## Items of Interest.

The fourth week of the court-martial trial of Captain Dreyfus was begun August 28. Charavay, the chief handwriting expert, created a sensation by declaring he had changed his opinion since 1894, and was now fully convinced that the bordereau was written by Esterhazy. M. Bernard proved an excellent witness for the defence. He at first believed Dreyfus was guilty, but now believes he is innocent. He told in detail how his conversion was brought about. The governor of the prisons said he thinks Dreyfus is innocent, and tells of his good conduct. Dreyfus told how he had determined to commit suicide on the day before his degradation, but was prevented by his wife, who told him that he owed it to her and their children to do his duty as a soldier and submit to the decree of the court-martial. Dreyfus seems to gain physically as his case prospers.

General Jiminez, who aspires to the presidency of San Domingo, was placed under arrest the second time at Santiago de Cuba by the order of General Wood, the military governor of the island, but was released on condition that he would leave Santiago without taking any arms with him. He has issued a proclamation as President-elect of San Domingo, setting forth his intention to establish a government similar to that of the United States.

It is reported that the organization at Topeka, Kan., of the Farmers' Federation of the Mississippi Valley is the beginning of a gigantic trust. The plan proposes to make every farmer who raises wheat and corn a member. The grain will be stored in warehouses and elevators in the principal cities, and the selling will be done by agents of the trust. Prices will be controlled by the amount of supplies placed on the market.

The sentiment in favor of the annexation of the island of Cuba to the United States is becoming stronger. The possibility of the withdrawal of all the American troops followed by the absolute independence of the island, has caused those who are in favor of annexation, or at least a protectorate, to appoint a committee to visit Washington and interview President McKinley regarding the matter.

President Figuereo, with his cabinet, has resigned, and Pedro Mejio has been chosen provisional governor of San Domingo. He will act until a new election can be held. There seems to be but little doubt that Jiminez will succeed to the presidency as soon as he arrives. Apparently, the entire island is satisfied with the change in the government, and it is believed that all fighting is over.

Governor-General Brooke has decided to make no more payments to Cuban troops. The first payments brought to light so much thievery and attempted swindling that he has decided to make no supplementary payments. What is left of the three million will probably be used to assist wounded and deserving officers who, under the original arrangement, were to receive nothing.

Judge Wines of the United States Circuit Court at Chicago, has rendered a decision which will be of more than usual interest to labor unions. It is to the effect that laborers have a right to combine together, and may persuade others to join them, so long as they do not resort to force, taunts, jeers, threats, or intimidation.

The last Legislature of Michigan passed a law requiring physicians to report cases of consumption, classing the disease as contagious. Doctors generally have refused to obey the law. Recently one of the leading physicians of Detroit was fined fifty dollars for such refusal. The case will be carried to the Supreme Court.

The government commissioners have effected an agreement with the Crow Indians, whereby one million acres of land will be thrown open for settlement after the treaty has been ratified by Congress. The land is a part of the Crow reservation in Montana. The price to be paid is about one dollar per acre in instalments.

Congressman George Edmund Foss of Chicago, who is making a tour of inspection of the naval stations and yards of Europe, says the Europeans are far ahead of us in naval stations, yards, and docks, and their facilities for manufacturing and placing guns on board ships are unequalled.

Information is received from Hong Kong that the native feeling against the Americans is growing stronger every day at Manila. Living expenses have doubled, and taxes are higher than under Spanish rule. The native police have been discharged, and Americans appointed.

Upon the recommendation of the quartermaster general, the secretary of war has decided to issue leather belts as part of the clothing allowance of the troops in the Philippines. The secretary of war will advertise for bids for the supply of fifteen thousand belts.

The Tenth Pennsylvania regiment arrived at Pittsburg August 28. Governor Stone delivered an address of welcome in behalf of the state. President McKinley also praised the "fighting tenth," and eulogized the valor of American arms.

The insular commission, which has given six months' study to the condition of the island of Porto Rico, has made its report to Secretary Root. It recommends a form of civil government to take the place of the present military government.

President Loubet says he believes the troubles of France are nearing an end. He feels that the whole country should bow to the verdict of the Rennes court-martial, which he believes can be relied upon for absolute impartiality.

The new White-Star line steamship, Oceanic, will sail from Liverpool for New York, September 6. She is said to be the largest steamer in the world. She is 704 feet long, and her gross tonnage is 17,040 tons.

October 16 has been set as the date for beginning the taking of the census of Cuba. It is probable that the census regulations prepared for Cuba will in the near future be adopted for Porto Rico.

The proprietor of an advertising weekly has offered to pay Sir Thomas Lipton twenty thousand dollars if he will change the name of the challenger from Shamrock to the name of the periodical.

The Porto Rico relief committee of Philadelphia has decided to issue an appeal to the public for fifty thousand dollars more, in order to send the second cargo of food and supplies to the sufferers.

Mr. George B. Loring of Texas, the promotor of the proposed Consolidated Cattle Company, holds options over six hundred thousand head of cattle and twenty-five million acres of land.

Justice Smith of the Supreme Court of New York has decided that colored pupils are ineligible to attend white schools in the state where there are schools exclusively for colored children.

The forthcoming bulletin of the State Bureau of Labor Statistics will show less than one per cent. of labor unemployed. This is the best showing ever made by the department.

In a recent speech of welcome to the California volunteers, the Governor said the present war was not a war of conquest, but was in defence of American rights and civilization.

The New York committee has invited President McKinley, Vice-President Hobart, and the members of the cabinet to attend the celebration of the return of Admiral Dewey.

Santiago and Porto Plata, San Domingo, have surrendered to the revolutionists. The strength of the revolutionists is such that it is impossible for the government to resist.

On June 6, 1898, there were 635,059 claims pending before the Pension Bureau. June 30, 1899, the number was 477,234, a decrease of over 157,000 for the year.

Free public schools have been established at Manila. The teaching of the English language is compulsory, and the poor children are furnished books free of cost.

The United States transport Kilpatrick has sailed from Brooklyn with five hundred thousand pounds of provisions contributed for the destitute Porto Ricans.

General Wheeler is to be given command of General Funston's brigade. He expresses himself as being well pleased with conditions in the Philippines.

A petition from the Netherlands Woman's Disarmament League has been presented to the Queen, praying for the preservation of peace in the Transvaal.

Orders have been issued for carrying out the provisions of the law allowing a soldier serving on distant duty to have part of his pay sent to his family.

The Pope is alarmed at the trend of events in France, and endeavors to persuade French Jesuits to moderate their violence toward Dreyfus.

The Red Cross Society of Madrid has received word from Manila that Aguinaldo has promised to release all sick Spanish prisoners.

The receipts of Cuba from January 1, 1899, to June 30, were $6,962,010, which was $1,480,021 in excess of the expenditure.

The eighteenth annual conference of the International Law Association met at Buffalo, N. Y., August 28, 1899.

General Otis has cabled that cavalry cannot be used to advantage in the Philippines.

It is estimated that at least ten thousand soldiers will march in the Dewey parade.

## Concord Celebrates.

### Triumph of Old Home Week in New Hampshire.

NEW HAMPSHIRE'S Old Home Week was appropriately observed throughout the state. Thursday, August 31, was Concord's great day, and was the crowning glory of the week. Addresses of welcome were made in behalf of the city by Mayor Nathaniel E. Martin, and in behalf of the state by Governor Frank W. Rollins.

The oration of the day was by Hon. James O. Lyford, naval officer of the port of Boston.

He spoke as follows:—

The New Hampshire you left one or two generations ago is not the same New Hampshire that you now gaze upon. You have come to see New Hampshire as she is. Let me briefly state where she stands. We point to a steady reduction of our indebtedness out of a state tax, which is almost wholly paid by the corporations of the state. So little does it bear upon the people, that when the last of the war debts of the towns is paid, an assumption of town indebtedness which probably no other state has undertaken, the annual allotment for this purpose, amounting to more than one-third of the entire state tax, will be available and will be used for aid to the common schools and for internal improvements. While New Hampshire thrift and business management have brought about this result, no meritorious work of a public or a philanthropic character has been neglected. Nor is local indebtedness behind that of the state in its admirable showing. Out of 235 towns of the state fifty-seven are out of debt and have a surplus in their treasury, and ninety-four others have a net debt of less than one per cent of their valuation. Of the remainder, if allowance be made for public improvements, such as water works and sewers, the net indebtedness would be, in most instances, a mere bagatelle. As regards the thrift of our people, let me call your attention to the fact that in 1893 the state of New Hampshire stood fifth in the rank of states in the amount of its savings deposits, being exceeded only by New York, Massachusetts, Connecticut, and California. Of course, she stood first in the per capita amount of these deposits, a rank she still holds.

No state of the union, in proportion to its population and wealth, has contributed so much in a generation to the growth of the great West as New Hampshire. Do you inquire what New Hampshire has done for the cause of education? We answer that the district schools which you knew exist no longer. In their places are better buildings, better teachers, longer terms, and an enlarged curriculum. We point to Phillips-Exeter Academy with its increasing roll of students, its enlarged faculty, and its rank as the first college preparatory school of the country. We also call your attention to St. Paul's School within the confines of this city, with a fame that is as wide as this hemisphere. Last but not least, our pride is centred in Dartmouth College, which, under the presidency of William J. Tucker, is rapidly forging to the front of American colleges. If you ask me who is the first citizen of New Hampshire to-day, I give undisputed answer, the president of Dartmouth College. You may not know that the town of Peterboro in this state established the first public library in this country. Let me call your attention to another achievement of a later date, wherein New Hampshire stands first among the states. In 1891 she was the pioneer in legislation for the establishment of public libraries in the towns of the state. So thoroughly in accord were the people of this state with this legislation, that there are to-day only fourteen towns out of 235 without a public library.

The New Hampshire Legislature passed a valued policy insurance law. Except one small state company, all of our fire insurance was done by foreign insurance. They did not like the law, and threatened to withdraw from the state if it was passed, and did withdraw after it was passed. It was New Hampshire, with its unprotected property on the one side, and the insurance companies with their millions of capital on the other. Did the people of New Hampshire quail before the situation? Not at all. It was met by the formation of home companies, and for four years we protected our own property. Having failed to coerce New Hampshire, the foreign companies, one after another, returned to the state, and the valued policy law remains unchanged upon the statute-book to-day. New Hampshire was among the first of the states to see the necessity of supplementing the gifts of nature with modern safeguards. The first house-to-house inspection for sanitary improvement that ever took place in this country, if not in the world, was instituted in this city by Dr. Granville P. Conn, as city physician, a generation ago. Out of this grew our present efficient state Board of Health, whose sanitary work has prevented any decline in the popularity of our summer resorts from infectious or contagious diseases.

In manufacturing you will find few states ahead of us in the character of work done, the skill of the artisans employed, the machinery they operate, or the wages paid for labor. Statistics of the entire state are not available, but a few facts in regard to the city of Manchester are an index of the industries of New Hampshire. The capital of the corporations of that city is $3,600,000, and the market value of the shares $12,000,000. The number of mills is 33; the number of spindles, 600,000; the number of looms, 10,000; the number of hands employed, 13,500; the annual payroll, $4,500,000. That city has the largest cotton mill in the world, and the thrift of its wage-earners may be indicated in part by the fact that the savings banks of that city have aggregate deposits of more than $17,000,000, a large percentage of which is the savings of its laboring people. Manchester has a population of 60,000, with 8,000 children in the public schools. This thriving municipality is all the growth of less than two generations, or since some of you first thought of leaving New Hampshire to better your condition.

Time and your patience are not sufficient to enumerate the present glories of the Granite State. In industry, in progressiveness, in civic pride, in philanthropic work, in

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

of other states. This is the New Hampshire which welcomes you to your old homes. A state of resourceful men and women. A state with varied industries. A state with unrivalled railroad facilities and with the lowest fares and freights. A state where the good sense of its people has kept it remarkably free from labor troubles. A state without class antagonism. A state with intense politics, where every man is born a politician, and yet the best governed state in the Union. A state which takes pride in its progressive governor, and which stands ready to support his suggestions for its development. What, therefore, is the meaning of this day? Its significance is in the development you see of the New Hampshire you forsook for other and more tempting fields. It spreads before you in panorama New Hampshire as it is—a fitting survivor of the New Hampshire of song and story.

## Christian Scientists Visit Concord.

An unheralded and very interesting feature of the Old Home Day celebration was the bringing to Concord of several hundred Christian Scientists from various points of New England.

It was in a way a tribute to New Hampshire's special celebration, yet the suddenness with which the invitation to the Scientists was sent and accepted was remarkable. The invitation was sent by Mrs. Eddy's wish to the Publishing House at Boston at about four o'clock Wednesday, without a word as to why the Scientists were wanted, or what they could be expected to do. But mindful of the one or two preceding occasions when Mrs. Eddy has invited her followers to visit her, the notice was spread by special messengers, verbally, and by telephone and telegraph, wherever Christian Scientists could be reached from Boston, and all were told to get the 6.40 train from Boston to Concord Thursday morning. Accordingly all who could possibly make the trip made an early start yesterday, and that train, to reach which many got up before light and resorted to all sorts of expedients to get into town at such an early hour, carried out three hundred Scientists, while a few came over from New York, and the train took on many more before it reached here.

Two well-known Boston Scientists who were at Green Harbor, where the news of the invitation was sent to them by wire Wednesday evening, took a drive of many miles by carriage to Whitman, in order to get into Boston in time for the early train. A few belated ones came from Boston and other cities along the line by a later train. On the arrival in Concord the visitors were met by Rev. Irving C. Tomlinson, First Reader of the First Church of Christ, Scientist, in Concord, and all wended their way to Christian Science Hall, where, Mr. Tomlinson told them, they would be enabled to witness both of the day's parades which were to pass the building. The time was filled in an impromptu reunion about the hall and under the trees on the little lawn. The passing of the fantastically dressed bicyclists in their parade caused some amusement, but for the most part the visitors made no attempt to see the sights of Old Home Day. Their interest was at the hall. They made a lively picture as they moved about the building, and a photograph was taken of the assembly. When the big civic parade passed all were out to see it, and they recognized the organizations in line with cordial applause. Governor Rollins in return gave them a marked passing salute as he went by at the head of the line.

In the afternoon the visitors were conveyed to Pleasant View, where two hours were spent in visiting the beautiful estate, and when Mrs. Eddy started out for her customary drive she gave her guests an unaffected greeting of pleasure. The visitors left the city on the early morning trains.

*Concord Evening Monitor.*

## To the Honest Public.

*Editor Statesman:*—When preparing a street for a boulevard with the intention of improving and beautifying it, is it not quite as requisite to level a hill on that street as to straighten it? To straighten Pleasant Street in accordance with the wishes of the city government has already taken of Mrs. Eddy's real estate the value of about one thousand dollars, while her neighbor is bitterly fighting the wise proposition to level the hill because it would make the grade between one and two feet lower than he says it shall be, and he is the only abuttor on that portion of the street where it is proposed to change the grade before macadamizing it, who opposes the change.

All the expert testimony is unanimous in favor of leveling the hill. Our experienced city engineer, who carefully prepared the plan—which only one man on that portion of the street opposes—plainly states that it would leave a "comparatively uniform grade and a symmetrical roadway." He emphatically declares that the desired grade "would benefit the public and would not injure anybody." A civil engineer and landscape gardener from Boston testifies that he should "recommend that proposed change as advantageous to the general public." Thus the opposition to this needed improvement lacks the support of those specially fitted to render an intelligent decision. While Mrs. Eddy, the Discoverer and Founder of Christian Science, offered, on conditions, the large sum of five thousand dollars for the improvement projected, this desirable work of macadamizing Pleasant Street is held in abeyance by one majority vote of the aldermen, and by another one man, a high school teacher, who is dependent on the public patronage.

For Mr. John F. Kent's real estate on Pleasant Street, consisting of a small house and barn, a liberty pole, and perhaps one acre of land, Mrs. Eddy offered ten thousand dollars. She did this, however, not because she wanted his place or valued it at that price,—for she knew that this sum was about fifty per cent more than it had cost him,—but to settle his quarrel over the grading of Pleasant Street; and he refused to sell it. Had she purchased his place she would have concurred with the commissioner's views as to the improvement of the street and his property thereon. Mrs. Eddy purchased on Pleasant Street years before he built there; she bought up the old huts on it and converted a barren pasture into "Pleasant View," now consisting of over eighty acres and having a frontage of about 2,080 feet on Pleasant Street. She has already expended over forty thousand dollars on her property on Pleasant Street, which has largely increased the value of property on this street. The city government immediately took "Pleasant View" into its precincts. Mr. Kent's place is outside these limits.

At the last meeting of the mayor and aldermen this same opposition prevented a hearing on this important improvement. One alderman, having seen the injustice of the opposition, would have voted for a rehearing had not the opposition threateningly declared that if he called for a reconsideration of the vote they should know he had been bribed, and they would expose him. Thus again by such tactics, was delayed the improvement of Pleasant Street. Here is a question for your readers: how dared men say they should know a man had been bought if he voted so and so, unless they themselves had been engaged in that business?

If such a record of unprecedented procedure represented the sentiment of Concord one might blush for his city's reputation. But such a record is not representative of our fair city. If untrammeled it is certain that a majority of the city government would express themselves against the uncalled-for opposition to lowering the grade and in favor of justice and right. For there is no question that the large majority of the enlightened and honest citizens of Concord favor that grade of the street which the experts and fair-

Digitized by Google

minded agree would most benefit the public. Moreover, it is to be remembered that there is but one man on the street in that vicinity who opposes its improvement.

A CITIZEN.

*Independent Statesman,* Concord, N. H.

## A Common Sermon in an Uncommon Way.

ONE of the peculiarities of the Christian Science Church is that the Bible and "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, are the only preachers, and the same sermon is preached in all the Christian Science churches, all over the land, on the same day, and usually at or about the same hour. Thus a Christian Scientist knows before going to church what the sermon is to be about. Another striking peculiarity in this church is that the audience is expected to, and very many of them do, study the sermon through the week very much as a preacher should. Such auditors never become sleepy during the service and gain more thoughts from, and see more beauty in, the sermon than those who fail thus to study and fit themselves for the reception of the Truth declared and proclaimed. To some it might seem that such a sermon would not create much enthusiasm; but not so, as in quite a large number of cases people have been healed of their diseases by listening to such sermons.

Wherever a Christian Science Church is organized, the regular order of service is observed. Ordinarily the sermon has five or six divisions, each one bringing out some particular thought.

For instance, the subject of next Sunday's sermon is "Spirit," and the first division brings out very beautifully that Spirit is God, and that God is All-in-all, and there is but one God, therefore there can be but one Spirit. The second division brings out the thought that Spirit and its formations are the only realities of Being. The third division brings out and clearly proves that Spirit is Substance.

And so each division brings to the consciousness of the student some beautiful thought or thoughts that enable him more fully to comprehend the true Science of Being, teaching him or her what God, Spirit, is and what He does for man. In place of the preacher, as in other churches, there are two Readers. First one reads from the Bible, and then the other from the text-book of Christian Science, "Science and Health with Key to the Scriptures," and thus they proceed until the sermon is completed

*Putnam Journal,* Unionville, Mo.

## Lockjaw Due to Fear.

"IT is highly probable," said an old physician, "that a good many of the numerous cases of so-called lockjaw recently reported from the North were attributable to fear. Nearly all of them were supposed to originate in wounds received from toy pistols, and after the first few deaths any nervous child who had sustained that kind of an injury must have been in an agony of apprehension. There are many well authenticated cases in which such terror has brought on symptoms almost exactly resembling the malady itself, and frequently death ensues. 'Mimetic Diseases' is the title of one of the most curious and interesting books in medical literature, and it is full of instances of the effect of fear on the human body, some of them so astonishing that they seem almost incredible. Imagination is especially to be dreaded where lockjaw is concerned, and I have always been on the lookout for it in my practice. I remember, some years ago, a gentleman came rushing into my office in a cold panic. He had been walking up Canal Street, and in passing a place where an old building was being torn down happened to step on a plank bristling with rusty nails. His foot turned and one of the nails pierced his shoe at the side of the instep and wounded him on the sole. Fortunately he was rather stout and couldn't bring up his foot so as to see the injury, but he told me he could feel the gash and also the stickiness of coagulated blood. The thought of lockjaw had entered his mind immediately, and he came to me feeling he was doomed. I made him lie down and removed his shoe and sock. There, sure enough, was a slight puncture, but, instead of telling him, I laughed heartily. 'Why, it's only a bruise;' I exclaimed. 'The skin isn't broken. There isn't the slightest possibility of lockjaw, but you must keep quiet a few days or the tendons may become inflamed.' With that I dressed the injury and swathed the foot in tight bandages, which I warned him not to remove. Then I called a cab and sent him home. I watched the case closely, and in a few days the wound was well. If he had known the facts I am convinced he would have had lockjaw."

*New Orleans Times-Democrat.*

## When True Religion is Gained.

I SAY, therefore, that when we attain to the true religion, when God is literally in a man's heart, we shall have the cheerfulness and even the buoyancy of eternal youth. There may be sorrows, but never a hopeless sorrow; pains, but never a pain that can overcome us. Christ had a Gethsemane, but he was still the Christ beneath its shadows.

And, again, I believe the time is coming when all diseases will vanish as they did at the touch of the Master. I can't conceive of God in the soul in conjunction with an infirmity. God's presence is remedial: it means health, and it cannot mean anything else. Jesus could not have given sight to blind eyes unless he possessed a power which would have made it impossible for him to suffer from a like affliction. He could not have restored the dead man to life unless there was something within himself which kept death at a distance until he saw that it was time to go to heaven. The heart in which God dwells must always beat in accordance with the gracious laws of health, for God and health are equivalent terms. The highest philosophy does not include disease as a necessity. When we are in the wrong, so long as we remain misinformed and grope in the darkness, we shall stumble and hurt ourselves, but when there is a light within we shall see our way clearly, and then we need not stumble.

Our comprehension of the philosophy of religion is rudimentary as yet. What we know is beautiful. We have seen the seven colors separately, but we have not seen them fashioned into a rainbow. We have worshiped the Christ, but we have not understood him. When the hour arrives in which we shall open the soul gladly and humbly, and when Father, Son, and Spirit shall enter, then—but no pen can draw that picture. GEORGE H. HEPWORTH.

*New York Herald.*

## A Judge's Decision.

A CHICAGO judge has imposed a fine of one hundred dollars and costs on a faith curist on conviction of violating the medical statute and in administering to Mrs. Anneta Flanders, who died under the faith "divine-healing" treatment. The Dowie treatment comprises the laying on of hands. The court held that under the law these healers must resort only to spiritual and mental means of treating the sick. When material means are added the state law governing the practice of medicine is violated. To the faith healer even the ordinary means to assist nature are denied hereafter, because the court held that all that a physician or surgeon did was to assist nature. This is certainly an original and interesting decision.

### Things that are not Seen.

Until the discovery of Christian Science, neither the teachings of agnosticism on a tribal Jehovah, or an anthropomorphic (man-like) God, consoled the world, enabling man to "wipe all tears away," and overcome sorrow. Divine Science reiterates the teachings of Jesus. Listen to its clarion call, "There is no death." What! you say, no death? Can any true theory of life make such a statement, at utter variance to the whole course of human experience, past and present, and hope to substantiate it by any satisfactory argument? Yes. But in order to comprehend this argument, some preliminary statements must be made and established clearly in thought. In the first place, the testimony of the senses as to life and man must be impeached. Has the eye ever seen Life or the hand ever touched it? If the senses cannot cognize Life, can they give us reliable testimony as to what Life or man is? In order to understand the Life of man, we shall have to look beyond the range of these corporeal senses; and here is just where the agnostic makes his mistake. He accepts the science of astronomy, although it reverses everything the corporeal senses say. "With Mind, Sir," he sees the revolving earth moving from west to east; he sees the twinkling stars expand into mighty opaque orbs and blazing suns making their mightier circuits through interminable space. The blue dome lost in vastness where the ninety-five millions of miles that measure the earth's distance from our sun, becomes a simple gauge to measure inconceivably vaster distances.

Or again, has the human eye ever seen an atom? Yet the science of chemistry will weigh and measure it. Mind goes far, far beyond the telescope, far, far beyond the utmost power of the microscopic eye. That which is "unseen" (?) by corporeal sense is a factor in all scientific, right, and just conclusions far beyond "the seen." If the senses cannot cognize life, and if in scientific research one is continually getting beyond mere sense testimony, are we to measure man by this testimony, inadequate to resolve the mysteries of either the celestial mechanism of which we are a part, or the chemical compounds that are a part of us?

The Science of Man reveals him as not made up of material elements and organs. It shows sense testimony as to man to be as inadequate to a true understanding of man as to a true comprehension of the solar system. If man has an environment as body, he also has an environment as mind, else how can he rise in thought to the discovery and view of that which eye has not seen. He may attempt to confine himself strictly to the evidences of the senses, but thought is every moment carrying him beyond their range, in memory, hope, imagination, in history, art, scientific research, spiritual development, etc. The man who says, "It may all be true, but I don't know, and don't believe any one can know," would find himself in a very lamentable state of ignorance if he applied this test to all branches of knowledge as he does to theological questions.

Christian Science teaches that God is Life—the only Life—that man is the reflection or expression of this Life. He is the creature of Life, the Creator, not merely as a bodily existence, but as a living consciousness. This consciousness that knows, that thinks, that loves is the man who has his environment in Mind. It is the pure and perfect likeness of the one perfect Mind, which is immortal Life, reflected here and there in every one, in all goodness, in every God-like quality, untouched by death.

*Weekly Herald,* Dayton, O.

### "Divine Healing."

We doubt very much whether the state will be able to secure a conviction of Mrs. Henrika Bratz and Elder D. C. Holmes, so-called "divine healers," on the charge that they contributed to the death of Mrs. Anneta Flanders. At least, if a conviction be secured it will be upon the ground that Mrs. Bratz used temporal rather than "divine" measures in the treatment of the woman. Psychic therapeutics, whether known as mental treatment, animal magnetism, Christian Science, faith cure, or what not, presents a problem difficult of solution by legal methods.

The reason is obvious. All the modes of treatment mentioned are alleged by physicians to be no treatment at all. No medicine is given; no physical agencies are employed. In the eyes of the law and according to physicians themselves the "mental healers" do nothing for their patients. No practice of medicine is involved; hence there can be no malpractice. That being admitted, upon what charge can the "healers" be held? It cannot be alleged that they were bound to do something for the patients, because the law forbids them—being unauthorized—to do anything at all. On the other hand, it would be absurd to hold them to account for doing nothing, because that is precisely what the law commands them to do. How are they to be held?

It is true that there is a question of contributory negligence raised, but that question involves not the "mental healers," but the relatives of the patient—if, indeed, it can be stretched to include even them. For, except, perhaps, in the case of children, there can be no legal obligation, though there is an ethical one, upon any one to secure medical attendance for another person, and it is perfectly clear that no one has the right to force upon a sick person a physician whom he does not want and whom he will be compelled to pay.

And right there is the meat of the whole question. People may be foolish; they may intrust their health and their lives to the care of incompetent persons, but there is no law, and in the nature of things there never can be one, which will compel them to patronize this, that, or the other school of medicine, or any school at all.

There are laws against suicide—anomalies, because the man who seeks to take his life is not likely to fear any human punishment. But there is no law which prohibits a man from dying from natural causes without the attendance—not to say the aid—of a physician. And there is no law which prohibits a man from calling in any person or persons whose prayers he deems likely to aid him. If the "divine healers" are to be punished for praying at the bedsides of those who are sick, the Christian minister, who does the same thing, is equally liable to punishment.

In the end a man's life is his own. It is his most precious possession and it may safely be assumed that he will use his best efforts to preserve it. But it is his judgment, not the judgment of any other person, which will be consulted. For if the law could compel him to take a certain physician, it could with equal justice compel him to subscribe to a certain religious doctrine, and that is not likely to be attempted in this country.—*Chicago Chronicle.*

### Christian Science Treatment.

The Christian Scientist who called attention in a letter to this paper to the fact that every one of the thirty or more people who died in this city last week, was presumably under the care of a regular physician, once more brought out a point which does not always receive the attention that it ought when Christian Science culpability is discussed by the newspapers and on the platform.

There is no disputing the assertion which the Scientists make that if every death which occurred when the patient was under the care of a recognized physician of any school

Digitized by Google

were treated as a sensational happening, the front pages of the newspapers would be given up daily to harrowing tales. It is only a day or two ago that much space was devoted in some of the newspapers to an account of the death of a child from diphtheria while she was under the care of a Christian Scientist, and columns of editorial denunciation of the cult have been excited by just such cases. But children have died from diphtheria while under the charge of physicians of the highest skill and responsibility, and the Christian Scientists claim that other children have recovered under their treatment. As to this last assertion we know nothing personally, and have to take the word of those who are interested for its truth.

The lesson of it all seems to us to be that there is need of a rather calmer judgment concerning this matter than is exhibited in some quarters. Of itself, it is not a decisive argument against Christian Science that some patients die under the treatment. That test would condemn every school of medicine and every physician that ever existed. There has got to be a broader view than that which dwells on failures, and ignores all the claims of success, and it is just as well to be fair as to be prejudiced in the study of the whole subject.

One thing is very certain, if Christian Science is a delusion it is bound to go the way of all delusions. No need exists of worrying about its ultimate fate, for that fate is as fixed now as it ever will be. In the mean time, if anybody takes comfort in it, we do not see why they should not be allowed that comfort in peace, while the rest of us can enjoy our patent medicines or our allopathic or homœopathic doses in quiet pity for the deluded mortals who will have none of them. At the end of all it will make little difference to any of us whether life closes under the care of a doctor with a diploma or of a healer armed with Science and Health.—*Standard,* New Bedford, Mass.

## The Lectures.

### At Cortland, N. Y.

Nearly every seat in the parquet at the Opera House was occupied Friday evening, May 12, upon the occasion of the lecture by Mr. Carol Norton, C.S.D., of New York. His subject was "Christian Science: It is Christian; It is Scientific."—*Evening Standard.*

The lecturer was introduced by the Rev. U. S. Milburn, pastor of the First Universalist Church, who spoke in part as follows:—

*Ladies and Gentlemen:*—As a representative of Cortland, it is my province and pleasure to welcome to our midst and introduce to you the speaker of the evening. I do this, not because I am an advocate of the philosophy which he will expound to us, but because we should welcome any one who can add to our intellectual life, moral powers, or spiritual growth. As I understand it, the lecturer comes to enlighten us upon a subject about which we do not know so much as we ought to know; *viz.,* Christian Science.

Every man should be proud of his religious belief. I am proud of mine; I am not a Christian Scientist. You are proud of yours; some of you are Christian Scientists and some are not. The speaker is proud of his. We should never be afraid to have our beliefs tested and placed alongside of other beliefs for comparison. I suspect there is some alloy in every creed—truth and error intermixed. The truth will prevail, for it is God's thought. The error will be destroyed, for in it are the germs of death. The wise thing for us to do is to use our God-given power of reason and accept the belief which, to our mind, contains the greatest amount of truth. Whatever our individual opinions may be, we ought to have the attitude of Gamaliel of old when he said, "If this counsel or this work be of man, it will come to nought: but if it be of God, ye cannot overthrow it."

I make an appeal to-night for toleration and a broader catholicity of spirit. Toleration is a virtue, the spirit of which has not permeated the Christian religion. I am no pessimist, I am no croaker, I am no fault-finder; but I believe I have stated the truth. I am aware that what toleration we do have is modern, and this fact rims with light the horizon of the future.

Every new thought given to the world has been received with scorn and ridicule by minds unable to grasp it, or, worse yet, fearful that the new thought would take precedence of the old. Hence it is that the old and more crude thought has ever been intolerant of the new and less crude. Columbus was laughed at as a wild dreamer; Galileo and Newton were imprisoned; Victor Hugo banished; Wendell Phillips mobbed; Savonarola burned; Socrates executed, and Jesus crucified because the old thought would not listen to the new.

We are frank enough to admit that the ecclesiastical powers of the church have been adverse to new thoughts, and anathematized those who accepted them. He who could subscribe to a creed, be it ever so monstrous or foolish, but which the church sanctioned, was a true believer worthy the kingdom. He who asserted his individuality, who used his powers of intellect and spirit, who followed his own conscience in matters pertaining to religious belief, was counted a heretic who should be treated with no toleration whatever. His morality may have been of the purest, his motives the highest, his life a benediction, still he differed from the church in belief and he must be ostracized as a heretic, persecuted and tormented.

Among the things which we have to be thankful for, is that so many heretics have lived. Thank God for the heretics! They are the liberators of the human mind, the emancipators of thought, the Abraham Lincolns of the soul! They substitute individuality for collectivism; they place man higher than the church, as he is. They give the inner consciousness more authority than an ecclesiastical council. They herald the right of every man to think for himself in the great question which concerns his relationship to the Infinite. They are the pioneers of thought, blazing a path through the untrodden forest of knowledge, so that we can safely travel the new country, building upon their discoveries and reaping in peace the fruits of their sowing in turmoil.

Let us listen to the message which is brought to us to-night with open and large temper of mind, whether we accept as truth the doctrines or not. One thing we do know: many of God's children testify that their hearts are happier, their minds serener, and their spirits have that peace which passeth understanding because of this doctrine. They can say truly, "One thing I know, that, whereas I was blind, now I see."

And so, ladies and gentlemen, it gives me great pleasure to introduce to you this evening Mr. Carol Norton, who will speak to us upon "Christian Science: It is Christian, It is Scientific."

MARY C. PIPER.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### Rev. Mary Baker G. Eddy,

**The Discoverer and Founder of Christian Science.**

THE above is the title to the leading article in the Old Home Week Supplement of the *Boston Traveler,* which supplement was an important feature in the Old Home Week celebration in Concord, N. H. This article was printed with the permission of the Mother and contains important facts concerning her that have never appeared before in print. The supplement is beautifully printed on calendered paper, and besides an excellent portrait of our Leader, it contains handsome illustrations of Pleasant View, the Mother Church, and the Christian Science Hall in Concord, N. H. This important publication is sold at five dollars per hundred, and can be had by addressing the Christian Science Publishing Society. The supplement will be very suitable for distribution among those who are becoming interested in Christian Science, and we would suggest a ready response from the Field to this opportunity for letting the truth be known.

### Our Literature.

THIS number begins Volume II. of the *Sentinel.* The table of contents on the cover will be appreciated by all. The use of the smaller type on some pages enables us to insert more matter than formerly.

Progress is the order of the day. The *Sentinel* will continue its mission of watchfulness and usefulness, untouched and unharmed by foes either in open field or in ambush.

The enemies of Christian Science are hostile to whatever tends to spread its teaching. They bitterly assail the principal book of the Rev. Mary Baker Eddy, "Science and Health with Key to the Scriptures," and seek by every form of denunciation, invective, distortion of its fair meaning, and ridicule, to destroy its effect. How well they are succeeding is evidenced by its increasingly rapid sales. It has reached its 172nd edition.

"Miscellaneous Writings," and the minor books of Mrs. Eddy are in fair proportion with the text-book; a healthy increase in their circulation bearing testimony to their appreciation, and the good work they are doing.

The Quarterly Lesson-Sermons are going out in goodly numbers carrying the Word to the uttermost parts of the earth; but their great mission is only in its infancy. They should reach the masses in their homes regardless of whether there are enough students and investigators in the neighborhood to hold services or not.

The *Journal* and *Sentinel* are doing a grand missionary work. All earnest workers and seekers need these hand-in-hand messengers, not only for their own good, but for the use they can make of them in interesting others in the great cause. The world of sickness, sin, and sorrow is calling out for relief. Thousands are asking: Where is our God? They have been taught to look for relief in matter, and its impotence to heal and save is coming to be more and more recognized by earnest, thinking people, and the need of a higher and more efficacious religion as well as pathological system is forcing itself rapidly into consciousness.

Our literature is among the effective agencies in bringing to public attention this better religion and healing system, and hence the deep importance of its wide extension. Gratifying as is its present circulation, there is no cause for lack of alertness and interest in its more rapid increase.

We know well what the open opposition to Christian Science literature is; but are we alert to that which is hidden? Are we watchful of the mental suggestions which are deliberately intended to cause prejudice against it? Do we flatter ourselves that while we slumber the mental suggester, or operator, is not vigilantly and constantly at work? He who claims to be a Christian Scientist, and yet ignores the methods of the mental malpractitioner is not much in advance of non-Scientists in ability to guard against the devices of evil. He has yet to learn a fundamental *fact* in connection with this mortal existence.

It is not in accord with the teaching of our text-book to assume to wipe all evil aside by the mere mental declaration that all is Good, therefore there is no evil; for evil is a human *fact* until it is overcome and destroyed by the Scientific methods of divine Truth. Until "the powers of darkness" are destroyed by turning upon them the light of Truth, they remain a condition to which mortals are under bondage and servitude.

Let us not be deceived by these powers of darkness, for in their Satanic stealth they assume the guise of plausibility and good. They could not otherwise deceive.

A Christianity that is not Scientific is like a system of mathematics without a principle. Such a system of mathematics would lead to endless confusion. Chaos would reign supreme, and the "sects" of mathematicians would be numerous. How about a Christianity whose starting point is not the Divine Principle, eternal in His supremacy, infinite in His unity, and uniform in His government?

Christian Science teaches that the ultimate of man is to be Godlike. Man, to be Godlike, must reflect—show forth—Good in life and character.

If a miracle is a special Providence, then, if "the day of miracles is past," the day of special providences is past. In other words, God is not the God He once was,—is not "the same yesterday, to-day, and forever."

Is it not Scriptural to assume that the unchanging God is not "special," in any sense, but eternally general? Eternal Truth cannot be special or limited.

A Christless Christianity is an impossibility. Christ is the essence of Christian living. Jesus taught of Christianity when he said: Go ye into all the world, preach the Gospel. Heal the sick. Cleanse the lepers. Raise the dead. The measure of fulfilment of this command is the evidence of the Christianity of Christ.

He who would wish a niche in the world's true pantheon must lead a life that is unselfish,—"meek, merciful, just, and *pure.*"

That punster was a philosopher who said, "'Tis better to have a *window* in the soul than a *pane* in the stomach."

Truth is total. It is neither limited nor capricious. It does not ebb and flow. It was not present yesterday but absent to-day. It is the eternal *Now.*

Prayer is praise and praise is prayer. Joyless prayer would be like a starless and moonless night,—lightless and gloomy.

## Christian Science Explained.

### Eighteen Reasons Set Forth to Show that it is both Christian and Scientific—Medical, Religious, and Legal.

THERE are eighteen reasons, medical, religious, and legal why it is claimed that Christian Science is both Christian and Scientific.

First.—So-called regular medical practice, or allopathy, was preceded by many forms of medical vagaries and superstitions. The leech and bleeding, incantations and Indian medicine men, herbs, and all the crude phases of so-called heroic treatment marked the early steps of what is known as modern medicine. Allopathy has gone, and is going, through many stages of development and so-called progressive expansion. The history of medicine is the history of experiment, guessing, poisons, and misery. While the discovery of anæsthetics has undoubtedly decreased the amount of pain in the world simply by subjugating it, the direct causes of disease and bodily pain have never been brought within the range of destruction through either allopathy or homœopathy. Incurable organic diseases are multiplying, and medicine receives its most pronounced criticism from its own representatives.

Second.—Allopathy was for a time considered regular, and as representative of scientific *materia medica*. The work of Hahnemann brought into positive existence the great theory of "like is cured by like," when straightway a great battle was precipitated and progressive homœopaths were called quacks and irregulars, and social and professional ostracism for years accompanied all their work and effort. But homœopathy had come to stay and remain with the race as one of the visible manifestations of a tendency toward metaphysical practice and the gradual elimination of the drug element in modern medicine.

#### Remarkable Results Secured.

Third.—The next logical step to the work of the high-dilutionists in homœopathy of course had to be mental,—metaphysical therapeutics. The remarkable results secured through the highest attenuations of homœopathy led the Discoverer of Christian Science Mind-healing to her great therapeutical deduction which bases the entire healing structure of Christian Science, namely: "All Causation is Mind, and every effect is a mental phenomenon."

Fourth.—Modern medicine with its drugs and drugging, its reliance upon material ways and means, surgery with its instruments, lacking moral and regenerative power, the absurd speculations relating to air, exercise, diet, and the terrors of the germ theory with its myriad hosts of microbes and little impersonal devils, called, "disease-germs," proves not only the utter lack of true science in *materia medica*, but shows the modern superstition of the human mind. While dignified with the word science, they really are well classified by the great physician, John Mason Good, M.D., F.R.S., of London, who writes: "The effects of medicine on the human system are in the highest degree uncertain, except, indeed, that they have destroyed more lives than war, pestilence, and famine combined."

#### The World against Medicines.

Sir John Forbes, Fellow of the Royal College of Physicians, London, also writes: "No systematic or theoretic classification of diseases or therapeutic agents ever yet promulgated is true or anything like truth, and none can be adopted as a safe guidance in practice." Our own Dr. Oliver Wendell Holmes declared that "it would be better for the world but worse for the fishes if the contents of every apothecary shop were emptied into the sea."

Fifth.—Four-fifths of the adherents of Christian Science, which body now numbers upwards of one million believers in Christendom, have been healed of organic and functional diseases through Christian Science, without drugs, after all medical practice failed. Their acceptance of Christian Science is therefore based upon fact not fable, and upon common sense rather than upon fanatical faith or superstitious credulity.

Sixth.—The destruction of the causes of disease in the latent thought, or sub-conscious mind, is the great work of this system. Morbidity, sensualism, evil-thinking, self-consciousness, parental impressions, inheritance, fear, self-contemplation and self-exaggeration, impurity, and the belief of physical causation, are the great causes of the diseases that afflict the human race.

Christian Science practice depends wholly upon mental diagnosis, and elevates the profound truths of mental anatomy and the direct effect of Mind over the organism of the body. By its practical application of the idea of the mental character of matter it dissolves cancers and heals consumption when medical so-called science admits its utter failure in the face of these disorders.

#### Religious Aspects of the Case.

First.—The God of the Old Testament, alias the Eternal Mind, the God of Israel, is represented in the teachings of Judaism as a God who forgiveth iniquities and healeth diseases. The Old Testament sets forth the healing of disease without material means and by divine power. According to the teachings and life of Jesus Christ the reformation of the sinner and the healing of the sick were one and the same thing, and he commanded his followers in all ages to heal the body and reform character. Therefore the healing of the sick through mental or spiritual processes should be as much a part of the Christian religion to-day as it was during the earth-life of Jesus and through the history of the church for the first three centuries of its existence.

Second.—According to the Founder of the Christian religion that which is impossible with man is possible with God—divine Mind, the Principle of health. The Christian ministry rests upon the great commission of Christ, "Go ye into all the world, preach the Gospel." This ministry and all Christians should also obey the next command of this commission, "Heal the sick." If Christ's followers to-day imitate and repeat his Gospel they should also imitate and repeat his works of healing; for he not only said, "If ye love me, keep my commandments," but he also declared, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

#### Mentality and Spirituality.

Third.—If God, alias divine Mind, the Principle of the Universe and man, is All-in-all, then God, or Spirit, is as supreme in the physical realm so-called as in the moral or spiritual. Therefore spirituality is mental, or character health, and normality or bodily health or wholeness is under the direct government of the divine Nature, alias God.

Fourth.—As there is no incurable evil to the power of infinite Good, so under the proper application of the divine Principle of mental healing, alias God, there should not be, and is not, any such thing as incurable sickness or physical disorder. Health of body is as normal as health of character.

Fifth.—The healing of the organic and functional diseases of the human body according to the teachings of Christ as recorded by the evangelist, and the spiritual and therapeutical deductions of Christian Science as taught by its Founder, Mary Baker Eddy, are neither miraculous nor supernatural, but divinely natural. The tenets and methods of faith cure, mind cure, hypnotism, animal magnetism, and mesmerism have nothing in common with the *modus operandi* of Christ or the teachings of Christian Science.

Sixth.—Metaphysical Christianity is practical Christianity. Scientific Christianity is being proven as eminently practical through the regenerative and physical healing

Digitized by Google

work of Christian Science, which is nothing more or less than a scientific or provable knowledge of the Omniscience of the Supreme Being that to some is known as divine Nature, to others as Creator or First Cause, while others worship God under the names of Father, The Eternal, Divine Principle, Life, Truth, Love. The healing of the sick without drugs or material means is a vital part of the Christian religion, and as such comes under the rights of religious liberty and rational common-sense obedience, not only to the commands of the Founder of Christianity, but to the scientific and visible actualities of twentieth-century progress.

**The Legal Aspects of the Case.**

First.—Law, common law, and the rights of Christian citizenship in all nations is based not only upon the moral code of Moses, the great system of human rights, justice, order, and mercy, but upon the God-given rights of man recognized by the signers of our national Declaration and Constitution. In the preamble of the Constitution one of the reasons given for the ordination and establishment of the Constitution is the promotion of the general welfare. In the preamble of the Declaration of Independence, life, liberty, and the pursuit of happiness are mentioned as among the inalienable rights of man.

Second.—Good health brought about by the cure of disease, as well as its prevention, is certainly a part of the general welfare named in the Constitution. Bodily health or harmony is certainly a vital part of life and an essential attainment in the pursuit of happiness mentioned in the preamble of the Declaration. Therefore, if popular and materially legalized methods of healing diseases utterly fail, and the restoration in this century of the method of Jesus Christ is found to be practically efficacious, the legal rights of citizenship give Christian religionists, or Christian Scientists, rightful protection of their dependence upon Christian Science Mind healing as an essential part of the Christian religion as safe-guarded by those portions of our national bill of rights which relate to religious liberty.

**The Triple Alliance.**

Third.—Governor Thomas of Colorado, one of the foremost lawyers of the West, in giving his reasons for his recent veto of a medical bill aimed at the practice of Christion Science in that state, spoke of the triple alliance of allopathy, homœopathy, and eclecticism working in a united way against medical progress as manifested in systems wholly outside the pale of these schools. Twentieth-century religionists and citizens, jealous not only of individual rights and personal liberty, but equally jealous of the attainment and retention of good health, will in no wise accept or allow any form of legislation which will tend to the creation of a Medical Trust, or anything which interferes with the rights of an individual in the choice of his minister, priest, grocer, lawyer, physician, or mode of treatment, be it according to the so-called regular schools, or according to the methods in vogue with the early Christians as established by Christ.

Business men engaged in furnishing the masses with the necessities of life receive a profit from their labors and live thereby. Ministers and missionary workers receive payment for their services, and are thereby supported while they carry on righteous work. Lawyers represent the interests of individuals and support the law of equity and justice, and receive fees for the same. Physicians engaged in the humanitarian labor of alleviating human suffering and curing disease, earn their living thereby and minister to humanity at the same time. Christian Scientists give their whole time, labor, and energies to the moral, spiritual, and physical welfare of humanity, and receive therefrom a reasonably modest and peculiarly small moneyed return or fee. In common justice who shall affirm the error of this proceeding.

**No Drugs or Medicine Used.**

Fourth.—Christian Scientists in their practice eschew the use of drugs and never use medicine. They cannot, therefore, be said to be practitioners of medicine. The healing of the sick through spiritual or mental methods is a part of their religion, and as such is not a matter of legislation. Their practices are decreasing diseases and sicknesses, and therefore cannot be said to be a menace to the public health. They have the religious right and the individual privilege of relying wholly upon divine ways and means, if this expresses their own definite wishes. In the words of Attorney-at-Law L. A. Watres, ex-Lieutenant Governor of Pennsylvania, "This is a free country and religious beliefs cannot be interfered with nor rights trampled upon. One has a perfect right to employ an allopath, homœopath, electropath, or any other kind of a doctor, and they have a right to employ no doctor if they see fit, but rely upon divine power, and this without fear of molestation."

Fifth.—Christian Scientists deferentially respect the motives of all honest opposers, whether in the ranks of the ministerial critics, or among our earnest lawyers, physicians, and surgeons. The Christian Science movement, under the wise leadership of Mrs. Eddy, is leaving no stone unturned in its educational propaganda in order that the people may know the Christianly Scientific character of the religion and healing methods of this system. We welcome honest investigation and cannot but be tolerant and patient with persecution under the guise of prosecution.

**Fair Play for Christian Science.**

Sixth.—In the spirit of Christ's charity, with heads and hearts lifted high above the earth-damps of ignorance, superstition, persecution, intolerance, and bigotry, let us give Christian Science fair play. Let its text-book, Science and Health, written by Mrs. Eddy, be compared with the Scriptures; let its therapeutical teachings and results be compared with the utterances of the most advanced scholars in modern medicine and surgery; let its teachings in relation to matter be compared with the pronounced deductions of such minds as Huxley, Tyndall, Oswald, Clifford, Grant Allen, and Hæckel; let its sociologic results be investigated from the standpoint of honesty and impartiality, and above all investigate its claims in relation to the cure of disease by direct contact with the upwards of one million people who have been healed through its practical efficiency during the last twenty years; let common sense, sober judgment, and the spirit of tolerant love and investigation answer the question, Is Christian Science Christian? Is it Scientific?

## How I was Led into Christian Science.

BY WILLIS D. MCKINSTRY.

PRIOR to the year 1893 my greatest desire was to be an optician, but circumstances were such that I could not prepare myself to enter into this business. With the beginning of the above year I secured a position for two years, which gave me time to study. At the time I began the study of optics, my wife began to investigate Christian Science. At first I attended church with her, but found a stumbling-block when the minister said there was no intelligence in matter. After this I attended services very little, but my wife continued her search for the Truth. When the time arrived for me to engage in the work of an optician, the question of location had to be decided. A large optical company in New York recommended a city in the extreme South. As our home had always been in the North, we thought it best for me to take a trip and look the

Digitized by Google

field over before deciding. My wife gave me the names of some Scientists she had taken from the *Journal,* requesting me to call upon them, for if she were to go into a land among strangers, she felt they would be her friends.

When I arrived at my destination, I made enquiry as to these Scientists and found they lived only a block away, and that there were Scientists stopping at the same place I was. I met them all several times, and felt a strong friendship for them. The location for my business was all that had been recommended. I at once decided to make it my future home, and made arrangements to return in about a month. I did so, arriving there on a Saturday evening. Sunday morning, while out walking, the thought came, "Call on Mr. S., the Scientist." When I arrived at his home I found a card on the door saying they were attending Sunday School. I continued my walk, and after walking for some time I caught sight of a card which read, "Christian Science Sunday School up-stairs," so up I went as though I had always been a regular attendant, meeting the same friends, who welcomed me as none but Scientists can welcome. Mr. and Mrs. S. invited me to come to the evening meeting at their home. After arranging my office I was really glad when the evening came, as I had a desire again to meet my new friends. This first evening spent with them will ever be remembered, such peace and love as was manifested can never be forgotten. Before leaving, Mrs. S. asked if I had Science and Health with me; as I had not, she offered to loan me one; I really did not care for it but did not like to refuse, so took it to my room. The next evening I picked it up and read for two hours, such a perfect peace and rest I had never experienced before. I had tried to read Science and Health at home, but could not become interested in it. When Sunday came I was ready for Sunday School. It was six weeks before my family came, and as I had never been away from them more than two weeks at a time, I became very lonely. I found this sense of loneliness would vanish whenever I read Science and Health, leaving a great peace and happiness, and it was this that led me to accept Christian Science. While reading this blessed book of Truth, I was healed of a chronic case of nasal catarrh. I had tried many remedies and specialists, all with the same result, no cure. The impersonal healer did the work; I was unconscious of the healing. I had used tobacco for about fifteen years, this habit was also destroyed unconsciously, for I knew not when I quit smoking. At first the thought never came to me that Christian Science would interfere with my business. In a few months the errors which I wrote in my advertisements began to be uncovered to me.

Then came the fork in the road. Which one should I choose? The one leading, or promising to lead, to financial success, and continue to dwell in materiality, or give up all (for all we had was in the business) and take the one leading into perfect peace and joy, providing we rise above the mortal and material into the spiritual.

This was no easy matter to decide. At first I was willing to give up my business if I could get other employment. I spent a part of each day for several weeks looking for other work, but still held on to my optical business, for the human sense said, You must keep this business to provide for your family. My earnest desire was to be guided by Truth. I did follow its guidance, gave up the optical business, and returned to our old home with about seven dollars in money. When our goods arrived several days later we borrowed the money to pay the freight. The Saturday following our arrival, one of our dry goods merchants said I could help them out that day. I went to work, but before night he said I could continue my work with them. I was thankful the work had been given me, but to the mortal sense the salary was discouragingly low. This never bothered me, for the words from Science and Health, p. 490, "Divine Love always has met, and always will meet, every human need," were with me constantly. Four years have passed and God has not forsaken us; every need has been supplied. One year after returning we went through a class with one of Mrs. Eddy's loyal students, which has been a great help to us.

Truth has rewarded me in many ways; it has healed me of aches and pains, it has uplifted me morally and spiritually. How beautiful it is to know that as we realize the allness of God (Good) and the nothingness of all things else, we are "delivered from the snare of the fowler, and the noisome pestilence." My greatest desire is to manifest the love which was in Christ Jesus. I am unable to express in words the love I have for our beloved Leader, the Rev. Mary B. G. Eddy, for the Truth which she has given us through Science and Health, "Miscellaneous Writings," and her other works. I feel that I can only express my gratitude by bringing the Truth more and more into my life.

## Reading Room at Washington, D. C.

FIRST CHURCH OF CHRIST, SCIENTIST, Washington, D. C., has opened an elegant Reading Room in a fine central location in this city. The Rooms are 9 and 10 McLean Building, entrance 1517 H St., N. W., open from 10 A. M. to 5 P.M., Sundays excepted. On the walls are fine pictures of the Mother Church, and Pleasant View, the home of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science and author of its text-book, "Science and Health with Key to the Scriptures." There is also a picture of Christ in the Temple, and several very appropriate mottoes; among them Mrs. Eddy's favorite text, Exodus, 20: 3; also Philippians, 11: 5, John, 8: 32; Ephesians, 4: 29; Romans, 15: 6. All the standard literature on Christian Science is kept on sale. All interested are cordially welcomed to the Christian Science Reading Room. We feel that a new era has opened up in our Church work in this city that will be a valuable aid in disseminating the Truth that is ushering in God's Kingdom on Earth. E. B. L.

## Truth Victorious.

FROM the beginning, the attempts of error to down Truth have resulted in error being Truth's greatest helper. Error beheaded John the Baptist, and Jesus came. (Mark, 1: 14.) Error crucified Jesus, and behold, "The risen Christ." Ignorance or mortal mind knowledge questioned faith, and seemingly annihilated it, when lo! Christian Science came with understanding which cannot be downed, but proves itself to be the Holy Comforter that shall abide forever.

> Truth crushed to earth shall rise again:
> The eternal years of God are hers;
> But error, wounded, writhes with pain,
> And dies among his worshipers.

The sun never fights the mist and rain, but simply remains in its place and shines. Its very nature is eternal, while the nature of the storm is temporal.

We, as Christian Scientists, have no fighting to do. The nature of Truth is eternal, that of error temporal. We have simply to remain in place, reflecting Divine Love.

M. F. E.

The *Sunday School Times* says: "We usually think of defeat as dishonorable. Sometimes it is. Defeat is a school in which most of us have to be trained. The true science of living is not to make no mistakes, but not to repeat one's mistakes."

Rev. Dr. Hillis believes that "the Bible was never so strong and Christianity never so omnipresent in the world as to-day."

## Testimonies.

### Bright's Disease and Sciatic Rheumatism Healed.

My health had been failing for several years. My family physician told me that I had better go to the mountains, and gave it as his opinion that my health would be restored. I came to the Black Hills in the spring of 1877, but instead of improving I grew worse. The doctors here said I could not live in this country, and sent me back to my old home in St. Joseph, Mo. I remained there four months and then returned to the Hills some better but not well.

During my illness my physician told me I must get liquor and take it regularly three times a day before meals. I was then a slave to medicine and tobacco, and here was a prospect of contracting the liquor habit, which was worse, if possible, than the other two; for it dethrones reason and robs man of his self-respect. But still I must take it, for the doctor said so. So I commenced taking it, and continued for several years, and acquired a desire for it. Had it not been for Christian Science, I should more than likely have become a regular slave to the liquor habit.

Wherever I went my pills, powders and plasters, whiskey, cigars and tobacco were sure to accompany me. But still no improvement. I was again told by the doctors that I could not live in this country, and the sooner I left it the better. I had almost despaired of ever having my health again.

In the fall of 1886 I was shipping cattle to Chicago, and business called me to the residence of Mr. W. T. K., a commission man doing business in the Union Stock yards of that city. His son, a boy about fifteen years of age, was in the last stage of Bright's disease. Mr. K. informed me that four doctors had been there that day and held a consultation and decided that nothing more could be done for the boy. He told me there was a woman over in Hyde Park that had done some wonderful things in the way of healing, and as all other means had failed he thought of taking the boy to her. He related a number of cures and asked me what I thought of it. I said try it, by all means. The next morning Mr. K. took the boy to the lady. The boy received his first treatment, and on their way home he told his father he was better. That day he ate a hearty dinner, which greatly alarmed the family. Mr. K. remarked to me that he was satisfied that would be Joe's last meal. But when supper came, to their great surprise, Joe said he was hungry. He was taken to the table and again ate heartily. The family were all of the opinion that Joe would pass away during the night; but were again surprised the next morning when the boy told them he was hungry. I then came home, but asked Mr. K. to write me from time to time how the boy was getting along. In four weeks I received a letter from Mr. K. stating that Joe was perfectly well and going to school.

During the winter following I was suffering untold misery from sciatic rheumatism. I wrote to my friend asking him if he thought the lady that cured Joe could do me any good. To which he replied, "I will answer you just as you did me. If you have tried everything else, and everything has failed, I would try it, by all means."

I applied for treatment, and in a few days I was entirely healed. Not only healed of physical ills but also of the loathsome and vile habits of smoking, chewing, and drinking; and since my healing I have had no desire for them.

My wife was then in bed suffering from the same trouble of which I had been healed. I looked upon my healing as something wonderful; I felt as if I had been snatched, as it were, from the brink of the grave. I bought a copy of Science and Health and began the study of Christian Science. Up to this time I had never heard the name of Christian Science; but I knew I was well, a thing I could not have said for twenty years before. I then learned that people could be treated absently, so I told my healer to treat my wife. I then wrote to my wife and told her I was well, and Mrs. L. was going to treat her, and if she discovered any change before I got home to note the time, so she could tell me. This was Monday, and I got home the Saturday evening following. My wife met me at the door, and said she was well. I then inquired when the change took place. She replied that on Wednesday about eleven o'clock she became easy and got up and dressed herself and went out to dinner with the family. This was the day Mrs. L. began to treat her. Her healing must have been instantaneous. I said, "Here is more evidence in favor of this new remedy."

Our oldest son, then a great sufferer from rheumatism, went to the same person and was healed. He took a course of instruction, came home, went to work, and the demonstrations that followed his slight understanding were truly wonderful.

I was still reading the blessed little book, Science and Health, and by this time the Bible, which had been laid aside years before, began to be interesting to me, and when going East on business or going to my ranch in Wyoming, instead of filling my grip with pills, powders, plasters, whiskey, cigars, and tobacco, I put in Science and Health, the Bible, and the *Journal*. I made these a constant study, and in fact thought of but little else.

About this time my second son, who had been treated by many physicians and pronounced incurable by all, applied to Christian Science for treatment and was healed in a remarkably short time.

In February, 1888, I went into a class taught by Mrs. L. I received such a blessing that I was anxious to have all my old friends come into Christian Science and be happy, and I really thought they would. I came home and went to healing and preaching the glad tidings. This did not suit the mortal thought and the old serpent began to raise his head in opposition. Then it was that theology, *materia medica*, and gross error joined hands to crush Truth. But as Paul said, "None of these things move me;" I just went on doing the best I knew how, working out my own problem, and doing the best I could to help others. In February, 1889, my wife, little daughter, and I, attended a class taught by our beloved teacher and Leader, the Rev. Mary B. G. Eddy, the Founder of Christian Science.—JOHN C. RYAN, Spearfish, S. D.

### Healed by Reading Science and Health.

About four years ago I met two young ladies who told me of their wonderful, to me, healing through Christian Science. They were very earnest and honest, and as I had an opportunity to watch their every-day life I had positive proof they had perfect health without the use of drugs, and no fear of food, climate, or disease—above all, they had peace and happiness. These things I desired above all else, for I was a great sufferer with a miserable disposition, and afraid of everything in the world. I was afflicted with catarrh, female trouble, lung and throat trouble, neuralgia, rheumatism, and indigestion.

I was a physical wreck. The doctors had failed to cure me of anything, but for a while relieved me some. Soon I had to drink hot water and apply hot water as my only relief from pain.

What happiness I experienced when I became convinced that God had not sent this suffering on me, as I had been taught. I persuaded my husband, who was bed-ridden, to try the Christian Science treatment and he was healed in a month.

I thought as soon as I could afford to pay for treatment I would take it, but felt in no hurry, as I had suffered so long I had become accustomed to pain and was in no fear of immediate death.

Digitized by Google

While I waited I bought a copy of "Science and Health with Key to the Scriptures," by making a sacrifice. I went to the Christian Science Church regularly and listened to every conversation on the subject, picking up crumbs of Truth, for I was starving, suffering, and miserable.

I accepted willingly the statements I read in Science and Health, whether I understood them all or not, and to my astonishment I began to get well without treatment from any one. Nothing I ate hurt me, weather began to lose its power also.

As sunshine banishes clouds and light darkness, the diseases disappeared from my body. I was so thankful and happy. With freedom came an understanding of the Scriptures. Before I studied Science and Health I could not understand or care for the Bible, because it *seemed* to teach me I had to suffer with disease and temper that I was taught I had inherited from my parents. The Truth revealed in Christian Science showed me that God is my Father, and He is not "a sender of disease." Words cannot express how I love to study the Bible *now*, and what it reveals to me through the Key.

I have not been sick enough to lie down but one day in over four years. God's blessed word as taught and revealed through Mrs. Eddy has been my only physician. I have used no drugs and am in perfect health, and this healing, being lasting, caused my relations to know that in Christian Science there is help for the sick when doctors fail, so they are now in health also, having tried the same fountain that flows only pure, good water—Truth's fountain—Science and Health.

I should be an ingrate if I did not feel thankful to Mrs. Eddy for her books, for they teach us the absolute Truth. I must not forget to thank others that I must mention. In overcoming my faults (and errors that seemed to use me), I caused others to suffer as well as myself. To those dear Scientists who helped me by reflecting love to me, I shall ever feel grateful, for it is when we are being tried and purified that we need love. I know what is wrong and the price paid when one does not turn from it *at once*, so I can reflect love and charity to those who come after me and are just beginning to learn the price.

I thank God that my eyes are opened to these blessings, and that I have and do suffer for every wrong thought held against another, for that is justice and Scriptural.

We need not condemn or judge those who stoned the prophets in the Scriptures, for if we watch our thoughts when we are not obedient, we shall find that *here* and *now*, we stone our prophets, our *Journal* and *Sentinel*, as well as each other, by throwing hard thoughts. I thank God for Christian Science and suffering.

ADELAIDE LEFFELL, Dallas, Texas.

### Severe Case of Asthma.

It was about five years ago that my attention was first seriously directed to Christian Science; I say seriously, for I had previously referred to it with mingled jest and contempt, and even when brought to my attention seriously as a means of healing, it struck me as most absurd. Nevertheless, at the earnest solicitation of a favorite cousin, I went with her to see a Scientist friend and consented to be treated. I had been a "close communion" Baptist Church member from the age of twelve (my parents being of the same faith) and the thought of my going to be treated by a Christian Scientist struck me as being little short of ridiculous. This thought I continued to entertain during two weeks treatment, when I decided I was no better and could afford to throw away no more money in that foolish manner.

For several years I had suffered with asthma, which became so serious that I was frequently kept awake several hours during the night trying to breathe, and the next morning would feel more weary than when I retired. During the daytime I carried a vial of medicine in my pocket, to which I resorted in order to obtain relief. After the two weeks Science treatment I took up my medicine again, but I grew worse instead of better.

In the mean time, however, I had read some in Science and Health, and believing as I did in the healing as related in the Bible, and finding no good reason why this method of healing should have been discontinued, I went back to the lady who had treated me. It seemed to me that I had treated her discourteously, to say the least, and so apologized. To my surprise, however, she seemed to think I had nothing to apologize for, for she said, "O, well, that's nothing! There's more joy in heaven over one sinner that repenteth than over ninety and nine just persons."

I asked for further treatment and was healed within a week. I had thrown all my medicines away, and have never taken any since.

Disregarding Jesus' injunction, however, to "go and tell no man," I told nearly every one I knew, at the first opportunity. As a result I had several opportunities to *prove* my utterances, but aside from two instances, a year or more apart, when I thought it necessary to have further help, I have been able to handle all claims through my own understanding.

Before coming into Science I found occasion to resort to medicine frequently, for one thing or another, and while traveling always carried a well stocked medicine box.

In business I find that the nearer I approximate Scientific dealings and practice, as outlined in the Golden Rule, and explained in Science and Health, the better and more profitable the result. Truly "with what measure ye mete, it *shall* be measured to you again." In the light of which it is little wonder that Scientists should measure back at least a heart-full of gratitude to Mrs. Eddy who has voiced the Truth to this age in a comprehensive and practical manner. This I truly desire to express by works as well as words.—CLAYTON J. WHIPPLE, La Grange, Ill.

### Valvular Heart Disease.

I was born with valvular heart disease, and up to my early manhood was a chronic invalid. Finally, the physicians having said there was no help for me, my mother suggested my trying Christian Science as a last resort, which I did.

I well remember that first treatment! I was not a believer in any sense, so that the spectacle of a woman sitting with her eyes closed for a few moments, with the idea that she could help me, seemed, at the time, farcical and absurd. That night for the first time in many months I rested, and in the morning the ridicule had departed and I realized that I stood in the presence of a great Power. Suffice it to say that in less than three months I was healed, and for nearly fifteen years I have demonstrated the efficacy of Christian Science as a preventive and restorative therapeutical agency.

I immediately sought for the reason of my healing, and I found it in the Bible, our guide-book to life eternal, the spiritual truths of which have been brought to us through the divine revelation to our beloved Mother, and recorded for our daily help in Science and Health.

Our Leader ever watches tenderly over her children, holding constantly before them the light of Love that shall guide them safely to the fold where, bathed in divine effulgence, they find the life of realization, and know that they are the children of God, who is their ever-present help in time of need.

FRANK H. LEONARD, New York, N. Y.

## Questions and Answers.

*If God is omnipotent, do you not limit Him when you say He can create nothing unlike Himself?*

J. H., A Searcher for Truth.

God is more than an omnipotent deity; He is Omnipotence itself, *i.e.*, the All and Only Power. A very prevalent thought of God is that of a person possessing power sufficient to perform any act He may elect, no matter what the character of that act may be. Thus it is believed that God can and does send evil upon man whenever in His wisdom it seems just for Him to do so.

The Scriptural declaration is that a fountain cannot send forth both sweet waters and bitter. We in no sense limit God when we say He is not, and cannot be, the source of anything unlike Himself; rather does this declaration establish the true sense of Omnipotence which robs all evil of its seeming power, for if God, Good, is the only power, there is, or can be, no power in evil.

Works, more than words, declare the Truth of Being. The thought that God can and does send sickness upon man will not heal that sickness; but the assurance that God is not the Creator of sickness, that He is the only cause and Creator, and that which He did not create has no real existence, has been, and is daily, healing patients where *materia medica* has failed. Which thought of God is more helpful to humanity, that which believes Him to be capable of performing evil as well as good, or that which declares Him to be the source of good only, and that good is infinite? Nothing but the realization that Good is infinite and omnipotent will destroy the claim of evil. In the degree that you give place and power to evil, in just that much you limit Good, and inasmuch as you realize that Good is Omnipotence,—the All and Only Power,—you take away the seeming power of evil.

We do not limit God when we say infinite Truth cannot create error or believe it to be true; eternal Life cannot die or cause death; ever-present Love cannot hate or produce hatred. Rather do we declare God's omnipotence when we say He does not and cannot create anything unlike the Divine name and nature.

❦❦❦

*Is the healing of sickness the most important work in Christian Science?*—H. C. L.

The healing of sickness without the use of material remedies shows an important difference between Christian Science and other religious teachings, but this is only a part of the work to be accomplished through the understanding of Truth. The greatest and most important work is the healing of sin. The Truth as taught and demonstrated by Jesus, made man every whit whole. While the sinner is in a worse condition than the invalid, yet the invalid needs to be saved from disease and suffering.

The power and willingness of God to save from sin is a generally accepted religious tenet, but comparatively few believe that He is just as able and willing to heal sickness to-day as he was in the time of Jesus and the apostles. To cause the world to see that God's love heals sickness as well as sin, is a work of no little importance. When a person has learned to rely upon God to heal him physically as well as morally, he must of necessity have more faith in God and feel more the need of Him than when he was accustomed to use drugs or other material agencies to heal disease.

The healing of sickness is easier than the healing of sin, and the student of Christian Science begins with the more simple demonstration. As a rule the sick are more willing to be healed than sinners are to be reformed, for while sickness brings nothing but discord and suffering, the sinner thinks he finds pleasure and satisfaction in sin.

The demonstrations over sickness are frequently more pronounced than the demonstrations over sin, because the good results can be more readily seen. A week, a day, or even an hour may suffice to prove that Truth has healed disease or relieved suffering, while months might be necessary to prove that any lasting moral benefit has been experienced.

These reasons may suffice to show why the healing of sickness has such an important place in the teaching and work of Christian Science.

## The Field and Our Publications.

At the beginning of a new volume of the *Sentinel* it is noteworthy that the great body of Scientifically working Christians are evidently appreciative of its weekly and monthly literature, otherwise the manifestation of the completeness of each would not be demonstrated. The Field has ceased to consider as best one number more than another, but has recognized that all are demonstrations up to the striking-hour of Truth's appearing. As we see more work demanded and executed at headquarters, there comes a great desire to all to do more for the encouragement of those who toil from the first hour to the twelfth, knowing that the reward is alike to all, even though it be an eleventh hour awakening to duty.

And with this awakening there is the incentive to participate in the burden-bearing. Not necessarily in direct contribution to the literary larder, but in promptness in forwarding matter of interest to the Field, and in demonstrating events that will express the expansion of the Cause, and thus testify our appreciation for our Leader's love in widening channels of communication to her "world-patient." With the desires "moulded and exalted," we shall have them take "form in word and deed" (Science and Health, p. 307).

WILLIAM HALE PARMENTER, New York City.

❦❦❦

Feeling a great sense of gratitude to our dear Mother for her poems published in the Journals, I wish to acknowledge the help received from reading the poem in the July number, entitled, "Signs of the Heart." Error had been making claims of what I once thought heart-trouble, which I had repeatedly denied. When the *Journal* came to hand I sat down at once and of course read the poem first. Before it was finished, the healing Truth had dispelled the illusion.

I wish to say to all who are tempted to let their subscriptions expire, thinking they have enough to read, to listen not to the tempter, but to take the *Journal*, read it, and loan it to those who are ignorant of Christian Science. Also let us acknowledge the benefits received.

MRS. SARAH O. BRAGG, Colfax, Wash.

The *Watchman* states that it is useless to deny that in the last twenty-five years the theological conceptions of the evangelical churches have been somewhat radically modified.

The preacher's best sermon is not that which he preaches on Sunday, but the life that he lives during the week.

*The Practical Age.*

Longfellow once said: "Believe the talent of success is nothing more than doing what you can do well."

Digitized by Google

## From the Religious Press.

### Importance of this Age.

The nineteenth century will be notable in our history for many reasons. It has witnessed industrial expansions without parallel in the records of the past. It has seen inventions multiply which conquer space and time, and create a fellowship all round the globe, so that two hemispheres can think with one thought. It has watched the birth of great scientific generalizations which have profoundly modified its conception of life, have brought man into more intelligible harmony with nature, and knit all things into one mighty whole. It has seen political changes alike abroad and at home to which preceding centuries could offer no counterpart; nations have swiftly grown conscious of their unity, and risen into majestic might; while power has passed from privileged classes, and governments have learned that they exist not for themselves but for the people.

Yet these are not the only or the most eminent claims which our time will establish on the thoughtful attention of posterity. This is an age of discoveries; and it will be known hereafter, I am deeply persuaded, as the age which discovered Christianity.

REV. J. ESTLIN CARPENTER.
*The Inquirer* (Unitarian), London, Eng.

### Jewish Society of Revisionists.

The Dreyfus case has wrought untold mischief; but it may result in much good. Already it has aroused sympathy for Jews as a people through the sufferings of one of their number, now generally believed to be innocent. It seems also to have suggested among Jews a sense of guilt because of the treatment by their own race of a Jew who was innocent. At a recent meeting in Odessa to express rejoicing over the revision of the Dreyfus case, a young Jew declared that this revision ought to move Jews throughout the world to revise another unjust trial, which resulted in the execution of an innocent man—Jesus of Nazareth. Despite the protests of orthodox Jews, a number of young men have formed a society for this purpose, calling themselves Revisionists.—*The Congregationalist.*

### Pay for the Pitchers.

Dr. Adam Clarke, while preaching to large congregations in Ireland, pictured in glowing terms the freeness of the Gospel, dwelling on the point that the Water of Life could be had "without money and without price." At the conclusion of the sermon, a collection was taken up to send the Gospel to the heathen. This collection embarrassed the preacher a little, as it seemed to contradict the theme of his sermon. As he was telling the story to a Christian lady afterward, she replied: "Very true, doctor, the Water of Life is free—without money and without price—but we must pay for the pitchers to carry it in."

This discriminating remark dispels the fog that seems to hang over the minds of some who cannot see that the freeness of water is one thing, and the employment of a person to carry it is quite another thing. The Gospel is a free gift, without money and without price; but those who take the glad tidings to others must be supported so that they can carry on their good work.

*Presbyterian Review.*

### Mormons are Aggressive.

Boston Common has furnished a speaking place for the utterers forth of many strange doctrines, but on Sunday last, for the first time, a Mormon missionary appeared on that historic ground, and by grace of a city license, expounded the doctrines of the Church of the Latter Day Saints to a curious company. The fact is, perhaps, not of great significance, but it is well to note that twenty-five hundred Mormon missionaries are abroad in the land, and with one of them storming Christian civilization at its Hub, it must be admitted that Mormonism is aggressive.

*The Watchman* (Baptist).

### The Motive Important in Prayer.

God, indeed, is always giving, and long before any desires of ours went up to Him, His love was pouring down on us, just as sunbeams rushed from the sun, before the planets had been completely shaped out of the nebulous haze surrounding them, which intercepted the light. But while He is ever giving, our capacity determines the measure of our reception, and a principal element in determining our capacity is our desire. We can have as much of God as we can take, and we can take as much as we desire. Wherever the coast-line opens into a bay, the sea runs in and fills it.

But the desire that receives must be more than a feeble, fleeting wish. Lazily wishing and strenuously desiring are different: the former obtains nothing, the latter, everything. Desire must be steadfast, too. If the widow's boys had held their vessels under the jar with unsteady hands, or shifted them from side to side, much oil would have been spilled. The steadfast longing is the answered longing; but the unstable man is not to "think that he shall receive anything of the Lord."

There is but one region where, and one object of desire in regard to which, we can be certain that we shall have what we wish, and as much as we wish. Surely it is wise to turn from this world of vain longing, in which satisfied desires are rare, and are almost as disappointing as balked ones, to "him who is able to do exceeding abundantly above all that we ask or think," and will never fail to satisfy the desires of them that fear him.

ALEXANDER MACLAREN, D.D.
*The Examiner* (Baptist).

## Miscellany.

### Baptists vs. Methodists.

The leading denominations prevailing among the mountains of Virginia, Kentucky and the adjoining states are Methodists and Baptists, and as a rule they are fairly well divided among the mountaineers, but occasionally, for some reason or other, an entire community will be of one faith.

One season my work took me to a remote section on the head waters of a small creek about twenty-five miles from the north fork of the Kentucky River, and I had not been there long until I discovered that all my neighbors were Methodists. They had a good hewed-log meeting house and a Sunday School, and were thriving as a congregation.

There was one old chap, though, who didn't seem to be an enthusiast in the cause, and one day I got to talking to him about the condition of affairs.

"Were you born a Methodist?" I asked, as a starter.

"I reckon I wuzn't," he replied, with a sniff of disrespect. "My folks wuz Baptis', I guess clean frum the time uv Noay."

"You go to the Methodist church, don't you?"

"Yes, but I wouldn't ef I could help myself."

"Isn't there a Baptist church anywhere around here?"

"Not nigher than the river, and that's more'n twenty miles, cuttin' acrost ridges."

"How does it happen that there is no Baptist church with a congregation as the Methodists have? I have always seen it that way till I came here."

"Thar wuz once, up to about twenty-five ye'r ago, an' we kep' the Methodists on the jump. But somehow I guess Providence kinder forsook us after that, caze every ye'r sence then the crick has been froze up all winter and dried up all summer, and we lost our holts. Yer see the Methodis' don't need water in their business like the Baptis' does, and they keep a clutterin' right along whether it's a drouth er a freshet. The crick wuz our salvation, and when it went back on us we just famished, that wuz all, and them that didn't move down to the river jined the Methodis', me bein' one."

"I suppose there never will be any change," I said at a venture.

"I ain't so sure about that, colonel," he answered with impressive earnestness. "I've been wres'lin' with the Lord in pra'r ever since fer a flood."—*New York Sun.*

### Infant Inebriate Dying from Drink.

Probably the youngest inebriate on record is five-year-old Carl Böerner, now under treatment at the Long Island College Hospital, and not expected to survive an attack of delirium tremens which led to his removal to hospital.

Accompanied by his mother, Mrs. Catherine Böerner, a German immigrant, Carl was brought to this port in the steerage of the Red Star liner Friesland, which arrived from Antwerp on Tuesday. The condition of the child attracted the attention of the Barge Office surgeon, who after an examination of the young sufferer, caused him to be hurried to the Long Island College Hospital, with which institution the Immigration Bureau has made arrangements for the reception of such patients as are in need of medical treatment.

The story the mother told is a sad one. She said that soon after the child was born he developed hydrocephalus, more commonly known as water on the brain. The attending physician told the mother that the infant would be subject to convulsions as it grew older, and directed that whiskey be administered whenever the attacks came.

They came so frequently during the long voyage across the Atlantic that the poor mother thought it necessary to keep the child continually under the influence of whiskey, with the result that delirium tremens set in when the vessel was nearing port.

That he will recover is not believed by the surgeons. Every method known to medical science in such cases has been resorted to, however.—*New York World.*

### Anniversary of Washington's Death.

On the 13th and 14th of next December the one hundredth anniversary of George Washington's death will be extensively celebrated. As George Washington was a member of the order of Masons, that fraternity in the vicinity of his residence, and the State in which that residence was, will begin an elaborate program December 13. The Grand Lodge of the State of Virginia will convene in Alexandria, and on the next day, the 14th, they will proceed to Mount Vernon, where the funeral services of December 18, 1799, will be duplicated as nearly as possible.

This anniversary must not be left wholly to Masons.—*New York Christian Advocate.*

## Notices.

Applications for membership with the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 7, 1899, must be in the hands of the Clerk of the Church on or before the 15th day of October.

WILLIAM B. JOHNSON, Clerk.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price, (cloth), each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth), each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An Illustrated Poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of the First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services in all the Christian Science Churches throughout the year.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles — cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, the First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Items of Interest.

The court-martial trial of Captain Dreyfus ended September 9. The prisoner was convicted of high treason and sentenced to ten years imprisonment. The case was decided after two hours of deliberation. The court stood five to two against the prisoner. M. Demange, the senior counsel, made a brilliant speech in behalf of the prisoner. M. Labori renounced his right to speak. The crowd on the outside greeted the verdict with cheers for the army. All Europe outside of France is filled with disgust and indignation at the verdict. Dreyfus was stupefied when Maitre Labori communicated to him the verdict, but he soon rallied and has seemed in better spirits than might have been anticipated. He is convinced that the ten years imprisonment to which he has been sentenced will be wiped out by the five years solitary confinement on Devil's Island, and he expects to be released by October 15. On this point the lawyers are divided. Many take the same view as the prisoner, while others, among whom is Maitre Demange, think the five years will count for nothing. The judges of the court-martial signed a recommendation for mercy and expressed to the President of the republic their sincere desire that Dreyfus shall not be submitted to a fresh degradation.

President McKinley has returned to Washington and the report is given out that his future course in relation to the new dependencies will be as follows. As soon as the rebellion is crushed in the Philippines a civil government by three commissioners will be established. Military control will be continued in Cuba, until it is determined, by means of a general election, whether the inhabitants desire independence or annexation. For Porto Rico a civil government of the territorial form similar to that now in Arizona. For Hawaii a territorial form of government, as recommended by the Hawaiian commission.

Admiral Dewey will be given his home coming welcome in Washington on the night of October 2. On the following afternoon he will receive from the hands of President McKinley, the sword which Congress voted him. Immediately after his arrival he will be granted indefinite leave of absence and will again be assigned to duty only upon his own application. The Admiral will be sixty-two years old December 26, and it is reported that he will at that time be placed upon the retired list.

Tuesday, September 5, was the great day of the Grand Army encampment at Philadelphia, Pa. The parade was six hours in passing the reviewing stand. There were thirty-five thousand men in line. President McKinley made two speeches. After reviewing the parade the President visited Admiral Sampson's fleet. As he stepped on board the flagship the entire squadron fired the President's salute of twenty-one guns, and the bands of all the ships simultaneously played "Hail to the Chief."

At the close of business August 31, 1899, the public debt, less cash in the treasury, amounted to $1,157,306,555. The net gold in the treasury was $248,757,971, the largest amount in the history of the government. The receipts from all sources during the month of August were $49,978,173. The disbursements amounted to $45,552,311, leaving a surplus for the month of $4,455,862. The disbursements charged to the War Department amounted to $14,981,390.

Miss Susan B. Anthony, who has just returned from abroad, says the Woman's Council in London was a grand success. She says it is a pleasure to note the change in sentiment towards woman's suffrage in England in the last sixteen years. About three hundred Americans attended the meetings, and next to England, America had the largest number of speakers.

The situation in South Africa has changed very little in the past week. The Boers have asked of Great Britain an explanation as to why British troops are being massed on the Transvaal frontier. President Kruger urges moderation and favors further efforts for peace. In the mean time the Boers are concentrating on the border.

Japan's new religious law has gone into effect. According to the new law, all sects, Pagan or Christian, are placed under the absolute control of the local governor. The law is very sweeping in its provisions. All the affairs of the church, even the minutest detail, must have the approval of the governor.

Information is received from Manila that the insurgents have issued three million dollars in paper money, the acceptance of which is made obligatory. The bills are redeemable in three years. A call has been issued to the property owners of the interior to supply carts, horses, and cattle without remuneration.

The twenty-fifth annual convention of the American Bankers Association met at Cleveland, O., September 5, with between twelve and fifteen hundred delegates from all sections of the country. The amount of capital represented was nearly five billion dollars.

The receipts from all sources at the three principal ports in the Philippines amounted to $667,618 during the month of August. This is $18,242 in excess of any previous month since the occupation by the United States.

During the seven months ending July 31, 1899, the exports from the United States to Cuba were $14,116,993 and imports $19,976,965. The exports to Porto Rico for the same period were $2,299,221 and imports $3,379,944

New York City's loving cup for Admiral Dewey is being made of the finest eighteen carat gold, and will cost at least five thousand dollars. It is being made by Tiffany, and will be ready for September 28

At the last of the official trial races the Columbia beat the Defender 10 min., 7 s., over a thirty-mile triangular course, and has been chosen as the boat to meet the Shamrock in the international cup race.

President McKinley has determined to send General Merritt to the Philippines to take command of the new army. General Otis will continue to have charge of civil duties and be military governor.

September 4, 1899, was the beginning of the Hebrew New Year 5660. The usual service was held in the various synagogues and in many places prayers were offered for the acquittal of Dreyfus.

The signing of the Parcels Post Convention between the United States and Germany on August 26 resulted in an agreeable exchange of courtesies between the Kaiser and President McKinley.

The four conferences of college students held this year in different parts of the country were attended by twelve hundred students representing nearly four hundred institutions.

Information is received from Washington that Great Britain and the United States have practically agreed upon a temporary line defining the boundary between Alaska and Canada.

Admiral Dewey has sailed from Ville France for Gibraltar, where he expects to stay until September 12. He is reported to have said he dreaded his countrymen's reception.

It is proposed to form a union of all the labor organizations in the district of Greater New York. The new organization will have a membership of nearly five hundred thousand.

General Fitzhugh Lee has made a report on the prevailing conditions in Cuba, and argues for an independent government for the Cubans under an American Protectorate.

The national convention of the Letter Carriers Association assembled at Scranton, Pa., September 5, with an attendance of over one thousand delegates.

The North Atlantic Squadron, under the command of Rear Admiral Sampson, was at Philadelphia during the National encampment of the G. A. R.

Over twelve thousand manufacturers of Spain have refused to pay the new taxes, and many land owners have decided to follow their example.

Rear Admiral Schley has accepted an invitation to visit Atlanta this coming fall. He will be the guest of Governor Chandler and others.

Twenty-nine states were represented at the eighteenth annual encampment of the Sons of Veterans at Detroit, Mich., September 7.

A Lancashire, England, firm has secured a contract for the shipment of ten thousand tons of steel to the United States.

Spain and the United States have agreed to begin the negotiation of new commercial treaties at an early date.

J. M. Levy has offered to buy the entire real estate holdings of William Waldorf Astor in New York.

Colonel Albert D. Shaw of Watertown, N. Y., has been elected Commander-in-Chief of the G. A. R.

An organ built recently to be run by electricity, is said to contain 64,500 miles of wire.

At a recent meeting of the Council of India, gold was made the legal tender in India.

It is reported that a gun recently made at Woolwich, Eng., shoots fifteen miles.

The European demand for American apples this year is greater than usual.

Labor day is now a holiday in twenty-nine states and territories.

Admiral Dewey left Gibraltar for New York, September 10.

The cotton crops for 1898-99 amounted to 11,274,840 bales.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Beginning of the Hebrew New Year.

### An Occasion of Solemn Import.

BEGINNING to-night with the first appearance of the new moon, and ending to-morrow night with the earliest shining of the stars in the sky, the first day of the month of Tisri is observed by Jews everywhere throughout the world as the introduction to the 5660th year since the creation of the world, and as the beginning of the ten days of repentance preceding the day of atonement.

Though the first day of the year, reckoning from the Mosaic creation, it is at the same time the first of the seventh month, computing from the Passover, the date of the deliverance of Israel from Egyptian bondage. The ancient Hebrew year was divided into two equal parts, the beginning of each of which was, and still is, a time of special sanctity. The real year begins with the month Nisan, the early spring, the time of the Passover, from which all the other holidays of the following twelve months are computed, and which is the starting point of the religious year. But the civil year begins to-day, and from it are reckoned all civil and commercial periods.

Because of the dependence of the Hebrew calendar upon lunar changes, the dates of the sacred days vary widely from year to year. Thus, the new year, which falls this year upon the 5th, was last year the 17th, will be next year the 17th, and in 1901 the 24th.

Though originally of chiefly civil import, as explained, the first day of the month Tisri has come to be used among the modern Hebrews as of exclusively religious significance. In the old days, before the Captivity, the coming of the new moon was watched for by eager eyes posted on every hilltop, and as soon as the most keen-eyed saw it in the evening sky, the news was signalled by a watch-fire on the top of the nearest mountain, and the next summit kindled its ready blaze to send the good news along, till Jerusalem was reached by this species of wireless telegraphy, and the Sanhedrim solemnly declared the new year begun. Then the blasts of a ram's horn made vocal announcement of the fact that another year had been completed, bringing round the day of Zion's final triumph, and all slaves who had been seven years in bondage were thenceforth free men and women, going forth from the houses of their former masters as they heard the blast of freedom from the nearest ram's horn.

To the modern Hebrew the significance of the day is, of course, spiritual and historical. There are no more slaves to be set free when the new moon of the month Tisri first shows its slender crescent above the sunset, but to every individual Jew the time is sacred with suggestiveness of deliverance from the bondage of sin, of re-acceptance of the ancient covenant, and to the strictly orthodox the day stands out unique as the anniversary of the beginning of creation, and the date on which the Lord of earth and heaven ascends the throne of judgment, and metes out to all living things their bane or blessing for the coming year.

Just as various denominations of Christians attach different significance to the words and miracles of Christ, explaining in numerous ways the doctrines of the apostles, and giving a literal or a symbolical interpretation to the Bible as a whole and its parts in particular, so the Hebrew peoples, though a unit in thought and feeling as no other people are, are of various minds concerning the proper method of carrying out the ancient ritual, and keeping the letter and the spirit of the commandments.

In the orthodox congregations the blue and white "tal'ith" is still worn by the men when they assemble for "Rosh Hashona," the solemn service of New Year's eve, as well as its continuation the following day in the shakrith. The long ritual of the day was written during the captivity in Babylon, and its chanting requires from five to six hours. It exalts the God of Israel, calls the chosen people to repentance, and announces a final triumph over all the enemies of Zion. The great roll of the law is taken from its resting place in the ark of the covenant behind the pulpit, and the service is almost entirely conducted in Hebrew. Blasts of the ram's horn, blown according to conventional rules, form a prominent part of the exercises, and the scene, even to a casual spectator, is impressive in the extreme. Nothing but grave sickness will keep any strict Jew from the service, and the fixed faces and eager attention of all indicate the solemnity and deep sacredness of the occasion. An extract from the ritual will serve to illustrate the importance attached to the day:—

> We will express the mighty holiness of this day, for it is tremendous and awful, on which Thy kingdom is exalted. Verily, it is Thou who art Judge and Arbitrator, who knowest all, and art witness, writer, recorder, and teller. Thou callest to mind all things long forgotten, and dost open the book of records so that it may be read of itself; every man's signature is in it. The great trumpet is sounded! A dull, murmuring sound is heard! The angels shudder! Fear and trembling seize them! "Ha! [they cry] it is the day of judgment!" (For in justice even they are not found faultless before Thee.) All who are about to enter the world pass before Thee as a herd of sheep. . . .
>
> On the First Day of the year it is inscribed, and on the Fast Day of Atonement it is sealed and determined how many shall pass by, and how many be born, who shall live and who shall die, . . . who is to perish by water and who by fire, who by sword and who by wild beasts, who by strangling and who by lapidation; who shall be at rest and who wandering; who shall reap enjoyment and who shall be painfully afflicted; who grow rich and who become poor.

At the close of the long service friends greet each other with the words, "Leshono tovo tikosev," meaning, "Mayest thou be inscribed [in the book of life] for a happy year."

## More than Sect or Creed.

What Love Divine does not permit
Does not exist at all;
For Love is God and God is Mind,
And Mind is All in All.

Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me.— PSALM 23: 4.

THE confidence which David had in God as expressed in the foregoing is an exemplification of the underlying Principle upon which Christian Science is founded—Divine Love,—that perfect Love which casteth out fear: because fear hath torment, as John tells us. Can you comprehend anything more satisfying, more comforting to troubled mortals than that which is contained in Isaiah: "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness"? Fear, as Christian Science defines it, means error, ignorance. When the Saviour had healed the woman in the synagogue on the Sabbath day and was rebuked by the ruler, he said: "And ought not this woman, being a daughter of Abraham, whom Satan [error] hath bound, lo, these eighteen years, be loosed from this bond on the Sabbath day?" And again in the thirty-second verse, after having been warned that Herod would kill him, Jesus said to the Pharisees, "Go ye, and tell that fox, Behold, I cast out devils [evil], and I do cures to-day and to-morrow." Thus it will be seen the injunction to cast out demons, as understood by Christian Scientists, means to force out error, *i.e.*, evil, sin, sickness, fear, by implanting in human consciousness the realization of the omnipotence of divine Love. It is conceded that sin and sorrow may be destroyed by mental action, why should it be thought incredible that sickness might be destroyed in the same way? Most of us have been taught to believe that matter was the basic principle of the universe, and therefore have depended too much upon material things for help.

"But ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you. Now if any man have not the Spirit of Christ, he is none of his" (Romans, 8 : 9). Just so long as mortals continue to look to the body for health, just that long will they continue to be deceived, because health cannot be found in matter, neither can matter be made the foundation for health, for there is no intelligence in matter. Mind is the seat of all intelligence. All is Mind. "This great fact is not, however, seen to be supported by sensible evidence, until its Principle is demonstrated by healing the sick and thus proven absolute and divine" (Science and Health). And what is the effect of the application of this system to the cure of disease? It is undoubtedly the safest and most effective method of healing [illegible] scientific system. Thousands of intelligent people have applied and are applying this means as their sole remedy in the treatment of disease of every nature with results incomparably superior to those obtained by the use of any other remedial agent. Let us suppose, for example, that if any one of you knew of a system of medicine that cured a greater portion of its patients than any other system ever discovered, if you knew its practitioners accepted the responsibility of so-called incurable cases as readily as the so-called curable, and healed them with equal facility; if in addition to all that, this system healed broken hearts, reformed blighted lives, and revived prostrate hopes, would you not desire to have all the world know of it? Christian Science does all this and even more. Christian Science is what its name implies—the Christ knowledge. It is primitive Christianity revived; the healing and saving power as taught and demonstrated by Jesus.

It is more than a mere sect or creed; it is a vast movement that is revolutionizing the theological and medical thought of the world. The world needs Christian Science to-day, not only to heal its sick, but to heal its healers. The physician is as much in need of the healing power of Truth and Love as the sick can possibly be. Its theology and medicine are one, governed by the one infinite Principle—God. It has no secrets from the public. It has no hierarchy, no professional class. All its students and adherents, because of the impulsion of Truth, undertake the ministry of this gospel of healing to the sick and sinning. They have felt its effects upon themselves; they have seen its good effects upon others; they have prayed to God as Christian Science has taught them to pray, and He has, to their positive knowledge, time and again, favorably answered their prayers. He has become to them a living, present, all-powerful, all-loving God, such as Jesus the Christ described, not such as men have since conceived. One of the reasons why Christian Science is showing such a marvelous growth is because mankind is learning that the religion of Jesus Christ was not established solely for death-bed purposes, but to benefit mankind in its present state of being as well as for a higher ultimate end. It is the religion of the here and now.

The Scriptures glow with golden promises, yet humanity seems to interpret them to mean in the great beyond, while Christian Science proves that these promises can be realized in this life. "Thy kingdom come," is understood to mean that God's kingdom *is* come, it is here on this earth, not in the dim, distant future, hidden by an impenetrable veil, and we should demonstrate it forcibly by conforming our daily life to the precepts of the Golden Rule, by living "in holiness and righteousness before him, all the days of our life," that the spirit which was in Christ Jesus may be also in us. "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven" (Matthew, 5 : 16).

"Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things." If we but look well after the present, the hereafter must needs hold no terrors. Christian Scientists are not alone in making and substantiating the claim that Mind is all. In his recently revised work on metaphysics, Professor Borden P. Brown, after stating the proposition that in this world there is nothing but Mind, says, "A thought world is the only knowable world; and a thought world is the only real world." How can people oppose a religion that teaches nothing but good? To give to tired humanity the assurance of an ever-present help in time of need, and the realization of the peace which passeth all understanding is the object and aim of Christian Science.

*Press*, Ottumwa, Ia.

---

*Zion's Herald* says: "Never had the church such need of power. Never, as now, were there such possibilities in the use of power. The political and the intellectual world are acknowledging the right and righteousness of Christianity —steam is already too slow. We harness to the forces of electricity and seek the speed of light and thought. Christianity must keep up; must have no lack of power."

---

The *Morning Star* says: "There exists a strong tendency to lean on statistics to prove that all's well with the churches; and not only to lean on them, but to stand on them, and even to lie down upon them in contented ease."

## Reasons for Their Faith.

OUT on Gamage Avenue, beyond the hill and the pines, lives the Reader of the only Christian Science Church in Lewiston or Auburn, Reuel F. Gordon. The *Sun* reporter called at the pleasant home the other day, and was met by Mrs. Gordon, a sweet-faced, healthy woman, who practises as well as her husband.

They have one son now, little Forest, who is about seven years old. He was never ill in his life. Once he had whooping cough, but his parents treated him, and he was not sick.

Said Mrs. Gordon: "A short time ago he was playing with nails barefoot, and stepped on one of the nails. I had to pull twice to get it out, and the wound was half an inch or so deep. I treated it, and he soon stopped crying. In ten minutes he was out playing again. The wound was not sore, and the next day you could hardly tell where it had been. He never took any medicine in his life. Christian Science has always been effectual in helping him out of his childish troubles."

"How did you come to believe in Christian Science?" asked the reporter, turning to Mr. Gordon.

He answered: "After the death of my father and mother, two brothers and two sisters were under medical treatment, and after my wife had been treated several years by some of the best physicians of Lewiston and Auburn, without any permanent benefit, my faith in medicine was not very strong, and when Christian Science was suggested to me, I employed it without any expectation of receiving help, and so told the healer. My wife had no faith in it, but we were ready to try anything. After receiving treatment, there was such a decided improvement that I became convinced that there was something in it, and the more I studied its ethical and therapeutical propositions, the stronger became my conviction that it was an appeal, not to the imagination but to reason."

"What is your theory of healing?"

"Christian Science teaches that man's normal condition is one of health, that sickness is abnormal, that it is the effect of diseased thoughts made manifest on the body. Its healing work is accomplished through the understanding that God is the Principle of all that really exists, and by realizing what constitutes man's relation to Him. This destroys the fear of disease, and thus prevents as well as heals sickness. To gain a proper idea of this subject one should thoroughly study the Christian Science text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy."

"About broken bones?"

"At this stage in the understanding of Christian Science, surgery seems more difficult to demonstrate than other branches, although there are many well-authenticated cases of broken bones and dislocated joints being healed by mental surgery alone, but usually in cases of broken bones a surgeon is called to set the bones, while Christian Science prevents inflammation and suffering, and such cases are usually healed very quickly.

"As to recent cases of prosecution for alleged cruelty?"

"When it is understood that in many places Christian Science has largely cut down the practice of physicians, their opposition is easily accounted for, and prosecution seems to be their natural remedy. I suppose they allege cruelty and neglect in order to arouse popular indignation, but this is unjust, for there is no class of people who manifest more love, patience, and tenderness in caring for the sick than do Christian Scientists, and if they are guilty of neglect when they employ the Greatest Physician known, what must be the responsibility of those who employ lesser ones?"

"What relation does hypnotism or magnetism bear to your work?" asked the reporter.

"None whatever," replied Mr. Gordon, emphatically.

"What are your views of Heaven?"

"I believe Heaven to be a condition of mind where all evil has been eliminated, and not a place. I believe this, first, because Heaven as a place cannot be located. Second, because the great Master declared that 'the kingdom of God is within you.' Third, because it is only through mind that we can perceive and experience the presence and uplifting of divine Love, and declare that 'the things which are seen are temporal; but the things which are not seen are eternal.'"

In regard to his church, Mr. Gordon said:—

"We have a small but growing church here in Auburn, with a present membership of forty-five. Our average Sunday attendance since last January has been a little above fifty. We hold services every Sunday at 10.30, in K. of P. Hall, 103 Main Street, where the lesson sermon is read. There is also a Wednesday evening meeting at 7.30 in W. C. T. U. hall, 90 Court Street; this is an experience meeting, where testimonials are given. To both of these meetings the public are invited. The bills of the church are paid regularly every month, and the money is raised by voluntary contributions. We have no church fairs, no excitement, nor is undue influence used upon any person."

When asked to define his position in a few words, Mr. Gordon said:—

"I will briefly answer that believing Christian Science to be God's revealed way, or the only way to a full salvation, which must necessarily include freedom from physical suffering as well as from sin, I have no confidence in any system which treats only one side of the subject, as calculated to permanently benefit mankind.—*Sun,* Lewiston, Me.

## Religion Pure and Simple.

After a while, the clashing creeds,
That led to strife and hate with men
Will yield to our superior needs
And love will prompt the lip and pen.
SICKLES.

CHRISTIAN SCIENCE is not a creed in the common acceptation of the term. It has not, nor does it require priest or parson to expound the beauties of its beliefs. It is a religion pure and simple. Pure because it teaches that "God is Love." Simple because a child can understand it.

The Truth as taught in the Bible is clearly and concisely revealed in Mrs. Eddy's book, "Science and Health, with Key to the Scriptures." A careful reading of this book will convince the utterly sceptical of the purity of her thought and the thorough logic of her reasoning.

Christian Science is the most profound fact of this century. If it be true, and time demonstrates such to be the fact, there is nothing on this earth that can pull it to pieces, for its foundation is built upon a rock so firm that it will stand the ravages of time eternally. If Christian Science be not true it will fall of its own weight, like a house built upon the sand.

This religion, therefore, does not occupy any middle ground. Judging its future by its past, and looking over the large number of eminent thinkers, lawyers, doctors, students of divinity, etc.,—who have thrown aside their former ideas of religion, therapeutics, and chosen professions to join the ranks of its thousands of earnest and faithful devotees, they must truly believe that its love and mercy

is not strain'd;
It droppeth as the gentle rain from heaven
Upon the place beneath: it is twice bless'd;
It blesseth him that gives, and him that takes:
'Tis mightiest in the mightiest: it becomes
The throned monarch better than his crown.

## Voice of the Press.

### Ignorance of the Press.

Many of the papers over the country, little and big, have recently had much to say of Christian Science. This subject has been forced on the attention of the public on account of its wonderful growth and on account of the efforts that are being made to suppress it. We know of no subject where the press has displayed such dense ignorance as in this. Even our own worthy contemporary recently stated that Christian Science practitioners ought to be arrested for murder. To be murderers they must have killed some one with deliberate, malicious aforethought. It is true that men and women die under Christian Science treatment, but there is no pretence that there is any intention to kill, any more than if they had been under the care of a physician. No person is forced to take Christian Science treatment, any more than he is compelled to go to a certain physician. There is manifestly no intent to do anything but to help the sufferer, and it is absolutely silly to call it murder, no matter what mistake he who seeks to help it may be laboring under.

There has been nothing in recent years in this or any other country that has had the wonderful success that Christian Science has had. It numbers among its adherents some of the greatest intellects of the country,—physicians, lawyers, judges, ministers, teachers, men and women in the highest positions of honor and trust and of the greatest attainments. Any doctrine or philosophy which has such a vast number of devoted and intelligent followers, proves itself worthy of intelligent investigation rather than ignorant condemnation. While we are not a Christian Scientist, we have given the subject much careful study, and are ready to state that if the teachings of Christian Science were accepted and practised, evil, sin, and selfishness would find no place in the hearts of men, and their lives would be tuned to perfect harmony with that of the Master.

The notion that Christian Scientists teach that, no matter what your ailment may be, if you believe you are well, you are well, or will be, is very prevalent. They do not teach anything of the kind. They say that "God is All-in-all," that He is omnipotent, that He is able to cleanse us not only from evil and sin but from sickness and error. They claim that God is all Truth and Power and Love, and that sin, evil, sickness, and error are not a part of Him, did not emanate from Him, but are opposed to Him. They say that if we can only come to the complete understanding of God and Truth, can lay hold of God and His Love, that all that is opposed to Him and His attributes must, of necessity, disappear from our lives. They hold that the life which is lived in perfect harmony with Christ's can have nothing in it out of harmony with him. We are not giving these as our beliefs or doctrines, but are simply stating in brief what we understand to be the teachings of Christian Science. Surely the doctrine that sin and sickness have no real place in men's lives, cannot be altogether productive of evil. We have a great many friends and acquaintances who accept these peculiar doctrines, and we must say that for real, practical Christianity, for happiness and contentment, for all that goes to make up a real, true life, we have never known their peers.

*Democrat-Lever,* Plattsburg, Mo.

### Advice to Medicos.

The war of the regular medical practitioners against the Christian Science healers still continues. Perhaps it might be as well for the medicos to agree among themselves before attacking other systems. There are several schools of medicine, each of which denounces the others, while they all depend upon the principle which is at the bottom of Christian Science—that of inspiring faith in the patient as to the efficacy of the means of cure. It may be a rash experiment to trust a sick patient in the hands of a person who ignores established rules, but the whole history of medicine is a record of experiments. Prohibition of Christian Science practice can be justified only on principles that would justify the suppression of homœopathy or any other school of medicine. It seems like murder to give a sick child over to persons whom ordinary judgment might regard as cranks and fanatics, but if we knew just what experiments medical men perform with their drugs it might seem still more like murder to trust to them. Yet we do so, and if the experiment is a success the physician gets the credit; if it is a failure we say it was the will of God.

*Times,* Lynn, Mass.

### Medical Treatment of Children.

Legal proceedings against the Christian Science healers in Newbury are proposed. It is rather difficult to see what the courts can do about it. A child died, it is true, under the care of a Christian Science healer, but, though it may be unfortunate that parents should prefer that sort of treatment for their children, it is nevertheless a fact that they have a right to adopt it, and the courts are not likely to put any obstacle in their way. As the laws stand now, parents have much the same control over the medical treatment that shall be given to their children that they have over food and clothing. No doubt there are mothers who give their children unwholesome food, under the impression that they are doing the best possible thing. If they are mistaken, and the child dies in consequence, it is not probable that the law could punish them. Nor would it be wise to attempt the regulation of all such matters by law. Parental responsibility has got to have some play, even if in some instances it proves to be entirely inadequate. If occasionally a parent does not know what is best for his child, that furnishes no reason for putting all parents under the guardianship of the state in the matter of medical treatment.—*Standard,* New Bedford, Mass.

### Good Deeds Arouse Jealousy.

If Christian Science be a delusion, as its enemies affirm with so much attention to detail, why attack it so persistently? The inherent weakness of any delusion is bound in the end to prove its undoing. The truth seems to be that these Christian Scientists are doing so much good that they have aroused the jealousy of other schools of the healing art, and have for this reason alone been tried, convicted, and sentenced in a most summary fashion. If all medical practitioners were to stand or fall upon the number of cases they lose, their number would wonderfully decrease. Better not persecute these people. If they are in the right persecution will strengthen them; if in the wrong the evil will work its own cure.

*Gazette,* Haverhill, Mass.

### Remarkable Comparison.

We are inclined to the belief that the proposed legal proceedings against the Christian Scientists of Needham, because a child died there last week, will not ever amount to much. The courts will be very slow to interfere with sincere advocates of any Christian belief. It was rather remarkable that another child who died at the same place of the same disease, but who was treated by regular physicians, lived only three days, while the one treated by the Christian Scientists lived eighteen days.

*Journal,* Newton, Mass.

Digitized by Google

### If Persecution Keeps Up.

A nine-year-old boy having died under Christian Science treatment at Needham, Mass., the doctors of that town have united to investigate the matter. Now suppose the Scientists combine and investigate the deaths of those who passed out of this life while under the care of the regulars. What an investigating time we are going to have in the not remote future, if this sort of thing keeps up.

*Gazette,* Haverhill, Mass.

### Its Own Failures Unexplained.

The "old school" at Needham is "aroused" over the death of a child who underwent Christian Science treatment. Bless us, hadn't the "old school" better explain the death of countless thousands of children under their own treatment? The "old school" is an intolerant body of gentlemen, the *News* is telling you!

*News,* Waltham, Mass.

## The Lectures.

### At Pipestone, Minn.

The people of Pipestone have never had the opportunity of listening to a finer lecture than that delivered by Hon. W. G. Ewing, of Chicago, at the Ferris Grand Thursday evening, August 24th, on the subject of Christian Science. There was a good sized audience present, and all gave the closest attention to the distinguished speaker. Mr. Ewing is an eloquent speaker, and logical, clear, and broad-minded in his remarks. Although he spoke over an hour and a half, the time was much too short to handle his subject from every point. Mr. Ewing has been for years Judge of the Superior Court of Chicago, and recently declined reappointment to accept a position as a member of the Board of Lecturers of The First Church of Christ, Scientist, of Boston. The lecture will give an onward lift to the Christian Science society of this city. The introductory address was delivered by Miss Florence Wilson.—*Pipestone Star.*

The introductory address was as follows:—

In the year 1866, Mary Baker G. Eddy discovered the Science of metaphysical healing, and named it Christian Science. Possessing a mind of wonderful brilliancy, yet overwhelmed with a keen sense of the suffering imposed by mortal beliefs, she had sought relief from earth's sorrows in a profound study of the Bible, and after years of devotion to her mighty task she gave to the world, not a new religion, but a clearer comprehension and understanding of the old one,—the religion of Jesus the Christ.

In this Science, which makes the seeming mysteries of the Scriptures so plain that a little child may understand, this generation has received a blessing the world has not known since the days of the apostles, when the sick were healed, the lame made to walk, the blind to see, and the dead to spring into newness of life through the understanding and demonstration of the Divine Mind.

Thirty years ago the discoverer of Christian Science had but a single student, but with unshaken faith in the omnipotence and omnipresence of eternal Good,—God,—she pressed forward to establish her church and fulfil her divinely appointed mission; and to-day her grateful and loyal followers may be numbered by the hundreds of thousands.

It is not possible that you may learn in one brief hour or two, all that Christian Science is or what it does for mankind. The theme is far too vast. It would be like trying to fathom in one short day the inexhaustible resources of Infinite Mind. Christian Science is not a theory, but a life. It is a growth into the Christ thought and work; to comprehend and understand eternal God,—Good,—whereby we are lifted out of a finite, material, false sense of life, into the infinite, the immortal, and the real.

In order that Christian Science may be more clearly presented to the people, it has been deemed advisable to send out lecturers into different sections of the country. We have with us this evening Hon. W. G. Ewing of Chicago, who will now address you on the subject of Christian Science.

Mrs. C. F. MARSH.

### At Hallock, Minn.

Hon. W. G. Ewing of Chicago delivered a lecture on Christian Science, at the Court House Hall, Tuesday evening, August 22d.

The audience was a representative one, and the hall was well filled; many Scientists were present from neighboring towns. The speaker was introduced by Mr. James Mitchell, First Reader of the local church, who said:—

*Ladies and Gentlemen:*—In this age of enlightenment and progress, the great query is, What constitutes the life of man? Solomon's advice is to "Get wisdom. Get understanding." "Keep her, for she is thy life." Man is realizing that what was logic in Solomon's time is good logic to-day, and is daring to thrust aside the old creeds and dogmas of past ages, and goes delving into the realm of the real, and brings to light some of the innumerable treasures of Truth for the benefit of mankind. Such is the aim of Christian Science. It is already accomplishing a great work, and will eventually bring destruction to all forms of evil.

Truth is self-assertive, and we all are in need of it. Men are made better by it, their spiritual welfare is promoted, the so-called ills of the body are healed by it, and we can find it an ever-present help in all our troubles and dilemmas.

You have been invited this evening to listen to a lecture upon the subject of Christian Science by Judge Ewing, who is eminently qualified to impart to you a knowledge of what constitutes unadulterated Christianity. He has personally experienced the healing power, and has demonstrated beyond cavil that it is truly Christian and Scientific. Of course you can expect to grasp but slightly the understanding of Christian Science by listening to a single lecture on the subject, but you will have the opportunity to learn something of what it really is, and some of the erroneous impressions being corrected, your further progress will then depend upon yourselves, as it is the inevitable law that each must work out his own problem. I have the honor to introduce to this audience the lecturer of the evening, Hon. W. G. Ewing of Chicago.

M. A.

The *Christian Advocate,* in alluding to the fact that the Bible has been translated into more than two hundred and fifty languages, says: "We venture the opinion that the King James version has formed the basis for the translation of at least one-half of that number. It is so strong and exact that the average translator of to-day can reproduce the Bible better from the English than he could from the Hebrew or the Greek."

The *Universalist Leader* says: "The well-meant self-denial of many of our pioneer ministers has not produced the fruits intended. They have trained the people to depend on the minister and not on themselves. We are fully persuaded that harm is done in a parish every time it has the services of a minister for nothing or for less than it should be."

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## From the Songs of David.

God is our refuge and strength, a very present help in trouble. Therefore will not we fear, though the earth be removed, and though the mountains be carried into the midst of the sea; though the waters thereof roar and be troubled, though the mountains shake with the swelling thereof. . . . The Lord of hosts is with us; the God of Jacob is our refuge. . . . Be still, and know that I am God: I will be exalted among the heathen, I will be exalted in the earth.—*Psalm* 46.

## Who Did Hinder You?

It is second nature to attribute our backwardness in spiritual growth or our failure to grow, to the frowardness of persons or circumstances. The Scriptures ask. "Who did hinder you that ye should not obey the truth?" and "Mortal Mind," the advocate of Self, replies, urging that such a one hindered him by slighting his efforts and refusing to give him credit for what he had done, or that circumstances frustrated his good intentions, and thus caused him to fail.

Let us resolve never to whine, but to answer manfully and meekly the questioning voice of Spirit, with the honest confession that our sinful self-love, and that only, hath hindered us. Is God's child, the reflection of Omnipotence and Omniscience, so circumscribed, that any outward person or thing can hinder him from unfolding the divine nature with which he is endowed? Is there any other success than this unfolding? Is there any other failure than to remain tightly rolled up in self?

It is almost fatal to the growth of true manly and womanly character as revealed in Christian Science, to accept the wrong standard of what constitutes success. If we fondly dream of wealth, leadership, or fame, and think that these are the insignia of success, we shall miss "the prize of the high calling of God in Christ Jesus." Our real success never for one moment depends upon the help or hindrance of other people. If our desire is to become magnificent and mighty among men, then we may be hindered from realizing our desire by the untoward attitude of men or events; but if our only aim is to be humble, kind, loving, honest, and pure, who or what can hinder us, except our own idolatrous love of self?

Let all the world frown upon us—can we not still be loving? Let our words and deeds be misunderstood and misrepresented—can we not yet be true? Let our highest thought and best deeds be received with contempt, as were those of Jesus and Paul—have we not the unhindered freedom to be meek and unresentful?

God's legacy to man is His own infinite wisdom, power, goodness, and love—His own character by reflection. To prove his kinship, man must do certain things, namely, be pure in heart, and love his neighbor as himself, and it is so arranged that nothing can prevent him from furnishing this proof.

Every human foible and peccadillo must go down before the inexorable law of divine Truth.

Christian Science comes offering to mankind the trinity of Life, Truth, and Love in exchange for the trinity of sin, sickness, and death. Is it not a munificent offer, and when seen and understood by men, will they not gladly make the exchange?

The soldier of Christ will best serve his cause by neither rushing recklessly on in advance of, nor lagging sluggishly behind, the main army. He will keep in strict line of march.

We should be even more thankful for the Love which comes to us out of the thunderings and lightnings of Sinai than for that which comes from the serenity of Olivet—provided we are so soundly asleep that we cannot hear the sweet tones of the latter. If we *cannot* be awakened by the one we *must* be by the other.

It is not the part of Christian Science to condemn sinners, but to convert them. Retaliation has no place in the Christianity of Christ.

## Signs of Progress.

It is the generally accepted doctrine of the great mass of Christians to-day, that the healing and other wonderful works of Jesus were miracles wrought among men to attest the verity of his words and to give credence to them as of divine origin; but that these works were only for that period and are not to be repeated, at least until his second coming.

Whatever the many differing opinions may be as to the time and manner of this second coming, the orthodox churches insist that the time has not yet arrived for the repetition of the healing works of the first century, nor for any system that does not follow along the line of material remedies in vogue when Jesus appeared. Here Christian Science takes its wide departure from the other churches. It maintains that Jesus came to teach and practise among men the things that should be taught and practised among them.

He urged, from the beginning to the end of his ministry, the importance of his works, and asked that they might be accepted as proof of their divine origin. He declared that the works he did and even greater should be done. He said he was doing the works of God and in accordance with His command. He told the Jews they did not receive him because they understood neither him nor his Father, whose will he came to do among men. It is conceded by all Christians that Jesus understood God, did His will, and demonstrated His law better than any other known in the history of time. His definition of God should and does date a new era. He said, "God is Spirit," also that God is good and the only Good. (See Luke, 18 : 19.) He therefore virtually declared that Spirit was Good and the only Good. There is but one Spirit because he declared but one God. He came to do the will and execute the law of Spirit. Now the law of Spirit must be spiritual. Then all his works must have been done through his understanding of spiritual law. On no plane and in no department can law be demonstrated without the understanding of it in some degree. Then in the works of Jesus were seen the operation and effect of spiritual law only. And it was seen that it healed the sick, raised the dead, quelled the storm, destroyed hate, fed the multitude, and blessed all who would receive it. It annulled the so-called law of sin, disease, and discord of every name and nature. Sickness and health, good and evil, Truth and error, are terms we employ to express our sense of opposites. Opposites have opposite natures and laws, and must produce opposite effects. By the term "Spirit" Jesus evidently in-

Digitized by Google

tended to give his idea of God as not being corporeal or material, but as the opposite of matter; and Webster so understood, for he defines the meaning of the term as "Life or living substance considered independently of corporeal existence; an intelligence conceived apart from any physical organization or embodiment." If Spirit and matter, to human apprehension, are opposites, then they must have opposite natures, laws, and effects. Jesus many times declared this truism. He said: "It is the spirit that quickeneth; the flesh [matter] profiteth nothing." In the fifth chapter of Galatians it is stated that "the flesh lusteth against the Spirit, and the Spirit against the flesh, and these are contrary the one to the other."

Then follows a statement by Paul of the nature, law, or fruit of Spirit and of the flesh or matter, declaring the nature and fruit of the one to be the very antipodes of the other. How plain it seems that Jesus was demonstrating the effect of the law of Spirit on the mind and body, and that it acted on both alike. His method being purely spiritual or mental, it must have reached the body through the mind. Throughout he demonstrated that this law of God was a law of life, not death; of health, not sickness; of love, not hate; and urged men to study, understand, and practise this law of Good; and when his disciples neglected to use it in cases of disease or danger, he chided them for lack of faith in the efficacy of this law to master the opposing error. It would be highly unjust to say that Jesus asked his followers to do what they could not do; or that he reprimanded them for not performing what is called a miracle, if he had not given them instruction in the law he so often and readily utilized.

Indeed it seems that any careful student can see, from Genesis to Revelation, that the Scriptures seek to separate between the law of Truth and the seeming law of error; between the spiritual and the fleshly (material). Do we not all see that the operation of material law, whether studied deeply or not at all, results in disease and death? Then why look to it for relief? Christian Science teaches that if spiritual law was ever operative among men or ever will be, it is now and always was. The principle and law of numbers, called mathematics, is demonstrable in all ages and countries when understood. Wherever it has been studied it is understood in some degree, and it is always demonstrated just to the extent it is understood; and this now is, and must ever be, the universal rule applicable alike to every state and stage of our existence. Every law of God must be as operative at one moment as any other, and if it could be understood in one age, nothing but sin and ignorance could prevent it from being understood in every other age. No man who believes that the law governing the action of steam or electricity belonged to a past or future period, ever did anything to utilize these forces. No man who believes that the successful operation of wireless telegraphy belongs only to a future century is doing anything to make it a success. It is he only who believes that the law of good is ever present to supply human needs and only waits the understanding thereof to be operative for all, that seeks and finds the principle and rule of that law. The man who persistently maintains that the spiritual law of healing understood and practised by Jesus and his followers is not operative for the sore needs of humanity to-day, and that Christianity does not now need the same works to identify and attest its verity and power for good, as in the past, will not seek or acquire the necessary understanding to practise it. "Science and Health with Key to the Scriptures" has come to this age through a loving Christian woman, explaining the nature and character of this spiritual law as deduced from the Bible, and gives the rules and methods for its demonstration in healing. Those who have felt the great need of this law have turned away from all material means of healing and sought and found in the Bible and its key, Science and Health, the law of Spirit, God. They find this law as ready to act to-day as anciently. In proportion as this law is grasped it is found demonstrable. It requires more time more devotion, more Christianity, more self-sacrifice, and a higher and deeper love for God and humanity to acquire a demonstrable understanding of this rule than is given to any material law, so-called, for healing the minds and bodies of men. As self-righteousness, self-love, and the tenacious adherence to old modes and methods are overcome, the human mind will be more receptive to spiritual truth and the Christ understanding, and healing must eventually become easy and natural. As Spirit and matter are opposites, and the law of the one the antipode of the other, it inevitably follows that the understanding of the law of Spirit can no more be gained by studying its opposite than righteousness can be gained by studying sin; or love acquired by studying hate. Christian Science urges that the material is the unreal and temporal and the spiritual the real and eternal; "for the things which are seen are temporal; but the things which are not seen are eternal." That is, the spiritual is not seen by the material, for spiritual things are "spiritually discerned." If it be true that death is the door-way to this eternal Truth, why does mankind shun this entrance with ever-increasing zeal? Mortals instinctively and naturally accept the statement of Scripture, that death is the last enemy to be overcome, and they will not look for the Truth that makes them free through this conceded enemy.

Christian Scientists firmly believe, and to a large extent are proving, that the healing of sickness and sin as practised by Jesus and his disciples is again made known to suffering humanity through "Science and Health with Key to the Scriptures," and is the dawn of the millennial period, is what is known as the second coming of Christ. ## Account of an Accident.

THE following newspaper accounts of a seemingly serious accident to Mr. Wright, with his own account of his perfect healing by the aid of Christian Science, were reprinted in the *Herald*, Grand Rapids, Mich., September, 3:

### Wright's Wrong Step.

The *Grand Rapids Herald*, August 7:

An accident which occurred on South Division Street at ten o'clock last night may have a fatal ending. L. A. Wright attempted to step backwards from a rapidly moving street car and was hurled to the ground and picked up unconscious. He was carried into a neighboring drug store, and the ambulance was summoned. Dr. Law, who lives near by, was also called, and made unavailing attempts to restore the injured man to consciousness.

Upon the arrival of the ambulance, Wright was conveyed to his boarding place, No. 380 Cass Avenue. Upon the trip home Wright's condition became rapidly worse, and it was apparent that he was suffering from internal injuries, the character of which were unknown. A number of small hemorrhages occurred, and his condition became so serious that fears were entertained as to whether the injured man would live through the night.

### Won't have a Doctor.

The *Evening Press*, August 7:

L. A. Wright, a day laborer living at No. 380 Cass Avenue with friends, was injured in a street car accident on South Division Street last night. He attempted to alight from a rapidly moving car, and did not correctly calculate the distance and the speed. He was hurled to the ground

Digitized by Google

No bones were broken, but frequent small hemorrhages made it apparent that he was suffering from severe internal injury.

Wright was hurt at about ten o'clock. Up to the present time he has received no medical attendance, because he refused to have any. His friends called in a physician late in the night, but Wright refused to answer his questions, take his medicine, or admit that anything whatever was wrong with him. This morning he expressed a desire to be attended by a Science healer, and one of that faith was sent for. In a few minutes she had him out of his room and sitting in a chair. As soon as she had gone he was compelled to resort again to his bed. He is in a semi-conscious condition, most of the time, and says that he has pains through his head.

### No Medicine for Him.

The *Grand Rapids Herald*, August 8: ·

The family and friends of L. A. Wright, the man who was injured by falling from a street car on South Division Street Sunday night, were notified last night of his condition. It appears to be serious, but no one knows just how serious, because he is a Christian Scientist, and refused to be treated by a regular physician. A lady who uses Christian Science methods of healing went to see Wright twice yesterday, and assured him he would be well in a few days, but the others in the house at No. 380 Cass Avenue, where Wright boards, could not see that he was improving. He lay on his bed in a semi-conscious condition, and moaned, and had to be roused in order to get him to say anything. Slight hemorrhage showed that Wright had internal injuries. He is married, and has been in the city but a short time. He came from Mason County.

### Mr. Wright Explains His Case.

In writing of the power of Christian Science over the laws (so-called) of material sense as given in my case of being thrown from a rapidly moving street car, I wish to say that I have been in the work of Christian Science eight years, and have proven by its demonstrations that it is the Truth of being as set forth in the Bible, and as was proven by Jesus and his disciples by healing the sick and raising the dead in direct contradiction to material laws. This method of healing was practised for three centuries after Jesus' crucifixion. Christian Science was discovered by the Rev. Mary Baker G. Eddy in 1866, and has been proven by thousands to be the power of God.

The method of healing by Christian Science can be known only by those who seek after and find the Truth by living it in daily life.

The demonstration over the effects of accident is something which has not been brought before the people in this city possibly, and since the case of my fall is before the people, I thought it might prove interesting to give the healing as it occurred.

I did not know how I came to be thrown from the car, nor did I remember what occurred afterwards until I was in my room, when I remembered for a short time what was going on. I saw the doctor who had been called, and told him I did not wish his help, and called for a Christian Science healer. After that I remembered nothing more until Wednesday morning. The healer was sent for Monday morning, and gave me treatment every day for a week. When I regained consciousness I felt very well, only a slight pain in the head and back of the neck, but this grew less each day as the treatment was given. I was around the house Wednesday. Thursday evening I walked down street with my wife, and after that I was able to be around all the time as I wished. In ten days I was at my work again. This case the doctor pronounced very serious, and he thought critical, and was greatly surprised to see me walking down street so soon.

The glory of my wonderful healing is all due to Christian Science. It has proved in this case, as in thousands of others, that material mortal law has no power when the Truth of real being is brought to bear upon it. "Ye shall know the Truth, and the Truth shall make you free."

L. A. WRIGHT.

Grand Rapids, Mich., August 30, 1899.

## How I came to Christian Science.

BY GEORGE B. WICKERSHAM.

IN the spring of 1876 my brother and I were taken sick with the measles. Being away from home, we were exposed, and took cold, and in place of the measles coming out on me as they should, they settled on my lungs. I first employed an allopathic physician, thinking that he could give me something to bring the measles out. But as he failed in doing this, I employed a homœopath, and he likewise was unsuccessful. In due time I was able to get up and go around, but felt miserable. Having medical treatment all through the summer, in the fall I decided to make a trip East to see if I would not feel better, but I returned home feeling little or no better. I doctored with different physicians until the summer of 1878, when I had a hemorrhage. The physician gave my lungs a thorough examination and advised me to go North for my health, and spend my time out doors, fishing, etc.

I was living at that time about a hundred miles south of Chicago. I had a brother living there, and stopped off a few days to see him. He was very much alarmed at my looking so badly, and said, "I want you to go and see the best specialist here before you leave." This I very readily consented to do, as my faith was in doctors and climate at that time. After giving me a thorough examination, the specialist stated that my lungs were in a very bad condition, and he did not think it advisable to go where my former physician had recommended, but advised me to take the boat and go through to Buffalo, N. Y., on the lakes, and then go down through the mountains of Pennsylvania.

I followed his advice, and seemed to feel better. I was gone some four months, and when I returned home went to see my old physician. He gave me a great deal of encouragement. I, however, was only home a short time when I had another hemorrhage. I continued to grow worse.

In September, 1879, I was advised, as a last hope, to go to Colorado and get the benefit of the bright sunshine and light air, for which Colorado is noted. The physicians did not give me the impression that I would be cured by coming here, but that I would have a longer lease of life. I went to Pueblo, and hunted up the best physician there. After an examination he said I had come too late, but that I would last longer there than in any place he knew of. This did not sound very encouraging, but, like many other poor sufferers, I still continued to hope for a change for the better. I remained in Pueblo all winter. Surely the bright sunshine was much enjoyed, but I failed to improve.

After going from one place to another in the vain search for health, I returned to my home in the East. When I arrived I placed myself under a physician that I had great confidence in. After treating with him for some time, he came in one morning and said, "God knows if I could do you any good I would do it."

So I decided it was best for me to return to Colorado, not with any special hope of getting better, but that I might be easier while I remained on this plane of existence. On my way West I stopped at my brother's in Chicago, and a friend there who heard of my intentions to go back to Colorado, came to me and said, "There is a

Digitized by Google

new method of healing started here in Chicago, and I want you to be sure to go and see the man who is practising this new Science." I asked him what it was. He said he did not know, but they called it metaphysics, or healing through mind. He said, "I know they give no medicine; my mother is having treatment, and she is better than she has been for years." I told him I had no time to fool away on such treatment as that. But he insisted so strongly that I thought it would be unkind if I did not go and have a talk with the man who was supposed to do such wonderful things without the use of drugs.

I went to see this healer with no faith at all, but merely to satisfy my friend. On my way I thought how foolish I was to be persuaded to go to see any one practising such nonsense. When I arrived at the house I found a number of people waiting for treatment. Then I began to console myself that I was not the only one that was foolish, as the patients there seemed to be bright and intelligent people. While I was waiting I decided to give the healer a trial. After waiting quite a while I had a talk with him, and asked him what he thought he could do for me in thirteen days. He asked why I limited myself in this way. I told him that I had planned to go to Colorado at the expiration of that time, but if I was the least bit better I would not go, but would continue the treatment. With this understanding he agreed to take my case. I had treatment every day, and at the end of the time was no better, just as I had expected.

I had not heard at this time that there was such a book in existence as "Science and Health with Key to the Scriptures," neither did I know that there was a Christian Science *Journal* published. In fact, I thought this man had some profound secret that enabled him to heal in this mysterious way. As he did not tell me anything about how this healing was done I thought it would be very impertinent in me to inquire into his secret method of healing. I decided to go on to Colorado, as I did not think there was anything in the treatment for me, although it might do for others. I saw some who were better, and some who had been healed. Before leaving, I ventured to ask the practitioner if there was any way in which I could learn this method. He said yes, and that might be my quickest way out. I told him I would see later about it, and I was soon on my way to Colorado.

After reaching there I decided to try the water and baths at the Magnetic Wells. I had not been there long before I regretted leaving Chicago, so I decided to write this man and ask him what I would have to do in order to learn his method of healing, as he stated that to learn it might be the quickest way out of my troubles. In his reply to me he said when I was through with Colorado and climate to come back and he would tell me.

I returned to Chicago, and went to see the metaphysician. My thought at that time was if I could only succeed in getting from him his wonderful secret of how to heal without drugs that I would be healed. I had a talk with him and he gave me a book and said this is the book I want you to take home and study for two weeks, then come back and I will give you another. Science and Health was then in its sixth edition of two volumes. My heart leaped for joy, as this was the first intimation I had had that there was a book on the Science. I had seen some wonderful cases of healing, but none of these patients ever told me anything about a book.

I took this little book and went home. When I got there I went to my room, locked the door, and opened the book for the first time. I had not been told there was a secret about this practice, but as this gentleman had talked so little to me about it I decided it was a secret and that I must keep it a secret to succeed. I told no one what I had, but I studied this blessed book almost night and day for two weeks. The Truth which I realized from this study healed me of all my diseases and I have never been sick a day since. The Truth took such a hold on me that I determined to devote my entire life to the work.

In the spring of 1884 our beloved Leader came to Chicago to teach a class, and I was one of the happy number. I shall never cease to thank God for this blessed privilege, for I feel that this teaching placed me firmly on the rock—Christ.

About two years later I came to Denver and I have witnessed many demonstrations of the power of Christian Science to heal.

I shall never cease to thank God and dear Mrs. Eddy for the little understanding I have gained of this blessed Truth. The longer I work the more I see that it is the great Truth that our blessed Master taught and practised, and I am earnestly striving daily to have more of that mind in me which was in Christ Jesus. I am so thankful that I began in the work as early as I did, and have had the privilege of seeing the work grow step by step for almost sixteen years.

To me the most wonderful thing was the ordination of the Bible and Science and Health as our only preachers. Now as I read the Scriptures I wonder why it is that the ministers have studied the Bible so many years and have not realized more of the spirit of Truth and Love that would enable them to heal the sick as well as preach the Gospel. How plainly Science and Health is bringing out the spiritual understanding of the Bible, and how thankful we should be to our Leader for what she has done and is doing for this and coming generations.

## Is the Practice of Medicine a Science?

BY ADAM H. DICKEY.

WE hear a great deal about the Science of medicine, and medical practitioners frequently refer to it as their "beloved science." Theologians and physicians unite in declaring that God created drugs, and gave them to mankind to heal sickness and disease. To be sure there is no Scriptural authority for such a claim, but unless medicine can produce some show of divine authority, the growing tendency of the age to accept Christian Science as the divine remedy for sickness, will leave medicine without a single excuse for its existence. Occasionally one of our well-meaning preachers will quote from Revelation, 22: 2, "The leaves of the tree were for the healing of the nations," and will offer that as divine authority for medicine. A perusal of the context of this quotation, however, discloses the fact that the Revelator was not speaking of drugs, but was describing the New Jerusalem—a new heaven and a new earth; and the tree referred to was the Tree of Life, whose leaves are indeed "for the healing of the nations." But the "Tree of Life," like the "Water of Life," comes to man through the revelation of God, and is not taken in doses through his digestive organs in the shape of drugs.

Now if we really want a few Bible quotations that show the true status of medicine, we can find them: for instance, in Jeremiah, 30: 13 we read, "Thou hast no healing medicines;" and later, in the seventeenth verse of the same chapter we find, "I will restore health unto thee, and I will heal thee of thy wounds." Exodus, 15 : 26 reads: "I am the Lord that healeth thee." Psalm 103 : 3: "Who forgiveth all thine iniquities; who healeth all thy diseases," and Jeremiah, 33: 6: "Behold I will bring it health and cure, and I will cure them."

Oh yes, you say, we know that God does the healing, but He does it through the drug. Well, let us see if He does. God is infinite. He is the same yesterday, to-day, and forever. He is immutable and just. He is no respecter of persons or things. If God gives drugs the power to

Digitized by Google

heal, it is done through divine Law, and divine Law, like its Creator, is changeless. For instance, the law of gravitation does not work one day, and refuse to operate the next, it is always the same. So, therefore, if the power to heal were in the drug, it would always be in the drug. Stale drugs would be just as good as fresh ones, for God's power never wearies. What would heal one disease would heal another, and there would be no such thing as failure, for God's law never fails. If the power were in the drug, the more we had of the drug the better off we would be. Drugs would heal if rubbed on the outside as well as if taken on the inside. If the power were in the drug it would be just as powerful on the shelf as in a man's stomach, and a drug store would be a perfect paradise.

These conclusions show the absurdity of such a position, and of necessity, you are compelled to abandon the claim that the power is in the drug, and you grasp at another straw and say the power is in the *application* of the drug. In other words you claim that there is a certain law of God that is operative only after calomel has reached the stomach. Another law of God is set in motion upon the proper application of a porous plaster of the right brand. The virtue, you give us to understand, is not in the porous plaster but in the application of it. Another of God's laws is obedient to quinine and whiskey taken in the proper quantities and at the right time.

What folly is this, to suppose that the infinite Creator cannot or will not move except through the application of an inanimate drug.

The question then naturally arises, Has God anything to do with drugs after all? If He has, why doesn't a sick man go to a theologian instead of a physician? If drugs operate by means of God's laws would not the graduate of a theological institute know more about God's method of healing than a graduate of medicine? If theology is the "Science of God," what is medicine the science of? Has God two different codes, one for the saving of sinners and another for the healing of the sick? Are we to suppose that when God deals with a case of sin He deals directly with the sinner, but when the object of God's mercy is a sick man, must we first guess which one of the nine hundred and ninety-nine decoctions of bitterness is needed to start the particular law of God in motion that is applicable to the case in hand? Jesus had only one method. He cured and saved by the same word, and bade his followers do likewise. *Materia medica* is not the revealed word of God; "Is not subject to the law of God, neither indeed can be."

## Obedience.

BY W.

POSSIBLY a scrap of my experience in the study of Christian Science may be helpful to some one who, like myself, has been seeking for a religion that will *satisfy*, therefore I give briefly a few thoughts, hoping that good may be done. After many years of unrest in two different churches, the Methodist and Swedenborgian, which for a time gave me a measure of comfort, I was led to read the text-book of Christian Science, "Science and Health with Key to the Scriptures," loaned to my wife by a neighbor, in the fall of 1896. Before reading to the close of the first chapter, I could exclaim, "I have found the Christ," and the more I read, the more deeply convinced I became that a long search for light had been rewarded. Every day a new ray of light pierced the cloud of material beliefs, and I pressed on, "charmed to confess the voice divine." Three years service in the Civil War had taught me that a soldier's first duty to his country was *loyalty*, next *obedience;* and I at once decided that as a Christian Science soldier loyalty and obedience on my part were necessary. Loyalty to our dear Leader, and unwavering obedience to all her orders and directions were seen to be necessary in order that the battle be won. I determined that I would do my best to be a worthy soldier and never doubt the wisdom of our general or question her motive in a single instance. It was *enough* for *me* to hear the orders from time to time, and my duty to obey. By obedience I do not mean a slavish, sullen submission to a command, but a cheerful, loving, and willing compliance with every order and rule set forth in our Leader's works. Our patient, gentle, loving Mother neither asks nor desires that any of her children should take one step that she has not taken. When alone, with none but God to sustain, she trod the thorny pathway from "sense to soul," many times "with bleeding footsteps." There is but one rule by which we can solve the great problem of life, this rule is given us in our text-book. It is for each of us to decide whether we shall apply this rule—in other words, obey, or continue to grope our way making blunders, while our dear Leader wishes and counsels obedience. She does not wish us to worship her personality, but follow where she leads. To the extent that I have been obedient, I have been blessed with understanding, and have been able to demonstrate over many errors in myself and others. We show our love of the Truth only by obedience, for a *loving* child is always an *obedient* child. Through obedience on my part, so far as I had understood what was required of me, the love of smoking left me entirely, after thirty years of indulgence, and for two years I have been free from that evil.

Through obedience I have learned to love my fellowman more; see less of his seeming wrongs and more of his real nature. Through obedience I have been enabled to accomplish more work at my desk. Through obedience I have in a great degree overcome impatience, and more than all I have learned that God is Love, and I can love Him more fervently. In obeying our Leader and Teacher we are not following a personality, but a Principle. We do not love Mrs. Eddy as a personality, but as God's messenger to us; for many, like myself, have never had the pleasure of seeing her face, yet we all know that she loves us, and why should not we love her? If we do love her we shall be glad to obey, and go on from height to height in understanding.

## Fear Illustrated.

BY A. L. C.

I REALIZE, since coming into the understanding of Truth, how much discord the thought of fear can bring to our consciousness. The incident which I am about to relate might not be credited by physicians were it not for the fact that it transpired long before I had any idea of what Christian Science was, and in my ignorance persecuted the faithful ones, as did Paul, in a blind belief that I was doing the will of God.

I had been educated to think that life insurance was the proper thing for every young man to have. After making a survey of the many propositions submitted to me, I selected a company of unquestioned integrity and met its medical examiner by appointment. After the examination he informed me that he could not possibly recommend me, as the action of my heart was imperfect. I never dreamed of such a conclusion and questioned him most carefully.

In my college days I had been used to all kinds of outdoor sports, and in truth felt quite proud of the fact that I stood at the head of my class of one hundred and fifteen members in physical development. I had heard some one tell of cardiac strains, and volunteered the suggestion that in my football days I must have overdone. The doctor coincided with me and I learned before leaving that I might drop off almost any time.

A thunderbolt out of clear sky could not have astonished me more; from that time on fear took possession of my con-

Digitized by Google

sciousness. Under no circumstances would I permit myself to exercise violently. I became morose, thought seriously of making a will, buying a lot in the cemetery, and getting things ready for the end which I was prone to believe was approaching. Every little sense of physical discord was exaggerated in my consciousness.

Some months went by, in which human will-power and fear waged war continuously, when a friend of mine urged me to try another kind of insurance. I claimed it was of no use, and finally told him my secret. He admitted that, to be rejected by a company in such high standing, was a serious matter, and for a time the subject was dropped.

Some weeks passed and the subject came up again, resulting finally in my agreeing to submit to another examination. I kept the appointment, went through the same formula as in my first examination, and when the doctor dismissed me I inquired as to his conclusion, expecting, of course, the same diagnosis. He declared he saw no reason why I should not have a policy. It was then for the first time that I confessed everything that had transpired before. He naturally became interested and desired to make a more careful test with the stethoscope, to which I agreed. After some minutes he turned to me and said, "Young man, it has never been my fortune to meet any one with a more perfect action of the heart than yours."

A big load was lifted by those words. I began to enjoy myself again, and soon lost all sense of fear. My belief had undergone a marked change. My friends noticed it and commented upon it.

Thus the inconsistency of human opinions was made apparent, but never appealed to me more than when belief gave place to faith, and the promises of divine Love were realized in the understanding of the allness of Good.

## Listening for God's Footsteps.

BY HERBERT S. FULLER.

THERE was a testimony given in one of our Wednesday evening meetings recently, that led me into a train of thought which ended in my having a clearer thought and a kinder one, I hope, relative to those dear ones who have not yet caught a glimpse of Truth, as it is revealed in Christian Science.

It was related that a woman who was a great sufferer from a belief in fear said that she would lie awake night after night in absolute agony, mentally, until she heard on the piazza the step of her husband, whose business kept him away until a late hour. Then she would close her eyes and be in a deep, peaceful sleep before he reached the room. This fear was destroyed by Christian Science.

Listening to this, and realizing how real her agony seemed to her at the time of which she spoke, the thought came to me that her story depicted plainly the condition of all mortals until the effulgence of the great light of Christian Science came across their pathway. Before we heard of Christian Science we were all in mortal terror. We were in a state of great fear. Whether we admitted it then or not, we now know that fear was with us every minute, and even when to sense we were the happiest we were even the most miserable. We were, in fact, waiting to hear God's footsteps at the door of our thought, although we knew it not.

Finally, after great suffering, we listened honestly, and were rewarded by hearing God's footsteps. Then were we awakened, and stepped forth into the sunlight of Truth, freed from fear. Peace came with the first faint sound of the footsteps we were waiting for, and it increased as they drew nearer. Through the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, we are more sensitive in our hearing, and in time will realize that God's footsteps can be heard all the time if we will but listen.

Let us remember then, when we would allow impatience to rule us because this or that dear friend does not seem to become interested in Christian Science, that each and every one of us has got to hear God's footsteps before we realize that peace and joy are with us. Every one of our dear ones will hear His footsteps some time, and so we should be patient and wait, reflecting Love to such an extent that their ears will be opened to listen to that which they long for, even though unconscious, seemingly, that they want it.

## Children as Friends.

BY ANNIE WILLIS MCCULLOUGH.

PROBABLY nine-tenths of the people in the civilized world regard children as so many little animals, embryo men and women, dependents to be fed and clothed, kissed and petted, but standing on a very different plane—a lower one, too—than themselves. We are impatient that they know no more, tugging them along mentally with us, as so many times we hurry them in a walk, forgetting that the poor little steps are short and the tiny feet cannot keep up with our strides. We look down upon them mentally, forsooth, for no better reason than that we can look down upon their physical stature!

It does not occur to us to be companions with them, to mingle with them because it does us good, to make friends of them. And yet child friends are as dear and beautiful a source of inspiration as this old world affords. Their intuition is so keen that we know enough to look askance at the person whom all children instinctively shun. There is nothing that can account for this unerring instinct. It is not explainable, except as we recognize that the child knows no shams, and is perfectly frank, and therefore instinctively mistrusts that which is not open and true. But whatever the instinct or its source, it is certainly a fact, as Oliver Wendell Holmes said, that "children are wonderfully sagacious in detecting their natural friends and enemies."

It is no small tribute to be chosen by children as a friend. Great men and women have felt this, and expressed it in their lives as well as their words. The time-worn sentence of Charles Dickens, "I love these little people, and it is no slight thing when they, who are so fresh from God, love us," is as beautiful and as apt to-day as ever.

The ordinary parent, if fond and indulgent, pets his children and buys them everything they can possibly want. The stern parent is constantly drilling the child to be clever, obedient, and, above all, reverential toward such superior beings as parents. The intellectual parent makes endless sacrifices to educate and cultivate his children. But not common yet is the parent who values above everything the friendship of the child. A certain eight-year-old, when her father and mother were away, wrote them letters, all signed, "Your little friend." It was the prettiest idea conceivable, and meant daughter, companion, and comrade, all in one.

And why should a child not be this? Childhood is not a mere offshoot, a fraction of the parent's individuality. A child is a separate entity, a whole human being, an entire soul, with a distinct life to live. Wise old Charles Lamb, bachelor though he was, recognized this better than many parents do when he said: "Children have a real character and an essential being of themselves. . . . A child's nature is too serious a thing to admit of its being regarded as a mere appendage to another being, and to be loved or hated accordingly; they stand with me upon their own stock, as much as men and women do."

Just so surely as we do not make our children our friends they will grow away from us, not improbably above us. At any rate, they will not stay with us in companionship of spirit, though they may build themselves houses in our very gardens.—*The Congregationalist.*

## Questions and Answers.

*I have heard it said that if Christian Scientists have power to heal sickness as they claim, it naturally follows that they have power to produce sickness as well. Is this true?*—An Inquirer.

It would be no more unreasonable or unjust to say that the prayers of the Christian which convert the sinner could also cause the saint to fall from his steadfastness. One who understood in the least degree the Principle and practice of Christian Science could not fail to see that it is utterly impossible for one, when governed by divine Mind, to cause sickness or sin. Nothing less than the healing influence of Truth and Love is Christian Science practice.

It is sometimes claimed that animal magnetism or hypnotism can heal sickness. It is also claimed that a reversal of the mental process which is supposed to heal, can and does make sick. For instance, it is claimed that if a hypnotist suggests to his subject that he does not suffer from a particular ailment, the subject will find when the spell is broken, that the suffering has disappeared, while to suggest to the subject that he does suffer would produce the opposite result.

Such practice is in no sense allied to Christian Science. It is simply the influence of one mortal mind over another wherein the stronger rules the weaker. It is not based upon the true conception of God, in fact, it takes no thought of God. It believes in the reality of evil as well as the reality of good, and it also believes that the presence of either depends in a measure upon the action of will power or the lack of it. Mortal mind is a house divided against itself; it voices Truth and error, good and evil, and does so ignorantly or intentionally, as occasion may require.

Divine Mind includes all reality and knows nothing beyond its own infinite ideas, for the simple reason there is nothing else to know. This Mind constantly asserts itself and declares its allness. The omni-action of divine Mind heals sickness and sin, by destroying in human consciousness the errors which produce them. To suppose that this Mind can create what it destroys, is like saying that the principle of music causes the pupil to produce discord.

The Christian Scientist heals, not by believing in the reality and power of mortal mind, but by understanding that God is the only Mind, and governs all things harmoniously. This understanding destroys the belief of hypnotism. Take away the hypnotist's belief of mind in matter, and you destroy his belief that he can mentally influence another. Because Christian Science destroys the belief of mind in matter it is the axe laid unto the root of all mesmeric influence. The understanding of Truth has no power to produce evil, but it is the universal remedy for all discord. So man, governed by Truth and Love, heals both sickness and sin, but he has no power to produce them.

***

*In the text "perfect love casteth out fear," is it human love or divine Love that is referred to?*—A Reader.

It is divine Love that destroys fear. Human love, instead of casting out fear is frequently mastered by it, and the greater the love the greater the fear of losing that which is loved. Human love is finite and mortal. It is a respecter of persons, loving one more than another, and sometimes it entirely ceases to love. Human love being finite, limits all things. It limits good, and of necessity acknowledges the power of evil. Because it believes in the power of evil, it fears evil.

Divine Love is God. Divine Love is no respecter of persons, and never ceases to love. Divine Love does not limit good; does not give power to evil, hence does not fear evil. In the degree that human consciousness realizes the presence and power of divine Love, it ceases to fear. For if God is All and all things are in His hands, what is there to fear? "He that feareth is not made perfect in love," says the apostle. This text shows that growth in the consciousness of divine Love will overcome all fear. The destruction of fear brings deliverance from the thing that is feared. This fact is daily being demonstrated in the healing of sickness and the overcoming of sin.

## Daily Work.

BY A. L. M.

UPON reading in the *Sentinel* the statement that better Scientists were needed more than numbers, the questions came: Are you meeting this demand upon you? Are you as watchful as you ought to be in your daily work? The temptation to make some law for another by saying, I know that this will be done, or that will not be, comes up often. Such thoughts influence others, perhaps are the worst things to be done; yet we, in our ignorance of all the facts, think they are the best. And we have meddled in the affairs of others as our opinion was not asked. It is so easy to be self-deceived. To think that we are watchful over the small things. The temptation to be impatient and resentful is of daily occurrence. From force of habit they are taken in, especially if the manifestation is so slight we hardly notice it, or think some other feelings prompted the thoughts. As the stock of self-knowledge increases, vanity, pride, self-love are uncovered and the destruction at least is begun; while humility, gentleness, and unselfishness are being demonstrated.

It is so easy to believe we are doing the things we know we ought to do. But examination of thoughts, words, and deeds often shows we have not done as well as we knew, nor even as well as we had thought. So looking through the day's work and temptations, showed that to be a better Scientist means constantly to destroy suggestions of error which seem unimportant, and to have little power either to hinder or to help our growth. Unless this earnest work is accomplished the larger demonstrations are not made.

And our friends who are not Scientists do not see the change in character they look for. They wish to see what Christian Science has really done before taking an interest in it, or seriously thinking of becoming one. To see the needed demonstration, to act promptly in filling the need, is necessary for rapid progress.

## Church Charter at Hannover, Germany.

*Dear Sentinel,*—We wish to tell the Field that since June first of this year, we have been chartered by the German government as Erste Kirche Christi des Scientisten in Deutschland.

About the same time we also organized a voluntary association for the advancement of the cause of Christian Science here, and up to date the association has already one hundred regular members, recruiting from all classes of our population.

Furthermore, we have started a fund for a church building, and have received permission from the government to keep open a collection list for said fund.

Words are inadequate to express our feelings of deepest gratitude and humility towards God, who so abundantly has blessed our earnest endeavors to be faithful workers in His vineyard, and to prove that we strive to grow in the understanding of the grand verities of Christian Science as revealed to us in the wonderful text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, our highly beloved and revered Leader and Teacher.

BERTHA GUNTHER-PETERSON, C.S., First Reader.
MARIE SCHOEN, C.S., Second Reader.

## From the Religious Press.

### Fifth Commandment in Russia.

It has been reported around the world that the Russian ecclesiastical authorities have changed the Fifth Commandment so as to read, "Honor thy father and thy mother, the emperor and his officials, that thy days may be long in the land." The Baron Schlippenbach, the Russian Consul at Chicago, has come forward to deny it, affirming that "none would dare to alter the Russian orthodox creed in any particular, as, apart from the religious significance of such a step, he would by such action become the laughing stock of the world." But the greatest trouble that Russia, from the time of Peter the Great, has ever had in a religious way has been with the sects engendered from among its own people, and a step of this sort would indicate that the Holy Synod, which has the control of such things, had been left to commit ecclesiastical suicide. Possibly the story may have arisen from some comment written upon the commandment. As Russia expels as fast as it can those who do not accept the orthodox faith, the remark "that thy days may be long in the land" would be quite appropriate by way of enforcement.

*New York Christian Advocate* (Methodist).

### Contentment.

It has been truly observed by Johnson "that the Fountain of Contentment must spring up in the mind; and that he who has so little knowledge of human nature, as to seek happiness by changing anything but his *own dispositions*, will waste his life in fruitless efforts, and multiply the griefs which he proposes to remove." Yet this is generally the very last remedy thought of for uneasiness. A person will change his own situation or the situation of his house, his profession or employment,—even his friends: and if he could, perhaps his wife or children, sooner than he will think of changing his habits of living, or his modes of thinking. Such a person's warfare is perpetual flight: like the Parthians, he shoots his arrows backward and whilst he is at full speed. He never stands still, even to reconnoiter his enemy; much less to grapple with him, and combat him hand to hand and foot to foot. Yet nothing is more true, than that our happiness depends almost entirely on ourselves. Hume used to say that a cheerful disposition was worth ten thousand a year. And certain it is, that without it, ten thousand a year would have very few enjoyments. He who is not contented poor, will not be contented rich.

*New Church Independent.*

### Why not Rejoice More?

All the coal-beds in Pennsylvania and Ohio are only solidified sunshine. The love of Jesus streaming down into your soul makes the central heat; that heat generates spiritual power. So doth the joy of Jesus become your perennial strength. A doubting, ague-smitten Christian cannot do much but shake. A backsliding Christian is on his road to a cell in the castle of Giant Despair. But "he who is nearest to Christ is nearest to the fire," and the contact keeps the heart aglow. Why not rejoice more? Count up your golden mercies, count up your opportunities to do good, count up your exceeding great and precious promises, count up your joys of heirship to an incorruptible inheritance, and then march on the road heavenward, shouting!

THEODORE L. CUYLER, D.D.

*The Watchman* (Baptist).

### Old Age Pensions.

I have no doubt that, before twenty years are over, the statesmen of Massachusetts will come round to some pension system for the aged. It is only too clear that our modern systems of industry make no direct provision for persons who have passed what may be called the "hustling" age. Steam-engines and waterfalls do not want laggards to work with them; they insist on the co-operation of young men and women. And it is idle to say that these young men and women ought to have the forecast which provides for old age in the period of youth. As we arrange things, the competition is quite too severe. The unmarried boy, utterly careless about his future, competes with the married man and compels him to work at the lowest rate of wages. In such a system as this it is the business of the community to provide for the man and the woman who can no longer serve it in the field.

EDWARD EVERETT HALE.

*Christian Register.*

### Love Makes Men Neighborly.

Love is always engaged in doing good to the neighbor. It is the good we find in people that makes them our neighbor; and the good that is in us, that makes *us* their neighbor. It was not the man that fell among thieves that was neighbor to the Samaritan, but the Samaritan who was neighbor to him. So far as we do wrong we are neighbors to no one. We are neighbors only as we do good to others; and the first step to this is to cease to do evil; to get rid of our own evils as harmful to others.—*New Church Magazine.*

## Miscellany.

### Uncle Sam's Odd Bills.

Every one knows that it costs almost four hundred million dollars a year to run the United States Government in times of peace, and that the departments of War and the Navy, the Indian and the pension bureaus, absorb the larger part of this amount; but in the course of years a large number of dependents upon Uncle Sam's purse have come into being, of which the general public knows little. Such, for example, are the International Bureau for the Repression of the African Slave Trade, located at Brussels, a highly laudable institution, to the expenses of which our Government contributes $100 a year; the International Bureau of Weights and Measures, also at Brussels, to which $2,270 is contributed, and the International Geodetic Association, the expenses of which our Government shares to the extent of $1,500 yearly. As a leading member of the group of nations specially interested in humane and philanthropic work, we subscribe $325 a year to a lighthouse service on the coast of Morocco; about $4,500 to be divided among citizens of other lands for service rendered to shipwrecked American seamen; $500 a year toward maintaining a hospital for sailors at Panama, and $9,000 for keeping and feeding American convicts imprisoned in foreign countries. Among the unfamiliar purposes in the home country for which money is appropriated from the federal treasury is the maintenance of the Washington Monument, costing $11,520 annually, and the provision of artificial limbs for soldiers, calling for $547,000 a year.

*Leslie's Weekly.*

### A Valuable Vase.

A vase cut from a single emerald has been preserved in a cathedral in Genoa, Italy, six hundred years. Connoisseurs and collectors may as well not read any farther, for they can never, never obtain the treasure, as every precaution is used to insure its safety. The dimensions of this emerald vase are: Diameter, twelve and one-half inches; height, five and three-quarter inches. An antiquarian has advanced the theory that it was one of the gifts made to Solomon by the Queen of Sheba, and has written a book to prove his assumption. At all events, in 1476 a decree was passed forbidding all persons to approach the priceless treasure too closely, and it is very rarely exhibited publicly, and then only by the order of the Senate. Several locks must be opened to reach it, and the key to each lock is in possession of a different man. Perhaps this is well. But we should be glad to learn how this precious gem got where it is, in the first instance.

*Boston Herald.*

### Carloads of Pianos.

There is a home suggestiveness about the report that in the present great movement of merchandise over the railroads of the West, the carrying of pianos forms an appreciably large part. Pianos by the carload going to the farming regions—in one case five carloads on a single train bound for the Pacific coast—shows more than prosperity; it shows a longing for the improvement of the homes of the people. Last year the carloads were of buggies and agricultural implements, the men's needs, this year the mothers and daughters are having their pleasures and ambitions cared for. The widespread desire for music which this simple bit of trade statistics indicates is something for which we ought to be grateful. There is, no doubt, much crude music in these United States, but crude music is far better than none at all, while out of small beginnings greater things must grow. But it is as a glimpse of the spirit and purpose of American home life that we record the matter here.—*The Congregationalist.*

Cherrapunji, in Assam, northeast of Calcutta, has the reputation of being the wettest place on the earth, the average annual rainfall being 403.15 inches, while it has the record of one month in which 147.17 inches fell. This year it seems bound to beat all previous records, 267.84 inches of rain having fallen between January 1 and the middle of June, five months and a half, while 73.79 inches, over six feet of water, fell in a single week.—*Boston Transcript.*

The *Independent* states that "the annual fees of the Church of England for marriage, burial, baptismal offerings, and pew rents are estimated at from one million to a million and a half pounds. This gives a total income of $36,500,000 per year as the annual revenue of the Church of England. A large part of this colossal revenue is expended in increasing the value of benefices or church properties, of which there are 13,970 in England."

## Notices.

### Mrs. Eddy's Pictures.

These pictures are made in the following sizes: cabinet and 8 x 10 photographs, and in all the large sizes in crayon and water colors. They can be had from the Reading Rooms or from the J. C. Derby Co., Concord, N. H.

### The Board of Education.

Requests for application blanks for the next examination cannot be complied with until due notice is given through our publications, as announced in the *Sentinel* of January 19, 1899.

### Rates for the Sentinel.

See page 18 for change in subscription price and terms of sale of the *Sentinel*.

Applications for membership with the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 7, 1899, must be in the hands of the Clerk of the Church on or before the 15th day of October.

WILLIAM B. JOHNSON, Clerk.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . . . 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . . 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An Illustrated Poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid. . . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

# Published by the Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of the First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services in all the Christian Science Churches throughout the year.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada. No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, the First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

Representative men from all parts of the country met in Central Music Hall, Chicago, September 13, to discuss the question of the great industrial combinations which have arisen in this country within the last fifteen years, and have increased so rapidly the past year. It was generally admitted by the speakers that under certain conditions the effect of the trusts was a great evil; but some of the speakers maintained that the trusts were essential to best business interests. One speaker said he believed that the magnitude of commercial operations at the present time demands the institution known as the trust. When he was a boy, he said, there was as big a hue and cry against the corporations as there is now against the trusts.

President McKinley has instructed the Philippine Commission to return as soon as possible. The commission will re-assemble in this country and formulate its report, which will reach the President in time for use in the preparation of his message to Congress. President Schurman says the Philippines should have some form of home rule. He says there is no Philippine nation. There are more than sixty languages spoken in the archipelago. These languages are so distinct from each other that the speech of any one tribe is unintelligible to its neighbor. Most of the tribes are small, but there are at least six having two hundred and fifty thousand members.

President McKinley has received many suggestions that he proffer mediation in the South African trouble, but it is reported at Washington that he has no intention of offering to do so. Unless the Boer republic and Great Britain should request the United States to mediate, nothing will be done beyond the instructions already given to the American consul at Pretoria to give all necessary protection to Americans and their interests.

The British authorities at Hong Kong detained the United States transport Tartar, on the ground that she is overloaded. But upon investigation it was decided that she was not crowded more than the other transports, and her clearance papers were granted. The twentieth Kansas Volunteer Infantry, with General Funston, is on board. The Tartar sailed from Manila in September with 1203 men aboard.

President McKinley is receiving petitions asking him to request the French government to pardon Dreyfus. But no such action will be taken, as the administration believes such action would be offensive to France, which would feel that this government had no right to interfere in a matter which relates to internal administration, and which she alone must decide.

Rear-Admiral Sampson will take command of the Boston Navy Yard after Admiral Dewey's reception at New York. Rear-Admiral Norman H. Farquhar, now in command of the Norfolk Navy Yard, has been selected to take command of the North Atlantic squadron. He will assume command October 10.

General Jiminez arrived at San Domingo September 12. He was received with enthusiasm, and has issued a manifesto declaring he will not accept the presidency of the republic until he is regularly elected by the people. His manifesto proposes a liberal government based on strict honesty and equity.

Major-General Miles has expressed himself as being well pleased with the recent experiments made at Sandy Hook for the purpose of ascertaining the force and power of new explosives. It was demonstrated that projectiles containing high explosives can with safety be thrown as far as fourteen miles.

President McKinley has addressed a letter to General Butterfield, chairman of the executive committee, stating that he will not be able to attend the Dewey celebration in New York. The President will not meet Admiral Dewey until he formally receives him in Washington, October 2.

The Bricklayers and Stonemasons Union of Chicago have voted to issue a card of honorary membership to President McKinley, so that he may not be branded as a non-unionist when he handles a trowel in laying the corner-stone of the new Government building, October 9.

Cornelius Vanderbilt, the head of the Vanderbilt family, died at New York September 12. He left a fortune which is estimated at one hundred and twenty-five million dollars. The simple but impressive funeral services were held in St. Bartholomew's Episcopal Church.

Information has been received from Tokio that the Japanese Government has decided to recognize Christianity as among the religious organizations of the country. The heads of the Christian church will enjoy the same rights granted to the Buddhist and Shinto priests.

The nineteenth annual session of the National Colored Baptist Convention assembled at Nashville, Penn., September 14. Among other topics discussed were methods to diminish crime and prevent lynching. Governor McMillen delivered the address of welcome.

The Imperial Government Railroad of Japan has placed an order with the Pencoyd Iron Works for nearly eight thousand tons of steel bridges to be delivered within a year. The company will receive seven hundred and fifty thousand dollars for the order.

Anthracite coal can now be delivered in London almost as cheap as it can be transported to some of the Western cities by rail. The Reading, Pa., Company is giving unusual attention to foreign trade, and as a result, the trade is steadily growing.

President McKinley is preparing to make several speeches on his western trip next month. The Ohio contest opens at Akron September 23, and it is the President's desire to have his own state endorse the administration by a notable majority.

It is stated that the largest salaries ever paid to clergymen in this country were those of Henry Ward Beecher and Dr. John Hall—$20,000 to each. Rev. Dr. Hirsch of Sinai congregation, New York, now receives the highest—$15,000.

The Secretary of the Treasury has decided to pay the October interest on September 18. This will amount to $5,596,526, and is the interest due on the four per cent bonds of 1907. The announcement favorably affected the market.

Numerous mass meetings have been held in the principal cities of the United States and throughout the world, protesting against the sentencing of Captain Dreyfus in accordance with the decision of the court-martial.

Information is received from Paris that at the next session of the Chamber of Deputies a bill will be introduced abolishing courts-martial in time of peace, and modifying the military penal code.

The total issue of the American Bible Society during the last year at home and abroad amounted to 1,380,892. The whole number issued during eighty-three years amounted to 65,962,505.

John Willis Baer, the prominent secretary of the United Society of Christian Endeavor, was nominated for governor by the Prohibitionists of Massachusetts, but declined to accept.

Premier Laurier of Quebec, Ont., will assist in the laying of the corner-stone of the new Federal building in Chicago, on October 9, the twenty-eighth anniversary of the great fire there.

Dr. Richard J. Gatling, the inventor of the Gatling gun, has recently invented an automobile plow which is calculated to do the work of eight horses and four men.

Axel W. Svenson of the Swedish Post-office Department, is visiting some of the principal cities of the United States, studying the American postal system.

Eight sections of the Paris Exposition will be devoted to the history of the religions of the world, giving the beliefs of all known races of men, past and present.

Queen Victoria is receiving numerous telegrams from her subjects at home and abroad, begging her to plead with President Loubet for Dreyfus' pardon.

An expedition which left Sweden last May to search for Professor Andree the explorer, has returned, having found no trace of the missing aeronaut.

Rear-Admiral Schley has been definitely assigned to the command of the South Atlantic station when Rear-Admiral Howison retires next month.

The National Export Exposition at Philadelphia, was formally opened September 14. President McKinley sent a message extending greetings.

The public schools of Boston opened Wednesday, September 13. In the 236 buildings there are about seventy-eight thousand pupils.

It is reported that Oliver H. P. Belmont has contributed twenty-five thousand dollars to the Bryan campaign fund.

Thomas Bain, the new speaker of the Canadian House of Commons, is the first farmer to fill that position.

Miss Ellen C. Witter of Denver is the only woman authorized to practise before the United States Land office.

The corn crop of the United States this year is estimated at 2,500 million bushels, the greatest ever known.

The wheat crop of Manitoba and the Northwest is estimated at fifty million bushels.

Admiral Dewey will be tendered a banquet in Boston, about November 1.

An aerolite weighing five hundred pounds fell near Sycamore, O., recently.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The Unchurched Classes.

THE following is an extract from an article by Rev. Washington Gladden, D.D., on "Congregationalism and the Unchurched Classes," recently published in *The Congregationalist.*

What are the unchurched classes? Are there any classes in American society which are deprived of the privilege of churchgoing? Have the churches erected barriers by which certain classes are excluded? Such a suggestion lurks in the phrase, "the unchurched classes," and we sometimes hear complaints of which this appears to be the *gravamen.* All such implications need to be carefully scrutinized. We shall find no churches which will admit that they have issued any such edict of exclusion, or that they cherish the purpose of making any class unwelcome. Mr. Wyckoff's luminous experience, as narrated in "The Workers," shows what is the conscious and intentional attitude of the churches in this matter. He testifies that for months he went constantly to church—and generally to the most fashionable churches—in the garb of a very poor working man, and that he was never received in any other manner than that of the utmost cordiality and friendliness, that he was always offered a good seat, that he was never patronized, or condescended to, or treated as if he were a person of different order, but always as if he were a brother man. Such testimony may suffice to offset the sneers of whole regiments of scoffers who never go to church. It is not to be doubted that there are snobs in many of our churches to whom the advent of poorly clad people would not be welcome, but it is probable that there are few churches whose administration is in such hands.

The working people of our cities are not unchurched by the action of the churches. There is plenty of room for all who desire to go to church in churches where they would be heartily welcome and where their associations would be largely with people of their own social class.

✠

The unchurched classes are not, therefore, out of church because the churches have, intentionally or unintentionally, shut them out; they are out of church because, as things now are, they choose to stay away. Nor are these all wage-workers. A pretty large sprinkling of the "unchurched" will be found among the business and professional people, on the uptown streets and avenues, in the best residence quarters. The problem of the unchurched will not be solved without diligent attention to these.

And now what have Congregationalists to do with the people who are outside of the churches? We have the same responsibility for them, I answer, that the Methodists and the Baptists and the Roman Catholics and the Episcopalians have. We are put in trust with the Gospel as all our fellow Christians are; if we have any truth or any faith or any hope which they need, our business as good stewards of the manifold grace of Christ is to share it with all who can receive it. It is to be preached in all the world, to every creature; the only expectation we are allowed to entertain is that every knee at length shall bow and every tongue confess that Jesus Christ is Lord, to the glory of God the Father. Permanent unchurched classes there are to be none; the existence of such classes at this time is evidence of the incompleteness or partial failure of the work of the churches—defects which it is our business to remedy as speedily as we can. It is probably safe for us Congregationalists to admit that we have our share of blame for this failure, and that we cannot too soon clear our skirts of this responsibility.

What about the unchurched upper classes? Can their estrangement from the church be explained? We hear many explanations, and it is evident that there are many reasons. It is a busy age, and men and women are absorbed with bread-winning and fortune-building. Social demands are not less exacting. For people who are much "in society" any useful connection with church life is physically impossible. Then the newspaper and the magazine and the novel, the popular lecture and the free library, furnish so much of occupation and diversion and distraction for the mind that the pulpit competes with them at some disadvantage. Amusement, in its various forms, has become indeed a large element in modern life; the church can do but little to supply this demand.

✠

Still it remains true that religion is, as Mr. Fiske insists, an "everlasting reality," and that it is "the largest and most ubiquitous fact connected with the existence of mankind upon the earth." The need of religion is the deepest need of man, and it is a perennial need. The men and women, the young men and maidens of this busy, eager, inquisitive, pleasure-loving generation need it as much as any people in the world ever needed it. They need it and they want it. It will not do to say that the total depravity of the outsiders explains their absence from the churches. That explanation is too easy. If the living word were spoken they would come to hear it. They do not want the stuffed effigy of truth that was alive three hundred years ago, they want truth that is alive to-day. Nor is it needful that this truth should be diluted and sweetened; that is a fatal error. Clerical flunkies will not long command the attention of thoughtful men. This generation, like every other, needs to be told a great many austere truths. Savonarola and John Knox did not lack for hearers, nor will any man in this generation who is equally courageous. The trouble is that so many are delivering the messages of Savonarola and John Knox instead of delivering their own.

Nor is it "sociology" that is wanted, whatever that may be. Neither that nor any other ology. It is the application of the truth of God and the law of love to the whole life of man. What is lacking is the note of reality, of vitality. We have, on the one hand, an orthodoxy that is shut up to the repetition of sayings that were true once and are true no longer, and, on the other hand, a liberalism that exhausts its energies in criticising orthodoxy. The one is as dead as the other. Neither has anything to say that living men want to hear. So there arises the cry that the church and religion are obsolescent. It is a shallow judgment. Living truth will command the attention of living

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

men, and the truth that is vital and fundamental is religious truth. To none is this more clear than to those who are grappling most closely with the great social problems.

No, we are not going to get rid of our religion; agnosticism is a poor salve for suffering humanity. The heart of the old religion is true, and we must get it out of its spectral forms and its "fantastic settings," and bring it home to men's hearts.

If we ministers could only get the dead wood and the worms' nests out of our creeds and out of our brains, if we could get hold of the things that are vital and essential—things that we can preach with the energy of conviction—the unchurched classes would rapidly decrease. Of course this change cannot be wrought by a small minority of us, whether we are called by the Congregational name or any other name. So long as ninety-five out of a hundred pulpits in a city are either keeping up the old traditional patter of a dead orthodoxy or pounding away with the critical hammer of a lifeless liberalism—both joining to denounce and discredit any positive and earnest message—no strong impression is likely to be made by a few voices upon the great mass of outsiders. The churches must speak the message of the hour with a united voice. Whether Congregationalists are more or less guilty than others with respect to this failure to find and utter the message of the hour—to preach the "Christ of To-day"—I will not try to say; blame enough belongs to us, I know, and it is for us to repent of our sins and forsake them without waiting for any. The one fact for us to face is that the neglect of our churches on the part of the intelligent classes is largely due to the lack of vitality in the gospel we preach.

There is no need of any different method in dealing with the unchurched poor from that which we employ in dealing with the unchurched rich. All we have to do is to get hold of the vital and essential truth—the truth as it is in Jesus—and believe it with all our hearts and preach it with all our powers. Set the truth of Christ blazing in all our pulpits, make the law of Christ the rule of all our conduct, and we shall soon have no unchurched classes. The multitudes will come flying as a cloud and as doves to our windows.

## Vicarious Atonement.

THE subject of Rev. Carl D. Henry's morning sermon at All Saints' Universalist Church yesterday was "Pious Foolishness." a name that he applied to the doctrines of total depravity, the substitutional atonement of Christ, and salvation by faith and not by works. The sermon was called forth, the pastor said, by a little book entitled "The Soul and its Difficulties," a "brochure of enormous circulation and productive of untold evil." Its teachings, which were the teachings of the creeds, the preacher declared, formed no part of the religion of Jesus, which was simple, reasonable, and so clear that a child can understand it. Vicarious atonement, the keystone of orthodox theology, was charged with being responsible for unmeasured sin, and sorrow, and the ruin of multitudes of souls who have thought to escape personal responsibility by making a scapegoat of Christ. Its effect upon the life of to-day was said to be pernicious and corrupting.

The preacher appealed for a forsaking of these "harmful dogmas of the creeds" and a return to the sane and simple religion of Christ, who obeyed and trusted God and practised the Golden Rule. "This alone is enough to transform every human life and convert the world into the abode of justice and happiness and fraternal love," Mr. Henry said. "This would bring us into harmony with God and solve our problems, banish our pains, and give us peace."

*The Cleveland Leader.*

## Found No Bill.

### Norfolk County Grand Jury Refuses to Indict Christian Scientists.

A FEW weeks ago the Boston morning papers, under flaring headlines, told of the death of a young boy by the name of Hedenberg in Needham while under the care of a Christian Science healer, the parents of the boy being Christian Scientists, and he himself, it is said, preferring that treatment.

The reports said that the doctors of the city held a meeting the day after the death of the boy, and it was decided after consideration that the facts in the matter should be collected and any evidence bearing upon it should be presented to District-Attorney Harris to go before the grand jury. It was not reported whether the parents of the child were to be proceeded against, or the healer, Mrs. Estelle R. Freeman of that town, but it was intimated that the parents would be the ones summoned to answer to some charge in connection with the case, although if any case could be made against Mrs. Freeman she also would be proceeded against.

The papers in writing up the case called attention to the fact that several children had died in Needham about the same time from the same complaint that the Hedenberg boy died of, dysentery, while under the doctor's care, and in fact stated that the boy who died under the treatment of Christian Science lived longer than the children who were under medical treatment.

After the doctors had announced their purpose of proceeding against the parties in the case, they disappeared from the case so far as publicity was concerned, and the matter they had collected was given to District-Attorney Harris by an officer of Needham who had been drawn into the case.

The grand jury met at Dedham last week, and on Friday this case was called, the intent being, as the *Enterprise* is informed, to make out a case against the parents for neglect. Four witnesses, principally doctors, were examined that day, and Monday morning the case was taken up again, Mr. and Mrs. Hedenberg, who are persons of high standing in Needham, being called with others. They were, however, the only ones examined, and then all were dismissed. When the grand jury came in no indictment was reported in the case.

The *Enterprise* is informed that the grand jury refused to indict and the case was thrown out for the lack of evidence, there being none to substantiate the charge which the doctors wished to prove. Notice of the proceedings were published broadcast, and it is no more than fair that the result also should be made public.

*Daily Enterprise,* Brockton.

## Christian Scientists Upheld.

THE attorney-general of Illinois, replying to a request from the prosecuting attorney of Tuscola, Ill., for an opinion, as to his right to proceed against the parents of a child who had died under Christian Science treatment, holds that the laws of Illinois do not prohibit the treatment of disease by mental and spiritual methods employed by Christian Scientists or others, where no medicine is used, and that where a person dies under such treatment it is not an offence under the criminal code of the state. The attorney-general says,—

"I am of the opinion that the criminal code has not been violated. Section 42 of an act to amend an act entitled 'An Act to Prevent and Punish Wrongs to Children,' approved May 17, 1877, in force July 1, 1877 (approved June 21, 1895; in force July 1, 1895), is the only provision of the

Digitized by Google

criminal code that can by any possibility be held applicable to such a case. It reads,—

"'It shall be unlawful for any person having the care and custody of any such child wilfully to cause or permit the life of such child to be endangered or the health of such child to be injured, or to wilfully cause or permit such child to be placed in such a situation that its life or health may be endangered.'

"I am of the opinion that the word 'wilfully' as used excludes it from application to the case in hand. As there used it means intentionally or designedly, and does not cover cases of mistaken judgment, where the parents or persons in charge of the child honestly believe in the efficacy of the treatment adopted.

"I am also of the opinion that under the act of 1899 concerning medicine and surgery, persons may minister to or treat the sick or suffering by mental or spiritual means without the use of any drug or material remedy, without a license from the State Board of Health. Christian Scientists claim to heal or cure the sick or those who think themselves sick, by such means, and that is exactly what was done or attempted to be done in this case."

Chicago *Times-Herald.*

## New Theory of Sickness.

### "Study your Patient as well as the Disease," says Dr. Harrington of Lowell.

A PAPER by Dr. Thomas F. Harrington of Lowell, which was read at a recent medical convention in the West, seems to have attracted an unusual amount of attention in the medical world.

Dr. Harrington's paper has been published in several of the medical journals, and he has received numerous congratulations from medical men. It has aroused special interest among the Harvard medical students and faculty, because Dr. Harrington has referred to the methods of teaching medicine employed at Harvard to demonstrate the truth of the position which he takes.

Dr. Harrington's paper is entitled, "The Philosophy of Sickness," and his theory, stated in brief, is that the physician should study the patient as well as the disease. He holds that each human being has a dual nature, and that no two persons are affected exactly alike, even by the same disease.

Thus, he says two children of the same age, and as nearly as possible alike in health and physical development, will be attacked by the same disease under the same conditions, yet one will die. Or, it may be that a strong, healthy child will die, while a weak, puny child attacked by the same disease will live. Dr. Harrington holds that in such cases there must be something more than the ordinary physical being which the eye beholds. There must be something in the mentality of the child—in the other nature which the eye cannot see—which exercises a powerful influence over the physical being. In this connection he cites the case of Pope Leo, who, at his remarkable age, underwent a dangerous operation a few weeks ago without the aid of anæsthetics.

Dr. Harrington then argues that the physician should study his patient, his mental attributes, his characteristics, his inner self, as it were, and that he will thus be better able successfully to cope with the disease.

*Boston Post.*

The *Sunday School Times* has the following: "There is no safer place than the path of duty, even when it seems surrounded by peril. No man can avoid dangers by refusing to brave them at the call of God."

## Voice of the Press.

### A Chance for Fame.

From the scare-headings in the newspapers, *Another Christian Science Victim,* one might be led to suppose that there were no victims of regular doctors. *Book Notes* would be glad to print the portrait of any physician who can with mere drugs cure *any* disease. The newspapers here gave no scare-heading when a person, certified by the State Board of Health to be a physician and surgeon, rammed a catheter through the crown of an old man's bladder, and then gave natural causes as the reason of the man's death. That, too, in this city.—*Book Notes.*

### Inducements to Churchgoers.

Several churches in Philadelphia have set up "cradle rooms" as an inducement to fathers and mothers to attend divine service.

A cradle room is a nursery. The parents whose baby is too little to be left alone or to behave well in the pew, bring the child with them and leave it in charge of an attendant, taking a check therefor. It is said that this happy contrivance has increased attendance fifteen or twenty per cent.

This experiment is only a beginning. It is bound to suggest further attractions. A lunch-counter might draw the reluctant worshipers to church. The Sunday School might be made alluring by candy and fruits. That is, Santa Claus should be on hand all the year round. In a great variety of ways the churches might be filled.

Nevertheless, a lingering doubt remains whether devotion induced by any such bribes has real piety in it. At any rate, it is religion which belongs to the outside of things, not to the inner life, and the question presses, Why don't people go to church? Why is it necessary to beg and persuade? Will some wise man answer?—St. Louis *Post Dispatch.*

### Has a Man a Right to Die?

When medical science has looked at a man's tongue and thumped his chest and has finally determined that he is suffering from an "incurable disease," has medical science any right to prolong his suffering by filling his internal regions with nux vomica or cinchona?

In other words, when the wise old "saddle-bags" have put their heads together and have finally decided that a malady with which a man is afflicted is necessarily fatal, has the man "a natural right to a natural death," or must he allow the doctors to drench his intestinal canal with the various compounds and elixirs known to the pharmacopœia?

This was the grave question discussed by Judge Simeon E. Baldwin, president of the American Bar Association, in an address delivered at Saratoga before the American Social Science Association. Judge Baldwin, who is a ripe scholar and an authority upon constitutional law, maintains that the practice of keeping alive a patient who is suffering from an incurable disease, and thus prolonging his misery and discomfort, is the product of old-time superstitions in regard to death which taught most men to believe that final dissolution meant a plunge into a state of agonizing torture. Almost any man was therefore willing to employ all the potencies of medical skill to postpone the brimstone bath as long as possible.

But with our newer and more rational ideas of death, this, Judge Baldwin argues, is a misapplication of the healing art. Where the disease is incurable there should be no "unnatural contest with a kindly as well as an unconquerable fate." "It is not right," says the learned judge, "that such a life should be prolonged in hopeless misery by medical art when nature plainly called the sufferer away."

Digitized by Google

Man may have a natural right to a natural death, as Judge Baldwin contends, but so long as therapeutics is largely experimental, and so long as mankind shows such marked reluctance to shake off this mortal coil for some other coil that he knows less about, the pill factories will continue to run overtime and the probate courts will continue to parcel out the estates among the "attending physicians."—Chicago *Times-Herald.*

### Rights Recognized.

Christian Science has won a victory in Illinois where the attorney-general has rendered a decision that no offence is committed by the treatment of a patient by mental or spiritual methods where no medicine is used. Really what right has the state to say that to any sick person medicine must be used regardless of whether he wishes it or not? Where are personal rights under such circumstances?

*Mail*, Lowell, Mass.

### Christian Science Victory.

The Christian Scientists, faith curists, and people generally who choose to receive attendance in their own way or go without it when sick, have secured a distinct victory in the liberal state of Illinois, where it is held by the attorney-general that mental methods of treating diseases are not in violation of the law. A number of cases were submitted to the chief law officer of the state, and he goes so far as to declare that not only is the attendance of the Christian Scientist at the bedside of the patient not a violation of law, but that in event of death no accusation of crime can be brought. The attorney-general in his opinion points out the difference between a mistake of judgment and a crime, and holds that the medical laws of the state do not prohibit resort to prayers or spiritual means instead of drugs, if persons, or even the parents of children, so prefer.

*News,* Providence, R. I.

### A Sensible View.

Every time some one dies of an incurable disease who has pinned his faith on Christian Science the opponents of that cult put on their war paint and strike out vigorously. When some one dies who has pinned his faith on doctors there is an opportunity for the other side to use the same kind of argument and invective. Such cases, however, do not carry any weight against Scientists or the doctors, and ought not to be dragged in.—*Gazette,* Taunton, Mass.

## God not the Author of Sickness.

How very many people there are in this world who honestly and sincerely believe that God sends sickness and various kinds of affliction upon them for some reason, they know not what, but out of which they are trying to hope and believe that some good will come if they endure patiently. For such people our hearts naturally go out in sympathy, and it is with the utmost solicitude for their well-being that we insist upon their taking higher views of the Fatherhood of God, and abandon all belief that He sends evil upon humanity in order to bring about a higher reign of righteousness. Such captious conduct would receive a sound rebuke if administered by an earthly parent to his tender offspring. No. This cannot be true, and it should only require the simple statement to show us how far it will lead us from the Truth if persisted in. I have never known a case of such resignation to result in the highest good; and I feel warranted in saying that the facts are just the opposite. The tendency of such a course upon the mass of suffering humanity is to quench the small spark of love's flickering light which already shines upon their upward pathway, and to cause the gloom of despondency to settle like a pall about them.

Now let me ask you, as one who has had experience, to reverse this entire process of reasoning. Think of God as your only Father, infinite and eternal, and whose tender mercies have never been impeached; that you are His child, made in His image and likeness, and that in your apparent weakness He holds you in the hollow of His hand; that He is the Life, the Truth, the Way, and because He lives you live to claim the blessings of eternal life now, and, my word for it, His loving-kindness and His tender mercies will cover you over like a mantle of glory, and "Neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate you from the love of God which is in Christ Jesus, our Lord."

Your sickness and suffering are not sent of God. They are the result of your own lack of fidelity to the higher law of Love, which will teach you, if you will only listen, to give up your lusting after the inducements held out by mortal mind. But if you will not do this by rising in the consciousness of Love and Truth to a higher plane of thought, then you must suffer till you will be glad to give them up. This you will observe is quite a different thing from becoming resigned to a doleful endurance under the belief that God wants you to suffer. Would it shock you if I should ask, "Do you want your own little child to suffer?" Of course you do not. You only want him to learn the way of Truth and Love and higher living, and you much prefer that he learn that way without the many bitter experiences that you have had. Simple, isn't it? Yet this law of Love and Truth is the very heart and soul of Christian Science. It is Christ enthroned within. This highway of right living you will find very clearly set forth in our denominational text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy.

Jesus tells us that God is our Life. Do you believe this? I have no doubt that you do, but it is in some vague, indefinite way. Will you ever need this divine spark more than you need it now? Will there ever be a time when this spiritual dynamics will be needed more than now to quicken you into real being? If not, why do you spend the hours in hopeless waiting? "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

If you say that God is not your real present life, then I ask you who, or what is? and I will not accept the definitions of Huxley, Helmholtz, and Spencer, which need their own basic principles accounted for in some absolutely inexplicable way. Don't imagine yourself too wise to accept this "foolish" statement which Jesus offers as the solution to this question of the ages. Better be humble and try to learn its stately wisdom, for "other foundation can no man lay."

What makes human sophistry such a hopeless paradigm is the fact that it fails at the very moment of its greatest need; and what makes the philosophy of Jesus so supremely grand is that it places the true believer above and beyond any earthly need which it does not supply. I believe I voice the sentiment of the age when I say that mankind has grown weary of rank materialism on one hand and theological casuistry on the other, and being bandied back and forth over the chasm of sickness and suffering which can neither be cured by one nor endured by the help of the other. It is not material wealth that the world needs to place it above want, for untold millions in provisions are wasted every year, and still the hungry go unfed. Neither is it the crucified Jesus, for theology has been preaching him for eighteen hundred years while millions of the purest lives of the ages have gone out in fire and blood. But it is the Living Christ enthroned within; the Christ who

Digitized by Google

said, "It is expedient for you that I [Jesus] go away: for if I go not away, the Comforter [the Living Christ] will not come." But Jesus went away and the Living Christ came, and he is with us to-day in all his healing power just as he was when he, through Peter and John, healed the lame man at the beautiful gate. If you will not believe this then you must continue to suffer for your unbelief till you are glad to believe.

"These signs shall follow them that believe; in my name shall they cast out devils; . . . and if they drink any deadly thing it shall not hurt them; they shall lay hands on the sick, and they shall recover" (Mark, 16 : 17, 18). People who read and observe no longer deny that Christian Scientists are doing this all over the world, and they have to their credit over one million cases of cures among the most hopeless invalids. Dayton has its share of these, and they can usually be found in their church hall on Sunday mornings and Wednesday evenings, and will be only too glad to testify to their healing and to help you on the way.—*Dayton (O.) Weekly Herald.*

## Minnesota Medical Bill.

FEBRUARY 1, 1899, Senator Jepson introduced the Medical Bill, Senate File No. 171. It provided, among other things, that any person who shall profess, under any system of healing, to heal or treat any ailment of another, for compensation, gain, or reward, received or expected, without having first passed a certain medical examination and been duly licensed (by the Board of whom more than one-half were doctors), shall be fined one hundred dollars or imprisoned for thirty days, and each day such person shall so practise shall constitute a separate offence.

The Senate referred this bill to its Judiciary Committee, who fixed an evening for hearing all parties who desired to be heard in reference to it. At the time so fixed the Senate Chamber was filled with a large number of Christian Scientists, ladies and gentlemen, from St. Paul and Minneapolis, and also with the representatives and friends of the Medical Fraternity, a very intelligent and cultured audience.

A number of doctors spoke in behalf of the bill and of the importance of protecting the public; and a number of other gentlemen addressed the Committee requesting that the Christian Scientists be exempt from the bill.

The Christian Scientists made an excellent showing on that occasion. The whole matter was, about a week afterwards, taken entirely out of the hands of that Committee and referred to a new Committee to draft a new bill and report to the Senate. It was in their hands for weeks. The medical fraternity was very active. So far not a word had been said about the unconstitutionality of such a law.

Mr. F. F. Wilde, a St. Paul lawyer and a Christian Scientist, represented the St. Paul Christian Scientists, and for the first time raised the question of the unconstitutionality of the proposed law. He prepared a brief on the subject, showing that under the constitution of the United States and of the State of Minnesota, and under the decisions of a number of the highest courts in the United States, such a law, if passed, would be unconstitutional and could never be enforced, and furthermore that it was class legislation.

With this he called upon Senator Allen J. Greer, an excellent lawyer, Senator since 1894, an influential and acknowledged leader in the Senate and entirely disinterested, and after having presented his arguments and explanations of the matter, Mr. Greer became interested in the cause of the Christian Scientists.

The result of the interview is best described by Senator Greer himself, who said,—

"Mr. Wilde's statements, particularly as to the unconstitutionality of the proposed legislation, were very clear. I had no personal interest in any way, only after his talk and explanation to me, and after carefully reading his brief, I was impelled by a sense of duty to take the position which I did in opposing this measure, feeling that he was absolutely right in his position, and that such legislation was contrary to the spirit of freedom, as vouched for to every citizen of this country under our constitution."

Senator Greer was on the Judiciary Committee and also on the new Committee.

The result was that the Committee as a *unit* reported in favor of the substitute bill, exempting Christian Scientists from the operation of all legislation. The legislature then dropped the whole matter.

ARTHUR D. S. CLARK, First Reader.

## Sifted Sayings.

A good life is the best way to understand religion and wisdom, because by the experiences and relishes of religion there is conveyed to them such a sweetness to which all wicked men are strangers. There is in the things of God, to them which practise them, a deliciousness that makes us love them, and that love admits us into God's cabinet, and strangely clarifies the understanding by the purification of the heart.—JEREMY TAYLOR.

For all of us the road has to be walked every step, and the uttermost farthing paid. The gate will open wide to welcome us, but will not come to meet us. Neither is it any use to turn aside: it only makes the road longer and harder.

GEORGE MACDONALD.

If you mean to keep as well as possible, the less you think about your health the better.

OLIVER WENDELL HOLMES.

God has delivered yourself to your care, and says: I had no one fitter to trust than you. Preserve this person for me such as he is by nature—modest, beautiful, faithful, noble, tranquil.—EPICTETUS.

Our life is always deeper than we know, is always more divine than it seems, and hence we are able to survive degradations and despairs which otherwise must have engulfed us.—HENRY JAMES.

Only those live who do good. TOLSTOI.

Life is a rich strain of music suggesting a realm too fair to be. GEORGE WILLIAM CURTIS.

Words, money, all things else, are comparatively easy to give away; but when a man makes a gift of his daily life and practice, it is plain that the truth, whatever it may be, has taken possession of him. LOWELL.

Silence never shows itself to so great an advantage as when it is made the reply to calumny and defamation, provided that we give no just occasion for them.

ADDISON.

The path of virtue is closed to no one, it lies open to all; it admits and invites all, whether they be free-born men, slaves or freedmen, kings or exiles; it requires no qualifications of family or property, it is satisfied with a mere man.

SENECA.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### A Request from our Leader.

OUR Leader writes the editor that she is grateful for the loving interest of the Field as shown in the great mass of correspondence now coming to Pleasant View; and wishing to recognize every manifestation of love, she makes the following request:—

Will the Field, until further advised, please send all correspondence concerning gifts, and donations, as well as all letters pertaining to church building and secular business, to Rev. Irving C. Tomlinson, Concord, N. H.?

We are sure the Field will gladly help the Mother and the Cause by at once adopting this timely suggestion.

### Thanks.

FOR the numerous telegrams, letters, and verbal assurances of love, loyalty, and fidelity to our Cause, its Leader, and servants at headquarters, and our literature, will our beloved co-workers accept our deepest thanks and profoundest sense of gratitude and reciprocal love.

We are indeed a band of brethren, laboring in common purpose for a common Cause; and, under guidance of Divine Love, we shall move steadily and fearlessly forward to that ultimate victory which is the sure reward of the faithful. "He that overcometh shall inherit all things; and I will be his God, and he shall be my son" (Revelation, 21:7).

### True Friendship.

IT is easy, as Jesus said, to love our friends—those whom we desire to love, but what reward have we for thus loving, other than our own gratification and the pleasure given to the friends? The best friend is he who, while duly recognizing our virtues, also points out to us, and if need be rebukes, our faults or failings. The former may be the friendship of flattery. The latter is always the friendship of sincerity. He who has not the grace to receive the latter token of friendship in the right spirit is a friend neither to himself nor to his friends. He has yet to learn the primary quality of true friendship.

But to love our enemies, by knowing that in the truth of Being we *have no enemies*—this is friendship in deed and in truth, and its reward is joy unspeakable and life "more abundantly." This is the friendship Christian Scientists *must strive* for and ultimately attain.

### Responsibility of All.

THE avowed enemies of Christian Science can do no harm whatever in attempting to turn others against it. The selfish motive sticks out so plainly that their attacks tend to awaken public interest in Christian Science rather than antagonism to it.

In the long run, the world's verdict, for or against Christian Science, will depend, not upon what its enemies say, but upon the character of Christian Scientists. Upon the followers of Science largely must the blame rest, if the heart-hungry men and women of the earth turn away from it unsatisfied, unfed. The responsibility rests not upon one or a few, but it rests equitably upon all followers of Christian Science, each bearing a share of responsibility proportionate to his or her understanding.

The influence of even one Christian Scientist, who exemplifies his faith in his daily life, earnestly and honestly striving to be "meek, merciful, just, and pure;" helping the sinner and healing the sick—will antidote the enmity of a neighborhood, and if all of us who call ourselves Christian Scientists were faithfully reflecting the Truth in our lives, envy and malice as well as ignorant antagonism would be swept away like a fog before a gale.

Impurity has ever been the foe of purity. Hatred, envy, malice, revenge, dishonesty, falsehood, and slander, are its boon companions. Were it possible, impurity would annihilate purity; but God reigns and He is *pure*.

A lie, like an *ignis fatuus*, flees before its pursuer. It cannot be traced to any source for it has no source. It cannot be bound for it is intangible. Yet the liar is sooner or later caught in the net which he weaves, and strangled there.

The world is challenged in this age to choose between a Spirit-God and a matter-god. The sooner the choice is rightly made, the better for the world. *God is Spirit.*

Genuflexions, unaccompanied by spiritual assent, are as meaningless as smiles of the lips without a responsive heart.

Man-made laws are temporal. God-made Law is eternal.

Christian Scientists do not hold to the Bible with a faltering belief, but with a settled assurance of its being the trustworthy revelation of God to man. They have this assurance because its general meaning has been made clear to their understanding.

The very fact that the name Christian Science is everywhere associated with the healing of the sick, would make it impossible for its followers to evade the obligation to prove the truth of the claims made for it.

Life without happiness is the equivalent of death, and unhappy people often attempt to exchange the one for the other. Christian Science confers true happiness because it teaches the understanding of Life.

Disease is error. We cannot hope to destroy it if we ourselves are governed by error, and sin willingly.

It is becoming apparent that man must do more than simply be honest and conscientious in his convictions. He must *know* the Truth. Not merely know it because someone has told him it is the Truth, but know it because he has gone to the fountain-head, himself, and proven what he knows by actual demonstration.

Let us meet the false claims of error with a clear and calm realization of Truth.

The only thing we need to fear is that we shall not be obedient to the voice of Truth.

## Who Can Tell How Christian Science Heals?

How often we see it stated in sermons against Christian Science, and in articles criticising its ways and methods, that the healing in Christian Science is done through hypnotic suggestion.

How does Christian Science heal? Who can answer this question? Evidently he only who understands its healing methods in some degree; and who understands it except the one who can, to some extent, heal the sick according to its teachings? Do any of these critics pretend to heal according to Christian Science? No, not one of them. Then can any of them tell how it heals? They may deny that it heals, but the cases of healing are so numerous and well attested that few critics at this time deny the works. Denying its healing and telling how it is done, are quite different things. The difference is the same as denying the science of mathematics, and explaining the principle by which its problems are solved. To deny requires no understanding, in fact it demands ignorance, while to correctly explain, understanding is indispensable.

How novel to the mathematician would seem the explanation of how a problem is solved, by one who cannot solve it; yet this is not so wide of the mark as is the explanation given of the method of Christian Science healing by those who cannot thus heal.

The writer does not know how the hypnotist claims to heal and will not try to give his methods, except so far as they are generally accepted as the teaching of its friends. A few general statements of the methods of Christian Science may perhaps show how wide and marked must be the difference between the two systems.

The writer many years ago witnessed a public exhibition of hypnotism, and only one. The operator sought to get control of the mind of his subject, and after this control was obtained secured every manifestation by audibly suggesting to the subject something the operator himself did not believe to be true. It is generally accepted that the hypnotist seeks first to get control of the mind of his patient. Here at the beginning the methods of the hypnotist and the Christian Scientist are directly opposite. Beginning as polar extremes, manifestly they must so continue to the end.

To the Christian Scientist it is a grave offence to take control of another's mind, either with or without his consent. He aims and ever seeks to free his patient from the control of every human mind, thought, theme, and theory, not excepting that of the healer. When treating his patient the healer holds in thought and reflects to the patient only what he firmly believes to be eternally and divinely true. He understands and holds steadfastly to the thought that God is the one and only real Mind, and that this Mind is infinite, pure, perfect, and eternal Truth, which cannot change, and that this Truth is everlastingly and inseparably interwoven with infinite, changeless Life and Love. He understands that God, being infinite Love, is the only real Creator, and never did or could create sin or disease, which are the phenomena of the human mind and not of divine origin. He clings to the everlasting fact that God is the author of Life, not death, of health, not disease, of goodness, not sin, and that therefore these errors do not come through divine law, but are annulled thereby. He holds to these truths with the same confidence and on the same ground that astronomers hold to the fact that the sun is still and the earth in motion, although to the finite, physical senses the opposite appears true.

The Christian Scientist has again and again proved his proposition to be true in ways and methods so numerous that his faith rises into the realm of understanding.

Galileo more than believed his unreceived statements, for he had in many ways demonstrated to his own perception the truth of what he said, and therefore neither doom nor dungeon could change his thought, though they did his word. The Christian Scientist knows, even if he cannot wholly prove as Jesus did, that Truth is greater than human error and can and will master it; that what is not ordained of God is the house built upon the sands of human reason and cannot stand, either in heaven or earth. He discerns how clearly Paul saw the human error of trying to mix good and evil, the spiritual and material, in cause or effect, illustrated in the human attempt to put a spiritual soul in a material body, and declared them contrary the one to the other. See Galatians, fifth chapter. Again when he so tersely asks, "What concord hath Christ [the spiritual] with Belial [the material]?" the Christian Scientist insists that if Paul could so understand and separate between the two as to heal the sick and sinful in the first century, the same faithful, honest, trustful, and spiritual thought can do the same to-day.

The healer knows that if he can fill his own consciousness with these everlasting truths that Jesus and Paul declared and demonstrated, that his patient who comes to him for help will mentally drink from the same Godly fountain, receive the Christly gift of health and peace, arise refreshed and strengthened in mind and body, and go forth with an abiding love for the God who has healed him and will ever after seek and find the secret of his healing in those bountiful storehouses of divine Love, the Bible and "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, which unlock the mystery and solve the problem of life. This Christly sense of God, and the real man as His image and likeness, the healer must ever hold in treating his patient, and this is the prayer with which we may "ask and it shall be given unto you."

How can he who has not tried, say that this silent communion prayer does not heal? In what school, ancient or modern, save and except only that taught by Jesus, his disciples and followers, has this understanding of God been taught as the indispensable equipment, the cornerstone, for healing the sick? And what medical board today is able to examine the candidate for practice in this new-old school for healing? This necessary equipment can only be found in Science and Health and the Bible, which always accompanies it in both church and home.

Grand Rapids *Herald*.

## Ottumwa Church Dedicated.

FIRST Church of Christ, Scientist, Ottumwa, Ia., has become a tangible factor in the life of that community. The newly acquired edifice, which has been remodeled and improved, was dedicated on Sunday, August 27, when the services were conducted by Mrs. Ruth B. Ewing, C.S.D., Second Reader of the First Church of Christ, Scientist, Chicago, assisted by A. P. DeCamp, of the St. Louis church.

The address of welcome was read by Mrs. Lillie Harmon Benson, daughter of H. L. Harmon, First Reader of the Ottumwa church, Mrs. Benson said:—

Friends, co-workers, fellow students:—To each and all we extend a hearty welcome, and our earnest prayer is that these services may convey the true conviction that in Christian Science is an ever-present consciousness of peace on earth, good will to men. Through trials and tribulations are we seeking and finding a house not made with hands, a home whose builder and maker is divine Mind, and this is what the restless multitudes of this age are seeking, if they only knew it.

We are looking for a God who is infinite Love, a God who is infinite Life, in fact, the world needs the understanding of a practical and saving Christianity. The sick, the sinning, the poor, the sorrowing, the dying, need the

Digitized by Google

knowledge of God that will free them from their present mental and physical maladies.

We lovingly and joyfully welcome you, our fellow workers, who have come from a distance that we may unite in one expression of deep gratitude for the privilege of being able to possess this church home, that we may aid more abundantly in restoring the lost elements of Christianity as well as elevating the race.

You are here to join with us in extending a loving welcome to all who have come to be present with us to-day that we may all unite with grateful hearts to dedicate to the cause of Christian Science this house, this manifestation of divine Love, which is the fulfilment of the prophecy of Isaiah:—

"And they that shall be of thee shall build the old waste places: thou shalt raise up the foundations of many generations; and thou shalt be called, The repairer of the breach, The restorer of paths to dwell in."

The motive of this demonstration is to correct the belief that God's power to heal belongs to the past. Christian Science comes with the assurance that God is the same yesterday, to-day, and forever.

Through the understanding of Christian Science we find that the command of Jesus to heal the sick is just as imperative as the command to preach the Gospel, and this understanding does heal the sick, thus re-establishing the primitive and natural function of Christianity. When we stop to think and look over what has been developed in the line of so-called science, we feel assured that it cannot be a real science, or more work would have been done in the destroying of disease.

Many thousands of noble men and women have spent their whole lives in the tireless search for a remedy for the ills that flesh is heir to, and yet disease has seemed but to assume new forms rather than to be annihilated. Why is this? Because the science of our being has not been understood.

Was it the flesh and blood of Jesus that healed? No, it was his conscious power given him through the right understanding of Him, whom to know aright is to have life eternal. This knowledge he taught and demonstrated, not only for that age, but it was to remain to save and heal and regenerate after his bodily disappearance. After about three hundred years this teaching almost disappeared from the world, and creed, dogma, and ritual took the place of pure undefiled Christianity, but all the materialism of the Dark Ages could not obliterate the Word that had been left to the world by the blessed Master.

The Light "which lighteth every man that cometh into the world," was never put out for a single moment. Jesus said "the Kingdom of God is within you," and that stood as a fact through it all to be discovered about thirty-three years ago by Mary Baker G. Eddy, who went forth alone against the belief that all is matter or matter and mind combined, with the statement that all is Mind, there is no matter, and to-day, through her constant demonstration of this wonderful Truth, more than a million people are rejoicing in the blessed proofs of the healing and saving power.

The future will reveal more and more her unselfish life, her great love for mankind, and the magnitude of her glorious work. For this work is built on true Christianity.

It has been about twelve years since Christian Science was first recognized in Ottumwa, and the work of purifying and regenerating the hearts of the few followers commenced. The work has been going quietly on all these years, and is still improving the morals and mentalities of its students, and healing and helping the sick and sorrowing who with hungry hearts seek its way.

Slowly but surely has the foundation of true Christianity been laid in this city, and now as a reward the few faithful over a few things possess this home where we can uplift the truth, the same truth that was declared by Moses and demonstrated by Christ Jesus.

The edifice which was dedicated by the Ottumwa Christian Scientists was originally built by the Episcopalians, and is described by the Ottumwa *Press* as a substantial building of brick and stone, that was once very handsome. It was sold to another denomination and the fine polished interior wood work was covered up with paint. The present owners scraped off the paint, repolished the wood work, and so thoroughly renovated the building that it seems like a new church.

## Among the Churches.

The recently organized First Church of Christ, Scientist, of North Adams, Mass., held its first service as a chartered church, Sunday, August 27, in its new quarters. There was an attendance of about one hundred and seventy-five.

The Lockport, N. Y., First Church of Christ, Scientist, has recently purchased and paid for a building site, which is regarded as the most desirable location in the city for a church. At present there is a dwelling-house on the property which has been converted into headquarters for local and visiting Scientists, where there are pleasant reading rooms furnished with all genuine Christian Science literature.

The Rockland, Mass., First Church of Christ, Scientist, completed its organization last June, starting with twenty charter members. From twenty-five to thirty people attend the Sunday services.

At Burlington, Kan., a few earnest workers have purchased a small church which is paid for. The church was organized last June, and a charter was secured.

The Second Church of Christ, Scientist, of New Orleans, La., was organized January 6, 1899, and chartered under the laws of the state.

Mrs. G. P. Noyes has purchased the property on Lincoln Street of F. S. Smith that was formerly the schoolhouse lot, and made a present of it to the Christian Scientists of this city on which to erect a church.

*Journal,* Gardiner, Me.

The Arnold property situated at the corner of West Main and Winthrop Streets, has been sold to the First Church of Christ, Scientist. H. O. White, chairman of the Board of Directors of the church, made the purchase in behalf of the society.

Mr. White was seen by an *Enterprise* reporter this, Thursday, morning, and said that the purchase had been made. Speaking further, he said, "It is impossible to say at this time what the society will do in the future. Whether it will remodel the building or erect a new one I cannot say. There is one thing certain, however, and that is, there will be a church on that property in the future. The real estate was in the market, it was a desirable location, and we purchased it for future use."

*Enterprise,* Marlboro, Mass.

The *Weekly Witness* says: "The Christian's first duty is to be right and do right; and his next duty is to stand firm for righteousness in the community in which he lives and for the nation to which he belongs."

The strength of love, it is said, may be measured by the sacrifices it is willing to make for the good of others.

## How I Came into Christian Science and what it has Done for Me.

BY GOTTLIEB A. WIZNER.

SOME ten years ago, I met a lady who came to visit at the home where I was boarding during my stay in the city. She claimed to be a Christian Scientist, and seemed ever willing and ready to talk on the subject of Science. All the knowledge I had of it, was from hearsay, and that was very little indeed.

One evening when left alone by chance I said, "Mrs. E., now I want you to tell me something about Christian Science, and what it is based upon." She readily assented to my request, and talked to me for some time, while I was wrapped in the closest attention. When she got through, I seemed more mystified than ever, and asked with incredulity, "Do you mean to tell me that this table, these chairs, and other objects we look upon, have their existence in imagination merely, that they are not what they seem?"

She made reply, "Yes; that is just what I mean. We just *imagine* they have an existence and are here, but it is all a delusion of the senses."

"Well," I answered, "if that is what Christian Science teaches, I want none of it. I guess if I were to bump your head against the table you would think it was something more than imagination."

My curiosity was satisfied, while I held a mild contempt for the new belief and all its adherents, and years passed before I found out that her teaching was *not* Christian Science.

During the following years my vicissitudes seemed many. Being possessed of a buoyant temperament and impulsive nature, keenly alive to the sensation of pleasure, I had also a very keen sense of suffering.

When trouble came, my health left me, and no effort on the part of *materia medica* could restore it. During the following seven years I was treated by eleven different physicians, but to no avail.

The trouble started with dyspepsia and all its attendant complications. I suffered untold agonies, both physical and mental. Sometimes for a short time the suffering left me. At such a time a new hope would spring up within me, only again to be crushed down to black despair.

I could see, as well as my friends, that my case was becoming hopeless; medicine could do nothing for me, and I was growing worse from day to day. Finally I was obliged to sell out my business, which was merchant tailoring, at a sacrifice, and go home to my mother and brother who live on a small farm within the limits of a neighboring city.

I had worn down to a mere shadow, as I was about half starved all the time, having had the law made to me by medical mortal mind, that my stomach was in too diseased a condition to perform its digestive functions properly.

All was done for me that a kind, loving mother, brother, and friends could think of and do. I was put through a course of Dr. Kneip's cold water treatment, and although that seemed to make me less susceptible to the cold wintry blasts, it seemed to the senses to develop another belief.

The following summer, 1898, I went on a visit to friends at Fond du Lac and Appleton, Wis.,—a feeling of temporary relief always following a change. When the friends at Appleton had received me, and made me comfortable, the lady of the house drew from me the story of my suffering. When she had heard my story, to my great astonishment and chagrin she made this remark,—

"Well, there is no need of being sick." As she had been very sick herself the previous winter, I thought it was a very cold way of expressing sympathy, and wondered if she had been sick for fun, since there had been, according to her own assertion no need of it.

When she saw the effect her words had upon me, she commenced to talk about the method Jesus used in healing diseases and destroying sin. She called my attention to the fact that Jesus never diagnosed a disease or employed material remedy for its cure, but used the power of divine Truth over error.

This was a revelation to me. I had never thought of it just in that light before. I remembered, when my attention was called to the fact, that I had seen no instance in the Bible where medicine had been administered. A new, sweet hope suddenly sprang up within me, and I became all eagerness to have her talk more upon this subject. Instead she produced a little book with black leather covers, and bade me read the Truth from its pages. It was "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy. The language was indeed the new tongue, for I could not understand it. Then I was given "Miscellaneous Writings" by the same author, to read.

I read like a starving man the testimonies it contains, and determined there and then to know more about this Christian Science. My friend had only shortly before that commenced to look into it herself. A friend of hers, who is a Scientist, had visited them while she was sick, and although she would take no treatment their conversation on the subject seemed to lift her right upon her feet. When he went away he left his book with her, and she was reading it every moment she could find to spare. I promised her, when I got home I would at once write to this friend of hers, who resides in Marinette, Wis., and submit my case to him.

After I got used to the new thought and the novelty of it commenced to wear off, and doubts—which I can now see were nothing but error trying to thwart Truth from having free course—began to spring up, I said, "There is no use, my sickness is too real and deep-seated to be affected by mere mind-force and prayer." But as the Truth is ever-present and omnipotent, it would not and could not be baffled by the puny efforts of a powerless error.

A new desire possessed me once more, to write before I got entirely out of the notion; it could do no harm, and I was curious to know what answer I would get. I did so, and I shall never cease to thank God for this one step. The answer came soon, and it was this in substance, "You can and will be healed if you *want* to be." This was so cheering and encouraging that I commenced to take absent treatment at once. One ailment yielded after the first treatment, and that proved to me that I was on the right road at last. My other ailments yielded very slowly, but hope was revived, and I pressed on. A copy of Science and Health was sent me, and although much of the contents was beyond my comprehension, yet there was much that I understood and assimilated. Later on I came to Marinette to be near my healer, and to learn more of this divine Truth. One by one all objections have been met and cleared away, until the understanding that God is Love —All-in-all—the only power, dawned upon me and made me free. Although error in its last throes still comes up now and then to harass me, I do not fear it.

I have had many little demonstrations of the power of Truth and Love over error, and as time goes on I learn to look more readily beyond the mortal sense, and not to be misled by adverse and discordant circumstances, knowing that as the great strong wind rent the mountains and broke in pieces the rocks before the Lord, but the Lord was not in the wind; and after the wind an earthquake, but the Lord was not in the earthquake, neither is God in the adverse discordant circumstances; but that over and above all these is heard "the still small voice" of a kind, good Father bidding us, His children, to come unto the full knowledge of our rightful heirship. Put on the whole

Digitized by Google

armor of His righteousness and array ourselves against man's common enemy—sin, sickness, and death, and we shall be the victors, for if God be for us, who can be against us? Good, Truth, is the only power, and if we enlist His help in this most righteous warfare, we shall know no failure.

The revelation of these truths to suffering humanity, by Mary Baker G. Eddy, fills my heart with gratitude to the author of Science and Health, for the blessings it has brought mankind cannot be estimated. It is beyond human tell.

## The Price of a Book.

BY WALDO PONDRAY WARREN.

How many times will it be necessary to affirm that Science and Health is not an expensive book, even at any price? Lives there one person who has caught its sublime meaning who would presume to estimate its worth in money? Could the gold of Ophir buy it back from those who have learned from its pages the grandeur of Life? By what standard of value, forsooth, could any one say this book is not worth three dollars, or even that it should cost mortals less—mortals who are willing to pay many times that much for medicines which do them no good? Judged by every standard of value known, in literature, education, commerce, therapeutics, and religion, the purchase of Science and Health at three dollars is the most sublimely profitable transaction possible in all the ages. The proverbial bargain of Esau, who sold his birthright for a mess of pottage, fades away into nothingness when compared with the present glorious opportunity of buying back our eternal birthright as a son of the Sovereign Infinite, through the knowledge of Man's unity with God, for the price of a book.

## Letters to the Sentinel.

*Dear Sentinel:*—Four years ago, when I had been reading Science and Health for about three months, I went to visit my husband's people, who were stanch Methodists. During a conversation on the subject the dear father, whose religious living I had always respected so much, said, "Daisy, your new religion will lead you to hell." That was a pretty hard thing to have said to me then by one whom I loved dearly, but I had gained enough of the Truth not to be moved.

This last winter our boys subscribed for the *Sentinel* for six months to be sent to grandpa. After he had received it several weeks, we went to visit him again and we found many beautiful evidences that the Truth, as it comes through the *Sentinel,* had changed the thought of this dear one greatly. After reading in the *Sentinel* the account of the Communion service, the meeting in Tremont Temple, and Mrs. Eddy's address, he said he had never heard of such a wonderful religious demonstration. At another time before a room full he said he would not dare to say that Christian Science would not be the coming religion, such rapid strides as it had already made.

After looking to see if there is any word from Mrs. Eddy, I look for the "Questions and Answers." The answers to the questions one has to meet for oneself or others so often are answered in a clear, helpful way. The explanation of the chastisement of Love was very plain. I thank God and Mrs. Eddy and all the dear ones, publishers and contributors, that we are privileged to have such reading as comes to us through the Christian Science Publishing Society. ELIZABETH J. SLEEPER.

West Derby, Vt.

*Dear Sentinel:*—In striking contrast to the testimonial in the current number of the *Christian Science Journal,* in which the first joint of a child's finger was wrenched off in a wringer and afterward replaced by a new joint through Christian Science treatment, I submit the following from the *Kansas City Star,* which shows the inadequacy of material methods as compared with the Christ healing.

MISS H. SUE STONES.

### Death under Chloroform.

J. F. Jolley, a well-known machinist of Kansas City, Kan., foreman of the machinery in the fertilizing department at the Armour packing house, died yesterday afternoon while under the influence of an anæsthetic administered in the office of Dr. J. W. Miller for the purpose of preparing him for a surgical operation.

One of Jolley's fingers was crushed by accident in the machinery at the packing house. He went to the surgeon's office at the corner of Central Avenue and State Line Street to have the finger cut off. The injury gave him such pain that it was necessary to administer chloroform. The operation was performed, but the injured man died.

*Dear Sentinel:*—When a child I was very much interested in a story I read about two travelers in the Alps. The cold was intense as they journeyed, and after a while one of them became overpowered with sleep, and fell down in the snow. The same feeling was felt by the other, but he knew the fatal consequences of falling asleep, so he began vigorously to shake and pound his companion in his efforts to rouse him. At last he was rewarded and he became warm himself through his exertions to help another.

As we are traveling up the hill of Science we may see a fellow traveler overcome in belief by the errors of sense, and may perhaps feel their effect ourselves, but if we go to work to help them, we shall gain the reward of work done unselfishly, of seeing our brother or sister saved "through Christ's precious love" (Science and Health), and shall gain a degree in working out our own Salvation. JANET T. COLMAN.

The *Church Standard* says of Tennyson that his constant thought was that life was too noble a thing to be frittered away—a gift too splendid and God-given to be used otherwise than with reverence. To be true to the art which God had given him, true to himself, was surely to be true to God.

"The law of the increase of blessings, says *Zion's Herald,* "is that you must sow them in the soil of unselfishness."

## Notice.

THE attention of all workers in the Field, and all persons interested in Christian Science, is again called to the Supplement published in Concord, N. H., by the *Boston Traveler.* The main part of this one issue in connection with the Old Home Week celebration in New Hampshire, is devoted to a dignified, sympathetic, and interesting article headed, "Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science." This article is approved, and it is desirable that it be widely used for distribution to set forth the kindly truth in regard to our Leader. The illustrations are excellent and the printing beautifully done by the Rumford Press of Concord.

Copies may be had for five cents each, but large orders are expected which will be filled at the *rate* of five dollars per hundred for any number, by the Christian Science Publishing Society.

## Nell and the Children.

*(From a narrative by B. Q. R.)*

"I SHALL be sorry to leave you, Nell; but I actually burn to put into practice the many things I have been learning here. Above all, I'm going to *love* those children in my school. You needn't think you mothers have all the good work to do. I'm going to be a secondary mother; and, in the case of the stupid and naughty children, who of course are always the most uninteresting to the teacher, I'm going to look for *what their mothers find in them.* Who can tell how much good I may do?"

"Who, indeed?" said Nell.

"But how I shall miss Doris and Frank! Do you know, I think the principal charm of that little girl of yours is her unaffectedness. When we were in the electric car the other day, I particularly noticed how wanting in self-consciousness she is. She was telling me about something she had seen; and, although she was not a bit noisy, all in the car who could see her seemed listening to her little story. It was so pretty! Her little hands went fluttering about, and her eyes sparkled; but she was quite unaware of the attention she drew. I felt proud of the child. How have you managed, with all her attractiveness and originality, to keep her so unconscious?"

"By being constantly on the watch, and shielding her from unwise flattery," said my sister. "I began when she was first learning to talk. When I found it necessary, I always asked those who listened to her quaint remarks to refrain from smiling or showing surprise; and, of course, I specially forbade any reference to her prettiness. It was our custom in the family, when we ourselves could hardly keep from spoiling our dainty baby-girl by indiscreet praise, to say, 'Doesn't she look *clean!*' We let that harmless adjective express all the superlative words we wanted to utter.

"You know, too, that I do not repeat the children's sayings when they can overhear me. Neither do I ask them to be good for appearance' sake, no matter what the temptation is, with visitors present on a 'naughty day.' Why should I use as a motive, 'What will this person think of you?' when I want their conduct built on the foundation of God's law?"

"My dear, my dear," said I, "you are giving me many ideas. Of this imprudence, at least, I have been guilty in the schoolroom. I will be wiser in the future."

With food for abundant thought, we stitched on for some time in silence. My sister had a good system with regard to correct speech and courteous manners, which I mentally commended. I now found myself thinking over this. When the children failed in polite expression, or repeated before their mother undesirable words gathered from the servants or other children, Nell would quietly say the correct form; or, if the error was of a particularly common and obstinate kind, she would say it twice. She did not oblige the children to repeat these corrections, trusting, rather, to the gradual effect of her own repetitions. On my giving speech now to these thoughts, Nell replied:—

"I don't like bad grammar, and I stamp on 'ain't' every time it appears; but some quaint little incorrectnesses of speech I let alone. Doris says: 'I strang the beads,' 'I brang the water,' 'They have dranken it all up,' 'I have wroten the letter;' and, looking upon these as childicisms, and not vulgarities, I really like to hear them.

"It seems to me a pity, however, to teach children bad grammar through nursery rhymes. To my mind antiquity should give way to purity of speech."

My sister ceased speaking; and I thought on,—this time of her courteous treatment of the children. It would have been strange, had their manners not been good. So many grown persons think it not worth while to use polite forms in addressing little ones. If Nell's dress happened to upset some structure on the floor, if she happened to run against a child in the dark, it was always, "Excuse me, darling!" If at table a piece of bread was left untouched beside either child's plate, and Nell wished to take it, or if she wished to put her cutting-table just where the children were playing with their blocks, it was not her way to appropriate without first asking in her most courteous manner, "Will you care?" or, "Will it trouble you if I do this?" I never heard the children reply to this in any other than an obliging mood.

My sister now continued:—

"These habits of courteous and correct speech have no part in the solid foundations of the characters we are building. They are the external ornaments, or, better, may be considered the smoothing and polishing process of the building materials. Yet they are important in adding beauty and completeness to the work."

As we talked of the power of the parents' influence, my sister said:—

"One thing that sometimes lessens this is the disagreement between the father and mother on subjects discussed before the children. The latter are sure to form more or less of an opinion in the matter considered, and to take part with one parent against the other.

"My dear, little children! If I can only help them on to goodness and a peaceful life! I try to utilize this springtime of theirs, dropping in little seeds of thought, which, I hope, will bear fruit throughout their lives. It may seem silly to you; but, even when they are asleep, as I tuck them up more thoroughly for the night, I often whisper to each, 'Be good, darling, be good!' Frank says now, if he could be only one thing, he would rather be good than strong. God grant he may always feel so!"

It so happened that this was the last opportunity my sister and I had for a good, long talk together. I was soon back again in my school, and hope that I am a better teacher because of that summer with Nell.

*The Christian Register.*

## The Two Guests.

Worry and Fret were two little men
That knocked at my door again and again:
"O, pray let us in but to tarry a night,
And we will be off with the dawning of light."
At last, moved to pity, I opened the door
To shelter these travelers, hungry and poor;
But when, on the morrow, I bade them adieu,
They said, quite unmoved, "We'll tarry with you."
And, deaf to entreaty and callous to threat,
These troublesome guests abide with me yet.

*Selected.*

## Nanny and Jack.

BY H. C. BUNNER.

Her uncle gave little Nanny
A Jack-in-the-box with a squeak;
But the squeak of the Jack was nothing
To Nanny's terrified shriek.

But soon she conquered her terrors,
And spoke like a brave little tot.
"You think you are real," said Nanny;
"But, truly, you know you're not!"

*St. Nicholas.*

"It is not often," says the *Advance*, "religious converts are reported in the market; but the Baptist Missionary Magazine estimates that Methodist converts cost $42.08 each. Baptists, $42.50. Congregationalists and Presbyterians come high—averaging respectively $176 and $232."

## Questions and Answers.

*Because there appear in the Sentinel items relating to the war and the policy of the administration, is it to be inferred that the Sentinel favors the war, or endorses the policy of the administration?*—F. B.

In the *Christian Science Weekly* of November 3, 1898, we said editorially we wished it distinctly understood that we did not reflect our own views in the promiscuous articles appearing in the *Weekly;* that they were a reflect only of the general views of writers and thinkers.

We have not changed our position one iota since that was written. We are responsible only for what is said editorially. The *Sentinel* is in some sense a newspaper, and because it publishes items of news relating to current events—including some events of the war—it should not be assumed that we favor the war or endorse war measures.

We well know that the religion of Jesus Christ is adverse to war. We fully recognize the fact that if his religion truly prevailed, war would be no more. If the brotherly love which lies at the base of Christian Science teaching were a fact in individual and national life, war would now be an impossibility.

Nevertheless Christian Scientists are a patriotic people and will uphold just government so far as they can. Human government, at best, is imperfect. The Christian Scientist knows what should be his attitude toward those who, to the best of their understanding and ability, are laboring to promote good government, and he will unswervingly hold thereto, regardless of criticism or differing personal opinions. He can do this, too, in a judicial and non-partisan spirit.

❧

*Do not Christian Science healers assume that the physical body is God's handiwork, and therefore in its natural state is free from disease?*—F. W.

The emphatic declaration of Scripture is that man was created in the image and likeness of God. Is it not evident that the image and likeness of God, Spirit, is not a physical body? In Science the physical body is understood to be the manifestation or expression of mortal mind. The body expresses what is found in this mind, and all inharmonious conditions of the body are the result of inharmonious conditions of mortal mind. When suffering and disease are destroyed in mortal mind, they are no longer expressed on the body.

The Christian Scientist does not treat a physical body. Truth heals the ills of the body by destroying the errors of mortal mind. As thought is divested of mortal and material belief, it becomes more spiritual and the body becomes more harmonious. A physical body restored to health through the understanding of Truth, manifests more of Good than does a sick body, but thought must escape all material environments and become purely spiritual, before it can be fully realized that the real man is spiritual, made in the image and likeness of God.

---

Lyman Abbott, in a sermon published in the *Outlook,* says: "Sin is not the same as punishment from sin. The New Testament says very little about saving men from punishment; it says a great deal about saving men from sin. Jesus Christ has come into the world to redeem us from sin; this is the vital matter, not the other."

---

"More dear," said Dean Stanley, "in the sight of God and his angels than any other conquest is the conquest of self, which each man, with the help of Heaven, can secure for himself."

## The Healing of Sorrow.

BY ABBIE JEWETT CRAIG.

IMPELLED by a desire to speak a word of love to those who mourn, I give my testimony regarding the healing of sorrow.

In little more than seven years the mortal sense of death has taken from me six of those nearest and dearest to me. About three years ago, after losing my only child, and being myself doomed to a life of uselessness leading to an early grave, Christian Science found me ready, longing, eager for a knowledge of the Truth it teaches.

Studying the Bible and Science and Health I gained rapidly in health. The black clouds of despair and sorrow rolled back, and for me a new day had dawned.

I had been studying one year when my beloved mother passed on. A friend writing me said, "Does your faith sustain you now?" Only a Scientist can realize what a sustaining power there is in a grain of Truth. My faith was tried and *not* found wanting.

But there was yet another trial in store for me, and when, eighteen months later, my husband passed on, there was need of vigorous work for demonstration to meet this sorrow. I needed and had help to meet it, and when the waves of sorrow began to roll, I dropped everything for the Bible and Science and Health, and studied until I gained a harmonious thought, and then took up the material duties again, feeling "The unspeakable peace which comes from an all-absorbing spiritual love" (Science and Health).

Soon after I discontinued treatment, to my, almost, despair, the claim presented itself again with seemingly larger proportions than before.

Knowing that what had been done once could be done again, I resolutely faced the situation and demonstrated for myself that divine Love is *All,* Father, Mother, Husband, Child,—*All.*

---

## Advised by a Specialist.

L. B. BETHARDS.

IT was for healing alone that I came to Christian Science. I knew nothing about it except that it offered to heal. I was advised to try it by a specialist on nervous diseases who was then treating me. He said, "It can't do you any harm; they have done lots of good." Such advice from a practising medical man is certainly abundant evidence that I was in a bad condition and he could do no more for me. I did as advised. It is now over three years since that time. My troubles yielded slowly to Truth; many have disappeared entirely, and others are slowly leaving me. I am becoming less afraid of sin and sickness. I owe all the change for good to Christian Science, for it has been my only medicine. It is about two years since I again commenced my work as a traveling salesman. I travel over a large territory and am pleased to say I find Scientists almost everywhere I go, doing good work. They are kind, thoughtful, and enterprising people.

I have many times been of a criticising mind, and thought of ways which, it seemed to me at that time, would advance the cause of Christian Science more than the ways I saw practised, but I am fast learning that the wisdom which wrote "Science and Health with Key to the Scriptures," which has directed and established so thoroughly an organized church with rules so simple and yet far-reaching, will always guide us in the best way; that I am perfectly safe in following and abiding in the advice and rules found in Science and Health, and the Christian Science "Church Manual." I am also learning that error is just as impersonal as Truth is impersonal.

## From the Religious Press.

### The Criticism that Exasperates.

Probably there are comparatively few of us who have not experienced the sense of exasperation that arises when something we have executed is criticised and condemned for defects of detail, while the general purpose and effect of the performance is entirely disregarded. The faults that the critic points out may be there; but we feel that we have been unjustly treated in not having the scope and purpose of our work taken into account. Trifles, it is often said, make up perfection; but we are all the time conscious that perfect trifles do not necessarily constitute a great and worthy whole, and that a masterpiece may involve many faults of detail. There may be false rhymes in a majestic poem; the great orator may mispronounce a word or two; there may be imperfect stones in a noble spire; but the man who can form his estimate of poem or speech or temple on the basis of these defects is guilty of the most flagrant injustice. Unless we mistake, one of the common causes of that brooding sense of injustice that is so common in the minds of sensitive children, is just that unsympathetic criticism to which they are often subjected by parents, teachers, and older children. Without being able to explain it they are conscious that what they do is estimated by its trivial and incidental defects and not by the main purpose they have in mind. It is wonderful how the heart of a child who has lived in this atmosphere of unjust criticism goes out in a flood to one who shows sympathy with its main purpose. It feels that it is understood, and one of the richest experiences of any soul, whether child or adult, is the consciousness of being understood.

*The Watchman* (Baptist).

### Individual Communion Cups.

Lists have been published showing the number of societies in each denomination, as far as the compiler could ascertain, of those who have introduced the unscriptural innovation of individual cups in the communion. These compilations have been made to aid in stirring up an agitation and in peddling the wares. Among Methodists the number is not only relatively, but actually, the smallest in the large denominations. This is an evidence of the practical common sense which has characterized the body as a whole.

We confess surprise that it has not spread more widely. For some refined, earnest ministers have supported it, and some cultivated laymen have agitated it. Besides, with presiding elders and pastors patenting individual cups, superannuated preachers taking commissions for selling them, manufacturers and dealers in the utensils offering pastors commissions to introduce them (which some, being tempted thereby, have taken), and arrangements having been made to surprise an Annual Conference by an exhibition of them at the Conference Communion, with health officers being induced to write personal letters to the ministers in a city, with physicians who never had a word to say against the use of strongly fermented wines at the Communion table (some of whom neglect the most obvious sanitary precautions in passing from patient to patient) warning the people, we are surprised that more churches have not been led astray from the simplicity which is in Christ.

*The Christian Advocate*, New York.

### Futility of Human Ambitions.

What a commentary upon the futility of human ambitions is the case of the late A. T. Stewart, brought to mind by the recent death of Judge Hilton, into whose hands fell the forty or more Stewart millions. In the later years of his life it was the great merchant's ambition to perpetuate his name and business. He had various plans tending to this end. Garden City, on Long Island, with its cathedral and school, was one of them. There he built the magnificent crypt that was to contain his remains. The Working Girls' Hotel in New York was another, this being his pet philanthropy. Whatever the terms of the trust committed to Judge Hilton, they were made with express intention that the firm of A. T. Stewart should remain in existence. A fatality seemed to attend upon every plan for the perpetuity of the Stewart name. Not one of them was carried out; and even his remains were not permitted to repose in the sepulchre prepared at such large outlay, for the grave-robbers carried them away; and though Judge Hilton spent over $100,000 in search, the conspirators were not found, and doubtless their statement was true, that they had burned the body with quicklime. What a different result there would have been had Mr. Stewart established a fund similar to the Peabody fund, for the education of a long enslaved race, or put his money, during his lifetime, into any form of practical philanthropy.—*The Watchman.*

## Miscellany.

### Gleason After the Doctors.

Patrick J. Gleason, ex-Mayor of Long Island City, who has been reported at death's door several times, is now laughing at his doctors and has thrown physic to the dogs. For a number of years his physicians said he had heart disease and other complaints, and he carried vials of medicine about with him in every pocket of his clothing. His medical advisers told him it was necessary to do so, as he might be stricken at any moment, and the medicine might be the means of saving his life.

Often he has been seen this summer sitting in a corner of Miller's Hotel, in Long Island City, showing his collection of little bottles to his friends, and dilating on their respective merits in emergencies. He also spent considerable time in training his faithful valet, who looked after his rooms over the Front Street livery stable.

"If you see me keel back in me chair and place me hand over me heart, 'Corkey,'" he would say, "just fish down in me left hand vest pocket for this bottle, pry open me mouth, and pour some of the stuff down me throat. If I should froth at the mouth and fall down, grab the bottle in the right hand vest pocket and give me that, if you want me to live until Saturday night to pay you your wages. On the other hand, if I suddenly become speechless and me eyes get the glassy stare in them, go for the pocket of me coat and get the bottle there, or I am a dead man. And in any case don't for the life of you forget the pills in the rear pocket of me trousers."

The big ex-Mayor had engaged the services of many physicians at divers periods, and every one of them pronounced his condition serious, and said that he could not possibly hope to live long, and he was in great danger of dropping off at any moment. At last Mr. Gleason decided that if he must die soon it was no use paying doctors' fees just to have it impressed upon him every time the doctors called. He then concluded that he would doctor himself for a time and the result was so gratifying that he kept it up.

Last week he applied to one of the largest insurance companies for a policy. He was promptly placed in the hands of the company's physicians and subjected to a rigorous examination. As a consequence, he was going about yesterday waving a $20,000 policy, and vowing he would bring suit against the doctors who had declared that he had heart disease.

"Sure, if I had heart disease I have gotten bravely over it," he shouted, "or those life insurance fellows would never have given me this policy. Let the doctors beware. I am after their scalps for sure!"

*New York Tribune.*

### An Exclusively Negro Town.

Birmingham, Ala., Aug. 17.—A special to the *Age-Herald* from Anniston, Ala., says: By a vote of ninety per cent of the registered voters, Hudson City Tuesday decided to be the most unique city in the United States, in that it will be the only exclusively negro town in the country. The election was by the order of the Probate Court to decide whether or not the town should be incorporated. Incorporation was carried unanimously, not a single vote being cast against. The town is located three miles from Anniston, and has four hundred population, all negroes, and contains one hundred houses, three churches, a schoolhouse, several stores, and no saloon. At the election the entire town turned out, males to vote, females to see that they voted right, and not a drop of whiskey or the least disorder was in evidence. Following the incorporation will be the most unique experiment in town government ever made in Alabama. Within five days the municipal election will be ordered, and the negroes will select city officials, every one of whom will be colored.

*Boston Evening Transcript.*

According to an apparently authentic article in a French periodical not less than twenty thousand aristocrats are at present confined in the prisons of Europe. Russia stands first with twelve thousand blue-blooded law breakers, while Italy deserves to be accorded second position, her places of detention harboring thousands of noblemen.—*The Church Standard.*

About four hundred cities, it is said, have adopted curfew ordinances. In many of these a decrease of eighty per cent in arrests and commitments of young people is reported.

"He is only an every-day Christian," said some one to the minister, of one who wanted to join his church. "He is just the man we want in our church," exclaimed the minister.

## Notices.

### Applications for Membership.

Applications for membership in the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 7, 1899, must be in the hands of the Clerk of the Church on or before the 15th day of October. Send applications to 30 Norway Street instead of 95 Falmouth Street, as heretofore directed. Hereafter address the Clerk of the Church at 30 Norway Street.

WILLIAM B. JOHNSON, Clerk.

### Mrs. Eddy's Pictures.

These pictures are made in the following sizes: cabinet and 8 x 10 photographs, and in all the large sizes in crayon and water colors. They can be had from the Reading Rooms or from the J. C. Derby Co., Concord, N. H.

### The Board of Education.

Requests for application blanks for the next examination cannot be complied with until due notice is given through our publications, as announced in the *Sentinel* of January 19, 1899.

### Index to Sentinel.

An Index to Volume I. of the *Christian Science Sentinel* (Weekly) is now in the hands of the printer, and when completed it will be mailed to our subscribers and supplied upon request.

### Rates for the Sentinel.

See page 34 for change in subscription price and terms of sale of the *Sentinel*.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
95 Falmouth Street, Boston, Mass.

---

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

Captain Alfred Dreyfus relinquished his appeal for a reversal of the judgment of the court-martial. He was pardoned by President Loubet, and left the prison at Rennes at three o'clock on the morning of September 20th. Little or no attention was paid to his departure. Captain Dreyfus said that while he had been given his liberty, yet liberty was nothing without honor, and declared that he would continue to seek reparation for the injury done him. The Dreyfusards are determined to pursue the campaign against the generals and other officers of the general staff. Dreyfus is now at the home of his brother-in-law at Carpentras, France. General Gallifet, the minister of war, has addressed an order to all the troops of the French army, telling them the case is settled and to forget it.

The Chinese government has lodged with the State department an emphatic protest against the military order of General Otis excluding Chinese from the Philippines. It is insisted that the action is contrary to international law, in violation of existing treaties, and completely disregards the friendly relations long maintained between the two countries. General Otis' order was issued some time ago, but without direction from Washington. The matter was promptly brought to the notice of the President, as the protest gives the matter an international aspect beyond the military questions involved.

General Otis has cabled that Aguinaldo sent two insurgent officers to General MacArthur with a request to send into our lines American prisoners, and to send to Manila a prominent insurgent general officer for a conference. The request for an interview was granted. It is hoped that the conference may prepare a way for surrender, and the outcome is awaited with much interest.

The friends of Rear-Admiral Schley protested against his assignment to the command of the South Atlantic squadron because they felt he deserved something better. But Admiral Schley told the President he had no protest to make. Although he did not care for the command, he would accept his orders, as he had always done during his forty-three years in the navy.

The Treasury Department has reversed its previous ruling, and decided that the Chinese stewards on board the Olympia may be permitted to land when the vessel arrives at New York. This permission will entitle them to the right to remain in the United States, but they cannot become citizens without the permission of Congress.

On account of the feeling which has been aroused on account of the Dreyfus verdict the French consul at Chicago has withdrawn his country's flag from the all-nations parade which is to be a feature of the fall festival next month. He said he could not do anything that would afford an opportunity to offer insults to the French flag.

Admiral Dewey, when at Gibraltar, expressed a willingness to accept the home in Washington which it is proposed to present to him, and the committee in charge of the fund is exceedingly desirous that it should be increased from twenty-seven thousand dollars to fifty thousand dollars before he arrives.

The preparations for war in the Transvaal continue on both sides. The despatching of British troops to South Africa is regarded by the Boers as a *casus belli*. President Kruger has cabled a strong personal appeal to Queen Victoria beseeching her to intervene to prevent bloodshed.

General Funston and the Twentieth Kansas will be given a reception at Topeka on their return from the Philippines. Governor Stanley will meet the regiment at San Francisco and escort it by special trains to Topeka. General Alger will be there to address the soldiers.

Word has been received at Washington that General Otis has failed in an effort to purchase the Filipino arms. The natives were to receive forty dollars upon surrender of arms and a guarantee that they would not be arrested for previous armed opposition to the United States.

Nine states were represented at the Anti-Trust Conference which assembled at St. Louis September 20, for the purpose of discussing the trust question and taking such action as might be deemed necessary. The idea of the conference originated with Governor Sayers of Texas.

Li Hung Chang, the Chinese statesman, severely criticises President McKinley on his foreign policy, and says he considers the American occupation of the Philippines a great mistake. He adds further that if Grant had lived no such mistake would have been made.

The members of the G. A. R. refused to take part in the Dewey land parade because of the position assigned them. Hearing of this, Governor Roosevelt telegraphed the major-general commanding the national guard of the state, to give them any position they want.

The Postoffice Department has decided not to extend rural free delivery any further for the present. The amount appropriated for this service for the current year was three hundred thousand dollars. The appropriation is nearly exhausted.

The Pope's encyclical recently addressed to France had nothing to say on the Dreyfus case. It was merely a theological lecture, urging upon the bishops a faithful performance of their duties, in which discretion should curb the over-zealous.

Hon. Thomas B. Reed has written a note of thanks to his constituents in which he says that during his twenty-three years of service in Congress they have not questioned his public acts, and no honors are like those which come from home.

Governor Roosevelt has issued a proclamation making September 29 and 30, the dates of the celebration in New York City in honor of Admiral Dewey's return, legal holidays in the state of New York.

William Rockefeller succeeds the late Cornelius Vanderbilt as director of the New York Central, and William K. Vanderbilt succeeds his brother as president of the New York and Harlem Railroad.

Sig. Marconi, the inventor of wireless telegraphy, is to report the international yacht races for the *Boston Herald*. While here, he will conduct some experiments for the United States government.

Information is received from Paris that the Senate has met as a high court of justice for the purpose of trying twenty-two politicians on the charge of conspiring against the government.

It is reported that Aguinaldo is willing to release all sick and civilian Spanish prisoners, but General Otis refuses to allow Spanish vessels to go to ports held by natives to receive them.

It is said that Ex-President Harrison is making a very strong impression in his address before the Venezuelan Commission. It is believed he will occupy at least ten days in speaking.

It is reported that on September 9, an anchor and a buoy marked "Andrée Polar Expedition" were found by a Norwegian cutter on the north coast of King Charles Island.

President McKinley has invited General Alger to attend the banquet to be given to Admiral Dewey at the White House, October 3. The invitation was accepted.

President Diaz has received from the Mexican Congress permission to leave the country for twenty days to visit Chicago and other points in the United States.

Including sixty vessels now under construction, the navy of the United States consists of 304 men-of-war. The list includes thirteen battle ships.

A decree has been issued by the provisional government of San Domingo naming October 9 as the date for the election of a president and vice-president.

Rear-Admiral Montojo, who commanded the Spanish forces at the battle of Manila, has been sentenced to retirement without the right of promotion.

The next Congress will probably enact a law requesting national depositories to pay one per cent interest on federal funds deposited with them.

Last year the American Board of Commissioners for Foreign Missions received $644,200.89. The expenditures were $692,446.78.

Smith College at Northampton, Mass., opened with over twelve hundred students. This is the largest woman's college in the world.

The naval estimates for last year were $47,128,251.08. This year's estimate will probably exceed that sum by $25,000,000.

The administration has decided to give Porto Rico two-cent postage with us, the same as Mexico and Canada enjoy.

General Otis has cabled that by October 1 all volunteers and discharged regulars will have left Manila.

The estimated pig-iron output this year is fourteen million tons, or two-thirds of the world's production.

Ex-Secretary Alger has announced that he will not be a candidate for United States senator.

Fabulous prices are being paid for windows on the line of the Dewey parade in New York.

Pig iron now sells at $19.50 a ton, the highest price in twenty years.

Paper currency has been demonetized in San Domingo.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## President Angell's Address.

THE Second International Congregational Council assembled in Tremont Temple, Boston, Mass., on the afternoon of September 20. About six hundred delegates from all parts of the world were in attendance. In some respects it was one of the most distinguished bodies of ecclesiastics that ever assembled in the city. Addresses of welcome were delivered by Mayor Quincy of Boston and Governor Wolcott.

The official address of President Angell was in part as follows:—

The history of the great movement which led our fathers to the adoption of the faith and polity which we have inherited I need not dwell upon in detail. You have from your childhood again and again lovingly lingered over every chapter of the wonderful story.

You know that the spirit of their faith was, as Palfrey says, no mere creation of the sixteenth century, but is as old as the manliness and truth of England, nay, as old as Christianity itself. Its benign light shone forth from the pure soul of John Wycliffe, the morning star that flamed so brightly on the eastern sky of the English reformation, and from the pathways of the fraternity of Christian Brothers, whose swift feet, beautiful upon the mountains, carried the New Testament and tracts into so many of the homes of England years before Henry VIII. had broken with the Pope of Rome.

How these earnest men, who were soon to be known as Puritans, found Henry's politico-religious reformation of the church inadequate to the spiritual needs of the nation you know; how in the bloody days of Mary scores of them gave their bodies to the flames, and made Gloucester and Oxford and Smithfield and a hundred other places holy ground forever: how hundreds more, fleeing to the continent, came under the influence of the great Genevan, who through them so shaped the ideas both of old and new England; how under the first Stuart they were so annoyed that thousands of them, his most intelligent and prosperous subjects, preferred life among the savages to life beneath the shadow of his throne; how the humble Scrooby brotherhood of Brownists, after many hindrances, made their way to Holland; how, after twelve years' sojourn in that strange land, a little company, whose names were to become so dear to us, set out for this distant shore; how John Robinson, than whom few men have better deserved canonization, gave them his benediction and his parting counsels in those wonderful words which are pregnant with the germs of future progress, and which stamp him as a century in advance of his age in largeness of view and in his mode of apprehending Scriptural truth; the weary voyage; the famous compact, carrying the life of future democracies in every line; the dreadful trials by famine, by sickness, by wars; the planting of the other and stronger colonies; the arrival in New England of twenty thousand settlers before the meeting in 1640 of the Long Parliament, which put an end to the Laudian persecutions; all the checkered history which follows until this little corner of America has furnished one-fourth of the population of this country, now stretching on this continent over one hundred degrees of longitude and forty degrees of latitude, and numbering more than seventy millions of inhabitants, and has wielded an influence which words can hardly exaggerate in shaping the destinies of this people; the purity and bravery with which, in Great Britain, the followers of Barrowe, and Robinson have borne their testimony to the truth, as they understand it, in face of the social and political discouragements offered by the existence of an established church; the energy and activity of their sons in the far-off insular continent of Australia; their missionary zeal illustrated by carrying the gospel to every continent of the globe—all this splendid history you know so well that, fondly as I could dwell upon it for the hour before us, I may not do so now. The hasty sketch by my unskilled hand would, I fear, be a poor substitute for the picture which the great historians of our faith have already hung in the chambers of your minds.

While expressing our appreciation of the fathers, we are not disposed to indulge in indiscriminate eulogy of them. They were fallible, and we honor them by recognizing and avoiding their mistakes. Let us not deny that some of them forgot St. Paul's assertion that the letter of the Scripture killeth, but the spirit giveth life. Let us admit that the founders of the Massachusetts colony at least did not run on in advance of their age, or even keep pace with Roger Williams in learning the lesson of religious liberty and of the separation of Church and State. Make all due abatement for these and any other blemishes upon their record, still there remains enough to their credit to entitle them to our lasting gratitude, and to justify us in dwelling for a little on some of their salient characteristics.

The first and most important of these was their intense desire to do the will of God. Duty to God has been their watchword, the key to their character, the inspiration of their life. Duty, not pleasure; duty, in spite of all temptation, to do whatever they could to set up the kingdom of God on earth; this was their regnant idea. God was to them not a being shadowy and far off, but a captain here with his people fighting in the great battle against Satan and all the hosts of evil. His command was always and everywhere implicitly to be obeyed. We may apply to most of them those strong words of Carlyle concerning the Puritans, "Here are heroes who knew in every fibre and with heroic daring laid to heart, that an almighty justice does verily rule this world; that it is good to fight on God's side and bad to fight on the devil's side. The soul of this heroism remains part of the eternal soul of things."

Again, our fathers not only longed to do the will of God, but they believed profoundly that God had revealed His will in the Holy Scriptures. They were Bible men. The Bible was their meat and their drink. They often fell into a slavish bondage to literal interpretations. They sometimes failed to read the Old Testament in the blessed

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

light with which it is flooded by the New. But still the fact remains that they took the Scriptures as the guide of their daily life. It was to them no dim and indistinct utterance from an almost forgotten past. As they lingered with a sort of spiritual passion over its pages, the words sounded in their ears as though falling from the lips of the living God. Traditions of ecclesiastical usage, the will of national or ecumenical councils, the decrees of kings or of high commission courts, all were as nothing to them against a "Thus saith the Lord."

Once more, they believed in education. The school was always planted by the side of the church. Nay, the higher education was cared for. Seven years had not elapsed from the transfer of the Massachusetts chapter to America, many of the necessities of civilized society were still wanting, when the Massachusetts colony appropriated a sum equal to its ordinary tax for a year to found the college at Cambridge.

It has been said, I think truly, that this is the first instance in which the people, by their representatives, ever gave their own money to found a place of education. The brethren in the other colonies cheerfully sent in their contributions of corn or money to strengthen the infant college. No doubt their primary aim was to train up a learned ministry. But their ideal of life and duty required of every man the best culture attainable by him. Every man was to be able to study the Scriptures. Every man was to develop his faculties so as to do the best work possible to him in God's vineyard. They could tolerate neither ignorance nor idleness. Wherever they or their descendants have planted themselves, schools and academies and colleges have sprung up, multitudinous as the stars in heaven.

I think you will agree with me that men with the traits and ideals I have briefly described naturally and necessarily developed a marked type of individualism which we may characterize as godly, steady, and intelligent.

By godly individualism I mean that kind which limits its self-assertion and its action by God's law. Its life is not self-centred, but centred in God. Its liberty is that with which Christ maketh free. Its independence is reconciled with obedience to the divine law. It finds perfect freedom in the service of God. It stands in sharpest contrast with that egoistic, morbid, heady, reckless individualism too common in our days, which sees no freedom save in defiance of the supreme law. That our fathers made some mistakes in deciding what were the divinely intended limitations of human action, we willingly concede. Still, it remains their signal merit that they honestly tried, and with a high degree of success, to rear up men who, in originality, good, round-about sense, and brave self-reliance, have never been surpassed, and who yet were ever ready to bend their wills to the will of God.

There was a steadiness, too, a certain wise conservatism in their individualism. This may seem to the superficial student of history, who thinks of Puritans and Pilgrims only as ranters and extremists, an unwarranted assertion. But any one who will carefully study the annals of England will be surprised rather at the patience than at the haste of the Non-Conformists. Rather than break with the established church they held on for long and trying years, exhausting every resource in the attempt to exercise their liberty of worship within the old fold. They were pre-eminently law-abiding, and, even under the exasperating rule of James I., openly proclaimed that they believed not in violent opposition to his laws, but in quiet suffering of the penalty, if they could not conscientiously obey.

Scan their proceedings in all the novel circumstances of their organization of governments on our shore. What decency and gravity and order! How little mere radical theorizing! These are plain, sensible Englishmen, adapting themselves with great wisdom to their new conditions. How little of old England do they drop off, merely for the sake of change! And in all their subsequent history, how seldom do the schemes of visionary leaders, system-makers, find any favor. These men have their eyes turned heavenward, but their feet are firmly planted on the solid earth. Gradually apprehending and taking up new ideas, toleration, co-operation, independence, they never, in grasping at the prizes of the future, let go the acquisitions of the past. The more rapid their movement in great emergencies, the more firmness and steadiness it seems to take on. The more canvas they spread to the breeze, the firmer is their hold at the helm.

With their English grit, and with an invincible faith they fought through to victory. And so every foot of New England soil should be hallowed ground to those who believe as you do. For nearly three centuries it has been the stronghold of the faith you cherish. If there is a spot where the Congregationalists of the world should find a heartier welcome than anywhere else, it is in the state which owes its very existence to the Pilgrims and Puritans of the beginning of the seventeenth century.

## Have Doctors a Right to Kill?

### Assists People to Die.

DR. NEHEMIAH NICKERSON of Meriden, Conn., in an interview with a reporter had the following to say in regard to the address of Judge Simeon E. Baldwin on the right of man to die a natural death:—

"It seems to me that most of the physicians who have expressed their opinions, both in town and throughout the country, have evaded the question at issue, and lost sight of Judge Baldwin's argument. He makes two propositions: First, when a physician is treating a person suffering from an incurable disease, and knows beyond the shadow of a doubt that the patient has but a few days to live, is it right to put him gently out of his suffering provided he desires it? Second, should a man who is tired of this life, and who is under no obligations to any one, end his life by his own hand?

"I would answer both of these questions in the affirmative.

"I think that when persons are suffering from an incurable disease, and after a careful diagnosis it is determined there is no chance of recovery, it is humane to honor their request if they wish to die. I think it cruel to prolong life under such circumstances.

"I remember a case I had a few years ago. A lady was dying of consumption. It was only a question of a few hours any way, and she was an intense sufferer. She begged me to assist her to pass away. Her husband asked the same thing, so after she had made what last requests she desired, I administered chloroform and she passed away. Another case I recall, a woman was dying of heart troubles. She suffered untold agonies and there was no chance of saving her life. She requested me to end her sufferings, and I accordingly gave her chloroform.

"During the war I frequently gave chloroform where there was no possible chance of recovery. I believed I was doing a humane act and rendering a kindness, and I believe so now.

"More than that, I believe that if a person has no obligations, is tired of this life and wishes to see the one beyond, he has a perfect right to end his life. This, of course, I repeat, if he has no obligations in this world.

"If men or women wish to believe in Christian Science,

Digitized by Google

even so far as to die without medical assistance, they have a perfect right to do so. I think, however, that a law should be made to protect the children.

"A few days ago a young lady called on me and said a relative was dying and she could not see him again, he was in such pain. When such a life is prolonged I consider it fiendish.

"A man called on me and said he was tempted to commit suicide. He had had a great amount of trouble and was bordering on insanity. I asked him why he didn't end his life if he wanted to, and I advised him of the easiest method, but he didn't know whether to take me seriously or not, and he is still alive, although confined in an insane asylum.

"Of course people have been known to recover after having been given up by a physician, so that I should recommend that more than one physician diagnose a case before judgment is pronounced. I only advocate the above when it is proved beyond a possibility of a doubt that the patient cannot recover, and when it will end a lot of needless and prolonged suffering."—Meriden (Conn.) *Record*.

### Doctors do it, he Says.

Meriden, Conn., Sept. 12.—The morning *Record* will publish to-morrow a signed statement from Dr. Nehemiah Nickerson, whose views on the right of man to die have caused such a sensation.

Dr. Nickerson says, in substance, that there is nothing in the published interview with him in Saturday's *Record* to show that the administration of chloroform to patients, dying of incurable diseases, tends to lessen the last few hours of life.

"By removing the agony from pain in cancer or from the struggle for breath in certain cases of heart disease or consumption, I should judge it might prolong the period. But this is a point which cannot be determined to a certainty.

"My remarks in Saturday morning's *Record* were intended to show what I considered the duty of the physician during the last few hours of terrible suffering from incurable disease, when we can act the part of a ministering angel in no more merciful manner than by rendering the sufferer unconscious during the few hours that remain.

"My consideration was entirely confined to those cases of long-continued incurable disease where there could be no possibility of a mistake, and when the patient was absolutely dying in extreme agony, which the physician could mitigate or relieve. Shall he stand by in helpless inactivity, while pain and agony wring the last breath from the poor sufferer? I say no, and doubly no. Morphia and various anæsthetics which my critics profess to use have no effect on the pain of cancer unless a necessarily fatal dose is given. The physician in such cases finds himself compelled to resort to chloroform.

"In spite of all the anathemas hurled at me, the profession has and does in extreme cases resort to this means of relief."

*Boston Post.*

### Dr. Simon Baruch's Views.

Dr. Simon Baruch believes that a physician should use his discretion in relieving suffering, even at the risk of hastening death.

"I agree with Judge Baldwin's position," said he at Long Branch, last night, "that when a fatal disease attacks a person whose vitality has been undermined by age a physician may abstain from the effort to prolong life, but it is not the function of a physician to be a Spartan and remove a man because he is useless. It is quite a different proposition when disease causes great suffering and the patient asks his physician to assist him to end his agony by hastening dissolution. Such demands are often made in every physician's practice, but they are made more frequently by persons who are suffering great pain from temporary and even natural causes than by persons who are dangerously ill. At such times patients are demoralized and incapable of forming a correct opinion of their condition. We sympathize with them deeply and give them anodynes to relieve their suffering, but only with a prudent regard for the life of the patient.

"I treat patients frequently who beg me to let them die. I am treating a friend and a patient here who requested me on two occasions to let her die. The pain did not yield to morphine, but the patient was kept free from it by chloroform inhalation until a surgeon came on a special train, operated, and restored perfect health. It would have been criminal for me to allow this patient to say when life should cease. Even if the relatives and family had seconded the request I would have refused to accede to it.

"In acute diseases, such as pneumonia and fevers, no man should yield to importunities to cease his efforts to restore the patient. Every physician has numerous cases in which recovery has been brought about under the most desperate and unpromising conditions.

"In chronic cases, on the contrary, such as the advanced stages of cancer and phthisis, the physician would be justified in yielding to the desire of the patient to be released from suffering, provided the family joined in the demand. There are various methods by which the patient's release might be hastened. Abstaining from administering food, stimulants, or medicines may suffice. If the pain is very great, in external cancer, for example, or the difficulty of breathing is agonizing, as in advanced heart disease, the doctor who can resist the patient's appeals must have a heart of stone. I do not hesitate to apply anodynes freely, even at the risk of terminating life, always advancing cautiously, and, if possible, after seeking other advice in consultation.

"Whether it be lawful or not does not enter into the problem at all. It is my solemn duty to save life and alleviate suffering, and I try to do either according to the dictates of my judgment."—New York *Herald*.

### May a Doctor Kill a Patient?

That truth is often told in jest has just received startling confirmation from an unexpected quarter. One of the stereotyped humorisms of the composite wit of the world is conjecture as to how many patients the average physician kills. Of course it is one of those gruesome jokes, of which the human species seems so fond, and if there is any real suspicion of actual professional homicide it is regarded as of the accidental class. Such a supposition as that the medical minister to man's ills and sufferings ever exercised, deliberately and with knowledge aforethought, his skill, not in cure, but in killing, was not for a moment entertained by even the most heartless of jokers.

But science is mighty and human nature full of contradiction. It having been advanced by Judge Simeon E. Baldwin, of New Haven, as sound law and orthodox philosophy that a doctor, not alone did his duty, but performed an act of mercy, when he quietly severed the cord of life for a suffering and incurable patient, along comes Dr. Nehemiah Nickerson of Meriden, the same state, and with refreshing frankness declares that he has often done so.

It is a bit startling, isn't it?

While the moral question involved is certainly the most important one, it is possible that public opinion will waive that, for the present, in an individual anxiety on the part of each person to have determined just how universal in his own community has become this practice of life limitation among the medical profession, of which profession his family doctor is a member. Physicians all over the country have united in condemning the Connecticut idea of their duty. They attacked it upon legal and upon moral

Digitized by Google

grounds, declaring that it would open the door to malpractice and would end progress in the science of curing.

Cincinnati *Commercial Tribune.*

### The Right to Die.

Judge Baldwin of New Haven, Conn., has aroused discussion by a paper delivered recently in which he said that physicians ought not to use their art to prolong the life of a sufferer who had but a short time to live at best, and who preferred early death to hopeless suffering. Dr. S. N. Nickerson, a physician of Meriden, Conn., goes further, and asserts that in some cases it is even desirable to hasten death. In commenting upon Judge Baldwin's paper Dr. Nickerson said,—

"I think that when a person is suffering from an incurable disease, and after a careful diagnosis it is determined there is no chance of recovery, it is humane to honor his request if he wishes to die. I think it cruel to prolong life under such circumstances."

Dr. Nickerson expressed the belief that a person in the circumstances indicated has a right to say when his life shall cease. Asked as to whether doctors are always able to tell when all hope of recovery is past, he replied, "I should recommend that more than one physician diagnose a case before judgment is pronounced, as patients have been known to recover after being given up by their physicians."

Clearly it is not wise to intrust power of life and death to fallible human agencies, which physicians are. If those worthy men were possessed of omniscience, and were certain never to abuse their power, they might be permitted, if they so desired, to graft the trade of executioner on their honored profession. But as matters now stand it would be best for them to limit their practice to the extent of not taking up intentional homicide as a branch of it.

*Chicago Record.*

## A Plea for the English Language.

If by the international language, proposed by Doctor Samenhof, the Russian philologist, is meant a universal language, then I say, let the world adopt the English language. For more than a thousand years the English has been in the process of evolution, and to-day it is the most flexible, composite, and beautiful language ever invented by man. It has borrowed liberally, but with discretion, from nearly all languages, living and dead; it contains more synonyms and antonyms than any other one tongue, and more words from which a great literature may be produced.

There was a time—but a few years ago—when French was considered the language of polite society the world over. But to-day English is spoken by a far greater number of people than is the Gallic tongue, and the reason is not far to seek. England owns about one-fifth of the land area of the globe, exercising a sovereignty over four hundred million people. Of course a large percentage of her subjects do not speak English, but from present indications it is only a question of time when their descendants will. Then we have to reckon in seventy-five millions of Americans who use the English language, besides other races in the Western Hemisphere and in other parts of the world to whom English is familiar. From this it will be seen that the English language has a good start of all the civilized tongues of the earth, and it must also be remembered that hundreds of thousands of Europeans are conversant with English. In its structural forms it has gained a strength and solidarity second to no other known language. It enabled Shakespeare to prove himself the greatest poet the world has ever seen. No thought or sentiment or casuistry that has been expressed in any other language is there that cannot be as perfectly and as forcibly expressed in English—if the right man guides the quill. It is true, our translators often lose much of the aroma and many of the verbal nuances of foreign literature in their transcriptions into English. But in our purely creative performances we do not sheepishly shrink from a comparison with the work of our foreign contemporaries.

As a nation the Yankees are not especially given to philology. Polyglots among us are few and far between. But we claim to be an intelligent people, and I think the standard of education among our lower classes will be found to be considerably above that in any other nation. We keep our printing presses going night and day, and maintain over twenty thousand periodicals. We are a nation of readers, and there are few, if any, inhabited parts of our broad land where publications of one sort or another do not go.

It seems to be easier for the Germans and the Russians to "pick up" English than for us to acquire their languages. I hardly think it is because foreigners are more persistent in their application to study than we are, but rather on account of their aptitude for languages; they are more natural linguists than we. Again, the average American has little sympathy with such a complex and difficult language as the Russian, and feels no practical need of it. On the other hand, for more than one important reason, the Russian sees the advantage of knowing English, and this may be said of all other progressive Europeans. Scores of new words are being incorporated into the English language by reason of scientific discoveries, and, for the most part, their etymology is valid, derived, as they chiefly are, from the Greek and Latin. It is capable of absorbing foreign words *ad infinitum*, as well as the majority of foreign idioms.

Why, then, should not English become the international—the universal—language? We know how miserably the attempts to foist Volapuk into popular vogue failed, and it may be questioned if any artificial language, however ingeniously formulated, would ever win the favor of an enlightened civilization. Such an international language, it cannot be expected, would be adopted by all the savage and barbarous peoples that infest this footstool of the Almighty. Nor would it make any special difference if they didn't adopt it. But it certainly would prove a great international convenience and benefit if a uniform language were practised among the principal civilized countries and such of their dependencies as are sufficiently advanced to appreciate the advantages of a common speech with their fellow-men.

It is natural for every man to love his native language best, but in the broad scheme here suggested, none of us can afford to be narrow-minded and bigoted. It is not a question which can be settled off-hand in a single session. From my point of view, there is no substitute for the English language; it embodies the thoughts and inspirations of too many matchless intellects to be crowded aside by any other. With its copious vocabulary and infinite resources, it stands to-day the best chance of winning its way wherever mankind is prepared to choose between it and other civilized tongues.

LEON MEAD.

*The Educational World.*

The *Pilot*, in commenting upon the charges made against the Catholic clergy for exorbitant fees in the Philippines for marriages, baptisms, and funerals, says the rate is fixed in those islands as follows: ten, twenty, and fifty cents.

Canon Farrar says: "Do not sink into mere money-making machines. Man lives indeed by bread, but, oh, remember that he doth not live by bread alone."

## Religious Wave Sweeps the World.

HALL CAINE, the Manx novelist, holds very strong, and what some people conceive to be uncommon, opinions on practical religious problems. Mr. Caine is not always willing to discuss for the public prints the religious ideas he has developed in his works. He is fearful of being misunderstood. He prefers to picture in a character or a situation the striking tendencies and phases of modern life, rather than to lay down bold theological dogmas. He is the psychic artist rather than the ecclesiastical metaphysician. This quality of the novelist's mind was strongly manifested when Mr. Caine talked reluctantly on live religious questions with a *Press* reporter.

"Do you think that there is so great a personal conception among Christians in these days as might be fairly inferred from your published treatment of the subject?" queried the reporter.

"I should not like to answer that question directly," was Mr. Caine's reply, after a thoughtful pause. "One can scarcely say how much is read into one's writings. It is the work of the novelist to portray, to picture character. It would not be fair to draw a general conclusion from a particular character. A character stands for a class—the corrupt Christian, for instance, representing a type. He is one of whom there are many, but he is not the whole race."

"Do you believe that religious teachers are too much under the sway of mere money-makers?"

"Oh, that is a hard question. Again one should be slow to make a general statement. I would not allow myself to dogmatize concerning the clergy. I give you a character in the novel. He is drawn from life. He represents one sort of man, but that is not to say he represents all."

"Do you find, in going about the world, that Christian people give a living representation of the teachings and spirit of Christ, or has Christianity degenerated into a sort of respectable infidelity, with Christian leanings? Is deism and infidelity gaining upon positive Christian doctrine?"

"I must beg you not to ask me to discuss doctrine. But I feel very strongly, from observation and deep study, this one thing: That the one great and supreme religious tendency of the time is a returning to that kind of Christianity that is represented in the early Apostles. It is a deep religious impulse that is sweeping through all classes and sects and denominations."

"Do you mean a purely emotional Christianity?"

"Yes, it is emotional, but not in any narrow sense. Religion itself is emotion—not exclusively, but very largely, an emotional thing. And that is not to depreciate religion. It is the highest kind of emotion. This supreme religious characteristic of the age is manifested in numerous ways in many lands. One sees phases of it in the Christian Social Union, in England. Here in America the St. Andrew's Brotherhood is a manifestation of the same impulse to return to the early Christian periods. It is seen in Italy and in the Catholic Church generally. It is no less manifest among the Methodists, and, in fact, in all denominations. I think this is the most striking phase of the present religious situation, and I look upon it as a very hopeful indication of the truly deep religious quality of the race."

Mr. Caine spoke with deep earnestness, that carried conviction. His large, brown eyes glistened with the intense fervor of one possessed of an idea whose import was to him a living truth. He gestured quickly and nervously, and his long, auburn hair fell carelessly about his collar.

One felt that here is a man who has thought and felt and struggled with the basic convictions of human life. Mr. Caine's personality is itself impressive. In conversation he speaks with extreme cordiality, and with a sweetness of manner that is altogether charming.

*Philadelphia, Press.*

## Marriages at Sea Illegal.

JUDGE DOUGHERTY of Santa Rosa has handed down a decision in which he holds that a marriage performed upon the high seas without a license is null and void. In substance the court, in a case before him involving this question, says,—

"Marriage may be solemnized by either a justice of the supreme court, judge of the superior court, justice of the peace, or priest or minister of the gospel of any denomination. No particular form for the ceremony is required, but the parties must declare in the presence of the person solemnizing the marriage to take each other as husband and wife. Marriage must be licensed, solemnized, authenticated, and recorded.

"The bonds of matrimony can only be welded through solemnization by some person authorized, and by him only upon the presentation of a marriage license. The parties to this pretended marriage gain nothing by going out upon the high seas. The sea has no law of its own. They were residents of California and amenable to California law.

"The sad feature of this illegal, and consequently, illicit union, is the birth of a son, which, under the law, is illegitimate, though perfectly innocent. It is only in actions for divorce that the court may give direction for care, custody, and education of minor children. Under the law this child is now the legitimate and adopted child of the father. He had no wife, no legal family, but he has publicly acknowledged him as his own and otherwise treated him as a legitimate child."

In this view of these cases,—no doubt the correct one,—what a deplorable state of things might follow such attempts to take an undue advantage of some one, or something that is believed by the parties to stand in the way of their designs. They, by the help of one who is most probably more guilty than they, enter upon a life of violation of law, and thus subject themselves to all the consequences of an illegitimate relation both to themselves and to the offspring that follows, which involves a scandal to the household and worse, the stamping of illegitimacy upon the child that will remain for life. Ignorance is no excuse; law can make no provision for that. A plain and severe penalty should follow the violation of all law.

*The Marin Journal,* San Rafael, Cal.

## Unity of Good.

IN nature's panorama, as in spirit life of man, a unity of thought is manifest. That unity of thought must be of good, or else of evil. It cannot be of both, else is it not a unity but a divided, antagonistic twain. All life, all thought, all aspiration, hope, and love, all growing charity, and purer manhood, point to that unity as good. Then take the great idea to your inner consciousness, and ever in your inmost soul repeat the glad conclusion, "God is Good." And all things of His thought are good. His thought is all. The universe its picture is, and man reflects it. Then grow into a comprehension of God's thought, absorb its loveliness, live its pure charity. Within this all-embracing thought of love, be only the reflection of love yourself.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## A Correction.

IN the editorial page of the *Christian Science Sentinel*, Vol. 2, No. 3, occurs the following statement:—

"If all of us who call ourselves Christian Scientists were faithfully reflecting the Truth in our lives, envy and malice as well as ignorant antagonism would be swept away like a fog before a gale."

While this, in substance, states a truth, yet as phrased, it is misleading, and we regret that it should have found a place in our publication. The statement as it reads is in accord neither with the teachings of the Bible nor "Science and Health with Key to the Scriptures." According to this teaching sinners cannot be saved through the efforts of others. The statement, as made, although not so intended, would almost re-affirm the doctrine of sacrificial atonement, or substituted salvation. Whereas the Scriptures affirm that each must work out his own salvation with fear and trembling.

According to Science and Health the only pardon for sin is its destruction. This destruction can be wrought only through the cessation of sin by the sinner.

While Christian Science does not teach eternal damnation, it does teach that the final destruction of sin depends on the obduracy of the sinner. It may be countless ages, or cycles of time, before some sinners will surrender their sinful natures to the demands of divine Love. Until they do, they continue in sin, and their sins will be expiated only through suffering, through pangs unspeakable, for there is no escaping the penalty for sin.

Read this on pages 310 and 311 of the text-book:—

"Sorrow for wrong-doing is but one step towards reform, and the very easiest step. The next and great step required by Wisdom is the test of our sincerity,—namely, reformation. To this end we are placed under the stress of circumstances. Temptation bids us repeat the offence, and woe comes in return for what is done. So it will ever be, till we learn that there is no discount in the law of justice, and that we must pay 'the uttermost farthing.' The measure ye mete 'shall be measured to you again,' and it will be full 'and running over.' Saints and sinners get their full award, but not always in this world. The followers of Christ must drink his cup. Ingratitude and persecution will fill it to the brim; but God pours the riches of His love into the understanding and affections, giving us strength according to our day. Sinners flourish 'like a green bay-tree;' but, looking farther, the Psalmist could see their end,—namely, destruction."

This teaching is reiterated in varied phrase throughout this book, and the other writings of the Rev. Mary Baker Eddy.

## Hamlet's Question Answered.

JUDGE SIMEON E. BALDWIN of Connecticut, president of the American Bar Association, recently gave a mild shock to readers of the newspapers by the publication of a paper read by him before the American Social Science Association, containing the daring statement of his opinion, that doctors have a moral and legal right to let patients die without attempting to prolong their existence, when there seems to be no chance of their ultimate recovery. No doubt Judge Baldwin thought he was breaking a new path for the medical men to walk in, but he must have since concluded that his views on this subject are almost old-fashioned, for Dr. Nehemiah Nickerson of Meriden, Conn., —a physician of excellent standing in his profession, who served with distinction as a surgeon in the Civil War,— hastens into print with an almost boastful confession that he actually puts patients out of their misery when they ask him to, by giving them a fatal dose of chloroform. Some other physicians are bold enough to make the same confession and to uphold Dr. Nickerson in his contention that it is right sometimes for doctors to kill where they cannot cure.

It is but just to say that many physicians heartily denounce Dr. Nickerson and his contention for the right to kill, but even physicians of unstained hands do not treat Dr. Nickerson's assertion that all doctors on occasion do as he does as if it were an awful libel against the medical profession; they do not treat the matter as though such things are unknown, but rather as though they represented a disagreeable phase of professional practice which it is embarrassing to speak about.

Some of the physicians who have given their opinions to the newspapers condemn the chloroforming practice on the ground that it is not right because *materia medica* lacks so much of being a science that it is impossible in any case, no matter how serious it seems, to be absolutely sure that the patient will not recover. This view of the question is very earnestly insisted upon by some of the most eminent men of the medical profession, a fact which incidentally confirms the statement we have so often made that *materia medica* is not scientific but that it is a mixture of superstition and guesswork.

The humane societies and anti-vivisection societies have frequently called public attention to instances of human vivisection, where death followed as the direct result of murderous experiments by physicians. The cases cited are usually in foreign charity hospitals or prisons, and it never seemed possible that such things could happen in America, but it is beginning to be learned that homicidal experiments are carried on in this country as well. It gets to be still more serious when physicians confess that they deliberately hasten the end of a patient's sufferings when requested, even in their ordinary practice.

The incompetence of a large percentage of doctors is an old, old subject for wits to whet their humor on, but it never becomes obsolete because new occasions of failure clothe it with new meaning. Although it is more than suspected that incompetent doctors not infrequently kill patients with chloroform and other drugs unintentionally, the public was hardly prepared to hear that physicians take human life intentionally. Some of the leading newspapers are emphasizing the danger of people submitting to the treatment of members of a profession in which men who purposely chloroform patients to death are harbored and recognized.

Accepting the testimony of appearances, doctors of medicine are forced to give up hope for patients ofttimes, when the conditions are not even serious. They believe what they see, and what they see is often a false symptom even from their own standpoint. Christian Science denies the truthfulness of appearances when they seem to foreshadow death, just as the astronomer would deny or disregard appearances, when clouds obscure the sun and seem to foreshadow a total and final eclipse. The Christian Scientist would hold unaffrighted to the scientific spiritual fact of man's unbroken continuity of existence, as the image and likeness of God. The Christian Scientist bears witness to the presence and power of Life, even in the face of the most contradictory testimony of physical appearances, and by so doing often rescues the sufferer from the clutch of death. We have no doubt that many of those who are well and strong to-day as the result of Christian Science treat-

Digitized by Google

ment, would have been "expeditiously despatched" had they fallen into the hands of a chloroforming doctor.

Christian Science never surrenders in a struggle with disease while a single spark of life remains; it never kills either by mistake or intention; it never leaves a patient in bondage to a degrading habit as a result of its treatment; it never produces evil results under any pretext whatever. Christian Science heals the sick, binds up the broken-hearted and saves sinners and it never fails to lift to higher and nobler ideals whomsoever honestly studies it.

## Anxiety for To-morrow.

BY HENRY D. NUNN.

Of all the sayings of Jesus, that found in the sixth chapter of Matthew advising us to take no thought for the morrow is the most difficult for mortals to reconcile with reason. It seems like downright encouragement to us to be shiftless, regarded from the accepted standpoint of the world, namely, that life may not be sustained by bread *alone,* but that it *cannot* be sustained *without it.*

Notwithstanding the seeming lack of wisdom in this bit of advice, I have not the slightest doubt but that Jesus uttered it, and fully intended that those who followed his teachings should act upon it.

How is it possible for men nowadays to stop thinking of to-morrow when so few feel sure of an income one week ahead and must keep on the lookout continually? This is the question most of us have asked ourselves. If it were true that we "must keep on the lookout continually," then, of course, we cannot stop thinking of to-morrow, but it is not true that we *must* keep on the lookout.

The perfect simplicity and plain common sense of this advice of Jesus is seldom appreciated, because we think of it as a proof of stupendous faith to rest satisfied in to-day. Christian Science makes it easier to give up fruitless worrying about yesterday and to-morrow than I ever thought it could be made. By the largeness of its representations concerning the power and beneficent activity of God in the world to-day, and by the great weight of proof advanced to support them, we are led to feel a sense of nearness to the Father which soothes our anxious fears, and then it grows to be natural to expect Him to keep us from destruction. If our motive in living is to love our neighbors and do good wherever we can find an opportunity, we are not so apt to doubt the possibility of continuing it after to-day as we are when our sole motive is to minister to our bodily wants.

Through the study of "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, we gain the conviction that the purpose of our existence on earth is to make kindness, love, patience, truthfulness, honesty, purity, and harmony more manifest among men, and that these things being direct from God, we are sure to be under God's protection so long as we are faithful in obeying every good impulse and in refusing to admit into our thought any suggestion of evil.

Make a cameo of to-day, cut it out of its mental associations of past and future, and it will seem beautiful. There is never anything very much the matter with to-day—the shadows that darken to-day are nearly always cast by the clouds of yesterday or to-morrow. Were it not for the thoughts of the past, ranging from regret to deep mental anguish, or for the anxiety regarding money that is due to-morrow or some other trouble that threatens to befall us the day after, we would, with few exceptions, be as happy as children to-day.

Jesus saw that anxiety was gnawing like a worm at the hearts of men, and he knew that it was not only useless but uncalled-for. When we stop to investigate the troubles of another man we can readily see that he cannot improve his situation in the least by worrying, but that he will render himself unfit to do what is best under the circumstances; furthermore, we can probably see that he is getting along all right if he would but stop troubling himself over fancied calamities long enough to take a square look at things.

Even the philosophy of ordinary mortals will lead them to the conclusion that it is best not to think of the morrow, but Jesus based his advice on something different from mere human philosophy of expediency; he stood on the solid rock of Truth, namely, that God is Spirit and man being His image and likeness, is spiritual and eternal with God, his Father and Creator. To the multitude which heard the Master's Sermon on the Mount this remarkable saying must have seemed as strange as it has to us. It was a command to let go of all dependence upon their own projects and plans for the future and to trust God absolutely. To trust God to the extent here implied is a severe test of one's belief that God really exists. Jesus saw that while men were trusting to themselves and to finite means for continuing their existence in the future, they were not trusting God, or, to put it more positively, they were distrusting God, and were virtually breaking the first commandment without realizing it. Jesus wished to lead them out of their false ways and get them to look immediately to God for all things. The people to-day are found to be putting their whole trust in themselves and in material conditions, and are therefore worrying about the future because they see that they are trusting in straws to bear them up. The scientific truth, as taught by Jesus, comes again to lead us back to God, who is a sure reliance.

We do not understand, perhaps, how it can be reasonable for us to trust in God (Spirit) for the material things which, to most of us, seem essential to the maintenance of human life, but obedience will fully confirm the wisdom of Jesus in uttering this precept. Those who have been able to ease the strain of existence by living in the present—in to-day—find that they are at least no less successful in meeting the demands of the morrow than they were when they thought anxiously about it, and probably they would say that the future, as it unrolled itself, disclosed more benefits than they ever could have dared hope for when they were in the habit of thinking about the morrow.

To take no thought for the morrow does not mean for us to be lazy or reckless—that would be twisting the command to mean, take no thought for to-day. Jesus' command was no doubt intended to direct men's attention to the joys and opportunities of to-day, which were slipping away from them while their eyes were turned to the future and the past.

A poet, whose lines have been passed on without his name accompanying them, writes this comforting verse, which it would not be amiss to memorize:—

Build a little fence of trust
Around to-day;
Fill the space with loving work,
And therein stay.
Look not through the sheltering bars
Upon to-morrow;
God will help thee bear what comes
Of joy or sorrow.

Literature is full of good advice about the proper valuation of "to-day," but Christian Science imparts the understanding to make such advice practically available. It also makes it reasonable and natural to trust God for the future, because through it we are receiving health, peace, and plenty from God in the present, and learn to feel assured that He who blesses us now will always bless us.

*Denver Times.*

The *Observer* believes there is no need for discouragement regarding the world-wide outlook. Christianity has met and overcome difficult conditions in every century so far, and will not be defeated now.

## Nashua Man Healed.

### Former Well-Known Hotel Man Relates his Experience with Christian Science.

*To the Editor of The Nashua Telegraph, Sir:*—I greatly appreciate your kindness in allowing me space in the columns of the *Telegraph* to give the public the benefit of my marvelous healing of late, together with some general remarks on Christian Science.

My only motive in giving an account of my healing through Christian Science is this: I desire to show the suffering multitudes that the power of God through the understanding of Truth is demonstrated in our day as it was in the day of Jesus and his disciples, over sin, sickness, death, and every other trouble, and I would herald these glad tidings of great joy to the ends of the earth, that I may "comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God;" and who does not need comforting in the midst of these terrible ordeals of mortal life?

I propose at this point to give an unvarnished statement of my healing, which will corroborate the statements I have already made concerning Christian Science and other statements that I may make at the close of this article.

The people of Nashua know full well that I had been hobbling through its streets much of the time for two and a half years, a decrepit, old, physical wreck of mortal manhood, having been given up to die by my physician and my family, and the people were thinking and saying, "That man is not long for this world." Grip, followed by acute bronchitis and terminating in nervous prostration lasting for over two years, were the claims upon me.

My physician, a kind-hearted gentleman, in his desire to alleviate my sufferings, prescribed a mild opiate (papine) when I was first taken sick, and this drug was administered to me from two to four times a day, nearly every day for the entire period of my sickness. The thoughts of the possibility of acquiring the opium habit were an unbearable torture at times that threw me into despair, and I cried to God in my agony to save me from such an awful doom and to heal my sickness; for I believed that the prayer of faith would save the sick; but for the want of the understanding of Christ, Truth, I could not touch the hem of his garment myself, nor could the ministers or others, who prayed with me so kindly, so tenderly, and so fervently. We all lacked the understanding of Truth to overcome sickness, and hence the "signs" which Jesus declared should follow them that believe—healing the sick, etc.—did not, could not, follow our belief; for it was belief without understanding, and the Bible says, "Ye shall know the truth, and the truth shall make you free." Our failure was simply in not knowing or understanding Truth.

In February, 1899, my wife and I went to Brockton, Mass., to stay a while with my daughter. While there my hopes were intermittent with no perceptible improvement in my condition, although I tried hard to exercise a cheerful, hopeful faith that I was gaining. I said to my wife the first day of last April (1899), "I feel that I am a physical wreck without one particle of soundness from the crown of my head to the sole of my feet." My lungs seemed to be nearly gone, my stomach was in an awful condition as I thought, and I was mincing over a scanty diet, almost afraid to eat anything, and, indeed, many things seemed to throw me into diarrhœa and distress me much. I was also suffering with a burning fever in my very bones from which I had suffered much of the time from my first attack of grip in 1896, and the fear of the morphine habit was also staring me full in the face.

At this juncture, when it seemed to me that I could not stand the strain any longer, when I was prepared to take Truth at any cost, God came to my rescue and offered me relief through Christian Science.

Three months earlier I would have died rather than enter into this "devilish delusion," as I heard Christian Science called from a Christian pulpit by an evangelist two weeks before the time I refer to. But what was I to do? What could I do? I had been fighting death all alone—looking right into the grave almost, until the very tortures of hell seemed to be consuming my flesh. I was perfectly helpless myself; doctors had failed me; ministers could not help me; the church had no healing balm to offer me, and my wife and my daughter had lost faith, as they told me themselves. Thus I was standing all alone upon the very brink of the grave, "having no hope, and without God in the world." Notwithstanding my mortal wretchedness, the third day of April I advised my granddaughter, who had been invited to attend a Christian Science meeting, to keep away from these deluded people, affirming that "Christian Science is the most gigantic error of the age," and yet I could not have stated one principle of Christian Science; for I had no more understanding of it than all others who as unwittingly antagonize it to-day, as I had done.

The *Christian Science Journal* and the *Sentinel* fell into my hands the same day, and I began to read them, and continued reading them through the week, and hope sprang up as I read the wonderful cures of every conceivable type of disease all over the world, and as I caught the spirit of the various articles, brimful of faith in God, faith in Jesus Christ, faith in the Scriptures, all of which breathe the very atmosphere of purity, love, and heaven in every line. On Sunday morning, April 9, I began reading the Christian Science text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy. The very first sentence in the preface settled my mind as to the truth of that wonderful, God-inspired book. Hope and gladness came into all our hearts as we read and talked nothing else but Christian Science. I went to a Christian Science healer April 13 for treatment. She told me that it would be necessary to lay aside all the *materia medica,* including opiates, which I was ready to do; as I had not taken medicine for a long time.

At my first visit she told me to read the ninety-first Psalm. After four treatments, two present and two absent, she discharged me with the remark that I needed no treatment, as I was getting the needed help in reading Science and Health, and that if I continued reading that book with understanding as I had done, I would be healed. She further remarked that she never saw or heard of one who took Christian Science so rapidly and so understandingly as I was doing. Ah, yes; I was a dying man fleeing from death and the grave crying, "Life, life, eternal life."

I continued reading Science and Health, and I finished reading it for the first time Sunday, April 30, in just three weeks. As I closed the book and laid it down, my thoughts, which had been almost wholly absorbed in Christian Science for four weeks, naturally turned back to my body again, and to my utter astonishment I found myself feeling perfectly well, and in my joy I exclaimed, "Why, I am perfectly healed!" The fever and pain had entirely disappeared, and I exclaimed again with increased astonishment, "I have scarcely thought of my stomach or any other physical organ, for four weeks, and I have been eating everything set before me, taking no thought for my life, what I should eat, without the least bad effect therefrom!"

Every organ in my body seemed perfectly sound, and, indeed, had I never studied physiology, I should not have believed that I had any physical organs, as I had no mortal sense of them whatever. I had a little struggle for two or three days after I left off taking papine; but on my awakening to the consciousness of health I found it had

Digitized by Google

utterly disappeared, together with the whole brood of devils (evils) which had held high carnival over my poor, mortal mind and body for over two years, and none of these imps of hell have ever returned to torment me to this day (September 15). This wonderful result was effected by simply reading Science and Health after I had received the four treatments mentioned. In my haste for deliverance, I went through the book with a rush; but I caught a glimpse of the truth that God is the only Life, Substance, and Mind.

Two or three days later my daughter said to me, as I was frisking about like a young man, "Father, I never saw such a wonderful change in a person in my life as has taken place in you in so short a time. You are no more the man you were a month ago than darkness is like light!"

Tell me, do you, oh mortal man, that "This is the work of the devil (evil)?" That this is "Satan himself transformed into an angel of light?" the "profane and vain babblings, and oppositions of science falsely so-called"? Where, then, shall we look for the work of God? Christian Science is bringing mortals out of darkness into spiritual light, love, health, and happiness, all over the earth to-day, far beyond any other agency known. Then is not this cry against Christian Science, the pharisaical spirit of the first century re-echoed in this nineteenth century which would "crucify . . . the Son of God afresh, and put him to an open shame"? It sounds so much like the voice coming up from the pit as in the days of the incarnation of the Son of God in the flesh, crying, "Crucify him! crucify him!"

My brethren, would it not be well for us to understand Christian Science better before we write, preach, and talk against it? Would it not be wise in us to heed Dr. Gamaliel's advice to his brethren, to "refrain from these men; let them alone: . . . lest haply ye [too] be found even to fight against God?"

I wish to state in this connection, parenthetically, that I have read all of Mrs. Eddy's works, eleven books and booklets all told, I think, and I have read Science and Health three times by course, and some parts of it several times, making a close study of it from April 9 to the present time, and I have not read a sentence in any of these works that has raised a doubt in my mind that it was Scriptural and absolutely true.

I will add, as I draw this article to a close, that if further evidence is called for to establish my statement, which seems almost incredible to some, my wife and others will corroborate every word I have written concerning my healing, and they will add that I have not overdrawn the facts in my statements, in the least. Finally, if my statements are true, if this marvelous healing, and this wonderful spiritual uplift were caused by Christian Science, then this fact demonstrates the truth that the Christianity of Jesus and Christian Science are one, for they are based upon the same Principle, and they are demonstrated by the same rule, the rule of ever-present, omnipotent Love.

ROLLIN K. SHERMAN.

*Daily Telegraph*, Nashua, N. H.

## Semiannual Lecture of The Mother Church.

A LECTURE on Christian Science by Hon. William G. Ewing of Chicago, Ill., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, Boston, will be given in Tremont Temple, Thursday, October 5, 1899, at 8 o'clock P.M.

As nature, the expression of the thought of God, shows perfect unity of purpose, a never-ending harmony of law; so will man's thought find fit expression in unity and harmony; a unity of purpose, in helpfulness to others; the sweetest harmony, in never-failing love for all. C.

## Testimony of an Electrician.

BY E. T. B.

CHRISTIAN SCIENCE was first brought to my notice when I was in the practice of medical electricity, attending an elderly lady whose daughter was under the care of a celebrated surgeon, and suffering from a severe and aggravated condition of sore nipples after child-birth. Proud flesh had set in, and all the remedies known to *materia medica* were tried and found wanting. I, too, had searched among my friends of the profession for a "balm," if indeed one could be found, but alas! with no better result.

This lady in some way heard of Christian Science, discharged her medical attendant, and sent for a Scientist, and in one or two treatments the cure was effected. I was told of this, and was very much surprised to hear that some *fake*, as I then supposed, had succeeded where science, so-called, had failed.

I was too busy with my practice to stop to investigate this curious treatment that had wrought a wonder, "in a day and a night," but went on trying as best I could to alleviate the sufferings of poor humanity by drugs, potions, plasters, electricity, and numerous other therapeutics that man had devised for the cure of disease.

It was not long, however, before Truth again knocked at my door, and it was in this wise.

My little daughter, then about thirteen years of age, was feeling ill and weak, and came to me, requesting that she might have permission to leave school early that day if she were unable to remain there during the entire session.

I examined her, and found her temperature was excessive, being 103, which, with other symptoms, suggested a fever. I called in our family physician, who was a fever specialist, and he diagnosed her symptoms as those indicating either typhoid fever or tuberculosis, which he expected would develop in a few days. After much diagnosis, he came to the conclusion that she had typhoid fever.

While the physician was consulting with me, a visitor was announced, who proved to be the lady who had told me of the demonstration over sore nipples some four years previous, and who was now a Christian Science practitioner. I related to her what the doctor had said about my child's condition, and she asked me, "Are you going to let that child go through that long seige of typhoid fever, when Christian Science can heal her right away?"

I answered that I had placed the case in the hands of our doctor, and should not like to experiment with something I did not understand, forgetting that I had many times tried some new prescription on some one else's child.

This Scientist talked to me for a little while after the doctor had gone, much of which I had no ears to hear, but one sentence I have never forgotten, and it was this: "There is but one power, and that is God." All through that long seige of ten weeks these words were often present, and they seemed to speak to me more forcibly each time, until one day, when the physician said, "You may give a dose of digitalis for her heart's action." I tried to drop the medicine, but my hand shook so that again and again I dropped too much, and had to throw it away, and I emptied the remainder out, feeling that I could not give it while these words were sounding in my ears. And she never had a dose of it.

The child seemed to gain and relapse many times during these weeks, and several times my friend the Scientist called to see what she could do for me, and kindly offered to give me a chance to go out while she sat by the patient, acting as nurse. She talked and read to her charge, and realized the Truth of Being for herself, thereby shutting

Digitized by Google

all thought of the error out of her own consciousness, and each visit would seem to be attended with benefit, as the child would be easier. However, I was not yet ready to relinquish all into the hands of Omnipotent Love, our "ever-present help in trouble," much as I desired to see my dear child healed.

In time the crisis came, and only those who know what the claims are that *materia medica* has made for one whose temperature was 106½, and whose whole system seemed collapsed, and all hope of saving her given up by the physician, can appreciate the marvelous healing that was effected by Christian Science treatment. In five hours after the Scientist had treated the case, her temperature was normal, and she exclaimed, "Mamma, I feel better now than I have felt since I became ill."

The next day the child sat up and ate a broiled lamb chop, a sweet potato, and some lettuce, and drank a cup of coffee. She was out of bed the second day, and has never felt the slightest reaction from following the directions of the Scientist, viz.: to rise when she wanted to, to eat when and what she liked, and to praise God for His mercies and benefits to her.

The physician came next day, as a friend, for he was very much exercised over the case for my sake, and declared that it was a remarkable one, that he had been puzzled over it, doubting very much as to whether it was typhoid fever or tuberculosis that the child had had.

He was astonished and horrified when he found her up and looking well the next day after having given up all hope of her recovery, and even doubted the evidence of his eyes as he saw her so changed, and expressing so much life and health. He began to shake his head, and prophesied all kinds of terrible conditions and relapses, ending with sure death. But Truth is mighty and did prevail, as it always does, and through this demonstration of Christian Science healing we have all come to the understanding of Love as our great Physician, who heals and makes every whit whole.

It was not a hard thing to give up a profession that I had been many times forced to admit was little else than failure in the aggregate, though occasionally alleviative during a short period. I know there are conscientious men and women in the medical profession who are thoroughly disgusted with their so-called science—*materia medica*—who, when the claims of disease beset them or their families, turn away from their own systems to try anything that seems to offer the slightest chance of escape from suffering. We know that in Christian Science our Principle is "the same yesterday, to-day, and forever," and that when there seems to have been a failure in the treatment of a case, it is only the failure on the part of either patient or practitioner. Ofttimes in reading the press notices under the caption, "Failure of Christian Science," I have wondered why they do not render the same verdict to *materia medica* on account of the failure of their prescriptions to heal their patients. If we are to judge Christian Science by the failure some people have made of it, by the same line of reasoning may we not judge and condemn mathematics because some one has failed to apply the Principle, and cannot get a correct answer to his problem?

Paul says: "Prove all things, hold fast that which is good." This is what hundreds and thousands of men and women are doing to-day all over the known world, and they are "setting to their seal that God is true," and that Christian Science is a religion, the therapeutics of which heal from sin, disease, and death. In grateful love for what our Mother in Israel has done for us in giving us Science and Health,—the Key which unlocks the door whereby we enter the Shechinah where the Word is revealed, "who healeth all thy diseases," I send this testimony to Christian Science Mind healing.

## The Price of Science and Health.

BY M. I. WIGGINS.

THE Christian Scientist is always amazed at the statement that the price charged for "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, is too great. Such a statement must come either from one totally ignorant of the Principle of Christian Science and what the book contains for humanity, or from one who does not recognize this argument as one of the subtle efforts of error to hinder the dissemination of Truth. Of course it may proceed from that malicious claim of evil whose pleasure it is to crucify Truth and its leaders, and if possible to destroy God's methods of establishing His kingdom upon earth. But the argument could only find lodgement in a mentality whose idea of money is greater than his idea of God.

The Christian Scientist who remembers his hopeless suffering, disagreeable doses, and doctors' bills (often having paid one, two, three, and more dollars for a single bottle of medicine) before the glorious teachings of this blessed book delivered him from all this misery and expense, is amused and surprised at the suggestion that three dollars is a high price to pay for Science and Health. True, we hear of authors who give to the public one or more books per year, at the cost of one or two dollars each, but has reading these books ever healed man of a single disease, or freed him from the expense of doctors' and druggists' bills, or taught him how to heal others of disease, poverty, or sin? Yet reading Science and Health is doing this for multitudes of people.

In the revisions which are made in this book from time to time we find a beautiful proof of the wisdom and love of our faithful Leader, who, ever mindful of the needs of humanity, so promptly and generously gives to the world of her store of spiritual understanding.

The Christian Scientist who understands and values the teaching thus given through the different editions of our text-book, is filled with gratitude for such manifestations of divine Love, through her who thus gives to the world the benefit of her thirty years' experience, labor, and suffering.

The Truth is free, always has been and always will be. It never can be bought or sold, nor have we ever paid one farthing for it. What we have paid for is the service of those who have labored in the Cause of Truth as teachers, healers, editors, publishers, etc. All true Scientists will agree that the charge made for such labor is always moderate and just.

## Letters to the Sentinel.

*Dear Sentinel:*—How beautiful and expressive you are in your clean new dress. How significant the "two golden candlesticks" symbolizing the work our beloved *Journal* and *Sentinel* are doing, to enlighten a sensual, sleeping, world. "Thy Word is a lamp unto my feet, and a light unto my path." How loud the clarion voice of Truth and Love cries out to every one of us, in this last number, "Watch! Watch and pray without ceasing!" And our hearts answer back, "Through God's grace we will."

We feel that the workers throughout the Field are reaching forth to hold up the hands of the faithful ones that they faint not till the warfare is ended. We never felt so deep a sense of gratitude to God for Christian Science, and such a great debt of love to its Discoverer, our faithful, watchful Mother, who never deserts her post of "spiritual observation and prayer," not even for one moment. We greatly desire to express in our feeble way our love and appreciation for this care. Also to the faithful workers who constitute our Publishing Society. Stalwart, faithful watchmen are you, on the walls of Zion,—towers thereof, marking well her bulwarks.

Digitized by Google

The events of this hour, we feel have roused the whole Field to a more consecrated thought and action, prayer and watchfulness, than ever before; and we feel that every worker's heart goes out to God for greater wisdom and strength. May we be more loyal and obedient to divine Principle, and to our beloved Leader, and unite as one great unit to support the workers in our Publishing Society, that their hands drop not down from weariness; that we help to make and spread this pure literature of Scientific Christianity which our *Journal* and *Sentinel* ever contains.

May the God of Abraham, Isaac, and Jacob, the only living God, guard, strengthen, and keep you, is the daily prayer of every earnest worker in the Field.

PHEBE L. HAINES, Fairmont, Minn.

*Dear Sentinel:*—Allow me to say through your columns that my love for our Mother in Israel, is stronger, purer, holier, to-day, than ever before. It is a love which does not grow dim, but brighter day by day. I would say to her, in the words of Ruth, "Whither thou goest, I will go; . . . thy people shall be my people, and thy God my God."

As I take a glance back, twelve years ago, and see a hopeless invalid, without God, with nothing to hold to in the seeming of darkness, and then think of how Science and Health came to me, breaking the shackles of sense, giving me God and Health, *I know* that through the dear Mother the Truth was given to me, and the whole world.

How many thousands to-day rise and call her blessed. "So we thy people and sheep of thy pasture will give thee thanks forever: we will shew forth thy praise to all generations" (Psalm 79 : 13).

MARY J. DRAKE, Mansfield, O.

*Dear Sentinel:*—We enjoy the *Journal* and *Sentinel*, but are we all doing our best to spread these messengers of Truth to all mankind? We all have friends, acquaintances, and relations, who would make good workers in the Master's vineyard if they once became interested in this grand work. Are we afraid to spend a dollar or two? Are we afraid of their criticism? Are we afraid to send our literature lest they turn again and rend us? No! not if we are loyal Christian Scientists. Let us, then, be up and doing with a zeal according to knowledge. We all need more of the zeal inspired by divine Love. Truth has wonderfully blessed us and we are sure it will help others. Then let us spread this literature, let us take up this line of work, knowing that God is sustaining us. G. C. P.

## Diphtheria Healed.

BY MRS. B. M.

I DESIRE to relate how we found Christian Science an effectual remedy in a case of diphtheria. A number of children had recently passed away with this disease. A neighbor lost two children in less than a week. My fear of the disease became so great that I had not been able to overcome it when our little four-year-old boy was taken down with it. He asked his papa to treat him, but the next day he seemed no better. He was very fretful, and cried all day for me to read to him from Science and Health. When his papa came home in the evening he found the child was getting worse, and so requested me to take charge of the case. I did so, but it seemed almost impossible to keep awake long enough to treat the child. I tried as best I could, to know the Truth and see the nothingness of error. Finally the darkness disappeared, and everything was as clear as day. The thought came to me all is the beautiful, good, and pure. I did not try to work any longer. I went to sleep with these thoughts, and when I awoke during the night, they came to me as clearly as if some one said, "*All* is the beautiful, good, and pure." The next morning there was not even an appearance of diphtheria. He had eaten nothing the previous day but that morning he ate a hearty breakfast and was bright and ready for play.

How thankful we are that we have a faint understanding of this blessed Truth. How could we get along without it?

## Circulating the Supplement.

Nashua, Sept. 20, 1899.

*Dear Friends:*—I think your thought of circulating the supplement is *grand*, and the beautiful review of our Mother must do much for the receivers. The pictures are so beautiful—in fact it all is a perfect little gem, and I thank you very much for remembering me, and giving me the opportunity of helping circulate the good tidings.

SUSAN R. K. HOYT.

## Points on Home Rule.

IN the beginning of another school year there will be an amazing advantage to all concerned if teachers may be permitted to co-operate with parents, or rather if parents will freely give teachers their support and sympathy. If, for instance, the pupils do not seem to be comfortably adjusted in their classes, if the work is too little or too much, if there is a perceptible degree of friction between children and teachers, or if, as sometimes happens, there is suffering on the part of a gentle child from the teasing and tormenting of a bully, let the parents freely talk the matter over with the teachers, being careful not also to discuss it with the children. In most cases some decision will be reached which will promote the interests of the child, and, in all our civilization, no interests to-day take precedence of this. The child is the foundation-stone of the republic. On him, on her, on what he or she may become, rests whatever we are to be in the next generation, depends the welfare of the world. MARGARET E. SANGSTER.

New York *Christian Advocate.*

Mother, do not forget to commend your little ones when their efforts have merited a mother's smile. Watch for these opportunities, in order that you may nourish into healthful growth the better qualities and affections of child life. The answering smile, the new light glistening in the eye, the inner resolve, will more than compensate. But these are only the germs; the fruit shall hereafter be gathered. Show by every act and word that you love and appreciate the good and it will flourish, and evil die for the very want of food to nourish it. B. B.

*The Church Standard.*

We are so anxious to have our children appear well before others, and in such a hurry to see them become all we want them to be, that we cannot wait for the sunshine of the home atmosphere to ripen the seeds we have sown, but, like the children themselves, we want to reap the harvest at once. L. E. A.

*The Congregationalist.*

There are women who live in perfect puddles of maternal love, who yet seem incapable of justice; generous to a fault, perhaps, but seldom just.

KATE DOUGLAS WIGGIN.

When the French writer, Victor Hugo, was an old man he found, it is said, what was to him "a strong argument in support of the immortality of the soul in the unexhausted and seemingly inexhaustible powers of his mind and soul."

## Questions and Answers.

*If man is the image and likeness of God he is already saved; to whom then was the command addressed, "Work out your own salvation"?*—W. C. B.

The command is to mortals living in the belief that error is as real as Truth, evil as real as Good, and death as real as Life. By believing in the reality of opposites mortals have a true conception of neither. Not having the understanding of Truth, they do not enjoy the blessings it has in store; and not seeing error in its true light, they believe in its reality and power, and are in bondage thereto. They must work out of this condition by gaining the understanding of Truth which saves from all error. Mortal man must not expect to be saved because of another's goodness. Another may help him bear his burdens, but a full and complete salvation from all error can only be the result of his own individual understanding of Truth.

One must have a perfect ideal before he can hope to attain perfection, for it is impossible to rise higher than one's ideal. Christian Science declares that man *is* the image and likeness of God. Since God is perfect it follows that His image and likeness is perfect also. Thus mortal man has a perfect model. By looking at this model continually and making his life conform thereto, he gradually approaches perfection and is saved from evil and its effects. This great work cannot be accomplished in a day. Unnumbered years, perhaps ages, may be necessary for the complete and final demonstration of Truth. The success of years is but the result of well-spent days and hours.

It is true that *man* is already saved from sin, sickness, and death, but mortal consciousness is not man. If mortals had gained the true conception of man they would not be mortal. Thus the working out of one's salvation causes the mortal consciousness or mortal man to disappear. The individual does not lose his identity by reason of this disappearance, for the real man, already saved, takes the place of mortal man. In other words, the false concept of man which includes sin, suffering, and death, gives place to the true concept which is already saved.

❦❦❦

*Does Christian Science discourage the study of chemistry, astronomy, botany, geology, physiology, and allied sciences, and does it encourage the highest mental training attainable?*—F. W.

Christian Science does not say, except in a general way, what a person shall or shall not study, or what he shall or shall not do. It declares the Truth of Being and reveals the divine Principle of all reality. It points out the way and then leaves the student to solve the problems of life through the application of his understanding of Truth. Just what studies or what mental training will help him in this great work, the student must decide for himself. The idea of Truth must be his unerring guide. From experience he learns to discriminate between good and evil, Truth and error. From experience also he learns what studies and mental training are helpful to him. The thing that seems necessary or helpful to-day he may find unnecessary to-morrow. For this reason he can establish no definite rule for himself and he does not attempt to do so for others. It is, however, apparent at the outset that he cannot be benefited by the study of any subject, the teachings of which are contrary to the teachings of Christian Science. The exercise of good common sense on the part of the student is most necessary. All the teachings of Christian Science are practical, but it requires great wisdom to make the right application of those teachings at all times and under all circumstances.

## Our Friends.

BY S. ELIZABETH CAREY.

WHO are our friends?

Are they those whose friendship gratifies our self-love, and love of popularity and position?

Let us turn to the short record of Jesus' life and find who our Master called friend. And let us consider also to whom he was a friend.

In the Scriptures we read that Jesus, as he was about to be betrayed, said to his eleven disciples who were with him, "Rise, let us be going: behold he is at hand that doth betray me. And while he yet spake, lo, Judas, one of the twelve, came, and with him a great multitude with swords and staves." Jesus said unto Judas, "Friend, wherefore art thou come?"

Friend! what a word to a traitor! To our human sense this greeting to one whom Jesus knew to be a traitor seems almost insincere, but was it so? He knew this very trial was to afford him the opportunity of giving to the world his greatest demonstration—the demonstration that Life is eternal. Did he shirk from his duty as the enemy approached? No; he stood firm, with the loving word friend upon his lips and a loving heart of sacrifice for the world.

It is our privilege to follow our Master's example of love. If there be a traitor found among us at any time, may we not recognize in him a friend, in that it makes us prove greater things in Truth? And may we not ask, "Wherefore art thou come?" in a way that will enable us to rise higher in proof of the Christ? We find that Jesus was accused of being a friend of sinners. In the truest sense of the word he was, yet he did not prevent the self-destruction of error. No one needs a loving friend more than a sinner. Should we not be awake and watching when evil approaches, and meet it as did Jesus, with the word friend upon our lips, asking the question, "Wherefore art thou come?"

## Realization.

BY A. B. A.

THE most beautiful thought that has come to my understanding during the quiet months of summer vacation is the knowledge that realization of God's allness comes in action,—the living of a better life in every avocation, a higher thought, a more steadfast purpose, a constant unfolding of Good in the daily cares that seem to make up the sum of life. The living of Love brings joy in all work and all work should be for the glory of God. We can then feel the truth of the lines by the saintly George Herbert:—

> A servant with this clause
> Makes drudgery divine:
> Who sweeps a room as for thy laws
> Makes that and the action fine.

Our Leader has said that this realization of the Truth of Being does not cause man to lose his identity, "but confers upon him enlarged individuality, a wider sphere of thought and action, a more expansive benevolence, a higher and more permanent existence."

Rev. Dr. Cuyler closes an excellent article in *Zion's Herald* on the "Secret of a Strong Life" with the following words: "The sermon that no sceptic can answer is the sermon of a clean, vigorous, happy, and useful life."

The *New York Observer* says, "We believe that there never was a time when there were more men of a godly character and a brainy fibre in the ranks of the American ministry than there are to-day."

## From the Religious Press.

### Mortgaging the Future.

Our churches have in recent years been drifting into doing business in benevolence on the instalment plan. Rich men have promised large sums of money to educational institutions conditioned on the raising of still larger sums, which the churches were not able to pay. Debts have been incurred by missionary societies which the churches could not lift at once and still continue to pay current expenses. It has become common for individuals, churches and local societies to pledge annual payments for a term of years. These promises are often counted as cash, and announcements are made with hallelujahs that large sums have been raised. This benevolence on the instalment plan is wasteful, disappointing, and elusive. We have known persons to promise amounts in future payments on which they could not even pay the interest. We have known ministers to pledge their congregations to give annual sums for a term of years, and then to move away, leaving their people to repudiate the promises made in their name. We have known jubilee meetings to be held over debts paid or gifts made by promises when the money has afterwards had to be raised two or three times over. At the present time many churches have so mortgaged themselves to pay in coming years for work already done that they have no heart to take up work which imperatively calls on them. Future years will have their own demands in missionary enterprise. We have no right to mortgage our abilities in advance while we do not yet know what these demands will be. We can best do business for God on a cash basis. Better than twentieth century funds will be the twentieth century motto for the churches, "Pay as you go."

*The Congregationalist.*

### Japan's Religious Dictator.

Japan has just enacted a new law to regulate all faiths and beliefs, the enforcement of which will be observed during the next few months with deep interest and no small degree of apprehension. Under this law all sects, whether pagan or Christian, are placed under the absolute control of a local governor. Detailed information in writing concerning the faith to be promulgated and the men who are to preach it must be furnished to this governor, and his consent obtained before a meeting can be held or a church opened. Church finances must also be accounted for, and when a church or temple is to be built, a statement must be made setting forth why such a building is necessary; the date when the building will be completed; the name of the building, where located, and all necessary information relating to the site and structure, and also the plan of the edifice; the name of the religion; its method of control and maintenance; when there is a chief preacher, his qualifications and the method of his election. When a sect is once licensed permission must be secured from the governor before even the slightest change can be made in its announced programme. On the face of it, this looks like a very menacing law to missionary effort in Japan. It is too early yet, however, to judge of its full scope, and it may prove less drastic than it now appears to be.—*The Examiner* (Baptist.)

### Fear as a Restraint.

The controversy as to the use of fear as a saving agency is not yet ended, although it has received a good many strokes of argument in its vitals. Perhaps as forcible an opinion as has ever been expressed as to the ignoble character of the fear of future punishment and its general worthlessness as a saving agency appeared in the *Independent* some years ago. We isolated the extract at the time from its connection, but have never printed it. We give it following, and commend it to the attention of those who yet cling to the well-nigh obsolete theory of the restraining influence of a belief in a "hell fire."

"Theologians may theorize and good Christians may differ as to the extent, existence, and nature of future punishment; but the fact remains indisputably clear that, whether there be less or more of it, whether it be of this sort or that, fear of it is a base motive to appeal to, a false motive to act from, and a worthless motive to trust in. Perfect love does not know it; spiritual courage resents it; the true kingdom of heaven is not taken by its violence."

*The Universalist Leader.*

### Pen Points.

Prosperity rarely brings out the best there is in a man. A man's adversities are often his most stimulating friends.

True charity consists not so much in what we give as in what we give up.

God makes our sunlight. We make our own clouds.

Sincerity is the foundation stone of character.

Strength always comes to the hand that serves.

Live to love, and you will love to live.

*Christian Uplook* (Methodist).

## Miscellany.

### Free Rural Delivery.

Free delivery of the mails in rural districts seems to be every way desirable, and it is most gratifying to be assured that before long all districts, except those with very sparse population, will obtain it. The Postoffice Department's experiments in several localities have been so successful, that it is safe to predict a large extension of free postal delivery before the beginning of the twentieth century. Figures recently published concerning the operation of the system in Montgomery County, Indiana, show that the enlightened and enterprising policy of the Postmaster-General is very highly appreciated by the people. During the first month of the free delivery experiment in this county each of the carriers delivered about one thousand pieces of mail matter; their routes on an average being thirty miles long. At the end of the first year the carriers were delivering more than five thousand pieces a month. During the first three months they would collect from eight to ten letters daily; now they collect fifty or sixty letters every day besides many packages. When the free delivery began, not a single newspaper was taken along any of the routes; now, every carrier delivers from seventy to one hundred newspapers every day; and weekly papers and magazines are taken in greatly increased numbers. It is needless to dwell on the significance of such facts. They speak for themselves of the educational and social value of the new system. It is a wholesome development, which adds to the natural attractions of country residence for those who can choose where they will dwell, and it will do something to lessen the drift of population to the cities, a consummation most devoutly to be wished.—*The Church Standard.*

### Parallel to Dreyfus Trial.

The discoverer of the literary parallel to the Dreyfus trial in "Alice in Wonderland" deserves the thanks of the public. All who remember the story of the proceedings in the matter of the paper with verses written upon it, which the White Rabbit picked up, will discern the likeness at once.

"Are they in the prisoner's handwriting?" asked another of the jurymen.

"No, they're not," said the White Rabbit, "and that's the queerest thing about it." (The jury all looked puzzled.)

"He must have imitated somebody else's hand," said the King. (The jury all brightened up again.)

"Please your Majesty," said the Knave, "I didn't write it, and they can't prove that I did; there's no name signed at the end."

"If you didn't sign it," said the King, "that only makes the matter worse. You must have meant some mischief, or else you'd have signed your name like an honest man."

There was a general clapping of hands at this; it was the first really clever thing the King had said that day.

"That proves his guilt, of course," said the Queen.—*The Church Standard.*

### A Fool of a Doctor.

Apropos of the discussion about the danger of eating fruit, one fool doctor has come to the front, who calls himself an "intestinal specialist," who says that all kinds of fruit are dangerous for adults as well as children, and then he specifies the following which, he says, should be avoided:—

"All fruits, either cooked or raw, all cereals and breakfast foods, nuts, pastry of all kinds, potatoes in all forms, onions, tomatoes, turnips, parsnips, carrots, celery, radishes, cabbage, egg and oyster plant, and corn."

The other day on a fresh air picnic a little girl was discovered feeding a baby canned lobster and cucumbers. She must have been acting under instructions from this "doctor."

*Poughkeepsie Semi-Weekly Eagle.*

### A Little Boy's Song.

I smile, and then the sun comes out,
He hides away whene'er I pout;
He seems a very funny sun
To do whatever he sees done.
And when it rains he disappears;
Like me, he can't see through the tears.
Now, isn't that the reason why
I ought to smile and never cry?

F. D. SHERMAN.

*The Watchman.*

## Notices.

### Applications for Membership.

Applications for membership in the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 7, 1899, must be in the hands of the Clerk of the Church on or before the 15th day of October. Send applications to 30 Norway Street instead of 95 Falmouth Street, as heretofore directed. Hereafter address the Clerk of the Church at 30 Norway Street.

WILLIAM B. JOHNSON, Clerk.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1.

### Mrs. Eddy's Pictures.

These pictures are made in the following sizes: cabinet and 8 x 10 photographs, and in all the large sizes in crayon and water colors. They can be had from the Reading Rooms or from the J. C. Derby Co., Concord, N. H.

### The Board of Education.

Requests for application blanks for the next examination cannot be complied with until due notice is given through our publications, as announced in the *Sentinel* of January 19, 1899.

### Index to Sentinel.

An Index to Volume I. of the *Christian Science Sentinel* (Weekly) is now in the hands of the printer, and when completed it will be mailed to our subscribers and supplied upon request.

Digitized by Google

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06: $5.00 half dozen: $9.00 per dozen: all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, $1.06: $5.00 half dozen: $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each: $5.00 half dozen: $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents: $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents: $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy: $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

# Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum: One Dollar for six months: Single Copies, Twenty Cents: Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents: Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy: $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor. C sharp to A: for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1: six copies to one address, $5: twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each: per dozen, $9: per half dozen, $5. Leather, per copy, prepaid, $1.40 each: per dozen, $12.00: per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50: Six copies, $7.00: Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

Perhaps no person ever received such a welcome in the United States as did Admiral Dewey upon his return home after an absence of twenty-three months. His arrival at New York on the morning of September 26 was unexpected, as he was two days ahead of time. His coming was greeted with the greatest enthusiasm, and the Olympia was soon surrounded by all manner of sailing and steam craft. He immediately notified the officials at Washington and New York of his arrival, and soon received the formal welcome of the navy department from Secretary Long. September 28 he was formally welcomed to the State of New York by Governor Roosevelt and his staff. On this day the three hundred and fifty men who fought under Dewey at Manila were given the bronze medals awarded them by Congress.

September 29 the naval parade was witnessed by at least three million persons. The parade was one of the most magnificent ever witnessed. It moved promptly at one o'clock, going up the Hudson to General Grant's tomb.

Saturday morning, September 30, the loving cup was presented by the city of New York in City Hall Park. The presentation speech was by Mayor Van Wyck. The magnificent celebration closed with the land parade from Grant's tomb to the triumphal arch.

The War Office of Great Britain has ordered the whole transport and supply for an army corps to prepare to proceed to Cape Town. This important order implies the early dispatch of an army corps. The Orange Free State will use every means possible to prevent war, but has declared that she will stand by the Transvaal, come what will. A despatch from London says there remains one more chance for peace. If the Transvaal and Orange Free State should consolidate, then the demands for suffrage could be conceded without any danger that the foreign element would secure foreign control. This proposition would presumably make for peace. It is said that President Kruger of the Transvaal is willing to resign in favor of President Steyn of the Orange Free State.

Miss Julia Dent Grant, the granddaughter of President Grant, was wedded to Prince Michel Cantacuzene, Count Speransky of Russia, September 24. The ceremony was strictly that of the Greek church, of which the prince is a member, and would be binding upon both parties in Russia, yet it was not a legal marriage according to the laws of the State of Rhode Island. To comply with the state laws requiring a resident clergyman to officiate, a second ceremony was performed the following day, according to the Episcopal ritual.

The three governments interested in Samoa—Great Britain, Germany, and the United States—have been considering the claims arising out of the bombardment last summer in which the American and British forces participated. It is proposed to observe the principle that private property destroyed as a necessary incident of the prosecution of naval and military operations, should be paid for. In this case, the damages would be paid by England and the United States, as Germany had no part in the bombardment.

Ever since the inauguration of General Grant, the Twombly family of Massachusetts has presented each President, on inauguration day, with the floral greetings of the Bay State. Mr. W. A. Twombly of Boston presented Admiral Dewey with a handsome floral horseshoe, over five feet in height, within which was the State seal of Massachusetts done in red, white, and blue blossoms. At the base was the word Massachusetts.

An agent for the British army is buying mules here, paying ten dollars per head over the market price. He wants three or four hundred drivers. He has also placed extensive orders for wagons. Early in October a ship will sail from New Orleans for Natal with three thousand draft and pack mules. A Chicago firm of horse dealers has received orders to purchase all the twelve hundred pound "gunners" the Western market affords.

Maryland's places in the Statuary Hall in the Capitol at Washington, are to be filled by statues of Charles Carrol of Carrolton, one of the signers of the Declaration of Independence, and John Hanson, who was a distinguished member of the Continental Congress. The statues are to be of heroic size, in marble. The Legislature appropriated twenty-four thousand dollars for the purpose.

Mr. Thomas F. Tracy, one of the delegates representing the American Federation of Labor in the recent British Trade Union Congress, says: The working people in this country are much better off. Wages are higher and the cost of living is less. The labor organizations and labor movements in general are in better shape.

The American authorities have refused the request of the Spanish Military Office to send a vessel under the Spanish flag to collect the Spanish prisoners at insurgent ports. The refusal was made on the ground that the ports are closed. The authorities, however, are willing to send an American vessel for the prisoners.

Fred W. Holls, secretary of the American commission to the Peace Conference, has returned and made a supplementary report to the State Department. It consists mainly of documents which are to be printed with the regular report which was filed several weeks ago.

The Queen Regent of Spain has presented the Spanish casino, at Tampa, Fla., with six hundred books for its public library. The gift was a mark of appreciation of the kindly manner in which the Spanish population of that city was treated during the war.

For the purpose of determining the exact amount of mail carried by the railroads in the United States, the postal clerks throughout the country have been ordered to weigh all mail for thirty-five consecutive days, beginning October 3.

The Building Trades Council of Chicago has finally decided to furnish the cornerstone for the new Federal building, and the trouble is ended. This assures the laying of the stone by President McKinley October 9, as was expected.

Six great universities have offered to confer their highest degrees upon Herbert Spencer, and several governments have tendered him decorations, but he has declined all such honors. He is seventy-nine years old and his fame is world-wide.

A Westinghouse plant equipped with American machinery has been established at St. Petersburg, and all Russian railways have been ordered to equip all their freight cars and engines with Westinghouse air brakes.

About one hundred representatives from fifty-eight American colleges and museums have spent a month gathering fossils in Wyoming. A permanent summer school of Geology and Paleontology is to be established.

The City Council of Oakland, Cal., has accepted the offer of Andrew Carnegie to give fifty thousand dollars for a public library building, provided at least four thousand dollars is guaranteed for its support.

The Parnell memorial committee of New York have decided to purchase the Parnell homestead at Bray, County Waterford, Ireland, to prevent it from falling into the hands of strangers.

The Pan-Presbyterian Alliance assembled at Washington, D. C., September 27. Delegates representing twenty-five million Presbyterians throughout the world were in attendance.

Dwight L. Moody took advantage of festival week in Chicago, when immense crowds were gathering, to start a great gospel campaign on each of the three sides of the city.

In accordance with instructions received from Washington, General Otis has permitted the seven hundred Chinese immigrants from Amoy to enter the Philippines.

Judge Alfred S. Hartwell has been chosen by the government to represent the Territory of Hawaii unofficially in Washington during the coming Congress.

John D. Rockefeller has contributed two hundred and fifty thousand dollars to the two million dollar endowment fund now being raised for Brown University.

The German government has paid into the Spanish treasury the sum of twenty-five million pesetas, the price of the Caroline Islands.

The Board of Review has raised the personal property assessment of the Pullman Palace Car Company from $1,500,000 to $8,900,000.

Secretary Coburn of the State Board of Agriculture, has issued a second appeal to the farmers of Kansas to hold their surplus corn.

By the application of electricity a pot of glass can be melted in fifteen minutes that by the old process would require thirty hours.

December 31, 1898 there were 186,810 miles of steam railroads in the United States, a net increase of 2,219 miles during the year.

Fourteen American prisoners, all enlisted soldiers, arrived at Manila September 30, having been released by the insurgents.

The Free Employment Bureaus of Chicago found places for nearly four thousand persons in six weeks.

Dewey day was generally observed by the Americans in Cuba. The Cubans took no part in it.

An American gunboat was recently captured by the insurgents, not far from Manila.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The First American Printing-Press.

BY ERNEST INGERSOLL.

It was a matter of very great interest to me to learn that the first printing-press brought into North America—the very one upon which parts of Eliot's Indian Bible were printed—still exists at Montpelier, Vt., in the careful custody of the Vermont Historical Society. It would indeed be difficult to find in the whole country an authentic relic more worthy of patriotic attention or one so identified with and typical of American ideas and development.

The machine as I saw it a few months ago was briefly labeled with a few general notes on its age and origin, and no one then accessible to me was able to tell me more. I resolved, therefore, to attempt to substantiate its claim and trace its history, and this I have succeeded in doing.

Somewhat over two hundred and sixty years ago the Rev. Jesse (or Joseph) Glover, an English dissenting clergyman interested in New England, whither he was about to emigrate, wisely proposed to supply the need of Massachusetts for the outfit of a printing-office. Unable or unwilling to procure the whole establishment himself, he solicited and received contributions from friends of the Puritans in Holland and in England on the representation that the matter was one of direct benefit to Harvard College, then lately founded. The types, indeed, seem to have been direct gifts to the college, but the hand-press, which Glover got in England, remained his personal property.

No regular builders of printing-presses existed at that period, any clever joiner being considered competent to make one of the hand-machines then alone used. Who put Mr. Glover's press together is not known, but he was evidently a good and honest workman.

As the clergyman was not himself a "practical printer," he engaged to accompany him to America a young man named Stephen Daye, who proved to be ill judged or ill recommended.

Mr. Glover started for Boston early in 1638 with his family and household effects, accompanied by Daye and taking with him his press and office equipment, but he died on the voyage. After Mrs. Glover landed she speedily settled in Cambridge, then regarded as the prospective capital of Massachusetts; and the press was at once set up in the house of Henry Dunster, first president of the new college, where an office was opened for work under the care of young Daye.

This is the very press of which I am writing, and which has come down to us; and it was the first one anywhere in America north of Mexico.

The initial "job" was one that would have pleased the good man by whose efforts it was possible—the printing of "The Freeman's Oath," which appeared "in the first month" (*i.e.*, March, old style) of 1639; and it is a line of poetry in the prosy page of colonial history that this should have been the first thing printed from types in this "land of the free." Next followed a locally calculated "Almanack," and then the renowned "Bay Psalm-Book." All of these were better in purpose than in typography, though the presswork was fair.

Though Daye remained as workman for some ten years, the real manager was Dunster himself, who soon married Widow Glover.

One might spend an entertaining hour over the publications of this earliest press during its many years in Cambridge. Thirteen books in all are supposed to have been issued during Daye's time; but after ten years of service Daye left.

There came to take his place, in 1649, a young man named Samuel Green, who as a boy had come over with Winthrop and had made his way as best he could. It is not known that he had had any special training as a printer, but if not he soon acquired sufficient skill to enable him to retain for fifty years the management of the college press. He became an influential citizen, was twice married, and became the father of nineteen children, of whom several of the boys became printers and trained their descendants to the same trade. Until the Revolution Boston was never without a printer of this name, while others founded newspapers and job offices in all parts of the country.

The college press devoted its energies mainly to religious literature, varied by the issue of colonial laws and other public papers. Toward the end of its second decade it began to issue versions of David's Psalms and a catechism in the local Indian language, made by an enthusiastic missionary at Natick—the Rev. John Eliot. He had already been at work upon a translation into the native tongue of the whole Scriptures, and had printed some parts; and at length he was able to secure the aid of the (British) Society for the Propagation of the Gospel in New England, which, in 1659 or 1660, sent over from London a new printing-press, type, and paper to enable him to complete this work, which then appeared to be so important and now seems so futile. As there was no proper printer in Cambridge, though Green and Eliot had trained one or two Indian compositors and helpers, the society also sent a pressman.

This new outfit was added to the Cambridge office under Mr. Green's care, and its first principal service was the making of Eliot's Indian Bible. The correspondence and accounts rendered in the course of this elaborate work show that to hasten matters both presses were used, especially in making the New Testament (which was a matter of great interest in Europe as well as in the colonies); and this fact, that parts at least of Eliot's Indian Bible were produced by it, is alone reason enough for regarding this cherished relic with veneration.

The business of the press steadily increased and Samuel Green remained in charge until he became very old, assisted by his sons; and upon his death in 1702 it passed under control of one of these, Bartholomew Green. Soon afterward, however, the college ceased to be a publisher, and sold all its material. Bartholomew may have been the buyer, for he had already opened an office of his own in

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

Boston, where he became "the most distinguished printer of that period in the country," and set on foot *The News Letter,* the first newspaper in the British colonies.

Whether a part of his office furniture was this old Glover press, or whether that was purchased directly from the college by Timothy, is unknown; but at any rate Timothy Green, a nephew of Bartholomew and grandson of Samuel Green (first), also opened a printing-house "at ye north part of ye town" (in Boston), and had and used this ancient machine until 1714, when he obtained the position of printer to the colony of Connecticut and took the old press with him to New London.

By 1752 he had grown old and weary, and induced his son Timothy (second), already a printer in Boston, in partnership with one Kneeland, to come to New London and take charge of the business. Among this man's apprentices was a nephew also named Timothy (third), who succeeded to his uncle's business—and to the ownership of our press—upon his uncle's death in 1763. He in turn took as apprentice a lad named Judah Paddock Spooner, who after a time became his brother-in-law, and in 1773 was taken into partnership. Then Green and he together moved the office to Norwich, Conn., where they prosecuted their business for five years, publishing an edition of Watts' "Psalms," Paine's "Common Sense," a book of military tactics, and other things, of which the most celebrated, probably, was the "Dialog Concerning the Slavery of the Africans," by Dr. Samuel Hopkins, which advocated immediate emancipation. It is quite possible that this famous tract was imprinted by this very press.

Whether the business became bad or not is not recorded, but in 1778 the outfit was removed to Vermont, then just beginning as a state and in need of some one to print its laws and legislative proceedings. A Spooner was already prominent in the affairs of that state, and it is presumable that he was instrumental in getting for them the government patronage. Whether Green went to Vermont is uncertain, but he furnished the equipment of the office, including our old press, and probably retained an interest. Before long, however, Mr. Green disappears, and the firm of state printers becomes J. P. & Alden Spooner.

They established themselves first in Westminster, Vt., in 1778, but the next year moved to Dresden, where they remained two years. By this time the settlement of the disputed boundary placed Dresden in New Hampshire, where its name was changed to Hanover, and it became widely known as the seat of Dartmouth College. This caused them to return the office to Westminster in 1781. Here they began the publication of *The Vermont Gazeteer* or *Green Mountain Post-Boy,* the first Vermont newspaper. It was printed weekly, of "pot" size, single sheet, and had as its motto,—

> Pliant as reeds where streams of freedom glide,
> Firm as the hills to stand oppression's tide.

In 1783 the office was again moved to Windsor, Vt., where in August the old press began to turn out *The Vermont Journal,* which became and remained for a great many years the principal newspaper in the state. Its early copies, not larger than a sheet of foolscap, were "worked" on the ancient press, which was retained by the Spooners until 1814, and its subsequent vicissitudes have been traced by the historian of Woodstock and others.

In 1814 this press was sold to Isaac Eddy of Weathersfield, from whom it passed to David Watson, of Woodstock, and later to Abel D. Alleyne, of the same town, who was its owner in 1826, when it had become much worn and was rarely used. In 1833 it passed into possession of a Colonel Russell under a judgment for debt, and was soon afterwards sold by him for a small sum to Mr. Merrifield, a citizen of Windsor, who took it home with him and kept it nearly fifty years, the latter part of the time stored in his barn. It was found there by L. O. Greene, editor of *The Vermont Standard* (of Woodstock), and deposited with the State Historical Society, which lately "restored" it with painstaking care, and placed it upon exhibition as aforesaid.—*The New Voice.*

## Wanted—A Benevolent Germ.

It is questionable whether the almost daily scientific announcements as to the habitat and habits of bacteria are an unmixed good or add much to the gayety of mankind. Science, having discovered the pestiferous microbe, is careful to tell us that the air we breathe, the food we eat, and the water we drink are filled with them, and that they are deleterious. Every one of these wrigglers is a bad one. Science has never found a good one. It tells us we must look out for them, but suggests no way of doing it. We are continually breathing, eating, and drinking them. We are informed they are slow poison, and yet science is unable to furnish an antidote. Are there no germs which are good and beneficent and which can be utilized to counteract the bad ones? Science makes no reply.

Most harmless things have been turned into bugaboos by science, and recently it has endeavored to disturb the security of the household by making us believe that the home is an all the year round resort for the microbe. It is in the water that comes through the filterer, even; in the kettle that sings on the stove, in the bread that is molded on the board, in the dust specks which float in the parlor, in the flues which convey the heat. Recently a German bacteriologist has discovered that the refrigerator, which was supposed to be the dispenser of purity, is a favorite resort for germs, and the cooler the refrigerator the more frisky the germ. It was long ago decided that fire could not burn them; now we are told ice cannot freeze them. The same scientist says that the carpets and furniture are full of them. The housekeeper who uses the broom and dust brush is warned that these implements of cleanliness are the deadliest enemies of health, and that the more thoroughly the housekeeper uses them the more closely she menaces the family, for they fairly reek with germs. The broom finds them and gathers them up in their innumerable hiding places, and at every whisk of it she sets free whole cohorts of microbes which might have been innocuous if left in their retreats.

All this is depressing and tends to superinduce pessimism. Is there not evil enough in this old world that can be seen and felt without having life made still more wretched by the announcement that every breath we draw, every swallow of food and drink, the street, the shop, the office, the home are swarming with innumerable legions of invisible pests, whose only office it is to remove us from this vale of tears? Is life made any happier for these discoveries of science? How did our grandfathers and grandmothers manage to get along and live to such a sturdy old age? Microbes were as numerous and active then as they are now. Was it because they did not know it, or were they too tough subjects for them? Ignorance certainly was bliss in their case. We are wiser, but are we happier? Will not science bestir itself and find a germicide that can be depended upon? Has it not skill enough to find good and friendly germs somewhere in its culture tubes? We have had enough of the gospel of despair which continually comes from its laboratories.—Chicago *Tribune.*

As in the seed that falls upon the ground there dwells the potency of fragrant bloom, so in the soul of man, however dark and dull it seem, there dwells the potency of perfect love, of progress infinite. C.

## Comments on Dr. Nickerson's Views.

### Murder, says Osborne.

If any physician in this county should attempt to follow Dr. Nickerson's ideas and it should come to the knowledge of the District Attorney's office, the Grand Jury would be asked to indict him for murder. James W. Osborne, who, in the absence of District Attorney Gardiner, is Acting District Attorney, made this declaration yesterday.

"Any physician who makes such a confession is, if his confession be true, a murderer," said Mr. Osborne. "No one has the right to take another's life, and if such a confession came to my attention I should at once present the person making it to the Grand Jury for indictment for murder in the first degree. The only defence which could be interposed is lunacy, and I believe that any doctor who would make such a confession is a lunatic.

"Furthermore, any one who confesses that he has advised a person as to the easiest way to commit suicide is liable to indictment. If the person so advised succeeds in committing suicide, the physician who advised him would in this state be guilty of murder. If he attempted suicide and failed, the physician would be guilty of being accessory before the act to an assault; for technically a person who attempts suicide commits an assault on himself.

"On the general proposition of the right of a physician to withhold aid from an apparently dying person, in my opinion medical science has not advanced far enough to intrust that power to any one. I have seen too many cases of persons slated for death where the slate has been broken and the patients have recovered, to care to intrust my chances of recovery or those of any one dear to me to the opinion of any physician. It is in my opinion the duty of a physician to use every means in his power to prolong life and to alleviate pain."

Charles A. Le Barbier, an Assistant District Attorney, said:—

"Any one who curtails human life by so much as one second is guilty of murder, no matter what his motives may be. That he wished to spare his patient pain or to make easier his dying hours is no defence. It would be dangerous to society in the highest degree to intrust to any one the decision as to whether a life should be prolonged or not."—*New York Herald.*

### Would Mean Court-Martial.

"If a medical officer of the army were nowadays to chloroform a man, as Dr. Nickerson said in the *Herald* this morning that he had done in the Civil War, he would be immediately court-martialled and adequately punished if found guilty."

This statement was made to me to-day by a high official of the Army Medical Department. Surgeon-General Sternberg is out of the city, but the officer with whom I talked may be regarded as an authority.

"There are many anæsthetics that can be used to alleviate pain," he continued. "In fact, the patient may by their use be kept in such a condition that he will not feel pain. Why, therefore, should his physician kill him? In the army of to-day every medical officer does his utmost to prolong life, and they will continue to do so or be court-martialled and punished."

Examination of the rolls of the department shows that Dr. Nehemiah Nickerson was a surgeon in the Twenty-first Connecticut and served faithfully during the Civil War. The department officials say they have no record showing that he administered chloroform to patients.

*New York Herald.*

## Spiritual Life in Churches.

Extract from a paper read by Rev. Joseph Robertson, M.A., at the International Congregational Council in Boston, Mass., September 26, 1899.

Our churches are nothing if not spiritual. We live in a time when much is made, in the church and out of it, of organization and machinery. We may be in danger of having men think that salvation is by public meeting and committee. It is admitted that our churches have ever exercised an influence great out of all proportion to their mutual strength, and, through their members and adherents, played a very important part in such matters as securing civil and religious liberty, advancing education, helping in municipal and political life and in developing works of philanthropy and benevolence, but our churches are nothing unless spiritual. The heroic band who began the work of laying the foundations of the American nation came to plant a church, and, as it has been said, in planting a church they founded a nation. Two dangers require to be avoided. There is an easy, selfish pietism which feels like sitting and singing itself away to everlasting bliss, that puts not its hand to the work of helping the lives of men, sympathizing with their sorrows, relieving their want and woe, not sufficiently realizing that, if man is a soul, he has a body, and that, if he is an heir of heaven, he is, meantime, a citizen of earth, and there is an active, busy—yes, and noble——service of man which may be in danger of losing its realization of the unseen and eternal. Spiritual men may need an ethical revival, but the busy organizer and worker must have the spiritual power which alone can make fruitful the works that are being set in operation by the desire to improve the moral and social condition of mankind.

A life of activity for God must spring from a life of communion with God. The spiritual life of our churches may be appraised by the measure of peace, purity, and power to be found in them. The time limits of this address will not permit any amplification of that position. Briefly let it be said, the spirit-filled church will be marked by the peace, not of inaction, or the desert of death, but of movement, union, harmony, concord, good will, brotherly love. With this thought turn to consider the Christian life which is so common among us to-day. Surely much of that is never what is meant by the high, hope-inspiring words of the New Testament! Think of the position of the believer and the promise of the gospel. And yet, with all the believer's high claims, and all the great promises made to him by God, how often do we feel forced to think that our common Christian life is commonplace and contradictory. We say we are Christians, and go to church on Sunday. Do people find out without our saying it that the spirit of Christ is in us? And would those who have no knowledge of how we spend our Sundays discover from ourselves that we are Christians, indeed? Do our wives and servants feel it? Do our employers and employees know it? Do our fellow-workmen see it? Is there never such a thing as talking cream and living skim milk? Read Paul's wonderful prayer for his converts in Ephesus, ending with the words, "That ye might be filled with all the fulness of God." So far I have spoken of a much deeper life than we possess being possible for us. May I not say that it is more than possible for us all, and that without controversy this fuller life is obligatory?

*Boston Evening Transcript.*

## Food Fear.

"There is a new disease," said a bright woman yesterday, as several of us sat over the teacups. "The scientific name of the malady is a big mouthful, of course. But in simple Anglo-Saxon it is just the 'fear of food' or 'food fear.'"

Digitized by Google

It sounds like a paragraph from one of Frank Stockton's delightful nonsense stories,—but it isn't. It is a sober, serious problem and doctors are diagnosing it as such. If you doubt the existence of this fear go into some high-grade grocer shop and ask to see the health foods. You will be astounded. The list of these would take up columns in a newspaper. New ones are coming to market every year. Healthy men and women are calling for "predigested nutrition" and "sanitary foods." Hundreds of otherwise reasoning and reasonable people sit down to a table in doubt and leave it in dread. Dyspeptic food faddists are responsible for the malady. Food fear is said to be a direct result of the mania for diet questions which has been raging over the country during the past few years.

The interest taken in food topics has been abnormal. Everywhere—city and country, land and sea, at home and abroad—diet has become the question. Housewives throw out at the doors the simple staple articles which their mothers cooked and devote themselves to strange gods in nutrition. Systems and symptoms are more engrossing as subjects than politics or art, books, operas, athletics. Studied with judgment and common sense the same questions would be profitable in the extreme. But they are not studied in a common-sense way two-thirds of the time. "Meat is poison. It is all diseased. It will fill you full of disease," A advises you. "Vegetables are all water. There is no nourishment in them," theorist B will tell you. C wonders at your temerity in eating a piece of winter fruit when there is so much appendicitis around.

You are warned against tea, coffee, and chocolate. One neighbor wants you to avoid food that isn't heated. Another is sure that you should touch nothing hot. One edible is too heavy to be eaten in our climate. Another isn't heavy enough. And the result of it all? Well, if you are a man or a woman of sense you try to forget every theory you hear with all the haste possible. You eat what you have always eaten if it has not quarreled with your stomach in the past. But if you are to be blown here and there with every wind of doctrine you will fall a victim to the food fear. You will probably sit down three times a day to a dish of pap and a box of pills.

*Philadelphia Press.*

## An Appreciative Letter.

AMONG the visiting Christian Scientists who responded to Mrs. Eddy's invitation to come to Concord on Old Home Day was Minnie E. Erwin of Boston, who has sent to Mrs. Eddy the following appreciative letter expressing her pleasure in the occasion:—

"Thank you for the kind message of invitation that came to your children in Boston, Wednesday afternoon. Yesterday morning we started on the early train, glad to do as Mother wished. It was a good day. Threatening clouds vanished and the sun shone brightly—a sweet prophecy. In the cars all faces were bright, and as we spoke together of the things of the Kingdom gladness seemed to reign. At nearly every station brothers and sisters came to join the happy throng. Inside the train was every manifestation of peace and love; outside, the beautiful scenery—winding rivers, green fields, and grand hills—turned our thought to the 'River of Life' and to 'the grand ideas of Truth' (Science and Health, p. 505), bringing to mind David's sweet psalm, 'As the mountains are round about Jerusalem, so the Lord is round about his people from henceforth even forever.'

"All was good, the gathering in the beautiful Christian Science Hall, where we were permitted to go in and out as we pleased; the sharing of the patriotism of the day; the interchange of Christian Science thought; the singing of our Mother's dear 'Shepherd Hymn;' the harmony and uplifting that came at Pleasant View as we roamed through the fields or sat on the grass talking lovingly together; the glimpses of Mother's peaceful face as she stepped into her carriage. Then, later, the gathering again at the Hall and Mother's presence for a few short moments. Though when she retired to the parlor a mortal sense of disappointment passed over us, it soon vanished, and we were glad that if all could not listen to her words of counsel and love, the dear First Members present had that privilege, and we could share the blessing. It was a happy day and we came home inspired with new hope, courage, and strength. Thank you for all you do for us. God bless Mother! and give us all the love that will enable us to be very faithful and true in all our Christian Science work and living."

*Independent Statesman.*

## Young Medicos Caught Out.

"WHEN I was attending medical college," said a New Orleans physician, "our old professor of *materia medica* and general practice told us one day that he had a remarkable case which he proposed to exhibit next morning in clinic. 'I have persuaded the man to allow you to examine him in the interest of science,' he said, 'and you will each make an independent diagnosis in writing.' Next day the patient appeared. He was a strapping big fellow, and, without any preface, he peeled off his clothes and took his place on the table. We examined him in squads, thumping his chest, listening to his lungs, feeling his pulse, taking his temperature, and doing everything else we could think of. I soon discovered valvular disease of the heart in an advanced stage, but said nothing, according to the rule, and sat up nearly all night writing my diagnosis. When the professor took his place on the platform at lecture hour his desk was heaped high with our written reports. 'Well, gentlemen,' he said blandly, 'I find here forty-six diagnoses, each describing a different disease. I consider the variety of your discoveries as very remarkable, especially'—here he paused and deliberately polished his eye-glasses—'especially, gentlemen, as there was nothing whatever the matter with the patient.' The silence that ensued was so thick you could have cut it with an axe."

*New Orleans Times-Democrat.*

## Injunction Against Death.

A YOUNG Hebrew of Peoria, Ill., has applied to the state's attorney for an injunction against death. The officials sympathized with him, but told him they had no jurisdiction in the matter. Not long ago he consulted a fortune-teller and expressed a desire that the prophet peer behind the veil and see how near the dark angel was to his name on the list. The prophet went into a trance and, after consulting the spirits, assured his visitor that he would depart this life January 15.

The young man has so much faith in the prediction that he is much alarmed. He argues that that date does not suit him, and he wants some relief in the matter. The fortune-teller says he is unable to change the date, and the officers of the law admit that they are powerless in the matter.

*St. Joseph Daily News.*

The *Universalist Leader* says: "There are two classes of people who will usually bear watching: those who talk a great deal of how good they are, and those who have much to say about how bad they are."

## Among the Churches.

### New Temple at Chicago.

THE foundation of the new temple of the Second Church of Christ, Scientist, is now laid and work on the superstructure is about to be started. The edifice, which is to be one of the most perfect of its kind in Chicago, is being reared at the corner of Wrightwood and Pine Grove Avenues. It will be spacious, comfortable—even elegant—in furnishings, and built for the one purpose of worship. The base of the building will be of granite and the superstructure of Bedford stone. Work on the edifice is being directed with all care and it will take fully nine months to finish it and have it ready for the pew-holders. The size of the building over all will be 113 by 96 feet. The main auditorium is designed to be a room of noble proportions. The dimensions are designed to be 83 by 110 feet. The seating capacity will be between fourteen and fifteen hundred people.

This auditorium will be supported by great columns over two feet in thickness and nineteen feet in height. Looking upward one will see a vast dome whose apex is forty-five feet from the floor and exteriorly sixty-four feet from the ground. The diameter of the dome will be twenty-nine feet. There is to be a foyer covering six thousand square feet. Provision will be made for the readers and for the committee and directors. Smaller rooms will be designed for this purpose. There will also be cloak rooms and other similar apartments.

Among the attractive innovations will be a pretty portico, this to measure seven by thirty feet and to be nineteen feet high. A vestibule will lead into the auditorium. It will be fourteen feet wide and forty feet long. The main entrance will be from Wrightwood Avenue. The number of steps from the walk to the foyer will be six, and the extreme width of the step approach on Wrightwood Avenue will be forty-two feet. The building will be imposing from the outward view, as can be guessed from the above description. The architect's design is along broad and beautiful lines, money is not to be spared, and all in all the church will be among the ornate edifices in Chicago.

The Second Church of Christ is an outgrowth of the First Church, whose tabernacle on Drexel Boulevard is the wonder and admiration of strangers in the city. First Church grew so rapidly that worshipers from the North and West Sides of Chicago decided last February they would have to obtain quarters for themselves in their own districts. A building fund was accordingly started in behalf of both congregations, and in ten days over twenty thousand dollars was raised. This idea was in direct line with the plans of Chicago Scientists mapped out nearly three years ago, when the First Church was planned. It was adjudged wise then that all believers in the doctrines of Mrs. Eddy should hold together practically as one church body and contribute to the construction of the First Church until the society had reached the stage where it could afford to make outlays for other church edifices.

In November, last year, the Second Church was formed. Its members subsequently withdrew from the First Church and secured for a place of meeting the new Zion Temple of the North Chicago Jewish Congregation, situated at Goethe Street and La Salle Avenue. The North Side Church was very small at the outset, but its growth has been phenomenal, now numbering, after a year's existence, about seven hundred members. At first there was talk among the North Siders of purchasing a church building from one of the other denominations. This project was abandoned for the greater one.

At the time the two new churches were organized building committees and other committees were selected. Similar committees were appointed for the Third Church, which also has planned a fine church building, and is about ready to begin construction. These committees formed the general building committees which have undertaken the construction in behalf of the congregations of the two tabernacles.—*Times-Herald.*

### Dedicated a New Organ.

Opening services were held at the Christian Science church on Green Street last Sunday morning at 10.30. The church has been closed since the second week in July, owing to the installation of a new two manual organ which was manufactured by the Searles Co., Methuen. It has been called the finest toned organ in the city.

The services were conducted by Mr. Prescott and Miss Susie Lang. Mr. E. Choate was organist for a chorus of fourteen or fifteen voices and also accompanist for Miss Daggett, who rendered a contralto solo.

The church looked very pretty, the whole rostrum being decorated with pink and white flowers, ferns, and palms. Many out of town people attended the services.

*Lawrence (Mass.) Daily Telegram.*

### A Correction.

We are informed that the building site in Lockport, N. Y., was purchased by the Second Church of Christ, Scientist, instead of the First Church, as stated in the *Sentinel* of September 21, 1899.

## "The Spinning-Wheel at Rest."

POEMS. By Edward Augustus Jenks. Royal duodecimo. Cloth. Bevelled edges. Fifty Illustrations, with portrait of the author. Price $1.50.

This is one of the most beautiful volumes ever issued from the New England press. It carries fifty exquisite illustrations (24 full-page), quite new, and many of them unique. Most of the poems have been given to the public, from time to time, through the magazines. It will prove a rare addition to any library of choice books, and, owing to its delicate beauty, will prove especially attractive as a holiday gift.

LEE AND SHEPARD, Publishers, Boston.

Concord, New Hampshire.

"The Spinning-Wheel at Rest" will be sent, postpaid, on receipt of price ($1.50) by the author (at Concord, N. H.). Each volume will bear his autograph signature.

EDWARD A. JENKS.

## Going without Religion.

THE worst kind of religion is no religion at all; and these men living in ease and luxury, indulging themselves in the amusement of going without religion, may be thankful that they live in lands where the Gospel they neglect has tamed the beastliness and ferocity of the men who, but for Christianity, might long ago have eaten their carcasses like the South Sea Islanders, or cut off their heads and tanned their hides like the monsters of the French Revolution.—*James Russell Lowell.*

Mr. D. L. Moody says: "Repentance is not the lopping off of particular sins. If I have a vessel full of holes and stop only part of them, the vessel will sink. We must break off from all sin and turn unto God."

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## Regarding Science and Health.

In reply to the numerous inquiries, Is Mrs. Eddy revising Science and Health? we answer No! and there is no immediate need of undertaking such a work. This is only another attempt to stop the sale of the present edition of Science and Health.

## Mr. Tomlinson Relieved.

Owing to important work in hand and many multiplied duties, Mr. Tomlinson has been excused from attending to correspondence intended for our Leader. Will the Field, therefore, please direct all letters as heretofore to Pleasant View?

## A Statement of Facts.

Misrepresentation is always best met by a mere statement of the truth. Hence the following statement of simple facts.

It is a fact that the Rev. Mary Baker Eddy in all her practice never charged but one patient, while she healed a great many.

It is a fact that she never received one cent of salary from her church, but when she did preach she received as her only compensation one half the amount put into the contribution box. She had preached for years before she would accept even this from her church. She went back and forth from her residence in Lynn, Mass., to Boston, sometimes breaking her way through the snow-drifts between her home and the depot, with her husband and a policeman by her side, when carriages could not go out.

It is a fact that she has always given away a goodly proportion of her books and writings, many times to those too poor to purchase them. While this is true, it is also true that the laws of our land, as well as the unwritten law of just compensation, exist as well for Mrs. Eddy as for others; and she is entitled to and will receive the same protection against plagiarism as any other citizen. This has already been demonstrated.

Christian Scientists act independently of her in their practice of Christian Science, and she is not responsible for any wrongful practices, if any exist, on their part, for she has not the time to settle such affairs, but has provided ample means for looking after those who may violate just rules in a Church Manual, and has had proper authorities of the church appointed for the purpose of enforcing discipline. These Church Rules and organizations of the denomination have been wisely made, as need has arisen, and have already proved themselves most successful in spreading the Cause of Christian Science throughout our country and among foreign nations.

Her text-book, "Science and Health with Key to the Scriptures," she desires to have given to the worthy poor in a prudent manner. The price of this book, which supplies the place of the family physician to the entire family, not only healing but preventing sickness of every kind, is extremely low at three dollars per copy. Let those who find fault with this price look into the price of medical text-books or even the text-books of the schools, and they will find this book cheap by comparison. Those who accuse the author of this book with charging exorbitant prices are either unfair or so prejudiced that they are incapable of judging rightly, or so ignorant of the prevailing charges for text-books that they speak with no weight. Furthermore, there is no one who has not actually tested and learned of the value of this book who is at all capable of judging thereof. The multiplied testimonies coming from earnest hearts, healed by its teachings, to the effect that money could not buy it of them if they could not procure another, is of vastly greater value than the sayings of those who speak without knowledge.

Those who gain all the knowledge they have of Christian Science by reading Mrs. Eddy's book, which cost them say three dollars, might afford to undersell her publisher, but cannot afford to claim that they do this in the name of Truth and divine Love.

It is a principle of domestic economy that people in order to live honestly must have just compensation for their labor, whatever it may be, and where such compensation is received it does not constitute a trust in any rational sense of the term. A livelihood thus obtained is in no sense a trust, unless it be a trust in God.

The real Christian Scientist lives in just this way, and prospers on honest wages, because his habits are upright and his expenses not extravagant, while his labors result in perpetual good; never in harm to any one.

In the end we shall see which succeed, those who obey, or those who disobey, the laws of God and our country, neither of which can be trampled upon or defied.

## Euthanasia.

It is not strange that there should be a public outcry against the practice of euthanasia by physicians. The extent to which it has been and is being practised becomes appalling in face of the fact that thousands of cases which, according to the pronouncement of physicians, were absolutely hopeless, have been brought out through Christian Science.

Is it not time the people were crying out in their own behalf for protection against the methods of a profession which, however conscientiously carried on, are wholly unjustifiable?

Let the people sincerely ponder this question, and if the medical profession continue to appear before our legislative bodies seeking the protection of the law on its behalf, the *vox populi* may well be heard for or against the system which practises or even impliedly assents to the "quiet putting away" of sick people on the plea that there is no hope for them.

Such a plea would be justified only on the ground that death ends all. This is manifestly the theory upon which the practice is based. If it were true that there is no life or existence beyond, and it were known in each case that there was and could be no hope of the restoration of the patient, the practice might be permissible from their standpoint, but not otherwise.

Christian Scientists admit neither proposition. They have in too many instances proved the possibility of recovery where physicians had abandoned all hope and declared death to be inevitable. They are equally well assured that death does not end all, though, of course, not able to prove it to the satisfaction of those not familiar with Christian Science teaching.

It is a fair inference that if life is immortal, if it is continuous, there is an awakening from that which is called death, somehow and some time, on the other plane. May it not be an equally fair inference that suffering does not cease at once with the change, and that when the patient awakens from the effect of the narcotic, there is no less suffering than would have resulted from an awakening before that event? If so, the physician who administers the fatal dose has failed entirely of his purpose to cause a painless death.

## Our Leader.

THE following are some appreciative references to the Rev. Mary Baker Eddy culled from recent lectures given in the Field by members of the official Board of Lectureship of the Christian Science Church.

The Spiritual Idea of Truth, manifested by Jesus, has been slowly working all these centuries, till in this age, near the close of the century, one human consciousness has been clear, pure, spiritual enough to let in the light of infinite Love, and the Rev. Mary Baker Eddy gives us "Science and Health with Key to the Scriptures" that unlocks its hidden treasures and solves the mysteries of Being.

In the plenitude of her maturity, she in selfless love and matchless wisdom, is leading this great movement toward the physical and spiritual freedom of the race.

It is, perhaps, a surprise to many that this Science of Sciences should have come through a woman—a woman meek and mighty. Strong in the strength of spirit, brave with the courage of a God-bestowed evangel. Nor is this strange. Truth is not a tower of Babel, a structure of material hypotheses and theories, reaching Heaven on a material basis. It is a revelation descending from God out of Heaven. It is spiritually discerned by the pure in heart. The transparency of a purified affection—a selfless, glorified life of love and tenderness—were the requisites. Woman first proved the divine Fatherhood of God. First at the sepulchre, she saw the immortality of man proven and rise superior to fleshly conditions and material laws, and now woman has given us the Science of Infinite Being, revealing the limitless possibilities of man, as heir through divine birthright of all good, eternal life, and perfection.

MRS. LIVINGSTON MIMS.

Christian Science was discovered by the Rev. Mary Baker Eddy, about thirty-three years ago. The parentage, education, experience, and remarkable spirituality of Mrs. Eddy had made her well fitted for the mission to which God had called her. She possessed a remarkable degree of spirituality even in childhood, and rapidly developed into that individuality which was needed to voice to this age the Science of Christianity, which she has rightly named Christian Science.

Some ask the question, Could not some one else have discovered Christian Science? No one else was prepared for such a discovery, and God never makes mistakes in His selections. Truth seeks an entrance into human consciousness, and, like the light pressing against the wall, it penetrates the moment there is a chink.

Mrs. Eddy was one to whom the veil of matter had worn thin enough for the light of Truth to break through. It is now too late for some one else to discover Christian Science. Like America, this Science is already discovered, and can never be hidden again. However, we may all enjoy the blessings of this discovery, though we can never be discoverers. It is true that Christian Science was discovered and founded by a woman; but that is not to the discredit of the Science, but to the credit of womankind.

ALFRED FARLOW.

The discovery (of Christian Science) came in this way: A woman met with an accident which her physician considered fatal; he said that she could not survive over three days. On the third day, which was the Sabbath, her pastor called to say farewell, believing the injury to be fatal and the end to be near. When he was gone, the other people were sent from the room, and the sufferer opened the Bible and read about the healing work of Jesus. Then dawned upon her consciousness the assurance that the divine Love must be omnipresent, and the sense of this truth came like warm sunshine. Agony ceased, life warmed the cold limbs, strength was restored, and she arose healed.

When Newton saw an apple fall, he gained the vision of an unseen force, and thus became the discoverer of the law of gravitation. By this experience of healing through the beneficent action of the divine Mind, there was gained the vision of divine Science, and since then the understanding of the law of Love has been established; that is, the Discoverer has also been the Founder of Christian Science, she who is now known to the world as the Rev. Mary Baker Eddy. For three years after this restoration to life, she studied the facts of healing recorded in Scripture, seeing them no longer as unrelated happenings of a miraculous nature, but as the necessary result of spiritual power and law, then the Science involved was understood, but it required six years more of experience and proof of the divine Principle involved in healing before it was possible to give to the world the text-book of Christian Science. All the propositions in a text-book must be proven beforehand, else the students will fail in their proof. It is an interesting fact that from the very first those who have studied "Science and Health with Key to the Scriptures," with the Bible, have found themselves able to heal the sick, and to cast evils out of themselves and others. Any reasonable mind will see that if by study of a text-book they become able to heal the sick as the early disciples and followers of Jesus did, it is an understood Principle that is being proved, and that Christian Scientists are not merely following a person.

In Christian Science where all depends upon demonstration, there cannot be hero-worship; there must be following in the way pointed out through the toil, the self-sacrifice, and the wonderful love for humanity evidenced by the Shower of the way. At the same time, if the tens of thousands of sick healed by virtue of the Principle thus revealed were not grateful to the Revealer, men would be on a lower plane than the brute creation. But those healed have learned the true nature of man, humane and Christ-like, and therefore express gratitude and pure love as naturally as a flower blooms in beauty and sends out fragrance. The excellence of this love is that all men share in the benefit of it. The singular purity and consecration of the Discoverer of Christian Science made the revelation of the omnipotence of Good come to her naturally.

REV. WM. P. MCKENZIE.

## Christian Science Testimony.

AT the regular weekly meeting of the First Church of Christ, Scientist, held in the Auditorium annex on Wednesday evening, many testimonials were given by persons in the congregation, which, as one reflects upon them, tend to induce a conviction that the application of the fundamental principles upon which the movement is founded, are accomplishing a great deal of physical as well as spiritual good. Consideration of these free, open-hearted, unsolicited statements, is, at this particular time, of great interest, for it is an apparent fact that the doctrine of Christian Science is claiming new followers every day.

At the opening of the services Mr. William Bradford Dickson gave a clear explanation of the relation of Christian Science and Christian Scientists to the Holy Scriptures. Mr. Dickson stated that the Holy Bible was considered by Scientists as the supreme book of books, the voice of infinite Wisdom; and that all the works and teachings of Christian Science were based upon it; that the Bible was judge, law-giver, and physician, supplying the remedy for all moral, mental, and physical ills; that Christian Scientists gave daily and devout study to this book and practised its teachings in the home and in business relations; that "Science and Health with Key to the Scriptures," the text-book of all Christian Scientists, gave the spiritual understanding of the Holy Scriptures, and that

Digitized by Google

the reading of Science and Health had healed him of several physical diseases which had baffled the skill of eminent physicians and had made him understand and love the Bible as never before. The gist of the testimonials was as given below.

One young lady, who from infancy had been afflicted with a weakness of the eyes, became interested in Christian Science and decided to read the book Science and Health. She executed her purpose, and by applying the principles taught, her sight was restored.

A Civil War veteran, who contracted a disease of the stomach by eating mouldy bread while in the service of the government, failed to find relief until he became a follower of Christian Science, and now he is entirely cured. He said the new religion had done more for him than words could express.

A Mishawaka manufacturer testified that while he had derived no particular physical benefit from Christian Science, he had been helped almost beyond expression spiritually. He said that before he became a follower of Christian Science he had never felt quite satisfied with himself, although he had led what would be considered a Christian life. He began studying the doctrine of Christian Science and since then his life has been entirely changed. He feels more at peace with himself and the world about him.

A marvelous case of healing was told of by an aged lady, who said she had been informed in a letter of an incident where a Christian Science healer was sent for to treat a woman near to death's door. The patient was unconscious when the Scientist reached her, but after one treatment was restored to consciousness, and soon completely recovered. This was brought about with only a few treatments.

Another lady, a member of a wealthy and prominent family, gave testimony concerning a meeting of Scientists she attended in Chicago where fifteen hundred enthusiastic workers were present. She told of the remarks of a young man who had been cured of the liquor habit and of his gratefulness to his sister, who, being a Scientist, influenced him to adopt the faith. The woman also stated that Christian Science had relieved her after years of suffering when she had been given up to be a hopeless invalid. She said she could not say enough in endorsement of the faith. Her husband had been cured of rheumatism, her son of catarrh, and her daughter of chronic liver complaint.

*Saturday Tribune,* South Bend, Ind.

---

Some few have stood upon the mountain heights of thought and there conversed with God. The message that they bring is, "God is Good." By lesser minds, with vision bounded by the earth clods where they delve, with scarce a glimpse of heaven above the pit themselves have dug, this message is but illy heard; when heard, but dully felt. To them is barely visible the noonday light of truth, that light which searches every nook where shades of error lurk and banishes for aye the shadows there. For far away and dim to them that light which floods God's upper world; 'tis but a silvery gleam amid the chill and blackness of the pit wherein they grope, so dim they half believe it but illusion. Oh! poor and blinded earth-worms! Follow up that thread of light to the open day of God's bright world of truth and love, and listen to the message of the spirits of the heights, then join in the exultant pæan, with angel voices leading, "God is Good."

C.

---

Lyman Abbott says the silences of a great teacher are sometimes as impressive as his speech. What Christ did not say about prayer is important, as well as what he did say. He prescribes no ritual, he urges no form.

## The Lectures.

### At Norfolk, Neb.

This field was richly entertained Sunday, September 17, by the presence and words of Edward A. Kimball, C.S.D. All Christian Scientists for miles around attended the meeting. A large company of people greeted the lecturer in the evening at the First Congregational Church, where he was introduced to the audience by George N. Beels, C.S., in the following words:—

*Friends:*—It has been made my pleasant duty, as First Reader of the Christian Science Church, to preside over this meeting. You are the invited guests of First Church of Christ, Scientist, which holds its regular services in Odd Fellows Hall. The First Congregational Church, in a spirit of generosity and Christian courtesy, has kindly opened its doors for the discussion of a religion which has not yet been accepted by the world at large as strictly orthodox. We trust that you will be richly repaid for the little time in which we shall engage your attention.

Christian Science is the great question of the hour now engaging the attention of both philosophers and statesmen of all nations of the globe where civilization is respected. It recognizes neither caste, creed, nor distinction save a loyal obedience to the commands of Christ our Saviour and God our heavenly Father. Contrary to the olden time, the "wise men" of this age have seen its star of progress approaching from the West instead of from the East, in fulfilment of that Scripture which saith, "That they may know from the rising sun, and from the west, that there is none beside me."

In the year 1866, on the shores of New England where her ancestors landed in search of the liberty of the sons of God, the Rev. Mary Baker Eddy discovered Christian Science which makes men free indeed. The victim of an accident, she was lying upon what was conceded to be her deathbed, with only a few hours at most before her. She called for her Bible, and as she read she was healed. An angel thought whispered to her the words of Life which she had been seeking for twenty years, and immediately she was made whole, arose from her bed, and triumphantly walked forth to tell the joyful news to a waiting world that Christ had never died, and had never left us, but had again appeared to human understanding, showing us that there is no death, and that health and life everlasting are to be had for the seeking.

There are many persons who do not know what Christian Science is, and whose misinformation on the subject is not only doing the cause a great injustice, but is preventing many from obtaining the rich blessings in store for suffering humanity. For this reason the Mother Church at Boston has organized an International Board of Lectureship. A member of that Board is present to-night who is in every way a loyal and able representative of the Cause, who has been taught the Science from the lips of the Discoverer, and you are invited to give careful attention to what he may say. I take pleasure in introducing to you Hon. Edward A. Kimball of Chicago.

Eva A. Loomis, Clerk.

---

### At Jamestown, N. Y.

In Samuels Opera House Tuesday evening, September 19, the First Church of Christ, Scientist, of this city, presented its doctrines in a strong and forceful address by the Rev. Arthur R. Vosburgh of Rochester, who represents, in the lecture field, the Mother Church at Boston.

Frank H. Mott, a prominent attorney of this city, though not a Christian Scientist, had been asked, and accepted the

Digitized by Google

invitation, to preside, and in introducing the speaker of the evening Mr. Mott made the following remarks: —

*Ladies and Gentlemen:*—Differing in opinion, one from another, as nearly all the persons making up this audience undoubtedly do,—guided by settled beliefs or unfortunate prejudices, as most of us are,—none, if he is wise, claiming infallibility, we have met to-night to listen to a discussion of those great problems, a rational understanding of which so nearly concerns us all.

The aspiration after truth, as it pertains to the physical, moral, and spiritual world, has been the theme of poets, orators, scientists, and sages for unnumbered years. The best way to enthrone Truth, and to drive out error is to bring them calmly to the bar of Reason. There our beliefs may be strengthened, and our prejudices destroyed.

It is in this spirit that we should meet to-night. Every theory which passes for religion must bear the searchlight of investigation.

Disclaiming any settled conviction as to the merits or demerits of Christian Science, the chairman of this evening will feel his mission quite fulfilled if he simply gives expression, and adds emphasis to the fact that, in the search for truth, men should be allowed to give the most frank and full expression to their thoughts and to be guided by the beacon light of conscience. We are glad that we live in a country which guarantees freedom of thought and of speech, and which does not recognize the right of any person or institution to take the place of a man's conscience in his aspiration after truth. Fetters have always failed to crush out conscience, and the intellectual independence of the citizen is our truest national glory.

Whoever has a message to deliver, which may in any way aid the untrammelled mind in coming to a more positive knowledge of the Infinite and Unseen, of man's responsibility to God and man, and to a clearer interpretation of the teachings of the Holy One of Israel, is entitled to courteous and respectful consideration, and to a fair and impartial hearing. In this spirit, I have great pleasure in presiding here and in presenting the Rev. Arthur R. Vosburgh, the speaker of the evening.—*Journal,* Jamestown.

### At Plymouth, Mass.

On Thursday evening, September 21, there was a large gathering in Davis Opera House to hear Rev. W. P. McKenzie, C.S.B., of Cambridge, member of the International Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, speak on "The Truth About Christian Science." A special train from Boston brought a good-sized party, among its members being some of the directors of the Mother Church, the managing editor and staff of the *Christian Science Journal,* and people from Chicago and various California and other western points, who, being in Boston, improved the opportunity to hear Mr. McKenzie.

Rev. Charles P. Lombard of the First Church introduced the lecturer.—*The Old Colony Memorial.*

### At Traverse City, Mich.

Judge W. G. Ewing of Chicago, delivered a lecture upon Christian Science at Steinberg's Opera House Friday evening, September 15, before a fairly good-sized audience. The speaker was introduced by Mayor Hamilton. Mayor Hamilton spoke of the rapid increase of membership of the sect, and said while there had been a great amount of censure called out by the Christian Scientists, it was conceded that much of this criticism came from persons who were ignorant of the principles of the denomination.

For himself, he said he was quite ignorant of the sect's aims and beliefs and had come to learn.

*The Daily Eagle,* Traverse City.

### At Kenosha, Wis.

Ex-Judge Clarkson of Omaha, spoke at the Rhode Opera House Monday evening, September 18, on the subject of Christian Science. The house was well filled with a representative audience, and the speaker had the undivided attention of his hearers throughout the address. He was introduced by Attorney James Cavanagh.

*Kenosha Evening News.*

### At Cozad, Neb.

A lecture was delivered at Cozad, Neb., Monday, July 10, by Judge W. G. Ewing. The speaker was introduced by Mrs. Hattie E. St. John of Kearney. We have no organization here, and there were only five of us to raise the necessary funds, but when we decided to have a lecture the money was soon pledged. RUTH LANHAM.

### Lectures at Other Places.

Sioux City, Ia.—Edward A. Kimball, Tuesday, September 19.

Fort Dodge, Ia.—W. G. Ewing, Saturday, August 26.

## Spurious Literature.

BY ANDREA H. PROUDFOOT.

MANY friends who have become interested in Christian Science having previously read spurious literature on the subject, find it a great stumbling-block when asked to read nothing but the authorized literature. They immediately question it, and see no reason why the beautifully worded phrases they have been reading should be considered useless to their growth in grace. I have been asked to explain the difference many times, and I wish to suggest one of the points which has proven to be most helpful in showing the difference, and in pointing out why such literature is hurtful.

Being completely unfamiliar with such literature myself, save as inquiring friends have made plain what they have gleaned therefrom, my answers do not by any means completely cover the question, but surely reading Science and Health will, if we search faithfully.

In the first place, the readers of spurious literature usually have trouble in seeing that there is any difference between human and divine Mind. They have so often had statements of universal truth poured into thought without first separating and purifying the mortal mind that they have never stopped to question, and it all sounds alike to them. In other words, they pour this new wine (if it is wine) into old and often vile bottles, and go on their way rejoicing, being entirely deceived as to what is Truth.

Human mind is flattered by being told that "Mind is God," and it gradually arrives at the false conclusion that "I am God." So it clothes the old error with a semblance of Truth, which merely illuminates its filthiness and gives it seeming power and self-respect. It is not hard to conclude that this is very dangerous ground.

In the writings of Mrs. Eddy, not one stone is left unturned to liberate the erring mortal from the dominion of self and self-illusory conclusions, and from the government of the self-mind.

Our Leader teaches us that it is better to be slain all the day long rather than add one whit to the self-infatuation of the material senses, or the carnal mind.

Nearly all the writers of so-called Mind-healing literature make light of the nothingness of matter. Either they

Digitized by Google

omit it altogether, or explain it in some esoteric way. Some claim it is a part of the God-head itself, and others that it is simply a lower stage of mind. The point of its *nothingness* is constantly avoided. One can easily see why this is done, for certainly it is the hard and most inadmissible point to the new student in Christian Science, whereas the understanding of the nothingness of matter is the lasting and eternal rock upon which all the healing works of Christ are accomplished. This may be slow in appearing to the student, but it must be forever insisted upon, and any system of healing which does not recognize matter as nothing cannot stand.

Although some of the students of spurious literature seem at first to receive physical benefit, it has been my constant experience that they have gradually lost it again. Such benefit is easily explained, for any radical change of thought will bring about some physical change, but the human mind is prone to believe when it has been lifted into a temporary illumination that what it has received is Truth, even as the glow-worm might be mistaken for a star. Nearly all such metaphysical literature is a dilution and perversion of Mrs. Eddy's thought, and the bulk of it is produced by students who have wandered afar from their teacher through not being willing or able to grapple with the claims of evil, and lay down self for Truth. It is as though they used only the easy examples in a mathematician's text-book, leaving out all those difficult ones which would prove the fundamental principles and rules. They do this to make it a more popular system by which the human mind is not taxed and disciplined out of its limitations.

It were well if every student of Science and Health would logically and clearly explain this difference to friends in doubt, since many of the misguided ones are systematically instructed to beware of the followers of Mrs. Eddy, who are described as narrow, prejudiced, and inclined to monopolize Christian Truth; whereas in truth they are only working to keep it unmixed with personal errors.

In the world of music there is but one code of harmony to which all real musicians yield themselves, and this code is self-established on the laws of truth which were discovered and demonstrated by the early musicians. Although many are expressing the beauties of music in a thousand-fold ways, yet every one must bow down to the one eternal self-established law of harmony. Even so in every expression of Science and Christianity, the eternal law of Life, Truth, and Love is self-established, and all honest, humble thinkers gratefully acknowledge the latter-day discovery of it through the demonstrations of Mary Baker G. Eddy.

## Familiar Texts Explained.

BY L. H. JONES.

"WHEN the even was come, they brought unto him many that were possessed with devils: and he cast out the spirits with his word, and healed all that were sick: That it might be fulfilled which was spoken by Esaias the prophet, saying, Himself took our infirmities, and bear our sicknesses" (Matthew, 8 : 16, 17).

The reference is to Isaiah, 53 : 4, which reads: "Surely he hath borne our griefs, and carried our sorrows."

Albert Barnes, a good Presbyterian, in his excellent Notes on the Gospels, commenting on these passages, says: "The words translated *griefs* in Isaiah, and *infirmities* in Matthew, mean properly, in the Hebrew and Greek, *diseases of the body*. In neither does it refer to the diseases of the mind, or sin. To bear those griefs is clearly to bear them *away*, or to remove them . . . The word rendered 'sorrows' in Isaiah means *pain, grief*, or *anguish of mind*."

In the fifth verse of this chapter of Isaiah we read: "But he was wounded for our transgressions, he was bruised for our iniquities: the chastisement of our peace was upon him; *and with his stripes we are healed.*"

Is not this an explicit declaration of Scripture that the work of the atonement should include bodily healing, salvation from sickness as well as from sin? Who then shall say, in the face of this unqualified declaration of the Scriptures, that the healing of sin was for all time, and is as efficacious to-day as when Christ was here in the body, but that the healing of bodily complaints was for the apostolic age only?

## A Voice from Nova Scotia.

BY C. A. McLEOD.

THE writer attended the Christian Endeavor Convention at Boston in 1895, with hope of being healed of deafness. A lady whom I asked in reference to a reliable curist, recommended me to Christian Science, saying also that she thought the healing of disease should be taken up by Christian Endeavorers in every land.

Of course as I answered my adviser in relation to Christian Science, it was only to express to her my utter disregard of this means of healing. In the same manner many reject just what they need most. However, before leaving the city and after failing to receive help from the medical faculty, I determined to try Christian Science for a prescribed length of time and set aside a certain amount of money for the same, for I could not be rid of the belief that it was a money-making scheme. My wise friend advised me to return to my home and read Science and Health. This I did, and in less than six months the deafness disappeared, as likewise did several other diseases, such as constipation, neuralgia, and tonsilitis. Although nearly one hundred miles from any Christian Scientist, yet with God and the "little book," I have enjoyed peace of mind, a new sense of the Bible, of nature, of everything temporal, so-called, and have healed a few of my friends. As an earnest seeker for more understanding of Truth, as well as the grace and willingness of heart to perform, I am a firm believer that God's ark is moving through the land.

## Development.

THE watchword of the universe is progress. Development without, development within, is God's eternal law. To those blest spirits who have outgrown lower types of thought, who soar to realms of pure intelligence whence they may view creation's symmetry, life is an ecstasy of joy. Their souls attuned to the celestial harmonies, they hear the songs of angel choirs, and echo happily the glad refrain of "God is Good." To every immortal soul belongs the tendency to onward, upward growth towards infinite perfection, towards apprehension of that All-Intelligence, at once All-Goodness and All-Truth. And ever, as the soul develops to its fuller powers, it more and more conceives the perfect goodness of the One, and sees that goodness shown in spirit man, as well as every pictured thought throughout the universe. C.

The *Morning Star* asks: "Is it right to judge a man by the worst that is in him? Take men at their best and you will make them better and be better yourself."

Some one says: "The only divinely justifiable war is when a man goes to battle with himself. Then are fired the guns whose sounds the devil hates and fears."

## A Japanese Legend.

BY IDA REED SMITH.

ONCE upon a time there lived in the province of Nigata a stone-cutter named Nikemoto. He was very poor, and he worked early and late in the quarries, hewing out stone for temples and palaces that he might never see. Life was hard and dreary for Nikemoto, and he was always discontented and complaining.

One night he lay down to rest on his armful of straw and fell asleep, grumbling that he could not be rich enough to lie on thick, soft matting, with a padded silk *futon* to wrap himself in. Now, the Ruler of All, who dwells afar in the White Palace, heard his complaint, and said to one of the Bright Ones that wait before him day and night,—

"Go, say to the stone-cutter that he shall be rich enough to lie on soft matting wrapped in a silk *futon*. And if he has still other wishes, grant them, until he wishes once more to be Nikemoto, the stone-cutter."

So the Bright One appeared to Nikemoto and said to him, "The Ruler of All has granted thy wish." And immediately the stone-cutter found himself in a spacious room, lying luxuriously on soft matting under silken coverings. But presently there was much shouting and singing, and the music of many instruments in the street, and lo, the great Mikado passed by, attended by all his nobles and soldiers. Heralds in gay livery went before him to clear the way, and those highest in authority in the Empire held over the Mikado's sacred head an immense golden parasol. Then again was Nikemoto discontented, and said to the Bright One, "What pleasure is there in being rich when one is not permitted to go about with a splendid escort and a gold parasol over his head? I wish I were the Mikado."

"Thou art the Mikado," answered the Bright One; and, indeed, it was so. Nikemoto sat under the great golden parasol, with the royal heralds shouting before him and an army of retainers following after him. And he journeyed through the city and along the highway to reach his summer palace in the Mountains of the North. On he went in state through the pleasant morning hours, under the great cedars that shade the road, and past the rice-fields where the young grain was growing green in the water; but at noon the sun that rode high in the heavens wearied him with its heat, and its exceeding brightness was painful to his eyes.

"It is no satisfaction to me that I am the Mikado," said Nikemoto to the Bright One. "The heat tires me and the light blinds me. But if I could but be the sun."

"Be satisfied, then," answered the Bright One, and Nikemoto was instantly transformed into the blazing orb that lights the day. In splendor and pride he traveled through the blue fields of the sky, darting his bright beams hither and yon throughout the whole earth. He made the petals of the cherry-blossoms fall in rosy showers, he withered the tender green herbage of the plain, and he dried up the deep, cool springs that lie in the heart of the forest. But he rejoiced in his strength and power, and forgot that men fainted in the heat and the cattle died of thirst.

"At last," cried the sun that was Nikemoto, "at last I am supreme! There is none whose might can be compared to mine!"

Then a cloud arose and came between the sun and the earth; and, though he shone with all his might, he could not pierce through it or drive it from before his face.

"See!" he cried bitterly. "That dull, gray thing yonder is stronger than I, the great sun! Let me, then, be a cloud!"

"Let it be as thou hast said," replied the Bright One, and once more was Nikemoto transformed. Then he gathered himself in thick folds and stood proudly before the sun that had been set in his place. He allowed no beam to fall upon the darkened earth by day, and by night he hid the moon and stars behind his gray mantle. By-and-by he caused great drops of rain and heavy showers and dreadful water-spouts to fall upon the land. The floods swept away the rivers' banks and spread themselves in devastation over the cultivated fields. They swept away bridges and houses and tore up the old oak-trees by the roots, and nothing resisted the strength of the torrent save one mighty rock, against which the waves beat in unavailing fury until they lay white and spent at its feet.

"Behold! A rock defies me!" said the cloud with the soul of the stone-cutter. "I am stronger than the sun, but the rock is stronger than I. I would be a rock."

"As thou wilt," the Bright One made answer, and Nikemoto became a great rock, that cared nothing for the heat of the sun or the shock of the waves that thundered against it. Steadfast and immovable he stood, until one day there came creeping across his breast the figure of a man, poorly clad, and carrying a few simple iron tools with which he cleaved the rock in pieces, and afterward made them fair and smooth.

"A man!" said the rock. "A man is able to break my body as he pleases! Make me a man, O Bright One, and I ask no more!"

So it was done, and Nikemoto became what he had been —a poor stone-cutter of the quarries. But when he awoke he was a wiser and a happier man, for the Ruler of All had taught him in a dream that everything of the earth has a limit set to its greatness. And because he has appointed to each a place and a task, in his sight one workman is as honorable as another, be he the quarry-man who hews the stones, the architect who places them in the temple's stately wall, or the great Mikado who kneels within to worship. For without the stone-cutter the temple had not been built.

*The Weekly Magnet.*

## "Playing Doctor."

A CERTAIN Cleveland attorney has two bright little children. They are quick at imitation, and have a talent for making up games in which they cleverly burlesque their elders. A few days ago their mamma found they were playing "doctor." The youngest child was the patient, with head wrapped in a towel, and the older the physician, with a silk hat and a cane. The mother, unseen by the little ones, listened at the doorway.

"I feels awful bad," said the patient.

"We'll fix all that," said the doctor, briskly. "Lemme see your tongue."

Out came the tiny red indicator.

"Hum, hum, coated," said the doctor, looking very grave indeed.

Then without a word of warning, the skilled physician hauled off and gave the patient a smart slap in the region of the ribs.

"Ouch!" cried the sufferer.

"Feel any pain there?" inquired the doctor.

"Yes," said the patient.

"I thought so," said the healer. "How's the other side?"

"It's all right," said the patient, edging away.

Thereupon the doctor produced a small bottle filled with what looked like either bread or mud pills, and placed it on the table.

"Take one of these pillets," the physician said, "dissolved in water, every seventeen minutes—al-ter-mit-ly."

"How long mus' I take em?" groaned the patient.

"Till you die," said the doctor. "Good morning."

## Questions and Answers.

*According to the teachings of Christian Science is a man saved by faith, or is he saved by works?*—L. C. R.

Man is not saved by faith in the personality of another, neither is he saved by reason of the works he is able to perform in his own strength and of his own accord. He is saved by that faith which can be, and is, demonstrated in works. The apostle says, "Faith without works is dead." In fact, works are the only evidence that man has a saving faith. But by faith and works is not meant merely a belief entertained about God and the practice resulting therefrom. The faith that really saves is more than the confidence and trust resulting from a human conception of Deity. A humanized thought of God may cause one to believe that he is safe from harm when he is in the greatest danger. He will quietly fold his hands and dream he is "saved" when he should be awake proving the allness of God and the nothingness of error. The faith that really saves, understands what God is, and is also awake to what error claims to be and do. The grand results accomplished by means of this understanding of Truth are proof positive that a saving faith is a present salvation.

The basis of this understanding is the spiritual fact that man is now the image and likeness of God, and as such he is already saved from sin, sickness, and death. This great fact must be wrought out in human experience. In other words, mortals must demonstrate the Truth of Being in works. In no other way can they gain the consciousness of existence which is saved from evil. As mortals realize that sin is no part of the real man, and that it affords no true sense of pleasure, they cease to sin. The declaration "There is no pleasure in sin," amounts to nothing as a theory, but when this scientific fact is so received into one's daily life that it takes away the false sense of pleasure, it is faith made manifest in works.

Faith and works declare that which is, and remove the seeming of that which is not. The appearance of Truth is the destruction of error. Faith without works cannot make Truth real enough to save from error; neither does man earn salvation by reason of the works he performs. God has already bestowed upon man health, sinlessness, eternal life, and all else that is necessary to perfect harmony. In and of himself man is nothing, hence he can of his own efforts accomplish nothing, but the understanding which God imparts, overcomes error and awakens man to a realization of the fact that he is already in possession of all the good he is striving to attain. Thus the reward of the human effort to understand and demonstrate Truth is the realization that man is and always has been the image and likeness of God. So long as man lacks spiritual understanding, he believes in the reality of evil and his own mortality. Nevertheless, his true being is spiritual and immortal, and already saved from the evils which seem so real to mortal sense. Salvation is the awakening to the spiritual fact that *man* is already saved, hence the words of Jesus, "Ye shall know [understand] the Truth, and the Truth shall make you free."

❧

*Does God, Good, know that error seems to be, or that mortal man seems to exist, be sick, and suffer? If not, why is it written, "God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life"?*—A patient.

Christian Science is daily demonstrating that the divine Mind and its ideas alone are real and eternal. This demonstration is bringing to light the fact that man is not mortal, subject to sin, sickness, and death, but immortal and saved from all evil.

God is Love and Love is divine Principle not person. It was Love that sent Jesus into the world to teach mortals the way of Life. He was the mediator between humanity and God. He saw the errors of mortal existence, and he also understood the Truth which could destroy them. The human Jesus recognized the claims of sin, sickness, and death, but divine Principle enabled him to master sin, heal sickness, and overcome death. Love prompted him to teach others how to do the works he did, and thus it was that those who believed in him—understood his teachings and put them into practice—were saved from evil and gained the true sense of Life which is eternal. Jesus was the highest earthly representative of God. In his love for the world, humanity was taught that God is Love. He declared, "I can of mine own self do nothing;" "but the Father that dwelleth in me, he doeth the works." Thus he testified he was sent of God into the world to teach and demonstrate the Truth, and that through him, God was saving humanity from sin, sickness, and death.

## Omnipotence.

THERE is a power that governs all that mortal eye can see,
A power we all must recognize, if from sin we would be free.

This power is not apart from good, for God is All-in-all,
He knows our needs and filleth them, whether great or small.

We must look up and recognize the power of Truth and Love,
If we would drink that living water from the fount above.

This water, pure as crystal, has the power to heal
Mankind from all infirmities, when the need of it they feel.

A need of something better, we must have within our heart,
And from the ways of sin, be willing to depart.

We must love this Truth and live it, in our daily life,
If we would have it heal us from all discord and strife.

That we may grasp this blessed Truth, to all mankind so free.
All selfishness must be cast out, then its beauties we will see.

All the beauties of heaven, are now upon the earth,
And will appear to this new consciousness when Truth is given birth,

And we'll know this is the road, to reach the open gate,
Where the ever watchful Shepherd, all crooked things makes straight.

B. A. MILLER.

*Saturday Review*, Des Moines, Iowa.

Make yourselves nests of pleasant thoughts. None of us yet know, for none of us have been taught in early youth, what fairy palaces we may build of beautiful thought—proof against all adversity. Bright fancies, satisfied memories, noble histories, faithful sayings, treasure-houses of precious and restful thoughts which care cannot disturb, nor pain make gloomy, nor poverty take away from us—houses built without hands, for our souls to live in.

RUSKIN.

*Zion's Herald* says: "A man may sometimes think that he is standing alone, but in truth no man ever stands alone. If he stands bravely for right and principle, God is with him, though there may be none other."

## From the Religious Press.

### A Cheerful Heart.

To some of us there is only one thing more disagreeable than a dreary pessimism; and that is a fallacious optimism,—an optimism which because it wears a shoe imagines that the earth is carpeted with leather, which puts the telescope to its blind eye when it is aware of any hostile fact on the horizon, which fortifies itself by reading only such papers and attending to only such facts as it knows will confirm it in the opinion which it chooses to maintain. For such optimism as ignores the facts, some other name than optimism ought to be discovered. Better the pessimism which recognizes them, and, when they are ugly, tries to abolish them, than the optimism which is complacent with their ugliness, and goes on smiling blandly while things are being done that call for righteous indignation and severe rebuke. The religious optimist, whose faith in God means tolerance of the devil, is not a useful citizen nor an entrancing spectacle.

Nevertheless, it behooves us, if we can, to maintain a cheerful heart in the midst of public calamities and personal misfortunes that threaten to rob us of that beautiful and enviable possession. Without being regardless of the rights of private sorrow or of the tragical significance of particular national affairs, we may cultivate a cheerful heart in many warrantable ways. A stoical indifference is not to be desired. The sentiment of Michel Angelo,

"While such things last, better to be mere stone,"

is not the ideal one for any modern citizen. Better to be sensitive to the stroke of public tragedy and private grief, and yet reach out after those things that will help us to bear up cheerfully under the burden, however heavy it may be.

*Christian Register* (Unitarian).

### Religion in Japanese Schools.

An ominous effort appears to have been made to discourage any religious teaching in the schools of Japan. The Education Department of the Government issued, several weeks ago, regulations for schools of all kinds. To these the minister of instruction has added a prohibition of all religious teaching and religious exercises, both in and out of regular class hours. There appears to be some question as to whether or not this applies to private schools, but it is evidently a blow aimed at Christianity, since this is the only religion whose adherents have given funds for training Japanese youth. Even if the prohibition is not absolute, it seems to expose youths in schools where religion is taught to be drafted as conscripts for the army, and to impose on them other disabilities, such as depriving them of the right of promotion in the higher government schools. The Japanese press appears to regard the movement with general disfavor, and energetic protests have appeared in several prominent newspapers. A dispatch received last week by the Chicago *Record* says that the object of the new regulations is the practical suppression of Christian schools. It may be that this action will result in the temporary closing of the Doshisha, but we cannot believe that a policy so narrow and illiberal will be established in Japan, now that by the new treaty she is lifted to an equality with Western and progressive nations.—*The Congregationalist.*

### The Lion Sermon.

The "Lion Sermon" is preached every year in St. Catherine's Greek Church, in the city of London. The service, which has been held on October 16 for the last two hundred and fifty years, had a curious origin.

It is said that Sir John Gayer, who was at one time lord mayor of London, while traveling in an eastern country, was suddenly confronted by a lion. Being quite defenceless, the worthy knight fell on his knees and asked God to deliver him. The lion looked at him for a while, and then suddenly turned and walked off in another direction, leaving the suppliant unharmed.

Sir John Gayer, on rising from his knees, resolved that he would show his gratitude for his miraculous escape, and subsequently set apart a sum of money for a service to be held on the anniversary of his adventure, which is said to have taken place on October 16. The "Lion Sermon," therefore, from that time has been preached annually on that date in this old city church.—*The Standard* (Baptist).

### To Live in the Now.

Carlyle has called God the eternal Now. With Him is no past, no future; one day to Him is as a thousand years, and a thousand years as one day. If, then, we would be like God, should not we strive to live in the *now*, doing our work well—with all our mind and strength—and leaving to His mercy a past we cannot mend, and to His providence a future in which He is already present? If we cast ourselves with loving trust on God we become partakers of the divine nature; and our life is "hid with Christ in God."—*The Examiner* (Baptist).

## Miscellany.

### Brigham Young's Old Employer.

The Rev. W. Wallace Webb, D.D., recently preached a sermon (which is published in full in *The Ontario County Journal* of Canadaigua) in memory of George Hickok, who was the oldest native resident of the city, and the oldest member of the Methodist Episcopal Church in Canadaigua. It is one of the most interesting of memorial discourses.

Mr. Hickok has been connected with some very remarkable persons. One day a man who had a wife and four children came over and wanted to borrow a dollar. "Chop wood with me to-day and earn it," said Mr. Hickok. He did so, and got bread for his family. That man was Brigham Young, then an independent Methodist. Brigham Young afterward contracted a bill and made a dozen chairs to meet the account, some of which are still in the family house. It was only a few miles from there that Mormonism arose. Smith professed to find the plates of his book, and to receive a revelation from angels at Mormon Hill, only a few miles from Canadaigua.

It was there that Brigham Young heard the new doctrine, and professed to be converted. The baptism took place in April, 1832. One day some men came to the farm and inquired at the house for Brigham. They were shown to the field where he and Mr. Hickok were cradling grain together. The men came up to Brigham and held a few minutes' earnest conversation with him. After the strangers had left, Brigham said, "George, I am not going to work for you any more." Mr. Hickok, in surprise, asked, "Why not?" His reply was, "I am going into better business; I am going to preach the everlasting Gospel." Mr. Hickok was afterwards accustomed to say, as long as he lived, that this was the last honest day's work Brigham ever did. He went with the Mormon missionaries to Auburn, and after four or five days returned, packed up his belongings, and with his family went to the place where the Mormons were gathering.

"What a contrast," says Mr. Webb, "between these men! George Hickok had equal natural ability, but was content to lead a humble, virtuous, sincere, and honest Christian life. Brigham Young died August 29, 1877, leaving a fortune of two million dollars to seventeen wives and fifty-six children." Striking is the comparison drawn between them: "When we think of the crimes committed under his leadership, especially the Mountain Meadow massacre, where one hundred and twenty innocent immigrants were murdered for plunder, and his devotion to the lusts of the flesh, who would not prefer the destiny of that harvester who remained in the field, to the one who laid down his cradle to grasp such a world-wide notoriety as he won."

So near at first, so far apart at last.

*Christian Advocate* (N. Y.).

### Hard to Find.

The janitor in a neighboring school threw up his job the other day. When asked what was the trouble, he said: "I'm honest, and I won't stand being slurred. If I find a pencil or handkerchief about the school when I'm sweeping, I hang or put it up. Every little while the teacher, or some one that is too cowardly to face me, will give me a slur. Why, a little while ago I seen wrote on the board, 'Find the least common multiple.' Well, I looked from cellar to garret for that multiple; and I wouldn't know the thing if I would meet it on the street. Last night, in big writin' on the blackboard, it said, 'Find the greatest common divisor.' 'Well,' I says to myself, 'both of them things are lost now; and I'll be accused of swiping 'em, so I'll quit.'"

Huntington (Ind.) *Herald.*

### A Cornstalk Trust.

It is said that a trust or combine is being formed for the purpose of buying up cornstalks, of which they say 250 million tons are burned or left to rot every year, when they should be worth $6 a ton. One company, with factories in Kentucky and Illinois, is now making cellulose, for lining battleships, cardboard, a splendid paper, a foundation for dynamite, a patent cattle food, and a glue from cornstalks, and is said to be successful with all these products. Eastern farmers would scarcely sell the stalks for $6 a ton if they had cattle to feed them to. They are worth two-thirds the price of hay, if well cured.—*The Watchman.*

### Race Physically Improving.

Scientists declare that the physical deterioration of the human race, which has been going on for centuries, has ceased, and a gradual improvement commenced.

*The Church Standard* (Episcopalian).

## Notices.

### Applications for Membership.

Applications for membership in the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 7, 1899, must be in the hands of the Clerk of the Church on or before the 15th day of October. Send applications to 30 Norway Street instead of 95 Falmouth Street, as heretofore directed. Hereafter address the Clerk of the Church at 30 Norway Street.

WILLIAM B. JOHNSON, Clerk.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1.

### The Board of Education.

Requests for application blanks for the next examination cannot be complied with until due notice is given through our publications, as announced in the *Sentinel* of January 19, 1899.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents: $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## Items of Interest.

Admiral Dewey arrived at Washington Monday, October 2. His journey from New York to Washington was a continuous ovation. His departure from Washington two years ago was unnoticed, except by a few personal friends. He returned on the same special train that the President is to have for his western trip. When he went away it was a comparatively unknown commodore; he returned with the rank of admiral, and is no doubt the most popular American to-day.

October 3 he was presented with the sword authorized by Congress. The presentation speech was made by Secretary Long. The Admiral received the sword from the hands of the President, whose brief speech was received with great enthusiasm. Admiral Dewey's response was brief and characteristically modest.

The festivities were concluded with a state dinner at the White House.

President and Mrs. McKinley left Washington October 4, for a half-month's trip to Chicago and the Northwest. He was greeted by big crowds all along the way. He made frequent stops and short addresses. He was given a grand reception at Quincy, Ill., where he and members of the Cabinet made addresses. At Canton, Ill., the President met Colonel William J. Bryan. A street fair was in progress, and Colonel Bryan delivered a two-hours' speech. The President left immediately after his short address, so did not hear Colonel Bryan's speech. At Peoria, Ill., the President dedicated a monument reared to the memory of the soldiers of the war of the rebellion.

President McKinley has ordered the cruiser Brooklyn and the gunboats Marietta and Machias to proceed at once to Manila. The order was given after an extended interview with Admiral Dewey, in which the Admiral carefully explained the existing condition of affairs, and gave his views of the outlook, and also recommended that the Brooklyn and some other vessels be sent at once to the Philippines to re-enforce the present fleet of the Asiatic squadron. The administration believes that the presence of these re-enforcements will have a material effect in putting an end to hostilities.

Admiral Dewey has accepted the gift of a home in Washington. As he desires it as quickly as possible, he prefers to have a house bought rather than built. He desires it completely furnished, "so that I can go right in and hang my hat on a peg and be at home at once." He prefers to have the house in the fashionable northwest quarter, not far from the Metropolitan Club, and near to the homes of most of his old friends. He does not want a large house, but one that can be bought and furnished out of the fund.

A number of prominent colored men recently called upon the President and laid before him the address to the people of the United States of the National Afro-American Council, held at Chicago last August. Among other things it calls for an industrial commission to inquire into the industrial condition of the colored people. In the opinion of the Council, the existing commission, being composed entirely of white men, is not favorable to a fair report of the negroes.

The War Department recently requested the International Young Men's Christian Association committee in Washington to place an association secretary on each of the ten or twelve transports to sail for Manila. Congress failed to make any provision for chaplains to accompany the new troops, and there are scarcely half a dozen chaplains in Manila. The Association will endeavor to comply with the request.

General Alexandrino, the head of the Filipino Military Commission, said in a recent interview that his government was willing to accept a protectorate under the United States, but was bitterly opposed to any colonial government. He said, "We want an honorable peace, but will fight until death for our institutions."

A mummy, thought to be many centuries old, has been found in Alaska. The body was encased in wrappings exactly like those used in Egypt. The mummy was found in a stone tomb, upon the door of which were hieroglyphics. It has been sent to the American Museum of Natural History of New York.

During the eight months ending with August, 1899, the exports of manufactures from the United States averaged over one million dollars a day, Sundays and holidays included. The total for the 243 days was $246,228,916, forty-five million dollars more than the corresponding eight months of last year.

Information is received from Washington that in his interview with President McKinley regarding the situation in the Philippines, Admiral Dewey advised a change of military commanders. He thinks that General Otis is not aggressive enough for the present emergency.

After three months of hard work, the Venezuelan Commission has rendered its decision. The ruling is in the nature of a compromise rather than favoring Venezuela. Venezuela was awarded but ten thousand square miles of the sixty thousand claimed by her.

A petition signed by fifty-eight members of the Cape House of Assembly has been forwarded to Queen Victoria, urging the abandonment of war-like measures, and asking her to appoint a commission forthwith to confer with the Boers.

Admiral Dewey has been formally detached from the Olympia. He is now at liberty to do as he pleases, and will not be assigned to any regular duty with the navy until his work as a member of the Philippine Commission is over.

In a recent interview with the Filipino agents General Otis said he would not recognize the insurgent government, and that nothing but capitulation will satisfy. The course is approved at the War Department.

A petition has been sent to President McKinley, asking him to offer the friendly services of the United States in mediation between Great Britain, and the republic of the Transvaal and the Orange Free State.

Bradstreet's report for the third quarter of the present year shows most encouraging commercial conditions. The report shows the fewest failures and smallest liabilities of which there is any recent record.

Last year 5,200,000 pounds of aluminum were produced in the United States, valued at thirty-three cents per pound. In 1888 nineteen thousand pounds were produced and valued at about $3.33 per pound.

The members of the Philippine Commission who have not already returned, are now on their way to Washington. The first meeting of the Commission will be held in Washington early in November.

The potato yield this year in the six counties between Kansas City and Topeka, through which the Kansas River runs, was about three million bushels, worth about six hundred thousand dollars.

A special invitation has been sent to Sir Thomas Lipton, owner of the Shamrock, asking him to be Chicago's guest at the laying of the corner-stone of the new Federal building, October 9.

It is proposed to make the Dewey arch permanent. To do so would require an expenditure of at least five hundred thousand dollars, and it might be nearly one million dollars.

It is said that ex-President Harrison's fee as chief counsel for the republic of Venezuela in the arbitration proceedings was two hundred and fifty thousand dollars.

The Spanish are greatly incensed over a recent order of the mayor of Havana that no Spanish flag shall be displayed in that city, excepting over the consulate.

Congressman Eugene P. Loud of California has been very successful in his investigation of the postal systems of Great Britain, France, and Germany.

Nova Scotia's apple crop this year is the largest on record. It is estimated that the exports this year will amount to four hundred thousand barrels.

The inauguration of President Caroline Hazard of Wellesley College was celebrated October 3. Miss Hazard is the fifth president of the college.

It is estimated that Canada will have about fifty million bushels of wheat for export this year. The crop is nearly double that of last year.

There is a strong feeling at Washington that the decision in the Venezuela arbitration has a direct bearing on our Alaska boundary case.

The *New York Sun* estimates that the strangers who visited New York during the Dewey celebration spent about five million dollars.

Admiral Dewey will make a tour of the West this fall in response to some of the very urgent invitations he has received.

The United States gunboat Urdanella, which was recently captured and beached by the insurgents, has been recovered.

The nineteenth annual session of the National Farmers Congress assembled in Faneuil Hall, Boston, October 2.

Rear-Admiral Schley has been installed as commander of the Loyal Legion in New York City.

The Spanish minister of war proposes to expend thirty-five million dollars for coast defences.

The thirty-fifth regiment left Portland, O., for Manila, October 4.

Admiral Dewey will visit Boston October 13 and 14.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Received Nation's Sword.

### An Impressive Ceremony at Washington.

TUESDAY, October 3, 1899, Admiral Dewey received from the hand of President McKinley, the magnificent sword awarded him by an act of Congress. The presentation speech was made by the Secretary of the Navy, John D. Long, who spoke as follows:—

*My Dear Admiral:*—Let me read a few extracts from our official correspondence, covering less than a fortnight's time, and now known the world over.

Washington, April 24, 1898.

To Dewey, Hong Kong: War has commenced between the United States and Spain. Proceed at once to Philippine Islands. Begin operations at once particularly against the Spanish fleet. You must capture vessels or destroy. Use utmost endeavors. LONG.

Manila, May 1.

*To Secretary of the Navy, Washington:*—The squadron arrived at Manila at daybreak this morning. Immediately engaged enemy and destroyed the following vessels: . . . The squadron is uninjured. Few men were slightly wounded. DEWEY.

*To Secretary of the Navy, Washington:*—I have taken possession of the naval station, Philippine Islands. I control bay completely and can take city at any time. The squadron is in excellent health and spirits. I am assisting and protecting Spanish sick and wounded.

DEWEY.

Washington, May 7, 1898.

*To Dewey:*—The President, in the name of American people, thanks you and your officers and men for your splendid achievement and overwhelming victory. In recognition, he has appointed you acting rear admiral, and will recommend a vote of thanks to you by Congress as a foundation for further promotion.

In those few words what a volume of history, what a record of swift, high, heroic discharge of duty; you went, you saw, you conquered. It seems but yesterday that the republic, full of anxiety, strained its listening ear to catch the first word from these distant islands of the sea. It came flashing over the wires that May morning as the sun bursts through the clouds and filled every heart with the illumination of its good cheer. In the twinkling of an eye your name was on every lip; the blessing of every American was on your head, and your country strode instantly forward, a mightier power among the nations of the world.

As we welcome you back there comes back, also, the vivid picture of that time, with all its hopes and fears, and with all its swift succeeding triumph and glory. Let me now read the act of Congress in pursuance of which we are here.

Here the secretary read the resolution of Congress appropriating $10,000 for the purchase of a sword to be presented to Dewey.

Continuing, Secretary Long said,—

It was by this solemn enactment, approved by the President, that the people of the United States made provision for putting in material form one expression of their appreciation of your valor as an officer of their navy and of your great achievement as their representative in opening the door to a new era in the civilization of the world. The victory at Manila bay gave you rank with the most distinguished naval heroes of all times. Nor was your merit most in the brilliant victory which you achieved in a battle fought with the utmost gallantry and skill, waged without error and crowned with overwhelming success.

It was still more in the nerve with which you sailed from Hong Kong to Manila harbor; in the spirit of your conception of attack; in your high, commanding confidence as a leader who had weighed every risk and prepared for every emergency, and who also had that unfaltering determination to win, and that utter freedom from the thought or possibility of swerving from his purpose, which are the very assurance of victory.

By authorizing the presentation of this sword to you as the mark of its approval, your country has recognized, therefore, not only the great, rich fruits, which, even before returning from your victory, you have poured into her lap, but also her own responsibility to discharge the great trust which is thus put upon her and fulfil the destiny of her own growth and of the empire that is now her charge. It is a new demand upon all the resources of her conscience, wisdom, and courage.

It is my good fortune, under the terms of the enactment of Congress, to have the honor of presenting to you this beautiful sword. If during the many coming years, which I trust will be yours, of useful service to your country, it shall remain sheathed in peace, as God grant it may, that fact will, perhaps, be due, more than to anything else, to the thoroughness with which you have already done its work.

I congratulate you on your return across the sea in full health of mind and body to receive it here; here in the national capital; here on these consecrated steps where Lincoln stood; here standing between the statue of the first President of the United States and him who is its living President to-day; here in this beautiful city adorned with the statues of its statesmen and heroes, the number incomplete until your own is added; here amid this throng of citizens who are only a type of the millions and millions more who are all animated by the same spirit of affectionate and grateful welcome.

I cannot doubt that it is one of the proudest days of your life, and I know that it is one of the happiest in the heart of each one of your fellow-countrymen wherever they are, whether on the continent or on the far-off islands of the sea.

Now, following the authorization of Congress, I present the sword of honor which I hold in my hand—rather let it go to you through the hand of one who, in his youth, also perilled his life and fought for his country in battle, and who to-day is the commander-in-chief of all our armies and navies, the President of the United States.

Copyrighted, 1899, by Mary Baker G. Eddy.

### President McKinley's Speech.

Following Secretary Long, President McKinley arose, and taking in his hand the magnificent sword, presented it to the admiral in the name of the American people. The President was in excellent voice, and his brief speech was received with the greatest enthusiasm.

The President said,—

*Admiral Dewey*:—From your entrance into the harbor of New York with your gallant crew and valiant ship the demonstrations which everywhere have greeted you reveal the public esteem of your heroic action and the fulness of the love in which you are held by your country.

The voice of the nation is lifted in praise and gratitude for the distinguished and memorable services you have rendered the country, and all the people give you affectionate welcome home, in which I join with all my heart.

Your victory exalted American valor and extended American authority. There was no flaw in your victory; there will be no faltering in maintaining it. (Great Applause.)

It gives me extreme pleasure and great honor in behalf of all the people to hand you this sword, the gift of the nation, voted by the Congress of the United States.

### Admiral Dewey's Reply.

As the President handed to Admiral Dewey the jewelled sword of honor, a great scene of enthusiasm followed, the cheering swelled into a mighty roar as it was taken up and carried to the farthest edges of the great concourse.

Admiral Dewey's response was spoken in a rich, firm, and distinct tone, and was brief and characteristically modest. When he said that the gift was evidence that republics are not ungrateful there was great applause and cheering.

Admiral Dewey said,—

I thank you, Mr. President, for this great honor you have conferred upon me. I thank the Congress for what it has done. I thank the Secretary of the Navy for his gracious words. I thank my countrymen for this beautiful gift, which shall be an heirloom in my family forever as an evidence that republics are not ungrateful, and I thank you, Mr. Chairman and gentlemen of the committee, for the gracious, cordial, and kindly welcome which you have given me to my home.

## A Deep Moral Lesson.

ADMIRAL DEWEY has a loving cup, presented by an admiring western city, which is large enough to hold a great deal of love, but a figure of Fame is perched on the rim in such a manner that it rebuffs every one who tries to drink out of the cup. There is a deep moral lesson in this present, which whoso will may study out at leisure, though it does not appear to apply to Dewey.

*Philadelphia Ledger.*

However perplexed you may at any hour become about some question of truth, one refuge and resource is always at hand: you can do something for some one besides yourself. When your own burden is heaviest, you can always lighten a little some other burden. At the times when you cannot see God, there is still open to you this sacred possibility to *show* God; for it is the love and kindness of human hearts through which the divine reality comes home to men. Let this thought, then, stay with you: there may be times when you cannot find help, but there is no time when you cannot give help. G. S. MERRIAM.

## As Seen by a Hindoo Pundit.

IN Chicago recently the ladies of one of the great churches invited a Hindoo pundit passing through their city to deliver a lecture "for the benefit of the church." Mr. Raya Yog—for that is the gentleman's name—did not lecture, but he wrote a letter to those ladies, which it is sincerely hoped they profited by.

In this letter Mr. Yog says:—

*Ladies*:—You have been graciously pleased to ask my assistance in an undertaking for "the benefit of your church." Pardon a stranger both to your religion and civilization, if I venture to ask, "Of which church?" For to my apprehension there are two: the Church of Christ, and the Christian Church.

The first, as I understand it, was founded by him you call your Saviour, a Jewish peasant, whose ministry among the poor and despised, lasted only three years, ended in an ignominious death, and was, in the opinion of the men of his own day, a failure. Nevertheless, though the succeeding eighteen centuries, while acknowledging his name, have steadily disobeyed his commandments and disregarded his teachings, the mere preaching of his word has been an energizing force that has altered the whole world and opened highways into its most inaccessible fastnesses, physical, and mental. There has been life in contact with the mere husks of his teaching, as in the bones of Elijah. It has fallen out as he declared, "that man does not live by bread alone, but by every word that proceedeth out of the mouth of God;" and that which makes up the life of man to-day—its activity, glory, and greatness—found its motive force in the preaching of his Gospel, and has advanced with it step for step.

According to the Gospel there are two kingdoms: that of this world, whose Prince had nothing in Jesus (Christ, who chose his own lot, having power to lay his life down and to take it up, rejected all belonging to it, even shelter); and the kingdom of heaven.

Its gate is so far from that of this world that to enter it "a man must be born again." Its atmosphere is so different that the new man must be spiritual—flesh and blood (animal love and desires) cannot inherit it. Its time is now, its place is here, "the kingdom of heaven is within you;" its centre is in the antipodes of self, that is, in God. Its law sets aside the pains and perplexities of earth, as electricity does time and space. It brings out succor, rest, and comfort from any conditions, without outward change; as the sun-power draws out leaf and blossom and fruit, without leveling or smoothing the heap of refuse or the mound of earth. It offers one model—a little child; one commandment, love—love that will give its whole life for another, a neighbor—that is, he who needs you, an enemy, a slanderer, a rival perhaps. It has one formula, secrecy in almsgivings, praying, and well doing; one reward, Eternal Life; "Because I live, ye shall live also;" one promise: "Ask, and it shall be given you."

Is not this true? Have I not correctly read you Gospel? But does the Christian Church find or take a "kingdom of heaven" with it into the market-places and counting-houses? Does it admit a working faith in its business and politics; or does it say something about "allegory," and keep its daily life and its religion in "water-tight compartments"? Does it love its neighbor as itself, when business is based on disadvantage of the neighbor, and society on the humiliation of a neighbor? Is it in humility that it crowds the highway, asking for greetings, and scrambles for the highest places? Is it for secrecy that subscription lists are arranged?

Where can I, a stranger, find in the collective doings of the Christian Church practical proof of the conviction that the real entities are unseen, and not of this world?

Again, the Church of Christ names itself a Spiritual

Digitized by Google

Church. It has one Ruler, God; a Spirit who must be worshiped in spirit and truth. It has a teacher and protector, a Holy Ghost. It is constantly attacked and accused by what one of your writers calls "an Unholy Ghost." It is in a state of warfare, for Christ must rule till he has put down all enemies under his feet. And it wrestles not against flesh and blood, but against Principalities, against Powers, against the Rulers of the darkness of this world, against spiritual wickedness in high places, a hierarchy of infernal splendor, the Order of the Wisdom of the Abyss! That is to be triumphant for a time; for it shall manifest itself with signs and wonders that might deceive the very elect, working miracles, worshiped by the world. It is not an infant hierarchy; for by what occult power did the Egyptian magicians parallel the wonders worked by Moses up to a certain point? By what occult power did she of Endor show the likeness of Samuel to the hard-hunted Saul? What mighty power withstood for one-and-twenty days the messenger to Daniel, that messenger robed in whiteness of snow and dazzle of gold, shining from within as the burning of a gem in his clearness, his eyes as lightning; before whom Daniel, prince, prophet, priest, seer wise in occult lore, the friend of angels, fell as one dead"? Who were those who withstood while Michael the great Prince of the Jews alone was with him in these matters?

What darkly wise urging was that calling the fainting Messiah to use the power given him of God for selfish ends, and to cut loose from the Divinity; subtler yet, whispering him to prove that power and test the promises in the services of his pride? What is "this Power in the Air," and its "Prince" against whom Christ and Paul and John warn all believers, this Brotherhood of the Shadow that is to prevail against the saints till withered and shrivelled in the brightness of the coming of the Lord? *That Christian Church that is to-day in the persons of its members the great business manager and land-owner and oppressor in the world whose Prince wars against the Church of Christ.*

But the word of Christ, that he declares shall outlast heaven and earth, has taken to itself wings of flame, and has traversed the world, and is returning, quick and powerful as a two-edged sword, blazoned on the blood-red banner of the Socialist, the Anarchist, and the Infidel. These deny the Christ, but are keen to see that the great working force of the times is latent in that despised commandment of universal brotherhood. And as his own are mute, the very stones in the street are crying out against those mighty shrines of granite and marble, decorated with everything except obedience, where they have buried a dead Christ, deaf to his poor who sin and starve about his temples. As the sun draws jeweled reflections from windows where are blazoned saints and martyrs who in life would not have been welcome in these costly buildings, and as the organ-swells fill all the solemn aisles and vaulted roof, there sounds continually a Voice:—

"They sit before Thee as my people and they *hear* Thy words, but they will not *do* them. For with their *mouth* they show Thee much love but their *heart* goeth after their covetousness. And lo! Thou art unto them as a very lovely song, of one that hath a pleasant voice, and can play well on an instrument. For they *hear* Thy words, but they *do* them not."

His name is over the portal indeed, but within are the counters of the *money-changers;* and though you can read the signs of the skies you cannot read "the signs of the times." And to those who still adhere to the Church of Christ, it has happened as he foretold, and the days shall come when you shall desire to see one of the days of the Son of Man, and shall say, Lo! here, or Lo! there, but it is not he; and even as he asks, should he at his coming find faith in the earth? do you echo the sad question, for he is rejected of this generation.

Have compassion, then, upon the embarrassment of a foreigner, confused between creeds and practice, and kindly explain. Is your undertaking for the benefit of the Church of Christ? Does it invite the help of the obscure and neglected, and propose to delight not only your friends, but the helpless and the sad; those hurt in heart and sore in soul; those who know pleasure only by report? Or, is it for a Christian Church, for the decoration and repair of some religious *club-house,* by way of coaxing the needed sum from people who are anxious to balance their heavenly book-keeping at the smallest possible cost, because of their earthly ledgers? . . Yours most respectfully,

RAYA YOG
*The Assayer.*

## Pews Hold too many Pharisees.

REV. JAMES D. PAXTON preached yesterday morning at the House of Hope Presbyterian Church, Fifth and Exchange Streets, taking as his text Luke, 17 : 20. "The kingdom of God cometh not with observation." He said in part,—

Let us begin this subject with a diagnosis, pass on to a distinction, and end with a discovery.

Christ meant to tell these people that religion consisted not of observances, but of an interior—the kingdom of God is within you.

The tendency of ancient, and I fear of modern, Pharisees is to care for appearances, and appearances only. I suppose the tendency is too deep-rooted to be applied to one sect, but is far down in the foundations of mankind. The Pharisees were always busy looking for pegs on which they could hang their forms. When they could not find enough traditions of the elders they made new traditions and dated them far back in the past and said, "these and all these we must keep." They made religion a drudgery. These men came to our Lord and asked him when the kingdom of God should come. Our Lord hesitated. He had watched them and knew their thoughts and he knew what formalism was to them. And so he replied to them in this way. You are all wrong; you do not know what religion really is. My kingdom is not one of observances, it is an interior. It is not something which has to do with times and seasons. Your question is an impossible one. It applies to a different category from religion.

In those days the best Jew was the man who knew the most forms, and the ideal Jew was the man who kept them all. Christ came to do away with that. He came to dethrone the drudgery to which the Pharisee bowed the knee. He came to tell the world that religion was not what the world had supposed. He came to enter into a death struggle with the monster of formalism and to set men free from the fetters which the Pharisee had forged. The result at first was that men smiled, then grew scornful, and finally rebellious, and put him to death.

Men left to themselves become formalists, even the very best of men. The old monks made a religion of their own; shut themselves up in their monasteries and made a wonderful schedule of observances, and called that religion. And, perchance, when any monk fell into sin and repented, there began a special set of observances in order to emphasize his penitence. Like the old Pharisee and the old monk, we are all of us more or less inclined to become formalists.

There is a distinction between the external and internal. He believes what he can see, and is unable to believe that others see anything that he cannot. And then he clothes God with the attributes of man, and thinks that God can see nothing that man cannot. Man does not know that the external things are but a small fraction of the real things, and we must look inside to find what is wrapped up in them.

Digitized by Google

Another distinction is that between the incidental and the essential. The old Pharisees were very particular about paying their tithes, even to the mint, the anise, and the cummin. Our Lord directed their attention to mercy and judgment and the weightier matters of the law. Men will always pay enough attention to the formal, incidental, and external, which have a certain value, but which we need not emphasize.

What is it that makes denominations among us? They differ, most of them, only in observances. Why am I a Presbyterian? It is a matter of taste; because I like the forms better. It is when I place what is a matter of taste upon a pedestal and worship it, that I make more of observances than it is right to make.

In those days they measured men by the length of their prayers, or by their prominence in the Temple service. We have changed our methods, but still we measure a man by his observances; that is, society does, but society and the church overlap, and what the one is the other is likely to become. I don't object to special days and special observances, but I do believe in keeping them in their proper place. The church is weaker because of the legacy of formalism which has come down to us.

This does not mean exactly that if religion or going to church or reading the Bible is a burden to you, then you ought not to do them; if going to prayer-meeting is a drudgery to you, then you ought not to go. These things should not be a drudgery to you. If they are, it is partly your own fault and partly the fault of the church. I believe in people going to church because they want to go, and I believe in people trying to want to go. I believe in the church being so attractive that the people will want to go.

What does our Master see? Does he look down on our life and see only a half-hearted clinging to certain observances, or does he look upon an interior life that gives him pleasure? He looked down across the valley upon the beautiful city of Jerusalem, the Temple gleaming in the sunlight. He was not looking at the beauty of the building or thinking of the beauty of its ritual. He was looking at the interior of that city. He cried: "O thou that killest the prophets." Would that represent our Master's cry upon watching us? "O thou that killest the prophets, and stonest them which are sent unto thee."

## The X-Ray a False Witness.

LIKE its forerunner, the ordinary photographic camera, the X-ray machine can be made to tell the most outrageous falsehoods. That venerable deception, the so-called spirit photograph, can be discounted by the shadowgraph, and with no great effort or remarkable ingenuity on the operator's part either.

A Chicago electrical specialist has been making some interesting experiments at the suggestion of the attorneys of the Chicago City Railway Company and others, and the results are somewhat startling. They tend to show that shadowgraphs may need a great deal of corroboration when introduced as evidence in a damage suit.

One of the lawyers exposed his hand before the machine with the muscles relaxed, fingers extended, and the member generally in normal position. The shadowgraph showed the bones to be in perfect condition. The attorney then made a second exposure of the same hand, cramping the first joints of the fingers slightly. The ends of the fingers appeared to have been crushed and the bones were apparently of unnatural size.

In another experiment the operator showed that it is possible to arrange an object on the outside of the body and make it appear to be lodged within. Thus a bullet placed in the clothing on the back of the body was shown in the shadowgraph as resting against the spine. The expert stated further that he had learned by long experience that it is possible for the operator himself to be deceived as to the location of an object disclosed by the X-ray machine.

These disclosures as to the ease with which the records of the X-ray machine may be falsified will prove valuable to the defence in damage suits for malpractice, personal injuries, etc. Hitherto the shadowgraph has been regarded as proof conclusive of the nature and extent of injuries. Hereafter the defence will prove the ease with which the X-ray machine may be made to lie, and upon the attorneys for the plaintiff will fall the burden of showing the integrity and reliability of the operator. It will be necessary to show also that he is a skilled electrician and possessed of a fair knowledge of anatomy. Otherwise he may have deceived himself, however honest and reliable he might be.

When X-ray testimony is introduced hereafter it will be necessary to re-enforce it very strongly, or the opposing counsel will build up mountains of doubt as to its accuracy.

## End of the Kinter Case.

### Federal Grand Jury at Buffalo Refused to Indict.

THE September term of the United States Federal Court came to a sudden close this morning after the indictments of the grand jury had been submitted to his honor, Justice Alfred Coxe. The next term will be held in November at Auburn.

The most important case that the jury had to consider was the much talked of Kinter-Saunders Christian Science case. It is still fresh in the minds of Buffalonians. Much interest was manifested in the hearing which resulted in the holding of George H. Kinter, the Christian Scientist, and James Saunders, by United States Commissioner Robinson. They were charged with causing the death of a son of Saunders named Ralph, at Fort Porter, in neglecting to summon medical aid. The child had been sick for some days with pneumonia and was not, it is alleged, given medicine that would in all probability have cured him. All he received was Christian Scientist attendance. The authorities soon learned of the case and ordered the arrest of Mr. and Mrs. Kinter and Mr. and Mrs. Saunders. The quartette was before Commissioner Robinson and many prominent Buffalonians were brought to testify in the case. Upon the evidence turned in the commissioner released the women and held the men for the grand jury of the Federal Court. This morning the jury reported that no bill had been found against Kinter and Saunders. The reason given is that the case does not come under the statutes of the Federal laws and that it is only within the State's jurisdiction to indict. Attorney Charles Brown of the District Attorney's office informed a *Times* reporter to that effect this morning.—*Evening Times,* Buffalo, N. Y.

One of my prescriptions for longevity may startle you somewhat. It is this: Become the subject of a mortal disease. Let half a dozen doctors thump you and knead you and test you in every possible way, and render their verdict that you have an internal complaint; they don't know exactly what it is, but it will certainly kill you by-and-by. Then bid farewell to the world and shut yourself up for an invalid. If you are threescore years old when you begin this mode of life, you may very probably last twenty years, and there you are—an octogenarian.

## World's Fairs as Peace Producers.

GREAT international expositions like that which France is to hold in 1900, and like the one which is to be held in St. Louis in 1903, are educators and peace preservers for the world. They teach geography, history, science, art, and economics to the masses of those participating in them in a more vivid way than text-books and lectures could do. They break down the barriers of prejudice and distrust which isolation incites, and establish a brotherly feeling among the peoples of the different nations which is more effective than peace conferences and diplomatic alliances in averting wars. World's fairs are among the most conspicuous and beneficent of the instrumentalities of civilization, and those nations and individuals profit most by them which are the largest participants in them.

*St. Louis Globe-Democrat.*

## Surgery.

AT the People's Institute last evening James Monroe McDonald talked upon the use and abuse of surgical operations under the caption, "Horrors of Modern Surgery." He said in part: "Surgery may be divided into conservative and destructive surgery. One is wise and humane, the other brutal and criminal. The field of true surgery is the field of traumatic lesions. The fractured bone, the dislocated joint, the lacerated tissue, these may be operated upon, because they are in the line of conservative surgery. Beyond this surgical science should not go.

*Chicago Record.*

## Policemen and Weapons.

PERSONALLY, I am ready to go on record that I would be perfectly willing to patrol any district of the city of Toledo at any hour of day or night without a club or revolver, depending solely on the love and patriotism of the people behind me for protection, and I would undertake to present a cleaner record for my beat at the end of the year than could be shown by a colleague who placed his trust in the power of a club and gun.

MAYOR JONES of Toledo, O.

## One Editor to Another.

NOTHING can convince the sceptical *Springfield Union* that there is anything in Christian Science. It even speaks of it in the most flippant manner as "tommy-rot," and yet there are, even in this city, well authenticated cases of healing under this system, one of which, that of an insane man, is so well established as to make denial foolish. Why not admit that there is possible, nay, probable, good, in Science, for it is the truth, leaving the error, if any there be, to work its own destruction.

*Gazette*, Haverhill, Mass.

## Not Scandal Mongers.

THERE is one virtue the Christian Scientists possess which might be adopted by others: They do not talk scandal. They say such things should be banished from our conversations. Harmony is their watchword, and we cannot live in harmony and concord if we speak evil, or suffer it to be spoken in our presence. How many of our readers adopt this course in their daily lives?

*Democrat*, Huntsville, Ala.

## The Doctor's Story.

MRS. ROGERS lay in her bed,
Bandaged and blistered from foot to head,
Bandaged and blistered from head to toe.
Mrs. Rogers was very low;
Bottles and saucers, spoon and cup,
On the table stood bravely up;
Physic of high and low degree,
Calomel, catnip, boneset tea—
Everything a lady could bear,
Excepting light and water and air.

I opened the blinds; the day was bright,
And God gave Mrs. Rogers some light;
I opened the windows; the day was fair,
And God gave Mrs. Rogers some air.
Bottles and blisters, powders and pills,
Catnip, boneset, sirup and squills,
Drugs and medicines, high and low,
I threw them as far as I could throw.
"What are you doing?" my patient cried.
"Frightening Death," I coolly replied.
"You are crazy," a visitor said.
I flung a bottle at her head.
Deacon Rogers came to me;
"Wife is comin' round," said he,
"I really think she'll worry through;
She scolds me just as she used to do.
All the people have poohed and slurred—
And the neighbors have had their word;
'Twere better to perish, some of 'em say,
Than be cured in such an irregular way."
"Your wife," said I, "had God's good care,
And His remedies—light and water and air.
All the doctors, beyond a doubt,
Couldn't have cured Mrs. Rogers without."
The deacon smiled and bowed his head;
"Then your bill is nothing," he said;
"God's be the glory, as you say;
God bless you, doctor, good-day, good-day."

If ever I doctor that woman again,
I'll give her medicine made by men.

*Medical World.*

The *Christian Science Journal* and the *Christian Science Sentinel* have come to us, the former a monthly, the latter a weekly. They are ably edited and finely printed. Both are published by the Christian Science Publishing Society, 95 Falmouth St., Boston, Mass., at $2.00 and $1.00 a year respectively. They are full of bright, interesting, attractive articles, testimonials of Christian Science healing, extracts and articles from other papers, etc. Our friends will find much refreshing and delightful reading in these representative periodicals.—*New Church Independent.*

There is but one Law and that is the Law of God. There is but one Court and that is the Court of Heaven. It is a court of Absolute Justice, whose decision is final. Human concepts and opinions have been formulated into *laws*, and human courts administer these laws; but God is the final arbiter, the Supreme Judge.

The early Christians were enjoined to heal the sick and to preach the gospel. Possibly the reason why the former function is neglected at present is that, while it is possible to preach without faith; it is impossible to make cures without it.—*Boston Evening Transcript.*

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## God Revealed.

CHRISTIAN SCIENCE is the religion of God. "Science and Health with Key to the Scriptures," through its author the Rev. Mary Baker Eddy, is a revelation *from* God because it is a revelation *of* God. It has revealed God to thousands, nay millions, to whom, before they began to understand it, God was an unknown God, therefore, no God. He has been revealed to them as a healing and saving God, and many thousands, as the result of this revelation, have gone forth in the strength and might of this revealed God, to *prove* Him to the world; to show by actual works that He is at once a most High and a most Nigh God; a living, all-present God, not a dead or far-off God. They have proved, and are daily proving, Him to be the God who is Spirit, not a god of matter. They are proving Him to be the God who is the Divine Principle of all that is, not a god of impotent personality, circumscribed by corporeality, nor bound by time or space.

It is this understanding of God that heals and saves.

We say, therefore, that Christian Science, during its more than thirty years of existence, has proved itself to be a revelation of God. Whatever brings into human consciousness a higher and better conception of God is, in that sense, a revelation of Him. To the extent that such enlarged revelation can be made manifest in good works, to that extent have those who do the works a right to claim the revelation. Failure to do so would be cowardice and disobedience. By the very necessity of the revelation they must declare and prove it. Christian Scientists know this. Hence their zeal and apparent self-assurance. It is rather the assurance of unavoidable duty and profound conviction. A zeal born of the consciousness of God's moving grace, —a divine impulsion.

Now to whom, humanly speaking, do Christian Scientists owe this revelation as it has come to them in this age? What, relatively, did they know of God before He was revealed to them in the Christian Science text-book? How much healing could they do? How much conscious divine power had they? How much, comparatively, did they even trust or put faith in God? All will answer: We could not heal at all. We relied on the futile methods of human professionalism; we pinned our faith to drugs and reposed our trust in matter. We never so much as thought of God as a healer or physician. Many will answer: We had no faith or trust in God as a physician, or in any other way. We were literally without hope and without God. All this was gloriously changed when God, through the author of the revelating book, was made known to them.

Through the revelation of devout communion with God; through a courage and self-sacrifice unparalleled; through absolute consecration to the Divine Principle under whose dominion she came in her search for Light; through prayer unceasing; through toil and travail, and through an indomitable fearlessness which could have been born only of Almighty Principle, she established the Cause of Christian Science; and established it too on the rock Christ Jesus, based it on eternal Mind, and pillared it on Omnipotent Good.

It is not a system built upon the shifting sands of human opinion. Its powerful text-book for more than thirty years has been read, understood, and applied by men and women of every grade of society and education, and almost every tongue. Impossible as it may seem to the sceptical, the well-known and well-established facts are that many foreigners without English education have read, and so far understood, its revelation that they have been healed of sicknesses incurable by human methods, and have gone forth and healed others, and are to-day active, earnest followers and demonstrators of Christian Science. Many of the so-called unlearned receive and assimilate its teachings more readily than those who come into its understanding only through the breaking down of intellectual barriers; yet all can understand it who sincerely try.

In view of the great work it has accomplished, it devolves neither upon Mrs. Eddy nor her friends to defend the scale of prices of her works against the assaults of those who are moved to their opposition through personal motives, or who, by reason of their unfamiliarity with the teachings of the text-book, are unable to judge of its value.

For more than thirty years it has been doing a healing and regenerating work, hitherto unparalleled in its scope, and has thereby long since passed beyond the range of carping criticism.

## The Spade and the Bible.

"THE various archæological societies in Europe and America which make Palestine, Egypt, and the valley of the Tigris and Euphrates their special field of research, are still reaping a rich harvest," says the *Christian Advocate* of New York. "Scarcely a week passes without some new discovery. Within the last twenty-five years there has been such a rich accumulation of new treasures from the past in each of these countries, that it may be safely said that the whole science of Oriental archæology has undergone a complete regeneration.

"A similar advance has been made also in the criticism of the text. Over forty years ago Tischendorf discovered on Mount Sinai the loose parchment sheets of large portions of an unknown codex of the Gospels. Instead of the Codex Sinaiticus disturbing the received text, it has only strengthened its hold upon the faith and reverence of the Biblical critics. The still later discovery of other Scriptural records in the same place, the Convent of St. Catherine on Mount Sinai, by two English ladies, Miss Gibson and Mrs. Lewis, only confirms the triumph of Tischendorf. Any critic who hopes to gain support for antagonism to the text and the doctrines of the Bible from any monumental records now coming to daylight, is clearly doomed to disappointment, if the future may be judged from the past.

"The triumph of the spade promises to continue. How broad will be the horizon of the rich field of Scripture confirmation, and how far it will extend into the future, are questions which the wisest cannot now answer. The mere mention of them bewilders; but it may be taken for granted that the doubter of the authenticity of the Scriptures has nothing to gain by what the spade has yet to unearth from the hiding-places of the centuries."

The results of the researches of archæologists are very gratifying to all who love the Bible, but more convincing than all the historical evidences of the authenticity of the Bible that have been or may be dug from the ruins of Egypt or Babylon, is the demonstration of its divine truth by the healing of the sick as practised by Christian Scientists. If the Bible is to be accepted as an authentic account of the teachings and acts of Moses, the prophets, Jesus, and the apostles, it cannot be denied that they healed the sick without the use of drugs or any other than spiritual means. By doing like works of spiritual healing, Christian Scientists supply evidence of the divine origin and substantial inerrancy of the Scriptures which defies successful contradiction.

## Judge Ewing's Lecture.

AKIN to the vital preaching of Jesus and Paul, is the work of the Christian Science Lecturers, who go about from one city or town to another, publishing peace, and health, and good tidings of Good, spreading everywhere the news that deliverance has come for both the sick and the sinful. As of old, multitudes listen gladly to the simple truth about God's infinite goodness, as it is again taught in the world by the Rev. Mary Baker Eddy and her followers, for human hearts are as hungry as ever they were for that love which passeth all understanding.

Such a multitude gathered in the vast auditorium of Tremont Temple in Boston, Thursday evening, October 5, to hear a lecture on Christian Science by the Hon. William G. Ewing of Chicago. All the people there to the number of about three thousand seemed to be governed by one motive, an earnest and honest desire to learn how to be saved and how to save others from misery, sickness, and sin. The audience seemed to be representative of the people of Boston, an audience, which, for intelligence, could not have been excelled at any time in the history of the world. Judging from the prompt and vigorous applause of many of the speaker's strongest points, this large and intelligent audience heartily endorsed Christian Science, as its true import and purpose were made plain.

Half an hour before the time set for the lecture, Tremont Temple was almost filled, the only remaining seats being in the topmost gallery, and in a few minutes all the seats in the house except those that were reserved, were filled and hundreds were standing. Even the choir balcony was packed. At the invitation of Judge Hanna, who was chairman, the multitude stood and sang our Leader's beautiful hymn, "Shepherd, show me how to go," without instrumental accompaniment.

The lecturer was introduced by Judge Hanna. It was an introduction in the literal sense of the word. The chairman told the audience something of the character and achievements of Judge Ewing, and of his noble zeal in his present field of labor as a bearer of good tidings to discouraged humanity. The address of Judge Hanna was as follows:—

*Ladies and Gentlemen:*—The time for a semi-annual lecture on Christian Science, under the auspices of the Mother Church, The First Church of Christ, Scientist, in Boston, having again arrived, it was deemed best to secure a larger place than the auditorium of our church for the accommodation of the audience. This splendid audience room was therefore secured, and the wisdom of its selection is quite apparent as we look over the great number present.

There have recently been added to the official Board of Lectureship of our Church some most valuable assistants in the persons of members of the bar, and ex-judges. Among them is a member of the Illinois bar of long standing and high attainments in his profession. In his youth, a friend and admirer of Abraham Lincoln, who was a frequent visitor at his father's house, he early imbibed the exalted views of life which so especially distinguished that truly great man and great lawyer. He adopted these views into his private life, and on coming to the bar, into his professional life, and those who are acquainted with Judge Ewing know how well he has carried out his youthful ideals.

To a long and distinguished career at the bar Judge Ewing added the cares and responsibilities of official and judicial duty. As United States District Attorney for the Northern District of Illinois, under President Cleveland, he acquitted himself with signal ability, and with credit as well to himself as to the government. As a member of the bench of the Superior Court of Cook County, sitting in Chicago, he commanded, throughout his entire term, the respect and confidence alike of the bar, of litigants, and of the public.

More than fifteen years ago, Judge Ewing, through Christian Science, was healed of a malady pronounced incurable by our friends of the medical profession. Judge Ewing is a living witness to the fact that asthma in its worst form can be cured through Christian Science, for his was a case of that kind.

Because of the obligation he feels himself under to Christian Science for thus preserving his life; because he knows in his deepest consciousness that Christian Science is the Christianity of Christ in its best and most practical expression, and because of his admiration and love for her to whom, through God, the world is indebted for this higher revelation and better understanding of divine Love, Judge Ewing declined a renomination to the bench and left his profession to devote his life thenceforth to the higher profession of spreading the healing and saving Gospel of Christ to a waiting and needy world. Noble purpose! Unselfish aim! and it is being nobly and unselfishly carried out.

For years Judge Ewing has been personally acquainted with our revered Leader, the Rev. Mary Baker Eddy. For years he has known of her ceaseless vigilance, her unflagging zeal, and untiring devotion to her great mission, a mission, the performance of which she can no more avoid than can Infinite Love cease its activities—and is it any wonder that he has been moved to place himself unreservedly at God's disposal?

It is now my pleasure to present to you as the lecturer of the evening the Hon. William G. Ewing.

Judge Ewing stood up at the last word of introduction, and won a place in the hearts of the people at once, by his friendly smile and the simple kindliness of his words. He seemed to many the kind of man whose sympathies reach down to his fellow-men in the lowest depths of sin and despair, and whose aspirations reach up to the highest manhood. Void of all pretence and plain of speech, Judge Ewing proved that the most convincing eloquence is the overflow of a heart filled with love and gratitude. His earnestness was so manifest that no one could mistake it, and his sense of love for his fellow-men was so great that all felt it.

The lecturer commenced by showing how impossible it would have been for this age to have attained to its present stage of advancement had the men of one generation not questioned the beliefs of their fathers. He showed that progress had been born of such questioning. Passing from the consideration of changes of thought and methods, Judge Ewing next constructed a platform on which orthodox Christians of all schools might comfortably stand with Christian Scientists, showing that the difference between Christian Scientists and other religionists, was not so much one of doctrine as of practice—that is, all profess about the same degree of faith in God, but the Christian Scientists add practice to profession, healing the sick as well as the sinful. Standing upon this platform, the speaker was able to talk to his auditors as friends instead of as strangers, and so he was on the best of terms with the audience at all times.

The most impressive feature of the address, was Judge Ewing's eloquent tribute to Mrs. Eddy. Moved by the inspiration of the hour, he ignored the premeditated plan of his lecture and broke forth into words of thanksgiving and praise to God for Christian Science and its Discoverer, that seemed worthy of the Shepherd King. Only a small part of what he said was preserved and that not the best part. Following are some things he said:—

Christian Science was discovered and revealed to the

Digitized by Google

world some thirty odd years ago by the Rev. Mary Baker Eddy, a native of New Hampshire, and now a resident of Concord in that state. The whole philosophy and practice of Christian Science is published to the world in Mrs. Eddy's book, entitled, "Science and Health with Key to the Scriptures." The latter part of the title, "with Key to the Scriptures," of this marvelous book, is very significant, for a great value in Mrs. Eddy's work is found in the light she has thrown upon the real, reasonable, and demonstrable meaning of the Holy Scriptures. In the great work of her devoted and beautiful life she took, as she declares herself, the Bible as her only guide, and she does not announce any principle, doctrine, or practice of Christian Science, that she did not find and that you, each one of you, may not find in the Bible. Wherefore Christian Science offers to the world no new Bible or mythical construction of the old one. It enthrones no new divinity, but re-enthrones and declares unto you the "one only living and true God," so long ignorantly worshiped.

I have little time and less disposition to defend Christian Science or the magnificent woman who in hope and prayer and love found it in God's revelation to man, from assaults made upon either. Of Mrs. Eddy, I need only say, as one of the tens of thousands of beneficiaries of the Truth she revealed, that time to its utmost limit, will be too brief for the world to discharge to her its debt of gratitude. Her life of devotion to God and humanity, her sacrifice of self for others, her ministrations to weary, suffering, dying men, her long years of fearless and faultless association with perfect Good, are her invincible panoply against every shaft of envy, ingratitude, or malice. And of the Science of Life, immortal life, she has revealed, it is enough to know that if it is not true, by the eternal decree of God it will come to naught; and that if it is true, all the powers of earth and hell cannot prevail against it. No detraction can mar it, and no monument can cover the sum of its infinite greatness but the eternal Principle it reveals.

The lecture was listened to with the closest possible attention, and it seemed short, although Judge Ewing spoke for an hour and a half. H. D. N.

## Judge Ewing's Testimony.

At the Wednesday evening meeting in the Mother Church, October 4, 1899, Judge Ewing made the following remarks:—

I believe I would like to say something in this meeting. It may not do you very much good but it will do me a great deal of good, I am sure.

I think that the latter part of the statement of the gentleman who has just taken his seat, can hardly be controverted, and that is, that Christian Science is growing; that there are better Scientists than there ever were before; that there is more scientific work done; better results.

I have been greatly impressed with this fact in the last two months, and it seems to me that it is now almost demonstrated not only that this work is growing, but that it must continue to grow. One of the very great matters of interest to me in my work as a servant of this Church has been to discover, that scattered all over the great northwest portion of this country, from Ohio to the Rocky Mountains, throughout that great wheat-garden which God has spread out in Iowa, Minnesota, and the Dakotas, —large enough to feed the world,—at nearly every cross-road are now found an association of Scientists, and in some fifty odd places that I have visited and talked to the Scientists, with one solitary exception, I have not found an organization throughout that whole country that is not larger than the organization in Chicago was fifteen years ago. Now this means much to a thinking person. Hundreds of these organizations, with a life of one to four years, started as these organizations all have been by some one courageous, honest, devoted man or woman,—generally a woman,—have by her efforts or his efforts grown to number eighteen, twenty, and thirty Scientists. Now, the question recurs to us: If one devoted Christian Scientist can "demonstrate" thirty Christian Scientists in three years, how many will the thirty demonstrate in the next three years? And this is the ratio of our growth. It has proved to be the ratio of the growth in my own home. And what I know of your own church here, the development of strength in the Mother Church, the ratio is not less. And it is not hard to find the cause for it all. It is found in the proof, and the only proof that Jesus Christ ever found in this world for his divine origin, and that is, that the lame walk and the blind see.

It has been a matter of special interest to me throughout this whole northwestern country to see the wonderful demonstrations which have been made, and the most marvelous are usually found in the smallest places. It is where two or three are gathered together in his name that this wonderful work is done. This is the argument that we have presented to men and must present to the world, knowing that the one thing of most interest for you and me and all God's children is to make these demonstrations speak for themselves, and say to every doubting man and woman as Jesus said to John, the lame *do* walk and the blind *do* see.

I have taken great pains to investigate and talk with the persons who have been the objects of some of these wonderful cures, and to talk with the person who has treated them, so that I might be able to say, in some sense, that I had a personal knowledge of the cases. It has been a longing of mine to be able to go through, as nearly as I could, the whole catalogue of human ills as they are presented to human sense, and I have almost accomplished that, so that almost every phase of sorrow, suffering, and heart-break I have seen cured. For a long while I knew I could say that the lame walk, I had seen so many instances of that kind. I wanted to be able to say, "The blind *do* see." I knew where very defective eyes were cured, but I wanted to find an instance where blindness had been total, or for a long term of years, so that no one could say that it was not a real, genuine instance of blindness. I wanted to see it perfectly healed. I had the pleasure within the last six weeks of seeing just such a case. I met a young woman twenty-two years of age at a dinner-party of Scientists in a little town in Nebraska, and as I looked across the table at her I could not help saying, "Your life has been a long holiday. You know no sorrow or tears;" but within fifteen minutes I learned that if I had taken the combined sorrows of all the people at that table they would not have equalled a tithe of what she had suffered. I learned from her mother that she had been born with defective eyes, one large and one small, and the sight drawn to one side. At the age of six months a curtain dropped down over her eyes so as to obscure the iris. No one knows whether she ever did see. At six years of age she was sent to an asylum for the blind and remained there twelve years, and was then sent home because she had reached the age-limit of the institution. Eighteen months before she was discharged her mother became interested in Christian Science and took class instruction, and is now the First Reader in the church there, and of course her thought was very naturally addressed to her child, and she gave her all the help she could. But there was not the slightest evidence that the treatment had accomplished anything, except in the cheer of the patient, she felt that she would yet see. After she came home, a neighboring Scientist began to treat her, and about fifteen months after she came home, this cloud just simply disappeared. It did not roll up or

Digitized by Google

down but went out into nothingness, and that girl to-day sees as well as any man or woman in this house. She said that God had been very good to her, in that He had made the large eye smaller and the small eye larger, so that they were both perfectly balanced. She is now a perfect specimen of vigorous young womanhood. This is the kind of demonstration that speaks for Christian Science, and enables us to use, with absolute knowledge of the facts, the argument of Christ, "the lame walk and the blind *do* see."

## A Wednesday Evening Meeting.

EVERY Wednesday night in the Christian Science churches of this city members gather in accordance with the rules of the Mother Church. Last week and the week before I attended these services for the purpose of giving to the readers of the *Times* accurate knowledge of the tenets the Christian Scientists propound and the results of their belief when put into practice in the actual experiences of daily life. I attended the First Church of Christ, Scientist, at Forest Avenue and Ninth Street. Both evenings the church was filled with a large, earnest, and devout audience. It is doubtful if there is a Protestant church in Kansas City that had a larger attendance at prayer meeting that night. The church is one of the handsomest and has the most elaborate appointments of any church in Kansas City.

The first man to tell what Christian Science had done for him related the following experience:—

"About three years ago I was afflicted with heart trouble and under the care of a physician. He called in several other physicians and they held a consultation and decided that they could do no more for me, that my case was helpless. At that time all my friends and relatives thought that nothing could be done for me, and the doctors told me not to attempt any work, as it would hasten my death.

"A neighbor who had been healed by a Christian Scientist told me of his experience. He called a healer, who came to see me for two weeks, and I felt better. The second morning after he came I went to church. I came back and felt better that afternoon. Still the healer did not think I was progressing rapidly enough toward complete health, and said that I was certainly taking medicine also, as there was something inimical to the treatment. I told him I had thrown away my medicine bottles, and that I was not taking any medicine. 'You may not be doing it consciously,' said he, 'but if not consciously, you are taking something unconsciously.' I tried to recollect every act from the time I had been treated. I remembered that I had been drinking some mineral water. My wife was under the care of doctors and they had advised this water, and, of course, I thought it was a good thing. I was taking this water unconsciously as a medicine. I continued to drink it after the healing and something was not right. The gentleman who was treating me, when I told him of the mineral water taken as medicine, said, 'That is just it. I knew there was something you were taking that was preventing the work of faith. You must stop drinking this water as medicine if you wish to be healed.'

"When I discovered that I was taking this mineral water as medicine I discarded it, and I was healed perfectly, and have been well ever since."

A woman arose and said, "About five years ago Christian Science found me a confirmed invalid. I had tried every remedy known to *materia medica,* and physicians pronounced my case hopeless. I was actually starving to death, mentally and physically. I was asked three years before to try Christian Science, but refused. Some of my friends prevailed upon me and I was induced to try. I was healed in six weeks."

A venerable man gave his experience as follows: "I had been a sufferer for thirty years and I tried Christian Science. I was suffering intensely. In about a week I was entirely healed and I have been well ever since."

A young woman related the following:—

"A demonstration in my daily life comes to mind. A few weeks since my little girl was playing in the yard with several companions. She came rushing into the house about six o'clock, overcome with heat and suffering with headache. 'Treatment, treatment, mamma,' she cried, and treatment was all she would say. I immediately sat down and realized Truth for her for a few minutes. We had company at dinner that evening and I left the child. When I had sat down to the table I heard a light footfall on the stairs, and the child came joyously running into the room, bright and happy, and the pain in her head was gone. She wanted her dinner then, and she was perfectly well. Such a complete change in so short a time."

The next speaker, who had the appearance of having been a traveling man, gave an instance of a demonstration which had cured an aggravated case of appendicitis. "I went to California, where my friend who was suffering from appendicitis resided," said he. "I found him suffering intensely. He had had one operation performed, but it had not accomplished anything and he was about determined, on the advice of his physician, to take another. The physician said that he probably would not survive the operation, but it gave the only chance for his life. I said to him that I could give him a remedy which would cure him. He desired to know what it was and I said, 'Christian Science.' He became interested and began to question me. I talked with him quite an hour.

"During the conversation he promised me to go to a healer. I left him that way after I had made the remark not to take any medicine, and I would try to see what I could do. He was given absent treatment by a healer, and when I went back on the third day, the swelling had all disappeared, and in three days he was eating any kind of food he wished. Through these demonstrations he became interested, and since reading Science and Health he thinks there is nothing like Christian Science."

A stalwart young man, who is one of the city's prosperous dentists, was the next witness for Christian Science. He said, "Christian Science has done so much for me in so many ways that whenever I think of giving a testimonial I never know where to begin. When I think of where it found me three years ago, how it lifted me out of darkness and gave me an entirely new idea of life and kept me in such a happy frame of mind, I say it is hard for me to tell what Christian Science has done for me, because it has done everything. We have had in our family healings of every sort and condition, and yet at the same time we have never been healthier than the three years we have been living according to Christian Science. I have noticed the benefits to be derived from Christian Science in its application to my business, that of dentistry. I believe there is no question but that Christian Science dentistry is going to do more for the alleviation of pain in the dental chair than any other thing ever brought before the dental profession. When treatment has been made by a Scientist all pain is entirely removed and all fear of what might be suffered is entirely removed, and, as I say, a greater understanding of its application to dentistry is going to do more for dentistry than anything else, than all the systems, machines, and treatises that the dental profession has devised. I look forward to the time when dentists will take up the study of Christian Science, and not go into the profession as they are now, driving in the dark, and will do away with the machine and anæsthetic methods of the present. The remedy is so simple, if they will only take it up and apply it to the profession."

Digitized by Google

An elderly lady then arose and bore witness to the dentist's statement. She said a few weeks since she had ten teeth extracted without a particle of pain. "I had received treatment," said she, "as the dentist preferred that some one assist me. As the gentleman says who preceded me, all fear was removed, and I sat down in the dental chair and had ten teeth extracted in twenty minutes without any pain. I had had previous experience in having teeth pulled without the assistance of treatment, and I had to receive the attention of two physicians and suffered intensely, and I know that Christian Science is the best remedy if you are going to have teeth extracted."

Another woman told the experience of a young married woman. Her case was pronounced hopeless, and her mother and friends grieved, as they thought she would die and leave her young baby. The witness saw her again after a few months and she was perfectly well, and said that Christian Science cured her. The young woman said that before trying Christian Science she had internal abscesses and had had seven operations performed. She was again afflicted with an abscess, and her parents felt that another operation was necessary. The mother went to the doctor and asked him what hope he could give her. He said: "I can give her no hope. If this was my daughter I wouldn't ask her to have that operation performed. If she insisted upon it she might have it, as there might be a chance for her life. I see little hope for her with or without it," and she told him she had been advised to try Christian Science, and he replied that he would be willing to try anything that would give him the slightest hope. "There is no hope for her in medicine that I can see," said he. So they tried Christian Science, and in a short time she was out and going about as a well and healthy woman. She had spent thousands of dollars on *materia medica*, and Christian Science cost her only fifty-eight dollars, and she is now entirely well. If anything gets the matter with her she runs to her Science and Health as other people do to their medicine.

A Scientist from Chicago was in the audience and he participated in the meeting as follows: "I live in Chicago and Christian Science is as good there as it is here. I am glad to say that in the United States to-night there are thousands of Christian Scientists who are giving testimony for Truth, and who have gathered to hear and tell about Christian Science.

Three years ago I was living in this city. I was sixty years old, as we reckon things. I thought my time had come to die. I had been doctored, I had been ministered all these years. I went to Christian Science, and in a few days, three or four, I was relieved of physical suffering to a great extent and was made to rejoice. Since that time I have not used tobacco, smoked, nor chewed, nor drank. Christian Science cured me of these habits. I have not used profane language, as I formerly did, and Science has cured me of all evils of the flesh. Neither have I patronized the doctors nor the drug stores. I feel as if it is my duty to tell these things. I want everybody to come to Christian Science. It seems to me as if I want to ask everybody to come and try. You will find that Christian Science will heal you of your aches and pains. It will heal you who think you are sick. I say to you who are under the bondage of evil habits and the appetites, if you will come to Christian Science you will find relief. You will find that Christian Science will relieve you of all these troubles. You will find Christian Scientists the best people on the face of the earth. They are trying to do right because it is right. You must experience Christian Science if you would understand. You will be proud to think you are a Christian Scientist, proud to tell everybody you are a Christian Scientist.—*Kansas City Times.*

## A Comparison.

BY C. F. N.

THERE has been much said in the past in regard to the price of our text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy. For the sake of comparison, let us, for a few moments, consider Science and Health as a treatise on physical healing simply, and then contrast its price with the prices of the standard text-books of medicine.

If one were to study medicine, about the first book required would be a text-book of anatomy, which would cost —not three dollars—but about six dollars. A text-book of physiology would cost about four dollars; one of *materia medica* and therapeutics three or four dollars, and one of theory and practice at least four dollars. That makes a total of over fifteen dollars for just a bare start towards the necessary medical library, and the up-to-date physician needs a large library, and must be constantly adding to it as new theories are advanced.

It seems well-nigh ridiculous to compare the price (much less the contents) of the above-named books with the price of Science and Health. The former teaches error—matter, disease, and death; the latter teaches Truth—Spirit, health, and Life. The physician requires a large and expensive library; the Scientist has in Science and Health a whole library—a *multum in parvo*. It is his (mental) anatomy, physiology, chemistry, *materia medica*, therapeutics, theory and practice all in one, and contains, together with the Bible, all that he needs successfully to heal all diseases. This, together with the high morality and spirituality it teaches, enabling one to heal themselves and others, morally as well as physically, makes its price—three dollars—seem insignificant by comparison.

It might be of interest to add, that in a recent report by the manager of the Chicago Central Christian Science Reading Room Association, it was stated, that whereas in the past the objection to the price of Science and Heath was almost of daily occurrence, it is now seldom alluded to, showing the change in thought upon this subject.

We shall all some time clearly see that the same Wisdom that guided the Mother in writing this wonderful book, guided her also in placing the right price upon it, and in everything else connected with it.

## Fear or Faith.

BY ELINOR F. EDWARDS.

"AND the apostles said unto the Lord, Increase our faith." Faith in what? Faith in that Power over all evil, which they had seen exercised by their Master in casting out demons and healing the sick. Faith is the best friend of man, and fear is his worst enemy.

Mortal man lives in an atmosphere of fear; he is afraid of fear, afraid of disease, afraid of contagion, afraid of heat, and afraid of cold. He is afraid of failure, of poverty, of what his neighbors will say, and afraid of death. His fears are without number; their name is legion. But faith is one. One thought of faith in the supremacy of Good, shall put to flight a thousand fears.

Paul said, "I have kept the faith." Faith in what? Faith in the power of Good to overcome all evil, even when evil seems to be the only power. For Paul kept this faith through persecution, hatred, imprisonment, weakness, perils by land and by sea, in shipwreck, and even in seeming death. That is why he had the right to say, "Henceforth there is laid up for me a crown of righteousness."

As mortals we are fearful about many things instead of being faithful over a few things. When we become faithful over a "few things," we shall be made rulers over the many fears that now make mortal existence a burden and destroy health, peace, and happiness.

# Testimonies.

### Healed of Many Ills.

About the first of this year, there came to our house, a woman to act as housekeeper. On the first evening after her arrival, I spoke to her about Christian Science. She said she had heard something about it, and one of her friends had claimed to be helped by it, but for herself she had no use for it. The next morning at breakfast she was much surprised that no audible blessing was asked, and she wanted to know if Christian Scientists did not pray. This was explained to her satisfaction, and she was given Science and Health to read. Day by day she asked many questions, and became more and more interested. She said that Science and Health was a wonderful book, and that the more she read it the better she liked it.

She was suffering from many troubles. One was rheumatism, another the result of a fall, which had troubled her so that she could turn in bed only with great difficulty. She was wearing a plaster on the sole of each foot and three on her back and sides. At the end of the first week she asked my sister what the treatments were like, and if there was any examination or manipulation. This being explained to her, she asked for treatment. That night she took off all the plasters; slept well, and had no trouble in turning over as much as she liked for the first time in many months. Soon after this I found she had been troubled for a long time with kidney trouble. I learned of this one evening after she had retired, and treated her at once. That night she had very little trouble, the next night less, and that was the last of the kidney trouble.

One Saturday morning she stepped into the elevator which had settled over a foot below the floor she was on. She fell heavily to the floor of the elevator, which the shock of her fall took to the bottom of the shaft. She was badly bruised and hurt internally, so as to produce much bleeding. I was away from home at the time and did not return until the next Tuesday evening. I found her in a deplorable condition. During this time she would have no physician, but studied Science and Health and tried to demonstrate over the accident. On my return I at once began to work for her. By the next morning she was much improved, and in a day or two was all right.

One evening I saw that she seemed to be in much pain, and found that she had been trying to demonstrate for herself over a severe claim of dysentery, but she was suffering so much from cramps that she asked for help. She was completely cured by one treatment. Science and Health was a great comfort to her, and when she was in trouble of any kind, she would go to her room, if only for a few minutes, read a few lines, and always found help. I wish you could have seen the look of joy on her face just before she left us, when I told her she could have the book she had learned to love so much, and my wife gave her the *Journal* and *Sentinel* for a year.

H. H. Bush, New Brighton, N. Y.

### Health and Happiness.

Not quite a year ago I was healed in two weeks' treatment, of a weak back that had troubled me for three years, and for almost a year had made me perfectly wretched; and while the restoration to perfect health resulting from this healing as well as the healing of other physical ailments has been very beautiful, my true healing, that for which I am most grateful, and over which I still wonder, is the utter change wrought, from a careless, selfish girl, to one whose honest desire is to know God and do His will wherever it leads. From being a meaningless name, the Bible has come to be the book I love with my whole heart, and am learning to understand little by little, through the light shed on it by Science and Health. Christian Science has made me look with respect upon other churches and the honest opinions of others, and is surely teaching me not to judge.

When I realize that in the past ten months I have known more happiness than in all the other twenty-four years of my life, my heart is filled with gratitude to God and the one through whom He has sent this light to us, and I am trying to love our Leader more by being obedient and loving God's children more. The blessing it brings in teaching me to see every one as God's perfect child, and thereby enabling me to love every one whether they seem to love me or not, is truly priceless. Words cannot tell the perfect contentment and restfulness it brings.

Caroline A. Loring, Waterloo, Iowa.

### Inflammatory Rheumatism.

I had never heard of Christian Science nor had I attended church in nearly thirty years until I happened to attend a Christian Science meeting. I was so impressed with the sermon that I continued to attend both the Wednesday evening and Sunday meetings until I had a chance to talk with the First Reader, who afterwards became my healer and benefactor.

I had been a great sufferer from inflammatory rheumatism for more than twenty years, a great deal of the time being compelled to walk on crutches. I was in the Soldier's Home for two years and a half, and became very fleshy, weighing two hundred and forty pounds, and was scarcely able to walk any distance. I also had a large tumor that the doctor at the Home had blistered and made very sore, but could not remove. They finally talked of taking me to the hospital to perform an operation. Rather than submit to the operation I left the Home. I had also become addicted to the use of liquor like many others. I went into the service young, I had used tobacco for nearly thirty-eight years of all of which I was completely healed. My weight has been reduced fifty pounds. I have been in the great copper mines of Idaho all summer, and have been able to climb the highest mountains and sleep in wet blankets, and have never felt rheumatic pains but once since. I then received absent treatment and was relieved in two hours after telegraphing my healer, one hundred miles away. Charles H. Clark, Salubria, Idaho.

### Completely Healed.

For many years I had been obliged to live on very little food, sometimes only bread and milk.

One day I was at the house of a neighbor where a Scientist was treating a child. I asked the healer if I could be healed, and he said, "Of course you can." Then I asked him to treat me, which he did, and told me to go home and eat anything I wanted and it would not hurt me. I went home, prepared a meal with plenty of beans and onions, two things I could not eat, but I ate all I wanted just to show him that they would hurt me, but they did not. Ever since then I have eaten whatever I wanted, whenever I wanted, and as much as I wanted, and no bad effects have followed. I also laid aside my glasses and have not had occasion to use them since. I am thankful for the Truth that makes free, but my spiritual understanding affords me the joy for which I am most thankful.

We have readings every Sunday and the lessons seem to get better and better all the time. They show us how to rise above the ills of the flesh into the realization of harmony. Eva Broom, Timberlake, Okla.

---

The world, the flesh, and the devil (all evil) can be overcome only by understanding the allness of Spirit and the nothingness of matter.

## Questions and Answers.

*When Jesus said to the woman, "Thy faith hath made thee whole," did he mean to say that it was through her understanding of Truth she was healed?*—A student.

The word faith as used in the Bible does not always mean understanding. It frequently means that condition of thought which has turned toward the Truth, and while it does not understand, yet it has confidence and relies upon Truth for the help that is needed. Such was the mental condition of the woman referred to. While she did not understand how Jesus healed, yet she firmly believed that he did heal, and she also believed that if she could but touch the hem of his garment she would be made whole. Jesus knew how the sick were healed, and when he said to the woman "Thy faith hath made thee whole," he meant that she was in the right mental condition to receive the great blessing his understanding of Truth could bestow upon her.

It is said that in a certain locality "he did not many mighty works because of their unbelief." By this we are not to understand that he willingly turned away from these people and withheld the blessing he could bestow, simply because they did not believe as he did. The Master was able and willing to help them, but their own condition of sin and unbelief made it impossible for them to receive the blessing of Truth at that time. Through suffering they must learn the nothingness of error until they were willing to turn from it and gladly lay down all for Truth. The Master realized this, so he turned from them and went to those whom he could help.

Such an one was this woman. Twelve years of suffering had caused her to look away from matter. She was willing to lay down all for Truth, and she came in the right way. Her faith, her fitness for the blessing of Truth, made it possible for her to receive, through the understanding of the Master, the healing she so much desired. Such faith as this woman had is greatly needed, for it turns thought from matter to Spirit, and is one of the first steps to be taken in gaining that understanding of Truth which enables one to do the works Jesus did.

At another time Jesus said to the two blind men who came to him, "According to your faith be it unto you," and they were likewise healed. It is not to be inferred that Jesus in any sense withheld the blessing or sparingly bestowed it according to the measure of their faith. He gave full expression to Truth and Love, and their blessing was in proportion to their fitness to receive. By fitness to receive, is not necessarily meant a certain degree of moral goodness already attained, for that would seem to imply that only the righteous could be healed. Rather does it mean a willingness to part with all evil, moral as well as physical. Such mental condition is open to Truth and will be blessed accordingly.

***

*If all matter is unreal, why do we deny the existence of disease in the material body and not the body itself?*

E. V. D.

"All is Mind and Mind's idea," is the emphatic declaration of Science. Matter, in any form or condition, is but the manifestation of a false mentality called mortal mind. If one admits the reality of matter he must likewise admit the reality of all its conditions. If harmonious matter is real, discordant matter is real also. If health in matter is real, disease in matter is real also. So if one clings to a thought of good in matter he cannot escape the belief of evil in matter, for his sense of discord in matter must of necessity continue to be as real to him as his sense of harmony in matter. It is only as he knows that matter has neither intelligence, substance, nor life, that he is able to heal disease on a scientific basis.

To think of a material body as real while denying the existence of disease in that body, is not scientific practice. A half-way position is neither scientific nor effectual. The great truth that man is spiritual because he is the image and likeness of God, heals sickness and sin. This scientific fact denies the belief of man's materiality, and should be kept before the thought continually, for in the degree that man acknowledges the claims of matter he is in bondage thereto. Mortal man must sacrifice the good that seems to be in matter if he would escape the evil that matter produces, for the one is as real as the other, and no more so.

## Wine as a Medicine.

BY M. P. H.

AMONG the vanishing arguments of Bible students who oppose Christian Science is the claim that the Apostle Paul advised Timothy to use wine for his stomach. In proof of this they turn to 1 Timothy, 5 : 23, and read to you a part of a beautiful spiritual letter that Paul wrote Timothy at Ephesus, whom he designated as his "own son in the faith." This letter of instruction and admonition points the way *out* of "fables" into "godly edifying"—into "Love out of a pure heart . . . and of faith unfeigned." Not into dependence on other gods.

For the sake of easy scrutiny let us place the verse they use to verify their pleading, in close connection with the preceding and succeeding verses:—

> 22. Lay hands suddenly on no man, neither be partakers of other men's sins: keep thyself pure.
>
> 23. Drink no longer water, but use a little wine for thy stomach's sake and thine often infirmities.
>
> 24. Some men's sins are open beforehand, going before to judgment; and some men they follow after.

Surely there is nothing in the twenty-second verse, nor in the twenty-fourth verse to warrant the abrupt digression which Paul made, if the twenty-third is to be taken literally and as containing a medical prescription for Timothy; but to study them is to be satisfied that Paul was not considering physical conditions at all, but that he was talking figuratively.

The use of the word *wine* in the Bible as a symbol of spiritual strength, is so common that we need not comment further as to it, except to note that Rev. Mary Baker G. Eddy, author of "Science and Health with Key to the Scriptures," gives the spiritual sense of wine as "inspiration, understanding."

Now as to "infirmities:" The Greek word used by Paul was *asthencia,* which according to the connection means "moral weakness, frailty." (Strong's Greek Dictionary.) This same Greek word Paul used in Hebrews, 4 : 15 where he says: "For we have not an high priest which cannot be touched with the feeling of our (*astheneia*) infirmities; but was in all points tempted like as we are, yet without sin."

Certainly in fairness to Paul, all must regard his thought in this twenty-third verse to have been, that Timothy should "no longer" *dilute* (as with water) his ministration, but rise above weakness, doubts, uncertainties, into the strength, the joy, the inspiration, the understanding, and the fulness, of "my God who shall supply all your needs."

## Christian Science.

IF God is all, and God is Good, in human acceptation of the term, then sin and pain are not, there is no grief, and evil's non-existent. Then heaven is here and now, love is the law, and life and happiness are one. Hatred and pain alike impossible, man dwells within a Paradise of blissful thoughts, where love's the only sentiment: the sole vocation, helpfulness to others.

## From the Religious Press.

### Overcoming Irritability.

I knew a lady who was a Christian, but a very uncomfortable and unhappy Christian, and who made everybody unhappy around her, and had the special peculiarity that, while she kept good enough in her own room, when she went out of the family all the prickles came out, and she was exceedingly disagreeable. She knew it was wrong, but she did not know what to do, and thought she would lose her reason.

One day she had been as cross as she could be all day, and in the evening she met a gentleman friend, who said to her, "If you will only take the sixth chapter of Romans, and kneel down with the open book on the chair before you, and read it verse by verse, and ask the Lord to show you what it means; and if you understand it and believe it, you will get deliverance."

She promised to do so, and when reading in her own chamber that night she came to the eleventh verse: "Likewise reckon ye also yourselves to be dead indeed unto sin," and she could not understand that. "I am not dead," said she; "it would be telling a falsehood if I said that. When I go out of my room I know that I shall just do the same as I have been doing all day." But the blessed Spirit would not let her rest, and at last she made up her mind to obey this command, and to "reckon" herself, on that authority, "dead to sin."

She turned to Galatians, 2: 20, where Paul says, "I am crucified with Christ: nevertheless I live; yet not I, but Christ liveth in me: and the life which I now live in the flesh I live by the faith of the Son of God, who loved me, and gave himself for me." She repeated it over and over, and although she could not understand it, she claimed it by faith continually, and asked the Lord continually to enable her to understand it. She went to sleep doing it, she got up in the morning doing it, she did it as she went down stairs. "But how will it be," she thought, "when I get into the dining-room?" But she went into the dining-room saying it, and went through her breakfast saying it, and the Lord made it true—she was dead to her old temptation.

After breakfast was over her mother said to her, "What is the matter with you; has anything happened? You seem to be so happy." She replied that it seemed as if her soul had sailed out into heaven. Since then, for three years, she has been living the overcoming life, reckoning herself dead to sin and alive to God in Christ; and not for a moment has the old temptation troubled her. Any Christian can do that, no matter what his present condition may be. At the very moment when he is in the worst possible condition he stands most in need of it, and God's Spirit stands ready to help.—*King's Highway.*

### Sunday School Statistics.

Sunday School statistics are furnished in the report of the recent Atlanta International Convention as follows: The enduring foundations of the Sunday School were laid in Gloucester, England, in 1780, and four years later the first school was opened in London, though in the meanwhile, schools had been established in other parts of England. In nine years the number of Sunday School scholars in the British Isles was 300,000.

The first school in the United States was established in New Jersey in 1786. The statistics show that in 1851 there were about 2,400,000 pupils in Sunday Schools in England, 300,000 in Scotland, 275,000 in Ireland, and 3,000,000 in America. By 1880 the United States had 6,800,000 Sunday School scholars, and 932,000 teachers. At that time the number of Sunday School scholars in the world was 12,000,000. The statistics for 1890 show 704,000 teachers, and 6,685,000 scholars in the United Kingdom, and 1,100,000 teachers and 8,345,000 pupils in the United States. Canada had 57,000 teachers and 490,000 pupils. The totals for the world were 1,996,000 teachers and 17,720,000 pupils.

It is estimated that at present the number of Sunday School teachers in the world is not less than 2,500,000, and the number of scholars 22,000,000. A World's Congress of Sunday Schools is to be held in London next year, which will probably give a fresh impetus to this branch of religious work.

*The Watchman* (Baptist).

### Reaction from Radicalism.

Rose Hawthorne Lathrop, daughter of Nathaniel Hawthorne, has just entered a Roman Catholic sisterhood. The daughter of T. W. Higginson, the radical, is a ritualistic Episcopalian. Action and reaction are manifest in the life history of many an old New England Puritan family, the recoil of one generation from Calvinism breeding a recoil from radicalism in the next generation, and landing the grandchild in the fold where all thinking is done by proxy, and the layman has but to trust implicitly to the priest.—*The Congregationalist.*

### Power of a Good Example.

We can recommend the church by our own manner of life. Just as a worldly, frivolous, or unchristian behavior reflects discredit upon the church to which we belong, so a saintly life, full of good works, sheds lustre upon it, and leads "them that are without" to think better of it. We can also recommend it in words, as opportunity offers—doing so, as is always best, without intrusiveness, but seizing any suitable moment to speak well of it.

*The Examiner* (Baptist).

### Proselytes from Judaism.

The *Mission World* says there are in the Church one hundred thousand proselytes from Judaism, and in the Church of England alone two hundred and fifty of the clergy are either Jews or sons of Jews. The Gospel is proclaimed in more than six hundred pulpits of America and Europe by Jewish lips. Over three hundred and fifty of the ministers of Christ in Great Britain are stated to be Hebrew Christians.

## Miscellany.

### He Knew too Much.

"I'm convinced that seasickness is largely a matter of imagination," said the captain of a steamship in the Central American trade. "Strong-minded, determined people are very rarely affected, but those who believe in advance that they are going to be ill are never disappointed. Years ago, before I got my present berth, I had a billet on the Ocean Steamship Line going out of Savannah, and our steward enjoyed a great reputation for his wonderful cures of seasickness. His scheme, which he confided to me, was to mix up a little salt and water in a vial, and direct the patient to take a teaspoonful every fifteen minutes. 'This is a very powerful drug,' he would say impressively, 'and directly after taking the fourth dose all traces of nausea will disappear.' In nine cases out of ten the treatment worked to a charm, and he raked in numerous fat tips. Last season one of our passengers for Port Cortez was a gentleman who had sprained his ankle, and who went directly to his cabin without my seeing him. The first day out he got deathly seasick, and I concluded to try the efficacy of the salt and water treatment. I mixed up the dose and found my patient lying in his berth groaning, with his face to the wall. 'I have a certain cure for your trouble,' said I, giving him the usual preliminary talk. 'It's a very powerful drug, and after you take four teaspoonfuls you may rest assured that your nausea will instantly vanish.' He turned as if he had been shot, and glared at me like a maniac. 'Good Lord!' he groaned. 'It's the same old gag!' and with that he grabbed the bottle and threw it through the dead-light. The man had a heavy black beard, but the moment I heard his voice I recognized him as our old steward on the Savannah line. He couldn't be cured. He knew too much."

*Times-Democrat.*

### Finds the new King David.

Lieutenant C. A. L. Totten, United States army, retired, formerly Professor of Military Science at Yale, believes he has traced a direct line of descent from King David of Biblical times to the little son of the Duke of York. According to Professor Totten, if this boy, the third in line of succession to the throne of England, ever becomes King he will be the long-expected King David, who is to come into the world to gather the Hebrew race from the four corners of the earth, and to solidify again this scattered people.

In speaking of his theory, Professor Totten said,—

"The heir of the Duke of York, if he ever comes to the British throne, will rightfully be called King David. He has always been called David. His full name is Albert Edward Christian George Andrew Patrick David. There is more to this matter than a mere name, for the Prince can trace his descent back to David himself, and that is where the significance comes in, for it is well known to Biblical students that there is to be at the termination of these times and the beginning of the next age a King David raised up to solidify the original empire of the Hebrews. His descent from King David can be traced by several lines. I have compiled most of this from Grimaldi's 'Queens of Royal Descent from King David, the Psalmist.'"

Professor Totten furnishes a long list of rulers extending back to Adam, and concludes by saying:

"This gives us 153 generations from Adam to Prince David, or 150 to Queen Victoria.

"Now, 150 generations at about forty years each is six thousand years, just about the time demanded by the Bible for the Adamic line down to the new age."

*Exchange.*

### A New Title.

A great popular preacher of the late eighteenth and early nineteenth centuries was William Huntingdon, S.S. He explained his title thus: "As I cannot get D.D. for want of cash, neither can I get M.A. for want of learning; therefore I am compelled to fly for refuge to S.S., by which I mean, 'Sinner Saved.'"—*Selected.*

## Notices.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1.

### The Board of Education.

Requests for application blanks for the next examination cannot be complied with until due notice is given through our publications, as announced in the *Sentinel* of January 19, 1899.

### Clerk of the Mother Church.

All correspondence with the clerk of the Mother Church on matters pertaining to his office should be addressed to WILLIAM B. JOHNSON, C.S.B., 30 Norway St., Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SELF-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months: Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy or more, each, 10 cents; 12 copies to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

October 14 was Dewey day in Boston. The Admiral arrived on the afternoon of the 13th, and was escorted to his hotel by three thousand veterans, representing two wars and every branch of the service. Immense crowds filled the station, and the streets were rendered almost impassable. It is estimated that fully fifty thousand people witnessed the pyrotechnic display on the Common on the evening of his arrival. The Daughters of the American Revolution presented him with a magnificent floral piece fully four feet high. The flagship Olympia had arrived in Boston harbor several days previous, and was the object of great interest, being continually thronged with visitors.

Saturday, October 14, was the great day. Twenty-five thousand school children gathered on the Common and sang patriotic songs. The feature of the day was the magnificent parade. The Admiral was presented with a sword and a handsome watch, the gifts of the city. The day closed with a banquet given by Governor Wolcott in honor of the occasion. The Admiral left Boston for Washington, on Sunday, at 7 P. M.

In his speech at Minneapolis upon the return of the 13th Minnesota volunteers, President McKinley declared in a much more comprehensive and emphatic manner than he did in his Pittsburg speech, the policy of the administration regarding the Philippines. He declared the future of the new possessions to be in the hands of Congress, and Congress is the servant of the people. He believes the islands will be retained by the United States, and will prove a rich and invaluable heritage.

Rear-Admiral Schley's flagship, the cruiser Chicago, will start for Cape Town, South Africa, soon after October 25. The cruiser Montgomery will also go to South Africa, and if necessary, in case of war between the British and the Boers, the marine detachments of these two ships will be sent overland to protect the United States consulates at Pretoria and Johannesburg.

General Otis has adopted the following scheme of local government for all cities and towns in Luzon occupied by American forces. In each town there shall be a municipal council, composed of a president and as many representatives as there may be wards in the town, which shall have charge of municipal affairs. The officers shall be natives elected by the people, and shall hold office for one year.

A member of the Panama Canal Commission says the company will never complete its work, as it is too big an undertaking for private capital. The company has already spent more than twelve million dollars on the project, and estimates that one hundred million dollars will be required to build the canal. The company, he says, is willing to sell to the United States.

The members of the committee of the Isthmian Canal Commission, who went to Paris to study the work of the Panama Canal Company, have returned. They also visited the Kiel canal and the North Sea canal, Amsterdam. The committee will go to the Isthmus in the near future and will spend the winter there studying the situation and going over the ground.

It is reported that ex-Speaker Reed said in a recent interview that his retirement was not due primarily to any professional opportunity which offered itself. He was totally out of harmony with the administration on the Philippine policy. He chose rather to return to private life than to become an element of discord as a party leader.

The corner-stone of the new Federal Building at Chicago was formally laid by President McKinley, October 9. In the evening, a magnificent banquet was held in the Auditorium. Addresses were made by President McKinley, Premier Laurier of Canada, Vice-President Mariscal of Mexico, and prominent men of our own nation.

The American Female Guardian Society recently adopted resolutions read by Miss Helen M. Gould, protesting against the seating of Brigham H. Roberts, elected as congressman from Utah, and urging all men and women to use their influence with their representatives to prevent Roberts taking his seat.

The International Commercial Congress was formally opened at Philadelphia, October 12, 1899. Distinguished representatives of nearly every nation of the earth were present. Assistant Secretary of State, David J. Hill, represented President McKinley and welcomed the foreign delegates.

Justice Brewer of the Supreme Court of the United States, says the trouble with most Americans is the lack of full information upon which to formulate a future policy toward the Philippines. He also says he is glad the responsibility of dealing with the islands does not lie with him.

Information is received from London that an agreement has been reached by which the Alaskan boundary issue is settled for a time. A line drawn across Chilkat pass will prevent local friction, but the settlement of the original contention seems to be as far off as ever.

Judge William R. Day, who was president of the American Peace Commission, says that the payment of twenty million dollars indemnity to Spain for the release of the Philippines was just, as the United States had no right to these islands as a matter of conquest.

Senator Hoar has returned from his trip abroad. He brought with him as a relic a black oak door that had hung for three hundred years in a house in Gloucester, where Charles Hoar, a direct ancestor of the family, lived. The door will be hung in the senator's home.

Chicago's fall festival was pronounced a success in every respect. The most spectacular out-door feature was the parade of all nations, in which representatives of fourteen nations took part. Twenty-five thousand men took part in the great civic parade.

The Young Peoples' Christian Temperance Union has been organized at Chicago. The new society pledges itself to secure one million votes for the Prohibition party and to collect one million dollars or more if necessary, to save the Woman's Temple.

By the retirement of Rear-Admiral Howison, Rear-Admiral Sampson becomes number nine in the list of eighteen rear-admirals. He is thus promoted to the first half of the list, and his pay is increased two thousand dollars a year.

General Funston and the Twentieth Kansas arrived at San Francisco October 11. General Funston said that some of the Philippine natives were very intelligent, but he does not think they are capable of self-government.

October 12 was Dewey day in Vermont. Admiral Dewey's native state. His welcome at Montpelier was a magnificent affair. Governor Smith presented the medal which the State had enacted should be given him.

A St. Joseph, Mo., packing house recently received from a London firm an order for three hundred and fifty thousand pounds of dressed poultry. One hundred thousand chickens will be necessary to fill the order.

To a note from the Pope requesting her to use her influence with her ministers in the direction of peace, Queen Victoria replied that it was beyond her power to interfere with the prerogatives of the ministers.

Zolnay's bust of Edgar Allan Poe was unveiled at the University of Virginia, October 7. No purely literary event in the South in recent years excited so widespread interest.

General Funston predicts the end of hostilities in the Philippines by next March. He says the Americans should be aggressive, and not temporize.

The formal declaration of war between the Transvaal and Great Britain was made at ten o'clock Thursday morning, October 12.

Admiral Dewey has chosen J. W. Crawford to be his official secretary. Mr. Crawford will hold the rank of lieutenant in the navy.

Agoncillo is in Paris, and has been given full power by Aguinaldo to negotiate for the release of Spanish prisoners held by the natives.

The Michigan law providing for the licensing of barbers in all towns of over ten thousand inhabitants, has gone into effect.

President McKinley attended three services in Chicago on Sunday, October 8, at one of which he addressed the colored people.

Seventy-three million dollars is the amount Congress will be asked to appropriate for the navy for the year 1900.

Mr. Montagu White, the consul-general of the South African Republic in London, closed the consulate, October 11.

At a depth of sixty-four feet a bed of the best quality of asphaltum, four feet deep, has been found at Logansport, Ind.

Six attempts to sail the first America's cup race proved failures. Fog and lack of wind was the trouble.

It is reported at Washington that the press censorship at Manila has been abolished by the President.

Rear-Admiral Sampson has retired from the command of the North Atlantic Squadron.

Paris has 2,685 newspapers, 142 of which are daily.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Talking Across the Sea.

It is only five years since we first heard of a wonderful Italian boy who was erecting poles on his father's estates in Italy with a view to establishing electric communication between them without wires. Of course the experiments excited considerable curiosity, but nothing particular was thought of them. The next we heard of him the young Italian was in England trying some experiments on Salisbury plain for the amusement of the troops and spectators. All the while little was thought of it until he began some more ambitious experiments along the shores of the English Channel by way of sending dots and dashes on board ships anchored off shore. Then it began to dawn upon the scientific world that there was a valuable idea in the experiments. Wireless telegraphy had been born.

But even then it was believed that the limitations were such as to make the invention only partially valuable. Since then Marconi has already succeeded in transmitting the tiny sound made by an electric spark a distance of thirty miles. During the recent British naval manœuvres messages were sent between ships eighty miles apart. It was here that it was found that mountains, high buildings, steel masts, etc., do not stop communication. Marconi while in Bantry Bay was able to talk with a ship lying many miles away and separated from the place of the trial by a chain of hills hundreds of feet high. The curvature of the earth has also been discounted.

Of course inventors are not telling all they know for publication, but it is announced that after many experiments Signor Marconi has found a solution of difficulties that at first seemed insurmountable. It is said that a modification of his system has been completed and has met every test except that of actual practice over a long distance. Theoretically the problem is solved, and it is not unreasonable to suppose that some time during the coming winter wireless messages will be sent a distance of several hundred miles.

And if messages can be sent without wire for, say three hundred miles, why not for three thousand? Signor Marconi proposes to forward messages from Lands End to the coast of Spain. In these experiments results will be disclosed that will determine the feasibility of sending a message over three thousand miles. Of course Marconi cannot tell until the actual test is made, but, so far as the theory is concerned, messages could be sent across the Atlantic without any great change. In fact, it is within the bounds of possibility that a wireless message may be sent across the Atlantic as early as next spring.

Such are the wonderful results that have been developed out of five years of experimenting. And it all originated in the mind of an Italian boy while studying at Bologna University. At first regarded as a scientific curiosity of no particular value, the experiments have now reached a stage of interest where the various governments of the world are anxious to get hold of the young inventor and apply his new knowledge for valuable uses in naval warfare. He has hardly had time to think yet of the wider application of his ideas to "talking round the world," but at any time we may not be surprised to hear that it has been accomplished.

This twenty-six-year-old scientist tells us that we may soon be able to talk across the ocean as easily as across a table. We might think it a mere boast had he not made good all he has promised. Surely life is worth living, if for no more than to watch the marvelous things that electricity is going to accomplish within the century soon to dawn.—*Boston Daily Globe.*

### Marconi's Great Invention.

Wireless telegraphy is destined to play an important part in the every-day life of the future. This is the consensus of expert opinion as gathered from many leading electricians, including Thomas A. Edison and Signor Marconi. Unable to supersede telegraphy by wire or the submarine cable, since there can be no general guarantee of secrecy for the despatches, and its operations are at present limited to short distances, the wireless system will yet occupy a field which these other methods of transmission by electricity cannot fill.

"What the limitations of the wireless telegraph will be I would hesitate to predict," said Signor Marconi recently to the question of a reporter. The inventor continued, "Two years ago one of the most learned electricians in all England said that beyond a distance of half a mile wireless signals could not be exchanged. At that time I had been successful at a greater distance, but I was then of the opinion that the limit would be about ten miles. Now we are operating between stations one hundred and ten miles apart. In the very near future I will have ready what is known as the deflector. It is already well perfected, but for personal reasons I have not yet given it to the public. By its means ships will be able to make their way through fog or storm to safety. My plan is to have all ships equipped with signalling machines and deflectors. It will then be possible to send the signalling currents all in one direction, instead of broadcast, as is now done. The deflectors will be revolved about the mast, and as the currents reach the point from which they are sent to the receiver an indicator will ring and the pilot may steer his vessel along a safe course, being guided by signals from shore.

Speaking of the use of the wireless system in warfare, Signor Marconi said, "Great Britain has already equipped eight ships of her Channel squadron with apparatus which I have supplied. Now Germany is experimenting, and, I am given to understand, has decided to make use of the wireless telegraph in the army and navy. Just as soon as the yacht races are completed I shall proceed with some demonstration for your government. I shall equip two vessels of the North Atlantic squadron and establish one land station; this entirely for experimental work. I cannot tell what the Washington officials expect, but I am assured that an exhaustive demonstration is desired."

Signor Marconi was asked whether he had any knowl-

Digitized by Google

edge of the telediagraph, the invention which is being used to send and receive pictures by wire. "Oh, yes," he said, "I have given it some study, and it is, in its way, wonderful. Like the wireless telegraph it has yet to be brought to its fullest perfection, but even now it is capable of great practical results."

"Could the wireless telegraph be applied to the sending of pictures?" "Certainly. Given time sufficient for the installation of the plants, and I would guarantee to transmit through the air a picture perfect in outlines."

Professor Thomas Edison was asked by a reporter what he thought of the system of wireless telegraphy. He replied, "Marconi has succeeded where I failed." Mr. Edison added, "There is certainly a great future ahead of wireless telegraphy. What that future may be no one can say. It would seem as if we were approaching the limit; but then, so it was thought a long time ago. What that limit will be no one knows. Mr. Marconi has proved that the electrical waves can be jumped around the curvatures of the earth, and this has heretofore been an insuperable obstacle. With this accomplished, there is apparently no end to the distances that can be overcome. So far it seems as if about two hundred miles were the limit, but yet even that distance may be as nothing in the future."

"Is the system a new one, or is it only an adaptation of old principles?" "The idea is not new, and others have been experimenting along that line. I had patents out on this line long before we heard of Marconi. I tried experiments at Menlo years ago and kept at it for a long time, but I could not get over the obstacle of the curvature of the earth, and about two miles was the limit that I could reach. Telegraphing from moving trains was the line of my invention, but I and all others ran up against obstacles that could not be overcome."

"What is your estimate of the practical value of the invention?" "Well, it will prove of great value in a maritime direction, but I cannot see that, as at present developed, it will be of much value in land operations. The system can be made of great practical use in sea service by stationing vessels or tugs a certain number of miles apart, but near enough to each other to come within the sphere of electrical influence. In this way lines of communication could be established for a thousand miles or more."

*Boston Evening Transcript.*

## How Dewey Allowed for Contingencies.

"I EXPECTED a gale. I allowed for that, but we didn't get it. That's why we are early."

Here is a man who, not only having something to do, does it, but makes allowance for things that might interfere with his doing it. He did not simply allow a certain time to get to a certain place. He allowed for contingencies. Another little fact has come out that may have escaped attention in the admiral's remarks—namely, that he came across with one engine and one propeller. Thus not only did he have necessary machinery, but he had an engine and a propeller to spare. So he not merely started on time, but made provision, in case machinery should break down, for spare machinery that would carry him. And he scheduled his journey so that, in case a gale should come up, there would still be margin enough for him to be on the spot when expected.—*Indianapolis News.*

*Zion's Herald* says, "The secular spirit, the greedy grasping after money, the weighing everything in the balance of gold, the measuring of ministers by the amount of salary they can secure—these things are alarmingly common among us."

## In Defence of Christian Science.

*To the Honorable Board of Aldermen.*

*Gentlemen:*—You are asked by our city's Health Commissioner to pass an ordinance compelling all "healers" to report certain diseases to him. He has publicly confessed before your Ordinance Committee that his purpose in seeking this legislation was to compel Christian Scientists to conform to prevailing medical methods. This question of medical censorship may seem a very small matter to you, but it involves a very great question with us. We do not question the methods of our Board of Health so far as applied to the practice of medicine. We do object to having medical methods applied to the Christ method of healing all manner of diseases. Just so long as the plagues to which flesh is heir remain obscured by reason of ignorance of the mental condition that always precedes the physical occasion, just so long will plague germs be prevalent and boards of health necessary to restrain the careless, warn the fearful, and protect the public from their spread. All diseases are more or less communicable. Our daily newspapers offer ready vehicles for the mental contagion to communicate itself in what they mirror of the world's evils. Disease and sin are one in nature. Disease is no more communicable to us or from us than is sin, when we understand the laws of metaphysics and apply them to rendering it powerless. The Bible teaches the Christian Scientist that our Master came and taught us the mastery of good over evil; that we are neither to fear evil nor believe in its power over us, but to cast evil out of ourselves and others born in its moral and physical aspects—to become their masters through spiritual consciousness and not remain their servants. He said to all true disciples, to you and to me: "Behold, I give unto you power . . . over all the power of the enemy: and nothing shall by any means hurt you." Do you not believe it possible that his words can be proven true?

You all know that some vices are more readily communicable than others. It is the same with some diseases. Christian Scientists are not ignorant of the fact that the public needs protection and should have it. What we claim is this: A restrictive health ordinance is to physics precisely what the Mosaic law is to morals, viz., a negative preventive against the development of many evils. Experience shows us that a non-restrictive obedience to the rules of Christian Science or divine metaphysics fulfils the whole law—the law of good morals, the law of good health, and the law of good ethics; and this, too, without making public property of the patient's particular sin by which he has fallen or the special disease by which he has fallen into sickness. Our system of healing the sick and reforming the sinner, while wholly based upon Scriptural authority, is not to-day generally understood, but the time is very near when it will be better known and universally recognized and respected. If as a system of healing it finds opponents, this is because, like homœopathy, the invisibility of the mental potency hardens the hearts of some while healing others into rest and peace.

Gentlemen, I call your attention to the fact that the entire system of the Christian religion rests upon the testimony given by not more than five hundred people who lived two thousand years ago. Aside from this evidence the system stands on its own merits. To-day an innumerable multitude firmly believe that God is able to raise even the dead. In all fairness, therefore, ought not the testimony of these people now before you, whose testimony may be augmented by nearly a million in our land who are living witnesses ready to testify that they have been raised, many of them from hopeless maladies, be overwhelming evidence that God can raise the sick to health through Christian Science? Yet they will all tell you that they were healed through burying the disease out of sight

Digitized by Google

and hearing and not by placarding it before the public. In the preaching of our gospel, which heals all manner of sickness, it has become well known that our methods differ radically from the time-worn practices of the faith-curist, the evangelist, and the physician, but we shall neither harm them nor the public. We shall do them good. What we now ask of you, honorable gentlemen, is simply to decline to pass an ordinance which threatens interference with the rules of our system and with our religious convictions on the question of right-doing until such time as, by the exercise of our Christian liberty, it becomes evident that we endanger the public health beyond what our medical friends do who profess conformity to the ordinance already in force. E. R. HARDY.

*Buffalo (N. Y.) Express.*

## Injured by a False Belief.

ONE of the strangest defences ever offered in a court is that made by the Edison Electric Illuminating Company, of Paterson, N. J., in a suit against it which is now on trial. The plaintiff is Berthold Frankel, a salesman, who alleges that during a storm he was struck by a falling arc light wire in Broadway, and seriously injured. He was taken to the General Hospital at the time and was a patient there for three months.

It is admitted by all the physicians who have testified that he displayed all the symptoms which usually follow such a shock, but they deny that there was any burn on his body to indicate that he had been touched by a wire. The defence is that Frankel never came into contact with the wire at all, and that his illness after the supposed accident has been due entirely to hypnotic suggestion, the patient being at one and the same time the operator and the subject.

The first witness who indicated this possibility was Charles L. Cuthbert, who witnessed the occurrence. He said that he saw the wire fall and watched it until it ceased its spluttering. Then, supposing that the wire had become dead, he kicked it into the gutter, feeling not the slightest shock. Immediately afterward two men came along under an umbrella, and, although he was satisfied that the danger was past, he warned them about the wire. As they approached it one of them fell to the ground.

Cuthbert swore very positively that neither of the men had reached the wire when one of them fell. Nevertheless the fallen man, who was Frankel, seemed to be injured, and an ambulance took him to the hospital. The lighting company's repair wagon arrived on the scene before the ambulance, the break having been shown at headquarters and the current shut off.

The medical testimony given, not by hypnotists, but by practitioners of the best repute, was the strangest feature of the case. Dr. William K. Newton, who is in the front rank of Paterson's medical fraternity, and who is physician to Vice President Hobert, testified that he examined Frankel at the hospital and reached the conclusion that his illness was the result of hypnotic suggestion.

Moreover, he made several tests that indicated the correctness of the view. He bathed the arms of the patient in hot and cold water alternately, telling him that the hot water was cold and that the cold water was hot. In every case Frankel believed that the water was of the temperature that he was told it was. Dr. Todd testified that he performed a further and more remarkable test. He placed cold water on the arm of Frankel, telling him that it was a powerful acid, and that it would burn. Frankel evidently suffered the greatest pain during the application and for some time afterward.

Dr. P. H. Harris, who is Frankel's own physician, admitted that he sometimes thought that the patient was not really suffering so much as he himself thought. The case, in which much interest has centered, will go to the jury on Tuesday. There is much speculation as to the outcome, and a majority are of the opinion that the unusual defence of the electric company will be effective.

*New York Herald.*

## Supplement to the Sentinel.

THE able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899, is issued as a supplement to this number of the *Sentinel*. The workers in the Field will readily see the wisdom of giving the supplement the widest possible circulation, and the extremely low price at which it is issued will enable them to do so. The price of the supplement is as follow: single copies one cent each, postpaid, to any address; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

## Christian Science History.

THERE is in the hands of the Publishing Society a large number of the pamphlet, "Christian Science History." These should be judiciously distributed. Those who wish more for distribution are at liberty to call for such number as they feel they can use to good purpose. It is not necessary to urge upon the Field the importance of circulating this booklet.

## Resolution.

BY GEORGE HARRY COMMANDER.

THERE is hope for the heart that can suffer,
There is strength in the metal that's wrought,
Though the hope and the tempered perfection,
With vintage of sorrow are bought.

There is power in a deep resolving
To live as our life began,
And mirror the innocence of the child
In the perfect life of the man.

There is peace in the mind that falters not,
Knowing the one right way;
That treads in the steps of Him whose strength
Is the only perfect stay.

There is rest in the faith that admits no doubt,
But o'ercomes temptation's wile.
For the hope, and the power, and peace, and rest,
Are the radiance of God's smile.

## Flowers.

As one might scatter Easter flowers amidst a throng, bringing fond messages of spring and beauty to many a weary pilgrim, though some should miss their mark and, falling, exhale their fragrance beneath unthinking feet; so let us strew with open hand, kind deeds and loving thoughts to all around, and these sweet messages of Love Divine will bring to many a sorrowing heart, to each receptive soul, a gentle peace, a holy aspiration toward the Good; the Beautiful, the True; and though misunderstanding and mistrust may oft reject these proffered blooms of heavenly growth, yet even thus rejected will they leave behind some subtle fragrance of Elysian fields, some sweetly penetrating essence of a Love Divine.

## The Lectures.

### At San Diego, Cal.

Under the auspices of First Church of Christ, Scientist, of San Diego, Cal., A. A. Sulcer, M.D., C.S.B., delivered a lecture Thursday evening, September 28, at Fisher Opera House, to a large and appreciative audience. The speaker took for his theme "The Science of Christian Science," handling the subject in a masterly and convincing manner, especially emphasizing its higher mission of cleansing from sin as well as the healing of merely physical ailments.

The speaker was introduced by C. Henry Clark, First Reader of the church, who spoke as follows:—

*Ladies and Gentlemen:*—Your presence here to-night shows that the subject upon which the speaker will address us has met with enough consideration upon your part, to awaken a desire for more light upon it. It is for the purpose of meeting this sober inquiry with reliable information that able lecturers have been placed in the Field who are qualified to speak upon this subject.

It is but natural that grave errors should be entertained by many upon the subject of Christian Science, since their only knowledge of it in many instances has been obtained from those who without the slightest understanding of its true teaching have sought to ridicule and condemn it.

To clear away some of these false impressions, as well as to present some of the logical reasons and Scriptural authority for its deductions, is the purpose of this lecture.

Christian Science, like every other great reform movement, has had to meet the hostility of the existing systems, and if it has forced the world to recognize it, and is to-day commanding respect, it has done so in the face of intensely hostile opposition.

A system having for its purpose the betterment of humanity, physically, mentally, morally, and spiritually, and that is able to show satisfactory results in confirmation of its claims, should receive the encouragement of all who desire these ends to be gained, even though it depart from the beaten path of time-honored systems.

It certainly needs no argument to establish the fact that there is a need universally felt for something that will establish better health, better morals, purer lives, happier homes, and a more equal and universal distribution of prosperity.

Our present systems of medicine, religion, and education, have been striving for centuries to accomplish these ends. They have neither lacked in talent, in zeal, in consecrated devotion, nor in opportunity; nor have they altogether failed in their efforts, and all praise is due to the noble army of devoted men and women who have consecrated their lives, their means, their talent, their prayers to the alleviation of suffering and sorrow, and the eradication of sin and crime in the world. But may we not reasonably ask in view of the facts which we meet on every hand, Are the results obtained the best for which we can hope? Are the systems in vogue the fullest expression of wisdom obtainable? Are we truly following the example of the great Galilean teacher to whom all Christendom turns as the exponent of God's will and purpose to man? Has our Christianity reached the zenith of the glorious work for which its great high priest and apostle, Jesus of Nazareth, laid down his own life, that we might obtain the great possibilities of which his Gospel gave promise? Have we indeed rightly and fully interpreted the means and methods employed by this meek but mighty Son of Man, and fully availed ourselves of all his words and works imply as being within our reach, and the scope of our application?

Full well do I apprehend your answer, since these questions touch a chord down deep in the heart of every honest seeker for Truth that vibrates in unison with an earnest yearning for a greater fulfilment of the promises of the Master, and which our own higher natures echo, and I need not say this answer is echoed more clearly and more sincerely by those who stand in the ranks of the medical profession and the clergy, than anywhere else, for no others see so clearly their own limitations, or feel so keenly the need of a greater power to cope with the foe they combat. Because of this fact, the gentleman who is to speak to us, who for twenty-five years stood as an honored member of the medical profession, was led to the serious investigation of the evidences of the power for good of the system discovered and founded by that God-fearing and humanity-loving woman, Mary Baker G. Eddy, set forth in the text-book, "Science and Health with Key to the Scriptures," and known as Christian Science.

What have been the results of his investigation, and the conclusions he has reached after years of practical test as to its scientific truth, and its practical application to the alleviation of all that mars man's happiness and health here and now, I leave him to answer. I have now the honor of introducing Dr. Abraham A. Sulcer of Riverside, Cal., who will address you.

C. H. C.

### At Bloomington, Ill.

A large audience assembled at the Coliseum Tuesday evening, September 26, to hear a lecture on Christian Science delivered by the Hon. William G. Ewing of Chicago.

The speaker was introduced by Edwin O. Ropp, Second Reader of First Church of Christ, Scientist, of this city.

The introductory address was as follows:—

From time immemorial a burdened world has sought freedom from human ills. Philosophers have reasoned, seers have watched, and prophets have prayed. In answer to these prayers, the Supreme Being gave to the world Christ Jesus, who gained the victory over all evil, and lifted the veil on Life eternal.

While mortals usually acknowledge the grandeur of our Master's career, yet many still believe it impossible to emulate his glorious example.

During this present age, the Supreme Being gave to the world Christian Science, wherein it is proved that the Principle by which ills are destroyed, is the same to-day as it was in the day of the Nazarene. To give to those who wish to see, what "many prophets and righteous men have desired to see . . . and have not seen," a glimpse into the vast realm of Christian Science,—an International Board of Lectureship has been established by this denomination. The speaker of the evening is a member of this Board of Lectureship. Having formerly lived in this city, he needs no introduction to a Bloomington audience.

In a letter to those having this lecture in charge, the lecturer stated that he anticipates much pleasure in discussing this question at his old home with the earliest and warmest friends of his life, and I am confident that the people of this community are glad of the opportunity to give him a warm welcome. I have the honor of presenting to you Judge William G. Ewing of Chicago.

E. O. R., Clerk.

### At Atchison, Kan.

Christian Science is becoming so widely talked about and thought of in this day and age, that it has become almost a necessity to the thinking people everywhere to know something about it, and it was for this reason that an audience composed of our best citizens filled the Opera House Monday evening, October 2, to listen to a lecture on Christian Science by Edward A. Kimball of Chicago. Mr. Kimball impresses one at once as being a gentleman and a scholar, one who handles his subject in a way that shows that because of personal benefit in the way of healing, when all else had failed, he has unlimited faith in its possibilities; that he has given the subject the most careful thought and

Digitized by Google

study, and that he firmly believes that humanity stands at the door of a great revelation. He discussed the subject both from a scientific and a Christian standpoint, and handled it in a very able manner. The speaker was introduced by Mrs. Hattie E. Graybill, First Reader of the First Church of Christ, Scientist, of this city.

*The Atchison Champion.*

### Lectures at Other Places.

Plymouth, Mich.—William G. Ewing, Monday, July 24.

Whitehall, Mich.—William G. Ewing, Thursday, September 14.

Wichita, Kan.—Joseph R. Clarkson, Thursday, October 5.

Cleveland, O.—William G. Ewing, Thursday, September 28.

West Superior, Wis.—William G. Ewing, Sunday, September 17.

## Among the Churches.

### A Third Temple in Chicago.

Plans have been furnished for the new temple of the Third Church of Christ, Scientist, which is to be erected at the southeast corner of Washington Boulevard and Leavitt Street. The edifice when completed will be one of the most beautiful of its kind in the city. It will be spacious, comfortable, even elegant in furnishings, and in all will present an effect of purity and simplicity particularly expressive of the principles for which the building is to stand and the uses to which it is to be put. The building will have a base course of gray granite, above which the walls will be of a delicately colored, dull-finished enameled brick, the cornices and the architectural features being of enameled terra-cotta of a creamy white color, and the columns at the main entrance monoliths of white marble. The ground for the foundation will be broken as soon as the contracts can be let. Work on the superstructure will be directed with all care and not hurried, as it is expected to take fully a year to finish it and have it ready for the pew-holders. The size of the building over all will be 110 by 95 feet. The main auditorium as designed is to be 82 by 104 feet. The seating capacity will be between thirteen and fourteen hundred people.

The exterior of the building will present an effect of classic simplicity, the forms throughout chaste and restrained even to the point of severity, the color soft, mellow, and varied, as the surfaces vary from a broad, simple wall to a delicate bit of fanciful detail. The four walls rise straight and unbroken to the main cornice in the form of a square, above which are the clerestory walls, supporting the roof, which is in the form of a cross. This form, the cross within a square, is the *motif* of the design throughout; the auditorium, with its vaulted ceilings, being in the form of a cross, and the four corners of the square being occupied by the staircases.

No trace of the ancient styles of ecclesiastical architecture appears in the design, the effect being rather to express the modern auditorium with its wide-spanning, vaulted ceilings, in a manner lofty and inspiring. The lower floor is to be occupied by a large and roomy lobby, such as the foyer of a theater, supplied with fireplaces and comfortable seats. Out of this foyer five broad staircases lead upward into the auditorium, which, with its wide-arched ceilings and great semi-elliptical windows, will give an effect of extreme breadth and simplicity. Here again color is to play an important part, and the intention is to decorate the walls and the ceilings in soft blues, sea green, and cream white, which, when toned through the opalescent glow of the windows, will give to the interior an effect at once restful, quiet, and luminous.

In addition to the auditorium and the foyer the building will contain rooms for Sunday School, committee meetings, and for the accommodation of the Readers. There will also be coat and bicycle rooms. All the minor requirements of a thoroughly modern building have been carefully provided for. The decorations of the exterior and the interior are to be based entirely on themes suggested by the teachings of Christian Science, and these decorations, taken with the originality of the forms and materials, combined with the free use of color, will give the building a strong local character, making it unique among houses of worship and noteworthy in an architectural sense among Chicago buildings.—*Times-Herald.*

### Churches in New York.

Plans for another handsome church edifice for the Christian Scientists in New York City have been filed by Architects Carrere and Hastings. The structure, which is to be of granite, will be 98 feet wide and 140 feet deep, located on the northwest corner of Ninety-sixth Street and Eighth Avenue, facing Central Park. The ground bought several weeks ago cost one hundred and sixty-five thousand dollars, and the building is estimated to cost over one hundred thousand dollars.

This edifice is to be used by the First Church of Christ, Scientist, now holding services at 137 and 143 West Forty-eighth Street, formerly used by Rev. Heber Newton. They are said to have a congregation of nearly one thousand.

The white marble edifice of the Second Church of Christ, Scientist, now being built at the corner of Sixty-eighth Street and Eighth Avenue, also facing Central Park, is nearly completed and is to be dedicated in November. This structure has already cost two hundred thousand dollars, but will require considerably more before completion. There are in all four Christian Science Churches in New York City.—*Sun,* Baltimore, Md.

### Christian Science Temple at St. Joseph, Mo.

Work on the Christian Science Temple was begun some time ago and the large foundations are now ready for the imposing superstructure. The site is at Twelfth and Felix Streets, and is a beautiful one. The edifice will be one of the most imposing in St. Joseph, will be of stone and carved trimmings, and will have a large and splendid auditorium in addition to various class rooms and other apartments to meet the requirements of those who will worship there.

*St. Joseph Daily News.*

### Organization at Little Rock, Ark.

For some time past the Christian Scientists in Little Rock have been holding services in the Whipple building, Fourth and Scott Streets. They have now perfected an organization and filed in the secretary of state's office articles of association.—*Gazette.*

"God asks and the world needs light, not lightning," says the *Congregationalist,* "a steady glow and not a sudden glare." "Our light is a reflected light—we shine best when we are looking at the Sun of Righteousness."

Even the Saviour of men, without courage, would have been zero. His gentle valor of heart was the force that revolutionized the world.—*Boston Evening Transcript.*

He who knows not how to be true to himself cannot be true to others.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## Assignment of Copyright.

AN assignment of all right, title, and interest of Mrs. Mary Baker G.Eddy of Concord, N. H., in and to the copyright of all her books, to Mr. Edward A. Kimball, is of record in the office of the Librarian of Congress in Washington, D. C.

## A Correction.

BY MARY BAKER G. EDDY.

IN the last *Sentinel* was the following question: "If all matter is unreal, why do we deny the existence of disease in the material body and not the body itself?"

We deny first the existence of disease, because we can meet this negation more readily than we can negative all that the body affirms. It is written in "Science and Health with Key to the Scriptures:" "There are degrees in the material or human belief, and a harmonious belief is one step out of error; a belief of health is an improvement on a belief of sickness."

Thus it is that our great Exemplar, Jesus of Nazareth, first takes up the subject. He does not require the last step to be taken first. He came to the world not to destroy the law of being, but to fulfil it in righteousness. He restored the diseased body to its normal action, functions, and organization, and in explanation of his deeds he said, "Suffer these things to be so now, for thus it becometh us to fulfil all righteousness." Job said, "In my flesh shall I see God." Neither the Old nor the New Testament furnishes reasons or examples for the destruction of the human body, but its restoration to life and health, as the scientific proof of "God with us." The power and prerogative of Truth are to destroy all disease and to raise the dead—even the self-same Lazarus. The *spiritual* body came with the *ascension*.

Jesus demonstrated the divine Principle of Christian Science when he presented his *material* body absolved from death and the grave. The introduction of pure abstractions in Christian Science without their correlatives leaves its divine Principle unexplained, tends to confuse the mind of the reader, and ultimates in what Jesus denounced, namely, "straining out gnats and swallowing camels."

## Reforms.

ULTRA-CONSERVATISM has never established reforms and never will do so. Finical adherence to traditionalism and conventionalism has never been characteristic of the reformer, and, in the nature of things, cannot be. Reform is radical. Its mission is to break down the traditions and conventionalities which have crystalized into such shapes that, although wrong and delusive, they have the semblance of right and reality. History clearly proves this. By way of illustration we instance the delusion of African slavery in this country. Its history is of such recent date as to take from it the taint of antiquity that would place it on the shelf of the forgotten, and thereby detract from its value as an instructive lesson.

This monster delusion even took on the character of a religion, and its existence was stoutly and conscientiously defended on Scriptural ground. The radicalism and violent disregard of private feeling and personal rights, of time-honored usage and long-established custom and belief, on the part of those bringing about its abolition, are well-known matters of history.

What is true of one kind of reform, is in some sense true of every reform, although there is a higher law of reformation than that expressed in war and bloodshed. The law of divine Love, even though appearing to human sense as coming out of Sinai amidst thundering and lightning, is the only true reformatory power. Its ultimate effect is the destruction of sin, and the destruction of sin is the reformation of the human race. However severe may have seemed the Sinaitic law, in its uprooting and destructive effects, as expressed in the Mosaic code, the final outcome invariably proved that it was well-tempered with the milder precepts announced from Olivet in the Sermon on the Mount. Indeed the two are one, for there is but one divine Law.

Tempered as was the Divine law, as interpreted in the Sermon on the Mount, it was misunderstood by the age in which Jesus announced and demonstrated it; the law was rebelled against, and its enunciator and demonstrator was rejected, reviled, and persecuted. The law was too radical, its demands too great, for that sensuous and sleepy age. By reason of such rejection the great reformatory movement which ushered in the Christian era was only partially successful. Its effects were impaired by the sinfulness and sensuality of that age and the succeeding ages, until during the dark ages, so-called, the reformatory light brought into the world by Jesus and his followers had become well-nigh extinguished. The vital spark, nevertheless, remained, and at intervals broke forth into more or less brightly burning flames, revivifying lukewarmness and stupor, startling heavy indifference and dreamy conservatism with its seeming aggressiveness.

Such was the great reformation of Luther, Zwingli, and Calvin, and even reforms of later date and less note.

Preceding these reformations, and that of the Christian era, was the great reformation inaugurated by Moses. The conditions attendant upon the Mosaic reformation, as set forth in the Scriptural narrative thereof, furnish a perpetual object lesson for every reform, and plainly prophesied of the difficulties and distrust which every subsequent reformer must encounter.

The frequent and repeated murmurings of those whom Moses, by Divine direction, was endeavoring to lead out of bondage into liberty; their impatience and stupidity; their failure to understand Moses and his mission; their constant falling away and rebelling; their utter inability at times to see that Moses was simply the instrument of God in His purpose to redeem them from their slavery; their blindness at times in seeing Moses as a selfish person who desired leadership for the mere sake of leadership; and their repeated attempts at forming cliques and schisms—all this is so graphically set forth as to make it easy to draw inferences and conclusions applicable to the experiences of all great reformers in all ages.

The attempts, too, of certain of those who started out as followers of Moses, to withdraw from his leadership and establish reform movements within his great movement, stand out in striking analogy, especially as related in the sixteenth chapter of Numbers. Our space will not admit of a full exposition of this chapter as it reveals itself to us, but a hasty glance at it may prove helpful and instructive, and a careful perusal of it, will, we know, be beneficial to all earnest searchers after Truth. Let it be distinctly borne in mind, however, that this Bible history has now as much vitality and significance as it ever had, and, as we have said, is but a great object lesson for the guidance of mankind in every age.

In process of time there arose against Moses a trio of

Digitized by Google

malcontents who thought the time had come for them to establish a greater reform than Moses was capable of doing, and to assume to themselves a greater leadership than was possible to him. They fancied they were better able than he to guide the struggling children of Israel out of the wilderness of Zin (sometimes rendered Sin) into the Promised Land. This trio consisted of Korah, Dathan, and Abiram. It is notable that the Hebrew word Korah means "boldness;" well named, surely, was he who led a conspiracy to overthrow Moses' authority.

The trio rose up, with certain of the children of Israel, and said to Moses and Aaron: "Ye take too much upon you, seeing all the congregation are holy, every one of them, and the Lord is among them: wherefore then lift ye up yourselves above the congregation of the Lord?"

Never did a leader strive harder to explain or make recalcitrant followers understand, than Moses. He assured them he was but the servant of God, and that God would show them who were His, and who were holy. He prayed unto Korah to hear him. He said, "Seemeth it but a small thing unto you, that the God of Israel hath separated you from the congregation . . . to do the service of the tabernacle . . . and seek ye the priesthood also?" He then reminded Korah that he and his followers were gathered together against the Lord, not against him and Aaron. He also called Dathan and Abiram to come up, but murmuring against him and forgetting the hardships of their Egyptian bondage, even deluding themselves into the present belief that they never had anything but pleasure and joy in Egypt, they said, "Is it a small thing that thou hast brought us up out of a land that floweth with milk and honey, to kill us in the wilderness, except thou make thyself altogether a prince over us? Moreover thou hast not brought us into a land that floweth with milk and honey, or given us inheritance of fields and vineyards . . . we will not come up."

The trio remaining obdurate Moses thus addressed the congregation: "Depart, I pray you, from the tents of these wicked men, and touch nothing of their's, lest ye be consumed in all their sins." The narrative proceeds: "So they gat up from the tabernacle of Korah, Dathan, and Abiram, on every side: and Dathan and Abiram came out, and stood in the door of their tents, and their wives, and their sons, and their little children. And Moses said, Hereby ye shall know that the Lord hath sent me to do all these works; for I have not done them of mine own mind."

Then follows in graphic Biblical allegory an account of the inevitable result of flagrant and wilful disobedience of God. It is as follows:—

"And it came to pass, as he had made an end of speaking all these words, that the ground clave asunder that was under them: and the earth opened her mouth, and swallowed them up, and their houses, and all the men that appertained unto Korah, and all their goods."

The lesson was not without results, for we thus read: "And all Israel that were round about them fled at the cry of them: for they said, Lest the earth swallow us up also."

Taken into the impersonal this is a most striking description of the destruction of the claims and allurements of the material senses and all that appertains thereto. Ambition frustrated! Would-be leadership defeated! Error destroyed! Truth under divine guidance triumphant! God's glory vindicated!

## Faithfulness Rewarded.

THE truth of the Scriptural words, "Where two or three are gathered together in my name, there am I in the midst of them," has been so beautifully fulfilled at Macatawa Park, Michigan, during this summer's season, that we cannot longer withhold the good tidings from those whom we know will be glad to hear. The first Sunday in June, the lesson from the *Christian Science Quarterly* was read by two ladies from South Bend, Ind., in their cottage at this resort. These ladies are earnest Christian Scientists though young in the work, and are not yet church members.

There were four ladies present at that meeting; the following Wednesday evening an experience meeting was held in the same cottage, at which seven were present: the same number gathered together the second Sunday, at which time one of us was requested to take the place of First Reader, as she was qualified to do so according to the rules of the Church Manual. The number attending our meetings increased so rapidly, that a larger room had to be secured. Accordingly the request for the use of the Auditorium was made to the President of the Macatawa Park Association. We had been advised by many not to do this for three reasons: First, that the Auditorium had been built expressly for an Orthodox Religious Assembly, which convened there every summer for one week; Second, because an Orthodox service was held there Sunday afternoons, also a Sunday School; Third, and especially, because a very strong prejudice seemingly existed against Christian Science. But the demonstration of Love and Truth was so perfect, that when our desire was made known, the President immediately granted our request, by saying, "Why certainly; you can hold your service there in the morning, that is what the Auditorium is for, it was built expressly for religious services, and I understand that Christian Scientists *do pray and sing.*"

In this needful hour, another, who had been working in our midst for two weeks, and one qualified for the work, willingly took the place of the Second Reader when asked to do so by one of the ladies who first started the Sunday service in her cottage. The first service was held in the Auditorium Sunday, July 16, with an attendance of over eighty. The building is beautifully located in the woods between high wooded hills, is roofed overhead and open on the sides, being closed at the end where the platform, organ, and reading desk are placed. The congregation increased in interest and number each week. The Wednesday meeting was held in the afternoon instead of the evening because of the unpleasantness of going through the woods at night. The services were well attended and awakened much earnest interest among the many visitors at Ottawa Beach as well at Macatawa Park.

Each Sunday different visitors were invited to sing for us. Our appreciation of their kindness was expressed by presenting them with a copy of one of the Mother's Hymns. They were always thankfully received, and with one exception these musicians were present at a Christian Science service for the first time. They manifested much surprise at the simplicity and beauty of our Lesson-Sermons, and said they were glad to be there, feeling that it was a privilege for them to sing for us, and expressed gratitude for the blessing they had received. Then from others we had acknowledgments of impersonal healing at the Sunday service and on Wednesdays. Testimonies of healing at that special meeting were given. We were very grateful for the strong support given us by the First Church of Christ, Scientist, in Chicago, and also by the First Church of Christ, Scientist, in Grand Rapids. They each supplied us with Hymnals, and from the Chicago church we received one hundred copies of the *Sentinel* for distribution. We were encouraged by helpful words from the First Church of Christ, Scientist, at South Bend, Ind., and we received from them the Christian Science History (pamphlets) to be given to strangers that were interested. Beautiful flowers in great abundance were received every Saturday night by boat from Chicago, sent by a Christian Scientist who had attended the services here and was deeply appreciative of the work being accomplished. Loving hands entwined these flowers with vines and grasses

Digitized by Google

gathered close by the Auditorium and made the platform, organ, and altar glorious with their handiwork. Many engaged in the happy work of love in the early summer mornings, were not acknowledged Christian Scientists. The flowers were always left as silent messengers of Love for our dear brothers and sisters of the Orthodox churches who gathered there in the afternoon for worship. We were thanked many times and very heartily by different ministers and others in charge of their services.

On one Wednesday afternoon we were asked by one who was assisting in a Sunday School convention (which had just adjourned as we entered the building), to extend our sympathies and prayers for the sorrowing household of one of the ministers, whose wife had just passed away, and whose cottage was close by the Auditorium. Very many earnest expressions of true brotherly love were brought out during the work here, giving evidence that our Father was indeed with His children.

We were ably assisted by one of the Mother's students from Baltimore, who was spending a part of the summer at Macatawa Park, also by his wife, in her loving care and charge of the Sunday School which was started with the opening Sunday in the Auditorium. Seven children were present from one boarding-house on this first day, only one of the number was the child of Christian Science parents. We were greatly impressed with the way Truth overcame every seeming difficulty. The week of the assembly it was thought by many that we could not occupy, and voice the Truth in that Auditorium, supposing it would be needed every hour. But on examining their programme we found they had arranged no meeting for either Sunday, Monday, or Wednesday afternoon. They were open for this manifestation of God's love. Upon the closing Sunday, August 27, we were blessed by having in our congregation many Scientists from Chicago, Grand Rapids, and two from Columbus, Ohio. At the close of the day, twenty-two were gathered at the home of a Scientist for an evening luncheon before the boat left to carry the visitors back to their respective homes. Brotherly love was clearly manifested and brought out a glorious tribute to our Mother, from her student from Baltimore, which was earnestly echoed forth from each loving heart in tender gratitude. The blessings that we ourselves received are many and large, the greatest surely is the joy of being able to say that amidst the seeming evidences of fruitless summer months spent by those in search of happiness, health, and rest, we have proven the Truth of the words written by our stanch and loyal leader, Mary Baker Eddy, in Science and Health, p. 513: "The highest and finest rest, even from a human standpoint, is in holy work."

Sincerely,

KITTIE K. MORGAN, Chicago, Ill.
BELLE S. GERE, Grand Rapids, Mich.

## A Rich Legacy.

BY KATE E. ROUSSEAU.

A MILLION dollar Polar expedition is now planned by Scientists of Europe, England and Germany uniting in it.

England furnishes $500,000. The German appropriation indicates almost as much. One gentleman, an Englishman, made the first offer of $125,000 from his private fortune.

The object of this expedition, which is the most elaborate, most thorough, and best equipped of any that has ever been sent out for a similar purpose, is to discover the South Pole. The article from which the writer gleaned the above items concluded with the following statements: "So it appears that this expedition, which will be making its report to the world at the beginning of the twentieth century, will probably be remembered at the close of that century as the most important scientific legacy left to it by this century."

Whatever good this legacy or any other discovery known to the scientific world, may bring, it is absolutely nothing compared with the discovery of Christian Science or universal liberty, whereby humanity can be liberated from the bondage of sin, disease, and death.

Each condition of this discovery has already been proven to a degree sufficient to prove the whole a certainty.

Abraham Lincoln, one of America's greatest characters, commenced the work of liberating in figures of four million. Our President of to-day increased the number to ten million, but Mary Baker Eddy, Discoverer and Founder of Christian Science, God's appointed Leader, has proclaimed to *all* humanity the possibility, yea, the necessity, to be liberated from the carnal mind.

That name, the last in the ascending scale of womanhood, is now, to those who understand her, and will be in the future to the whole world, the most illustrious name in American history, showing that America is a "city set on a hill," whose light cannot be hid, but will radiate with noontide glory until the uttermost parts of the earth are lighted by it, and all receive their portion of the rich legacy of Love, the understanding of his Father, left by Jesus, and presented to us by the author of "Science and Health with Key to the Scriptures." The flag of our nation, in its typical sense, points to the eternity of Truth the country contains. I read a beautiful tribute paid to it, that to me, as a Christian Scientist, had a greater significance than it otherwise could. It was the following toast given by Benjamin Franklin, while minister to France, at a banquet given in Paris: "Why are the emblems of the United States more enduring than those of France, England, Ireland, and Scotland?"

> The Lily will droop and its leaves decay;
> The Rose from its stem will sever:
> The Shamrock and Thistle will fade away;
> But the Stars, they shine forever.

A friend (a Scientist) now visiting in Paris, writes that a deep interest and a desire to visit this country is shown by those who have some understanding of Christian Science, on account of its being the birthplace of the Science and the home of its Discoverer and Founder.

Judging from the fruits gathered in this, the closing of the nineteenth century, the closing of the twentieth century will witness fruits little dreamed of by those not yet instructed in the Science, and it will be generally accepted that Christian Science is the rich legacy left it by the nineteenth century, finding its parallel only in that event which ushered in the first Christian century, and caused angels to rejoice.

## A Pleasant Incident.

DURING the month of August, while their own church was undergoing repairs and redecoration, the congregation of First Church of Christ, Scientist, in St. Louis, held its services in Temple Israel, located in the same block, the beautiful place of worship of a large and influential Jewish congregation. Several of the members of the Scientist Church were old business friends of the Trustees of the Jewish Temple, and upon their need being made known the use of the edifice was most cordially granted,—a proposition to pay rent being instantly vetoed.

At the last Wednesday evening meeting held in the Temple, the following resolutions were offered, and were adopted by a unanimous vote of the congregation:—

RESOLUTIONS.

Whereas, the Board of Trustees of Temple Israel have given to the congregation of First Church of Christ, Sci-

# SUPPLEMENT

# To the CHRISTIAN SCIENCE SENTINEL

## Christian Science, the Religion of Jesus Christ.

The semi-annual lecture under the auspices of the Mother Church, The First Church of Christ, Scientist, was delivered by the Hon. William G. Ewing, of Chicago, in Tremont Temple, Boston, Mass., Thursday evening, October 5, 1899. Tremont Temple, which seats about three thousand people, was on this occasion filled to its utmost capacity by an earnest and intelligent audience, and between two and three hundred people were standing.

The lecturer was introduced by Judge S. J. Hanna, editor of *The Christian Science Journal*, and *Christian Science Sentinel*, who said,—

Ladies and Gentlemen:—

The time for a semi-annual lecture on Christian Science, under the auspices of the Mother Church, The First Church of Christ, Scientist, in Boston, having again arrived, it was deemed best to secure a larger place than the auditorium of our church for the accommodation of the audience. This splendid audience room was therefore secured, and the wisdom of its selection is quite apparent as we look over the great number present.

There have recently been added to the official Board of Lectureship of our Church some most valuable assistants in the persons of members of the bar, and ex-judges. Among them is a member of the Illinois bar of long standing and high attainments in his profession. In his youth, a friend and admirer of Abraham Lincoln, who was a frequent visitor at his father's house, he early imbibed the exalted views of life which so especially distinguished that truly great man and great lawyer. He adopted these views into his private life, and on coming to the bar, into his professional life, and those who are acquainted with Judge Ewing know how well he has carried out his youthful ideals.

To a long and distinguished career at the bar Judge Ewing added the cares and responsibilities of official and judicial duty. As United States District Attorney for the Northern District of Illinois, under President Cleveland, he acquitted himself with signal ability, and with credit as well to himself as to the government. As a member of the bench of the Superior Court of Cook County sitting in Chicago, he commanded, throughout his entire term, the respect and confidence alike of the bar, of litigants, and of the public.

More than fifteen years ago, Judge Ewing, through Christian Science, was healed of a malady pronounced incurable by our friends of the medical profession. Judge Ewing is a living witness to the fact that asthma in its worst form can be cured through Christian Science, for his was a case of that kind.

Because of the obligation he feels himself under to Christian Science for thus preserving his life; because he knows in his deepest consciousness that Christian Science is the Christianity of Christ in its best and most practical expression, and because of his admiration and love for her to whom, through God, the world is indebted for this higher revelation and better understanding of Divine Love, Judge Ewing declined a renomination to the bench and left his profession to devote his life thenceforth to the higher profession of spreading the healing and saving Gospel of Christ to a waiting and needy world. Noble purpose! Unselfish aim! and it is being nobly and unselfishly carried out.

For years Judge Ewing has been personally acquainted with our revered Leader, the Rev. Mary Baker Eddy. For years he has known of her ceaseless vigilance, her unflagging zeal, and untiring devotion to her great mission—a mission, the performance of which she can no more avoid than can Infinite Love cease its activities—and is it any wonder that he has been moved to place himself unreservedly at God's disposal?

It is now my pleasure to present to you as the lecturer of the evening, the Hon. William G. Ewing.

Judge Ewing was greeted with hearty applause, and his address was as follows:—

There could be no clearer demonstration of the intelligence and cosmopolitan thought of this community than this magnificent assemblage of men and women, of all phases of religious belief, intent upon a candid investigation of the intellectual, Scriptural, and scientific equipoise of Christian Science. This meeting is an omen of your profound interest in all questions touching the active relationship of the creature to the Creator, and man's present and eternal welfare. I fully appreciate the courtesy of your presence and shall present to you my views upon the subject of Christian Science, with the earnestness of my convictions, I trust, but at the same time with such due regard for your rights of opinion as will lead us all, as members of a common brotherhood, with one origin and one destiny, to reason together about the things of eternity and with the simplicity and heroism of truth, to "hold fast that which is good," although we stand alone, amid the dismantled beliefs of our fathers.

It is safe to assume that nine-tenths of this audience are Christian religionists of some school; that you are honest and sincere in your church association and your religious tenets; wherefore, it must not be expected that you will surrender the convictions you have concerning God and your duty to Him, unless your reason is convinced and your conscience satisfied that to do so is at once your greatest privilege and highest duty.

I am here to throw, if I can, a ray of light upon your pathway; to add, if I may, something to the joy and sweetness of your life and not to lessen your denominational strength, or add to my own. If you are happy, contented, satisfied, in your present religious beliefs, God forbid that I should disturb them; for I know of no power, human or divine, that can add a joy to satisfaction. In the early morning of the world the Psalmist sang as his highest eulogy of the glory and fulness of God: "I shall be SATISFIED, when I awake, with Thy likeness."

My mission is to talk to those who are not satisfied; who deem it within the range of human possibility that there is a light in reserve that may gild with a sublimer splendor and crown with a sweeter and tenderer love man's appreciation of the infinite Fatherhood of God and "His ways to man." To all such I wish, simply and earnestly, to talk; not to preach to you a sermon—I am not a preacher; not to soothe you into a brief dream of content by flowers of speech—I am a stranger to the pleasing, but ephemeral, devices of the orator; I simply want to talk to you as man to man, as friend to friend, brother to brother; my only art will be the simplicity and courage of conviction; my only argument, a statement of facts; and after all, how resistless is the potency of a fact! The sole purpose of inquiry in every court of justice in Christendom is, and ever has been, to invoke facts; the world is weary of theories, it longs for facts; it is surfeited with dogmas, arguments, and platitudes, and cries out for facts.

### Beliefs of Our Fathers.

The great difficulty in presenting any new phase of religion to the world is the peoples' inherited religious beliefs, the opinions of their fathers. No one thinks it strange that we should discard our fathers' thought respecting dress, habitation, or form of government; yet the idea seems to be almost universal that filial duty demands that the child shall think religiously, think of God, only as his fathers thought. And yet we know indeed that our fathers questioned the beliefs of their fathers and made us happier by it; that their fathers questioned the beliefs of their own fathers and made the world brighter by it.

No one can know better than I how very difficult it is for one to forsake the traditions of his fathers; I speak from experience, for my ancestors were Scotch-Irish Calvinists, with much of the assertive impetuosity of the Irish; with some of the solemn piety, and all the dogged stubbornness of the Scotch; in that faith I was born and educated, and have yet the profoundest respect for the learning, high character, sublime faith, and sincere, though awfully solemn, piety of the great Presbyterian Church; in infancy I received its baptism; for more than a quarter of a century I was in its communion, and so tenaciously do the teachings of youth abide with the man that it was years after I had been rescued from the cold clutch of death, by Christian Science, before I could give up the early lessons learned of God, life, death, hell and Heaven. My mother's sublime and beautiful *faith* in the measureless goodness of God I have not surrendered, nor shall; its simple memory is an abiding benediction, jeweled with joy and luminous with love. My own experience awakens the profoundest sympathy for the man or woman who struggles with a sense of present duty in conflict with adhesion to long-cherished ancestral opinion. However, reflection satisfied me, and doubtless will satisfy you, that every advance in religion, as in liberty and morality, for centuries, is the result of the children battling the beliefs of their ancestors. If John Calvin had not questioned the beliefs of his fathers, there would have been no Presbyterian Church; if Martin Luther had not raised his mighty voice against the beliefs and practices of his fathers, the world would never have rejoiced in the light and glory of the Reformation; if the Wesleys had not forsaken the tenets of their fathers, the sublime devotion and heroic sacrifice of the Methodist circuit rider would never have gladdened, purified, and sanctified the humble homes of England and America. God be praised, say I, for the moral courage, the intellectual integrity, that places duty before sentiment. The history of the Christian Era is replete with demonstration that rebellion against the religious beliefs of the fathers, not less than "the blood of the martyrs," is "the seed of the church."

I do not undervalue the effect of our ancestors' thought upon the civilization and Christianization of the world; but clearly its worth rests in the patent fact of the indestructibility and resistless progression of good, and the further fact of the good in the

Digitized by Google

experience and knowledge of each generation furnishing vantage ground to its successor for something better. We are stupid indeed if we are not wiser than our fathers; we have the accumulated knowledge of years that they did not have. Of all the countless dead at the beginning of this century, not one, if he should revisit the scenes of earth, could understand even the simplest nomenclature of the great discoveries in the practicality of electricity and steam that have girdled the earth with light, brought the distant places near, and make a conversational convocation of the nations as speedy and practical as was the assemblage of a presbytery or diocesan convention in their day.

God be praised for the moral courage, the intellectual integrity, that enables men and women to discharge the duties of to-day in the light of to-day, rather than by the mere pride of ancestral opinion; for the important question is not what was our fathers' concept of the mission of Jesus, but what, in fact, was that mission, and what duty does it impose upon us.

### How to Understand Christian Science.

I cannot explain Christian Science to you in an evening's interview, or in many times the limit of a lecture; and my opinion of the legitimate length of a lecture is quite in keeping with the great Dr. Robert J. Breckinridge's, who, when asked in class by a theological student how long he thought a sermon should be, promptly replied: "Thirty minutes, with a leaning to the side of mercy."

In the limited time at my command, I can, at best, in the simplest form of expression, tell you but a little part of what this wonderful revelation of Truth has done, and is capable of doing, for a sin-burdened world; give you some suggestion of the infinite "Principle of Life" upon which Christian Science depends, with the hope that you may be induced to make such investigations as will enable you to determine for yourselves, after careful and faithful research of all the avenues of Truth, whether Christian Science brings to you "Dead Sea fruits that turn to ashes with a touch," or rather a beautiful and abiding hope, born of understanding and radiant with the love of God. But you can only become an accomplished Christian Scientist by earnest, honest and persistent study and demonstration of its truth.

### Points Upon Which All Christians Agree.

Doubtless there are many points involved in Christian belief and conduct, respecting which you and Christian Scientists are in perfect accord; a brief reference to these will, I think, bring us a little closer together, possibly inspire in us mutual confidence, and enable us, at least, to prosecute the inquiry of the hour in the pleasing assurance that we are equally earnest and honest in our search after the ultimate good—a knowledge of God—"Whom to know aright is life everlasting."

I certainly am safe in assuming that you are in favor of whatever makes men and women better, happier, purer, more loving and lovable? So are we. You will aid whatever will lessen the burdens and sorrows of men; whatever will banish superstition and minimize fear? So will we. You, I am sure, will encourage whatever will destroy avarice, selfishness, and lust; whatever will exalt manhood, sanctify the home, enthrone virtue, affection, sympathy, and love? So will we. You, I trust, believe in one God and Father of all, infinite in wisdom, justice, goodness, mercy, truth, and love—a divine, spiritual, incorporeal Intelligence, without "form or parts, beginning of days or end of years;" Who fills all space; is omnipresent and omniscient; Who made all that was made and pronounced it good. You believe in, love, worship, and adore such a God? So do we.

You believe in Jesus Christ, the only begotten Son of God, who taught in the Temple; preached the gospel; healed the sick; made the lame to walk; gave sight to the blind, hearing to the deaf, purity to the sinful; was crucified, buried, and on the third day arose triumphant over death, and with the radiant splendors of the transfiguration, spanned the heavens with a bow of promise, and dispelled forever the shadows of earth by the demonstrated truth of life immortal as God. You believe in this dear, compassionate, loving, healing Christ as your Lord, your Saviour, your exemplar? So do we. You believe the Bible is the divinely inspired revelation of God to man? So do we. You believe the Ten Commandments are God's laws of requirement and restriction, to be resolutely and absolutely obeyed, one not less than another? So do we. You believe that prayer is both a privilege and a duty? So do we. You believe in the great commandment, "Thou shalt love the Lord thy God with all thy heart, with all thy soul, and with all thy mind;" and the second, which is like unto it, "Thou shalt love thy neighbor as thyself"? So do we.

Thus it is found that we are substantially in accord upon the essential requirements of the religion of Christ as you understand it. And is this not sufficient to establish the conclusion that we should not antagonize each other, even if we have different ways of reaching the same Omnipotent Good, we in common profess to love?

### Essentials of Christian Science.

Now let me tell you in the most general way something of what Christian Science is, in the hope that upon reflection and investigation we may agree upon the essentials of Christ's religion, as Christian Scientists understand, believe, and practise it.

Christian Science was discovered and revealed to the world some thirty odd years ago, by the Rev. Mary Baker G. Eddy, a native of New Hampshire, and now a resident of Concord in that State. The whole philosophy and practice of Christian Science is published to the world in Mrs. Eddy's book, entitled "Science and Health, with Key to the Scriptures." The latter part of the title, "with Key to the Scriptures," of this marvelous book, is very significant; for in fact the great value of Mrs. Eddy's work, or, as I believe and am pleased to call it, revelation, is found in the light she has thrown upon the real, reasonable, and demonstrable meaning of the Scriptures, the divine revealment of God to man; and it seems to me that all merely captious objections, by Christian people, to Christian Science should be silenced by the fact that Mrs. Eddy distinctly announces how in her search after the Truth, she took the Bible as her only guide, and I am sure that she does not announce any doctrine or practice of Christian Science that she did not find, and that you may not find, in the Bible. Let us therefore start out with the distinct announcement that Christian Science offers to the world no new Bible, and no vague or mythical construction of the old one; it enthrones no new Divinity; but the "one only living and true God," so long ignorantly worshiped; Him, Christian Scientists re-enthrone and proclaim unto you. Indeed, the very substratum of Christian Science, its initial principle, the premise of all its reasoning, is the declaration of, and insistence upon, the patent *fact* that "God is all in all." This premise, I venture to say, no intelligent believer in God will presume to question; and yet, if conceded, the genius of Bacon or Locke could not imperil the logic of Mrs. Eddy's conclusion, namely, *Christian Science*.

### What Is the Healing Power?

The older Christian Churches urge as an objection against what they conceive Christian Science to be, that it is sheer impiety for any person to assert that he is clothed with the power of God to heal the sick. The striking weakness of this objection is that Christian Scientists do not profess any such thing. As it was in the time of Jesus, so now the power that heals the sick is the power of God.

Christian Scientists assert that the benefi-

cent God of nineteen hundred years ago, who so loved the world that He gave His son to suffer whatever might be necessary for him to suffer to reconcile man to God, to enable man to know God, is our God to-day, with all the power, all the tenderness, all the love, all the sympathy for man that He manifested nineteen hundred years ago, and that it is the same power and love that now makes the lame to walk and the blind to see.

The only argument that Jesus ever used to establish his divinity was the one he sent to the questioning John: Go tell John "the blind receive their sight and the lame walk;" and that is the argument we use to-day to establish the divine origin of Christian Science. The lame do walk and the blind do see, and all the logic in the world cannot lessen the force of this fact.

If, as Christian religionists, you believe that God by the word of His power created all the worlds, whirled them into space, and set them "forever circling round the sun," you must believe that He has the power to keep His creature, man, in the image in which he was created, free from sorrow, sickness and suffering, as well as from sin; you must believe that He who fashioned the eye and the ear, and strung to exquisite harmony what you call the marvelous association of human nerves, has the power to remove a film from the eye He created, a thickness from the drum of the ear He made, and inharmony, discord, or jarring, from the nerves created for song and joy and not for aches and groans. Now you really believe, or think you believe, that God has the power to do this, and you also believe that God is willing to exercise that power, and heal the sick, give joy for sorrow, peace for crying, roses for ashes. I say this because, in your churches every Sabbath, and at your family altars daily, I trust, you pray to God for the sick and suffering. It is yet fresh in the memory of us all that the whole civilized world was redolent with the prayers of Christian people for Grant and Garfield in their hours of dreadful anguish; and yet I cannot be so harsh as to presume that Christian people would indulge the impiety of petitioning God for relief which they questioned either His power or His willingness to bestow. It is true you come a little tardily to the Great Physician with your cherished sick, and somewhat, it must be confessed, in the spirit of the old elder who prayed, "O God, we come to Thee because we have no other place to go." It is only after the doctors, patent nostrums, seven-bark liniment, mud baths, electrical shocks, blue glass, pig-nut bread, cod liver oil and tepid water have left you desolate and hopeless, that you go to God, the infinite fountain of light, joy and life, with your loved sick ones, and even then, not trusting God for the relief you ask, for the chances are many to one that you pray with medicines in your pocket and doctors at your call.

All of you say, have said a thousand times, "In God we live, move, and have our being;" but do you really believe this? For it is simply equivalent to saying, "In God we live, have our health and immortality." I sometimes doubt whether you do believe it, for you act as if this beautiful declaration of the Allness of God were a promise made to the ear, to be broken to the hope; and that, in fact, your life and health rest in human aids, material things, the dull, unpitying clods of earth. This will not do; a moral belief that does not find expression in act is not an intellectual conviction; you may deceive others, possibly yourselves, but you cannot deceive the Infinite. I submit to you this simple proposition: If you believe you live and move in God, should you not, as a mere act of intellectual integrity, of common honesty, trust your life and health to their infinite Keeper?

Really, your lack of trust in God's healing power is not very strange; it is the natural result of the ancestral opinion I spoke of a moment ago. Our fathers believed, and taught us to believe, that God makes us sick; that God makes us blind and deaf and lame, and therefore we can easily under-

Digitized by Google

stand how reluctantly and doubtingly one who believes that God is the fruitful source of all his sorrow and heartache, would go to Him with a confiding petition for relief from the very sorrows He has wrought. And here is the marked distinction between the old churches' thought of God and our thought of Him. Christian Scientists do not believe that God makes you sick or blind or deaf or halt, but we do believe that God is infinite Love, "the Great Physician who heals all our diseases."

You ask for help as a last resort, but you do not expect it. Perhaps I can illustrate the thought I am trying to enforce. A few years ago, in a New England district, the drouth was so great that all the churches agreed that on a given Sabbath there should be united prayer to God for rain. As the people from one country home were starting to their place of worship, a little girl said, "Wait for me a moment, I have forgotten something," and ran to the house and brought out an umbrella; whereupon her mother, her pious mother, her God-fearing but not God-trusting mother, said, "Why, child, what on earth do you want with an umbrella to-day? The prospect of rain was never so distant." The little girl, with the confiding and abiding trust of a child, replied, "I thought you were going to pray to God for rain."

The fact is, my friends, our respective concepts of God are wide apart. Christian Scientists do not believe that Infinite Goodness filled the world with reprobates and sinners simply to give Himself occupation in pardoning their sins "to the praise of His glorious grace," or in torturing them with sickness, anguish and flame "to the praise of His glorious justice;" but they do believe, and act upon the belief, that God is infinite Love, the bountiful Source and Preserver of all life, the Great Physician who heals all our diseases.

### The Mission of Jesus.

Christian Scientists believe that when Jesus went into the synagogue on the Sabbath day and read from the prophecy of Esaias, respecting the "office of Christ," where it is written, "The spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised," and, closing the book, declared to the congregation, "This day is this scripture fulfilled in your ears." Christian Scientists insist that when Jesus did this he thereby solemnly made proclamation to all men, of all time, of his God-sealed ambassadorship, not only to preach the gospel, but also to heal the sick, break the shackles of the bound and usher in "the acceptable year of the Lord." And thus we have clearly defined by prophecy and by the unequivocal words of Jesus, the substance, spirit and practice of the religion he established; a religion of faith, works, freedom—freedom from man's oppression, from sickness, sin and death; a religion of ministry, cheer, and love. And Jesus literally fulfilled his high commission, preached the gospel, healed the sick, cleansed the lepers, broke the fetters of sin, and gave liberty to the bound. He taught his disciples to emulate his example and told them that the mighty works he did, and greater, they should do. Who in the old churches will be so recklessly bold as to assert that Jesus did not mean what he said?

It must be remembered that the "works" of which Jesus spoke, were his so-called miracles, his ministrations to suffering, stumbling, cringing, crying men; the restoration of health, sight, hearing, strength, courage, hope, happiness, life, to men; and all without the aid of any drug, manipulation, diet, change of climate, mechanical contrivance, mesmerism, hypnotism, or effect of mortal mind upon human ills; but all, from the withered hand to the raising of Lazarus, by the power of God—the supreme majesty of the all-pervading Spirit of Good.

This was what Jesus did, and in his last admonition to the Eleven, his chosen faithful disciples, is found the crowning cheer of his sublime ambassadorship, "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

I submit that it is not within the range of intellectual operation to apply this last command and blessed promise of Jesus to the Eleven only, and not to all generations of men forever and aye; and consequently to us, to you and to me; Jesus the Christ has spoken it, spoken it to you and to me. "If you believe, in my name you *shall* cast out devils; if you believe, in my name you shall lay hands on the sick and they *shall* recover."

Christian Scientists accept this call to duty as addressed to them, and by the most crucial tests, by thousands upon thousands of absolute cures, covering the whole range of mortal affliction, have demonstrated the efficacy of metaphysical healing, and therefore the absolute truth of Christian Science.

From what I have said, it must be apparent to you that Mrs. Eddy with perfect propriety named her great discovery "Christian Science;" *Christian*, because it is the Christ system, the Christ practice; and *Science*, because it is demonstrable Truth, infallible Principle.

### What Christian Science Has Accomplished.

May I tell you some things Christian Science has accomplished in the fifteen years last past? It has drawn to its loyal support more than five hundred thousand adherents; has organized more than four hundred congregations; has built, during the last five years, many churches, ranging in cost from one thousand to two hundred thousand dollars; it has more than ten thousand practitioners, devoted to healing the sick; it has restored to health, happiness and hope, more than seven hundred and fifty thousand of your fellow-men and mine, most of whom had hopelessly exhausted the remedies usually known to medical learning. The membership of the Christian Science denomination has been drawn from all the churches, Catholic, Protestant and Jewish, and from all the respectable professions and callings in life. There is not a religious denomination in the world that has in its membership a larger percentage of educated, refined and cultured people than Christian Scientists have; and nowhere on earth, I am sure, and I say it not boastingly, but as a simple statement of fact, will you find people freer from the cares and worries of life, more contented in their business and their homes, more devoted to the duties of home, state and church, prompter in discharging their obligations to neighbor and to God, stricter moralists, closer observers of the proprieties, more munificent abettors of every good work, or people richer in the graces and amenities of pure manhood and womanhood, than Christian Science has given to the world.

I submit to the candid judgment of my fellow-men the simple proposition that an organization showing such results cannot flippantly be ignored, and by all the tests of common candor, demands your serious, earnest thought.

I will not discuss the stock objections urged against Christian Science. They are in fact so contradictory that they are self-destructive. For instance, I noticed in an iconoclastic newspaper a series of interviews with prominent people, respecting Christian Science. A prominent Doctor of Medicine said, "Christian Science is a beautiful religion; it is spiritual, devotional, and uplifting in its thought; but it is impotent and imbecile as a curative of human ills." Immediately following this a no less prominent Doctor of Divinity said. "Christian Science does effect wonderful cures of disease; the evidence of this is too patent to be denied; but it has no semblance of religion."

The destructive clash of these two opinions has, to my mind, a forcible illustration in a law-suit I had the pleasure of hearing when quite a small boy at my old home in Bloomington, Ill.; Mr. Lincoln, the great President, was defending a case brought upon a written guaranty of a horse, the guaranty being that the horse had good eyes and sound lungs. The plaintiff in his declaration alleged that the horse's eyes were not good and his lungs were not sound, and to maintain his contention introduced two witnesses, Doc. Lindlay and Cap. Ferguson, supposed experts on all questions relative to the horse.

Lindlay first took the stand and testified: "I know the hoss the suit is about, and have examined his eyes and lungs. So fur as his lungs is concerned they are as sound as a blacksmith's bellows, but sure as you're born the horse is moon-eyed."

No questions were asked this witness on cross examination, and Capt. Ferguson took the stand and testified: "I know the horse very well; I think his eyes are all right. They are just as good as were ever put into a horse's head: he can see in daylight and in dark and in any of the moon's phases, but his wind is a little shaky; he haint got good lungs."

This witness also took his seat without any questions from the defendant's counsel.

Mr. Lincoln introduced no witness for his client, and went to the jury upon the testimony of the plaintiff's witnesses; and made the briefest and most logical argument that was ever made in a court of justice in my state. This is what he said:

"Gentlemen of the jury, if these witnesses are creditable, then the plaintiff has proven for my client by one of them that the horse's eyes are good; and for my client he has proven by the other that the horse's lungs are sound; now if the witnesses are not creditable then the plaintiff has not proven anything for himself, or anything against my client, and in either event my client is entitled to judgment for costs." It is needless to say that the plaintiff paid the costs.

I will not offend your sense of "fair play," of warfare "in the open," your love of justice, exalted character and high endeavor, by entering upon a seriatim defence, in this magnificent presence, of Christian Science, that has gladdened the world with such surcease of Sorrow, or the beneficent woman who in hope and prayer and love revealed Christian Science, and applied it to the daily needs of men,—against the wanton assaults of malevolence, ignorance, or greed, made upon either. As one of the tens of thousands of beneficiaries of metaphysical healing, with love unalloyed I say of Mrs. Eddy, that time to its utmost bound will be too brief for the world to discharge to her its debt of gratitude. Her life of devotion to God and humanity, her sacrifice of self for others, her ministrations to weary, suffering, dying men, her long years of fearless and faultless association with perfect good are her invincible panoply against every shaft of envy, ingratitude or malice. And of the science of life, immortal life, she has revealed, it is enough to know that, if it is true, all the powers of earth and hell cannot prevail against it. No detraction can mar it, and no eulogy can compass the sum of its infinite greatness.

### More Light.

In the opening splendors of this dawn of truth, shall we not with sublime courage keep pace with the march of good manifest to-day? Alas for him who constantly looks mournfully into the future and depreciates the present. I believe in the progress of good in the sublime and beautiful Now: in its breadth of intellect, its conscience, its morality, its reach after God.

I champion this day as the brightest and best since the world began. Every yesterday was but the dawn of a grander to-day, and each to-day will pale in the sublimer splendor of to-morrow. There is more re-

Digitized by Google

finement, learning, gentleness, and genius; more estheticism and common sense, more contempt for hypocrisy; there is more truth and courage, homely honesty, simplicity and virtue, more unfaltering Christian faith, more devoted Christian piety, more affection, love and charity in the world to-day than ever blessed humanity in any yesterday in all the tide of time.

The world has learned that its great need is not a more intimate acquaintance with microbes and germs; not a science that will more accurately measure the sun and weigh the stars; not a loftier walk with the muse, or a more exquisite touch of brush or chisel, but rather a realization of the promise that flashed in splendor upon the world with the advent of the humble Nazarene, a knowledge of the true God, to be adored, worshiped, and loved, but not feared.

Christian Science is hastening the fruition of that promise. Its apprehension enlarges the moral stature of man, quickens the kindlier sentiments of his nature; makes the husband and father more devoted and affectionate; the wife and mother more tender and loving; works the negation of self and the development of love for our kind; moves the heart to pity, spreads the mantle of charity, and lifts the weary children of earth nearer to the great loving heart of God.

Strangely enough, the objection to Christian Science is made that it is the work of a woman. I say strangely, because to my mind this fact is the sign-manual of its integrity and purity. It seems to me that to the most careless observer it must be apparent that by the exercise of mental and moral forces, woman gladdens to-day, and hastens the dawn of the brighter to-morrow. In the republic of letters; in every forum of intellectual combat; in every profession; in all the arts, in all the sciences; in every walk of human learning; on every field where humanity struggles for humanity; woman, panoplied with Truth and Love, moves to the shining goal of every laudable human ambition, confessedly the guardian of the "Holy of Holies," the spiritual thought of the world. Surely, the beautiful to-morrow is dawning, when enlightened justice will have one code of morals for all God's children, and not, as now, one for the man, and another for the woman; when man will be more just to woman, and woman will be more just to herself; when she will not shrink with loathing from her poor, tempest-tossed sister, who, in the uneven struggle for existence has fallen, and leave her a helpless and hopeless waif upon a remorseless human sea; but in the spirit of the pitying Christ, will take the hapless one in her loving arms, and with that "Touch of nature, which makes the whole world kin," lift her up into the sunshine, the gladness, the effulgent glory of redeemed womanhood. For let it never be forgotten that it was a woman, a sadly sinning but sweetly repentant woman, who bathed Jesus' feet with her tears and wiped them with the hairs of her head, and of whom the Saviour said, "She is most forgiven because she hath loved most."

In the sublimity of that broader and better allegiance, into which the Science of Being leads us, every good man and woman will be an integral part of its glory, just as every blade of grass, impearled by the dews of heaven, lifts its jeweled crest to kiss the dawn, and to reflect the splendor of the rising sun.

As woman was last at the cross and first at the sepulchre; as woman was the holy messenger to proclaim a risen, triumphant Saviour, so now, in the opening splendors of his kingdom on earth, a woman, another Mary, is the sweet messenger of "glad tidings" and

"Her clear voice is heard in the van
Proclaiming the dawn, when all nations
Shall echo the Great Heart's pulsations.
And God be reflected in man.

"She guards the Christ love in her keeping;
By her are the Christmas chimes rung;
She rekindles the yule-fire's glory,
And all the world over, the story
Is written, and spoken, and sung.

"And all the world over the people
Are spreading the blessing abroad;
Are cleansing the depths of the fountain;
Are climbing the heights of the mountain;
Are waiting the coming of God."

# PERIODICALS

PUBLISHED BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY,
95 Falmouth Street, Boston, Mass., U. S. A.

## A WEEKLY NEWSPAPER

***Christian Science Sentinel***

PUBLISHED EVERY THURSDAY

Contains Items of Interest condensed for busy people; gives the Voice of the Press and timely Editorials in connection with the movement; has a department for Questions and Answers, and presents interesting contributed articles.

Subscription Price: One Dollar a Year. Foreign subscriptions, $1.50. On sale at three cents a copy, postpaid.

## A MONTHLY MAGAZINE

***The Christian Science Journal***

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE,

Is the Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

It contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science, dissertations and lectures.

Subscription Price: Two Dollars per annum; One Dollar for six months; Foreign Subscriptions, $2.40 per annum; $1.20 for six months; Single Copies, Twenty Cents, postpaid.

## BIBLE LESSONS

***The Christian Science Quarterly***

PUBLISHED JANUARY, APRIL, JULY, AND OCTOBER.

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year, in all the Christian Science Churches.

Subscription Price: One copy one year, postpaid, Fifty cents.

Foreign subscriptions, one copy, one year, 60 cents

On Sale at 15 cents a copy.

Catalogue of prices for Oxford Bibles, Hymnals, Books, Pamphlets, etc., sent on application.

# Works on Christian Science, By Rev. Mary Baker G. Eddy

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1891. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Price (cloth) each . . . . . $3.18

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . 4.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid . . . . . 5.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid . . . . . $2.25

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . . . 4.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRIST AND CHRISTMAS.** An illustrated poem. Single book, prepaid, $3.00; $30.00 per dozen.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, prepaid.

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; $2.50 per dozen, prepaid.

Direct all orders for above works, and make remittances payable, to

entist, the free use of this edifice during the month of August, 1899, for our Sunday and Wednesday meetings, and,

Whereas, in granting this privilege, and in the care taken by the officers of Temple Israel for our every comfort and convenience, the utmost kindness, liberality, and courtesy has been shown,

Therefore, Be it resolved, as the sense of this Church and congregation, that we deeply appreciate this great favor and most neighborly courtesy, and that our especial thanks are tendered in recognition of the spirit of lovingkindness shown by our brethren, the Trustees of Temple Israel;

Furthermore, we rejoice with great rejoicing that through the teaching of Christian Science, based as it is on the utterance of Moses, reiterated by the great Nazarene, —"Hear, O Israel: the Lord our God is one Lord,"— we, as Christian Scientists, can so surely and confidently see that on-coming day of God when true Judaism, true Christianity, and true Science are seen to be one,—the time so well described in these lines from our Hymnal:

Now is the time approaching.
By prophets long foretold,
When all shall dwell together,
One shepherd and one fold.

Now Jew and Gentile, meeting
From many a distant shore,
Around one altar kneeling,
One common Lord adore.

St. Louis, Mo., August 30, 1899.

A copy of these resolutions was forwarded by the clerk of the church to the Trustees of Temple Israel, and in due time, acknowledgment was received in the following letter from Rabbi Harrison, full of cordiality, and a broad sense of religious unity.

Mr. Henry C. Ochterbeck, Clerk of First Church of Christ, City.

*Dear Sir:*—The Board of Trustees of Temple Israel have handed to me the resolutions of acknowledgment passed by your Church at their Wednesday evening meeting, and have requested me to do what my own inclination would naturally suggest, namely, to express their deep appreciation of the fraternal sentiments contained in these resolutions. It is a welcome sign of a closer fellowship when men and women long for religious unity, when they can with a perfect sense of homeness worship at the shrines of sister religions and feel that they are indeed sisters, when they can fix their attention on the things that unite instead of on those that separate them. We feel impressed, therefore, with the hearty words communicated to us as a symbol of the better understanding that we all hope and pray will come about between all earnest seekers after the highest good.

And we are glad to hear, also, that you felt at home and were able to find a congenial resting-place during your temporary plight. I trust you will always feel at home in our little Temple, and that we may have some opportunity again of serving you, though not, I trust, from any cause unpleasant to yourselves.

With kindest regards and fraternal greetings from all our people and from myself, I remain,

Very cordially yours,
LEON HARRISON.
Minister of Temple Israel.

This letter was read at a subsequent Wednesday evening meeting, after the return of the Christian Science congregation to their own re-beautified church; and it is pleasant to note further that upon the celebration of the New Year in Temple Israel the Christian Science Church and congregation were represented by a beautiful bouquet of white roses.

## A Plain Statement.

BY FLETCHER L. WILLIAMS.

HAD any one predicted five years ago that I would write the following statement, I should have ridiculed the idea. But it seems to me that I should now come out before men, and acknowledge my God.

Although I lived many years on Beacon Street in Boston, I heard of Christian Science but on one occasion, and it was presented in such an unwise manner I never wished to hear of it again. It might not be out of place to state that we as Christian Scientists cannot be too careful in our statements of this Science, and it seems to me that the wiser course is to put our text-book "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, into the hands of the investigator. I feel this deeply, because had this been done in my case, it would have saved me much suffering in the years that were to come.

Having married, I decided to leave my home and settle in England. At this period of my life I was an Agnostic; and was it to be wondered at, as (I believe) there are to-day four hundred different sects who base their belief on the Bible, and each claims it is correct, and the other three hundred and ninety-nine are incorrect. Where was an honest man to turn? It would be an impossible feat to honestly look into each sect's claim, and in all this theology the religion of Jesus was lost. Then my love for mathematics was so strong that it made me demand a proof—if there was a God, prove it. I did not affirm that there was a God or that there was not, but I demanded a proof.

Five years ago Mrs. Williams put that marvelous work entitled "Science and Health with Key to the Scriptures" in my hand, and asked me to read it, and give her my opinion of it, and to-day I can willingly and joyously state that in my opinion it is only second to the Bible, and to me it has made the Bible first; while before, the Bible had no interest to me, except from a literary standpoint.

What makes me devoted to Christian Science is its wonderful mathematical accuracy—once understand its premise, and the deductions must come out correct. A failure is *never* attributable to this Science, but to the demonstrator. One must be true to its Principle, and then the demonstrator cannot fail. The immutable law of Love is always the same. The statement that God is All-in-all is as axiomatic to me as a Christian Scientist as the statement that a straight line is the shortest distance between two points is to me as a mathematician, and the first statement seems to me more easy to prove than the last.

I accepted Christian Science at first intellectually, as I had no need of it from a physical point of view, and this may have been the reason of my not waking up to what Christian Science really is until about a year ago, although I had received class instruction, and attended all the services. Every day only proves more conclusively that there is nothing for an honest man or woman to do but to make Christian Science first. And in this manner we can best return our gratitude to our beloved Leader.

---

The Bible emphatically declares that God is Spirit; also that "There is none beside Him." This being true, the onus of proving a matter-life apart from God is clearly upon the opponents of God as Spirit and All. The Christian Science text-book surely has made an affirmative case.

To heal mankind of sin and sickness, and teach them so to live as to be able also to overcome death—this is the mighty mission of true Christianity,—the Christianity of Christ.

## An Interesting Meeting.

For several months past Christian Science has been occupying the attention of our people, because of the reports of some wonderful cures being effected through the assistance of Christian Science, which caused your scribe to drop in at a meeting last Wednesday, which happened to be what is called a testimonial meeting. The meeting was crowded and appeared to be devoid of any seriousness or the usual look to be seen at an ordinary prayer-meeting; on the contrary, everybody was social and wanted to impress every one that they were possessed of some particular kind of pleasure.

The meeting opened up by Mrs. Hatch reading a few selections from the Bible apropos to the text, "Ask and ye shall receive." She then read from the text-book, Science and Health, by Mrs. Eddy. A song followed and then began the testimonials.

Mrs. Hatch, the leader in the work here, testified how Christian Science had healed her. She spoke, in substance, as follows:—

"How good it is to know how to pray, and I am glad that I do know how to pray, and that our prayers are not mere meaningless words. From childhood I could not see to thread a needle unless it were a very large one. My eyes were examined by the doctors and I was told that nothing could be done for me—that I would be obliged to use spectacles. My hearing was also bad, as bad as my eyes. When I was sixteen years of age the doctor said the drum of my ear was partially destroyed and that my hearing would never be any better, but instead would become worse every winter. Since taking Christian Science treatment I can see perfectly without the aid of glasses, and my hearing is now all right. I also suffered with severe trouble with constipation but I am now well—Christian Science has healed me. I am thankful I know how to pray and that my prayers are answered."

The next was a lady with dark eyes and dark complexion, showing signs of having come through some form of sickness. She stepped out to the middle of the floor and standing erect said, "I am in perfect health and have not felt better in ten years. For the last two years I have had to use a crutch, but most of the time I was on a couch. I had lost the use of my left arm and my limb was paralyzed, my head was drawn to one side, I was just in perfect agony, and many times did not expect to live another day. My husband would often tell me 'Don't be discouraged.' For ten years I suffered with heart disease and the only relief was morphine. I suffered everything, as those who know me can testify. Last Thursday something came over me, I could not see nor tell what, but it was a great struggle. I had tried everything I knew but found no relief or help until I tried Christian Science, and, thank God, I am free. I thought if I could only live to tell my friends, but it seemed so dark and I could not move; my hands were cold, even my mouth would not open. When I was set free, I at first could not realize it, but got up and walked into the other room and said, 'Oh, sister, see me,' but she was so badly frightened she only answered, 'Oh, mamma!' for she did not realize what had happened. Then for five minutes I walked the floor. I could not tell her how I felt for all the pain had left me. Before I was healed I could eat nothing; now I can eat anything."

Later on the husband of the above speaker told some of his experiences, stating that when he first met his wife, eighteen years ago, she was not in the best of health, but that now she was better than he has seen her for seventeen years. "I am happy to say that Christian Science has given me back my wife. I have had no less than six doctors make examinations, but they all differed, except that the most of them said it was heart trouble, and ever since 1890 I have spent money and doctored. When I went to work in the morning I hardly expected to see her alive again. I would frequently stop work to go home to see, expecting to meet some one on the way to tell me that she had gone. There was a strange thing about her trouble, the symptoms would vary from year to year apparently. Just one year ago last June, Doctor (giving name of a local physician) said my wife would not live three days, and that I could get any other physician I would like to have; in fact, she came very near dying at the time. She was for three weeks kept under the influence of morphia. She rallied, however, but she had chills and nervous spells which appeared to go right to her heart. Many times I caught her just as she was about to fall, and sometimes I thought she would die in my arms. I often thought I would have to tell my children that their mother was dead. No one can tell how she suffered. When my daughter went to the Christian Science Sunday School I had no belief in it, in fact never gave it any consideration, but I am a person who is willing to give a thing a trial. I finally concluded to have my wife give the treatment a trial. When I left home last Thursday she was worse than usual, but when I returned home I was more than surprised to meet her at the gate. People ask me what I said. What could I say? I could not say anything. I can now say that I have an electric battery for sale and have no further use for medicine in the house.

"I cannot say that I am a Christian Scientist, but this I do know, that a great deal of good comes from it."

A white-haired gentleman of about seventy years was the next speaker.

"I am glad the day has come for me to say a few words. Three months ago I was in a paralyzed condition from the effects of rheumatism for about forty years, and I have not been able to see without the use of glasses. Some people say it is second sight. Well, I don't feel that I am that old, for I feel as young as ever I did. In daylight I can thread the finest needle my wife has and can do all the reading I want. I am glad to know what little I do of Christian Science."

Another speaker told about the trial he had with his wife, she having consumption, and how he had traveled west in search of health for his wife, and how, since receiving Christian Science treatment, his wife was healed of consumption. She had been ailing for thirty years.

A lady told how she had recovered from neuralgia and the necessity of glasses. "I cannot tell how I feel, for I have forgotten that anything was the matter with me. I had the catarrh very badly and was very nervous, but now I am well."

Another lady also gave her testimony. She has a family of eight to look after. For years she was a sufferer from rupture and found relief only in injections of morphine, now, since she has taken treatment, she is relieved of all former distress and can do as much as any one.

Several others gave their testimony to being healed of rheumatism, stomach trouble, and other ailments.

The Christian Science people seem to feel that ministers and others who disbelieve their practice should do a little investigating before condemning it. If the statements of the above parties are true, of which there at present appears to be no doubt, the Science should not be so severely criticised as is now being done. All those who gave their testimony are well-known people in the community, and can be consulted very readily if desired.

*Callam County Courier.*

### Typhoid Fever.

A short time ago I received a telegram to come at once to Bowie, Texas, as my sister was not expected to live. There was no train out till nearly two o'clock next morning, so I did not arrive till between five and six. She was very low with typhoid fever. I had only been there a few minutes when it was agreed that the doctor should be dismissed and the case turned over to me. Even my father, who had bitterly opposed Science, gave consent. Anything to save his child. Had my sister been dead the family and friends could scarcely have expressed more sadness. I gave her the first treatment about six o'clock, and by nine o'clock she was laughing and talking and eating an apple. The next day (Thursday) she went to the dining-room and took dinner with the family. Friday morning she was up and dressed as early as I was. Saturday she cleaned up my mother's room, making the bed, sweeping, and dusting. Sunday she helped generally with the housework, and in the afternoon went out for a walk. Monday morning, as I was preparing to start home, I asked her when she wished me to stop the treatment. She said, "I am as well as I can be and have been for two or three days."

Christian Science healed me when everything else had failed. I had female trouble in its worst form, rheumatism, heart trouble, tonsilitis, in short, I think I was diseased all over; but thanks to Christian Science I am well.

MRS. A. JONES, Chickasha, Ind. Ter.

### Helped by the Lecture.

Hearing the lecture delivered by Judge Ewing in Tremont Temple last evening, is one of the many blessings for which I am indebted to Christian Science.

An unusual experience came to me during the discourse; it seemed as if a veil of which I had been scarcely conscious, was suddenly removed from my eyes, making everything clear and bright. I knew at once that the Truth declared there and the Love expressed had wrought this change, and that not a film from my physical sight, but a cloud from my inner consciousness had been dissipated. In proof of this my realization of Truth to-day has been clearer, more assured, and, I *know*, more effectual. Thus Scientists as well as those calling themselves not such are helped by these glorious outpourings of Truth.

How can we be thankful enough to God for the blessing of these lectures, for the faithful laborers through whom they come, and for her whose obedience has made them possible! Truly, "We have nothing to fear when Love is at the helm of thought" (Miscellaneous Writings).

E. S.

### Scarlet Fever and Diphtheria.

I desire to tell something of what Christian Science has done for me and my family. Under *materia medica* I was called upon to lay away two children within eighteen days. A little later my husband. The third child was attacked with scarlet fever and diphtheria at the same time, and she was also given up after a consultation of doctors. I then saw there was nothing in the drugging system. I had just heard of Christian Science. I sent for the only Christian Scientist I had ever heard of, a young student who had had no class instruction. The healing was instantaneous, and my joy and happiness were so complete that it seemed to me I was lifted entirely out of material consciousness.—MRS. A. S. KISH, Joliet, Ill.

### Glasses Laid Aside.

For many years I was a great sufferer with chronic inflammation of the eyes. I wore glasses, used all kinds of remedies, and consulted specialists in different cities, but found no relief. One oculist to whom I applied told me that the nerves of my eyes were nearly destroyed. It seemed as though I should be blind. I tried to be reconciled, but could not see why I was so afflicted. About this time a Christian Science healer came to Preston to see a patient. I called to see her. She assured me that with "God all things are possible," and advised me to procure Science and Health and to read it faithfully. She said others had been healed why should I not be? At my request she gave me a treatment. I was at once enabled to lay aside my glasses, and in a short time I could read the finest print, sew, or do any kind of work without them either night or day.—ROWENA MCNEIL, Preston, Ia.

### No Desire for Tobacco.

I have been a subscriber to the *Journal* over ten years. For twenty-three years I used tobacco. After learning something of Christian Science I bought Science and Health and commenced reading it. Soon my cigars lost their good flavor, and I changed the brand. I tried more expensive ones, but they were no better. One day a friend presented me with an imported cigar, supposed to be very fine. It was reserved for an evening smoke. I remember as if it were but yesterday the feeling of contentment and also of the assurance of enjoyment that came to me as I took my Science and Health, sat down, lighted the cigar and began to read. The cigar was absolutely tasteless and I laid it one side but kept the book. This was thirteen years ago. I have never tasted, or even had a desire to taste, tobacco since, but I still keep the book.

DAVID ANTHONY, Providence, R. I.

### Morphine Habit Cured.

Last October I went to a Christian Scientist to be healed of the morphine habit of fifteen years standing. For three years I had morphine injected in my limbs daily, and sometimes several times a day. At times the skin about the joints would look green. I had no flesh, and was afflicted with a nervous movement of the head which prevented my attending church or going in company. I had also abscesses of the womb, paralyzed hips, and other ills. I have had as many as seven spasms in one afternoon. I received treatment about four weeks, when I was entirely healed and have had no desire for morphine, nor have I taken any since. The jerking was destroyed with the habit. My husband says a miracle was performed. I am a living witness to what Christian Science can do for those who are under such abject slavery to morphine as I was.

S. J. M., Emlenton, Pa.

### How Baby was Healed.

My little baby had been very sick for two months teething and belief of fever. He was a mere skeleton and I was afraid to lift the little one up, he seemed so frail. His father and I had given him up to die when a Christian Science healer gave him his first treatment July 2; he had not slept in eight or ten weeks without soothing syrup or paregoric in double doses. The night she treated him he went to sleep in five minutes and slept all night. He is now a fine fat baby a year old and can talk and almost walk. He is devoted to his healer. Everybody thinks his cure a miracle.—MRS. O. L. WHITEHEAD, Halifax, N. C.

## Questions and Answers.

*If a patient is not healed where is the fault? Is it on the part of the patient or on the part of the healer? or is it because there are some cases that are incurable even in Christian Science?*—A Patient.

Speaking from the highest standpoint of metaphysical healing there are no incurable cases. The Principle of Christian Science is perfect and a perfect understanding of the Principle could not fail in any case. One might as well say that some of the errors made in the attempt to solve a problem in mathematics could not be corrected by the right application of the Principle, as to say that some of the errors of mortal existence cannot be corrected by the application of the Principle of perfect and universal harmony. In the highest sense there is no such thing as an incurable case in Christian Science, although the practitioner may occasionally fail to make a complete demonstration. So far as specific cases are recorded in the Gospel, Jesus did not fail to heal always. There is, however, an implication that he did not attempt to heal, or do mighty works, in some places because of the people's unbelief. His life was in strict conformity to the demands of infinite Good, and because of this he was able to heal sickness, cast out devils (evils), and even raise the dead. In no case did he say it was God's will for man to be in bondage to sin or sickness. If there were such cases, is it not probable that Jesus would have found at least one during his three years ministry, and so stated to his disciples? Such an important point as that it was not God's will for all to be healed, would certainly not have been omitted by the great Teacher. He would have made this point clear to his students, and not sent them out into the world with the express command to heal all manner of diseases, and leave them ignorantly to attempt to do some things impossible, if there were cases which could not be cured because it was not God's will they should be.

The Christian Scientist believes that it is God's will for all to be saved from sin and sickness, and he is firmly convinced that the understanding of the Principle of Christian Science can and will heal any case. If this be true it necessarily follows that if there are failures the fault must be on the part of the healer, or the patient, or both.

The healer can demonstrate only so far as he knows, and his understanding may not be equal to that particular demonstration. Then the fault may be on the part of the patient. While he is willing to be healed physically he may not be willing to part with some moral evil that causes his suffering or makes it possible. The healing of Christian Science is scientific—it can remove the effect only by removing the cause. If sin is the cause of sickness the sin must be destroyed before the patient can be healed.

With Jesus the healing of sickness and sin were one. To the man sick of the palsy he said, "Thy sins are forgiven thee." Likewise in the work of the Christian Scientist the healing of sickness and sin go hand in hand. The demonstration is in proportion to the healer's understanding of Truth and the patient's fitness and willingness to be benefited by that understanding.

❦❦❦

*If God is the only power and there is in reality no power in a drug, either for good or evil, why is it necessary to require a patient to give up all material remedies? Would it not be just as well to allow him to continue to use them if he desires to do so, since they can neither help nor harm him? When he is healed he will give them up of his own accord.*—A Beginner.

While it is true that a drug has no inherent power, either to help or to harm, yet mortal man believes that it has. It is his belief that makes it possible for him to experience the good or ill effects ascribed, by universal belief, to material remedies. The Scriptures tell us that "no man can serve two masters," but does not one attempt to do this if he uses drugs when a Christian Scientist is endeavoring to heal him through Mind alone?

Mortal man is so material in thought that if he should be healed by a Christian Scientist while using material remedies he would probably give the credit to matter rather than to Mind. Then he would not have less faith in matter but more, for he would believe that matter had not only made him sick but had also made him well again. Matter would be to him a friend as well as a foe, and he would be encouraged to look to matter more than ever. Would his healing then be of any real benefit to him? True, he would be relieved of his suffering, but the mission of Christian Science is not so much to save mortal man from suffering, as to save him from the error that makes suffering possible.

If the patient is unwilling to give up material remedies he should be allowed to continue their use until he is convinced they can do nothing for him. Then when he turns to Christian Science, perhaps as a last resort, he will be in a condition to receive the help he desires. As his suffering is relieved and he regains his health, he will, if he is truly honest, give the credit where it belongs. Then when he is told that the same power which heals disease can also prevent it, he will desire to know for himself how the sick are healed. As he takes up the study of this all-important subject and begins to work out his own salvation, the mission of Christian Science is being fulfilled in his experience.

## The Other Eye.

BY E. C. D.

We all know how a very insignificant object, when held close to the eye, seems capable of hiding much of the outside world, so that the beauty of God's earth may seem to be shut out from us by a disc no larger than a dime. But the moment the obstacle begins to recede into space, the all-pervading light rushes in around it, and finally engulfs it, and it is lost in immensity. So it is with every calamity that we hold close, and to which we give a place in our thoughts. Only as we banish it do we discover the clear light of Truth still shining, and by that light we realize the insignificance of the condition which seemed to us so real.

It gives us courage to know that we have always the power to prevent to temptation from assuming such false proportions (we are not obliged to hold the object so near the eye) and that by always exercising that power, the influx of light, understanding of Truth, comes, in response to God's eternal law.

But we know too that *one* eye must be *closed* in order to make the object held before the other eye exclude so much—with both eyes open the illusion is not complete; and it seems to me that the lesson there is that, no matter what trial of our faith comes, no matter how dark things seem, we have always *the other eye*, the eye of spiritual understanding, and if we keep that eye open,—"single"—we shall not be left in darkness, but rather the whole body shall be full of light.

The *Missionary Herald* reports an incident from India as follows: "In a gathering of native Christians at a Bible reading about love to God and love to man, a man suddenly ran out of the room into the darkness, exclaiming, 'It is in your book, but you don't do it.' This might apply to other than heathen countries."

## From the Religious Press.

### Why are Conversions Few?

The statement has recently been published that conversions are comparatively few in the Protestant churches, and are becoming fewer still with each passing year. This complaint does not proceed from unreasonable and censorious critics, but from wise and good men whose word is entitled to great weight.

Does not careful observation prove that much less attention is being devoted to the conversion of sinners now than in former years, and that conversions are not so frequent as they formerly were? Is it not possible that Christians are losing interest in the conversion of sinners?

Many interests now engage the attention of ministers and churches. We are building and endowing educational institutions. We have several great publishing houses, from which we are sending out millions of pages of religious literature every year to bless the world. We have many strong organizations for the collection and disbursement of millions annually for religious purposes. We have an immense young people's organization, into which many thousand young men and women are being gathered for discipline and training for future usefulness. To all these Christian institutions and enterprises we say Godspeed.

But it is possible that these may divert the attention of the Church from the chief object of its mission. . . . The early Methodist Church sought one thing—the conversion of sinners. Those heroic ministers and laymen did not think of pleasing men or building a colossal ecclesiastical structure for their own glory. They preached, exhorted, sang, prayed, traveled, and toiled for the conversion of sinners. . . .

Many reasons for the dearth of conversions may be given. Christian people do not expect nor desire the conversion of sinners as they should. When church members really expect and earnestly desire this thing it will not be long before they shall witness the desire of their hearts. Much of the preaching of this day is not calculated to produce conversions. The craze for entertainment and excitement in the Church cripples its energies. We do not need entertainment, but worship; we do not need sensational excitement, but spiritual excitement. Conversions are hindered by coldness and worldliness in the Church.

New York *Christian Advocate.*

### Agitation Prevents Stagnation.

Agitation keeps lakes, seas, and oceans from stagnation. By the constant movement of its particles water is purified, aerated, and, whether in the salt seas or fresh-water lakes, is made wholesome and refreshing. In like manner society is kept in motion, purified, freshened, and filled with the breath of life by the constant movement of its constituent parts. Many are alarmed by the restlessness of theologians, laboring men, political leaders, governments, and nations. But the very life of modern society and the permanence of civilization and progress, break up barbarisms, and bring out into the fresh air and sunshine all the inert elements, which else would settle and stagnate. But it is always to be borne in mind that in society, as in the atmosphere and the ocean, the currents which most powerfully affect the welfare of the human race are not the noisiest or the most obvious. The movers and the movements which are most conspicuous in the head-lines of the daily press commonly do not represent the deep, slow-moving forces, which, like the great ocean currents and the trade winds, are shaping continents. They are rather the puffs, flaws, squalls, cross-currents, and rips which abound in the neighborhood of islands and shoals. They often indicate danger, but they cannot be depended upon to indicate the course of a long voyage or a journey round the world. Taken too seriously, agitations of this kind in Church and State excite alarm on the part of some, and in others excite expectations of rapid change and progress, which have no warrant either in experience or in sound reason. Agitation prevents stagnation. But he who would read aright the signs of the times will look beneath the surface of events, and study the deeper, slow-moving forces which shape the course of history.

*Christian Register* (Unitarian).

### Mormon Invasion of New Hampshire.

Six Mormon missionaries are now at work in various parts of the State. When some of them were interrogated as to the reason for their visit and zealous activity, the reply came that Governor Rollins' proclamation revealed the fact that New Hampshire had more unchurched to the acre than any other New England State, and it is the mission of this people to carry the gospel to the "lone sheep," and they thought there was ground for salvation in this State. The humor is manifest. Later, however, they declared they came to correct prevalent misunderstandings concerning their church in regard to the practice of plural marriages, strongly denying them, as the laws of the United States forbid them, and are rigidly adhered to by them as obedient citizens. One said he was ready to stake his life that there had not been a plural marriage in the church since 1891—an assertion hard to substantiate in the face of facts now and then coming to the surface. They declare their policy is not to tear down, or make proselytes, but to teach the truth as they understand it. As they fail to secure buildings in which to speak, their services are held in the open air, poorly attended, and with a display of more zeal than converts. The father of one was a native of New Hampshire. It is a fact not generally known that eight men born in the State in Sullivan and Cheshire Counties were ordained to the Mormon priesthood, though none thus ordained entered upon active service.

*The Congregationalist.*

### Y. M. C. A. Annual Report.

The last annual report of the International Committee of the Young Men's Christian Association says that of the 1,429 associations in existence, 1,341 sent in reports which showed an aggregate membership of 228,568, and an active membership of 108,592; 344 own buildings valued at $10,847,936, and 92 own other real estate valued at $1,270,550. Deducting debts, the net value of all property is $10,347,272. The cash paid out for current expenses was $2,453,778.—*The Watchman* (Baptist).

## Miscellany.

### The Hindoo Idea of Religion.

I met in India an intelligent Sikh from the Punjab, and asked him about his religion. He replied, "I believe in one god, and I repeat my prayers, called japji, every morning and evening. These prayers occupy six pages of print, but I can get through them in a little more than ten minutes."

He seemed to pride himself on this rapid recitation as a work of increased merit. I said, "What else does your religion require of you?"

He replied, "I have made one pilgrimage to a holy well near Amritsar. Eighty-five steps lead down to it. I descended and bathed in the sacred pool. Then I ascended one step, and repeated my japji in about ten minutes. Then I descended again to the pool and bathed again, and ascended to the second step, and repeated my japji a second time. Then I descended a third time and bathed, and ascended to the third step and repeated my japji a third time; and so on for the whole eighty-five steps, eighty-five bathings, and eighty-five repetitions of the same prayers. It took me exactly fourteen hours, from 5 P.M., one evening, to 7 A.M. next morning."

I asked, "What good did you expect to get by going through this task?"

He replied, "I hope I have laid up a great store of merit, which will last me a long time." This is a genuine Hindoo idea.

*Concord Evening Monitor.*

### The Coldest Place in the World.

Verchoiausk is considered to be the coldest place in the world. It is a small collection o. native log-houses, planted near to, but not on, the Yana River, says the *Philadelphia Press.* The street, if so it may be called, extends on each side of a narrow sheet of water, a kind of creek formed by the autumn overflow of the Yana, which in winter forms a frozen promenade or driving place for sleds. It is a dreary place enough. The summer lasts only four months, and during the other eight of the year it is bitterly cold; the thermometer sometimes indicates 86 below zero, and seldom goes above 50 until April 30.

Corn will not grow in this desolate region. Barley and oats have been sown, but have always succumbed to the early frosts. Of vegetables, there are only the radish and the turnip, with perhaps an occasional and very precarious crop of potatoes. Cabbages all run to leaf. The ground rarely thaws, even during the hot season, beyond twelve or eighteen inches, and in places most exposed to the sun never beyond a yard. Most of the dwellings are Rakut huts, built of fir-trees against a square framework and covered thickly with mud to keep out the cold.

Should we feel at times disheartened and discouraged, a confiding thought, a simple movement of heart towards God, will renew our powers. Whatever He may demand of us, He will give us at the moment the strength and the courage that we need.

*Fenelon.*

The *Religious Herald* says: A preacher in consulting his bishop about organizing a surpliced choir as a drawing power in his church, said: "Bishop, what do you think of it?" The good man simply replied: "Have you ever tried preaching the Gospel?"

A philosophical statistician calculates that in the year 2000 there will be 1,700 million people who speak English, and that the other European languages will be spoken by only five hundred million people.

*The Church Standard.*

Lord Kelvin in a lecture stated that, as a result of recent investigations, it was estimated that the earth had been the abode of life for about thirty million years.

*The Church Standard.*

## Notices.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1.

### The Board of Education.

Requests for application blanks for the next examination cannot be complied with until due notice is given through our publications, as announced in the *Sentinel* of January 19, 1899.

### Clerk of the Mother Church.

All correspondence with the clerk of the Mother Church on matters pertaining to his office should be addressed to WILLIAM B. JOHNSON, C.S.B., 30 Norway St., Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
95 Falmouth Street, Boston, Mass.

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

The first race of the American cup series was sailed Monday, October 16. The course was fifteen miles to windward and return. Columbia, the American yacht, won by ten minutes, eight seconds. Time 4h. 53m. 53s. The second race, over a triangular course of thirty miles, was also won by the Columbia. When only three miles from the starting-point the topmast of the Shamrock broke, which so disabled her that she gave up the race and was towed inside Sandy Hook. The Columbia sailed over the full course alone, and was declared the winner. Time 3h. and 37m. The third race was over a windward and leeward course of thirty miles. The Columbia again came off victor by six minutes thirty-four seconds. Time 3h., 38m., 09s. Having defeated the challenger three times, the famous yachting trophy stays in America.

Senator Hanna and others favor creating another cabinet department, to be called the Department of Commerce. It is thought the President will, in his next annual message, recommend such a department. The reason given for creating a new department is that too many great branches of business are grouped under the control of a single cabinet officer. For instance, the Interior Department embraces, the Land Office, Pension Department, Indians, and so on.

General William R. Shafter was sixty-four years old October 16, 1899. For over a year he had held the positions of brigadier-general in the regular army, and major-general of volunteers. On his sixty-fourth birthday he was retired by operation of the law which fixes the age-limit of officers of the regular army. He will remain in the volunteer service in command of the department of the Pacific until relieved by the President.

About one hundred and sixty delegates from different parts of the country assembled in Chicago, October 17, to launch a crusade against the policy of the administration in the Philippines. Among the prominent persons who attended was the Hon. Carl Schurz. He declared he was opposed to making any further war upon the natives, and urged that an armistice should be established at once.

Representative stove men from Maine to Texas will meet at Philadelphia next month to effect a manufacturers' combination. It is estimated that the combination will result in a saving of eight million dollars annually. The aggregate sales have averaged twenty-five million dollars annually for the past three years. There are 218 manufacturers of stoves throughout the country.

The consuls at Manila have received a book containing the correspondence between Aguinaldo and the American commanders and consuls. The book is addressed to the members of the United States Congress, and upon it the Filipinos base the assertion that the American government recognized their sovereignty and promised them independence.

In his address of welcome at the eighteenth National Conference of the Unitarian Church at Washington, D. C., Senator Hoar of Massachusetts said, regarding the Philippine question, that nations as well as individuals may work out their own salvation according to the law of God, without dictation or coercion from any other.

The *New York Commercial* says that it is proposed to consolidate the National Bank of Commerce and the National Union Bank, both of New York City. These banks are two of the largest and strongest institutions in the United States, and have a combined capital of six million two hundred thousand dollars.

Alfred S. Hartwell, who will represent Hawaii as an unofficial territorial delegate at the coming session of Congress, has for thirty years been a leading member of the bar in Hawaii. He is a graduate of Harvard. In 1868 he was appointed first associate justice of the Supreme Court of Hawaii.

During the past two months two thousand Spaniards have arrived in Havana, who say it is impossible to get work in Spain, and that the government is assisting them to emigrate to Cuba. It is believed that two hundred thousand will reach Cuba within the next few months.

When Admiral Watson receives the reenforcements which have been assigned him he will have no less than fifty ships, large and small, under his command. This will probably be the largest naval force ever maintained in Asiatic waters by any Power.

The Canadian Pacific has placed orders for thirty or forty new locomotives with several of the leading locomotive manufacturers in the United States. This is the first order for locomotives this road has placed outside of Canada for many years.

Several large plants for the manufacture of iron tools are to be erected in Berlin, Germany, by American firms. It is reported that about twelve thousand dollars worth of iron tools are exported weekly from New York to Germany.

The British Parliament opened October 17, in extraordinary session, to consider the South African situation. The Parliament voted to stand by the government. The Liberal leaders criticised the ministry, but pledged the party's support.

A national organization, to be known as the American Anti-Imperialist League, was formed at Chicago October 19. All existing organizations become members at the outset, and new organizations will be formed all over the country.

Andrew Carnegie donated three hundred thousand dollars for the erection of a public library in Washington. He recently informed the commissioners in charge of the work that he would increase the donation fifty thousand dollars.

Secretary Root holds that no franchise can be granted, except by Congress, to any company to land a cable in Cuba. For this reason the American troops will continue to prevent the landing of an American cable in the island.

The fifty-third annual meeting of the American Missionary Association opened at Binghamton, N. Y., October 17. The treasurer's report showed that $296,910 had been expended during the fiscal year.

Arthur Twining Hadley, LL.D., was inaugurated president of Yale University, October 18. He is the thirteenth president of Yale, and the only one who had not previously been ordained a clergyman.

Notwithstanding the recent agreement of Germany, Great Britain, and the United States to abolish the office of king in Samoa, it is reported that the natives have proclaimed Tamasese as king.

The Supreme Court of Michigan has decided that women are ineligible to hold elective office in the state, unless the statutes or constitution expressly stipulate that they may do so.

The Treasury Department will soon put into operation in the mint establishments a new plan for refining, which will save the Government sixty or seventy thousand dollars a year.

A formal petition, signed by several million citizens of the United States, protesting against the seating of Representative-elect Roberts of Utah, is to be presented to Congress.

President McKinley and party returned to Washington October 19, having covered a distance of five thousand miles. The President made nearly one hundred speeches.

William J. Bryan and party recently made a tour of Kentucky and Ohio. The Colonel made several speeches, and was greeted by large crowds wherever he went.

It is expected that within a month the organization of the Consolidated Cattle Company, with a capital of one hundred million dollars, will be effected.

The number of immigrants who came to this country last year was 311,715, which exceeds the number of the previous year by more than eighty thousand.

A fund of $375,000 has been raised by the lord-mayor of London for the South African refugees. The Queen subscribed twenty-five hundred dollars.

The collections of internal revenue for the three months of the present fiscal year have averaged nearly a million dollars for each business day.

The taking of the census in Cuba began October 16. The enumerators were well received, and all the desired information was readily given.

Miss Susan B. Anthony is about to retire from active service as president of the National Association of the Woman Suffrage Societies.

Ex-Speaker Reed has been admitted to the New York bar, and has declared his intention of residing permanently in the state.

Active preparations for war in the Transvaal continue. Several battles have been fought, with heavy losses on both sides.

John D. Rockefeller outbid Andrew Carnegie for the control of the American Barge Company's fleet of lake steamers.

The gold production of the South African republic in July, 1899, was 409,127 ounces of fine gold, valued at $8,308,757.

United States packers have received contracts for supplying five million pounds of canned beef to the British army.

Dr. W. H. P. Faunce was inaugurated president of Brown University, October 17, 1899.

Missouri's fruit crop this year is estimated to be worth twenty million dollars.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Ancient Egypt's Greatest Monument.

### Begun Before the Time of Abraham, it was Building for Two Thousand Years.

THE Temple of Karnak, work for the restoration of which has been going on for a number of years under the direction of American, English, and French archæologists, is perhaps the most interesting ruin in Egypt, though less known to the tourist than the Pyramids and the Sphinx. It was and is the most enormous structure in the world. Its ruins to-day cover many acres. The nucleus of the temple alone is over twelve hundred feet in length. All the great rulers of Egypt from the time of the Middle Empire, over 2000 B.C., until after the Roman occupation, added to the work from time to time during a period, therefore, of over two thousand years.

The temple was approached by three long avenues of sphinxes. One of these extended all the way from the temple of Luxor, on the south, a half-hour's ride on a donkey, the whole way being lined on either hand with hundreds of sphinxes hewn from stone. Seven large temples surrounded the main temple. The last is the sanctuary of Ammon, the "Throne of the Two Lands." It is the greatest architectural construction ever built. You approach it from either end through a gigantic outer gateway. Six mighty pylons, or tower gates, extend in succession across the shorter dimension of the building. The largest of these tower gates is 372 feet wide, 50 feet thick, and 140 feet high. Between the first two of these pylons are the remains of the great court. It is so large that two considerable temples are built within it.

From the great court you enter the colonnaded hall, a vast structure, the most stupendous of all buildings of its kind. It is 338 feet long and 170 feet wide. The entire cathedral of Notre Dame, in Paris, might be put into this one hall alone and leave plenty of room to spare. Its roof is supported upon sixteen rows of columns, 134 in all; the two central rows of columns are 60 feet high, 35 feet in circumference, and 11 feet 10 inches in diameter. The remaining columns are 42½ feet high and 27½ feet in circumference. They are all carved with representations of deities and kings, once colored in bright hues; no place in all the world so thrills the traveler or makes him at the same time so conscious of the vanity of human greatness.

Behind the great colonnaded hall is a central court. Here are still standing two obelisks, two solid shafts of granite. These two are representatives of four—that is, two pairs, which originally stood here; one from each pair has fallen. The first pair was the work of Thothmes I.; the second was erected by his great daughter, Hatshepshut (Hatasoo). The standing obelisk of this latter pair is the largest in Egypt, being 97½ feet high, and is notable as being the work of a woman. Back of the obelisks is the sanctuary chamber, and behind this are a few scattered blocks, which, as the fruit of recent discoveries, are now known to be the remains of a Middle Empire temple.

The whole temple is more or less in ruins. Sad heaps of ruins represent what were once beautiful columns and exquisite statuary. The huge pylons are crumbling at the top and wasting away at the base. The remains of dwelling-houses of sun-dried brick built round the temple by natives in the Christian period, long since the temple was deserted, have disintegrated into dust and half-covered the outer walls. Even in the great colonnaded hall there yet remain immense heaps of debris.

The date of the building of the temple is not known definitely. It had been thought by archæologists that it was begun by Setee I. of the nineteenth dynasty, and continued by his son and successor, Rameses II. The great hall commemorates in its grandeur and by its sculptures the magnificence and power of those two pharaohs. The sculptures of the interior of the walls represent these monarchs making offerings to the gods, and were undoubtedly carved during a period shortly after their reigns. But only last April there were found by M. Legrain two statues in the ruins which go far to confirm the belief, first advanced by Lepsius, the great German explorer, and agreed in by the Frenchman Mariette and others, that this vast temple was a gradual growth, probably reaching back in its beginnings to the Middle Empire kings of the twelfth dynasty, over two thousand years before Christ.

Of these statues, one was in alabaster, and represented the great Theban god Ammon; the other, which is of the highest historical importance, was set up by King Usertesen, in honor of his father, in the days of Abraham. The alabaster god is eighteen feet high, and was made from one solid block of stone, the largest alabaster statue in the world. He was in three pieces. The head and shoulders were in one large piece, the trunk another, and the feet and pedestal form the third, the whole when put together constituting an eighteen-foot standing image of the god. It seems as perfect a work of art as if it had been carved by some Greek Praxiteles, although the hand of the Egyptian sculptor who hewed it was dust perhaps a thousand years before the birth of the Greek. The statue has doubtless been in the ruins for a long time. Possibly one of the columns of the hypostyle hall fell upon it long ago. This conjecture is supported by the fact that the statue was found close by the entrance near a fallen column. The age of this work of art can be determined with some degree of definiteness. Before Amenhotep IV., a king of the eighteenth dynasty, about 1500 B.C., Ammon was the god of Thebes. Amenhotep destroyed the worship of Ammon, but upon his death the priests of Ammon at Thebes overthrew the religious movement of Amenhotep. The following kings (of the nineteenth dynasty) were devotedly attached to the worship of Ammon. It was doubtless at this time, the age of Rameses II., that the statue was made. Had it been made before, Amenhotep would have destroyed it, and it is hardly possible to assume that the decadent art of any later age than that of Rameses II. could have produced it.

The second statue, though less beautiful, is of greater archæological interest, bearing this inscription in hiero-

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

glyphics: "The King of Upper and Lower Egypt, Ra-Kheper-Ka (*i.e.*, Usertesen I., this being another name by which he was called), has made in remembrance of his father, the Prince Antef, an offering of a thousand loaves of bread, a thousand oxen and fowl, a thousand garments, a thousand bolts of cloth, and incense like unto a faithful follower of Ammon, Lord of the Thrones of the Two Lands. The Prince Antef, son of Akoui."

The historical significance of this inscription is great, for the finding of this Middle Empire statue positively carries back over five hundred years the date of the building of this temple. Usertesen I., called Ra-Kheper-Ka in the inscription, was the second king of the twelfth dynasty. This dynasty was the nucleus of the Middle Empire period, beginning in the twenty-second century before Christ. Usertesen lived not later than 2100 B.C. No monument or inscription ever before found in the temple was carved before 1600 B.C. M. Legrain unearthed it in the very part of the building which had been supposed to belong to the twelfth dynasty. Those who have visited Karnak will remember the two beautiful granite columns in front of the granite sanctuary of Thothmes III. At the base of these the statue was found.

The cause of the fall of the present columns is undoubtedly the same which has made the work of restoration even perilous, the fact that the bases of the columns have crumbled. They are composed of sandstone, and the surrounding dust of the ruins, containing as it does much nitre, so impregnates the waters of the inundation that they become a solution of nitre, which enters into the stone and disintegrates it. It is then turned into simple sand, which may be brushed aside with the hands.

The work of restoration in progress is under the supervision of M. Legrain. He has already spent four years here, and to complete his work with the present force will require ten years more. The labor goes on during the six cooler months of the year, and seven hundred men are employed. These Karnak excavations are the greatest task ever attempted in Egypt. The clearing began in the hypostyle hall of the temple of Ammon. During the excavation the avenue of ram's head sphinxes was cleared, and many walls bearing interesting sculptures were here brought to light. One of the most important discoveries was undoubtedly that of the "Nilometre of Karnak," which, in contradiction to certain expressed opinions, gives the level of various floods of the Nile. By the inscriptions and dates on this nilometre, modifications are made in the chronology of some dynasties; the level of the floods and the dates of the reign under which they occurred are documents of the highest historical importance. A good deal of the Egyptian chronology is based on a flood which took place in the third year of the reign of King Osorkon II. This flood is mentioned again on the Karnak Nilometre discovered by M. Legrain. The importance of this discovery will fully appear when the dates inscribed on the nilometre have been compared with other accepted chronological facts.

*Boston Evening Transcript.*

## Characteristics of World Heroes.

IF there be any qualities above others by which the world's heroes have been characterized, those qualities are modesty and simplicity. Modesty and simplicity have an extraordinary development in Admiral Dewey. Was ever anything better than his non-acceptance for himself of the plaudits of New Yorkers for the great Manila victory, and his turning to his officers and men and proudly remarking: "Those are the winners of that victory"? His simplicity is equal to his modesty; he will have no state, no show, no magnificent retinue in his entourage, his ambition is to be a simple American citizen among American citizens.

*New Orleans Times-Democrat.*

## Defence of Christian Science.

*To the Editor of the Commercial Tribune:*—Will you kindly allow space through your columns to make mention of some mistakes, as it would clearly seem, that appeared in the recent trial of those persons known as Christian Scientists, who were arrested for the so-called illegal practice of healing the sick in our midst, the correction of which might possibly result in quite another termination and verdict? The charge is the violation of the Mosgrove bill, that has for its object, ostensibly, the protection of the community and state at large against healers of the sick by quackery, fraud, ignorance, or otherwise, by those unlicensed or unqualified who use material aids or other agencies. It is not intended here to give the specific letter, but, as I understand it, this is the substance of the statute. The Mosgrove bill aims at the healer, and deals directly with those who profess to heal the sick by any agency whatever who do not conform to the prescribed methods of the State Medical Board. This bill, then, includes all schools of allopathy, homœopathy, hydropathy, electricity, eclectic, osteopathy, hypnotism, mesmerism, massage, all applications of liniments, salves, glycerin, all applications of water, cold or hot, all bandages and every other known appliance, local or foreign, that is employed to bring ease to disease. This Mosgrove bill may send out its searchlight upon every conceivable school of healing and upon individual efforts, and bring under its ban the non-conformist; but, according to my judgment, neither in its letter nor spirit nor in its most subtle essence can it touch the Christian Scientist.

We plead guilty to the fact that a vast amount of healing has been and is now being accomplished; that almost every known disease has been met and mastered. In a million of cases given up by all other schools as incurable, Christian Science has been able to score a glorious triumph. But the Christian Scientist is not the healer in any sense implied by that term. I disclaim it. To call a Scientist a healer is a misnomer. It is wholly a mistake.

Is the mathematical principle included in numbers? Certainly not. The principle simply works through numbers and so governs the problem correctly to which it is applied. It is so in Christian Science, which is founded on the eternal Principle, on Infinite Mind that governs all and upholds all by the universal law of harmony. In this Mind, or God, health is the everlasting fact, and it has been proved conclusively within the last quarter of a century that this ever-operative divine Principle of love, peace, and good will to the race, when understandingly applied to disease, of whatever type or virulence, at whatever stage or continuity, heals with irresistible power and certainty. God alone is the physician and healer in every case, be it toothache or cancer, rheumatism or leprosy, crime, insanity, or consumption. The Scientist is not the healer. What part has the Scientist, then, in the work? The part that the pane of glass has that admits light into our homes, or the part that numbers have through which the mathematical principle is expressed. This fact is recognized by all schools of theology, else why do ministers preach and people assemble to hear? We admit that a careful and persistent fitness is required for the high and holy work of Christian Science. As the window pane must be kept clear and transparent to transmit the greater light, and as numbers must be accurate to express mathematics, so must the life of the Christian Scientist come into harmony with Principle, God. This life must be kept pure and transparent; it must be meek and humble; it must be poised in the understanding of its relation to God, that light and blessing may be radiated upon itself and upon all with whom it comes in contact. The Scientist is but an instrument, to direct the Truth-seeker to the source of health and harmony. He is a channel for the accomplishment of God's will and God's

Digitized by Google

works. Jesus himself said, "I can of mine own self do nothing, . . . but the Father that dwelleth in me, he doeth the works."

Will not arrests have to be made on a higher plane, since among the many thousands of Christian Scientists not one can be found to admit that he or she is the healer? It would seem that the Mosgrove bill will have to undergo a peculiar sort of revision in letter and spirit to adjust itself to the universal law of harmony that recognizes nothing outside of its own perfect and focal existence.

But why, then, do Scientists take remuneration for their services if God alone is the healer? Scientists never take pay for the healing process, nor for the Truth as taught in Christian Science. In numberless instances among poorer classes no fee is required or taken, but where parties can, and ought to pay, a fair equivalent is accepted for their time and trouble. The law of compensation holds as good here as in other departments. The Scientist must be a constant student, supplied with proper books and literature, and must give his earnest thought and attention to solving these great problems of Life, Love, and Truth. His daily expenses must be met, even as others, and for this continual outlay and preparation of fitness, are charges made.

If, then, the Scientist is not a healer and makes no charges for healing, how utterly futile is the Mosgrove bill to affect the work of Christian Science. It falls to the ground.

Dust to dust! F. M.

*Cincinnati Commercial Tribune.*

## A Distinction.

THERE appeared in the "People's Column" of the *Traveler* October 7, a communication entitled, "Ruined by Christian Science," in relation to which a gentleman connected with the Christian Science movement, whom we know to be entirely reliable, presents to us the following statement: "This man was victimized by a professional swindler, who claims to be a Christian Scientist, but who is not, and never was, a member of the Mother Church. I have received letters from the writer of the communication referred to, in the last of which was contained a threat to the effect that if the church here did not pay to him the money that he had been swindled out of by the individual named, he would expose the whole matter through the newspapers. As to his alleged treatment by Christian Scientists, he gives no specifications which would enable us to determine whether he was treated by true Christian Scientists or by charlatans masquerading under some misleading analogous title."

We can say from our own knowledge that there are many who claim to be "healers" who are confused in the popular mind with Christian Scientists, but who are not of that church, and for their acts Christian Scientists should not be held responsible.

The "People's Column" of the *Traveler* is open to all for a fair statement of their grievances, and for the expression of their views in a proper manner upon any proper subject that may interest them, but we desire it to be distinctly understood that the *Traveler* assumes no responsibility for the views therein expressed. We frequently publish severe criticisms of ourselves in the "People's Column," because we intend to give all who desire to use it the utmost liberty for free discussion. Editorial in the Boston *Traveler.*

A Scientific Christianity implies a methodical, symmetrical Christianity,—a whole Christianity.

When the mists roll by the bright sunshine again appears; but the sun was shining all the time.

## The Eternal Womanly.

IN her inaugural address, Miss Caroline Hazard, Wellesley's new president, set forth a noble conception of woman's place and power. After comparing the women of to-day with those of two centuries ago, she said,—

The order of nature does not change. Yet nature's law is growth, and with that growth the position of women has changed, and with that change the cultivation of the individual becomes more important. The problem is not simply that of bringing children into the world, but what kind of children shall be born, what kind of a mother shall be educated; or, if the high development of motherhood is denied her, how shall she take her place in the world, a useful and honored member of the community, having children of her spirit. For I take it the eternal feminine is simply this: it is the power of love which has its throne in a good woman's heart. Call it altruism if you like, call it the mother sea, found a philosophy or a system of speculation upon it—it is simply this endless capacity of love and devotion which Mary of Bethany showed when she sat at Jesus' feet.

Granted, then, that this is at the root of woman's life, that every woman child who comes into the world has this great gift and responsibility, that this is her contribution to human life, with what reverence, with what awe, should we approach her, to make or to mar! Sentimentality and mannishness, like Scylla and Charybdis, stand on either side. The intellect must be trained to its full capacity or there will be an uneven balance. Heart and head in happy union must rule the conduct. And so we believe in what is called higher education. . . .

And with this education our sources of joy are enlarged. Not until we sound the depths of sorrow do we know the reservoirs we have to be filled with joy. "God giveth that is good in his sight wisdom, and knowledge, and joy." The wise man puts it all in a sentence for us—the wisdom which cometh from above, this soul education, which is so impossible to define; the knowledge the mind is so eager to acquire; and as the crown of both, the legitimate fruit of both, joy, the last heavenly gift. Without this joy no good work is possible. It is the sustaining power sometimes called enthusiasm, sometimes satisfaction—always precious, always to be desired.

This highest gift of heaven, this gift which is good in God's sight, woman is peculiarly fitted to receive. If the deep, abiding fountain of love in her heart is her greatest element of strength, then, indeed, she has a true and vital spark of the divine life in a peculiar sense. It is her great task to interpret the divine spirit in terms of every-day life. What countless men, the best of the world's leaders, have acknowledged their debt to their holy mothers! There have always been men to speak with tongues, and there must always be women to interpret. How close, then, to the source of all life must we women press, lest the light that is in us should turn to darkness!

*The Congregationalist.*

## Inerrable Word of God.

IN the Tremont Theatre a large audience listened to a lecture by Rev. Hiram Vrooman, pastor of the Church of the New Jerusalem, on "The Bible; Its True Nature and Divinity and Its Spiritual Inerrancy." He said in part,—

A certain scholarly examination of the Bible is now being made by leading clergymen in the various Christian denominations and by other Biblical students, the results of which are known as the "higher Biblical criticism." This higher criticism, so-called, concludes from the evidences it has examined, that the Bible is not the inerrable and veritable word of God. The change of attitude toward

Digitized by Google

the Bible by the Christian ministry during recent years as the result of this higher criticism has been almost revolutionary.

Many of the exponents of the higher criticism, notwithstanding their practical repudiation of the Bible as the word of God, are deeply spiritually minded men with clear visions of spiritual truth. These men have been drinking from a crystal stream innocently denying the fountain. They have had twilight visions of a new world of righteousness, innocently denying the rising sun.

A clear line of demarcation exists between natural and spiritual knowledge. Natural knowledge, including the natural sciences and the materialistic philosophies—all knowledge derived through the senses—deals only with a set of facts which perform their ultimate use in man's physical body. Spiritual knowledge, however, deals with another set of facts, which are revealed and which perform their ultimate use in the human mind or soul. Spiritual facts are conveyed to the mind by the mediumship of symbols. Whenever a man sees with spiritual vision the mental picture symbolized by Biblical grouping of natural objects, then the vision of that symbolic picture is the conception of some spiritual truth: thus it is that spiritual facts enter the mind to become a part of a man's definite knowledge.

For clearness let us say that there are some things about the Bible, as we ordinarily comprehend the term, that are finite and human. The paper and ink are finite and human. The literature as such is finite and human. But the symbolic pictures to be seen through the literature as their medium are divine. To me the greatest and surest joy of my life is the belief, founded upon the rock of rationality, that the Bible is the divine and spiritually inerrable word of God. To it I may turn in confidence as an authoritative guide to direct me through the labyrinthian ways of confusing and constantly surprising worldly experiences.—*Boston Transcript.*

## A Unitarian Conception of Jesus.

I ASK you, I entreat you, keep in your thoughts and hearts that which those hearts cannot help loving and cherishing. And by this I do not mean those things that all the world, even those who patronizingly rank Jesus only as one in a long line of many prophets, are forced to allow. It is not his unerring knowledge of man, his matchless insight into the Divine, his spotless life, his precious example, his fiery denunciation of sin, his tender sympathy for the sinner. It is not merely his martyr's death or his hero's crown. Cherishing and clinging to all these—cherishing, too, what no self-complacent critic shall prevail on me to reject, his mastery over every form of physical and moral suffering and evil, even unto death and the grave; believing, as I do, that death could not hold his spirit nor earth retain his spirit—it is something else of his that makes me cling to him as the way, the truth, and the life. That something is himself, his person, his nature—that exalted, unique, being, who is to me more than parents or brethren, more than teacher or example, my living, real, present friend, in whom I live, through whom I come to God.

Friends, the world has seen a long line of glorious prophets. They have gone on from age to age manifesting the truth, and commending themselves to men's consciences in the sight of God. For their precepts and their examples, their lives and their deaths, we are grateful. Whether their teachings are recorded in books as among the great of earth, or whether they have made their kindred better by that modest and unseen influence which a record would only stain, we are grateful. We bow the knee in gratitude to our Father that He has given them for our help. But, however much we owe to them, of all of them we must say, "They were, they have been, they are not now." Whatever faith or reason tells us of their existence in other and higher spheres of service or of glory, to us they are not; we may read of them, we may love to recall them, but to us they are gone. But he, he our Lord and Master, Jesus the Anointed, is. We cannot think of him as gone in the way those others have gone. Superstition has looked for his second coming. It has come, he is with us; he is with every soul of man that turns in trembling love and tender awe to that Father of whom he first taught us as no other teacher ever did. From the story of his gospel, from the experience of his saints, from our own inmost lives, our dear Lord comes forth in his own person, beyond, above, beneath, behind all criticism and all doubt, shining at the portal of that way which he has opened behind the veil, our living friend and brother, manifesting the truth which is himself, commending himself to every man's conscience, in the sight of his Father and our Father, of his God and our God.

DR. WILLIAM EVERETT.
*Christian Register.*

## Power of Habit.

HABIT is defined as the tendency or inclination toward an action or condition, which, by repetition, has become easy, spontaneous, or even unconscious. Thought itself is governed by habit.

How is thought governed by habit? Every man has two kinds of opinions: one kind consisting of logical conclusions that are the result of thought, while the other kind consists of opinions that are merely the result of habit. The majority of our opinions are of this last character. We, ourselves, call them our "views," other people call them our "prejudices." Most of what we call "thinking" on every-day occurrences of life is little more than a mechanical adjustment of our minds to our environment. There is a strong tendency in us all to accept what seems inevitable as right. This applies to most of our ideas about the conventionalities of life, but it also applies to more important matters. Fifty years ago everybody in the South, and almost everybody in the North, defended slavery. The conviction was not a logical conclusion—it was a habit. Slavery had always existed, and our thinking was adjusted to it; it therefore seemed a part of the Divine plan. Our thinking is at present adjusted to the wide existence of poverty in the world. Some people think that this is not an intelligent conviction, but a habit of thought which we may get rid of some day.

If you wish to change a man's opinion on any subject, the first thing to do is to find out whether that particular opinion is a logical conclusion with him or an opinion formed from habit. If it is a logical conclusion, you can change it by argument; but if it is a mere habit, argument will only irritate him and make him stubborn. You must give him a chance to outgrow it. As we grow older we form many such habits, which constitute a kind of "mechanism of thought." After that, when a new proposition is presented, the first question is not "Is it true?" but, "Does it accord with my views?" If it fits into our mechanism of thinking, we accept it; if it does not, we reject it. In this way most of us crystallize at about forty and fossilize at about sixty years of age. Great minds, however, remain plastic until extreme old age.

*The Mechanic Arts Magazine.*

The *New York Observer* says: "The one hundred and two Pilgrims who on the 16th of September, 1620, landed at Plymouth represented the moral sinew that vanquishes a world. In their veins ran the best blood and in their hearts pulsated the purest love and life in all England."

## Among the Churches.

### Corner-stone Laid.

At 7.30 on the morning of October 12, 1899, the corner-stone of the new edifice being erected for the First Church of Christ, Scientist, Berlin, Ont., was quietly laid in the presence of the church members. Appropriate selections were read from the Bible and the Christian Science text-book, and also a brief history of the local branch church. The simple ceremony was completed by placing in the stone a copper box. Its contents comprised a handsomely bound Bible, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, the latest numbers of both the monthly and weekly publications of the Christian Science Publishing Society of Boston, Mass.; a copy of the declaration of incorporation of the Berlin church, and copies of the *Daily News Record* and *Telegraph*.

The new building will present a striking and substantial appearance, being built of field stone laid at random, and the site, at the corner of Water and Francis Streets, is convenient for the members both from Berlin and Waterloo.

*News Record.*

### New Quarters at Canon City, Col.

First Church of Christ, Scientist, of Canon City, Col., have removed from their old place of worship, an up-stairs hall, and October 1 held their opening service in the church edifice, corner 5th and Main Streets, recently vacated by the M. E. Church. It has been repapered and painted, and is now a very pretty place of worship.

One of our members purchased this property and leased it to us for a year. When the lease expires we hope to have our own vine and fig-tree.

We have felt sometimes as we read of the rapid progress elsewhere that our growth was slow, but we rejoice in this, that we are learning to love and are growing in the understanding of Christian Science, and our hearts are made glad to see the increased attendance since our removal.

MINNIE C. SHAEFFER, Clerk.

### Union Meeting.

The Christian Scientists of Park County, Col., held a union meeting at Fairplay on Sunday, July 30, in the M. E. Church. There were present Scientists from Jefferson, Garo, Buffalo Springs, Alma, and Leavick, besides residents of Fairplay, in all about sixty in number.

Mrs. Ella P. Sweet, C.S.D., who first taught Christian Science in Park County, came up from Denver to attend the meeting.

On Saturday evening a testimonial meeting was held in the parlor of the Hotel Windsor.

The Scientists went from the meetings greatly encouraged and strengthened.

E. G. P., Buffalo Springs, Col.

### Public Reading Rooms.

In Indianapolis, Ind., the Scientists have long felt the need of public reading rooms, that all interested in Christian Science might be provided with a way to learn its precious teachings. Our need has been met and we now have ready for the public, a beautiful reading room centrally located.

ROSETTI KNEIP.

### Organization at Vinalhaven, Me

A church to be known as First Church of Christ, Scientist, in Vinalhaven, Me., was incorporated under the laws of the state August 29, 1899.

This organization has its present home in a pleasant hall in a central location on Main Street.—S. S. L.

## The Lectures.

### At Racine, Wis.

Association Hall was well filled Thursday, September 28, with intelligent men and women, among the number being a delegation from Kenosha, to listen to ex-Judge Clarkson of Omaha, on Christian Science.

At 8.30 the speaker came upon the stage, accompanied by Mr. Simmons, who introduced him to the audience, in the following language:—

*Ladies and Gentlemen:*—It may be taken for granted, I think, that every fair-minded person is or ought to be a seeker after truth. Inasmuch as truth has, from the very dawn of creation, had a habit of presenting itself from time to time in new and unexpected forms, the candid mind will reject no idea nor form of belief, no doctrine of life, which has met the acceptance of any considerable body of his fellow-men, without careful investigation. It will not be sufficient to such a mind, merely that it fails to have the sanction of authority or antiquity. While I am not sufficiently informed as to Christian Science to count myself as an adherent to its particular form of thought, I cannot fail, indeed no one can fail, to recognize that it has within a few years past drawn to itself a numerous following, including some of our most intelligent and best people. This fact alone is sufficient to render it a pleasure to me to listen with you to-night, to an exposition of its principles by one who has given them deep and earnest study. You will permit me to say that the only hesitation I have felt about introducing to you the speaker of the evening arises from the fact that he is a lawyer, and being a lawyer yet contends that he has found a more satisfactory way of serving his fellow-men than by following strictly his profession.

I have the pleasure and honor of introducing to you the Hon. Joseph R. Clarkson of Omaha, who will address you.—*The Racine Times.*

### Lectures at Other Places.

Rice Lake, Wis.—William G. Ewing, Monday, September, 18.

Marion, O.—William G. Ewing, Sunday, October 1.

Chicago, Ill.—William G. Ewing, Sunday, October 15.

## A Thought.

BY EVELYN SYLVESTER.

I SAT in my study, thinking,
When a pure and holy thought,
In the depths of my quiet consciousness,
Was clearly and sweetly wrought.

"Arise," said the angel message,
"For the world hath need of thee;
Not only to do thy duty well
But to do it cheerfully.

"Not only to help thy brother
The rugged way along,
But to soften the upward path with a smile
And sweeten it with a song.

"Not doing unto others
As they do unto you,
But, denying self, reflect to them
The beautiful, good, and true."

I folded the angel closely,
In humility bowed my head;
Afar, as in distant ecstasy,
A faint "well done," was said.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## Take Notice.

BY MARY BAKER G. EDDY.

THE following three quotations from "Science and Health with Key to the Scriptures" are submitted for the dear Churches of Christ, Scientist, to select from, and to place one of them only on the walls of the church. Otherwise, as our churches multiply, promiscuous selections would write your text-book on the walls of your churches.

Divine Love always has met, and always will meet, every human need. MARY BAKER G. EDDY.

Christianity is again demonstrating the Life that is Truth, and the Truth that is Life.

MARY BAKER G. EDDY.

Jesus' three days' work in the sepulchre set the seal of eternity on time. He proved Life to be deathless, and Love to be the master of hate. MARY BAKER G. EDDY.

## Historical.

WE desire to quote some letters and articles which will give a retrospect for a year, and inform our readers regarding the opportunities given the *Washington News Letter*.

In May, 1898, Captain Linscott of Washington, D. C., reported to Rev. Mary Baker Eddy that a patient of his had been filling the pages of a little sheet of which he was editor with articles relating to Christian Science, and as a consequence had so lost patronage that financial ruin threatened him. The response of Mrs. Eddy to this appeal was immediate.

In the *Christian Science Journal* for June, 1898, appeared a letter from our Leader, recommending "every Scientist on *terra firma*" to subscribe for the *News Letter* for one year. Can one imagine greater kindness to a struggling paper about to cease its existence, than this recommendation, which gave it entrance and welcome into thousands of homes of good people? Kind thoughts were given to the editor, many subscriptions were sent in to his enterprise, and contributions poured in for his columns, so that success was assured; but it should be clear that all this grace of love was solely the outcome of the recommendation referred to, which called it forth. Years and years of toil could not gain for any paper such a position. Does this warrant the charges now made by Mr. Sabin about exclusive "combines," "trusts," etc.?

The fact is that in their loving desire to help, some Christian Scientists passed the line of kindness, and poured in what was really flattery, which became so much of an intoxicant as to turn our brother's head, and make him believe that his success was due to his own greatness and cleverness.

At the expiration of the year, Scientists everywhere began to send inquiries both to Mrs. Eddy and to the Publishing Society as to whether they were expected to renew their subscriptions to the *Washington News Letter*. One year of weekly issues had surely furnished the paper with ample opportunity to prove its service to the Cause, and its usefulness to workers therein; therefore it seemed expedient to let the paper stand upon its own merits, so any obligation to continue subscriptions because of the first recommendation was removed by the publication of the following letters:—

We quote first the letter from the Publishing Society which appeared in the August, 1899, *Journal*.

THE WASHINGTON NEWS LETTER.

The Publishing Society has felt and still entertains a friendly interest in the *Washington News Letter*, and through the loving counsel and admonition of our beloved Leader—not to "cast the first stone"—we trust that this attitude has been put upon the truly Christian and Scientific basis.

The editor of the *News Letter* in a recent editorial says of his paper, that it is "not a Christian Science organ, nor is it a Christian Science publication." We understand that he thereby defines his position in relation to our cause.

The matter which appears in the Christian Science organs is under the careful inspection of the Christian Science Publishing Society, and is understood to be officially representative of our movement. The *News Letter* does not come under this care and inspection. Nevertheless, the friendly interest of the Publishing Society will continue so long as its editor boldly defends the Truth, and is obedient to the Principle and rules of Christian Science; but the Publishing Society cannot in any way be responsible for what appears in the *News Letter*.

Christian Science Publishing Society,
JOSEPH ARMSTRONG, Business Manager,
SEPTIMUS J. HANNA, Editor.

We quote next the following letter from the Rev. Mary Baker Eddy, which appeared in the same *Journal*.

*Dear Editor*:—Having received a letter from Captain John F. Linscott, C.S.D., of Washington, D. C., in or about May, 1898, informing me that Colonel Sabin of that city, editor of the *Washington News Letter*, had become a Christian Scientist, and by reason thereof had lost the principal patronage of his newspaper,—I immediately requested all Christian Scientists to subscribe for said newspaper one year. In a letter Colonel Sabin pleasantly assured me that their generous subscription had resulted in the present prosperity of his paper. I had never heard of Colonel Sabin up to the above-named date, and have never had the pleasure of meeting him.

In answer to the questions from the Field: "Are Christian Scientists under obligation to continue their subscriptions for the *Washington News Letter*?"—they are under no further obligations to me.

July 10, 1899. MARY BAKER EDDY.

The editor of the *News Letter* admits that his paper had been saved by the generous help of Christian Scientists, in the following comment upon a letter regarding the obligation of Scientists to continue as subscribers to his paper, published in his issue of August 9, p. 560. He says:—

When the editor of the *News Letter* first commenced to write Christian Science the patronage of the paper left it, and, as appears from her [Mrs. Eddy's] letter, Captain Linscott, First Reader of the Church in Washington, wrote to her, stating the facts. She, of her own volition, asked Christian Scientists throughout the world to subscribe for the *News Letter* for one year, and her request was generously responded to.

This enlarged subscription list placed the *News Letter* where it was not obligatory upon any person to subscribe for it for the purpose of sustaining its life, or, in other words, the object of the Mother's original recommendation had been accomplished. The *paper had been saved* and become an instrument of usefulness, notwithstanding the abandonment of its mortal-mind patronage.

The Mother's note does not signify in the slightest degree that she is not yet the friend of the *News Letter*.

The *News Letter* and its editor is the devoted friend of Christian Science and the Mother, as its Founder and Discoverer, and whatever we can do for the advancement of this great Truth it is our ambition to do. We take her advice in all things, and our desire is to follow her leading.

To show the kindly feeling which was then expressed, we quote also the following from an article in the *News Letter* entitled "Christian Science Publishing Society" from the same issue, page 561:—

In view of the fact that the Christian Science Publishing Society and its managers, with the editors and all connected with it, are now being subjected to persecution by the powers of evil, it becomes the duty of all loyal Christian Scientists, and those who desire to see the advancement of the kingdom of God on earth, to rally to the support of Christian Science and to those who are the appointed leaders of such propagation. In this behalf I desire to call attention to the publication known as "Christian Science History," and also the "Legal Aspects of Christian Science," published by the Society in Boston. The pamphlet "Christian Science History," is sent free of charge, and should be very widely circulated throughout all parts of the country and the world. The "Legal Aspects of Christian Science" is charged for, and the price will be given on application to the Publishing Society.

The present time seems to be fraught with antagonism against

Digitized by Google

the Truth to a remarkable degree, and the clouds seem thicker and thicker as we advance into the future, but we know that God reigns, that God is absolute, that God is All, and that God is Good; therefore, no worker of evil can affect His cause or injure those who are faithfully working in His vineyard.

The *News Letter*, like each one of its subscribers, is but one in the field that is endeavoring to carry on this great work, and we are all working in the one great cause, and should do all we can to advance the work and uphold our Mother and her appointed agencies.

In the *News Letter* of August 16, the editor, in his article on "Law of Interpretation," undertakes to interpret his own language, from which article we extract the following, page 592:—

THE EDITOR INTERPRETS.

I have given this general rule and explanation in order that I may claim the right all others are entitled to, to explain the meaning of my own writings in my own way. I refer especially to the article written in the *News Letter* of July 5, in which I made use of the following words: "The *News Letter* is not a Christian Science organ, nor is it a Christian Science publication." I have received innumerable letters asking the meaning of these words, and even so good a lawyer and good a friend as Judge Hanna, the editor of the *Christian Science Journal*, put an interpretation upon that writing which I never dreamed of. One may ask, Can't I read? I answer, yes. Can't I understand? I answer, no. You cannot understand unless you are guided by the one infinite Mind. There has never yet lived the human being guided by mortal mind who was able to understand another's writings. This I am justified in saying by the innumerable cases which fill the law books and fill all history with such controversies, showing that human reason cannot fathom infallibly the meaning of others. I wrote to my good friend, Judge Hanna, stating that he had mistaken my meaning, and he replied that he had given it the only interpretation which seemed possible, but adds "that we shall be glad to hear any explanation which you have to make in reference to what you intended to be the import of your editorial."

My intentions when writing that article were in perfect harmony with my former enunciations as to what the *News Letter's* policy was to be. I meant to say, as I say now and repeat, that the *News Letter* is not a Christian Science organ, nor is it a Christian Science publication. My idea of a Christian Science organ and a Christian Science publication is, that such paper or magazine, or whatever it may be is such as is published ONLY by the Christian Science Publication Society, and NOT by anybody else. The *Journal* and the *Sentinel* are Christian Science organs and Christian Science publications. They write Christian Science. The *News Letter*, on the other hand, writes OF Christian Science and ABOUT IT. It is a John the Baptist—"one crying in the wilderness;" it is he who goes through the wild forests and blazes the trees, that those following after him may know that the hand of civilization has been before. The *Journal* and the *Sentinel* are my organs, the same as they are the organs of every other member of the Christian Science Church, and what they say and do are binding upon us as loyal Christian Scientists; but if the *News Letter* should make a mistake and enunciate some principle which in fact should be wrong as to what Christian Science is, there is no one on earth who can hold the Christian Science Church organization responsible justly for what the *News Letter* may say, because *it is not a Christian Science organ, nor is it a Christian Science publication.*

. . . . . .

My object in writing this editorial is to inform my friends throughout the world my exact position. There is no unfriendliness, no tension, or anything but brotherly love existing between the *News Letter* and the Christian Science Publishing Society or the Mother Church, or Judge Hanna or the Mother herself. They all love the *News Letter* and it is devoted to them, but some have misunderstood the meaning I intended should be given to my article of what the *News Letter* is, and as I have stated, I alone of all the world have the right to interpret and say what is the meaning of my own writings. I know of only one living person who can infallibly interpret the writings of others, and she is not guided by mortal mind. OLIVER C. SABIN.

In his issue of September 6 the editor says of the article from the *Journal* that it "purposely and maliciously puts a construction on an editorial I had written trying to show that I had said exactly what I did not say." As there was no attempt at interpretation in the *Journal* article other than to suggest that the editor had thereby defined his position in relation to our Cause, it is difficult to see how the editor can justify his charge of malicious misconstruction.

The editor's attitude toward the Cause and its Leader on August 30th was indicated in the following extract from his issue of that date, page 656:—

A FRIENDLY ATTITUDE.

God is blessing us all in this work, for, even though surrounded by enemies who are black with the envy and hate of mortal mind, who snap and snarl at Christian Science, our blessed Mother, and all who are working in this vineyard of the Lord, they can neither hurt, injure, nor retard any of us, and as for the *News Letter*, it, under the guidance of Truth, has become a great paper, and doing the work of the Lord manfully and without fear or favor.

COMPLETE CHANGE OF BASE.

Within one week we are astonished at learning that the editor has undergone a marvelous transmogrification. He no longer recognizes the leadership of the Discoverer and Founder of Christian Science, but, publishing his own photograph as a frontispiece in his paper, declares editorially: "The editor of the *News Letter* is as competent to teach Christian Science as anybody in the world, and it is simple and plain to all and easily taught" (Page 691).

In his issue of August 9 before quoted from, in comment upon the letter from the Rev. Mary Baker Eddy, he calls himself her "devoted friend," but in the issue of September 6 he spoke of it as part of a "combine" made to destroy his paper.

BROTHERLY EFFORTS.

When rumors and inquiries began to come to headquarters, the following letter (which he terms "unfriendly") was sent to him by the Christian Science Publishing Society, and published in his issue of September 6, page 691:—

BOSTON, June 27, 1899.

Col. Oliver C. Sabin,
512 Tenth Street, Washington, D. C.

Dear Brother: In view of the many stories that have been circulated about you in connection with your work in Christian Science, we think you should come to Boston at once.

We are constantly receiving inquiries from the field relative to the reliability of the *News Letter* as a Christian Science publication.

You will readily see the desirability, as well as the absolute necessity, of having a satisfactory explanation from you before we can give an intelligent reply to these questions.

Kindly let me hear from you upon receipt of this.

Yours in Truth, J. ARMSTRONG.

In the reply to this letter published in the same issue, the editor said, among other things, "I recognize no power but God and His duly appointed messengers on earth to control my conduct and my actions, and so far as I am now advised, you have nothing whatever to do with me or my business, further than Christian friendship and brotherly love."

We fail to see wherein the letter quoted was unfriendly, or written in other than a Christian spirit, or any cause for so defiant a reply, or where the basis for a charge of conspiracy was found therein.

To show more clearly how the "Christian friendship and brotherly love" asked for, continued to be shown, we give the text of a letter sent to the editor from the First Members after some knowledge had been gained that he was making the plans recently disclosed by him. It is as follows:—

July 22, 1899.

Col. Oliver C. Sabin,

Dear Friend: The kindly attitude of our beloved Leader towards you as editor of the *Washington News Letter*, has found its expression in loving counsel and admonition to the First Members of the Mother Church in response to which they hereby express to you their cordial appreciation of all the good which results from the work of the *Washington News Letter* in behalf of our Cause.

We have noted that the editor of the *News Letter* has candidly admitted that said paper is "not a Christian Science organ, nor is it a Christian Science Publication."

This defines its position in relation to our Cause, and though the matter for this paper is not under the careful inspection and sifting of the Christian Science Publishing Society, yet our friendly interest toward it will continue so long as it remains a bold defender of Truth, and is obedient to the methods of Christian Science. Sincerely yours,

THE FIRST MEMBERS.

P.S. I should have stated that this letter is not for publication in the *Washington News Letter*.

WILLIAM B. JOHNSON, Clerk.

P.S.S. There was in preparation a statement from the Publishing Society which would have seemed severe in regard to the *News Letter*, but by reason of our Leader's disapproval thereof only her kindly communication was published. W. B. J.

THE REAL CONSPIRACY.

Many readers of our publications may not be aware of the plans that the editor of the *News Letter* has been incu-

Digitized by Google

lating for months while professing his loyalty, and which he now has declared. So we may summarize them:—

The organization of a central church in Washington with contributing branches elsewhere; the authorization of preachers, lecturers, and teachers; the writing of a book; the raising of money upon "certificates of indebtedness" redeemable in subscription to paper, books, etc., and other schemes for establishing a "trust."

IN CONCLUSION.

In conclusion we republish from the *News Letter* of September 6, page 694, the editor's own confession that it was not any act or attitude on the part of Mrs. Eddy or Christian Scientists that urged him to separate from the movement and attack it.

ONLY DUTY COMPELS.

That all the world may know forever that I make this move from a sense of duty and in obedience to God, and that forever all liars' mouths shall be closed from saying that I was forced to this move by Mrs. Eddy or the Mother Church of the Christian Science denomination, I publish first the following letter:—

PLEASANT VIEW, CONCORD, N. H.,
July 19, 1899.

My Dear Colonel Sabin: About one year ago I asked my Church to help you financially; they did it. Now I have asked them to continue to patronize your newspaper and to help you spiritually. I did then, and do now, what I do, for your sake, to be able to know that I keep the Golden Rule inviolate, and love others as myself. . .

(Signed) With Love, Mother, M. B. EDDY.

The second document I will give is a copy of a resolution, sent me by Mrs. Eddy in her letter above referred to, as follows.

(Copy.)

Resolution passed by the First Church of Christ, Scientist, Boston, Mass., July 17, 1899:—

Resolved, That the First Members express their kindly interest in the welfare of the *Washington News Letter*, so long as it keeps free from matter injurious to the cause of Christian Science, and stands out, as it now does, in defense of Truth.

These documents show that Mrs. Eddy and the Mother Church were the friends of the *News Letter* and its editor.

The only reason for my new move is because of the direct leading of our blessed Father. The command to me is, "UNCHAIN THE TRUTH; IT SHALL BE FREE." OLIVER C. SABIN.

These documents and the editor's own words show that Mrs. Eddy and the Mother Church were friends indeed of the *News Letter* and himself, even whilst he was maturing his plans to attack them and establish his church.

Mrs. Eddy has been the best friend he has ever known, and his own course illustrates what was said by him in an editorial in his issue of July 5, from which we quote:

"If we look at the history of the Mother and see how often she has been betrayed, denounced, and abused, and for no other cause than doing good (many of these betrayals and outrages having been committed by those who were under the *greatest obligations of immediate help*), then one can catch a slight glimpse of the frailty of mortal man and mortal mind." (Italics are ours.)

## An Expression of Love.

THE following expression of love and confidence speaks for itself:—

Washington, D. C., October 7, 1899.

Reverend Mary Baker Eddy, Concord, N. H.

*Beloved Leader and Mother:*—We, the Board of Directors and Board of Trustees, comprising the Official Board of First Church of Christ, Scientist, at Washington, D. C., desire to express to you, on behalf of the Church, our love and gratitude, and the profound respect and confidence we entertain for you as our beloved Leader and Guide in Christian Science work and methods.

We desire to say to our Leader and to all, that we believe her system of Church government and methods of propagating the cause of Christian Science are the wisest and best, as a means to an end, that could possibly be adopted under existing circumstances, and as such, they reflect in a large degree the Wisdom and Love that have characterized each step taken by her for the advancement of our great cause and the betterment of mankind. Therefore, for any one to seek to improve upon, or to reform her methods at any time, is, to our sense, the sin of presumption, and we herein and hereby most emphatically disavow and disclaim any affiliation or sympathy with any such movement. Truly "the letter killeth."

Again permit us to assure you of our love and loyalty, and beg to remain your obedient and faithful followers in Christian Science.

### Mrs. Eddy's Reply.

To the above Mrs. Eddy promptly sent the following eloquent and appreciative reply:—

Pleasant View, Concord, N. H., October 10, 1899.

First Church of Christ, Scientist, Washington, D. C.

*Beloved Brethren:*—The Board of Directors, and Trustees of this Church will please accept my grateful acknowledgment of the receipt of their Christian canon pertaining to the hour. The joint resolutions contained therein show explicitly the attitude of this Church in our Capital toward me, and the cause of Christian Science, so dear to our hearts, and to all loyal lovers of God and man.

This Year, standing on the verge of the twentieth century, has sounded the tocsin of a higher hope, of strengthened hands, of unveiled hearts, of fourfold unity between the churches of our denomination in this, and in other lands. Religious liberty and individual rights, under the Constitution of our Nation, are rapidly advancing, avowing and consolidating the genius of Christian Science.

Heaven be praised for the signs of the times. "Let the heathen rage and imagine a vain thing;" our "Trust" is the almighty God, who ruleth in Heaven and upon earth, and none can stay His hand, or say, "What doest thou?"

After reading this letter to your Church please unite in singing the hymn, 169, in the Christian Science Hymnal.

With love, Mother,

MARY BAKER G. EDDY.

## Timely Action.

WITH much pleasure we publish below the resolution adopted September 20, 1899, by the Board of Management of First Church of Christ, Scientist, London, England.

THE RESOLUTION.

It was moved by Mrs. Thomson and seconded by Major Rowley and resolved,

That this Board having had its attention drawn to the issue of the *Washington News Letter* of 6th instant, expresses its unqualified disapproval of the misstatements contained in it reflecting upon our beloved Leader, the Reverend Mary Baker G. Eddy, and showing hostility to the Christian Science Publishing Society of Boston; expresses its unshaken loyalty to and reverence and regard for Mrs. Eddy, and its continued confidence in the motives and acts of the members of the Christian Science Publishing Society, its editors and business manager; and directs that no copies of this newspaper be issued from the Book Room or allowed to remain in the Reading Room of this Church; and that copies of this resolution be forwarded to Mr. Calvin A. Frye, Mrs. Eddy's secretary, and the Publishing Society.

(Signed) W. N. MILLER,
Chairman Board of Management of First Church of Christ, Scientist, London.

Digitized by Google

### Mrs. Eddy's Reply.

Board of Directors of the First Church of Christ, Scientist, London, England.

*My Beloved Brethren:*—Pardon delay in answering your loyal letter, and living light set upon a hill. The chain of Christian unity unbroken stretches across the sea, and rises upward to the realms of incorporeal Life—even the glorious beatitudes of divine Love. Striving to be good, to do good, and to love our neighbor as ourself, man's soul is safe, man emerges from mortality, and receives his rights inalienable—the love of God and man. What holds us to the Christian life, is the seven-fold shield of honesty, purity, and unselfed love. I need not say this to thee, for thou knowest the way in Christian Science.

Pale sinful sense, at work to lift itself on crumbling thrones of justice, and by pulling down its benefactors, will tumble from this scheme into the bottomless abyss of self-damnation; there to relinquish its league with evil. Wide yawns the gap between this course and Christian Science; here the connection stops.

God spare this plunge, lessen its depths, save sinners; and fit their being to recover its connection with its divine Principle, Love. For this I shall continue to pray.

God is blessing thee, my beloved students and brethren. Press on towards the high calling whereunto Divine Love hath called us, and is fast fulfilling the promises.

Satan is unchained only for a season, as the Revelator foresaw; and Love and good-will to man, sweeter than a sceptre, are enthroned now and forever.

Lovingly yours,

MARY BAKER EDDY.

Pleasant View, N. H., October 22, 1899.

The above resolution of the London Church was surely timely, and fully warranted by the remarkable action of the editor and publisher of the paper in question. His change of attitude in the short space of one week is without a parallel in newspaper history. We do not deem it necessary at this time to characterize such conduct as it well and justly might be characterized. It speaks for itself, and tells its own amazing story.

We, therefore, feel that the London Church acted wisely and justly in the premises, and venture to express the hope that other churches will go and do likewise.

We take this occasion again to thank the many friends who, by private letter and otherwise, have given expression to sentiments quite similar to those contained in the above resolution.

## Christian Science in Dresden.

BY EMILY COTTON.

WE know that our co-workers will rejoice with us in hearing of the onward march of Truth in this good city of Dresden.

It was after Christmas, 1897, therefore in the last days of that year, that our teacher first arrived here. We were but *two* to welcome her, for though there were several who took some slight interest in Christian Science, there were but very few at that time who were willing to investigate it seriously. But the healing work done by Mrs. S— began at once to attract attention, and in April, 1898, she taught her first class. During the months which followed, Sunday and week-day services were organized, testimonial meetings held, and also readings for such foreigners as understood no English,—and then, in the autumn of that year, our teacher had to return to America, and the little band of students here worked on during her absence, along the lines she had laid down, and tried to "quit them like men" and "be strong in the Lord," though conscious of many a mistake and many a stumble.

Slowly but surely, more and more have joined the little working band, and when we had the joy of welcoming her return in the spring of this year, she found new students awaiting her.

At present we have two services on Sundays—first a German, followed by an English one, and the former is attended by people of all classes, the very poor as well as their richer neighbors. We have Wednesday evening meetings, where interesting testimonials are often given, for almost all patients become workers in their turn, and once a week a meeting is held for such Germans as understand no English, in order to study our text-book, and teach them to read it for themselves.

One young lady, for instance, who does not know enough English to understand what is said to her in that language, can yet read "Science and Health with Key to the Scriptures" with understanding sufficient to enable her to heal by its means, and she has had such demonstrations as cause her face to fairly *beam* with joy. "The joy of the Lord is your strength." In the study of the book her understanding is evidently divinely illumined.

Part of the population of Dresden being a floating one, as numbers of strangers arrive here yearly to stay a few weeks or months, we have had many transient visitors at our meetings and services, who, becoming interested in the presentation of the Truth, have carried the good seed with them when they departed, to sow it in other lands, where it surely will spring up and bring forth fruit in due time. Thus, a young man has but now gone to Siberia with a copy of our text-book in his pocket, that he means to make his constant companion, and who can tell how far the influence of that blessed book will reach in that darkened land?

Much good healing work has been done too, and though it appears but modest as compared with the wonderful demonstrations given elsewhere—demonstrations which fill us all with delight and awe, as bringing the Infinite Presence so near to our apprehension,—yet we know that it is the same Power that works in all, it is the same Truth demonstrated, and we are cheered and encouraged in our fight with error. The blind and the near-sighted have recovered sight, the lame walk, the effects of accidents have been neutralized, surgical operations rendered unnecessary, cases of fear, nervous prostration, paralysis, lung-trouble, etc., healed, and often the healing has been accomplished in one treatment. And in how many cases have burdens been lifted, cares relieved, poverty dispelled, and harmony established where all was discord before! These signs have followed the Good Tidings proclaimed here, and do give us the assurance that the reign of Christ is begun, and that "the wilderness will blossom as the rose."

To show how interest in Christian Science is growing here, I should like to mention that nearly fifty copies of Science and Health have been sold during this summer, besides others of Mrs. Eddy's works, and the *Journal* and *Sentinel* are eagerly looked for, welcomed, and studied by all. And how shall I express the love and gratitude that fill the hearts of all, teacher and students, for her through whose unwearied labor we have received such joy and consolation!

## Christian Science in Oklahoma.

BY L. W.

SUNDAY morning, July 23, amid sunshine, music, and sweet harmony the Scientists of El Reno, in Oklahoma Territory, held their initial services in their little home on Capitol Hill. The pure white reading-desk was bedecked with flowers and lovely plants, as was the organ. The white walls and white wood-work, the former ornamented with appropriate mottoes, were all in harmony with the

Digitized by Google

pure teachings of Science. About forty persons were in attendance, and the services were impressive. The congregational singing was hearty and sincere. Mrs. H. J. Williamson of Kansas, sang the Communion Hymn, and "Nearer, my God, to Thee," was rendered by Mrs. Williamson. Mrs. R. S. Turlock, and Mr. E. J. Simpson.

Before reading the lesson of the day, the First Reader, Miss Lena Weischedel, delivered the following address:—

Let us observe this saying and learn a lesson in being obedient, "As by one man's disobedience many were made sinners, so by the obedience of one shall many be made righteous." This saying is not confined alone to Jesus, but includes all who accept his teachings. Disobedience applies not only to Adam, but to all who obey the law of sin; and Paul said, in Romans, 6 : 16, "Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness." Jesus is the way; we must become like him. How much we owe to Mrs. Eddy for revealing to this age again the Gospel that Jesus lived, and taught others to live! I know whereof I speak, for I was raised from helplessness to strength by the understanding received from "Science and Health with Key to the Scriptures" that God is the only power; therefore, no other power could rule over me.

It is a little over two years since the work in Christian Science was established in El Reno. The 6th day of January, 1899, we organized our church with seven charter members, called the First Church of Christ, Scientist, of El Reno. We now have fourteen members, and a Sunday School of twelve members. They are faithful little workers, and with their free-will offering have presented to the church this beautiful reading-desk of pure white, with the motto "God is Love," in gilt letters on it. This motto means much to each one, as "love is the fulfilling of the law."

Up to this time we have rented upstairs rooms for our services. In December, 1898, the way was opened by a donation of three lots. In March, 1899, a building fund was started; in June a building committee was elected, and now you see our humble home, in connection with the Christian Science Reading Room, called the Christian Science Home. The cost of this home is five hundred and fifty dollars. The amount left over in the treasury is fifty cents. Thereby God has blessed us, as none of us are rich in this world's goods. The help received from other Scientists not belonging to this organization was fifty-five dollars.

"Nearer, my God, to Thee," was sung, after which Mrs. Ernest J. Simpson, the Second Reader, made the following remarks:—

God is everywhere. A realization of this supreme truth makes the humblest home radiant with joyous sunshine, peace, and harmony. No magnificent structure can make a home unless the hearts of the people beat in unison, in harmony, and in love. On the other hand, the most unpretentious dwelling will crystalize into "Home sweet home" when thought is filled with sincerity, charity, and honest purpose. As we assemble to-day in our modest home, may we all realize that harmony is abiding with us, and that divine Love has breathed a silent benediction. Imbued with the principle of Truth and Love, as taught, practised, and demonstrated by our beloved Master, mountains of difficulty disappear like morning dew; materiality's nothingness is made apparent and the reality of the spiritual becomes manifest.

---

Dr. Watson—Ian Maclaren—says that the "shadow on American life is the tendency to give an undue place to the value and influence of wealth."

## In The Mother Church.

A GENTLEMAN from Colorado gave the following testimony at the Wednesday evening meeting in the Mother Church last week.

We have many evidences of the spread of Christian Science influence both as to longitude and latitude, all over the world. My testimony will relate to the higher altitude where I found it this summer, having occasion to stay at a hotel in the Rocky Mountain region. I wrote my name on the hotel register, and while the landlady, who performed the office of clerk, assigned me to a room, I turned my attention to the show-case, usually containing cigars, tobacco, and frequently cards and dice-boxes. This little hotel is in a small town. Possibly all the inhabitants could find room in this house. It is the county seat, and at this time the town was full of jurymen and witnesses. In times past it has been my pleasure to see the leader of this meeting there attending to his professional duties.

A show-case always tempts the eyes, and I must say that I never looked into a show-case where my eyes were so rewarded as in this. In that show-case were no dice, cigars, cards, or tobacco. The floor of it was covered first with an open Bible; second, the Christian Science text-book, Science and Health; third, "Miscellaneous Writings;" fourth, the *Christian Science Journal;* fifth, the *Christian Science Quarterly,* and there were besides these Christian Science tracts.

I had occasion to go higher and stay over night with a man who had charge of a property, and found him to be a Christian Scientist. On Sunday morning he said, "If you have no use for me here, gentlemen, I will go to my Bible class." Some one remarked that if it were known that he was a Christian Scientist they would not want him, but he replied, "The superintendent of our Sunday School is a Christian Scientist."

These circumstances show how Christian Science has found its way into remote Rocky Mountain regions.

---

## Testimonies.

### Healed after Material Remedies Failed.

SEVERAL years since, the writer was assailed by a very severe disorder, which material remedies had failed in overcoming, after quite a persistent trial. Resorting to Christian Science treatment, I was restored, and upon further investigation became an adherent to its teachings. I feel very grateful for this manifestation of divine Love and I would like to acknowledge the Master in this, and his many wonderful works. His message of Truth "with healing in its wings," spoken by him nearly nineteen centuries ago, has brought peace and harmony into the lives of a mighty host in the present age. Indeed, an army has gathered under Truth's banner, beautiful in its praises "to God in the highest," for to almost every land and clime hath the glad tidings gone, of the Father's loving care for His children—"healing the sick and sin-laden, binding up the broken hearts." Those crosses which are strewn all along material paths, speak to us now more of a living and triumphant Saviour, and in striving for the Christly mind, the watch is toward this radiant light which portends the full tide of his coming. My invocation is for more realization of the Father's allness, to assimilate more and more of Truth, which giveth perfect peace; and for the hastened day when life shall no longer be denominated anywhere. The crown of life is Love, for God is Life—God is Love. In illumining this way which leadeth to eternal life, and whereby cometh a panacea for every ill

Digitized by Google

and woe, Mrs. Eddy has wrought that for which humanity stands under lasting obligations. I am the recipient of much for which to be thankful in health and happiness, also in a business way, through a study of this divine Science.—R. H. GRESHAM, near Guavalujara, Mexico.

### Total Blindness Healed.

In reply to the statement that Christian Science is too expensive and that three dollars is too much for a copy of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I would like to make the following statement: I was born in Louisiana, Pike Co., Mo. My father was a wealthy banker there for almost thirty years. In early childhood I was taken sick and grew much worse as the years rolled on. I was constantly under the care of the best physicians and oculists. I was in many different sanitariums, traveled far and wide, and everything that love or money could do for me was done, but all to no avail. I was a complete physical wreck, and finally became totally blind. As a last resort I was persuaded to try Christian Science, but had no faith in it whatever. I had paid about fifteen thousand dollars to the different physicians and oculists, and was much worse when I stopped their treatment than when I began with them. I paid for Christian Science treatment sixty dollars, and three dollars for a copy of Science and Health. My health was completely restored under Christian Science treatment. This was more than three years ago, and I have never been sick one day since. My eyesight is perfect, my eyes being as strong and as well as can be. I would like to ask the world this question, If three dollars is high for a book through whose teachings the Scientist was enabled to heal me in three months for the sum of sixty dollars, compared with the fifteen thousand dollars I had paid the physicians and oculists, and the twenty-five years of terrible suffering I endured at their hands.

MRS. FANNIE C. BRADY, St. Louis, Mo.

### A Severe Burn.

About six weeks ago while at work my husband got some hot solder in his eye. When he came home with his eye covered I asked him what had happened. He said he thought he had lost his eye. At first I thought I would offer to treat him, but as he had been very much opposed to Christian Science I thought it best not to do so. I gave him the remedies he asked for, but they failed to give him any relief. At 8 P.M. he went to bed. He groaned and tossed till 10 P.M. Then he asked me if I would treat him. I did so and in an hour he was asleep. When he awoke in the morning he put his hand over the well eye to see if he could see, but he did not say anything. During the forenoon he went up street, and went to see the gentleman who, the night before, had advised him to go to a specialist. The gentleman said, "Well what did you do to your eye? It was blistered and now it is all right." My husband told him that I had treated him with Christian Science. I felt very thankful that I was able to treat him. He said he never had anything so bad get well so quickly. I know he was thankful.

MRS. KITTIE JOHNSON, Jamaica Plain, Mass.

### Testimony of a Child.

MONDAY, the second of January, I was taken suddenly ill while in school. I went home and grew rapidly worse. I had fever and a dreadful headache accompanied with sore throat, and by Wednesday there was left little more than the shadow of my old self. Mamma read the lesson on "Life" from the Bible and Science and Health and I was instantly healed and had a supper of fried potatoes and pickles at 9 P.M. I slept through the night without once awaking, and in the morning resumed my play as usual.

The morning of January 9 I awoke with the dreadful hoarse croup cough. Mamma took me in her arms and read from Science and Health, and I was immediately healed, and went to school. I came home at noon and sang "Shepherd," also took my music lesson and sang four songs with my teacher with perfect ease.

These demonstrations seem more beautiful, as a third of the town are suffering with the grip. I am nearly nine years old. I read Science and Health and I love Mrs. Eddy for teaching us the way of Life, Truth, and Love.

*George Laura Marble, Plymouth, Ind.*

## The Science of Christianity.

HE that would to a proper sense attain
In Knowledge, of the very rudiments
Of this Great Science, must his Cross uplift
And bear it meekly in his daily life,
Following in the footsteps of his Lord
And Master Jesus Christ, the Way-Shower.
As Christians verily in deeds, and not
In words alone, this Comprehensive Truth,
That God is the Great Principle in which
Man lives and moves and has his being—we
Must realize.

The very air we breathe
Is redolent of God's Own Presence, which
To those who love Him is the breath of Life.
The Sun's bright rays which shine upon the path
We daily tread in passing through this world
Of Mortal strife, in which our aim should be
The working out our own Salvation from
The claims of Sin and Death—these same bright rays
Are mere reflections of that glorious Light
Which radiates from One All-seeing Mind,
All-wise, All-loving, and Eternal God,
The Life, Truth, Spirit, and Intelligence,
The Great I AM, which rules the Universe.

. . . . . .

In God's Own Truth is naught but Glorious Light
In Mortal Error naught but darkness black
And sombre:

If a small but shining light
No matter how diminutive, is brought
Into a darkened room—dark as the night—
Then instantly that darkness disappears
Nor trace of it remains:

Reverse this fact,
And try with darkness to destroy the light
What ignominious failure must result:
'Tis thus with Error as 'tis thus with Truth,
Confront this Error with of Truth one ray
And instantly it vanishes away,
Confront the Truth with Error's dark, unreal,
Unlovely countenance, and the result
Must be discomfiture; for evil has
No power to extinguish or suppress
The Glorious rays of Light in God's own Truth.

*—Dunmore.*

## Questions and Answers.

*Do not Christian Scientists claim too much when they say the understanding of Christian Science is a help in all the affairs of life?*—Investigator.

Has not God promised to be an ever-present help? and does not the Bible teach that the Christian can rely upon Him in every time of need? The Bible certainly teaches that at all times and under all circumstances, it is man's privilege to look to God for help. When Jesus said to his disciples, "Lo, I am with you alway, even unto the end of the world," he declared God's presence and power to help at all times and in all ways. Because mortal man does not know God is why he doubts God's willingness and power to help. The understanding of what God is, removes this doubt, and not only causes man to have faith in God, but also shows him why he should always rely upon God. Christian Science gives man a truer conception of God, and thereby increases faith in the present fulfilment of the many promises recorded in the Scriptures.

Persons in all the walks of life have accepted the teachings of Christian Science, and have testified to benefits received. The sick have been healed after all other means have failed; the sinner tells how his sense of pleasure in sin has been destroyed and that he now finds a hundredfold more pleasure in right doing than he ever thought he found in the ways of sin; the business man testifies to the benefit he derives from Christian Science, how it helps him to overcome worry, fear, and anxiety, and how it enables him to conduct his business in accordance with the Golden Rule; the teacher tells of the benefit of Christian Science in the schoolroom; the mechanic knows that he is helped in his work by the realization that God is with him to supply needed strength and intelligence; the mother declares that the blessings of Christian Science in the home are innumerable. Thus the testimony of persons of all classes, in all conditions, and under all circumstances, bear faithful testimony as to how Christian Science has helped them.

The teachings of Christian Science impart the understanding of Truth which demonstrates that "now is the day of salvation." Only the one who understands somewhat the teachings of Christian Science, and lives what he knows, can realize how many and how great are the blessings to be derived therefrom.

***

*Why do Christian Scientists encourage their patients to procure the text-book, "Science and Health with Key to the Scriptures"? Is it necessary for the patient to study this book in order to be healed?*—J. R.

While it is not necessary for the patient to become a student of Science and Health in order to be healed of disease, yet if he is willing to take this book and study it faithfully in connection with the Bible, his recovery will, as a rule, be more rapid and complete than if he had made no effort to help himself. But patients are not always ready to do this. Sometimes their only conscious desire is to be healed physically, and they are unwilling to make an effort to understand the teachings of Christian Science. If their restoration to health awakens a desire to know what has healed them, they will take up the study of Science and Health and learn for themselves how the sick are healed.

The Christian Scientist knows that he is not the healer of the sick. He understands that the Truth, revealed in the Bible and Science and Health, is the only real healer of sickness or sin. Because of this he realizes the importance of encouraging the patient to seek diligently for the understanding of Truth which heals morally and physically.

Religion is faith, hope, and love in motion.

*Boston Evening Transcript.*

## To Students.

BY EMMA C. SHIPMAN.

It is sometimes said that when people become Christian Scienists they lose their taste for books; but this is not true, for Christian Science teaches one to love everything good and uplifting, and it acknowledges the best books as an important aid to one's growth.

If the students in our schools and colleges knew what Christian Science would do for them, no sacrifice would seem too great for them to make in order to obtain the text-book, "Science and Health with Key to the Scriptures."

To illustrate the benefit students may derive from Christian Science, I will relate what it did for one student. The one of whom I speak is a girl who had not been strong from childhood. She was extremely fond of her books and studies, but her school life was frequently interrupted by ill health, which so increased that in the last months of preparation for college she was forced to go from each recitation to her bed; yet when suffering from the greatest pain or weariness, the thought of her beloved studies would send her back to school.

She began her college work in Boston. There she met Christian Scientists, attended the Christian Science services, and commenced the study of Science and Health; from this time her life was entirely changed. She grew well and strong. The studies which before had been a burden now became a pastime. Her love for books has increased, so that two, the Bible and Science and Health, have become her constant companions.

In Science and Health she has found a philosophy so broad and high that it meets every human need; a history which is that of the upward march of mind; a science which is exact and unchangeable; a botany which is the analysis and classification of the flowers of thought; a physiology which gives perfect health; a language which is the new tongue spoken of by Jesus in his last commission to his disciples; and a glorious mathematics, even the infinite calculus of divine Love.

By proving the problems in this book, each one may find his true self as the reflection of infinite Intelligence and Life eternal.

---

## An Acknowledgment.

BY C. C. M.

I wish to acknowledge through the columns of the *Sentinel* an error which I unwittingly committed and others may have done the same.

In my eagerness to have my friends, and others, accept the truths of Christian Science, I subscribed to other publications purporting to be in the line of Christian Science instead of subscribing for the regular official organs through the channel of the Publishing House.

I now see that was error. If the name of Christian Science arouses antagonism in a person's thought, then such an one is not ready "to receive the blessing and give thanks," and we must follow our Leader's admonition and "wait patiently for Spirit to move upon the waters of mortal mind, and form the divine concept."

Christian Science is the "pearl of great price," and to cheapen its value or try to get it for nothing shows that the one who attempts it does not appreciate its worth.

I see the matchless wisdom of our Leader in placing the price upon her works and instruction that she has done.

Truth is its own protection. An eminent New Hampshire jurist, the late Judge E. D. Rand, once said, "We never need be alarmed at the perilous situation of Truth. Of all things in this world, that is the one thing which is best capable of taking care of itself."

Digitized by Google

### ...w to Secure Them.

...y has been well defined as "doing ...ed in a kindly way." The last ...his definition is quite as important first part. It is not enough to have ...nd heart and a benevolent disposition, it is not enough to give alms and to do deeds of charity. The courteous man is more than kind, he is also kindly. The rough, gruff, overbearing philanthropist, who throws out his charities to the needy as he would pitch a bone to a dog, is not a model of kindliness, however large-hearted and generous he may be.

Abraham is a capital illustration of genuine courtesy in his entertainment of the angels who, unannounced and unheralded, in the garb of ordinary wayfarers, presented themselves at his tent door.

Note how courteous he is in his hospitality! The three strangers suddenly present themselves. How does he know who they are? They have not presented their credentials, nor any letters of introduction. To be sure, since they lived four thousand years ago on the plains of Mamre, they could hardly have been insurance agents or book canvassers, but how does Abraham know but that they want to interest him in their pet financial scheme of cultivating a new breed of sheep, or a distinct variety of camels on the plains? How does he know but they will present a subscription paper for a new university or library in Egypt, where letters and polite literature already flourish?

Nevertheless, though they present no credentials, he bows himself to the ground and begs them to pass not on, but to let his servant bring them water that they may wash their feet, and urges them to rest under the trees, while he himself promises to bring them food; "a morsel of bread," in his modest Oriental style he calls it. He begs them to "comfort their hearts." What a homely, courteous phrase that is! Then after that he tells them that they shall go on their way. FRANCIS E. CLARK, D.D.

### The Chiefest of Evils.

Selfishness is the root of every evil, the deadly poison which paralyzes the better impulses of men. So insinuating is it that it finds an entrance into nearly every heart. Sometimes it assumes the garb of the goddess of pleasure, and with luring voice and seductive ways seeks to lead astray whomsoever it may into the forbidden paths of self-indulgence. It encourages oppression, cruelty, indifference; and discourages self-sacrifice and generosity. When there is a disposition to indulge the petty vices of unkind speaking and fault-finding, and the greater evils of jealousy and envy and ill-will, selfishness whispers indulgence to sensitive conscience. There is a mean kind of happiness in being unkind and hateful and revengeful; and selfishness encourages people to seek it through the indulgence of these despicable traits of human nature. When a person injures another's feelings through unkindness, it is a manifestation of the selfish spirit. He finds spitefulness a pleasure. He enjoys inflicting pain. It is selfishness which wings the barbed dart of malice, selfishness which prompts us to disregard the happiness and peace of mind of our acquaintances and friends, even of those nearest and dearest to us, selfishness which causes us to barter righteousness and purity and duty, for sensual gratification and ease and pleasure and wealth and power and caprice. It is the deadliest of all vices because the root of all vices, the most malignant foe of all goodness and nobility of soul because the leader of all foes. It exerts its pernicious influence in business life, in social relations, in the home, in the very temple of Christ. It should be shunned as a pestilence, eradicated from the heart as a poisonous weed, battled ...ith as a deadly enemy, cast down from its throne as the falsest of all the false gods before whose shrines we are all too ready to bow the knee.

*Universalist Leader.*

---

### Quality of Men's Work.

The difference in value between the work of two men is determined largely by the quality of their work. More largely, we think, by this consideration than any other. It is conceded by all that good intentions will not stand in lieu of good work in the case of a blacksmith or a tailor. But it is quite generally held that moral and religious work furnishes an exception. We must take the man here for what he means rather than for what he does. Is there not a fallacy here of a particularly harmful kind? Is not the fact this, rather? that in work of this high and delicate description the greater the blunder the greater the harm? Accuracy, patience, thoroughness tell in these fields as nowhere else; carelessness, want of knowledge, and lack of method are never so distinctive and wide-reaching as in the important task of realizing true spiritual and social ideals.

*The Universalist Leader.*

---

### Wait for the Light.

Suppose we grow bewildered and feel at a loss to know what is right or what is true —what then? Is right less right, or truth less true because of our confusion? To ask the question is to answer it. What, then, is becoming in us? What, let us ask, would some people do who should happen to find themselves in the dark? Would they become excited and angry, rush upon and destroy objects around them, and wound themselves in their foolish frenzy? Would they not, on the contrary, wait patiently till the light should come?

*The Examiner* (Baptist).

---

The *Advance* says: "It is hard to love the truth when it speaks against us. And it is hard to live the truth unless we are sanctified by it."

---

## Miscellany.

### Arithmetic 1700 B. C.

Probably the oldest copy book for home lessons in arithmetic was recently unearthed in Egypt. The papyrus, which was found in excellent condition, dates from the period about 1700 B. C.,—that is, about one hundred years before the time of Moses, or almost thirty-six hundred years ago. It proves that the Egyptians had a thorough knowledge of elementary mathematics almost to the extent of our own. The papyrus has a long heading: "Direction how to attain the knowledge of all dark things," etc. Numerous examples show that their principal operations with entire units and fractions were made by means of addition and multiplication. Subtractions and divisions were not known in their present form, but correct results were obtained nevertheless.

Equations are also found in the papyrus. Among the examples given is this one: Ten measures of barley are to be divided among ten persons in such a manner that each subsequent person receives one-eighth of a measure less than the one before him. Another example given is: There are seven men, each one has seven cats, each cat has eaten seven mice, each mouse has eaten seven grains of barley. Each grain of barley would, if cultivated, have yielded seven measures of barley. How much barley has been lost in that way? The papyrus also contains calculations of area, the calculation of the area of a circle, and its transformation into a square, and finally, calculations of the cubic measurements of pyramids.—*Philadelphia Record.*

### He Warmed Himself.

Yesterday afternoon at the court house one gentleman unconsciously amused a dozen spectators. In front of the elevator entrances on the several floors are laid large rubber mats. They are heavy, and were so molded that they looked something like registers in the floor. The gentleman under consideration went into the court house yesterday. It was cold outside, and his nose was red, his cheeks looked pinkish, and he had a sort of frozen air. He stepped up to one of the big mats, held his hands over it for a while, and then rubbed them satisfactorily. He turned around and backed up to the mat as a man does to a stove, and a look of satisfaction crossed his face.

He was getting warm. He thought the mat was throwing out the heat. He was mistaken. He got warm just the same.

*Selected.*

---

### Pills or Death.

Discussing the question of patent medicine advertising in church papers, the Pittsburg *Christian Advocate* says that Dr. William Hunter, one of its early editors, when appealed to by one of the clergy who objected to such advertisement, replied that in the present state of the paper's financial health it had to take pills or die.

*Western Advertiser.*

---

A jar of wheat at Wisbeck, England, is known to have been sealed for sixty years. It is in good condition, and a portion is to be sowed to test its vitality, the remainder being again sealed up to wait the lapse of another long period.

---

A whistle to be heard forty miles consists of three whistles—the two smaller with mouths turned downward—between two steel discs. The steam passes through openings in the disc.

---

## Notices.

### Supplement to the Sentinel.

The able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899, has been issued as a supplement to the *Christian Science Sentinel*. The workers in the Field will readily see the wisdom of giving the supplement the widest possible circulation, and the extremely low price at which it is issued will enable them to do so. The price of the supplement is as follows: Single copies one cent each, postpaid, to any address; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1.

### The Board of Education.

Requests for application blanks for the next examination cannot be complied with until due notice is given through our publications, as announced in the *Sentinel* of January 19, 1899.

### Clerk of the Mother Church.

All correspondence with the clerk of the Mother Church on matters pertaining to his office should be addressed to WILLIAM B. JOHNSON, C.S.B., 30 Norway St., Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each, per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy, and more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

The twenty-sixth annual convention of the National Woman's Christian Temperance Union met at Seattle, Wash., October 20. The treasurer's report showed a balance of $3,435. The Willard memorial fund amounts to $3,268. In her address, the president, Mrs. Lillian M. N. Stevens of Portland, Me., recommended opposition to the seating of Congressman-elect Roberts of Utah. She said that in three-fourths of the State of Maine the prohibitory law was enforced as well as other laws. She hoped that other states would follow the example of Massachusetts, which has the first law in the world prohibiting vivisection in the schools.

Frank A. Vanderlip, of Washington, D.C., chairman of the Dewey home committee, received the following letter from the admiral:—

Washington, D.C., Oct. 26, 1899.

Dear Sir: I acknowledge the receipt this day of the title deeds to the beautiful house presented to me by my countrymen. My heart is full of gratitude to them for this overwhelming expression of their regard for me, and I request that you will also accept and convey to the committee my heartfelt thanks for your and their efforts.

Very sincerely yours,

GEORGE DEWEY.

The administration has notified the great powers on the continent that the United States will not take part in any movement to interfere with Great Britain during her present operations in South Africa. There is no alliance between the two countries, but it is understood by the continental powers that Great Britain has the moral support of the United States as against them, without reference to the Transvaal question, just as last year the United States had the moral support of Great Britain. The administration has not interfered in the Transvaal matter, and will not do so.

While the British have been generally successful thus far in the war with the Boers, yet her victories have not been without loss to herself. Since the beginning of hostilities ninety-four have been killed, four hundred and ninety wounded, and thirteen missing. Among the casualties are eighteen officers killed and fifty-five wounded. Great Britain now has twelve thousand regulars and fourteen thousand volunteers in the field. The strength of the Boers is estimated at 50,864.

General Leonard Wood has issued an order for the establishment of an industrial school for boys at Santiago. The sons of Cuban soldiers killed in the late war will be admitted. Competent American teachers will be employed, and the boys will receive instruction in various trades and an education in elementary English branches. The Spanish military hospital has been repaired at an expense of forty thousand dollars, and turned over to the civil authorities for the purpose.

During the last fiscal year the postoffice money order department issued 29,976,371 orders. The amount of the issue was $224,958,363. The total earnings of the department was $1,591,638. On these orders there was paid a war revenue tax of $579,886. There was an increase of twenty million dollars in issues, and almost four hundred thousand dollars in earnings.

Admiral Dewey has told the President that a resolution by Congress for the suppression of the rebellion and the retention of the Philippines, will be more effective than the army and the navy in the Archipelago, where Aguinaldo has made the impression that Congress and the country are opposed to the "President's war," and will repudiate it later on.

Russia has at last agreed to arbitrate with the United States the claims resulting from the seizure of three American sealing vessels by Russian authorities about eight years ago. The claim for damages amounting to one hundred and fifty thousand dollars has been pending ever since. The arbitration will probably take the form of the Venezuelan Court.

The total income of the postoffice department for the last fiscal year was $639,136,899, an increase of nearly fifty million dollars over the preceding year. The deficit for the year was about six million dollars. The number of postoffices in the United States increased from 72,976 on July 1, 1898 to 74,384 on June 30, 1899.

The postal service in Cuba has been thoroughly organized, and shows a great increase in the volume of business. Of the six hundred clerks employed fully five hundred are Cubans, the policy of the administration being to hire Americans only where it was absolutely necessary to do so.

The terms of the late Cornelius Vanderbilt's will have been made public. The lion's share goes to Alfred Gwynne Vanderbilt. Numerous bequests were made to various institutions. He made a few bequests to friends, and gave substantial rewards to faithful servants.

The world's wheat supply is estimated at two thousand five hundred and forty million bushels, a reduction of about one-eighth, as compared with last year's crop report. There is also a deficit in rye, barley, and oats, but a surplus in maize.

Before Rear-Admiral Schley leaves to take command of the South Atlantic squadron, he will be presented with a loving cup and a dinner service, made from silver coins recovered from the wreck of the Spanish ship, Christobal Colon.

The Woman's National Industrial and Patriotic League has undertaken the task of procuring, by popular subscription, a home for Rear-Admiral Schley at Washington. Admiral Schley has said that anything they may do will be acceptable.

The Carnegie Steel Company will spend about eight million dollars in improving its plant at Duquesne, Pa. Two of the largest blast furnaces in the world will be built. The Carnegie Company will then produce 2,700,000 tons of pig iron a year.

A Texas lumberman has received from his agent in the city of Mexico an order for three billion feet of lumber. The order would exhaust the supply of every mill in the State, and is the largest lumber deal ever made in the world.

There is an unusual demand for apples for export to England and Germany. So far this season over one hundred thousand barrels have been exported. The price paid to growers was about three dollars a barrel.

In recognition of his services at Manila, Georgia presented a sword to Flag Lieutenant Thomas S. Brumby of the Olympia. Admiral Dewey sent a telegram in which he highly commended the gallant officer.

According to recent estimates, the California farmers will receive about fifteen million dollars for the product of their orchards and vineyards this year. This is a gain of three million dollars over last year.

Canada has offered to give up much of the gold country included in the Alaska dispute in return for a seaport, but stipulates that she must get the seaport before she agrees to arbitrate the boundary line.

It is said that M. Cambon, the French ambassador who became so well known on account of his influence in bringing about peace relations between the United States and Spain, will return to Washington.

October 25, Rear-Admiral Sampson was presented with a sword by Governor Voorhees on behalf of the state of New Jersey as a mark of appreciation of services rendered during the war with Spain.

It is reported that a representative of Aguinaldo is coming to Washington, and will present to President McKinley new terms for ending hostilities and for the future government of the islands.

The exports of manufactured goods in September, 1899, amounted to $31,373,264, which was an increase of more than six million dollars on the corresponding month of last year.

The signal service is preparing a table showing the enormous expense of telegraphing to the Philippines. It is intended for use in urging the necessity for a Pacific cable.

The British gained a decisive but costly victory over the Boers at Glencoe, October 20. The English loss was thirty-one killed and one hundred and fifty-one wounded.

The British military authorities will use the wireless telegraph in South Africa, and in this way hope to obviate the difficulties experienced from the cutting of wires.

At the one hundred and fifty-third anniversary of Princeton University, October 21, the degree of LL.D. was conferred upon Hon. Whitelaw Reid.

The demand for laborers throughout all sections of the West greatly exceeds the supply. Wages are higher than for many years past.

The fifty-first regiment of Iowa volunteers, numbering 764 men and 46 officers, arrived at San Francisco from Manila, October 22.

The world's gold production for 1898 was $287,428,600. Of this amount the United States contributed $64,463,000.

The American women in London are preparing to equip a hospital ship for service in South African waters.

The special session of Parliament called on account of the South African war, was prorogued October 27.

The quartermaster's department is preparing to ship $1,500,000 worth of supplies to Manila.

The Russian Red Cross has tendered its services to both belligerents in South Africa.

General Lawton has established a civil government at San Isidro.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Archaeology Upsets Higher Criticism.

### Professor A. H. Sayce, an Eminent Assyriologist, Declares Latest Researches Demonstrate Bible's Credibility.

"HIGHER criticism is wrong. The higher critics of the Bible are engaged in hair-splitting trivialities and are pursuing false methods. The old view of the old book is correct, except regarding the Book of Daniel, which is composed of legends."

This is the startling statement made to a correspondent of the *Herald* by Professor A. H. Sayce, archæological explorer and professor of Assyriology in Oxford, England, after thirty years spent in deciphering the ancient hieroglyphics of Eastern lands.

"Our researches," he continued, "among the monuments of Babylon, Assyria, and Egypt, have opened up a new world undreamed of a few years ago. They show that the history of mankind goes back to the very remote past, and that civilization was then quite as high as that of imperial Rome or the civilization of Europe at the time of the Renaissance, if not higher in some respects. The population of the early East was highly cultured and highly literary. Both in Egypt and Babylon a large portion of the people seem to have occupied their time in reading and writing.

"The monuments found in Egypt and Babylonia are literally covered with writing. Even the smallest articles of daily use have been found covered with inscriptions. The revelations are also partly due to the discoveries that the old cities of the East had very large libraries of books, and some discoveries made a few years ago at Tel-el-Amarna in Egypt—where a large number of letters on clay tablets were found—proved that in the fifteenth century before the Christian era the whole educated population of the East, from the Euphrates to the Nile, were engaged in writing letters to one another.

"This correspondence was going on actively in a language and form of writing which belonged only to the Babylonians. Those, therefore, who wrote in this language must have studied and learned it as we do French.

✠

"Not long since a discovery was made in the extreme south of Egypt showing that papyrus books were written in the very early days of Egyptian history. As regards the Babylonian libraries, they were equally ancient and very numerous. Every great library had its clay books. Some time ago at a place called Tello, in South Chaldea, a French excavator discovered a library which was formed three or four centuries before the birth of Abraham, and which he concludes had contained thirty-three thousand separate clay tablets or books on all kinds of subjects. He found them arranged in shelves, piled one upon another. They had probably been overwhelmed by the fall of the building in which they were placed. Many of these clay tablets are now in Constantinople. About ten thousand were stolen by the Arabs. The tablets are mostly written in Accadian, a language which is still imperfectly known.

"What is especially needed now is excavation on the site of certain old cities in Palestine, where it is certain we should find early libraries of clay books like those I have spoken of. For instance, there is one place I should like to excavate, and that is Gezer. There we know, from the cuneiform inscriptions, that there was a library in Canaanitish days, and I believe a number of inscribed clay tablets would be found. No doubt these would throw much light on the history of Palestine. One of my discoveries was that of the Hittite Empire. Certain monuments found in Asia Minor were the work of the Hittites, and they possessed a peculiar system of hieroglyphics."

✠

"And what has been the result of these discoveries as far as the Bible is concerned?"

"I believe that in the main they establish the traditional as opposed to the modern critical view of the antiquity and credibility and historical trustworthiness of the Old Testament records, especially the Pentateuch. I do not mean to say that in all respects the old views we had upon the subject were correct, but that on the whole the Old Testament records seem to have been vindicated by the discoveries we are making.

"I have come to disbelieve thoroughly in the so-called critical view of the composition of the Pentateuch. I believe that substantially it belongs to the Mosaic age, and I see no reason why it should not have been written by Moses. The book has undergone certain alterations and changes, but substantially it is the work of the Mosaic age and of Moses himself. It contains extracts from earlier documents, more especially in the Book of Genesis, and some of these earlier documents can be shown to have been written and to have been contemporaneous documents in the Babylonian language and cuneiform characters."

"Then you consider most of the results of the higher critics to be mere guesswork?"

"Yes, the more archæological facts come to the light the more I am inclined to mistrust their conclusions. The higher criticism rests entirely upon what is called the literary analysis of the Bible, the division of the writings of the Old Testament among authors whose works are distinguished from one another by differences in style and in the use of words and grammatical expressions. Experience shows that any conclusions of that kind must be extremely precarious, because it is next to impossible successfully to analyze written documents upon a merely philological basis, even in the case of languages well known and still spoken."

"In what way do you define the special inspiration of the Bible?"

"Judging from what one reads in the newspapers and magazines, educated opinion in America has undergone a great change in the way in which the Bible is regarded. Instead of being considered as verbally inspired, authoritative in every word, it is now considered to contain the word of God, rather than to be itself the word of God. We believe, at any rate, that in the Bible we have the special revelation made by God to man, but

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

made in the form of literature, and that it is the spirit that underlies the form, and not the form itself, which contains the message of God's will. As you know, the idea of inspiration has never been authoritatively formulated. The English Church knows nothing of the inspiration of a book. In the liturgy the only inspiration spoken of is the inspiration of the hearts and souls of men by the Spirit of God. What we mean by the inspiration of the Bible is that in it we have the will of God revealed to us. That will is revealed by the general spirit of the Bible, and not by the individual words or phrases."

"Has science disproved the possibility of miracles?"

"Science deals only with the phenomena observable by the senses. Of the cause of these phenomena it knows nothing, and consequently it can offer no evidence either for or against events which are not in accordance with every-day experience. The essence of a miracle is that it should be such an event. Criticism has been driven back to the conviction that the gospel narratives are a true record. In them Christ claims to be the Son of God, and therefore able to work miracles—*i.e.*, to produce effects which do not fall within every-day experience."

"What do you consider the greatest archæological discovery of the last quarter century?"

"On the whole, the most valuable archæological discovery of the last quarter of a century from the Biblical point of view has been that of the Tel-el-Amarna cuneiform tablets."—*New York Herald*

## Thanksgiving Proclamation.

THE following Thanksgiving Day proclamation was issued by President McKinley, October 25, 1899:—

A national custom dear to the hearts of the people calls for the setting apart of one day in each year as an occasion of special thanksgiving to Almighty God for the blessings of the preceding year. This honored observance acquires with time a tenderer significance. It enriches domestic life. It summons under the family roof the absent children to glad re-union with those they love.

Seldom has this nation had greater cause for profound thanksgiving. No great pestilence has invaded our shores. Liberal employment waits upon labor. Abundant crops have rewarded the efforts of the husbandman. Increased comforts have come to the home. The national finances have been strengthened and public credit has been sustained and made firmer. In all branches of industry and trade there has been an unequalled degree of prosperity, while there has been a steady gain in the moral and educational growth of our national character. Churches and schools have flourished. American patriotism has been exalted. Those engaged in maintaining the honor of the flag with such signal success have been, in a large degree, spared from disaster and disease. An honorable peace has been ratified with a foreign nation with which we were at war, and we are now on friendly relations with every power on earth.

The trust which we have assumed for the people of Cuba has been faithfully advanced. There has been marked progress toward the restoration of healthy industrial conditions, and under wise sanitary regulations the island has enjoyed unusual exemption from the scourge of fever. The hurricane which swept over our new possession of Porto Rico, destroying the homes and property of the inhabitants, called for the instant sympathy of the people of the United States, who were swift to respond with generous aid to the sufferers.

While the insurrection still continues in the island of Luzon, business is resuming its activity, and confidence in the good purposes of the United States is being rapidly established throughout the archipelago.

For these reasons and countless others, I, William McKinley, President of the United States, do hereby name Thursday, the 30th day of November next, as a day of general thanksgiving and prayer, to be observed as such by all our people on this continent and in our newly acquired islands, as well as by those who may be at sea or sojourning in foreign lands: and I advise that on this day religious exercises shall be conducted in the churches or meeting places of all denominations, in order that, in the social features of the day, its real significance may not be lost sight of, prayers may be offered to the Most High for a continuance of the divine guidance, without which man's efforts are in vain, and for divine consolation to those whose kindred and friends have sacrificed their lives for country.

I recommend, also, that, on this day, so far as may be found practicable, labor shall cease from its accustomed toil, and charity abound toward the sick, the needy, and the poor.

In witness whereof, I have set my hand, and caused the seal of the United States to be affixed.

WILLIAM MCKINLEY.

## The Church of the Twentieth Century.

DOCTOR JOHN R. H. LATCHAW, president of Defiance College, Defiance, O., spoke at St. Louis on "The Church of the Twentieth Century," from the text, "Awake, awake; put on thy strength, O Zion; put on thy beautiful garments, O Jerusalem, the holy city: for henceforth there shall no more come into thee the uncircumcised and the unclean. Shake thyself from the dust; arise, and sit down, O Jerusalem: loose thyself from the bands of thy neck, O captive daughter of Zion."

We stand upon the verge of the Twentieth Century of Christian civilization. Great have been the triumphs of the past, fruitful and mighty are the issues of the present, and to the eye of faith and reason, hopeful, glorious, and sublime must be the output of the future. In world progress and experience, as in those of nations and individuals, there is no such thing as a dead level or as a continuous and gradual ascent from the lower to the higher, from the grosser to the more refined, from the sway and tyranny of passion to the liberty and law of the spirit. Like men and nations, the world in its progress has its ups and downs; but none the less as the centuries pass it moves forward and upward.

Therefore, the Twentieth Century should suggest a degree of progress and development in the unfolding of God's purpose and plan in creation, preservation, and redemption which the world has not yet seen. What, then, of the Twentieth Century church? In the first place, there will be one. The text is a call, an exhortation to activity; it is the persuasion of Jesus Christ, the head of his body, the church, to believe in his free redemption, to arise from lethargy and bondage, and to rejoice in the liberty wherewith Christ makes free all who believe on him.

Awake, arise, shake thyself, loose thy bands, captive daughter of Zion. Awake from drowsiness and lethargy. Open thine eyes to behold thy opportunity, and to know thy duty to God and thy fellows. Arise, be lightened, for thy light is come, and the glory of the Lord hath risen upon thee. The church of the Twentieth Century must be alert, vigilant, active along progressive and practical lines in retrieving herself from worldliness, idolatry, and sin, and in rescuing, evangelizing, and fraternizing our struggling and perishing race: a call to rise from the dust of the world, to crucify the flesh with its affections and lusts; to lay aside vanity, self-satisfaction, and self-gratulation, and to act upon the higher principles of the gospel, that if a man would save his life, he must be willing to lose it; if he would be great among his fellow-men, he must be their servant, not their lord—a minister, not an autocrat.

Digitized by Google

The Church of Christ, in short, should be the Church of the Twentieth Century, not only in name but in character and power.

The Christian Church must recognize Christ as her head and righteousness; his word as her only and all-sufficient rule of faith and practice; all who accept him and his word as being one in him, and free and equal in the exercise and enjoyment of all the rights and privileges of a common father's house.

Liberty, unity, and charity, constitute the three-fold cord that makes and keeps God's people one.

Such a church will have a mission until the end of time. It will be catholic, because inspired as the habitation of God. It will be practical, because with its back upon an effete past, its hands will be busy with the ever-living present, and its face will be turned hopefully to the future. It will be cosmopolitan, because its hands will be extended in love and sympathy to all for whom Christ died.

## A Woman among Women.

THE following is an extract from a lecture delivered at Pittsburg, Pa., October 19, 1899, by Carol Norton, C.S.D.:

In a conspicuous degree Jesus Christ fulfilled his own prophecies and confirmed the very hopes that he set forth in his sublime teachings. His immediate followers and the Christian Church, which was the legitimate outgrowth of his career, for a brief period followed closely the Spirit and repeated the signs of his teachings. The ebb and flow of human consciousness, the characteristic tendency of the human mind, which invariably recedes after its first advance before making its second, brought about the temporary loss of the living energies, or signs, *i.e.*, works, of Christianity according to Christ, and from the close of the third century until the latter part of the nineteenth the metaphysical and healing aspects of Christ's teachings have been virtually lost sight of. Woman, true to her history and nature, after a long, patient, prayerful search for her buried Lord in the valley of human experience, alone amidst the darkness of the starless night of human woe, went apart from the common walks of life, and through prayer, meditation, and spiritual discovery rescued from the place of its entombment the undivided garment of Christianity, and lo! the world again walketh in the light of hope and Love under the illumination of a healing and saving understanding of Christianity.

The actual history of the Christian Science movement since its foundation, by Mary Baker Eddy in 1866, abides in a glory all its own and in its humane achievements, spiritual, and physical instances of healing and reformation, and in the self-evident good that it has accomplished.

Throughout history woman's life has been one of ministry. She it is who has seen life's pathos more than its victories. She has protected its periods of infant growth, youthful expansion, and manly development with a heart of love, and tenderly placed about it the protection of purity, ennobling influence, and righteous prayer. Woman is used to waiting. She has become accustomed to the suffering that sounds no murmur, and to unselfish labor known to and rewarded by God alone. In each period of Hebrew and Christian history woman has scaled the heights of the celestial mountains of holiness and pure living, and with feet firmly planted on the mountain-top of Soul-life has called to life's valley-dwellers and told them of the mountain vision, the divine vistas, and of the highlands of spiritual life. Woman's nature is peculiarly fitted to listen to the "still small voice" of the Eternal Pure One.

As in past ages, so in the present, a woman's illuminated vision has endowed religion with new life, clothed again the teachings of Christ with the garment of healing and regeneration, and brought to earth the sweetness, richness, and soul-satisfying elements of a vital, spiritual, transforming understanding of the divine Science of one God, one Christ-Idea, and one divine destiny for all men. Mary Baker Eddy, as the Discoverer and Founder of Christian Science, fills an individual single niche in religious and reformatory history. No one else can do the work that she is called upon to do by virtue of the responsibility laid upon her as the one to whom the fundamental truth of this great Science came.

The present era is responding to the energizing elements of the spiritual awakening in whose midst we find ourselves. A higher understanding of Christianity is entering human consciousness. Health, happiness, and holiness are becoming each day more directly the possession of man. The life of the present is being raised to levels of harmony and holiness, and the immediate future bears rich promise. The sweet melody of this great spiritual awakening floats across the wastes of earthliness, and, rising above the din of the world's untimely and unholy clamor, brings to the mind and body of man a foretaste of that peace which passeth all human understanding, that peace of mind and health of body which the world can neither give nor take away.

## Witnesses for God.

TRINITY CATHEDRAL was crowded this morning with a notable audience assembled to witness the consecration of Rev. Arthur Llewellyn Williams, bishop-coadjutor of the diocese of Nebraska. All the pews were taken early in the morning, an hour or more before the beginning of the lengthy services, and at ten o'clock, when the ceremonies opened, there was scarcely standing room.

Rt. Rev. George Worthington, S.T.D., LL.D., Bishop of Nebraska, was the presiding bishop and consecrator. The co-consecrators were Rt. Rev. John Francis Spalding, D.D., Bishop of Colorado, and Rt. Rev. Theodore Nevin Morrison, D.D., Bishop of Iowa. Rev. Mr. Morrison served as substitute for Rt. Rev. William Edward McLaren, D.D., D.C.L., Bishop of Chicago, who was unable to attend on account of illness. Rev. Mr. McLaren had been mentioned on the programme as the preacher, and in his absence Rev. Mr. Morrison delivered the official sermon.

He talked at length on the evidence of the existence of God; evidence that may be seen in every-day worldly affairs. He regarded belief in a supreme being as a vital issue, and indicated that the world in general knows positively the existence of a God. He referred to the great numbers that have professed belief in Christian Science, and while he was not advocating such doctrine, he used it as an illustration to show that the Christian Scientists have built up a large following because they are pronounced in their belief in a God.

Omaha dispatch to the *Nebraska State Journal*, Lincoln, Neb.

## An Interesting Question.

*Editor of the Buffalo Commercial:*—An item in a recent issue of your paper states that the census bureau is investigating to discover the cause of decrease in death rate in this and other cities. I take the liberty of calling your attention to the fact that wherever this decrease is noted you will find a corresponding increase in the number of persons who are adherents to the doctrine of Christian Science as taught in "Science and Health with Key to the Scriptures" by Rev. Mary Baker G. Eddy. In view of this fact I raise the question for investigation, how far this marked decrease in death rate is due to the successful practice of Christian Science. Z.

Buffalo, September 23. *Commercial*, Buffalo, N. Y.

## Legality of Christian Science.

The question of the legality of Christian Science practice has recently been made the subject of judicial decision in Illinois. The *Medical Record* calls the decision "one of the curiosities in jurisprudence."

The case was one of typhoid fever which ended fatally. The medical fraternity charged that death was due to neglect, although the patient had been treated by the methods employed by Christian Scientists. The attorney-general held that the laws of Illinois do not prohibit the treatment of disease by mental and spiritual means. The text of his decision is quoted as follows:—

I am of the opinion that the criminal code has not been violated. Section 42 of an act to amend an act entitled, "An act to prevent and punish wrongs to children," is the only provision of the criminal code that can by any possibility be held applicable to such a case. It reads, "It shall be unlawful for any person having the care and custody of any such child wilfully to cause or permit the life of such child to be endangered or the health of such child to be injured, or to wilfully cause or permit such child to be placed in such a situation that its life or health may be endangered."

I am of the opinion that the word "wilfully" as used excludes it from application to the case in hand. As there used it means "intentionally" or "designedly," and does not cover cases of mistaken judgment, where the parents or persons in charge of the child honestly believed in the efficacy of the treatment adopted.

I am also of the opinion that under the act of 1899 concerning medicine and surgery, persons may minister to or treat the sick or suffering by mental or spiritual means, without the use of drug or material remedy, without a license from the State Board of Health. Christian Scientists claim to heal or cure the sick, or those who think themselves sick, by such means, and that is exactly what was done, or attempted to be done, in this case.

The *Medical Record* is somewhat indignant at the interpretation here given the term "wilfully," by which cases of mistaken judgment are excepted, but to most laymen, the construction will commend itself as just, so long as medical science itself is divided in conflicting schools, and people of necessity will have to depend on their own judgment, which sometimes may be "mistaken," as to what line of medical treatment is to be sought—allopathic, homœopathic, osteopathic, or what not. At any rate, it will be interesting to see what can be urged against the decision.

*News,* Salt Lake City.

## The Lectures.

### At Pittsburg, Pa.

The lecture of Mr. Carol Norton at Carnegie Music Hall, Thursday evening, October 19, on Christian Science, and the attention which it attracted, again call to notice the remarkable growth of this new sect. Its rapidly augmenting importance as a factor in directing thought, as a philosophy of life, and as a religion, has been impressed upon us more than ever during the last few months by the many articles and books that have been published with a view to controverting its doctrines. But in spite of all this its growth and its hold upon its adherents are increasing in a remarkable manner, and it is one of the forces in the shaping of the intellectual and religious life of the day that cannot be ignored.

Mr. Norton, who is one of the ablest and most forcible exponents of the doctrines of Christian Science, draws great audiences wherever he goes. He recently addressed a gathering of upward of three thousand persons in Metropolitan Opera House, New York, and the reports of his lecture occupied a large space in the metropolitan press, which is one evidence of the wide interest in the subject. Mr. Norton certainly shows that he is capable of making a strong presentation of the subject, and his forceful arguments make it impossible to dismiss Christian Science as a mere fad. It must be reckoned with as one of the great spiritual movements of the day.

Editorial in the *Times,* Pittsburg, Pa.

Mr. Norton's lecture was attentively listened to by a large audience representing intelligent people of almost every walk in life. Clarence Burleigh, city attorney of Pittsburg, a lawyer and public speaker of high standing, presided over the meeting and introduced the lecturer. He spoke as follows:—

*Ladies and Gentlemen:*—I have been selected to introduce to this audience the lecturer of the evening.

Just exactly why I was chosen to perform this very pleasant duty, neither you nor I can guess. I do not think that I am especially renowned for my piety; I know that I am perfectly healthy, and, among the many and many things of which I am profoundly ignorant, Christian Science occupies a prominent place.

But, years ago, I learned a lesson, and I learned it well: that there are many things in heaven and earth that are not dreamt of in my poor philosophy; and I know that any movement which numbers among its votaries hundreds and thousands of the most intelligent, the most thoughtful, and the ablest people of the whole country, must, of necessity, have in it and through it true honesty of purpose and genuine integrity and merit.

This age which we live in is not only a material age, it is also the age of science. In almost every pursuit of life now the continual struggle is between mind and matter—between science and brute force. Practically, miracles are being accomplished and wrought out upon every hand, and in everything, mental and physical, and almost daily and almost continuously, the incomprehensible, and almost the impossible, is being accomplished, until, it seems to me, scepticism should entirely vanish until at least argument and explanation, investigation and demonstration have the fullest sway.

More especially should this be the case in regard to a movement which has for its motive health and love; and, therefore, ladies and gentlemen, I bespeak for the gentleman who will address you this evening the closest attention, the closest scrutiny, and the most intelligent and careful thought of which the audience is capable. And it may be, in the words of Goldsmith, that

> Truth will from his lips prevail with double sway,
> And those who come to scoff, remain to pray.

Without any more words, it is my pleasure to introduce to this audience Mr. Carol Norton of New York, the lecturer of the evening.

### At Johnstown, Pa.

Several hundred people, Tuesday evening, October 17, listened to the lecture of Carol Norton of New York, on Christian Science at the Johnstown Opera House, and they gave him a very respectful and earnest hearing.

Mr. Norton is a prepossessing gentleman, rather young, well dressed, affable in manner, straightforward of speech, and apparently quite sure of his ground. He talks with easy confidence, in a clear tone, and at times there are touches of the orator's art in the presentation of his theme. However, he was mainly argumentative, appealing to thought rather than to emotion, and urging his ideas as one who had no sort of doubt whatever of their perfect validity.

Digitized by Google

Ex-Mayor W. Horace Rose presided, and introduced Mr. Norton.—Johnstown *Democrat.*

The introductory speech by Ex-Mayor Rose was as follows:—

*Ladies and Gentlemen:*—A great many years ago the wisest man that ever lived said there was nothing new under the sun. To-day there are few people who take this statement as literal and apply it in the concrete to all elements of nature. Man has made progress in all ages, but if Solomon were resurrected from the grave to-day he would doubtless be surprised to see the telegraph, the telephone, the locomotive, and the long list of practical inventions that in his time were never dreamed of. While man has struggled upward in all ages, the world's greatest progress has been made doubtless within the past fifty, twenty, aye, ten years! Since my advent on this sphere almost all the wonderful inventions that are now used every day have come into practical use. Even law has progressed, religion is progressing, and science is blazing paths through hitherto untrodden wildernesses.

To-night we have with us a gentleman who will address you on what is denominated Christian Science. I know nothing of this Science, but I do know that many educated men and women all over this enlightened world are becoming Christian Scientists, and I am anxious to hear its message and consider its claims, and I bespeak for Mr. Norton a respectful hearing.

I have the honor, ladies and gentlemen, of introducing to you Mr. Carol Norton of New York.

### At Des Moines, Ia.

Foster's Opera House was crowded to its capacity and many were turned away Tuesday evening, October 17, the occasion being the lecture by Judge William G. Ewing of Chicago, on Christian Science. By the time the lecturer was presented the house was so full that it was necessary to place a guard at the door with strict orders to admit nobody. The seats were all taken and people stood in the rear, at the sides, and in the aisles. A considerable number secured the privileges of the stage, and occupied seats in the wings.

The lecture was given under the auspices of the local Christian Scientists. Judge Ewing is well known in Christian Science circles and is recognized all over the country as one of its ablest exponents. He was presented to his audience by Judge S. F. Prouty, who referred to him as one of the ablest jurors in Chicago prior to the time he left the bench to take up the work of Christian Science. Judge Ewing spoke with great earnestness, and throughout the hour and a half of his discourse was followed with the closest attention by his great audience.

Des Moines *Leader.*

Judge Ewing of Illinois, discussed Christian Science last night before a large audience at Foster's Opera House. His address was modest and eloquent and his words and manner indicated that he is a Christian. His address was full of faith and hope, presenting the bright side of life. Such an address would do good anywhere. The great audience gave breathless attention.

Editorial in the Des Moines *Capital.*

Though I am an old doctor of divinity, to this day I have not got beyond the children's learning—the Ten Commandments, the creed, and the Lord's prayer—and these I understand not so well as I should, though I study them daily, praying with my son John and my daughter Magdalen.

MARTIN LUTHER.

## The Board of Education.

THE Board of Education has prepared printed application blanks to be used by those who desire to appear before it for examination.

These blanks are now ready, and can be procured by written application addressed to the Board of Education, 95 Falmouth St., Boston, Mass. No other form of application will be received.

Special attention is directed to the following By-Law of the Church Manual:—

"Students are examined and given certificates by this Board, for no other purpose than teaching Christian Science. All other applicants will be dismissed."

## Church Rule.

IT shall be the privilege of all the leading Churches of Christ, Scientist, situated in our largest populated cities, or in the capital cities of the United States, Canada, or Great Britain (in addition to their other established lectures), to call on Judge William G. Ewing of Chicago, Ill., for an annual lecture under the regulations and auspices of the Mother Church in Boston. Also, with the consent of Judge Ewing, the church shall publish his entire lecture in at least one of the leading, local newspapers.

## Notice to the Field.

THE November number of the *New England Magazine,* now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

## Regarding Christian Science History.

Do you send Christian Science History free? please answer in *Sentinel.* W. R. S.

Yes, this booklet is for free distribution. It should be judiciously circulated so as to do the most good.

## Index to the Sentinel.

THE index to volume I. of the *Christian Science Sentinel* is mailed with this issue. If, for any reason, subscribers fail to receive the index it will be mailed upon application.

To you who are perplexed and of doubtful mind, then, in these days of conflict and uncertainty, I say,—Try what trusting to the Living Soul will do; try whether God will not speak to you there. Do what prophets and psalmists did; do what Jesus and the Apostles did: Believe in God, the Living God, for yourself. Try all doctrines by the touchstone of pure thought, devout feeling, and religious trust. Believe nothing on any outward authority, but compel all to submit to the test of reason, conscience, and love. Believe only because you feel, approve, and know; believe like happy children, not like submissive slaves. So shall you be truly free; and, within yourself, you will have the witness that what you hold by is from God.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### Is there an Easier Way?

WE have heretofore spoken of the price of medical and other text-books, and shown that by comparison the price of the Christian Science text-book, "Science and Health with Key to the Scriptures," is not only reasonable, but low. Lawyers know how expensive law books are. The lowest price is $5.00 for a standard text-book, and $6.00 to $7.00 a prevailing price.

The price on that invaluable compendium of 471 pages, "Miscellaneous Writings," bound in cloth, and printed on a fine quality of paper, is only $2.25, or in quantities of one dozen or more, $2.00 per volume. So of all the other books of the Rev. Mary Baker Eddy; they are not out of proportion with other standard books. They were, we dare say, never intended to be cheap, as the term goes. No spirit of competition entered into the fixing of the price upon them. They are sent forth on their intrinsic merit, to do their appointed work, and not to compete with other publishers.

The spirit that clamors for cheaper books relating to spiritual Truth, would, if it could, cheapen also the Truth itself. It would climb up some nearer and easier way. It is looking about for a back-door entrance, or a more convenient side-door entrance. It chafes under the stern demands of the front-door entrance and hopes to skip airily around it. Like Bunyan's allegorical characters in Pilgrim's Progress, "Formalist" and "Hypocrisy," this quality of thought would take the by-way leading to the right and left of the hill "Difficulty" rather than undertake to climb straight up it.

It will be helpful to consider an extract from this remarkable delineation of Christian experience.

"And he [Christian] espied two men come tumbling over the wall, on the left hand of the narrow way; and they made up apace to him. The name of the one was Formalist, and the name of the other Hypocrisy. So, as I said, they drew up unto him, who thus entered with them into discourse.

"*Chr.*—Gentlemen, whence came you, and whither do you go?

"*Form.* and *Hyp.*—We were born in the land of Vainglory, and are going, for praise, to Mount Zion.

"*Chr.*—Why came you not in at the gate which standeth at the beginning of the way? Know ye not that it is written, that 'he that cometh not in by the door, but climbeth up some other way, the same is a thief and a robber'? (John, 10 : 1.)

"*Form.* and *Hyp.*—They said, that to go to the gate for entrance was by all their countrymen counted too far about; and that therefore their usual way was to make a short cut of it, and to climb over the wall, as they had done.

"*Chr.*—But will it not be counted a trespass against the Lord of the city whither we are bound, thus to violate his revealed will?

"*Form.* and *Hyp.*—They told him, that as for that, he needed not to trouble his head thereabout: for what they did they had custom for, and could produce, if need were, testimony that would witness it for more than a thousand years.

"*Chr.*—But, said Christian, will you stand a trial at law?

"*Form.* and *Hyp.*—They told him, that custom, it being of so long standing as above a thousand years, would doubtless now be admitted as a thing legal by an impartial judge: and besides, said they, if we get into the way, what matter is it which way we get in? If we are in, we are in: thou art but in the way, who, as we perceive, came in at the gate; and we also are in the way, that came tumbling over the wall: wherein now is thy condition better than ours?

"*Chr.*—I walk by the rule of my Master: you walk by the rude working of your fancies. You are counted thieves already by the Lord of the way: therefore I doubt you will not be found true men at the end of the way. You come in by yourselves without his direction, and shall go out by yourselves without his mercy.

"To this they made him but little answer; only they bid him look to himself. Then I saw that they went on, every man in his way, without much conference one with another, save that these two men told Christian, that as to laws and ordinances, they doubted not but that they should as conscientiously do them as he. Therefore, said they, we see not wherein thou differest from us, but by the coat that is on thy back, which was, as we trow, given thee by some of thy neighbors, to hide the shame of thy nakedness.

"*Chr.*—By laws and ordinances you will not be saved, since you came not in by the door. (Galatians, 2 : 16.) And as for this coat that is on my back, it was given me by the Lord of the place whither I go; and that, as you say, to cover my nakedness with. And I take it as a token of kindness to me; for I had nothing but rags before. And besides, thus I comfort myself as I go. Surely, think I, when I come to the gate of the city, the Lord thereof will know me for good, since I have his coat on my back; a coat that he gave me freely in the day that he stripped me of my rags. I have, moreover, a mark in my forehead, of which perhaps you have taken no notice, which one of my Lord's most intimate associates fixed there in the day that my burden fell off my shoulders. I will tell you, moreover, that I had then given me a roll sealed, to comfort me by reading as I go on the way; I was also bid to give it in at the celestial gate, in token of my certain going in after it: all which things I doubt you want, and want them because you came not in at the gate.

"To these things they gave him no answer; only they looked upon each other, and laughed. Then I saw that they went all on, save that Christian kept before, who had no more talk but with himself, and that sometimes sighingly, and sometimes comfortably: also he would be often reading in the roll that one of the Shining Ones gave him, by which he was refreshed.

"I beheld then, that they all went on till they came to the foot of the hill Difficulty, at the bottom of which there was a spring. There were also in the same place two other ways besides that which came straight from the gate: one turned to the left hand, and the other to the right, at the bottom of the hill; but the narrow way lay right up the hill, and the name of the going up the side of the hill is called Difficulty. Christian now went to the spring (Isaiah, 49 : 10), and drank thereof to refresh himself, and then began to go up the hill, saying,—

> The hill, though high, I covet to ascend;
> The difficulty will not me offend;
> For I perceive the way to life lies here:
> Come, pluck up heart, let's neither faint nor fear.
> Better, though *difficult*, the right way to go,
> Than wrong, though *easy*, where the end is woe.

"The other two also came to the foot of the hill. But when they saw that the hill was steep and high, and that there were two other ways to go; and supposing also that these two ways might meet again with that up which Christain went, on the other side of the hill; therefore they were resolved to go in those ways. Now the name of one of these ways was Danger, and the name of the other Destruction. So the one took the way which is called Danger, which led him into a great wood; and the other took directly up the way to Destruction, which led him into a wide

Digitized by Google

field, full of dark mountains, where he stumbled and fell, and rose no more."

Thus has it ever been, and thus will it ever be. The true Christian pilgrim must pass through the one and only gate; if he fall into the Slough of Despond he must get out on the right side and go on his way toward the wicket-gate over which is written, "Knock, and it shall be opened unto you." When he comes to the hill "Difficulty" he must boldly and courageously ascend it, rather than undertake to go around it; for as surely as Christ taught and proved the one Way, so surely will the by-paths lead to Danger and Destruction. Entering in at the straight gate cost Christian much from the human standpoint—even all the "rags" of the material senses, including his worldly possessions and (for a time) his family ties, but he won, indeed, a golden reward, when he reached the happy end of his pilgrimage.

Whenever Christian left the straight and narrow way to seek an easier, he got into trouble, and through much suffering, humiliation, and delay, had to retrace his steps until he again found that way. So will every sincere seeker of the Heavenly Kingdom have to do, for verily, the way is strait and narrow that leads thereto.

## Ingratitude.

THERE is no baser quality of the human mind than ingratitude.

Gratitude to God for His boundless goodness is a prerequisite of Christianity. Love of God is gratitude, for love of God is obedience to Him, the acceptance of His mandates, and the carrying out of His beneficent purposes. Ingratitude, therefore, is absence of love, and absence of love may be hate.

He who turns wilfully upon a benefactor hates his benefactor. He who hates one who is doing God's work—doing good in the world and for humanity—hates God. God accomplishes His infinite purposes through His servants. To attempt to injure a faithful servant is a thrust at God Himself. What difference between hating and opposing one commissioned to execute a command, and hating and opposing the giver of the commission?

Jesus repeatedly declared that those who hated him hated his Father also. Nor did he speak in the merely personal sense. Jesus was commanded, in a special and peculiar sense, to do his Father's work. He was a teacher and wayshower. He taught others, in part, how to do the work he did.

What is the logical meaning of his saying: He who hates me, hates my Father also? This: He who attempts to interfere with or destroy my work of love and its helpful and saving effects, hates both me and Him who sent me, because he hates our works. He who hated Jesus and his works hated also his disciples and their works.

Bringing the application down to its still larger meaning, we assert that opposition to any of God's servants down through the ages has been opposition to God. Yet it is true that, in all ages, every great spiritual movement has been opposed, and usually most bitterly by those claiming to be friends thereof. History proves this to have been a prevailing idiosyncrasy of mortal mind in all ages. It strikingly illustrates the working of what, in Christian Science, is termed animal magnetism or mesmerism. The mesmerized person sees everything through a distorted vision. He sees his best friends as his worst enemies. He looks out only from the view-point of his own egotism. His own selfhood is his only reality, hence his only god.

Paul, that truly great Christian metaphysician, in his experience, came in contact with this phase of mortal mind, and most aptly defines it in 2 Thessalonians, 2, thus:—

"Let no man deceive you by any means: for that day shall not come, except there come a falling away first, and that man of sin be revealed, the son of perdition; who opposeth and exalteth himself above all that is called God, or that is worshiped; so that he as God sitteth in the temple of God, shewing himself that he is God."

## Application of Christian Science to Dentistry.

BY CHARLES L. VAN FOSSEN, D.D.S.

ABOUT three years ago, I began an investigation of Christian Science, and immediately put into practice the little I could understand, both in my business and in my home. The transformation in my life has been very great, in fact, the comparison, before and now, is about as night to day. Physically—and this is the only man I ever knew up to that time—I was healed of what the world calls "being a good fellow." This included the excessive use of alcohol and tobacco in all their forms. When Christian Science wiped these habits away it completely obliterated all desire for them, so that they are no temptation whatever now. My eyes had given me a great deal of inconvenience, and I had worn glasses for astigmatism for over four years, when I awoke to the fact that glasses did not make me see. So, with the assistance of Christian Science, I discarded them, and found my eyes much more satisfactory without the glasses than with them. The claim of rheumatism I also set aside as an unnecessary appendix for me to carry longer.

My wife, in turn, discarded probably as many claims as I. Our little baby's healing—then two years of age—in one night of an aggravated case of whooping cough, which the doctor summoned told us it would take at least five weeks to cure, was one of the signs that tended to lead us to the Truth. And so I might go on and enumerate case after case of healing in my own family that thousands of others are experiencing every day and stand ready to testify to. What I desire to deal with more particularly at this time is the application of the teachings of Christian Science to dentistry. This has been one of my problems, and I have undoubtedly made a great deal of it. Like all other students of this unlimited Science, I have not been as patient as I might have been. I have wanted to solve the problems that *might* present themselves some time, and was not satisfied to apply as much as I knew today, and work diligently for a greater understanding tomorrow. It was so easy to see the seeming big black clouds ahead, that many times I have been unable to see the reflected light from underneath them. My ideas of the profession of dentistry, when I began the study of Christian Science, were pretty well ground in, and were formed after taking the usual collegiate course, which is practically the same as that given to the medical students. The M. D. candidate takes up the study of therapeutics—the general system, normal and abnormal—in a more exhaustive manner than the dental student, who delves more deeply into mechanics, its laws and application. The one studying the principles and practice of medicine, the other of dentistry. So you see the courses are very much the same. This, together with the experience gained from an active practice of dentistry laid down on these lines for about ten years, had, as I before remarked, been pretty well ground in; and when I began to consider remodeling my practice to conform to my very indefinite idea of what would harmonize with Christian Science, it was a pretty big problem. Very much like the M. D. attempting to continue the practice of medicine on the principles of Christian Science. One of the easy ways of evading this seemingly very hard problem was to go into some other business. This seemed, at first thought, the wise thing to do. There were so many things, to my sense, that could not be made to harmonize with Christian

Digitized by Google

Science. The whole profession seemed the opposite of what it should be. To effect the change, the problem seemed endless, and as long as I looked at the whole problem, everything was black. Then I would think of the years I had spent in preparing myself for the business—the years in working to the point of success, both as regards experience and practice—and the fact that many of my patients thought that I was of great service to them—was it the right thing to drop it? Then came the thought that no material business was scientific and that the time would come when they would be unnecessary; and unless I was able to offer people something better than dentistry as practised to-day, would I be doing myself or any one any good by dropping it? I realized that running away from a problem does not solve it, and I began then to see that by my quitting the practice of dentistry, I would not stop the present seeming need of dental work. This line of argument began to bring me to a little light. I then could see that this same thought would apply to every form of material business, and how unreasonable it would be for us all to drop our material work until we had demonstrated a better work. There is no question in the mind of any one who knows anything whatever of the teachings of Christian Science, that the dentist who is applying as much as he knows of its rules to his work will bring out far better results than one who does not. His work will be accomplished easier, and the results will be more perfect and satisfactory, both for patient and operator. This can also be said of any and every line of business. I recall how, early in this experience, when talking to a Christian Scientist who afterwards became my teacher, I told him that in dentistry we had to use a great many medicines to cure diseases of the teeth and assist us in our mechanical work in the mouth, and, of course, I could not get along without them; and if Christian Science was going to interfere with their use, I could not adopt it. What factors in bringing about the results desired, I then, and the majority of dentists to-day, attributed to these medicines, and how useless, from the standpoint of common sense, otherwise Christian Science, they have been proven to be! How much I owe to this teacher, I can never express or repay; for often when I would go to him with questions pertaining to seeming impossibilities, to my sense, he would, without making a law for me, or without pointing a definite way, tenderly, carefully, lead me back to a place I could understand and demonstrate from, and there he would hold me, and a little later I would be able to go to him and say, "Why, it seems so strange, but that case I talked to you about at such and such a time, it never happened." Had he said to me "You must not do this or that, because it is not scientific," I should not have understood, and probably I should to-day not have this understanding to assist me in my daily life. Like all beginners, I insisted on looking way ahead, and felt that if Christian Science was what was claimed for it, there would be no necessity for mechanical work in the mouth, to fill cavities with gold, or replace lost members with an artificial appliance.

I look back at my first feeble steps in applying my little knowledge of Christian Science to dentistry, and then think that to-day it is with no doubt or indecision that I do so, but with the firm knowledge that the proper application of its rules brings certain results, and that failures are due only to misapplication, or lack of understanding. One of the greatest problems in dentistry to-day is the fear of the patient. This causes more pain than all the work put together. If we will look about us a little, we shall not wonder much that we are in this condition, and ready to jump any minute that some one says, "Ghosts!" This is caused largely by an exaggeration of facts dating from childhood. We court sympathy. The child goes home and tells the mother that it has fallen down and hurt its hand, and the mother picks the little one up, and knows that it is suffering terrible pain, and has probably broken some bones, and in a moment the whole household is upset. The child is petted the balance of the day, given everything he wants, and he naturally thinks it is real nice to get hurt, and the next time he makes a little bigger fuss than before. The mother will come to her dentist with her child and after being informed that certain work is necessary, will immediately get excited, go all to pieces, and say something like this before the child, "Oh, that is terrible! How she will have to suffer! Do you think she is strong enough to stand it, doctor? Had I better have her father come and hold her?" etc., etc. Is it any wonder that this child suffers when having her teeth fixed? This same child is reproduced in the adult, and, ordinarily, the older the person, the greater the fear. It is the general talk in most all households to that extent that almost before the child erupts a tooth she knows all about the terrible punishment she must endure at the hand of the dentist. After such an education, you will not be surprised at the statement I now make, and I do so without fear of contradiction by any dentist of experience, that if you can destroy in the patient the fear of what is liable to happen, you will eliminate ninety-nine one-hundredths of all the pain suffered in the dental chair. Medicine has never reached this condition. Christian Science is a specific. In my practice with children who have not been continually told about the horrors of dentistry, I very often have them sit in the chair and have nerves extracted and go away without knowing what has been done. This is not an unusual experience in my office, and it is accomplished with the aid of Christian Science. An operator attempting this who believes that pain is bottled up inside the nerve, and that the pain must be launched at the same time the nerve is removed, and who occasionally asks the child if it hurts very much, will find that it does, and that the child suffers greatly. If the profession of dentistry could realize the benefits to be gained by the application of Christian Science, in just this one place, that of allaying the fear of the patient, they would find their work entirely remodeled. I have had splendid results by employing a healer to treat the patient for this fear, and occasionally settle me down a little, for very often the operator's fear is the greater. Far better results are gained since I have understanding sufficient to destroy my own fear. It is a most unusual incident in my office to-day for me to lose any time waiting for my patient to get nerved up. When the patient thinks this a part of the necessary procedure, I spend a moment showing the nothingness of the work in hand, often mentally, sometimes audibly, and am able to proceed at once. I can recall but one patient in the past year where I have lost any time from this cause.

So-called diseases of the teeth, from the standpoint of the dentist who is a Christian Scientist, are not only more quickly met than in the old way, but when met this is the end of them, as there is no recurrence when once obliterated through Christian Science. An abscessed tooth is handled on the basis of cleanliness, not of disease. The roots are thoroughly cleansed. If I can accomplish this with pure water, it is done so. If it needs a little soap to clean them perfectly, I use it. Then I close the tooth with a filling to retain it in this clean condition. Any physician or surgeon will tell you that he is unable to heal a wound with any of his remedies, but that he simply cleans up the part and nature does the rest. Of course from his standpoint, he thinks nature needs a great deal of assistance. From the Christian Science standpoint, the less nature is assisted, the better and surer the result.

I have very often in my experience, when treating a tooth, been unable to accomplish the result desired, and after working days and possibly weeks, have sent the patient home and told her to leave it absolutely alone for a

Digitized by Google

month, and upon her return I would find the tooth well. This result is accomplished with the aid of Christian Science without this waiting.

Patients continually ask me whether it does not handicap them in making a higher demonstration to have a tooth filled. This, I cannot answer. For me, to-day it seems to be more sensible to close a cavity in a tooth with a mechanical operation than to allow it to remain open for the food to pack into and decay, causing me to demonstrate over a foul breath as well as pain; but I am continually saying to my patrons, "If this does not seem best to you, go and work out the problem for yourself. I have nothing better that I can offer you to-day; but I know that the day will come when, if I do my work right, I shall have."

I have noticed a wonderful improvement in the teeth of Scientists over all others. A mechanical operation in their mouths seems to hold longer and better and gives better satisfaction all the time. Scientists know why this is, for it is not only true of the teeth, but of everything else.

I might cite a few instances of the power of Truth in the practice of dentistry that have come under my observation.

About a year ago, a lady from out of the city desired to have all her remaining lower teeth extracted. Fearing the pain, she had a healer treat her while the teeth were taken out. When I came to one of the front teeth, I found that it was attached to two others by a very heavy coating of tartar, and the process bone surrounding all three teeth seemed to be loosened. It was necessary for me to dissect away the soft tissues from about this segment and remove the bone and three teeth together. This took some few minutes, probably ten to twelve. In doing so, I cut one of the small arteries, causing the blood to spurt out three or four feet. The operation completed, I told the healer that the flow of blood was excessive, and asked if I should ligate the artery. He said he would meet it mentally, which he did; and in less than twenty minutes all bleeding had stopped, and the patient left the office remarking that she was surprised beyond measure in that she had suffered no pain. This was rather a serious little operation, and when the patient first came into the office she was very much worried over the anticipation of it. Without Christian Science, this work would have been impossible, except under systemic anæsthesia.

A case of chronic abscess of a molar, caused by a hole being drilled through the side of the roof. The tooth was so sore all the time that the slightest pressure was painful. Extraction seemed necessary, as the hole had been closed so many times, and on account of the irritation caused, had to be re-opened almost immediately, that permanent closure seemed impossible. As a last resort, the tooth was filled in the same manner as would have been employed if it had been one of the best in the mouth. The case was turned over to a Scientist for treatment. For a few days the old swelling and soreness appeared, which was met quickly. The tooth is to-day, and has been for over two years, one of the best in the patient's mouth. This operation having failed a number of times under ordinary treatment, Christian Science must be given the credit for saving the tooth.

A case of fracture. A bicuspid tooth, filled on both sides, was split in two places. Extraction supposed to be the only relief. The tooth was wired together, a cap made and set over it, cementing the two halves together. Christian Science treatment prevented any soreness. Case the same to-day as over two years ago when completed.

A case of loose teeth. Tartar had been allowed to accumulate to that extent that the roots of the teeth stood out of the gums over half their length. A discharge of matter exuding from the gums, a so-called incurable disease—Pyorrea Alveolaris. Seemingly, the teeth must come out. Very carefully the tartar was removed and Christian Science treatment resorted to. The teeth have given over two years' splendid service, and are more firm in their sockets to-day than when the case first presented itself.

I tersely cite the above cases as examples of the extent to which Christian Science is used by me in my practice, and refer only to unusual cases, and those whose healing was some time ago. Christian Science is just as effective in the simple cases of every day's work, with which we are coming in contact. Relief from worry, irritability, etc., is one of the first benefits to be obtained from the practice of Christian Science.

How many dentists need this to-day! I am thoroughly convinced that a small understanding of Christian Science by the dentists of the world will do more toward eliminating the pain of dental operations than all drugs, or systems of hot air, electricity, and their like, combined.

## Christian Science Heals and Satisfies.

BY S. GERTRUDE PALEN.

It has been some time in my consciousness that a tribute of gratitude was due Christian Science for what it has done for me. In reading the *Sentinel* of August 31, a statement was made on this line which confirmed me in my oft-put-aside idea of sending in my testimony to the power of Truth. It is almost two years since I first heard of Christian Science through the almost raising from the dead of one sentenced by *materia medica* to pass on in three weeks. A well-beloved member of my family was ill at that time, and I, on her account, stood facing a very dark, dismal winter, as for many years she had "suffered many things of many physicians," and was simply patched up, never "made every whit whole." The thought came to me, Could Christian Science do anything for me? I sought a relative who I felt might aid me, and with much assurance she said it was for every one and certainly she would be benefited. I was not seeking this "pearl of great price" at that time for myself, as my physical ailments were very few. I had always been strong and well and, although far from satisfied on the spiritual lines, I never thought of the awakening in store for me.

For twenty years of my life, I had been a member and active worker in the largest Presbyterian Church in New York City, and, although its doctrines were the best I knew, they afforded me but little real peace and I was most dissatisfied and always longing for answers to many questions, and the only answers I could ever get to what troubled me so, was, "God's ways are not as our ways;" "You will know some day." To wait until death opened up the vista seemed poor consolation, for then I felt there would be no necessity to know. In this spirit of mental unrest, I attended for one year an Episcopal Church, but here I became more heart-hungry than before, and again turned to another Presbyterian Church for two months, when, as I said before, ostensibly for the invalid member of the family, I sought one day a Christian Science reading room. I never can forget that day. The moment I entered that room, it seemed to me I was in a different atmosphere from any I had ever been in before, and it seemed even then, that with the flood tides of sunshine pouring in there were also flood tides of Love. I was introduced to several of the bright-faced women present, and although they said some things I did not understand which seemed to be in a "new tongue," I realized they had something that I had not, and I soon found myself again going down there to find out what this was, and if it was for me too.

The first service I attended, I again was impressed with the Love thought so apparent, and also with the fact that only one person whom I could see wore eye-glasses.

Digitized by Google

I never had anything the matter with my eyes, but the mortal law had fastened itself upon me that a number of persons about my age had put on glasses and I ought to do the same, as I might strain my eyes. This had occurred about four years previously, and these glasses had become absolute masters, as I could neither read, sew, nor write without them. I thought this night, What am I doing wearing these things? If others looking as old and much older than I am are without them, why cannot I do the same? The next morning I went to the reading room, took a treatment, put aside the glasses, and have never had them on since. I took three treatments and had considerable work to do myself, but gradually I broke down this law by claiming at all times there was nothing but the spiritual sight and this was perfect, and long since, I have been able to read, write, sew, and do everything without artificial aid.

This naturally led me to go still further into this great Truth. I was soon in possession of Science and Health, our great text-book, and although the tears would often flow that everything seemed so vague in it to me, the demonstration over the eyes and over one other claim gave me a sure foretaste and forecast that greater things would follow. A year ago last spring, I entered a class taught by one of Mrs. Eddy's first students, and although even this splendid class instruction oftentimes seemed almost nothing to me, I always held to the thought that others had grasped this mighty power of God, and I, too, would surely see face to face some day. Through the summer many things opened up to me, and in the autumn, when I was privileged to enter a review class, I was able with the text-book to dig out much for myself and realize what Jesus meant when he said, "Ye shall know the truth, and the truth shall make you free." I have seen stronghold after stronghold go down in my own experience, material laws broken time and time again. The invalid I before mentioned has been so wonderfully benefited after many years of bowing the knee to many gods of all sorts of drugs, all kinds of treatment, and foreign and home travel, and the change in her both physically and spiritually is so great that I feel as if I would like every one to know "how great a God is our God."

In June, I visited the Mother Church for the first time, and was present at the meeting of the members on the 6th of June in Tremont Temple and saw and heard our dear Leader and Teacher, Rev. Mary Baker Eddy, and never can I forget that glorious day. I would say to those reading this and knowing nothing about Christian Science, look into it and judge for yourselves, and cast it not aside until you have proved for yourselves if it be true or false, for I know having once put your hand to the plough (having once decided, as you must, that it is the Truth) you cannot turn back, and more and more will the light of Truth be revealed to you, until "you walk no more in the darkness, but come into the light."

---

A holy life consists in resisting every temptation of evil, every suggestion, audible or mental, of the tempter. The world is not generally aware that evil thought can be lodged in unsuspecting and unprotected minds, and do its pernicious work without being audibly expressed. This is one of the vital lessons for mankind yet to learn.

It is a universal and inevitable law that dust returns to dust. And why not, since there is nothing else it *can* do?

Truth is permanent and abideth forever. Falsehood is fleeting and abideth nowhere. It hath no place.

## Christian Science is Practical Common Sense.

BY J. W. RUSSELL.

CHRISTIAN SCIENCE, as taught in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, when properly understood, gives us an intelligent understanding of Life, and enables us to become our own minister and physician. If we have a fear of the future state of existence Christian Science will remove it by teaching us how to live in the present. If we are sick, Christian Science will heal us by teaching us that health is the real and true condition of life and that sickness is the unreal and false. It teaches us the way to live in harmony with our neighbor. Every one has a conscience, or a power to reason. If it is used, our understanding grows and controls our feelings; if we do not use it our feelings control us, and we are in bondage to a hard taskmaster.

This world is full of illusions; things seem to be and are not. Our senses tell us one thing, and our intelligence tells us the opposite is true. True education consists in being able to distinguish the real from the unreal, the true from the false. The only tangible capital stock we have in our business is the amount of intelligence we manifest in it. Thought governs our health, our work, and our business, just as much as it controls the movements of our hands. The same law which governs us governs our business. If we worry about our business, it affects our health, if we worry about our health it affects our business; hence, believing we are spiritual and our business material, is equivalent to saying that God takes care of us and the devil looks after our business. All business is mental; it is simply an exchange of thought. All a person does is the result of what he thinks; all we pay or receive from any one is the result of thought. If our thoughts in any line of business are true they are valuable, and one proof that they are true is that we are successful.

Each has his life problem to work out, and the less we depend upon others the stronger and more self-reliant and successful we become. In our dealings with our fellowman we should see ourselves as we see others, neither granting personal favors nor asking them; but we must settle every question on its merits, without fear or favor. By pursuing this course, we gain the esteem of all fair-minded thinkers.

A belief in another's goodness without any desire on our part to be good, will never help us. I have for many years seen my wife and my mother cooking, and yet I could neither cook a dinner nor set the dishes on the table properly. Why? Because I have been satisfied with their understanding of it and have had no desire to learn. A belief in another's honesty will not make us honest unless we put our belief into practice and become honest ourselves. Jesus was the best and most intelligent person that ever lived. His understanding of Life was so perfect that he was able to overcome sin, sickness, and even death itself. If we worship him as a martyr who died for us, that belief not only prevents us from understanding him but it keeps us in ignorance of the truth of his teachings.

If we look upon him as the wayshower and try to understand what he taught, we can do the things he did in proportion to our understanding of his teachings. The thought which has kept the world in bondage is, that the works of Jesus were supernatural, and not to be understood, but *believed*.

There cannot be a natural and a supernatural law when we have a case tried in court. The judge decides it and if we appeal to a higher court and get the decision reversed, this does not prove that there are two conflicting laws, but the higher takes the place of the lower when the decision was simply a misinterpretation of the law. When we hear anything that is new and believe it because some one

Digitized by Google

in whom we have confidence told us about it, the belief in that person may prevent us from understanding.

A belief is personal and wavering, while understanding is impersonal and positive. We do not believe that twice two are four because some one has told us so, but because we know it to be so as a fact, for we have proven or demonstrated it. When a chemist is about to analyze anything, he does not form an opinion of it before he begins, but he waits until he gets through and bases his conclusion on the facts resulting from the analysis.

As we are able to rise above our personal senses, we are enabled to see the truth in Christian Science, which has been likened to a musical instrument. If there is no music in us we can find none in the musical instrument; so, if there is no appreciation of Truth in us, we can see no Truth in Christian Science. But if we do have a sincere desire to know the Truth we shall be content to study the Bible and Science and Health. The daily practice of what we learn will enable us to receive more.

## Man's Extremity is God's Opportunity.

BY SIGEL C. REED.

I FIRST heard of Christian Science nine years ago. For ten years prior to that time my principal article of diet was medicine, believing the more I took and the more disagreeable it was to take, the sooner desirable results would be obtained, but I was sadly disappointed.

I continued to grow worse, suffering constantly, both physically and mentally. I often asked God to restore me to health, and failing to have my petition granted, would pray to be relieved of my suffering through death, and could not help wondering what kind of a God we had that would ignore both of my requests, and allow me to continue to suffer as I did. During the ten years I was sick I gave twenty different physicians a trial, besides many different kinds of patent medicines.

One day it occurred to me that I had been doctoring all these years, not knowing what ailed me, so concluded to spend a day visiting with the M. D.'s, and ascertain, if possible, the cause of my sickness.

The first physician to examine me said, "I think it better to tell you plainly the truth, you have not more than four months to live, as you have diabetes in its worst form." Only those who have had the death sentence passed on them can understand the full import of those words, the agony I experienced for a few moments would be impossible to describe.

I soon recovered my composure, however, and called at another office. There were two physicians present. Both said I did not have diabetes, but could not agree on just what I did have. I called on another physician who pronounced my ailment stomach trouble.

I then returned to the physician who was then treating me, and had been for the past two years. He said, "I have done all I can do for you unless I experiment by trying remedies given in my medical journal." I could not see how there could be any difference between experimenting and the treatment I had been receiving, and so informed him, but decided, nevertheless, to take experimental treatment. The result of such treatment was that I came very near passing away in the doctor's office.

I then declared I would never take any more medicine, believing I had but a short time to live anyway. But "man's extremity is God's opportunity." In a few days Christian Science was mentioned to me. I remember how I tried to smile, and said, "faith cure." However, after considerable persuasion on the part of my wife to try it, although she knew nothing at all about it, but was favorably impressed with the name, I consented to an interview with a healer.

My first question was, "Will you take my case, no cure no pay?" Reply, "No." I then asked, "Does it require any faith at all on my part to effect a cure?" She replied, "Not necessarily." I very plainly assured her I did not have a particle of faith in it, and did not believe for a minute I would be benefited, but I concluded to take treatment.

Little did I realize while conversing with my healer I was negotiating for a new lease of life. At the end of the first week I felt as though I had been torn all to pieces and was being made over again as it were. At the end of the second week,—what a change! Free from all suffering, both mental and physical, and experiencing a sense of peace, happiness, and satisfaction I never thought possible for me again to enjoy.

Since then the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, have been my constant companions. I would say to those who have grown weary and discouraged in their search for health, and who perhaps are beginning to doubt that there is a power greater than evil, and that God has any jurisdiction over us on this plane of existence; to lay aside prejudice, opinions, and beliefs long enough thoroughly to investigate Christian Science, and I assure you, dear sufferer, that you will be satisfactorily convinced that God is just as able, willing, and ready to restore you "every whit whole" now, as He was, and did, centuries ago those who turned to Him. In fact, you may find Him to be all that the Scriptures claim Him to be, namely, "a very present help in trouble."

Chaff never becomes wheat. It is blown about of the wind as refuse, or consumed by the flame. Every lie is as chaff. Isaiah said: "Woe unto them . . . which justify the wicked for reward, and take away the righteousness of the righteous . . . therefore . . . as the flame consumeth the chaff, so their root shall be as rottenness, and their blossom shall go up as dust."

The golden grain of Truth cannot be adulterated by the chaff of error.

The mists of error, however thick in the seeming, cannot obscure the sunlight of Truth. The Sun of Righteousness shineth perpetually.

Good is eternal. Evil is temporal. The first is real, the last unreal.

## Rondeau.

BY EUGENIE L. FRASHER.

"IN God we trust," this motto wrought
Upon our coinage, should have taught
Us all the unity of Mind,
That in our hearts its Love might bind
Our countrymen in loving thought.

At any time when needing aught,
Turned we, and other sources sought?
Why did we not recall to mind,
"In God we trust"?

Should any time our lives seem fraught
With pain, or in some tempest caught,
Should earthly friendship prove unkind,
We'll know the coin must be refined,
Then comes that Truth, though dearly bought,
"In God we trust."

Digitized by Google

## Questions and Answers.

*The impression prevails among some of those outside of Christian Science that the healing of sickness is all that the Science accomplishes or seeks to accomplish; is this true? or does Science deal also with sin?*—An Inquirer.

While healing sickness is an important part of the work of Christian Science, it is the least important. Vastly more so is the destruction of sin. Indeed, sickness, in Science, being the consequence of sin, directly or indirectly, there can be no *healing* of sickness, in the highest sense, without the healing—destruction—of sin.

While physical regeneration—the renewal of the body—is by no means to be despised, spiritual regeneration—that is, spiritual growth—is the real goal. Yet the same divine Principle cures both sin and sickness. Our text-book, "Science and Health with Key to the Scriptures," makes this very plain throughout.

On page 394 we read:—

"The same Principle cures both sin and sickness. When Christianity overcomes faith in *Materia medica*, and divine faith destroys faith in drugs, and other material methods of healing, sickness will disappear."

Only a careful study of this book, however, will fully reveal what is meant by this statement. Please study it, and thus learn of Christian Science.

❧

*How can I know when I am making spiritual progress? At times when I feel spiritually strongest I have the least success in healing, and vice versa.*—A practitioner.

"The Spirit itself beareth witness with our spirit, that we are the children of God" (Romans, 8). So said Paul. Our seasons of what seem to us our greatest exaltation may not be the time of our best realization of divine Truth. Sometimes when sore pressed we are really nearer to God than when there seem to be no clouds, but all is sunshine. The heart may be more contrite in distress than in moments of ecstasy, or mere emotional joy.

Paul also said:—

"Therefore I take pleasure in infirmities, in reproaches, in necessities, in persecutions, in distresses for Christ's sake: for when I am weak, then am I strong" (2 Corinthians, 12 : 10). Nevertheless, "Joy cometh in the morning."

## Led into the Truth.

BY EMMA B. DUNBAR.

In October, 1895, I was taken with a mental trouble called by my physician "a kind of nervous prostration," caused by physical troubles of many years' standing, for which I had had much medical treatment. I tried electricity for three months, receiving some benefit physically but none mentally. I was trying to keep my mental disability from my family and friends. At last I could do so no longer, and gave myself up to the care of a nurse. From that time until April, 1896, I grew steadily worse mentally. My physician did everything in his power to help me, and my general health seemed better, but the mental trouble did not yield.

At last I went to a specialist, but received no encouragement for the present. "Perhaps in a year or two" I should be better. At the earnest solicitation of friends, who thought a change of air and scenery might benefit me, I went to the home of a dear friend for a while, but received no benefit. I was not permitted to eat anything which was sweetened with sugar or molasses. I could eat light meat, but no dark, no tea or coffee was allowed for drink. I could have milk or water. At times I would feel inclined toward Christian Science, then I would decide to have nothing to do with it; but after a hard struggle I yielded to it as a last resort, and found healing very quickly. I began to improve with the first treatment and commenced to eat anything I wished. I can look back, and see how through the whole of my sickness, I was being led into the Truth, and that there was no other way for me to come but through suffering.

Before I wholly gave up, when I was struggling with all the will power I possessed to keep the fact of my sickness from the world, there was a Sunday School Conference held in the Methodist church near by. I felt anxious to attend, and did so, although I hardly felt able to go, but I only heard the different speakers talking words. I could think only of myself until a lady was called to illustrate with little children, how she taught an infant class. She drew the picture of two mountains on a blackboard, and told them, at the same time asking them questions, the story of David and Goliath. I became so absorbed and interested in the story that I entirely forgot myself and my sickness, until suddenly brought back to a remembrance of it by these words, spoken to me, clearly and distinctly, "You are going to get well."

I knew it was no audible human voice; I knew it was the voice of God. Oh, how rejoiced I felt, for I thought I was going to get well immediately; but the next day I was no better, and steadily grew worse. At times I would think of the promise, but the battle with error was raging fierce and strong, and it seemed as if there were no hope. But Love prevailed, and when I was healed how plainly I could read the meaning of the story. The giant Goliath represented error; David, Truth and Love, and when Truth and Love prevailed over error, and destroyed it in me, even as David prevailed over Goliath and destroyed him, then I got well. I went to Christian Science for healing alone, thinking the true religion was what I already possessed. I was not satisfied with it but I thought the fault was in myself that I was not living it. During my sickness my Bible seemed full of condemnation, and it was only from a sense of duty and because I felt I was doing right that I read it at all. My prayers seemed to rise no higher than the lips which uttered the words. But I had an earnest desire to get well so that I might try to live a better Christian life.

Science and Health tells us, on page 307, "The desire which goes forth hungering after righteousness is blessed of our Father, and does not return unto us void," and it did not with me. With the physical healing came the revelation of what was healing me. My Bible seemed to be a new book, full of Love, and I knew that at last I had found the true religion, a new, yet old religion, which Jesus Christ lived and taught when he was upon the earth. I also found a peace and joy and satisfaction "which the world can neither give nor take away." Much gratitude to our Mother in Israel who stood the test alone with God and brought this rich legacy to a waiting world.

God's thought, the universe, is perfect, harmonious throughout, and good; the natural law that runs through all, like some refrain through combination of sweet sounds, binds all in unity. Whence then the seeming discord? 'Tis alone in him who hears. Attune your soul, O man! to the sweet melodies on every hand, the perfect harmony of nature's law. Then discords cease, and harmony of thought and soul will then accord with the pure harmony of universal law.

The *Christian Register* states that "doubt may be a sign of a healthy mind. Happy the man whose doubts increase his confidence and who, testing all things, holds fast to that which is good."

## From the Religious Press.

### An Open Mind.

Jesus of Nazareth never spoke a more penetrating word than when he said, "My judgment is just; because I seek not mine own will." More of the ethics of the intellect have never been compressed into a dozen words. Here was a field into which Jesus did not often press. All the more precious is this isolated utterance, so good that, if he had said a hundred things about the conduct of the mind, he could have said nothing better, nothing of more general application.

Certain people are mentioned in the New Testament who had not so much as heard that there was any Holy Ghost; and, if the Christian centuries had never heard that there was any ethics of the intellect, they could not have demeaned themselves in a more melancholy fashion. Their general character has been unethical, so far as the conduct of the intellect has been concerned. All the premiums of the Church have been offered to intellectual dishonesty. All doubt of the established doctrine has been accounted devil-born. The intellect has been suborned to furnish reasons for this or that preconceived opinion. The open mind has been regarded as another with that open door which Dante saw in his appalling vision of infernal things, and over which was written, "All hope abandon, ye who enter here."—*The Christian Register* (Unitarian).

### Royalties Who Aid the Salvation Army.

The young queen of Holland is extremely sympathetic in her disposition, and she is not in the least narrow-minded. Evidence of this is found in the fact that she has lately expressed her sympathy with the work of the Salvation Army, and has sent by her mother a check to be devoted to the use of the organization. In Denmark General Booth gets important countenance from the crown prince and other members of the royal family, and in the Danish possessions in Iceland members of the army are encouraged to carry on their work. In Sweden King Oscar has manifested his approval of the army's work among the poor.—*The Standard.*

In a sermon on "Personality in God and Man," published in *The Christian Register* (Unitarian), the Rev. Alexander T. Bowser quotes for his text Hebrews, 1: 3: "The express image of his person," and says,—

"This is the only place in the Bible where the word 'person' is applied to God. The writer is speaking about Jesus, whom he calls the Son of God, the brightness of his glory, and the express image of his person. The Greek word which is here translated 'person' means substance or essence: and in speaking of personality in God and man, I wish to talk about an essential characteristic of being, which is substantially the same in God and man."

The *Standard* says that the authorities of the University of Chicago are considering the advisability of establishing a new department supplemental to the Divinity School, namely, a theological institute or training school, the particular aim of which will be to provide for thorough study of the English Bible and training in practical church and mission work. It is expected that Y. M. C. A. secretaries, Sunday school superintendents, city missionaries, and others would resort to such a school for training.

The *New York Observer* entreats Dr. McGiffert of Union Seminary to withdraw from the Presbyterian fellowship, to avoid further embarrassment. Dr. McGiffert's "History of the Apostolic Age" is under the ban of heresy, placed upon it by the declarations of the conservative leaders of the denomination. Dr. McGiffert declines to withdraw, but maintains that his teachings are orthodox.

We live by the faith of the unseen; for the things seen are temporal. The things of the senses turn to dust in our hands. The strongest proof to me that we are immortal is that there is a something in us which is permanent and knows these varying states to belong to time and place.

REV. GEORGE CRUM.

*The Universalist Leader.*

Nineteen Methodist churches of Toronto, Canada, have secured promises of contributions to the Canadian Million Dollar Twentieth Century fund, aggregating $250,000. Several sects, both in Canada and the United States are working to secure large sums of money to be used at the beginning of the twentieth century in church building.

Livingstone did not enter Africa until 1841, and Stanley did not cross the Dark Continent until 1877, says *The Watchman*, but according to the latest statistics, Christian missions in Africa, including Malagasi, have more than a half million of communicants, and the adherents probably number as many more.

Just as Jesus blessed little children, he will bless all that is childlike in faith and innocent in wish in our overtroubled and wayworn souls. And in the heart of the believer what Christ blesses grows.

*The Congregationalist.*

The thirtieth quarterly Convocation of the University of Chicago October 2, was addressed by Bishop John L. Spalding of Peoria, who is a Roman Catholic prelate.

## Miscellany.

### The Twentieth Century.

The nineteenth century closes with the year 1900. Immediately after midnight, therefore, of December 31, 1900, is when the twentieth century begins. In other words, it begins with the first second of the first hour of the first day of January, 1901.

The twentieth century will open on a Tuesday and close on a Sunday. It will have the greatest number of leap years possible for a century—twenty-four. The year 1904 will be the first one, then every fourth year after that to and including the year 2000. February will three times have five Sundays—in 1920, 1948, and 1976.

The twentieth century will contain 36,525 days, which lacks but one day of being exactly 5,218 weeks. The middle day of the century will be January 1, 1951.

Several announcements are made of changes to be inaugurated with the opening of the new century. The first of importance is that Russia will adopt the Gregorian calendar. This will be done by omitting thirteen days, the amount of error that will have accumulated after the close of February, 1900. The Russians will then write January 1, 1901, instead of December, 19, 1900, or rather, instead of both, according to the dual system now in vogue in that country and in Greece. The other important announcement is that it is not at all unlikely that the astronomical day, which begins at noon of the civil day, will begin with the civil day, at midnight. The present method of having the astronomical day to begin twelve hours after the beginning of the civil day is apt to be confusing. On the other hand, to have the former begin at midnight, just when astronomers are often busiest, will be to them somewhat inconvenient.—*Scientific American.*

### Soldiers' Deposits.

It is not generally known, yet a fact nevertheless, that Uncle Sam is paying a higher rate of interest to his soldier boys than on the last bond issue. And how many have an idea to what this interest amounted the past year? Almost $50,000! This interest—four per cent.—is paid on deposits, and only to enlisted men. Officers with straps are excluded. Any soldier, not retired, may deposit his savings with any paymaster in sums not less than $5. This he may do at any time, but once depositing it must remain until expiration of his enlistment. During the past year the record of depositing, says a correspondent, has been remarkable, but it is plain the high-water mark is far from having been reached. For the fiscal year, ending June 30, over $500,000 was deposited by the troops of Manila alone. This amount has astounded the War Department. Indeed, with the increase of the army, this feature of soldiers' deposits has caused the department to open its eyes in wonder, for the great record of last year promises to be vastly eclipsed. Expectations for Manila alone run as high as $1,500,000, which will mean $60,000 interest—and many expect the amount of deposits there to reach nearly $2,000,000.—*Boston Transcript.*

### Small Philosopher, This.

"Mamma, de baby's kyin'," said a little girl, glancing up from her playing.

The mother paid no heed.

"Mamma, de baby's kyin'."

Still the mother did not heed.

The little girl arose, went over to the crib, and looked down sympathetically upon the bundle of pink and white.

"Nebber mind, baby. Dis is a troublesome world you've tum to. You'll hab to ky a heap o' times and nobody'll notice you."

*Selected.*

### We Certainly Would.

"Oh, mamma! You just ought to tell sister about her prayers. She says awful things."

"What does she say?"

"Why, she says: 'Lord, bless mamma and papa, and all of us. And, dear Lord, please take care of yourself, for if anything happens to you we'll all go to pieces.'"—*Exchange.*

## Notices.

### Supplement to the Sentinel.

The able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899, has been issued as a supplement to the *Christian Science Sentinel*. The workers in the Field will readily see the wisdom of giving the supplement the widest possible circulation, and the extremely low price at which it is issued will enable them to do so. The price of the supplement is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec. 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

### Clerk of the Mother Church.

All correspondence with the clerk of the Mother Church on matters pertaining to his office should be addressed to WILLIAM B. JOHNSON, C.S.B., 30 Norway St., Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Items of Interest.

The first meeting of the Philippine Commission was held at Washington, D.C., October 30. The Commission met daily from 10 A.M to 1 P.M, and all the sessions were secret. A preliminary report was submitted to the President November 2. The report is a summary of the condition of the islands when the Commission left them; of the events which led to the original Filipino insurrection; of the exchanges between Admiral Dewey and the other commanders and insurgents; the progress of the present insurrection, and finally, a statement regarding the Filipinos' capacity for self-government. The report includes a memorandum by Admiral Dewey explanatory of his relations with Aguinaldo. The report endorses the policy of President McKinley in suppressing the rebellion, and favors the retention of the islands. The report was considered satisfactory, and received the full approval of the Cabinet.

The Boers gained a big victory over the British at Ladysmith, October 30. Between fifteen hundred and two thousand men were surrounded by the enemy and after a hard fight were compelled to surrender. During the fight the mules stampeded with the guns and ammunition. The British soldiers fought as long as they had ammunition, and then surrendered. The Boers' loss was nearly a thousand killed and wounded. Since the battle the Boers have succeeded in cutting off all communication with Ladysmith, and General White's position is believed to be precarious. Re-enforcements are being sent to the British soldiers as rapidly as possible.

Sir Thomas Lipton, the owner of the Shamrock, sailed for home November 1, on the St. Louis. Before his departure he said that within the next three months' his challenge for the America's cup would be in the hands of the New York Yacht Club. He said it will be impossible to have a new boat built in time for the races in 1900, but he would be ready in 1901.

The loving cup which will be presented to Sir Thomas by his friends and admirers in America, is to cost five thousand dollars, and will be sent so as to reach him on Christmas day.

The Twentieth Kansas received a royal welcome upon its arrival at Topeka, November 2. The parade was two miles long, and included thirty-two bands, numbering nearly one thousand musicians. At the State House General J. K. Hudson, on behalf of the people of Kansas, presented the beautiful thousand-dollar sword to General Funston. In the evening an elaborate banquet was served to the soldiers. The day closed with a magnificent display of fireworks.

At the request of General Brooke, the Secretary of War has sent Professor Alexis E. Frye of Boston to Havana to establish a system of education. Professor Frye is said to be one of the best equipped educators in the country. He has taught every grade from the primary through the high school. He has secured pledges necessary to enable him to erect six school buildings in the island.

The treaty between the United States and the Sultan of the Sulus has become a political issue. It is claimed polygamy and slavery, as they now exist in that part of the Philippines, have been recognized by the United States. In reply, Assistant Secretary Hill says polygamy and slavery are not upheld, and both will doubtless be abolished in due time.

A recent naval test near New York proved that within a radius of twenty-one miles messages can be transmitted by wireless telegraphy with all the accuracy and precision of an ordinary land line. It was also proved that hills, high buildings, wires, and wind currents do not interfere in the slightest degree with the transmission of messages.

Admiral Dewey surprised his friends recently by the announcement of his engagement to Mrs. Hazen, widow of General W. B. Hazen, who for a long time was chief of the signal service, and sister of John R. McLean, Democratic candidate for Governor of Ohio. It is said the marriage will take place the latter part of this month.

The late Jay Gould's estate yielded an inheritance tax of about seven hundred and twenty thousand dollars, while that of Cornelius Vanderbilt will yield more than four times that amount. While the Vanderbilt estate is larger, yet the increase is partially due to the fact that there is now a national as well as a state inheritance tax.

Count Cassini, Russian Ambassador and Minister plenipotentiary to the United States, says that America is rapidly forging to the front in the Russian market. He also said there was a movement on foot to remove the American exhibits at the Paris Exposition to St. Petersburg and Moscow after the Exposition closes.

Professor George T. Ladd of Yale College has been lecturing in the Orient since last July. The Japanese emperor recently conferred upon him the decoration of the Order of the Rising Sun. He is the only American ever honored by an invitation to lecture before the national universities of Japan.

Count d'Almenas recently claimed in the Spanish Senate that three islands of the Philippine group were not included in the scope of the treaty with the United States, and that these ought to be made the basis of negotiations for the liberation of the Spanish prisoners.

The battle flag of Terry's Texas Rangers, which was captured by Indiana soldiers during the Civil War, has been returned to the survivors of the Confederate band. The presentation was made at Dallas, Texas, by Governor Mount of Indiana.

Regarding the Cuban situation, it is said that President McKinley is entirely in accord with General Lee, who is in favor of continuing our protection in the island for some time to come, and deferring the matter of self-government.

All the members of the Dewey family related to Admiral Dewey will hold a reunion at the Waldorf-Astoria in New York in January or February. It is estimated there will be at least fifteen hundred members of the family present.

The work of collecting the million dollars necessary to perpetuate the Dewey arch has begun in earnest. About seventy-five subcommittees were appointed, and began at once to canvass New York for subscriptions.

It is reported that the Boers found several cases of dum-dum bullets which the British had abandoned in the fight. Some of the Boers wanted to use them, but President Kruger would not allow them to do so.

Several train-loads of canned beef are being shipped weekly from Chicago to Africa. Fifty car-loads were recently shipped in one day. It is thought the beef is for use in the British army.

After making satisfactory tests of wireless telegraphy for the government, Marconi demonstrated that it was possible for a third party to interfere with the sending of messages between two points.

The first treaty between Mexico and China was recently negotiated at Washington. English was selected as the "official language" instead of French, which is the universal language of diplomacy.

The cost of maintaining the army last year was $27,064,646. This amount includes, besides the army proper, rations issued to prisoners of war, destitute Cubans, sufferers from floods, Indians, etc.

Germany has consented to withdraw from Samoa and surrender all her claims to Great Britain. In return she will receive the Gilbert Islands and the British portion of Solomon Islands.

Monday evening, November 6, the Chinamen of Boston celebrated the fourth anniversary of their Christian Endeavor Union. All the Chinese Endeavor societies in the city took part.

Information is received from London that another complete army division will forthwith be formed for service in South Africa. The division consists of ten thousand men and fifty-four guns.

During the month of October the total coinage at the mints of the United States was $11,838,109. Of this amount $8,220,000 was gold, $3,313,569 silver, and $304,540 in minor coins.

It is announced at Toledo, O., that a large crude oil combine is about ready to begin operations. This combination will be the only real competitor of the Standard Oil Company.

The American ladies in London have been very successful in raising funds to equip a hospital ship for service in South Africa. About forty thousand dollars have been raised.

The president of German peace societies has telegraphed to Queen Victoria, praying her to accept the mediation of the United States in the war with the Transvaal.

During the last three years Germany's trade in paper exports has fallen off four-fifths, owing to the very successful competition of United States paper-makers.

The Cubans are becoming alarmed at the large immigration of Spaniards. During the past three months six thousand immigrants have landed in Cuba.

A man in Charleston, S.C., recently closed a contract with the British consul for fifteen hundred mules. They are supposed to be for use in South Africa.

Reports from different parts of the United States show that the apple crop this year in the aggregate is only moderate.

It is reported that Chicago will present Admiral Dewey with a ten thousand dollar silver service when he visits that city.

The gold coin in the United States September 1, 1899, was $862,919,952; of this $672,933,192 was in circulation.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The Liberal Christian.

"THE liberal deviseth liberal things; and by liberal things shall he stand."

That man is liberal who stands with face toward the rising sun of Truth wheresoever it riseth, and who joyously drinks in the inspiration of the higher life. Such a man lives, progresses, and mounts as "on wings of eagles," and never for an instant thinks that the "Sun of Truth has as yet reached the full noon of complete understanding and realization by man."

That man is liberal who depends more upon the unfolding of the divine Life within his own chastened heart and purified mind, than upon the opinions of men, the doctrines of creeds, scholastic speculation, and so-called churchly decrees; who delights to commune with the Christ-Spirit of his own being, and who puts Principle above personality, Spirit above creed, Right above party, and inward conviction above outward sense evidence.

That man is liberal who accords to all men the same privileges of thought and action that he contends for as the essential liberties and rights of his own individuality, and who is judicious and tolerant, yet clear and sure, in his judgments, whether they be private in the secret court of his unspoken conclusions, or public, as spoken admonition or condemnation.

That man is liberal who recognizes that the experiences of human life which, point by point, show the false and temporal nature of all things evil and material, are the different educational courses of progress in the great University of earthly experience, and who learns to draw from these deep lessons of life the true import of their significance as the birth-throes of the life divine.

That man can be called liberal who learns Truth from all things, both great and small—from babes and sages, youth and age, birds and stars, flowers and animals, sunshine and shadow; and who can as readily and humbly learn from the lowly as himself teach the multitude that may willingly sit at his feet and bow before his wisdom.

That man is liberal whose religion is love to God and man, who makes Christly character the great test of discipleship, who loves Truth, Principle, and Good for their own sake, and who spurns fear in religion as an unworthy motive element, seeing in it a menace to the pure and undefiled love of God. Such a man is noble because of his love for those characteristics that make up true nobility, and his foundation is of rock and not of shifting sand.

That man is well called liberal whose heart rejects the blind tyranny of fashion, habit, custom, and so-called public opinion, once named by a great thinker, "a conscience owned by a syndicate,"—he is truly liberal who has the courage of his convictions and who will speak and act for them as sincerely and radically in the arena of public criticism, censure, and abuse, as amidst the approving silence of his own breast or the plaudits of the multitudes.

Truly liberal is he who adopts a liberal religion and who sees in all things God's generous and liberal plan of salvation for the world. Such an one recognizes that the ever presence of God, together with Love's omnipotence, makes scientifically certain the important fact that divine Mind enters as supreme into each and every state of life, and that the God who forgiveth (destroyeth) all our iniquities, also in the words of the psalmist, "healeth all our diseases," for God is all and in all, and "in Him we live, and move, and have our being."

That man is a true liberal who makes a loving, pure, and noble life his creed; who sees in unselfishness toward his fellows the true worship of God, and whose cardinal aim in life is to

> Be to other souls the cup of strength in some great agony,
> Enkindle generous ardor, feed pure love,
> Beget the smiles that have no cruelty,
> Be the sweet presence of a good diffused,
> And in diffusion evermore intense.
> So will he join the choir invisible
> Whose music is the gladness of the world.

That man is liberal who sees in endless progression the radiant plan of God's eternal law; who recognizes that time, space, finite limitation, the circumscribed horizon of the human mind, and the speculations of human intellect form no real part of the eternal plan of Infinite Mind, whose Being is Love and whose Law is the One Mind maintaining the individual identity of all things eternally, from glory unto glory.

It can be well said that that man is liberal who sees in the great thought of immortality the scientific and sure birthright of every creature of God's universe, whose faith in endless existence is based on the doctrine of the self-existence and eternal perpetuity of all that is good and perfect, and whose rational understanding of immortality is built upon the granite foundation of the teaching that Mind and Mind's creations, both in essence being the very selfhood of Life, Truth, and Good, are forever and forever eternal, for

> To Life there is no death.
> To Love there is no fear.
> What was still is;
> What is shall be,
> With naught of change for death;
> With nothing of decay.

That man can be called liberal who firmly believes in the Divine Immanence, whose faith in One Supreme Being—God—is so full, deep, and unchanging, that he thoroughly disbelieves in the reality or actuality of any seeming force or element which is opposed in character or operation to the nature of the All-Good.

Such a man will see in the spiritual leadership and life of Jesus Christ a divine revelation of man's eternal and progressive perfection.

That man is liberal who sees in the words of Jesus Christ more than abstract transcendentalism, who recognizes in his promises no limit of following or time, and in his commands to his followers in all ages no portion that can be rejected as a dead letter, or be outlawed because professing Christians of all sects have for centuries ignored its vital demands.

That man is liberal who, on affirming that the spiritual

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

is the only real and that Soul neither dwells amidst nor of the things of time and sense, has the courage and consistency to follow this recognition to its logical conclusion and admit to the whole world, if need be, his disbelief in the divine reality of the changing, chaotic, and decaying phenomena of life visible to the natural eye and to the material or personal senses.

That man is truly liberal who halts not at the bounds of time and matter, nor at the short span of years that make up the average of human existence, but who penetrates beneath the surface of physical life, and rising above the fatuous evidence of the human senses sees everywhere present the glorious evidences of the eternal divine Mind, whose thoughts are things, and whose creations are visible to the eye of the spiritually illumined mind, while they are wholly shut out from the vision of sense in accordance with Paul's words: "The things which are seen are temporal; but the things which are not seen are eternal."

That man can be termed liberal who *loves* his enemies and shows it in *thought* and *act;* who shows himself as anxious to prove his foe in the right in a given instance, if this be the fact, as to help in his conviction by unchallenged silence, and who always takes the side of liberal progress, justice, purity, and right, even if it be to side with an unpretentious minority, or to share a crust for the sake of a principle; yea, even to part from the beaten pathway of the world's sages, philosophers, and popular teachers, if the honest conviction of Truth so demands.

Then to side with Truth is noble when we share her wretched crust,
Ere her cause bring fame and profit, and 'tis prosperous to be just:
Then it is the brave man chooses, while the coward stands aside,
Doubting, in his abject spirit, till his Lord is crucified,
And the multitude make virtue of the faith they had denied.

CAROL NORTON.
*Eastport (Me.) Sentinel.*

## Editorial Variations.

A YOUNG woman of an intense emotional nature, with an ardent, ambitious intellect, possessing, it appears, many fine faculties but lacking the saving one of common sense, in a stress of excitement lost her reason and her strength and was committed recently to Agnews asylum as an insane patient, where she died. For some time before her insanity manifested itself she had been a student of Christian Science and a votary of its doctrines. On that showing a considerable number of the people of the neighborhood have come to the conclusion she was rendered insane by the philosophy she was studying, and they have found means to make something startlingly sensational of the case and to raise a clamor against Christian Science and all its teachers.

In that same asylum at Agnews there was for many years—and may be yet, for all I know—a young woman of ardent mind who, while a student at the State Normal School at San Jose, became insane from a strain upon the brain brought about by overstudy and lack of proper recreation and nourishment. Now let us have another sensation and raise a cry against the Normal School, demanding the suppression of the teaching of those who believe in the education of girls.

Call a doctrine "Christianity," and the common world will listen to it with toleration at least, though it be hardly more than a traditional superstition handed down from the dark ages of the human intellect. Call a doctrine "science," and the same world will listen to it with an equal toleration, though it teach by precept there is no soul, and that every ill of humanity can be cured by pills. That much the world will do solely because Christianity and science are old, familiar names. We do not know what they mean, but we know the words, and anything called by their names sounds friendly. It has been the custom to regard them as good old antagonistic forces, opposing one another in the domain of philosophy in much the same way as Democracy and Republicanism oppose each other in politics. We have grown used to their rivalries and their fights, and it appears to most of us a natural condition of the world that they should go on fighting. The thinkers who are trying to fuse the two into a rational system of Christian Science are therefore regarded as enemies of society, hardly more respectable than the men who try to organize fusion parties in politics, and the average man who has never given a serious thought to Christianity, science, or Christian Science is cocksure that just as a fusion party would endanger the chances of both the old parties, so the new philosophy, if it be not suppressed, will entail the destruction of both science and Christianity.

The war for the cause of the good old faces, forms, creeds, and names against anything and everything unfamiliar began with the appearance of the first stranger on the outskirts of a village of human beings. No sooner had that earliest of wanderers been sighted by the natives of the village than one said to another, "Do you know that thing?" The other replied, "No, I don't." "Then," said the first, "get your club and let's kill it."

When a name has once become familiar and approved, any kind of doctrine can be put forth under it with success, no matter how different it be from what the name itself means and implies. Examples of that truth are to be found in the thousand vagaries preached and practised in the names of religion and of science. In a recently published letter Mrs. Elizabeth Barrett Browning said,—

"In our age faith and charity are found—but they are usually found apart. We tolerate everybody because we doubt everything; or else we tolerate nobody because we believe something. Largeness of intellectual vision becomes indistinctness in the apprehension of outline, just as the case is in physical near-sightedness."

Mrs. Browning is dead and her age is dead with her, but the old problem remains; and what is perplexing the brains of our debating societies is to find out how we can have faith in "our national mission" and still indulge a charitable respect for the religion of our infancy.

*San Francisco Call.*

## A Valuable Article.

THE *New England Magazine* in its November issue presents a valuable article on "The Founder of Christian Science," by Henrietta H. Williams.

The writer, in glowing periods, charmingly tells the story of Mrs. Eddy's home and church life from her early childhood, amid the New Hampshire hills, until her return and present residence in Concord. The article is finely illustrated with twenty-five engravings, many of which have never before appeared in print. A speaking likeness of the great Leader of Christian Science kindly greets one from one of the pages. There is an excellent picture of Mrs. Eddy's childhood church, the Old North Church in this city, and also of the First Congregational Church in Tilton, of which she was a member for forty years. The strength of the movement which she leads is shown by fine views of the handsome church edifices in Boston, New York, Chicago, and Kansas City. Of special local interest are

Digitized by Google

the illustrations of Pleasant View and other well-known points in Concord.

One must believe that the author writes from a close and conscientious study of every detail connected with her important subject, and her descriptions of the scenery and landscape of Concord and vicinity are faithfully and feelingly portrayed. Throughout the article one catches clear glimpses of the earnest, consecrated, unselfish woman, whose life has been and is devoted to the establishment of God's kingdom on earth. While the author in no way champions the cause of Christian Science she does present in fine and forceful language the beautiful life history of Concord's eminent citizen.

An important feature of this excellent article is a letter from Mrs. Eddy to her old church in Tilton, in response to an invitation to be present at the seventy-fifth anniversary of the church, observed in Tilton, July, 1897. In the letter she feelingly says,—

"Reverently I remember those solemn obligations which I so early assumed, and my daily prayers, then and now, were and are to live a Christian life. . . . All who have part in the merits of Christ or the Truth of Salvation are working, watching, and praying here for more unity and love and for the communion hereafter with Saints and Angels."

Mrs. Williams' paper concludes with the following just comment: "Such an achievement as Mrs. Eddy's—the founding of a great religious movement by woman—is a fact historically almost without precedent. It proves her qualification as a born leader of advancing thought. The movement of which she is the origin and head is certainly one of the most noteworthy and interesting movements in New England or in America at the present time, and her life and personality command attention."

*Concord Evening Monitor.*

## Clara Barton on Woman Suffrage.

A LETTER from Clara Barton has recently been given to the press, which may be of interest to many, as coming from one who has devoted her life to the service of her country, which, in turn, refuses her any voice in choosing those who are to rule its destinies. She writes as follows:—

"I believe I must have been born believing in the full right of women to all the privileges and positions which nature and justice accord to her in common with other human beings. Perfectly equal rights—human rights. There was never any question in my mind in regard to this. I did not purchase my freedom with a price; I was born free; and when, as a younger woman, I heard the subject discussed, it seemed simply ridiculous that any sensible, sane person should question it. And when, later, the phase of woman's right to suffrage came up, it was to me only a part of the whole, just as natural, just as right, and just as certain to take place.

"And whenever I have been urged, as a petitioner, to ask for this privilege for woman, a kind of dazed, bewildered feeling has come over me.

"Of whom should I ask this privilege? Who possessed the right to confer it? Who had greater right than woman herself? Was it man, and if so, where did he get it? Who conferred it upon him? He depended upon woman for his being, his very existence, nurture, and rearing. More fitting that she should have conferred it upon him.

"Was it governments? What were they but the voice of the people? What gave them their power? Was it divinely conferred? Alas! no; or they would have been better, purer, more just and stable.

"Was it force of arms—war? Who furnished the warriors? Who but the mothers? Who reared their sons and taught them that liberty and their country were worth their blood? Who gave them up, wept their fall, nursed them in suffering, and mourned them dead?

"Was it labor? Women have always, as a rule, worked harder than men.

"Was it capital? Woman has furnished her share up to the present hour. Who, then, can give the right, and on what basis? Who can withhold it?

"In regard to my nationality, I was born in the old Huguenot town of Oxford, Mass., U. S. A. My father and mother were born there. My grandfathers and grandmothers, with two exceptions, were born, lived, died, and were buried there.

"There is, once in a while, a monarch who denies the right of man to place a crown upon his head. Only the great Jehovah can crown and anoint him for his work, and he reaches out, takes the crown, and places it upon his head with his own hand. I suspect that this is in effect what woman is doing to-day. Virtually there is no one to give her the right to govern herself, as men govern themselves, by self-made and self-approved laws of the land. But in one way or another, sooner or later, she is coming to it. And the number of thoughtful and right-minded men who will oppose will be much smaller than we think; and when it is really an accomplished fact, all will wonder, as I have done, what the objection ever was.

"CLARA BARTON."

*Boston Evening Transcript.*

## The Gentleness of Jesus.

IT was gentleness, not weakness. It was that calm sweetness of disposition and manner which illustrates the kindly self-control of a strong, masterful spirit, not the shrinking, timid uncertainty of temper and behavior which resembles gentleness because it lacks something of the power of self-assertion. It was entirely consistent with sturdiness of conviction, positiveness of speech, and boldness of action. It was exhibited not only toward our Lord's friends, but also toward his opponents. It was specially noticeable in his treatment of all who came to him in fear or doubt or sorrow.

Let those who sometimes suppose gentleness to be a tame, insipid virtue, make careful study of it as seen in the character of Jesus. They will learn to admire it. They will be impelled to cultivate it. They will perceive it to be a fruitful source of true and mighty power. When we understand that one is gentle, as Jesus was, because he can afford to be; because, apart from the moral aspect of the matter, he realizes that he is strong enough in the highest sense to dispense with bluster, we feel that he has attained to a lofty and honorable level of character and life.

Then, when the time comes for righteous indignation of soul—as come it does now and then—and for vigorous, incisive speech in support of the right or condemnation of the wrong, then the very contrast between one's customary gentleness and his temporary sternness adds immensely to the effect of the latter. If such a gentle spirit can be wrought up to such a pitch we say, "how grave the cause must be!" We never have known men or women more intense in their opinion, or more unfaltering and potential in their conduct and influence than some of those who most closely have resembled Christ in gentleness of disposition and manner.

Gentleness is a characteristic excellence of the truly great. It also is one of the greatest of excellences. Perhaps no other is so commonly associated with Jesus in our thought. Nor is the endeavor to attain to any other more difficult or profitable. Happy is the home, the office, the factory, the school where gentleness like that of Jesus reigns!—*The Young Man.*

## The Lectures.

### At Camden, N. J.

The large court room was crowded to the door Monday evening, October 23, by an audience representing the believers in Christian Science of this city and Philadelphia, as well as many who desired to become acquainted with the movement founded by Rev. Mary Baker Eddy, which is attracting so much attention throughout the country, owing to the many great cures that the leaders of the movement claim to have effected and the opposition the doctrine has met with on the part of medical schools and religious denominations.

The meeting was called by the Christian Science Church of this city, and the services of Mr. Carol Norton, C.S.D., of the International Board of Lectureship of the Mother Church of Christian Science, had been procured to deliver an address. The large audience was composed principally of people of intelligence and refinement, and the closest attention was given to the lecturer.

The meeting was opened by Rev. George Tomkins, D.D., C.S., who presided. In introducing the lecturer he said:—

"I hold in my hand a telegram dated Berlin the 20th inst., in which his Imperial Majesty, the Emperor of Germany, says, 'All true science leads back to God.' If I were to be the lecturer I should be inclined to take that as my text, but we have with us a former colleague of the Board of Lectureship of the Mother Church, Boston, Mass., in brother Carol Norton of New York City, and he has chosen for his subject: 'Christian Science—Practical Christianity,' so very near akin to the subject given me by our dear Leader when she started me in the lecturing field. She said, 'Be filled with Love Divine; berate no man's religion, and show the practical excellence of Christian Science.' And this is practical. I also hold in my hand a letter received this morning from Fortuna, Cal., in which an old sea captain declares he is absolutely cured of asthma. A gentleman now present, and who has many a night sat up with him, expecting every breath to be his last, testifies that he knows the circumstances of the case, for he is here from that distance of nearly four thousand miles, and, as he has testified in our church, was healed since coming here. You say that is marvelous, it is not more marvelous than when I was starving, my jaws being locked, and in the greatest agony, 'God's Saving-Health' came to me in the words of the 118th Psalm, 'I shall not die, but live, and declare the works of the Lord.' I am here to declare that it is God's work to heal and save men if they will only be as receptive of the 'Truth in the spirit and love of it' as the little child, of whom Jesus said, 'Whosoever shall not receive the kingdom of God [Spirit] as a little child, he shall not enter therein.' I bespeak, therefore, that child-like receptivity of Truth while we listen to Carol Norton, C.S.D., of New York City."—*Post-Telegram,* Camden, N. J.

### At Kansas City, Mo.

Standing room at the Coates Opera House was at a premium Sunday afternoon, October 22, when Hon. William G. Ewing, ex-judge of the Superior Court of Chicago, delivered his lecture on Christian Science.

The crowd came early, and long before three o'clock, the hour set for the lecture to begin, every seat in the house was taken. During the lecture many stood in the aisles and about the doors, and many others left altogether because they could not get seats.

The lecture was delivered under the auspices of the Second Church of Christ, Scientist. Mrs. Amanda J. Baird, C.S.D., First Reader of the church, introduced the lecturer.

In introducing Judge Ewing, she spoke as follows:—

*Friends, Ladies, and Gentlemen:*—The large assemblage that is gathered here this afternoon to hear a lecture on Christian Science is a proof that the people of Kansas City are progressive and are reaching out for a demonstrable religion. This Science is engaging the attention of thousands of people in this country and in foreign lands, and is verily the gospel of peace on earth and good-will toward men. The object of these lectures is to present Christian Science in a proper light before the people. In the evidence of the wonderful healing that has been accomplished through the teachings of Mary Baker G. Eddy it were folly to deny this healing power. John G. Whittier says,—

> The healing of the seamless dress
> Is by our beds of pain:
> We touch Him in the throng and press,
> And we are whole again.

Judge Ewing of Chicago, who has attained eminence as a lawyer, is devoting his time to the cause of Christian Science. He is a member of the Board of Lectureship of the Mother Church of Boston, and is going to tell you the glad tidings of great joy; that every disease, all sin and error, can be destroyed through the understanding of God. It is now my pleasure to present to you the lecturer for the afternoon, the Honorable William G. Ewing of Chicago.

*Times,* Kansas City, Mo.

### At Lafayette, Ind.

Probably never within its history has Willard Hall held such a large audience, composed principally of the most prominent of Lafayette's citizens, as it held Tuesday evening, October 24, when Edward A. Kimball of Chicago, member of the Christian Science International Board of Lectureship, appeared upon the platform to present his lecture on "The Principles and Doctrines of Christian Science."—*Morning Journal,* Lafayette, Ind.

### At Other Places.

Ottumwa, Ia.—William G. Ewing, Friday, October 20.

Burlington, Vt.—Rev. William P. McKenzie, Tuesday, October 24.

## Among the Churches.

### A Stone Church.

Franklin Street will soon be adorned by a handsome stone church, standing on the fine lot at the north-west corner of the intersection with Seventeenth Street, which was recently purchased by the Christian Scientists. It will be the first church built on the Pacific coast by a Christian Science congregation, although the denomination has handsome edifices in Boston and other Eastern cities.

The decision to proceed at once to build was reached this week. On Monday evening a meeting of the congregation was held and a vote taken, which showed the sentiment was unanimous in favor of erecting a church. It was equally unanimous in favor of building in stone.

The new church will be of a size to seat from seven hundred to one thousand persons, and it will be Gothic in style. Besides the main auditorium there will be a Sunday School room. The exact amount to be spent has not been determined, but it will probably exceed thirty thousand dollars. The society paid eight thousand dollars for its lot and has four thousand now in bank. On Monday night it was voted to proceed immediately to raise twenty thousand more.

The Oakland Christian Science congregation numbers two hundred members and is displaying a great deal of enthusiasm under the leadership of Mr. Fluno, who has

Digitized by Google

been notably successfu.. The Los Angeles society is more numerous than this one, but it has not yet erected a church.

*Enquirer,* Oakland, Cal.

### Pipe Organ Recital.

The beautiful audience room and galleries of the First Church of Christ, Scientist, were filled to overflowing last night with music lovers who had assembled to hear the pipe organ recital. The soft golden light from the myriad globes of the chandeliers so blended with the exquisite tones of the organ that the whole was a dream of beauty. The altar and railing behind it were decorated with palms and ferns and a most beautiful display of American Beauty roses.

The new organ is a masterpiece of its kind, not only as to tune and compass, but as to form, coloring, and shape. It occupies three arches directly back of the altar. The color scheme of the pipes and the arches is especially beautiful. The casing is of dark oak and the lower part of the pipes is a delicate old rose, just the shade of the tinted walls of the church, while the upper portions are a dull, handsome unburnished gold, tipped again at the top with the old rose. The arches are of the same rich gold with golden ornamentations, not unlike jets of flame running out over the old rose of the walls. The arches are supported by golden columns in groups of four. The Christian Science Church is certainly to be congratulated on its beautiful organ and the success of its recital.

*Kansas City Journal.*

### New Christian Science Reading Room.

New reading rooms, under the auspices of the First Church of Christ, Scientist, have recently been opened in the New Century building. They are on the first floor, facing Hopper Street, and have been beautifully fitted up and supplied with Christian Science publications. Every day, except Sunday, there will be some one in attendance at the rooms from 9 A.M. until 5 P.M. to receive visitors who may come to read or to make inquiries with reference to Christian Science. Christian Science literature will also be kept on sale.

It is believed by the Christian Scientists that the growing interest in the subject here in our city creates a demand for better reading room facilities than have been furnished in the past. For several years the rooms have been at 11 Rutger Street. Now, in a more central location, with larger rooms pleasantly and conveniently arranged, friends and strangers will find an attractive place where they can pass a quiet hour and gain accurate information on a subject which is now engaging the attention of thousands of thinking people and bringing cheer and relief to thousands of suffering and sorrowing humanity.

*Daily Press,* Utica, N. Y.

### Appealing to Prisoners.

A very interesting feature was added to the regular Sunday services at the jail yesterday afternoon, the Christian Scientists visiting that institution for the first time. The prisoners were assembled in the large waiting room on the second floor of the jail and accompanied by Jailer Loomis, Deputy Stone, and other officials, listened with deep interest to an exposition of Christian Science by Mrs. E. K. Betts and Frederick Sim. Accompanying Mrs. Betts and Mr. Sim was the choir of the First Church of Christ, Scientist, which rendered hymns, in the singing of which the prisoners joined. Mrs. Betts dwelt on the need of faith and confidence in Christ, and explained the healing influence of such faith both in a physical and spiritual sense. She related her own experience and said that through Christian Science belief she had ceased to be an invalid. Mr. Sim read passages of Scripture in support of the Christian Science doctrine.—*Record,* Troy, N. Y.

### New Quarters at Pasadena, Cal.

It gives me much pleasure to announce that our little band in Pasadena has made another forward move. Two years ago the first of October, we made the move from 108 S. Holliston Avenue, to the G. A. R. Hall. It seemed quite a step for us then. We have since moved from the small hall to a larger one in the same building, and on the first of October, 1899, we moved into the Auditorium, the largest hall in the city. Our quarters now are new, airy, and handsome, with rooms adjoining for the Sunday School.—SARAH TOWNSEND GEE.

### A Correction.

In a recent issue of the *Sentinel* it was stated that the new edifice of the Second Church of Christ, Scientist, in New York City would be dedicated during the present month. We learn that the paper from which the extract was taken was misinformed. No date for the dedication has been decided upon.

## Music Wards off Fatigue.

A PHILADELPHIA contractor, who has recently returned from the Sudan, tells of an interesting fact connected with the building by the English of the new military railroad in that region. With every gang of forty or fifty men are assigned two harpers and a flute player. Music is furnished almost continuously, and so long as the musicians play the workmen—nearly all Negroes—do not seem to feel the fatigue, and their movements are conformed as nearly as possible to the time of the music. As a general thing, the players get tired before the workmen do. To a white man the melody produced by these cheerers of labor would not be inspiring, for it is peculiarly plaintive. The Africans, however, find the music a great inspiration, and work with cheerfulness and dispatch. The Philadelphian declares that the idea is one well worth considering, for it is well known that colored laborers and stevedores along the river front will work harder and faster if permitted to sing. As a matter of fact, singing among them is encouraged.—*Philadelphia Record.*

## General Grant and Admiral Dewey.

THE resemblance between Admiral Dewey and General Grant is strikingly close. The merit record of the one in the naval academy is almost identical with that of the other in the military academy. They were at about the same place above the bottom of the class, they were deficient in the same studies, and their conduct marks were much alike. The one reached the highest position in the army and the other in the navy.

In modesty and dignity of personal bearing they are singularly alike. They resemble each other also in their disposition to award full credit to their subordinates in every achievement. Their manner of speech is identical. It is direct, terse, right to the point, and in plain, vigorous English, such as the plain people can understand. In another respect they are also alike; namely, in securing the cordial admiration of all foreign Powers with whose representatives they came in contact. Both of them, in the words of Dewey, "scratched gravel" and had their reward.

*Philadelphia Ledger.*

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## A Loving Voice from the Branches.

We publish herewith further testimonials from branch churches expressive of love and fidelity to the cause of Christian Science, its patient and dauntless Leader, and those at headquarters who are endeavoring to the best of their ability to aid in carrying on the great movement. These expressions, coming from sincere hearts, mean much. There is in all such testimonials an unseen and inexpressible quality—a "Love reflected in love"—that defies expression in language.

### First Church of Christ, Scientist, New York City.

October 28, 1899.

To our beloved Leader and Mother, who first taught us to lisp the language of Spirit, and led us to apprehend the power of Infinite Love.

In this hour of the crucial conflict of Truth against all that oppose its Divine manifestation, we desire to express our continued, unfaltering, and devoted loyalty, and our deep appreciation of your wise, dauntless, and perfect leadership.

Our gratitude is voiceless, as we recall your tender Mother-love, which has so patiently borne all the assaults of evil, that your faithful children may follow you "past the hill-crest, home unto the Plains of Peace."

We wish to assure you that all that has been said or written by revilers, whisperers, or false witnesses,—the mouthpieces of anti-Christ,—but strengthens our faith and confidence in the infallible Truth, and deepens our love for *you*.

Day by day we sing, with greater realization, your own words, which now come to us with the force of an oath of allegiance,

> We will follow and rejoice
> All the rugged way.

Your loving children,

*First Reader,* AUGUSTA E. STETSON, C.S.D.
*Second Reader,* EDWIN F. HATFIELD.

Representing First Church of Christ, Scientist, of New York City.

### A Poem.

Accompanying the above was the following poem:—

Oh! heart of the Motherhood,
Brooding above,
Soft voicing thy message
Through Love's chosen love,
Hear gratitude voiceless
And prayers without speech,
Which soar like the dove
Heaven's portals to reach.

Oh! fill us with meekness
To sit at her feet,
Who teaches the pathway
To Love's blest retreat,
Who leads Israel's army
In paths Jesus trod,
The highway of holiness,
Leading to God.

AUGUSTA E. STETSON.

### The Reply.

First Church of Christ, Scientist, New York City.

*My Beloved Brethren:*—Your Soul-full words, and song, repeat my legacies in blossom. Such elements of friendship, faith, and hope, re-possess us of Heaven. I thank you out of a full heart. Even the crown of thorns that mocked the bleeding brow of our blessed Lord, was overcrowned with a diadem of duties done. So let us meekly meet, mercifully forgive, wisely ponder, and lovingly scan the convulsions of the distempered mortal mind—that its sudden sallies may even help us, not to a start, but to a tenure to unprecarious joy. Rich hope have I in him who saith in his heart:—

> I will listen for Thy voice,
> Lest my footsteps stray;
> I will follow and rejoice
> All the rugged way.

MARY BAKER EDDY.

Pleasant View, Concord, N. H., November 2, 1899.

***

### First Church of Christ, Scientist, Troy, N. Y.

At a joint meeting the Board of Directors and Trustees of First Church of Christ, Scientist, of Troy, N. Y., held October 29, 1899, the following Resolutions were passed unanimously:—

Resolved: that a message be sent Rev. Mary Baker Eddy, the beloved Pastor Emeritus of the Mother Church, expressing loyalty toward her, and grateful acknowledgment of her unceasing labors, selfless devotion, and wonderful wisdom, as the rightful Leader, under God, of the great cause of Christian Science.

Resolved: that a message be sent the Publishing Society expressive of confidence in the strict integrity of its Publisher, Editors, and Associates, and the present and past gratitude of this Church for the vigilance, squareness, and devotion which, under very difficult circumstances, have provided for use and distribution a literature which teaches pure Christian Science.

Resolved: that no literature which is in name, word, or motive inimical to the Christian Science text-book, *Journal, Sentinel,* or *Quarterly,* be allowed in the Reading Rooms of this Church.

Resolved: that copies of this action be forwarded Mrs. Eddy and the Publishing Society.

E. K. BETTS, *Clerk.*

### The Reply.

To the Board of Directors and Trustees of First Church of Christ, Scientist, Troy, N. Y.

*My Beloved Brethren:*—Your joint Resolutions, cordial endorsement, and faithful re-assurance publish, not repeal, the divine law of Love. They rise on the sounding shores of time clearer, and nearer, than the billows roar.

The dear disciple saith: "Behold what manner of love the Father hath bestowed upon us, that we should be called the sons of God: therefore the world *knoweth us not,* because it knew him not. Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when He shall appear, we shall be like him; for we shall see him as he is. And every one that hath this hope in him purifieth himself, even as He is pure" (1 John, 3 : 1–3).

MARY BAKER EDDY.

**West Side Church of Christ, Scientist, New York City.**

82nd Street, between Broadway and West End Avenue, New York City.

It is hereby

*Resolved:* That our heartfelt and loyal love, reverence, and thankfulness be extended to the Pastor Emeritus, our beloved Teacher and Leader, Rev. Mary Baker Eddy. We renewedly recognize the wisdom of her practical, as well as the divine exactness of her spiritual leadership. We discountenance all criticism of the character and continuance of this leadership, already so long and grandly exemplified. We pledge ourselves and Church to the worship of God and service of man in the way God has revealed it to this age through the author of our text-book, "Science and Health with Key to the Scriptures."

*Resolved:* That the Board of Trustees of this branch of the Mother Church desires to express to the parent Church, The First Church of Christ, Scientist, in Boston, Mass., its deep affection and gratitude; also its tenderest loyalty to and earnest support of the great work of healing and reformation that centers in and radiates from the institutional activity of the Mother Church, its Directors, Publishing Society, publications, and Educational, Lectureship, and Missionary Boards. Be it further

*Resolved:* That our earnest thanks be extended to all the officers and members of these several departments of Church organization, for their honesty, devotion, and philanthropic endeavor in carrying out the demands of the sacred labor or "*trust*" imposed upon them. It is further

*Resolved:* That every scheme, argument or publication assuming to be in or of Christian Science as a religion, that unjustly attacks the nature or *modus operandi* of the institutional operation of our denomination, or wilfully misrepresents the acts and business methods of its Directors, Trustees, Editors, or members, shall and does receive our unqualified disapproval.

With loving gratitude,

CAROLINE W. FRAME, C.S.D., *First Reader.*
CAROL NORTON, C.S.D., *Second Reader.*
ELIZABETH P. SKINNER, C.S.D., *Treasurer.*
JOSHUA F. BAILEY, C.S.D., *Trustee.*
CHARLES P. SIMMONS, *Chairman Board of Trustees.*

To Rev. Mary Baker Eddy, Concord, N. H.
New York City, October 29, 1899.

**First Church of Christ, Scientist, Grand Rapids, Mich.**

Grand Rapids, Mich., November 1, 1899.

Reverend Mary Baker Eddy, Concord, N. H.

*Beloved Leader and Mother:*—We, the Readers, Board of Directors, and Officers, of First Church of Christ, Scientist, of Grand Rapids, Michigan, and also the officers of its Sunday School, unanimously and most heartily, on behalf of the whole church, desire to express our gratitude to you as our trusted and well-tried Leader and Guide in every line and work of Christian Science which leadeth into all Truth. The astonishing and amazing course of the *Washington News Letter* did not shake but emphasized our confidence in your just, pure, and wise leadership of our great cause, both now and in the past; nor did it in the least mar our high esteem of the motives and character of those connected with the Christian Science Publishing Society. The *Sentinel* and *Journal* are to us continuous reminders of the Christly wisdom and love which move onward and upward the divine Truth in Christian Science, whereby humanity is uplifted and healed. In our church there is no dissenting voice. The Bible and "Science and Health with Key to the Scriptures," are our only text-books, the price of the latter we would not have cheapened, nor would we have a door-way for its adulteration opened by any abridgment of its copyright.

Upon its change of base, the *News Letter* was promptly excluded from the library of this church, its sale stopped, and all previous orders countermanded.

The subscription of every officer of the church has been ordered cancelled, and we believe it is not read or accepted by any member.

*Readers*
IDA M. STUDLEY,
CHAS. C. WILMOT.

*Board of Directors:*
JOHN CARVETH, FRANCES E. UTLEY,
E. G. STUDLEY, LUCY F. BARNETT,
C. W. JENNINGS, ORCELIA A. RATHBONE,
MARIA R. ALLEN.

JAY D. UTLEY, *Treasurer.*
LIZZIE W. CEPERLEY, *Clerk.*
BELLE S. GERE, *Librarian.*
GRACE H. WILMOT, *Supt. of Sunday School.*
MYRA NICHOLS, *Asst. Supt. of Sunday School.*

**First Church of Christ, Scientist, Malden, Mass.**

Malden, November 2, 1899.

Rev. Mary Baker Eddy, Concord, N. H.

*Beloved Leader and Mother:*—The Board of Directors of First Church of Christ, Scientist, of Malden, Mass., desire to express our disapproval of the recent inharmonious developments at our national seat of government, also our loyalty to our dear Mother in Israel, her Church, its Board of Directors, and its Publishing Society.

THE BOARD OF DIRECTORS,
First Church of Christ, Scientist, of Malden, Mass.
FRANK P. HARDEN, *Clerk.*

## Approached the Wrong Man.

THE publisher of a popular weekly paper published in New York City was recently approached by the representatives of certain syndicates that are opposing Christian Science, with a proposition to unite with them in "putting it down," saying to him it was the opportunity of a lifetime and he would be foolish not to avail himself of it.

The gentleman so approached happened to be well acquainted with a number of Christian Scientists and to know much of the good work they are doing, and he declined their enticing proposition. He wisely cautioned them that in their efforts to "put Christian Science down" they most likely would only be "putting it up."

Comment seems to be unnecessary, yet we may feel called upon at some time more fully to expose some of the methods which are being resorted to by those who are vainly flattering themselves that Christian Science can be "put down."

## Vain Conversation.

ERROR finds no more convenient door open to our consciousness, than that of foolish conversation. Too often we spend time in vain gossip, thinking we are talking Christian Science, that should be given to searching the Scriptures and Science and Health, and to spiritual prayer.

When Christian Scientists get together socially they do not gossip about the weather, and the physical ailments of all the people in their neighborhood, but sometimes their talk is equally unprofitable. Overmuch is said about demonstrations, sometimes exhibited (metaphorically) like so many trophies. The better time, generally speaking, to recount demonstrations is in the Wednesday evening meetings, or when we feel that by telling of our experience, we can meet the needs of an inquirer in private.

## The Religion of Jesus.

THERE is probably no system of practical knowledge so plain as that offered by Christ, our Saviour. And there is no other system so befogged by learned quackery and educated prejudice. One can scarcely read a single page from any of the gospels, but he will see shining out from it the very life that all should live. Not a question that humanity is struggling over to-day, but is fully answered and illustrated. Not a single trouble bows down the hearts of men, but is shown to be without any reasonable foundation; not a single individual crime that it does not show to have been committed out of the lack of wisdom. Social evils, political oppression, and every conceivable sham is laid bare, and in their stead is made to shine forth in infinite beauty and loveliness the true way by the life and teachings of this Galilean philosopher, whom the learned in the religious quackery and the political chicanery of his day regarded as a pestilent fellow. But if that life were understood to-day in the true sense in which he lived it, and the consummate truth of his doctrines allowed to illumine the path we are treading from day to day, there should be little need of the jail, the penitentiary, and the gallows.

It is not so much religion that the world needs to-day as practical Christianity. In fact, what passes for religion is rapidly becoming the most dangerous element with which society is confronted, for there is no evil that is more subtle in its influence than listless indifference. Selfishness, self-satisfaction, self-hood; such can and does pass for religion in every sense of that Pharisee's who stood up and thanked God that he was not as other men. But such is not Christianity. Christ said, "He that believeth on me, the works that I do shall he do also." He also said, "Heaven and earth shall pass away, but my words shall not pass away," and yet what has happened that the sick, the lame, and the halt cannot be healed as in the days of Jesus? Who says the Christ life is not practical for this age? Who says that the Christ principle will no longer heal the sick? People may be ever ready to worship the personality of Jesus, and extol and praise him for his well-merited name, but if they had that belief in him which is understanding, they would be doing the works which proclaim their oneness with him instead of contenting themselves with idle worship and offering up songs of praise.

Under whatever name the reforms of the past have been inaugurated, and under whatever name future progress toward the millennium shall be made, Jesus Christ has always been, and always will be, the initial figure. No being can ever go beyond him in laying the foundation for a true life. But because that life seems so heavy, so forsaken, so far away, shall we displace it with a substitute so weak, and so cowardly that the world will offer no persecutions? No, we cannot. When we come to that degree of faith which is understanding, and see that the divine Principle—Life, Truth, Love—is absolutely all, we cannot refuse to follow where it leads.

It is only one step from the denial of the mighty principle of healing which after slumbering through centuries, has been rediscovered by Mary Baker G. Eddy—only one step to that deep, dark chamber of infidelity which denies all the mighty works of Jesus of Nazareth.

Men may deny the reality of all the mighty works which Jesus is alleged to have done. They may account for them in ways which may seem to them to be in harmony with "natural law;" they may explain the account of his resurrection in ways perfectly satisfactory to the rules of historical criticism; but his life, his trial before Pilate, his last prayer for his enemies remain forever unanswered, and they contain the very matrix out of which such true greatness might easily flow. Men may say that Stephen did not "see the heavens opened, and the Son of man standing on the right hand of God," but their lips must close in mute silence before that love which prayed that his murder be not laid to the charge of his enemies. It is in perfect keeping with the rules of "higher criticism" to say that St. Paul never saw many of the writings that are attributed to him, but all will agree with Ernest Renan that no man would live, labor, suffer as he did, and finally give up his life in defense of what he knew or believed to be a lie. But St. Paul says of himself and his fellow disciples, "Even unto this present hour we both hunger, and thirst, and are naked, and are buffeted, and have no certain dwelling-place; and labor, working with our own hands: being reviled, we bless; being persecuted, we suffer it: being defamed, we intreat: we are made as the filth of the world, and are the offscouring of all things unto this day." You may call this religious fanaticism if your wisdom inclines you to do so, but to me it bespeaks the very essence of that Love which would bring the Kingdom of heaven with all its health and harmony, and make earth a paradise.

The most bitter words of condemnation that Jesus had for the evils of his day were uttered against those priests and rulers, who were steeped in the Jewish dogmatism which constituted their national code of faith and practice. He saw how easy it is for the true aim of life to be lost or largely obscured by the performance of rites and ceremonies. They soon become the substantials in the faith and practice of a religion which can be put on for special occasions, and left off for convenience. He showed beyond all cavil, that such things have little or nothing to do with the genuineness of the inner life. He showed that all the ordinances could be kept, and yet these devotees could be compared to whited sepulchres, beautiful on the outside, but within filled with dead men's bones. In fact nine-tenths of all the bitter scorn, abuse, and persecution to which he was subjected, came out of this sect of religionists. It has been said that if Jesus should come again to-day, as he did eighteen hundred years ago, demanding that the life be guided by the law of Love and Truth, and insisting that not one jot nor tittle of this law should pass till it be fulfilled, he would again meet with the same opposition. The voice of Truth is again heard asking only for the ushering in of God's will and the complete loyalty to his heavenly kingdom on earth, wherein all the captives to sin, sickness, and death shall be unchained, the bruised set at liberty, and the humble poor be enlightened,—all this is offered to-day in the name of Christian Science, which is the understanding of the Christ, Truth, healing the sick, purifying the heart, and restoring the affections to their rightful place in the unsullied image of God. Not that all or any who profess to have been touched by this quickening Spirit can say that they are reflecting God, as is their privilege to do, but nothing short of this will ever meet the demands of the meek and lowly Nazarene.

*Dayton (O.) Herald.*

---

*Zion's Herald* says: "Bad men have worked their way into elect circles of Christian disciples ever since the days of Judas. When it is necessary to eliminate these betrayers of the Church, let not the saints be so timid or craven as to give comfort and aid to the evil-doer."

---

The maelstrom attracts more notice than the quiet fountain; a comet draws more attention than the steady star; but it is better to be the fountain than the maelstrom, and star than comet, following out the sphere and orbit of quiet usefulness in which God places us.—DR. JOHN HALL.

---

Men who are willing to stand up for the truth against all comers; men that never equivocate, men that are full of truth, these are the men that the soul elects to be its heroes. BEECHER.

## A Tribute of Gratitude.

BY RICHARD D. MCDONALD.

I HAVE long felt that I would like to express my gratitude for the great blessings that have come to me through Christian Science.

My first acquaintance with Christian Science was thirteen years ago, when the subject was broached to me by a lady who talked very beautifully about it. I listened to her respectfully, and remarked that if she could prove to me half of what she had stated, I would be glad to accept what seemed to be a wonderful religion. Nevertheless, I did not then accept Christian Science, and it was six years later when I had the experience which brought me to know some of the greatest benefits derived from this blessed Truth.

After many years of faithful service to the so-called laws of *materia medica*, worshiping also the laws of hygeia, the laws of climate, etc., in every instance where I had expected relief, I found nothing but dismay.

My ailment was diagnosed as valvular heart trouble. I had employed the services of eminent physicians in different schools of medicine, but with no relief. I followed the advice of friends to leave all medicine alone, but was not relieved of my distress. One of the greatest ailments was the fear which was ever present with me, and which I knew medicine did not and could not reach. It was difficult for me to walk up stairs, because of shortness of breath. I was restricted to a certain diet, but this gave me no relief.

The various diagnoses of the case made by the physicians were all different. Finally, one of the doctors advised me to abstain from all matters pertaining to my business pursuits, and to live out of doors and exercise the muscles of the arms and chest. I did not follow this advice, as it seemed to me but another experiment to evade the question. At this time Christian Science was again brought to my attention. At first I was strongly inclined not to accept it. A friend insisted upon my trying the treatment. I remonstrated saying, "I have no faith in it." The answer was, "It will certainly do you no harm and may be the means of healing you, as I have heard of wonderful cures."

It was several weeks before I finally concluded to try the treatment. I was under the care of a Scientist for three months, and during that time, on many occasions, I was tempted to refrain from taking further treatment. At first I disliked my healer very much and could not tolerate her presence, but as the work of Truth progressed my thought of her changed. On taking my first treatment the book, Science and Health, was handed me to read, but I could not read it. I became so irritable that I stopped trying to read for several days. One morning I picked up the book again and opening it to page 304 read the following lines, "Christian Science, rightly understood, coincides with the Scriptures, and sustains logically and demonstratively every point it presents. Otherwise it would not be Truth, and could not present its proofs. Christian Science is not made up of contradictory aphorisms, nor of the inventions of those who scoff at God. It presents the calm and clear verdict of Truth against error, uttered and illustrated by the Prophets, by Jesus, by the Apostles, as recorded throughout the Scriptures." I read these lines over and over, and said to myself, "Surely this must be the Truth." From that time on my love for the book was unbounded, and I read it every available moment. It became a by-word with my friends that the book would be the means of my losing my reason, but this only caused me to have a stronger inclination to continue the reading. When suffering from intense pain the reading of Science and Health would bring immediate relief.

My healing was slow, but with it came a moral and spiritual uplifting which was much more to me than the physical healing. During the treatment, much to my surprise, I was healed of a disease which I had not mentioned to my healer, but which had caused me a great deal of suffering. Of course my healer was not surprised when I told her of my relief. This good lady was a constant example of patience and kindness to me. She encouraged me in every possible way to read Science and Health, and not to limit the work of God.

I want to say to those who feel they are not being healed as quickly as they should, that it is not only seeking but striving which enables us to receive the benefits of Truth. As our dear Mother and Leader says, "Divine Love is our only Physician and never loses a case."

## Abiding Leadership.

IN the original English edition of Rotherham's translation of 2 John, 9,—which occurs in our Lesson-Sermon for October 8,—it reads, "Every one that *is leading forward,* and not abiding in the teaching of the Christ, has not God." In the latest edition, the rendering, which more literally expresses the original Greek, reads, "Every one *that taketh a lead* and abideth not in the teaching of Christ, hath not God." The first shows the possibility—by the use of the present tense—that some now in possession of the seeming reins of leadership are *not* abiding in the Christ-Truth; while the latter shows that some are mesmerized by their self-will and mad ambition, and will try to snatch the reins of leadership and drive like fury away from Truth's well-defined track, even if they dash all who accompany them into outer darkness, for, being uninspired by Spirit, they are without the hope wrought of "a conscience void of offence toward God, and toward men," just because they "have not God."

Spurgeon's success begat the envy of an older minister, who mistook his ambitious dream for what he told the "prince of preachers" was an "inspiration by God, to come and preach to the thousands in his Metropolitan Tabernacle." Mr. Spurgeon replied, "All right, dear brother, so you shall, just so soon as He inspires me that you should."

The parents of Thomas Carlyle designed him for the ministry of the Church of Scotland, and bade him to go to his room to "pray about it." Weary with his two hours on his knees, he so welcomed the dinner bell, that he preferred to await the answer to his prayers, until he had gratified his sense of hunger. His comparison of his, possibly, mean meals as a simple minister of the Gospel, to his then sense of "faring sumptuously every day," led him to turn his back on the work designed by his parents and risk reaping the reward of such as "abide not in Truth."

If for any reason one "is leading forward," or "taketh a lead," through sinister motives, appealing to the passions, selfishness or meanness of mortals—"Abideth not in the teaching of Christ" and "hath not God," such an one mistakes ambition for inspiration, and an inordinate affection for self, for a selfless mission to mortals.

Moses' mission to Israel imposed a renunciation of "all the treasures of Egypt" and the throne thereof: his renunciation of "being a son of a daughter of a Pharoah," his "choosing rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season." And in order to have all the time he needed to work out his problem, "he endured, as seeing him who is invisible," "forty years in the wilderness". He is thereby fitted to become the "Abiding Leader" of God's host; and the permanent Law-Giver of Israel, and the Anglo-Israelites, and every nation, state, and tribe of men, to all generations, just because he was humble and obedient, and dared to let God use him. Thus every line of British and American jurisprudence is an emanation of the law given by Moses.

Digitized by Google

So also is that law of "A just God and a Saviour," expressed to us in the Master's Mountain Message, of which we have the quintessence, with Love's interpretation, in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, of which one wrote recently, "Science and Health is priceless. No amount of money could buy my copy, if I could not get another." So, also, I declare, and I rejoice to say we were never able to dispose of so many as at present. It may help our co-workers to say, as another writes, "You referred me to Science and Health, I am sorry to say I have not got it, how I do long for it," that we always assume, when addressing an applicant for healing, they have, or will get our text-book, and invariably with good results.

Our loyalty demands that we point out the all-sufficiency of the productions of our "Abiding Leader." The counterfeiter endeavors to make his imitation as nearly like the genuine as possible. But it is for us to be in fact—SENTINELS.

GEORGE TOMKINS.

Camden, N. J.

## Filled with the Holy Ghost.

BY ELINOR F. EDWARDS.

THE New Testament makes frequent use of the expression, "filled with the Holy Ghost." What does it mean? The question is answered by Jesus himself in the fourteenth chapter of John, where he refers to the Holy Ghost as the Spirit of Truth. Therefore, to be filled with the Holy Ghost is to be filled with the Spirit of Truth. The impenetrable clouds of mysticism have always enveloped the words, Holy Ghost; but Christ's Christianity dispels the mists of a false theology, not only revealing what the Holy Ghost is, but what it does.

John, "the prophet of the highest," was filled with the Holy Ghost; so were his father, Zacharias, and his mother, Elizabeth, before his birth. Jesus, filled with the Holy Ghost, met and overcame the threefold temptation. Then he "returned in the power of the Spirit to Galilee," and immediately the works followed,—casting out of devils and healing the sick.

In one place the record tells us that the apostles were all filled with the Holy Ghost, "and began to speak with other tongues, as the Spirit gave them utterance." Then followed many miracles, and many believers were added to the Church,—three thousand souls in a single day.

Peter, filled with the Holy Ghost, was able to stand before the Council and "speak the word of God with boldness," after the healing of the impotent man. Stephen, filled with the Holy Ghost, "did great wonders and miracles among the people." Of Barnabas it is written that "he was a good man, and full of the Holy Ghost and of faith: and much people was added unto the Lord." When Saul was filled with the Holy Ghost, the scales fell from his eyes, and "straightway he preached Christ in the synagogues, that he is the Son of God."

At the close of the thirteenth chapter of Acts, the record states that "all the disciples were filled with joy, and the Holy Ghost." This was after Paul and Barnabas had declared the glad tidings to the Gentiles, "and they were glad and glorified the word of the Lord."

And as it was then, so it is now. Great multitudes today hear the Word and are healed through the Spirit of Truth, and the disciples are again filled with joy and the Holy Ghost, the immortal joy of Spirit.

To be filled with the Holy Ghost is to understand and exercise the Christ-healing; to know how to keep the Master's commandments and follow his example,—heal the sick, raise the dead, cleanse the lepers, and cast out demons,—in other words, to enter into the joy of the Lord.

## Testimonies.

### Testimony of a Former Dentist.

IN a recent Wednesday evening meeting in the Mother Church the following testimony was given by a gentleman who for years had been a practising dentist:—

I suppose there is no class of people to whom the claim of intelligent matter is more potent than the practitioners of dentistry, for the reason that they are so constantly associated in their vocation with the belief of intelligent matter as sensitive tissue. And I can but marvel ofttimes that after practising dental surgery for a score of years I could have become a convert to Christian Science, that I could accept this great basic Truth, that "All is infinite Mind and its infinite manifestation." [Science and Health.] I thank God that I did accept it, and I have for the last nine years practised Christian Science, humbly trying to follow in the footsteps of our Mother and Leader, Mary Baker Eddy.

My associates in the Alumni Association of the Harvard Dental School are scattered all over the world and I have deemed it a duty and a privilege to send them Christian Science literature wherever I could reach them, because I knew how greatly it would help them in their practice if they had even a little understanding of Christian Science, and how much more good they could do in the world if they would but adopt it thoroughly.

I have had some success in introducing Christian Science to my fellow practitioners in the past. Not long ago I had for a patient a classmate in a neighboring state. He had been given up by the doctors, because he could not keep medicine on his stomach, and they thought the medicine would do no good unless the patient could retain it. He applied to me for treatment, and the Truth healed him, physically at least, and he wrote that he would see me and thank me personally.

I had a case not long ago of what is considered an incurable disease without surgical operation, and is called tic douloureux. The patient had been operated upon some two years before I saw her, and some of the nerve had been removed. She was told by her surgeons that she would need to be operated upon again in two years. She was in great agony and applied at last for Christian Science treatment. After quite protracted treatment she was entirely healed, both physically and spiritually. It is the only case I have ever known where resort to the knife the second time was avoided.

There are many, many other cases on record of healing through Christian Science, and I know that if the profession knew how much it would do for them they would gladly adopt it.

### An Active Railroad Man.

An active railroad man testified at the same meeting as follows:—

The growth of interest in Christian Science among hard, level-headed business men is becoming noticeable. There was a gathering in this city last week of railroad men from all over the country. I have attended these meetings a number of times, but I had never heard Christian Science mentioned in them until last week. I found several members interested in Christian Science and they were glad to get off and talk Science.

I want to tell the experience of one of these members. He had a disease called locomotor ataxia. Another railroad man advised him to try Christian Science. The patient agreed to visit a practitioner, but said, "If this Scientist tells me that nothing is the matter with me, I will tell you that it is all bosh." He called on the Scientist and told her his tale of woe, and she gave him a treat-

Digitized by Google

ment. The patient said afterward, "This is too easy; it cannot be right. She did not ask me to give up anything." He was healed in eight treatments, and is perfectly well. The smoking, chewing, and drinking habits also left him, and he discarded his glasses, which he had worn for fifteen years, and has not used them since.

Now, why is it that the business man is taking to Christian Science? You cannot fool many railroad men with schemes and fads. They come because its Principle and its statements are proven every day. They know and see it, and accept it.

### Sciatic Rheumatism.

About ten months ago I became affected with sciatic rheumatism which incapacitated me for work for about three months, this being the second attack within a period of five years.

As usual with a person affected in such a way, I treated with a physician the greater part of that time; I also tried a number of different patent medicines recommended for sciatica, until I became discouraged, and disgusted with medicine.

My physician being of the homœopathic school would tell me that allopathic treatment would do me no good; that the treatment he was prescribing would eventually wear out the disease. But the fact of the matter was, I was being worn out and the disease was not getting any better.

I was finally prevailed upon to try Christian Science treatment, and I therefore concluded to visit Omaha and consult one of the Christian Science demonstrators. The morning I started for the train, I could scarcely get there alone, it being the first time I had left the house for nearly two months.

After ten days' treatment I started at my work again (that of a locomotive fireman). While the cure was not instantaneous, I knew that I was getting better right along, and that without the use of drugs.

I bought the text-book, "Science and Health with Key to the Scriptures." I read it and studied it, and as the understanding became more clear, the disease disappeared. I have not felt the least vestige of the disease since that time, and I am completely cured.

About ten days previous to writing this article I was getting down from my engine when my ankle turned under me, almost dislocating my ankle joint. After a few moments of demonstration I got up, went about my work, and have not experienced any pain or soreness from it.

This proves to me the higher spiritual understanding of God, and the nothingness of material sense.

I find in Christian Science great help and benefit in many ways. It enables one to discern the truths taught by our beloved Lord, who is the Way, the Truth, and the Life; lifting from our eyes the veil of obscurity that has darkened our spiritual understanding, and bringing to light the love of God.

In reading Science and Health one should not try to grasp too much at a time; but read and reflect. Our Master has said, "Ask, and it shall be given you; seek and ye shall find." When we ask in the right spirit, God will answer our petition, and His presence is with us at all times.—J. A. Millin, Norfolk, Neb.

### Consumption Healed.

Last June I contracted a cold, which soon developed into consumption. I had suffered for a number of years with some throat affection. I also had nervous dyspepsia and heart trouble, and had been for some time in a nervous and run-down condition. When my lungs became affected, I soon became so weak that my doctor told me that medicine would do me little or no good, and advised my spending some time at Colorado Springs, Col., where I would be greatly benefited by the climate and mineral waters of that section, but after spending some weeks at the above-named place, I found that I was losing flesh and strength daily, and as *materia medica* had already abandoned my case, I began reading "Science and Health with Key to the Scriptures," and afterwards took treatment of a Christian Scientist at that place, who came to me the first time, as I was unable to walk even one block.

The next day (Wednesday) I made an appointment to meet my healer at his house, but did not know how I could do it, as I had about two blocks to walk, besides riding nine blocks in street cars. I managed to crawl there some way, and that afternoon took a ten mile ride, ate a hearty supper, and slept well all night, and by the following Saturday felt that I could walk any place I wished, one of my first feats being a six mile stroll through the canyons.

Three weeks after my first treatment, I started home, a well man.—J. T Lincoln, Kansas City, Mo.

### Christian Science in Childbirth.

I had five children and suffered much under *materia medica*. The sixth under Christian Science treatment was a positively painless birth. The second day I was up and around the room. The third day while the family were at dinner, I felt so free and happy that I went down to the parlor and played on the piano, and have been down to my meals from the third floor ever since. The nurse left me on the fourth day, and I have taken entire care of the baby since that time. On the tenth day I went out to Wednesday evening meeting, and before two weeks were ended had been down town twice shopping, and I never felt so well and strong as I do now.

Words fail to express the gratitude I feel to our dear Mother for giving us this glorious Truth, and I thank God every day for sending it to me, as it is indeed an ever-present help in time of need.

Mary Coit Wheeler, Chicago, Ill.

### Helped by the Journal.

I wish to tell of a demonstration that was made by means of the help that seemed to come through reading the *Journal*. My husband had a congestive chill, after which he was very sick. He suffered greatly and we realized that we had no time to send for help, being twelve miles distant from any Scientist. After working for two hours, I thought to pick up the *Journal* and read a little. Opening to page 187 of the June *Journal*, I read the article, "The Simplicity that is in Christ." When near the close I came to these words: "Truth is omnipotent and omnipresent," and just then I knew the work was done. Relief came at once and before I finished reading the page, the sufferer was sleeping as sweetly as a babe, and all was still instead of groans of agony. Surely "in quietness and confidence shall be your strength."

Mrs. E. L. H., Vidette, Kan.

### Noted Oculists had Failed.

From the time I was four years of age, I was troubled with what the doctors pronounced granulated lids. I suffered intense pains, often being kept in the dark for weeks at a time, practically having no use of my eyes whatever. As I grew older, they grew worse, although I was treated by several noted oculists. Having endured this pain and torture for sixteen years, I concluded to try Christian Science, and after four weeks' treatment by a practitioner of this city, I was healed, and for several months I have used my eyes upon the closest work, and can safely say they are perfectly cured.—Estelle Brown, St. Louis, Mo.

## Questions and Answers.

*Was not the power to heal sickness and cast out devils bestowed upon the disciples to prove that Jesus was the long-looked-for Messiah? Since this fact was established beyond all doubt, is there any further necessity for the exercise of this power? Does not the fact that it was lost sight of within three hundred years after the beginning of the Christian era show that it is no longer necessary?*

Inquirer.

The disciples had power to heal the sick and reform the sinner, and these works proved that Jesus pointed out the way of salvation from sin and sickness, and that others as well as himself could do these mighty works. But this power was not a personal gift, bestowed by Jesus upon his disciples regardless of any effort on their part other than a willingness to receive it. The power was divinely bestowed through Jesus' teachings. It was proportionate to the disciples' understanding of the Master's teachings, and it proved his teachings to be true.

Salvation from sickness, as well as from sin, was at that time, and is now, a great need of humanity. It was the mission of Jesus to point out the way of salvation that makes free indeed.

Not only the healing of sickness but the destruction of sin as well, proved the messiahship of Christ, yet it is not suggested that moral healing is no longer necessary. It is argued that the Saviour's mission was to save all men from sin. Was it not his mission to make man every whit whole, physically as well as morally? This was certainly the work he did and also told his disciples to do.

There may be those who believe the teachings of Jesus will save from sin, and that he gave his disciples power to heal sickness to prove that his teachings were true, and that he made plain the way of salvation from sin; but that there is no immediate connection between the practice of his teachings and the healing of sickness. Entertaining such an opinion prevents one from so understanding his teachings as to be able to heal the sick in accordance therewith.

Jesus told his disciples to return good for evil, love their neighbors and even their enemies. The understanding of his teachings enabled them to do so. These works, as well as those other works commonly called miracles demonstrated the truth and power of his teachings.

The Christian of to-day is expected to return good for evil and to love all mankind, foe as well as friend. His power to do so depends upon his Christianity—his Christlikeness. It is not considered that his power to obey these commands is specially bestowed upon him to prove to the world that he is a Christian; but we recognize that while it does prove his Christianity, yet it is the natural outgrowth thereof. Then we see that the more Christianity one possesses, the better able is he to live in accordance with the teachings of the Master.

When the eyes of mortals are opened to see that the power to heal sickness comes through the right apprehension of Truth, just as the power to be good and do good comes in this way, they will know it is their privilege to rely upon God to heal sickness without the use of material remedies. They will see that life, health, and holiness are to be found in the way of salvation pointed out by Jesus and made plain for all mankind.

The contrite heart only is receptive to the influx of divine Love.

## The Power of Truth.

BY B. A. M.

THAT Christian Science comes to this age with healing in its wings can no longer be denied by sage or philosopher. After a million or more people have given in their testimony of the saving grace of this Truth, not alone from sickness, but from sin, the evidence is too preponderous for any one of sound sense or good judgment to deny the facts although there is occasionally some who will expose their ignorance by so doing.

While we all recognize the wonderful benefits derived from the healing of disease by the power of this Christ Truth, yet this alone is not to be compared with its power to heal from sin; and it is here that it gives its grand proofs of divinity, for while other isms so-called may seem to relieve suffering for the time being, there is no record of the regeneration of the sinner, while in Christian Science one of the most important factors of the treatment of sickness is the lifting of the patient on to a higher plane morally and spiritually. We find this is the testimony in nine cases out of ten, the patient recognizing a change in his heart and consciousness towards a better and higher life. If the patient has been living in a state of thought of ill-will toward a neighbor, he finds the neutralizing effect of Truth has destroyed this sense of ill-will, and left in its place nothing but a sense of love. Can a metaphysical treatment that destroys and unloosens the chains of sinful sense that are holding man in bondage to sin, sickness, and death, be so very bad as some would have you think? Do not all Christians desire to think rightly? But do they when allowing mortal thought to be so prejudiced that it is vested with envy, jealousy, and even hatred for a Truth that is based on a system of right thinking, and a people who are striving to have (as taught in Scripture) that Mind that was in Christ Jesus, or trying to assimilate that Christ thought which had the power to heal in Jesus' time?

We read in Science and Health, p. 155, "The Christlike understanding of Scientific Being and divine healing includes a perfect Principle and idea,—perfect God and perfect man,—as the basis of every thought."

When we have this perfect principle as the base of our thinking along all lines of action we shall be able to demonstrate Truth and speak as one having authority. It is this right thinking and right living that is the demand of the hour, and it is the duty and privilege of every Christian to increase his or her endeavors in this direction, that we may all help and not hinder the glorious work being done by our dear Leader as Commander-in-chief, her able and efficient staff at headquarters, and the official Lecture Board, who have all been tried and not found wanting.

While error seems to wriggle and squirm at the wonderful strides Truth is making, let us all, as faithful soldiers, be faithful to every trust, knowing that one with God is a majority; that we have nothing to fear. "Clad in the panoply of Love, human hatred cannot reach you" (Science and Health). The stirring of error only foretells its doom, and we cannot do too much to sustain a Cause that has brought its untold blessings to thousands of sufferers through the persecutions, trials, and self-abnegation of our Leader.

Let us all be sober, earnest, and vigilant, and as the smoke clears away after the doom of error we shall hear the angels singing, "Glory, glory, glory! Our God omnipotent reigneth!"

---

When it is known that through right understanding and true living, health is catching instead of sickness, there will be no fear of contagious diseases.

❧

Truth is affirmative, never negative.

## From the Religious Press.

### A Saint Within Three Degrees.

Rev. W. C. Roberts in *The Church Standard* says: "There is a class of people, and it is a large one, with whom it is perfectly delightful to live, so long as the thermometer does not vary more than three degrees. If the mercury stays at 70 degrees Fahrenheit, or does not sink below sixty-seven degrees, they are reasonable and even pious —their tempers are equable—their spirits are good, their view of life is roseate, and altogether you put them down as just the best people in the world.

"But when the frost gets into the air, never so little, and creeps into the house, to make the thought of chilliness possible, a change comes over them that is pitiful to behold, and painful to contemplate. All the geniality has departed, the well-rounded nature has changed into a mass of sharp angles, the altruistic spirit has turned to vinegar, and a single hour of companionship with them is sixty minutes of martyrdom—fussiness and fretfulness are in every tone of their voice.

"The same thing occurs, and is perhaps intensified, when the unruly mercury dares to show his head above the 70 degree mark, for by this turn of his magic wand he has changed the lovely being into a panting and abusive creature—taken away every sign of elasticity, put up the bars against every endeavor, and made an overheated self so prominent that it is extremely uncomfortable for any second self to approach."

---

It is a grave error to declare that the teaching and example of Jesus and the apostles are opposed to definiteness of belief and to plainly enunciated principles. They all were earnestly and emphatically positive and definite in their convictions and in their open avowal of them. Why did Christ come to this world, if not to teach new truths, to oppose old errors, to reform men's lives by presenting for their acceptance precept and rules unlike those on which they were acting? He came to save from erroneous beliefs by imparting instruction that is eternally true.

*The Universalist Leader.*

---

Marion Harland in an article in *The Congregationalist*, headed "The Church Supplanted," criticises the present method of conducting Sunday Schools, and charges that the young people attending them manifest slight interest in the other work of the church. The writer says: "From Maine to California the press, secular and religious, is discussing the question, Why do not our young people go to church? The problem is serious."

---

The constitution of the Transvaal forbids the public exercise of any form of faith outside that of the Heidelberg Catechism, and explicitly proscribes the Roman Catholics. Only those are eligible for office who are members of the Dutch Reformed Church. No minister of this Church may perform any of the Christian Sacraments for any black man.—*The Church Standard.*

---

Rev. G. Campbell Morgan, the English preacher who has been holding a series of meetings in American cities, is said to make a practice of giving at least two days of each week to preaching in different cities and towns in Great Britain in addition to ministering to his own congregation in London.

---

Arthur Mee in the *Puritan* for September says that something like 100,000,000 copies of Spurgeon's sermons have been sold at a penny each, and double that number of copies of newspapers containing his sermons have been circulated.

---

Keep your thoughts clean, your heart pure, and your hands active in good works. Whoever observes this rule is not far from the kingdom of heaven.

*The Universalist Leader.*

## Miscellany.

### The Sorrowful Tree.

There is a tree in Persia to which the name "the sorrowful tree" is given, perhaps because it blossoms only in the evening. When the first star appears in the heavens the first bud of the sorrowful tree opens, and as the shades of night advance and the stars thickly stud the sky the buds continue gradually opening until the whole tree looks like one immense white flower. On the approach of dawn, when the brilliancy of the stars gradually fades in the light of day, the sorrowful tree closes its flowers, and ere the sun is fully risen not a single blossom is visible. A sheet of flower dust as white as snow covers the ground around the foot of the tree, which seems blighted and withered during the day, while, however, it is actively preparing for the next nocturnal festival. The fragrance of the blossoms is like that of the evening primrose. If the tree is cut down close to the roots, a new plant shoots up and attains maturity in a short time.

In the vicinity of this singular tree there usually grows another, which is almost an exact counterpart of the sorrowful tree, but less beautiful, and it blooms only in the daytime.—*St. Louis Globe-Democrat.*

---

### Effect of Fear.

An English traveler once met a companion sitting in a state of the most woeful despair and apparently near the last agonies, by the side of one of the mountain lakes of Switzerland. He inquired the cause of his sufferings. "Oh," said the latter, "I was very hot and thirsty, and took a large draught of the clear water of the lake, and then sat down on this stone to consult my guide-book. To my astonishment, I found that the water of this lake is very poisonous! Oh, I am a gone man—I feel it running all over me. I have only a few minutes to live! Remember me to——" "Let me see the guide-book," said his friend. Turning to the passage he found, "L'eau du lac est bien poissonneuse"—"The water of this lake abounds in fish." "Is that the meaning of it?" "Certainly." The dying man looked up with a radiant countenance. "What would have become of you?" said his friend, "if I had not met you?" "I should have died of imperfect knowledge of the French language."

*Chicago Daily News.*

---

### A New Fuel.

A new compound fuel is now being tested in England with claimed satisfactory results. It is composed of 93 per cent of coal dust and 7 per cent of a mixture of pine and caustic lime. These three substances are mixed and run into moulds, where they harden to such a degree that they do not separate in burning, and are sold in the shape of perforated bricks weighing about ten pounds each, for big furnaces, and for domestic use in cakes or lumps of lenticular form, of which 140 weigh 100 pounds. The new fuel is sold in London for $5.25 per ton retail. It gives out an intense heat and only traces of smoke, while the residue of ashes does not exceed 3 per cent. It can be burned in an ordinary grate, and the fire resembles an exceedingly brilliant coke fire.

*Boston Transcript.*

---

### Sacred Fires of India.

The sacred fires of India have not all been extinguished. The most ancient, which still exists, was consecrated twelve centuries ago, in commemoration of the voyage made by the Parsees when they emigrated from Persia to India. The fire is fed five times every twenty-four hours with sandalwood and other fragrant materials, combined with very dry fuel. This fire, in the village of Oowada, near Bulsar, is visited by Parsees in large numbers during the months allotted to the presiding genius of fire.—*Philadelphia Ledger.*

Paris continues to be the head centre of journalism, and the number of newspapers there keeps on increasing. It increased from 2,291 in 1869 to 2,327 in 1897, to 2,587 in 1898, and is 2,685 at the present time, of which 142 are daily.

## Notices.

### The Board of Education.

The Board of Education has prepared printed application blanks to be used by those who desire to appear before it for examination.

These blanks are now ready, and can be procured by written application addressed to the Board of Education, 95 Falmouth St., Boston, Mass. No other form of application will be received.

Special attention is directed to the following By-Law of the Church Manual:—

"Students are examined and given certificates by this Board, for no other purpose than teaching Christian Science. All other applicants will be dismissed."

---

### Supplement to the Sentinel.

The able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899, has been issued as a supplement to the *Christian Science Sentinel*. The workers in the Field will readily see the wisdom of giving the supplement the widest possible circulation, and the extremely low price at which it is issued will enable them to do so. The price of the supplement is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

---

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding, "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

---

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

---

### Church Rule.

It shall be the privilege of all the leading Churches of Christ, Scientist, situated in our largest populated cities, or in the capital cities of the United States, Canada, or Great Britain (in addition to their other established lectures), to call on Judge William G. Ewing of Chicago, Ill., for an annual lecture under the regulations and auspices of the Mother Church in Boston. Also, with the consent of Judge Ewing, the church shall publish his entire lecture in at least one of the leading, local newspapers.

---

### Clerk of the Mother Church.

All correspondence with the clerk of the Mother Church on matters pertaining to his office should be addressed to WILLIAM B. JOHNSON, C.S.B., 30 Norway St., Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum: One Dollar for six months: Single Copies, Twenty Cents: Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents: Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy: $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A: for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1: six copies to one address, $5: twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each: per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each: per dozen, $12.00: per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50: Six copies, $7.00: Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

The annual report of the treasurer of the United States shows that the total ordinary receipts for the last fiscal year amounted to $515,960,620. The ordinary expenditures were a little over $605,000,000 leaving a deficiency of $89,111,559 in the ordinary revenues.

The total receipts from all sources were $1,038,451,340, and the total disbursements $946,222,148.

On June 30 last the amount of paper in circulation was $310,547,349 in United States notes; $92,605,792 in treasury notes; $401,869,343 in silver certificates, and $237,832,594 in national bank notes.

The gold coin in circulation steadily increased from $478,771,490 on September 30, 1896, to $646,561,185 on the same date this year. On the 1st inst. the estimated amount of gold in circulation was 33.18 per cent of all the currency.

It was expected that the results of the November elections would show whether the nation endorsed or disapproved of the policy of the administration in the Philippines, but there seemed to have been no marked demonstration either way. Perhaps the greatest interest centred in Ohio. Judge Nash, the Republican candidate for governor, was elected by fifty thousand plurality. Massachusetts elected a Republican governor. In New York the Democrats carried the city and the Republicans the state. The Fusionists carried Nebraska by more than twelve thousand majority. In Kentucky the result is in doubt. Both sides claim the victory and the official count is awaited. In many of the states this was the off year and but little interest was taken in the elections.

The latest news from the Transvaal is to the effect that General White is being hard pressed at Ladysmith, although he expects to be able to resist the Boers until re-enforcements can arrive. In the mean time the Boers are making every effort to reduce the city. It is reported that the Boers have guns on the north, east, and west of the town, but as yet their shells have done but little damage.

The President's policy regarding Cuba contemplates the retirement of General Brooke from the military government January 1, 1900, and the appointment of General Wood as civil governor. The Cubans are in doubt concerning the establishment of a Cuban republic, as the subject is not mentioned in the Paris treaty.

Special arrangements are being made whereby students in Japan may be admitted to the University of Chicago by passing examinations in their own country. It is thought this policy will increase the number of Japanese students in the university. Harvard University is the only other American institution which has entrance examinations in Japan.

Great Britain, Germany, and the United States have through their representatives signed a convention providing for the adjustment by arbitration, of the claims of the inhabitants of Samoa for damages resulting from the naval and military operations there last spring. King Oscar of Norway and Sweden is specified by the treaty as arbitrator.

Major Count Esterhazy, the reputed author of the bordereau which brought about the conviction of Captain Dreyfus on the charge of treason, was sentenced to three years' imprisonment and to pay a fine of fifty francs, for swindling his cousin. He was also ordered to refund the thirty-five francs claimed by his cousin.

General Lord Wolseley, the commander-in-chief, has written Lady Randolph Churchill, thanking her for the efforts of the American ladies in England in fitting out a hospital ship for South African waters. The ship will sail about November 25, and it is reported that Lady Randolph Churchill will be on board.

The committee appointed by the National Educational Association, to consider the advisability of establishing a national university, has recommended that no such university as proposed be established. The committee will, however, give the matter further consideration, and will meet again in February.

In order to avoid the charge of militarism which is already being raised in some political circles, President McKinley is considering the advisability of withdrawing the troops from Cuba and Porto Rico. There are in these islands five hundred officers and fourteen thousand men.

In his annual report the Postmaster General recommends the handling of mails by pneumatic tubes in congested centres of population. There is a possibility that automobiles may take the place of the wagon service and also of the electric cars in the largest cities.

Admiral Dewey and Mrs. Mildred M. Hazen were married at the rectory of St. Paul's Roman Catholic church in Washington, D. C., Thursday morning, November 9. The ceremony was strictly private and of the simplest character.

Japan, Great Britain, and the United States will unite in asking the Governments of Russia, Germany, and France to give written assurances that open ports will be maintained by these nations in their respective spheres of influence in China.

The Federal authorities at Austin, Texas, report that many discontented Chinamen of Mexico are taking advantage of our deportation law, and are entering Texas for the express purpose of securing free passage back to China.

The Chinese minister at Washington recently requested the United States to give China its moral support in opposition to the partitioning of the Chinese empire. The Government declined to give any such assurance.

The Maryland Steel Company will ship sixty-five hundred tons of rails every month to Vladivostock. The rails are intended for the Trans-Siberian Railway, and the contract calls for seventy thousand tons.

Information has been received at Washington that Aguinaldo has again eluded the American forces and escaped with his troops to the mountains, and that the chances for his immediate capture are very slight.

A test case has been carried to the United States Supreme Court to settle the question as to whether the express company or its patrons shall pay for war revenue stamps affixed to express receipts.

In his address at the Lord Mayor's banquet in London, November 9, Lord Salisbury declared that England's policy in the Transvaal was to confer the blessings of good government and secure safety for all.

For saving the life of an American soldier, General Otis has granted a full pardon to a Filipino prisoner who was sentenced to penal servitude for six years by a Spanish court in 1897.

Hon. Amos L. Allen of Alfred, Me., has been elected to fill the vacancy caused by the resignation of Hon. Thomas B. Reed as representative of the First Congressional District of Maine.

Three million acres of potatoes were raised in the United States this year, and according to a recent estimate, the yield will be about two hundred and forty-two million bushels.

In exports of cheese, butter, flour, and manufactures of wood Canada is becoming a rival of the United States. The exports during the last thirty years amount to $2,464,277,239.

Ex-President and Mrs. Harrison have returned to America. Mr. Harrison went to Paris last May as counsel for Venezuela before the Anglo-Venezuelan Arbitration Commission.

Captain Dreyfus is still at Carpentras, France. His health is much improved. He is hopeful of his eventual triumph, and says that he is cheerful in his suspense.

A tablet and a monument to the memory of Miss Winnie Davis, "The Daughter of the Confederacy," was unveiled at Richmond, Va., November 8 and 9.

John D. Rockefeller recently offered to sell his iron mines, railroads, and ships for fifty million dollars to Andrew Carnegie. The offer was refused.

A company of Americans will establish telegraphic communication by Sig. Marconi's wireless system, between five of the Hawaiian islands.

The largest Italian ship-builders will equip their plant with seventy-five thousand dollars' worth of American labor-saving machinery.

The expense of the regular army during the last fiscal year was over thirty-four millions and that of the volunteers over thirty-six millions.

About three hundred and sixty men of the 43d regiment of United States Volunteers deserted at Burlington, Vt., November 10.

As early as September orders were placed in Wisconsin for fifty thousand Christmas trees, to be shipped East.

November 6, 1899, home rule was established in the island of Negros. This is the Filipino's first attempt at self-government.

The Board of Federal Appraisers has decided that Cuba is a foreign port, so far as customs duties are concerned.

The Creek Indian Nation of Oklahoma numbers 14,771, and has a body of land aggregating 3,040,000 acres.

In a recent automobile parade in New York City one hundred horseless carriages of all varieties were in line.

For the first time the supply of gold money in the United States has passed the billion dollar mark.

# CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## A Religion of To-day.

IT is time for us to create a world that shall be founded on faith—faith in the living presence of a living God amidst a living people. Most of us accept traditions of a God who lived down through the Hebrew prophets and the early Christian apostles. Possibly some of us have an undefined sense that God was living during the Reformation and until the Pilgrims landed on Plymouth Rock. Or we are willing to believe, and that with a considerable degree of emotion, in a God who will live suddenly and immensely in some after-death world, or in some remote millennium, in which He shall sit in terrific judgment on the world. But the idea that God is living now, in the midst of a living people, inspiring and teaching them even more directly than He inspired and taught the people of centuries ago, with revelations concerning our present problems as sure and safe as any revelations of the past, and with judgments as swift and immediate as any judgments of the future—at such a faith we grow pale, or turn from it in anger. The reason, of which we are unconscious, lies deep in the spiritual and intellectual requirements of such a faith. It is easy enough to assent to formulated beliefs, coming from constituted religious authorities, concerning the God of yesterday or the God of to-morrow.

Such assent is no evidence whatever of faith, but rather evidence of lack of faith. Formulated beliefs are largely the refuge of timidity, servility, spiritual indolence, and the unwillingness to undertake the effort of thinking; yea, the most insistent orthodox beliefs are defended by a subconscious but deep-seated and most practical atheism. We are all of us secretly ready to make any terms with faith that will keep God out of the immediate present; keep Him from having a mind about our actual affairs, or at least keep Him from speaking it, until some convenient judgment time. We forget that the prophets and martyrs and apostles have met their tragic ends just because they declared that God was alive, and insisted upon saying things about the immediate and practical concerns of men; that they characterized as downright infidelity the beliefs that put God into yesterday and His judgments into to-morrow. The faith that God is living and judging right now, and that the pressing and perplexing problems of the moment are the real vision of His glorious presence, requires an altogether more strenuous sort of living than we are apt to think or talk about. Such a faith means that God is looking us straight in the face every moment, and that the whole of life is a perpetual judgment; it means that every irrelevant act, or idle word, accounts for itself in injury to the individual soul and loss to the common life; it means that we must at once come to judgment with ourselves, and straight off give an account of our words, deeds, and motives to the awful judgment-seat of the highest ideals and divinest instincts that we have disbelieved in, or put off, or trifled with. But strenuous and exacting as such a faith is, the human race cannot live without it.

The real unfaith of man lies in his infidelity to the ideal. Unbelief in the practicability of the highest conceivable ideals of righteousness is the only actual atheism—the atheism which conceives of God as absent from the problem or work of the moment; absent from the thing just in mind or hand. This infidelity and atheism spring from the unconscious worship of evil as lord and possessor of the real field of human activity. All unknown to ourselves, we have an immensely greater faith in the devil than we have in God. And we therefore think ourselves let off with the feeling that we are poor worms of the dust, and with the confession that we are miserable sinners in need of mercy; all of which is well enough as a religion for generations just emerging from serfdom, but is no religion for manly sons of God, in need of a noble and inspiring faith.

Evil is, only because we think that it is. It has no reality beyond our belief in it; no power, save such as our belief invests it with. Evil exacts tribute because we are stupid enough to come to terms with it. The devil exists because we unconsciously worship him as the real power, when we think we are worshiping God. We have strife, competition, and struggle because we believe in strife, competition, and struggle. We have the palace beside the sweatshop, the wretched tenement behind the church, the monstrous lobby in the legislative hall, the swarms of political and commercial parasites on the social body, because we believe in all this hideousness and tyranny as real and potent; as having always been, and as therefore always to be. But there is no evil except our belief in evil.

The real faith of man consists in urgent and steadfast fidelity to his noblest ideals. To believe in the practicability of the highest conceivable righteousness in human life, by whatever name we call that righteousness, is to have the faith that makes and remakes the world—the faith that finds the real presence of God in the living people and their problems, whether that God be named or unnamed. This sort of faith is the substance out of which society and the soul get their building material; the substance from which great ideas and lofty ideals rise to lead the world toward perfection.

The world will finally become just what you make it by your faith. It was no pious or arbitrary decree on Jesus' part that life and things would be unto men according to their faith; that faith as a grain of mustard seed would remove mountains of difficulties, and mountains of rock and iron. His words of faith are the simple application and interpretation of elemental and universal law. It is faith alone that has power to justify the wrong by setting it right; to save us from wickedness by abolishing it, and by establishing liberty and love in its place. The faith of a single man who takes his stand upon a noble ideal and there abides is mightier than the legions of Cæsar or the brigades of Cromwell. The power of a pure and simple ideal, in an obscure soul that believes in it, is so overturning and

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

reconstructive that the most imperialistic and secure of world powers are as but mushrooms in comparison therewith. The only practicable thing in the universe is an ideal, and our faith in the ideal is the only source of reality.

The wronged and beaten people who have so long stretched forth worn and vain hands of hope to our temples, to-day yearn for some ideal of right and justice into which they may pour their lives as a testimony of their faith. They ask us to show our faith in our Father by our fidelity to the great cause of the common life. They wait for us to prove our faith in a living Providence by procuring equality of opportunity among men. We have power to give them such a faith, and if we would invest life in that which will abide after our problems have gone, in that which will outlast the centuries and their history, then the investment must be in some ideal worthy to lead the faith of our age on to better ages and wider ideals.

GEORGE D. HERRON.

Professor of Applied Christianity in Iowa College.

## Vivisection Rejected.

FOLLOWING are a few extracts from the last public address of Lawson Tait, the greatest English surgeon, at St. James Hall, London.

"I reached this platform [anti-vivisection] some seventeen or eighteen years ago. . . . I had to submit to a deep humiliation, for it was no small matter for an ambitious young man of twenty-four or twenty-five to acknowledge that he had been wrong in his published conclusions, and admit that his experiments were not only utterly wrong, but mischievous and misleading. I was humiliated. . . .

"But the result was a pamphlet which I issued on the uselessness of experimentation upon animals for any purpose that you can imagine.

"I went to the records of medicine and surgery and found out how futile all the illustrations were.

"There is no condition of experimentation possible, with the influence of anæsthesia, from which just conclusions can be formed! The thing is ridiculous. It is a *reductio ad absurdum*. Your 'patient' must be either conscious or unconscious; if it is unconscious the experiment is admittedly 'worthless;' if it is conscious its nervous system is so stimulated, and it is so upset by the torture, that no truth can be arrived at.

. . . . . .

"I move this resolution:—

"That this meeting wholly disapprove of experimentation on living animals, as being crude in conception, unscientific in its nature, and incapable of being sustained by any accurate or beneficent results applicable to man."

This was seconded by Dr. Wall, in a telling speech, and carried. *The London Animals' Friend.*

All men freely admit that there is such a thing as human principle, and that this principle properly applied will always produce uniform results. Why not, then, admit that there is a divine Principle, high above the human, and that the proper application of this Principle is productive of uniformly good results?

Solomon said, "Keep thy heart with all diligence; for out of it are the issues of life."

In other words, Watch and pray with unceasing diligence, for thus only can our consciousness be kept in unison with God, who is Life, and in whom no death is.

God is the Soul of the universe. A Soul-less universe would be no universe,—a thing inconceivable.

## The Lectures.

### At Philadelphia, Pa.

Under the auspices of the First Church of Christ, Scientist, at Twenty-first Street and Fairmount Avenue, a lecture on Christian Science was delivered Tuesday evening, October 31, at Horticultural Hall, by Carol Norton, C.S.D., member of the International Board of Lectureship of the Mother Church in Boston. The lecturer aimed to show that Christian Science is Christian, curative, and lawful.

*Public Ledger,* Philadelphia, Pa.

Captain John F. Linscott, C.S.D., of Washington, D. C., introduced Mr. Norton in the following words:—

The First Church of Christ, Scientist, of this city, has invited me to run up from Washington to hear this lecture, and has conferred upon me the honor of introducing the distinguished lecturer this evening, and of saying a word myself. The Apostle Paul, when he got in a difficult place because of his belief in Christianity, his belief that God could heal the sick and the sinner and raise the dead by one and the same process, related something of his own personal experience to prove Christianity true as a whole. I shall do likewise. Under the saddening influences of the Civil War I drifted away from the influence of a loving mother's kind admonition, and later in life, nearly twenty-three years ago, while in the process of reaping the gloom and sadness that I had been sowing, the cumulative sorrow and pain of the senses, I made my first prayer to God. It was a prayer of ignorance answered in love and mercy. My absolute extremity was the Christ opportunity of that holy presence and power that had always rested upon me as upon all human beings. There I felt the first touch of true life and its sweetness and power, and I was helped physically, mentally, and morally. For ten years I labored from the platform and personally, under the auspices of the Woman's National Christian Temperance Union, under the gallant leadership of that golden-haired, silver-tongued orator for God and home and native land, Frances E. Willard. I found that we had this difficulty: while we could heal the sick mentally and physically, and give them a hope of divine power for deliverance, we had no scientific interpretation of the Scriptures whereby we could ground them in the letter and the spirit. So with the many interpretations it became bewildering to the human mind, and many as they grew weak in their faith grew weak in the flesh and relapsed.

Thirteen years ago I heard of Christian Science. I read in the newspaper a few lines or paragraphs ridiculing it, and I was prejudiced against it from that moment. Later a friend said to me, "I should think that you would be interested in Christian Science, because it is founded on the Scriptures." And that very moment I was interested. And it was not long before I took the Bible to my heart and I said, "I believe every word in this book that I understand, and every word in it that I do not understand God will reveal to me through Christian Science." And so I began to read the literature of Christian Science, and the first definition that I read was of Christ. I read it in the Glossary of Science and Health. The definition is this: "The divine manifestation of God, which comes in the flesh, to destroy incarnate error." I said, "I believe that." And then I read the definition of Christian Science, and I said, "That is a good definition; I believe that." Then I read in our text-book, Science and Health, that the theology of Christian Science, when understood, healed sin and sickness. And then I asked myself the question, What is Science? I turned to Webster's Dictionary and I found this definition, that "Science is a complement of cognitions, having in point of form the character of logical perfection,

Digitized by Google

and in point of matter the character of real truth." I said that is a good definition. What is the definition of theology? I turned to Webster, and he says, that "theology is the science of God and His relation to His creatures. The science which treats of the essence and character of God and His attributes and laws and His government. The doctrine we are to believe and the duties we are to perform." Then I put the definition of Christ with that, and I said, this seems a scientific interpretation indeed. Then I began to read the Scriptures from the understanding that had been revealed to me through the metaphysics of the divine Mind and its divine manifestation, as presented in our text-book, Science and Health; and then and now I take my Bible in my hand and I read Jesus' words where he said, "Search the Scriptures; for in them ye think ye have eternal Life." He saw that divine manifestation of God which comes to the flesh. Now I take my Bible in my hand and in my heart I can read, and in my heart I can see, and in my heart I can feel, and in my heart I can understand the voice of God speaking to me in Bible language, where before the words were meaningless. So I now read understandingly. My heart says, I will love thee, oh Lord, my strength. My understanding of this theology of the Scripture has enabled me in thirteen years' time so to preach the kingdom of God and heal men and women from the love of sin and the fear of pain and death, by preaching it, pouring in the kingdom of God by the letter and the Spirit, and placing in their hands the scientific text-book which gives the scientific interpretation of the Scriptures and practical Christianity, that I have said in my heart, "It has made a new Christianity for me. It has made a new Bible for me, and it has given me a higher understanding of God and my obligations to Him and my fellow-man."

So, dear friends, I am a Christian Scientist because it enables me to preach the kingdom of God with a better understanding of God and a better definition of God and man. I know there are some opposed to it, but we cannot help that, for every new and better thing which comes to the world is opposed at first. Old forms and creeds and doctrines and republics die in giving birth to new and better ones. And why not? I know that some of our friends say that it may do something for the body but there is no religion in it. Others say it may do something for the mind but there is no power in it to heal organic disease; but there are countless thousands declaring that it has healed them physically, mentally, and morally. We have gone through many deep waters. Some years ago in Iowa they arrested a man for healing a woman who was very ill and given up by physicians. The man was arrested and the case brought before the court, and the judge asked for the text-book that these people studied, and he read a little in it and said to the prosecuting attorney, "My dear sir, if there is a case here in this court it is a case against God, for I see that God does the healing through the teachings of this book, and this court has no jurisdiction to try such a case."

*Now* our work is progressing all over our land. We do not worship our Mother but we love her. We love this true Leader who has through all these years stood steadfastly at the helm and helped us mentally and spiritually through her kind admonition. So if you will please excuse a simple illustration I would say this: that you take your gold twenty-two carat fine and have it made into the most beautiful loving-cup and place on its top the richest gem on earth, the Koh-i-noor of the crown of England, and that would be the symbol of our love and appreciation of our dear Mother in Israel, the Rev. Mary Baker Eddy. Knowing that I have presented the poor wine at the first of the feast, I now have the pleasure of presenting to you my dear friend, Carol Norton, C.S.D., of New York City, a member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, Mass., whose life and sweet influence has been a benediction to me for the past nine years; and he will now address you on the subject of "Christian Science: it is Christian, Curative, and Lawful."

### At Marshalltown, Ia.

The lecture delivered before a large and intellectual audience in the Odeon on Thursday evening, October 26, by Judge William G. Ewing, one of Chicago's able jurists, and a member of the official Board of Lectureship of the Mother Church of Boston, was a masterly one and ably served its purpose of presenting to the people Christian Science in its true light.

The speaker was introduced by Hon. J. L. Carney who spoke briefly but fairly and liberally. That Judge Ewing is a firm believer in the doctrine, none who heard him will deny, for his remarks, while eminently broad-minded and just, had the effect of conveying to his hearers much of the deep conviction which is his.

The local Scientists have given the citizens of Marshalltown two most able lectures on the subject at considerable expense to themselves, but they feel more than repaid for their expense and trouble by the fact that their belief has been so fairly and intelligently presented to their friends and neighbors.—*Herald,* Marshalltown, Ia.

The Hon. Mr. Carney spoke as follows:—

*Ladies and Gentlemen:*—In inviting me to act on this occasion the ladies who called for that purpose stated that they did so in order to confer upon me an honor. I fully appreciate the justice of the remark. It is an honor to be invited to preside at this meeting of intelligent citizens. We are all, I hope, seekers after the truth; none need fear the consequences of an honest search for truth. No one will, I presume, deny that the doctrines of Christian Science have in the very recent past made wonderful progress. I for one am not dismayed thereat. When the human mind has grown so weak as to fear intelligent, candid, and fair discussion, the spiritual nature needs a powerful injection of some kind of tonic to restore its lost vigor.

In reflecting upon the stupendous discoveries within the last half of the present century, in the arts, in the science of healing, in electricity, and in almost all departments of human activity, imagination pauses in its flight and is soon outstripped by reality. The legal profession, I am glad to say, in these later days, needs no defender. Accustomed to deal with the gravest problems of life, the experienced lawyer weighs with care the reasons for or against any asserted proposition and rejoices in the triumph of truth. It is to listen to one of the masters in the profession that we have come to-night. He has been honored among the people with whom he lives by various positions of trust and responsibility; as a judge of the courts in the great city of Chicago it was his duty to hear the evidence, to apply the law. Whatever may be our individual beliefs we may be assured that he believes what he will state, and that his conclusions are the deductions of a mind trained to separate the chaff from the wheat, to detect and reject error and falsehood wherever found. I have the honor, and take pleasure in presenting to you, as the speaker of the evening, the Hon. William G. Ewing of Chicago.

### At Evanston, Ill.

Ex-judge William G. Ewing of Chicago, Tuesday evening, October 31, addressed one of the largest audiences ever assembled at the Country Club, on Christian Science. The lecture was given under the auspices of the First Church of Christ, Scientist, and was the most important address on the subject of Christian Science ever delivered in Evanston. Judge Ewing was introduced by Mayor Bates who said, in presenting him to the audience:—

Digitized by Google

There are certain creeds in which we all believe and to which we all subscribe. We believe in everything which elevates humanity. We endorse every effort and every influence which makes men better and purer and more honest and upright. We believe in all those things and endorse all those influences which help men to meet the duties and responsibilities of this life, which fits them for that better life which is to come. We endorse all those things which strengthen man's faith in God.

We are fortunate, my friends, in having with us to-night a gentleman who by his life, by his labors, and by his influence exemplifies these principles and this creed. I have known Judge Ewing for years. I have known him as the able and efficient United States attorney for the northern district of Illinois. I have known him as an eminent and eloquent member of the bar of the state. I have known him as an able jurist and a just judge, but I know him best, my friends, as a pure and lovable man. It therefore gives me very great pleasure to introduce to this large and representative Evanston audience the Honorable William G. Ewing, who will now address you.

*Press,* Evanston, Ill.

### At Saginaw, Mich.

Hon. W. G. Ewing, ex-judge of the Superior Court of Chicago, lectured at the Masonic Temple Thursday evening, November 2, on the subject of Christian Science, and the audience which filled the Auditorium was by no means restricted to followers of that belief. Influenced by a desire to hear the virtues of Christian Science expounded by one of its ablest advocates, many intelligent and thinking people gathered at the Temple and were well repaid by an address which was pleasing and scholarly. The speaker was introduced by C. C. Foster, of this city, who said:—

Some eight months ago we had the pleasure of listening to a lecture given by Mrs. Knott of Detroit, and as the time has arrived for us to have another lecture, we are happy to state that we have secured as the speaker of the evening the Hon. William G. Ewing, who is well known to many of the people of this section as an ex-judge of the Superior Court of Cook County, sitting in Chicago.

As a member of the bench, he commanded the respect and confidence of all, and has now abandoned his profession to devote his life henceforth to the higher profession of spreading the truth as contained in Christian Science.

Some fifteen years ago, Judge Ewing, through Christian Science, was healed of a malady pronounced incurable by the medical profession, and having been recently elected as a member of the official Board of Lectureship, he can speak from personal experience and knowledge of the subject before us to-night.

It is now my pleasure to present to you as the lecturer of the evening, the Hon. William G. Ewing.

*Evening News,* Saginaw, Mich.

### At White Plains, N. Y.

Mr. Carol Norton, C.S.D., of New York City, delivered a lecture on "Christian Science, it is Christian, Curative, and Lawful," at the Auditorium, on Thursday evening, October 26. Mr. Charles H. Dale, president of the Peerless Rubber Co., of New York City, introduced the lecturer with a few well-chosen remarks. The lecture was well attended by an appreciative and unusually intelligent audience. A large number of persons, among whom were many ladies, came from New York City and arrived in this village at eight o'clock to listen to the lecture. Mr. Norton is a fluent speaker, a cogent reasoner, and his lecture, which was logical, interesting, and instructive, was listened to with profound attention.

*Eastern State Journal,* White Plains, N. Y.

The lecture was given under the auspices of First Church of Christ, Scientist, of White Plains, N. Y.

The work here has only been started since August 13, 1899. We have now a regular Sunday service and Sunday School, with about twenty-five attending; also we have opened our church reading rooms daily to the public, and expect soon to be a chartered organization.

MRS. N. J. CARTER.

### At Chicago, Ill.

Former Judge William G. Ewing delivered an interesting lecture on "Christian Science the Religion of Jesus Christ," before an audience which filled the First Church of Christ, Scientist, to the doors Monday evening, October 30. Hundreds stood throughout the lecture, and the ushers were compelled to turn away more than a thousand for lack of room.

It was the semi-annual lecture at the First Church by a member of the Christian Science Board of Lectureship. As Mr. Ewing is a member of the congregation of the First Church as well as a member of the Board of Lectureship, his address was of especial interest. Many people prominent in other denominations were present. In introducing the speaker Edward A. Kimball, who is also a member of the Christian Science Board of Lectureship, said that Christian Science was forcing itself upon the affections of humanity and commanding the attention of the world by healing the sick, reclaiming the drunkard, and saving sinners.—*Times-Herald,* Chicago, Ill.

### At Grand Rapids, Mich.

The lecture by Judge William G. Ewing of Chicago, on "Christian Science the Religion of Jesus Christ," delivered Friday evening, November 3, in the Fountain Street Baptist Church, under the auspices of the First Church of Christ, Scientist, was one of the ablest, clearest, and most brilliant expositions of the Christian Science faith that has been heard in this city. In spite of weather that was extremely disagreeable the attendance was large, including not only members of the local organization, but of other churches as well, and the arguments of the eloquent lecturer were listened to with the closest attention throughout. The meeting opened with the singing of "Nearer, my God, to Thee," and then Mrs. E. G. Studley introduced the speaker.—*Herald,* Grand Rapids, Mich.

### Lectures at Other Places.

Rock Island, Ill.—Edward A. Kimball, Thursday, November 2.

## Among the Churches.

### Church Edifice at Racine, Wis.

AT the Sunday morning service of the Christian Scientists at Odd Fellows Hall on Wisconsin Street a collection was asked in order that the necessary amount might be raised to meet the final payment on the property recently purchased, to be used as a meeting place for the members of the First Church of Christ, Scientist. In response to the request a sum amounting to about two thousand dollars was voluntarily given, and now the last of the twelve thousand dollars required has been subscribed, and on November 1 the property will be clear.

Six months ago the property on the corner of Main and Seventh Streets, at one time the old Osborn homestead, and until recently occupied by the late Dr. Brodsky, was purchased. At that time, however, all the available cash amounted only to about five hundred dollars, and in the comparatively short space of time which has elapsed, and

Digitized by Google

when it is taken into consideration that the membership is only forty families, or about fifty members, it is indeed a great surprise to the people of this city that so large a sum as twelve thousand dollars could be raised by the Christian Scientists; in fact it seems almost incredible, but nevertheless it is true. What is more, this sect have received the money through voluntary offerings. They do not hold church fairs, sociables, suppers, or entertainments, as is customary in other churches; neither do they do any begging whatever. The money needed is freely given by the members, who are simply asked this question: "Has Truth given to you, and are you not willing to give to Truth in a material way?" And the response to the query is very liberal.—*Racine (Wis.) Weekly.*

### Progress at Marshalltown, Ia.

The Christian Scientists of Marshalltown, Iowa, have for several years held their services in a hall, but have now secured a beautiful little church in a good location, and they feel very grateful for the demonstration. There is only a small band of workers here, yet this step was taken without going in debt; rent was paid in advance, and other expenses provided for.

We have had two lectures the past year. The attendance has increased greatly since our services are held in a church building. ADDIE M. ROBBINS, Marshalltown, Ia.

### At White Plains, N. Y.

The Christian Science movement has quite a following in White Plains, and a permanent place has been secured in which meetings will be held every Sunday afternoon, beginning with next Sunday, at 3.30. This is in the Hart building on Railroad Avenue. Mr. Taylor will be present every week day at the rooms to give such information in reference to Christian Science, as those interested may ask for.—*White Plains (N. Y.) Journal.*

## Semi-Annual Meeting of the Mother Church.

THE semi-annual meeting of The First Church of Christ, Scientist, the Mother Church of Christian Science, in Boston, was held Tuesday morning, November 7. The progress of the movement was indicated by the reception of about twelve hundred and forty new members into the church. This makes the present membership of the Mother Church about sixteen thousand.

Associated with the Mother Church are five hundred branch congregations in this and foreign countries, with their five thousand healers, readers, and lecturers. Many of these societies already have temples of their own, while many others have church buildings in course of erection. Among those now building are two additional handsome structures in New York, two in Chicago, and others in several of the leading cities of the country.

Besides the cities already named having church edifices of their own, with strong congregations, may be named Providence, Philadelphia, Detroit, St. Louis, Kansas City, Denver, Salt Lake City, Atlanta, Toronto, Can., and London, Eng.

A resolution was sent to the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, expressing the affection and gratitude of the church which recognizes that the wonderful prosperity of the cause is due to her self-denial and her faithfulness to the teaching and example of Jesus.—*Boston Journal.*

**What a man does for others, not what they do for him, gives him immortality.** DANIEL WEBSTER.

## Supplement to the Sentinel.

THE official lecturers, appointed by the Mother Church to give the public correct information about Christian Science, have frequently been introduced by prominent men whose introductory speeches show how sincerely thinking people now respect our cause. Selections from among the many introductory speeches have been collected and printed in the form of a supplement which is issued with this number of the *Christian Science Sentinel.* This supplement will be an excellent missionary among all people and will cause them to think. To insure its wide circulation it will be sold at the following very low prices: Single copies, two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

## The Lord's Prayer.

[THE following poem is said to have been written by King James I.]

If any be distressed and fain would gather
Some comfort, let him haste unto
Our father,
For we of hope and help are quite bereaved
Except Thou succor us
Who art in Heaven.
Thou showest mercy; therefore for the same
We praise Thee, singing,
Hallowed be Thy name.
Of all our miseries cast up the sum;
Show us Thy joys, and let
Thy kingdom come.
We mortal are and alter from our birth;
Thy name be blessed here,
Thy will be done on earth.
Thou mad'st the earth as well as planets seven,
Thy name be blessed here
As 'tis in heaven.
Nothing we have to us, our debts to pay,
Except Thou give it us.
Give us this day,
Wherewith to clothe us, wherewith to be fed,
For without Thee we want
Our daily bread.
We want, but want no faults, for no day passes
But we do sin—
Forgive us our trespasses.
No man from sinning ever free did live,
Forgive us, Lord, our sins
As we forgive.
If we repent our faults Thou ne'er disdain'st us;
We pardon them
That trespass against us;
Forgive us that is past, a new path tread us,
Direct us always in Thy faith,
And lead us—
We, Thine own people and thy chosen nation,
Into all truth, but
Not into temptation.
Thou that of all good graces art the giver,
Suffer us not to wander,
But deliver
Us from the fierce assaults of world, and devil,
And flesh, so shalt Thou free us
From all evil.
To these petitions let both church and laymen,
With one consent of heart and voice, say
Amen.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Card.

WILL one and all of the beloved branch Churches of Christ, Scientist, to whom I have not already responded through these columns, please accept this card of thanks. And let it include my reply to any future resolutions which, as in the past, have so enriched our periodicals with their wealth of wisdom, fellowship, and love.

MARY BAKER EDDY.

Pleasant View, November 7, 1899.

## Note.

Mrs. Eddy writes that she had not time to prepare and get her reply in the last *Sentinel* to three of the churches whose resolutions were published therein, so sent the above card, which came too late for publication in that number, to explain why and to express her gratitude for them.

*Editor.*

## A Falsehood Corrected.

THE *New York World* of November 4, published a sensational despatch from Philadelphia relative to the death of a Mr. Morgan there, in which occurred the following:—

"Finally he [Morgan] became so bad that Mrs. Eddy came on from Boston and called at the Morgan house. She remained for several days, praying for Morgan's recovery. There was no improvement, however," etc.

It is needless to say the above is absolutely false. Mrs. Eddy resides in Concord, N. H., not in Boston. It is well known that she treats no patients whatever, and has not for years, for the demands upon her time are such that she is obliged to refuse all patients. For years she has published at the end of the preface to the text-book of Christian Science, "Science and Health with Key to the Scriptures," of which she is the author, the following note:—

"The author takes no patients, and declines medical consultation."

The absurdity of the falsehood published in the *World* is therefore patent to every one having the slightest knowledge of the truth.

We are glad to say that the *World*, on being informed of the facts, promptly published a correction.

## The Christian Science Publishing Society.

IN the *Christian Science Journal* for February, 1898, we published a full synopsis of the change of title of the property and assets of the Christian Science Publishing Society, and also of the new plan of organization accompanying such change of title.

The real estate, and all personal property and assets of every kind, were conveyed and transferred by the Rev. Mary Baker Eddy to The First Church of Christ, Scientist.

She executed simultaneously with the deed of conveyance and bill of sale of personal assets a Declaration of Trust, whereby three Trustees were appointed, with well-defined powers, duties, and obligations in connection with the Publishing Society, whose business had theretofore been conducted by a comittee known as the Publishing Committee. These Trustees became successors of the Publishing Committee.

The said conveyance, transfer, and Declaration of Trust, comprehend the following:—

"1. A conveyance in perpetuity to The First Church of Christ, Scientist, in Boston, Mass., of the real estate of the Christian Science Publishing Society, with the buildings now used by the Society, and located at Nos. 95 and 97 Falmouth Street, in Boston. Its value is not less than $22,000, and it is situated in a vicinity where the increase in value is considerable.

"The following reservation is made by Mrs. Eddy in this conveyance:—

"'Reserving, however, the right to have and occupy so much room conveniently and pleasantly located in the Publishing House as may be necessary to carry on the publication and sale of the books of which I am or may be the author, and other literature connected therewith.'

"2. A transfer to said Church in perpetuity of the *Christian Science Journal, Quarterly,* and all the literary publications of the Society, and every right and privilege whatever connected therewith, saving only the right to copyright the *Journal* in her own name, and all the moneys and assets thereof; these to be held in trust by three trustees. These Trustees are to have charge of the business affairs of the Society, and the business is to be continued in the name of The Christian Science Publishing Society. All accruing profits over and above the actual running expenses of said business are to be turned over semi-annually to said Treasurer, meantime the moneys and assets of the Society to be kept by the Trustees in a safe bank or trust company.

"The fund thus realized is to be held by the Treasurer for the benefit of the Mother Church, as now organized, and disbursed under careful safeguards in such manner as will best promote the interests of the Cause. The total present value of the entire property thus conveyed and transferred is fairly estimated at $50,000."

Thus it will be seen that all surplus earnings arising from the business of the Publishing Society go into the hands of the Treasurer of the Mother Church,—or in other words, for the benefit of the Church,—and are disbursed under careful safeguards in such manner as will best promote the interests of the Cause.

The Trustees are held to a strict accountability, as also are the authorities of the Mother Church. There is no chance for private speculation with the trust fund, even should there be a disposition to do so. As conducted, the necessary running expenses of the Society are provided for and defrayed by and under the supervision of the Trustees, which expenses are kept within such reasonable bounds as is compatible with the proper conduct of the business, fair and reasonable compensation, in accordance with a prudent Christian spirit, being awarded the employees of the Society, and convenient facilities for the work being provided. As the business of the Society increases—and it is rapidly increasing—these facilities must, of course, be enlarged.

Thus is the business of the Christian Science Publishing Society carefully and conscientiously carried on, and if such a plan, and the manner of its execution, constitutes a "trust," then all who are familiar therewith are proud of such a trust and thank God for it. They are quite willing the whole world should know of this trust and everything pertaining to it.

They are proud, as well, of the spirit of Christian magnanimity which prompted the Rev. Mary Baker Eddy to thus provide for the welfare of the movement.

It is truly a "religious trust" which has for its head one who thus unselfishly parts with private and individual interests for the promotion of a religious movement whose sole purpose is the uplifting and regeneration of humanity,

Digitized by Google

—the healing of the nations. Such a trust is God's trust, and to Him we gladly and devoutly commit the issue.

## The American Press.

THE kindly reception which is being accorded Christian Science by an ever-increasing number of American newspapers is one of the signs of the times. This patent fact is due to the displacement of misconception by an intelligent understanding of the aims, the methods, and the fruits of Christian Science. To be sure there are still instances where lack of information is evident, but even the unfair notices may be taken as the first step toward investigation and the possession of exact knowledge of our Cause. It goes without saying that the favorable attitude of the press has been brought about, very largely, by the wisdom of our Leader, whose lofty purpose, self-consecrated life, and loving labors are being appreciated by the fair-minded everywhere. Co-operating with our Leader in the enlightenment of the press there have been the earnest efforts of the local Scientists.

Their sincerity and good works commend them and their Cause to the thinking editors in American journalism. "By their fruits ye shall know them," and the Christian Scientists are ever ready to be judged by their fruits. Through wisdom and love the newspapers everywhere are being won to the side of justice and right. The Press is in position to be an efficient instrument for Truth; it is indeed a happy omen to see it so generally just and fair.

## The Church Manual.

THE 12th edition, containing the names of all the members of the Mother Church, including those admitted November 7 last, is now ready.

The importance of the members keeping themselves informed of the Church Rules and By-laws is so apparent that we do not deem it necessary to more than suggest it.

The Manual is now in two volumes, one containing the names exclusively.

## Expressions from the Branch Churches.

### Churches at Chicago, Ill.

[Copy of telegram from Chicago, received November 12, 1899.]

Rev. Mary Baker Eddy, Concord, N. H., November 12, 1899.

At a meeting representing all the Churches of Christ, Scientist, in Chicago, it was resolved that the Christian Scientists of Chicago in deep gratitude for the wise and loving example and counsel of the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, hereby express their appreciation of her patient toil and ceaseless efforts for the weal of mankind as leader of our denomination. Her faithful ministry has resulted in the healing of the multitude and justly won for her the trust, esteem, and love of millions. Having been associated with her during many of her thirty years of unparalleled labor for the world, we denounce every evil effort to impeach the purity of her motives and the rectitude which has governed all her actions; and we repudiate as un-Christian and pernicious any publication whatsoever that lends itself to the misrepresentation of her righteous life, and the Publishing Society which she has founded.

ARCHIBALD MCLELLAN, *Chairman.*

### First Church of Christ, Scientist, Lawrence, Mass.

In behalf of the First Church of Christ, Scientist, of Lawrence, Mass., the joint Board of Directors and Trustees adopted the following resolution:—

*Resolved,* that we express to our beloved Leader, the Rev. Mary Baker G. Eddy, and to the members of the Christian Science Publishing Society, with its efficient corps of executive officers, our sentiments of loyalty and unswerving confidence in all methods used for the extension and protection of Christian Science in its purity; that we proffer to them our loving co-operation and joyful obedience, based upon the salutary experience that has ever followed the pursuance of this course; that we protect our beloved Cause to the best of our understanding from the ravages of evil, and that we resolve anew to strive to emulate the sixth tenet of the Mother Church, viz., "to love one another, and to be meek, merciful, just, and *pure.*

SUSIE M. LANG, C. H. CLOSSON,
ANGELIA DAGGETT.

## Church Dedication at Middleburg, Neb.

A VERY neat and substantial structure has been erected by the Christian Scientists of Middleburg and vicinity. The dedicatory services were held on Sunday, July 9. Visiting Scientists from Seneca, Kan., Falls City, Stella, Humboldt, and Kansas City, Mo., were in attendance. Two services were held, one at 11 A.M. and one at 3 P.M. Each service was well attended, about half of the crowd being obliged to remain outside.

The following addresses were read:—

*Dear Friends and Brethren:*—With love which words cannot express, we welcome all who meet to worship with us in this demonstration of "our own vine and fig-tree." We are glad to have you know of our work, and that it is of God.

The Church of Christ, Scientist, is a menace to nothing but that which opposes God and godliness. It is making and will continue to make a steady war upon evil in all its forms. It stands for the right in everything, for Good and goodness, for Truth and truthfulness, in fact, for everything which makes men better, and this little temple set upon a hill, which cannot be hid, is but a type of the church of the everlasting building, the "house not made with hands, eternal in the heavens," "whose builder and maker is God."

It means, to be a member of this church, that we acquire the ability to think and act rightly; to be able to know the difference between a wrong thought or motive, and a right one; and further, to accept and be controlled by the right one; to act unselfishly, to deal justly.

In the book of Micah we read: "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" In the last chapter of Mark's Gospel is this promise: "And these signs shall follow them that believe . . . They shall lay hands on the sick, and they shall recover."

About twelve years ago, the proof of this promise was verified in this vicinity, and from this has grown the manifestation we to-day behold, which is of itself a sufficient proof of the stability and permanence of Christian Science. Christian Science has come to remain among us. Its teachings are being engraven upon the hearts of men. Its holy influence is being felt among mankind. It is healing the sick, comforting the sorrowing, binding up the broken-hearted, converting the sinner, and bringing a peace which the world can neither give nor take away. It is not a very easy matter to change the convictions of one who has been benefited by this Science, much less when their faith becomes understanding, and they are able to say with the Apostle Paul, "I know whom I have believed."

Truth is invincible. It will stand the test of time. It will bear the most searching investigation. Christian Science can be applied to all the affairs of humanity and will supply every need.

Digitized by Google

This edifice has been erected as a testimonial of this little band's faith and trust in God. Without the divine impulse to impel action, a church could not have been built. So it was the heavenly motive, born of divine Mind, which has built for us this little temple. How true have you found the words of Zechariah, the prophet, "Not by might, nor by power, but by my spirit, saith the Lord of hosts." The true temple, however, wherein true worship is found, is described by John the Revelator, in these words, "And I saw no temple therein [no material structure]: for the Lord God Almighty and the Lamb are the temple of it." The true idea, born of Spirit, God, is the Lamb, and by learning and living this idea, this right way, we enter into the true temple, the Holy of Holies, the spiritual consciousness, the realm of God.

These outward expressions are but types and shadows of the "sanctuary of soul," the condition whereof St. John spake when he declared there would be no more crying, nor pain, nor tears. "There shall be no more death, for the former things are passed away."

The erection of a church for the cause of Christian Science is but a means to an end, even the ultimate triumph over all sin, disease, and death. Its purpose is to cause mankind to learn of the true God, to know whom is eternal life; to cease sinning, to be better, to love God and our fellow-man.

It is something quite unusual for a church of a new denomination to commence erecting churches in the country districts. This is certainly a fulfilment of the prophecy, "The earth shall be full of the knowledge of the Lord, as the waters cover the seas." Churches of Christ, Scientist, are rapidly being built. Their membership is steadily increasing, and their influence for right and good is being felt throughout the length and breadth of the land.

❧

*Dear Friends:*—We are assembled here to-day to dedicate with simple and appropriate ceremonies, this little church to the service of the one God, Omnipotent Mind. To our mortal sense of things, it is a material structure of wood and stone, but it symbolizes the "house not made with hands, eternal in the heavens." It is the outward confession of our spiritual consecration to His service. Many of us have come up out of much tribulation, and are now building upon the sure foundation that God is infinite Love, the understanding of which liberates mortals, here on earth, from every phase of human bondage. Many of you have come from a distance, that we may all unite in one expression of deep gratitude for the growth and progress of that church, which to-day is restoring one of the lost elements of Christianity and is thereby affording proof of its divine mission. To each and to all we extend a hearty welcome, and may this welcome and these services carry the conviction that God is an ever-present help to-day as of yore. God is "the same yesterday, and to-day, and forever." Since God changes not, He could not possibly lose His ability to heal, His goodness, or His wisdom. Christian Scientists have but one God, divine Love, and therefore they have much love for the one through whom the light of Truth is again brought to this age. Thirty-three years ago there was only one Christian Scientist, that one was Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science. To-day Christian Scientists are numbered by hundreds of thousands.

This little temple is to-day dedicated to the One True God, and its purpose is to inspire love for God and man; to turn us from darkness to light, from sin to holiness, wrong doing to right doing, sickness to health. Christian Science teaches absolute right, and any mistake or wrong deed is adverse to its teaching. The ability to do right is gained as rapidly as we put our understanding of Christian Science into practice. Full and entire obedience is the ultimate goal. Our shortcomings and failures are the lack of a sufficient understanding of its teachings. Jesus was its true demonstrator, and the Christian Scientist desires to follow his steps in overcoming the world, the flesh, and all evil.

❧

The following address by Alfred Farlow, C.S.D., of Boston, was received too late for delivery at the church:—

*Beloved Brethren:*—No step could be of greater benefit to this period of your growth than that you have builded and are to worship in your own house. Here, unmolested by the likes and dislikes of others, you may rest in peace under your own roof.

It is blessed to have something which you may call your own. It gives you a stronger individuality as a society or organization to be planted permanently. It tells to the world that you have come to stay.

Every new religious body begins its career in parlors and halls, but its substantial and rapid growth dates from that period when it begins to own its own church edifices. It is difficult to convince the general public that you are really a religious denomination until you show forth to them the visible church building. Furthermore, the building of a church requires money and the self-sacrifice of its members.

It has been said that a religion that reaches a man's pocket-book must be a good religion. No class of religionists on earth are more liberal with their money, none more ready to give to the support of their cause, than Christian Scientists. Why? Because Christian Science proves itself valuable by its good works.

We are glad to claim the Church of Christ, Scientist, as our own and support and nourish it as we would an own child. The building of a church edifice speaks also of the love and harmony of its members. An agreement to build a church never grows out of the quarrels of its members, but rather is the direct proof of the unity and concerted action of its members.

Thrice blessed then are the people who constitute this little band. You have found a good cause, you have loved it and loved each other, or you could never have builded this church. Continue in love, peace, and harmony, and prosperity will follow all your future years.

At this period it cannot be said that the rogue only succeeds. God reigns in these latter days and the good alone are prosperous. The safety of a church as well as the safety of the individual depends upon the love and self-sacrifice of its members. Our love must be universal and perpetual, and evil must be kept out of our thoughts as well as our deeds.

ALFRED FARLOW.

*Humboldt (Neb.) Enterprise.*

## The True and the False.

BY JOHN CARVETH.

FOR centuries men standing high in the scale of human intellectuality have not only denied the inspiration of the Scriptures from cover to cover, but have declared that it does not even disclose the ordinary standard of human intelligence. These men did not see a single thread of spiritual law and power in the Bible, but its woof and warp were wholly material to them, and this, their worldly wisdom, was what Paul rightly called "foolishness with God." Others less material in thought discerned somewhat the spiritual idea, but they mixed it with the material in cause, means, and effect. They have heard and followed the voice of the serpent to Eve, that the spiritual and material grow on the same material tree, and that this heterogeneous mixture is not only good for food but calculated to make one wise. By accepting this evident falsehood as true, Adam and Eve lost sight of the spiritual tree of Life,

Digitized by Google

and gathered thistles and thorns. And from then till now the same course has brought the same results. Jesus came to plant anew in human consciousness a still higher sense of this spiritual Tree, and declared that it brought forth good fruit and could not bring forth evil fruit. He likewise showed that however alluring the fruit of the opposite tree might be, its beauty of to-day turned to ashes on the morrow. So when the same old serpent asked him to partake of the same fruit in the form of earthly kingship and material sway and power, and to mix in his healing of sin and disease the spiritual with the material, and thus acknowledge them both as of the same nature and character, both as real and natural, he knew the tempter to be "a murderer from the beginning, and abode not in the truth, because there is no truth in him;" that though the sweet was promised the bitter would be given, and that its hue of gold was but the glitter of brass. He rejected it. He knew that there was but one real power; that "it is the Spirit that quickeneth; the flesh profiteth nothing." He knew that by trying to serve two masters he would hold to the one and despise the other. He clung to the spiritual and by it he made the leprous claim of disease and the roaring wave his servants instead of masters. Paul beheld the line of demarcation drawn by Jesus, for he discerned that there was no communion between light and darkness, nor fellowship between righteousness and unrighteousness.

From beginning to end the Scriptures, by logic, allegory, history, metaphor, and parable, seek to separate between the spiritual and material, and to show that they cannot, except in human erroneous belief, blend in origin or conclusion.

The prophets of old in a greater or less degree, discerned and separated between the two.

When Jesus, who had been prophesied by the spiritual thought of preceding ages, appeared before the material and worldly sense of things, his clear spiritual perception of God and man enabled him so to heal the sick as to astonish and confound the material thought of his time. The better perception pronounced his works miraculously good, while those groping in the depths of deepest darkness, declared them criminally bad or denied them *in toto*. He who did the works knew them to be naturally good.

This spiritual discernment of Creator and creation, this tree of Life that bears but one kind of fruit, and which beholds evil in its varied forms as the mirage of ignorance, has healed the sick and sinful in all ages and climes, does now and ever will, until the light of divine Truth shall shine so clearly in human consciousness that the myths of mortals and material beliefs will no longer cast their shadows over the ever-present angel of health and peace.

Is not this so-called tree of knowledge, ever bearing and mingling opposite fruits, typical of the human mind, untaught of God, which is ever mixing its beliefs of good and evil, health and sickness, life and death, mind and matter, in what it calls a mortal and material man? And is not this mixture of ever-warring opposites the wheat and tares that must grow side by side, to human sense, until the harvest when the tares must be burned and the wheat gathered into "heavenly places"? And what is the harvest hour but the appearing in human thought of that spiritual sense which so clearly knows the true from the false that the separation may be made without injury to the true? And what is this fire that must burn the tares when the division is made, except it be that exalted and illumined human perception of divine Love that consumes every earthly thought and thing?

Is a knowledge of evil any more important to the understanding of good than is the knowledge of ignorance to the understanding of wisdom? To traverse the pathway of righteousness and love is it essential to carry with us the torch of cruelty and hate? To walk in the footsteps of Jesus must we hold before us the character of Judas?

The proposition to-day that a knowledge of this unsavory mixture is the wisdom that will make us "as gods" is as false now as when the serpent uttered it in the garden. And to accept it as true to-day as effectually drives us out of Eden as it did those who accepted it in the beginning. When the sweet is mixed with the bitter all becomes bitter. So when, in mortal human belief, truth and error, the real and unreal, *i.e.*, the spiritual and so-called material, are united in theory and practice, it is a co-partnership wholly wrong, which for the boundless good of mankind is being rapidly dissolved in the unerring court of Christian equity. This unholy and unnatural partnership is the tree Jesus pronounced corrupt. It is a kingdom divided against itself that is brought to desolation, a house built on the sand that cannot stand the winds of time. "Cut it down!"

Christian Science comes now as of old to separate between the spiritual and material, the right and the wrong. Truth and Love unflavored with error and hate, is the tree of Life, that yields her "twelve manner of fruits," "every month," and heals the sick and sinful through the spiritual alone, as aforetime.

When this separation is made and the suppositional partnership between good and evil is through Christly methods scientifically dissolved, on the theory that evil is not in any way essential to good, but ever clouds and darkens it, and that such unnatural coalition is impossible in fact and rests only on erring human belief, then will evil perish as mist before the sun, for lack of the only support—its supposed unity with good—by which alone it can even appear to exist.

The spiritual perception and understanding whereby to make this needed separation is gained only by studying "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy in connection with the Bible, and living and practising daily the Truth acquired thereby.

## What Shall the Harvest Be?

CHRISTIAN SCIENCE is the name given by its Discoverer and Founder to the system now attracting such marked attention, because of its practical application to the affairs of every-day life.

It is applied Christianity. This period of history, known as the Christian era, has been a remarkable one in the history of the human race. It was inaugurated by Christ Jesus, who set aside prevailing traditions and usages, and established the great principle of individual liberty, through the understanding of man's unity with God—Good. He certainly demonstrated this in his life and bade his followers do the work he did.

We are told that this was done for about three centuries after his ascension, giving proof of the ever-living Christ overcoming all opposing evils, material laws, and conditions. Since then profession has usurped the place of practical obedience to his commands; good words instead of deeds; inculcating obedience, and at the same time failing to obey; looking at Jesus the Christ as so far above and beyond all other men, that to emulate his example was to dishonor his divinity. Thus men lost sight of the true—the real.

Now, once again, the true idea has come to re-establish visible harmony, by healing all sin and sickness, making permanent upon the human plane the long hidden manifestation of infinite Love, which has ever wrought for man's highest development, even when man seemed most sadly blinded by his own ignorance of the Creator, the creation, and most of all, himself.

Although Christian Science is the very Science of Creation taught, illustrated, and demonstrated by Jesus; as a system of doctrine and practice, discovered by Rev. Mary Baker Eddy, and so named by her, it has been a factor in human affairs but thirty-three years. In these years its

Digitized by Google

stupendous power and promises have been fully established by demonstration. Human thought cannot form any idea of what it includes.

Picture to yourself, if you can, the wonderful transformations in thought and action since the beginning of the Christian era. Look on that picture, and then on this, the whole evolution of the Christian civilization with all that it includes.

Thirty-three years of Jesus on earth, to sense a plain wayfaring man, whose ministry ended in a dishonored death. But mark the Christ—the resurrection and the ascension confirmed the tokens of his divinity as proved by his works and words among men. But for those thirty-three years of earth-life, there had been no Christian era and no Christian civilization. How wonderful the fruits of those thirty-three years, yea, of the three years of public ministry of Jesus! What a harvest from the seed sown, which seemed so small to human sense!

Looking backward we cannot despise the day of small things. Looking forward in that era only the prophetic eye could see the new heaven and earth, and give a glimpse of the mystery that had been hidden from ages and generations.

All this the demonstrations of Jesus made not only possible, but it is the logical, inevitable outcome of his ministry, retarded and distorted by the failures and errors of human thought, through all the centuries. Yet the evolution of Truth, Life, and Love has gone on through all eternity, is going on now, and will go on forever, in an endless procession.

Thirty-three years ago the true idea illumined one heaven-born consciousness, and despite all opposing elements and conditions the result is already world wide, leavening Church and State, solving all vexed questions in human life. This true idea of the Unity of Mind, the One Mind supreme over all, "above all, and through all, and in you all," must forever dissolve all discordant elements and conditions, and solve all mysteries with the universal solvent of the Love which is Truth and Life—the one, supreme, all-inclusive Mind. The world now is giving Christ his true place as the Saviour of the world, but how far from it was the apprehension of those who crucified him.

What is the true position of the one now with us, through whom this demonstration has been made thus far? Is it not the demonstration of Mary Baker G. Eddy? Is she not the one to whom this illumination came? Did she not labor for, and embody it in the book, "Science and Health with Key to the Scriptures"? Has she not demonstrated the statements of the book, and thus proved her faith by her works? Is she not still demonstrating the higher problems of the Science of Life, scaling the heights of purer and more helpful thought, denying personality, following Principle as the way, and urging all who have accepted this revelation of Truth to do the same?

If the world at large cannot see this, if human hatred of Truth still makes her unselfish labors harder through opposition, cannot those who have received the blessing she has given to earth, and who have been and are grateful for the faithful work that has given this Truth to the world and to them, cannot they stand unmoved in solid phalanx about her, ready to stem every flood of error and to obey her every mandate as she obeys God? Those nearest to her have done this these last years, and the students of her faithful students have done the same, and so on; obedience to the one Mind has produced a unity of thought that is only possible to Principle and idea.

This alone is Truth flowing from the eternal Mind through, root, trunk, branches to the minutest buds and quivering leaflets. Through this loyalty to Principle the movement has already reached immense proportions.

Thirty-three years of our blessed Master's work among men, three years of public ministry, and the record says he had about one hundred and twenty faithful followers, yet all that has followed, and that is to come, is the result of his glorious demonstration of Love, of his promises, and their fulfilment.

Thirty-three years since the impersonal Truth appeared, and thousands and thousands have already accepted and are yet accepting it.

What will the harvest be?

> Who can predict results? He who can stand
> Upon the verge of nineteen Centuries,
> From then to now, see the vast view expand,
> Will shrink from prophecy. Pæans of praise,
> Exultant, grateful hearts with one voice raise,
> To her who taught them, waiting staff in hand,
> To follow where she leads, as God shall give command.

E. P. T. H.

*Dayton (O.) Weekly Herald.*

## Healed by Christian Science.

THE following statement of how his wife and daughter were healed by Christian Science, after all material remedies had failed, was recently made by Mr. C. A. Smith of Spokane, Wash., and read at a Wednesday evening meeting of First Church of Christ, Scientist, of that city.

I desire to say that it gives me great pleasure, under the circumstances, to acknowledge the truthfulness of the claims of Christian Science, which has been demonstrated to me in a manner that will admit of no reasonable doubt. Owing to the fact that we are comparatively strangers in this city and among you, I have hesitated somewhat in saying what I have felt it my duty to say concerning Christian Science.

Some of you, doubtless, have noticed that I have been coming to your meetings with more or less regularity for the past four weeks. I will say that these visits have not been made out of idle curiosity, although I must acknowledge that I know little or nothing of that divine Science taught here in your meetings. But I do know that there is some reality in it, and that it is capable of doing much, not only in the way of lifting up and elevating the scale of human progress and civilization, but in relieving suffering humanity and restoring the sick and disabled. To say that when I came to your city, less than two months ago, I was a sceptic in the faith of Christian Science, would be putting it mildly. Like many others I am strong in my prejudices, and though I had only a superficial knowledge of its claims, yet I felt that I was justified in condemning it on general principles, and took it for granted that its advocates were, to say the least, to a certain extent, victims of misplaced confidence, and while some of them might be sincere in their belief, there was practically nothing on which to base their claims; but the circumstances which have conspired to bring me to a realization of the truth and reality of Christian Science are too potent and convincing to admit of any doubt in my mind. Therefore I am trying, in a measure, to make reparation for my past misdeeds concerning this matter, and at the same time striving to gain some knowledge of this great and divine Truth. My eyes have been opened to this great Truth by demonstrations too convincing to admit of any reasonable doubt. The circumstances are briefly as follows:—

Our little girl, six years of age, had been suffering since early infancy from what the medical authorities termed a very weak and delicate stomach. In order to keep her from suffering continually she was kept on a very strict diet. Even with this precaution she was frequently subject to such severe attacks that we felt her life was in imminent danger. It was while she was suffering from one of these most severe attacks, and after a physician had failed to help her, that I mentioned the case to a friend who told me that he had personal knowledge of the successful appli-

Digitized by Google

cation of Christian Science treatment, and that it had accomplished astonishing results. His apparent good faith and lack of enthusiasm impressed me somewhat, but at the same time I entertained no hope that it would help our little girl. I, however, reported the conversation to my wife, and she lightly remarked: "Oh, I don't believe in that stuff, but we can safely give it a trial, as she cannot keep the doctor's medicine on her stomach, nor anything in the shape of food or nourishment." I remained at home longer than usual that day at noontime, and as I started to go to my office I met the good lady who had come down to see our child. She is a Christian Science worker, and had been informed of the child's condition by her husband, the gentleman with whom I had had the previous conversation.

The first treatment gave the patient almost immediate relief. Another treatment, at supper-time, after the child had slept for several hours, resulted in her taking and retaining on her stomach a glass of water, followed soon after by a second, after which she fell asleep and rested quietly all night. The following morning she got up as she was told she would, was dressed, and partook of a reasonably hearty breakfast, and we trembled for the result, for she had eaten nothing from Saturday night until this Wednesday morning, and was so weak that she staggered as she was being dressed, and said, "I act like I was drunk, don't I, mamma?" But as we were told to let her have just what she wanted, and being accustomed to obey the doctor's orders, we kept faith with our promise and did not undertake to exercise our own judgment in the customary way, which is the first evidence of faith in Christian Science displayed by us, but this was not until after we had been given unmistakable demonstrations of its truthfulness.

This beautiful illustration was followed by another which, if possible, is still more convincing. The mother of the child had been a sufferer for many years from the most aggravating forms of sick headache, apparently originating from the spine, and were of such a nature that the ordinary prescribed remedies failed utterly to have any effect upon her, and the doctors were powerless to render any permanent relief. This trouble was supplemented by an affection of the heart which manifested itself at frequent intervals in the most pronounced manner. Doctors could give us no assurance of permanent relief. We called in one of the well-known Christian Science healers about two weeks ago, who has been giving her treatments since, with the result that the headache has disappeared, as well as the difficulty in breathing caused by the heart affection. In consideration of all this we feel that it is our duty at least publicly to acknowledge the great benefit received from Christian Science.

Thus far there is every reason to believe that the cure of the little girl is permanent, as she is now allowed to eat anything her appetite craves and that too without any bad results. We have heard these cases both referred to in the testimonial meetings here, but in a manner so modest that it failed even to do justice to the cause of Christian Science. We feel now that we can do no less than to make an honest effort to acquire a more thorough knowledge of this great and all-important Truth. C. A. SMITH.

## From England to Alaska.

AT a recent Wednesday evening meeting in the Mother Church, testimonies were given by Christian Scientists from widely separated parts of the world, including one from England and another from Alaska. All had accounts to give of good healing work and of the increasing strength of the cause.

A woman from Port Angeles, Wash., testified that in February last there were but six people in that place who knew of Science and Health. At present there is a regular attendance at the Christian Science services of one hundred and the Sunday School has a regular attendance of fifty. This progress has been made in the face of opposition from the pulpits of various churches.

One of the pioneer workers in Great Britain said:—

"It is indeed a pleasure to be in this dear church once more. I have just arrived from England, and my mind goes back to twelve years ago when I first heard of Science, and I remember how few Christian Scientists there were in Boston then. I am rejoiced as I come here and see this crowd and hear of the churches established in the neighborhood. It is just twelve years since I heard of Christian Science and was healed by reading the book Science and Health. I remember when I first studied with the Mother and went back to Ireland and healed. I never charged for it, and when I told Mrs. Eddy of this, she told me to charge for it. Then I realized how much I had wronged my patients by not charging them. Sometimes I would keep on treating the patients after they were really healed, because they would not acknowledge the benefit they had received. When I began to charge for my work they got well in much less time, and were only too glad to say so.

"In Belfast, Ireland, there is a Christian Science house started. In Scotland there are three places where the lessons are studied, and in England, besides London, there are services at Hull. So you see how well the work has been going on in the last twelve years."

Perhaps the most impressive testimony was that of a colored woman from Alaska. She told how, in that far country, the precious book, "Science and Health with Key to the Scriptures," was put into her hands when she was bound by rheumatism, and other serious claims. She paid little attention to the book for a while, and when she did read it, seemed unable to understand its message. One day she opened Science and Health and read the second paragraph on page 162. This was the beginning of the book for her, and her own healing soon followed.

Having related the facts about her case and testified to her sincere love for, and gratitude to, our Leader for the great boon of Christian Science, the speaker told of several demonstrations, showing how she had proved God to be a present help in trouble.

The vessel which brought her down from Alaska ran aground during a storm, and was in a position of extreme peril, where the seas broke over her in great fury. The engines were started at full speed several times, but instead of going ahead, the ship stuck all the more firmly. Women and children screamed and strong men were thoroughly scared. Even the captain lost his head and was helplessly bewildered. One of the women saw the Christian Scientist standing by herself on one side, seemingly unmindful of the danger (she was seeking safety in the secret place of the Most High), and the passenger asked in amazement, "Are you not afraid?" "No," was the reply. "Why, what is the matter with you?" Calmly and kindly the Christian Scientist said, "There's nothing the matter with me, what is the matter with you? I know that God is present, and that His power is sufficient to save us and to still the storm." The others caught her words and began to edge up closer. "I did not feel afraid," said she, "but talked to them of God, saying what came to me, without question, and in ten minutes everything was all right and we finished our voyage in safety."

She stopped at Vancouver for a short time, and in the family where she stayed there was a young woman afflicted with a disorder which attacked her periodically with such violence that she had to be held down in bed for the several days during which the spells lasted, and between the attacks she was weak and miserable. This humble woman, who

Digitized by Google

was healed by reading Science and Health, awakened the girl's interest in the subject of Christian Science through her faithful practice of studying the Bible Lessons, and when an attack came on the girl asked her for Christian Science treatment, and was healed in one treatment and now is strong and healthy.

These experiences were given in such a spirit of meekness and sincerity that they deeply impressed all who heard them recounted.

A woman from Scranton, Pa., said,—

"Ten years ago I was a hopeless invalid. I was healed in two weeks through Christian Science. My children have been healed; my sister was raised from her death-bed; my father and mother were healed, and so was my husband.

"A young lady was brought into our reading rooms at Scranton, last March, who had been an invalid for twelve years. She had curvature of the spine and many other ills. She was carried in by two young men, her cousins, against the wishes of her friends. She had been reading Science and Health for about six months and had found what she believed would heal her. At the end of six weeks she came to one of our meetings and sat in a straight-backed chair throughout the service, and at the next meeting she came in, walking with the aid of crutches. From that time she improved, until now she is walking out of doors with a cane. The cane is used because one limb is shorter than the other. This young lady has converted a great many of her friends to Christian Science."

## Testimonies.

### Helped by Reading Science and Health.

As it is frequently claimed that the price of Christian Science literature is too high, perhaps it would be a benefit to relate the following incident.

A lady came to me who knew nothing of Christian Science, only having heard the name. During our conversation she said, "My husband is feeling quite sick to-day, in fact he has not been well since his sickness three years ago when he had the diabetes. The doctors gave him up to die, but he made the remark, 'I will fool those doctors yet.' He recovered so he was able to be up around, but said he was in almost constant pain." I told her something of Christian Science, and said if he would get our text-book, Science and Health, and read it faithfully, I thought it would be all he would need, as many were healed through reading it. She said, "Oh no; he never reads books; he reads the papers, but I never knew him to read a book." Her husband came to see me the next day and I talked with him about Science and what it had done for my family and some others whom he knew. He said, "I believe I will get that book."

That was about Christmas, 1898. I saw him again about the last of January, 1899, when he said, "I have read that book through five times and I am just *beginning* to *read it.* I have not felt as well in a long time." He is about seventy-eight years of age. He seemed very happy. I said, "Well, Mr. C., do you think three dollars too much for *that book?*" He looked at me quite surprised at such a question, and said, "No," emphatically; "three hundred would not be too much if I could not get it at a less price." I saw him again in July, and he had finished reading it the tenth time and was still reading. I have a feeling of pity for those who think of money as an equivalent for Christian Science.—E. B. F.

### A Great Change.

A gentleman called to inquire about Christian Science, and after conversing with me he was introduced to two other Scientists who related their experience. The next day he walked in and seated himself by my desk and the change in his appearance was remarkable. He said, "I came to tell you that I feel a great deal better than I did yesterday and am satisfied that my sickness is mental."

Asked how he accounted for the change in his condition, as he had had nothing but the impersonal talk of the previous day, he answered, "Well, you fellows were so light-hearted and happy, and so sure there was nothing to worry about, and seemed so to feel what you said, that somehow, when I went out, I couldn't help smiling and feeling light-hearted myself. Tell me why you are so enthusiastic over this Christian Science."

It was then made apparent to him that Christian Science revealing, as it does, the Science of Life, must be the only desirable thing in the world. Gaining the understanding of it one has all else, for it reveals Causation, God.

C. F. Brown, New York, N. Y.

### Greatly Benefited.

Although not a Christian Scientist, I will very gladly give you an account of what Mrs. A. O. of this city, through her treatment, has done for me. For years, in fact nearly all my life, I have suffered from a terrible cough; for weeks I had not rested from three o'clock in the morning. One evening Mrs. O. asked me if I would like her to give me a treatment. "Certainly," I said. From that time until now, a period of two months, I have never from coughing, lost one hour's rest, and I am very thankful for what has been done for me in this, and many other ways.

Mrs. Emma Leary, Los Angeles, Cal.

### Christian Science in Dentistry.

A few days ago I had a wisdom tooth to be drawn. As the forceps entered my mouth I mentally denied the claim of any power in mortal laws, and declared the Truth. Although I felt the instrument crowd and jar in my mouth I had not a twinge of pain. I thanked God for the downing of that seeming foe, and continue fighting my shadows which at times seem so very real, knowing that as the Sun of our Righteousness floods human consciousness the shadows disappear.—K., Amsterdam, N. Y.

### Rupture Healed.

It is my wish to tell of the great benefit which my son of five years has received through Christian Science treatment. His trouble was rupture caused by a fall. He had worn a truss for nearly a year, not being able to walk without it. As soon as he began the treatment he left it off, and has never felt the need of it since. He had seven treatments, all absent.—Mrs. A. E. Bell, Peoria, Ill.

## Proverbs.

Enter not into the path of the wicked, and go not in the way of evil men.

Avoid it, pass not by it, turn from it, and pass away.

For they sleep not, except they have done mischief; and their sleep is taken away, unless they cause some to fall.

For they eat the bread of wickedness, and drink the wine of violence.

But the path of the just is as the shining light, that shineth more and more unto the perfect day.

(Chap. 4, v. 14–18.)

A naughty person, a wicked man, walketh with a froward mouth.

He winketh with his eyes, he speaketh with his feet, he teacheth with his fingers;

Frowardness is in his heart, he deviseth mischief continually; he soweth discord.

Therefore shall his calamity come suddenly; suddenly shall he be broken without remedy. (Chap. 6, v. 12–15).

## From the Religious Press.

### The Duty of Self-Control.

Everybody agrees as to the fact, but in practice most of us sometimes come very far short of our ideal.

Of course self-respect is involved in self-control. When we realize that we are off our balance, that we are being swayed by forces which we ought to be able to control, we cannot help being ashamed. The momentary gratification which some people find in yielding to anger soon passes away, and at its best is no compensation for the feeling of weakness and self-contempt which accompanies the consciousness of having failed to retain one's poise of mind and conduct. To keep the tone natural and the language calm, to conquer the impulse to return the blow or the insult, to preserve a clear, cool, resolute mastery of conditions when the attempt is made to baffle and mislead one—this, in the lower and the higher grades of effort alike, reveals the master of self and therefore of others, for influence and usefulness are involved.

It is a maxim in the working world that no man can control others who cannot control himself; that the soldier, the sailor, the operative can be handled much more surely and rendered much more effective by him of the low tone and the quiet yet decided manner, than by cursing and threatening. He who can restrain and control himself wins inevitable respect and admiration. We admire him who succeeds thus, and he whose self-control evidently is based on Christian principle, he who seeks to restrain himself and in this way honor his God and Master, wins a double influence. And it is credited where credit is due. His Christian character is acknowledged. To some people the duty of self-control is far harder than to others. In such cases the victory when won, is the more creditable, but it is a lesson which almost every one of us, and especially those who are young in Christian experience, should take to heart, that, in the language of the good Book, "he that ruleth his spirit is better than he that taketh a city."—*The Congregationalist.*

### Christianity and Civilization.

The idea that the progress of the kingdom of God in the earth is dependent upon the extension of civilization throughout the world was uncompromisingly set forth by Rev. Dr. Lyman Abbott at the International Congregational Council. He said in substance that the railroad, the telegraph, the commercial enterprise, and the establishment of civil law, were necessary for the Christianization of the backward races, and that all that had been accomplished by Christian missions in Africa was as a few glowworms to the darkness of a starless night. The claim that the best way to promote the interests of the kingdom of God to-day is by imposing our civilization by force of arms, if need be, upon the backward races, is the latest modification of the inveterate distrust of the secular spirit in the spiritual power of the Gospel; and this claim is skilfully advanced as a pretext for the most indefensible aggressions upon the rights and liberties of these backward races.

It is no mere matter of guesswork and surmise that there resides in the Gospel itself, unhelped by statecraft, or armies, or commerce, the power to uplift and transform the most benighted peoples. It is not many centuries ago since our English ancestors were revolting savages or high-handed pirates. It has been precisely in those islands that most firmly resisted the inroads of Roman or Byzantine political and social influence that the highest forms of Christian civilization have been developed. When the British islands received the Gospel, they received the power that more than any other made them what they are. There is vastly more hope that the backward races will attain to a worthy civilization of their own under the power of the Gospel, than that they will become Christianized by the imposition upon them of the externals of some European civilization.—*The Watchman* (Baptist).

As an illustration to enforce an argument, *The Universalist Leader* says:—

"Health in its relation to the body is an absolute good; and is it not as good at one time as another?—in our first score of years as in our second, and before we are forty, as after? And any one can see the stupid solecism it would be to say: 'There being a chance to get health after I am fifty, and have rounded up a full half century, it is needless to get it before.' But health stands as an absolute good, and therefore a perpetual one in our constitutional makeup. There is, therefore, always good sense in securing it as soon as possible."

To proselyte for mere sectarian advantage is a miserable business. To proclaim good tidings for the joy of the whole earth is a sublime vocation.—*Christian Register.*

## Miscellany.

### The Power of Imagination.

The following interesting experiment is described by E. E. Slosson of the University of Wyoming: "I had prepared a bottle, filled with distilled water, carefully wrapped in cotton, and packed in a box. After some other experiments in the course of a popular lecture I stated that I wished to see how rapidly an odor would be diffused through the air, and requested that as soon as any one perceived the odor he should raise his hand. I then unpacked the bottle in the front of the hall, poured the water over the cotton, and started a stop watch while awaiting results. I explained that I was quite sure no one in the audience had ever smelled the chemical compound which I had poured out, and expressed the hope that while they might find the odor strong and peculiar, it would not be disagreeable to any one. In fifteen seconds most of those in the front row had raised their hands, and in forty seconds the 'odor' had spread to the back of the hall, keeping a pretty regular 'wave front,' as it passed on. About three-quarters of the audience claimed to perceive the smell, the obstinate minority including more men than the average of the whole. More would probably have succumbed to the suggestion, but at the end of a minute I was obliged to stop the experiment, for some in the front seats were being unpleasantly affected and were about to leave the room."—*Psychological Review.*

### The Only Christian Daily.

The *Montreal Witness* has been in existence fifty-four years and now has a constituency of two hundred thousand readers. It has from the first refused advertisements of strong drink, tobacco, theatres, and quack medicine, and thus sacrifices at least £10,000 a year. And yet it is a splendid success. The paper was originated as the *Weekly Times* by a sturdy Scotch Christian and temperance advocate, Mr. John Dougall. His son, John Redpath Dougall, persuaded him to convert it into an evening half-penny organ. This son has carried on the traditions of his father. He refuses all business alliances with Belial and allows no space to theatres and sporting gossip. He has made foes in plenty, and attempts have been made to blow up his works with dynamite. To his sturdy character is ascribed the fact that none of the Canadian dailies issue Sunday editions.—*Christian Commonwealth.*

### Curious Addresses.

Letters have been received at the Chicago post-office addressed to Cgicago, Chacago, Chacargo, Chacigo, Chagio, Chagoe, Chaicgo, Chaigo, Charcigo, Checago, Chigcago, Chicaco, Chicoga, Chicheo, Chigo, Chigako, Chighte. Chincago, Choinge, Choga, Chrecage, Cigaigo, Czikago, Dsciago, Gaceco, Gigago, Hicago, Kikago, Shiccago, Schikka, Schogio, Schichaco, Shkago, Sjicago, Stikago, Sukargar, Tschicago, Tchigo, Tezhiago, Zhtjgo. They got there, just the same.

## Notices.

### The Board of Education.

The Board of Education has prepared printed application blanks to be used by those who desire to appear before it for examination.

These blanks are now ready, and can be procured by written application addressed to the Board of Education, 95 Falmouth St., Boston, Mass. No other form of application will be received.

Special attention is directed to the following By-Law of the Church Manual:—

"Students are examined and given certificates by this Board, for no other purpose than teaching Christian Science. All other applicants will be dismissed."

### Supplement to the Sentinel.

The able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899, has been issued as a supplement to the *Christian Science Sentinel.* The workers in the Field will readily see the wisdom of giving the supplement the widest possible circulation, and the extremely low price at which it is issued will enable them to do so. The price of the supplement is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding, "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec 1. The per capita tax for the year beginning June, 1, 1899, and ending May 31, 1900, is now due.

### Church Rule.

It shall be the privilege of all the leading Churches of Christ, Scientist, situated in our largest populated cities, or in the capital cities of the United States, Canada, or Great Britain (in addition to their other established lectures), to call on Judge William G. Ewing of Chicago, Ill., for an annual lecture under the regulations and auspices of the Mother Church in Boston. Also, with the consent of Judge Ewing, the church shall publish his entire lecture in at least one of the leading, local newspapers.

### Clerk of the Mother Church.

All correspondence with the clerk of the Mother Church on matters pertaining to his office should be addressed to WILLIAM B. JOHNSON, C.S.B., 30 Norway St., Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

The latest reports from South Africa are to the effect that all the troops for the relief of Ladysmith are past Cape Town, while part of the relief is at Estcourt only forty miles away. On the 15th inst. an armored train which was sent out from Estcourt to reconnoitre, was shelled by the Boers and suffered a loss of ninety men in killed, wounded, and missing. The Boers are sending fresh troops to Ladysmith, which they say must fall in a few days; so that they will be able to confront General Buller, whom they expect on the western border.

It was reported that General Joubert, commander-in-chief of the Boer forces, was killed in action, November 9. The report, however, lacks confirmation, and is generally believed to be untrue.

Up to the present time about fifteen hundred British soldiers have fallen into the hands of the Boers. A prisoner who had been released, reports that the prisoners are well fed and shown every consideration.

According to a recent report of the Comptroller of the Currency, the number of individual depositors in the banks of the United States is gradually increasing. While the number of individual borrowers is increasing, the depositors greatly outnumber the borrowers. A gradually lessening rate of interest is being charged on loans, and is also being paid on deposits. The average deposit of the individual is increasing. July 12, 1899, 7,203 banks reported the aggregate of individual deposits as being $3,776,410,402. On the same date the aggregate loans were $3,475,272,262. The estimated grand total for 1899 in 12,804 banks is $7,513,954,361 in deposits, and $5,751,467,610 in loans.

The committee on pension legislation, appointed at the recent encampment of the G. A. R. at Philadelphia, has presented to President McKinley the report adopted at the encampment recommending certain changes in the pension regulations. Among other things the report recommends that the practice of refusing pensions to widows of soldiers who have annual incomes of ninety-six dollars or more, be discontinued, and that the limit in such cases be raised to two hundred and fifty dollars a year. Commissioner of Pensions Evans is in hearty accord with the suggestions and the President promised to give the report the fullest consideration.

Panama, a state of the Colombia confederacy, has asked to be annexed to the United States. It seems to have practically severed connections with Colombia, although its independence has not been acknowledged. Our State Department has paid no attention to the request, and even ignored its receipt. The population of Panama is about two hundred and fifty thousand.

The annual report of the Civil Service Commission shows that during the past year 48,503 persons took the civil service examination. Not quite 75 per cent of the candidates passed. Out of 4,414 appointments to the departmental and governmental printing services, 784 were women. Of the 24,213 women who have passed examination during the last ten years, 3,476 have been appointed.

Information is received from Manila that on November 11 one of the sharpest two hours' engagements of the war was fought near San Fabian. The Americans lost seven killed and thirteen wounded. Twenty-nine Filipinos were captured, and eighty-one found dead. The whereabouts of Aguinaldo and his army is a mystery. Bad roads have prevented the pursuit of the insurgents.

Major John A. Logan, son of the late General Logan, was killed near San Jacinto, November 14, while leading a charge against the insurgents. He was buried at Manila. Immediately upon receipt of this information, Secretary Root cabled General Otis to have the body embalmed and forwarded to Washington on the first returning transport.

The Methodists of Chicago will establish a seven-day church in that city. Services will be held every day, but it is not intended that the services shall be altogether of a religious nature. Concerts, lectures, and social gatherings in the church will be included, and later a library and reading-room will be established.

The November report of the Department of Agriculture shows that the cotton crop of 1899 is 1,595,000 bales less than in 1898. There was also a decrease in the yield of wheat amounting to 159,000,000 bushels; while there was an increase of 55,000,000 bushels in the oat crop, and 132,000,000 in the corn crop.

The annual report of the adjutant-general shows that the military forces in the service of the United States are composed of 64,586 in the regular army, and 34,574 U. S. volunteers, making a total of 99,160. The number of regulars and volunteers in the Philippines and en route is 49,414.

A despatch has been sent to Aguinaldo by President McKinley requesting the kind and humane treatment of the Spanish prisoners. The despatch was sent to General Otis, who forwarded it to General MacArthur with instructions to get it to Aguinaldo if possible.

Admiral Dewey recently said to President McKinley that if General Leonard Wood, who had command at Santiago, had been in command of the forces at Manila, there would have been no war; or, if there had been, it would not have lasted more than six weeks.

The fifth annual convention of the National Hardware Association met at Pittsburg, Pa., November 15. Three hundred delegates representing two hundred and fifty companies, with a capital of seventy-five million dollars were in attendance.

Secretary Gage has announced that the Treasury Department will purchase twenty-five million dollars worth of bonds. The four per cents of 1907 will be received and paid for at 112.75 net, and 111 net will be paid for the five per cents of 1904.

Rudyard Kipling places a valuation of $2.50 on every autograph he writes. The poet, however, does not receive the money himself. When a receipt is sent him, showing that the collector has paid $2.50 to some charity, he forwards his autograph.

The Court of Claims has been asked to find that $382,000 is the amount of bounty due Admiral Dewey, his officers and men, for the destruction of the Spanish fleet at Manila. Admiral Dewey's share of the bounty is $19,194.

The 31st annual convention of the Knights of Labor from all over the United States and some portions of Canada met in Faneuil Hall, Boston, November 14. This is the first time the annual convention has met in Boston.

It now appears that the three islands of the Philippine group, which were not included in the Spanish-American treaty, were not ceded because they belong to Japan, and were not claimed by the Americans.

Harvard and Yale met on Soldiers' Field, Cambridge, Mass., for their annual football contest, November 18. Neither eleven was able to score. It was estimated that fully thirty thousand people witnessed the game.

Owing to the increased price of steel rails, the men in the Illinois Steel Company will be able to earn from one hundred and fifty to three hundred dollars a month after January 1, 1900.

The postal revenues of the past year amounted to $95,021,384 and the expenditures were $101,632,160 leaving a deficit of $6,413,885. The cost of mail transportation was $54,423,058.

Rear Admiral Schley has recently become a Knight Templar and a Knight of Malta. The degrees were conferred upon him by the Columbia Commandery 2, District of Columbia.

In view of the French Government's proposition to grant amnesty to every one connected with the Dreyfus case, the trial of M. Emile Zola has been indefinitely postponed.

Representative business men in Hawaii have decided to make an exhibit at the Paris Exposition, and will ask for space with the other territories of the United States.

When Congress meets three seats in the United States Senate will be contested: Scott of West Virginia, Clarke of Montana, and Quay of Pennsylvania.

The total imports into Hawaii for the first nine months of 1899 were $13,667,372, an increase of $5,306,792 over the corresponding period of 1898.

The transport Indiana, bearing the Tennessee volunteers, the last of the returning volunteer regiments, has arrived at San Francisco.

The authorities at Cape Town recently intercepted a complete wireless telegraphy plant intended for the Boer signal service.

An unofficial, but apparently accurate census of Cuba shows a population of 1,317,000—a decrease of 315,000 since 1887.

The Artificial Lumber Company of America, with a capital of twelve million dollars, has been chartered at Trenton, N. J.

The merchants and bankers of Manila are asking that more of our treasury notes be sent there for use, instead of gold.

The number of round-trip tickets sold from Eastern points to Colorado during the season just closed, was 17,939.

Li Hung Chang thinks the United States had better sell the Philippines to Japan or buy Aguinaldo out.

General Jiminez was inaugurated President of San Domingo, November 16.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Have Miracles Ceased?

CHRISTIAN SCIENCE is a subject concerning which we hear many conflicting statements. However, a visit to one of the weekly testimonial meetings will bring to light the fact that the believers have very substantial evidence to bring forth in support of their views. The service was opened by a song, after which Mr. Robert L. Ziller read a chapter from the Bible followed by a short selection from "Science and Health with Key to the Scriptures," the text-book of Christian Science, written by Mary Baker G. Eddy, the Discoverer and Founder of this Science. Before proceeding with the meeting the speaker made the following remarks. "It is sometimes asked by those unfamiliar with the teachings of Christian Science whether we believe in prayer, in Christ, and in God; and whether the healing is through hypnotism. We are sometimes called a Godless and prayerless people, and it may not be out of place to remark that no statement that could be made about Christian Scientists would be further from the truth. We truly believe in God, yea, we know that He is 'All-in-all.' We acknowledge no other way of salvation than that taught by our blessed Saviour, and it is only by meekly and prayerfully following in the pathway he marked out for us that we hope to overcome the ills that beset humanity. No mental suggestion, thought-transference, hypnotism, or spiritualism enter into the ministrations of Christian Science. I have no hesitation in saying that those who will speak to-night will agree with me in the statement that their healing of sickness as well as sin was brought about by fervent and effectual prayer in the deepest, truest, and most scientific sense of the word. The meeting is now in your hands."

A gentleman in the congregation immediately arose and, noting the time, said, "I have but two minutes in which to speak to you to-night, as I have to catch the train, but I cannot half express the gratitude I feel for what Christian Science has done for me. My troubles were numerous and baffled all efforts of my physicians. I was examined by fourteen physicians and finally given one month in which to prepare for death. I was entirely healed through Christian Science, and I now know that God is our refuge, and an ever-present help."

Another gentleman arose and said, "I did not embrace Christian Science through being healed of sickness, for when I first heard of it I was not sick. To make my condition understood I shall have to go back about five years in my life, at which time I was a successful contractor. I lived in St. Louis and later in New Orleans, and spent many of my nights in the ring, for I was considered a good amateur boxer. It is hardly necessary to say that this led me among associates of the lowest character, where evil and vice of every sort is found. Reverses in business came, causing me to have but little income. I entered the ring as a prize-fighter, and was well known in that circle as an athlete of marked ability. My heart was never at rest and I thought that perhaps if I should move to a farm with my family an ideal life might be experienced. I came to Texas and bought a farm, but soon found that this failed to bring the satisfaction I had anticipated. Then Christian Science came into my life, and I knew at once that this was what I had always yearned for. I cannot express my gratitude to God for this blessing. It has filled my life with a joy hitherto unknown. It has made me a different man, for it has helped me in every way, and brought the understanding of what constitutes true life."

The speaker's voice choked with emotion as he concluded, and his hearers were deeply moved by his sincere and earnest expression of gratitude to God for Christian Science.

The next speaker was an elderly lady. She said, "I cannot leave to-night without expressing to the best of my ability the deep gratitude I feel to God for my restoration to health through Christian Science. Four years ago my case seemed hopeless and I was expected to die with consumption. I was urged to try Christian Science. I did so and was healed. Since then my understanding of this Science has often been of great use, and because my one desire is to know more of this blessed Truth that brings us nearer to God, I am here. I shall do all I can to help others with this blessed Truth."

Another lady testified to being healed nine years ago, and that she had been the means since then of bringing this healing to many others, and stated that Christian Science had been of great benefit to her family.

The next speaker said she had been a victim of hereditary consumption, having lost brothers and sisters by this disease. Finally it developed in her and she was expected to live but a short time. She said in part, "I tried all sorts of medicines and traveled to various climates. With each change there seemed to be a slight improvement, but it was never permanent. Finally, while in a precarious condition, I was induced to try Christian Science, and I was healed in about three months. I am a living witness of the efficacy of Christian Science, and have been instrumental in bringing healing to others. Words cannot express my gratitude to God for this priceless blessing."

A gentleman from one of our Western counties arose and told of the healing of his wife. He said in part, "We had tried everything we could try, and my wife was never free from complaints. Finally her mind became affected, and I had to be with her much of the time. This took me away from my business and everything looked very gloomy. We found that material remedies were powerless to do any good, and hearing of a method by which the sick were healed without medicine I wrote to make inquiry. I was advised to buy a book called 'Science and Health with Key to the Scriptures,' and did so. At the same time I wrote a letter asking for treatment in my wife's case. I soon noticed that she ceased to complain, and I saw that she was earnestly studying the book—a thing she had been unable to do before. In ten weeks my wife was well. I paid little attention to the book at first, and it was not until quite a while later that I was induced to make a careful study of it. It interested me very much, and I soon saw that this knowledge was a thing

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

greatly to be desired. I saw too that the healing was of God. Last summer our little girl became very sick with a fever. A telegram was sent to a Scientist asking for help, and within two hours the fever had left her. I am here to learn more of this Science. I would advise all to make an investigation of this subject, and you need not take my word for it, for you can read for yourself, and find what it is and does, and that it is the understanding of Christ's teaching as found in the sacred Scriptures."

The next speaker told how he had been healed of stomach trouble from which he had suffered many years. He said: "I had found no permanent relief. I could eat but few things that would agree with me and carried medicine around with me in my vest pocket continually. I went to a Christian Scientist here and told him of this one complaint and began treatment. It was my intention to tell him of my other complaints later if this one was healed. According to his suggestion I threw the medicine I had with me away. You can scarcely imagine my astonishment and joy when in a short time I found myself healed, not only of the disease for which I had asked to be treated, but of the others also about which the healer knew nothing. But I value the knowledge of the Truth which has come to me through Christian Science above all else. I feel younger, and life has now a meaning and a purpose to me. Since that time I have not lost a day from my work. I am truly thankful for the blessings of God, and I know that words cannot express half the gratitude I feel for Christian Science."

The last speaker was a lady who told of a case which had come under her observation in which the patient had been healed of the tobacco habit. She also stated that she had seen many diseases healed through Christian Science.

After singing a hymn the meeting, which lasted one hour, was brought to a close. This meeting was nothing like a revival, and the speakers were not at all under the influence of religious excitement. They spoke clearly and calmly, and when at times their voices seemed choked with emotion, it was evidently through a feeling of deep gratitude to God, and not through timidity or excitement. Your scribe had once heard the remark that only a class of weak-minded men and women took up the subject of Christian Science (though this congregation did not look like that class), and turning to an amiable looking lady who sat by his side ventured to ask, "Do you know anything of these people, and who they are?" "Oh yes," she replied, "I am acquainted with many of them. People from all walks of life are glad to embrace Christian Science. Do you see that tall gentleman near the wall? He was a minister. That gentleman on his left is one of our war veterans. He was formerly a judge in one of our northern counties, and is now a state officer. The gentleman nearest you is a lawyer, the one next to him is a merchant, and the one you see near the door is the District Clerk of a neighboring county." "Do I know who those three ladies talking together are?" "Yes, I am told that the young lady is the daughter of a Methodist minister, the one on her right is the wife of a well-known railroad man of Houston, and the lady in black is the daughter of President Lamar. They have come here to study Christian Science, and those you have heard speak to-night do so because they feel it a privilege as well as a duty to tell their fellow-beings how God has blessed them and restored them to health."

As your scribe walked homeward he wondered whether these were the people whom he had heard called "weak-minded fanatics," and he remembered the words from the Bible. "By their fruits ye shall know them."

*Daily Statesman*, Austin, Tex.

## Believing versus Knowing.

For ye have heard of my conversation in time past in the Jews' religion, how that beyond measure I persecuted the church of God, . . . being more exceedingly zealous of the traditions of my fathers. But when it pleased God . . . to reveal His Son in me . . . immediately I conferred not with flesh and blood.—St. Paul.

Thus have ye made the commandment of God of none effect by your tradition.—Jesus.

What are the beliefs of priest or people measured against the utterance of a truth?—Conilli.

The world is beginning to demand facts. The people are no longer willing to "imagine a vain thing," not even in religion. They are weary of crying "Peace, peace, when there is no peace." They cry "Where is the peace on earth? Where the good-will to man? Where the inhabitants that shall not say, I am sick? We want to see the fulfilment of the promises on our suffering bodies, in our desolate homes and blasted lives! Give us one little sign of the remedy that Jesus possessed for the world's ills."

Men say, in their creeds, "I believe in God, the Father." The agnostic, without a creed, says, "I don't know." On the one side there is the beautiful, loving sentiment; on the other, stolid indifference or wakeful investigation. But it is plain that the real difference between "I don't know" and "I believe" is not great enough to establish a system on either side that is not subject to change and dissolution. If a man were going to New York and did not know his way, one would not tell him to take a train of cars and they believed he would get there. He would have to know the way, even if only from one station to another. All are trying to find the way from the bondage of the human to the liberty of the Divine. Are we to be forever left to grope in theories and beliefs of men? Jesus, our wayshower, has said, "If a man will do his will, he shall know of the doctrine." Will the mere belief that there was a Jesus of Nazareth enable a man to love his neighbor as himself, or to live the life required of a Christian?

Mrs. Eddy, the Discoverer and Founder of Christian Science, in her text-book, Science and Health, says this of the word "believe:" "The Hebrew and Greek words, often translated *belief*, differ somewhat in meaning from that conveyed by the English verb *believe*, and so their derivatives have more the significance of faith, understanding, trust, constancy, firmness. Hence the Scriptures often appear, in our common version, to approve and indorse belief, when they mean to enforce the necessity of understanding."

It is important what men believe, because lives are molded by beliefs. But, until belief gives place to understanding, are we not still "dwelling in tents," and far from the "city which hath foundations"?

We owe the Orthodox churches endless gratitude and love in that they have believed and taught that God can and does destroy sin. This teaching has restrained crime, and accomplished untold good. May God speed them in their work of reform. But, if they will stop to think, they will agree that Jesus brought a full salvation. He healed the sick bodies that were brought to him, while he cast out their sins. Many are awakening to this fact who are not willing to slumber longer with the sluggard, or to be soothed by the "traditions of their fathers." They ask to see the "signs following" that Jesus predicted should mark his followers. He said, "The works that I do shall he do also." He did not say of the believer, the one who understood his teachings, the "words that I speak he shall speak," nor the "thoughts that I think he shall think" (however necessary these may be); yet he did say that the "works that I do he shall do," and works are practical—something that can be seen. What did Jesus prove his mission to be?

When the sick were brought to him it was not that he might prepare them to die, but that he might heal them of

Digitized by Google

their diseases. It is not recorded that he ever told them to be resigned, or that God made them sick, but it is written that he "rebuked the fever;" that he said, "Behold, thou art made whole: sin no more." Again, his mission was to preach the gospel. Why was it called the good-spell? Because he spake as one having authority and his words healed the multitudes of sin and of sickness. We have no record that he ever preached at a funeral, or that he ever said that death was the portal to heaven, or a friend to mankind. When he appeared, with his understanding that God is Life, the funeral was no longer a necessity. He abolished death.

Meekly, and in an infantile way as yet, the true Christian Scientist of to-day is following the Master. These people are proving their way as they go. Slowly, it may be, because, in a material age like this, it is a fight to see clearly the "narrow way of Spirit." But they give proof that they are healing the sick and destroying sin in themselves and others. They no longer believe but know in whom they trust. So far as they have demonstrated they know as confidently as they know the multiplication table.

There are more than a hundred people in this city who will testify that they have been healed by Christian Science —that whereas they were sick and some of them nigh unto death, they are now well. They know that their healer was not man, nor drugs, but God.

Daily the true Christian Scientist is seeing the power of divine Mind to destroy sin and sickness. They rejoice that the promise is that "all shall know me from the least of them to the greatest." "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

MARY TRAMMELL SCOTT.

*The Constitution,* Atlanta, Ga.

## Study of the Bible.

REAR-ADMIRAL JOHN W. PHILIP, who commanded the Texas in the war with Spain, delivered an interesting address Saturday afternoon, November 11, 1899, before the Young Men's Christian Association of the Naval Academy, at the Academy Chapel, and most of the officers and members of their families, with whom Admiral Philip is so popular. Admiral Philip said:—

I heartily congratulate the young gentlemen who are members of the Naval Academy Association for being enrolled as associate members of the Young Men's Christian Association, which numbers upward of two hundred and seventy thousand members in the United States and Canada. When I was a midshipman of the Academy the Young Men's Christian Association had not been thought of here. As you know, it was first organized in London, in 1844, and Boston and Montreal about the year 1851.

The conditions that exist generally throughout the country in regard to the influence of temperance and religion in all the important avenues of life are among the blessings that God had in store for our country.

The cadets at the Academy to-day are indeed fortunate. The education that the Academy gives, if properly applied, will enable its graduates to meet whatever demands will be made upon them, and these demands will be, no doubt, as they always have been, various, and frequently tedious and dangerous. The officers of our navy have always been called upon to fill places that would at first glance seem to belong to others. Science, in many of its branches, has been advanced by the study, research, and experiments of naval officers. Besides their help to science, it has occurred during the past one hundred and twenty odd years that the navy has existed, that our officers have helped to make treaties. They have also been asked to advise foreign governments in regard to their naval establishment and other matters, and the history of these years (by the way, more familiar to you than to me) and the records of the Navy Department, prove that wherever the naval officer has acted in the capacities above mentioned, or in other ways been called upon, he has done so without embarrassment, and in almost every case with credit to our government. The men who have in all those matters been most active have been men who were influenced and guided by the teachings of Christianity.

After forty-three years of service in the navy, being now very near the end of my career, with experiences varied and interesting in many ways, I am quite sure that the naval officer of to-day needs all the education and help possible fully to perform the many duties that the country has a right to demand of him.

Among the most useful helps in one's education, both here at the Academy and after graduation, I believe, is the study of the Bible. Wherever one may serve or whatever may be his duty, the teachings of the Bible are especially useful to the naval officer. Fortunate, indeed, is one who is influenced by the truths of the book that has been the means of giving us the daily blessing of our lives, and in all earnestness I would especially urge the young officers of the navy to lay hold of its teachings, for great are the blessings of those who remember their Creator in the days of their youth, while the evil days come not, nor the years draw nigh when one shall say, I have no pleasure in them.

Now in closing, I desire to leave this word with the members of the Association: Be not discouraged, but "let us hold fast the profession of our faith without wavering; for he is faithful that promised," and to the older officers of the Academy I would ask their aid and encouragement to the cadets belonging to the Young Men's Christian Association. While the nation educates your brain and trains you physically for the public service you are to perform in the navy, it largely leaves to your own individual selves the study of religion and the soul, which is, with the other, equally necessary to produce "the good and great—to make the hero and the man complete." Therefore, remember the opinion of one who is your sincere well-wisher, that religious study is necessary to a good understanding of one's duty to all men which is the basis of good discipline.

*Boston Herald.*

## Visiting Christian Scientists.

AMONG the visitors present at the Wednesday evening meeting in Christian Science Hall last evening was Mr. Gibbs, from Sydney, Australia, who had traveled ten thousand miles to learn more of Christian Science and to visit the home of its revered Leader, the Rev. Mary Baker Eddy. Mrs. Colles of London, England, told of the prosperity of the cause, not only in that great metropolis but throughout Great Britain. In Dublin and Belfast, Ireland, the movement is well established. In Edinburgh, Scotland, is a growing congregation. A letter was read from a Christian Scientist in far-away New Zealand, speaking of the growing interest there, and requesting that a lecturer be sent to them.

The home land had a representative in a leading business man of Cleveland, Ohio, who spoke with conviction of the practical value of Christian Science to business men.

*Concord Evening Monitor.*

It is stated that notwithstanding a number of branches from the Christian Science Church in Boston have been formed in the suburbs in order to reduce if possible the great crowds which have filled the main church, it is still thronged at the Sunday service and at the experience meetings on Wednesday evenings.—*Boston Transcript.*

## The Lectures.

### At Baltimore, Md.

Upward of two thousand Baltimoreans journeyed to the Lyceum Theatre Sunday afternoon, November 12, to hear Mrs. Sue Harper Mims, a member of the International Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass., deliver a lecture upon the doctrines of her faith. The house was crowded almost to the doors.

The lecture was given under the auspices of the First and Second Churches of this city. Mrs. Mims, the lecturer, is a native of Atlanta, and before her conversion was a social leader in the Georgia city. She was a warm personal friend of Jefferson Davis, General Joseph E. Johnston and other distinguished Southerners. Like many other converts, she was brought into the fold of the new faith by a personal experience of the efficacy of its disciples in healing disease. For fifteen years she was an invalid. Everything that medicine could offer to ease her suffering was unavailing, and she had given up all hope of recovery, when Christian Science and its teachings were brought to her attention. From that hour, according to her testimony, her lost health gradually returned.

Mrs. Mims soon became one of the most earnest Christian Scientists in the Church. To gain a better understanding of Christian Science, she received class instruction at Concord, N. H., from Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. Mrs. Mims' high social position in the South rendered her conversion very conspicuous, and it was not long before she was the head of a zealous band of workers in her native State. The influence of her example and teachings has been such that Christian Science is now firmly established in a half-dozen Southern States.

She is one of the two women who, with ten men, constitute the International Lecture Board of the Church. Her lectures have been heard throughout the South.

Mrs. Mims was introduced by Mr. Carol Norton of New York, who delivered a lecture on Christian Science in Baltimore a year ago. Mr. Edward H. Hammond, First Reader of the First Church of Christ, Scientist, of Baltimore, in presenting Mr. Norton, said, in part:—

A year has elapsed since the first lecture on Christian Science was given in our spacious Music Hall. The Scientists of our city at that time felt highly gratified at the large attendance and the great interest manifested. Encouraged by the success of their first, they now give to the public their second lecture. The two churches, therefore, the First and Second Churches of Christ, Scientist, now unitedly present to you, the people of Baltimore, this good-will offering. It is an offering made with a full heart. It is an offering made by those who give it from a sincere desire that others may share in the rich benefits which come from the knowledge of Christian Science. This knowledge we know betokens and prefigures "peace on earth, good-will toward men." For, as Christian Science becomes better known, it will be seen to be laboring not alone for physical health, but for that Heavenly peace whose nature is enduring, being built upon the rock, Christ, and for that good-will toward men which is the fruit of the Second Commandment: "Love thy neighbor as thyself."

We have been favored on this occasion with the presence of another member of the Board, the gifted lecturer who in November last so acceptably presented to us the ideas of Christian Science and their practical outcome. It will be his pleasure to introduce to you our honored guest and lecturer. I now have the honor to present to you Mr. Carol Norton of New York City, member of the International Board of Lectureship of the Mother Church in Boston, Mass.

In introducing Mrs. Mims, Mr. Norton said:—

*Ladies and Gentlemen:*—It is with a sense of privilege and honor that I have accepted the invitation to introduce the lecturer of the evening extended to me by First and Second Churches of Christ, Scientist, of Baltimore.

We have with us this evening one who is both spiritually qualified and officially authorized to speak of the great and blessed truths resident in Christian Science.

We are assembled here this evening to hear from the lips of woman of a wondrous and joy-bringing religious movement that is the direct outgrowth of one single, consecrated woman's life and labor. The influence of this great movement is felt throughout Christendom and in its tenets abides universal Christianity.

With you I esteem it a sacred privilege and a genuine pleasure to hear from the spiritual precincts of a Christian woman's heart an interpretation of the simple precepts of our common spiritual Leader—Jesus Christ.

As twentieth-century Christians, or as Truth seekers, standing already amidst the sunset shadows of a passing century, as men with faces hopefully turned toward life's bright and promising to-morrow, as women with faces upturned to God in heartfelt thanksgiving for the larger hope, freedom, and promise of these good new days, let us not forget, oh! let us not forget, the good that God has done for the race through the agency of righteous womanhood. Into the keeping of holy and undefiled and prayerful womanhood in all ages and among all peoples has the Eternal given His choicest gifts to man.

With a glory all its own abideth the religion of Jesus. Its saving and healing power is for this and all coming ages.

The virgin Mother whose Soul-sense and chastity spoke in the Magnificat through Creation's primal order gave to us Love's best gift to man—our Lord and Saviour. His life was her recompense and his victory over death and the grave proved to that sweetest, tenderest of women that her woe and tears shed as a living halo over the burden of his martyrdom were not in vain.

The Scriptural appellation, or name, of our Lord's mother was Handmaid of the Lord, or one who waits close to the hand (power) of God. Thus by virtue of her spiritual acquaintance with the eternal Nature became the most blessed among women. Down from the cross upon the upturned, sorrowing face of this Mary—his mother beloved—looked earth's most faithful son, and said in the pathos of filial affection, "Woman, behold thy son!" and then to John, "Behold thy mother!" Mary, to Christian believers the dearest among the names of women, received his last earthly ministration and was last to look up to and into those eyes that untiringly spoke of love; and Mary, most triumphant of names, was the first name that he spoke after the Resurrection. Thus in the sweetness of its own holy fragrance liveth this name in our midst to-day, a synonym for the chaste virginity, merciful love, and abiding constancy that constitute true womanhood in all ages and in all true religion.

Another Mary, true to woman's sublimest possibilities and spiritual instincts, speaketh to the world to-day of her risen Lord. Through prayer and tireless toil, through cross-bearing and spiritual victory, she has given and continues to give to the world the rediscovered and undivided garment of the teachings of Jesus—apostolic healing and the understanding of the Love that reforms and regenerates.

Among the consecrated women of the fair and sunny South I can confidently affirm that none is better fitted to speak of the great work of Mary Baker Eddy, and its relation to Christianity according to Christ, than the lecturer of the evening. For a period of about ten years I have been privileged to know of her lofty ideals, philanthropic activity, healing work, and sincere devotion to Christian Science, its Leader, and institutional growth.

Digitized by Google

Without further delay I have the privilege and pleasure of presenting to you Mrs. Mims, C.S.B., of Atlanta, Ga., member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, Mass. Mrs. Mims will speak to you of "Jesus in Christian Science; the Simplicity of his Method."

Mrs. Mims' voice is of that full-toned, flexible quality which is heard with equal distinctness by those directly before her and those at the extreme rear of the auditorium. She uses no gestures in speaking and closely follows the manuscript of her lecture. Though she spoke for more than an hour she held the attention of the large audience until the last word of her lecture.

*Herald*, Baltimore, Md.

### At Milwaukee, Wis.

Plymouth Church was filled with one of the largest audiences that ever assembled in that edifice Tuesday evening, November 7, to listen to the lecture of ex-Judge William G. Ewing of Chicago, on the subject of Christian Science. Every seat in the church was occupied and chairs were placed in the aisles to accommodate the people. Many were turned away, unable to gain admission. Judge Ewing was introduced by Mrs. Emily S. C. Finch, the Second Reader of the Second Church of Christ, Scientist, of this city. The subject of this discourse was "The Religion of Jesus Christ."—*Sentinel*, Milwaukee, Wis.

### Lectures at Other Places.

Kalamazoo, Mich.—Edward A. Kimball, Friday, November 10.

Lansing, Mich.—William G. Ewing, Monday, November 6.

Saline, Mich.—William G. Ewing, Monday, September 11.

Rock Island, Ill.—Edward A. Kimball, Thursday, November 2.

Algona, Ia.—William G. Ewing, Tuesday, October 24.

Liberty, Mo.—William G. Ewing, Saturday, October 21.

## Among the Churches.

### Second Church Organized at Houston, Tex.

At a meeting of the members of our society of Students of Christian Science, held in our chapel at eight o'clock Tuesday evening, October 24, 1899, it was unanimously decided to organize a Second Church of Christ, Scientist, of Houston, Texas. A charter was prepared, and forwarded to the Secretary of State, upon the filing of which the Second Church became a corporation under the laws of the State of Texas.

The Society, which has become the Second Church of Christ, Scientist, of Houston, Texas, was organized July 3, 1898. A few weeks after our organization, divine Love met our need by opening the way for our Society to hold services in a church building erected especially for our use. July 26, 1898, one of our members signed a five-year lease for a church building, fifty by twenty-five feet, to be built on Main Street between McKinney and Lamar Avenues, one of the most accessible and desirable locations in the city. September 4, 1898, we met there with our friends for our first service. The building is of frame, with metal roof and Gothic stained-glass windows. It is located just beyond a hedge of evergreens under the spreading branches of a large oak. In this quiet shelter all honest weary hearts may hear and learn of the blessed gospel of Christian Science, this new-old gospel of peace on earth and good-will to all men.

Upon completion of the building and the furnishing thereof, it was dedicated to the cause of Christian Science, and offered as a testimonial of our love to our Leader, the Rev. Mary Baker G. Eddy. Her acceptance of our offering was personally acknowledged.

Our labors have been rewarded with many beautiful demonstrations in the healing of disease and sin, and the work has prospered beyond our fondest hopes. With our Impersonal Teacher and Pastor this branch of the dear Mother Church is striving to demonstrate universal divine Love.

STONEWALL BOND.

### A Second Church at Washington, D. C.

"In thy name shall they rejoice all the day: and in thy righteousness shall they be exalted."

A Second Church of Christ, Scientist, has been organized in Washington, D. C., with eight members of the Mother Church.

It was incorporated October 7, 1899, under the laws of the District of Columbia. The Sunday morning and evening services and the Wednesday evening testimonial meetings are held for the present in a small hall at 1213 Twelfth St. N. W.

A Reading Room under the auspices of this Church was opened October 27 at 716 Eleventh St. It is centrally located in the business section of the city.

A Building Fund has been started, and two substantial oak boxes have been presented to us, each containing sums of money.

Divine Love is supplying our needs, and is blessing this young and tender Branch in many ways. We gratefully acknowledge Love's provision for us in the numerous gifts from Boston and elsewhere.

May the future prosperity of this church prove that it is indeed founded upon the Rock—Christ.

E. MINERVA VAN TRUMP, Clerk.

### New Quarters at Pittsburg, Pa.

The First Church of Christ, Scientist, has leased the chapel formerly occupied by the First United Presbyterian Church, on Fifth Avenue, between Boquet and St. Pierre Streets. For the past ten days decorators and furnishers have been at work on the interior, and to-morrow the congregation will occupy it for the first time, holding morning service at eleven o'clock and evening service at eight o'clock.

In May, 1895, two dozen Christian Scientists met in a room in the Pittsburg Academy building, Ross and Diamond Streets, and began holding religious services. In July of that year a church was organized, and in September, 1896, the church had outgrown its first meeting place and leased the chapel in that building, and ever since has held Sunday and Wednesday services there.

*Pittsburg Dispatch.*

### Property Purchased at Kearney, Neb.

The Christian Science people have bought the corner west of the Journal building and for the present will use the building on the lot for church purposes. It is the intention, however, to build, in time, one of the finest church edifices in the city on that location.—*Daily Hub.*

How poor is it possible to be? As poor as we are in head, heart, and will—and no poorer.

If we cannot get out of ourselves we shall be stay-at-homes with a vengeance, wherever we are.

H. A. KENDALL.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Notice.

THE Churches of Christ, Scientist, are hereby lovingly requested to address all articles they send for publication in our periodicals to the editor, Judge Hanna, and to mail them directly to his office, 95 Falmouth Street, Boston, Mass. MARY BAKER G. EDDY.

## The Article in the New England Magazine.

THE *New England Magazine* is one of the staunch monthly magazines of this country. While it is essentially devoted first to New England's interests, traditions, and customs, it reaches beyond its local environments out into the national domain of literature. Indeed it is of international importance, as so ably conducted and intrinsically valuable a publication must ever be.

Christian Scientists are more than ever appreciative of its merits since its publication of the delightful article by Henrietta H. Williams on "The Founder of Christian Science," which, with the interesting illustrations accompanying it, adorns the November issue. These illustrations are twenty-five in number, and in the beauty of their execution as well as the wealth of pictorial information imparted they add richly to this otherwise valuable historical sketch.

We are especially pleased with the picture of the "old gray farmhouse covering one of the knolls that outline the southern skies" which sat as a sentinel overwatching the "large, neat, well-kept farm" constituing the Baker homestead; a typical New England farmhouse of its day and generation, replete with reminiscent charm and suggestive of a generous fireplace, cheery blaze, and merry hum of spinning-wheel, not "at rest," but giving forth

> Its song of love and cheer.*

By easy retrospect we may also fancy, that here

> The tea-kettle takes up the song,
> And shakes his cap with laughter long.*

Not less interesting is the reproduction from old-fashioned daguerreotypes, of the strong, honest face of the father, Mark Baker, and the sweet, calm features of the step-mother, Elizabeth Duncan Baker.

One of the standard portraits of Mrs. Eddy is also well reproduced.

The old North Church of Concord, awakening sweet and tender memories of early religious life, stands out also in striking relief, wherein on the "great and solemn" Sabbath day "of the past generation" the Baker family, including the youngest daughter Mary, was wont to gather for worship.

The views—exterior and interior—of the Rev. Mary Baker Eddy's home at Pleasant View are well executed and, as always, attractive in their simple beauty. The beautiful little Christian Science Hall at Concord, also receives full justice. The church edifices — the Mother Church in Boston—those in New York, Chicago, Kansas City, and the neat little chapel in the White Mountains, are finely set forth in faultless half-tone. The interior of the Mother's Room is also exactly reproduced.

All these, with other pictures not here mentioned, make up a most interesting symposium of illustrations, showing somewhat of the external history and surroundings of a remarkable life. They have their place, and in no way tend to minimize the interior history of that life. But of the other and deeper side, the religious and spiritual, the sketch is by no means lacking in interest.

The references to Mrs. Eddy's early education, religious habits and predilections, church associations and attendance, and other data relating to the period of childhood and youth, bring out, in striking aspects, the processes of character-forming so important in every great and useful life. Much of this incident has never before appeared in print, and will be read for the first time with keen interest.

A letter to the Congregational Church of Northfield and Tilton, N. H., on the occasion of the celebration of its seventy-fifth anniversary—of which church she was in early life a devout member—in response to an invitation to be present, is filled with tender pathos, expressive of her deeply spiritual nature, even in childhood days.

We note these sweet touches:—

"Under the ministry of one of the first pastors of your church, the Rev. Enoch Courser, I took my first feeble footsteps side by side with my revered parents and the fathers and mothers of this church. Reverently I remember those solemn obligations which I so early assumed, and my daily prayers, then and now, were and are to live a Christian life."

Again: "Many of the members of this church have gone home; I am yet a pilgrim, with sandals on and face turned thitherward. All who have part in the merits of Christ or the Truth of salvation are working, watching, and praying here for more unity and love and for the communion hereafter with saints and angels."

This delicate touch of a personal nature is also worthy the pen which sketched it:—

"In meeting her I was much moved at the apparent loveliness and gentle kindliness of one whose history denotes great force of character, who has known deep sorrow, sharp disappointments, and also mighty triumph. No sordid life, no inefficient judgment, no reliance on human strength has wrought the spirit that shines through this devout face."

The writer, from frequent opportunity to note the characteristics of this wonderful woman, can corroborate all that Mrs. Williams has so well said.

There is an unusual blending in Mrs. Eddy's personality of masculine strength and feminine sweetness,—masculine in power of analysis, force of reasoning, and terseness of expression; feminine in quickness of perception, fine insight, sensibility to beauty, and purity of feeling.

And whence these extraordinary qualities? Is not her life of unvarying consecration to God, her constant endeavor to live apart from the senses and absolutely in Soul, a sufficient answer? Her teaching is that God is Love, and that man is the idea and reflection of God; hence the more of God, or Love, one reflects the more gentleness and loveliness will shine through face and feature.

All the above, and vastly more, is summed up in a single paragraph of the text-book of her authorship, "Science and Health with Key to the Scriptures," page 135:—

"To ascertain our progress, we must learn where our affections are placed, and whom we acknowledge and obey as God. If Love is becoming nearer, dearer, and more real to us, matter must then submit to Spirit. The objects we pursue and the Spirit we manifest reveal our standpoint, and show what we are winning."

It is a law as fixed as eternity that those who walk with God, by conforming themselves to His character, will *reflect* Him in personality and life.

Mrs. Williams concludes her exquisite article with a comprehensive reference to the growth of the Christian Science movement, and the relation to it of Mrs. Eddy as

* From "The Spinning-Wheel at Rest"—the charming book of poems by Edward Augustus Jenks.

Digitized by Google

its Founder. The production, as a whole, is a literary and historical achievement of high merit, and will stand throughout the future as one of the bright gems in the cluster of jewelled tributes to her of whom a distinguished jurist, who knows her well, has recently said, "I have no hesitation in deliberately pronouncing her the most marvelous woman of all the ages."

## Help from the Press.

FROM the papers kindly sent us from all parts of the world, we note with satisfaction the many ways in which the press is proving itself the friend of fairness and the true exponent of the facts concerning Christian Science.

The press is always glad to get the news and the items of interest concerning this growing Cause.

The editors, as a rule, gladly publish notices of the Church services, and accurate information concerning church organization, additions to the membership, church building, and church dedications. Important articles from the *Sentinel* and *Journal* often appear in many papers. The lectures delivered by the members of the Board of Lectureship, are quite generally published in full, and usually gladly so; while all messages and addresses of our Leader are welcomed by the papers of weight and influence.

Christian Scientists do not undertake to write out their own interpretation of the Sunday Sermon for the Monday morning papers, but notices of these services are printed very generally in the Saturday press, and carefully written accounts of the Wednesday evening meetings not infrequently appear. Well attested cases of healing in Christian Science which now frequently appear in public print proclaim the fact that the Christ-power which healed through Jesus of Nazareth, is to-day at our very doors awaiting our welcome.

Because an exact and precise statement of Christian Science is needful, because capitalization and punctuation must be correct to rightly express the thought, careful proof-reading and revision of the articles is required. In this work the editors welcome the help of the Scientists and are grateful for their assistance.

We note with pleasure that in case of misstatement regarding Christian Science, the newspaper making the mistake is usually perfectly willing to print a brave, yet careful, kindly, and Christian correction of its erroneous article. We take this opportunity to thank our friends for kindly sending us the papers containing items of news concerning Christian Science.

## A Personal Word.

I AM compelled to announce that I am not subject to personal interviews relative to matters connected with the Board of Education. I can only refer intending applicants to the Church Manual, the information contained in the application blanks, and the notice in our publications. These contain all the information I could give in a personal interview.

Let those who wish to apply send their applications accompanied with such explanation, in brief, as they deem necessary, and in due time, they will be notified of the decision of the Board. If any question exists one member of the Board cannot pass upon the sufficiency or otherwise of applications. This must be done by the Board as a whole.

I again emphasize the following By-Law:—

"Students are examined and given certificates by this Board, for no other purpose than teaching Christian Science. All other applicants will be dismissed."

Letters received indicate that this provision is being ignored. It will be strictly enforced.

SEPTIMUS J. HANNA.

## Regrets.

WITHOUT entering at all upon a consideration of the relative right involved in the war between Great Britain and the Boers, we cannot but express our deep regrets that so soon after the Peace Conference at The Hague, in which England bore so conspicuous a part, this unfortunate and bloody conflict should have ensued.

It is the more to be regretted since both parties to it in their national capacity are professors of the Christian religion. Let us hope that a precedent has not thus been established which will disannul the good effects of that great assemblage of peace ambassadors.

On the contrary, let us know that the angelic announcement of "Glory to God in the highest, and on earth peace, good-will toward men" which ushered in the Christian era is none the less operative, and will yet become the watchword of the nations of the earth.

## The Larger Hope.

CHRISTIAN SCIENTISTS are truly disciples of the "larger hope." They are learning, day by day, to look through the falsity of error to the reality of Truth. To know that, in the highest sense, only Truth is real, and that every phase of its seeming opposite is unreal, because untrue, is indeed assurance that the Kingdom of Heaven *is* come, and the Father's will is being done in earth as it is in Heaven. The Divine will is ever and eternally Good, not evil.

## Communion Service.

IT will be noticed that the subject of the Bible Lesson for December 10, is "Sacrament." This lesson is prepared for the convenience of the branch churches where Communion service occurs twice in the year, in June and in December, on the second Sunday of the month.

## Out of Darkness into Light.

BY G. M. RISHEL.

I DID not become interested in Christian Science because I was healed physically, but I was attracted to it by hearing of the wonderful cures it was producing. I at once decided that a system of religion that was able to do works of this character must surely be the correct religion. This was about twelve years ago. I read the book, Science and Health, but it was almost a sealed book to me.

The Massachusetts Metaphysical College was open at that time, and I often wished that I might have the pleasure of attending the college, that I might gain more understanding of this system that claimed so much for mortals. The way, however, did not seem quite clear for that, so I kept plodding along by myself for several years, as there was not a Scientist in our beautiful mountain city to whom I could apply for help or answers to my questions. Nine years ago I attended a class and came home greatly refreshed.

Then came the time of persecution. I had been a member of an Orthodox church for several years. I saw more clearly than ever that Christian Science must be the Truth as taught and demonstrated by Jesus. I was enthused more than ever, and did not keep it a secret. It seemed too good to be selfish about, and I longed to share it with others. I told several of the prominent church members about it. The first was the minister's wife, who was an invalid and had about decided to have a surgical operation performed. I told her that she would not be obliged to go to the hospital for treatment, because Christian Science could heal her and do the work better than

Digitized by Google

all other forms of treatment. She seemed somewhat interested, and I left, promising to send her a book that would explain the principle of Christian Science.

Several days afterwards I had a call from the minister. I cannot tell all the conversation. I confessed my ignorance on so great a subject as Christian Science, being so young a student, and he so well versed on his theology and plan of salvation, yet I do not feel that I got the worst of the argument. My answers to him always seemed to be ready. A beautiful passage from the Bible or Science and Health always flashed before me to give him. There was not one harsh word spoken. I felt that he was mistaken in regard to Christian Science, and that *some* day he too would see the glorious Truth.

After he left I had almost more to demonstrate over than I was able. The remainder of that day was spent in deep thought. I was trying to decide whether, after all, I would be lost in the end, as he said I was lost then. He said I had deviated from the true path, and the only way for me to be saved was to get back to where I was before I learned of Christian Science. I went through a great deal of darkness at this time,—darkness that could almost be felt, but the light was not entirely obscured. It appeared again, faintly at first, but more and more as I put my entire confidence and trust in God. I realized then that it was the only thing I could do. The Board of Directors drew up a set of resolutions in which there were some directions to follow. I was to take my choice, either give up my Sunday School class or Christian Science. They knew that I loved my class and I felt sure they thought when it came to the point, that I would choose to give up the latter. I gave up my class. I could not give up Christian Science.

From that time until now I have never had a doubt that Christian Science was of God. For a long time after this experience I wondered why, when I had such a desire to know more of our beautiful Science, I could not grasp its teaching more quickly, and why I could not do what I was continually reading that others were doing.

I know and realize now that I wasted much valuable time with just these thoughts. It is a complaining, distrustful thought that hides the "all Good," instead of bringing it to our vision. The Light of Truth cannot appear so long as we cloud it by holding in our consciousness such opposite thoughts. When I began to realize this, I tried at once to divest myself of all these downward thoughts. I tried to trust more to divine guidance. I rested more absolutely in the Spirit and as a consequence I experienced more happiness and peace of mind than ever before. I also learned this lesson, that in climbing up the hill of Science, we must let "Patience have her perfect work." We must ascend the ladder rung by rung. It is useless to try to reach the top until all the previous steps have been taken. True, it may seem that there are those who take two or three steps sometimes to our one, but in the Master's words, "What is that to thee? follow thou me."

Our best is all that is required of us. I am resolved anew to do my best in freeing my consciousness from every thought unlike the good. What if the physical senses do declare this to be an herculean task? I shall not let the physical senses frighten me. They have no power in reality, because there is only one Power and that is God, and He reigns indisputably.

Jesus said, "The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light." To be single in thought to the Good is the teaching of Christian Science from beginning to end. We must reap as we sow. The good seed, that we, as students of Christian Science, are now intelligently sowing *must* give us a bountiful harvest. "Let us not be weary in well doing: for in *due* season we shall reap, if we faint not."

## Justice and Honor.

BY M. BETTIE BELL.

WE can only honor God by acknowledging His creation as spiritual and immortal. Then nothing can take away our faith in and understanding of the spirituality of the sons and daughters of God. To honor God it is necessary to take three steps: First to learn to know God as the Principle and only Creator of the universe and man; Second to honor the real self as a part of His creation; and, Third, to honor our brother man by understanding that he can manifest no deflection as he is forever reflecting his Creator. It is thus that Truth and Love are honored and justice becomes peacemaker to mankind. If justice comes of law and law is Life, then sin, sickness, and death are not justice and not the law of Life. Many are saying, "What authority have you Christian Scientists for presenting the Word in the way you do, and why are you so radical and narrow-minded as to disbelieve in preachers and want all your churches to read from the book?" Hear the command of Jeremiah to Baruch and let it answer:—

"Then Jeremiah commanded Baruch, saying: . . . Therefore go thou, and *read* in the roll, which thou hast written from my mouth, the words of the Lord in the ears of the people in the Lord's house upon the fasting day: and also thou shalt read them in the ears of all Judah that come out of their cities. . . . Then read Baruch in the book the words of Jeremiah in the house of the Lord, in the chamber of Gemariah the son of Shaphan the scribe, in the higher court, at the entry of the new gate of the Lord's house, in the ears of the people. . . . And they said unto him, Sit down now, and read it in our ears. So Baruch read it in their ears" (Jeremiah, 36 : 6, 10, 15).

We will observe that Baruch did not *preach* the word from his own conception, but obeyed the command and read it from the roll or book.

In the last chapter of Esdras (Old Testament Apocrypha), it is declared twice that Esdras was the reader of the law.

"And he read in the broad court before the holy porch from morning unto midday, before both men and women; and all the multitude gave heed unto the law. And Esdras the Priest and Reader of the law stood up upon a pulpit of wood, which was made *for that purpose*" (1st Esdras, 9 : 41, 42).

Every true Christian Scientist is a healer, teacher, and preacher of the word, but, as of old, the law is expounded in the pulpit by the Readers chosen "for that purpose." How can justice and honor be established on the earth and the One Mind reign if the law is not read and understood and all of one accord come together to worship Him in Spirit and in Truth? The prayer, in the fourth chapter of 1 Esdras from the thirty-seventh to the forty-first verses inclusive, denies emphatically the whole material condition, and declares that Truth is "the strength, kingdom, power, and majesty of all ages." This Scientific prayer of declaration won the victory, built the pulpit of wood, established the reading in the pulpit, and was accepted of all, having one opinion. It is thus that justice strengthens and enriches, giving us the opportunity to demonstrate one gospel, one ministry, one law. Through justice is the law fulfilled, and "as thy days, so shall thy strength be."

Jesus trod the wine-press alone; bore the ignominy of his persecutors; suffered the woe of Gethsemane; and endured the agony of the Cross to destroy the illusive doctrines of injustice and demonstrate to the world the justice of a pure religion. Justice is a tree of life laden with the fruit of reason. Resentment, hate, jealousy, anger, and variance between members of the body must disappear through the just action of a righteous law. Justice gives

Digitized by Google

us dominion over all evil. It says, "The way of transgressors is hard," and if you know the way and refuse to walk therein, you shall be beaten with many stripes.

Love demands of us each day a higher proof of our loyalty to Truth, a stronger denial of self-affections, a firmer understanding to part with sense-pleasures until the dream is broken and His kingdom is come and His will is done.

Let us strive to walk in Wisdom's way by overcoming a false sense of justice and injustice, honor and dishonor, that we may expel from consciousness that which binds, and exchange the "stony heart" for a "heart of flesh." True Christianity expresses itself through justice and honor. It never leaves us nor forsakes us. It is the "Lo, I am with you alway, even unto the end." The Christianity of Christian Science is the Christ-nature speaking through man. This is the twain wedded together which brings out a knowledge of God in the understanding of life. It is here we find grace and charity, peace and purity, piety and affection, power and holiness, strength and temperance. Clothed with these, man is wedded to his Maker in the bond of perfection. In our lives we must grow to express these qualities, do justice to our religion, and give honor to God.

## The Harmony of Life.

BY M. F. MILLER.

"SEEK ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." "Ask what ye will."

Here, then, is the solution of all peaceful, prosperous, and perfect living. What, then, can be the matter with poor humanity, irritable, thoughtless, incompetent, selfish, poverty-stricken, disease-stricken, sinning, dying, mortal man—the direct opposite of man as the image and likeness of God—Supreme Good?

Jeremiah, 50 : 6, explains what the trouble is very clearly. "My people hath been lost sheep: their shepherds have caused them to go astray, they have turned them away on the mountains: they have gone from mountain to hill, they have forgotten their resting-place."

Creeds and doctrines, rites and ceremonies have led them astray, turned them on the mountain, the high plane of the spiritual understanding of God as all in all. They have gone from mountain to hill, a lower plane of thought, become steeped in the belief of good and evil.

They have forgotten their resting place—not lost, but forgotten it, and Christian Science is leading the world back to its resting-place. Up out of the valley of lust, poverty, and degradation, away from the hills of self-righteousness, pride, ambition, selfishness, to the pure atmosphere of supreme Good, the kingdom of heaven (harmony), the Holy Mountain where they neither hurt nor destroy.

Our text-book is the key that unlocks the treasures of the inspired word, the shepherd of this and all future generations to lead them up the mountain to their resting-place to the knowledge of God, the Father of all. How gently, lovingly, wisely, our dear Leader and Mother is feeding the sheep as they toil, ofttimes slowly, always joyously, up the mountain side, and how we love her who has taught us to worship God in spirit and in Truth.

The Psalmist has graphically pictured the Christian Science movement of to-day: "Let the redeemed of the Lord say so;" redeemed from sin, disease, and death; in other words, from mortality or the belief of Life in Matter, from wandering in the wilderness of sin, a belief in something besides God, without a habitation save in sorrow and disease. The "little book" is calling them from every corner of the earth and they are being gathered together from the north and from the south, from the east and from the west, into the understanding of Good—from wandering in a solitary way not knowing God as the principle of their being. Our loving Mother, from her high place, watches her children, coming, some mounting on wings as eagles, some toiling, others springing around or over obstacles, many wandering in a zigzag way, hungry and thirsty, their souls fainting in them. To such she reaches her hand with words of courage and cheer (Science and Health, p. 327). "Love means that we shall be tried and purified."

How beautiful is this Mount Horeb at whose top is our resting-place!

The pale invalid whose first transforming thought has turned his sad eyes upward feels a thrill of hope deathless and eternal though "often beset by fearful odds."

Little bands of pilgrims struggling up from the mountain foot, torn by discords from without and within, look upward and take heart, knowing the gates of brass are broken and the bars of iron are cut in sunder; knowing the tempestuous seas of error must hear and obey the "Peace; be still" of him who is always with us. All around the mountain sides watch-towers are springing up, nestling among luxurious verdure, standing boldly out on projecting rocks, clinging to out-of-the-way, strange places, sending their cheering beams abroad so that the upward wanderer seeing the light is sure of a joyous welcome. "How beautiful upon the mountains are the feet [understanding] of him who bringeth good tidings, who publisheth peace."

Up the mountain side the earnest student of the "little book" is climbing, rejoicing to find that little by little he is learning to be absent from the body and present with the Lord. Little by little the belief in matter is receding and he understands that as it was in the beginning it is now and ever shall be. In the beginning it was peaceful, calm, the morning stars sang together and all the sons of God shouted for joy, so is the real world now and ever shall be.

Hear, oh Israel! the Lord your God is one Lord. There is naught beside Him, and omnipresent Good is made manifest—the Christ, yesterday, to-day, and forever. There is on earth peace, good will toward men.

## The Protecting Power of Truth.

BY MARIETTA T. WEBB.

ONE Sunday morning a year ago last August, while seated in church, and my head bowed in silent prayer, I had a presentiment of my home being in danger of fire. I took in the situation in a second; we had not had any rain since the early spring, and the excessive heat of the summer had made everything very dry.

For a moment I thought what a terrible loss it would be if such were the case. Then fear began to creep upon me, when suddenly I was confronted with Truth, which said, "I am applicable not only in the treatment of diseases, but in all the difficulties and trying places of life."

I at once began to demonstrate the Truth. Sweet peace stole over me, and when the silent prayer was ended, and we were repeating the Lord's Prayer with the spiritual interpretation, I forgot my presentiment for the time being.

When I arrived home from church the first thing that met my sight were signs of fire. Two of my neighbors who had rushed in to assist my husband in putting out the fire met me with frightened looks on their faces, and exclaimed with uplifted hands, "O Mrs. Webb! I don't know what saved your home, or your husband! Aren't you frightened?"

To their amazement, and my husband's, who had his hands and arms bandaged, I calmly answered, no. I then went on to explain why I was not alarmed or even surprised; and they marveled at it, although I had often

Digitized by Google

spoken to them about the wonders that God's truth will perform.

I did not look at the burns that my husband had received, nor did I bandage them, and in a day or so they were all healed. The fire was caused by the explosion of a bottle of gasoline, which had been left standing in the hot sun.

At first there was a slight explosion which sent the cork flying out, followed by a little flame, which instantly ignited a curtain, and this attracted by husband's attention. In grabbing the bottle to throw it out of doors it exploded and went to pieces in his hands, the fire from it running up his arms and also igniting the woodwork at his feet.

The damage to our home was very slight. Surely "The angel of the Lord encampeth round about them that fear him, and delivereth them." The Bible and "Science and Health with Key to the Scriptures" are my daily guides, the heavenly manna on which I feast and live.

O, glorious Truth that makes us free; that guides us into all the avenues and through all the vicissitudes of life; that is a healing balm for all human complaints; and that protects us from all evil; and which I verily believe is to be the only salvation of my race, the Afro-American, and that it will abolish the prejudice which exists throughout these United States; for, go where we will, we are made to feel our color.

But with the wide and rapid spread of Christian Science man is not only learning what the true love of God is, by loving all mankind; but he is getting out of his old prejudiced self, into the spiritual sense of man's union with God.

## Thoughts.

BY HARRIET LINCOLN COOLIDGE.

DID you ever begin your work for the day with a feeling of weariness and discouragement? Have you tried to overcome these feelings with prayer and the reading of the Scriptures all to no purpose? Then have you questioned yourself and wondered why God did not help you? I feel quite sure that many people have had such days as this, but of course it was *before* they had heard of Christian Science. Now, if we are tempted with such thoughts, we have our remedy in reading our little text-book, Science and Health by Mary Baker G. Eddy, and in all the blessed promises in the Bible, which seem so different from the old thought. All the doubts and fears gradually fade away if we calmly and quietly try to realize for ourselves the beauty of this great Truth.

Have you ever watched the sunrise among the grand mountains and hills? At first all seems misty. Masses of white, soft vapor lie in great clouds between the hills and down on the lowlands, but as we watch, the bright rays of the sun penetrate every place where there is mist or shadow, and then if we turn away or close our eyes for a few minutes, when we look on the scene again, all is changed; the glorious sun has risen, we can see the distant hills clearly where before we could only see a very short distance. Now the little birds are singing joyously as though they too were thankful for all this brightness, and we know they are always glad and happy. Often I wish we were as ready to sing hymns of praise as they are. We should be, for we are told that we are of much more value than they. Christian Science clears away all the mists that seem to obstruct our view, but at times we do not rouse ourselves to look at the sunrise. We have not awakened and need to be shaken or have a shower-bath of Truth poured over us every day until we are fully aroused and can see all things in the pure, beautiful light of Christian Science.

A dear teacher of Christian Science once pointed out to me the sweet hymn of Cowper which is in our Christian Science Hymnal, and it has been so very helpful to me that I like to speak of it here.

**Ye timid saints fresh courage take!**
**The clouds ye so much dread,**
**Are big with mercy, and will break**
**In blessings on your head.**

**His purposes will ripen fast,**
**Unfolding every hour;**
**The bud may have a bitter taste,**
**But sweet will be the flower.**

**Blind unbelief is sure to err,**
**And scan His work in vain;**
**God is His own interpreter,**
**And He will make it plain.**

COWPER. *Alt. and Abr.*

## A Jealous God.

BY C. M. RICKARD.

BY the light that Christian Science turns upon the Scriptures, we can understand much that was once far from being clear or satisfactory to the searcher after Truth.

In the second commandment, Moses, one of God's interpreters to mankind, undoubtedly used the verb translated *jealous* with a profounder sense of the term chosen than the English word is ordinarily used to express. Jealous, applied in its lower meaning to a phase of mortal belief, is a human passion, and is not applicable to the Supreme Being. Used in its higher signification, it implies, even in the English tongue, a careful presentation of characteristics; a self-appointed guardianship over intrinsic and inalienable rights, enforcing their recognition. Making the application of the word impersonal, we can therefore accurately define it, as

A quality of an exact Principle, which denies and casts out every claim to equal or even comparative power with itself.

Thus: the Principle of mathematics is *jealous* of mistakes of figuring, in the sense that when the principle and its rules are applied to numbers, it uncovers and destroys every error of attempted ignorant, imperfect, or careless calculation.

Light is *jealous* of the darkness. That is to say, Light does not admit any reality in darkness, but holds to its own supreme and exclusive right to shine. It is therefore *jealous* of the darkness only in the sense that owing to its nature as light it excludes the darkness. When the light of day, or of understanding, appears, the obscurity of night, or of error, or of ignorance must needs disappear.

Love knows no rival in hatred, because where Love is, hatred can have no existence. Truth recognizes no authority in a lie, nor does it admit its right to be, for when Truth speaks the lie falls powerless, and is reduced to nothingness.

Harmony does not tolerate the presence of discord, for harmony, it is readily seen, can contain no element of discord, and when harmony is made manifest discord must necessarily flee before its presence. Admit the *real* into consciousness, and it excludes the *unreal*.

In this profound sense, Good, or God, as the Principle of Being, is truly *a jealous God*, for Good acknowledged as supreme is seen to be the Intelligent Governing Presence and Power that banishes the ignorance of evil, annihilating, because of its intrinsic nature, all that is unlike itself, Good, or God.

Speaking of Christian Science, did you ever hear one of that cult seeking to persuade others to follow it? I never did. Moreover, I never heard of abuse of other people's religion at a Christian Science meeting. But I suppose that there are quite a few things hereabouts of which I have not as yet heard.—*Poughkeepsie News-Press.*

## Immortal Life.

BY ANDREA HOFER PROUDFOOT.

THAT God is our only Life and that all Life is immortal has been much clearer since the Sunday lesson of October 15. It is sweet to realize that if we will only work there is no more mystery about immortality than there is about working out an example in mathematics, if we will but take the rule and use it.

In explaining the thought of immortality to some of the children the following line of argument came up and helped us all to see more clearly in what immortality consists.

If we are thinking something to-day which will be forgotten to-morrow it was never a real thought any more than our dreams are real. In the place of this empty, useless thought, we receive one which is a real thought, one which is always true and lasting. This is surely clothing our minds with immortality or eternal thoughts which can never die. So day by day, if we strive to have true thoughts we shall lay off the old useless thoughts, and put on the lasting helpful thoughts which enable us to demonstrate happiness, health, Love, and Truth, and these are the things which make us live forever. Thus we partake of that Mind which is everlasting. "And this is life eternal, that they might know thee, the only true God."

How easy it is to put on immortality if we will only lay off those thoughts which are really not thoughts at all but only dreams. If we learn the Truth, which can never die, and put it into practice, we really enter step by step into eternal life, through the understanding thereof. We do not need to wait until we are educated or grown up, to begin to take these steps, for the Bible says, "My yoke is easy," and surely, is it not easy if we begin in this way with the help of Science to know eternal Life?

## Awake Thou that Sleepest.

BY M. FLORENCE EUSTIS.

THE past week, I seem to have been awakened to the fact of the work one must do as a Christian Scientist. We are asleep, resting in the work that Mother and the head ones have done and are doing, resting in the fact that Truth *is* and hence must be victorious.

Jesus said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you," showing plainly that Truth is, is for us, and that we are to have it, but, he said, "*Ask, seek, knock.*" Words expressive of decisive *action*.

The character of Peter has always been of interest to me. It was Peter who, at a time when Jesus was despised and rejected, said, "Thou art the Christ;" and again when Jesus explained why he would wash the feet, said, "Not my feet only, but also my hands and my head." No half-way position for Peter, yet, at this time, Jesus foretold the denial. Did he see that Peter was satisfied with the position of disciple, but not ready for the work belonging to that position?

In reading the account of, to find a reason for, the denial, I saw this, "And Peter followed afar off"—the other disciple went in, but Peter stood without. (Luke, 22 : 54; John, 18 : 15, 16.) Had he gone in, he never would have denied his Master, for his position with Jesus would have shown all that he was a friend, but he stood without, hence the reply, "I know him not."

Can it be that many are holding the position of Christian Scientists, yet are not working, just resting content in the work others are doing? Truth *is*, but Jesus said, "Ask, seek, knock," in other words, *prove*.

## Testimonies.

### Demonstration over an Accident.

Mindful of the injunction to bring our tithes into the storehouse, and not to listen to the subtle suggestion of error which says, "Don't write," I wish to tell of a demonstration over what seemed to be a severe accident, while attempting to get off an electric car after it had started. I was on the running-board, and finding the car was not the one I wanted, tried to step down, not realizing the speed, and was thrown upon my back into the street. There was perhaps a moment of unconsciousness before I was lifted to my feet and surrounded by anxious friends and spectators. I was able to realize the Truth instantly, and to declare audibly that I was not hurt, was perfectly well and able to continue our trip, during which I treated mentally as well as I could. I seemed to grow worse rapidly. No bones were broken; the injuries being wholly internal, but when our destination was reached I could hardly drag one foot after the other, but refused all offers of help from the Scientists who were with me, because I felt the time had come to rely upon my own understanding of Christian Science healing, as taught in our text-book, Science and Health. I ate my dinner with the others, but when we started to return home I had to be carried to and from the train, boat, car, and carriage to my home. Those who saw me afterwards hobbling about with a cane will testify to the severity of the claim.

In the old thought I could not have risen above the evidence of the senses, and should have gone to a hospital or spent weeks in bed at home, and perhaps have become a cripple. But in Christian Science I never doubted for a moment that God would heal me, and could feel the claims yield to the power of Truth from day to day. I never gave up for an hour nor accepted any of the kindly offers of help in my household duties, and was cheerful and happy all the time. Later on I found that leaning so heavily on the cane and throwing my weight upon the least injured side caused it in turn to become so lame and stiff that I could not move without excruciating pain, and I saw that my cane must be laid aside and I must try to walk without it. This seemed difficult, since from the extent of my injuries I could not tell whether I should break into pieces or fall over like a log at the first step. So one morning, in addition to the regular treatment, I opened my Bible at the ninth chapter of Matthew and studied it long and faithfully, and then I committed the closing paragraph on page 360 in Science and Health to memory, and went into my bedroom to try the experiment of putting one foot before the other, but holding the cane in my hand and standing so as to fall upon the bed. A few timid attempts showed me that all material aid must be put aside, and once more trusting to the power of Truth I put the cane away and took the first step with fear and trembling and much suffering. It was some weeks before I was fully healed. The accident happened the last week in July, and by the first of September all outward manifestations had disappeared, and I have been perfectly well and free from pain since. It is beyond the feeble efforts of my pen to express my gratitude and love to Mrs. Eddy for having shown me the way out of all error, physical and mental.

I should like to say to those who have criticised the prices of Christian Science literature and treatment, that my only expenses for this accident was one dollar for being carried from boat and train. My outlay for Mrs. Eddy's books and class instruction do not compare with what my bills would have been under *materia medica*.

ELIZA BRUCE RYAN, Boston, Mass.

### Cancerous Tumor Healed.

Having received great benefits physically and spiritually from Christian Science, I wish publicly to bear my testi-

Digitized by Google

mony to the Christ-Truth. For several years I suffered from a cancerous tumor (so three or four medicos pronounced it) growing on the upper surface of the stomach. At this time, I was living at Vernal, near the Uintah Reservation, Utah, about two hundred and twenty-five miles from Salt Lake City. In 1896 or 1897, being in great agony, I submitted to examination by four physicians, who gave the trouble the above name. They told me that owing to its very peculiar location they could not help, beyond giving me morphine or some other narcotic. They hinted that my days were numbered. Naturally I felt somewhat depressed, for I had a family to support and had been unable to do much for two or three years on account of my condition.

In July, 1898, I took my wife and two little girls to visit among her relatives in Salt Lake City. During my short stay in the city I went to the hospital, where I was again examined by four of the staff surgeons and physicians, who pronounced my case hopeless, though they could give some relief with morphine, etc. They told me to be very careful, that my days were numbered, etc. I returned to Vernal. My wife wrote me, insisting that if I would only come back to the city I could be cured by Christian Science.

I laughed at the idea. Everything else had failed. The tumor was very large and hard. I could scarcely walk a block. I returned to Salt Lake City in October, 1898. My wife took me to a relative who had been healed by Christian Science. With great difficulty I walked from the street car to the house close by. After listening a while to a Christian Science talk, I remarked I did not believe in anything, not even Christian Science; but I consented to take treatment. From that hour improvement began. Day by day, under the solvent of Truth, the cancer diminished. Peaceful and refreshing sleep came to help me along. I went to work at once, doing some teaming. Among the first jobs that came, I had to haul and deliver at the hospital, where I had undergone examination, some very large stone steps. One or two of the physicians saw me handling the stones, and severely rebuked me, saying such work would kill me. I said, "I am getting better. I can do any kind of work. Christian Science has set me on my feet, made me well and strong, given me refreshing sleep and a good appetite."

That was more than a year ago. I feel better than I ever felt in my life. I have suffered no return or inconvenience. The tumor has entirely disappeared. My trouble was hereditary; several members of my family have suffered from it and a sister died with it not many years ago.—A. R. STRANG, Salt Lake City, Utah.

### Another Case of Dentistry.

I have often seen in the *Journal* and *Sentinel* where others have received help in Science in dentistry, and would think, "Well, their fear was not as great as mine." Now it has been demonstrated for me that there is as much help for us in dentistry as in anything else.

I went to Austin, Minn., to a dentist. A Scientist went with me. She remained with me a few moments, then went home. I had eight teeth pulled without one particle of pain, and no inflammation, or soreness in my mouth since. The dentist said after he had pulled two or three teeth, "Well, I have not done work for many like that." I said nothing until he had finished. When I went to pay him, I said, "That is what Christian Science can do for us." He said, "I wish more would have it, then we could do better work." I said, "Not only in dentistry, but in everything, it is just as great a help for us."

The work was done in the morning, and I ate a hearty dinner. I went to the dressmaker three times the same day, visited with friends, and came home the next day, and have not had the least inconvenience from it all.

ISA V. HOLSTON, Madison, S. Dak.

### Christian Science Helps the Student.

I feel that it is fully time that I put into words my gratitude for the joys that Christian Science has brought me. Eight years ago the thought of a college education for myself, a sickly, nervous child, had never occurred to me. To-day I look back over four bright, happy college years, and thank Christian Science for them. I can never express what Science meant to me there. Lessons made easier, envyings overcome, and sickness met and conquered. Many pleasures came to me too; all through Science, because I was trying to know that my happiness was not dependent upon circumstances or personalities. I am now at home and have taken a Sunday School class which is a great help and pleasure to me. I find that Science, instead of taking our friends away, gives us even more, for Science means happiness, and happiness is always welcomed by everybody. Of course I have many problems yet to meet, and many "days of dumps," but I have found a sure cure for the latter and a Principle by which to work out the former, and I always end by going on my way *rejoicing*.—ELIZABETH JENKINS, Evanston, Ill.

### Indigestion and Tobacco Habit.

Four years ago a copy of Science and Health was given to my husband by his parents, who had recently become interested in Christian Science. We commenced to read it at once, and the Truth as revealed in that book healed him of a bad case of indigestion. The tobacco habit was also overcome in a few weeks, and glasses, which the doctor had said he must wear at work and to read, were laid aside and forgotten. His eyes were as well as ever, and have remained so.

About one year ago we had the privilege of class instruction from one of Mrs. Eddy's loyal students. Many physical diseases have been healed by our understanding of Truth. In overcoming a claim of malice I was greatly helped by a thought gained while reading the *Journal* for September, 1899. "Malice has no power over God's idea." When I read this the demonstration was complete.

D. B. C. B., Herkimer, N. Y.

### Amputation Unnecessary.

A gentleman had a bull nettle sting on his foot. He was suffering great agony and his foot was so badly swollen that it was turning purple and yellow, and water was escaping in several places. He had been told that he would have to have his foot amputated. He called for Christian Science treatment one Sunday morning; the next day at one o'clock his foot ceased to pain him. He also had fever, and that left him. He went right on with his work of picking cotton, and did not stop but once, and that was to make his report to his healer.

MRS. EMMA DARNELL, El Campo, Tex.

### Benefit Acknowledged.

I am, to mortal sense, almost fourscore years of age. I regard it my duty and privilege to tell you of a most beautiful demonstration. In the year 1894 I had a little sore coming on my lip. I did not think much about it, but kept denying the error. Then in March, 1897, I went to my sister in Ohio. While there it grew worse. In August I came back to Washington. I began taking treatment of a Christian Scientist and was healed. It has been one year since I was healed.

MRS. E. B. FRIEND, Washington, Ia.

## From the Religious Press.

### Presbyterian Statistics.

The statistical reports of the Northern Presbyterian Church give it for 1899, 32 Synods, 232 Presbyteries, 7,657 churches, 996,907 communicants, 1,029,229 members of Sunday schools, 1,115 candidates for the ministry, 137 local evangelists, 433 licentiates, 108 churches organized during the year, 48,259 members added on examination, 17,682 adults and 24,908 infants baptized. The contributions were: for home missions, $1,095,311; for foreign missions, $764,976; for education, $143,130; for Sabbath school work, $121,177; for church erection, $101,597; for the relief fund, $68,304; for the freedmen, $137,567; for synodical aid, $85,921; for aid for colleges, $261,268; for the General Assembly, $80,160; for congregational purposes, $10,694,518; miscellaneous contributions, $793,788; total, $13,777,717. The figures show a gain of 8,030 communicants and a loss of 4,938 in membership of Sunday schools; and the baptisms were fewer than for several years. The financial reports show an advance in nearly every department except ministerial relief; and the whole amount of contributions is larger by $74,156 than in 1898.

The statistics of the Southern Presbyterian Church give it 13 Synods—the same as for the past seventeen years—77 Presbyteries, 1,471 ministers, 2,919 churches, 221,022 communicants, 8,613 members added on examination, 2,847 adults and 4,588 infants baptized during the year, 41,627 baptized non-communicants, 19,808 teachers, and 143,639 pupils in Sunday schools. There were also 357 candidates for the ministry and 60 licentiates; 56 churches were organized during the year. The churches contributed last year $30,005 for the Assembly's home missions, $116,533 for local evangelistic purposes, $13,762 for the invalid fund, $111,191 for Foreign Missions, $52,722 for education, $12,587 for publication, $12,459 for colored evangelization, $4,025 for the Bible cause, $15,948 for Presbyterian causes, $802,607 for pastors' salaries, $583,570 for congregational purposes, and $96,276 of miscellaneous contributions, the whole aggregating, according to the footings of the table, $1,851,771. The average amount of pastors' salaries was $670. The figures show an increase during the year of 63 ministers, 46 churches, 3,947 members, and $4,917 in contributions, while the number of pupils in Sunday schools appears to have fallen off 2,268. The increase in membership for the last four years has been two per cent a year, as against four per cent in preceding years.

*The Christian Advocate*, New York.

### Duration of Punishment.

We have no hesitation in saying that there will be eternal punishment only for those who are *voluntarily* and *eternally* disobedient. We will go even further, and assert that, in our opinion, all Unitarians would say that, if any human beings are voluntarily and eternally disobedient, punishment will forever attend their disobedience. Such a statement is involved in the very nature of righteousness and retribution. The Unitarian idea is that disobedience and punishment are linked together in this world, and in all worlds. Character determines destiny. Moreover, no man can be made righteous against his will. Voluntary obedience carries with it appropriate consequences, while voluntary disobedience just as naturally and inevitably brings on its train of woes. But fifty years ago Orthodoxy said, Many *will* be eternally disobedient, and will be eternally punished. That is not the statement now made by Dr. Storrs. We do not believe that he or any other Congregationalist of similar character and intelligence will affirm without qualification that any single human being will certainly have the courage and the endurance eternally to defy the Almighty and take his punishment. But we are willing to say with him, *if* any one eternally refuses to obey the law of righteousness, he will be eternally punished.

*The Christian Register* (Unitarian.)

## Miscellany.

### Two Experiences.

(WILLIE'S.)

The day has been really most dreary for me;
The reason I'm surely unable to see.
I didn't have time to help Tom paint his sled
(I painted my own a most beautiful red);
Dick wanted his stilts fixed, but I hadn't time—
It took me an hour or more to do mine!
Mamma wished an errand done—I couldn't go—
I had others to run for myself, don't you know?
Maud asked me to make her some kind of a toy—
That's fit for a girl to do, not for a boy!
All day I've tried so hard to please me,
Yet I'm as unhappy as I can be!

(BENNIE'S.)

To-day I thought I would do something for me,
But really I haven't had time you see!
I mended a skate strap for small brother Tom,
I shoveled the path out—it made me so warm!
Baby Beth couldn't multiply twenty times one,
I've been through division—for me it was fun.
I ran on an errand for little sick Joe
(He tried to get Patsy, but he wouldn't go);
Mamma wanted wood chopped. "Really," said I,
"I know I can do it; please let me try."
I've been, oh, so busy—it wasn't for me,
But I'm as happy as I can be!

*Farm and Home.*

### Giving Does Not Kill.

Bishop Whipple of Minnesota closed a recent letter by repeating a story which Bishop Clarkson used to love to tell: "A devout colored preacher whose heart was aglow with missionary zeal, gave notice to his congregation that in the evening an offering would be taken up for missions and asked for liberal gifts. He had in his congregation one well-to-do man who was very selfish, who said to him before the service: 'Yer gwine ter kill this church if yer goes on saying, give, give! No church can stan' it. Yer gwine ter kill it.' After the sermon the minister said to the people, 'Before the service to-night Brother Jones tole me I was gwine to kill this yere Church ef I kep' a asking yer ter give; but, my brethren, Churches doen't die dat way. Ef dere's anybody knows of a Church dat's died 'cause it's been giving too much to the Lord, I'll be very much obliged ef my brother will tell me whar dat Church is, fer I'se gwine ter visit it, an' I'll climb up on de walls of dat Church under de light of de moon, and shout, 'Blessed are the dead dat die in the Lord.'"—*Diocese of Fond du Lac.*

### The Story of a Ladder.

Once upon a time, so the story goes, a ladder drifted upon the shore of a distant island—most likely one that is now ours. In doubt as to its intended use the natives began to "pow-wow" about it. This ended in the formation of two parties; one contending that the rungs were made to hold the sides together, and the other that the sides were made to hold the rungs apart. So the matter rested. After a time, a sailor came to the island and, seeing the ladder, promptly put it up against a tree, and gathered some fruit he wanted.

*Selected.*

It is said that more than a hundred International Congresses will meet at Paris in 1900.

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### The Board of Education.

The Board of Education has prepared printed application blanks to be used by those who desire to appear before it for examination.

These blanks are now ready, and can be procured by written application addressed to the Board of Education, 95 Falmouth St., Boston, Mass. No other form of application will be received.

Special attention is directed to the following By-law of the Church Manual:—

"Students are examined and given certificates by this Board for no other purpose than teaching Christian Science. All other applicants will be dismissed."

### Church Rule.

It shall be the privilege of all the leading Churches of Christ, Scientist, situated in our largest populated cities, or in the capital cities of the United States, Canada, or Great Britain (in addition to their other established lectures), to call on Judge William G. Ewing of Chicago, Ill., for an annual lecture under the regulations and auspices of the Mother Church in Boston. Also, with the consent of Judge Ewing, the church shall publish his entire lecture in at least one of the leading, local newspapers.

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

### The Church Manual.

The twelfth edition, containing the names of all the members of the Mother Church, including those admitted November 7 last, is now ready.

The importance of the members keeping themselves informed of the Church Rules and By-laws is so apparent that we do not deem it necessary to more than suggest it.

The Manual is now in two volumes, one containing the names exclusively.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6¼ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen: $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston: 15 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more ies, postage paid, each, 15 cents; Fifty copies or more to one ad ss, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy or more, each, 10cents; 12 copies, to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

Admiral Dewey astonished the people of the United States by transferring to Mrs. Dewey the home at 1747 Rhode Island Ave., Washington, D. C., recently presented to him by forty-three thousand of his admirers. The announcement of the transfer caused a great deal of unfavorable comment, and even his intimate friends were at a loss to account for his action. It now appears that the Admiral chose this means of transferring the property to his son George, as a deed to the property from Mrs. Dewey to the son was immediately afterwards recorded. The Admiral believes that through the method adopted no dispute could ever arise over the disposition of the property. By the terms of the deed, however, Admiral and Mrs. Dewey still retain a life interest in the property.

Vice-President Garret A. Hobart died at Paterson, N. J., Tuesday morning, November 21. The funeral took place on Saturday, November 25. The morning service at the residence was attended by the members of the family, President McKinley and his cabinet, and Mr. Hobart's most intimate friends. The public service was held in the afternoon at the Church of the Redeemer. The interment was at Cedar Lawn cemetery. The body did not lie in state in the City Hall at Paterson, as was desired, but the casket was open in the library of his home for three hours on Friday afternoon. Four companies of regulars from Governor's Island took part in the funeral ceremony.

Captain W. R. Abercrombie of the United States infantry, who nearly two years ago was appointed the head of an expedition to explore all the routes from the Pacific coast to the interior of Alaska, has returned to New York. The route he has decided upon is by steamer to Port Valdez, then by a new military road to Eagle City or Fort Egbert as it is called, on the Yukon River. From this point it is only seventy miles to Dawson City. The distance by this route from Port Valdez to Dawson City is two hundred and seventy miles. This route enables the American people to travel on their own domain entirely, and shortens the route two hundred miles.

Official returns show that since the outbreak of the war in the Transvaal the British have lost ninety men killed, and two hundred wounded. The Boers' loss is estimated at one thousand. The British force now actually in the field is about sixty thousand men. The situation at Ladysmith remains unchanged and there seems to be little prospect of getting relief to General White in the immediate future. The Boers have succeeded in cutting off all communication with Estcourt. During the past week the Boers have suffered several defeats, and in an attack by General White at Ladysmith they are reported to have lost many of their big guns.

It was reported that an effort was being made to have the arch at Madison Square, New York, known as the Navy arch instead of the Dewey arch as it is now called. The purpose was to make it a national monument, not erected in honor of a single individual, but as a testimony of the nation's appreciation of the glorious deeds of the navy from the time of Decatur and Paul Jones until now. But the chairman of the committee having the matter in charge states that the arch is to be the Dewey arch in the sense it has always been, and that it will commemorate the fame of Admiral Dewey and the battle of Manila.

The Fifty-sixth Congress will meet on December 4. The House will be composed of 185 Republicans, 163 Democrats, 7 Populists, and 2 Silverites. The Republicans will have a majority of thirteen.

As California, Delaware, Pennsylvania, and Utah failed to elect Senators at the last session of their respective Legislatures, the number of Senators will be eighty-six instead of ninety, the number provided for by law. Of these, 51 will be Republican, 26 Democrats, 4 Silver Republican, 4 Populists, and one independent, giving a Republican majority of sixteen.

Information is received from Manila that Bautista, president of the Filipino Congress, has presented himself to General MacArthur and formally renounced all further connection with the insurrection. General Otis says the insurgents can no longer make any claim whatever to a government, as the president, treasurer, and secretary of the interior are in our hands. The whereabouts of Aguinaldo is still unknown, and nothing more than guerilla warfare is expected in the future.

Charles E. Macrum, the United States consul at Pretoria, was directed by this government to assume charge of British interests in South Africa during the war. The Transvaal authorities have declared that the affairs of British prisoners and of American citizens suspected of British sympathies are military matters outside of his province. Secretary Hay has cabled him to insist upon the rights to which he is entitled under international law.

President McKinley and Secretary Long have agreed that as Rear Admiral Schley has not seen fit to ask for a court of inquiry, it is not expedient to appoint one. The formal orders sending Schley to command the South Atlantic squadron have been signed by Secretary Long. He will proceed to South America at once, but has been instructed not to allow any of his ships to go to South Africa unless ordered to do so.

In his annual report Governor Brady of Alaska recommends statehood, government establishment and operation of cable and telegraph, and a cessation of killing seals for at least ten years. An appropriation of one hundred and ten thousand dollars is asked for a penitentiary and suitable public building at Sitka. The gold output for the season amounts to about three million dollars.

Captain Dreyfus is still at Carpentras, France. In a recent interview he said that he now believes there was no deeply laid scheme against him. He thinks he may have appeared vain or ambitious, as he did not associate sufficiently with his brother officers, but generally worked ten hours a day at difficult technical work. Naturally the fact that he was a Jew was against him.

The Commissioner of Indian Affairs, in his annual report urges more schools for the Indians and more systematic methods in their instruction. Out of an enrolment of twenty-five thousand there are now 20,522 boys and girls in school. The Indian population from which these are taken is 181,000.

Two of the biggest battles of the Transvaal war were fought near Ladysmith, November 15 and 16. The first lasted from daybreak till two o'clock in the afternoon. It is reported that hundreds of Boers were killed, and many taken prisoners. The British losses were comparatively small.

Secretary Long will ask Congress to make an appropriation for eighteen new warships. The vessels desired are three armored cruisers of thirteen thousand tons displacement, three protected cruisers of eight thousand tons, and a dozen gunboats of nine hundred tons.

The Imperial Government of Japan has appropriated three million dollars for the erection of an earthquake-proof steel palace for the Crown Prince. The design for the palace is being made by Chicago engineers.

The statehood convention which recently assembled at Guthrie, Ok., appointed a committee to draw up a memorial to Congress, asking that Oklahoma be granted statehood with the present boundaries.

The friends of Admiral Schley propose to introduce a bill in his behalf during the coming session of Congress reviving the grade of vice-admiral. They feel confident they can secure its passage.

The Cuban wreckers are reported to have found one hundred and ninety thousand dollars in Spanish gold in the Almirante Oquendo which was destroyed at the battle of Santiago de Cuba.

Though Queen Victoria is a member of the Church of England, she is, it is stated, a member of a Scotch Presbyterian Church. She is a good listener, and gives close attention to the service.

The George Washington Memorial Association of Washington, D. C., is endeavoring to procure a general observance of December 14, the one hundredth anniversary of Washington's death.

At Chicago, in a recent test of the Pollak-Kirag rapid automatic telegraph invention, a message was sent 1,080 miles at the rate of one hundred and fifty-five thousand words an hour.

An English syndicate has purchased the Manhattan Oil Company. The Manhattan had a capital stock of two million dollars and was the greatest rival of the Standard Oil Company.

The New York Central & Hudson River Railroad has ordered ninety new locomotives. Five of these will be built after the design recently invented by Cornelius Vanderbilt.

The first G. A. R. post was organized at Decatur, Ill., April 6, 1866. There are now over seven thousand posts with a membership of more than three hundred thousand.

The United States transport George W. Elder recently made the round trip to Manila and return in sixty-one days. This is the quickest trip on record.

Tammany Hall has presented the lord-mayor of Dublin with three thousand pounds sterling to save the Parnell homestead at Wicklow, Ireland.

The Marconi Wireless Telegraph Company of America has been chartered at Trenton, N. J., with an authorized capital of ten million dollars.

Admiral Dewey has received and accepted an invitation to visit Chicago May 1 of next year, the second anniversary of the battle of Manila.

It is reported that Cecil Rhodes has a balloon at Kimberly in which he intends to make his escape if driven to that extremity.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## A Manila Church.

THERE stands in the old walled city of Manila a church whose rare beauty should win it a place among the famed temples of the world, says an exchange. It is the Church of St. Ignatius Loyola, and, as the name would indicate, was erected by the Jesuit fathers. The ten years that elapsed between 1879 and 1889 were consumed in its construction, and a success that was truly artistic crowned the effort of a decade. The exterior is neither imposing nor artistic, but it was upon the interior that effort was centred, and few structures in the world can boast of the perfect harmony of effect there attained. Practically the entire interior is done in the native hard woods of the Philippine Islands, that have been carved by master hands. A remarkable fact in connection with the work is that it was all done by natives. The designs were all made in Europe, but every credit is due the workmen who so closely followed their methods. This incident illustrates a peculiar trait in the Filipinos. They lack the originality, but are wonderful imitators. Give their carvers a model and they will duplicate to perfection. Let their painters see a picture and they will copy it to the minutest detail. Permit their musicians to hear a composition and they will reproduce it on their own instruments. Probably the most artistic piece of carving in the church is the pulpit. It is a massive affair affixed to one of the giant columns close to the altar rail. On its sides are a series of panels upon which have been carved scenes depicting important Scriptural events. The pulpit has a beautifully carved base, and upon the outer side of the balustrade are the figures of saints. The figures have all been perfectly carved, and there has been a wonderful regard for detail. Proportions are perfect, and the effect is at once harmonious and artistic. A prodigious amount of labor was expended upon the pulpit. Rev. Father Francisco Simo, one of the rectors of the church, under whose direction much of the work has been done, relates that the carving of the base of the pulpit consumed two years, and that the balustrade occupied nearly as much time. Next to the pulpit, the ceiling, which is entirely of carved wood, attracts the most attention. There are a series of intricate designs that show the genius of art and the skill of the carver, and the effect is admirable. The columns, capitals, and arches have been done in wood, and they too, enhance the beauty of the church. The altars—one main and two side—are also of wood, and show splendid specimens of the skill of the carvers. The floor is likewise of wood, and the sheen of its polish serves to heighten the general effect. Most of the wood used is molave, best of all the fifty varieties of hard wood that grow in the Philippines. It is capable of resisting any of the insects that attack wood, and neither heat nor water affect it. Steel is the only thing that will outlast it. It is so hard that the fashioning of it is very difficult, but the excellent results obtained make it worthy of the effort. The art of wood-carving has long been taught to the Filipinos, and the traveler in their islands sees many samples of their work. It has reached its greatest perfection at the Jesuit College at Manila, and the work in the Jesuit church is incomparably the best so far done. Twenty-three years ago the students of the college sent an elaborate piece of carving to the Centennial Exposition at Philadelphia, and with it won first prize.

The architecture of Manila may be truthfully said to be relieved of mediocrity by the churches, and that of St. Ignatius Loyola is the greatest of them all. The cathedral —a massive structure of the Byzantine period—attracts attention on account of its size and the fact that its foundation stones were laid in the sixteenth century, but neither interior nor exterior are particularly pleasing. Another remarkable church in the old city is that of St. Augustine, built way back in 1570 from a design drawn by a nephew of the architect who planned the famous Escurial in Madrid. For over three hundred years it has defied the earthquake and typhoon, and the original walls still stand as a monument to the builders. The design is rather of the Tuscan order, but modern additions have changed and almost obscured the original lines. The church of Santo Domingo is another imposing structure. It has an exterior of florid Gothic and an interior of nearly perfect Gothic, but the latter is marred by some impossible coloring and some inartistic statuary. The same complaint may be properly made of any of the score of churches in the city and surroundings, with the single exception of the Church of St. Ignatius Loyola. When the tide of American travel sets toward the Philippines, and when Manila is included in the itinerary of the globe-trotter between Singapore and Yokohama, this really remarkable structure will win its place in the world of art.

*Boston Transcript.*

## Editorial Comment.

RELIGION is inherent in every human breast. The anthropological student shows specimens of the gods made and worshiped by the North American Indian. The Aztecs of New Mexico, who possessed many of the fine arts of civilization, were not alone in the worship of gods made of iron and silver. History and mythology tell of the worship of the elements, thunder, lightning, fire, and water, and their representatives among the mythological deities that peopled the air and seas. The Scriptures narrate the idolatrous practices of the Jewish tribes of Israel. The great King Xerxes participated in the Druidical grove worship, and through it fell in love with a tree, committing all sorts of absurdities. The Chinaman has his Joss worship, the Hindoostanee his hideous idol with all the mortifications of the flesh and sacrifices to Juggernaut. The worshipers of the false prophets Buddha and Mohammed and not the least, the South Sea Islanders, with their orgies and human sacrifices to appease the wrath of their gods, all and more than these show that worship in man is inborn. He must "make his adoration" before or to something, even if, as in the civilized type, it is himself.

The church at home and abroad is doing much toward evangelizing the world, and the thoughtful see in the not far distant future the day when there will be but one church and one religion under one God, the Lord of Hosts, great and mighty. The Churchman inquires what creed

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

the Universal Church will partake of, and each exponent of doctrine and form, in imagination and hope clothes it in his favorite garb of worship. At this stage of Christian progress it is impossible to foretell more than that the Universal Church will be founded upon the best elements of all combined, and the fundamental truths of the religion founded by the God-man Jesus Christ, while upon earth.

The rapid spread and remarkable growth of the new sect of Christian Science the last few years in the large cities shows that people are ever in the search of the same old Gospel truths, clothed, though they may be, in a new garb of thought. This interest in Christian Science demonstrates that it must at least be accorded a hearing among the factors in directing thought and bearing the ills of life with a philosophy that something more than mere will power dominates.

The Academy of Music last evening, as on a former occasion, was filled with people to hear Mr. Carol Norton on the subject of Christian Science. The interest displayed by this large audience shows that Pottsville people are not behind metropolitan gatherings (Mr. Norton lectures to audiences of three thousand people in the large cities) in desiring to ascertain for themselves whether this movement is merely a fad, or whether it must be received as one of the great spiritual factors of the age. Mr. Norton is a forcible speaker, and makes a strong presentation of the subject to searchers for more light on the intellectual and philosophical side of religious life. If Christian Science can give this light, it can, in common with the orthodox sects, lay claim to becoming the Universal Church of the future, a forerunner of the Millennium which that church will herald.

*Pottsville (Pa.) Daily Republican.*

## President's Proclamation.

AFTER the Cabinet meeting of November 21, President McKinley issued the following proclamation:—

By the President of the United States.

A Proclamation.

*To the People of the United States:*—Garret Augustus Hobart, Vice-President of the United States, died at his home in Paterson, N. J., at half past eight o'clock this morning. In him the nation has lost one of its most illustrious citizens and one of its most faithful servants. His participation in the business life and the law-making body of his native state was marked by unswerving fidelity and by a high order of talents and attainments, and his too brief career as Vice-President of the United States and President of the Senate exhibited the loftiest qualities of upright and sagacious statesmanship. In the world of affairs he had few equals among his contemporaries. His private character was gentle and noble. He will long be mourned by his friends as a man of singular purity and attractiveness, whose sweetness of disposition won all hearts, while his elevated purposes, his unbending integrity, and whole-hearted devotion to the public good deserved and acquired universal respect and esteem. In sorrowing testimony of the loss which has fallen upon the country, I direct that on the day of the funeral the executive offices of the United States shall be closed, and all posts and stations of the army and navy shall display the national flag at half-mast, and that the representatives of the United States in foreign countries shall pay appropriate tribute to the illustrious dead for a period of thirty days.

In witness whereof I have set my hand and caused the seal of the United States to be affixed.

Done at city of Washington, this twenty-first day of November, in the year of our Lord one thousand eight hundred and ninety-nine, and of the independence of the United States the one hundred and twenty-fourth.

(Signed) WILLIAM MCKINLEY.

By the President. JOHN HAY, Secretary of State.

## The Lectures.

### At Pottsville, Pa.

Carol Norton, C.S.D., of New York, lectured to a large and intelligent audience in the Academy of Music at Pottsville, Pa., Tuesday evening, November 14. He was introduced by Judge David C. Henning, who spoke as follows:—

*Ladies and Gentlemen:*—Probably there is no subject that has engaged the human mind in all this world, in every age, so much as has the subject of religion. I believe I say advisedly, in the light of the history of mankind, that there has never been found an original people who did not have a religion, and who did not possess at least some glimmering ray of immortality.

When Confucius, who lived over eight hundred years before Christ, was asked, "Where does your religious philosophy come from?" he answered, "It comes from the teachings of the ancestry of twenty-nine hundred years ago." He is now considered, in the Empire of China, their prophet.

When we come to the Mahometan religion, see in what a short time that religion developed in the name of Mahomet, the prophet; and there is no tribe or sect, there is no manner of people more loyal to religion than are the nations of the Turk, the Arab, and the other followers of Mahometanism.

Take the ancient Roman. His gods and his goddesses were the planets and the stars and the constellations, and their prayers for their victories, their solicitude for their government, and all that concerned them, were all centred upon whatever oracle represented that star, that constellation, or that planet having in keeping the particular subject-matter.

Take even the North Teutonian, yea, nearly all of Germany and a portion of the original Celts, and their god was Woden, their goddess was Freigga, their lesser gods were Thor and Tyr. Think of the hold this religion had on the people when in this Christian age we name after those four gods four of the days of the week—Wednesday for Woden, Tuesday for Tyr, Thursday for Thor, the thunder and hammer god, and Friday for Freigga, the wife and goddess of Woden, Thor and Tyr being their sons.

Take the ancient western Celt, and his god was the star of Mercury, his prophets were the ancient Druids. Take the different tribes of Africa. No explorer has ever found an original people there but that it possessed its religion.

Take the Indian tribes of America. They had their religion, they had their religious rites and ceremonies. They had their gods, they had even a sense of the immortality of the soul. As Pope says:—

> **Lo, the poor Indian! whose untutored mind**
> **Sees God in clouds, or hears him in the wind.**

Whittier in his "Bridal of Pennacook," represents the Indian maidens as singing of their queen, who was lost in the waves of the Merrimac:—

> **Oh mighty Sowanna!**
> **Thy gateways unfold,**
> **From thy wigwam of sunset**
> **Lift curtains of gold!**
> **Take home the poor Spirit whose journey is o'er,—**
> **Mat wonck kunna-monee!—We see her no more!**

There was a religion among the pastoral people of the land of Judæa, and I think it one of the most wonderful victories in the history of the human race that these shepherds, these net-makers and fishermen, could carry that simple pastoral religion into the philosophy of Rome, and although founding it in caves and huts in this pulse of the world, as against the splendors of Nero and his successors who ruled the world, that this latter em-

Digitized by Google

pire should fade away in a few hundred years and the empire of Christianity, so humbly begun, should now govern the civilized world. This Christian empire is now the mainstay of the civilized world, and it is the only hope and anchorage for immortality in the next.

This religion has undergone some changes. After the Apostolic Fathers had written and had commented upon the life of the Saviour and his teachings upon the true Christian life, men construed those variously, and differences of opinion arose as to the works of the Saviour and his offices while here on earth. The Church was, however, kept alive, and the many differences that crept into the church were finally settled at the Ecumenical Council held at Nice in 325 A.D. This religion then passed through the Mediæval and Dark Ages, even the ages of barbarism it still survived, but many dissensions arose, when in the middle of the fourteenth century the two great moving stars of the Reformation arose—Huss of Hungary, the Wycliff of England, who were the forerunners, or the John the Baptists of the Reformation of Luther. Then Protestantism appeared, out of which came freedom of religion, not only stimulating the old, but establishing the new whose growth and progress have been so great that now the spires of their churches reach to the heavens throughout all civilization.

Since the Reformation, new ideas have been evolved, new leaders have been found, and from them have grown Calvinism, Wesleyism, the great Episcopal Church, the great German Reformed Church, the Lutheran, Presbyterian, and many other denominations, and the progress of religious thought has not rested even there. Men seek its anchorage in the New Testament, and in the writings of the Apostolic Fathers,—in the writings of men like Origen; Polycarp, so often quoted by Canon Farrar, the pupil of St. John the Evangelist; the historians, Eusebius and Irenæus. Yet on each day Christianity makes rapid strides for progress. In this free country of ours it was made one of the distinctive features of our government that we should stand equal before the law, and that we might worship God each according to the dictates of his own conscience.

I say many new ideas have been brought about, evolved from great minds, evolved from great thoughts, evolved from a closer scrutiny into the early religions, and no man dare say where there is faith and where there is the following of the teachings of the great Master, that any one church is wrong. I am not theologian enough, and I doubt if there are many who are, to say that the congregation of one church will go to Hades, while the congregation of another will enjoy the delights of Heaven.

But I am not here to deliver a lecture or to address you upon a subject of which I know so little. I understand that you are to be addressed to-night by a man of thought, a man who represents a denomination that claims to be close to the great Master. I understand that he represents a denomination, a thought, a belief, that, it is claimed, comes closer to the divine injunction than that of any other church. I believe that he represents the thought that our Saviour was in earnest when he commanded his disciples to go forth to preach the Gospel *and to heal the sick.*

I am not here to advocate the dogma, the tenets, or the doctrine of any church, but I believe that the whole world will stand with me when I say that that church which inculcates faith is an ornament to any community, is a moral teacher whose touch must be felt by the people of any community, and that this audience may more fully understand the beliefs of this newer doctrine, a gentleman has kindly consented to come to Pottsville to open the page of the book of learning for you.

I know that in introducing to you this gentleman, I am introducing to you one of the finest scholars of this country, a gentleman whose name is known throughout the length and breadth of this land as a logician and as a theologian, a man who has made this subject-matter his study, and, I understand, he belongs to a group of men who have devoted their lives, just as the apostles devoted their lives, to the Cause in which they feel that the Master has called them to serve. I have the pleasure now, ladies and gentlemen, of introducing to you Mr. Carol Norton, C.S.D., of New York City. CORRESPONDENT.

## At Rochester, N. Y.

Carol Norton, member of the International Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, lectured on "Christian Science, It is Christian, Curative, and Lawful," at the Lyceum Theatre Sunday evening, November 19. An audience was present which taxed the capacity of the great theatre, and long before eight o'clock every seat on the lower floor was taken. There were a large number of Christian Scientists present, but almost every shade of orthodoxy was represented in the great assemblage. Scattered among the audience were a number of clergymen, who seemed greatly interested in what the speaker had to say. There was also present a large representation of the element which is generally considered outside the pale of the church, and who were plainly bent upon making an investigation of the subject.

The lecturer was introduced by Rev. Arthur R. Vosburgh, C.S.B., of this city, who said:—

It is to be presumed that this audience represents a wide variety of thought and opinion regarding Christian Science. But whether you are here to-night as a worker in the cause, as a believer, as an inquirer, or even as an opponent of what you believe to be Christian Science, your presence bears eloquent and united testimony to this one thing: the importance and the interest attaching to the questions with which Christian Science has to do. These questions are not, "What shall we eat?" "What shall we drink?" and "Wherewithal shall we be clothed?" but they are questions that have to do with righteousness, with judgment, with healing, with salvation, with eternal life.

Perhaps the central question that arises in approaching Christian Science is: "Is Christianity a Science?" That is, is it a definite system that can be taught and practically applied? Was Jesus only a wonder-worker, accomplishing miracles through a mysterious, supernatural power with which he was personally endowed; or were his mighty works the demonstration of a divine Principle and a spiritual law that are universal and eternal? And does Christian experience and Christian power inhere in blind faith or enlightened understanding?

In the light of modern investigation it is impossible to believe that anything comes about except according to law, and we are driven to one of two conclusions: either Jesus' marvelous works of healing the sick, raising the dead, walking the wave—all his so-called miracles—were the demonstrations of a spiritual law which he could apply because he understood it, or the New Testament records of them are mythical statements of what never occurred.

Christian Science accepts the whole Scriptural statement of the life of Jesus, beginning with the immaculate conception and including all his mighty works up to that which surpassed and crowned them all, his resurrection and ascension. But Christian Science does not see these as what are ordinarily called miracles; does not see in them simply a manifestation of the Master's power as a divine wonder-worker, but sees in them the demonstration of a divine Principle and a spiritual law that are valid for all time, and are only waiting to be understood to be demonstrated. This interprets the significance of Jesus' words:

Digitized by Google

"He that believeth on me, the works that I do shall he do also."

Now here the thought will arise that the New Testament promises are conditioned on faith and not on understanding. But, I ask, how far can you separate the two? How can you have a rational faith in that of which you have no understanding? Nay, more, all knowledge begins in faith; faith is the beginning of knowledge. All that you have ever learned began in faith and advanced into understanding. You learned your multiplication table on faith, you applied it in faith, you gained correct results through your applied faith, and through this the half-formed knowledge that was at first faith became scientific understanding.

So spiritual knowledge begins in faith; faith in divine resources, faith in spiritual possibilities at first somewhat dimly seen, somewhat imperfectly understood. But applying this first imperfect knowledge we gain practical results, our vision becomes clearer, and faith unfolds into understanding. And this is the method of the New Testament. It is not faith but knowledge that is held forth as the ideal attainment. Peter says, "Add to your faith virtue; and to virtue knowledge; and to knowledge temperance; and to temperance patience; and to patience godliness; and to godliness brotherly kindness; and to brotherly kindness charity" or love; "for," he says, "if these things be in you, and abound, they make you that ye shall neither be barren nor unfruitful in the knowledge of our Lord Jesus Christ." And the Greek word used to indicate this knowledge to which we are thus to attain is not the simple Greek word *gnosis,* the general term for knowledge, but it is *epignosis,* which means definite, exact knowledge, scientific knowledge, if you will. Not less than twenty times is this same word used in the New Testament. John's first epistle uses the word know thirty-four times, and reaches the climax and conclusion of its thought in the statement, "And we know that the Son of God is come, and hath given us an understanding." And Jesus' definition of eternal life for his followers is "that they might know Thee the only true God, and Jesus Christ, whom Thou hast sent."

The New Testament teaches a science, a science founded on an immutable Principle and an unfailing law. We know that this divine Principle and spiritual law are present and potent to-day, because, to the extent of our understanding, we are demonstrating them. We believe that ultimately through their working in human experience they will destroy all sin, sickness, and death because Jesus has thus demonstrated them. This is the position of Christian Science.

That wider opportunity may be given the public of knowing what Christian Science is and what it is not, an International Board of Lectureship has been appointed under the auspices of the Mother Church, The First Church of Christ, Scientist, in Boston. We have with us as the speaker for the evening a distinguished member of this board. It is now my honor and pleasure to introduce to you Mr. Carol Norton, C.S.D., who will address you on "Christian Science; It is Christian, Curative, and Lawful."

*Rochester Democrat and Chronicle.*

### At Minneapolis, Minn.

Thoughtful men and women were those who filled the Lyceum Theatre Thursday evening, November 9, to listen to an address on Christian Science by former Judge William G. Ewing of Chicago. While the admission was free, this made no difference in the audience, which was composed of persons who would have gladly paid a high price for seats, if such a thing had been necessary, in order to hear the eminent jurist.

While the Christian Scientists of the city were out in force, there was a large number of persons who do not believe in Christian Science, drawn to the theatre by a desire to see how the well-known Chicagoan would handle his subject. Many of the medical men of the city, and a number of representatives of the legal profession, occupied prominent seats in the body of the house.

Judge Ewing was introduced to the Minneapolitans by Abbott Edes Smith, who said, during the course of his remarks:—

Many years ago the young minister of the church which I was then attending prefaced his sermon, one Sunday morning, by the announcement that he had been reading up on evolution during the past two or three weeks, and that he had now prepared a sermon upon the subject. He then proceeded to draw a grotesque caricature of evolution, such as none but the veriest tyro, without the least comprehension of the theory to be criticised, would ever have dreamed of presenting to an intelligent audience as a picture of evolution, and such certainly as no reputable evolutionist would ever have recognized; and thereupon, with biting sarcasm, and with an occasional something which was intended to pass for argument, that unfortunate caricature, that misbegotten child of his own creation, he furiously ground to powder.

Most of the attacks by pulpit and by press and by *materia medica* upon what the speaker or the writer imagines to be Christian Science are made by those who for the sole purpose of adverse criticism have read our text-book only superficially, if indeed they have deemed it necessary to do even this. They set up a figure of their own creation, which is not Christian Science, but which they are pleased to denominate Christian Science, and then proceed to demolish it. If Christian Science were what such critics believe it to be I, for one, should not be a Christian Scientist.

Not to teach Christian Science, but to correct some of the prevalent misconceptions concerning its nature, and briefly to illustrate its theory by showing its practical helpfulness in every department of human life, in business, in society, in the home, an International Board of Lectureship was organized and now exists in the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. The lecturer of the evening is a member of this Board. His presence, as well as his words, bears witness to the wonderful healing power of Christian Science, and reminds us of the debt of love we owe to Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, who has sacrificed all that mortal man holds dear, that she might lead sin-sick and suffering humanity back to the simple and practical Christianity of Jesus.

The lecturer to-night is himself an object-lesson, to attest the truth of his words. Long an able and distinguished lawyer, formerly United States district attorney for the northern district of Illinois, he is well and favorably known to the legal profession of the Northwest as judge of the Superior Court of Cook County, sitting in Chicago. He declined a renomination to the bench and retired from his profession, in order that he might enter a new and higher sphere of usefulness, as ambassador of the new-old gospel of Christ, which heals and saves mentally, morally, and physically.

In behalf of Second Church of Christ, Scientist, of this city, under whose auspices this lecture is given, it is now my privilege to present to you the speaker of the evening, William G. Ewing.

Judge Ewing was greeted with applause which was long continued. At its conclusion he began his address.

*Tribune,* Minneapolis, Minn.

### Lectures at Other Places.

## Among the Churches.

### At Centerville, S. D.

The Christian Scientists have opened their rooms in the Noble Building, and held their first services there last Sunday morning at 10.45. They have very pleasant quarters and have fitted up their rooms very neatly. The society has opened a free reading room at their place of worship, which is open every Tuesday, Thursday, and Saturday afternoon from two to four o'clock. Services will also be held at their rooms Wednesday evening at 7.45. Interested ones are invited to any of these services. Christian Science is one of the prominent topics of the day, there being nearly a million people who can testify that they have been permanently healed by following the teachings of this doctrine. This society has at the present time over five hundred congregations in this country, and is growing very rapidly. The members are composed of those from the highest as well as the lowest walks of life, and their claims are to do the most good they can toward elevating and lifting up humanity. They have over five thousand practitioners who are devoting themselves to the healing of the sick of mind and body. Standing upon such a platform, and with such beautiful objects in view, we would be the last one to throw a stone in their way. "Prove all things; hold fast that which is good."

*Chronicle and Index.*

### New Reading Room at Cincinnati, O.

Under the combined auspices of First Church of Christ, Scientist, and the Christian Science Institute Association of Cincinnati, O., the Scientists have recently opened for the public accommodation handsome reading rooms in the Mitchell Building, on the first floor. The rooms are elegant in their appointments, and consist of a reception room and offices for practitioners. The rooms are centrally located, between McAlpin's and the Chamber of Commerce Building, and can be reached by all car lines of both sides of the river.—*Commercial Tribune.*

## Thanksgiving.

BY CARLOTTA B. SEABEY.

Give thanks to Thee, O Lord of Hosts!
Give thanks in rapturous song!
Thy love surrounds and blesses us,
Thy mercies round us throng!

If we complain, or cry, or sigh,
That Thou from us art far,
Our clearer vision shows us this,—
Ourselves have raised a bar

Between our mortal eyes and Thee,
A bar unreal and slight,
Which vanishes when we can know
We but reflect Thy light.

This knowledge dearest is to us:
Ours is Thy grace, Thy joy,
Ours is the tender love divine,
Ours peace without alloy.

Then thanks to Thee, O Lord of Hosts!
Give thanks in rapturous song!
Thy love surrounds and blesses us,
Thy mercies round us throng.

## A Word from a Journalist.

Judas always was, always will be, so long as mortal mind is allowed to be an autocrat. The power of Christian Science, in the language of our Mother, is felt more than seen, and to organize to put it down, is like a combine to suppress the air we breathe.

As a newspaper writer of over twenty years' experience in New York, I meet the Judas—the slanderer—constantly, only to grow firmer, wiser, and better.

There is a great stir among the influential, thinking writers, many of whom are my friends; I know that they are touched, but they are slowly grasping the Truth as revealed by our beloved Mother. The whole world is in a mental convulsion and millions realize this state of things, without the faintest understanding. Rest assured that the great, pure, progressive newspaper men of New York, the "Thought Centre" of the world, will awaken and yet glorify in the language of spirit, in the new tongue.

Max Jagerhuber, *Journalist.*

New York, N. Y.

## Acknowledgment of a Gift.

Free Public Library, Montclair, New Jersey.

Mrs. Susan B. Schenck, Montclair.

*Dear Mrs. Schenck:*—On behalf of the trustees and on my own account as well, I wish to extend to you, and through you to the Christian Scientists of Montclair and Upper Montclair, our thanks for your gift of Miscellaneous Writings" by Rev. Mary Baker G. Eddy, and we will gladly add it to the number of our books.

Very sincerely yours,

November 10, 1899. S. Augusta Smith, Lib.

## The Future Church.

The church of the future will be a people's church. In form of government it will be a pure democracy and will have no written creed, for they are dry, dead husks through which the living truth is always bursting. No form or dogma will be made to do service for religion. Religion is love. Worship is service.

The church of the future must appeal to the social conscience. It is hideous that we should eat our meals in peace when our brothers are starving. It must assert man's right to heaven here. It must abolish poverty or be abolished. It must help men to have faith in God, faith that the Creator has made all things well, faith that the ills of humanity are due to indifference to truth and transgression of law, faith that the kingdom of heaven will come when men learn to be just. The church of the future must have faith in man, faith that he would rather do right than wrong, faith that freedom is his greatest need, faith that if he were not living in economic serfdom his own inborn love of truth and right would do more for him than all other agencies combined. Herbert S. Bigelow.

*The Post,* Cincinnati, O.

General Grant, when asked to write a message to the Sunday School youth of the United States, wrote as follows: "Hold fast to the Bible as the sheet anchor of your liberties. Write its precepts in your hearts and practise them in your lives." "There is no better motto for nation or individual than that," says the *Watchman.*

Mr. Samuel B. Capen says: "A giving church is always a growing church."

God never made his work for man to mend.—Dryden.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Notice.

THE Churches of Christ, Scientist, are hereby lovingly requested to address all articles they send for publication in our periodicals to the editor, Judge Hanna, and to mail them directly to his office, 95 Falmouth Street, Boston, Mass. MARY BAKER G. EDDY.

## Christian Science Methods.

THE methods of Christian Science, from the inauguration of its literature, have been unique. It never resorted to any of the usual means of advertising or pushing its publications upon the public. It never advertised its books or periodicals in any other publications. Not the slightest effort of the ordinary kind has ever been made to "boom" it. It has pursued the most conservative policy known in the propagation of a religious literature.

We include in this all genuine and authorized literature. This policy was initiated by the Rev. Mary Baker Eddy with reference to the text-book, "Science and Health with Key to the Scriptures," as well as all her other writings, was adopted by the Publishing Society in the beginning, and has been undeviatingly adhered to ever since.

Had the customary pushing methods been followed, no doubt the sales of our Leader's works would have vastly exceeded their present aggregate, unprecedentedly great as that is. Had the Publishing Society desired merely to build up a great and paying business, on ordinary business principles and only for financial gain, there is not the slightest question that it could have reckoned its receipts by the thousands where now it reckons them by the hundreds.

The standard has been high above that of ordinary business. The commercial spirit has been carefully avoided. Mere financial profit has ever been subordinated to the single purpose of putting forth the literature in such a way only as to meet a realized need, or supply a present existing and healthful demand for it.

Mrs. Eddy, as its author, and the originator of the means of its propagation, no doubt, easily foresaw the unwisdom of attempting to force Christian Science literature upon "unprepared thought." She saw it was wise rather to let the needy, both in the physical and spiritual sense, receive it under such conditions that when received, it would do its divinely appointed work.

This wise policy has surely been blessed of God, and instead of sending forth a literature to be tossed about by the unreceptive and unappreciative, as so much chaff, it goes out laden with the wheat of Truth into forth-reaching hands and hungering hearts as a healing and spiritualizing messenger. It goes forth only upon its intrinsic merit, unaccompanied by any mesmeric thought or desire that people *must* buy it whether they wish to or not. We are thankful that this Christian spirit has been so rigidly adhered to. It is the only true method.

So far as our connection with this branch of work is concerned we have endeavored only, by an occasional reminder, to keep the Field awake to the importance of placing our literature in the hands of the needy and receptive, resorting to such means merely as were wise and judicious and free from any attempt at undue influence, mental or otherwise.

Such means we still feel should be used. We do not, by anything here said, mean to create the impression that the activities heretofore in vogue within our ranks should cease. On the contrary, there should be a constant desire to continue them in the true spirit and with a view only to spreading the glad tidings of health and peace and joy.

## Photographs of Churches.

IN response to a request not long since sent out for photographs of the branch church buildings, several fine pictures were sent in. We would be glad to receive a picture of each church building, to be kept in the Publishing House, or for such other use as it may be thought best to make of it. When the word went out that no more photographs need be sent in, it was because the particular purpose for which they were then requested was not carried out, and it was feared it might inconvenience some to send them on such short notice.

We should like the remaining ones as soon as may be convenient.

## The Church Manual.

THE thirteenth edition, containing the names of all the members of the Mother Church, including those admitted November 7 last, is now ready.

The importance of the members keeping themselves informed of the Church Rules and By-laws is so apparent that we do not deem it necessary to more than suggest it.

The Manual is now in two volumes, one containing the names exclusively.

It will be observed that the Manual is now in the thirteenth edition.

## Expression of Love.

First Church of Christ, Scientist, Kansas City, Mo.,
November 8, 1899.

Rev. Mary Baker G. Eddy, Concord, N. H.

*Our Dear Mother:*—First Church of Christ, Scientist, in Kansas City, Missouri, through its Board of Directors, desire the privilege, at this time, of tendering to you, our beloved Leader, our love and appreciation, not only for what you have done, but are now doing, for the great cause of Christian Science.

We have seen the "Red Sea" of mortal belief parted many times for us to walk safely over, and could we now doubt your leadership? What though the great red dragon stands ready to devour "the young child;" any and every attempt to misinterpret the motives and acts of the Discoverer of Christian Science, has our most unqualified disapproval. "By their fruits ye shall know them." For the unfaltering and absolute correctness of every step taken by the Leader of this, our Church militant, and the great results achieved, can ultimate only in the Church triumphant. This we know; and with our faith unshaken in your holy purpose, and confidence in the Publishing House for its work in spreading the Truth, we have only unfeigned loyalty. Yours in Faith and Love,

CHARLES E. FINLAY, *President*,
MRS. EMMA B. SMITH, JOHN M. BYRNE.
MRS. SALLIE A. SAUNDERS, W. L. MATHES,
L. B. PRICE,

CHARLES L. VAN FOSSEN, *Clerk*.

## Selected Articles.

### Testimonies at a Wednesday Evening Meeting.

In search of health man has sought out many material inventions. He has knocked at the door of the allopath, the homœopath, and the other schools of medicine, and did he know the ingredients of the drugs and the poisons swallowed, he would be astounded. He has sought the health resorts and bathed in the waters recommended to heal him; he has ascended the mountain, traversed the plain, traveling from one country to another, longing, looking, searching, seeking for that which matter and climate can never give, for health must be sought in Soul, —God,—not sense; must be attained through spiritual, not material means.

With the open Bible before him, when all material means have failed, has that individual ever lived to whom the query has not come, "Why is the healing done in the days of Jesus and his apostles not repeated to-day?"

"Is there not as great need of suffering being relieved to-day as then, seeing that diseases have so greatly multiplied?"

"Are the Scriptural promises true?"

Jesus said, "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

A young lady testified as follows: "Soon after I graduated at the High School I became afflicted with spinal trouble. The best medical aid that could be obtained in the town where I lived was summoned, but despite all their efforts to help me I grew worse, and at the end of seven years I was an utter wreck without a ray of hope that I would ever be well again. Through intense suffering my head was drawn out of shape, my chin resting against my breast. To make me in the least degree comfortable it seemed necessary for my mother to pad me in bed (using many small pillows), this requiring several hours each day. Nervousness was of such a high tension that holes were bored through the floor, and the bed made to rest on posts placed in the ground. I could not endure the jar of any one walking across the floor. In this critical condition Christian Science found me, and cast a ray of hope on my pathway. Under its beneficent influence I slowly but steadily improved, and to-night I stand before you healed, glad to bear testimony to the power of Christian Science healing."

A Scientist from Columbus, O., visiting in our city, spoke of the following incident which occurred in her home. A lady friend was stopping with her for a few days. For seventeen years she had been a slave to the awful habit of using opium, having spent a great portion of this time in sanitariums, endeavoring to be cured, but all to no avail. Through Christian Science the healing was accomplished, and the desire for opium destroyed.

A young man testified that during severe illness, the doctors prescribed morphine to allay suffering, taking this every one and one-half hours, but the suffering was not relieved by this method. Through Christian Science the pain was overcome, and the desire for morphine destroyed.

A middle-aged man spoke thus: "For some time I had been in poor health, suffering from the effects of a sunstroke. I sought the different schools of medicine for relief, first trying one, and then another without any permanent result. My wife had heard of Christian Science healing, but this I scorned, as I now see, through ignorance and prejudice, not having the faintest glimpse of what it really was. Finally, when I saw that I was getting no help from medicine, to please my wife, I consented to call on a Christian Scientist and did so. I informed the healer that I was rather sceptical, not having much faith in it. He assured me that Christian Science was not a faith cure, but a Science, and asked me if I were willing to be healed. To get relief was what I wanted, and I consented to give it a trial. I had always been afraid in the hot sun, but on leaving his home that day, I did not suffer from the effect of the heat, though it was a warm summer day. In less than one week I was healed and felt like a new man."

The superiority of Christian Science healing over *materia medica* can be seen in the following experience. A lady testified that from early childhood she had been subject to sick headaches, and that from year to year, her suffering and misery increased. In later years she became afflicted with muscular rheumatism, which the doctors claim went to her heart. For seven years she was an invalid, spending the greater portion of this time in the hospitals. She said, "I became so low that friends did not think it possible for me to live. At this critical point Christian Science was brought to my attention. It proved to be the good Samaritan that bound up my wounds. It convinced me that there is balm in Gilead. While the physical healing seems a marvel to those not understanding Christian Science, yet it is of small consequence compared with the spiritual uplifting, the moral reform, the new beauty beheld in the Scriptures, which is the 'new tongue' of which our Master spake."

A lady stated that Christian Science had healed her of twenty-five years of suffering, including almost all the ills that flesh seems heir to, and while she was very grateful for this, it was of little value compared with the happiness and joy and reform that this great Truth had brought into her home.

A gentleman spoke of two instances. First, he told of a business man raised in the Jewish faith, living in a neighboring city, who had become interested in Christian Science. He says, "I see in Christian Science a Principle, and I am endeavoring to conduct my business according to that Principle, which causes me to love Good and honesty, though this is different from the course I once pursued." Second, he spoke of great benefits that an elderly lady has received in Christian Science. The physical relief was great. In a recent conversation with her daughter, she said, "Mother has changed so much; she is so different, her life is changed, and it is due to Christian Science." Her heart was filled with joy for the great change or reform in her mother. I told her that the physical healing and moral reform were one in Christian Science, and that it was impossible for man to be healed physically without the moral benefit.

A lady testified that she had been in very delicate health for some time, and not only a great sufferer, but was compelled to use glasses for seven years, it seeming impossible to go without them. Through Christian Science she was healed in a very short time, and is now able to work, and can see to sew and read without any glasses.

A practitioner stated that she had been called to a home, where a little child had been given up to die. After she entered the house, it was not long until the child commenced to improve, and in a few hours it was on the floor playing, having been restored to health.

Different testimonies were given of healing by reading the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. A lady spoke of being healed of lung trouble, rheumatism, spinal trouble, and

Digitized by Google

nervousness simply by reading this book. She seemed unable to express her gratitude for the blessings that the reading of this book had brought to her.

A gentleman narrated the healing of a severe case of pneumonia, thus pronounced by a physician. When the Scientist reached the house the family was very much alarmed, as the doctor had left just a few minutes before, stating that the patient was very ill. The man could be heard from the street, trying to get his breath. Through the realization of Truth by the Scientist fear soon began to subside, and within twenty minutes not a trace of the disease was manifest. The difficult breathing was gone, and he could rest. He gained strength rapidly; the beef-tea diet was dispensed with for solid food, and in a few days he was at work again.

A man told how he had been healed of a severe cold through Christian Science. He said, "Not in years had he had such an attack, but by reading Science and Health, and demonstrating the Truth the best he understood, he was able to overcome it. Other men arose, and gave similar testimony.—*Dayton (O.) Herald.*

## True Charity.

IN the preface to "Miscellaneous Writings" by Mary Baker G. Eddy, Mrs. Eddy says, "A certain apothegm of a Talmudical philosopher suits my sense of doing good. It reads thus: 'The noblest charity is to prevent a man from accepting charity; and the best alms are to show and enable a man to dispense with alms.'"

Many people feel that the price at which Science and Health is sold hinders the poor from receiving its help and instruction, and so, to their belief, those most in need of its influence are deprived of it.

I would like to relate an experience I had some nine years ago. There was a family among our acquaintances who were chronically poor. We, with many of their friends, helped them regularly, and there was never any indication that the need grew less. There were times when the need was great. After I had been studying Science and Health about two years I became convinced that Christian Science could meet that human need and that nothing else would. I talked to my mother about it, and told her that I thought instead of sending the usual box of supplies it would be better to send them Science and Health and a letter. They must be taught to maintain themselves, and Science and Health would teach them how to do it. At first mother objected. She was perfectly willing to send the book, but wanted to send the box as well. She finally consented, and Science and Health was sent, together with a letter saying that in it they would find every earthly want supplied, for it would teach them how to live.

In the mean time I handled every belief that mortal mind presented to me about the family the very best I understood how to do. But I had not the slightest idea of the condition they were in when my letter and the book, Science and Health, reached them. The father had been sick in bed for three weeks and the oldest son had been confined to his bed for two weeks (there were six children), and they were living upon the charity of the town. The town doctor, who prescribed for the poor, had visited them and provided them with medicine, but seemed to feel that nothing more could be done and had ceased coming. Everything seemed to fail them. The mother said when the letter and the book reached them instead of the much-looked-for box her heart failed her, and after reading the letter aloud to her husband she laid the package containing Science and Health away without opening it. However, that evening, after the children were put to bed, the father asked his wife to get the package and open it. After looking through it she began to read aloud from its pages and read till early dawn, when she took an hour's rest. The husband had been sleeping for some time. All day he watched her about her work, and just as soon as the children were put to bed he asked her to read again from its pages, and she read till after midnight, when he had been asleep some time, and the mother, too, retired. The next day he was able to sit up, and in less than three weeks' time both father and son were at work again, and never from that day to this have they received alms, and they are able to overcome very many of the claims of evil through the understanding they have gained from the study of our text-book. The older children are holding good positions and the entire family manifests an atmosphere of intelligence, self-respect, and independence that is very gratifying.

I believe that "Science and Health with Key to the Scriptures," through its teaching, is handling the conditions of poverty as nothing else can. It is not making concessions to it, but is showing mortals the way out of it.

Many people believe that Science and Health cannot be understood by the masses, because the language its author employs can only be understood by the most learned and scholarly. That this is only a belief, and a vanishing one, is proved by the hundreds of simple, unlettered people who read its pages and prove by the application they make of its teaching in overcoming the claims of evil in themselves and others that they do understand it.

Science and Health teaches that God is the only Intelligence; also that God is no respecter of persons. It appeals to Mind, not matter, and God's children can understand the Truth.

Many people entertain the belief that Christian Scientists ignore the Bible, or at least, that they treat it lightly. They even believe that the Christian Scientists' God is not the God of Abraham, Isaac, and Jacob, or of Jesus the Christ. This illusion has not the slightest foundation in fact, for there are no people on the earth to-day who are more earnest students of the Holy Scriptures than the Christian Scientists themselves. The Bible is their daily study, and "Science and Health with Key to the Scriptures" is founded wholly upon it. It explains and brings to human comprehension the healing methods employed by Jesus. It illuminates the Scriptures with a clearer light and enables us to grasp their practical import in a larger degree than the world has ever known before, so that mankind is seeing Jesus' words in Mark, 16.: 17, 18, being fulfilled to-day.

C. B. W.

*Grand Rapids Herald.*

The *Sunday School Times* says, "There are no more Alexanders among us. In the religious and moral life, there are always more worlds to conquer. Before us always lies the joy of the privilege of growing through overcoming."

The work an unknown good man has done is like a vein of water flowing hidden underground, secretly making the ground green. CARLYLE.

## Endeavor.

THOUGH the difficulties throng,
And the struggle may be long,
And the power of evil strong,
Hope on.

For to patient, brave endeavor,
Cometh utter failure never,
And the crown, at last, forever
Shall be won.

### Many Blessings Received.

BY FRANCES B. JOHNSTON.

CHRISTIAN SCIENCE has healed me of many ailments—colds, coughs, rheumatism, ear-ache, tooth-ache, heart-ache, grip, deafness, the effects of the grip, and other ills too numerous to mention. It has almost restored my eyesight. I could not read a word without my glasses, and I can now read the Bible and Science and Health with perfect ease without them. Christian Science is the greatest boon that was ever brought to mankind.

It is about fourteen years since Christian Science was first brought to my notice. I never antagonized it, but wanted to know what it was from the first; however, the desire was not sufficient to make me search for it. I needed it then, as the entire world needs it to-day, but it was not until five or six years later that I really accepted it. I was then (to mortal sense) sick in body and in mind. Life had become a blank to me as it would be to-day without this Science. I seemed to be "without hope and without God in the world," although I had been a church member for many years. In that condition I made a business trip to St. Louis and stopped with an old friend who was under Christian Science treatment, and both she and her husband could talk of nothing else. They were full to overflowing of this blessed Truth, and I caught the overflow. I listened and was ready to obey. I was told to deny the material senses, and to declare the allness of God. I arrived in St. Louis in the evening after a very uncomfortable day on the cars, having been so ill all day that I could not hold my head up. The following afternoon my friend gave me the Bible and Science and Health, and asked me to read aloud to her. I do not know why we turned to the chapter on Genesis in Science and Health, but we did; and as I read, making my comparisons with the Bible, the spiritual creation dawned upon me and I exclaimed again and again, "I never saw it in that way before." As I continued to read, I became so interested and so absorbed in the books before me, that I forgot everything else. I read the entire afternoon and evening, and the next morning I arose without a pain or an ache, and as free and as happy as a bird on the wing. In fact I did not tread upon *terra firma*, but seemed to float in mid-air. The business upon which I had gone to St. Louis was accomplished in half the time I had expected, and without the least fatigue. Then I hastened to herald "the glad tidings of great joy," but alas! I soon found that I had much to learn, for this good news failed to meet the hearty reception which I had expected. Opposition met me at every turn, and the greatest opposition in my own family. A copy of Science and Health was given to me and I read it *once*, but did not make a study of it. For about three and a half years I was able to demonstrate the healing power of Christian Science to a certain extent; but when the real test came my understanding was too limited to meet the opposing thought. I had been called a "crank" on the subject of Christian Science so many times, that I began to think perhaps I was one, and that I would give medicine a trial once more.

For about a year, I swung like a pendulum between *materia medica* and Christian Science, growing worse all the time. Finally I remembered what Christian Science had done for me, and I decided, like the Prodigal, to return to my Father's house. Shortly after that decision, when endeavoring to help a suffering friend, the Christian Scientists heard of me and came and invited me to attend their meetings. I went and was pleased with the people I saw there. That was nearly five years ago, and I have been with them ever since.

I have had many trials to test my faith, but the one most severe of all was last winter and spring, in an illness that seemed as if I must needs pay the utmost farthing. Mrs. Eddy tells us in Science and Health that "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified." I was compelled to call for help. My husband was determined that I should have a doctor; but this time, I am happy to say, I stood firm for Christian Science treatment, and had it, and I am *so* thankful. Although it was not a quick healing, I *know* that Christian Science did the work, and it was an experience that I needed.

About a year and a half ago I had the blessed privilege of class instruction from one of the Mother's loyal students.

I would like to tell of two demonstrations which have been so much to me. One is the overcoming of anger, and the other is a demonstration over the fear of storms. Any discord would throw me into a frenzy of anger, and as a natural consequence I would say many things which I would afterwards regret, and for several days would be sick and feel as if I had "been beaten with many stripes" —literally—all of which was very discouraging when I was trying so hard to know the Truth and to live it. One day after the close of a Christian Science meeting, a Scientist came to me and said, "How are you getting along?" "Oh," I said, "not at all. When I think I am making some progress, something disagreeable will occur and I get so angry." "Why," she said, "treat yourself for anger as you would for sickness." That was a revelation to me, and I went to work to master this serpent. One Sunday morning, not a great while after I had commenced this mental work, in conversation with my husband I happened to make a remark which did not please, although it was nothing whatever to call forth an exhibition of temper. He spoke very sharply to me, but instead of retorting in the same spirit I answered him to the point, but in the mildest manner. The next word was one of kindness, and the breakfast with the family that morning was one of the most harmonious meals I ever remember. I did not realize at first, that the demonstration over anger was made, but although I have been a little vexed at times, never have I experienced that old feeling of anger and hatred, where one would quarrel, in thought, for hours or days after with that seeming enemy—that creation of mortal thought

To mortal sense I must have inherited the fear of storms, for my mother's fear was great. As I grew older the fear seemed to grow upon me, until it was indeed a disease, as much so as any sickness could be. I could feel the storm coming when there was not a cloud in sight, but when I began to look for it I always found it. Then I began to prepare for it, by closing the house long before the storm would reach us, and was in agony until it was over. One strange thing about this fear was that I often dreamed of storms, and such frightful ones, worse, far worse, than I beheld in my waking hours.

The first summer after I had taken up Christian Science in earnest, I determined to destroy this fear, but I worked all summer without making the demonstration. The next spring our stormy weather commenced in April. I said I *must* make my demonstration, and went to work. Not long after that I had a dream, but it was a very different one from the others. I saw a number of people intently gazing at something in the sky, and I joined them and looked in the same direction. I saw lovely *white* clouds, changing, as clouds often do. They took the form of a *white* cross, then gradually parted in the centre and faintly outlined in the mist was a figure with hands outstretched toward me, as if it were coming to meet me. The dream was with me all the next day and seemed to bring sweet

Digitized by Google

peace and harmony. I kept asking myself, "What does it mean? What does it mean?" The second morning after, the paper carrier came to the door and said, "Wasn't that a fearful storm that we had last night?" "A storm!" I replied; "why, I did not hear any storm; did not know that we had a storm." He said, "Yes, indeed; I stayed up nearly all night watching the clouds. I thought we were going to have another cyclone." As I turned away from the door I thought of my dream. I had not heard *that* storm, when the slightest rumble of thunder in the distance would always waken me from a sound sleep before, and I have never had that awful fear since.

## A Confession.

BY ALFRED MOORE.

WHEN about twelve years old I became a member of the Congregational Church, which I had attended from my earliest recollections. In a short time I deeply regretted the step I had taken, for I realized I did not believe what I professed, and as I did not wish to become a hypocrite it made me very miserable, especially after talking with some of the members as to a means of escape. I was told there was no way except by excommunication for cause. I then determined to leave my home and did so, at about sixteen years of age, much against the wishes of my parents (as I was the youngest boy of ten children). I went as far as possible (from Newark to California), thinking to escape my troubles, which I tried to forget in worldly pleasures.

After about eight years I succeeded in having my name dropped from the church records. I then tried to become an infidel, but I did not succeed, for I always admired the example of Christ, and in looking back now I do not believe there ever was a time that in my inmost heart I did not long to know the Truth and was, in some degree at least, a searcher after it, but it must rest on demonstration, not theory.

When I first heard of Christian Science, eleven years ago, I was very much prejudiced against it, and did not wish to investigate it on account of my former experience. But about one year ago, at the earnest request of a very dear friend and Scientist who had patiently labored with me during all these years, I went to the Mother Church. It was indeed a surprise to me in more ways than I can mention. I had been to church only a very few times since my boyhood, and although I went fully determined not to believe, and classed Christian Science with Spiritualism and thought it a fraud and a scheme to make money, I felt the love-thought that was expressed there more by actions than by words, but I fought it as best I could. However, I was not able to resist my inclination to go again, and up to the present time have been a regular attendant, although I live about eight miles from the Mother Church.

Science and Health by Mary Baker G. Eddy has been in our home for several years, but I was unable to read it, and after several failures I purchased "Miscellaneous Writings," which I read. The last letter in the book especially appealed to me, and I was then able to read Science and Health, which I did night after night. A short time after this I embraced an opportunity for class instruction, and under the instruction of a loving and loyal teacher I was able to see the light, very dimly at first, but since that time I have never had any doubts as to Christian Science being the Truth as taught and demonstrated by our blessed Master, Jesus Christ. What do we owe to Mrs. Eddy, or rather what do we *not* owe her! Can words ever begin to express the depth of love and gratitude that is constantly, like the waves of the sea backed by the incoming tide, springing up in the hearts of the thousands upon thousands who have been rescued from their open graves and have come up out of the depths of hell after suffering mentally and physically for years. How, then, can we show our gratitude, if not by words? In no way better than by works, by a life corrected, by a heart overflowing with love for God and man, go forth and "let our lives attest our sincerity" (Science and Health). By living the Christ-life, and demonstrating the principles laid down by our beloved Leader we may add our mite of happiness to her whose cup is even now running over with love to all both bond and free, and who will always be called blessed by the present and future generations.

## How can I Know I am Right?

BY I. L. M.

WHEN I first began the study of Christian Science, I thought I could stand up and face the whole world in my new-found convictions, I felt so happy and "lifted up;" but after more study, and the arguments of opposing friends, a great many doubts and fears arose, and I asked myself again and again, How do I *know* that Christian Science is *right?* I had never witnessed any wonderful demonstrations, and what I had seen I thought "might have gotten well any way;" so I was one of the doubting Thomases. I tried to think I was right, and yet I sometimes doubted. Then this thought came to my mind, "By their *fruits* ye shall know them." What are the fruits of Christian Science in me? I know that since trying to live it I have a very much clearer sense of the Bible. I begin to love my enemies. I have more charity for my neighbors who sometimes say unlovely things about me or my friends, for I now know that we are all children of the one Mind, even the Father of all, and that some day the mantle of wickedness shall fall from *all* his children, and we shall all see each other in the image and likeness of Love. *Now* I have no fear for the morrow, and when storms rage (as they often do in this western country) I feel perfectly safe. If at times I have a little pain or suffering, I do not fear that "it may develop into something more serious." I do not waste on it a second thought, for I know that God's power is infinite, and He will take care of me if I trust Him. It is such a comfort to have something to lean on that we know cannot fail us if we do our part. I have only mentioned *some* of the fruits. What do you think of them? Are they good or are they bad?

Ah! to look back at the old life of fear, taking bad tasting medicine, etc., is like looking back into a dark cave from which you have just emerged into the bright sunlight. So I feel that I can know that I am right when I love my fellow-man more and try to reflect God more.

## A Double Conversion.

BY CHARLES S. COOK.

THIRTY-TWO years ago I was converted to Christianity in the regular orthodox fashion. A series of special meetings were held at Shawmut Church, Boston, in the care of E. B. Webb, D. D., and among the leaders was Dr. Kirk of the Mt. Vernon Church. I was convicted of sin, had the usual distress and fear of eternal loss, then came acceptance of Christ and a great joy. I united with the church, and for the intervening thirty-two years I have tried to do my duty in active work connected with the Congregational church. I went into this experience guided by Dr. Webb. After a few years I came to think more independently, and I confess that the Calvinistic doctrines of our church were hard to believe and seemed to me absolutely unreasonable. I have, during the last ten years, been a careful student of the religious thought of the age and of the history of the religious idea in the past,

Digitized by Google

and I had become more and more uneasy in my association with a church of which I was an inconsistent member.

Two years ago I was led almost by accident to read Science and Health. I was disgusted with the book at first, and I may say, for a year. I read in a desultory manner and did not give the work the careful study which must be given to achieve anything like good from its pages. It was only when I could appropriate to myself the foundation stone of Truth, God as principle and not a person, that I came to an understanding of Christian Science. After I had accepted that all was easy. Christian Science applied to the Scriptures illumines them with supernal brightness and satisfies the reason and the soul. I feel that my first conversion was blind faith, my second intelligent faith. I am simply on the shore of this great continent of spiritual wealth, and I look forward with the greatest happiness to studying the Bible with the light of Christian Science. This spiritual idea will surely dominate the world in time.

## Is the Theory Correct?

BY J. C. C.

No one who has had any experience can now deny that radical healing is accomplished through Christian Science; so the next question that comes to the doubting Thomas is this: "How can you tell whether the theory of Christian Science is correct? There are many mysterious mental influences as yet unexplained, which seem to produce marked phenomena. There is a phenomenon of Spiritualism, for example, some instances of which are doubtless genuine; but it does not follow that the theory accepted by Spiritualists is correctly deduced. Perhaps the healing you attribute to the teachings of a certain book is really caused by mental suggestion, hypnotism, or animal electricity?"

Dear friends asking these questions, get the books,—you can find them in the libraries, if at present you do not wish to purchase,—and try the theory for yourself. We who never knew how to heal sickness before, are gaining an understanding of "Science and Health with Key to the Scriptures," and can apply its teachings to the belief of every known ailment, moral or physical, and usually to the entire eradication of the trouble, uprooting it so thoroughly that not a sign of it ever appears again.

Just try it for yourself, and if you do not perceive clearly how to banish your own fears, ask some one who has studied the book thoroughly to help you. Rest assured that "it is the theology of Christian Science which heals." Put its teachings into practice and you will know whether or not it is of God.

A lie invariably recoils upon itself and returns to its malicious utterer. Where else can it go, or what else can it do?

Health is wholeness. Therefore let us strive for and attain it. But this means vastly more than physical wholeness.

## My Task.

BY M. P. H.

O, MAY I see
It rests with me
To gain,
And then maintain,
My rightful part
In "the great heart
Of Love!"

# Testimonies.

### Our Need Supplied in Christian Science.

I have been a student of that wonderful book, Science and Health, for the last six years, and have seen the power of Truth over error in many ways both in my own family and for others. I have felt for a long time that I ought to give my experience for the benefit of humanity, even as I receive help and strength by reading the testimony of others. I did not come into Science through healing, but by spiritual growth.

Fifteen years ago this winter my thought was turned God-ward by a "John the Baptist" preacher. I saw myself as a sinner, and all good belonged to God, and I must look to Him for strength to live aright. I went on overcoming sin in self through the word of God, both written, and spoken, and obeyed. I read many books written by consecrated servants of God which awakened thought more and more, until both my husband, who had been a Christian for several years, and myself were fulfilling the law sufficiently to take God as our healer from sickness as well as from sin, and I was restored from a severe attack of grip, and also restored a neighbor.

From that time on, which was nine years ago this winter, I have not tasted medicine, but have always relied on God for healing. When Christian Science was brought to our notice it gave us a clearer understanding of the God of Love we had believed and obeyed and trusted so long. We needed the Spirit and the letter to make our experience complete, and it was found in Science and Health.

During these last six years my husband has been healed of severe stomach trouble, a chronic trouble that several doctors had failed to relieve, and catarrh. Our children have been cured of numerous beliefs, and myself of catarrh of years' standing. In a case of childbirth the child was turned in the womb, and a safe and natural delivery made possible. Thirteen years ago, under similar circumstances I lost the mortal life of my child and came very near losing my own, besides untold suffering. I have seen an infant and an adult in my own neighborhood get well after the doctor had said there was no hope, simply by the unspoken denial of error to keep my own thought clear. I spent an evening with a neighbor who had been examined by a doctor and told that it would take a year to cure her. I gave her the Truth audibly, showed her what belonged to her as God's child. The next morning she arose well, although the evening before she was unable to arise from her bed to visit with me, and could not bear the children's noise. That same lady, who has since moved away, sent a young man to me last spring who was suffering from both mental and physical troubles. In six weeks he was entirely free and has remained so.

MRS. MABEL MCCUTCHEON, Northville, Mich.

### Catarrh and Consumption Healed.

On the 12th day of October, 1886, after a life of sixty years in error and doubt, my physician, after a consultation with another doctor, said, "Mr. E., you may as well fix up your affairs, as I can do nothing for you. Medicine cannot save you; you may live a month or two, possibly not more than ten days."

I had been troubled with catarrh over twenty-six years, and now had consumption with hemorrhages; also sciatic rheumatism fifteen years, and all the ills it seemed that afflict mortal man. All of this after a life of years and years of belief in, and devotion to, doctors and drugs. That same day a friend called and said, "Mr. E., you do not seem so well to-day." When I related what my physician had said during the forenoon, my friend replied, "You had better try Christian Science," telling what it

Digitized by Google

had done in her case, after years of treatment by the best doctors in Denver, Col.

My first word of reply was, "Is Christian Science another phase of Spiritualism and fraud?" After much talk pro and con, at my friend's suggestion, I called a healer. When I said to the healer, "I do not understand how you have the power or ability to heal me without a material remedy," he replied, "Oh, I cannot do it; God heals, I voice the Truth and God does the work." I said, "I do not believe in the God I was in early years taught to believe in." The reply was, "In Christian Science God is Immortal Mind, fills all space, and leaves no room for the belief of sin, sickness, and death." The conversation seemed to give me hope and courage. After making a promise to give up the medicine and whiskey that for years had been my only refuge, I was treated. I was told to eat and sleep as I wished. That night my sleep was natural and refreshing. After many years of cross-bearing and striving, I still abide in the flesh and *know* that the Light which cometh down from heaven—harmony—giveth me wisdom and understanding to overcome bodily ills through Immortal Mind.

The tobacco habit, to which I had been a slave for fifty years, has vanished with the errors of a life in darkness and uncertainty.

With gratitude to our Leader through whom a glimmer of this Light has awakened me to a consciousness of harmony, Life, Truth, and Love, I give all praise, and am daily striving to reflect more of this Mind that was in Christ. Now at the age of seventy-three years, if error tries to assert its claim, I turn to Science and Health and find the Truth that banishes all doubt.

E. E. E., Rio Vista, Cal.

### Tobacco and Liquor Habits Destroyed.

Early in January, 1896, I was badly afflicted with chronic nervous dyspepsia, and palpitation of the heart. I had been troubled more or less with these diseases for several years, but the attack in 1896 became so serious that I placed myself under treatment with one of the best homœopathic stomach specialists in Buffalo. This doctor treated me for about thirteen months; but I did not improve; in fact was worse than when I began treatment with him.

By the advice of a friend I tried a noted allopath, who said my trouble was gastritis. This man tried all kinds of drugs on me, but after five months' treatment I was no better—had received no benefit at all.

It was then I heard of Christian Science. I placed myself under Christian Science treatment at once and received immediate benefit. Threw away all my great store of drugs, and was able to eat anything and enjoy my food. I had used tobacco for thirty-seven years. I had also indulged in liquor. These evil habits, with the use of profane language, disappeared in a very short time. Through knowing the Truth I was also able to put away my glasses, which I had worn seven years. I had a number of other troubles, such as bronchitis, inflammatory rheumatism, all of which have been healed.

One year ago I was enabled to take class instruction. Since then I have been able to help others by demonstrating the Principle of Truth and Love as taught by our beloved Leader, Mary Baker G. Eddy, in "Science and Health with Key to the Scriptures."

I sought the physical healing, but think the moral and spiritual healing to be wonderful. I am a member of the Third Church of Christ, Scientist, here, and last June I united with the Mother Church in Boston. I enjoy reading the *Journal* and *Sentinel*, and would not be without them. JOHN W. S. BERGMAN, Buffalo, N. Y.

### A Wonderful Demonstration.

Two years ago some boys were badly burned by an explosion of powder. Among those who were sent to the hospital was a boy who I was told was so terribly burned that it seemed impossible for him to recover, and that his suffering was fearful. As I listened a flood of pity welled up in my heart, and I silently invoked God's help for him. He was in the hospital for weeks, and then sent home, as they could do nothing more for him. While at home a physician attended him, and all the encouragement he could give, was, that if the boy could get strong enough they might perform an operation on his limbs, which were drawn up, and nearly all the flesh was burned off, so that he had no use of them. He also suffered from internal injuries caused by inhaling hot air. Divine Love led his mother to come to me to see if Christian Science could help him.

I commenced to give him treatment at once, but was unable to visit him for nine days. Then I found that with the help of crutches he had walked up town, and in a few weeks he could use his limbs freely, and all the great sores were healed up. He also had a deep cut across his nose, that was healed completely, and to-day he is a great, strong, well boy, demonstrating the wonderful power of divine Love to heal and save.

RUTH V. BROWN, Asheville, N. C.

### A Severe Case of Sore Throat.

Last August I was attacked with a sore throat. My throat was so badly swollen that I had not taken food for over seventy-eight hours, and for several hours I was unable to swallow water. My family as well as myself began to be alarmed, as medical treatment gave me no relief. But man's extremity is God's opportunity. We sent to a loyal student of Science and Health for treatment. I felt easy in a very short time and the next morning I got up and ate my breakfast as usual and walked a mile to the home of the Scientist who had treated me. I have since been healed of what *materia medica* would have pronounced typhoid fever. I was also healed of the tobacco habit after using tobacco for over twenty-five years. The Scientists here are doing a grand work, and many desperate cases have been healed. My wife and two daughters have accepted Christian Science and are proving for themselves that God is a very present help, and that Christian Science is the Truth that makes free.

A. F. CLARK, Chanute, Kan.

### Fractured Limb Healed.

I had been under the care of all the different schools of medicine, and had taken patent medicines, but found only a little temporary relief. When Christian Science found me I was in such a state of mind that I did not care to try anything that would only prolong this existence, for if it was God's will (as I then believed) that I should be one to suffer, why try anything new? I can never express in words what an uplifting and comforting thought the understanding of God brings, through the teachings of Science and Health. The power of Truth to heal a broken bone was proven to me when I fell and fractured my right limb. I was healed in two weeks' time and I was only confined to the bed two days, where if I had called a doctor I am sure I would have had a very different experience. Although one claim has not disappeared, we know that man, being the image and likeness of God, is perfect, and if we keep before us that likeness harmony will be the result.—N. H. W., Chicago, Ill.

## From the Religious Press.

### Church Advertising.

Church advertising is well worthy of the attention of every minister and Board of Trustees. The time was in business when a man could open his store and people would come and buy; to-day the merchant must go after every customer, and getting him, hold him. To do this he has resorted to advertising, and advertising has become a business: almost a science. It is not for churches to die of dignity and keep out of the modern method of getting business. We want people; then we must go after them, and getting them, hold them, and there is a legitimate place for church advertising. It is in the experimental stage so far, but it is interesting to watch these experiments. The circular letter has been "done to death," in some places, in others it has yet a clear field, what is wanted is the method that fits the place, and the fearless and constant use of it. Our enterprising pastor in Beverly, Mass., Rev. E. M. Barney, has made a most striking venture, that must be watched with interest; he has taken half a page in the local Saturday paper for a year, and in it appears a "display ad." of Universalism in general and his own church in particular. It is very certain that every one in Beverly will see the huge headline, "First Universalist Church," and the equally huge closing line, "Christ Will Conquer," and it is to be assumed, unless the people of Beverly are out of the common, that they will read all between, about the location of the church, the Building, the Pastor, the Organizations, the Statement of Belief, the calendar of services, and the invitation; and having read, what will be the effect on the readers? That is the crucial question. It would seem that it must make them think. It is to be hoped that "keeping everlastingly at it," which is the law and gospel of advertising, they may be brought into the church. Here at least is an interesting experiment, and enterprising pastors will do well to watch the Saturday editions of the Beverly, Mass., *Evening Times.—The Universalist Leader.*

### Christian Commercial Travelers.

Commercial travelers have organized a national society of Christian workers to be known as "The Gideons." At a secret meeting officers were elected as follows: President, S. E. Hill, Beloit, Wis.; vice president, W. J. Knights, Janesville, Wis.; secretary, J. H. Nicholson, Janesville, Wis. Following is the executive board: L. C. Smith, Oshkosh, Wis.; Charles B. Kettridge, Waukegan, Ill.; J. F. Grunkau, Milwaukee, Wis.

The new organization has one hundred and eighty members. The object of the society is to recognize Christian traveling men with cordial fellowship and encourage one another in Christian work; to improve every opportunity for the betterment of the lives of the commercial travelers, business men, and others with whom the commercial man comes in contact. Any traveling man who is a Christian, no matter of what denomination, is eligible to membership.

*Chronicle*, Chicago, Ill.

### A Missing Element in Modern Preaching.

Is not our modern pulpit becoming too purely ethical? By ethical preaching I mean the laying of emphasis on man's goodness rather than God's forgiveness. Are we, or are we not, urging men to be good rather than pleading with them to be reconciled to God? While ethical teaching is indispensable, have we not failed to lay sufficient stress on the spiritual motive from which all right living proceeds? We have not neglected motives; but the question I would ask is, whether the one great and all-controlling motive, the divine love as attested in the death of Christ, is sufficiently urged?

REV. J. B. G. PIDGE, D.D.

*The Examiner.*

## Miscellany.

### Grover Cleveland's Bible.

There is a great deal of sentiment about Grover Cleveland, which he inherited from his mother, and a religious vein, which comes from his father. Upon his writing table in the library at Princeton lies the old-fashioned Bible, with covers of black enamel, which was given him by his mother when he first went away from home. While he was President the little volume was always kept in the upper left-hand drawer of the desk which was presented to the President of the United States by the Queen of England as a memento of the Sir John Franklin expedition to the arctic region. At the top of the cover in a little space surrounded by an ornamental border is inscribed in gilt the name "S. G. Cleveland," and upon the fly-leaf there is a line or two of writing in a neat, precise feminine hand, from which we learn that the book was a gift to "My son, Stephen Grover Cleveland, from his loving mother."

Colonel Lamont says that he first saw this Bible on the table in Mr. Cleveland's law office in Buffalo, and other friends remember having seen it there. When Mayor Cleveland became governor the book was generally on the bureau of his bedroom. When the governor was about to become President, Colonel Lamont found the little Bible in the President's rooms at the Arlington, and, handing it to Chief Justice Waite, asked him to use it when he swore the new chief magistrate into office. There were about forty thousand witnesses on the plaza in front of the Capitol when Stephen Grover Cleveland pressed his mother's gift to his lips, and before it was returned to him Mr. Middleton, the clerk of the Supreme Court, entered a formal record on the last fly-leaf that it was used to administer the oath of office to Grover Cleveland, President of the United States, on the 4th of March, 1885. WILLIAM E. CURTIS.

*Chicago Record.*

### Do not Repeat It.

Persons should be very careful how they repeat stories that reflect on another's character. As a rule, they are nothing but rumors at best, and generally are much exaggerated, and always do great injustice to the persons under discussion. The Supreme Court of this state has recently held that the persons who repeat a slander, even when they say, "Now I do not believe this," or "Mrs. So-and-so says that——" or "They say that this is the case, but do not quote me," or any other qualifying phrase, are equally guilty with the one who starts the story.—*Harvard Herald.*

### Largest Stone Ever Quarried.

The largest stone ever quarried, so the manufacturers say, has been extracted from a granite ledge near Vinalhaven, Maine, to serve as one of the eight columns destined to support the great dome of the Episcopal Cathedral of St. John the Divine, in New York. In the rough the stone is sixty-four feet long, eight and a half feet thick, and seven feet wide, its weight is three hundred and ten tons. To turn it into cylindrical form, a lathe that will cost more than fifteen thousand dollars must be specially built.—*Youth's Companion.*

The American Tract Society has issued during the year twelve volumes, twenty booklets or tracts, and has printed for distribution 55,000,000 pages, and since the society's foundation nearly 10,000,000,000 pages of tracts and books, chiefly in English and German.

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the Field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### The Board of Education.

The Board of Education has prepared printed application blanks to be used by those who desire to appear before it for examination.

These blanks are now ready, and can be procured by written application addressed to the Board of Education, 95 Falmouth St., Boston, Mass. No other form of application will be received.

Special attention is directed to the following By-law of the Church Manual:—

"Students are examined and given certificates by this Board, for no other purpose than teaching Christian Science. All other applicants will be dismissed."

### Church Rule.

It shall be the privilege of all the leading Churches of Christ, Scientist, situated in our largest populated cities, or in the capital cities of the United States, Canada, or Great Britain (in addition to their other established lectures), to call on Judge William G. Ewing of Chicago, Ill., for an annual lecture under the regulations and auspices of the Mother Church in Boston. Also, with the consent of Judge Ewing, the church shall publish his entire lecture in at least one of the leading, local newspapers.

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, $1.06; $5.00 half dozen: $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy or more, each, 10cents: 12 copies to one address, $1.00; Twenty-five copies to one address $1.75; 50 copies to one address, $3.00.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

In his Thanksgiving speech Ambassador Choate said, "Let England and America clasp hands across the sea, and the peace of the world would be absolutely secure." Mr. Joseph Chamberlain, Secretary of State for the British colonies, on the same date delivered a speech in which he said: "The union, or alliance, if you please, between these two great nations, Great Britain and the United States, is a guarantee of the peace of the world." The remark has occasioned a great deal of comment all over Europe, and numerous inquiries have been received at Washington regarding the alliance. It was declared that no alliance exists with England or Germany, and none is contemplated by the President. Secretary Hay declared that no alliance exists between the United States and any other power, except the treaties of ordinary international friendship for the purpose of business and commerce, and these are all known to the world.

The annual report of the commissioner of internal revenues shows that the receipts from all sources for the year ending June 30, 1899, aggregated $273,484,573. The total amount expended in collection of internal revenues during the last fiscal year was $4,591,754, or 1.68 per cent of the collections. This percentage of cost is the smallest in the history of the bureau. The receipts of the first four months amounted to $103,103,485, an increase of nearly ten million dollars over the receipts of the corresponding period last year.

Great changes were recently brought about in three important railroad systems. The Pennsylvania obtained control of the Baltimore and Ohio, which has a total mileage of 2,046.03 miles, and a capital stock of $101,727,000. The New York Central has obtained control of the "Big Four" and Chesapeake and Ohio. The mileage of the "Big Four" is 2,234.19 miles, and a capital stock of $38,000,000. The Chesapeake and Ohio has 1,360 miles of road and $60,533,400 capital stock.

An unusual but profitable industry in Lawrence County, Ill., is the raising of sunflower seeds. The buyers pay $1.25 to $1.50 per hundred pounds for the seed. This fall one man has bought seven hundred and fifty thousand pounds of seed, and he expects to ship five million pounds this year. Only a few men know what is done with the seed, and they refuse to tell. It is admitted that the oil is pressed from the seed, but what use is then made of the oil is not divulged.

About five tons of grains and cereals for our cereal exhibit in Paris has been received at Washington from farmers from Maine to Oregon. The grain has been selected by experts sent out by Secretary of Agriculture Wilson, and represents the finest that could be selected from the crops of the present year. The grain is being carefully overhauled in the Washington warehouse and prepared for exhibit.

Troup County, Georgia, is to have a cotton factory, built, run, and managed entirely by negroes. It will be under the control of the Mutual Aid Society, which has not less than three hundred lodges scattered throughout the state. A town will be incorporated and a negro mayor, negro councilmen, and negro policemen will be in charge of it.

The son of Captain Gridley, who commanded Admiral Dewey's flagship at the battle of Manila, has been designated for appointment as a lieutenant in the marine corps by President McKinley. Young Gridley has no money with which to prepare himself for the examination, but President McKinley and Admiral Dewey will pay all his expenses.

It has been discovered that a man in New York City has been buying and selling washed internal revenue stamps at the rate of from six thousand to eight thousand dollars worth a day. It is estimated that he has cleared about thirty thousand dollars and the Government has been defrauded out of twice the amount.

Paris contains the finest labor temple in the world. It was erected in 1892 at a cost of four hundred thousand dollars. Eighty-two trades and organizations have meeting places and offices under its roof, for which a nominal rent is paid. The sum of $10,000 is appropriated annually by the municipal council for its maintenance.

The cash balance in the United States Treasury November 30 was $286,216,439. The total receipts for the month of November were $46,945,572, and the ordinary expenditures $40,769,847, leaving a surplus of $6,175,725. The November pension payments were $13,686,986, and the interest payments $3,609,232.

For more than a quarter of a century it has been the custom of Horace Vose of Westerly, R. I., to furnish the Thanksgiving turkey for the President's and Governor's tables, and this year he also sent one to Admiral Dewey. The turkeys were the choicest to be had and weighed twenty-five pounds each.

The fiercest battle of the Transvaal war was fought at Modder River Tuesday, November 28. After ten hours of hard fighting the Boers were routed by General Methuen's forces. It is estimated that the British have lost three thousand men in killed, wounded, and prisoners since the war began.

In his annual report the Comptroller of the Currency says that on September 7, 1899, there were 3,595 National banks in operation. The combined capital was $605,772,970. The individual deposits on that date amounted to $24,450,725,595, an increase of $419,271,055 during the year.

The mills of Rhode Island employ about twenty-five thousand hands, and those of eastern Connecticut about seven thousand. The manufacturers of Fall River have increased the wages of their employees ten per cent, and it is believed that all other mills in that section will do likewise.

It is stated that thirty-five or forty thousand Cherokee and Creek Indians will settle in Mexico where they have received a land grant of eight million acres. Their property in the Indian Territory is valued at one hundred million dollars, and they desire to sell to the Government.

A party of expert oil-well drillers have started from Kokomo, Ind., for Egypt. They have a contract with an American syndicate to drill a large number of deep wells on the bank of the Red Sea. It is believed by the prospectors that oil or natural gas may be discovered in Egypt.

It is reported that five thousand people are engaged in the pearl hunting industry on Clinch River, near Chattanooga, Tenn. Over ten thousand dollars worth of pearls have been shipped to New York jewelry firms. Pearls are found ranging from fifty-five to seventy-two grains.

Information has been received from Havana that the United States government officials, who have been there since the battleship Maine was blown up, secretly investigating the matter, have discovered that the explosive used was seven hundred pounds of gun-cotton.

An organization to be known as the Spanish-American War Veterans was organized at Washington, D. C., November 25. Admiral George Dewey was chosen commander-in-chief, and Colonel Theodore Roosevelt, senior vice-commander-in-chief.

Sir Thomas Lipton has contributed an article entitled, "After the Yacht Race," to the *North American Review*. He says that while he did not win the cup, yet he secured a much better token—that of the abiding brotherhood of our two peoples.

The will of Vice-President Hobart has been filed. The estate is estimated at two and a half million dollars. Mrs. Hobart receives one million dollars outright. Twenty-five thousand dollars were given to various charitable institutions.

Admiral Dewey is quoted as saying that the easiest way out of the difficulty of dealing with Aguinaldo is to let him escape. If he succeeds in getting away from the islands his influence will be gone and he will never trouble us again.

The total coinage at the Philadelphia mint during November was $3,046,070, representing 19,415,240 separate coins. $1,668,700 was in gold, $1,182,000 in silver, $141,500 in nickels, and $113,870 in pennies.

Prime Minister Silvela has declared that the government of Spain will not pay the bank notes issued by the Spanish bank of Cuba during the time that Weyler was captain-general of the island.

The plaster Dewey arch cost $6,853.14 more than the twenty-six thousand dollars allotted by the plan and scope committee. This does not include a cent for the work done by the sculptors.

President Kruger is said to be able to write as well with his left hand as with the right, but detests pens and ink so much that he uses indelible lead pencils whenever possible.

It has been announced that Yale and Harvard will receive about twenty-four thousand dollars each as the profits from the football game on November 18.

Out of respect to the memory of Vice-President Hobart, the President and Cabinet have cancelled all their social engagements for the present.

General Miles has recently returned from a tour of inspection. He says the defences along the Pacific coast and the Gulf are in very good condition.

Application has been made for shore rights in the harbor of Vancouver, B. C. It is proposed to utilize the tides in generating electric power.

## Our Rare Coins.

### Talk with Washington's Leading Numismatic.

"STRANGE as it may appear," said Mr. B. F. Collins, the leading numismatic expert of this city, "the best American coins come from abroad. This is because the best preserved coins are those which have been hoarded. Foreign ship captains are very likely to receive them in the course of business, and having difficulty in passing them in their native land, are likely to put them aside, partly as savings and partly as curiosities. Years later, when the captain and his collateral heirs are dead, they are fished out and get into the hands of dealers. Many years ago, besides, it used to be the practice when a child was born to set aside a complete set of the smaller coins of that date, and frequently they were secured fresh from the mint. If they were carefully kept and have been handed down a couple of generations, they are likely to have a premium value.

"But most of the rare coins now discovered come from the farm. Some man who lives in a very rural region far from the railroad, and who earns his money slowly and does his own banking, may decide to buy a new wagon, and he asks Maria where those old coins done up in a stocking are. These get straightway into the local bank, and the cashier, who has a list of premium coins pinned up beside the window, takes out any which are worth more than their face value. If he lets them go by they are caught in the city bank, or again at the sub-treasury. Very few get as far as the United States Treasury. During all the years I was in the treasury I never came across anything which had any special value. Employees of the treasury are engaged in a small way in coin and note collecting, and are permitted to take good numismatic specimens and substitute their value in other coinage."

✠

Professional coin-dealers, not only in Washington but all over the country, are greatly bothered as a result of a typographical error in a newspaper article which has been going through the exchanges. Among other things the article tells of the payment not long ago of $1,000 for a five-dollar gold piece of the date 1822. But the date was accidentally made to read 1882. There are over three million dollars' worth of the 1882 gold pieces in circulation, and about every man who happened to read that story has been able to secure a gold piece which agreed with the description. And he has been taking it to the dealers and demanding one thousand dollars for it. Many dealers have posted a sign near the door reading: "Which have you—a five-dollar piece of 1882 or one of 1822? The price of the former is $5; of the latter $1,000." When a customer enters in a state of evident excitement his attention is called to the sign.

In a Washington pawnshop Mr. Collins recently discovered an article which he prizes highly. It is a gold badge of the Order of the Cincinnati, which was founded by George Washington. It bears the date 1793. The order is undoubtedly the oldest and most honorable of its kind in the United States, and these badges of membership which have been handed down as heirlooms are naturally regarded highly by their possessors. How came it in the possession of the pawnbroker, whether by theft or by dire necessity, is not known. The design is an heraldic eagle carrying a laurel wreath in its beak. In red and blue enamel in the centre is a miniature which seems to represent a meeting of officers under a tree. It is pendent from a bar and ribbon, and is finished on both sides. The gold in it is worth about $20, but its value as a curiosity is very much greater.

✠

The government secret service frequently receives material assistance in detecting and punishing counterfeiters from the collectors and dealers in rare coins. The premium values paid for these coins furnish a strong motive for making the imitation article, and dealers are obliged to be on the alert all the time. Altering dates is the practice most frequently resorted to by the operators. This is a much simpler thing than the manufacture of an entirely new coin; in fact so simple that few dealers in the country will accept fine specimens of the most rare coins without a careful investigation of their history. This is notably true of the 1804 dollar, which commands a price in the thousands, and of which there are supposed to be only three or four in existence. In altering the date the electroplating process is employed, and an old 1801 dollar taken as the basis of operations. The figure one is removed and then the whole is coated with a thin layer of wax, through which a figure four is etched. When the coin is put into the plating solution the silver is deposited only on that part from which the wax has been removed. The figure "4" thus produced is carefully finished off with engraving tools and the result is something calculated to deceive the very elect. About the only way these counterfeits can be detected is by the uncertainty as to their history. The man who offers it to the dealer cannot give a connected and substantial account of the channels through which it came into his possession. Usually the coin's biography goes back to a tramp or a saloon-keeper, beyond which point it is vague and misty. The story usually told to account for the scarcity of this dollar of 1804 is that nearly the entire mintage was on board the frigate Philadelphia when she was blown up in the Bay of Algiers to keep her from falling into the hands of the pirates with whom the United States was then at war. If this be true, the genuine article is not likely to become plentiful unless some one does some successful prospecting in the waters of the Mediterranean.

✠

"To the dealer in old coins copper is infinitely more valuable than gold or silver. Many people do not understand this, and jump naturally at the conclusion that gold or silver coins command the greatest premium. To the collector condition is the main consideration. A coin must be perfect to have high premium value. Gold and silver will keep in good condition almost indefinitely. But

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

copper is very perishable. Take a copper cent to-day fresh from the mint and put it out-doors over night and in the morning it will be, from the view-point of the collector, greatly damaged. There is not an absolutely perfect set of American copper coins in the world. A great deal is heard of the 1804 silver dollar, one of which sold for over two thousand dollars. A copper cent of 1799 in perfect condition is infinitely more scarce and would bring a much higher price. But I can say with confidence that it does not exist. Mere age counts for very little. I can furnish Greek and Roman coins of absolutely undoubted authenticity over two thousand years old, for seventy-five cents, but a silver half-dime of 1846 in perfect condition I will gladly pay ten times that price for."

*Boston Transcript.*

## Violated no Law.

CHRISTIAN SCIENTISTS are not obliged to take out licenses to practise medicine, according to Judge Elliott, and neither Mary Brookins nor Albert P. Myer, though indicted for this omission, can be prosecuted. The cases against them were, on that account, formally dismissed this morning. In sustaining the demurrer to the indictment Judge Elliott stated that it was not the intention of the legislature to classify Christian Science in the practice of medicine when framing the statute relating to that matter, or it would have been worded differently. If the legislature wished to consider Christian Science as a school of medicine and place it under restrictions as such, the desire must be more plainly indicated in order to be effective.

Miss Brookins and Albert P. Myer are well known in Christian Science circles in this city. They were called in by the Kerns family in North Minneapolis to treat a little boy. The child died and later it developed that he had been suffering from diphtheria. A great commotion was created in the neighborhood, and official circles were also disturbed. Out of the agitation came the indictments against Miss Brookins and Mr. Myer for practising medicine without licenses. This was the only charge upon which there was any show of holding them for trial, and now that it has failed to hold the incident is probably closed.

*Journal*, Minneapolis, Minn., November 20, 1899.

## The Concord (N. H.) Bird's-eye Picture

by Bert Poole has been revised and is now ready.

Each building in the city has been sketched and shows with more or less distinctness.

Underneath the main picture are three panels on a larger scale. One of Christian Science Hall, another of the "Old North Meeting House," and the "Old Elm," and one of Pleasant View and the Bow Hills in the distance.

There are two styles as follows:—

Prang's Photogravure Print, 18x27 inches, on plate paper 28x38 inches, . . . $5.00

Prang's Carbon (Gray or Sepia) 18x27 inches, mounted on heavy plate paper 30x40 inches . . . . . 10.00

Prepaid to any point in United States. Circulars on application. Send all remittances or orders to

GEORGE M. CLOUGH, 107 Falmouth St., Boston, Mass.

The Free Methodists of England have old-age pensions for their ministers. Each minister pays three pounds per year to the fund.

John Wanamaker authorizes the statement that he never advertised in a Sunday newspaper and never will.

# The Lectures.

### At Fort Worth, Tex.

The appearance of Mr. Edward A. Kimball at the Opera House Sunday afternoon, November 19, in an exposition of Christian Science, was greeted by a large and intelligent audience, in spite of the downpour of rain which they had to brave. Many visitors were there from Dallas, Weatherford, Bonham, Paris, and Sherman, and even from Ardmore, in the Indian Territory, who, being interested in Christian Science work, had come to attend the lecture by Mr. Kimball.

The lecturer was introduced by Mayor Paddock.

*Morning Register, Fort Worth, Tex.*

The introductory address of Mayor P. B. Paddock was as follows:—

*Ladies and Gentlemen:*—I have not been selected for the performance of the pleasant duty of introducing the speaker on this occasion because of any peculiar fitness of my own, for probably there is not within the corporate limits of the city one more densely ignorant of the peculiar tenets of the faith which you profess than myself.

There is one redeeming feature in connection with my relation with this new doctrine, and that is, that I am willing to be enlightened.

If, in the few remarks I submit for your consideration this evening, I use terms and expressions which are not in strict accord with your views, or are not applicable to the theories you advocate, I am sure your generosity will pardon me, for they will come from a lack of information, and not with the intent to misrepresent.

The doctrines you advocate are new. They have been discovered and promulgated within a generation, and like all innovations, all departures from accepted theories, have been the subject of much comment and criticism,—criticism sometimes unwarranted by the facts, sometimes undignified, and often uttered in derision, and because of ignorance and lack of investigation. Like all innovations and departures from established doctrines yours must find its way into the minds and consciences of men through education and the dissemination of the information which you have obtained by study and research, which your fellow men and women have not given to the subject.

One of the most prominent objections urged to your new faith, your new doctrine, is that it was discovered by a woman. That it is a woman's fad. This finds no sympathy in my mind. The day is past when a great truth cannot be accepted because it emanated from the mind of woman. Members of any other faith are estopped from condemning it for this reason. I am told that it was a woman who was last at the cross on the day of the crucifixion. It was a woman who was first at the tomb on resurrection day, and a glance into any of the places of worship of any denomination will discover the fact that most of the pews and benches are occupied by women, and that they are first in every good work for the advancement of the human race, and for the amelioration of the ills that afflict the human family; then why should they not be first in advocating the peculiar truths and theories of this new doctrine?

You may be encouraged in your work by the thought that no new doctrine has made such rapid progress as yours. In less than the ordinary span of life it has grown from the one single advocate who first announced to the world the discovery of a new truth, if such it may be denominated, to hundreds of thousands who have embraced and are daily promulgating its principles.

This is not my first experience in a gathering of Christian Scientists. I have been among them in this country and abroad, and I can bear cheerful testimony to the fact

Digitized by Google

that I have always found these audiences composed of bright, happy, and cheerful persons, whose bright eyes and beaming countenances gave evidence of satisfaction in the faith they professed.

You need not be dismayed because your doctrine is received with incredulity by some and derision by others. Such is the experience with all innovations in religion, science, or philosophy. You may be consoled with the reflection that it has been accepted and is being advocated by some of the brightest intellects, the most profound thinkers, both men and women, in this and every other country, among whom is Mr. Edward A. Kimball of Chicago, who has come to speak to you this evening, and whom I now take pleasure in introducing to an audience composed mainly of the people of Fort Worth.

### At Dallas, Tex.

A large and appreciative audience was gathered at Phœnix Hall on Friday evening, November 17, to meet the distinguished speaker, Edward A. Kimball, C.S.D., of Chicago, Ill. Mr. Kimball is one of the foremost exponents of Christian Science of the day, and came to this city under the auspices of the Church of Christ, Scientist, 208 South Ervay Street, whose attractive chapel attests the zeal and fidelity of its members. The clear, forcible handling of his subject met with hearty response from his audience. Mr. Kimball comes to Texas to give a series of six lectures, and will appear in the larger cities of the state. The introduction was made by a leading Scientist of the city, Mr. Sam P. Cochran. The introductory remarks were as follows:—

*Ladies and Gentlemen:*—On behalf of the Christian Scientists of this city I wish to say that we are gratified by your ready response to our invitation to attend the lecture on Christian Science to be given in this hall to-night. It gives evidence that the broad-minded people of Dallas are ready, yea, anxious, to take up new questions when presented to them, whether social, political, or religious, and give them full and impartial consideration. Nothing is truer in a material sense than that old things are passing away, and new things are pressing upon the attention of mankind and demanding consideration. The century now nearing its close has done more for the advancement and development of mankind than the preceding five hundred years; and I feel that I do not overstate the facts when I assert that the last third of the century has produced the best and highest of its grand achievements. Under the impulse of a higher development in literature, art, and science mankind has sprung forward with giant strides to conditions surpassing the dreams of "Arabian Nights" tales. The wonderful discoveries and developments in electricity, steam, chemistry, mechanics, and astronomy have astounded the world and awakened it from its lethargy, while the advancement in social and political conditions has been equally marked. With all this grand material advancement and achievement going on around us, are we not justified in asking ourselves the question, Is there no room for religious development?

What is religion but man's conception of God, of his duty to God, and how he can best fulfil that duty?

Are men so united and in such accord in their conceptions of deity and of the proper service due Him, that there is no ground for question as to whether or not they are absolutely right in their views? Will not any candid person admit that there are more forms of religion than of civil government in the world, and greater diversity of opinion on religious subjects than on any questions of social or political science? Surely, then, amid the multitude of these opinions there is room for further investigation, and the possibility of advancement.

What Christian Scientists claim in regard to such advancement I will leave for the lecturer of the evening to state to you.

It has been said by some critics that Christian Science was good for hysterical women and ignorant people, but not for the educated, practical people of this day. This will be the third public lecture on Christian Science delivered in this city within the past eighteen months. The first was by a gentleman from New York—a student and a scholar of high attainments. The second was by a lady from Detroit—not hysterical, but one who faces the world in her daily work, and whose ministrations bring health and peace to afflicted women and children. To-night, ladies and gentlemen, you will have the privilege of hearing a business man—one who for many years was deeply engrossed in the worldly pursuits of life, who was successful in business, but who has now given up all other work to teach and practise Christian Science. He will tell you what Christian Science is as it is seen and understood by a practical business man.—*Exchange.*

### At Detroit, Mich.

A very large and quite fashionable audience crowded the Detroit Opera House Sunday afternoon, November 5, to hear Judge W. G. Ewing of Chicago, defend and expound Christian Science. It was an immense audience, filling the entire seating capacity of the parquet and balcony and boxes, and showing a goodly number in the upper gallery. There were many persons who stood throughout his lecture. Judge Ewing is well known in this city. He addressed the Detroit Bar Association last spring, and has spoken here on more than one occasion. This was his first appearance here as a pulpit orator, however. He is an elderly man, but strong and vigorous and a thorough convert to Christian Science. He is widely known for his great legal learning and his unusual powers of oratory.

He was introduced by Don M. Dickinson.

*Tribune,* Detroit, Mich.

Don M. Dickinson, who introduced Judge Ewing, was in President Cleveland's cabinet as postmaster-general, and he is one of the foremost men of Michigan. Following are his remarks in full:—

*Fellow Citizens, Ladies, and Gentlemen:*—It is with a degree of humiliation that I confess before such a vast audience of cultivated people that I know little or nothing of the subject of Christian Science, and that I have read none of its literature. I am one of the large majority of busy Americans. We leave undone many things that we ought to do, and there is really too little mental health in us.

At the same time I have a great respect for anything that I do not understand, and it is a respect that is not in the least detracted from by the general or wholesale condemnation of orthodoxy, whether orthodoxy in medicine or orthodoxy in religion.

Moreover, a propaganda which has for its chief postulate the infinite goodness and the all-pervading presence of God, is entitled to receive the respectful attention and consideration of all mankind. And when it presents, as its teachers, eminent men, who had already attained in other fields fame for their learning, their great ability, and their honesty of intellect and of heart,—a fame as wide as the country, as in the case of your distinguished lecturer of to-night,—the subject must command the study of intelligent men.

Mr. Lincoln, when on the stump in Illinois away back in the fifties, used frequently to visit Bloomington. There he was the ever-welcome guest—although a Whig in politics—of the Ewing family, the head of which (the father of my friend who sits behind me) was a leading citizen of that state and one of the staunchest Democrats in the country.

Digitized by Google

On one occasion, Mr. Lincoln, in referring to the large family of Ewing boys, said to their father, "Don't let all these fine boys grow up Democrats; let me make a Whig of one of them." "Well," said Mr. Ewing, "there is that little fellow there; he is a weakling, and I don't know whether we can raise him—you may take him."

Thereupon Mr. Lincoln took the boy upon his knee, and then and ever after called him "my Whig Ewing."

The weakly boy *was* raised, and developed a sound mind and a sound body. And always from that time until this day, his friends, whose name is legion, affectionately call him "Whig Ewing." He is here, and I take great pleasure in now presenting to you my friend of many years, Hon. W. G. Ewing of Illinois.

### At Beatrice, Neb.

A fair audience assembled at the Paddock Opera House Monday evening, November 20, to hear Judge Clarkson of Omaha lecture on the subject of Christian Science. His defence of the doctrine was concise and eloquently put and carried much conviction with it. Judge Clarkson is a fine talker and the lecture was much appreciated.

*The Beatrice Daily Express.*

State Senator F. M. Prout introduced Judge Clarkson in the following friendly remarks:—

*Ladies and Gentlemen:*—In this, the close of the nineteenth century of the Christian era, a century which has marked a greater advancement in civilization, in thought, in science, in toleration, and in religious liberty than all the centuries which have preceded it, a new religion has made its appearance among the children of men, or rather, as its adherents claim, a new application of old principles.

This religion has established church organizations throughout the United States, in Canada, in Great Britain, and other parts of the world and is rapidly growing in numbers and strength. Its followers, like the Presbyterian, Methodist, Congregational, and other orthodox churches, base their belief on Holy Writ, and adopt the Saviour of man as their great exemplar. They, however, apparently go further in their faith in Christ Jesus and his word than do other orthodox churches, in that they believe as a part of their faith that what he said to his followers when on earth is as true to-day as it was at the time the words were spoken; that these words and promises are as applicable to his followers in the twilight of the nineteenth century as they were to his followers in the dawn of the first century of the Christian era. They believe that the words of the Master "He that believeth on me, the works that I do shall he do also" have as much application to his followers of to-day as they had to those who heard the words fall from his lips; and it is in the teaching of this new religion that they are now engaged.

That they have been persecuted and reviled for their belief is not to be wondered at when we remember that no great reform in religion has ever been introduced, that no great discovery in science has ever been announced, that no attempt has ever been made to shake the world from its old traditions and preconceived opinions that has not been met with opposition and persecution and martyrdom; even the Saviour of men was crucified because he taught as never man taught before. But toleration in religious thought has become so much greater than in former years that these people are permitted to establish churches and teach their new doctrine. We shall have the privilege to-night, and I venture to say also the pleasure, of listening to an exposition of these, to some, peculiar doctrines, from one who has long been a resident of our state, and has occupied a high position in its judicial department; and, although we may not think as he thinks, although we may not believe as he believes, I bespeak for him your candid and careful attention while he shall address you upon this subject. I have the pleasure of introducing to you Joseph R. Clarkson who will address you.

### At Fremont, Neb.

A large and refined audience gathered Monday evening, November 13, at Love's Opera House to hear a lecture on Christian Science by the Hon. William G. Ewing, widely and justly recognized as a speaker of eloquence and culture. The main floor of the house was completely filled and a number seated themselves in the gallery. The speaker was warmly greeted and had the earnest attention of a thinking audience throughout the course of his excellent and logical address.

The introduction speech by Miss C. Lulu Blackman was as follows:—

*Ladies and Gentlemen:*—I extend to you to-night the glad and cordial greetings of the First Church of Christ, Scientist, of this city.

In presenting this public lecture we have, as a church, been actuated simply by a loving and earnest desire to bring to you a clearer understanding of the joyful message, that has lifted our own thought, from

> The depths of error's darkness
> Into Truth's eternal day.

Our pleasure in your presence is two-fold. Having been honored by your most cordial and universal acceptance of our invitation, we rejoice that we have a theme and a speaker worthy of the most earnest and profound attention of a progressive, truth-seeking, and liberty-loving people.

I shall not introduce the Hon. William G. Ewing of Chicago to a Fremont audience to-night as an able lawyer and a jurist of wide repute, as a scholar and orator, nor yet as a man of high social standing and great political influence, although he has attained and rightly possesses these honors.

Judge Ewing declined a renomination to the bench and gave up the successful practice of his profession, for the express purpose of entering actively into Christian Science work, and is now, by official appointment, a member of the International Board of Lectureship, of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, Mass. Thus authorized, he has the merited approval of all branch churches of this denomination as an able and worthy exponent of Christian Science.

It is in this capacity I now, with pleasure, present to you the lecturer of the evening, the Hon. William G. Ewing.

*Fremont Daily Tribune.*

### Lectures at Other Places.

Fairmont, Minn.—William G. Ewing, Friday, November 10.

Austin, Minn.—William G. Ewing, Saturday, November 11.

Fremont, Neb.—William G. Ewing, Monday, November 13.

Lexington, Ky.—Mrs. Sue Harper Mims, Thursday, November 16.

Orange, Ia.—William G. Ewing, Sunday, November 19.

"How do you accomplish so much in so short a time?" asked a man of Sir Walter Raleigh. "When I have anything to do, I go and do it," was the reply.

Our grand business in life is not to see what lies dimly at a distance, but to do what lies clearly at hand.

CARLYLE.

# Among the Churches.

## Corner-Stone Laid at New York City.

The corner-stone of the First Church of Christ, Scientist, was laid, Thursday, November 30, by Mrs. Augusta E. Stetson, First Reader of the church, in the presence of a thousand people who believe in Christian Science. The splendid temple, which will be reared at the northeast corner of Central Park West and Ninety-sixth Street, will cost, with the land, five hundred thousand dollars. It will be in the Grecian style of architecture, and will seat twenty-five hundred people.

The assemblage at the ceremony seemed to be rich and intellectual. Among those most prominent were Mrs. Laura Lathrop, Mrs. Emilie B. Hulin of Brooklyn; Mrs. Carrie M. Snider, Mrs. Effie Andrews, and Messrs, Baldwin, Van Nostrand, and Hatfield. But Mrs. Stetson was the central figure. She came here from Boston in 1886 and lives at No. 24 West Seventy-second Street. No one assisted her at the services on this occasion, and it was remarkable that almost every word she uttered was taken from the writings of Rev. Mary Baker Eddy, Founder of the sect.

Mrs. Stetson first read Mrs. Eddy's hymn, "Shepherd, show me how to go." The audience repeated the words. This was followed by selections from the Bible and from "Science and Health with Key to the Scriptures," one of Mrs. Eddy's works, the text-book of the sect.

An interval of silent prayer was succeeded by the audible repetition of the Lord's Prayer, with its spiritual interpretation from the text-book.

Mrs. Stetson read the Scientific Statement of Being, from the work of Mrs. Eddy, the Twenty-third Psalm, and a prayer from the Church Manual. Next came the reading by Mrs. Stetson of the copy of a letter to her church by Mrs. Eddy for deposit in the corner-stone. The oral exercises closed with the reading of a poem written by Mrs. Eddy, entitled "Laus Deo."

The face of the corner-stone bears this inscription:—

"A tribute of love and gratitude to our Leader and Teacher, the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of its text-book, 'Science and Health with Key to the Scriptures.'"

The Mother Church of Christian Science is in Boston and has a total membership of about sixteen thousand, of whom thirteen hundred are resident members. This church has now three hundred and four chartered branches in the United States and foreign countries, and in addition there are one hundred and eleven regularly established Sunday services. The total church membership in the world is upward of seventy thousand, and there are about three hundred thousand regular church attendants. There was an increase of seventy-five churches in 1898, against forty-four in the year before.—*The World.*

We are informed that the above estimate of the value of the church edifice is too high; that the total cost of the ground and building will be about four hundred and fifty thousand dollars.

## New Church at Denver, Col.

The congregation of the Christian Science Church adopted plans last night for the erection of a new church to cost between $75,000 and $100,000.

The location of the structure will be at the corner of Fourteenth and Logan Avenues on five lots recently purchased from the Cassell estate. The new edifice will be one of the largest and most imposing places of worship in the city.

It will be constructed of white pressed brick with stone trimmings, and will be square, the dimensions being 125x125 feet. The auditorium will be surmounted by an immense dome, while a tower is to be constructed at the corner nearest the street. Chimes that will ring music every half hour are to be placed in the summit of this tower. The seating capacity of the church proper will be about twenty-three hundred, more than any theatre in Denver. The seats downstairs will accommodate sixteen hundred, while the gallery is expected to make room for seven hundred more.

In the basement of the building there is to be a Sunday School room with a seating capacity of four hundred. The church is to be steam heated and electric lighted throughout, hundreds of vari-colored incandescents to adorn the interior of the dome and the tower. Trustees' rooms, ladies' retiring rooms, and a number of ante-rooms are to open off the main corridor.

There will be six entrances to the church, the main entrance to be under the dome, and fronting on Logan Avenue.

Other features of the church will be a new pipe organ, a slanting seating arrangement, decorated windows, magnificently appointed pulpit and chancel, and handsome furnishings throughout.

Gove & Walsh drew the plans. It is proposed to begin on the church about March 1.

The present house of worship of the Christian Scientists on Logan Avenue, near Eighteenth, was erected six years ago, and was enlarged in 1896 to make it seat eight hundred people. The scope of the church has entirely outgrown the building, and scarcely half the people who desire to attend the services have been able to secure seats during the past year or so.

The trustees at last night's meeting decided to offer the old church for sale to the highest bidder.

*Post*, Denver, Col.

## Christian Science Chapel.

After three months of quiet work the local society of Christian Science has completed arrangements by which they will come into possession of the old Baptist Church on the corner of Sixth and Douglas, which building they are preparing to make into a cozy little home for their church organization. The first steps were taken in the matter early in August, and the fourteen members, together with a few students, have labored with so much faith and ardor that there will be but a very small loan between them and the clear title to the property when the papers are finally turned over. Withal the work has been so quiet that very few beyond those personally interested have known a word in regard to the matter, and not a cent of money has been solicited from outsiders. These people quote a sensible text that in looking toward the source of supply all needs are met, and in this instance, at least, they have succeeded remarkably well.

Arrangements have been made to repair the interior of the building at once, and the outside in the near future. When this is done the society will certainly be nicely housed.

The first service in the new property will be held on Wednesday evening, November 22, and thereafter all Sunday and Wednesday evening services will be held there. The reading room on Douglas Avenue, between Second and Third, will be continued.

We wish to congratulate the society upon its success, and upon its prospects in its new quarters.

*Yankton (S. D.) Daily Gazette.*

Rev. Dr. Cuyler says, "The more pronounced and emphatic every Christian is in his aloofness from the codes and fashions and the sinful ways of the world, the more peace and spiritual power will he have."

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Honest Objections.

THAT many of the objections made against the price of Christian Science literature are honestly made by the immediate objector, we do not doubt; but, on the other hand, we are aware that these objections have their origin among those who are bitterly opposed to Christian Science, and who, by every means in their power, both audibly and mentally, keep up the argument of exorbitant prices.

This argument is caught up by some and thoughtlessly accepted as true simply because it has been made or suggested, and passed from one to another; whereas a little sober thinking would show the utter fallacy of it.

We have heretofore referred to the high prices of standard text-books,—schoolbooks, college text-books, law books, medical books, etc., and shown that they range higher, binding and quality of paper and finish considered, than the Christian Science text-book. Yet they all purport to teach truth, or some phase or phases of it. The Christian Science text-book teaches Truth; and while its teaching is based on spiritual instead of material premises, it is, therefore, not less but more Truth than the text-books which assume to teach only material or physical subjects, for, we think, all will agree that things spiritual or eternal are of greater importance to mankind than things material or temporal.

A fair (indeed the only fair) test of the intrinsic value of a book is the work it does or the results it accomplishes. Thus tested the adherents of Christian Science can justly point with much confidence to the comparative value of their text-book, for its beneficiaries, both in the sense of physical healing from every form of ailment, and of spiritual and moral help, are numbered by the hundreds of thousands.

A common argument is that the Bible is much less costly than "Science and Health with Key to the Scriptures." As a general rule this is true; but nevertheless there are some very expensive editions of the Bible, and many persons are glad to pay a high price for a fine Bible This is a matter of choice. The three dollar edition of Science and Health is quite as helpful, if not as convenient, as the finer and more expensive editions. The purchaser exercises his choice in taking the book. But may we not reverently ask of our honest objectors, helpful as they have found the Bible, and precious as it was to them, did they ever find in it a Principle or rule, by virtue of which they could be healed of sickness, or heal sickness, before they read Science and Health? We are sure the honest answer will be in the negative.

In no spirit of hostility, but only by way of fair argument and illustration, we remark that the books of the medical profession are admittedly very expensive, and, in number, they amount perhaps to millions of volumes.

The surgical instruments and appliances are multiplex and their value is almost beyond computation. Does not this amount to a tax upon their patrons, many of whom annually contribute thousands of dollars to this purpose?

A person who pays three, four, five, or six dollars for a copy of Science and Health, and earnestly studies it, learns thereby to heal himself and others, and is wholly relieved of paying tribute to the physician and surgeon as he formerly did.

The experience of the practitioner in Science is that the person coming to him as a patient, as a rule, first purchases the cheaper edition of the text-book, but after a little while, on becoming aware of what the book accomplishes, gets a more expensive copy, and frequently offers to give the cheaper one to his healer to be used in a charitable way.

We do not hear these objections made by those who are accounted poor, but almost without exception, by those who are fully able to pay.

Those who are troubling themselves so much about the hardship of the price upon the poor are manifestly wasting their sympathy, for this class, more than any other, are loud in their acclaims of joy over the fact that they possess the precious book, and from them largely comes the declaration that if they could not procure another, no money would buy their copy from them.

Adulterations may be sold cheaply, but what sensible person wishes an adulterated article when he can get the genuine?

## A Falsehood Refuted.

UNDER the above heading the *Washington News Letter* republishes our correction of the falsehood published in the New York *World*, and follows it with the following editorial note:—

"The reason why we copy the above from the *Sentinel* is because in another column, we print the substance of an article taken from the Philadelphia (Pa.) *Times*, in which the charge is made that Mrs. Eddy was in Philadelphia and was the attendant on Mr. Morgan.

"It will be noted that the above denial does not deny that she was at Philadelphia. We will gladly give the facts when we know them. We call on the Philadelphia *Times* to make good its statement."

We quoted thus from the *World* article:—

"Finally he [Morgan] became so bad that Mrs. Eddy came on from Boston and called at the Morgan house. She remained for several days, praying for Morgan's recovery. There was no improvement, however, etc.;" and then added, "It is needless to say the above is absolutely false." This general denial is followed by specific denials, and the whole is so complete a refutation of the entire falsehood that we are surprised at the quibble of the editor of the *News Letter*.

We now say that the Rev. Mary Baker Eddy *was not in Philadelphia at the time mentioned*, and further, that for more than ten years she has not been away from her home in Concord, N. H., excepting as she has visited the Mother Church in Boston, and each of these visits was conspicuously mentioned in the newspapers.

We add also that Mrs. Eddy knew no more of the case of Mr. Morgan than did the editor of the *News Letter*.

## Distribution of our Literature.

WE have referred in recent issues to the methods of the Publishing Society in the sale and distribution of Christian Science literature, and shown the purpose and motive controlling the same.

The Society, from the beginning of its existence, has been signally aided in this work by the active and disinterested endeavors of the co-workers in the Field. Most effective indeed has been their aid. At their own expense, the branch churches and societies, through their reading rooms and in other ways, have wisely put out a vast quantity of literature.

Digitized by Google

## Resolutions of the Branches.

WE desire on behalf of the cause and our Leader to return renewed thanks to the Branch churches for the resolutions of love and appreciation which have been received; and they are many. More will doubtless yet be received. They will be duly published in our periodicals. Possibly not, however, until all shall have been received.

We desire also to express our lively appreciation of the rapidly increasing subscription to our publications. This substantial recognition of the genuine literature of Christian Science is clear evidence of a desire for unadulterated food, and the blessing of growth and understanding will be in due proportion.

Let us keep strictly in the strait and narrow way, and attempt not to avoid the hill "Difficulty," for sooner or later it must be climbed. There is no way around it.

# Selected Articles.

## True Values.

OVER and over again I am asked the question, "Why are all the authorized books on Christian Science copyrighted?"

Authorized books are protected by copyright from anything being added to or taken from or any manner of alteration being made in their text, and then being re-issued under the same title with the same author's name on the title-page.

Last year I bought some of Cooper's novels. Upon looking them over I found them rewritten and so changed that there remained nothing of the inimitable "Leather Stocking Tales" but the plot, the title, and the author's name. No one dares to mutilate a book protected by a copyright. Already there are many books claiming to teach Christian Science which are as little like the genuine as the spurious "Leather Stocking Tales" are like the original. When we buy a copyrighted book we know that it has not been tampered with, and that the words of the author are just as he wrote them. This is why all authoritative books are protected by copyright, and why all books written by Mary Baker G. Eddy remain authoritative.

Granted that this is necessary to keep the text pure, why, people urge, need the book cost so much? and why do Christian Scientists charge for their services since Jesus and the apostles did not?

Regarded as a text-book, which it is, it is phenomenally cheap, as is easily ascertained by comparison. In any other light, both questions can be answered under one. To assume that Jesus and the apostles were not paid for their work is to jump to a rash conclusion. It is true that they issued no copyrighted books. They lived nearly fifteen hundred years before the printing press was invented, and it was much longer before a copyright was authorized to secure to an author the fruits of toil more difficult and exhausting than mere manual labor. There were few who could read books in their day.

It is true that Paul once speaks of not having been a burden upon the Corinthians in these words (I quote always from the revised version): "For what is there wherein ye were made inferior to the rest of the churches, except it be that I myself was not a burden to you?" Then he adds, "Forgive me this wrong." The plain inference is that this was the only church which was so excepted from the payment.

In another part of the letter he says, "Have we no right to eat and to drink? . . . Or I only and Barnabas, have we not a right to forbear working? What soldier ever serveth at his own charges? who planteth a vineyard and eateth not of the fruit thereof, or who feedeth a flock, and eateth not of the milk of the flock? Do I speak of these things after the manner of men, or saith not the Lord the same? For it is written in the law of Moses, Thou shalt not muzzle the ox when he treadeth out the corn. Is it for oxen that God careth, or sayeth he it altogether for our sake? Yea, for our sake it was written. . . . If we sowed unto you spiritual things, is it a great matter if we shall reap your carnal things? If others partake of this right over you, do not we much more? . . . Even so did the Lord ordain that they which proclaim the gospel should live by the gospel."

In the second epistle to the Corinthians he says, "I robbed other churches taking wages of them, that I might minister unto you, . . . for the brethren, when they came from Macedonia, supplied the measure of my want." Clearly Paul was not accustomed to provide for his own wants outside of what he received for his labors in the churches.

But a greater than Paul said, "Behold I send you forth . . . carry no purse, no wallet, no shoes . . . and into whatsoever house ye shall enter . . . there remain, . . . for the laborer is worthy of his hire. Go not from house to house."

I know of nothing to indicate that Jesus was in any way lacking in the good things of this world, but his one statement that he had not where to lay his head, which was true enough, owing to the extreme persecutions to which he was constantly subjected. The extent of this is indicated when he wished to return to Bethany for the resurrection of Lazarus. The disciples protested, "Rabbi, the Jews were but now seeking to stone thee; and goest thou thither again?" And Thomas says, "Let us also go, that we may die with him." We know that the seamless garment was costly; that the cruse of ointment which was broken over him was valued at about four hundred dollars in our money; that he was luxuriously entertained when he would accept the courtesy, and he was constantly reproached and reviled because he would associate with others than the rich and exclusive. Surely the High Priest of the new understanding of the old eternal Truth did not except himself when he taught, "Seek ye first His kingdom, and His righteousness, and all these things shall be added unto you." And, "There is no man that hath left home, or brethren, or sisters, or mother, or father, or children, or lands, for my sake and for the Gospel's sake, but he shall receive a hundredfold, now in this time, houses, and brethren, and sisters, and mothers, and children, and lands, with persecutions, and in the world to come, eternal life." We know that he received the persecutions, why do we suppose that he did not receive the other things that were promised.

The underlying reason, however, why payment for services is laid down as a rule by the church, lies less in the need of the healer, who is often not at all in need, than in the need of the patient, who may be in great need from the material standpoint. In spiritual healing something is required of the patient as well as of the healer, and that something is the state of mind which really wants Truth and help. A sincere desire for help is indicated by a willingness to sacrifice something for it; and the thing we are accustomed to sacrifice for things we desire, and so comes easiest to us, is money. Everything is estimated by the carnal mind at its cash value, and the thing that is given away is stamped by that very act as being worthless. This is the inevitable and almost unvarying judgment of the carnal mind. Thirty years of experience has proven it true in scientific treatment as in other things. The patients who are unwilling to pay are those who want all they can get for nothing or as little as possible in return. These are decidedly those who ask amiss. They receive little or nothing as compared to others, and the failures to heal are largely from that class.

The sacrifice of Mammon to God is begun with the payment of money for God's healing.

Digitized by Google

Every step into Spirit is at the same time a step out of matter, for spiritual healing means more than mere physical reconstruction. It is the beginning of spiritual regeneration. This explains, it may be, why Paul says, "Forgive me this wrong." This does not mean that Scientists do not do gratuitous work. Probably half the work done is gratuitous work, but the more of this kind of work is done, the more the truth of this statement is made evident.

## Christian Science.

ALL over this land and wherever Christian Science has been introduced it has met with much bitter and stubborn opposition. Many are wondering and asking why this should be when Christian Science is good and good only, healing the sick and casting out error of every kind, promoting health, happiness, virtue, and prosperity in the family and in the community. Why is it that it meets with opposition? And, coming still nearer home, why does that within individual consciousness rise up in rebellion against this grand Truth, that is ever a present help in time of need, and when understood aright would make us free? Does it not all arise,

First: From ignorance of Christian Science and what it includes, ignorance of its divine origin and its basic principles as laid down in its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and other works by the same author, which reveal a perfect principle applicable to every need of mankind?

Secondly: Does not individual or universal prejudice lead us to condemn what we do not understand and, like Nathanael of old, to ask "Can there any good thing come out of Nazareth?"

Thirdly: Is it not the pride and selfishness of the human heart wherein mortals have sought out many inventions, formulated many theories and worshiped gods many, instead of the one true and living God, who is Spirit without form or parts, who is all-pervading, divine Love? Worshiping a material body or personality and theories relating to matter and its so-called laws is but idol worship, and only ends in sin, sickness, and death. Bowing down to these idols the first commandment of the Decalogue is broken; and when this is broken they are all broken.

Fourthly: Is it not exalting personality with a desire for leadership, personal control, social position, and all that contributes to self-aggrandizement and mad ambition? When Christian Science heals us of disease and suffering, taking away that which we are glad and willing to part with, we say it is a grand thing; but when it conflicts with any pet theory or sinful pleasure or practice, then it is denounced and betrayed; and then only through suffering is the human mind willing to listen to the voice of Truth and yield up its claim of power and so-called dominion and its many gods of materiality and human theories till finally it declares with the wise man: "I have seen all the works that are done under the sun; and, behold, all is vanity and vexation of spirit." And the days have come wherein it says: "I have no pleasure in them." Thus mortals will give up their beliefs of pleasure in matter and mortality, and in meekness and humility sit at the feet of divine Love worshiping the Father in "Spirit and in Truth." Jesus said: "Except ye become as little children, ye shall not enter into the kingdom of heaven."

The Discoverer and Founder of Christian Science with wonderful spiritual discernment beheld the universe of Mind, the apprehension of which lifts mortals out of themselves into the realm of Spirit, revealing their oneness with and spiritual relationship to the Father. She then formulated this into a system adapted to the needs of mankind and then began to teach the unseen verities of the Science of Being. She finally established the Massachusetts Metaphysical College in Boston, which has sent out thousands of healers and teachers all over this and into foreign lands to plant vineyards and take care of them; to sow the seeds of humility, unselfishness, purity, and affection; thus with love to God and good-will to man bearing fruit unto eternal life. Many of them have been maligned and stoned, their students manipulated, and their landmarks torn up. Yet in faithfulness and love they work on with an exalted hope, letting "patience have her perfect work." Knowing full well that the days of persecution do not belong wholly to the past by any means, but knowing that "all that will live godly in Christ Jesus shall suffer persecution." Therefore they rejoice that they are found worthy to suffer for Christ, Truth, and look hopefully into the future when the Science or Truth of Being will surely overcome every form of error.

It is not the arrogant and proud seekers for place and power who are ready for Christian Science that gain its spirit and bring forth its fruits, but it is the weary pilgrims, weary of the false and fleeting pleasures of sense which has promised much but has only brought disappointment and sorrow. It is such that are glad to leave the old for the new, and it is to such that Christian Science comes as a Saviour and Redeemer, saying, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

## Christian Scientists and Counterfeits.

THE man who beats the big bass drum is the "head leader" of the band, in the estimation of every boy, because he makes the most noise.

Persons who do not know enough about Christian Science to discriminate, usually hit upon the noisiest partisans and imagine that they are "head leaders," justly typical of the entire body of Christian Scientists. Concerning this, J. B. Willis, in an article published in the *Christian Science Sentinel*, says, "The metaphysics of Science and its unusual words and phraseologies furnish peculiar temptations to those who treat the transcendent as a lightsome thing, while its wake is likely to form an inviting retreat for the flotsam of a religious tide. Unable, as yet, to apprehend or fittingly represent Science thought, these, nevertheless, will be most frequently noted by objectors as its exponents, the product of its influence, and to bear with them and the criticism and misjudgment of the cause which they inevitably beget, supplies a severe test of that patient self-command which has been so wondrously disclosed in the life of the Founder of Christian Science."

Blatant and shameless impudence are prominent characteristics of some persons who masquerade as Christian Scientists, but these are really as antagonistic to Christian Science as burglary is to the Golden Rule. The true Christian Scientist minds his own business, and when occasion necessitates his standing in any public way for Christian Science, he is modest and does not forget that he is a humble representative of a great Cause, nor does he make the foolish mistake of imagining that he himself is some great one.

Christian Science is frequently judged by the vulgar self-assertion of persons who have no moral right or moral fitness to assume to represent the thousands of unselfish, unobtrusive workers for Truth, who are giving all their time and thought to healing the sick and imparting rest and peace to the weary and discouraged ones of earth.

Patience, long-suffering, kindness, brotherly love, and meekness are typical qualities of character when moulded after the teachings of Science and Health. From the very

Digitized by Google

fact that Christian Scientists are so generally imbued with the earnest desire to bring out such qualities as these in their lives, it is impossible for the world at large to learn much about the practical effect of Christian Science teachings except on close acquaintance with its honest followers. By the unobtrusive individual work of Scientists in overcoming those evils by which they are themselves beset, the world is being made better. The love and sweetness which breaks out in purifying streams from the hearts of faithful servants of Truth everywhere, find channels through the thought of those whom they save from sickness and despair, thus permeating the universal thought with a slight flavor of that millennial good-will, of which all have dreamed.

It requires very moderate ability to beat a bass drum; to sing through the violin the heart's deepest yearnings, involves not only ability, but sincerity and devotion.

To be a true Christian Scientist means consecration and loyalty to the very highest ideals of which man has conceived, and one who is awake to the demand thus made upon him is not noisy or self-assertive. He never feels sufficiently complacent to stop and applaud himself.

When one who claims to be a Christian Scientist habitually applauds himself it may be safely concluded that he is not a worthy exponent of the religion he professes to represent.

The tendency of the world to accept as true Christian Scientists, those who make the most noise and are easiest heard, calls loudly to each earnest follower of Truth to improve his own expression of Science at every point, in order to hasten the time when the true type shall be so well known and appreciated by all men that counterfeits cannot pass current. HENRY D. NUNN.

### Healed by the Book.

BY CONSTANCE M. RICKARD.

TEN or eleven years ago a copy of "Science and Health with Key to the Scriptures," came into the family. At that time I was in good health, was satisfied with self and with the world. I looked into the book out of curiosity, to see what the Christian Scientists believed. Every statement read was questioned and antagonized.

Such a condition of thought shut out the Light. None had been received, apparently, when the volume was returned, without comment, to its owner. As the years went by, this dense ignorance of God began to manifest itself in physical ailments. But I had always wanted the Truth, and was seeking it even then in different orthodox churches, while the way was being prepared by making truthfulness the highest standard of right-doing in the household. Finally, in studying Evolution, my grasp on any certain belief in God, and all the hold that had remained upon creed and dogma, slipped away. It was then that the constant prayer of a hungry heart was answered. I had been made ready to receive the Light. Once more Science and Health was placed in my hands. This time I approached the subject of Christian Science in a spirit of humility, eager to know if it really were the Truth after all, and prepared to accept whatever I could apprehend of the Science of Being and its seeming mysteries.

I gave very little thought to the promise of healing, being much more anxious for a solution of the enigma of mortal existence. It did not seem credible that this was the same book I had tried to read before. The pages were now illuminated. I found all that I sought and a great deal more. It was a glad surprise when I discovered that I could understand, believe, and even apply what I read. As my poor befogged condition of thought was thus enriched and enlightened, all the aches and pains which nothing else had reached, together with the numerous "troubles" of the so-called vital organs, began to disappear one by one. Material medicines were discontinued, and never again resumed. I rejoiced to find myself a well woman. The Book had healed me. Class instruction soon followed. Not having any funds at that time that I could strictly call my own, and not wishing to ask a sacrifice of my husband, I began to look around for some means of earning the price of my teaching. Nothing better presented itself than the task of doing my own laundry work. Not being accustomed to such labor, I knew very little about it. Consequently the work was harder than it would have been for one more used to it. But I began it at once, never doubting that the ability needed would be given me. What little I knew of Science I applied, and was rewarded and overjoyed to find that I could lift and wring heavy articles without strain or fatigue, could splash soap-suds all over me with impunity, and stand with wet feet without ever taking cold.

Before I began to read Science and Health the least exposure to damp air would bring on a severe attack of sickness. I had given up going out at night and could not even step on wet grass without suffering dire consequences. But the revelation of God's law had broken this terrible bondage to material sense. I was free, and very happy in the recognition of that freedom and its source.

This experience of working hard for the price of instruction brought me lasting benefits, both in the way of spiritual Light received, and well-grounded conviction of the power of Mind over matter. The thought was ever present that I was working for Principle, to prove a rule, and it was proven. The money thus earned I gave with joy, and felt that the instruction received in return was priceless. Often since then I have been helped and enabled to help others, by remembering this demonstration and have kept to the straight path by repeating David's words to Araunah, the Jebusite, when he offered to the king his threshing-floor as a free gift whereupon to rear an altar to the Lord. "And the King said unto Araunah, Nay; but I will surely buy it of thee at a price: neither will I offer burnt offerings unto the Lord my God of that which doth cost me nothing." (2 Samuel, 24 : 24.)

With the understanding gained through the course of lessons of how to detect and cast out error, and with the increasing ability to conquer suggestions of fear, the teaching was proven true, day by day, through demonstration of its rules, and the physical healing became a well-established fact.

From that time to this I have enjoyed robust health, have not taken one drop of medicine nor used any outward application, and have not spent one day nor a portion of a day, in bed, because of sickness.

For six years Christian Science has been the only healer in the household, and it has met and overcome, for members of the family, claims of varied description, including severe accident, where mental surgery has been proven quicker and more efficient than material methods. Several beliefs deemed extremely dangerous, and some too often fatal, have been quickly healed, no ill effects remaining, but the recovery rapid and complete.

As soldiers of God we are enlisted for ceaseless warfare against the enemy, until every thought shall be brought under subjection to the One Mind. Mrs. Eddy tells us in Science and Health, page 344, "We must have trials and self-denials, as well as joys and victories, until all error is destroyed."

If we are not faithful enough, or wise enough to be forever on guard, we shall inevitably be caught sleeping at our post. Error never fails to take advantage of such

Digitized by Google

heedlessness, and we are called upon to score up what seems a victory for the adversary.

But these experiences, rightly taken, are in reality our best instructors, for they teach us the absolute necessity of watchfulness and prayer. I am grateful for having learned, even through trials and some tribulation, that we cannot ever bend the rule, but must obey it. Since I had the first real glimpse of the truth of her teaching, my love and gratitude have always gone out to the dear Mother who has given to the world this priceless discovery of the Science of Christianity.

## Rest and Peace Found at Last.

BY EMILY A. EASTMAN.

PERHAPS it would be well to tell somewhat of my life previous to coming into Christian Science. When in seeming prosperity, and all the world looked bright and beautiful, our dear little girl, three years of age, passed away. I was raised a Presbyterian, and had been a member of that church some years. When our minister came to comfort us, he said, "You must be reconciled to this, for it is God's will. He has taken her away to make you better, to draw you nearer to Him." My reply was, "He has driven me far from Him." I could not believe his words true, for my human father would not be so unjust.

From that time until Christian Science was presented to me, I was like a ship without a rudder. However, I would often take up my Bible, and read the beautiful promises written there, and say, this is beautiful, there is a God, but I do not know where, and I am sure He knows nothing of me, or I should not be sick all the time, and have so much trouble.

A few years after, came another overwhelming trial, when my husband was stricken down with creeping paralysis, now termed locomotor ataxia, and through his protracted illness and mismanagement of business, all earthly treasures seemed to vanish excepting my only son, a mere lad.

After my husband passed away, my son and I came to St. Louis to live. With a few years of hard struggling my son's health failed, and the doctor said he must have a change of climate, it was the only help for him. He went to Denver, and through the change of climate seemed to regain his health. He remained there one year, when I joined him. While there I had a protracted illness; the doctor called the disease the grip, and added to my other old diseases it seemed to leave me in a very bad condition, particularly my head and eyes. While feeling so ill, my attention was called to Christian Science by two young ladies, who had been healed by it. They were then teaching in the Denver public schools. They invited me to attend the Christian Science church with them. The sermon preached that day was, "I am the resurrection and the life," presenting the resurrection from a Scientific standpoint.

I thought I had never heard anything so beautiful, and it gave me food for thought for many weeks. About this time a friend of my son came from Salt Lake City to Denver on a visit, and seeing me so miserable, said, "Now if you will only go to Salt Lake and bathe in it, you will be cured."

Business called my son to Grand Junction, Col., which is about half way to Salt Lake City. While there I met a Christian Scientist and had a few hours' talk with her, and gained a little more understanding of Christian Science. We remained in Grand Junction a few months, when we moved to Salt Lake City, arriving on Thanksgiving Day. I took to my bed that same day.

The landlady and my son said that I should have a doctor. I said no; that they had given me no permanent relief; but if there were a Christian Scientist there I would like to see her.

The healer came about three o'clock in the afternoon. She asked me if I wanted Christian Science. I replied, "I know very little of Christian Science, but I do know I do not want a doctor." She then asked me if I would like to read Science and Health. I told her I would, but I did not know how long it might be before I could *see* to read, as my eyes were in such a bad condition. I had been wearing glasses for fifteen years, and for the last year I had been obliged to wear an additional pair when reading or sewing. She said, on leaving, "You will be better in a few days, and I will send you a copy of Science and Health to read." She did so. I saw nothing more of this lady until I met her at church several weeks after.

In a few days after this visit I was able to sit up a little while at a time. Then for the first time I picked up Science and Health, and as it seemed very heavy I supported it upon a pillow. The book opened at the Lord's Prayer and on reading it through I came to the line, "Feed Thou the famished affections;" then came a shower of blinding tears, with the realization that I had at last found what would give me peace and rest. As I read on, while it was but a few lines each day, the Scriptures seemed illumined, and I grew stronger each day; but had no ambition for anything but reading the book. On being questioned by those around me as to what I thought of Christian Science, I replied, "It is the light of the world; a city set upon a hill, which cannot be hid."

My healing was very gradual, and not without many struggles, for many times I was tempted to go to a healer. Then "the still, small voice" would say "God is just as near to you, for 'Lo, I am with you alway;'" then I would take new courage, get my Science and Health, and go on reading. I worked on in this way, allowing Spirit to bear witness. My son seeing the beauty of Christian Science soon became greatly interested, and has been following the teachings of Science and Health, ever since, and has made many beautiful demonstrations not only over physical claims, but also in his business. Nearly two years had elapsed before I made the demonstration over my glasses.

## Gratitude.

BY D. P. L.

THE philosopher who defined gratitude to be "expectation of future favors" must have had experiences which suggested the witty saying. Perhaps he smiled as he said it, but no doubt the experiences were pathetic—like those of a kind-hearted gentleman who found at his door a wretched, shivering, half-starved little mongrel. He carried the trembling creature into his house where it was warmed and fed. It was made clean and had the tangles smoothed out from its yellow coat of hair, and soon grew sleek and self-important. There were some of the family who did not become enthusiastic over the fawning little creature, but for his patron's sake he had kindness from all, and was believed by him to be a grateful little dog. Now there are dogs more noble than some men. They will repay a passing kindness by a lifetime of fidelity, or will lose life even in the endeavor to show good-will to the one they serve. The patron of the little mongrel believed in him, and was even flattered by his fawnings; so he was not pleased with those who warned him in regard to his pet. One day there came a chance to test this devotion. It was after dusk one evening on a night of rain like the one when the dog was found, and near his home the gentleman was set upon by roughs. He cried out, and in response to his call he saw the yellow dog come running. Even in the struggle with his foes, his heart was

Digitized by Google

gladdened by this unmistakable fidelity, and he thought how wrong those had been who had not trusted the dog. But when the little beast bit and lacerated his hand, and afterwards, when a policeman frightened the roughs away, followed them joyfully, as if he had found his own people, he was indignant. In the dog's after life the kicks were so frequent and the favors so few, that in expectation of the good which so infrequently came the yellow cur was kept in a very fervor of gratitude.

## How Evil can be Bound.

BY C. H. G.

FOR eighteen hundred years the Christian world has been looking expectantly for the dawn of the millennium, the thousand years wherein evil shall be bound and made powerless. To-day how much might be done to make that long-looked-for cycle of peace a great and abiding reality, if every Christian would guard his thought so carefully, as utterly to shut out of his consciousness all evil and permit none but pure thoughts to enter in. Then Love would be enthroned as absolute Ruler; love for God and love for man. The Golden Rule would be the enacted law of the land. The reign of Harmony would have begun to dawn upon Christian nations. In all their relations mankind would put self out of sight and love for others would be the ruling thought.

If every Christian Scientist would faithfully bar the door of thought to evil of every kind, keeping strict watch over his daily and hourly cogitations, what a tremendous uplifting influence beyond what that influence is to-day would be exerted upon the world. Scientists would so radiate Love that their example would be an irresistible sermon and exhortation. They would have begun to perceive the meaning of that admonition, "Let this mind be in you which was also in Christ Jesus."

What a goal to strive for; what a race, to be run and won. Then would they reflect the power to deprive evil of its supposed authority in much greater degree. The millennium would be brought nigh.

## Our Mother in Israel.

BY S. M. WILLIAMS.

OUR Leader, Rev. Mary Baker Eddy, has granted her loyal followers the right to call her "Mother." The one who is leading us out of Egypt, or the flesh, into the promised land of Spirit, is indeed our "Mother in Israel." Mother, is the dearest name on earth—from a human standpoint, the most holy.

How completely the symbol can be carried out! Does not the Mother reflect the wisdom and love which guides the child in the right path, and has the child any right to question the mother's authority? Would the child be obedient who did that? Let us see to it that we are true heirs and not bastards, that we are "loyal" according to the definition given us in "Retrospection and Introspection," page 62: "By loyalty in students I mean this,—allegiance to God, subordination of the human to the divine, steadfast justice, and strict adherence to divine Truth and Love."

To follow where she is leading gives the true birthright of spirit. What will the inheritance of that birthright be? In the words of St. Paul, "The fruit of the Spirit is love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance."

Every duty omitted obscures some truth that we should know.
RUSKIN.

## Testimonies.

### Fear of Insanity Destroyed.

I was reared in the so-called orthodox religion. As a member of St. Paul's Episcopal Church at Duluth I attended service regularly and taught in the Sunday School. To me the service was beautiful and dignified; I experienced nowhere else the spiritual uplifting that took possession of me while listening to the chants or reading the Litany. But as I grew older I became more and more conscious of the fact that, in spite of the grandeur of the service, harmony did not prevail; there was very little evidence of brotherly love. I went to other churches and there was the same "inhumanity to man" in a greater or less degree. When I felt myself growing pessimistic, I would reproach myself for beholding the "mote in my brother's eye," and start in with a renewed effort to find the harmony I was seeking.

A year ago last March I was taken ill with typhoid fever; I went to the hospital for treatment. The fever at first was in a very mild form, and in less than four weeks I was supposed to have sufficiently recovered to undergo an operation. This was promptly followed by another run of typhoid fever; then a third siege, each one worse than the preceding. I cannot remember having one pleasant thought during these two relapses. I was constantly being thrown over precipices, would try to walk on water, or would imagine some one was shooting me, or my fingers were being chopped off. I made fruitless efforts to concentrate my mind. A band seemed to be forming around my brain and the hot, heavy, sore feeling at the front of my head threatened to drive me insane. One whole night I lay looking with horror at a pair of scissors on the stand beside me, hoping that I might retain the mental strength to resist the powerful desire to end my life.

Then came the rheumatism. One day a friend called to see me, and during her visit the Sister took my temperature; I read my fate in the nurse's facial expression as she glanced at the thermometer. When I was served with a light supper of milk toast my fears were confirmed that my temperature was again above normal. My friend looked at me with pity in her eyes, then threw back her head and said, "Why don't you get mad? I believe you'd get well if you didn't take it so patiently." I was shocked at this remark, which seemed to me then almost sacrilegious; as I look at it now, there was more virtue in what she said than I imagined. I supposed that God in His infinite wisdom had made me sick, and that it was part of my religious duty to bear it patiently; I had not a doubt but this was a course of development through which I had to pass in order to reach a higher state of being.

In the course of four months I was able to be around, and in less than six months I returned to my work in the office. To mortal sense my illness had left me with palpitation of the heart and insomnia. The pressure on my brain—the feeling that I had a tight skull cap on—never left me for a day. The mere mention of murder or suicide would send me into a paroxysm of fear. If I started to go to some place the thought would come to me that I might be insane before I got there. At the office I would put my penknife out of sight—I was afraid of it and ashamed to tell any one of my weakness. One doctor, who examined my heart, said I should take no violent exercise as my heart was likely to "give way." I tried all kinds of material remedies, praying, meanwhile, in the words of the Litany, to Father, Son, and Holy Ghost for mercy, and ending by beseeching the good Lord to hear my prayer.

One day I picked up a newspaper and was surprised to note the account of the dedication of a Christian Science Church. I knew there was such a religious denomination

Digitized by Google

in the city, that cures had been made, but I did not suppose there were many believers, neither had I ever met personally one who had been healed. A ray of hope came to me, but I still knew of two remedies I had not tried for insomnia—a certain patent medicine and beer. When these were duly taken I went to see a Christian Science healer, resolving to do anything she asked of me, however foolish it might seem. I slept five hours the night after the first treatment; my heart trouble soon disappeared; the fear of insanity left me and I began to feel a sense of peace and freedom I had never experienced before. I read "Miscellaneous Writings" and Science and Health eagerly; my heart bounded for joy when I thought that perhaps at last I had found the "unattainable" for which my soul had been sighing. Here was a new conception of God and of myself as a child of God. I turned to the Bible to verify what I found, and there it all was, though I never before had had the eyes to see, the ears to hear, or the heart to understand. For weeks I seemed to be unconscious of what happened about me—I walked on air, so to speak. I received an insight into what it meant to live, move, and have my being in God. The ridicule and censure of friends seemed very trying to me at first; doubts have arisen at times, but each time I have turned all the more lovingly and confidently to the Truth that is Life. My only regret is that those I love most have no conception of the beauty and peace of Christian Science, but even in this I do not "sorrow as those who have no hope."

NORA J. HALL, Minneapolis, Minn.

### A Case of Dental Surgery.

On returning from a visit to the dentist recently, I found awaiting me a copy of the *Sentinel* of November 2, containing a most helpful article from the pen of Dr. Van Fossen. It seemed only proper, under the circumstances, to corroborate the testimony of the dentist with a chapter from my own experience in the new way of thinking.

The belief in the necessity of suffering during a dental operation is so general that every one must hail with joy the discovery that such pain is actually unnecessary.

Possibly my story may re-assure some timid heart, to whom dentistry is a synonym for suffering. No one could have needed help in this direction more than I, for, on account of a supposed affection of the heart, it was considered unsafe to place me under the influence of an anæsthetic. Twice this experiment was tried but resulted so disastrously that I was sent home utterly prostrated, and for weeks I did not recover from the shock. Thanks to the instructions which I have received in Christian Science, I am learning to meet this fear with an understanding of its unreality. This time the experience was shorn of its horror.

Soon after the beginning of the work, there was a slip of an instrument and a copious hemorrhage followed. Seeing the doctor, to whom I was a stranger, preparing a yellow liquid, I told him it would not be necessary, that the flowing would cease directly. He looked at me inquiringly; perhaps he was not accustomed to interference, but I assured him I had not used a drug as a medical remedy for years, that I was a Christian Scientist. Immediately the discharge ceased and he was enabled to continue his labor.

It was found desirable to put in a crown tooth. During his work, the dentist came upon an exposed nerve. For a moment he was perplexed, then, unknown to me, went to call his assistant, fearing the result of what he had decided to do. I heard him request that the window be opened, remarking that the room was rather warm, but I was quietly, peacefully resting in the comfortable adjusting chair, all unconscious of harm, only feeling sure of the abiding presence of Love, and Love's protection, while there wafted through my thought the sweet hymn of the Mother,—

> O'er waiting harpstrings of the mind
> There sweeps a strain,
> Low, sad, and sweet, whose measures bind
> The power of pain.

When the work was finished, the dentist laid his hand most tenderly upon my shoulder and said, very kindly, "That was cruel treatment, but I want to say to you, that it is the most remarkable case I have ever known in dental surgery. For I have extracted a live and bleeding nerve for you and have put on a crown tooth, and you have never said a word. It certainly is a demonstration. I will confess to you that when I saw that nerve I knew that something must be done. Ordinarily, I would have applied arsenic to kill it and have sent the patient home. I felt,—well, I must say, I felt devilish. I thought it a good chance to test the claims of Christian Science. I am sure you did not deceive me, for I watched the corners of your eyes very closely. I know you possess a great secret; you have gone down into things very deeply." Since then, the incident has been office talk, the dentist declaring he wished all his patients were Christian Scientists. He has accepted some of our literature, said he would gladly read Dr. Van Fossen's paper, and is doing much thinking. "I know what I see," he said, "and though I may dispute theories I cannot contradict facts."

FRANCES BENDIT, Brooklyn, N. Y.

### Healed by Reading Science and Health.

It has been six months since I learned through "Science and Health with Key to the Scriptures," the Truth that made me free. For four years after my little girl was born, my health was very bad. I was treated, and thought my very existence depended upon medicine, but I did not seem to improve.

In March I visited in Ruston, La., where, a few months previous, a lady who was a Christian Scientist had visited, leaving some *Sentinels*. One fell into my hands and I determined to find out if there were any truth in Christian Science. I at once ordered Science and Health, and when it came I gave it my undivided attention. I considered this a venture, since among all my friends and acquaintances not one was a believer in Christian Science, to say nothing of being a Christian Scientist.

Before I had finished reading Science and Health I felt that I was entirely well, and upon confessing the Truth I felt the presence of divine Love, and that "peace of God which passeth all understanding." I have told a great many of this blessed experience of the healing power of Christ, but only one friend has been benefited to the extent of being healed. I am striving to gain a better understanding of the Truth that heals in order that others may be constrained to believe. My knowledge of the Truth has enabled me and my little girl to live in a malarial district for the past six months without being sick or taking any medicine as a preventive.

MRS. LAURA M. FAULK, Charlieville, La.

---

The Lord's name is taken in vain when blessings are asked that are not earned.

To be truly great, a man must be good; without goodness there is no true greatness.

If we keep well and cheerful, and the mind constantly active, we never grow old. By-and-by we get to the end of the journey, but we never grow old.

*The Practical Age.*

## From the Religious Press.

### Proposed Mission for Dr. Hale.

At the last meeting of the Boston Unitarian Club it was suggested that Dr. Hale should go into cities where he is well known and Unitarianism is not, and preach as the representative of the American Unitarian Association. We have already mentioned a preaching mission similar to the one now proposed carried on in England by the ministry of Rev. Stopford Brooke, who easily takes his place among the most eminent literary men and preachers of Great Britain. It is often said that the ministry is the only profession where long experience and accumulated stores of wisdom count for nothing. There is an element in every community which does not care for wisdom. This element is larger than it ought to be, but it does not represent the public opinion which moves the world. We hear much about the degeneracy of the clergy; and yet there never has been a quarter of a century in the history of the world when such conspicuous honor has been paid to ministers of religion, who, by their services, their character, their learning, and their wisdom have deserved the love and reverence of their fellows. The public will listen to Dr. Hale when it would not listen to a younger man. A layman said of him at the club, "He has earned the right to do just as he pleases and say just what he likes for the rest of his life." As an instance of his abundant vigor, we note the fact that he has just delivered in Boston a course of six Lowell Lectures on the early history of New England. They have been given evenings and repeated in the daytime, making practically twelve lectures since his attendance at the Washington Conference.—*Christian Register* (Unitarian).

### Don't Put the Church to Shame.

Why should the church leave her high place and come down into the arena, where she will be put to shame? asks Ian Maclaren in the *Ladies' Home Journal*. Do men come to church for petty pleasures fit only for children, or for the satisfaction of their souls and the confirmation of their faith? Would Christianity have begun to exist if the apostles had been "pleasing preachers" and "bright men," and had given themselves to "socials" and "sales" and "talks"? The church triumphed by her faith, her holiness, her courage, and by these high virtues she must stand in this age also. She is the witness to immortality, the spiritual home of souls, the servant of the poor, the protector of the friendless, and if she sinks into a place of second-rate entertainment then it were better that her history should close, for without her spiritual visions and austere ideals the church is not worth preserving.

### Worn-out Phraseology.

Many Christian people will sympathize with Dr. Campbell Morgan in his expression of weariness with some old theological terms, so many of them are misleading and others are so familiar as to have lost their meaning or their grip upon us: "There is that word consecration; we have used it and abused it until it has almost lost its significance. Young people should not consecrate themselves in monthly instalments, or reconsecrate themselves. They should consecrate themselves and stay consecrated. Reconsecration means that the consecration has been withdrawn and is renewed. And thus we are deceived by old familiar terms." The pulpit of to-day would gain immensely in power and influence by dropping many of those old words and phrases and adopting fresher substitutes.—*The Watchman* (Baptist).

The Secretary of War has decided that the work of chaplains of the new volunteer regiments being sent to the Philippines may be done by members of the Y. M. C. A. Congress did not provide for chaplains to accompany the new volunteer army.

## Miscellany.

### Quaint Pews in English Churches.

Some pews in the fine old church at Malpas, Cheshire, possess a most amusing peculiarity. Each one consists of several seats, which are really, though not apparently, detached, and they look easy and comfortable. In this case appearances are deceitful, for should the occupant of any one seat lean forward while "nid, nid, nodding," over he goes on the floor. The seat is so constructed as easily to tip over when any weight is placed on its outer or front edge, and was so designed to prevent people from going to sleep in church.

We still find in a few of our ancient churches, the high pews, luxurious cushions, and curious fittings of former days.

In the good old times, when the squire was lord of all he surveyed in the village, his pew in the parish church was often a kind of sitting-room. One such pew occupies the whole of the south transept of the diminutive church at Gatton, in Surrey. It has a fireplace, a low seat which extends round two sides of the room, and blue tapestry decorations. Above it is another floor on which are three or four ordinary pews for the use of the squire's servants, and from it a covered way leads to Gatton Hall, some few yards away. There may be some truth in the story that a former squire used to enjoy a pipe by the fireplace during the sermon, and that if he became weary he would go out through the private door for a short stroll in the church yard.

A similar pew exists in the church at Colwich, Staffordshire. It has a staircase leading to a private door, and it is said that the postman came this way to convey letters, and that the servant brought in cake and wine for consumption during the service.

The royal pew of St. George's Chapel, Windsor, is peculiar because it is the largest of its kind in England, and on account of its being situated above the choir, down upon which the queen can see the service from a fine oriel window.

In Little Benjamin Church, Norfolk, is a pew for strangers and wedding parties. It was constructed by a shepherd and bears a cheerfully suggestive piece of ornamentation in the shape of the carving of a skeleton.

A game of whist played in a pew would nowadays cause considerable comment. Yet it seems that the square pews at Trowbridge were used for this purpose at the time the "poet" Crabbe was droning away in the pulpit.

Other interesting old pews have names, and occasionally coats-of-arms, painted on them, thus:—

"The Rectory Pew." "The Churching Pew," and, best of all, "The Hall Dog's Pew."—*London Golden Penny.*

### Everybody Using the Telephone.

The telephone has become a necessity of modern life, and whatever tends to cheapen the telephone service and enlarge its sphere of operations deserves support and encouragement. There has been a rapid increase of independent telephone companies. It is stated that the close of this year will see thirty-five hundred independent telephone exchanges in operation, having over seven hundred and fifty thousand instruments. In 1880 there were under rental use in the country 60,873 telephones. One year later the number had increased to 132,692. In 1898 the number of telephones in use was over a million. In 1885 there was in use in the various systems and modes of building 137,223 miles of telephone wire. At the beginning of this year the mileage had increased to one million, one hundred and fifty-eight thousand miles. The use of the telephone is more common in the United States than in any other country.

*Leslie's Weekly.*

The largest tree in the world lies broken and petrified at the end of a defile in Northwestern Nevada. It is said to be 666 feet long.

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### The Church Manual.

The thirteenth edition, containing the names of all the members of the Mother Church, including those admitted November 7 last, is now ready.

The importance of the members keeping themselves informed of the Church Rules and By-laws is so apparent that we do not deem it necessary to more than suggest it.

The Manual is now in two volumes, one containing the names exclusively.

It will be observed that the Manual is now in the thirteenth edition.

### The Board of Education.

The Board of Education has prepared printed application blanks to be used by those who desire to appear before it for examination.

These blanks are now ready, and can be procured by written application addressed to the Board of Education, 95 Falmouth St., Boston, Mass. No other form of application will be received.

Special attention is directed to the following By-law of the Church Manual:—

"Students are examined and given certificates by this Board, for no other purpose than teaching Christian Science. All other applicants will be dismissed."

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4⅛ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

The Fifty-sixth Congress assembled at 12 o'clock noon, December 4. The Senate remained in session only thirty-three minutes, and then adjourned out of respect to Vice-President Hobart.

The House was called to order by Clerk McDowell. David B. Henderson of Iowa was elected speaker. The rules of the last Congress were adopted without change.

Mr. Brigham H. Roberts of Utah was the prominent figure. A monster petition was presented containing seven million signatures protesting against his being allowed to take the oath of office. He was not permitted to take his seat on the opening day, and on the day following, after having been heard on his own behalf, the House decided by a vote of three hundred and two to thirty, that he should be excluded pending the investigation of his case by a special committee of nine members.

The President's message was received on Tuesday, December 5, the reading of which consumed two and one-half hours.

When the troops now on the way arrive, the British will have, including the colonial and naval contingents, 105,770 men in South Africa. General Methuen has had several engagements with the Boers at Modder River, but no decisive victory has been gained by either side. The British have been unable to get relief to General White, and the situation at Ladysmith is becoming more serious every day. General White and General Buller have established heliographic communication. Marconi's wireless telegraph system is now working at eight stations in the field.

June 30, 1898, there were 993,714 pensioners upon the pension roll, and on June 30, 1899, there were 991,519, a decrease of 2,195. The number of claims adjudicated during the year was 196,973, of which 107,919 were rejected, and 89,054 allowed. The amount expended for army and navy pensions during the year ending June 30, 1898, was $144,651,879.80. The amount expended for the same purpose during the year ending June 30, 1899, was $138,355,052.95, a decrease of $6,296,826.85. The average annual value of all pensions during the year was $132.74.

In his annual report Secretary Root recommends the establishment of an army college. The academy at West Point, he says, is not sufficient for the present needs of the army. The experiences of the past two years has shown that we have an insufficient number of trained officers.

He states that the deaths in the army from all causes for the fourteen months from May, 1898, to June, 1899, inclusive, were 6,619. The total deaths in the army of the Philippines from January 1, 1899, to November 1, 1899, were 843.

It is reported that some members of the band of the 24th infantry (colored) organized a minstrel company and gave performances in a Manila theatre. The enterprise was a success from the start, and they are reported to have made five hundred dollars per day. High prices are paid to Americans for every kind of work. Some of the soldiers who understand how to use a typewriter are earning an average of twenty-five dollars a day.

The last of the volunteers for the Philippines sailed from San Francisco December 6. While the insurrection is supposed to be nearing an end, yet the Administration is of the opinion that troops will be needed to garrison Luzon and to assist in the restoration of peace and order in the other islands of the archipelago. For this reason the movement of the volunteers was not interrupted.

Captain Dreyfus has written the president of the Senate committee declaring that the liberty given him by the government of France is nothing without honor, and that he will continue to seek reparation. He desires the whole of France to know by a definite judgment that he is innocent, and asks that he be left every means of legally establishing his innocency.

The United States Supreme Court has decided that the Addystone Pipe Company is doing business contrary to the Sherman arti-trust law. In December, 1894, six corporations engaged in the manufacture of cast-iron pipe entered into a combination for the purpose of suppressing competition, and arbitrarily fixing and maintaining the price of their product.

Booker T. Washington, a prominent colored educator, is endeavoring to secure an endowment fund for the Tuskegee Normal and Industrial Institute, at Tuskegee, Ala. As a result of a recent meeting held in Madison Square Garden Concert Hall in New York City, a gift of fifty thousand dollars was received from Mr. and Mrs. C. P. Huntington.

As a result of the protest made by the Chinese minister, Secretary Root has sent instructions to General Otis at Manila to observe strictly the treaty provisions between the United States and China. This means that Chinese, with the exception of laborers, will be admitted to the Philippines in the future.

The Administration has finally yielded to Mr. Macrum's repeated appeals to be relieved of his position at Pretoria, and the President has designated Albert F. Hay, son of Secretary Hay, to proceed at once to South Africa and take the place of Mr. Macrum, the present United States consul at Pretoria.

Miss Emma Lucy Gates, the eighteen-year-old granddaughter of Brigham Young, has entered the Royal Conservatory of Music in Berlin with highest honors. Professor Shultze has received her as one of his four private pupils, and says her voice may become one of the greatest voices of the world.

The new Panama Canal Company of Paris holds that its route is better than the Nicaragua route. The estimated cost is one hundred and three million dollars and the services of twelve thousand men during a period of ten years will be necessary to construct the canal.

Letter postage to the Philippines is the same as to a foreign country, five cents for each half-ounce or fraction thereof, except that letters to or for persons in the employ of our Government in the islands, if so marked, go at the domestic rate of two cents an ounce.

On Christmas Day Admiral Dewey will reach the age when he would ordinarily retire from active service, but as the law advancing him to his present grade makes no provision for his retirement, he will probably remain in active service indefinitely.

Brigham H. Roberts has issued an address to the American people in which he denies all the charges against him, and declares that the action taken is beyond the law, and points out the danger of seeking to deprive a state of its representation.

It is reported that all the powers concerned have favored the proposals of the United States regarding the maintenance of the "open door" in China, and each has promised to sign the desired assurance if the others will do so.

The Post Office Department has provided for the registration of letters by letter carriers on their routes. The new service will be inaugurated in some of the leading cities, and extended to others as rapidly as possible.

November 1, 1899, Harvard University had the largest number of students registered by any college in America. The number was 5,250. The University of Michigan was second with an enrolment of 3,346.

A rifle of very small bore, invented by Captain Daudeteau of the French army, fires a bullet with such force that it will perforate a horse from head to tail at a distance of one and three-fourths miles.

The Cuban Steel Ore Company of Philadelphia has purchased two thousand acres of iron ore land in the eastern end of Cuba. The ore will be distributed among the many furnaces throughout Pennsylvania.

The remains of the victims of the battleship Maine are to be brought to Washington and re-interred in the National cemetery at Arlington with full military honors.

In June of next year the twelfth census of the United States will be taken. Fifty thousand enumerators will be required, as the work must be finished in one week's time.

About twenty thousand employees will be benefited by the recent decision of the American Woollen Company to increase the pay of the operatives in all its mills ten per cent.

The University of Pennsylvania will send a team to take part in the Olympian games at the Paris Exposition next summer, and also in the English championship games.

The First Assistant Postmaster General has decided that "when a female postoffice clerk marries, it will be necessary for her to resign from the service."

The national council of the Grand Army of the Republic has decided to hold the next Grand Encampment in Chicago the last week of August, 1900.

The Election Commission of Kentucky have decided that William S. Taylor, the Republican candidate, has been elected Governor of the state.

A Philadelphia company is engaged in building a large number of double-decked trolley cars for use in Paris during the Exposition.

An electric hose carriage has been tested in Paris and proven successful. At several fires it arrived before hose-carts drawn by horses.

The postmaster-general has ordered that all cards for foreign mails must bear the inscription, "Postal Card—Carte Postale."

New York City is to have an eight million dollar bridge between Brooklyn and Manhattan.

The German army includes more than ten thousand military musicians.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## The President's Message.

PRESIDENT MCKINLEY'S message to Congress was read on Tuesday, December 5. The document dealt with many matters of vital interest to the country. It was largely historical and reviewed with great fulness the operations of the several departments of the government. The President's recommendations are generally considered as outlining the policy of the administration in the next great political campaign.

We make the following excerpts from the message:—

*To the Senate and House of Representatives:*—The fifty-sixth Congress convenes in its first regular session with the country in a condition of unusual prosperity, of universal good-will among the people at home and in relations of peace and friendship with every government of the world. Our foreign commerce has shown great increase in volume and value. The combined imports and exports for the year are the largest ever shown by a single year in all our history.

### NATIONAL BANKING ACT.

Increased activity in industry, with its welcome attendant—a larger employment for labor at higher wages—gives to the body of the people a larger power to absorb the circulating medium.

The attention of Congress is respectfully invited to this important matter, with a view of ascertaining whether or not such reasonable modifications can be made in the national banking act as will render its service, in the particulars here referred to, more responsive to the people's needs. I again urge that national banks be authorized to organize with a capital of $25,000.

### FOR THE GOLD STANDARD.

I urgently recommend that, to support the existing gold standard, and to maintain "the parity in value of the coins of the two metals (gold and silver) and the equal power of every dollar at all times in the market and in the payment of debts," the secretary of the treasury be given additional power and charged with the duty to sell United States bonds, and to employ such other effective means as may be necessary to these ends.

### RESTRAINT OF TRUSTS.

Combinations of capital organized into trusts to control the conditions of trade among our citizens, to stifle competition, limit production, and determine the prices of products used and consumed by the people, are justly provoking public discussion, and should early claim the attention of the Congress. The whole question is so important and far-reaching that I am sure no part of it will be lightly considered, but every phase of it will have the studied deliberation of the Congress, resulting in wise and judicious action.

### ISTHMIAN CANAL SCHEME.

June 10 a commission, known as the Isthmian Canal Commission, was organized under the terms of the act approved March 3, 1899, for the purpose of examining the American Isthmus with a view to determining the most practicable and feasible route for a ship canal across that Isthmus, with its probable cost, and other essential details.

The great importance of this work cannot be too often or too strongly pressed upon the attention of the Congress. In my message of a year ago I expressed my views of the necessity of a canal which would link the two great oceans, to which I again invite your consideration. The reasons then presented for early action are even stronger now.

### THE PARIS EXPOSITION.

Preparations for the representation of the industries, arts, and products of the United States at the World's Exposition, to be held in Paris next year, continue on an elaborate and comprehensive scale, thanks to the generous appropriation provided by Congress and to the friendly interest the French government has shown in furthering a typical exhibit of American progress.

I am informed by our commissioner-general that we shall have in the American sections at Paris over seven thousand exhibitors from every state in our country, a number ten times as great as those which were represented at Vienna in 1873, six times as many as those in Paris in 1878, and four times as many as those who exhibited in Paris in 1889. This statement does not include the exhibits from either Cuba, Porto Rico, or Hawaii, for which arrangements have been made.

### SOUTH AFRICAN WAR.

This government has maintained an attitude of neutrality in the unfortunate contest between Great Britain and the Boer states of Africa. We have remained faithful to the precept of avoiding entangling alliances as to affairs not of a direct concern. Had circumstances suggested that the parties to the quarrel would have welcomed any kindly expression of the hope of the American people that war might be averted, good offices would have been gladly tendered. The United States representative at Pretoria was early instructed to see that all neutral American interests be respected by the combatants. This has been an easy task in view of the positive declarations of both British and Boer authorities that the personal and property rights of our citizens should be observed.

### OUR PROMISE TO CUBA.

The withdrawal of the authority of Spain from the island of Cuba was effected by January 1, so that the full re-establishment of peace found the relinquished territory held by us in trust for the inhabitants, maintaining, under the direction of the executive, such government and control therein as should conserve public order, restore the productive conditions of peace so long disturbed by the instability and disorder which prevailed for the greater part of the preceding three decades, and build up that tranquil development of the domestic state whereby alone can be realized the high purpose.

This nation has assumed before the world a grave responsibility for the future good government of Cuba. We have accepted a trust, the fulfilment of which calls for the

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

sternest integrity of purpose and the exercise of the highest wisdom.

AS TO THE PHILIPPINES.

The future government of the Philippines rests with the Congress of the United States. Few graver responsibilities have ever been confided to us. If we accept them in a spirit worthy of our race and our traditions, a great opportunity comes with them. The islands lie under the shelter of our flag. They are ours by every title of law and equity.

The suggestion has been made that we could renounce our authority over the islands, and, giving them independence, could retain a protectorate over them.

This proposition will not be found, I am sure, worthy of your serious attention. Such an arrangement would involve at the outset a cruel breach of faith. It would place the peaceable and loyal majority, who ask nothing better than to accept our authority, at the mercy of the minority of armed insurgents. It would make us responsible for the acts of the insurgent leaders and give us no power to control them. It would charge us with the task of protecting them against each other and defending them against any foreign power with which they chose to quarrel. In short, it would take from the Congress of the United States the power of declaring war and vest that tremendous prerogative in the Tagal leader of the hour.

It does not seem desirable that I should recommend at this time a specific and final form of government for these islands. When peace shall be restored it will be the duty of Congress to construct a plan of government which shall establish and maintain freedom and order and peace in the Philippines. The insurrection is still existing, and when it terminates further information will be required as to the actual condition of affairs before inaugurating a permanent scheme of civil government.

No effort will be spared to build up the waste places desolated by war and by long years of misgovernment.

We shall not wait for the end of strife to begin the beneficent work. We shall continue, as we have begun, to open the schools and the churches, to set the courts in operation, to foster industry and trade and agriculture, and in every way in our power to make these people, whom Providence has brought within our jurisdiction, feel that it is their liberty, and not our power, their welfare, and not our gain, we are seeking to enhance.

Our flag has never waved over any community but in blessing.

I believe the Filipinos will soon recognize the fact that it has not lost its gift of benediction in its world-wide journey to their shores.

GREAT OPPORTUNITIES OF CONGRESS.

Presented to this Congress are great opportunities. With them come great responsibilities. The power confided to us increases the weight of our obligations to the people, and we must be profoundly sensible of them as we contemplate the new and grave problems which confront us. Aiming only at the public good, we cannot err. A right interpretation of the people's will and of duty cannot fail to insure wise measures for the welfare of the islands which have come under the authority of the United States and inure to the common interest and lasting honor of our country. Never has this nation had more abundant cause than during the past year for thankfulness to God for manifold blessings and mercies, for which we make reverent acknowledgment. WILLIAM MCKINLEY.

Executive Mansion, December 5, 1899.

---

"A science," says Edward Payson, "which divorces man's activities and his religious nature may well be styled the dismal science."

## The Lectures.

### At Grinnell, Ia.

Under the auspices of the First Church of Christ, Scientist, at Grinnell, Ia., Tuesday, October 31, in the Congregational Church, a lecture on Christian Science was delivered by Mr. Edward A. Kimball, C.S.D. The speaker was introduced by Prof. R. G. Cole, who said:—

It is undeniably true that in no previous period of the world's history have such numerous and earnest efforts been made to search out Truth and find it, as are being made at the present moment. How to sweeten life; how to lessen its sorrows and its burdens and destroy its pains and its sins; to express in our own lives and teach others to express in their lives that spirit of Christ whose mandate is "Love one another," these are questions whose careful and honest discussion distinguish these closing years of the nineteenth century from every previous period.

It is not strange, in such numerous manifestations of this desire for Truth and righteousness, this common longing of humanity, that men should differ, sometimes fundamentally, sometimes merely superficially, as to what Truth really is. Truth itself is infinite and unchangeable, but human conceptions of it have varied, largely because of the different view-points of those seeking it, and the incompleteness of their vision. There has been but one complete revelation of Truth, the revelation that was given us in the life and works of the lowly Nazarene, but wherever and whenever among men there have been visions of the realization and livableness of *this* life, there and then have been raised mile-stones marking the upward progress of humanity toward that universal condition of sonship to God which the Scripture gives us ample proof is our lawful heritage.

Among real seekers for Truth there can be no enmity one toward another, by the very definition of the term, and it is one of the glories of our time that men of the most diverse beliefs can meet together on common ground and fearlessly, openly, and sincerely exchange points of view, not only with tolerance, but with friendliness of spirit. It is the Spirit that has broken down the barriers between races, nations, religions, and denominations, and has revealed the common brotherhood of man. It is this Spirit that makes such a meeting as this possible. There are those present who entertain very divergent religious views, some possibly of no religious views whatever, and yet all of us are willing, and I doubt not glad, to hear something authoritative concerning a church that is the youngest among the sisterhood of churches. It can number only about thirty years in its history, and yet in this brief time it has enrolled among its followers nearly a million people of every station in life—high and low, rich and poor, educated and illiterate, black and white.

Christian Scientists are very much like other people in this respect,—that they wish to be judged, and certainly have the right to be judged, not by what other people *say* they believe, but by what they actually believe and do. Whenever a higher revelation of Truth comes to any generation, its general acceptance is retarded more, I take it, by misunderstandings and misinterpretations than by active hostility. Christian Science has been no exception to this rule, and whatever seeming hostility has existed to this thought, has been due largely to ignorance of what it really is. Partly with this thought in mind, I suppose, and partly to furnish authoritative information to the thousands of inquirers, there has been established what is known as the International Board of Lectureship of the Christian Science denomination, of which Board the speaker of the evening is a member. I have been asked to introduce the speaker this evening, an invitation that I have accepted with a double pleasure. I have an intense admiration for

Digitized by Google

any one, under any circumstances, who, without hypocrisy or equivocation, will stand boldly and fearlessly, yet with tolerance and Christian love, for the Truth as it has been revealed to him, and who reflects this Truth in every thought and action of his life. Such a one I recognize in Mr. Kimball, for to the pleasure of which I have just spoken I can add that of personal friendship, the fruits of which have been for me a constant and ever-increasing inspiration along the lines of spiritual life and its unfolding. I take pleasure in introducing to you Mr. Edward A. Kimball of Chicago, a member of the International Board of Lectureship of the Christian Science denomination, who will now address us on the subject of Christian Science.

### At Austin, Tex.

There was a large and attentive audience present at the Board of Trade Hall, Monday evening, November 20, to hear Mr. Edward A. Kimball lecture on Christian Science. The speaker held the undivided attention of the audience throughout the lecture, and handled the subject in a masterly manner. He was introduced by Mr. Robert L. Ziller, who spoke as follows:—

*Ladies and Gentlemen:*—From time immemorial, man has sought the understanding of God and His immutable laws. In olden times men looked longingly for the appearance of a prophet who should explain to them the uncomprehended facts of Being and lead their faltering footsteps into ways more sure. However, human reason often miscalculated as to the way in which God should reveal Himself, for even while men were looking for the coming of God's messenger with pomp and ceremony, he already stood in their midst. So came our blessed Saviour centuries ago, and he taught in no uncertain language what men needed to do in order to be saved from both sin and bodily sickness. His was a practical teaching, for he showed mankind how the understanding of God was a sovereign antidote for all the ills of humanity. Gradually the world lost sight of the practical import of the Master's teaching in relation to the healing of bodily ills, and it has been commonly believed that Christianity was for the saving of the soul but not for the body. In this age God has again given us the revelation of His laws, and, as of old, it has come without pomp or ceremony. A woman had met with an accident which was considered fatal. When almost within the portals of another world she called for her Bible. As she read, her consciousness was flooded with light, and, realizing the ever-present healing and saving power of God, she arose a well woman. That woman—the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science—has since devoted her life to bringing an understanding of the Science which healed her, to a suffering and heavenly-homesick world, recognizing the fact that it was the healing and saving Science of Christ, or Christian Science. To aid in this a Board of Lectureship has been formed, and we have with us to-night one who has been carefully instructed in this Science, and who is prepared to speak with authority on the subject. I bespeak for him the attention which this lofty theme deserves, and it gives me great pleasure to introduce to you Mr. Edward A. Kimball. He will speak to you on the subject of Christian Science.

*Daily Statesman,* Austin, Tex.

### At Lincoln, Neb.

Notwithstanding the inclemency of the weather, a large audience assembled in Bryant's Opera House and listened attentively for an hour and a half to an eloquent and earnest address upon Christian Science by Judge Joseph R. Clarkson of Omaha. The speaker was introduced by Mr. C. B. Daughters, a prominent attorney of this place, who made the following introductory remarks:—

*Ladies and Gentlemen:*—It is said that the first steps on the road to wealth are exceedingly slow; that it is most difficult to acquire the first hundred dollars, or the first thousand dollars, that large capital seems to accumulate by accretion, without effort of the possessor. So in the field of knowledge.

For thousands of years the world's knowledge was very small. The acquisition of knowledge was then slow and difficult. But the growth of knowledge is in a geometrical ratio. Knowledge begets knowledge. Each succeeding period of human progress placed the student upon vantage ground.

The discovery of one truth is a key for unlocking the door of the next. The present century has given the world more new ideas than were acquired by the human race in all the centuries that had gone before. Rock-ribbed dogmas have crumbled away under the penetrating rays of science. What was heterodox yesterday is orthodox to-day. When we think we are most safely intrenched in our faith a flood of light breaks in and exposes our weak and broken defences.

The unknown facts are as numberless as the stars of the firmament. We can be sure of only a few things. Prejudice is dissipated by the light of knowledge. Long accepted dogmas are discarded. Theories may be exploded or enter the realm of demonstrated facts. Every thinking soul should be ready to accept the truth whether it be revealed by the learned philosopher or by the humble Nazarene, or perforce evolved from the soul's intuition. Let us meet the speaker here to-night upon this broad ground.

We have with us to-night a man of learning, a man of large experience, a thinker, an able and earnest advocate of Christian Science. I have the honor and pleasure of introducing to you Judge Clarkson of Omaha.

*Lincoln Beacon,* Lincoln, Neb.

### At Lawrence, Kan.

Judge Joseph R. Clarkson, delivered a lecture on Christian Science to a large audience in Lawrence, Sunday, November 26.

Professor Vickrey of the State University said in his introduction:—

Because any institution is persecuted by public opinion or prosecuted by the civil law, is not conclusive evidence that that institution is either right or wrong.

Christian Science is now on trial in the courts of public opinion and the civil law. It is not on trial for its life, for if its principles are wrong, it will die a natural death and all the efforts of its ministers and devotees cannot sustain it or keep it alive. But if these principles are right it will live, and all the Herods and Neros and popes and inquisitions cannot prevail against it. It is not on trial for its life, but it is on trial for its rights and its privileges.

Though less than a generation old, Christian Science claims a half-million followers, among whom are teachers, preachers, lawyers, doctors, senators, and judges. Some one asked a Christian Science leader not long ago, "Where do you get most of your converts?" The answer was, "From the graveyard. That is, we intercept them as they are on the way to the graveyard."

I am not sufficiently acquainted with the principles of Christian Science myself to speak of them intelligently. But I am glad to state that we have a gentleman with us to-night with authority to speak, and who is eminently able to enlighten us concerning this new religion, and I trust that I voice the sentiment of this large audience when I say that we have left our prejudices at home and that we have come to-night prepared to listen respectfully and to consider fairly all that may be said.

Digitized by Google

I now have the distinguished honor and pleasure of introducing to you Judge Clarkson of Omaha, Neb.

*Daily Journal,* Lawrence, Kan.

### At Houston, Tex.

There was a large crowd at Turner Hall Thursday evening, November 23, to hear the Christian Science lecture by Mr. Edward A. Kimball, an authorized expounder of that doctrine. There are quite a number of believers in Christian Science in this city, and it was through their instrumentality that the lecturer was brought here. They are earnest, active believers in the doctrine, and they expect by lectures, by such entertaining people as Mr. Kimball, to convince those who attend that the doctrine is one to benefit them, and the missionary work will continue from time to time. The attendance at the lecture last night was very gratifying to the believers in the faith. They had given advance notice of the coming of the speaker, and urged every one to come, without cost, to learn something of that which is to them a sacred and religious belief. It matters not what others believe, or what others may think of the belief which is thus put forward, there can be no doubt that Mr. Kimball is earnest in his profession of the faith. His lecture showed this plainly, and that he is not alone in this earnestness and sincerity, is indicated by the active work being done by those believers resident in Houston.—*Daily Post,* Houston, Tex.

### At Horton, Kan.

On Sunday, November 19, Judge Clarkson of Omaha, delivered a lecture at the Opera House in this city, under the direction of the First Church of Christ, Scientist. A large crowd of people assembled to listen to his remarks, fifteen Scientists of Topeka having come to hear him, and some from other points. Mr. Clarkson was introduced by Scott Hopkins, who in very appropriate words took occasion to commend the object and appealed to the public to consider well the remarks they were about to hear, as the cause had probably been judged too hastily and harshly. The editor of the *Commercial* was not present to hear the lecture, but from what we are able to learn from some of those who attended, it was a masterly effort, and the Judge evidently has the cause at heart. His remarks had the effect of showing the public that Christian Science is not the terrible bugaboo that some think it, and the more it is investigated the more it will be commended, if not accepted.—*Commercial,* Horton, Kan.

### At Plattsmouth, Neb.

The lecture upon Christian Science, at Waterman Hall Thursday evening, November 16, by Judge Clarkson of Omaha, called forth a very large crowd of people who were interested listeners. A special car came from Omaha and Council Bluffs with two hundred and forty excursionists, and citizens swelled the number in the hall to fully six hundred, while many went away, unable to obtain even standing room. The order during the evening was of the best, and strictest attention was paid to the speaker.

Judge Clarkson made plain, in a fluent and pleasing manner, the ideas of Christian Scientists. Doubtless there were many in the audience who agreed with his views as expounded and many to whom they were new and strange and who were not in sympathy. The lecture, however, was interesting to all who were unprejudiced and who can find good in all things.—*Plattsmouth Post.*

### Lectures at Other Places.

Aurora, Ill.—William G. Ewing, Sunday, October 29.

Maryville, Mo.—William G. Ewing, Friday, November 17.

## Among the Churches.

### Reading Room at Ottawa, Ont.

The Christian Scientists held a largely attended meeting on McLeod Street, Sunday, November 26. The Readers were Mr. O. Higman and Mrs. Higman, who conducted the lessons from Science and Health and from the Scriptures respectively.

A number of inquirers took advantage of the throwing open of the Christian Science reading room in the Bank Street chambers in the afternoon to visit the place for light on the new theory. The reading room, though small, is cosily furnished, and is well equipped with literature bearing on the subject.

Some of the experiences vouched for by believers present were interesting as showing the extent of the merit claimed for the Science. One gentleman stated that he had been a victim of chronic gastritis and had been warned by physicians not to come to this country. He became a student of Christian Science and was cured. This believer's wife was a consumptive. Several members of her family died from phthisis. She became a convert to Christian Science and is cured.

Consumptives would seem to be particularly amenable to treatment. Several instances were cited of successful cures, which called for more or less credulity from lay members of the audience. Among these was one of a young man who had been given up by five doctors. He was treated by Christian Science and is now walking about the city. A member present was severely burned on the arm by molten metal. He was urged to apply the usual remedies, but consulted Christian Science and the pain at once left him. An extraordinary case of absent treatment was certified to by another believer. In this instance an aged lady was the patient. She had been unable to sleep for days, and the doctors had administered opiates to the utmost extent. It was feared the sufferer would lose her mind, when a Christian Scientist in Toronto was consulted. The result of absent treatment at a distance of three hundred miles was in this case a complete cure.

The foregoing instances were related by men of evident intelligence and apparent good standing. Whatever may be thought of them by the general public, there is no doubt that they are thoroughly believed by the members of the cult.—*Free Press.*

### Services at Chester, Pa.

The first public meeting in the interest of Christian Science ever held in Chester, Pa., was at Library Hall, Broad St., on Tuesday evening, November 21.

The meeting was conducted by Rev. George Tomkins, D.D., of Camden, N. J. After a solo by Mrs. E. Aline Dexter of Philadelphia, the Scriptures were read by Mr. William F. Randall of Philadelphia, and selections from "Science and Health with Key to the Scriptures," were read by Eugene F. Voorhies of Camden. Several most excellent testimonies of healing were given by persons present, and at the close of the meeting announcement was made that permanent Christian Science services would begin in Chester on Sunday, November 26, also a regular mid-week meeting on Wednesday evening. Eugene F. Voorhies is First Reader, and Mrs. Ruth H. Stokes, Second Reader.

For some years past it has been the earnest desire of several loyal students of the "little book" that there be a center for Christian Science work in Chester, and all feel exceedingly grateful for the happy result.

CORRESPONDENT.

### Organization at Sacramento, Cal.

Christian Science first became known to the people of Sacramento about twelve years ago. Most of this time

Digitized by Google

gatherings were held in parlors to read and study Science and Health by Mary Baker G. Eddy. About a year and a half ago a society was formed and a hall rented. Regular Sunday services and Wednesday evening meetings were then held.

On Wednesday evening October 25 of the present year, a church was organized to be known as First Church of Christ, Scientist, of Sacramento. The following Wednesday we elected our Readers. We have thirty-four charter members. MRS. EMMA DUNCKHORST, *Clerk*.

### Organization at Creston, Ia.

I am thankful to be able to inform the Field of our organization; also that our incorporation papers were received October 10. We all feel it is such a benefit to us, for it brings all the students into a thought of love and unity.—EVA THOMPSON, *Clerk*.

## A Statement of Facts.

MISS LIZZIE A. MOORE, the Christian Scientist who had charge of the case of Mrs. M. M. Davis, who died a short time since in Rome and about which there has been much in print, gives out the following statement in regard to it:—

I was first called, as a Christian Science healer, to treat Mrs. Davis in February, 1897. She was then physically helpless with what the physicians pronounced to be inflammatory rheumatism, and was also suffering from heart trouble which she had had from birth. The heart trouble at frequent intervals caused her extreme suffering for periods of one to six months. When I was called in she was considered to be in a very critical condition. Under Christian Science treatment she was healed in two weeks.

About a year ago, a relative of Mrs. Davis who knew how sickly she had always been, visited her and declared that she had never been so well in all her life as she was then.

I was again called by Mrs. Davis the first of September of this year, to treat her for heart trouble. She was brought out of several severe attacks during this last illness when it seemed hopeless to all her friends. She was asked by her husband, her nurse, and by her friends if she wanted a physician, and each time she answered emphatically, "No." Once she said that Christian Science had already prolonged her life nearly four years, and she daily expressed her gratitude for her freedom from pain and for her peace of mind during her illness, and declared that the truth of Christian Science was more to her than anything she had known in all her previous experience. From first to last she never asked for a physician and she had only to mention such a wish to have it granted. I will add also that Mrs. Davis did not take any drugs of any kind while I was attending her, as has been insinuated.

The intimate friends of Mrs. Davis were not excluded from the house, but were allowed to visit her when she cared to receive them, and some of them saw her as often as they wished. Mrs. Thompson of Albany, N. Y., a favorite cousin, accepted an invitation from Mrs. Davis at the commencement of her sickness and remained in the family, seeing Mrs. Davis every day with the exception of a few days in October, until after she passed away. Under such circumstances it should be plain to every one that the patient was entirely free to choose any mode of treatment she desired.

The published statement that Christian Science teaching prohibits the employment of a surgeon when needed, is not true. While Christian Scientists recognize no healing efficacy in drugs, yet they are instructed to leave certain mechanical operations to a skilful surgeon.

*Press*, Utica, N. Y.

## Vaccination.

SOME days ago, the *Press-Knickerbocker-Express* published the following:—

According to the Poughkeepsie *Enterprise*, a bright and promising boy, son of Morris Decker of Amity, Orange County, is the latest vaccine victim in this state. The boy was vaccinated a month ago. He got along very well until Thursday of last week, when he complained of a stiff neck. Then he caught cold, was unable to open his jaws, and suffered terrible pain until he died. Up to date, the following children in this state have died from vaccine poisoning: Annie Ackels of Brewster, from lockjaw; John Burns of Geneva, from blood poisoning; Decker boy of Amity, Orange County, presumably from lockjaw. The compulsory vaccination law should be stricken from the statute book.

In commenting upon this editorial, the *Deseret News* of Salt Lake City says that the above statement should cause the utmost care to be taken in the selection of the vaccine virus and its application, and also that the patients should be carefully watched by responsible physicians until all danger is passed.

We believe that the use of vaccine virus at any time is a harmful practice. We believe that it poisons the blood without warding off disease. We believe its use is little short of criminal, in view of the fact that its effects are often seen in ruined constitutions and distorted limbs. Vaccination will yet be relegated to the limbo of great errors, which have deceived mankind in all ages. In the event of smallpox appearing in any section of this state, proper attention to sanitary laws would do much towards banishing the disease.

*Press-Knickerbocker*, Albany, N. Y.

## Wireless Telegraphy.

THE term wireless telegraphy is a misnomer, for without wires the method would not be possible. The phenomenon is merely an enlargement of one that we are fully conscious of in the case of telegraph and telephone circuits, which is termed electro-magnetic induction. Whenever an electric current suddenly flows or suddenly ceases to flow along a wire, electrical currents are caused by induction in neighboring wires. The receiver employed by Marconi is a delicate spark caused by this induction, which forms a bridge so that an electric current from the relay battery can pass and influence magnetic instruments.

Many investigators had succeeded before Marconi in sending telegraphic messages several miles through the air or ether between two points not directly connected by wires. Marconi has extended the distance by employing a much higher electro-motive force at the sending station and using the feeble inductive effect at a distance to set in action a local battery.

It is evident that wires are needed at the sending station from every point of which magnetic and electric waves are sent out, and wires at the receiving station which embrace, so to speak, these waves. These waves produce minute sparks in the receiving instrument, which act like a suddenly drawn flood gate in allowing the current from a local battery to flow through the circuit in which the spark occurs, and thus produce a click on a telegraphic instrument.

We have said that messages had been sent by what is called wireless telegraphy before Marconi made his experiments. These messages had also been sent by induction, signals on one wire, being received by a parallel and distant wire. To Marconi is due the credit of greatly extending the method by using a vertical wire.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## The Bible.

Three hundred Harvard students are said to have recently listened for an hour with eager attention, as a professor read, without comment, portions of the English Bible. "The old book," says the *Congregationalist*, "is still the most fascinating volume extant."

*Boston Evening Transcript.*

THE Bible is not only "the most fascinating volume extant," but it is likewise the most practical, when one is able to discern the underlying Principle taught therein from Genesis to Revelation. The real worth of the Bible is realized only as its teachings are understood and put into practice. As a work of literature it is unsurpassed by anything of ancient or modern times. For this reason one may read or hear it read with the greatest satisfaction; but when one begins to see that the Bible is philosophical and Scientific in its teachings, it becomes a book of practical value to him. Then he is doubly interested in its perusal, for he finds therein that which not only entertains but helps him as well. It unlocks the mystery of the future, it solves the mystery of the present, and he finds himself strengthened for the struggle of life.

The seeming inconsistencies of the Bible have no weight with him. That these apparent inconsistencies should present themselves is reasonably to be expected when he considers that the writers lived in different centuries, with different surroundings, and wrote under widely different circumstances. Then when he recalls how these writings were preserved, translated, and compiled in their present form, it is not unreasonable that there should be some apparent contradictions. But all the discrepancies and inconsistencies pale into insignificance as he recognizes the hand of God from first to last. To him, the harmony of the writers, made manifest in the uniformity and simplicity of their teachings, and likewise the grand and noble lives which were the outgrowth of those teachings, is proof that a higher than human influence must have guided their pen. He finds the people of all ages reaping the reward of obedience and paying the penalty of disobedience. He sees that the law of cause and effect is in force to-day as it was then, regulating the affairs of human experience and pointing to the existence of an unchangeable God who is no respecter of persons. He finds the teachings of the Bible summed up in that most remarkable of all discourses, the Sermon on the Mount. When he stops to contemplate the life of the Preacher of that sermon, he finds that even in the minutest detail, it was in strict conformity with his doctrines, and that he was able to prove by his works that his teachings were not only true, but practical; and when he sees that the students of this great Teacher were able to follow their Master in works as well as words, he is assured that the Bible supplies a human need that is not supplied in any other way.

Then it matters not so much whether Moses wrote the book of Job, or Paul the Epistle to the Hebrews, or who is the author of Genesis. They are written. That fact cannot be denied, and neither can it be denied that they teach things he can put into practice. All the "higher criticism" of the age cannot shake his faith in the practicability of the Word of God.

The world is growing weary of human interpretations of the Bible, which are so often the result of an effort to prove a certain doctrine to be true, rather than of an earnest endeavor to gain the Truth regardless of preconceived opinions and practices. Suffering humanity, yearning for a present salvation, is fast reaching the point where more satisfaction is derived from the study of the Word itself without human comment.

The experience of those Harvard students is the weekly experience of thousands of Christian Scientists throughout the world. For nearly five years the only preacher in the Church of Christ, Scientist, has been the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The sermon consists of selections from the Bible and correlative passages from Science and Health, which are read without comment. The hearers are not told what is or is not the meaning, but each is left free to find the interpretation in his own life.

The full churches and close attention given to the reading of the sermons, are indeed strong evidence that "the old book," with its Key, Science and Health, "is still the most fascinating volume extant." This is evidence to the observer, but to the Christian Scientist there is still stronger evidence to be found in his own individual experience. Here he has applied the Scriptural teachings to the affairs of life, and he finds they are not only practical, but just what he needs, for they supply a long-felt want. Each experience calls to mind some text of Scripture and he is oftentimes surprised to note how completely it answers his question. It could hardly be more definite if it had been written to him and for that particular occasion. This is because the Bible declares a Principle, and the application of this Principle is the thing most needed in all the affairs of life, business and social as well as religious. Then again familiar texts come to him with a clearer and deeper meaning as occasion seems to require. Thus day by day he sees the need of understanding the Bible, for he is fully convinced that it points out the way of Life and teaches him how to avail himself of the innumerable blessings bestowed upon him by his Heavenly Father, who has promised never to forsake him, but to be an ever-present help in all times of need. Truly the Word of God is the voice of Truth to suffering humanity, and only needs to be understood and lived to bring a present salvation from all evil, sickness as well as sin.

## Individual Work.

IN the distribution of the literature of the Christian Science Publishing Society, individual Scientists have done an immense work. Yet all has been done within the lines indicated in our recent articles—that is, with reference to the good of the cause and reaching the needy, and not for financial gain. So far from this being the motive, our zealous co-workers have been financial losers in this work; but compensation of a higher sort than that which is measured by dollars and cents has been abundantly theirs, and they have rejoiced in the blessings which have crowned their Christly labors.

With a deep consciousness of having, unitedly, done our duty in the interests of divine Truth, we can afford to pass unnoticed the unjust and untruthful jeers which proceed from some whose motives are base and selfish.

We shall continue our God-appointed work with good cheer and clear consciences, well knowing by whom we are truly judged.

## The Board of Education.

As announced in a paster attached to last week's *Sentinel*, the session of the Board of Education is postponed from January until June next. The applications now on file will be retained, but others will not be received until further notice.

If it should be determined to require new applications from all, that fact will be duly published in our periodicals.

### Reply to Dr. Fulton.

GRAND RAPIDS, MICH., November 21.—Rev. Dr. Fulton's sermon attacking Christian Science has created considerable comment here and has drawn out a vigorous reply from a citizen of this town. The contributor signs himself "B. B.," and writes as follows to the Grand Rapids *Herald:*

In his sermon Sunday evening, November 5, Rev. John M. Fulton of the Westminster Presbyterian Church assailed with ridicule, invective, and slang the beliefs of the Christian Science denomination.

In this age, when a better civilization has softened the asperities and intolerance which characterized the bigotry of the past; when practically the Christian churches of all denominations have come to recognize the fact that all the others are working along their own lines and with their own peculiar construction and interpretation of religious truth, and yet all working in the name of the same Master and for the same ends, for the bettering of mankind; when such a spirit of harmony and toleration has come to pervade all religious faiths calling themselves Christian, it comes with surprise when some minister of the Gospel, from his pulpit, in the pride and intolerance of his own opinion, viciously attacks the motives, tenets, and beliefs of some other recognized body of Christian believers.

#### SPIRIT OF THE ATTACK.

The spirit which prompts such an attack is not a new thing in the world, but happily in our day is becoming rare. It is the same spirit which in the time of Christ animated the one who thanked God that he was not as other men are. It is the same spirit which through the ages past tortured and burned at the stake the incautious man who dared to disagree with the prevailing religious beliefs.

The motive which prompted the reverend gentleman to preach the sermon in question and also to cause it to be published at length in one of the daily papers is perhaps difficult to see. The fact that the Christian Science denomination has grown so much more rapidly in the last ten years than has the Presbyterian denomination ought not to have roused the gentleman to such an outbreak. Neither should the fact that many prominent members of his denomination have transferred their faith from the thirty-nine articles to the simpler statements of the Sermon on the Mount have wrought such a fury in the breast of this usually mild-mannered gentleman.

#### DISPLAYS PROFOUND IGNORANCE.

That the sermon in question was intended seriously to throw light on the beliefs and doctrine of another denomination is rebutted by the fact that throughout it displays the most profound ignorance of what the tenets and teachings of that church really are.

That the sermon afforded an opportunity for the learned divine to exhibit his ability as a master of ridicule, and presented a field for a brilliant display of the choicest slang, no one who heard or read it can doubt.

The fact that the Christian Science form of belief is the serious, intelligent faith of a multitude of men and women whose purity of life and devotion to the Master cannot be questioned; also the further fact that many of the brightest men in every department of life—physicians, jurists, men of letters, as well as ministers, some of them even more widely and favorably known than Mr. Fulton, have found in Christian Science a higher form of faith, a better philosophy, a purer religion than they had found elsewhere, cannot be thus easily disposed of.

All of this is met and answered by Mr. Fulton with what he seems to think a clinching argument: "I have met some very chaffy Scientists who are no credit to their profession."

Mr. Fulton unfortunately furnished no glossary of slang phrases with his sermon, and it is of course possible that we have failed to gather the full import of some of his sentences.

[Here follow some quotations from Mr. Fulton's remarks showing that by the use of vulgar language, and in the virulence of his tirade, he not only violated every propriety of the pulpit he is supposed to adorn, but made statements that were as false as they were indecently put. They are without a shadow of foundation in fact, and their utterer could easily have so ascertained if he had wished.

We venture to say that the gentleman whose able article we republish, has scores of sympathizers in his fair and Christianly attitude, many of whom are not allied with our cause. We can only look with pity upon those who thus degrade their high ministerial calling.—EDITOR, *Sentinel.*]

One can scarcely bring himself to believe that this scene was enacted and the above language actually used in a modern church, in a civilized community, and used by a man claiming to be a Christian gentleman and assuming to exercise the functions of a spiritual leader among the people . . . Mr. Fulton says in his sermon that Christ never gave absent treatment.

If this is true, then Matthew was mistaken when he tells the story in the eighth chapter of his gospel how Christ healed the centurion's servant without going to his house, and again in the fifteenth chapter, where he relates the healing of the Canaanite's daughter by his word when he was in another place.

According to Rev. Mr. Fulton, Mark was also in error in relating the same incident in the seventh chapter of his gospel. It appears that Luke also fell into the same sad error in relating the incident of the centurion's servant in the seventh chapter of his gospel. It is true, Luke says that Christ was not far off from the house when the healing took place.

In the fourth chapter of John he tells about the absent and complete healing of the nobleman's son by Christ. Either Mr. Fulton or the Apostle John has made a mistake.

It is probable that Mr. Fulton did not intend to question the veracity of the inspired writers. It is more likely that he read these writings as he apparently must have read the literature of Christian Science, and so overlooked these recorded cases of absent healing.

#### STATEMENT IS UTTERLY FALSE.

That the sermon is in any sense a reply to the dignified and eloquent exposition of Christian Science recently given by Judge Ewing in this city, no one would for a moment imagine.

Until the reverend gentleman is qualified to distinguish between argument and abuse, between tolerance and bigotry, between the Christianity of Christ and the dogmatism which seems to constitute so large a part of his religion, between an argument of sense and a tirade of slang, he should have the discretion not to enter the lists as the assailant of a religious belief he knows nothing about.

He closes his sermon by asking his hearers if it is noth-

Digitized by Google

ing that they are asked to give up the Bible, to give up prayer. He asks them if they are ready to say, "Farewell, Heavenly Father! Farewell, my Saviour Jesus, Son of God! Farewell, Holy Spirit, my comforter! then forsake the Christian Science delusion."

No other meaning can be given to these words than that the speaker intended to assert and have his hearers believe that such was the teaching of Christian Science.

The slightest and most casual reading of any of the published works of Mrs. Eddy or any of the literature or lectures of that faith shows at once that such a statement is utterly false.

Are we then to believe that Mr. Fulton assumed to utter publicly and with the sanction of his ministerial position these most serious charges concerning a form of faith which he had never taken the pains to investigate in the slightest degree?

FAITH HAS NOTHING TO FEAR.

Whether we believe the teachings of Christian Science or not, the world certainly has nothing to fear from a form of faith which, coming in the name of the Master, proclaims that its mission and its ministry are not to destroy revered and long-cherished beliefs, but to throw a new light on the old faiths, to exalt the supremacy of Mind, and to make men and women better in all the manifold duties and relations of life.

The Christian world ought to have no hostility to a form of faith which says to the weary, the sick, and the suffering, "If you cannot touch the seamless garment of the Nazarene, you may at least believe and know that his religion rightly understood and lived has the same healing power to-day as when it was first proclaimed by the Galilean Sea."

The writer is not a Christian Scientist nor has he affiliated in any manner with that church or denomination, and is moved to make these comments on the sermon in question not at the instance or with the knowledge of any Christian Scientist, but simply that such an ignorant, unwarranted, and intolerant attack on a worthy body of Christian believers should not go unchallenged.

*Chicago Times-Herald.*

## Home of Rev. Mary Baker Eddy.

**Henrietta H. Williams in the New England Magazine.**

PLEASANT VIEW, the home of Rev. Mary Baker Eddy, Founder of Christian Science, stands in one hundred acres of carefully cultivated ground on the brow of one of the southwestern hillslopes of Concord, N. H., about a mile out, though within the city limits. As one drives out by way of Pleasant or School Street, shaded avenues that wind over the western hills into a fine boulevard, the recent gift of Mrs. Eddy to the city, the appropriateness of the name of her home becomes apparent. From the boulevard to the White Farm road in the valley, and from the valley to Bow in the distance, is a view over hills and meadows of surpassing loveliness. No effort has been made at Pleasant View at landscape effects, though few home sites are richer in natural effectiveness. Above acres of waving grasses and long lines of fine old orchard trees, from rose garden, lawns, and shrubbery to a copse of pine and hemlocks in the valley, then on over a vista of village-dotted hills and dusky river banks framed in the purple shadow of distant mountains, the scene is beautiful indeed, and its deepest note is peace. The enchantment of these broad perspectives commingles with the charm of old-fashioned flowers and the scent of freshly mown hay, orchard sweetness and all the restfulness of a quiet home. The air is redolent of pines that fringe the lawns, and daisies, buttercups, and clover in the fields beyond; more than a hundred apple-trees outline the meadows, sending up their fragrance to mingle with that of beds of lilies, sweet peas, and alyssum, hyacinths and a profusion of simple home flowers plentiful in New England.

An indefinable sense of stillness broods over these broad acres as gentle as the morning breeze which lifts the heads of the bending grasses. Beyond a trim hedge, hothouses on the farm and neat barns and stables appeal to one's sense of symmetry in the rounding out of the prosperous homestead. Above a spring a windmill supplies water for an artistic bit of pond in the valley; and a somewhat merry contrast to the author's busy and serious days is a little cedar skiff, in a gay dress of crimson plush and silken awnings, moored in an ornamental boathouse—the gift of some of her followers. A neat walk winds from the valley to the broad verandas, that are arched in woodbine. A wealth of color everywhere greets the eyes. Arbors, shaded in clematis and roses, dot the lawns in the foreground, and midway is a young elm planted by the author herself.

To the right, in front of the tower, a bronze fountain sends up its refreshing spray to the summer warmth. On the western slope of the grounds, beyond the tamarax shrubs and tall catalpas, beds of mignonette, petunias, and roses vie in sweetness with the honeysuckle that winds above the window ledges. From the clean cut driveways to the grape and raspberry border heading the orchard all is order and simplicity, and there is a nice blending of the practical with the lovely never wanting in the author's environment. Mrs. Eddy's pets are four horses and the goldfish in the fountain. All know her voice, and a word serves to show the fondness alike of great and small for the nature whose every impulse is kindness.

But life at Pleasant View is not a leisurely existence. Within and without all denotes systematic industry. Constant contributions to the various publications of the denomination, a voluminous correspondence and ceaseless deeds of benevolence throughout the ranks of Christian Science require more than desultory meditation. One secret of the vast amount of work that this one woman accomplishes is the clockwork precision and promptness with which her domestic affairs are regulated. Her servants are devoted to her and speak tenderly of her unselfish and consecrated life. Her thoughtfulness of their comfort is witnessed by many daily acts of kindness which her life is never too busy to include. Under great pressure of work she halts to order that lemonade be sent out to the workers in her fields, or in cold weather a cheering jug of hot coffee. The flag that flies from Pleasant View on National occasions bears witness to her patriotism.

*New York Daily Tribune.*

Christian Science is a refuge for all who are sick, discouraged, or distressed. In all the world there is no other such refuge.

This day is one of rejoicing to some one who has caught a glimpse for the first time of the glorious Truth revealed by Christian Science. Some one, some where, has found new hope and new life. Let us rejoice with this unknown brother or sister and recall our own joyful awakening.

Only the foremost in the race for worldly wealth and honors is rewarded, but in the race "for the prize of the high calling of God in Christ Jesus," all who run will be richly rewarded. The swiftest will gain the prize first, but not at the expense of the slowest, for all who run will be farther advanced than if they had walked or stood still, and spiritual advancement is its own reward.

## Contributed Articles.

### Another Plea for the Birds.

I HAVE intended for a long time to express thanks for an article which appeared in the *Sentinel* last spring, entitled, "A Plea for the Birds," by Mr. Henry A. Manning. It was in the number of April 13. I wish to thank both the author and the *Sentinel* for this article, as it taught me a lesson. The writer expressed deep regret that so many Christian Scientists should wear birds and birds' plumage in their hats, thus encouraging the cruel practice of butchering thousands of beautiful birds—many of them song-birds at that—solely for the purpose of ministering to the feminine love of "pretty things."

I must confess I have been as guilty as any of my sisters. How I could have been asleep so long I don't know. Certain it is that my conscience sometimes pricked me sharply in regard to the matter. I have always flattered myself that I was a sincere lover of birds, especially song-birds, and I recall numerous summer afternoons, in bygone days, when I sat under the trees and read yards of bird poetry, ever and anon pausing to watch the robins and woodpeckers and orioles as they flew by—thinking how beautiful they were, and how dearly I loved them. Could any one possibly love them more than I did? And all the while the little feathered creatures in the branches overhead must have smiled grimly and made sarcastic remarks to each other in bird-language; for was I not displaying in the hat which I was so complacently wearing the plumage of their brethren?

Verily, the jewel of consistency was not mine! Years ago I read an article in a newspaper describing the manner in which the birds are put to death. It was simply horrible, and I have never forgotten it.

For all that, I continued to wear feathers in my hats, though not so much, even after I became a Christian Scientist. My conscience was only half aroused, and it was not fully wakened until the article in the *Sentinel* appeared. That was too much for me, and I determined never again to wear head-gear which was adorned with birds or birds' feathers.

It seems to me that Christian Scientists should be at the head of every reform. Societies for the protection of birds began to be formed long ago by non-Scientists, and should Scientists be behind them in their benevolent aim? Will not the dear sisters who are dreaming of their winter hats, hunt up and carefully read the article, "A Plea for the Birds," and then ask themselves whether or not they are willing to do without feather adornments in future?

The writer of the said article having pleaded eloquently and at some length, it is hardly necessary for me to write many words regarding the subject; yet there are one or two points on which I should like to dwell a little, and which he left untouched. It seems to be a matter regarding which the feminine world, for the most part, is deeply asleep. And wherefore? Is it because vanity is dearer to us than mercy? Is it because the giving up of these pretty ornaments would be such a stupendous sacrifice, that most of us would require an indefinitely longer period to demonstrate up to it?

Probably thoughtlessness is at the bottom of it for the most part. As Mr. Manning says, "Our unworthy deeds are frequently our thoughtless acts. The thoughtful woman is not cruel, but it is for lack of thought in womankind that the birds suffer."

So true it is that,—

> Evil is wrought by want of thought
> As well as by want of heart.

Is it not also true that we ought

> Never to blend our pleasure or our pride
> With sorrow of the meanest thing that feels.

It may be urged that this is a comparatively insignificant matter; there are so many more important things to demonstrate over. But is it insignificant? Is the encouragement of any kind of cruelty insignificant? In his article Mr. Manning quotes Lili Lehman, the opera singer, who said, "Every year twenty-five million beautiful birds are slaughtered by this terrible folly. The farmers are already suffering from it, and yet women enjoy wearing feathers, like the savages."

Scientists are busy people, yet this is hardly a question which it would take a great deal of time to settle.

If I seem over-zealous regarding this thing, it is because I love the birds so dearly that, now that I am fully awake to the great wrong of this wholesale "slaughter of the innocents," I long to do all I can to hasten the time when we shall see these beautiful creatures, no longer on ladies' bonnets, but living out their little lives, full of song and gladness, in their native woods and fields, where they belong.—F. R. W., Peoria, Ill.

### A Voice from the Prison Cell.

"DIVINE Love always has met, and always will meet, every human need," was demonstrated to-day in the Nebraska State Prison. For a long time it has been the desire of myself and other prisoners who have become interested in Christian Science, to have Christian Science services held here on Sunday afternoons, but the chaplain, as well as the former warden, being opposed to it, it was impossible to have our wishes gratified.

On the first of August a change in wardens took place, and to-day, the new warden permitted eight Scientists from Lincoln to hold a Christian Science service, after the usual Sunday afternoon prayer-meeting. The thirty-five prisoners in attendance at the prayer-meeting were given the privilege of attending the Christian Science meeting or retiring if they so desired. Every one stayed for the service, and not less than six of those present were believers in the blessed Truth.

My heart overflows with gratitude to God, omnipotent Love, whose ways are so much higher than our ways, and who brought it about to have this great Truth revealed to the benighted souls in a place of this kind.

Only two months ago a package of Christian Science literature was sent to me for distribution, but before it reached me, it came into the hands of the chaplain and he refused to allow it to come in. In his sermon the following Sunday, in referring to it, he said he could not allow such literature in the prison, for the Christian Science people were departing from God. When I questioned him after his sermon concerning what he knew about Christian Science he admitted that he knew absolutely nothing about the teachings, and that he had a daughter and stepdaughter-in-law who were Christian Scientists.

The words of our Master, "Father, forgive them, for they know not what they do," may be applied to our good old chaplain. Only five days ago I was discussing with one of Mrs. Eddy's loyal students and a Scientist from Lincoln, how we should ever be able to manage to get a permit to hold services here on Sundays,—and to-day, our demonstration was made. "If God be for us, who can be against us?" Words of mine are inadequate to express the gratitude I owe to the Rev. Mary Baker G. Eddy, for the blessed Truth revealed by her has been "the shadow of a great rock in a weary land" for me, for over two years. I can truthfully say, that after having been tossed about on error's wave for these many years, I have found a haven of rest in Christian Science. My daily prayer is, that in living a life as taught in Science and Health, here-

Digitized by Google

after, I shall also be found worthy to call her by that endearing name "Mother."—H. B., Lancaster, Neb.

September 10, 1899.

[We publish the following in connection with the above. —ED.]

*Dear Sentinel:*—A Christian Science service was held at our State Prison here last Sunday afternoon. Eight Scientists from the city went out and thirty-five of the inmates of the prison attended the service.

Three or four copies of "Science and Health with Key to the Scriptures" are in circulation among the prisoners, and also the *Journal* and *Sentinel*. About twelve are interested in Christian Science and the sermon given them each Sunday from the *Quarterly* will certainly sustain and increase the interest now manifested. It seems such a privilege to be able to present this practical religion to these men, that teaches them *how* to be good, honest citizens, and to look into their faces, and see only the good thought manifested there. Gratitude to the Mother who has made all this possible, springs up anew in our hearts, and our allegiance to her teachings becomes stronger than ever.—N. B. E., Lincoln, Neb., September 12, 1899.

## The Error of Worrying.

BY JANE DUDLEY STONEMAN.

WHO can lift his eyes skyward, on a clear calm night, and see the myriads of planets, and stars quietly moving along their celestial orbits, and remember that for countless ages this beautiful order and harmony has existed, and entertain a doubt of the power, wisdom, and omnipresence of God who established and perpetuates the harmonious movement of these countless millions? Now this same divine Mind will also guide our pathway in harmony and peace, if we only submit ourselves to His guidance and rely on His promises. "Trust in the Lord with all thine heart; and lean not unto thine own understanding."

All the long, weary hours of worry over possible evils that may come to our loved ones have brought nothing but sorrow, pain, and heaviness to us. No good ever came by worrying. Jesus said long years ago, "Which of you by taking thought can add one cubit unto his stature?"

When we cease leaning on our own understanding and trust all to God, these dark images of disaster, want, and sorrow, will dissolve as mist before the sun, and evil will be overcome by the presence of Truth.

If worrying results in no good to us, but rather makes us ill and careworn, then it is wicked and un-Christian to worry; it is doubting God, and His sure promises to us. For, "No good thing will he withhold from them who walk uprightly."

Do you fear a temporal need? Behold in what gorgeous apparel the lilies are clothed! How the fowls of the air are fed! Did He not furnish a table in the wilderness and feed the multitude on the shores of Galilee?

Is it over business affairs you worry? "In all thy ways acknowledge Him, and He will direct thy paths." For the upright man is this promise: "Whatsoever he doeth shall prosper." Are you anxious over a wayward son or daughter? "Cast thy burden upon the Lord, and He shall sustain thee." Remember that in God's own good time, every tongue will confess His power, and every knee bow in adoration to Him. Surely no one should have a fear of accidents. When we commit our loved ones to the keeping of One, whom the winds and waves obeyed, who saved Daniel from the lion's jaws, delivered the Hebrew children from the fiery furnace, made the blind to see, the deaf to hear, the lame to walk, what have we to fear? This all-powerful, all-wise, loving Father, is always with us. He is "Closer than breathing, nearer than hands and feet" (Tennyson). "If God be for us, who can be against us?"

The Bible is full of blessed promises for those who love Him and delight to serve Him. They shall walk in ways of pleasantness and paths of peace. A true Christian should have a triumphant feeling of security. With feet firmly planted on the Rock of Truth, no buffeting of the winds and waves of earthly emotions against this sure foundation can mar his serene calmness, or separate him from his God.

## God Changes Not.

BY N. L. G.

IN our ceaseless longing to gain a higher understanding of God and live better lives, we war in thought with our surroundings, and keep pulling the cords of error closer and closer by ever recurring to the hope that to-morrow, next week, or perhaps the coming year we shall be in a changed position where we can make greater demonstrations or see more clearly the Light. Through suffering we learn that we cannot run away or move away from error, but must stand in the strength of our God and see its nothingness. We are told in that wonderful "Crumb," from which the multitude is fed and there still remains seven baskets, that "Evil is not something to fear and flee before; . . . but, met with Science, it can and will be mastered by Science" (Miscellaneous Writings, p. 284).

Slowly but surely the lesson is being learned that, in so far as we can, it is well to demonstrate the Truth in the surroundings in which it found us until the fact is proved that there is no power to keep this Light from shining and being reflected from the darkest places. The light that shone to Daniel in the lion's den is reflected even unto this day. In Luke, 2 : 51, 52, we read, "He [Jesus] went down with them [his parents], and came to Nazareth, and was subject unto them: . . . and Jesus increased in wisdom and stature, and in favor with God and man." Now we know that the light did shine in the lion's den and Jesus, by abiding in his humble home, increased in wisdom and stature and favor with God and man; and we, by keeping our faces to the Light and clinging steadfastly to the thought that God changes not, can bring into our lives the realization that we, as God's children, need no change, but dwell now in the harmony of love, peace, and joy.

## Good Results from a Lecture.

BY A. H. S.

AFTER Judge Ewing's lecture of November 6, the First Church of Christ, Scientist, of Lansing, Mich., had the lecture printed in the daily Republican, and also in the semi-weekly edition which goes out into the farming community. The newspapers went out with loving thoughts of the good they would do. A few days ago we were told of the deep interest with which the lecture was read by one farmer. For several years he has suffered from neuralgia. When an attack came on he took up the lecture and read it again, and the pain left him. He told his wife he knew it was the lecture that did the work, for never before had the pain left him so quickly. Generally he had hours of suffering. He has the lecture carefully laid aside and reads it over and over.

One of the leading physicians of the place heard the lecture and declared it was the most logical lecture he ever heard. The superintendent of our public schools listened to it with interest, and at once questioned if the study of physiology in the public schools was an advantage.

One of our lawyers was found in his office reading the lecture aloud to some of his lawyer friends. He said he had read it twice before.

Thus our lectures preach the gospel and heal the sick.

## Wednesday Evening Meetings.

### Christian Science Experience.

It is safe to say that in all the churches of this city there was never a more earnest, enthusiastic, and reverential service than that held last night in the Christian Science Church, at No. 1 West Monroe Street. It was the usual Wednesday evening experience meeting, or rather, it was most unusual. There are seats now for nearly one hundred, and the church was almost entirely filled.

The services consisted of reading from the Bible, Psalm 107, the first three pages from the chapter on "Prayer" in the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and appropriate hymns, which were most heartily sung by the entire congregation. The happy, earnest singing of this church has been the subject of most favorable comment, and many passing by stop to listen with pleasure and interest. Christian Scientists do not have a special Thanksgiving service; even the smallest child is daily taught to take every trouble to God in prayer, and the manifold blessings of their religion call for unceasing thanks; but, always uniting in spirit with every child of God in a good purpose, there was caught the tone of the national preparation for Thanksgiving. At the request of the leader, the testimonies began at the first row of seats, and without a break in line, continued to the end of the room. Utterances from childish lips and voices filled with joyful emotion left no room to doubt the sincerity of this religious body of people.

One lady told of being healed of a severe case of astigmatism by reading the text-book, Science and Health. She had worn glasses for a long while, would suffer much from pain and soreness if she attempted to read or sew without them, and the doctor had pronounced her case incurable. She has now entirely discarded glasses, and her eyes are restored to perfect soundness.

It seems that many of this gathering have given up glasses after long use. One bright lad, in a clear, ringing voice, declared that he was thankful that his mother did not have to take medicine any more.

Not the least interesting feature were the tender and loyal utterances of reverential love for the Mother and Leader of Christian Science, Mrs. Eddy, and the recognition of the blessings that have come into their lives through her clear and satisfying exposition of the Scriptures. The services did not close until after nine o'clock, and even then people seemed loath to depart.

There is truly a home feeling and happiness in this body of worshipers that is rarely seen in other churches. One visitor remarked that since the days of Christ and his apostles he had never heard of such brotherly kindness and love as he had witnessed in this Christian Science Church.

*Evening Call,* Jacksonville, Fla.

### A Thanksgiving Service.

A Thanksgiving service was held by the Second Church of Christ, Scientist, Lyceum Parlors, last night at its regular week-day meeting. President McKinley's proclamation and appropriate selections from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, were read, which, together with the hymns and prayer, made a harmonious and impressive service.

An interesting and characteristic feature of the latter part of the meeting was the impromptu speaking of some members of the congregation during the time allotted for that purpose. Some twenty persons, both ladies and gentlemen, spoke very earnestly of the great benefits they had derived from Christian Science, and how thankful they were that it had been brought to their attention. Several ladies spoke of having been healed of chronic illness of many years' standing, one of them having been an invalid for twenty-five years, and all were now healed. One lady spoke very feelingly about her boy, who had been perfectly healed of hip-disease and was now able to attend school.

Among the cases mentioned by the others were the healing of astigmatism, general debility, nervous dyspepsia, incipient consumption, malarial fever, paralysis and neuralgia of the eyes, loss of speech through stammering.

One lady spoke of how grateful she was that God, through Mrs. Eddy, had brought this Christ-love to human consciousness and made this Christ-healing again possible in this age.—*The Morning Herald,* Baltimore, Md.

### Interesting Mid-week Meeting.

The regular mid-week meeting at Christian Science Hall Thanksgiving eve was full of genuine thanksgiving. Visitors were present from Boston, Lowell, and Tacoma, who voiced their gratitude to God for benefits, physical and spiritual, received through Christian Science.

An interesting account was related of a recent gathering of Harvard University students who are already deeply interested in the Scientific application of religion to the needs of man. As students and scholars they had found Christian Science so practical and rational in their own experience that they rejoiced at the hearty welcome accorded it by the studious and cultured in this and foreign lands.

From Racine, Wis., a letter was read relating the progress of the work there, and the erection of a new edifice of worship.

A letter received from the leader of the work in Scotland told of the growth of the movement in Great Britain and the recent purchase of larger quarters in Edinburgh to accommodate the increasing membership of the local church. In all English-speaking countries Christian Scientists report a deepening of the religious sentiment and the growth of applied religion and practical Christianity.

A business man of Boston gave thanks to God for his complete healing from dyspepsia by Christian Science after fourteen years of suffering. The wife of a former resident of Concord expressed her gratitude for the power of Christ which had lifted her out of the last stages of consumption and completely restored her to health and happiness.

One and all who told of their physical and spiritual healing voiced their thanksgiving to God, from whom cometh "every good gift and every perfect gift."

*Concord Evening Monitor.*

## The Work of Mrs. Eddy.

In reply to the statement of John J. Ingalls that women establish no faith and write no creeds, Susan B. Anthony says:—

"What of Mrs. Eddy? No man ever obtained so large a following in so short a time. Her churches are among the largest and most elegant in Boston, Chicago, and other cities. But it is only during the last half century that woman has been permitted by man even to offer a prayer aloud in public. The great Apostle Paul enjoined her to keep silence in the churches. For nineteen hundred years since the dawn of Christianity, man has been much occupied establishing faiths and formulating creeds for woman to follow. Since she found her voice and her tongue, fifty years ago, she has been too busy rising to her own level and adjusting her life to new conditions to do more than recognize the great need of humanity—fewer creeds and more of the divine Spirit. When woman does write her creed, it will be one of right actions, not of theological theories."

# Testimonies.

### The Value of Science and Health.

There has been so much said lately about the price of Science and Health that I would like to relate a few cases where the book brought health, happiness, and prosperity.

A woman whose husband was sent to the penitentiary was left to support the family—a child, father-in-law, and mother-in-law. She was a timid woman and had never worked away from home, so it seemed hard for her to have to seek work. She applied to a dressmaker who told her she would pay her what she was worth to her, and increase her wages in proportion to her usefulness. With the very first money she earned, Science and Health was bought, in spite of the counsel of the mother-in-law who thought she ought to buy necessary food. This year she worked in the best dress-making establishment here, and none of the family have lacked what they needed.

She has a little girl, five years old, who has not taken medicine since she was a few months old (when the mother first knew of Science). This is the first child she has had who has lived for any length of time. It has been said that her children were too delicate to be raised, but this one is certainly the picture of health. She has told me that she would not take anything for Science and Health. She has "Miscellaneous Writings," and takes the *Journal* and *Sentinel*.

Another woman here, a dressmaker, who was almost bed-fast, and said by some of the doctors to be incurable, had to be supported by the Odd Fellows. Through the blessed ministry of Christian Science she has been raised from sickness to health, and enabled to support herself and child. She tells me that she could not do without her Science and Health, which not only teaches her how to keep well but how to keep from worrying over her work.

Another woman was so low that the doctor said she would not live three days without a surgical operation. Her husband had given up work to stay with her, thinking she could not get well. She had Christian Science treatment on Saturday, and Sunday morning she prepared the breakfast for the family and has done all her housework since, even to the washing and scrubbing. Her husband has employment, and it is needless to say they are happier than before. Do you suppose she would say three dollars is too much for the book?

Another woman bought a second-hand book and took in washing to pay for it. She was healed of heart trouble, gall-stones, rheumatism, skin-cancer, and other troubles, by reading the book.

She has since bought a new Science and Health, "Miscellaneous Writings," and some of Mrs. Eddy's other books. In her home and surroundings is a greater expression of prosperity, for she said it took all they could make to pay for drugs and doctors' bills before.

And as for me, I would not give up my Science and Health for the universe if I could not get another. Through Christian Science treatment and the reading of the book I was healed of kidney disease, sick-headache, stomach trouble, fevers, weakness in the spring, and a scrofulous affection of the throat. For all these blessings I am very grateful; but it has done much greater things for me than the healing of physical disease. It has destroyed many fears and given me a peace of mind that I never knew before. It has taught me to love God and my fellow-man, and to think less of self. The Bible was, I might say, a sealed book to me before I read "Science and Health with Key to the Scriptures," now I read my Bible daily and love it and understand it as I never did before. I read the precious promises and know that they will be fulfilled.

There are seven of us here who have organized as a church society. We are all members of the Mother Church. Our attendance has increased since the first of September. If we continue to grow at this rate we shall soon have to look for new quarters.

Our Sunday School was opened several weeks ago with thirteen pupils, and now we have twenty-three. Our Wednesday evening meetings are well attended, and while the testimonies are not always remarkable, yet they mark a step forward in the experience of the giver, and so we rejoice.—Miss Nena Smith, McKinney, Tex.

### Help for the Aged.

On my arrival home last year from Boston, where I had been to attend the Communion service, I was called to treat a lady whom the physicians had given up. They said she had a cancer or internal growth, and that she could not possibly live. When I went into the home the daughters said, "Surely, you do not think mother can live, she is almost eighty years old, and she must die some time. If you heal her, I will believe in Christian Science." I said this: "I know that the Truth is able to heal all diseases and restore the dying to life, and according to Jesus' teachings and Christian Science your mother can be a well, strong woman; for Jesus spoke the Truth when he said, 'Whosoever liveth and believeth in me shall never die.'"

When I saw the lady she was suffering intensely, had no rest day or night. She had to be turned on a sheet, and every time they moved her she would cry out with pain.

The first week she did not improve much, there seemed to be a very strong opposing thought against the Truth.

The nurse resigned, and the first night after the nurse's departure the patient slept all night, from nine o'clock till morning, and from that on she was no care to the family. In six weeks she started back to the state of Vermont, as she was only out here on a visit. She had eight weeks' treatment, and the last I heard from her she was able to visit with her people and friends and was enjoying life.

Virginia Davis, Spokane, Wash.

### Typhoid Fever and Other Ills.

Last March I was very ill with a complication of diseases which the doctors called typhoid fever, inflammation of the bowels, and measles. I also had a rupture of twelve years' standing. I employed seven different physicians of this city, all of whom pronounced my case incurable.

At this time my attention was called to Christian Science, and I sent for a healer, who told me of the God who is Life and Love, and through her demonstration of the power of the God who is All-in-all, I was healed of all my ills within five weeks.

I had been prostrated for eleven weeks, and was able to be up in less than one week after taking Science treatment. The rupture was the first to disappear under the power of Truth. My sufferings were beyond description, but I can now say that I am perfectly well, and I know that by living this Truth which Jesus taught and demonstrated, I may continue in health.

It is my desire that all may know of this Truth and I would be glad to tell of my healing to any who wish to know.—Luella B. Elkins, Indianapolis, Ind.

---

Religion is no haggard and stern monitress waving you from enjoyment; she is a strong angel leading you to noble joy. The Bible is not a book of repressions and prohibitions; it is a book of kindling inspiration. God would not have you crouch like a poor, timid, startled creature, torturing yourself with a terrified watch over your lower desires. He would see you stand erect and manly, like a victor, in heroic confidence, with these enemies beneath your feet.

Archdeacon Farrar.

## From the Religious Press.

### Love at Work.

The Christian religion may be regarded as a simple machinery for securing the full power of the human affections as a social force. And herein it radically differs from all other religious movements of every kind and character. It is love in action. The old paganisms were utterly lacking in the working ideal. Buddha had vast compassion, but it little availed in the relief of human suffering that he should spend years in silent meditation under the sacred tree. The antiquities of Egypt are full of the majesty of the State Church; but the pyramids were erected at a cost of human life immensely great. Art and poetry combined to make old Greece a delight to the studious eye; but still the poets who sang so bravely, and the artists who hewed the deathless marble into immortal beauty were as cold and heartless as the gleaming marble itself. The splendid scholarship and divine art of the children of Hellas was as clear as their deep blue skies and cold as the snow-crowned summits of lofty Olympus. One thing it lacked, and lacking that it faded and perished in eighty brief and memorable years. The power of love as the central force in human society was lacking, and nothing else could answer. And Rome in her palmiest days was but a tender nurse to the passions and inhumanities of life.

It was not until Christ came and spoke his word that love was put to work in human society as the supreme motive of a high and holy life. Love became in his mouth the heart of religion. Heretofore it had been an incident, and temple worship and doctrine the main concern. The religion of Egypt was a philosophy; that of Greece a spectacular appeal to the beauty-loving eye and ear; that of Rome a cultivation of duty and devotion to the State. Jesus came, and the new sense of help to men arose. Nothing good that had gone before was denied,—it fell into its proper place and was numbered with the infinite resources of the kingdom of God for the uplift, redemption, and salvation of men.

REV. L. J. DINSMORE.

*The Universalist Leader.*

### Overcoming Evil with Good.

A spiritual conquest is inevitable. Evil with its serried forces is in the field, aggressive, defiant, eager for conflict. Offenses will come; they cannot be prevented. There is but one alternative: We must either overcome or be overcome.

How shall we treat the foe! Vindictively? Requite evil with evil, breach for breach, wrong for wrong? Then shall we crown evil a certain victor. Revenge brings a man down to the level of his enemy. "He who will fight the devil with his own weapons must not wonder if he finds him an over-match." You may fight fire with fire, but to oppose evil with evil is but to treble the mischief. He who offers the first injury makes a beginning of evil, but he who retaliates renders the evil almost uncontrollable.

Shall the evil be met simply with contempt or indifference? To merely refrain from requiting evil with evil is apparently neither to conquer nor to be conquered, but in reality to be thus passive is also to be conquered. A truce means nothing else than a victory for the evil.

Shall we meet the evil with good? Oppose error with truth, hatred with love, enmity with good-will? This is the divine method. This is to overcome. Falsehood will flee the face of truth. The most obdurate foe will yield to kindness. Persistent friendliness subdues the most injurious. The heart of adamant is melted and the most malignant enemy transformed into an abiding friend by the "blessed sorcery of love."

W. H. CLINE.

*Our Young People.*

### The Spiritual Ministry of the Church.

Have we not reached a point in the development of our Protestant churches in the United States where we are in serious danger of substituting some of the incidental ends for which a Christian church is established for her spiritual witness and power? On the ground that the church should be interested in all sorts of social, political, and economic reforms, too many congregations have diverted their pulpits and their influence away from the work of ministering to the deeper and vital needs of the human soul.

This is the line of least resistance for ministers. Gospel preaching is often regarded as simple and easy, and so it is if the preacher merely repeats well-worn ideas and phrases; but we undertake to say that it is much easier to preach on such a subject as prison reform, or the housing of the poor, or the relations of temperance to legislation, than it is to take the most familiar New Testament text, and make its truth vivid and authoritative to the average congregation.—*The Watchman* (Baptist).

### The Power of the Unseen World.

Is there one of us who has not, and increasingly with growing years, the humiliating experience of being coarsened and deadened by the present world? Our ideas are filched from us; our great efforts are frustrated; we are not merely fighting against a hindrance, we are not merely wrestling with an enemy; we are imbibing an atmosphere—an atmosphere that relaxes and enervates the soul. There come times to men when they are still young, and more frequently and sadly to men of middle age, when it seems almost useless to struggle against the present age, and we are inclined to allow the current to carry us withersoever it will, retaining many pious ideals, but conforming unto present ways. It is only as the grandness of the spiritual comes into a man's imagination and rushes like a great sea up the mighty waterways of his heart, that he shall be completely satisfied and this world shall have no further hold, because it has no further attraction.

IAN MACLAREN.

*The Standard.*

## Miscellany.

### Building a Town Instanter.

In Oklahoma they do not build towns as they do in other parts of the world. The people of that territory sneer at the moth-eaten statement that Rome was not built in a day. They are well aware it required more than one day to build Rome, but that was a very long time ago, and, under any circumstances, nobody could expect genuine enterprise in Italy.

A new town was made in Oklahoma last Monday. It did not take half a day to build it. It was made at once. This new town is Billings, about thirty miles northwest of Perry, and it marks the terminus of a new branch of the Rock Island Railroad. The town site was marked out only four days before the town was established, and Monday morning was fixed for occupancy. White Rock, a village about four miles away decided to join the new venture. The five hundred inhabitants of White Rock put their houses on wheels Saturday evening and on Sunday moved over to the edge of the new site. The White Rock postoffice went along with the other domiciles, and when six o'clock came on Monday morning the White Rock houses were moved to their several lots, and the postoffice changed its name to Billings. Many other settlers came with wheeled houses or tents, waited patiently on the border line over Sunday, and moved in at six o'clock Monday morning.

Sunday evening there was not one house in Billings. Monday forenoon there were more than three hundred and the town was established. Two banks were opened the first day, and there were enough saloons to wash away all the dust that had collected in men's throats during the rush.

*Pittsburg Despatch.*

The deepest oil well in the world is to be found about twenty-five miles from Pittsburg, Pa. The well is now 5,532 feet deep, and it is proposed to sink it to six thousand feet.

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### The Church Manual.

The thirteenth edition, containing the names of all the members of the Mother Church, including those admitted November 7 last, is now ready.

The importance of the members keeping themselves informed of the Church Rules and By-laws is so apparent that we do not deem it necessary to more than suggest it.

The Manual is now in two volumes, one containing the names only.

It will be observed that the Manual is now in the thirteenth edition.

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Items of Interest.

Governor Otero of New Mexico asks that the territory be admitted to statehood. The population, including 25,329 Indians, is 260,500. The territory includes nearly seventy-nine million acres. The assessed value for taxation is over forty million dollars.

One of the interesting features of the Governor's report is the religious. There are two Jewish places of worship in New Mexico, and four churches of the African Methodist Episcopal denomination. The Catholics had the field for a long time. In 1850 the Baptists established a church, and in 1851 the Methodists and Presbyterians. In 1881 the Congregationalists built a church and other denominations have followed.

General Buller suffered a serious reverse on the morning of December 15 while attempting to cross the Tugela River. This was General Buller's first attempt to relieve Ladysmith. The British lost eleven guns and were compelled to retreat.

Field Marshal Lord Roberts, V. C., has been appointed commander-in-chief in South Africa. Lord Kitchener of Khartoum is to be General Roberts' chief of staff. The whole of the reserves not yet embodied will be called out.

The first Lafayette dollar, the unique specimen authorized by Congress in aid of the fund for the erection of the Lafayette monument in Paris, was struck off in the United States mint in Philadelphia, December 14. This coin will be presented by President McKinley to the President of France. The second coin struck off was forwarded to Mrs. McKinley.

Fifty thousand of these coins will be struck off and are to be disposed of at two dollars each.

The thirtieth anniversary of the opening of the Suez Canal was recently celebrated. A statue of its promoter and builder, M. de Lesseps, was erected at Suez. The par value of the shares of the company is one hundred dollars. In 1872 the highest price that could be obtained for them was thirty-five dollars a share. At the present time the stock sells at seven hundred and fifty dollars a share, and the canal is earning a good and regular dividend on this valuation.

The convention of American Federation of Labor met at Detroit, Mich., Monday, December 11. Two hundred delegates were present, representing a membership in labor organizations of about eight hundred thousand. Resolutions were adopted declaring for the reduction of the standing army to twenty-five thousand men; urging Legislatures to outlaw all kinds of convict labor, and against permitting slavery in the Hawaiian Islands.

The Secretary of the Interior says that during the fiscal year ending June 30, 1899, public lands aggregating 9,182,413 acres were disposed of. The total area of public lands is approximately 1,082,138,221 acres, of which 929,308,068 acres are undisposed of, and 152,830,153 acres have been reserved for various purposes. Excluding 5,320 Indians in New York, and 62,500 Indians embraced in the five civilized tribes, the Indians number 181,586.

The centennial of the death of George Washington was commemorated at Mt. Vernon, December 14, 1899. The ceremonies were conducted by the Masonic bodies and by the Red Men of the United States. All the thirteen original states were represented by Masons. President McKinley delivered an oration at the tomb. In the evening exercises were held in Convention Hall. Chauncey M. Depew was the orator of the occasion.

Sunday morning, December 10, General Gatacre suffered the severest blow sustained by the British during the war in the Transvaal. With three or four thousand men he marched Saturday night expecting to surprise the Boers at Stromberg, but he was led into a Boer ambuscade by treacherous guides. He was driven back and suffered a loss of six hundred men, who are supposed to have been taken prisoners.

For some months it has been suspected that large quantities of military stores were in the possession of the Cubans in the interior. Recently the mayor of Tunis voluntarily surrendered three field guns, ten thousand rifles, and a large amount of ammunition. The mayor said he was convinced that the possession of these arms by the Cubans was a source of danger.

During the fiscal year ending June 30, 1899, we imported 51,382,000 pounds of rubber valued at $31,875,000. It is believed that within a few years our own plantations in the colonies will produce all the rubber we need. One hundred thousand rubber plants are to be started at once, and the business of rubber culture conducted on scientific principles.

Assistant Secretary Meiklejohn of the War Department has announced that any outside influence to secure promotion for employees in the department would have no weight whatever, and that every such attempt will be regarded as a violation of the regulations. All changes in the civil service of the department are made entirely on merit.

The Pennsylvania Railroad proposes to inaugurate a pension fund on its entire system east of Pittsburg and Erie. About one thousand employees, it is said, will retire under the provision of the pension fund January 1. It is understood the pension will be on a percentage basis of salary received during the ten years preceding pension.

It is estimated that during the coming winter twelve hundred million feet of standing timber will be cut in the country around Lake Superior and the upper Mississippi River. To cut this enormous quantity of pine will require one hundred and fifty thousand men and five thousand horses and oxen.

General Leonard Wood is much interested in the plan of the Red Cross Society to establish industrial schools in Cuba. He favors a manual-training department, where the boys could be taught a trade, and also an agricultural department where the students could be given practical lessons in farming.

The American Negro Academy will hold its third annual meeting in Lincoln Memorial Church, Washington, D. C., December 27-28. The object of the Academy is to encourage young and ambitious Negro writers. The membership includes some of the leading Negroes of Europe and America.

The *North American Review* has published the details of a plot to put into circulation ten million dollars of spurious bills, the finest counterfeit ever made. Some of the bills were declared to be genuine by treasury experts in Washington, who had never been deceived before.

General Leonard Wood is now a major-general of volunteers, the Senate having confirmed his nomination sent in by the President. The President will make him governor of Cuba in the place of Major-General Brooke, who now holds the office of governor-general.

It is reported that F. O. Matthiesen, who has been prominent in the sugar trust ever since its organization, has refused to remain longer on the board of directors. It is rumored he will withdraw from the trust and will become the head of a new opposition to the sugar trust.

Secretary Gage decided to anticipate the January interest on United States bonds outstanding, which amounted to about five and a half million dollars, and began payment of the same December 15.

Vermont forests have furnished forty thousand fir-trees for the holiday trade. These have been handled mostly by one firm in Philadelphia which has shipped eighty carloads.

**The postal savings banks of Great Britain had deposits amounting to $615,720,495 at the end of the year, an increase for the year of about twenty-five million dollars.**

A bill has been introduced in Congress extending the bounty of the homestead law to the soldiers who served in the war with Spain or are now serving in the Philippines.

The War Department has received notice from General Otis that it is his intention to open all seized ports to the commerce of the world as fast as they can be garrisoned.

During the fiscal year ending June 30, 1899, 23,550 patents were granted; 1,406 trade marks, 372 labels, and 76 prints were registered, and 16,670 patents expired.

The total horse power furnished by the Niagara Falls Company is 34,590, and it brings an income of more than seven hundred and fifty thousand dollars.

Ex-Senator Allen of Nebraska has been appointed by the Governor to fill the vacancy caused by the death of Senator Hayward.

The nineteenth annual meeting of the National Civil Service Reform League was held in Indianapolis, Ind., December 15.

Information is received from Manila that three thousand Spanish prisoners have been released within a month.

Admiral Dewey has been presented with a pair of seal-brown horses, costing one thousand dollars.

During the last year Missouri sold eight million dollars worth of mules, chiefly for war purposes.

A town in Iowa proposes to send Admiral Dewey a black bear for a Christmas present.

Mr. Roberts of Utah says he will appeal to the courts if he is defeated in the House.

William S. Taylor, Kentucky's new governor, took the oath of office December 12.

The Republican National convention will meet in Philadelphia Tuesday, June 19.

It is reported that two Chicago women are to start a bachelor's magazine.

## The Advance of Christian Science.

### Kind Words from a New York City Daily.

FOR those who seek the truth about Christian Science and who would know its principles and teachings there is a flood of light in the lecture delivered in the Metropolitan Opera House yesterday afternoon (Sunday, December 10) by Judge W. G. Ewing of Chicago, a full report of which appears in this number of the *Mail and Express.* As an exposition of the doctrines of this new sect, if such it may be called, Judge Ewing's effort is profoundly interesting, and it will be recognized as an important addition to the literature of a movement which is engaging the serious attention of the religious world.

Without implying any approval of Christian Science, either as a creed or as an applied practice, we can all afford to acknowledge the sincerity and intelligence of those who profess it. They constitute a large and growing body of pious, high-minded, honest men and women, who are animated by a pure desire to conform their lives to the beautiful example of the Master. They obey his commands as they understand them; they hold that the Divine philosophy, properly interpreted, ministers to the body as well as to the soul; they preach the gospel of cheerfulness and calm, and out of the life-story of the Nazarene they have evolved a religion which responds in the fullest measure to the spiritual needs of its believers. The tolerant spirit which pervades their teachings; the perfect unselfishness of their zeal, and their manifest desire to practise what they preach, all entitle them to the unbiased hearing which they ask of rational truth-seekers.

The growth of Christian Science in this city is a fact which it would be folly to ignore. Yesterday's meeting in the Metropolitan Opera House represented nearly a score of organized churches of that faith inside the boundaries of Greater New York—all of which have been established within little more than a dozen years—and none of these churches bears a dollar of debt or fixed expense. The character, dignity, intelligence, and generous impulse of those who accept the teachings of this new gospel entitle their cause to impartial consideration.

Editorial in *Mail and Express.*

## "Make Sure Your Heart is Right."

"I WILL not quarrel with you about opinions. Only see that your heart is right towards God, that you know and love the Lord Jesus Christ, that you love your neighbor and walk as your Master walked, and I desire no more. I am sick of opinions, I am weary to hear them. Give me solid and substantial religion; give me a humble, gentle lover of God and man, a man full of mercy and good fruits, a man laying out himself in the work of faith, the patience of hope, the labor of love. Let my soul be with these Christians, wheresoever they are and whatsoever opinion they are of. Whosoever thus doeth the will of my Father in Heaven, the same is my brother and sister."

JOHN WESLEY.

## The Lectures.

### At Concord, N. H.

The lecture on "Christian Science, the Religion of Jesus Christ," delivered in Phenix Hall last evening (Thursday, December 14) by ex-Judge William G. Ewing, of Chicago, attracted an audience which completely filled the hall both on the floor and in the balcony, and caused standing room only to be the lot of many who arrived even before the hour set for the lecture to begin. A large delegation of Christian Scientists from other cities was present, a special train being run from Boston early in the evening, returning at the close of the lecture.

Judge Ewing is a member of the Board of Lectureship of the Mother Church of Christian Science in Boston, and he appeared here under the auspices of First Church of Christ, Scientist, in Concord, whose First Reader, Rev. Irving C. Tomlinson, C.S.B., presided. In presenting the speaker Mr. Tomlinson, said:—

*Fellow Citizens and Fellow Workers:*—It is recorded in sacred writ that the Master of Men, seeing two good fishermen at their tasks beside the sea, said to them, "Follow me." "And they straightway left their nets and followed him." The voice divine which spoke to the simple fisher-folk beside the Sea of Galilee still calls the worthy workmen to higher duties. Happy he who hears and heeds!

Less than a year ago, in the great metropolis on the shores of Lake Michigan, a distinguished jurist was busy in his chosen calling, which he honored and adorned. He was of noble ancestry, as we count nobility in this free republic; his father the friend of the martyred Lincoln, he himself beloved by the sainted President whose life he worthily strove to emulate. Early the favored youth entered that profession made honorable by names great and good. His rare gifts, his love of learning, his sterling integrity, soon placed him in the foremost rank of the legal profession of the West.

All that the world can give lay at the feet of this gifted advocate, this learned student, this pure-minded man. He was a leader in his political party, the friend of legislators and presidents. He was eminent in his profession. There awaited him the seat he had already filled so well in the Superior Court of the great city of Chicago. He was the recipient of a generous income, the possessor of a beautiful home and a happy family. To this man, so favored and so honored, there came a call which he heard and heeded. His high office, his loved calling, these he surrendered, and why?

Fourteen years before, he had seen his wife raised from invalidism to perfect health through a power not of earth. He saw his friends and neighbors made healthier and happier in a way he did not understand. Most impressive of all, after years of suffering such as they only know who have been afflicted with asthma in its severest form, he saw himself by this same beneficent power restored to strength and vigor.

Then he learned to know, as his wife had known for years, and as many in Concord have long known, the true

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

and worthy character of Mary Baker Eddy. He found her life devoted to the service of God and man; he found her a humble follower of that same Christ Jesus he had always loved; he found her character unsullied, her motives pure, and her mission unselfish. These won from him, as they have won from many here, his high esteem and his profound veneration.

In his fourteen years of study of Christian Science every doubt that has assailed others he has met; every question that comes to others he has asked; and for the hope that is in him he will now make answer.

It is with pleasure that I now present to you Hon. William G. Ewing, ex-judge of the Superior Court of Chicago and member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, who will speak to you of "Christian Science, the Religion of Jesus Christ."

Judge Ewing was received with applause and his lecture was punctuated at intervals with a like mark of appreciation. He spoke with great vigor and earnestness, livened at times with flashes of pungent wit and humor, and he was listened to with marked attention.

*Concord Monitor.*

### At New York City.

People enough to have furnished congregations to a dozen churches crowded the Metropolitan Opera House to the doors yesterday afternoon (Sunday, December 10) to hear ex-Judge William G. Ewing of the Superior Court of Chicago elucidate the principles of Christian Science. As a whole, the audience was above the level of intelligence of a church congregation, and the proportion of men of the "thinking age" was certainly much larger than would be found in nine churches out of ten.

Although the lecture began at half past three, the doors were thrown open at two o'clock, and there were people waiting then. Observers of this city's manners and customs here remarked that any free entertainment at the Metropolitan Opera House is sure to call out a big crowd. But this crowd didn't seem to be made up of those persons to whom free admission would be a compelling magnet. By three o'clock all the seats in the orchestra were filled and the ushers were announcing standing room only for those who didn't wish to go upstairs. The galleries were crowded early, too, for the rule of the day was that the followers of Rev. Mary Baker Eddy were to congregate above and leave the best seats for their friends. By the time the lecturer began the house was entirely filled.

*New York Sun.*

Judge Ewing was introduced by Carol Norton, C.S.D., who spoke in part as follows:—

No earthborn interest or empty hope accounts for the presence of this vast audience. Your expectant faces and receptive hearts prepared for Truth's reception bear eloquent testimony to the living energy of the subject of the lecture we are to hear—"Christian Science, the Religion of Jesus Christ."

The present is the new Christian era. Apart from the busy market-places, aside from life's daily round, we are assembled to hear of the teachings and works of the world's greatest arbitrator and most humane and successful physician, its foremost teacher in moral and ethical law, its most rational logician and metaphysician, its grandest statesman in the commonwealth of love and brotherhood, and finally its greatest demonstrator of divine Science. Thus do I refer to our common Saviour and elder Brother, a nature one with the soul's prophets of all ages, yet alone, unique, and divinely individual in its own sublime selfhood.

The noble martyrs who gave up their lives in order that the dove of peace might settle on the head of every earthly nation, in every victory of self-surrender extol this hour.

The world of thought looks to Jesus. He is the central figure of heart and life history. He stands as of old at the new century's threshold, repeating, "Follow me. Imitate my example. Heal the sick, cleanse the lepers, cast out demons, raise the dead." To the dignified exposition of the religion of Jesus, taught and demonstrated in Christian Science as interpreted and established by Mary Baker Eddy, and to the willing support of the great work founded by her as the foremost reformer of Christendom, the distinguished speaker of the afternoon has consecrated his life.

After a long and honored service on the bench he has retired to devote his entire time to Christian Science and its establishment. He stands for fraternal fellowship, moral integrity, impartial judgment, and manly gentleness. In his early youth a friend of Abraham Lincoln, and now in his larger youth and fuller vigor—for Christian Science made him a well and whole man—a friend and faithful disciple of the great abolitionist of mental slavery, our beloved Leader and Teacher, Mary Baker Eddy. I now have the honor and privilege of introducing to you Hon. William G. Ewing, ex-Judge of the Superior Court of Chicago and member of the International Board of Lectureship of the Mother Church of Christian Science in Boston.

### At San Antonio, Tex.

Mr. Edward A. Kimball, C.S.D., of Chicago, lectured in this city November 20, at the Christian Science Church, to a large audience, to whom he presented the subject of Christian Science in an able and interesting manner. He was introduced by Mr. Robert L. Ziller, C.S.B., of Austin, in the following words:—

*Ladies and Gentlemen:*—The local Christian Science Church has honored me with an invitation to preside at this meeting and introduce the lecturer of the evening. As I see before me this splendid audience I am reminded of a thought that has strongly presented itself to me to-day. It is this: Every intelligent, thinking person on the globe would like to know three things. First, men desire a knowledge of God. They want a religion that can give evidence of being based on Truth and one that will perfectly satisfy every legitimate demand of their hearts. Next, they most earnestly desire evidence to show that there is some curative agency within the reach of humanity that will bring relief to pain-racked bodies and lift the great burden of suffering from a world plunged into the very depths of fear and despair. Lastly, they want an understanding of some law which will enable them to govern correctly every action of their lives and bring them into harmony with the divine Life.

Mankind has for centuries sought an understanding of a true theology, a true system of therapeutics, and a perfect law. If all men had gained this understanding we should have no lecture here to-night, for there would be no need of one. You will have the privilege of listening to one this evening who is neither a minister, nor a physician, nor a lawyer, and yet I will venture the assertion that he will make plain to you how men may come into an understanding of the true theology; he will tell you about a prescription that can heal all the ills of humanity, and he will indicate to you the nature of a law that cannot fail in its operation. He will do this because he will tell you something of the most wonderful Science that ever has been revealed to man, namely, the Science of Christ, or Christian Science, which embraces in its infinite scope a knowledge of all true theology, true therapeutics, and true law.

The distinguished lecturer who will address you this evening is one of the great multitude that has been taken from an abyss of suffering and despair into the sunlight

Digitized by Google

of life and joy. He comes to tell you of this gospel of peace and happiness that you likewise may become partakers of the blessings of divine Love, and I bespeak for him a cordial welcome and a respectful hearing. It gives me great pleasure to introduce to you Mr. Edward A. Kimball. He will speak to you on the subject of Christian Science.

*Daily Express,* San Antonio, Tex.

### At Houston, Tex.

Turner Hall was comfortably filled last night (Thursday, November 23), with an intelligent and cultured audience to greet Edward A. Kimball, a very able and eloquent expounder of the doctrine of Christian Science. Mr. Kimball's visit to the city was due to the united efforts of believers in the Science. The lecture was free to all. The speaker was introduced by Mr. O. B. Kone, and his discourse was masterly and contained much food for serious thought. His arguments were convincing, and even if he made no positive conversions, there are none but what are in a sense lifted up, or in a measure better for having heard him.—*Evening Herald,* Houston, Tex.

Who can limit or measure the strength of even the smallest hands when those hands are uplifted to God! The members of the First Church of Christ, Scientist, of Houston, Texas, after deciding to avail themselves of the great privilege of having Mr. Kimball lecture here, immediately set to work to raise the funds necessary. In less than five minutes this was done, among the little handful of loving followers present. The lecture was delivered to a large audience, and I think I can safely say an appreciative one, since we have already seen the immediate fruits of these "quick and powerful" words of God.

Without being conscious of any previous spiritual dearth, we feel that we have indeed experienced a "time of refreshing." We unite in one fervent breath of gratitude to our Mother who has provided, through her unequalled love and wisdom, these stars to illumine the path of the little ones whose faces are turning toward the *light.*

BEULAH G. HINES.

### At Peoria, Ill.

Is Christian Science the coming religion?

Does the astonishing growth of this new faith during the past ten years, a growth unparalleled in the history of the world, indicate that the old Christianity, with which its followers have been content for two thousand years, fails to satisfy the needs of modern civilization?

Is the regeneration of the world,—so much hoped for, prophesied, and long delayed,—to be brought about at last through the doctrines advanced by the Rev. Mary Baker Eddy?

Mr. Edward A. Kimball, a member of the International Board of Lectureship of the Mother Church, answers all these questions unhesitatingly and fearlessly in the affirmative.

Mr. Kimball lectured on Christian Science at the Grand Opera House last evening (Monday, December 4), before an audience that completely filled the body of the house, an audience composed of well-known and cultivated people, who listened with profound and even eager attention to a lecture nearly two hours in duration.

The speaker was briefly introduced by Judge Lovett and entered at once, without any attempt at preamble or introductory, into the exposition of the theme.

Mr. Kimball brought to his task few of the gifts of the practised orator. There were no bursts of eloquence or attempts at impassioned declamation. The speaker's manner was argumentative rather than emotional, but he spoke with the simple sincerity of one who holds his subject near his heart, and his words bore the impressive stamp of the deepest earnestness.—*Herald,* Peoria, Ill.

### At Portland, Me.

If any person had any doubts as to the widespread interest among the people of this community in the doctrines of Christian Science, or at least their willingness and desire to receive instruction in those doctrines, a glance in at the New Jerusalem Church last evening (Sunday, December 3), would have dispelled those doubts. The church was completely filled, every seat being occupied and nearly a hundred more occupying more or less uncomfortable positions during the entire evening for the sake of listening to the instructive address delivered by Judge William G. Ewing of Illinois, of the International Board of Lectureship of The First Church of Christ, Scientist, of Boston.

Hon. Edward Wiggin of Bangor presided. He spoke of the two Christian Science churches in this city and extended a cordial invitation to any and all persons to attend their services. He spoke of the tremendous growth in numbers of the believers in this new-old doctrine since its re-birth thirty-three years ago. He then introduced the speaker of the evening.

*Daily Eastern Argus,* Portland, Me.

### At Marshall, Mo.

Last night (Thursday, November 30), at the Opera House, for the first time in the history of Marshall, an advocate of this new system of religion delivered a public address.

The speaker was Judge Joseph R. Clarkson of Omaha, Neb. He appears to be a very earnest man in his convictions as to the new faith, and is withal a man of fine intellectual equipment.

There was a large gathering of Marshall people out to hear him, and the presentation of his view was, perhaps, as fine as is generally made of the new religious faith which he espouses with all the energy and fervor of his soul.

The very best attention was accorded to the distinguished gentleman during the whole time of his lengthy lecture. Some of our city's Christian ministers were present, and the impression which Judge Clarkson formed of our community must have been good.

*Daily Progress,* Marshall, Mo.

### A Correction.

An error appeared in the introductory remarks of Judge Edward W. Hatch as published in the *Christian Science Sentinel* for April 27, 1899. We republish that portion of his introductory in which the error appeared.

"I know that the people of the city of Brooklyn will give it [Christian Science] fair, candid consideration, weigh it carefully, and if it be true there shall be no prejudices to prevent its lodging either in the brain or in the heart.

> A Hair, they say, divides the False and True;
> Yes; and a single Alif were the clue,
> Could you but find it, to the Treasure-house,
> And peradventure to The Master too.

"This new scientific statement of thought may be the Alif that shall lead you and me into the holier presence, into a happier life, into a better condition of mind and body, and bring us nearer to God."

### Lectures at Other Places.

At Le Roy, Kan.—Edward A. Kimball, Tuesday, October 3.

## Among the Churches.

### Larger Quarters for the Children.

The hour of the Sunday School session at First Church of Christ, Scientist, Fifteenth Street, between Portland and Park Avenues, was taken up yesterday (Sunday, December 3) with a special programme of dedication. The church was well filled for the morning services, and the congregation and a hundred children in addition filed into the Sunday School rooms at twelve o'clock.

The occasion of the dedication was the completion at a cost of twenty-five hundred dollars of an addition to the Sunday School room. When the church was built, about two years ago, the rooms then devoted to the Sunday School were amply large for all demands, but the two years have been so prosperous that more room became a prime necessity. Funds were secured, and two months ago the work was commenced. Everything seemed to favor the work, from the weather to the contractors and the firms from which supplies were procured, and when the Sunday School assembled yesterday everything was completed.

The children of the Sunday School, the enrolment being nearly one hundred, and all under the age of fifteen, had collected one hundred and fifty dollars of the money needed for the improvement, and the dedication ceremonies were entirely by them. The programme consisted of songs and recitations by members of the school and by the twelve classes into which the school is divided.

The First Church has had a wonderful growth. The church building was finished a year ago last February, at a cost of eleven thousand dollars and was dedicated free of debt. Now a twenty-five hundred dollar annex has been built and paid for. At the time the church was erected the society numbered but forty-four members. Including those who will be admitted to-day the membership is now over three hundred. The First Reader of the church is Miss Mary Brookins, Second Reader, W. G. Hollis.

*Tribune,* Minneapolis, Minn.

---

The service was conducted by the Superintendent and opened with the singing of hymn 179 from the Christian Science Hymnal, followed by silent prayer and the Lord's Prayer with its spiritual interpretation from Science and Health, after which the reading of the lesson for the day was rendered responsively.

The dedicatory address, nearly all original, was delivered by one of the pupils. He said,—

On behalf of the Sunday School of First Church of Christ, Scientist, I welcome you most heartily to share in the joy, peace, and happiness which this demonstration of Love has brought to us. Also, on behalf of the Sunday School I thank the members of this church, the committees, and all who have helped in the work which has been so successfully carried on in the enlarging of our Sunday School rooms.

To-day we lovingly dedicate these rooms to the omnipresent God, who is around, above, and over all—the God of Life, Truth, Love, Intelligence, and Substance, "In whom we live, and move, and have our being," and whom to know aright is Life eternal.

In Christian Science, as taught by the Rev. Mary Baker G. Eddy, we are enabled to worship One God "in spirit and in Truth," and to demonstrate over all the ills that flesh is heir to.

This, the Sabbath School children are daily striving to do and are fulfilling the command, "Love one another," and in the words of our dear Mother (from "Miscellaneous Writings"), "What a glorious inheritance is given to us through the understanding of omnipresent Love! More we cannot ask: more we do not want: more we cannot have. This sweet assurance is the 'Peace, be still' to all human fears, to suffering of every sort."

The commandments, the Twenty-third Psalm with its spiritual interpretation from our text-book, the Ninety-first Psalm, the Beatitudes, thoughts of love from the Bible and Science and Health, healing thoughts from the Bible, and the Scientific Statement of Being, from our text-book, were given by different classes.

A duet, "Shepherd, show me how to go," from the Christian Science Hymnal; two recitations, "The Golden Key," and "In Our Father's House," from the *Christian Science Journal;* three selections, "Love," "The Mother's Evening Prayer," and "The Oak on the Mountain's Summit," from "Miscellaneous Writings;" and three solos, "Our little prayer," "An highway shall be there," and "A Heavenly Song," were contributed by different members of the school.

Several of the children told of demonstrations they had made by overcoming thoughts of anger, dislike, and physical claims. One child told how her little blind kitty was healed by realizing "that sight is mental and not material."

By way of a brief statistical report the Superintendent said,—

The birth of our Sunday School under the new order of service dates back four years, and at that time there was but one teacher and three pupils. To-day we have twelve classes and a membership of ninety-five scholars.

The Christian Science Sunday School, being just for the children, we have placed the age for graduating at fifteen years. Six have graduated, eight have united with the Mother Church, and eleven are members of this branch church. The Sunday School has taken an active part in sending out Christian Science literature and in the building of this church. They contributed over one hundred and fifty dollars to the demonstration just completed, and it is true, they are casting out sin and sickness, not only from themselves but from others. In many cases the little ones have come to us before their parents were seemingly ready to listen to the Truth of Christian Science, and have fulfilled the prophecy, "And a little child shall lead them."

Mrs. Eddy says in "Pulpit and Press," pages 14 and 15, "The children are destined to witness results which will eclipse Oriental dreams. They belong to the twentieth century. . . . Ah, children, you are the bulwarks of freedom, the cement of society, the hope of our race!"

With the splendid results already gained and the grand promises before us, shall we not, as Christian Scientists be more active, more in earnest, and more awake to our opportunities in gathering these little ones into the Christian Science fold.

The following remarks were made by the First Reader of the church, helping to make plain the oneness of the church and Sabbath School work:—

*Dear Children of the Sabbath School:*—The very little that I have to say is intended especially for you; but there are no secrets about it, so we will not mind if the others hear it too. As we have listened to what you have been saying and singing from the Bible, from the writings of our dear Mother, and from other Christian Science publications, the thought would naturally arise as to whether you realize the deep meaning of these words, whether you know that these are the highest, and broadest, and best expressions in our language, such as Jesus meant when he said, "The words I speak unto you, they are spirit, and they are life."

We learn in Christian Science that there can be no outward expression without thought back of it, and no thought without mind to think it—so the completion of this beau-

Digitized by Google

tiful demonstration is a proof that you do, to a large degree, understand and put into practice this grand and Life-giving Truth of Christian Science. That your sense of the one divine Mind that is Love, the Giver of every good gift, has grown deep and strong and high,—so that you have exemplified the poet's thought,—

Build thee more stately mansions, O my soul,
As the swift seasons roll!
Leave thy low-vaulted past!
Let each new temple, nobler than the last,
Shut thee from heaven with a dome more vast,
Till thou at length art free,
Leaving thine outgrown shell by life's unresting sea!

By your sweet faith and good work you are proving your place in God's plan, you have a double membership, you constitute, not only a separate body as a Sunday School, but also a most important department of the Christian Science Church, which is the highest and purest organization in the world.

You have said you dedicate these rooms to the service of God, and that means, too, that you dedicate yourselves to His service, the constant, every-day service of doing and being good; of making manifest the divine Life, Truth, and Love.

We know our beloved Mother builds great hopes upon the children of this generation, and we believe you are doing and will continue to do your part in fulfilling her hopes. So we shall all work and grow together up to the building of God, "The house not made with hands, eternal in the heavens."

In conclusion, a reference from Science and Health, p. 235, l. 6–11, was recited by one of the little girls. The service closed with singing, "Bringing in the Sheaves," and the Manual prayer. E. A. S.

### Church Dedicated at Racine, Wis.

Sunday, December 3, 1899, certainly marked a very important epoch in the history of Christian Scientists in Racine. It was the occasion of the first dedicatory services in their new church, located at the southwest corner of Main and Seventh Streets.

Services were held at 10.45 in the morning and 3.15 in the afternoon, and the handsome little edifice was crowded. As one approached the building the name of the church,—First Church of Christ, Scientist,—on a handsome gold leaf sign, caught the eye. Inside there is a large auditorium with delicately tinted walls brilliantly illuminated by electric lights, making a very pretty and attractive effect. Modern opera chairs of the latest design are arranged, and will seat two hundred and twenty persons. An elegant piano, a present from a member, is conspicuous, and there were cut-glass vases, jardinieres, and other receptacles, filled with choice flowers and plants, beautiful remembrances from friends in Racine and out of town.

On the walls were conspicuously displayed mottoes in gold letters from the Bible and one motto from their text-book, written by Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science.

The services were the regular services of the Christian Science churches. Miss Harriet Bates gave the voluntary, and Mr. William Van Arsdale delivered an address as to the spiritual understanding of what church is. Two solos were sung by Mrs. Crum, a member of one of the Christian Science churches of Chicago. The services were the same in the afternoon.

Mr. Van Arsdale in his address said:—

It is with hearts filled with joy and peace and thanksgiving that we enter our new home, knowing that divine Love has led the way.

This bears testimony that the First Church of Christ, Scientist, is established in Racine, and the Truth which it represents is not at war with any who love God, Good, but only with evil, sin, sickness, and death. This Truth bears a message of Love and good-will to all mankind. It brings the Light to those in darkness, strength to the weak, rest to the heavy laden, and joy to the sorrowing world.

The mere fact that we are the sole possessors of a piece of property and four material walls, is not the thing which brings to us this sweet sense of joy and gratitude. It is the unwritten, unexpressed story of added Light born of experience in overcoming materiality with its selfishness and limitations.

This is but one step taken, and in humility and earnestness may we go on and on, gaining in this knowledge of eternal Truth and omnipotent Love, demonstrating in our daily living the meaning of the real church, striving for that Mind which was also in Christ Jesus, acknowledging God in all our ways. Having a broadening love for humanity, and an increased sense of our debt to a loving Father, let us say in our hearts,—

'Tis He that works to will,
'Tis He that works to do;
His is the power by which we act
His be the glory too!

The Bible readings were as follows: Exodus, 36 : 5–7; 1 Chronicles, 29 : 10, 18, 20; Psalm 91.

The membership of the church numbers some fifty members and the congregation one hundred. The property has been purchased, remodeled, and made into the handsome and commodious edifice that it is, since the eighth day of last May at a cost of nearly fourteen thousand dollars, and it is all paid for; it being one of the rules of the Christian Science congregation not to dedicate a church edifice not paid for and free of debt.

The growth of the church in Racine has been rapid and substantial, and on a par with similar organizations in other sections of the country. It was twelve years ago that the first Christian Science class was organized in the Belle City. For some years it appeared to die out, but the past three years it took a firm hold, and can now be classed as one of the strongest religious organizations of the city.

The membership embraces many of the best families in Racine, and they are to be congratulated upon the dedication of their new and comfortable home.

*Racine Daily Journal.*

### Pipe Organ Recital.

The crowd in attendance Tuesday evening, November 28, at the organ recital at the First Church of Christ, Scientist, was a remarkable one, in point of numbers and intelligence. The church would not begin to hold all who desired to attend. The seating capacity of the building is about eight hundred, but they were so packed in, standing and sitting, that the crowd must easily have numbered one thousand. There were those also who were not able to gain admittance at all.

The occasion was the organ recital announced for Mrs. Leone Langdon-Key, the event marking the formal introduction of the beautiful new pipe organ which the church has just set up. The members of the congregation certainly have reason to felicitate themselves on the unusual success which marked the occasion. It is doubtful if ever Sheboygan saw before so much enthusiasm at an event of that kind.—*Sheboygan (Wis.) Telegram.*

### At Cotuit, Mass.

May 6, 1899, we organized as First Church of Christ, Scientist, Cotuit, Mass., with seven charter members. Since then nine more have been admitted. We rent a small hall and hold Sunday services, morning and evening.

A building fund has been started, and a growing interest in the work is manifest. "If God be for us, who can be against us?"—LIZZIE A. DOTTRIDGE, *Clerk.*

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## The Massachusetts Metaphysical College.

THE annual term of the Massachusetts Metaphysical College will open, with the Board of Education, on Wednesday following the second Tuesday of June, A.D. 1900.

## A Card.

*Beloved:*—I ask this favor of all Christian Scientists: Do not send to me on, before, or after the forthcoming holidays aught material, except three tea jackets,—all may contribute to these. One learns to value material things only as one needs them; and the costliest things are those that one needs least. Among my present needs material, are these jackets. Two, of darkish, heavy silk, the shade appropriate to white hair. The third, of thick satin, lighter shade, but sufficiently sombre. Nos. 1 and 2 to be common-sense jackets for mother to work in, and not overtrimmed by any means. No. 3 for best, such as she can afford for her drawing-room.

MARY BAKER EDDY.

## Our Contributions.

NOT less unique than the Christian Science method of distributing its literature is the manner of supplying the same. No small part of the matter published in the *Sentinel* is made up of carefully selected articles from other publications. Many of these are articles bearing upon Christian Science in some of its phases, written by Christian Scientists. Each issue of the *Sentinel* also contains a number of original articles from the pens of Christian Scientists. These are all voluntary contributions, written in the interest of the cause, and for no other purpose than to do good.

The *Journal* is now almost wholly made up of original articles, including that invaluable department covered by the general heading of "Notes from the Field."

These contributions, one and all, are the free and spontaneous offerings of hearts burning with a holy zeal to make known the happy theme so dear to them. They are written out of the joy arising from actual experience. They are the exuberant outflow of a higher and grander perception of life and its infinite meanings. They are the glad acclaims of a new birth—a spiritual awakening such as the writers had not believed possible to them on this plane of existence.

They come to us, as a rule, with little or no attempt at literary embellishment or fine rhetoric, but in simple language the writers tell of their glorified conception of God as Love, and Life, and Truth. Many of them, in differing phrase, re-echo the resilient joy of the Psalms of David, not as mere poetic ecstasy, but from the depth of experienced and abiding conviction.

Naturally, then, they are not stilted by the formal professionalism which characterizes the purchased articles of many publications. They are written from a different standpoint and for a different purpose. The authors have at last found a healing and saving and loving God, and they zealously desire that the whole world shall know of Him. This desire made manifest is their only, but their rich and abundant, compensation.

It is not strange that a foremost desire of such overflowing hearts should be, first, a devout expression of thanks to God, and, next, of gratitude to his consecrated servant whose exalted spiritual apprehension enabled her to reveal Him to them as an all-present and ever-abiding Father and Mother Love,—as truly a healing and redeeming Saviour.

It is not strange that these hearts, thus touched to an ineffable tenderness, should feel like showering their choicest blessings upon that precious volume which thus unexpectedly cast its light athwart their darkened pathway, haloing it with a brighter hope and a diviner glory.

We renewedly thank God for such contributors, and for the conditions which make their contributions possible.

Let not the springs of love and gratitude run dry, but rather continue to send forth their healing and saving waters in ever-increasing volume. Let the rejoicing hearts sound their loud hosannas adown the corridors of the dawning twentieth century, so that the peoples of earth's remotest and darkest continents may catch and re-echo the glad refrain, and *know* that their Redeemer liveth.

## Wrong Methods of Advertising.

IT is unnecessary for us to say that methods of advertising akin to those of quack doctors and venders of patent nostrums are not countenanced by Christian Scientists. On the contrary they are reprehended.

Christian Scientists have done all they properly can do in the way of advertising when they unobtrusively make known the fact that they hold themselves in readiness to respond to calls for healing sickness or otherwise aiding those who desire such services as come within their province, or line of duty. The pushing methods pursued by many in the professional and business world have no place in Christian Science.

In this connection we feel it our duty to call attention to the recent advertising methods of Mrs. S. A. Jefferson of Chicago. She has for some months been pursuing a course of advertising which is wholly unauthorized in Christian Science. Yet she assumes to be a Christian Science healer, and quotes from our publications and from Christian Scientists as if by authority. We wish to say that her use of the name of the editor of our publications is wholly without authority, and has been from the time she began her advertising. She has also used the name of Rev. Irving C. Tomlinson without his authority.

She has been kindly remonstrated with. Earnest Christian endeavor has been made by Christian Scientists in Chicago to show her the error of her ways, but she has thus far shown no disposition to change her methods. In view of this, her card has been removed from our *Journal,* and if she persists in her present attitude, she cannot expect recognition in it.

For a long time we have passed her conduct by unnoticed, but a stern sense of duty has made it impossible to remain longer silent. We earnestly trust she may awaken to see her error. To this end all true Scientists would gladly aid her in every proper way.

## Is Sickness Real?

IF sickness is real—in the true sense of reality—it must be of God. If of God, it is necessary and inevitable. What right, then, has any one to attempt to revoke a necessary and inevitable decree of God? In this view,

Digitized by Google

if one gets sick he is so by virtue of a divine decree, and to get well would be to violate such decree. In that case health would be wrong and sickness right, and the great profession of medicine, with its vast institutions, would be contrary to God's law and purpose.

Who desires to plant himself upon such logic?

## Resolutions of the Branches.

We ask that the churches of Christ, Scientist, shall not withhold their "Resolutions" and touching expressions of gratitude so spontaneously begun, but will forward them to the editor as heretofore requested. These resolutions from the churches pertain to the present hour, and express their true attitude and feeling. Let these continue to come from all over this land, and from other lands, until all our churches are heard from, and our bond of unity is seen to be unbroken.

## A Holiday Gift.

In the choice of gifts for the holidays, or any other season, Christian Scientists need not experience the perturbation usually attending the appropriate selection of a remembrance; for in the Mary Baker Eddy Souvenir Spoon they will find a gift both intrinsically valuable and of inestimable worth through tender associations.

This spoon, as we have before declared, is a masterpiece of the silversmith's art. Its design is unusually chaste, rich, and significant. Not only does it bear a most striking likeness of our Leader, but it has also a faithful representation of her home and a *fac-simile* of her autograph. Its crowning charm, however, is to be found in the original legend, written by the Mother herself especially for this souvenir, and reproduced in *bas relief fac-simile* of her handwriting.

It will be remembered that these spoons are manufactured by the Christian Science Souvenir Spoon Company of Concord, N. H.

## A New Pamphlet.

Our readers will all remember the able article entitled "Scriptural References Sustaining the Doctrines of Christian Science" by Mr. John Gillespie of Chicago, published in the December, 1898, *Journal*.

This article proved to be so interesting and helpful to Christian Scientists, as well as inquirers and investigators, that it was deemed best to publish it in pamphlet form. It has been carefully revised and enlarged by Mr. Gillespie, and makes a neat pamphlet of forty-seven pages.

In this convenient form for distribution it is undoubtedly destined to do a great work.

It so clearly shows that Christian Science, in its every phase, is based absolutely upon Scripture, that it will prove an invaluable aid to all earnest investigators. For price see Pamphlets, etc., on last page of the *Sentinel*.

Man separated from God, his divine Principle, would surely return to dust—nothingness. Man eternally reflecting God, his divine Principle, can no more return to dust—nothingness—than can light end in darkness, or life in death. If light could *end* in darkness, it had never been light, but always darkness. Could life *end* in death, it had never been life, but always death.

If death were the real and inevitable, and life the unreal and casual, then the universe would be the abiding place of death, not of life.

## Church By-Laws.

Article XXXV., section 1, is amended to read:—

If a Christian Scientist is to be married, the ceremony shall be performed by a clergyman who is specially legally authorized to perform this ceremony. According to our present laws, a Christian Scientist alone cannot unite individuals in wedlock.

If a member of this Church publishes quotations from Mary Baker G. Eddy's copyrighted writings, without giving the name of the author, he shall be liable to public exposure thereof in our periodicals; and to have his name dropped from this Church.

This remonstrance has become unavoidable, not only, to call more serious attention to the commandment of the Decalogue, but to prevent Christian Science from being *adulterated*. This By-law shall neither be amended, nor annulled, except by the unanimous vote of all the First Members of this Church.

## A Letter from Mrs. Morgan.

62 E. Logan St., Germantown, Pa.

*Editorial Department of the Christian Science Publishing Society.*

On reading the *Sentinel* of December 7, 1899, I was greatly grieved to find that there is still any questioning about Mrs. Eddy being in Germantown, and perhaps, when they learn from my own pen that what was reported in the *Philadelphia Times*, and other papers, is an utter falsehood, they will be satisfied. Neither Mr. Morgan nor myself ever had the privilege of meeting or seeing Mrs. Eddy, much to his regret and mine. She has never been in Germantown to my knowledge, and she never treated Mr. Morgan and never knew of his illness. I feel that it is only just that I should write to the *Sentinel* to correct this false statement, and if any one interested in Science, reads this, I hope it will be sufficient proof to them that what I say is true. There can be no doubt in the minds of Christian Scientists after what our dear Mother has said in regard to this matter, as we all know, and have known for years, that Mrs. Eddy has stated in her writings that she neither treats nor consults on disease. I want to say that although Mr. Morgan's case was not met, to him Christian Science was the Truth, and to me it is the Truth, and with God sustaining me I shall still go on with its beautiful teachings, and try to be faithful to God's prophet, who is the instrument in this age for this great work.

December 12, 1899. Mrs. J. P. Morgan.

Our Lord offers nothing by halves. His promise is illimitable. All mine is thine. Confining His generosity neither to kingdoms, nor continents, nor worlds, nor heaven itself, He lays the whole universe at a poor sinner's feet. There is nothing we need that we shall not get, nothing we can ask that we shall not receive.—Thomas Guthrie.

For immediately, as soon as thou givest thyself to God from thy whole heart and seekest not this nor that, according to thine own pleasure or will, but settlest thyself wholly in Him, thou shalt find thyself united to Him and at peace; for nothing can afford so sweet a relish, nothing can be so delightful as the good pleasure of the Divine will.

Thomas a Kempis.

When the Lord changes our petitions in His answers it is always for the better. He regards (according to that known word of St. Augustine) our *well* more than our *will*. We beg deliverance; we are not unanswered if He give patience and support.—Robert Leighton.

## Selected Articles.

### The Spirit of Truth.

How often it is asked, how do Christian Scientists heal? and how incredulous seems the inquirer when we rightly answer that it is not Christian Scientists, but Christian Science that heals. Christian Science cannot fail to heal, for it is the Spirit of Truth, and the Spirit of Truth is the same now that it was nineteen hundred years ago. It healed then, it heals now. Yea, it always healed and always will, till the last mortal fault in human thought is destroyed. It may be asked, What is the Spirit of Truth? Jesus called it the Comforter that leadeth into all Truth. "And ye shall know the Truth, and the Truth shall make you free"—that is, free from sin, disease, and death—free from all error. Again, a knowledge of God and His Son, Jesus Christ, is eternal life.

Thus a knowledge of Truth and a knowledge of God has the same effect, because God is Truth. Again he tells us in John, 4 : 24, that God is Spirit (see marginal note in revised version), and the beloved disciple in 1 John, 5 : 6, says that the Spirit is Truth.

If Spirit is Truth, then Truth is Spirit—God.

Hence the Spirit of Truth and the Truth of Spirit are one and the same. Therefore Truth is found in Spirit—divine Mind—not in matter.

The Spirit of Truth is the essence and nature of God, which enters the human consciousness through the action of spiritual not material law and destroys the errors of belief therein; puts off the old man, that is, the false or erroneous sense of man, and brings to light the new man, yea, the true man, the Christ man.

But the great and all-important question is, how is this healing Spirit of Truth to be gained? Can it be acquired by the human intellect unaided by divine revelation, or a power outside of itself? The Scriptural and true answer is, No; for the human intellect belongs to the natural man, which Paul says "receiveth not the things of the Spirit of God: for they are foolishness unto him." Again, he virtually says that this human intellect, the wisdom of the natural man, or the world, uncorrected and unillumined by divine revelation is foolishness with God—that is, it is opposed and contrary to the Truth that makes free. How then is it to be gained? Evidently by rightly, correctly, yea, truly, studying God's revealed Word to man—the Bible.

But how can the healing Spirit of Truth be acquired even by a patient and critical study of the sacred Scriptures, if we deny the primary, innate, and everlasting nature of this Comforter?

"Whosoever shall deny me before men, him will I also deny before my Father who is in heaven."

Jesus did not claim that he was the healer. He clearly recognized that it was the Holy Ghost or Spirit of Truth—the Comforter—which came from God that healed.

Then according to the words of Jesus, he who denies the healing presence of the Spirit of Truth to-day will be denied the healing power and presence of that Truth. "And all things, whatsoever ye shall ask in prayer, believing, ye shall receive." Do not the Scriptures plainly show that to deny that the Spirit of Truth heals to-day, bars the very door through which it can come? "Science and Health with Key to the Scriptures" is God's revealed message to humanity for this hour, which opens this door, that sinning mortals have closed by a long, persistent, and wicked denial of God's continuing love, presence, and power. It takes away this spirit of denial and brings first a spirit of faith, which through daily demonstration, however small, gradually brings the understanding by which we are made rulers over "many things."

The honest, faithful, and patient study of Science and Health in connection with the Scriptures gradually takes away the denial of Christian healing for this time, in which the need was never greater, and brings in its place the certain and demonstrable Truth, that God is the same yesterday, to-day, and forever, "with whom is no variableness, neither shadow of turning;" that He is as ready, willing, and able to heal humanity to-day as in the long past; that Truth and Love, are in their very nature immutably healing, when understandingly accepted and not ignorantly and ruthlessly denied.

Therefore it can readily be seen how reasonable it is that Christian Scientists should appreciate and love this Key to the Bible—this lamp that lights the way to God and makes Him, through His Word, a present help in every time of trouble; that brightens every hour and makes human life a glad song of praise, even in this high-noon of general unrest.

Through persecution, toil, privation, and a holy, unalterable reliance upon the might and supremacy of the "Mind that was in Christ Jesus," Mary Baker Eddy has, in Science and Health, brought to the world a light that the passing years do not dim, but which grows brighter as by loving, faithful workers in the Master's vineyard it is put to the crucial test of proof through demonstration.

Christian Scientists do not worship, but love this devoted Christian woman as they love Paul and the faithful disciples of Jesus for all they did to give the people then and now a demonstrable and Scientific Christianity.

J. C.

*Grand Rapids (Mich.) Herald.*

### Healed by the Word.

ONE of the local Christian Scientists sends this contribution:—

Last Sunday in the congregation of the Christian Science Church was reported a case of healing by the ever-present Christ, or by the understanding of the Word which was read from the pulpit. The case healed was one of acute neuralgia with which a lady was suffering, and it had troubled her for years. When the paroxysms would come they had frequently put her to bed for several days, during which time she suffered the greatest agony. She was perfectly healed by hearing and understanding the word of the Gospel.

The Bible had been read and then when the First Reader was reading the hymn, which was written by Rev. Mary Baker Eddy,—

> Saw ye my Saviour? Heard ye the glad sound?
> Felt ye the power of the Word?

Yes, she knew Jesus; she heard the glad sound of the Gospel, and she knew the word was of God.

"In the beginning was the Word, and the Word was with God, and the Word was God" (John, 1 : 1). She felt the power of the Word. The hymn continued,—

> 'Tis the Spirit that makes pure,
> That exalts thee, and will cure
> All thy sorrow and sickness and sin.

She saw and realized that it was the Spirit that purified, exalted, and cured sorrow, sickness, and sin. She was well and had her freedom from pain; she was filled with joy of soul and thankfulness to Mary Baker Eddy for showing her the Saviour and God as "our refuge and strength, a very present help in trouble" (Psalm 46 : 1).

No special prayers had been offered for this sufferer; it was simply the illumination of the Gospel that healed her.

The impersonal healings reported from that church are something wonderful; as many as five or six healings from sin and sickness have been reported from one meeting.

## Christmas Chimes.

BY MARY ELLA WEBB.

O'ER Bethlehem's hills, long years ago
Shone one bright star;
Its gleaming light the wise men saw,
And followed far,

Till they in lowly manger found
The Christ-child sweet,
And knelt in humble reverence
Low at his feet.

The virgin mother, o'er that babe
Kept silent ward,
While gold and frankincense and myrrh
They gave their Lord;

And wakeful shepherds listening, heard
A wondrous throng,
Sing *"on earth peace, good-will to men,"*
A glad new song.

Again that star, with living light
Illumes earth's skies—
And Truth's bright rays are shining where
The "young child lies."

Again a *mother* guards her child
With tender care,
And all who follow Truth's star-gleams,
Her vigils share.

Like watchful "sentinels" of old
They loyal stand,
Till church-chimes ring, *"peace and good-will"*
O'er all our land.

## Christmas Gifts.

BY MINNIE E. ERWIN.

**And when they had opened their treasures, they presented unto him gifts; gold, and frankincense, and myrrh.—*Matthew.***

IN the ebb and flow of Christmas-tide, thought goes back over the centuries to a day some nineteen hundred years ago, where in a little Judæan town, wise men found the infant Jesus, whom they had faithfully sought, and, opening their treasures, "presented unto him gifts."

Prophets in many climes, and for long ages, had foretold the coming of a king who was to gather into one universal unity of peace and plenty all nations and peoples; and that the birth of this king was to be signaled to the world by the appearing, in the eastern horizon, of a brilliant star. Seeing the star these watching wise men, laden with the choicest products of their countries, journeyed, with glad hearts, from their distant homes, that they might lay at the feet of the infant king tokens of love, reverence, and allegiance. Canon Farrar, in his "Life of Christ," referring to the visit of the Magi, and the offerings they brought, says, "The imagination of early Christians has seen in each gift a special significance, myrrh for the human nature; gold to the king, and frankincense to the divinity." To-day this old, old story comes to every Christian Scientist with new illumination and a clearer meaning. "Science and Health with Key to the Scriptures" is to us the star which has shone out in the twilight of the nineteenth century.

**In tender mercy, Spirit sped**
**A loyal ray,**
**To rouse the living, wake the dead,**
**And point the Way.**
**(*Christ and Christmas* by Mary Baker G. Eddy.)**

Burdened with a sense of sin; sick and wretched under the thraldom of false beliefs; suffering because of mistaken education and disappointed hopes; weighed down with materiality; humanity cried for deliverance, and waited with longing for the coming of the Deliverer, whose reign should be all-harmonious; and when the star appeared, every wise thought followed it until it "came to the place where the young child lay."

The appearing of Christ, Truth, in each consciousness is, at first, small, and has been likened to a young child, and we are told how we must guard and nurture the new idea. As we love and honor it, and are willing to give up all unlike it, there comes to us each day, a new, a better, a clearer conception and birth of Truth, which grows in our consciousness, putting on new strength and beauty, until it becomes the ruling, governing, guiding Spirit of our lives,—our King indeed,—not now the infant Jesus, but the risen, living Christ. Constantly we are to renew our allegiance and our love, so that in the truest sense each day is to us a Christmas day. Do we, like the wise men, bring our gifts to Christ? Our gold, and frankincense, and myrrh?

As the light of Truth shines into our hearts, it reveals to us much of pride and self-love; with the myrrh of penitence and contrition, we bring this human sense, and lay it at the feet of Christ, when, lo, it crumbles into dust, and in its place we find one of Christ's dear gifts to us—humility, which we put on as a beautiful garment, obeying the command, "Be clothed with humility" (1 Peter, 5 : 5).

Again the light of Truth uncovers to us another error of thought, which only the search-light of Truth can reveal. We are startled as we find that the evil of hypocrisy and insincerity had found lodgement within, and we are expressing more of it than we knew; so filled with sorrow, as we look upon the mortal picture, yet rejoicing in Christ, the Destroyer of error, we bring this burden sprinkled with the myrrh of self-abnegation, and lay it down at the feet of Christ, Truth, and going back to our every-day work and living, we find that we have, instead, the sweet gifts of truth and sincerity.

Once more, as we cry "Search me, O God," the Truth-light is thrown into consciousness, and shows us self-will and stubbornness, and we are astounded to see with what tenacity we cling to our will and our way, demanding that others shall walk in the path that *we* point out. The Revealer shows us also, in connection with this condition of thought, a spirit of criticism and censoriousness that has taken possession of us, becoming, with rapid growth a root of bitterness and a weed of hatred, whereby we are made to think unloving thoughts, and to place heavy burdens upon those whom we should help. Sadly, yet thankfully, we lay this sin at the feet of Truth, leaving it there; sad, that it has seemed so real, thankful, that it is uncovered to us, and that we know the remedy, and, bringing the sweet myrrh of *earnest striving to forsake sin*, with joy we find that we have received God's gift of love, —a love that thinketh no evil, because it understands that Good alone is real,—and that sends out the fragrance of brotherly love and charity, as through the revelation of this beautiful Presence, we catch a glimpse of the nothingness of all unlike Good. So we find love where we once saw hate, and doubt and fear—hate's companions—are silenced as we humbly discern and destroy error with Truth, live the life that is Love, knowing no will but the will divine.

The thought of a power apart from God, destroying, to human sense, God's omnipotence; and the varied beliefs of intelligent matter, manifested in the pains and pleasures

Digitized by Google

of sense, may cling to us like so many leeches, robbing us of the true idea of life, causing us to suffer much in our efforts to free ourselves. But we have the myrrh of "*patient continuance in well doing*," and, bringing all our struggles, our discouragements, our weaknesses, our selfishness, our wants,—all our error,—to the sin-destroying Christ, the myrrh of penitential forsaking of sin, of self-abnegation, of honest endeavor, goes up to Spirit in sweet incense, and the healing fragrance of divine Love falls upon our sorrowing, hoping hearts, as the Voice says to us, "Go, and sin no more."

Frankincense,—so-called because it gives out its odors *freely*,—has been likened to prayer. And who so truly prays as a Christian Scientist? We bring our frankincense to Christ, not so much in word, as in earnest desire for righteousness, in humility and love. Mrs. Eddy says, on page 321 of Science and Health, "Self-forgetfulness, purity, and affection are constant prayers." Only as the desire for Good permeates our entire thought and we constantly put it into practice, daily bringing out deeds of love, do we bring to Christ our frankincense. Every victory over sin is a true prayer. Pain and sickness are overcome through exalted prayer. When our frankincense goes up to God freely, in the sweet fragrance of thanksgiving,—thankful for the Christ-gift that comes to us in Christian Science, whereby we may overcome for ourselves, and heal the sick and the sinning; thankful for the transparent life of her through whose beautiful sincerity it has come; and, like the Psalmist, thankful for *all* God's loving benefits; who shall say that we do not pray: "Let my prayer be set before Thee as incense."

Gold has been called the King of Metals, and it represents to us that which is best and purest, and of highest value. Do we bring to Christ, Truth, the pure gold of consecrated lives? Do we instantly improve the golden opportunities that come to us in Truth's work? Do we give Truth the gold of honest purpose and true activity? The Master said, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." So, only as we carry the gold of loving, helpful sympathy—the gold of an understanding of Good that saves and heals, to the sorrowing, burdened sons and daughters of men, telling them of their true birthright, helping them to look up to the Father, Mother-God, whose sons and daughters they truly are, do we give Christ our gold. So, shall we not be glad when we go into the crucible, where, through suffering, the dross is purged from human character because we desire to bring pure, unalloyed gold to our King?

God gives us gold always. So we will take courage, and as we reach out our hand to take the pure gift, we will seek to bring out golden lives of obedience, gratitude, and activity, giving our gold back to Truth in loving thoughts and deeds to each dear child of God, until all come into the consciousness of their kinship and inheritance.

## Christmas Musings.

BY JAMES J. ROME.

How simple, yet how pathetic the story of the birth of earth's greatest teacher, exemplar, and martyr: "and she [Mary] brought forth her first-born son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn." What obscurity! The gladness and rejoicings over the birth of earth's greatest prince are confined to the exultant heart of a happy mother. No feasts and festivities to welcome the glorious advent of the son of the Highest, only the sullen silence of a sinful world, unwilling to receive and acknowledge its king. Yet how impossible that such a momentous event should leave the thought of the world undisturbed.

No sooner has this seemingly obscure event transpired than a stir begins to be manifested. The faithful, earnest, humble shepherds on the plains, in quiet solitude, are quickest to discern the fulfilment of long-cherished hope. Leaving their flocks they gather in grateful homage around the lowly crib. The three wise men from the East are guided by their star of promise to where the young child lies, and present with willing hands and happy hearts their treasures of gold, frankincense, and myrrh.

But another element in mortal mind is stirred. Herod (envy, jealousy, and fear) resents the coming of one who will undermine and destroy the false foundations of his evil power, and seeks his destruction. But the protecting arm of divine Love is around the anointed one to shield him from all harm. Yet many hearts are made to feel the smart of that malicious blow; and the mourning and lamentation of Rama,—"Rachel weeping for her children, and would not be comforted,"—are echoes of that strange event when "she laid him in a manger; because there was no room for them in the inn."

Thus began the conflict of love and hate, adoration and malice, gratitude and persecution; for "I came not to send peace, but a sword." So in the later experience of that holy life we find the mysterious conflict, evil ever trying to destroy him who went about doing good. Even Pilate asks, "Why, what evil hath he done?" and no one could tell, yet they cry out, "Away with him! crucify him!" The whole country is agitated, the great capital is convulsed, all because of him whom she "laid in a manger; because there was no room for them in the inn."

That manger-cradle which gave a date to the Christian era had begun a conquest which should go on down the ages, reforming and transforming the world, developing a greater liberty and higher civilization, although its meaning and purport were but partially and faintly perceived. At last the age has arrived when a higher understanding of its true signification has been reached, and "the glorious liberty of the children of God" is taught and demonstrated, and a full salvation is revealed.

Now as of old sinful mortal mind would consign the child to a manger. But now as then through the meekness and might of its exponent, the chosen of God in both ages, the majesty of Truth has prevailed. The Truth cannot be smothered or hidden in obscurity. Too many yearning, longing hearts are ready to catch the angelic refrain that heralds its coming. Too many eager watchers looking for the star to guide them "to where the young child was."

Much time has been spent in Jerusalem, consulting earthly kings and priestly traditions down through the ages. At last, one turned from that worldly maze, and lo! the star re-appeared, which led her from the frivolity and vanity of mortal sense to "where the young child was" who had been laid in a manger, "because there was no room for them in the inn." Now as then we find that error, envy, jealousy, and malice, oppose, only to be overcome.

With the healing and the blessing
Comes the conflict and the strife;
But the conflict leads to victory
And the striving leads to life.
And the weary, heavy laden,
Burdened sore with sin and pain,
Can lay down their heavy burden
And unite the glad refrain
Of those "out of tribulation"
Who have washed their garments white
In the Lamb's blood who hath bought them,
And hath brought them to the light.
And the hosts of New Jerusalem,
That happy, joyful throng,
Raise their voices in full chorus
In a grand and glorious song.
And by myriads of redeemed ones
There is grateful homage paid,
To the hallowed son of Heaven
Who was in a manger laid.

## Gold, Frankincense, and Myrrh.

BY JESSAMINE GLESSNER CHILDS.

As the time of year draws nigh in which we commemorate the birth of Jesus of Nazareth, the greatest teacher of Love the world has ever known, we ofttimes look back over the vista of years and see in thought those wise men of the East scanning the heavens for a sign from God.

They read those starry skies as we read a well-loved book, and in those silent watches their minds reached out for higher thoughts, gaining inspiration from looking into those windows of Heaven.

Rewarded when they least expected it, one night their Star of Hope appeared in the East. It brighter grew until it flooded them with light. It beckoned them to journey far and to bring their gifts of gold, frankincense, and myrrh, those gifts that nothing but self-sacrifice could make their own to give, and lay them at the feet of him whom they had long looked for, their King, the Messiah.

They rose up and obeyed, they traveled long and far to bring him greetings, and they found him in a manger. Did they shrink from worshiping and giving their gifts because, instead of a king with golden sceptre and jeweled crown, with vast armies to subdue, they found but a little babe? No. They trusted; they believed God's voice and God's hand led them to Bethlehem, and their minds were so uplifted by the Spirit of Truth that they laid their gifts in gratitude to welcome one, the King of Love, whose life and works, because of his understanding of God, would make him ruler over the so-called ruler of evil. They hailed him with joy. They bowed their heads. They offered their gifts of gold, frankincense, and myrrh, and were satisfied.

To-day, as of old, there are faithful seekers after God watching and longing for the Star of Hope to appear, and for those who have come to Christian Science, that wonderful revelation of divine Love, the truth of God, and realized its blessings, that star has dawned, and following they have found the Christ-Truth, the Impersonal Love, that healing power God-given.

Through the purity, self-sacrifice, and love for God of our beloved Leader and Teacher of Christian Science, Mary Baker G. Eddy, the Truth has been manifested. She has shown us how to gain the understanding of Love that heals the sick, opens the eyes of the sinner, and causes him to find pleasure only in God.

Let us of to-day who have been born anew and have received the great blessings of Christian Science, lay at the feet of Truth the pure gold of a character loyal and true. Let us send forth the sweet incense of a life made rich in loving works, and fulfil with joyful hearts every demand made upon us.

## A Thanksgiving Letter.

Portland, Ore., Thanksgiving Day, 1899.

*Dear Sentinel:*—Although the daily life of a Christian Scientist holds a perpetual Thanksgiving, I cannot let the day which our nation marks pass by without expressing just a word of gratitude for Christian Science and what it is doing for humanity.

And what have Christian Scientists, more than others, to give thanks for? Not only the individual blessings of dear ones restored to health and strength, of sins and fears and sorrows subdued, of trials forgotten and victories gained, but the one mighty blessing which has come to this age, the Revelation of Truth to suffering humanity, the *knowledge* of God unfolding to man.

When we glance at the page of history, and recall the many weary hearts which have longed for a knowledge of the Truth, the many consecrated men and women who have renounced all earthly things, who have gladly taken upon themselves privation and suffering, hoping thereby to acquaint themselves with God, can we be thankful enough that a full revelation of God has, *without our effort,* come to us and knocked at our doors for admission? Do we appreciate that that for which so many men and women have striven with tears and prayers, and have only dimly seen, that which in past centuries seemed even beyond the reach of renunciation and martyrdom, is at last shining brightly in our midst, only waiting our recognition of its presence?

Our Master demonstrated to the world, the whole of Truth, but mankind was too deeply buried in matter to rise and understand, at that time, the mighty import of his words and works. Succeeding ages have "believed on him," and have been satisfied to call their *belief* Christianity, not demanding that his life, in its every detail of destroying sickness as well as sin, should be manifested in the lives of men. In this century we have received the promised Comforter, which our Master said should testify of him. And this testimony reveals so clearly the perfect Principle which governed his perfect life, that man can no longer be content to worship the *result* shown in Jesus, but are rising to understand the Truth which produced the perfect result, and, through the application of this understanding, are manifesting, in modest beginnings, these same results in their own lives.

Can Christian Scientists be thankful enough? Do we know how to be thankful enough? Poor humanity forgets to count its blessings, fails to remember that ingratitude and discontent are plagues which must be cast out before the kingdom of rejoicing can be reached. Are our ranks entirely free from this quality of human thought?

With our gratitude to the "Giver of all Good," the loving student rejoices in remembering that the revelation of Truth could not have come to this age, had there not been a purified, consecrated revelator, one who was ready to say, "Speak, Lord, for thy servant heareth."

Some one individual must of necessity have risen to a point of spiritual perception exceeding the general thought of the age, else how could the age have received anything beyond its own knowledge? The laws of the universe have always been ever-present, ever-operative, but a Copernicus, a Newton, an Edison must needs stand forth to perceive, and give to the world, a knowledge of that which lies beyond the range of the five personal senses. So Truth has been ever-present, and for that we give thanks; but without the spiritual discernment of our beloved Leader, Mary Baker Eddy, we should have known no more of it than had already been known and manifested in all the struggling centuries since Jesus of Nazareth first lived it for our example and salvation.

A writer in the *Christian Science Journal* has said, "The world is so unused to the thought of gratitude that it calls it *worship;*" and we can add, that when the world awakens to the true understanding of the gratitude which Christian Scientists hold for the Discoverer and Founder of Christian Science, it will be recognized as being totally distinct and apart from the worship given to God, and God alone.

For the understanding which enabled our Leader to write the book "Science and Health with Key to the Scriptures," for the wisdom which has established the magnificent methods necessary in organizing and maintaining the cause of Christian Science, for the sublime faith and patience, the loving charity, and the moral courage which have sustained her against all that human hatred and revenge have tried to fling in her path, Christian Scientists can in their worship to-day, unite in saying, "Father, I thank thee."

And, dear *Sentinel,* may I send a loving little "Thank you" to you, whose weekly coming is one of our brightest blessings?—BLANCHE H. HOGUE, Portland, Ore.

# Testimonies.

### Severe Mental Affliction Healed.

My first acquaintance with Christian Science was about two years ago. After many years of faithful service to the so-called laws of *materia medica*, worshiping also many man-made laws, I found nothing but dismay. The various diagnoses of my case made by physicians differed, some being too absurd to relate, and their directions as to diet were as various. Having a severe mental affliction at the time, it was feared they might have to take me to an insane asylum. Previous to this I had been at an institution for the treatment of nervous disorders, where I saw and heard many heart-rending scenes (of which none of my relations knew). I wanted to end my life at various times. I know now that God's hands were outstretched.

While in great distress I sought Christian Science in Phœnix, N. Y. After several weeks' treatment I obtained relief. I found I had severe struggles, but, thanks to God and the many dear Christian Scientists with whom I have come in contact, I gained more of the Truth. My healing was very slow, but many ills have disappeared: catarrh of the stomach, severe headaches, and internal troubles, also a severe attack of pleurisy.

My daughter, eleven years old, was wonderfully restored a short time ago from fever. She was delirious and scarcely able to raise herself, even for a moment.

We both find God an ever-present help. I want to say to those who feel they are not being healed as quickly as they should, that it is not only seeking but striving which enables us to receive the benefits of Truth.

It has been said to me that Christian Science would be the cause of my losing my reason; but it restored my reason and has done so for many others. I am able to work now, and to demonstrate over errors that present themselves, and I am trying to help others.

MRS. L. FISH, Port Richmond, S. I., N. Y.

### Neuralgia of the Heart.

For years I was troubled with what the doctors called neuralgia of the heart, which caused me great suffering. As I was getting no better, and having heard of some cases that had been healed by a new treatment where no medicine was used, I thought I would try it. I went and was healed, and for a number of years had good health. Some years after, having a very severe illness and there being no Christian Scientists residing where I lived, I had physicians, who did all they could for me, but thought I could not possibly live. I lived, but remained in very poor health, suffering all the time. Finally my physician told me he thought I had a tumor and expressed his desire that I should go to Toronto and have an examination by a specialist there. I did so and was informed I had two tumors instead of one, which were developing rapidly. It was claimed an operation was necessary, and that as soon as possible. Fearing the effects of an operation, my thought turned to the treatment that had healed me before; and meeting another lady who had also been healed by Christian Science, I decided to try the treatment again, before undergoing the operation. A week later I began treatment on the 22nd of April, and continued until the 22nd of May, 1896, when my healer sent me home, a well woman. I have had no medical aid since, and I had no bad after-effects to get over from this treatment, as I should have had if the operation had taken place. It was proven to me that the sword of the Spirit, "which is the word of God" is sharp and powerful.—MRS. E. J. W., Port Perry, Ont.

### Healed by Reading Science and Health.

Through the mere reading of one chapter in "Science and Health with Key to the Scriptures," I was transformed, and healed completely of a claim of heredity, a disease that had been fastened on me from my birth. I suffered all my life, from this false man-made law until the law of God made me free, through Christian Science. The chapter on healing in Science and Health revealed to me the unreality of the evil belief in the laws of heredity, the false claim of the carnal, or mortal mind that says the children must suffer for the sins of the parents, and I was made free, I never doubted for one moment that every word in that book was the Truth, although I did not understand it all by any means. I have since learned how and why I was healed by simply reading the book. Every word in that book is the true idea of God, which has been demonstrated and proven to be the Truth. The Truth that Jesus said, ye shall know, and it shall make you free. I shall never cease to thank God daily for Christian Science, for its Revelator, our Mother, whom we all love, and shall never cease to love, for her faithful, unselfish devotion to God and His cause, and for the great Revelation, Science and Health, which enables us to read the Word of God with spiritual understanding and discernment never known before.—ELLA G. HAGIE, Chicago, Ill.

### Desire for Tobacco Destroyed.

Last May business took me to Chicago, and on Wednesday evening I attended a meeting at the First Church on Drexel Boulevard. I was not a Scientist at the time, but I was greatly interested in the testimonials. I had been endeavoring to give up the habit of smoking, but with indifferent success. It occurred to me as I listened to the experiences of others, that I, too, might get help here, and almost before I knew what I was doing I arose and stated my case, asking help in my struggle. After that I did not get the same enjoyment from my cigar, and gradually the desire left me; to-day I am *free*—the Truth has made me free.

I shall never forget the impression made upon me by the quotation from page 490 of Science and Health by Mary Baker G. Eddy, emblazoned in letters of gold on the wall to the right of the pulpit: "Divine Love always has met, and always will meet, every human need." I seemed to absorb their meaning at a glance and they have been my constant recourse in time of need ever since, as they have become the constant recourse of wife and children.

THOMAS E. SCANTLIN, Lafayette, Ind.

### Experience of a Business Man.

I have used Christian Science in business and in my home, and I have found it very practical. There is a science of numbers called arithmetic, and there is a Science for right living which is called Christian Science. Before I understood much of Christian Science, I thought Scientists were too loud in their praise of Mrs. Eddy; but now that I know what her unselfish life-work has been and what Christian Science has done for me—even the name of Mary Baker Eddy is an inspiration to me. I came home one evening and flung myself in a chair; it seemed to me my time had come, then the thought came to me to try Mrs. Eddy's hymn. I read,—

> 'Tis the Spirit that makes pure.
> That exalts thee, and will cure
> All thy sorrow and sickness and sin.

Five minutes afterwards I got up perfectly well and went out. Was it the words that healed me? No! It was the realization that Spirit—omnipresent God—heals, and our beloved Leader's inspired hymn helped me to realize it.

## From the Religious Press.

### The Need of a Revival.

It cannot be denied that the churches, as such, are failing to exert the influence that properly belongs to them. It is the exception rather than the rule to find crowded congregations. The number of members may be kept up, but the covenant obligations of church members sit upon them rather lightly. Depth and earnestness of religious conviction are not conspicuous in many congregations. As would naturally be expected missionary societies are finding that their way is hedged with difficulties. The appeal of the Missionary Union, which we summarized last week in an editorial note, was a deplorable symptom. The country, we are told, is generally prosperous, but there has been no corresponding increase in missionary gifts, despite the fact that the acquisition of the Spanish colonies by the United States has been welcomed by many religious men as a divine call to preach the gospel in these regions.

But we need not continue further in this strain; it is not one in which we take any delight. What is needed? The answer is plain—a revival of spiritual religion. We are not to excuse ourselves by asserting that God has a set time to favor Zion. We are responsible for using the means that are adapted to produce certain ends. The first step toward a better state of things is to stop comforting ourselves with the statistics of church communicants, and to look at the actual facts as they appear in our own communities. The next step is for pastors and churches to address themselves to their proper work of soul-winning. Why, it has come to pass that that very phrase is disagreeable! Many churches have devoted themselves so arduously to wise or unwise reforms, which chance to be popular, that they have been diverted from their true mission. And above all we need to cultivate, by prayer and meditation upon the truth, that spiritual temper which makes eternal things so real to us that we are glad to wait upon God, and to sacrifice our ease and time and money to advance the cause of the kingdom of God.

*The Watchman* (Baptist).

### Loving Service.

The basis of service—perhaps it would be better to say, the incentive to service—must be love, else service degenerates into servility. Such was the Master's incentive to serving his fellow-men, and such must be ours. With love to spur us on the task of helping others becomes not a burden, but a pleasure; the most menial task becomes easy, perhaps a positive delight. It is not drudgery to serve one we love. And so, if we loved our fellow-men, as we are commanded to do, it would not be drudgery to serve them, to minister to their needs, to consecrate ourselves to their welfare. This service we may render in many ways. By kindness we may serve men. In any way that we in the least help them or make them happier, we may serve men. Any person may serve in this way however limited his influence or the sphere in which he moves. Such is the lesson contained in the Master's saying, "I am among you as he that serveth." It sets before us an ideal to be attained, a rule of the divinest living, a key to the practical Christian life. To serve one's fellows is at the same time to serve one's God and to serve one's self.

*The Universalist Leader.*

### Be Not Fearful.

Whatever our troubles, whether of mind, body, or estate, let us not be fearful. There are moods in which, whatever our circumstances, we are as safe as the angels in heaven. When we love, honor, and adore our heavenly Father, we are of their spiritual company—the company over whom disaster, accident, change, have no impairing power. Let us not shudder, then, as though these external things which vex us could have influence permanently to disturb our peace. Fear of them can alone give them power over us, at all. Matter and hate can never usurp the lordship of spirit and love. Let us be patient, then, resting quietly in the everlasting arms, assured that the gentle and trustful, in virtue of the very nature with which they are endowed, must triumph over adverse circumstances and unholy besetments.—*The Examiner* (Baptist).

### Christmas Gifts.

Here is a hint for those who are too poor to give many Christmas gifts: write Christmas letters. It is the thoughtfulness and the love that count, not the gift itself. Choose among your acquaintances a dozen lonely ones, whether poor or rich, old or young, and have a letter to each ready to mail in time to reach its destination on Christmas morning. No matter about having any news to write: just good wishes, and a tithe of the good words you will speak about your friend after he is dead. They will warm his heart now, which is far better. It is the season to give; and the only thing at all worth giving is oneself.

*The Standard* (Baptist).

## Miscellany.

### New York's First Sidewalk.

Now that New York is paved from end to end with stone, it may be interesting to know that in the early part of the last century there was not a sidewalk in the whole thrifty town. The first attempt at one was the work of a woman—Mrs. Samuel Provoost, familiarly known to all New Yorkers by her maiden name of Polly Spratt. She was a celebrated belle in her youth, and an exceedingly wise business woman all her life long. Polly Spratt's husband died young, leaving behind him a fortune and a large importing business. His widow undertook the management of both. She built a row of offices in front of her handsome house, and a large store on one side. It was a little out of the line of traffic, and the shrewd owner determined to attract special attention to it. She therefore sent for a number of large, flat flagstones and laid a fine sidewalk, not only in front of her property, but up to the street on either side. As New Yorkers had then no other place to walk than on the round, slippery cobblestones of the street, which sloped to a gutter in the middle, so that it was exceedingly difficult, in winter, to keep dry-shod, Polly Spratt's pavement was the talk of the town, and attracted so many visitors that her store was always thronged. Others followed her example, and soon the city authorities went to work to give sidewalks to all the principal avenues. It is said that ladies came from Philadelphia to shop at this wonderful New York store, and that Mrs. Provoost made such a fortune that she kept a two-horse coach, a thing which no one but the governor had ever been known to do. She afterwards married James Alexander, and is well known in all the chronicles of New York as one of the leaders and ornaments of colonial society: and her son, Major William Alexander, became an intimate friend of George Washington.

WILLIAM RITTENHOUSE.

*Forward.*

### In a Mosque.

Not long ago I happened to wander through a mosque. There is no preaching in a mosque. People go there for blessed silence, for prayer, or for the cool shadows of the marble wall. Yet all over the world Islam is a Gibraltar against the missionary. As I wandered through this mosque there were groups of boys sitting in circles on the floor. In each circle was a turbaned master, in his two hands a Koran and a rod. Some of the boys showed me texts, which they had written in fair Arabic script, in which, "a hair perhaps divides the false and true." I said in my soul, "This is the Gibraltar which defends Islam against the unbelieving dog." I thought how heretic Iwan, when young, did eagerly frequent doctor and saint, and heard great argument.

REV. THEODORE C. WILLIAMS.

*The Christian Register.*

The Empress Dowager of China declares Confucianism to be the State religion of China, and commands that it be studied in all Chinese colleges and schools.

## Notices.

### Supplements to the Sentinel.

Two supplements to the *Christian Science Sentinel* have been issued. The first is the able lecture of the Hon. William G. Ewing of Chicago, delivered in Tremont Temple, Boston, Mass., October 5, 1899. The second is composed of selections from among the many introductory speeches of the prominent men who have introduced the official lecturers of the Mother Church. The workers in the field will readily see the wisdom of giving these supplements the widest possible circulation, and the extremely low price at which they are issued will enable them to do so. The price of the supplements is as follows: Single copies two cents each, postpaid; ten copies or more to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### The Church Manual.

The thirteenth edition, containing the names of all the members of the Mother Church, including those admitted November 7 last, is now ready.

The importance of the members keeping themselves informed of the Church Rules and By-laws is so apparent that we do not deem it necessary to more than suggest it.

The Manual is now in two volumes, one containing the names exclusively.

It will be observed that the Manual is now in the thirteenth edition.

### Notice to the Field.

The November number of the *New England Magazine*, now ready for delivery, contains a finely illustrated article regarding "The Discoverer and Founder of Christian Science." Many of the illustrations are here produced for the first time, and the text of the article will be of fresh interest to all Christian Scientists. This magazine will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty-five cents each.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

The year for payment of per capita tax will commence June 1 and end May 31, instead of beginning October 1 and ending September 30, as heretofore. See Church Manual, eleventh edition, Art. XII., sec 1. The per capita tax for the year beginning June 1, 1899, and ending May 31, 1900, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## Items of Interest.

Major-General Henry W. Lawton was killed December 19 while directing an attack against the insurgents at San Mateo. Upon receipt of the news at Washington, President McKinley sent the follow cablegram to General Otis:—

Executive Mansion,
WASHINGTON, D. C., Dec. 20, 1899.

To Major-General Otis, Manila: I have learned with inexpressible sorrow of the death of Major-General Lawton, and ask to share with the officers and men of the Eighth corps in their grief. One of the most gallant officers of the army has fallen. At the time the sad news came to us his nomination as brigadier-general of the regular army was already made for transmission to the Senate, but no rank can enhance his fame. He rose from the ranks of the Ninth Indiana volunteer infantry, filling every grade in the service to that of major-general of volunteers, and in three wars was conspicuous for bravery and devotion to duty. The country mourns the death of this intrepid leader. Convey to Mrs. Lawton my heartfelt sympathy in her overshadowing affliction. WILLIAM MCKINLEY.

The treaty of 1834 between the United States and Spain provided for the payment of claims of American citizens arising from losses suffered by them through Spanish aggressions on the high seas and the illegal blockades of South American ports. Like all other treaties between the two governments this treaty was renounced by Spain at the outbreak of hostilities in April, 1898. Spain has voluntarily resumed payment of the interest, and has forwarded to the United States drafts of about sixty thousand dollars covering the arrears of interest for 1898 and 1899, thus showing she considers the treaty of 1834 to be still in force.

President McKinley has not nominated the twelve exposition commissioners. The reason [illegible] is that there are too many candidates. The salary of the commissioners is three thousand dollars and expenses, and the law provides that they shall serve only during the year 1900. Postponing the selection until after the holidays will result in a monetary loss to the commissioners, for they will probably receive no pay for the time that will elapse from January 1 until the date of their appointment.

The War Department has issued an appeal to the people for the relief of the widow of General Lawton. The committee appointed to receive the contributions hope to raise fifty thousand dollars. Mrs. Lawton will receive immediately a pension of thirty dollars a month, all that is allowed by law. Bills have been introduced in both the Senate and House granting Mrs. Lawton a pension of two thousand dollars a year.

A scheme for mining for gold under the State direction for the benefit of the State treasury has been submitted to Governor Thomas of Colorado. The State possesses valuable mining property in Cripple Creek. It is thought the scheme will relieve the State of a financial stringency, and at the same time provide an opportunity to employ convict labor without coming into competition with free labor.

Two-thirds of the world's sugar is now produced from beets. Prior to 1872 the world's production of beet sugar had never reached one million tons. In 1899 the cane sugar amounted to 2,904,000 tons, and the beet sugar 5,510,000. In 1872 the average cost in foreign countries of all sugar imported into the United States was 5.37 cents per pound, and in 1899 2.39 cents.

Congress adjourned December 20 for the holiday recess, which will last two weeks. Although about five thousand bills and resolutions had been introduced in the House, and about two thousand in the Senate, nothing has been accomplished in the way of legislation. The gold standard bill is the only one that has passed either house.

Professor C. W. Hough of the Fort Dearborn Observatory, Northwestern University, has discovered that Tau Tauri is a double star. The companion star is one of the ninth magnitude. Professor Hough claims the distinction of having registered more double stars with the Astronomical Society than any astronomer in the world.

The old Jefferson Davis home, near Mississippi City, will be purchased by the Confederate Veterans Association and converted into an industrial farm for those veterans who cannot support themselves. The estate covers one thousand acres, of which only one hundred acres are cleared.

Governor Pingree has called the Michigan Legislature to meet in special session for the purpose of securing a joint resolution providing for submission to the people next November of an amendment to the state laws, placing the railways upon the same basis of taxation as other property.

The American Federation of Labor, which closed its nine days' session at Detroit, Mich., on December 21, adopted a resolution appealing to Congress to submit to State legislatures a sixteenth constitutional amendment to prohibit disfranchisement of citizens on account of their sex.

The Illinois Supreme Court has held that the anti-department store ordinance of Chicago is void. The court declared that the ordinance was an attempt to take away the rights granted by the constitution of the United States and of the State of Illinois.

Ex-Speaker Thomas B. Reed is preparing an argument to attack the constitutionality of the inheritance tax law. Many attorneys throughout the country are interested, and more than a dozen cases hang on the result of Mr. Reed's argument.

According to an estimate based upon the actual consumption in years of normal conditions, the exports of the United States to Cuba, Porto Rico, Hawaii, and the Philippines will amount to one hundred million dollars per year.

An industrial school for girls is to be established in Philadelphia. The school will cost two million dollars and its aim will be to furnish educational facilities to the poor girls of the city, either orphans or fatherless.

The Navy Department has decided to make its own experiments in developing wireless telegraphy. The decision was due to the fact that the terms presented by Marconi were considered too high.

General Miles has recommended that the present senior class at West Point be graduated February 15, as was done last year, to fill many vacancies in the army. The class numbers fifty-four.

A movement has been started among the members of the National Association of Spanish-American Veterans in the vicinity of Lancaster, Pa., to erect a monument in honor of General Lawton.

The Supreme Court of Ohio has decided that the telephones of the Bell company shall be taxed at their rental value, estimated at $233 each, instead of their actual cost, $3.40 each.

When it became evident that Colonel Mills would use all his powers to suppress hazing, the students at the military academy at West Point unanimously voted to stop it.

The United States will send two hundred delegates to the world's convention of the Woman's Christian Temperance Union at Edinburgh, Scotland, next summer.

The gold standard bill passed the House December 18, by a vote of 190 to 150. The bill received the solid vote of the Republican party and eleven Democrats.

President Kruger has formally protested against the sale of munitions of war by American manufacturers and merchants to the British government.

The postmaster-general has authorized a special issue of postage stamps commemorative of the coming Pan-American Exposition at Buffalo, N. Y.

Secretary Hay's report on The Hague treaty has been sent to the Senate by President McKinley, who urges immediate action by the Senate.

It has been decided that the official opening of the Paris Exposition is to be on Saturday, April 14. The date originally fixed was Easter Sunday.

The American Express Company gave to each of its thirty thousand employees in the United States a Christmas present of a five dollar gold piece.

The Supreme Court of Tennessee has decided that no "workhouse, city, county, or state prison keeper has a right to whip a prisoner therein."

Lieutenant Thomas M. Brumby, who was Dewey's flag lieutenant in the battle of Manila Bay, died in Washington, D. C., December 17.

The Samoan Islands have, by agreement, been annexed to Germany. The German flag was hoisted at Apia, December 13.

The Governor of Georgia has signed a bill compelling sleeping car companies to use separate sleeping cars for negroes.

Some estimates place the number of men under General Joubert's command in South Africa at one hundred thousand.

Rev. Dwight L. Moody, the noted evangelist, passed away at his home in Northfield, December 22.

B. D. Stillman recently resumed the practice of law in New York City at the age of ninety-five.

Professor Roentgen, the discoverer of the X-rays, has accepted a call to Münich University.

Two million florins have been raised in Amsterdam, Holland, for the benefit of the Boers.

The soldiers' votes sent home from Manila to New York cost thirty dollars each.

"What I Say Unto You, I Say Unto All, *WATCH.*"—*Jesus.*

## Interesting Testimonials.

In view of the very general interest in Christian Science in this city, engendered by Mr. Kimball's lecture and the sermons preached upon the subject, a *Champion* man dropped into the meeting of these people on Wednesday evening.

Almost every seat in the church at the corner of Ninth and Santa Fe Streets was full.

The meeting was opened by singing a hymn. This was followed by reading the Ninety-first Psalm and several short selections from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. A few moments were devoted to silent prayer and the Lord's Prayer repeated by the entire assembly, when the First Reader announced that the meeting was open, and invited any who had been benefited physically or morally to testify to that fact. It was indeed surprising to hear these testimonials, claiming such wonderful cures after the doctors had failed. The public can judge for themselves in regard to the merit of these testimonials for Christian Science, as we publish below their statements.

A young lady in the rear part of the church rose, and in a clear, firm voice, and her face beaming with sincerity, said, "I had suffered from a cough ever since having the whooping-cough in infancy, and for two years I was under the care of a physician or taking medicine. All this time I was unable to do anything and for some time not able to help myself. One of the most noted physicians in the city said I had consumption and could not possibly live. Two specialists of Kansas City, who made a critical examination of my case, said there was no help for me. At this time my mother witnessed the healing by Christian Science of an infant, said to be dying with pneumonia, and insisted on my trying it. At first I refused, but finally consented and went to the Scientist. When I went for my first treatment I could not speak above a whisper and had not been able to do so for some weeks. When I returned home after my first treatment I could talk in as firm a voice as now. In five treatments I was entirely healed, and since then I have not taken a dose of medicine. My sister, about fourteen years of age, was attacked with St. Vitus' dance, which extended to every muscle of her body. She was taken to the best physicians in town, who gave her no encouragement for even a temporary relief. She was taken to a Scientist, and to-day she is a healthy, happy child."

Promptly, when this speaker was seated, a lady, prominent in the social world of our city, arose, and with a face and tone that gave emphasis to every syllable she spoke, said, "About five years ago, at the earnest solicitation of a friend, I was induced to try Christian Science healing. I had exhausted almost every remedy known to *materia medica*, had tried the Wier-Mitchell cure, sanitariums, and change of climate; and always without lasting benefit. Physicians told me I could never be well and must never stay in Kansas during the summer on account of the heat. When I went for treatment I had no faith; in fact, I was prejudiced and told the healer so, but she asked me if I believed in God. I told her I did, when she replied that God was the only healer. I began to improve after taking the first treatment, and in six weeks I was perfectly well and have remained so ever since. I have proved that I am not dependent upon climate for health, for when we understand what our true being is—and Christian Science teaches us what it is—we know that God is the only Source of health. The Bible teaches us that God is Life, and that Life is indestructible, harmonious, eternal, and that God is Love."

At the close of this testimonial, a lady in the front of the church arose, and in well-chosen language recited her experience in conquering the mother fear in treating her only child for croup, and by the earnestness of her manner, made an impression on those who listened which will not be forgotten.

This was followed by a lady who, in a quiet, but very earnest manner, said, "It is something over four years since I took my first Christian Science treatment. For some twelve years previous to that time my health was very poor, and I had several physical troubles of a chronic nature, for which I had tried doctors and had taken patent medicines. In fact, it was a rare thing for me to go a week without medicine, and all this brought no substantial relief. Since my first treatment in Christian Science, not one dose of medicine has passed my lips; my physical ills have vanished, and I am perfectly well. I would like to say further that Christian Science has not only restored my health, but has taught me what God is, and what is man's relation to Him. Man's rightful inheritance is dominion over every material condition. Before coming into Science, I was in a state of spiritual darkness. My idea of God was very obscure. In fact, I did not know what I believed; but through the study of 'Science and Health with Key to the Scriptures,' the light has gradually dawned upon me, and enabled me to obtain in some small degree that understanding which leads to perfect day."

Another lady, wife of one of the most prominent business men in Nebraska, said, "It is indeed a satisfaction to know that God is ever present, and not the far away, uncertain help we had believed. I had a strong proof of this some weeks since. I was stricken prostrate with a severe attack of typhoid fever. Christian Science does not admit that fever has to run its course. In one week I had recovered. My case created considerable stir in the boarding house, and there was strong talk of telegraphing to my friends. Little did they realize that I had a friend who was always present, and unfailing in His help."

At this time a well-known business man of upper Commercial Street arose and said, "About a year and a half ago I was severely poisoned in the arm by coming in contact with poison ivy while on a fishing excursion. It be-

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

came so swollen and discolored that one of the most prominent surgeons in the city told me that amputation was the only remedy. I had it treated by a Christian Scientist, and the result is I have as sound an arm as any man. In addition to this, my wife was healed of a cough of years' standing, and my children of diphtheria.

This was followed by a lady who has been a resident of the city for eighteen years, who said, "Christian Science, while pursuing its divine mission of leading man nearer to God, is also giving him freedom from sin, sickness, and the discords of material sense. I was healed in Christian Science after fourteen years of suffering, over which medicine and doctors had no control. I had attention from three of the best physicians in the city and one noted specialist from Kansas City, receiving no help, and was finally told that the only relief would be through a surgical operation. I am glad to say that I stand here tonight perfectly well without medicine or knife, but through Christian Science.

This was followed by a gentleman, well known to every citizen of Atchison, who spoke as follows:—

"My conversion to Christian Science followed my second reading of Science and Health. The first reading was far from satisfactory, and I freely said so. A Scientist told me to read again, and I did so, and freedom from the tobacco habit was the result. I had been a slave to this habit for almost forty years. This was followed by a complete physical, as well as a moral, revolution, and I am glad to testify that I am a new man and give Christian Science the credit for it.

"In the light of this experience can there be wonder that I am a Christian Scientist and at all times and in all places willing and glad to give a reason for my faith?

"Is there wonder that I, in common with all Christian Scientists, am not only willing, but glad, to say that I honor and revere, above all other human beings, the one who in this age first demonstrated the truth of Christian Science, and out of her own experience and suffering taught us to weave for ourselves the seamless garment of divine Love that should shield us from the attacks of error, no matter what their source or character?

"Is there wonder that we involuntarily turn to the Rev. Mary Baker Eddy as our counsellor and guide, and give her that most sacred of all names—Mother?"

The hour for closing the meeting having arrived, the First Reader said, "It has been my privilege during the past twelve years of Christian Science work to know of almost every form of sin and disease, both acute and chronic, yielding to Christian Science treatment, and after presiding over these meetings for the past four years, can say that Atchison furnished her share of proof in the way of results of the practical value of this revelation of the Allness of Mind and the nothingness of matter. In fact, the membership, if not the entire attendance of this church, is the result of the healing, saving, and enlightening influence of Christian Science. Christian Scientists can say, 'Shew me thy faith without thy works, and I will shew thee my faith by my works.' They can bear witness, as of old, to the blind seeing, the deaf hearing, the lame walking, the sinner repenting, the infidel converted, and the spiritually dead awakened. We will close our meeting by singing hymn No. 1."

After this there were pleasant greetings among the Scientists and to the strangers present, and the congregation dispersed.—*Atchison (Kan.) Champion.*

## The Lectures.

### At New Haven, Conn.

The lecture at the Hyperion Theatre given under the auspices of First Church of Christ, Scientist, New Haven, Conn., December 1, was a great success. The audience numbered sixteen or eighteen hundred persons, and was one of the largest ever assembled in New Haven to attend a lecture of any kind. This was the first lecture given in this city on the subject of Christian Science.

The daily papers of the following day published favorable notices of the lecture, and the *Journal and Courier* published in full the manuscript which was submitted to them, giving a nice notice of the same, and we learned afterward that there was a very large call for these papers and that they were freely distributed.

The audience was largely composed of the most intelligent people of the city.

New Haven being a college town, many thought that very few people would pay attention to the subject, but it seems that people of every rank and station in life are to-day interested in the subject of Christian Science and desiring information regarding it, hence, the interest expressed at this lecture.

It is only proper to state here, that from the time the subject of the lecture was announced, "Christian Science, the Religion of Jesus Christ," until Judge Ewing took his seat at the close, there was the strictest attention paid to every word. At the close of the lecture there were many compliments passed by those who had previously heard but little of the subject, and it was evident from the conversation and the appearance of the people as they passed up the aisles and out through the foyer, that the audience had not only been entertained but much instructed in the subject. Many expressed themselves as being pleased with the clear enunciation of the speaker and also the subject-matter of the lecture. Many of the old church members said that they could agree with every word the speaker said, and were very much pleased to think that the New Haven Church had given them the opportunity to hear this fine exposition of the subject.

The speaker was introduced by Edward P. Bates, C.S.D., of Boston, Mass., who spoke as follows:—

*Ladies and Gentlemen:*—The First Church of Christ, Scientist, of New Haven, Conn., wishes to express to you its pleasure at receiving so large a number of guests this evening in response to its invitation. It is evident that the subject of Christian Science is before the people, and you are certainly welcome here.

It might be pleasant for many of you to know something of the history of the church whose guests you are.

About ten years ago in this city, a class was taught in Christian Science. After the class was taught, the members began to hold Sunday services in the Boardman Building at the corner of State and Chapel Streets. About two years afterward they organized as First Church of Christ, Scientist, New Haven, Conn., and received the first charter from the state ever given to a Church of Christ, Scientist, in Connecticut. They continued to hold services at those rooms until January, 1898, when larger rooms were required, which were obtained in the same building. Those rooms were furnished and decorated in a simple manner, but filled the requirements at that time. In June of this present year another move was made to 156 Orange Street, where a larger hall and a reading room were obtained, which were prettily decorated and furnished.

The reading room is open daily in the afternoon and members of the church are in attendance, who will be glad to welcome visitors and converse on Christian Science. Here will be found all standard Christian Science literature, including the Christian Science text-book, "Science

Digitized by Google

and Health with Key to the Scriptures" by Mary Baker G. Eddy, also several smaller works by the same author, and the publications of the Christian Science Publishing Society of Boston, Mass.

The members of this church are largely those who have been healed in Christian Science, as I have been, and I personally know of hundreds, yes, thousands, who have experienced this same healing. The members of this church have many friends in the churches where they formerly worshiped, whom they love. They also love their old pastors and they desire to bring to their attention the beauty and simplicity of Christian Science healing. They know of many in the churches who are suffering physical ills, and it is their object in inviting you here to-night to present to you the benefits we have experienced, and to furnish an opportunity for you to correct some erroneous impressions.

We have with us to-night a gentleman who was healed in Christian Science some fourteen years since. He comes to us duly accredited as a lecturer. By profession he was a lawyer; in his younger days the friend of Lincoln. He was appointed United States District-Attorney for the Northern District of Illinois, by President Cleveland. After filling this office for some time, he was elected to the Superior Court bench of Cook County, Ill., serving several terms. He refused re-election a year or two since in order that he might devote his entire time to the cause of Christian Science and to the benefit of his fellow-men.

I have personally known him for several years and it is with great pleasure that I appear here to-night to introduce him to you. It is needless for me to say more, as he will speak for himself, and that will be better than anything I can say for him; therefore, it is with great pleasure that I introduce to you the Hon. William G. Ewing, the lecturer of the evening. LEWIS T. PERRY, *Clerk.*

### At Providence, R. I.

An audience which crowded floor, stage, and galleries of Infantry Hall listened to a lecture on Christian Science by Hon. William G. Ewing of Chicago, Tuesday evening, December 12. Mayor William C. Baker and other distinguished citizens of the city occupied seats upon the stage with prominent members of First Church of Christ, Scientist, under whose auspices the lecture was given. The audience was largely composed of the best people of Providence; it was fairly representative of the intellectual life of the city, which seemed to indicate an inclination to consider the doctrines of Christian Science with seriousness, and was also, no doubt, a recognition of the distinguished character of the lecturer.

Judge Ewing was a personal friend of Abraham Lincoln, and is now a prominent member of the Illinois bar, having been United States District Attorney for the Northern District of Illinois and judge of the Superior Court of Cook County, sitting in Chicago. It is doubtful if any one could have presented the principles of Christian Science more convincingly than Judge Ewing, who brought to bear on his subject lessons learned from his own large experience, and who had the advantage of long legal training. He was introduced to his hearers by Mayor Baker, who said:—

*Ladies and Gentlemen:*—A few nights ago a delegation of gentlemen, and I use that term advisedly, for they were representative men of this town, of high standing in the community, called upon me and asked me to be present at this meeting and introduce to you the speaker of the evening.

I did not long hesitate to grant their request, for several reasons: in the first place, I wanted to meet in person the speaker, whom I had already known by reputation. That pleasure has been afforded me this evening, and I am sure that I am not disappointed in him.

In the next place, I wanted to hear what he had to say upon this subject, which seems to be such a soothing theme to some of our people, and such an irritating one to many others. I wanted to learn from one in authority something in regard to this modern doctrine—if, indeed, it is modern—which has such ardent devotees and such bitter critics, called Christian Science. I had read, of course, many of the criticisms that are published in relation to this doctrine; therefore, my natural love for fair play, my desire to learn the truth, and to get it at whatever cost and from any source, urged me to come here this evening and listen to his arguments in its favor.

So far in my life I have been what I might term hopelessly well and have had very little interest in the various healing arts, but now that advancing age is coming upon me, and I am fast approaching that period of life when the grasshopper will become a burden, and rapidly moving along that circle which grows narrower and narrower until it comes to a point where all things stand still, it is not strange that I find my interest awakening to matters akin to the subject of to-night's lecture. But that is not all. I wanted to come here because I am always proud to introduce strangers to a Providence audience; proud because I present them to a body of people representing the highest order of intelligence and enlightenment, who love the truth and are diligently searching for it; people of broad and catholic minds, whose dearest inheritance is that which they have received from the founders of this state and city, an indomitable love for freedom of thought and speech, and an unflinching hatred of all that is narrow and bigoted and mean, whose chief characteristic is toleration of other people's views, a dignified respect for other people's opinions.

The gentleman whom I shall introduce to you to-night comes to us from the West, but that need not alarm you. He does not come after Eastern money and has no mining stocks or Western mortgages to unload upon you. I am informed that he comes here bringing to you, as he earnestly and sincerely believes, a boon of priceless value, free and without pay. His reputation in the part of the country from which he comes—and that is the place to go to find out a man's worth and what he amounts to—is such as would command the most respectful hearing from any audience upon any subject upon which he was inclined to speak. He is a man who has held high offices of trust and honor, that have been conferred upon him by the people of his own state and by the former chief executive of this great nation. He is a gentleman of distinction, whose word may well have weight with you. He comes to you to-night with no other purpose than to address himself to your intelligence and to your reason.

He is a member of the International Board of Lectureship of the Mother Church of Christian Science, Boston, Mass.

I now take pleasure in introducing to you Judge William G. Ewing of Chicago, Ill.

*Evening Bulletin,* Providence, R. I.

### At Auburn, Me.

The remarkable address of Judge Ewing of Chicago, in Auburn Hall on Monday evening, December 4, upon Christian Science has already been alluded to in our columns and the descriptive elements of the scene fully set forth. A few weeks ago, also, we published in the *Journal* a liberal abstract of a similar address by Judge Ewing in Boston. In reviewing the address of Judge Ewing in Auburn, Monday evening, it seems that it is so notable in its scope and purpose, and so complete in its statement of the faith of Christian Science that our readers will want it as it was given, *verbatim et literatim.*

Digitized by Google

We take pleasure in presenting not only the address of the distinguished western jurist entire, but also the introductory remarks of Rev. Carl S. Patton of Auburn, pastor of the High Street Congregational Church in that city. It is needless to say that both speakers were warmly received and that Judge Ewing's remarks made a profound impression.

Rev. C. S. Patton, who introduced the speaker of the evening, said:—

When one of your number, Mr. Gordon, called upon me to ask me if I would be willing to introduce the speaker of the evening, I told him it would give me great pleasure to do so.

I do not share the apprehension that exists in some quarters as to the free discussion of religious questions which prevails in these days. It is written in an ancient book, well thought of in this community and in this presence, that we shall know the truth and the truth shall make us free. It has also been said from of old, that the truth is mighty and will prevail. But there is no way in which the truth can make us free except as we know it; and there is no way in which we shall know it except as we come to the consideration of it with open minds and welcome it from all sources. Nor is there any assumption upon which you can hold that the truth will prevail, except the assumption that there is that in the mind of man that enables him to know the truth, and in the heart of man that makes him loyal to the truth as he sees it.

All any speaker demands is that the truth which he brings shall be considered in an open and receptive spirit. It is in this spirit that we have all come to listen to the address of the evening. It gives me great pleasure to introduce to you Judge W. G. Ewing of Chicago, who will speak to you on the subject of Christian Science, and for whom I bespeak your cordial, sympathetic, and earnest attention.—*Evening Journal,* Lewiston, Me.

### At Galveston, Tex.

In response to the invitation of First Church of Christ, Scientist, a large and intelligent audience assembled at Cathedral Hall last Friday evening (November 24), to hear Mr. Edward A. Kimball of Chicago, Ill.

The lecturer was introduced by Mr. Chauncey G. Sweet, First Reader of the Church, in the following words:—

*Ladies and Gentlemen:*—It is with pleasure I welcome you this evening in behalf of First Church of Christ, Scientist, of this city, to listen to a lecture upon the subject of Christian Science. The Board of Lectureship was established by our beloved Leader, Mrs. Eddy, for the purpose of presenting Christian Science to the public by its ablest exponents.

Our church is proud to have this opportunity to present to you one of the foremost lecturers in the field of Christian Science; one of long-tried experience in the work. Besides being a member of the Board of Lectureship, he is a member of the Board of Education of the Massachusetts Metaphysical College in Boston, an institution incorporated under the laws of the State of Massachusetts by the Discoverer and Founder of Christian Science, Rev. Mary Baker G. Eddy, of Concord, N. H., where those contemplating entering more into the work of Christian Science, expecting to teach, are required to undergo an examination.

I now have the honor to introduce to you the lecturer of the evening, Mr. Edward A. Kimball of Chicago, Ill.

Mr. Kimball held the attention of the audience for quite two hours. Some of the greatest and most erroneous objections that are offered against Christian Science were most satisfactorily answered.

He interspersed his lecture throughout with many appropriate illustrations, and closed by paying a very tender and beautiful tribute to the life and character of Mrs. Eddy.

Our little church, and in fact the whole field here, have already felt the benefits of this lecture, and we believe the good results are just beginning.

GEORGE R. CHRISTIE, *Clerk.*

### At Kansas City, Mo.

An audience which packed the First Church of Christ, Scientist, at Ninth Street and Forest Avenue, listened to a scholarly lecture by Edward A. Kimball, C.S.D., of Chicago, yesterday afternoon (Sunday, December 10). He was introduced by John H. Wheeler, who said:—

The lecture for this afternoon is the result of a provision made by the Mother of Christian Science in her wisdom, for the purpose of promulgating the truth of Christian Science, and at the same time correcting the many misconceptions entertained by those not familiar with its teachings. You will recall with me the reply of our blessed Master, Jesus Christ, to the disciples of John the Baptist when they came to him and inquired: "Art thou he that should come? or look we for another?" At this time Jesus was healing the multitudes, and he said in response to this question: "Go your way, and tell John what things ye have seen and heard; how the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

The First Church of Christ, Scientist, of Boston, Mass., endearingly termed the Mother Church, in establishing the International Board of Lectureship, appointed some of our most able exponents and practical working Christian Scientists to carry out the mission of preaching the gospel to hungry hearts in this and foreign lands.

The great and increasing popularity of these lectures with the masses is certainly overwhelming proof of their utility.

The prophet Isaiah declared: "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!"

It is with great pleasure that I present to you this messenger of these glad tidings of Peace on earth and goodwill to men.

It is my pleasure, therefore, ladies and gentlemen, to introduce to you the lecturer for this afternoon, Mr. Edward A. Kimball, C.S.D., of Chicago, Ill.

*Times,* Kansas City, Mo.

### At Webster City, Ia.

Probably no man or woman in this vicinity, whether a believer in Christian Science or not, ever heard so able and comprehensive an exposition of this doctrine as was given by Judge Ewing at the Opera House last night (Friday, October 27). His large audience was made up for the most part of people who went to hear and learn, and throughout the whole of his nearly two hours' discourse he was given the closest attention. The distinguished jurist is a most interesting and forceful speaker, and those who admit his premises could not fail to agree with his conclusions.—*Daily Freeman,* Webster City, Ia.

### Lectures at Other Places.

At Mt. Vernon, O.—William G. Ewing, Thursday, September 7.

At Junction City, Kan.—Judge Joseph R. Clarkson, Thursday, November 23.

## Among the Churches.

### First Church of Christ, Scientist.

A First Church of Christ, Scientist, was organized in Lansing, Mich., January 26, 1899. It is doubtless the youngest church in the city, but none the less progressive.

Its methods are unique, as the subject of money is never mentioned from its pulpit, neither does it resort to fairs, festivals, etc., but is sustained entirely by offerings. It is needless to add that there is no lack, God being the supply.

The foundation of the Christian Science Church is "that laid," namely, Jesus Christ, the healer of sick and suffering humanity. The Wednesday evening meeting consists of Scriptural reading, prayer, and the testimonies of those who have experienced the spiritual and physical healing. It is the theology of Jesus and the spiritual interpretation thereof which is taught in the Church of Christ, Scientist, the healing power of which is ever present at its services, and ever possible among its members.

Some idea of the rapid increase in the following of Christian Science, especially during the last seven years, may be had from the fact that within that time not less than three hundred and seventy-five churches have been organized, many of which have erected beautiful edifices in the leading cities—and all churches are dedicated free of debt. Among those now building are two additional handsome structures in New York, and two in Chicago. The progress of the movement was indicated by the reception of about twelve hundred and forty new members into the Mother Church, in Boston, Mass., November 7. In June last over twenty-four hundred were added.

Thus, with stately steps, but rapidly withal, has Christian Science advanced from the time of its discovery (1866) to the present. It may safely be said to be nearing the third stage of progress of scientific truth. According to Agassiz: "Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it."

*State Republican.*

### Church Services at Ouray, Col.

The parlor of the residence of George A. Brown is filled every Sunday with the believers in Christian Science, as discovered and founded by the Rev. Mary Baker G. Eddy some thirty years ago. The services of song, prayer, and spiritual readings are very beautiful as well as edifying.

This denomination is increasing in numbers by thousands every year throughout the world, and many authenticated cures have been established. The work entitled "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is the text-book. The followers of this religion endeavor to practise the Golden Rule and lead pure and spiritual lives. As thousands of educated people are added every year to this church, it is well worth the consideration of the public. In the near future a larger place of meeting is to be secured to accommodate the increasing number of attendants.

*Silverite-Plaindealer,* Ouray, Col.

### A New Church at Berlin, Ont.

That the denomination of Christian Scientists is growing in strength, is shown by the presence on Water Street of a handsome new church, which is rapidly nearing completion. This First Church of Christ, Scientist, has a foundation of field stone laid at random, the remainder of the walls being stucco plastered. The frontage on Water Street is one hundred feet, with the main part of the church seventy by fifty feet, exclusive of a circular tower. There will be a basement for Sunday School purposes. The estimated cost of the entire building when completed is six thousand dollars.—*Daily Telegraph.*

### Watertown, South Dakota.

We are now pleasantly located in our new chapel which will seat about seventy-five people. We purchased a lot with a small house and fitted it up for church services, Wednesday evening meetings, reading room, and dispensary. The lot is centrally located and a desirable location for a nice church. We have been organized as a church about fourteen months. We are unshaken in our loyalty to our dear Mother in Israel and the Christian Science Publishing Society and its management.

JOHN D. CARLE.

## The Sentinel.

THE *Christian Science Sentinel,* published by the Society at 95 Falmouth Street, Boston, Mass., Judge S. J. Hanna managing editor, publishes in the current issue an account of the lecture of Carol Norton, C.S.D., of New York, delivered at the Academy of Music, Pottsville, November 14. It also gives space to the polished and masterly address of Judge D. C. Henning, who introduced the speaker at some length in a review of the religions of different eras in history, and to an editorial on the same subject appearing in the *Republican* columns subsequent to the lecture. The *Sentinel* is one of the several publications issued in Boston in the interests of the Society. It presents a neat typographical appearance, is printed on book paper, in magazine type, and to those interested in the Science, furnishes interesting data and reading matter pertaining to the work and advancement of the cult.

*Pottsville (Pa.) Daily Republican.*

Minneapolis, Minn., December 10, 1899.

*Dear Editor:*—Your *Sentinel* is a very sensible paper, and I am very glad to get it. In fact, the Christian Science teachings are satisfying, embracing the pure principles of the Christ-life, elevating and making humanity better. This is saying a good deal for a dogmatical Methodist. Still, I want to be just, and believe if the majority of men and women had not entered into judgment against you without understanding you, in all probability much more good could be accomplished.

Yours very truly,

W. F. STILES.

## Why Lincoln was not a Church Member.

PRESIDENT LINCOLN was once asked why he did not join a church and this was his notable answer:—

"I have never united myself to any church, because I have found difficulty in giving my assent, without mental reservation, to the long, complicated statements of Christian doctrine which characterize the articles of belief and the usual confessions of faith. When any church will inscribe on its altars as its sole qualification for membership the Saviour's condensed statement of the substance of both law and gospel, 'Thou shalt love the Lord, thy God with all thy heart, and with all thy soul, and with all thy mind; and thy neighbor as thyself,' that church will I join with all my heart and all my soul."—*World Herald.*

We don't parade Washington Street with shabby habiliments—if we can help it—but we stroll through existence with moral accoutrements the most ridiculous and unbecoming.—*Boston Evening Transcript.*

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY DOES NOT RECEIVE PATIENTS.

THE author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## A Card.

*Beloved*:—I accept most gratefully your purpose to clothe me, and when God has clothed you sufficiently He will make it easy for you to clothe one of His "little ones." Give yourselves no more trouble to get the three garments called for by me through last week's *Sentinel*.

MARY BAKER EDDY.

Pleasant View, Concord, N. H., December 25, 1899.

## The New Century.

WE are on the eve, not only of a new year, but of a new century. In every department of human life, secular and religious alike, old things are passing away and all things are becoming new.

The word "new" in this connection, however, is a relative term. Strictly speaking we should say with the wise man of old, "There is no new thing under the sun." There are varied applications of old things to new conditions, and these appear to be new. But every seemingly new thing is but an application, in a way before unknown, of an always existing principle. When a new continent was discovered, it was new only in the sense that the discoverer, and the inhabitants of other countries, had not previously known of its existence.

When a new invention is made, it is new only in the sense that the particular application of its underlying principle had not before been known or made. Edison's discoveries are new only as they are applications of the natural element now called electricity, which always was.

A new thing is, therefore, but a human concept of an old thing applied in a way not before known.

What is true in the secular or material sense is true also in the spiritual. We speak of new spiritual truths; but this is really a misnomer. There are no new spiritual truths, for there is but one Truth and that Truth is eternal, and the eternal is past, as well as present and future.

In the strict sense there is no new time. Time is as old as eternity, excepting only as there are subdivisions of time suited to human convenience; these are the human concepts of time.

As we pass into the twentieth century we are entering merely into a new human classification of time. That classification is a period of one hundred years.

What that period of years has in store in the way of new applications of old principles, in the material realm, the wisest of earth's philosophers cannot even conjecture. If the wonderful pace of the latter half of the closing century—especially the last half of that half—is maintained, we may expect marvels that will out-marvel the most extravagant dreams of the alchemists and idealists of all the ages. And in the spiritual realm, one might easily imagine that if spiritual progress and development parallel the material, all the wonderful prophecies of Isaiah and the foreshadowings of Revelation, will find their fulfilment within the period of time known as the Twentieth Century.

We have but to compare present spiritual conditions with those that existed at the beginning of the nineteenth century, to form some conception of the possibilities of the twentieth.

If we begin our estimate with the last quarter of the closing, we may get a yet better idea of the developments of the dawning century. Within this comparatively brief period the wondrous works, of a spiritual nature, accomplished through the new application of the ever-existing divine Principle of spiritual healing, as exemplified through Christian Science, have been brought to the attention of the world. The sick have been healed in ways that, from every former standpoint, are astounding, nay, miraculous. Every law of healing formulated by human wisdom has been overcome. Every form of sickness previously regarded as hopeless and incurable, has been healed through Mind alone—that is, through the divine healing Principle manifested through Christian Scientists.

May we not confidently hope and believe that the spiritual progress of the next century will be such that whole nations will come into a knowledge of Truth; that the brotherhood of man will be so far established that the Millennium will be upon the earth, and the Kingdom of Heaven generally known as a present possibility instead of a future hope?

## The True Spirit.

WE like very much the spirit and tone of the following extract from a letter recently received by us from an earnest and active Christian Scientist, and venture to express the hope that a similar spirit will enter into the articles and contributions of all who write for our periodicals, for it is the truly Christian Science point of view.

"I hope that whenever you receive anything from me you will understand always that it is sent for whatever disposition you deem best to make of it, and that, so far as I am individually concerned, it is wholly immaterial to me whether it is used or not.

"My sole desire is to help lead our friends out of the woods. As I expressed it in a letter to a business acquaintance of mine in Chicago the other day, who wrote me of his ailments, that I should feel it my duty, if I found him wandering around in a dense woods, lost, to lead him out, especially if I were familiar with the blazing of the trees, and therefore capable of rendering him that assistance, and it was exactly under those conditions that I wrote to him concerning the way out of his physical disabilities through the teaching of Christian Science."

We like also the happy simile of the writer embraced in the second paragraph quoted. This is exactly the spirit in which every true Christian Scientist endeavors to help his neighbors.

God's law is written in the hearts of men. It is the privilege of Christian Scientists to read this inner law, and show others how to read it, underneath the accumulated errors of material sense.

This Christmas-tide is of especial interest in that it is on the eve of another century. It is now nineteen hundred years since the birth of Jesus, and yet that event has been more widely observed than at any previous time.

Men drink liquor when depressed, because they think it will stimulate them and lift them above the worries of life, and the re-action plunges them into deeper despair. Love is the only perfect stimulant. Under its influence men can wrest victory from defeat and rejoice amid seeming tribulations. After quaffing pure Love, there is no re-action.

## From Business Men.

### A Banker's Experience.

In response to your invitation for an expression of benefits through the understanding which has come to me from the study of Christian Science, I would say, that about nine years ago I wrote to my youngest sister something like this, "Now, Aggie, don't be carried away by the foolishness of Christian Science." Here I am, nevertheless, proud in the conquering of the presumption which sought to keep that sister from seeing Truth. However, even Paul kicked against the pricks considerably before he recognized that which knocketh at the door of human consciousness and satisfieth the understanding.

The transformation through Science in yet another sister in the overturning of former characteristics where they were severe or ungovernable; the remodeling and further improving where they were before natural and good; the constant evidence of discipline of self, not through will power, but through love of and interest in the study of God as Intelligence, Mind, Principle, that which becomes understanding with us and is therefore real, this, four years ago, arrested me as it should any one, and caused me to investigate.

I found a Science, simple, natural, full of dignity; demanding much but giving more. I found a Science practical not alone in healing sick bodies and minds, but sick relations with mankind, sickly interests in life, half-hearted interests in business, half-hearted results; giving in place the courage of conviction and the man who is governed by Principle, not simply the human ideas of principle, but Principle, self-operative, perfecting in its nature, overcoming every form of problem which confronts mankind.

With the key to the understanding of life as revealed in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the Scriptures become the grandest literature. The types therein become a poem of character, and we begin to read such character in the natures of to-day, rather than two thousand years ago, often distressingly near our own doorstep. As we learn to know how to crush the serpent through study of its nature, where before we became its victim through fear and ignorance of divine law, is it any wonder that we are heralding the discovery of an all-round science which applies to every day and governs all creation, according as we learn through it how to detect the human false creations of sense which ultimate in discord? ROBERT M. ORR.

Mr. Orr is second vice-president of the America National Bank of Chicago.

### Opinion of a Capitalist.

My attention was called to Christian Science seven years since by the healing of an intimate friend—one whom *materia medica* had failed to cure, although patiently and thoroughly tried for many years. My wife and I entered a class of Christian Science instruction early in 1892, and from that time until the present moment we have never ceased to praise God for being led into this great Truth. It has been of inestimable value in my family and my business life. It has enabled us to overcome serious physical ailments, to rise superior to disappointments and discouragement in many forms—also to overcome fear, which is the bane of human existence—for we have been taught what perfect love is, and that understanding has destroyed our fear.

I would not part with my knowledge of Christian Science, even if it were possible, for any money consideration. It is the pearl of great price, which, having found, we would part with anything rather than leave it. I know if business men would study this Science and practise it lovingly and simply, they would find rest and comfort.

J. E. KNAPP.

President of the Maryland Coal Company, No. 1 Broadway, New York.

### A General Passenger Agent.

I have been rather a close student of the beautiful teachings of Christian Science for the past seven years. Like many others, at first I was inclined to treat the matter with derision, and could not understand how practical, sensible business men and women could be interested in such a belief.

I was physically in very bad shape, and naturally turned to anything that held out a hope of relief. I took up the study, but did not obtain instantaneous relief, as many do, but I clung to the Truth until I was absolutely and entirely healed of every physical ailment, and for the past five or six years have enjoyed perfect health and happiness.

I could write pages giving my personal knowledge of others who have been healed physically and spiritually. Christian Science is a religion that commends itself not only to practical business men, but to every one regardless of vocation—the rich and the poor alike.

Speaking somewhat from a railroad man's standpoint, I happen to know personally of railroad presidents, prominent railroad attorneys, traffic managers, and in fact all along the official line I know many persons who are earnest supporters and followers of Christian Science.

It will afford me special pleasure to impart information to any one who is earnestly seeking further light in this direction. H. C. ORR.

General passenger agent of the Kansas City, Pittsburg & Gulf Railroad Company, Kansas City, Mo.

*Grand Rapids (Mich.) Herald.*

## Quits Law for Religion.

From politician to preacher, from expounder of man-made law to exegete of advanced religious doctrine, are the transitions from vocation mundane to calling devout through which ex-Judge W. G. Ewing has passed. The former chief executive of the Iroquois Club has abandoned for the time being the practice of the law, and consecrated his energies and ability to the spreading of the gospel of Christian Science.

The fact that ex-Judge Ewing had become a member of the Board of Lectureship of the Church of Christ, Scientist, was emphasized after the publication in the morning papers of dispatches from New York to the effect that the former judge, on Sunday (December 10), from the platform of the Metropolitan Opera House had explained to an immense audience the tenets of Christian Science.

Inquiry last night at Mr. Ewing's home, 3743 Ellis Avenue, elicited the information that six months ago the ex-jurist was chosen by the home church in Boston—Mrs. Eddy's—a member of the International Board of Lectureship, in short, to become an evangelist of the creed, to go throughout the land teaching its precepts. It is understood that the position is a permanent one, and inasmuch as during the six months of his lectureship Mr. Ewing has not appeared in the character of a barrister, the inference is declared to be that he will leave the legal profession, in which for many years he has been a leading light.

Miss Ewing said last night, after confirming the statement that her father had identified himself with the Church of Christ, Scientist, as a lecturer, that he would remain in the East some time, carrying on exegetical work. Mrs.

Ewing, who has achieved national reputation as an expounder of the doctrines which her husband is now elucidating, is the Second Reader at First Church of Christ, Scientist, 4015 Drexel Boulevard.

Ex-Judge Ewing was, from its inception, one of the pillars of the Iroquois Club, and in 1892, at one of the banquets of the famous Democratic organization, when there was a great deal of uncertainty as to the democratic nominee, advocated the renomination of Grover Cleveland for the presidency. Mr. Ewing's pronouncement in favor of Mr. Cleveland won the enthusiastic approval of the Iroquois banqueters, and ultimately was a factor in securing the nomination for the New York man.

Mr. Ewing in July last resigned the presidency of the Iroquois Club, to which he was elected six months previously. He was born in southern Illinois, and was educated at Wesleyan University, Bloomington, taking a law course subsequent to graduation. He came to Chicago from Quincy in 1882. In Quincy he had been city and state's attorney for twelve years, and had conducted some important cases that won the attention of Chicago men.

In 1884 Mr. Ewing was made United States district attorney for the Chicago district. He retired from office in 1889, and in 1892 was elected to the bench of the Superior Court of Cook County, serving until 1898. After doffing the ermine Mr. Ewing gradually became interested in the doctrines of Christian Science, his devotion to them culminating in his assumption of his present duties. *Chicago (Ill.) Chronicle.*

## The True and the False.

CHRISTIAN SCIENCE in its true, literal sense, as approved by the intelligent persons who profess its principles, undoubtedly suffers by the large class of alleged healers who, taking advantage of the opportunities of the growth of the Science, do business under its cover and in its name, with the logical result that newspaper exposures of their unwarranted and, at times, unlawful practices, operate to the public prejudice of the real Science as accepted by good, high-minded, honest men and women. This newspaper knows but little of Christian Science, as a creed, but in its practice it is convinced that there is a great distinction between the really intelligent, conscientious persons who are exponents of the doctrines of this new sect, and the persons who accept it, without believing, for pecuniary advantage in healing practices upon the gullible. The exposures of the latter, puts the ban, unjustly, upon the Science, as a whole. The real Science, says the *Mail and Express,* editorially, has for its converts, "a large and growing body of pious, high-minded, honest men and women, who are animated by a pure desire to conform their lives to the beautiful example of the Master. They obey his commands as they understand them; they hold that the Divine philosophy, properly interpreted, ministers to the body as well as to the soul; they preach the gospel of cheerfulness and calm, and out of the life-story of the Nazarene they have evolved a religion which responds in the fullest measure to the spiritual needs of its believers."

*Times,* Olean, N. Y.

In God's own might
We gird us for the coming fight,—
And strong in Him whose cause is ours
In conflict with unholy powers—
We grasp the weapons He has given
The light, the worth, the love of Heaven.

## God's Man.

BY KATHLEEN.

HE must be clad in Light,
The armor of his King.
No robes of darkness cling,
Hamp'ring with mournful guise
The offspring of the skies;
His seamless robe is white.

He must be pure in heart
To see his Father's face,
And meekly seek his place.
Inheriting the earth
He is of heavenly birth,
From mortal sense apart.

His is the "willing mind."
Kneeling at Wisdom's feet,
Rising the Truth to greet,
The olive branch of Peace
Bearing without surcease,
The son of God we find.

Obedience Truth demands.
The Heavenly vision clear
In fulness must appear
When, moulded to His plan,
His image, perfect man,
*Obedient* waiting stands.

Perception then unfolds;
*Now,* are we sons of God,
With power our feet are shod.
Fearless and free we rise,
Claiming our rightful prize—
The manhood Spirit holds.

## Experience of a Railway Man.

BY B. S. JOSSELYN.

I WAS raised a Methodist, but being a railway man, my duties often prevented my attending church, and as a consequence I drifted along in a desultory manner until my marriage. My wife being an Episcopalian, I naturally went with her to church and was accepted as a communicant in that church about two years afterwards. But my daily labors were such that I thought I did not have the time to make myself a very conscientious churchman.

One day a little pamphlet came into my hands, entitled, "Idols Dethroned;" I read, and was startled that I had other gods of worship. Up to that time I did not realize that the worship I was giving my family, my horse, my occupation, and numerous other things was resulting in my loving them all more than my God. This caused me to think deeply on the subject.

Shortly after that, a friend, upon hearing of what I had read, informed me that if I was interested in mental phenomena, he had something that was far superior to what I had been reading, and a few days after handed me a work on psychic phenomena. I read it carefully and about the time I had finished it, a person came to town, giving hypnotic performances. I was very much interested in what he said and did, and after a little practice, was enabled to cause any of the phenomena that he did. While in the height of my achievements I was seized as if

with a chill, which filled me with a sense of terror; I felt uncanny and sat myself down to think, and the first thought that came to mind was, If there can be such a power in an entirely material law, how much more can there be if one only understood the spiritual law of things. For days I pondered, and while in this condition a very warm friend of mine in Kansas City commenced talking Christian Science to me; telling me what wonders had been accomplished thereby, etc., and dwelling particularly upon the names of noted persons who had espoused the cause; many of these were known to me, either personally or by reputation, as reliable, evenly balanced individuals, instead of a class of people that had never appealed to me as having any too much wisdom; but now when this lawyer, this doctor, that minister, that successful business man, etc., saw something in the Science, there must be something in it; so I procured a copy of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and commenced diligently reading it.

I had seen, in purely mental phenomena, what the power of thought amounted to, so made up my mind I should not let any one know what I was reading, for fear of some influence for or against the book; I wanted the Truth to come to me naturally and not as the result of another's mentality. So I read and read with much perplexity in trying to overcome my old mortal illusions, and believing, it seemed to me, that white was black. After much perseverance, the Truth gradually dawned upon me and I sought my New Testament and read the first four books carefully, and their meaning was so illumined that I hardly recognized as the same those words that I had committed to memory as a child. For example "Blessed are the peacemakers," etc., always meant to me that if I saw two people quarreling and stepped between them, I was a "peacemaker;" I now saw that it meant something more; that blessed are they who give peace of Mind to others; *they* shall be called the children of God. And so it was with everything that I read; I caught some of the spiritual meaning of what I read, and in the same measure lost my material conceptions.

I did not commence the study of Science and Health on account of any physical sense of inharmony, but simply as an investigation of one of the topics that was absorbing so much of the attention of my friends; but, as the Divine thought grew in my consciousness I found myself becoming better in both mind and body, and about two weeks after I commenced my reading, discovered that I no longer required my glasses and have not worn them since; at about the same time my nineteen years belief in chronic constipation disappeared; I had been on the operating table for this last-named claim, without benefit, and here it was relieved in less than three weeks and without my knowing it. I was also wearing a truss for a severe hernia. I could not stand or sit up without my truss, and the doctors expected that I would always wear it; but three and a half months after I commenced reading I dressed hurriedly one morning, forgot to put the truss on, experienced no inconvenience, and have never had it on since, and that is now nine months ago.

My weight was in the neighborhood of one hundred and thirty-two pounds, never over one hundred and thirty-seven at my best, and to-day I weigh about one hundred and eighty pounds.

So much for the physical demonstrations that have been made manifest in me, and apparently without any effort on my part. When I first took up the study I read of many things that I must give up, which appeared to me as impossible; or if I did give them up, life would not be worth living, for that was all the pleasure I received, at least that is what I thought. As I advanced in the understanding of Science, those idols, or beliefs, were lost or forgotten as completely as if they had never existed, and I then wondered how it was that I had ever thought there was pleasure therein. Then I began to realize that I had not only been made better physically, but spiritually, and have many times since demonstrated to my satisfaction that I am much better mentally; that is, I can see through a proposition much easier than before, for fear has been dethroned, and the problems that formerly appeared insurmountable now melt away into nothingness at the first approach of the thought of Truth.

Then came to me the Bible quotation, "Freely ye have received, freely give," and I am taking great pleasure in preaching the Gospel and the usual signs are following in quick succession. A large number of instantaneous demonstrations of the Truth have been made, not only over minor claims, but over chronic ones as well.

I find that it is vain for a man to suppose himself spiritual who allows his mind to run riot amid scenes of materiality instead of scenes of spirituality and God-likeness. Such a one is not spiritual but mortal minded; therefore if ye would be spiritually minded and have life and hope, correct the thought, and harmony will prevail.

## Symmetry.

BY O. F. H.

How much a word sometimes means to us! Take, for instance, this word "Symmetry." What thought is brought to our mind? Is it not instinctively a thought of equality, roundness, fulness, harmonious proportions? We say a figure is absolutely symmetrical. We immediately think of a perfect figure, and a sense of satisfaction, of harmony, comes to us, and we know that nothing can be added to, or taken from this figure without marring its beauty, without ruining its "absolute" symmetry.

We are taught that "God is All-in-all" and that "the spiritual universe, including man, is a compound, yet individual, idea, reflecting the divine Substance of Spirit" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 464). Now taking all these thoughts into consideration, can we not gain a faint idea of the absolute harmony,—the symmetry of the real universe? Each idea is perfect, or the whole could not be perfect. It is a perfectly rounded, symmetrical figure. If we take from or add to any part of it (*i.e.*, if we do so in our thought—for we cannot do this in reality), we have impaired the whole.

Is it not the attempt to "take from" or "add to" this, in our human life, that causes so much inharmony? Are not mortals, in many instances, trying to "take from" their brother, and "add to" their own store, thinking that by so doing they are gaining something for themselves? Do we not see, the world over, "the struggle for power, the scramble for pelf," subordinating man's higher sense of justice and honesty, until he no longer thinks of the wrong done another, if his own interests (?) are served by a questionable transaction? What is the result? Some become millionaires—others paupers. The one class cries for bread, and the other is usually crying for happiness, and wondering why they are not happy, little dreaming it is because they have robbed themselves by wronging their brothers, in having spoiled the symmetry of the universe by taking more than was justly their own, and having failed to keep the command of the great Master, "As ye would that men should do to you, do ye also so to them likewise."

In the universe referred to (Science and Health, p. 464, l. 22), man must be perfect as the father is perfect, reflecting justice, mercy, wisdom, goodness.

In taking this view of God's universe, do we not see that our part, our place, is just as important (just as necessarily perfect), as any other individual part or place? Have we

Digitized by Google

not just as much responsibility as any other, or all other individuals? If we are not in our proper place or manifesting our God-given heritage of health, goodness, kindness, wisdom,—of Truth, Substance, Love,—we are failing to do our part toward bringing out the harmony which it is not only our privilege, but our duty to do. If we forget that justice is absolutely just—that mercy is absolutely merciful—that wisdom is absolutely wise, and that we must manifest these qualities, not only in ourselves, but by giving to every other individual his or her just rights, always striving to be just, merciful, and wise, whether it seems to be to our personal advantage or not,—we shall hinder our own advancement and mar the harmony—the symmetry—of the whole.

What is more beautiful than a perfectly symmetrical tree,—with its branches full and perfect on every side? But if for any reason, one side is perfectly developed and the other side is dwarfed, gnarled, or withered, the beauty of the whole tree is ruined. So it is in our great work for our Cause. Every branch must be full, perfect, thrifty, in order to have a perfectly symmetrical whole. But suppose one branch should let in envy or jealousy, another pride or rivalry, thus dwarfing its own growth; can we not see that until these errors are overcome, the beauty, the symmetry of the whole is marred? As it is with the branches, so it is with every leaf and twig, each one must be perfect in order to make the whole perfect. This brings our work down to the individual. Each individual doing perfect work makes a perfect branch,—each branch being perfect we have a perfect, symmetrical whole. Let us remember that one imperfect leaf causes the tree to lose its absolute perfection!
