However, I nerved myself sufficiently to get into an easy chair by the fire and try to realize the Truth. My thought turned to the Bible, and the statement of Jesus in his wonderful parable of the Prodigal Son came to me, "Son, all that I have is thine." I sat pondering how this "Son, all that I have is thine," could apply in the present difficulty, when like a flash came the passage from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 160, "We must act as possessing all power from Him in whom we have our Being." I saw at once that that was the answer,—"Son, all that I have is thine," all health, strength, and goodness is already thine; then be a man and act as possessing them. In less time than I have taken to write this, every sense of weakness and pain disappeared. I ate a hearty breakfast and did a hard day's work without the slightest sense of weariness.

I have written the experience because it pointed out to me three very important facts that we can never afford to lose sight of in Science if we wish to make complete and perfect demonstrations.

First, on the Sunday afternoon instead of at once handling the error in a straightforward and vigorous way when it presented itself, I only did so half-heartedly, because it seemed it would be much pleasanter and easier to realize the Truth when at home quietly than when driving, thus neglecting to apply Paul's admonition, "Now is the accepted time; behold, now is the day of salvation."

Then again in the evening before going to bed the thought was present that a good night's sleep would finish the good effect of reading Science and Health. I had the good night's sleep and awoke with the error seemingly more powerful than before, showing that any dependence, no matter how slight, on material means or self, will work evil to the Scientist. "Put not your trust in princes, nor in the son of man."

Digitized by Google

The last lesson from this experience, that has never left me and has been of invaluable help, is always, under all circumstances and in every case, promptly to "act as possessing all power from Him in whom we have our Being." Numberless times the thought has come to me in moments of great need, and it has never failed, when acted upon, to bring harmony out of discord.—H. W. E., San Jose, Cal.

### How I was Led into Christian Science.

As the testimony I offered in a former issue of the *Journal* seems to have been somewhat misconstrued, in the "Notes from the Field" in the April number, I shall give my leadings into Truth a little more in detail, in justice to all concerned.

After spending the winter of 1898–99 at Augusta, Ga., the detachment of the Hospital Corps to which I belong was ordered to Havana, Cuba, the latter part of March. On arriving at Savannah, Ga., we were delayed at that place a month, awaiting transportation. The evening of my arrival in Savannah, which was a Wednesday, while taking a walk with no particular aim in view, I noticed a bulletin-board conspicuously displayed which announced that Christian Science meetings were held at that place every Wednesday night as well as a morning and evening service each Sunday. As I had never attended a Christian Science meeting, having heard but little and *knowing nothing* about it I resolved to attend one of their meetings to see what sort of people Christian Scientists were. I entered the room as the services were about to begin, and took a seat at the rear of the room. I glanced about me at the nicely furnished apartments, and then took a look at the people gathered there. Instead of the company of poor, ignorant, and unrefined people which I expected to find, there was a goodly crowd of the pleasantest, most refined, and happiest-looking people that I had ever beheld at a church gathering. The first thought that came to me was, These people certainly must enjoy their religion, whatever it is. I was greatly pleased with the services, especially the voluntary testimonies, all of which had the ring of sincerity about them, and were very different from the platitudes to which I had so often listened in the prayer-meetings of my own church. At the close of the meeting I was the recipient of a pleasant greeting from the First Reader and was introduced to a number of the members. The greeting from all was so cordial that I could not but say, These people certainly have the real religion if it can do for them what they say it can, and if it can thus transform their lives and fill them with God's sunshine.

I then inquired of the First Reader as to whether she had any literature which she would let me have to read, so I could find out more about Christian Science and what Scientists believed. Owing to the literature which she was so kind as to lend me, and to the many instructive interviews which she granted me from the time she could ill spare from her busy life, I received an insight into Science which led me on into a closer and deeper study of our dear Mother's book, "Science and Health with Key to the Scriptures," which, after a careful study of four or five months, I accepted as the true "Key to the Scriptures," and was received as a member of the Mother Church of Boston, Mass. I offer this testimony in justice to the Scientists of Savannah, Ga., through whose kindly labors I was led into the Truth.

FRANK B. HEADLEY, Hosp. Corps, U. S. A., Quemados, Cuba.

### Restored to Health and Strength.

For two years and a half I could not do anything and the latter part of that time I could scarcely feed myself. I was paralyzed on both sides, the lower limb of the left, and the upper limb of the right. I lost my speech January 6, 1899. I grew worse all the time, and the doctors told me they had done all they could for me.

I was asked to try Christian Science, which I did, and I cannot say enough for it. On the second day of April, 1899, I went to a healer. The next morning I felt a change and was surprised to find I had some use of my hand. On the fourth I walked with my cane, and on the fifth I walked alone without help. The 7th of April I was healed. On the tenth I went to work, something I had not done in two years and a half. I had run down in weight from one hundred and sixty-five pounds to one hundred pounds when I was healed. I have not lost a day since. I now weigh one hundred and forty-eight pounds and am gaining all the time. I read "Science and Health with Key to the Scriptures" and find it a great help.

J. R. SHAFER, Fort Wayne, Ind.

### Truth an Ever-present Help.

I was taught by the Universalist doctrine that God is Love; but how little did I understand the meaning of that word Love! Now, through the light thrown upon it by Christian Science as taught by our beloved Leader, Mrs. Eddy, that word of Love has proved mighty to the pulling down of many of the seeming strongholds of error.

My mother suffered for twenty-four years with stomach trouble, and for eighteen years she was unable to take any solid food. The doctors told her she was liable to die at any time but Truth has healed her.

Truth has been my only help in time of need. It has enabled me to overcome the croup, sore throat, grip, headaches, accidents, hatefulness, and many other errors of mortal mind. My greatest battle at this time is to overcome self. My one prayer is that I may be able to practise the Golden Rule given by our great Teacher.

SUSIE F. TRUMBULL, Amesbury, Mass.

### Healed by Christian Science.

When a little child I was afflicted with inflammatory rheumatism. Frequently I was confined to my bed on account of it and I was seldom free from pain. I also had liver trouble. I became so bad that I could not sleep with my window open the hottest nights in summer, because my limbs seemed to ache worse. The doctors said I would always have rheumatism and liver trouble, for I had inherited them. Added to this burden was a severe cough which kept me up the greater part of the night for nearly two years before I was healed in Christian Science. By this time I had lost all faith in medicine. I heard of a loyal student of "Science and Health with Key to the Scriptures" and went to her for help. In a short time the cough disappeared and I can truly say I am entirely healed of all my other troubles.—ANGIE MOORE, Elgin, Ill.

### A Child's Testimony.

I am a little girl, thirteen years old. I am a Christian Scientist. I do not go to Sunday School because mamma and I are the only Christian Scientists here. We go over the lesson during the week, and almost every Sunday. I love all of Mrs. Eddy's writings. I like to read the children's demonstrations in the *Journal*.

I am very thankful for Christian Science and to our dear Mother who has done all in her power to show us the right way. I have a pocket edition of Science and Health which I think a great deal of. I love to study the sermons. I have studied them alone and with mamma too. I read Science and Health through several years ago, and started it again, have got as far as Genesis.

I also have the picture of Mrs. Eddy and her home. I think lots of them. I know that if I dwell in the true Principle (divine Love), error of every sort will flee from me.—GOLDIE ETHEL HOUGHTAYLEN, Scranton, Ia.

## Religious Items.

The English correspondent of the Philadelphia (Episcopal) *Church Standard* says: "The London Tent Campaign Committee is arranging to encircle the city with large tents during the summer months, in the hope of reaching the masses of non-churchgoers. This committee, composed of influential gentlemen, purposes to supply forty-four districts and to provide accommodation for more than one hundred thousand persons each week.

The *Watchman*, which is the New England organ of the Baptists, says: "The men who really seek to understand the Bible and regulate their lives by it, develop the best type of human character that the world has seen. That simple fact is an argument for the divinity of the Book that outweighs volumes of sceptical argument. The moment you become convinced that a man will be loyal to the Bible in all circumstances, you trust him."

The number of Mohammedans has been estimated by a missionary living in Arabia at 196,500,000. Of these 18,000,000 are under the rule of the Turkish government, 23,000,000 are ruled by other Mussulman sovereigns, 36,500,000 are subject to African princes, 20,000,000 live in China, and 99,000,000 are under Christian rulers. Of these last about 58,000,000 belong to India and Beloochistan.

In an article on the "Christian Assurance of Immortality," the *Congregationalist* says: "The persistent, superficial, and unsatisfactory efforts which men make to find outside of Christianity some assurance of immortality is pathetic. . . . Probably not one person in a hundred has any doubt of immortality except in some hours of depression."

In the department of advice and admonition to ministers the *Free Methodist* says: "Truth is always positive. Don't weaken the force of truth by saying, 'I believe.' It may be the truth whether you believe it or not. If it is the truth it needs no force mightier than its own omnipotence, and no commendation more authoritative than itself."

"The glory of man's life," says the *New Church Messenger*, "is in its God-given capacity to co-operate with the Divine Life; to ask, to seek, to knock; to try, with the divine help, to do his part, whether it be in resisting evil in himself, or in the just performance of his duties, or in helping his fellow-men."

"For all that makes life in this, the last year of the nineteenth century after Christ, happier, more refined, better worth living than was life nineteen centuries before him, we are indebted to him whose name marks the dividing line between our era and the other," says the Philadelphia *Church Standard*.

In an article showing the distinction between happiness and joy the *Universalist Leader* says: "Happiness is a passing quality, transitory in its nature, and not always satisfying. Joy is the inward possession which abides and blesses, and is the true source of the soul's highest and best life."

We are told constantly that the drinking habit is increasing. As a social ceremony, it may be; but certainly, more and more in all athletic sports, in all work requiring steadiness of eye and hand, and in all the common routine of business, the drinking man is at a discount.—*Christian Register*.

The *New Church Independent* of Chicago gives prominence to an appeal for contributions for the purchase of lands and the erection of buildings in California for the establishment of a "School of Labor and Learning," for the "actual practice of true Biblical Ideals."

The New York (Baptist) *Examiner* quotes the following from a source not indicated: "All the sin that has darkened human life and saddened human history began in believing a falsehood; all power of Christianity to make men holy is associated with believing the truth."

In one of its Easter editorials the *Universalist Leader* says: "The condition of hearts is the cause of the condition of things. Things have no initiative in themselves. Awaken a new emotion in the heart, and brain, tongue, and hand move with a new purpose."

The Ecumenical Conference of Foreign Missions opened in New York April 21 and will continue to May 1. Delegates were present from all parts of the world. Ex-President Harrison, the honorary chairman, presided at the opening session.

The Hartford (Conn.) *Courant* gives an interesting account of a movement for the federation of Hartford Protestant churches for the purpose of avoiding duplication of effort along certain lines of benevolent work and moral reform.

"The spirit of altruism is rapidly increasing, as is shown by the fact that $55,000,000 more than in 1899 was given this year in educational and philanthropic bequests," says the *Christian Endeavor World*.

"Helpfulness is not the activity of some isolated faculty in us, such as our purse, or our example, or our advice, or our handshake. It is the gift of ourselves," says the *Sunday School Times*.

Rev. W. T. Herridge says in the New York *Observer* that "much of the unrest which is now felt in Christendom is not the outcome of religious unbelief, but simply of theological dissatisfaction."

"Religious vagabonds," says the *Christian Register*, "often welcome a kind of liberalism which releases them from the obligations of loyalty to any church without laying upon them new duties."

The *Advance* says that in the Bible sin comes before sorrow; and that the man who can deal most mightily with sin and its remedies, will do most to heal the sorrow of the world.

The Chicago (Baptist) *Standard* says that the Bible, "interpreted by men free from ecclesiastical restraint and human tradition" is the Baptist rule of faith and practice.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to the Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of Selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Judge Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The April *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice also is given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Fall River, Mass.

The per capita tax for the year beginning June 1, 1899, is now due.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance postage free, to any part of the United States and Canada. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1806, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political Events.

By a vote of 33 to 32, the United States Senate, on April 24, denied a seat in its body to Matthew Stanley Quay, who was appointed to the Senate by the Governor of Pennsylvania. Quay has been for many years and is now, a controlling factor in the Republican party of his state, and he has long been a power in national politics, having had great influence in the United States Senate, of which he was continuously a member for many years. He was manager of the national campaign of the Republican party which resulted in the election of Benjamin Harrison to the presidency. He was appointed to fill the vacancy in the Senate caused by the failure of the Pennsylvania Legislature to re-elect him or agree on a successor.

State conventions of the Republican party were held in several large states last week, including Pennsylvania, Massachusetts, Ohio, and Indiana. All of them endorsed the candidacy of President McKinley for re-election and fully concurred in his plans for holding the Philippines. In Pennsylvania, although the convention was controlled by Quay absolutely, and although it was held the day following his defeat in the United States Senate through the non-support of Senator Hanna and other friends of the administration, the resolutions adopted endorsed McKinley.

The total amount of the new two per cent United States bonds given out in exchange for bonds of older issuance, was $257,194,250, up to April 26. The greater portion of these bonds have been deposited with the government as security for national bank circulation.

Senator Mason of Illinois has introduced a resolution in the United States Senate providing for the gradual withdrawal of our troops in Cuba and setting July 4 as the date for turning over the government of the island to the people thereof.

Charles H. Allen, the newly appointed civil governor of Porto Rico, arrived at San Juan April 27 and was cordially received by the people.

Senator Lodge has introduced in the Senate a joint resolution making February 12, Lincoln's birthday, a national holiday.

### Industry and Commerce.

Statistics of British trade with the United States for the first three months of 1900 show that our exports to the United Kingdom in that period was valued at $126,815,000 in round numbers, against $149,720,000 in the same period of 1899 and $153,360,000 in 1898. Our imports from Great Britain in the same quarter aggregated $19,580,000, against $12,980,000 in 1899 and $13,885,000 in 1898. The balance in our favor was $107,235,000 this year, against $136,740,000 in 1899 and $139,475,000 in 1898, a decrease of nearly $30,000,000 from 1899 to 1900 in the first quarter.

The convention of the National Association of Manufacturers opened in Boston April 24, prominent manufacturers from all parts of the United States being present. The New England Cotton Manufacturers Association also met in Boston at the same time. The Manufacturers convention closed with a banquet at which the Chinese minister, Cabinet Secretaries Root, Long, and Gage, and other notables were present.

The Companie del Norte of Spain recently commissioned an agent to obtain specifications and all particulars relating to the supply of some four thousand freight cars, with the result that an American car company has been invited over to close the transaction, which will involve $1,500,000. Other European contracts expected by the same company amount to $12,000,000.

D. L Gillespie & Co., lumber dealers of Pittsburg, Pa., have received the contract from the British Westinghouse Electric Company to furnish all the lumber to be used in the great plant to be built by the company at Manchester, England. The lumber contract will amount to between $300,000 and $400,000.

Typographical Union No. 6 of New York City has an industrial farm at Bound Brook, N. J., where employment is given to printers who are out of work or who are not fit for work at the case. The enterprise has proved very successful and it is probable that more land will be leased.

There have recently been sharp reductions in the prices of iron and steel products. Some observers of commercial affairs declare that the maintenance of high prices in these products would have been injurious to general trade.

The Newfoundland seal catch the past season is estimated at 380,000, and other industries of the island have likewise prospered, so that the business outlook is better than it has been for a long time.

The greatest oil well that has been opened in Pennsylvania since May, 1882, struck oil April 24. The flow is at the rate of one hundred barrels an hour.

The Fifth Avenue Hotel and the Madison Square Theatre building adjoining have been sold in one parcel for $4,225,000.

### Foreign News.

A new daily paper has been started in London called the *Daily Express*. In the first number, which appeared April 23, the editor, C. Arthur Pearson, says: "Somehow, it has become newspaper tradition to love darkness better than light—to put bad news in bigger letters than good news, to make capital out of the sudden ending of life, the catastrophe of the householder, all the bitterness and sorrow that make life look black. In our young, fresh, candid way, we will try to do better than that, and always will be looking for good news. When we get it we will print it in these columns in the biggest type."

The British force at Wepener, which was in danger of capture by a large force of Boers, was relieved April 26. Lord Roberts sent strong forces to attack the Boers, and attempted, with other large bodies of troops, to prevent the retreat of the besiegers, but they would not accept battle and many of them safely escaped pursuit, but a part of the Boer force was intercepted and an engagement ensued at Thaba Nchu.

Queen Victoria left Ireland on April 26 and returned to England. The visit was made very pleasant for the Queen by the kindly attentions of the Irish people. She conferred baronetcies upon the lord mayors of Dublin and Belfast, the title of lord mayor on the mayor of Cork and his successors in office, and knighthood upon the mayors of Cork and the mayor of Londonderry. She gave one thousand pounds to be distributed among the poor in the Dublin hospitals.

Fire broke out in Hull, Ontario, across from Ottawa, at 11 A.M. April 26. It was carried over to Ottawa and raged in both places for two days, destroying about twenty-five hundred buildings, two thousand in Ottawa and five hundred in Hull, entailing a loss of from fifteen to seventeen million dollars and the death of perhaps a dozen people. Between twelve and fifteen thousand men, women, and children were rendered homeless.

All the flags for the British ships of war, except the Royal standards, are made in the government dock yards, and the enormous number required may be judged from the fact that in the color loft at Chatham alone about eighteen thousand flags are made in a year.

Notwithstanding Russia's enormous expenditures for the construction of the Trans-Siberian railway and for increasing the strength of her army and navy, her revenues during the past twelve years have exceeded her disbursements by 790,000,000 rubles.

The Russian ministry has appropriated $1,545,000 for the purpose of irrigating the barren district in the Trans-Caspian country, making an oasis of many thousand acres in what is now a desert.

Press dispatches from Manila under date of April 23, report that during the week previous about one thousand Filipinos in the neighborhood of Manila were killed, captured, or wounded.

### General News.

St. Louis has a novelty in the school building line. One of the nine portable schoolhouses recently erected will be dedicated and ready for use to-day to accommodate the overflow pupils at the schools where they were needed. They are so constructed that they may be moved from school to school as occasion requires, and were adopted by the school board as a better method than renting extra rooms in the neighborhood of the overcrowded schools. Each of the schoolrooms contains seats for eighty pupils.

An interesting experiment has just been started in Glasgow. The superintendent of parks in that city is preparing a number of window boxes, with earth of the proper kind, and seeds and some growing plants, to be rented to dwellers in the poorer districts at a shilling a box, the shilling to be returned to the purchaser in the fall when the box is brought back to the superintendent.

The statistician of the United States Department of Agriculture has issued a statement showing that the world's wheat crop for 1899 amounted to 2,725,407,000 bushels. North America raised between one-fourth and one-fifth of the world's crop.

General Grant's birthday was generally celebrated by patriotic and political organizations Friday, April 27. At a dinner given in Pittsburg, Pa., by the American Republican Club, the widow of General Grant was a guest.

A beautiful gold watch has been presented to Admiral Dewey by the schoolchildren of Minneapolis and the Northwest. It was purchased with money raised by penny contributions.

The Hamburg-American line is soon to have a large cruising yacht for specially conducted tours around the world.

Nearly every farmer in Geauga county, Ohio, has a telephone in his house.

## Selected Articles.

### A Remarkable Case of Healing.

THE following remarkable case of healing was related at a recent Wednesday evening meeting of First Church of Christ, Scientist, Dayton, O.

The First Reader stated, "We have with us to-night a gentleman who met with a serious accident some time ago, breaking the hip-bone. It is a case of surgery with scarcely a parallel, and another grand triumph for Christian Science. The doctor, surgeon, and nurses at the hospital acknowledged that they had never witnessed a case like unto it. Mr. William Rice, to whom I refer, is here, and will speak for himself."

Mr. Rice arose, and stated: "When I was a boy I heard of the old adage, 'that some people will not take a hint until they are knocked down.' This is my experience relative to Christian Science. It would be presumptuous for me to undertake to tell you what Christian Science is, but I would like to tell you what Christian Science has done for me.

"About the latter part of August, 1899, while visiting my sister, Mrs. Rollins, at Union City, Ind., I read a few chapters in 'Science and Health with Key to the Scriptures.' I got a mere glimpse of the work, but after careful consideration it dawned upon me that Christian Science was, and is, a divine Truth, and from that time I began to think more about it. On November 18 last, I met with a serious accident, breaking my hip. The instant I saw the inevitable it flashed to my mind that I would be seriously hurt, but God was with me, and would sustain me. This thought was so vivid that it never left me, neither had I the least doubt or fear of the result. A crowd gathered around me, I requested them to call the ambulance, and send word to my wife, which they did promptly. When I arrived home the same excitement prevailed, no one knowing what to do. I requested them to call the family physician, and also sent for a Scientist. I tried to encourage my wife, but she did not have any hope until the Scientist arrived, and began to allay her fear.

"As soon as the doctor arrived he made a hurried examination, stating that I must go to the hospital. I was not favorable to this, but he said a broken leg was a very simple thing, and easy to handle, but this was the hip, and a very serious case, and required appliances that he did not have, and could not get in time. I saw from the expression of his countenance that he had no hope of my ever getting through this ordeal, and had it not been for the sustaining power of God as revealed in Christian Science, I am satisfied that I could not have lived through it. I was very weak, for he had been giving me heart tonic for the past two years, and I had been an invalid for eight years. The ambulance was called again, and now came the trying time. Of the fifteen to twenty people present, including two doctors, there was not one but the Scientist and myself, who thought I would ever come back alive. We reached the hospital about 11 A.M., and another examination was made, but the bone was not set until 4 P.M. The surgeon thought I would not survive the operation of setting the hip. He was undecided as to what course to pursue. For a man of my age and weak constitution he feared to administer the chloroform, and was afraid to undertake the job without it. Finally he decided to administer chloroform.

"Here is the point that puzzles the surgeon and doctor. When they administered the chloroform they did not think that I would ever rally from the effect of it, but that the chances would be better than without it. To their surprise I came out without experiencing any of the bad effects that usually follow. I was weak from lack of nourishment. The second day the surgeon could give my wife no encouragement, but before the day had entirely gone I experienced a change, and wanted something to eat, and from that time commenced to improve rapidly. There was scarcely any manifestation of fever, so little that the family physician did not think there would be re-action enough to cause the bones to knit. I experienced very little pain. At the end of three weeks my temperature was not taken. In five weeks the union was found to be complete and in perfect shape. They were gratified with the progress made, pronouncing me the banner patient of the hospital. According to their theory I was fully three weeks ahead of the usual time for a young man in good health, and remarked that they were unable to understand it.

There were other patients in the hospital at the same time with similar affliction, but they were not under the care of a Christian Scientist, and they are there to-day with no hope of ever getting well. The usual verdict in such instances is that if the individual gets better he will be a cripple for life, but this law has been proven false in my case. Only recently I heard it stated that there was not a genuine case of healing in Christian Science." (Mr. Rice then walked up and down the aisle in the church without aid of either crutch or cane.) He said:—

"If my case of healing is not genuine I would like to know what is. I am to-day a better man physically than I have been for years. I have been healed of a severe case of stomach trouble. With the exception of the chloroform administered at the time the bone was set, there was no medicine taken. The Scientist was with me daily, and this Truth sustained me, despite the depressing surroundings of sickness and suffering. The Scientist saw that every want was supplied.

"Here I wish to acknowledge that the surgeon did a good job in setting the bone, and to express my gratitude to him, to the doctors, and to the nurses who kindly did all they knew how to do in a surgical line. Our family unite in giving thanks to God for the revelation of Christian Science; thankful to her who is its Discoverer and Founder, Rev. Mary Baker G. Eddy, and as grateful as we know how to be to the Scientist in charge."

Other testimonials were given:—

A gentleman stated that we did not realize the number of people in our city who are quietly investigating the subject of Christian Science. He remarked that a very learned man has now been reading Science and Health about two months, and he pronounces it a most wonderful book. He has been a student of the Bible for years, but never found a commentary that so illumines the Scriptures.

A lady spoke: "My sister was taken with a severe attack of quinsy. Similar attacks had occurred before, and, under the doctor's care, usually required a few weeks before she recovered. A Christian Scientist was called to see her about 11 A.M., and at 3 P.M., the same day, she was able to eat. The quinsy was so soon destroyed that she scarcely realized that she had it."

A man, carpenter by trade, stated: "In the factory where I am employed I had been using an adze, and by accident struck my leg, badly cutting it. My companions had numerous suggestions to make, but I informed them that I had a remedy. After bandaging it no material remedy was used. I applied what I understood of Christian Science. Had this occurred before I knew of this Truth, no doubt I would have resorted to a cane or crutch, but neither of them were used, and I was able to continue with my work, and the wound soon healed."

A lady testified to the great good being accomplished by placing Christian Science literature in our public libraries. A few days ago a gentleman from the National Military Home called at her home and asked for help. He stated that he had been an infidel, reading Tom Payne, Voltaire, and Ingersoll's works. One day he noticed the *Christian Science Journal* in the library. He picked it up, and then laid it down, thinking that he would not have anything to do with it. Later he commenced reading, and became interested. He had been a very profane man, but the reading of Christian Science literature destroyed this habit, giving him a better idea of what God is. The desire for intoxicating drinks was overcome, and the man reformed. He has since ordered the pocket edition of Science and Health.

A gentleman spoke of three instances of healing: two were ladies who had been afflicted with heart trouble. pronounced incurable by their physicians. Through Christian Science they have been restored to health; a third was a man with delirium tremens. He had resorted to physicians, and tried many remedies that he might be healed. At last he sought Christian Science, which showed him the omnipotence of God or Good, and that the Christ-Truth to-day destroys the desire for intoxicating drinks. He states that he has been made free from the curse of drink.

A gentleman spoke of receiving two letters, one from an elderly lady, who stated that it had been six years since she first heard of Christian Science, and while she had experienced physical benefits, overcoming a badly sprained wrist, yet it was the spiritual healing that she valued most highly. The Bible and "Science and Health with Key to the Scriptures," were her constant companions. Words could not express her gratitude to our dear Mother for what she has done. The Bible is a new book. The other letter read: "They have had a minister here who has been preaching for two weeks. He said to the ministers, physician, heal thyself. Jesus always had a multitude because he healed. Nowhere in the Old or New Testament is healing and preaching separated. Then he put his hand down on the Bible and said, 'You may say what you will of Christian Science, they have the right method, they are on the right track.'"—*Dayton (O.) Herald.*

## Christian Science Testimonial Meeting.

THE testimonial meeting of the Christian Science Church is an innovation. A visit to First Church of Christ, Scientist, in this city, located on Fifteenth Street between Park and Portland Avenues, last Wednesday evening, fully confirmed this conclusion. Several hundred bright, intelligent, and interested persons, from all walks and professions of life, composed the assembly. The First Reader stated that the public services of the Christian Science Churches were held in order that the Principle, the methods, and the practical results of Christian Science may be made known. She said that the practical results belong especially to the Wednesday evening meeting, when those who know of such instances may tell how the sick have been healed, the sinner reformed, the sorrowing comforted, and how the cares, anxieties, and burdens of daily life have been lifted and the pure sense of spirituality has been exalted through the ministrations of Christian Scientists, showing that its broad claims to efficacy and power rest upon proof rather than profession. The testimonials were remarkable, being accounts of the healing of almost every phase of disease common to mankind. Each one who spoke did so with manifest freedom and confidence, and with much earnestness.

A young lady related the strange healing of a case of dyspepsia through merely listening to testimonies given at one of these meetings, which the patient had entered while in an indifferent attitude of thought.

Another spoke of an invalid wife who had been restored to health, and the marked release from despondency and discouragement which the members of the family experienced as a consequence of studying this Truth. The next speaker cited an instance of the healing of an internal tumor. The patient was suffering from intense fear when she first called on a healer, but the audible assurance from the latter that "Divine Love always has met, and always will meet, every human need" (a quotation from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy), calmed the fear, and a few treatments resulted in complete restoration to health.

An elderly lady testified to the great help in healing from sin and sickness experienced in her home through Christian Science, she herself having been instantly healed of an incurable disease through its power.

A gentleman, formerly a practising physician, related a case of healing from consumption which came under his observation, and which convinced him of the efficacy of Christian Science, the practice of which he is now engaged in in preference to *materia medica*. He stated that the patient when first treated was almost too weak to walk and could not speak above a whisper. He saw the weakness gradually supplanted by strength, the voice return, and the man, in a comparatively short time, restored to full health and able to resume his daily labors.

A lady told of a case wherein prejudice and misrepresentation had been overcome, and in spite of warnings of friends to have nothing to do with Christian Science, she investigated it and was healed, and her husband also cured of the tobacco habit. The confession was freely made that the latter experience was in itself worth more than the little which Christian Science had cost the family.

Perhaps the most remarkable testimony of the evening, because of its wholesale character, was next given by a young lady. It covered the experience of an entire family, beginning with the healing of a child of typhoid fever, the case having been taken from a hospital. The husband and father had his eyesight restored, the mother was healed of pneumonia, a child was cured of diphtheria, and another child was speedily restored from an acute attack of choking while swallowing food.

The healing of a case of the grip in two treatments, all

Digitized by Google

throbbing pains in the head instantly disappearing shortly after the second treatment, was next mentioned by a gentleman.

A gentleman, formerly a member of the Salvation Army, and who stated that he had "preached on the streets of Minneapolis many times," told of his acceptance of Christian Science being followed by a great spiritual uplifting and the curing of tobacco and other habits in which he had formerly indulged. C. C. E.

## Communication.

Editor of *The News.*

*Sir:*—Having noticed in a recent issue of your paper certain statements about Christian Science and Christian Scientists, I beg that you will allow reasonable space for clearer information on the subject. In this connection it is right to acknowledge the fairness of our press generally in the consideration of all phases of leading topics.

In the course of the criticism referred to, we find the following true statement, viz.: "This is a free country and one of the fundamental principles of our freedom is the right to worship under our own vine and fig-tree," etc. The concluding clause, however, is not applicable in any degree, inasmuch as Christian Science is emphatically not "a religion or doctrine that jeopardizes the lives of our dear ones." The conception of it as a life-destroyer is a gross misapprehension.

If you admit the "right to worship" as taught in Christian Science, you must also admit the right to heal through such worship, for this is the doctrine of Christian Science, that its practitioners heal the sick by "worshiping the Father in spirit and in truth." Jesus said such was the true worship, and this fulfils his command to preach the gospel (good tidings) with which injunction he invariably coupled the other,—heal the sick.

The outward facts concerning the healing work done, increase rapidly in volume as the years pass and the work progresses. These facts are easily procurable (at least many of them) and are plain and indisputable to the unbiased searcher for Truth, especially to the sufferer who has found no relief from material means, and is led to turn to a higher source for aid. Many thousands of such have found health and peace under the benign influence of Christian Science. Healing in Christian Science churches during public services is a frequent occurrence.

In Toronto, Ont., First Church of Christ, Scientist, has a membership of over four hundred. Think of this congregation, year by year increasing in numbers, and relying for their healing solely on Divine help, as taught in Christian Science, and practised in the hundreds of Christian Science churches throughout our land and other lands.

The percentage of deaths in the ranks has been very small indeed, and it will be smaller when Christian Scientists gain a fuller understanding of the divine Principle which heals alike the sick and sinful.

Recoveries are the rule under Christian Science treatment, even the most severe and chronic types of disease which have baffled the skill and honest endeavors of the best physicians, yielding—some readily, some gradually—to the healing touch as taught by the Master. (Mark, 16 : 17, 18.)

Thanking you for the valuable space in your paper, and if you desire it for future publication, or for your personal enlightenment, details will be furnished of some of the authentic and remarkable cases of healing through Christian Science. CHRISTIAN SCIENTIST.

*The News,* Portage La Prairie, Manitoba.

## Christian Science and Higher Criticism.

IN view of the recent resignation of Professor Mosely, of Mercer College, because of his study of Christian Science; of the recent resignation of Dr. Hillis from the Presbyterian Church on account (it is said) of the influence of the higher criticism; of the retirement of the learned rabbi, Dr. Wertheimer, from the Jewish Church and his conversion to Christian Science, it becomes interesting to know the difference between what is called the higher criticism and Christian Science. The tendency of the higher criticism is toward a large and liberal view of the literal sense of the Bible with the attempt to reconcile it to the human logic, material evolution, and material science. This process necessarily abolishes much of its literal history. Christian Science, on the contrary and exactly opposite line, keeps the sacred Scriptures absolutely intact, but, throwing on them the lens of Soul, restores their spiritual sense, and with it the lost power and understanding of primitive Christianity.

It was this spiritual sense of the Scripture and of Jesus' true character and mission that glorified the vision of St. Paul and converted him. Then he saw the old Scriptures, as types of what was to be revealed: "Now these things happened unto them for ensamples" (1 Corinthians, 10 : 11). We find in the concluding paragraphs of that remarkable fourth chapter of Galatians, wherein man's divine kinship is so strongly taught, that the entire beautiful story of Abraham, Sarah, and Hagar is lifted entirely out of any personal meaning and is interpreted in its absolutely metaphysical or spiritual meaning, showing the Jerusalem that now is—a material sense of man and the universe at war with the new Jerusalem—the spiritual sense—that is mother of us all.

The entire Epistle to the Hebrews is a translation of the old forms and ceremonies of the Jewish church into their sublime spiritual sense; it is this sense that Christian Science restores to the world with the regenerating power that is its accompaniment. MRS. SUE H. MIMS.

*Atlanta (Ga.) Constitution.*

## Christian Science Testimony.

A TRAVELING man from Michigan called at the Christian Science reading rooms recently, and while there he gave glad testimony to the benefits he and his family had received from Christian Science. He had himself been lifted out of chronic invalidism into a new state of strength and usefulness. His wife had been restored after all had despaired of her recovery, and his son had been healed of asthma which had at times driven him to think of suicide to escape the suffering. The entire family, lifted out of sickness into health, is now rejoicing in the Truth that has set them free. "But, best of all," he said, "we have gained harmony, and been freed from discord. Realizing that there is but one Mind—the 'Mind that was in Christ Jesus'—we live in joyful harmony, with not a discordant note to mar our peace."

He said his first question on going to a town was, Is there a Christian Science reading room or society in it? and all his spare moments were spent there in converse with Christian Scientists or in the study of the text-book, "Science and Health with Key to the Scriptures." The thought he expressed of living securely in divine Mind seemed the most helpful of all to me, for now that we know the falsity of all discords we surely can destroy them, whether they are named sickness or sin, anger or anguish. Since they are not in the divine Mind, while we dwell securely there they cannot enter or disturb our peace.

S. F. S.

*Hoopeston (Ill.) Herald.*

## The Lectures.

### At South Bend, Ind.

The eminent Illinois jurist, William G. Ewing, former judge of the Superior Court in Chicago, and now of the Board of Lectureship of The First Church of Christ, Scientist of Boston, Mass., lectured at the Auditorium Tuesday night (April 17) on the doctrine of Christian Science. The audience which greeted Judge Ewing was large and made up of representative citizens of South Bend, Mishawaka, and Elkhart. There were many avowed Christian Scientists present, but the greater part of the audience was made up of adherents of other faiths who accepted Judge Ewing's lecture as a source of enlightenment. That they were impressed by his lucid and dispassionate revelation of the doctrines of his church was evident by their attentive attitude.

The speaker was introduced by William Bradford Dickson, of the local Church of Christ, Scientist. Mr. Dickson said:—

*Friends and Fellow Citizens:*—It is, indeed, a pleasurable task to tender to this large and intelligent audience a few words salutatory, prior to the edifying lecture of the distinguished jurist who will address you this evening on the infinite theme of Christian Science. In behalf of the members of First Church of Christ, Scientist, of this city, I extend to you all a heartfelt greeting and cordial welcome.

The American people are pre-eminently a truth-loving and truth-seeking people, not only willing but anxious to hear both sides of all the great questions of life. It is proverbial, too, that they are almost invariably found casting the weight of their opinion on the right side of the vital issues of the hour, and therein lies the transcendent greatness of our nation; the prophecy, promise, and only guarantee of its continued existence.

The city of South Bend is a prosperous and progressive young metropolis, and the audience which has assembled here to-night is a representative American audience, willing to hear the whole truth in regard to a theme of infinite importance to every human heart.

If, at the close of this hour, a single hungering and thirsting one shall have been exalted to a higher and more glorified view of God, then the Christian Scientists of this city will rejoice in the proof that their efforts have been blessed.

The able and learned gentleman who will now address you has been healed and ennobled by the mighty leaven of Love which moves the universe, and you can safely write him down as one who loves his fellow-man.

Ladies and gentlemen, I have the honor of presenting to you Mr. William G. Ewing, formerly for many years judge of the Superior Court of the state of Illinois, now of the Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, Mass.

The one predominating feature of his lecture was its fairness. He (Judge Ewing) did not stoop to censure adherents to established creeds or criticise the doctrines of the old churches, but by convincing argument sought to show the modern conception of God believed by students of the Science of Christianity. He spoke for about an hour and a half and held the close attention of every man and woman in the audience.—*Daily Tribune.*

### At Joliet, Ill.

A large audience comprising some of Joliet's best known citizens, gathered at the theatre last night (Friday, April 13) to hear Judge William G. Ewing, ex-judge of the Superior Court of Chicago, and now a member of the Christian Science Board of Lectureship. The address was listened to with the closest attention. It was a scholarly effort by an earnest, plain-spoken man. Judge Olin introduced the speaker as follows:—

*Ladies and Gentlemen:*—In recent times a religious movement, known as Christian Science has been inaugurated. It has been inaugurated and is being advanced by persons of high standing in the world of thought and of acknowledged worth. As I understand it, they claim that its teachings are in harmony with those of the Great Teacher—the divine Nazarene—and that if these teachings are reduced to practice, the result will be that those who adhere to them will be better—better as physical, intellectual, and moral beings—and thus the world will be made better and happier.

Certainly this is a consummation most devoutly to be wished, and so far as my observation and acquaintance extend, I may say the disciples of this movement are among the best of the people and as nearly as I can judge are among the happiest of them.

I suppose, however, that many of us, in common with the people in general, are not very clearly informed in respect to these teachings, and have seldom, if ever, had the opportunity to listen to the presentation or discussion of them. But I am advised that such opportunity is afforded on the present occasion, through a prominent speaker upon, and an earnest advocate of, this movement, whose fame has preceded him, and whom we are glad to hear. I have now, ladies and gentlemen, the honor to present to you this advocate, a distinguished member of the Illinois bar, Judge Ewing of Chicago, who will address you on the subject of Christian Science.

Judge Ewing was given a cordial welcome as he stepped forward.—*Joliet News.*

### At Port Richmond, N. Y.

On the evening of Monday last (April 9) a lecture on Christian Science was delivered in Masonic Hall, Port Richmond, before a very select and appreciative audience, numbering about three hundred persons, including visitors from Brooklyn, Manhattan, New Jersey, and other places, who followed with intense interest the elucidation of the principles embraced in the doctrines of Christian Scientists.

The Rev. E. T. Derr of New York City, formerly a Baptist clergyman, but now an enthusiastic Christian Scientist, presided, and in his opening remarks said that it was not until a year after Christian Science had been brought directly to his notice that he began honestly to investigate it, and that he was led up to that point through the healing, by Christian Science treatment, of his wife, who had been a sufferer from organic disease for seven years, and whom a dozen skilful and eminent physicians had failed to cure. He pleaded with the audience to lay aside prejudice and to withhold judgment until they had heard and pondered all the evidence upon which the platform of Truth stands.

The lecturer of the evening, Mr. Carol Norton, C.S.D., was then introduced, and proceeded to give a clear and logical exposition of the subject, "Christian Science—Universal Christianity."

The delivery of the lecture occupied one hour and fifteen minutes, and it was very creditable to the speaker as well as to the audience that the discourse throughout was listened to with the closest attention and most absorbing interest.—*Richmond County Advance.*

Digitized by Google

### At Fresno, Cal.

A large and appreciative audience assembled at the Barton Opera House, last Sunday, April 8, to listen to a lecture on Christian Science, given by Dr. F. J. Fluno of Oakland, whose subject was "Claims of Christian Science on the Modern World."

The lecturer was introduced by Mrs. A. J. Hodge, First Reader of the church, in the following words:—

*Friends:*—We are here to-day to hear of the new, yet old, religion—the same that was taught by our blessed Master, on the Judæan hills and on the shores of the Galilean Sea nineteen centuries ago. Yea, it is even more remote than that, for it extends back to the Genesis of our Bible.

Surely there is nothing which the world stands more in need of to-day than a religion which heals its sick as well as its sinful, and brings peace on earth and good-will among men.

We have with us to-day one who is abundantly able to speak to us on this subject, having had many years experience therein.

I now have the pleasure of introducing to you Dr. F. J. Fluno of Oakland, California.—*Correspondence.*

### At Montrose, Col.

The lecture last Sunday afternoon (April 1), by Judge Joseph R. Clarkson of Omaha, was, as had been promised, an intellectual treat. The Opera House was well filled by an appreciative audience, many people coming in from the surrounding country to hear, and all were well pleased.

The Judge is an able and entertaining speaker, and held the closest attention of the audience from the opening to the close of the lecture, lasting an hour and a half. The talk was scholarly and logical throughout, and showed the gentleman to be deeply in earnest and perfectly master of his theme. His subject was "Christian Science, the Kingdom of Heaven at Hand." The address was a straightforward statement of the fundamental principles of Christian Science, and must have set at rest in the minds of his hearers the vague impressions that it was something un-Christian. Many of the stock objections so often urged against it were shown to be absolutely without foundation.

Such a lecture cannot fail to have an elevating, uplifting influence upon all who hear, and its effect will be felt in this community.—*Montrose Enterprise.*

### At Ottawa, Ill.

Judge William G. Ewing, who for a great many years has been indentified with the Chicago bar but of late has entered the lecture field, talked for nearly an hour and a half at the Opera House last night (Thursday, April 12) on the subject of Christian Science. He came under the auspices of the local church. The Judge is a fine speaker. His conversion from Presbyterianism to the doctrines of the new faith dates from a severe illness a number of years ago, from which he claims he was completely restored to health by Christian Science. In his arguments he is careful to leave no open points of attack. He says he has no quarrel with the churches, nor with the medical profession, having contributed to the latter quite as largely as any one. However one may differ from Judge Ewing, no one can deny he is a plain and lucid speaker, well worth hearing.

*Ottawa Journal.*

### At Chicago, Ill.

Mrs. Annie M. Knott of Detroit addressed an audience of two thousand people last evening (Tuesday, April 17) at First Church of Christ, Scientist, 4015 Drexel Boulevard, on Christian Science. Mrs. Knott is a member of the Board of Lectureship of the Mother Church of Christian Science, and is regarded as one of the strongest speakers among the representatives of the Board. This is the first lecture she has ever delivered in Chicago, but she has visited the city as a worker a number of times and spoke at the dedication of First Church of Christ, Scientist, on Drexel Boulevard two years ago. Mrs. Knott has a great many friends among the twelve hundred members of the congregation, and her address last evening had the close attention of the vast audience for over two hours.

*Chicago Times-Herald.*

### At Kansas City, Mo.

Notwithstanding the fact that the clouds were lowering and fugitive drops of rain were dotting the pavements, the edifice of First Church of Christ, Scientist, at Ninth Street and Forest Avenue, was packed to the doors yesterday afternoon (Sunday, April 15) at three o'clock when Judge Joseph R. Clarkson of Omaha began his address on Christian Science. There were fully seventeen hundred people in the handsome auditorium, and all listened to the address with the closest attention. Judge Clarkson was formerly an eminent attorney and a law partner of Senator John M. Thurston at Omaha.

Judge Clarkson was introduced by John H. Wheeler, First Reader of the church.—*Kansas City Times.*

### At Cincinnati, O.

A scholarly lecture was delivered yesterday (Sunday, April 15) at the Auditorium by Edward A. Kimball, C.S.D., of Chicago. Mr. Kimball is a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. His address was on the subject of Christian Science, and that doctrine was ably defended by the distinguished speaker. Mr. Kimball was introduced by Mr. J. A. Scarlett, who commended the lecturer to the audience as a man of broad views and keen understanding.

The lecture was listened to with a great deal of interest by a large and appreciative audience.

*Cincinnati Enquirer.*

## A Word of Appreciation.

Concord, N. H., April 25, 1900.

*Editor Sentinel:*—Let me express my thanks for the admirable editorial on "The Prisons," from last week's *Sentinel.* I have placed copies in the hands of our Governor and Secretary of State.—IRVING C. TOMLINSON.

## Railroad Fares.

APPLICATION has been made to the railroads for reduced rates to attend the Annual Meeting of The First Church of Christ, Scientist, in Boston, Mass.

### Take Love for Your Physician.

Love is the grand remedy for all the ills of the mind. It is the great solvent for anger, hatred, jealousy, and all the bitter animosities. If properly understood and applied, it would cure every sin-sick soul in existence.

If you have been trying to put out the fires of hatred by adding more hatred; if you have been meeting anger with more anger, change your prescription. Take Love's balm for all that blights happiness or breeds discontent. You will find it a sovereign panacea for malice, revenge, and all the brutal propensities. As cruelty melts before kindness, so the evil passions meet their antidote in sweet charity.

*Success.*

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Take Notice.

My attention has just been called to a proof of a photograph of mine sent out by William H. Pierce & Co., Boston, which they claim is the best extant of me to-day. This photo is merely a fac-simile of a photograph taken by an artist in Concord about ten years ago, which I condemned, and I have refused to sit for a photograph since that date.

MARY BAKER EDDY.

### Church By-law.

BRANCH CHURCHES.—SECT. 3. The three largest branch churches in each of the United States, and in Canada, and Great Britain, are requested to appoint annually a Publication Committee to serve under its church by-laws, for the state in which it is located. This church is not necessarily confined to its own members in selecting this committee, but if preferred, can appoint a Publication Committee conveniently adapted therefor, who is in good fellowship with another Church of Christ, Scientist. This Committee shall consist of males only, and shall be appointed by the First and Second Readers of the church employing him. This By-law, adopted in April, 1900, will take effect at their next annual election, commencing with the Church of Christ, Scientist, in each state having the largest membership.

This By-law applies to all states except Massachusetts, in which the Publication Committee is elected only by the Mother Church.

### The Power of the West.

A SHORT time since we received a letter from Mr. Edgar S. Bradley of Omaha, thanking us for publishing extracts from one of a series of letters he has written to the *Boston Herald*, of which he is the special correspondent for that part of the West. These extracts, it will be remembered, related to the power of the West, especially in its future political, social, agricultural, and commercial aspects.

We were glad to publish so valuable a contribution from so able a pen as Mr. Bradley's, not only for the information given, but because of the necessity for awakening the people of the East to the rapidly increasing magnitude of the great West. It is high time such an awakening should take place. A more thoughtful study, by the people of the East, of the almost limitless possibilities of the vast region of country lying between the Mississippi River and the Pacific Ocean, will bring with it a revelation even more wonderful than that which followed the discovery of the American continent by Columbus; especially that part west of the Missouri River, which only of recent years has been, to any extent, developed.

This region of country is a vast empire, embracing within itself every needed element of material prosperity. Its agricultural resources, brought to their highest development, would furnish a net product almost equal to the world's present demands. Its mineral wealth of gold, silver, lead, copper, coal, petroleum, natural gas, iron, etc., is only just becoming known. The discoveries and output thus far are but suggestions of the vast treasure-vaults yet undiscovered. Its horticultural possibilities are astonishing even the oldest experimenters. Its grazing—cattle and sheep raising—facilities are vast beyond the conception of those unfamiliar therewith. A large part of this great region is arid, and can only be reclaimed to cultivation by means of irrigation, and this is being done, thereby adding, with annually increasing rapidity, to the settlement and population of a region which, in the past, has been believed to be uninhabitable.

In this connection a short extract from the "Personal Recollections of General Nelson A. Miles"—a most valuable book—is of interest. On pages 546, *et seq.*, speaking of a section of California he says:—

"Within the memory of most readers it was a hopeless desert, with an oasis here and there around which all there was of the Spanish civilization had clustered. American ingenuity, tempted by a climate which has, perhaps, no parallel in the world, found new sources of water. The highest resources of modern engineering science were applied, and mechanical skill of the first order was brought to bear. Artesian wells were sunk where the existence of water beneath the surface had never before been suspected, and flowing wells, which surprise the eye and seem miraculous, water hundreds of the richest acres of the world. Tunnels have been bored into the mountains. Ditches were lined with cement to prevent the seepage which had wasted half the water in all old systems. Miles of piping have been laid. Mountain springs have been found and their waters carried long distances at vast expense. The results are now known to all the world as something marvelous in an age of marvels. The work has not yet come to an end, and the time may come when hardly an arable acre in all that wonderful region will be unwatered and idle.

"This is but an instance, though perhaps the foremost one, of the practical results of modern irrigation. Yet systems even still more colossal have been made, used, and have passed away, upon American soil. The most extensive of these remains are found in Arizona, a region then and now almost the heart of aridness, and yet one that was once occupied by choice by the unknown people of an unknown time, who lived and toiled in those valleys, which have not since their time been occupied, and which have long since reverted to the primeval desert."

". . . The question of irrigation in the United States has in recent years become a topic of absorbing interest. The public lands which are arable and lie in the humid and sub-humid regions are practically all now occupied, and the process of spreading out and occupying has had its first check. Yet the soil of the arid region is very rich. There is every inducement to settlement if there were only a certainty of even a half supply of water. So recently has the emergency confronted us that no action has as yet been taken by the general government beyond the appointment of a commission to investigate general facts and establish boundaries, whose final report has never been acted upon. The various states and territories have locally interested themselves. The instances of successful irrigation in southern California have been mentioned, and exist elsewhere in localities far apart over a wide area. But they may be said truly hardly to affect the general situation, which is one of great magnitude and vast importance. These beginnings have led to investigation and imitation, and the following are some of the facts that now appear:—

"According to the census of 1890 Colorado had under irrigation 4,068,409 acres, or about 6,337 square miles, Arizona had 65,821 acres; New Mexico, 91,745 acres; Wyoming, 229,676 acres; Montana, 350,582 acres. Cali-

Digitized by Google

fornia exceeds the largest of these figures, and there is a still smaller acreage in Idaho, Washington, and Oregon. It will be seen how small a proportion of the area of these regions is at this date under the dominion of the plow."

These interesting data furnish a rough hint of the future of the area under consideration, and dimly prophesy of the inevitable course of empire in that direction.

But we cannot dwell upon this subject. It is well worth the serious study of people everywhere, and especially of New England, many of whose citizens, strange as it may seem, are much more familiar with England and the continent of Europe, than with the section of their own country here considered.

Mr. Bradley, then, in his valuable articles, is doing a good educational work along political lines.

Is there not a great educational work to be done along religious lines? What of the future of Christianity in the great West? In almost every part of the settled country west of the Missouri River Christian Science has found its way, and we daily hear of the increasing interest and rapid spread of this practical religion throughout these newer regions. Here alone is a vast world to be conquered, and as the demands increase they must, and will, be fairly met. Meantime let the earnest disciples on these new Galilean shores, continue to sow, patiently awaiting the mighty crop that will surely be reaped in the coming harvest time. East, west, north, and south—everywhere—will the Heaven-sustained workers in the Lord's illimitable vineyard, sooner or later, receive the "Well done, thou good and faithful servant, . . . enter into the joy of thy Lord."

## Among the Churches.

### Church Dedicated at Atchison, Kan.

The *Atchison Champion* published a full account of the recent dedication of First Church of Christ, Scientist, in that city. We make the following extracts as space will not permit us to publish the account in full.

The anniversary and dedicatory services of the Christian Science Church in Atchison were held Easter Sunday, and the services were both largely attended and very interesting. Over five hundred invitations were issued to prominent Scientists in other cities. It was the fifth anniversary of the establishment of the church in this city, and the church building being free from debt, it was dedicated with appropriate services. The building has been renovated throughout, and presented a very attractive appearance on Sunday. Cut flowers, Easter lilies, and palms were gracefully arranged about the pulpit. On one side of the pulpit, in gilt lettering are the words, "I am the Way, the Truth, and the Life: no man cometh unto the Father but by Me."—JESUS. On the other side, "Divine Love always has met, and always will meet, every human need."—MARY BAKER EDDY. Above were the words, "God is Love."

After the regular services had been concluded, Mr. Robert Reid, the Second Reader, read a clear and concise history of the Christian Science movement in Atchison. It was in part as follows:—

Before taking up the history of this church proper, it might be well to go back to the time when interest in the work was first manifested in this city.

In June, 1894, a lady of this city, who for years had been a great sufferer from a very serious complaint, who had been treated by several eminent physicians, and had about exhausted all material remedies in her efforts to regain her health, went to Kansas City for the purpose of attending to some business. While in one of the business houses there, she was telling about her condition, how much she suffered, and how she had tried almost every kind of remedy without receiving any permanent relief, when a Christian Scientist present asked her if she had ever tried Christian Science. She said she had not, but if it would do her any good she would be very glad to try it. The Scientist assured her it would, and offered to conduct her to a Scientist if she wished to try it, to which she consented. She was taken to the home of a Christian Scientist, where she made arrangements to take treatment. She remained in Kansas City about two weeks under treatment, when she returned home greatly benefited, and a few weeks later was perfectly healed. This was the first seed of Truth sown in Atchison, which has multiplied many fold and ripened into the present church organization. So wonderful was this lady's healing that it soon became known throughout our city, and others became interested. The field seemed to be ripe for the Truth. There were many remarkable cases of healing and a liberal demand for the literature.

The first class of students to receive instructions, was organized March 6, 1895, and consisted of seven members. Since that date four other classes have been instructed with a membership of thirty-eight, making a total of forty-five who have received class instruction. .

The first church service was held April 7, 1895, in the Ingalls Building. On April 9, 1895, an application for a charter for a church organization was duly signed by seven persons and presented to the secretary of state at Topeka.

Meetings were continued in the Ingalls Building until March, 1896, when the room was no longer large enough to accommodate the regular attendants, and larger quarters were necessary. Rooms were procured and fitted up on the second floor of the building at the southeast corner of Fourth and Commercial Streets, formerly occupied by the Y. M. C. A. Society, then disbanded. The expense of repairing and furnishing these rooms was about four hundred dollars, and not a cent in the treasury. It seemed a large undertaking for so small a body; but all interested seemed to realize that the good of the cause must come first in all our considerations, and the result was that at the annual meeting of the church, held April, 1897, the statement of the clerk showed all bills paid and a small balance on hand. Our church membership at that time had increased to about forty. Meetings were held in the Y. M. C. A. rooms from April 1, 1896, to July 3, 1897.

About this time it was learned that this church building, then owned by the St. Paul German Methodist Society, was for rent, the congregation being unable to meet the necessary expenses of the organization. Some of our members looked at it with a view to renting, and while in conversation with one of the trustees, he advised them that the building was for sale. A meeting of our church was called the next day, June 30, 1897, to consider the question of either renting or buying the church. At that meeting it was decided to buy the building, and the trustees, by a unanimous vote, were authorized to offer three thousand dollars for the property. That same evening the entire amount was pledged by our members, one thousand dollars being at once available to make a cash payment. Our trustees met the trustees of the German M. E. Church the following day, and offered them three thousand dollars for the church and parsonage; but before the deal was finally consummated, an additional one hundred dollars was asked to meet some necessary expenses in making the transfer, making a total of thirty-one hundred dollars, which was promptly accepted.

In addition to keeping up the current expenses of the church, this entire indebtedness has been cancelled, and to-day, the fifth anniversary, of our organization, we dedicate this church to the cause of Christ, free from debt.

There has been collected for all purposes since the date

Digitized by Google

of organization, $7,272.10. We now have a total enrolled membership of fifty-seven, all good, active, earnest, and loyal Christian Scientists.

To those who are not members and who have rendered valuable assistance we take this occasion to acknowledge our appreciation of their kindness and return them our heartfelt thanks for their moral influence and financial support.

Our little church stands to-day as one touched with the spirit of Truth, clothed as with a new vesture, having been cleansed and purified within and without.

At the close of Mr. Reid's address, Mrs. Helen S. Pennel, who officiated as First Reader, read in a clear, impressive manner, the dedicatory address, which was in part as follows:—

*Brothers, Sisters, Friends:*—We meet this Easter morning to dedicate to God, this First Church of Christ, Scientist, Atchison, Kan. We can say with Solomon of old, when he dedicated God's house, "Blessed be the Lord, that hath given rest unto his people Israel, according to all that he promised: there hath not failed one word of all his good promise, which he promised by the hand of Moses his servant. The Lord our God be with us, as he was with our fathers: let him not leave us, nor forsake us: that he may incline our hearts unto him, to walk in all his ways, and to keep his commandments, and his statutes, and his judgments, which he commanded our fathers. And let these my words, wherewith I have made supplication before the Lord, be nigh unto the Lord our God day and night, that he maintain the cause of his servant, and the cause of his people Israel, at all times, as the matter shall require: that all the people of the earth may know that the Lord is God, and that there is none else."

To our dear Mother in Israel, the Rev. Mary Baker G. Eddy, we owe unlimited gratitude and love for rediscovering the old but new Truth which is leading us out of bondage into light and liberty. She has said in "Miscellaneous Writings," page 224, that "we should go forth into life with the smallest expectations, but with the largest patience; with a keen relish for and appreciation of everything beautiful, great, and good; but with a temper so genial, that the friction of the world shall not wear upon our sensibilities; with an equanimity so settled, that no passing breath or accidental disturbance shall agitate or ruffle it; with a charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it."

This has been demonstrated in all our efforts to dedicate this house to-day, free from debt. Our fellow students from Kansas City have not only been with us in spirit, but have generously and lovingly aided us with their material substance.

"Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ: for the accuser of our brethren is cast down, which accused them before our God day and night." When the church militant rises to the church triumphant, then will the words of St. John, the revelator, be fulfilled, "And I saw no temple therein: for the Lord God Almighty and the Lamb are the temple of it. And the city had no need of the sun, neither of the moon, to shine in it: for the glory of God did lighten it, and the Lamb is the light thereof."

---

### Opening Services at Sheldon, Ia.

The services at the Christian Science Church Sunday (April 8) partook somewhat of a dedicatory nature, as it was the occasion of their first occupancy of their new rooms over the Union Bank. These rooms have been renovated till they present a very attractive appearance. Palms, blooming plants, and cut flowers added to the general cheerfulness of the place. The morning services consisted of the usual devotional exercises and the usual lesson, composed of Bible texts and corroborating passages from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, which is the text-book of the denomination.

At the close of the service Mrs. Starrett gave the following address, welcoming the friends and defining the object of the society's change of location.

*My Friends:*—We have asked you to gather with us here to-day in order that you may, by your presence, interest, and approval, aid us in making a forward movement in the history of Christian Science in Sheldon, marked for the work by a broadened basis and extended operations, and for the workers by increased labor, higher aspirations, and, we hope, greater achievements. The work here is not new, as man counts time, though as we compare our life in Christian Science to that which preceded it, and measure the attained by the attainable, we feel as though the door had but just opened which admitted us to the new world.

Nine years ago this summer the nucleus of these present meetings was formed by a little company, now somewhat dispersed, who gathered at the home of Frank E. Wade for church services. A year and a half later a room over Mr. Bassett's store was secured and services held there until the summer of 1893, since which time the room in the Empire Block has been our church home. But the demand both from within our own consciousness and from those who stand at the front and wisely direct our work has been for better facilities and more vigorous operations in establishing and propagating the Principle with which we have identified our lives and endeavors. To this end we have secured these present apartments, which afford us the desired conditions.

In numbers our church has increased from thirteen members to twenty-one, but as some of these are now nonresidents our working force is not greatly in excess of the original. Such, in brief, is the outward course of Christian Science in our midst. But its real history lies in its inward course through our lives and character, and of that what tongue or pen can tell?

To those who journey with us in this new-old way there is no need, for heart meets heart in common experience of effort, trial, joy, and triumph, but to those to whom this path is still untrod we wish to give our witness of the transforming and translating power of this Word, spoken since the foundation of the world, but sounding anew to this age and condition of man, as Christian Science, transforming as it builds us into the stature of the man Christ Jesus, translating as it brings the "new heavens and new earth," where God dwells with man, into present experience.

It is with no antagonism to existing forms of religion and medicine, with no desire for proselyting or self-aggrandizement, with no desire to force our views on an unwilling consciousness, but with a very strong desire to love our brother as ourselves, and bring into the lives of those reaching out for better things the knowledge and opportunity which has so enriched our own, that we bring these thoughts to your attention.

That you may know briefly and accurately just what this implies, I will give you the words of the one best authorized to speak, our God-appointed leader and guide, Mary Baker Eddy. In her book, "Retrospection and Introspection," she says:—

"I claim for healing scientifically the following advantages. (1) It does away with all material medicines, and recognizes the antidote for all sickness, as well as sin, in the immortal Mind; and mortal mind as the source of all the ills which befall mortals. (2) It is more effectual than drugs, and cures when they fail, or only relieve, thus prov-

Digitized by Google

ing the superiority of metaphysics over physics. (3) A person healed by Christian Science is not only healed of his disease, but he is advanced morally and spiritually. The mortal body being but the objective state of the mortal mind, this mind must be renovated to improve the body."

It is a part of our plan to establish in these apartments a reading room, which shall contain an abundance of the pure and authentic literature of the subject, and there will be always in attendance one who is qualified by study and experience both to aid the inquiring thought and bring to consciousness the health which is the inalienable heritage of the child of God.

I am frequently asked, "Is there any one here who heals?" and I want to say plainly and emphatically, yes; all Christian Scientists heal, for not otherwise can they assure themselves of an understanding of the Principle they profess.

And so, my friends, in moving into these larger and more centrally located rooms, and placing before the people of Sheldon the opportunity to possess the knowledge and benefits of Christian Science, we are but scattering abroad the gifts with which divine Love has graced our own lives; and that both giver and seeker may be reciprocally blest is our deepest prayer.—*Semi-Weekly Mail.*

---

On the above occasion the *Sheldon Daily Sun* had the following to say editorially:—

There are many things we do not know, and some things we do know, among them, that to be a Christian Scientist one must have a mind divested of all evil, and practise the Golden Rule. A Christian Scientist believes in healing the sick as they were cured in the time of Christ. We often hear it said, and the general opinion seems to be, that Christian Scientists do not believe there is pain and sickness. This is not true. The Discoverer of Christian Science and the author of "Science and Health with Key to the Scriptures," the Reverend Mary Baker G. Eddy, does not teach that there is not pain and sickness to the human consciousness. When the Scientists claim that they can, through or by the divine Mind, heal disease, disease is pre-supposed. But we are not sufficiently informed upon the subject of Christian Science to discuss it intelligently, yet we do know for ourself, that there is a power in the Principle taught by them to make one better, and any doctrine that will do this is at least worthy of candid and serious investigation.

---

### Christian Scientists Organize at Helena, Mont.

The Christian Scientists of Helena, who for some time past have been holding services in the Power Block, met Monday evening and organized First Church of Christ, Scientist, of Helena, with twenty-five members present. They adopted a constitution and by-laws, the preamble of which is as follows:—

"We, being loyal students of Christian Science, deeming it necessary to our continued spiritual growth, and desiring to express our love and gratitude to our beloved Leader, Rev. Mary Baker Eddy, Founder and Discoverer of Christian Science, do organize and establish First Church of Christ, Scientist, for the purpose of maintaining and spreading the doctrines of Christian Science, as contained in the text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy."

The organization elected officers as follows: T. R. Hinsdale, First Reader; Frances C. Hinsdale, Second Reader; Frank B. Norris, Treasurer; Mrs. Laura Wommelsdorf, Clerk; Mrs. Grace S. Esler, Sunday-School Superintendent; Mrs. June Ide, Organist. The seven trustees elected consisted of the above-named officers, with the addition of C. H. Anderson.

*Daily Independent.*

### Impressions of Mr. Kimball's Lecture.

EDWARD A. KIMBALL'S lecture in Boston was plainly the product of many hard lessons well learned, and it was therefore admirably adapted for the instruction of others, especially those who are striving to improve their understanding of Christian Science. Not the least value of his lecture was that it showed forth the native attractiveness of Truth, free from any attempt at adornment or persuasion.

Pleading with men to believe as we do, is a kind of mental mendicancy. It suggests doubt as to the worthiness of our beliefs when we lack the faith in those beliefs to let them rest on their merits. Mr. Kimball proved his confidence in the power of the Truth he presented, and he manifested exceeding good taste in its presentment, by courteously refraining from everything like personal exhortation. He let it be seen by his attitude that, in his estimation, the Truth he preached was too great to need any help that man could give by begging favor in its behalf. All that he could possibly say in so short a time to clear away the mists of misunderstanding was said. Having done this much he was content.

Untempered zeal may tempt one to disregard the intellectual rights and privileges of another, urging him to employ persuasion bordering on violence in order to destroy erroneous beliefs. But the Christian, seasoned by good works and therefore invincibly fixed in the faith that finally every knee shall bend before the Truth, is in no haste. He respects the right of every man to his own opinions, even if they be wrong or possibly dangerous, and does not seek to forcibly wrest them from his possession. The calm Christian Scientist declares what is true and leaves the Truth to do its work.

Mr. Kimball stood with his hearers on the broad ground of the universal human need of salvation from the present ills of baffled hope, uncertainty, discord, sickness, sin, sorrow, and death. That such a need is universally felt, was recognized when stated, as a self-evident fact, therefore speaker and audience were in easy accord.

Concerning the fear of a future hell he said:—

"It would seem that instead of wondering whether they are going to hell or not, people would much better address themselves to the endeavor to get out. Go to humanity and witness its tears, sorrow, and broken hearts; its strife, woe, sin, disease, and death. Listen to its ceaseless wail of anguish and its pitiful appeal for deliverance, and you will find that it is enduring a hell upon earth. Now the question of vital concern to us is, Can we get out?"

Mr. Kimball then proceeded to tell about the promise of deliverance which Christian Science makes and the fulfilment thereof. He told in a straightforward, convincing manner about some of the results of this method of healing that he had known, referring to his own case as follows:—

"I represent just the difference between a live man and a dead man because of the discovery of Christian Science.

"I am on this platform to-night instead of lying in a grave in Chicago only because of Mrs. Eddy's enduring faithfulness in making these things possible.

"As one among a million beneficiaries of this endeavor, I should be less than man if I did not blend my voice with the others who are with sensible gratitude acknowledging the splendid ministry of Mrs. Eddy and the consummate good which that ministry has entailed upon this generation."

During the entire lecture, Mr. Kimball never strayed away from his hearers, but always tethered his arguments to solid, self-evident facts or every-day experiences, common to the knowledge of all. He found a way to get at the kernel of every question without bothering very long with the husk. He made it perfectly clear that Christian Science is the acme of common sense. H. D. N.

### What Christian Science did for Me.

BY CLARA DWIGHT.

ON the eighth of April, 1895, I was in a condition bordering almost upon despair. I had tried many doctors and many remedies, including baths, electricity, and numerous other things, and still, like the woman in the Bible "was nothing bettered, but rather grew worse." Naturally I had lost faith in all material remedies, and the outlook was dark. I had no friend who was able to care for me, but on the contrary they needed me. Especially was this the case with my mother. I dared not look to the future, but tried to trust Him whom I was trying to serve, and feel that all was well; having at the same time, however, a consciousness that I did not receive all the help and strength from my religion that I ought.

At this time the dear Lord himself, without my seeking it, or might I rather say, in answer to my prayer for help, sent to me one of his disciples who believed that the power Jesus the Christ conferred upon his followers to do the works that he did, was not confined to those who believed in him when he walked the earth, but that it belonged to all who believe.

At that time I had so little faith that anything could heal me, that I refused to see her, but this thought was overruled, and in twenty minutes' conversation with her, I began to feel a new life unfolding itself to my consciousness.

Later in the day, when we continued the conversation, I felt sure a path was opening before me through which I might walk to Life and Light. What a joyous time this was. I could not sleep I was so happy, this new Life of which I had had a glimpse revealed so many delightful possibilities. Even then I did not expect to be healed immediately; but as I look back upon this experience I think the healing was almost instantaneous, my strength and courage came to me so quickly. I was able to see and talk with my friends and all were astonished at the great change in me.

From that time I have never had a desire to use any material means for the preservation of health, knowing that divine Love can always be depended upon. Divine Love can heal without drugs. I longed to have all who were in any trouble apply to the same source and be healed, and bitter was my disappointment when I found those to whom Jesus might say, as when on the earth, "Ye *will* not come to me, that ye might have Life."

I felt the joy of freedom such as those only know who have been captives to the claims of the flesh. I realized as I had never before the Truth of these words, "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

John, the beloved disciple, who was supposed to live in closer communion with Jesus than any other person, said: "For this purpose the Son of God was manifested, that he might destroy the works of the devil," but I had never realized the meaning of those words before.

With the study of the text-book, "Science and Health with Key to the Scriptures," in connection with the Bible, many things became clearer to me: the doctrine of the Trinity; Jesus' miracles, and many other things, so that the Bible has since been like a new book to me.

During these years I have enjoyed almost uninterrupted health, and have been able to take up many things which I had previously given up on account of ill health. I believe that God is omnipotent and that God is Love; so what is there for us to do except give ourselves up unreservedly to Him, believing that He will then give us *all things*.

### Working in Harmony.

BY C. J. R.

WHILE the prosperity of Christian Science to-day depends mainly on individual demonstration, nevertheless, there are yet demonstrations to be made collectively in church work whereby the cause may be advanced more rapidly. The object to be attained is to have all act in concert; all move with one accord in the highest possible concept of Truth, towards the desired end.

To do this, we sign certain tenets, the constitution, and by-laws, thereby agreeing to abide by them until they are changed, as future decisions may direct. By signing them we give our consent to be so governed in church matters, all just government being obtained by the consent of the governed. We therefore to a degree relinquish our rights as individuals for the advantage to be gained by acting as a body; even as a soldier swears to obey his superior officer. If then a question arises and we find ourselves on the side of the minority it would be our moral duty to help the majority to success in their endeavors, even as we would expect them to help us were we on the side of the majority and they with the minority. Such surrendering of our concept of action must be made in order to act as a unit, which is the thing desired.

A plan of action having been adopted in a council of war, all the officers must support it, even though some were against the plan. If they did not they would undoubtedly be courtmartialed. Acting as a unit they will probably win. Acting separately through jealousy, etc., has caused many defeats.

I do not say for you to give up your concept of right and wrong—far from it, but to abide by the rules you have helped make till they are legally changed, and support whatever power those laws give the officers you elect. As long as individuals are imperfect, government will be more or less so, but we desire the best we can gain under the circumstances.

The concept of Truth entertained by individual members ranges from the lowest to the highest that any member has obtained. According to the concept of one a certain course seems best, to another it does not. So these different concepts account for the disagreements as to the best church policy. Some, seeing absolute Truth, think it best for the whole body. This is not necessarily so any more than it is best for all to go without food, because Jesus fasted forty days. There is a saying that the pace of a cavalry troop is that of the slowest horse in it. So we should be careful that we do not attempt to go so fast that the slower ones are separated for the benefit of the enemy. We get the greatest momentum by all acting together. Many young students, naturally grateful for the Truth that has been shown them, try to force their views on others, by ill-advised words and acts, thereby doing more harm than good. We must remember that

> The soul of music slumbers in the shell
> Till waked and kindled by the Master's spell;
> So human hearts, touch them but rightly, pour
> A thousand melodies unheard before.

### The Power of Prayer.

BY ISABEL R. SCOTT.

RECENTLY, after struggling all day against a physical trouble, and seeming only the more wearied because of the lack of demonstration, I became aware that the need was not so much relief from physical suffering as it was freedom from material consciousness, and a clearer understanding of Love.

Turning to God in earnest prayer for divine Love to guide me in all my ways and deliver me from temptation,

Digitized by Google

consciousness was filled with peace and light and I was instantaneously healed.

The sense of deliverance from the physical suffering was insignificant compared to the consciousness of the *power* of *prayer* to demonstrate man's unity with God.

As this mental attitude of prayer becomes habitual, we are lifted above the sense of sin and disease, into harmony and health: uncertainty, fear, pain, discouragement, give place to the certainty that God does "in very deed dwell with men on the earth," and governs all. And so there comes to us the knowledge that we, each one, in reality stand absolutely alone with God in a communion most wonderfully satisfying, and in which we learn *how* to love our neighbor as ourself.

Our Leader says, in "Miscellaneous Writings" p. 307, "Every human thought must turn instinctively to the divine Mind as its sole centre and Intelligence. Until this be done, man will never be found harmonious and immortal."

This loving relation between God and man, as Father and child, has been the highest ideal of the centuries, and how to make this ideal a practical factor in our every-day experiences is made clear to us in our text-book, "Science and Health with Key to the Scriptures."

## The Church.

BY S.

IN "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 574, church is defined as "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle."

Our mental conception of the church triumphant enables us to build the material structure, and the higher our conception of the perfect church, the more perfect our church militant will be.

We all desire a beautiful material structure, but if in the desire and working for this, our spiritual conception becomes blurred or lost, what will the result be?—a house built on the sand. Love and Love alone builds the true church. In this building of Love is found a refuge from all evils. Purity is its foundation, the rock on which it stands.

Our mental conception of the true church may be compared to Solomon's temple hewn from forests and fashioned from quarries, and all brought together without sound of hammer or iron. Each individual did his work patiently, obediently, and when finished, it was a perfect whole.

We each have our work to do. The work is unselfish and in the building every block, when placed in position, will be an answered prayer for the world.

Our pathway will not be strewn with roses, but our work will be for time and eternity, and the reward, "Well done, thou good and faithful servant: . . . enter thou into the joy of thy lord."

## The Open Door.

BY VIOLET GIBSON.

HONESTY opens the door to Truth. If we are dishonest, and not wishing to see things as they are and resenting when other people endeavor to present them in their true light, we shall not make much progress in uncovering the lie which is trying to deceive us, and keep us from realizing the Truth of Being, which frees us from all forms of error. Our thoughts and deeds must bear criticism, or else they are unsound. Let all unsoundness go. We want the Truth and nothing but the Truth, therefore we are only too glad if an unsound (untrue) thought or deed is uncovered. A *true* thought or deed is substantial, and can stand any amount of knocking about,—criticism, comment, and misunderstanding.

# Testimonies.

### Organic and Hereditary Troubles Healed.

Although I had numerous inherited troubles, yet the tender care of a loving home so alleviated them that the childhood ills are almost forgotten. But when early left to earn a livelihood the difficulties were so increased that work and sickness alternated at short intervals for several years.

Allopathy, homœopathy, surgery, hygiene, mind-cure, etc., were unavailing. Will-power had become exhausted, and the last two years were spent at health-resorts and sanitariums.

I went to Denver in winter, hoping to be freed from malarial fevers, but the old symptoms of nervous prostration increased. The residents said that while the high altitude was a curative for fevers, yet it engendered nervous diseases. Weighing carefully the two verdicts, I decided that the malaria was easier to endure than the many ills of nervous prostration, and returned home.

Still wandering about in search of relief, the next winter found me far east, requesting a physician to try hypnotism as a cure, little caring what would be the consequences if it failed, but he refused to take the chances.

Finally, when all hope of health or happiness was gone, Christian Science was suggested. It was new to us, and seemed mysterious; but my aunt, who did not believe that I would live through the trip, argued that it could do no harm and might give me strength enough to go home for the rest cure.

To please her who had been so kind, I went next day to the practitioner, who gave me a treatment, but said very little. The second day I asked what this method was. Her few words of explanation gave a clue as to how to work, and a clear idea of the radical difference between spiritual law and the material so-called laws.

The idea of two bases of law in cause and effect, one real, the other untrue, expressed itself in this verse from Romans, "To whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness."

In the days following, whenever tempted to yield to the control of pain or weakness, this verse came with such power as brought courage to stand on the side of true health.

A complication of stomach troubles with continual pain had for a long time reduced me to a diet of hot water and grain foods. Six days after the first treatment, my cousin gave a lunch-party, and I enjoyed partaking of all the foods and drinks, sat up and chatted with the visitors the whole afternoon, and nerves uttered no complaint.

During the two months' treatment, organic and hereditary troubles retreated one by one, some disappearing entirely, and a course of dentist work which had been postponed for sufficient endurance, was successfully accomplished.

At home, no one was more cordial in rejoicing over the change than the dear physician who had carried me through four operations, and was one of the first to whom I told the glad news.

While the sense of the resurrection morn was so consciously present, yet at the same time was the realization of the work in detail to be done by the mortal, and these nine years have been full of steady work, "here a little, there a little;" growing not only in true health and strength, but in true joy.

Christian Science is Life to me, and as I grow in the love of it I am more and more glad for the words in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 158, "Consecration to God lessens not man's dependence on Him, but heightens it."

J. W. B., San Francisco, Cal.

### A Grateful Acknowledgment.

Not long ago I was called to a little town in the southern part of Indiana to visit a lady who was suffering with nervous prostration. She received Christian Science treatment and was healed in about one week.

Soon after a little girl called and said Christian Science had been recommended to her mother, who was then in bed, and had been most of the time for over six years. I went with her and found as she had said. In bed was a very thin, pale woman wearing glasses, and a pair of crutches stood in one corner of the room. I gave a treatment and talked with her about two hours, answering questions about Christian Science. Then she arose and walked across the room without crutches seven times. After returning to Chicago I continued the treatment, and the following is an extract from the last letter I received from her.

Paoli, Ind., February 15, 1900.

*Dear Mrs. W.*:—I know that God is my Life, strength, source of supply, and all else that is Good. I know and can say many of the verses and prayers, also the Scientific Statement of Being from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. My daughter reads to me every day. I swept the floor and walked downstairs and back again without crutches, something I have not done for over six years. I never think about my glasses or crutches, and there is not money enough to hire me to take another dose of medicine. I am so glad you came to see me; if you had not I would not have known as much about God as I do now. I thank you a thousand times for leading me to the light. I now see that I have been in darkness all my life. I do not know as much as I wish to; but I am learning more and more every day about Christian Science and its wonderful works. My neighbors are all pleased because I am getting along so nicely.

Such is the power of divine Love as revealed to us in Science and Health by Mary B. G. Eddy.

In *whatever form* error presents itself we *know* we have an effectual remedy, as there is but One Power and that divine Love.—N. S. W., Chicago, Ill.

---

### Thanks to our Helpers.

I cannot refrain from giving expression to the many benefits derived from our reliable reading matter the *Journal* and *Sentinel,* with their many helpful and encouraging thoughts. At times, when struggling to overcome some error, we find just what we want, as an article seems to apply to us we are enlightened and our need is supplied. We hardly realize how much we receive through our weekly and monthly messengers. I feel very grateful to the co-workers in the Field for the many helpful thoughts I have received.

I shall mention two articles in particular which were of special interest to me. One in the *Sentinel* of March 8—a lecture at Tufts College by Mr. Tomlinson, which seemed especially good, as it was so clear and practical; the other in the *Sentinel* of March 22—an illustration of the thistle which showed we could not accept Truth partly, and in a half-hearted manner, and expect to demonstrate it, but must grasp it boldly and firmly in order to break error's attempted stings. To see this has been much help to me.

A short time ago my little girl, five years old, in handling a pair of button-hole scissors, ran them in her eye, making a small gash on the eyeball just below the sight. In two or three days there was not a trace of it, owing to the power of Truth manifested by the understanding of Christian Science.—Mrs. J. F. L., Blue Island, Ill.

### Healed of Many Ills.

When "Science and Health with Key to the Scriptures" was placed in my hands, life seemed to be, what it really is, a mere existence—an enigma to be solved at some future day. I was not unhappy, discontented, nor a physical sufferer. I had a good home and a good husband, but there were ever these questions in mind: What is life? What are we here for? Why have we no proof of what God is? Why this aimless waiting? Waiting for what? Oh, to know what God is and our relation to Him.

Little did I dream that these questions could ever be answered this side the grave. When I learned that a book had been written thirty years before answering them all, and giving a Principle to be applied and demonstrated in our daily lives, my joy was full; but this was not all the glad messenger had in store for me. Physical healing was taking place: astigmatism of the eyes was healed, glasses were laid aside, catarrh and grip had to yield their sceptre. Then the dust-covered Bible came out from its hiding to give up its once hidden treasures of love and peace and joy. My heart o'erflows with gratitude to the Mother in Israel for all the good that has ever come into my life, and that is still in store as each new step is demonstrated and a higher altitude reached.

Mrs. Mary Brinkerhoff, Kansas City, Mo.

---

### A Puzzling Question Answered.

Before gaining the understanding of the Scriptures which our text-book, "Science and Health with Key to the Scriptures," gives, I often wondered at the many contradictory passages the Bible seemed to contain. Among the most puzzling was that David continually besought God to destroy his enemies, while Jesus said, "Love your enemies."

Christian Science has made clear to me that the enemies which David wished destroyed were not corporeal personalities, but false claims of error which he knew God could destroy. Our Leader tells us in "Miscellaneous Writings," p. 8, "Simply count your enemy to be that which defiles, defaces, and dethrones the Christ-image that you should reflect." Jesus commands us to love those who do not manifest love toward us, knowing that by holding them in the thought of Love, we may be able to help them to overcome error and see them manifesting love to us in return. How thankful we should be to God for revealing to us, through our dear Mother, the way to love our enemies, which, in the old thought, seemed impossible, and how gratefully our thoughts turn to her who is daily exemplifying in thought and deed, this great command of our Master, "Love your enemies."

May Davis, Biltmore, N. C.

---

### Thankful for all the Publications.

I take pleasure in offering my song of praise for *all* the dear publications that come to us in this time of need, bringing indeed peace and comfort to our homes here in this western prairie country. A few of us have met at our home for more than two years, holding Christian Science services as best we can. With the love offerings we have purchased a copy of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, also "Miscellaneous Writings," and a number of pamphlets, to loan, as well as seven Christian Science Hymnals for our meetings. We shall endeavor to go on in this joyful work and follow our Master who spoke to *whosoever will,* to preach the Gospel by healing the sick and restoring the sinner. This is possible to all since the Bible is being made plain through the study of our text-book, Science and Health. Its perusal in connection with the Bible is our daily food, nourishing the life hid with Christ in God.

Maggie Hauck, May City, Ia.

## Religious Items.

Much has been published in the daily newspapers recently regarding the desire of prominent Presbyterians to have the creed of their denomination changed with a view to dropping the clauses relating to "infant damnation," and "predestination," on the ground that they are not generally believed by Presbyterians of this age.

The discussion of this question started with the criticism of the "Confession of Faith," by Rev. Dr. Hillis, an ordained Presbyterian clergyman, who is pastor of Plymouth Church, Brooklyn, a Congregationalist body. He was called to account by the Chicago Presbytery, of which he was a member, and promptly resigned his membership in the Presbytery. Following this incident the Presbytery of Nassau, N. Y., and the Presbytery of Utica, N. Y., are said to have addressed a petition to the General Assembly—the highest legislative body of the denomination in the United States—asking it to "formulate a short and simple creed that would unite and not divide." The presbytery of Boston, Mass., at its meeting on April 18, also passed a resolution instructing its delegates to the General Assembly to request that body "to appoint a committee to undertake the work of restating the confession of faith of the Presbyterian Church in the United States in the language of to-day.

Dr. W. C. Gray, editor of the *Interior*, a Presbyterian paper of Chicago, is also reported to be an advocate of creed revision. He is quoted on the subject as follows: "Speaking of the subject, Dr. Gray said that the churches in Scotland relieved themselves of objectionable statements in the confession by adopting a supplementary and an explanatory statement, which thus became their working creed. The Presbyterian Church of England set the confession aside and formulated a new, brief code, which is now the doctrinal symbol of the Church."

Rev. Dr. Charles Parkhurst, the celebrated New York clergyman, preached on the subject of creed revision Sunday, April 15, and is reported to have said: "If we are thorough Presbyterians and believe what our doctrinal prospectus advertises us as believing, we believe it probable that some of the children in your homes, little children, perhaps the babe of your bosom, is damned, already damned, damned before it was born, damned from everlasting to everlasting, and then you are invited to come into church and say 'Our Father.' It is true that nobody preaches it, and equally true, I doubt not, that nobody believes it, nevertheless it is printed on the flag beneath which the Presbyterian army is marching, and it hurts us as a denomination."

Rev. Dr. Robert F. Sample, who is moderator of the General Assembly, holds that the creed does not need revision, but says: "There are no representatives of the Presbyterian Church who do not themselves, intimately and sincerely, believe in the salvation of infants dying in infancy."

E. H. Chapin, the great Universalist divine, in an address on "The True Source of Reform," once said: "The great element of reform is not born of human wisdom; it does not draw its life from human organizations. I find it only in Christianity. 'Thy kingdom come'—there is a sublime and pregnant burden in this prayer. It is the aspiration of every soul that goes forth in the spirit of reform. For what is the significance of this prayer? It is a petition that all holy influences would penetrate and subdue and dwell in the heart of man until he shall think and speak and do good from the very necessity of his being. So would the institutions of error and wrong crumble and pass away. So would sin die out from the earth: and, the human soul living in harmony with the divine will, this earth would become like heaven."

Rev. J. Mervin Hull says in the (Baptist) *Watchman:* "All are seeking for happiness, but many fail to find it. Some fail because they seek for happiness for its own sake, and not as an attribute of true living. It is a golden butterfly that turns to yellow paper when it is caught. Some fail because they have a wrong, a perverted idea of what happiness is: wealth, pleasure, fame, success, as the true objects of life. The old verdict of the great pleasure-seeker is true of all these: 'Vanity of vanities, all is vanity.'"

The *International Evangel* quotes a statement of Charles Spurgeon concerning the power of God to raise the dead, from which we take the following: "Grant a God, and no difficulties remain. Grant that God is, and that he is omnipotent: grant that he has said the dead shall be raised, and belief is no longer hard, but inevitable. Impossibility and incredulity—both vanish in the presence of God. . . . We rejoice in the opportunity to believe great things concerning a great God."

In an editorial on "Miracles," the (Episcopal) *Church Standard* says: "When our Lord healed the sick by a word, or a touch, it was the *restoration* of law, not the *abolition* of it. The laws of health—we use that very expression—had been broken by 'the fraud and malice of the devil,' or by 'man's carnal will and frailness,' and he vindicated and restored them."

The following is from a letter written by Max Nordau which the (Unitarian) *Christian Register* publishes: "If the Jews up to this time have not publicly rendered homage to the sublime moral beauty of the figure of Jesus, it is because they have always been persecuted, tortured, and put to death in his name."

General John Eaton, for seven years president of the American Society of Religious Education, has resigned that office, and Justice John M. Harlan of the United States Supreme Court has been elected to succeed him.

In the *Congregationalist's* department "Closet and Altar" is found the following quotation from William Seeker: "If the life of Christ is not your pattern, the death of Christ will never be your pardon."

Efforts are being again made to arouse the interest of Biblical scholars and antiquarians in an effort to discover by excavations the birthplace of Abraham and Sarah.

The Liberal Congress of Religion assembled in Boston April 24th to continue in session until the 29th.

Virtue consists not simply in the absence of vices, but in the overcoming of them.

*Coleridge.*

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

The Christian Science Publishing Society does not receive money for church dues, or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Judge Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The April *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice also is given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets can be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass. are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4⅛ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

## Items of Interest.

### Political Events.

The bill providing for the establishment of a complete form of government for the Hawaiian Islands was signed by President McKinley on April 30. The law provides for a governor and other executive officers, a legislature of two branches, and a judiciary consisting of a Supreme Court, Circuit Court, and inferior courts. The law also provides that Hawaii shall be represented in Congress by a delegate, chosen by the people. The tariff laws of the United States are to be extended over the Territory of Hawaii. Sanford B. Dole, who has been President of the Hawaiian Republic since the monarchy was overthrown, is to be the first governor.

The Post Office Department now sells the two-cent denomination of postage stamps in small bound books of twelve, twenty-four, and forty-eight stamps each. They are sold at an advance of one cent on the stamp value of each book to cover the cost of manufacture. The pages are of six stamps each, interleaved with paraffine paper to prevent premature adhesion, making a book of convenient size to carry in the pocket or pocketbook.

A substitute for the pending Nicaraguan canal bill has been introduced. It authorizes the President to acquire in behalf of the United States the control of such territory as may be necessary and desirable for the construction of a canal between some point in the Caribbean Sea and the Pacific Ocean.

Admiral Dewey was entertained by the city of Chicago on May 1, the anniversary of the Battle of Manila Bay, as the hero of that event. The admiral received a hearty welcome. Continuing his trip westward to St. Louis he was received with great enthusiasm wherever his train stopped.

The House of Representatives, on April 30, voted to recommit the joint resolution providing for a constitutional amendment prohibiting polygamy, to the Judiciary Committee without instructions. This, it is thought, shelves the measure for this session.

**A political organization calling itself the United Christian party held a national convention at Rock Island, Ill., last week and nominated Rev. S. C. Swallow of Harrisburg, Pa., for President, and John G. Wooley of Chicago for Vice-President.**

**The United States has made a sharp demand upon the Sultan of Turkey for immediate payment of the ninety thousand dollars due American missionaries for loss of property resulting from the Armenian outrages.**

Friends of ex-President Cleveland are advocating making an attempt to secure his nomination for president at the National Democratic convention.

Charles H. Allen, ex-assistant secretary of the navy, was inaugurated governor of Porto Rico on May 1.

The gold money of the United States on May 3 amounted to $1,043,525,117.

### Foreign News.

The Boer peace delegates, who left Rotterdam for the United States May 3, made a statement of their objects just before sailing in which they said: "Briefly, the objects of our visit to the United States is to appeal to the government and people in order to seek the re-establishment of peace. We have, thus far, only visited Holland, because the people are of our race and we wish to see the resolutions adopted at the Peace Conference applied in our case. We have reasons to believe that we shall not lack support here if an occasion favorable to the re-establishment of peace arises."

Neither side in the South African war has inflicted very serious loss on the other recently, although there has been considerable fighting east of Bloemfontein, where the British are trying to force the Boers to retire northward. The Boers have clung to their positions with much tenacity, as by so doing they have been able to delay the general movement on Pretoria. The Boers have superiority of position and transport to match the superior numbers of the British.

The North German Lloyd Steamship Company has placed an order for a mammoth ship to run between New York and European ports. It will be 752 feet long, will have forty-five thousand horse power, and is expected to have an average speed of from 24 to 25 knots an hour, so that the time from Queenstown to New York, which is now a little over five days and seven hours, will be reduced to four days and twenty-one hours.

A petition has been presented to Governor General Wood of Cuba, asking him to issue a decree making illegal the use of such terms as "mulatto," "colored," etc., in police warrants, official documents, etc. The petition says: "The continuance of the use of offensive descriptive epithets only tends to perpetuate the barrier between the black and the white."

British subjects in the Yukon gold district have petitioned the Dominion Parliament for representation on the ground that the population of twenty-two thousand and the annual revenue of $2,000,000 collected in the district warrant the concession. They ask for the privilege of sending two members at present to the House of Commons.

The new criminal code for the Philippines will become operative on May 15. The privileges of the writ of habeas corpus will be vested in individuals. Under the old Spanish law they were granted, but the matter was left to the discretion of the judge. In this way there was a loophole for abuses of rights.

The Ontario Court of Appeals has handed down a judgment in the case of the Michigan lumbermen engaged in operations in Ontario, against the judgment of the court below, upholding the act of the Legislature requiring the sawing in Canada of all logs cut from Ontario crown lands.

General Funston has discovered a warehouse near Cabanatuan, Philippine Islands, in the province of New Egija, containing all the archives of the Malolos government, Aguinaldo's correspondence up to the time of his flight, and much valuable historical matter.

There are 2,473 newspapers published in the British Isles; 521 of them in London, the others provincial. The magazines number 1,685, and the reviews 684. London has 15 illustrated papers at present, the war giving these a great circulation.

A London special to the *Philadelphia Press* says that Dr. Theodore Herzel, originator of the scheme to establish a Jewish State in Palestine, is now in London perfecting the details of his great movement.

**Replying to a question in the British House of Commons recently, the financial secretary to the treasury, Mr. R. Whanbury, said the cost of the South African war up to March 31 was $116,250,000.**

**Queen Victoria has decorated General Sir George White, the defender of Ladysmith, with the Cross and Star of the Royal Victorian order.**

**The Nicaraguan Government has cancelled the concession to the Maritime Canal Company to construct a ship canal across Nicaragua.**

**The Colombian government has extended by six years the time for the completion of the Panama canal.**

### Industry and Commerce.

It is reported that James J. Hill, president of the Great Northern Railroad Company, recently made the statement that in less than twenty-four months he would be transporting freight from Buffalo, N. Y., to Hong Kong, China, for less money than is now required to carry the same freight from St. Paul to the Pacific coast. "And what is more," Mr. Hill is alleged to have said, "I shall have no competition. I shall have the largest steamships in the world on the Pacific, the largest steamships ever operated on the Great Lakes, and the largest cars ever built."

Papers were filed at Trenton, N. J., May 3, by the American Bridge Company—the so-called bridge trust,—for an increase of its capitalization to $70,000,000, half preferred stock and half common. The new company takes over twenty-four of the principal bridge concerns of the United States, comprising, so it is said, 85 or 90 per cent of the entire business of the country.

Twenty-five thousand men employed by the Standard Oil Company all over the country have had their wages raised ten per cent. It is officially stated that the increase affects laborers, firemen, lightermen, watchmen, stillmen, packers, tin box makers, coopers, and pipemen.

During the first week of May several important labor troubles were settled, including the Granite Cutters' strike of New England, and the New York Central Car Repairers' strike at Buffalo.

### General News.

The Victoria Cross is only awarded to officers and men who have performed some signal act of valor or devotion to their country in the presence of an enemy. It carries with it a special pension of $50 a year, and should the holder do some deed which, if he had not already won the cross, would have gained it, another bar is attached to the ribbon by which the cross is suspended. This bar carries an additional $25 a year pension.

**Recent reports as to the difficulties of laying a submarine cable from the United States to the Philippines tell of stretches of ocean bottom on which a railroad could be laid for five hundred miles without grading.**

**Mrs. Richard P. Bland is collecting data of the boyhood and early days of her husband, which will be included in a biographical volume.**

**It is predicted that some time next year a person will be able to speak from the Atlantic seaboard to Pacific coast towns by telephone.**

## Long Lost Letters Found.

### Letters between Christ and King Agrippa.

NEW YORK, May 2.—The *Journal* and *Advertiser* prints to-day a special cable from Rome which says that two letters, one from King Agrippa to Christ, the other from our Saviour to the king in reply, letters referred to by Eusebius in the fourth century, have been rediscovered after being lost for 903 years. The letter from King Agrippa to Christ reads:—

"I have heard of Thee and the cures wrought by Thee without herb or medicine, for it is reported that Thou restoreth sight to the blind and maketh the lame to walk, cleanseth the leper, raiseth the dead, casteth out devils and unclean spirits, and healeth those that are tormented of diseases of a long continuance. Hearing all this of Thee, I was fully persuaded that Thou art the very God come down from heaven to do such miracles, or that Thou art the son of God and performeth them. Wherefor I have sent thee a few lines entreating Thee to come hither and cure my diseases. Besides, hearing that the Jews murmur against Thee and continue to do Thee mischief, I invite Thee to my city, which is but a little one, but is beautiful and sufficient to entertain us both."

Christ's reply to the above reads: "Blessed art thou for believing me when thou hast not seen, for it is written of me that they that have seen me shall not believe, and they that have not seen me shall believe and be saved. But concerning the matter thou hast written about, this is to acquaint thee that all things for which I was sent hither must be fulfilled, and that I shall be taken up and returned to Him that sent me. But after my ascension I will send one of my disciples that shall cure thee of thy distemper and give life to all them that are with thee."

The *Journal and Advertiser* says: "The special cable from Rome purports to prove the truth of a tradition that is almost as ancient as Christianity. Of course the *Journal* cannot vouch for the truth of the statements which were made yesterday, April 30, by Professor Bohrmann of the Vienna University to the Archæological Congress in Rome, but they are of intense interest."

The cable message continues: "Professor Bohrmann announced that these letters had been discovered carved in stone over the gateway of the old Palace of the Kings of Ephesus, and that they were undoubtedly the letters referred to by Eusebius and other early writers, according to whom they were written in Syro-Chaldaic characters and originally discovered under a stone, eighty-four miles from the city of Iconium in the year 97, and then lost. Fragments purporting to be of the original were declared spurious by Pope Leo III. Professor Bohrmann says this discovery proves that such letters were written and supplies the full text."

The Ephesus inscription is in Doric Greek. The first letter is signed by Abgarus, who is the Agrippa of the Biblical text. The tradition referred to is that told by Eusebius to the effect that Abgar XV. (Abgar meaning king), surnamed Ucome, "the Black," who reigned at Edessa (Ephesus) from 18 to 50 A.D., wrote to Christ asking him to take up his abode with him and relieve him of an incurable disease. Christ promised to send him one of his disciples after his ascension, and accordingly St. Thomas sent St. Thaddeus. Cedrenus supplements the story as follows: Ananias, the bearer of Abgar's letter to Christ, was also a painter, and tried to draw a picture of the Saviour, but was so dazzled by the splendor of his countenance that he could not.

A special from Rome is also printed in which Professor George Robert Milne Murray, fellow of the Royal Society and of the Linnæan Society, keeper of the department of botany and natural history in the British Museum, lecturer at St. George's Hospital and naturalist of the solar eclipse expedition to the West Indies in 1886, is quoted as saying that the inscription was undoubtedly genuine. Professor Murray had been shown a fac-simile.

### Christian Science.

#### The Bible Teaching Concerning the Power of God to Heal the Sick.

To the Editor of the *People and Patriot*:—

In a recent issue of your paper it is stated that "Mrs. Eddy and Judge Ewing say that if believers in Christian Science drink any deadly thing it will not harm them," and it is further declared that Mrs. Eddy says "she tried it by taking some large doses of morphine and found that the drug had no effect on her." It is then proposed that Christian Scientists test their healing religion by publicly taking large doses of poison.

Regarding the statement concerning Mrs. Eddy, her exact words will furnish a complete explanation. They are to be found on page 248 of her last well-known work, "Miscellaneous Writings," and are as follows:—

"Many years ago my regular physician prescribed morphine, which I took, when he could do no more for me. Afterwards, the glorious revelations of Christian Science saved me from that necessity and made me well, since which time I have not taken drugs, with the following exception: When the mental malpractice of poisoning people was first undertaken by a mesmerist, to test that malpractice I experimented by taking some large doses of morphine, to see if Christian Science could not obviate its effect; and I say with tearful thanks, 'The drug had no effect upon me whatever.' The hour has struck, 'If they drink any deadly thing, it shall not hurt them.'"

Because of the Christian Scientist's faith that "God is a very present help in time of need," the newspaper writer would have him put it to a public test. This reminds one of a very similar proposal made to the founder of Christian-

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

ity. He taught the Bible doctrine about God that "He shall give his angels charge concerning thee: and in their hands they shall bear thee up." According to the record in the fourth chapter of Matthew this teaching of Jesus was doubted by some and the proposal of a critic for "a severe test" is thus recorded: "Then the devil taketh him up into the holy city, and setteth him on a pinnacle of the temple, and saith unto him, If thou be the Son of God, cast thyself down." Jesus said unto him, "Thou shalt not tempt the Lord thy God." Or as the Greek original reads: "Thou shalt not put to the test the Lord thy God." His Master is a sufficient example to the Christian Scientist. The power of God is not to be used for a spectacle. God is man's helper, but at the demand of the incredulous He does not lend himself for experimental purposes.

It has without doubt already occurred to the careful reader that the implied charge in the article that Christian Scientists cannot protect themselves from the effects of poison is in reality an imputation against Christianity itself. Christ Jesus distinctly said that his followers should have power over poison. As recorded in the tenth chapter and nineteenth verse of St. Luke's gospel he said to his followers: "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you."

Christian Scientists believe that the Saviour meant every word that he said. It will not do to say that the great physician meant those words only for his twelve disciples. He meant that this healing power should belong to all followers, in all time, as is shown by his farewell words to his friends as given in the last chapter of St. Mark. Said he: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Those who are familiar with Bible history will remember that Jesus herein was proposing nothing new or novel in religion. The Bible has many accounts of healing without any other means than the power of God. The Psalmist spoke of the Creator as one "Who healeth all thy diseases."

Of the Master it was said, "He healed all manner of diseases." All the sick who came to him were cured through his prayers to Almighty God. And he plainly said of every true disciple, "The works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." When he ordained his disciples to the ministry he plainly said, Go preach and heal. There are many who believe that the first of these commands is binding. There are others who believe that both commands are binding. If it is right to obey Christ by preaching, is it not also right to obey Christ by healing? If he is a worthy disciple who obeys one-half the command of the Master, is not he also worthy who obeys the whole of the command?

As far back as the time of Moses, thirty-five hundred years ago, God was known as the healer of the people, for we read, "And the people murmured against Moses, saying, What shall we drink? And he cried unto the Lord; and the Lord shewed him a tree, which, when he had cast into the waters, the waters were made sweet: there he made for them a statute and an ordinance, and there he proved them, and said, If thou wilt diligently hearken to the voice of the Lord thy God, and wilt do that which is right in his sight, and wilt give ear to his commandments, and keep all his statutes, I will put none of these diseases upon thee, which I have brought upon the Egyptians: for I am the Lord that healeth thee."

If to the obedient Israelite fifteen hundred years before Christ, God could say, "I am the Lord that healeth thee;" why to the obedient Christian nineteen hundred years after Christ may He not also say, "I am the Lord that healeth thee"? If the power of God was the cure of disease fifteen hundred years before Christ Jesus lived and taught, why may not this power of God deliver people to-day?

The religion of healing which was preached by the founder of Christianity was early practised by his church. Said James, "Is any sick among you? let him call for the elders of the church, . . . and the prayer of faith shall save the sick."

It was the blessed privilege of those disciples who had walked and talked with Jesus to obey the whole of his command in preaching the gospel and healing the sick.

But not only did those who were near Jesus fulfil his expectations in healing disease, but those also who never saw him, were likewise obedient. Paul, who never looked upon the gentle face of the loving Master, healed the sick and raised the dying. Read the interesting account of his healing work on the island of Melita, as given in the twenty-eighth chapter of Acts.

Is it not clearly evident, then, that he who denies the power of God to heal is doing more than assail Christian Science. He is in fact making an attack upon the truth of the Bible and is seeking to discredit the words and works of Jesus and of his obedient disciples.

REV. IRVING C. TOMLINSON, C.S.B.
*People and Patriot.*

## Mrs. Eddy, Christian Scientist.

"THE Founder of Christian Science" is the title of an interesting and timely article in the November number of the *New England Magazine*, by Henrietta H. Williams.

The Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, author of the denominational text-book, "Science and Health with Key to the Scriptures," and the acknowledged spiritual adviser of a very large and growing body of intelligent Christian men and women, is a woman whose history is intensely interesting to thoughtful people of all shades of opinion. In a little more than a quarter of a century this gifted woman has established a church with thriving branches all over the world and converted to her ideas of practical Christianity hundreds of thousands of people.

This excellent article reveals the Leader of the Christian Science movement in a way that is new to most readers, for we see her in the friendly setting of her New England home among the hills of New Hampshire, where she was born and reared, and where she still loves to dwell in the busy retirement of "Pleasant View," in the suburbs of Concord.

Mrs. Williams has evidently been faithful in gleaning the facts in regard to the life of Mrs. Eddy, for she relates some incidents never before published, of the home life and training of the now famous woman, which show how her experience prepared her for the work she has accomplished. The article is illustrated with twenty-five half-tone engravings, which add greatly to its value as history. Some of the scenes of Mrs. Eddy's childhood are particularly interesting to students of Christian Science. During the era of church building begun by the Christian Scientists five or six years ago, they have erected many beautiful edifices in the leading cities of the country. A few of the more costly of these are represented in the illustrations. They suggest the enduring character of the religion which Mrs. Eddy founded.

*The Pacific Commercial Advertiser*, Honolulu, Hawaiian Islands.

## Cures by Christian Science.

*To the Editor of the Sun.*

*Sir:*—I see by the *Sun* of a recent date that William A. Purrington, Esq., delivered an address in your city, in

Digitized by Google

which he made the remark, among others, that Christian Scientists were not able to, or did not, furnish any proof of any cases of so-called organic diseases they had cured. If Mr. Purrington is still looking for facts I will gladly help him by giving him the names and addresses of persons who have been cured by Christian Science of cancer, consumption, neuromas, tumors (sarcomatous and tuberculated). I am an old physician of over twenty years' practice, and feel that I know a cancer from a boil, and am able to distinguish the difference between a case of consumption and a case of hysteria.

I myself was cured by Christian Science after suffering for twenty-two years, undergoing seven surgical operations, and at last being given up by the best surgeons in New York. In this city is a gentleman, prominent in insurance circles, who had a cancer on his face, who was operated on at the Roosevelt Hospital, and whose case was said to be incurable. He received Christian Science treatment and is now perfectly well, in fact, there is not even a scar on his face to show where the cancer was. A gentleman in a nearby town fell, striking his head on a stump in such a way as to injure a nerve centre. For years he suffered the most terrible pains in his face and head. He had the best medical and surgical treatments, but nothing that medical science could do helped him. He received Christian Science treatment and in a few weeks was cured, and has never had a return of the pain. I could fill a whole page of your valuable paper with cases I have personally known to be cured through Christian Science.

C. A. Q. NORTON.

Hartford, Conn., April 11.

*New York Sun.*

## A Lawyer's Testimony.

MRS. MARY SPARGO FRASER, the successful woman lawyer, told me yesterday that she was cured nine years ago of a severe attack of inflammatory rheumatism by the Christian Science treatment. "Do you think," I made bold to ask, "that Christian Science will mend mechanical troubles as well, such as broken bones?" "Certainly," said Mrs. Fraser. "I know of a case where a little boy had broken both arms and was cured by our treatment. A physician put his arms in splints, but the recovery was phenomenal. A little while ago, last fall, I believe, I sustained a fall and sprained my ankle. Everybody knows what a painful thing that is. Some people would rather have a fracture than a sprain, and in my case it was very severe. Well, Christian Science cured me. On the first day following the accident I rode my wheel down town. On the fourth day I rode thirty miles, and in a week I was walking as well as ever.—*Evening Plain Dealer,* Cleveland, O.

## A Little Lay Sermon.

Let it rest! Some proceeding has wounded us by its want of tact; let it rest; no one will think of it again.

A harsh or unjust sentence irritates us; let it rest; whoever may have given it will be pleased to see it is forgotten.

A painful scandal is about to estrange us from an old friend; let it rest, and thus preserve our charity and peace of mind.

A suspicious look is on the point of cooling our affection; let it rest, and our look of trust will restore confidence.

Fancy, we who are so careful to remove the briers from our pathway for fear they should wound, yet take pleasure in collecting and piercing our hearts with the thorns that meet us in our daily intercourse with one another, how childish and unreasonable we are!—*New York World.*

Learning is only so far valuable as it serves to enlarge and enlighten the bounds of conscience. G. ELIOT.

## The Lectures.

### At Glens Falls, N. Y.

The interest felt in Christian Science in this village, and, without doubt, a general element of curiosity on the part of many, were instrumental in assembling a large audience at the Empire Theatre last evening (Monday, April 23) when Carol Norton, C.S.D., of New York, lectured on "Christian Science—What It Is and What It Is Not." The lecture was given under the auspices of the local First Church of Christ, Scientist.

The lecturer, on invitation of the society, was introduced by Joseph A. Kellogg, who expressed for those present a desire to learn more of the movement which is so prominent in present-day topics.—*Glens Falls Times.*

The introductory speech of Attorney Kellogg was as follows:—

*Ladies and Gentlemen:*—Having been honored by the committee in charge with a request to introduce the speaker of the evening, I can best show my appreciation of that mark of confidence by abbreviating the preliminary remarks which custom prescribes as appropriate on such occasions.

The right of full and free liberty of religious belief is safeguarded by provisions of the organic law both of our nation and state, and is established as one of the fundamental principles of our system of citizenship.

The nation itself was founded and in its earlier history was largely populated, by those who, fleeing from the lands of oppression, sought a refuge where they might worship God according to the dictates of their own consciences.

As in all other lines of human investigation and research, there have been, during this century now closing, marked advances and changes in religious thought and belief.

Intolerance has given way in a large measure to liberality. Instead of attempting to force our own ideas upon our fellows by the aid of the rack and thumbscrew, or to punish them with the sword and the fagot for inability to accede to our views, we in general have come to concede to others their right to their own opinions.

Furthermore, notwithstanding the multiplicity of sects, there are still many who are reached by none of the long-established branches of the church, and are indifferent to the appeals of them all.

In these circumstances it is our duty to welcome all reasonable discussion of religious subjects by competent and educated men. For such a purpose we are gathered together this evening.

I do not know what Christian Science is, or what it is not, and can therefore neither commend nor condemn it. We do know, however, that it has attracted the support of many persons prominent in the business and professional world, and is accorded the patronage of many sincere, intelligent men and women, who claim to have derived much benefit therefrom.

This movement has reached such proportions that it should command our attention, and in justice to ourselves we should examine concerning it and be satisfied as to how much, if anything, it contains of good.

The speaker of the evening is especially endowed by nature, experience, and study to present this subject, and give to us much valuable food for thought in this direction.

It will be our pleasure to listen to his words, well knowing that "if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it.'

The subject of the evening is "Christian Science—What it is, What it is not," and the speaker whom it now gives me much pleasure to introduce, is Mr. Carol Norton.

*Correspondence.*

### At Lancaster, O.

Mr. Edward A. Kimball of Chicago, addressed a fair-sized audience last evening (Monday, April 16) at the Auditorium, on the subject of Christian Science, of which cause he is an ardent advocate. That many who were present were interested was manifested in the close attention given to the speaker.

The speaker was introduced by Mayor George S. Cunningham in a fair-minded way, bespeaking for Christian Science a hearing, and letting it stand or fall according to its own merits or demerits.—*Lancaster Daily Eagle.*

Mayor Cunningham's introductory address was as follows:—

*Ladies and Gentlemen:*—I am here to-night for the purpose of introducing to you a distinguished gentleman, who has laid aside his secular calling and is devoting his life to a cause which he believes will benefit humanity. As you all know, I am not a Christian Scientist, yet I disclaim any abiding convictions as to its merits or demerits. I am willing to grant to every man the right to believe as he will—the right to worship God according to the dictates of his own conscience.

This is an age of progress when men are seeking after the truth. Whatever may be our belief, the aspiration after truth should lead us to grant to others a respectful hearing and the right to the most full and free expression of their thoughts. The intellectual independence of the individual man is the glory of our republican institutions. Whoever has a message that will lead to a clearer understanding of man's responsibility to God and to his fellow-man is entitled to your consideration and to mine. We have had but one complete revelation of the truth—that from the lips of the meek and lowly Nazarene—yet it has gone thundering down the ages and is as unchangeable as time itself. Though the truth is mighty and unchangeable, yet our conception of it is as varied as the mind of man.

While it is ours to live in a world of limited vision, no man should be condemned unheard and no cause should be discarded until its advocates have had a full and fair hearing.

If there is no good in Christian Science it will run its course and pass away. It needs no persecution at your hands and none at mine.

You will, no doubt, all be pleased to listen to a distinguished advocate upon the subject of Christian Science, and it is my pleasure to introduce to you Mr. Edward A. Kimball.—*Correspondence.*

---

### At Elgin, Ill.

The Opera House held an interested audience last evening (Friday, April 27) to hear Judge William G. Ewing of Chicago give an able address explanatory of Christian Science. The speaker was introduced by Judge E. C. Lovell, who said:—

*Ladies and Gentlemen:*—It is the chief pride of our country and its institutions that we not only give to others but believe in exercising for ourselves the greatest freedom of private opinion. I have always regarded it as one of the crowning glories of the nineteenth century that there was assembled in Chicago several years ago in connection with our wonderful World's Columbian Exposition that convention of devout and sincere seekers after God and His truth, called the Parliament of Religions. One of the religions which was recognized in that Parliament was Christian Science. It was even then found to have such numbers of adherents that the management thought it fit and proper to give Christian Science a day for the presentation of its faith and claims to public attention. Those of you who were there know what crowds were present and with what interest that presentation was received by large numbers who listened intently to every word that was spoken in its behalf.

I am not a Christian Scientist myself, but in common with you all have been taught from childhood to regard with respect the religious beliefs of all who sincerely strive to discover the proper relation of man to the Creator and to his fellow-man.

When a new faith, or an old one in new guise or under a new name, is presented for our consideration, it is very gratifying to hear the reflections upon it of a man trained to the examination of facts and reasons, and who has for years been an experienced judge. Such a man is present with us this evening in the person of the eminent representative of Christian Science who is to address this audience, and I do not doubt that you, like myself, will listen with the most careful attention to his statement of the reasons for the faith that is in him.

It is with great pleasure that I introduce Judge William G. Ewing of Chicago, who will now address you.

*Elgin Daily News.*

---

### At Lima, O.

Judge William G. Ewing of Chicago, lectured at Faurots' Opera House last night (Tuesday, April 24) on Christian Science, its teachings, its beliefs, and its power as a purely religious organization. The distinguished jurist was greeted by a large and cultured audience, nearly every seat in the house being occupied when the venerable advocate of Mrs. Eddy's great religious reformation began an address which at once commanded the undivided attention of his hearers.

By way of introduction it might be said on behalf of Judge Ewing that he is a convert by special application of the Science which he teaches and so firmly believes in. He does not go into personalities and recite instances of the power to heal which the Scientists believe exists to-day as strongly as it did in the apostolic day, but it is well known that Judge Ewing's life history contains an instance when Christian Science brought about the cure of a disease which medical practitioners had declared to be beyond their power to relieve.

Judge Ewing did not announce a text, but if one were chosen from his lecture it would have been the early assertion: "We have no new Bible; no strange construction of the old one."

The conclusion of Judge Ewing's lecture was a flight of eloquence for which he showed strong capabilities from the very opening of his discourse. There was a ripple of applause at the end, but the audience refrained from any marked demonstration out of respect for the subject under consideration as well as for the venerable advocate of principles, as yet but imperfectly understood by the great majority of the religiously inclined.

*Lima Daily Times.*

---

### At LaGrange, Ill.

The lecture at the Rink last Sunday afternoon (April 15), on "Christian Science, the Religion of Jesus Christ," by Judge William G. Ewing of Chicago, called out one of LaGrange's most intelligent and cultured audiences, and perhaps the largest that has assembled in this suburb for some time past.

Professor E. G. Cooley, principal of the LaGrange high school, in introducing the distinguished lecturer, said Christian Science was a subject that appealed to the most thoughtful and earnest minds, because it held out what its adherents believed to be a higher conception of Truth and nobler ideals of life. He was unable to outline its position or describe its benefactions, being comparatively a stranger to its teachings; but he was pleased to state that there was present a man of eloquence and learning, eminent for his

Digitized by Google

services at the bar, on the bench, and in other fields of moral and intellectual combat, who was commissioned to speak authoritatively on behalf of Christian Science, and he felt sure that all would enjoy his exposition of the interesting and timely theme.

Judge Ewing stepped forward and was enthusiastically received.—*LaGrange Call.*

### At Logansport, Ind.

The eminent Illinois jurist, William G. Ewing, former judge of the Superior Court of that state, and now of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., lectured at Dolan's Opera House last night (Friday, April 20) on the doctrine of Christian Science. The audience which greeted Judge Ewing was large and made up of representative citizens of Logansport and other neighboring cities. There were many avowed Christian Scientists present, but the audience was chiefly made up of adherents of other faiths, who accepted Judge Ewing's lecture as a source of enlightenment. That the listeners were impressed by his lucid and dispassionate revelation of the doctrines of his church was evident by their attentive attitude.

The speaker was introduced by Quincy A. Myers, and as Judge Ewing stepped to the front of the stage the audience was strongly imbued with the idea that he is a man whose convictions have been worked out by impression rather than conceived by any passing idea of a fanciful turn.

*Logansport Daily Reporter.*

### At Indianapolis, Ind.

English's Opera House was well filled yesterday afternoon (Sunday, April 22) with people, who were there to hear William G. Ewing of Chicago, speak on the subject of Christian Science. His manner was impressive and he undoubtedly convinced every one in his audience of his sincere belief in the doctrine, if he did not convert them to his views. He started out by commenting on the old-time belief that what the father believed should also be the belief of the son.—*Indianapolis Journal.*

### Lectures at Other Places.

Monmouth, Ill.—William G. Ewing, Saturday, April 7.

## High Praise for Justice Hatch.

THE following complimentary notice of Justice Hatch from the *Sun* will be read with interest by Christian Scientists. Justice Hatch presided at the Academy of Music lecture last spring and introduced the Christian Science lecturer, Carol Norton, C.S.D.

The members of the bar assembled in the court room of the Appellate Division in Brooklyn yesterday to pay a tribute to Justice Edward W. Hatch, who has been transferred by Governor Roosevelt to the Appellate Division in Manhattan. Former Judge George G. Reynolds of the city Court referred to the many changes that had taken place since the establishment of the Appellate Division. Then addressing Justice Hatch he said:—

"Our presence here shows the warm regard we have for you. If, by any chance, we should stray into that gorgeous temple of justice on the other side of the river the feeling of strangeness and awe which we might experience will be assuaged when we recognize one with whom we have been long familiar among our more humble home surroundings."

This was responded to by Presiding Justice Goodrich, who said in part:—

"Four years ago Judge Hatch came from Buffalo to Brooklyn, practically unknown to our bench and bar. As every lawyer knows, the real work of an Appellate Judge begins when the work of counsel ends. Judge Hatch brought to the consultation room a clear idea of the opposing theories of the argument, and with patient analysis of records and reports verified his impressions. Without revealing judicial secrets, I may say that the irrefutable logic of his opinions has often removed the doubts of his associates and made justice apparent. While we may not commend his decisions in which we have participated, lest we seem to sound our own praises, we may declare that his opinions have given lustre to this court and added moral force to the authority of its judgments. We bear witness to his high character, to his shining ability, to his legal acumen, to the virility of his judgment, and to his unflagging industry."

Justice Hatch held a reception in the ante-room. The Appellate Division went into session, with Justice Almet F. Jenks seated on the left, he having been assigned to succeed Justice Hatch.

## Progress of Equal Suffrage.

SIXTY-FIVE years ago women could not vote anywhere. In 1838 Kentucky gave school suffrage to widows. In 1861 Kansas gave it to all women. In 1869 England gave municipal suffrage to single women and widows, and Wyoming gave full suffrage to all women. School suffrage was granted in 1875 by Michigan and Minnesota, in 1876 by Colorado, in 1878 by New Hampshire and Oregon, in 1879 by Massachusetts, in 1880 by New York and Vermont. In 1881 municipal suffrage was extended to the single women and widows of Scotland. Nebraska gave school suffrage in 1883 and Wisconsin in 1885. In 1886 school suffrage was given in Washington, and municipal suffrage to single women and widows in New Brunswick and Ontario. In 1887 municipal suffrage was extended to all women in Kansas, and school suffrage in North and South Dakota, Montana, Arizona, and New Jersey. In the same year, Montana gave tax-paying women the right to vote upon all questions submitted to the taxpayers. In 1889 municipal suffrage was extended to single women and widows in the province of Quebec. In 1891 school suffrage was granted in Illinois. In 1893 school suffrage was granted in Connecticut and full suffrage in Colorado and New Zealand. In 1894 school suffrage was granted in Ohio, a limited municipal suffrage in Iowa, and parish and district suffrage in England to women both married and single. In 1895 full suffrage was granted in South Australia to women both married and single. In 1896 full suffrage was granted in Utah and Idaho. In 1898 municipal and county suffrage were granted to the single women and widows of Ireland, the women of Minnesota were given the right to vote for library trustees, and Louisiana gave taxpaying women the right to vote upon all questions submitted to the taxpayers. In 1899 the Legislature of Oregon passed an amendment to grant full suffrage to women, by a vote of 48 to 6 in the House and 25 to 1 in the Senate.

The trend of civilization is clearly in the direction of equal rights for women. Hon. John D. Long calls the opposition "a slowly-melting glacier of bourbonism and prejudice." He adds: "I want to be on record as having melted out early, or rather as having never been frozen in."

*Woman's Journal.*

As the summer, with its silent warmth, avails more for harvest than can the winter, with its majesty of storm and wind, so the inspiration of love achieves what the inspiration of duty cannot.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Take Notice.

My attention has just been called to a proof of a photograph of mine sent out by William H. Pierce & Co., Boston, which they claim is the best extant of me to-day. This photo is merely a fac-simile of a photograph taken by an artist in Concord, N. H., about ten years ago, which I condemned, and I have refused to sit for a photograph since that date. The photographs sold by J. C. Derby & Co. are authorized by me. I have also consented to let Mr. Derby manufacture a Christian Science insignia.

M. B. Eddy.

### A Word in Defence.

The following card from Rev. Mary Baker G. Eddy appeared in the *Boston Herald* of May 5, 1900.

To the Editor of *The Herald*:—

I even hope that those who are kind enough to speak well of me may do so honestly, and not too earnestly, and this seldom, until mankind learn more of my meaning and can speak justly of my living. Mary Baker G. Eddy.

Pleasant View, Concord, N. H., May 4, 1900.

### Church By-law.

BY MARY BAKER G. EDDY.

Only the Christian Science Board of Directors and the First Reader of the Mother Church, shall be present at meetings for the examination of complaints against Church members. Only the Board of Directors and the First Reader shall confer or vote on cases of complaints and church discipline. A complaint against a member of the Mother Church, *if said member belongs to no other church,* shall be laid before this Board, and within thirty days thereafter, the clerk of the Church shall address a letter of inquiry to the member complained of, as to its validity.

If the previous Christian character of the accused member is good, his reply to the clerk contradicting the accusations, or his confession thereof and compliance with our Church Rules, shall be sufficient on behalf of said member for the Board to dismiss the subject, and the clerk of the Church shall immediately so inform him. Also, the complainant shall cease to speak ill of him, or be subject to discipline and dismissal from this Church. No cards shall be removed from our periodicals except by a majority vote of the Christian Science Board of Directors and First Reader, at a meeting of the Mother Church held for this purpose, or for the examination of complaints. No Church discipline shall ensue until the requirements, according to the Scripture in Article XXVI., Section 6, of our Manual, have been strictly obeyed.

A member of the Mother Church, and a member or the Reader of a Branch Church of Christ, Scientist, shall not send to the Mother Church a complaint against another member of a Branch Church. Each Church shall separately and independently discipline its own members,—if this sad necessity ever occurs.

### Righteous Judgment.

When friction occurs between two persons what is the first thought as to who is to blame for it? Are we amiss in saying that in ninety cases out of a hundred each thinks the blame rests wholly with the other? Are we amiss in saying that in almost the same ratio this is not only the first thought, but the last as well?

To the thinking person this is a startling fact. It is a fact that has cursed the ages. By reason of this fact nations have gone to war and brought upon themselves and inflicted upon each other the indescribable horrors, the dreadful slaughter, the awful carnage, the waste of treasure, and the long trains of sorrow, suffering, and woes that fill the volumes of the world's history; and the world's history is little more than a record of war and bloodshed.

Each nation thought it was right, and this, of course, placed the other in the attitude of being wrong.

What cycles of misery would the human race have been spared had each nation but conceded that there was right and wrong on both sides, and that there was a fair chance to give and take! Had the quality of self-delusion here considered been understood for what it really was, long ages ago the principle of arbitration of national disputes could have been successfully applied; and, as a result, long ages ago wars would have ceased.

Take the South African war as an illustration. The powers controlling in England are certain that England has the right on her side; this being so, to England's view, the South African Republics are all wrong. Therefore England sees no compromise ground and nothing to do but to fight it out.

On the other hand, the authorities of the South African Republics are equally certain that they are right and England wrong. Therefore they can consistently make no concessions and they have no recourse but to fight it out. Hence the terrible carnage, with its long trail of direful effects, goes on, and thousands of lives are being sacrificed and scores of hearts made to bleed, all because each contending party believes it impossible that there is a measure of right and wrong on both sides. What will the end be? A compromise, in spite of everything. It is inevitable. Even though one side may be victorious, there will have to be concessions; and these concessions could have been arrived at peaceably years ago, had it not been for that quality of mortal mind which sees itself to be all right and everything that seems to differ from it to be all wrong.

Nowhere, however, has this mental condition so conspicuously manifested itself as in the religious arena. Here it has found its fullest vent, and with what awful consequences it is not necessary here to recount. History tells us in pages of sombre hue.

Religious intolerance and sectarian bitterness is the legitimate child of the "I am right and you are wrong" element of the human mind. Every phase of self-righteousness has its root here. Every condition of unjust judging springs from this source. Neighbor quarrels with neighbor, friend with friend, brother with brother, parent with child, and child with parent, husband with wife, and sister with sister—all because of this mental quality.

How is it with Christian Scientists? Have we become so far awakened to this mental idiosyncrasy that we are able to act independently of it? Are we so alert to this peculiarity of the human or mortal mind that we can so act as to be sure we only are right and the neighbor or fellow-worker, who may not be able to see in all respects as we see, is wholly wrong? Is there no chance for us to give and take? Is there no happy mean for us? Can we find no compromise ground? We surely can, and we shall.

There is no power, or claim to power, that can say us nay. We *know* that we are not the servants of evil and cannot be made such. We know that we are under the

Digitized by Google

dominion of Good *only*. If we will have in us only the Christ Mind, no plague can come nigh our dwelling, and we can *be* and *remain* in the secret place of the most High and most Nigh God. Thus defended we are safe from (the belief) of foes within and without.

We must reach this standard *ourselves* ere we are competent to "judge" our neighbor; for until we do, the blinding beam of *self-rightness* is yet in our own eye, and we cannot see our brother with single-eyed rightness.

May God help us to judge righteous judgment in the name of the risen Christ.

## Special Railroad Rates.

WE are authorized to say that a reduction of one third of the railroad fare, on the certificate plan, has been secured for those desiring to attend the Communion Service and Annual Meeting of the Mother Church in Boston, on June 3rd and 5th next.

The following directions are to be strictly observed:—

First. Tickets at full fare for the journey to Boston may be secured within three days (exclusive of Sunday) prior to and during the first three days of the meeting. That is, tickets can be obtained not earlier than May 30, nor later than June 5. In purchasing tickets request a certificate. Do not ask for a receipt.

Second. Be at the railroad station for ticket and certificate at least thirty minutes before departure of train.

Third. Certificates are not kept at all stations. By inquiring at the station it can be ascertained whether certificates and through tickets can be obtained for Boston. If not, the agent will state at what station they can be obtained. A local ticket can be purchased to the station indicated, and there a certificate and through ticket procured.

Fourth. On arrival at Boston, the certificates must be presented to the agent of the railroad company in charge of transportation, at 95 Falmouth Street.

Fifth. It has been arranged that a special agent of the N. E. Passenger Association will be in attendance at 95 Falmouth Street, to validate certificates on June 3, 4, and 5. Unless certificates are thus validated the benefit of the reduction is lost on the home journey.

Sixth. When the certificates are duly validated they will be good up to June 8 for a continuous passage ticket, on the return, on the same route over which the trip was made to Boston, at one third the limited fare, as above stated.

Thus far authority has been secured only from the N. E. Passenger Association, but we are informed that there is probably no doubt that all the railroads will unite in this arrangement.

### More Food.

We trust the Field will not forget that our *Journal* and *Sentinel* have an insatiate maw, and are constantly crying for more food.

We especially need more articles suitable for the *Journal*, —such as can be written from the standpoint of experience and demonstration.

## Among the Churches.

### Opening Service at Topeka, Kan.

Sunday, April 29, witnessed an important event in the history of Christian Science in Topeka, Kan. The occasion was that of the opening service in the church building recently purchased by the Christian Scientists in that city. As space will not permit us to republish the detailed account of the service as given in the *Topeka Daily Capital*, we make the following extracts.

The opening on Sunday morning of the church building recently purchased by First Church of Christ, Scientist, corner Huntoon and Polk Streets, marked an epoch in the growth of Christian Science in this city. The church was beautifully decorated on the inside, the work having been designed by Mr. Joseph Twyman of Chicago. The colors are a blending of primrose yellow and ivory white, which brought out the thought of harmony and purity to a remarkable degree. The pulpit is a present to the church from the Sunday School, as was also the pulpit furniture. It was pure white, with the words carved on the front, "God is Love." The pulpit and steps leading to it were a perfect bower of palms and plants. This work was done by the ladies of the church, and was certainly beautiful to look upon.

On the west wall of the auditorium were the following quotations from Jesus: "He that believeth on me, the works that I do shall he do also." "All power is given unto me in heaven and in earth." Also on the north wall the following from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy: "Jesus' three days' work in the sepulchre set the seal of eternity on time. He proved Life to be deathless, and Love to be the master of hate."

The audience that listened to the services Sunday morning was one that completely filled the auditorium and lecture room. Mr. Willis D. McKinstry delivered an address of welcome to the new home, and Mrs. C. S. Whittaker followed with a statement covering the history of the growth of the church in this city.

Mr. McKinstry's address was in part as follows:—

We, the members and congregation of First Church of Christ, Scientist, come with glad hearts to our new place of worship.

To the visiting Scientists, we extend a glad welcome and are grateful for the love and good-will which brought you here to-day, that together we may rejoice in the growth of our beloved cause in this city.

Strangers, who have come to worship with us, we greet you as friends, and bid you welcome. Though we may differ in some respects in our religious beliefs, we have much in common. You believe in one supreme God and His Son, Jesus Christ; so do we. You are striving to be Christians, Christ-like; so are we. We have nothing but love for you, for we are brethren.

In behalf of the church I wish to express our sincere thanks to the friends who have so kindly and cheerfully aided us by their contributions in the purchase of this church and their many favors shown us. The children of our Sunday School have helped in this demonstration. They have "come rejoicing, bringing in the sheaves." We thank them for this beautiful pulpit furniture. May the motto upon the pulpit, "God is Love," be deeply engraven upon our hearts.

This is a most fitting time to consecrate our lives anew to the cause of Christianity, that we, step by step, may rise above and overcome all error within our consciousness, treading in the footsteps of our Saviour who, by reason of his pure life and clear understanding of God, was enabled to prove his divine sonship and the nothingness of all evil, sin, sickness, and death.

The Principle and rule of Jesus' life-work has been discovered and given to this age by the Rev. Mary Baker G. Eddy, in her book, "Science and Health with Key to the Scriptures." To her we owe a debt of deep and earnest love and gratitude. She has taught us that divine Principle, Life, Truth, and Love, is demonstrable; that it is as vital and powerful to-day as it was nineteen centuries ago; that the Christ is still with us, and God is a present help in every time of need.

Digitized by Google

"Prove all things; hold fast that which is good," was the apostle's injunction. Christian Science demonstrated, establishes the omnipotence of God—Good. It enables us to know and prove that He is supreme, a God of love and tenderness; our life; our health; our strength; our all. "I am the Lord, and there is none else, there is no God beside me."

Man's true nature is perfect. Jesus was the perfect man. He was the way-shower. His was a life of love, healing both sin and sickness. He said, "I am the way, the truth, and the life." In proportion as we live this life of love, meekness, and truth, can we demonstrate our true being. If the words of Christ dwell in us, if we have our minds filled with Truth and Love, we reflect the Christ-principle which destroys sickness and sin.

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy (page 574), we find the definition of church. "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle." Our church, then, means more than walls of brick and stone; it is Truth and Love made manifest.

To become a stronger church we must have more of the real structure—the consciousness of Truth and Love. This is an individual work. We must each live closer to God, then will we as a church become a greater spiritual power.

To God, the giver of all good, we give thanks for this demonstration. He has not failed us. For several years we have been working and praying for a church home. "We have done the little we could do," leaving the rest with Him. He has enabled us to make this demonstration, and to Him we give the glory, praise, and honor.

Mrs. Whittaker spoke in part as follows:—

In the month of June, 1887, a party of four Christian Scientists, loyal students of our Mother, arrived in Topeka from Boston. They had come to the West for the purpose of establishing Christian Science in this locality. Shortly afterward part of them left for neighboring cities, but one remained here, deciding to make this his home and field of labor. Some months later another family, two of whose members were also students of Mrs. Eddy, moved here from an adjoining state, and to these three is credit due for the first sowing of the seed in this field.

In 1890 we had a little band of interested ones, forty two in number, who had become so sure that Christian Science was the revealed Truth as Jesus taught it, that we met together at the home of one of our number and formed ourselves into a church organization to be known as First Church of Christ, Scientist, Topeka, Kansas, for the promulgation and study of the Scriptures with the new and inspired light that is thrown upon them by our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Some months later we rented a hall at 210 West Sixth Street, where we held our services until last Sunday. While we have many pleasant recollections of the growth and progress we made there, yet we are glad indeed to leave it as a place we have outgrown, for it was only a temporary abiding place. We feel that Christian Science will never have its rightful place in any community until it is established in church buildings, showing that it is founded upon Truth, and has come to stay.

We come into this church building with a membership of one hundred and five, but this by no means constitutes all the growth of these thirteen years; as many families have moved to other fields of labor and have united with churches at their new homes.

I first heard of Christian Science during the summer of 1887. At that time I was a hopeless invalid, having exhausted all medical skill, and was only waiting for relief by death. Like many other sufferers, I opposed Science very bitterly at first, but finally, in the fall of that year, was prevailed upon to give it a trial and, much to my surprise, began to improve slowly, and to-day I am a living answer to the question so often asked, "Does Christian Science heal organic disease and all forms of real sickness?"

Christian Science Churches are mainly composed of people who, without this blessed understanding that God does heal to-day as surely and certainly as in the beginning of the Christian era, would not now be numbered among the living. Mine is not an isolated case by any means, but just one of many.

In those early days of our growth in Science, what wonderful times of rejoicing we all had. The Bible, which I had read and studied so much, was made a new book. I felt that life was a great blessing, and that God was very near. Such a sense of safety and security pervaded my whole being that I felt I could never do enough for my Heavenly Father to thank Him for the blessed peace and joy and happiness that had been revealed to me. It was a wonderful light; a great spiritual revelation! The whole world was changed in those days. I knew God as Life, Truth, and Love, and I saw that our Saviour had not left us comfortless, but had sent the Comforter as he had promised. Sorrow was turned to joy, tears to smiles, misery to happiness, and the Kingdom of God was come. I know many of you here to-day can recall your own experiences of a like nature.

To the friends who meet with us to-day, I wish to add my word of welcome, and also thanks to all who have helped us in the purchase of our church building. I feel that God will bless you, as your means and good-will have blessed us. We feel that we have made a grand demonstration in being able to purchase this church and make the repairs that were required for transforming this rather dark and uninviting looking room into the bright and attractive place of worship we see before us to-day.

To our dear church, I would say, Let us dedicate ourselves anew unto our Heavenly Father, and to His service, and let us go forth with such a sense of dwelling in the secret place of the Most High, that evil thinking and evil speaking will have no power over us.

The Bible says "resist the devil [evil] and he will flee from you," so if we are constant in resisting the wrong and cultivating only the good and pure, the sick and weary ones will be led to seek that one "pearl of great price," which we have found in Christian Science.

---

### Evanston Christian Scientists Buy Property.

Members of First Church of Christ, Scientist, have bought the lot and house on the southwest corner of Grove Street and Chicago Avenue for $16,250. This is the site on which the library board had an option. Recently the option ran out and the Scientists offered the cash and now are in possession of the property. C. E. Ware, a prominent member from South Evanston, furnished the necessary money, but the church will pay it back before it makes use of it. The house standing on the lot is to be remodeled and made into an assembly hall seating five hundred people. This is not to be the church, for in a few years a pretty edifice will be built. Plans are being drawn for remodeling, and the hall will probably be ready for meetings next September. The lot has a hundred feet frontage on Chicago Avenue and is over two hundred feet in depth.

There are at present over one hundred members of the First Church of Christ, but the congregation numbers on an average two hundred and fifty persons. The number is constantly increasing, so that larger quarters have been engaged three or four times. The latest move was made because the rooms in the Y. M. C. A. Building are too small to accommodate the Christian Scientists.

# Reading Rooms Opened.

### At Grand Rapids, Mich.

The members of the First Church of Christ, Scientist, have recently established and opened some very handsome new reading rooms on the fourth floor of the New Houseman Block. The two rooms are beautifully furnished and present a most attractive appearance. The walls are tinted a delicate green, while the carpets are in blending shades of green and olive. The furniture, which is of polished oak, consists of a large, commodious reading table, leather upholstered chairs, a small, dainty writing desk, a hat rack containing a large mirror, and a settee, all of which are attractively arranged about the room. The adjoining room is fitted up with an oak office desk, a very handsome davenport upholstered in a rich shade of olive, also bookcases containing Christian Science publications. The windows are hung with soft lace draperies.

The walls of both rooms are hung with beautiful and appropriate pictures. Opposite the entrance door is a large, handsome picture of Mrs. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. On an opposite wall is a beautiful reproduction of Hoffman's last painting of the Christ. Over the picture is fastened a branch of the conqueror's palm. Among other pictures, most of which are from sacred subjects, are fine reproductions of Hoffman's "Christ and the Rich Young Man" and "The Boy Christ in the Temple." There are about the rooms the numerous delicate touches which create a sense of beauty and harmony and an atmosphere of comfort and home.

The reading rooms are in no sense assembly or club rooms, but they are open to the general public and are at the disposal of any and all persons interested in Christian Science who wish to examine the literature or to spend a little time in reading. These reading rooms are also the local headquarters for all the Christian Science publications. The rooms are open every afternoon from twelve o'clock until five, also Tuesday and Friday evenings from seven until nine, and are in charge each day of some member of the Christian Science Church. The literature is at the disposal of all persons who are interested in the subject, while orders and subscriptions for the publications are also taken. Information will be furnished regarding the Christian Science healers in this city, and their addresses may be obtained there.

Similar reading rooms are established in nearly all cities having a Christian Science Church. Their purpose and object is the same in all places, and they have proved very beneficial and practical.—*Grand Rapids Herald.*

### At Marshalltown, Ia.

On Monday of this week free reading rooms were opened to the public in the Kirby Block, over the New England Store, being rooms 1 and 2 on the second floor, under the auspices of the Christian Science Church, which bears all the expense. The object is to place Christian Science in its true light before the people of Marshalltown, and to afford them an opportunity to inform themselves, through its literature, including all of Mrs. Eddy's works, in regard to its teachings, tenets, claims, and purposes. All the current literature of the society is kept in these rooms, all is accessible to the public without charge, and much of it is intended for free distribution throughout the city. The office hours are from 10 A.M. to 4 P.M., and there will always be some one in attendance. A cordial invitation is extended to the public to visit the rooms and take advantage of the opportunities so freely offered. The rooms are very homelike in appearance and furnishings, and especially inviting. The main apartment is papered in bright red colors, handsomely carpeted, steam heated, provided with an elegant writing desk, commodious bookcase, study table, easy chairs, and a couch. The walls are adorned with a variety of beautiful pictures, and the entire interior is tasty and attractive.—*The Reflector,* Marshalltown, Ia.

### At St. Joseph, Mo.

The First Church of Christ, Scientist, has rented rooms on the ground floor of the new King Hill Building, 819 Francis Street, which are being handsomely fitted up for Christian Science reading rooms, where all Christian Science literature, consisting of the works of Rev. Mary Baker Eddy and the publications of The Christian Science Publishing Society will be kept constantly on hand.

The rooms will be open to the public from 9 A.M. till 5 P.M. every day except Sunday, and all who desire may spend here a pleasant hour investigating this subject, which is absorbing the attention of so many intelligent people. The location is central and one of the best in the city for the purpose intended. The Wednesday evening experience meetings of the church, which have been held in Unity Church, will hereafter be held in these rooms.

*St. Joseph Daily Gazette.*

### At Indianapolis, Ind.

A Christian Science reading room was opened April 1 under the auspices of First Church of Christ, Scientist, of this city, in Room 17, Lombard Building. The opening of reading rooms where the literature of this denomination can be read or purchased, and where information or treatments can be given, is taking place simultaneously in all cities or localities where Christian Science is established. Its object is to give to the public a better opportunity to learn of the works and teachings of Mary Baker G. Eddy, the Founder of Christian Science.

The opening of a reading room in this city, in a central locality, and under the auspices and control of the Christian Science Church, is regarded by all those directly or indirectly concerned in the movement, with unusual interest.—*Indianapolis Sentinel.*

### At Peoria, Ill.

Pleasant quarters have been fitted up by the Christian Scientists in the Woolner Building, as a reading room or library wherein all literature—books, pamphlets, and papers—pertaining to the creed, can be found. Room 44 is the location and Mrs. Charles Easton is in charge. She will cheerfully answer all questions and put the reading matter in the hands of all who may call. Those interested in the Science are cordially invited to spend their leisure hours there where study and inquiry may be indulged in. The room is a pleasant one and centrally located, especially chosen for the convenience of those interested in the faith and research into its workings. The former quarters were in the Christian Science Temple on Hamilton Boulevard, but were found not convenient enough to the general public.

*Sunday Journal.*

### Reading Rooms at Other Places.

Santa Cruz, Cal.—42 Locust Street.

Ottumwa, Ia.—Church edifice, Fourth and Market Streets.

Eureka, Cal.—1035 H St.

Lynn, Mass.—61 Exchange Street.

San Francisco, Cal.—206 Kearny St.

Logansport, Ind.—522 Broadway.

Washington, Ia.—Corner Iowa and Jefferson Streets.

## The Mission of a Christian Science Tract.

BY L. M. EARLE.

THE article entitled, "Love's Messenger," which appeared in the *Sentinel* of February 15, brought very forcibly to mind the mission another Christian Science tract had to perform. Hoping it may help to further illustrate the good accomplished by sending out these little missionaries of Love, or any of the Christian Science publications, I will give it.

Before I had heard anything of Christian Science except the name and a little unintelligible talk about it and its claim to heal the sick, my only child passed through a severe and dangerous illness. At this time my sister was in the East visiting the family of a physician whose wife was a Christian Scientist and one of Mrs. Eddy's students.

My mother sent my sister daily letters, in one of which she gave the diagnosis of the attending physician and described the symptoms, asking her to give it to the doctor and see what he could suggest. She did so and sent us his opinion and suggestions. The physician's wife enclosed a Christian Science tract which she hoped might lead us to seek help from God the great Physician. Out of gratitude I read the tract but it was meaningless, and I thrust it, as I supposed, away. None of us had sufficient faith in God to believe that He could or would heal our loved one unaided by the doctors and the material means that were being used, but we did believe that He possessed the power to take that life so precious to us, and lived in hourly terror that He would. I personally believed God was Love, because the Bible said so, but I thought of Him with more fear than love, more doubt than trust, and as too far away, vague, and shadowy to be a very present help in time of trouble. I could not realize that the promises in the Bible were meant for me. So the doctor's suggestions were considered of more importance and value than the tract.

Nine months later I was driven to seek help from Christian Science for myself. Before any literature had been given me to read or I had even seen "Science and Health with Key to the Scriptures," I wished that I had that tract, showing that some thought in it had unconsciously been lingering in memory. For some unaccountable reason my mother had saved it when I cast it away, and had kept it all that time unknown to me, so when I needed it it was ready for its work. I read and re-read it, trying to imbibe its spirit and make its teaching practical. I feel sure that it was a factor in the demonstration that was made for me. It had a mission to perform and it could not be lost or destroyed until Love's work was done.

## Point of View.

BY ALICE MAITLAND FAIR.

CHRISTIAN SCIENCE shows us that the universe as it appears to the material senses, is far from being the universe which God sees and has pronounced complete and perfect.

It shows us that the imperfections which we seem to see are not in God's creation, but in our false sense of that creation; the result of looking from an incorrect point of view. God is Spirit, then His point of view must be spiritual; ours has been material.

If we could see as God sees, every seeming imperfection, every sense of sin and discord, would disappear forever, and the realities of perfect Being become apparent.

This true, spiritual point of observation, from which creation is seen as Intelligence sees it, is the goal towards which Christian Scientists are pressing, and nothing short of attaining it can ever satisfy. To keep this goal ever in view, is to run our race, as Paul advised, with the mark of our high calling ever before us, and if we strive unwaveringly to reach it, faithfully demonstrating every step of the way, we shall some day "see face to face," and "know [each other and all God's ideas] even as also we are known [of Him]."

Suggestions of error, however real they may seem to mortal sense, must give place to the harmonious facts when we turn about before believing in their reality and ask: Is this true from Love's standpoint? Is it apparent at all to the Mind which sees only perfection—only His own perfect ideas? What must He see in place of it?

Intelligence must see in you and in your brother only the qualities of mind which reflect Mind, the spirituality which reflects Spirit, undisturbable love answering to Love, truthfulness the likeness of Truth, joyousness and harmony, echoing the Harmony of Divinity, fearlessness and trust acknowledging His omnipotent care.

So, little by little, we shall come to acknowledge no truth or reality in any point of view but God's, and Science proves to us that what we accept will be manifested.

This is our privilege, as well as a necessity of our relation to God, which must be recognized ultimately, since He is our Mind.

In "Science and Health with Key to the Scriptures," p. 472, Mrs. Eddy points out one of the glorious results of thus realizing the true point of view, and thereby manifesting the truth. She says, "Jesus beheld the perfect man, who appeared to him, where sinning mortal man appears to us; in this perfect man the Saviour saw God's own image and likeness, and this healed the sick."

## The Garden.

BY J. S. MASON.

ONCE there was a garden called Self-will's garden. In it sprang up many plants that to Self-will seemed beautiful, but in reality they were unlovely, unsightly weeds; nothing else. Yet Self-will, looking through his own dense consciousness, saw only beauty there, and cherished and nourished each poor stalk, nor wished it otherwise.

There came a day at length, when pain and sorrow laid Self-will low.

Subdued and changed, he crept forth once more to view his garden. In the new light of regenerated life, he saw clearly the rank weeds of discontent, unlovingness, unthankfulness, pride, and falsity, which once had seemed blossoms most fair, to his misguided vision. Self-will, whose name a glorified sense had now changed to Meekness, sighed over the wasted hours spent in nourishing such unsightliness. "Is this, then, my cherished garden?" he murmured sorrowfully, looking involuntarily up and away from the unpleasing sight.

As he gazed upward, there came to memory, the thought of another garden,—the garden of the resurrection morning, where the Master had stood in the glory of his final demonstration of Love and self-abnegation. Catching the reflection of that Love and self-sacrifice, divine Meekness, enlightened understanding, joyfully received his heritage of Life, Truth, Love. In changed consciousness his gaze returned earthward, and lo, the miracle! Where had seemed weeds and noxious growth, the false outcome of error, Truth now showed the real and eternal,—the perfect garden, beautiful in the regularity of uprightness, purity, sincerity, with the sunrise of Spirit irradiating every leaf and flower.

Meekness gazed enraptured, in newness of life and consecration, while the soft winds whispered, "And the Lord shall guide thee continually . . . and thou shalt be like a watered garden, and like a spring of water whose waters fail not."

## "Miscellaneous Writings."

BY CHARLOTTE S. DENNIE.

I WANT to express just a little of the gratitude I feel for what "Miscellaneous Writings" has done for me.

It has been such a help and comfort, and so many rough places have been made smooth through its messages of Love, that I should think every Christian Scientist would have a copy right at hand; and certainly those who are investigating the Truth of Christian Science, need it very much. Nothing would induce me to part with my copy, if I could not procure another.

It was first published just as I began to love Christian Science. I studied it faithfully for a year while working for the class, and many times while battling with that claim called self, I found just what I needed in this dear book, satisfying in every way. Its pages now are always new, I never tire of them; and as I gain in understanding they become clearer and more precious. I have just had such a beautiful demonstration over a case of sickness, through reading them, that I want to tell of it. An epidemic which has been going the rounds came tempting me, bringing much seeming discord. I was realizing the Truth, as we are taught to do in Christian Science, when the thought came so strongly, "I want 'Miscellaneous Writings.'" I felt it would meet the need, and turned to it as a child would to its mother. I opened to one of the letters to one of the churches, and on page 151 I found the healing. I read it over and over, and although the demonstration was not instantaneous the relief was immediate. I was able to perform all my duties; and by the next evening, was rejoicing in the peace and freedom which comes after a battle well fought.

In the old thought this trouble would have meant weeks of discord, and I thank God for our Mother, who is showing us the way to overcome every temptation that presents itself, mental or physical, and is leading us, through Love, out of darkness into the Light of Truth.

## Trusting in God.

BY Z.

MUCH is said about trusting and resting in God. To the unthinking, this knowing or trusting, this state of resting in God, would seem a lying back and letting God work, but when we consider that it is mortal mind that is to rest and trust, in order that divine Mind may work, we shall see that the hardest work is for us, at the present time. For mortal mind to rest and trust is most unnatural. I have found that rest and trust in God means, not lying back, but decisive action.

In the old thought, I read in Jesus' healing work, action on his part alone, but lately, in reading his words, I find that in every case he required work done by those receiving help.

I made a list of the expressions used, each shows the action required: "seeing their faith," "fill the pots," "let down the nets," "beseeching," "wilt thou," "stretch out thy hand," "according to your belief," "Peace, be still," "weep not," "murmur not."

To the inactive fig-tree, he said, "Cut it down;" to those toiling against material conditions, "Be of good cheer." In feeding the multitudes, he bade them start in with what they had on hand. He commanded his followers to love, bless, and give, not to friends but to enemies, to those who curse and do not return. Downright hard work for mortal mind.

Christian Science prayer is honest desire for good *actively* carried out in our daily existence. Trust is the strength that is given us through the scientific understanding, that enables us to carry out this desire for good daily, and rest, the "I thank Thee that Thou hast heard me," and "I *know* that Thou hearest me always."

## Testimonies.

### Healed Morally and Physically.

Christian Science came to my notice through a demonstration of its healing efficacy. It was a case in which the physicians had stated that owing to the disease of the affected organ, an operation was the only thing that could effect a cure. Christian Science was recommended by one who had been healed by its means. Contrary to expectations of physicians and friends, relief came at once, and the law of God was once more proven supreme over the law of sin and death. But I did not heed its import.

For many months I drifted along recklessly and carelessly, devoting a large part of my time and earnings to a "good time." The glamour of this soon faded, and with a hungry heart I grasped at the opportunity to cast my net on the right side. After a period of thorough study and instruction, I realized that I was healed. I was cleansed of evil desires, bad habits, and wicked motives, and lifted to a higher plane of thought and action, with a deep desire to do and be good. I really wished to emulate the Master and obey his commands. My former condition can be best expressed in the words of Paul, "O wretched man that I am! who shall deliver me from the body of this death?" and later when I saw the Light, "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

The Christ-Truth as discerned by Moses and Isaiah is made clear and practical through Christian Science, as evidenced by the many marvelous works it accomplishes. To me there can be no higher proof of the Truth of Christian Science than the fact that it does heal disease most effectually, very often instantaneously, that it heals from sin, that it enters into the every-day life of its followers, instilling a desire to be Christlike.

When a boy I had the privileges of the Episcopal Church and had intercourse with its pastor, a loving, Christian gentleman, one who was a most devout preacher of the gospel as he knew it, but it remained for Christian Science to really heal me of sin and sickness, as Holy Writ says the Christ Principle can do.

The practicality of Christian Science, its usefulness in every-day life, the Christianity of its adherents, and the knowledge of the power of God to save, moved me to want to become a better Christian,—a Christian Scientist, and from the very hour that the Light came into my life I have drunk of its blessings. I have experienced freedom from hereditary sick headache, the tobacco habit, and many of the ailments which go to make up the greater part of mortal existence. The hate, jealousy, envy, evil thinking and acting which produce physical discord can be and are overcome by Christian Science. To young people, young men, who are situated as I was, I say, leave the old for the new, apply it to your own case and partake of the greatest blessing obtainable in this or any age. I know what it can do, for I have felt its touch and have partaken of the water of Life freely. There is no one who cannot avail himself of this blessing, no place where God is not, and nothing He cannot do. The God of Christian Science is a God of Love, and "Love leaveth us not in temptation, but delivereth us from evil" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 322).

"Walk in the Spirit, and ye shall not fulfil the lust of the flesh." Through Christian Science we learn that God's child, the man of Christian Science, can triumph over the evils of the flesh, for "It is the Spirit that quickeneth: the flesh profiteth nothing: the words that I speak unto you, they are Spirit, and they are Life." I know, for it is proven to me beyond cavil, that Christian Science is the religion of Jesus Christ, the Principle he said would be practical to "them that believe."—JAMES K. REMICK, St. Louis, Mo.

### Love Overcomes Resentment.

This morning, while reading our *Journal* for April which had just arrived in its fresh, new dress, I was so impressed by the wealth and richness of its contents, and especially the glad notes of "thanksgiving" that seemed to ring from all its pages, that I determined that this day should not close without my giving some expression of my heartfelt thanks for the joy that Christian Science is daily bringing to me.

I have known of Christian Science not quite two years and a half, and though all my life has been brightened by everything that earthly love could give me, yet these two years stand out, clear and distinct, from all the rest.

Dark days have seemed to come at times, but I have known through them all that if I was but firm to the Truth, as revealed in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, that the sunshine of divine Love would dispel the shadows.

A recent experience of the power of Love to overcome resentment, was so beautiful and helpful to me that I would like to give it to the Field. Not many evenings ago I was told of some remarks upon the subject of Christian Science that had been made in one of our stores, when a number were present, by an acquaintance who had attended our service the previous Sunday. There was such a misrepresentation of facts in these remarks that I found myself struggling with the thought of resentment. Had these things been true, I might well have been disturbed, but I *knew* positively that they were not; *why*, then, even from a mortal mind standpoint, should I be troubled? but as a child of divine Mind I had no right whatever to resent evil, or to see it as a reality in another of God's dear children. I thought I had overcome the error before retiring that night, but I found the next morning that I had not wholly conquered it, and I went to work more earnestly than ever, till I felt Love had prevailed.

A little boy in the Sunday School told of the following demonstration. His finger was caught in a spring rocking chair, making an ugly looking wound, but he sturdily went off and treated himself, and by afternoon it was all right. Another child told of being excused from the dining table because of pain and nausea. She lay down for a time and treated herself,—said she tried several times to get up and felt so deathly sick that she could not, until all at once Jesus' words came to her, "Damsel, I say unto thee, arise." She said she tried to realize it was Christ speaking to her just as he did to that other little girl, and she did arise and went off to school, the happiest little maiden imaginable.

Is it any wonder that, in the face of these things, Christian Scientists cannot but thank God for revealing this blessed Truth through our beloved Leader, Mary Baker Eddy?—Mrs. Alice Lyman Sleeper, Lancaster, N. H.

---

### Healed at the Church Services.

I am so filled with gratitude that I want to give expression to my feelings in a few words that may help and encourage some dear one walking in the same path. Yesterday, Saturday, I suffered an attack of a trouble I had not experienced since coming into Christian Science, more than four years ago, although I have not forgotten that I was at that time in bondage three or four weeks. I struggled all day Saturday with this trouble, at times rising above it, but seemingly not strong enough to hold the ground for Truth. To-day, Sunday, at our church services I was perfectly freed, so that this afternoon I have been as calm and peaceful as a little child. My heart is filled with joy.

Twice before I have been healed at the services. This church, founded on the healing power of the Christ, is a blessing for which humanity cannot be grateful enough. Tri-weekly we may come to this "Pool" by the wayside, and drinking from this fountain of Love receive strength for the onward march.

Well do I remember in the old thought that a trouble like the one referred to would have kept me from the church services. But not so now, for in the new thought I have learned to expect the presence of the great Physician, whose healing power has been many times demonstrated at these services through the clear understanding of our impersonal preacher,—the Bible and the Christian Science text-book,—thus verifying the words of Isaiah: "So shall my word be that goeth forth out of my mouth: it shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it. For ye shall go out with joy, and be led forth with peace."

To live so wholly in this thought that we may reflect the light of Truth as taught in the Bible and so clearly explained by our revered Leader, is, I feel, the only way in which to express love and gratitude to the Discoverer and Founder of Christian Science, and to glorify God. "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."—Mrs. A. B. F., New Bern, N. C.

---

### All Material Remedies had Failed.

I was a member of the Presbyterian Church for years. As far as the church was concerned I thought it was all right. From early childhood I was religiously inclined, a lover of that which is pure and good. For years I had chronic catarrh of the nose and throat, which was not healed by *materia medica*. I investigated every remedy that was presented to me but all were of no avail. Prominent physicians failed to meet the demands of my case. I remember one physician after making an examination assured me that the only remedy he had for me was a change of climate, and he advised me to go to Texas or Mexico, saying this would possibly prolong my life.

Then I decided to take treatment from a Christian Scientist. I did not understand Christian Science, but I asked many questions. At one time my healer, who afterwards became my teacher, told me there never was such a person as myself. This awakened me from my dream. I looked at her, and like a flash the omnipotence of Truth dawned upon my consciousness as never before. From that time to this I have been free. This is indeed the Truth the Master referred to when he said, "Ye shall know the truth, and the truth shall make you free."

Miss Lizzie Jackson, St. Louis, Mo.

---

### The Christian Science Quarterly.

A letter just came to me containing this testimony to the helpful influence of the *Quarterly* by one who is studying by herself, as so many are, and who seemingly are isolated from church service. "A just acknowledgment of Truth, and what it has done for us, is an effectual help" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 371). Acknowledgment in this direction is of the seed, which when it is grown is the greatest of all and a nucleus of the many gatherings of Scientists in the smaller cities and towns all over the world.

My friend writes, "I wonder if you realize how much help the *Quarterly* is in the study of Christian Science? Even if the references are familiar, when read in the connection they are given, they bring the meaning of the subject much more forcibly to one. It seems as though you ought to advise any one who is interested enough to read Christian Science literature, to get the *Quarterly*."

Carrie L. Sawyer, Gloucester, Mass.

## Religious Items.

The meeting-house of the First Parish (Unitarian), Concord, Mass., was destroyed by fire recently. This was one of the oldest and most venerated edifices in New England. It was built in 1712 and was approaching the end of the second century of its existence. In this church in 1774 was held the First Provincial Congress, of which John Hancock was president. The grandfather of Ralph Waldo Emerson was one of its pastors, and such men as Ralph Waldo Emerson, Nathaniel Hawthorne, and Senator Hoar have been regular attendants. The church organization has been in existence since 1635.

The *Congregationalist* prophesies a religious revival. The editorial says: "We do not know just when it is coming or what form it will assume, but we believe that not many years will pass without witnessing a great renewal of popular interest in religion. Mr. Moody died in the firm conviction that such an awakening was at hand; and as we talk with men of spiritual insight and leaders in Christian activity we discern in them a gratifying degree of hope and expectation."

Robert Louis Stevenson, in one of his letters to Edmund Gosse, wrote: "It is the history of our kindnesses that alone makes this world tolerable, if it were not for that, for the effect of kind words, kind looks, kind letters, multiplying, spreading, making one happy through another and bringing forth benefits, some thirty, some fifty, some a thousandfold, I should be tempted to think our life a practical jest in the worst possible spirit."

The (Baptist) *Watchman* says: "A great fact, like the resurrection of our Lord, means different things to different people, and different things to us at different stages of our spiritual development. When last Sunday we observed that to some young people Easter meant but very little of what it does to grown men, we were also called to remember that there are some interpretations that are only possible through experience of life."

The Boston letter to the Chicago (Baptist) *Church Standard* says: "Mr. William N. Hartshorn, son-in-law of the late Daniel S. Ford, spoke before the men's Bible class of the Ruggles Street Church Sunday afternoon, February 11, on the life and character of Mr. Ford, and his interest in workingmen. To each man present was given a copy of the picture of Mr. Ford and a souvenir copy of the *Youth's Companion*."

The *Universalist Leader* says: "God has not blundered in creation, but men have blundered in comprehension. Christ is not a subterfuge, an afterthought, a makeshift, a desperate remedy, a last resort on the part of a disappointed and defeated God. Christ is a part of God's plan, and comes in as naturally and beautifully as the flower on the apple-tree follows the bud and precedes the fruit."

"Agencies of man's devising may alleviate, but they cannot cure this tendency to division and strife and substitute a drift to peace and unity. Christ in the heart and his Gospel of love and ministry in all the activities of life is the only cure."—Extract from the address of ex-President Harrison before the Ecumenical Missionary Conference in New York.

Mrs. A. Augusta Cooke, in an article in the *Universalist Leader* on "The Christianizing Influence of Hymns," says: "'Love Divine all Love Excelling' is one of Wesley's most helpful hymns. It was a great favorite of Mr. Beecher, and no one who ever heard the great congregation of Plymouth Church sing it, is likely to forget the soul-stirring effect."

J. H. W. Stuckenberg, D.D., says in the *Homiletic Review*: "If religion is inherent in man, then its study is involved in the very study of man. Ethnology, sociology, the history and the philosophy of religion have contributed valuable material to prove religion a human requirement and one of the most potent forces in human evolution."

The Baptist *Watchman* says that the Hartford Theological Seminary has collected reports from fifty-five colleges and universities in twenty States concerning the religious condition, and that almost without exception the returns show decided religious interest and activity. The percentage of active Christians is larger than usual.

Rev. A. F. Bailey in a sermon on "The Gospel for To-day," published in the (Unitarian) *Christian Register*, says: "Theological controversy was never an unmixed blessing, and its value decreases with the advance of time. Increase of knowledge makes much seem childish now which once was deemed highly important."

Rev. F. B. Meyer, a London preacher, has a sermon in the New York (Baptist) *Examiner* in which he says: "We are saved to serve; forgiven that we may go to preach forgiveness; lifted into the light of fellowship with God that we may lift other people thither."

The *Outlook* says: "If we are not living an immortal life here, how can we believe in an immortal life hereafter? Immortality is a present possession, not a mere future expectation; and the way to be strong in the hope of future life is to be rich in the life immortal here."

The *Biblical World* urges the churches to return to the primitive method of teaching from the Scripture instead of relying wholly on preaching, and it declares that a thoroughly qualified teaching minister is necessary to every well organized church.

Rev. D. L. Chapin in the *Homiletic Review* says: "The truest courage in all the world is Christian in its quality, and comes from an acquaintance with God. If we fear God and keep His commandments, we have nothing else to fear."

Bishop Whipple of Minnesota has made a tour of Porto Rico in the interests of the Episcopalian denomination, and his interesting report of the religious situation of this new territory is published in the *Church Standard*.

*Zion's Herald* says: "Some of our choicest blessings come to us as secondary results, not planned for, nor asked for, but just the sweet overflowing of God's love from the cup that faith holds up to him."

"We believe that the twentieth century will open with a nobler type of American character than ushered in the nineteenth century," says the *Christian Register*.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture by Judge Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The May *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice is also given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.
Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.
Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

**One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.**

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political Events.

The convention of the anti-fusion element of the People's party, otherwise known as the Middle-of-the-Roaders, opened in Cincinnati, O., May 9. Nearly seven hundred delegates were present representing every state in the Union, except Arizona, New Mexico, North and South Carolina, and Vermont. On May 10 the convention nominated Wharton Barker of Pennsylvania for President, and Ignatius Donnelly of Minnesota for Vice-President. The platform adopted demands the "initiative and referendum," "imperative mandate," public ownership and operation of railroads, telegraph and telephone lines, coal mines, etc., the reclamation by the government of all lands held by railroads and other corporations in excess of their actual needs, and all lands owned by aliens, free coinage at sixteen to one, a graduated income tax, the election of the President, Vice-President, Federal Judges, and United States Senators by direct vote of the people. The platform denounces trusts and declares that the only adequate remedy is public ownership of public utilities.

The national convention of the Populist party was held at Sioux Falls, S. D., last week, and nominated William J. Bryan for President and Charles A. Towne for Vice-President. Mr. Towne was born in Michigan and is a graduate of the University of Michigan. He has practised law in Duluth, Minn., since 1890. He was a Republican member of the 54th Congress. In the presidential canvass of 1896 he worked with the Silver Republican party in the interests of Bryan and the free silver cause. He is very popular in the West, and he is in entire sympathy with Bryan's aims. The platform adopted by the convention denounces the recently enacted banking law, demands the free coinage of silver at sixteen to one, also the abolishment of all tariffs on trust goods, and indorses the initiative and referendum. It denounces the administration's policy in the Philippines, and also the Porto Rican tax; tenders sympathy to the Boers, and denounces any foreign alliance. Municipal ownership of public utilities is endorsed.

A committee from the American Publishers' Association, which represents twenty-two thousand newspapers, has presented a memorial to Congress affirming that the price of printing paper has been increased from sixty to one hundred per cent without any adequate reason so far as the conditions of the industry are concerned, and appealing for relief through legislation against the Trust.

Senators, representatives, and citizens of Washington who favor the Boer cause are planning to give the Boer peace envoys a notable public reception on their arrival in the capital, May 20, such as was given Lafayette, Kossuth, and Parnell.

About June 1 the census enumerators will commence their work.

### Foreign News.

News dispatches from the theatre of war in South Africa the past week have not contained startling estimates of losses, yet the events which they recorded have brought the contest much nearer its concluding stages. The Boers, after being driven out of the hills to the east and southeast of Bloemfontein, were successively driven northward from one position to another by the overwhelming numbers of the British. Lord Roberts had seemingly thoroughly equipped his army for a rapid advance during his long delay in Bloemfontein, and when he began operations in force he was able to meet the Boers at every point with an average superiority of five to one. Against such odds the Boers did not care to risk a general engagement and retired as the British pressed forward. There were a number of rear guard actions but, judging from the press reports, the losses were not heavy. Lord Roberts is now operating in the territory of the South African Republic on the northern side of the Vaal River. He has also sent a large force to the relief of Mafeking which has been under siege for more than two hundred days, and the success of the expedition is confidently predicted by the British. Kroonstad, which became the Orange Free State capital after the fall of Bloemfontein, was occupied by the British May 12 without opposition.

The crown prince of Germany having recently become of age, was the central figure in a national celebration in which the people of Germany participated. The young prince was congratulated by all the crowned heads of Europe, and at a solemn ceremony held Sunday, May 6, he took the oath of allegiance. By virtue of taking the oath he has acquired the capacity to succeed to the throne, if for any reason the throne becomes vacant, and he can now claim a suitable allowance from the crown funds. He has also become governor of Pomerania and Prince of Oeles, a post carrying large revenues.

A petition to the Queen from the residents of the Australian gold fields, praying for separation from the earlier settled parts of West Australia, recently arrived in London. It has upwards of twenty-eight thousand signatures. It is understood that the grievances of the petitioners are practically identical with those of the Transvaal Outlanders, that is, taxation without representation. The petition urges the fact that Great Britain in conferring autonomy in 1890, reserved the power to sub-divide the colony.

The Volksraad, which is the national parliament of the South African Republic, convened at Pretoria May 7. Fifty out of the sixty members were present, several of them still showing the effects of participation in the war. President Kruger addressed the body.

The Netherlands Peace Society has addressed an appeal to President McKinley begging him to further the peaceful object of the Boer mission, to investigate their case, and to bring about arbitration, and put a stop to the war in South Africa.

Great progress has been made in rebuilding Convention Hall, in Kansas City, Mo., which was recently destroyed by fire, and it is now considered certain that it will be ready for the Democratic National convention July 4.

The Ashantis have taken up arms against the British in the African Gold Coast Colony, and a serious rebellion is in progress. The native army which attacked one position numbered ten thousand.

In accordance with his own request, Major General Otis has been relieved and Major General MacArthur has been appointed to succeed him as commander of the military forces in the Philippines.

F. W. Atkinson, principal of the high school in Springfield, Mass., has been officially notified of his appointment as superintendent of public instruction in the Philippine Islands.

The British government has instructed its consul in Amsterdam to expend two hundred dollars for Dutch books for the use of the Boer prisoners at St. Helena.

General Fantelon Garcia, the highest Filipino officer, next to Aguinaldo, was captured May 6 by an American officer.

The volcano Vesuvius was again in violent action recently. Lava was projected to a great height.

### Industry and Commerce.

The Pennsylvania Railroad Company has borrowed $15,000,000 in New York for one year at 4 per cent, with privilege of renewal. It is in the nature of a collateral loan, and the largest of the sort that has come to notice in some time. The occasion for making it is unknown, but following, as it does, the recent issue of stock, it must indicate the extensive operations by the company in the line of acquisition and enlargement. It presumably provides for some transaction which the company is not yet ready to finance permanently.

The conductors and motormen of St. Louis to the number of about four thousand struck on May 8 for higher wages and recognition of their union. Their action blocked street car travel and when the company attempted to operate the cars with non-union men under police protection, rioting ensued. The rioters used stones and bricks, and the police clubs, sabres, and revolvers.

A direct line of steamers between Chicago and Liverpool is now seriously considered. The Welland Canal route would be used, and it is estimated that it would take between eighteen and twenty days to make the trip.

In attempting to work Japanese laborers on the roadbed of the Union Pacific railway in Wyoming in place of Italian laborers, the officials of the company are having difficulty.

Tokio, Japan, is to have a fine electric railway system, two hundred miles in length.

### General News.

John C. Judge, a lawyer of Brooklyn, has been retained by about five thousand militiamen who served in the Spanish-American war, to secure for them pay for their services from the state of New York in addition to the regular pay received from the Federal Government. Mr. Judge asserts that every enlisted man who served in the New York State volunteer regiments during the war, and who received an honorable discharge, is entitled to $1.25 for each day of service, whether active or in camp, regardless of what was paid him by the Federal Government; also that non-commissioned officers are entitled to pay for the same period, but at a higher rate per day. He estimates that his five thousand clients served about 240 days each, which would bring their claims up to $1,500,000 to settle with all the volunteers of the state on the same basis.

The consul of Sweden and Norway at St. Johns, Newfoundland, offers a reward to any and all persons who may find articles connected with the polar expedition of Andrée, the aeronaut. The reward is especially directed to whalers bound for Davis Strait, which connects Baffin's Bay with the Atlantic, and to fishermen proceeding to the coast of northern Labrador.

The chief of police of Chicago has issued an order prohibiting smoking by policemen in uniform whether on or off duty.

## Farming in Alaska.

### Uncle Sam Making Efforts to Develop Its Possibilities.

"THE future of Alaska as an agricultural region seems just now most promising," said Professor C. C. Georgeson, the government agent in charge of crop experiments in that Arctic province. "We have already made very interesting trials with various food plants at Sitka and Kenai; a start in the same line is being made on the island of Kadiak, and next year one or more stations for similar work are to be established in the interior, where, the conditions being different from those of the coast, special study and investigation are required.

"Agriculture, as the term is understood in the States, has never been practised in Alaska, efforts in that direction being confined to the cultivation of small garden patches for the growing of hardy vegetables—chiefly potatoes and turnips. Two years ago the government started experiment stations at Sitka and Kenai—the latter a small settlement on Cook's Inlet, consisting chiefly of Russians and Indians, which, on the maps, is usually called Fort Kenai, for the reason that United States troops were stationed there for a few years after the purchase of Alaska from Russia. Practically only one year's work has been done at these stations, the business assigned to them consisting chiefly of experimentation with every useful kind of plant that would be likely to grow well in that part of the world.

"In taking up this work, the Department of Agriculture got together seeds of nearly everything in the way of garden and field crops that might be expected to grow in Alaska. Some of the seeds were obtained from Norway, Sweden, and other parts of the world where climatic conditions are not unlike those of the territory; others were got from northern experiment stations in Minnesota, Wyoming, and Montana—especially the seeds of hardy varieties of grains. As soon as the stations were located, experimental plats covering several acres were laid out and sown with the various kinds of seeds, and incidentally a beginning was made in the study of the prospects for rearing domestic animals. At present there are practically no domestic animals in Alaska, though the country is well adapted to sheep, pigs, and goats, while in the Sitkan region and on the Aleutian Islands cattle keep fat all the year round on the wild grasses. Poultry, too, can be raised to advantage.

"The only domestic animals in the mining region of the Yukon are cats, kept to catch mice, and dogs, which are used for drawing and packing. An extensive vegetable garden has been established opposite Dawson, which is the capital of the Klondike district, the plowing being done with the aid of dogs. Occasionally moose, trained to pull, have been utilized in that country for plowing. At Circle City and elsewhere lettuce, radishes, onions, turnips, and peas are sown on the roofs of the houses, which are covered with a layer of earth; the latter, warmed by the heat from within, yielding very satisfactory crops. The soil of the Yukon Valley is a rich loam, from the falling leaves of the forests, and three hundred and fifty miles from the mouth of the river cauliflowers, radishes, lettuce, cabbages, carrots, and beets are raised in the gardens of the Protestant and Roman Catholic missions. Peas propagate themselves, but beans are a failure, and potatoes are watery. The surest vegetable in that region is the early turnip, which sometimes reaches a weight of ten pounds.

"Alaska is most particularly the country of small fruits, no other part of the world producing so many kinds, or in such abundance. There is a wonderful variety of berries, some of which, being unknown in the States, might be introduced to great advantage. They grow wild over great areas in extravagant profusion—bright scarlet cranberries the size of peas, big strawberries, raspberries, red and black currants, blueberries, gooseberries, bearberries, dewberries, mossberries, and roseberries. These last are the fruit of a species of rose, known to botanists as the Rosa Cinnamonea. Traders buy large quantities of the cranberries from the natives who pick them, shipping them to San Francisco, and red currants are so plentiful in the neighborhood of Cook's Inlet that one may purchase them for two and a half cents a pound. The Indians depend upon berries to a great extent for their supplies of winter food, crushing and drying them, while the Russians prepare from them many delicious preserves.

"The priests of the Russian Church in Alaska are specially enjoined by their bishop to give every possible assistance to our government in the work of improving the agricultural resources of the territory. Something in this way they are able to do through their influence with the natives, whose condition is becoming more precarious year by year. As the canneries increase in number, and the streams are fished clear of salmon, they are finding greater difficulty in obtaining winter supplies of food. The sea otter and the seal, until recently an important source of income to the Indian hunters, are already reduced in numbers almost to the point of extinction, and even the large game and fur-bearing land animals are rapidly diminishing. As these sources of livelihood are more and more depleted, the natives will be compelled to appeal to the government for aid, or else starve. The only practicable remedy is to encourage them to cultivate the soil, and the first step in this direction is to give them seeds of hardy vegetables and grains. No vegetable is appreciated by them more than the turnip, which grows well with little labor and skill, yielding an edible product in a short time.

"To the opening of Alaska as a great agricultural region there attaches a very picturesque interest, inasmuch as hitherto this Arctic province of ours has been popularly regarded as a hopeless waste by reason of its frigid climate—productive, perhaps, of furs, fish, and gold, but incapable of utilization for farming purposes. Recent study of the subject, however, has made it evident that this notion is wholly a mistaken one, and it is now believed that in the

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

not-distant future the territory will not only support millions of people with the fruits of its own soil, but will actually export large quantities of foodstuffs, such as butter, cheese, wool, mutton, and beef. Thanks to the warm Japan current, which corresponds to the Gulf Stream of the Atlantic Ocean, the climate of the southern coast of Alaska is rather mild, being not more severe than that of Maryland and Virginia, with fewer vicissitudes, and in that part of the country millions of cattle and sheep might subsist on the wild grasses with a much less percentage of loss from winter cold than in the western part of the United States. All cereals except Indian corn do well, and the same is true of most vegetables.

"One who sees Alaska only from the deck of a steamer is apt to be unfavorably impressed with the agricultural possibilities of the territory, the coast being everywhere mountainous. In the southeast the mountains are covered with a dense growth of forest, and only in the small valleys that lie between are lands suitable for farming purposes to be found. There is, however, much more of this kind of land than one might suppose, the chief obstacle to its conversion into productive farms being the timber. But there are vast areas where no timber grows, and such places are usually covered by luxuriant grasses, which can be utilized for the maintenance of domestic animals. In the Cook's Inlet region, which is the most promising in all Alaska, thousands of square miles are available for agriculture. Westward of Cook's Inlet the timber gradually disappears, grass taking the place of forest, and there immense numbers of cattle might be kept at pasture for the greater part of the year, feed for winter being preserved in silos.

"Off the southern coast are a good many islands, some of them very large, which are fertile and well adapted for farming purposes, especially for the production of cereals. One of these, called Kadiak, is ninety miles long by sixty miles wide, and might be a granary for the whole territory. Two-thirds of it is treeless, and the fertility of its soil is shown by the extraordinary luxuriance of the grasses with which its hills are covered, equalling anything to be seen on the prairies of Wyoming and Minnesota. It is in the same latitude as a part of Scotland, which produces much barley and rye, and it has about the same temperature and rainfall. Oats, as is well known, are extremely hardy, and will grow very far north. Inasmuch as no section can claim to be an agricultural country unless it can produce the grains which feed man and beast, this matter of cereals is all-important.

"It is thought that the interior of Alaska may, perhaps, offer even greater possibilities for the development of agriculture than the coast region. While the winter climate is more rigorous, the summers are warmer, and it is likely that barley, oats, and buckwheat could be grown successfully in many localities. Wheat and rye are not so certain, but good hopes are entertained. The valleys of the Yukon and Tanana are specially suitable for the production of hardy vegetables, and it is suggested that as the mining towns are built up, farmers and gardeners in that part of the country would find a remunerative market for their produce. At present the region is difficult of access, but the situation in this regard will soon be altered by the construction of railways, and thus a new empire will be opened to hardy and industrious settlers. Summer on the upper Yukon is a delightful season. There are about eighty days of 'growing weather'—equal, one may say, to one hundred and twenty days in the latitude of Ohio and Indiana, the sun shining throughout the twenty-four hours.

"To sum up, it would appear that most of the important food plants of the Temperate Zone grow well in Alaska. It is estimated that the white population of the territory will soon reach two hundred thousand, and at the present time all the food for these people, except game and fish, a little meat, and a few vegetables, has to be fetched from a distance of a thousand miles or more—an absurd condition of affairs, inasmuch as the available farming lands close at hand would maintain millions. It is asserted that some day the territory will rival Montana and Wyoming in stock-raising. Immense areas are covered with rich grasses suitable for forage, the Kentucky blue grass being found as far north as Kotzebue Sound, while timothy and red-top are most common in the south. One of the questions which the experts are studying is how best to preserve fruits and vegetables for winter use in Alaska—always an important matter in a frigid latitude."

*Boston Transcript.*

## The Handwriting in the Sand.

PROF. CASPAR RENE GREGORY, of Leipzig, the great New Testament textual critic, has found in an old manuscript a different reading of John, 8 : 9. When Jesus stooped to write on the ground, the woman's accusers interpreted the act as an admission that they had made out their case. Looking up he said, "Let him that is without sin amongst you cast the first stone," and again stooped down and wrote with his finger on the ground. The oldest man present looked down to see what Jesus was writing. "His name was Eldad. He read, 'Eldad stole a house from Joram's widow.' He knew that it was so. He had forgotten all about it. Nobody else knew it. He had done it under the form of law. But it was true. He could not stone the woman. He might as well go home. And he went out. Jesus swept his hand over the sand and began to write again. He wrote swiftly, for the next scribe had eagerly begun to read. His name was Nahum. He read: 'Nahum slew Azidad in the desert.' And the days long gone by came back to him. He saw his staff fall upon his friend when no one was there to see. And he went out. Jesus wrote faster and faster, and the scribes read faster and faster, and they went out faster and faster" until none were left. Professor Gregory, with a happy imaginative touch, draws all this from the new reading, "And they, *when they read it,* went out one by one, beginning from the eldest, even unto the last, and Jesus was left alone, and the woman in the midst."—*Selected.*

## How far to Heaven?

How far from here to Heaven?
Not very far, my friend;
A single hearty step
Will all thy journey end.

Hold there! Where runnest thou?
Know Heaven is *in* thee!
Seek'st thou for God elsewhere
His face thou'lt never see.

Go out, God will go in;
Die thou, and let Him live;
Be not, and He will be;
Wait, and He'll all things give.

I don't believe in death!
If hour by hour I die,
'Tis hour by hour to gain
A better life thereby.

ANGELUS SILESIUS, A.D. 1620

## Warmly Defends Christian Science.

*To the Editor of the Advertiser:*—The story of the disappearance of Charles Rawstrum of Montclair, has been copied in the exchanges, probably from ocean to ocean, and from the great lakes to the Gulf. An acquaintance has just informed your correspondent he saw it in an Alabama paper.

Now that Mr. Rawstrum has been found and the papers are again alive with the same old story as originally told, I beg for a little space in which to point out its glaring inaccuracies and those of a similar article published in your city at about the same time. The Rawstrum story was, briefly, that an industrious carpenter, twenty-four years of age, had been for two years a regular weekly attendant of the Second Church of Christ, Scientist, at Madison Avenue and Twenty-ninth Street, New York, and had finally been made insane through the study of Christian Science, and had disappeared to work for the cause, leaving a wife and child penniless.

The simple facts of the case, as told to the writer by Mrs. Rawstrum, are that her husband did have a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, but discarded it more than six months ago, because, in his opinion, it is false; that he has not since then opened the book; that he was at that time and for months afterward in good health physically and mentally; that three months ago he was taken ill and has been ill and out of work ever since; that on March 18 for the first time he "talked queer," and the next day he disappeared.

Diligent inquiry has also been made among the members of the church mentioned, but they have no knowledge of Mr. Rawstrum.

In the week preceding the publication of this story of "Victims of Christian Science," as the *New York Times* entitled it, appeared the following in the editorial column of the *Roseville Saturday Times* of Newark:—

"The multiplicity of deaths resulting from the practices of Christian Scientists is appalling! Daily there are being added scores of victims to this phase of bigotry. These dangerous practices should be stopped by legislation. Laws should be framed and enforced to prevent the wanton sacrifices of health and life by those whose mental balance is a question of doubt."

Now, Mr. Editor, your correspondent affirms, as the result of some years of investigation, that Christian Science has never made a sane person insane, but, on the contrary, has made many insane persons sane, and, as to "multiplicity of deaths," your thoughtful attention is invited to the following facts, which are quite as startling as they are conclusive:—

Your correspondent has been a constant reader of the *New York Times* during the time referred to, and possibly has read as much of other newspapers and periodicals as the average business man. Moreover, he is a Christian Scientist, "made so in spite of himself" some years ago, first by its healing him when better accredited means had failed, and next by its logic—by his discovery that it was common sense and not nonsense, which was his prior firm belief, founded on newspaper information. Naturally, then, he has scrutinized the columns of the *New York Times* and other publications for items touching the subject of Christian Science, and probably few such have escaped his attention. And if he did overlook any of the nature in question, some kind friend could always be counted on to quickly advise him of it.

As a result, then, of these observations and of other sources of information, he asserts without fear of successful contradiction that neither the *New York Times* nor any other paper in the land, or all of them combined, have published an average of three cases per week for the whole United States, of deaths under Christian Science treatment during the last year or during any year! He doubts if a showing can be made of two deaths per week, or of even one per week!

Nor in the count does he exclude any cases as not properly chargeable to Christian Science, which, nevertheless, is true of a large percentage, if not of one-half of the cases reported, but he yields the benefit of this doubt.

Now it is claimed by Christian Scientists that there are in the United States alone at least half a million people of this faith, and it is conceded by many writers outside their ranks that they do number several hundred thousand.

Encyclopedias give the numbers of their church "communicants" as seventy thousand. But for the present purpose it is quite sufficient to assume there are only fifty thousand of these people who, men, women, and children, in times of sickness never employ physicians or drugs, or have other than Christian Science treatment.

The last United States official mortality table for the population of the whole country, excluding Indians, shows an annual death rate of 1.4.

1.4 of 50,000 is 700, or more than thirteen per week! Again I call on the press of the country to produce a record of three per week! And in addition to the liberal allowances already made let us also assume that half the cases have escaped publication, and does any opponent of Christian Science believe this? More; that two-thirds of them, still more, that three-quarters of them have been unnoticed, and yet there remains a gain.

The fact is patent to any honest investigator, and too simple and plain for controversy on the part of even the fairly disposed observer, that there is a lower, far lower, mortality rate among Christian Scientists (and consequently there must be less sickness among them, too) than among the whole people or any body of people of equal or greater numbers.

And this, too, notwithstanding the well-known fact that their members are largely and heretofore almost wholly, drawn from the invalid ranks of the several communities in which they have established their churches, now to the number of nearly five hundred.

Many of these churches are among the largest, and some of them are the largest, in their respective cities, and scores of their members have come out of life-long invalidism; have been people of organic diseases or broken down constitutions, physical wrecks, "impaired risks," as the life insurance companies say, but now restored to health.

A recent writer called on the life insurance companies to refuse to insure Christian Scientists, and thus strike a severe blow at "this fanaticism," to which a better-informed man replied, that if they only knew the facts the companies would be glad to write a blanket policy at half rates on the whole lot!

The average health of large bodies of diseased people raised not only up to but above that of the whole number of the people in their respective communities, and this, say you, is bigotry and should be stopped by legislation. God forbid! In his recent lecture on Christian Science, at the Metropolitan Opera House, in New York,—the day the firemen turned away hundreds of people because the house was packed to the roof—Judge Ewing of Chicago said, "The sole purpose of inquiry in every court of justice in Christendom is and ever has been to evoke facts; the world is weary of theories, it longs for facts; it is surfeited with dogmas, arguments, and platitudes, and cries out for facts."

Mr. Editor, I have endeavored to confine myself to facts.

WM. A. CHILDS.

## The Lectures.

### At Cedar Rapids, Ia.

A large audience, probably about six hundred people, assembled last night (Thursday, May 3) in Greene's Opera House to hear a lecture on Christian Science by Judge William G. Ewing of Chicago. People were waiting before the doors were opened at half past seven. The audience included men and women from all the smaller towns around and a fine representation of our own citizens.

Judge Ewing is one of the members of the Board of Lectureship of the Christian Science Church, and is in constant demand. He was introduced by his friend of the bar and bench, Samuel K. Tracy, general solicitor of the B., C. R., & N. railway. Judge Tracy spoke briefly but impressively in the following words:—

*Ladies and Gentlemen:*—Many of us have often been before this stage to listen to mirth, music, or tragedy; to-night we are to hear a lecture on Christian Science.

Many are turning from the doors of the sects unsatisfied. What the people want is a religion that is practical in healing both sin and sickness. They read from Holy Writ, in plainly spoken words, that such a theology exists and is fully assured, and these words many believe must be absolutely true or positively false. There can be no fashionable or convenient ecclesiastical middle ground to stand upon, by way of compromise, in this matter. The Christian Scientist believes and demonstrates that what was thus declared nineteen hundred years ago, as to the Christian religion being able to heal sin and sickness alike, was intended for all ages and all people, and that those assurances are not rendered void or at all inoperative, by the lapse of time. The statute of limitations does not run against these promises. The Christian Scientist believes the Master's words in this respect were not idle platitudes, but are now, as then, actual verities, obtainable by the understanding and living of this religion. It was his theology that healed, and not his personality, and the understanding and adoption of that theology is the definition of Christian Science. This faith cannot be stoned to death either by ridicule or ecclesiastical denunciation, but it is thriving upon both. If there is any religion that possesses this power of equally healing sin and sickness, let us have of it freely. I now take pleasure in introducing Judge Ewing, who is an accredited lecturer in this field.

Judge Ewing commanded the closest and most reverent attention for the address which lasted almost two hours. He is a man past middle age, full of the youth of hope and goodness, and his talk was a grand message of love, peace, and good-will. His experience of many years as an eminent jurist gives him the power to present his arguments in the most forcible and logical manner, yet always breathing out gentleness and brotherly kindness. His subject was "Christian Science, the Religion of Jesus Christ," and he first pointed out step by step in the most convincing manner the many changes that have taken place in the course of years and the many ways in which we have all departed from the thoughts and the beliefs of our fathers; then the speaker proceeded to note the many essential points in which the old churches and the Christian Scientists agreed perfectly. His peroration was an appeal of wonderful beauty and was heard with almost breathless attention.—*Cedar Rapids Evening Gazette.*

### At Peoria, Ill.

The auditorium of the Grand Opera House was filled with a large and intelligent audience yesterday afternoon (Sunday, April 29) to listen to the lecture of the Hon. William G. Ewing of Chicago, on Christian Science. Judge Ewing is a member of the Board of Lectureship appointed by the Mother Church of Christian Science.

The Hon. O. J. Bailey introduced the speaker. Mr. Bailey said:—

Before the waters parted and the mountains reared their peaks against the sunlight, Truth had its being, and divine Love in all its perfection of character had become a fixed Principle. And man through all the ages has sought a better knowledge of this Truth, of this divine law which gave him being, and which is shaping his destiny. He has turned to nature, to the writing on tables of stone, to revelation, and to inspiration, and has written his judgments into laws and called them creeds, articles of faith, and articles of belief, and has pronounced them perfect; but succeeding generations have written across their face, "Surely this cannot be so, it is not our experience, it is not our reading, it is not our interpretation of these Divine laws," and they have written anew. This evolution has proceeded on and on into the present where the light of Truth reflects a brighter certainty. The teaching of the Christ is the accepted revelation of life and immortality. The people of the world are nearer together than ever before in their belief in the cardinal principles of Christianity, and this is due to an increasing liberty of denominational and individual thought, and a growing respect for the conscientious conclusions of those who differ from us in their findings.

It does not follow that we are Christian Scientists because we are in this midst, but we who are not such may well listen with profound interest to the claims of Christian Science as "the religion of Jesus Christ," when these claims are presented by one fully accredited, by one learned in the law and learned in the laws of interpretation,—a judge whose honor abides with him to dignify and grace his character. Such a one I have the pleasure of introducing to you as the speaker of the hour, Hon. William G. Ewing of Chicago, whose subject, as I have indicated, is "Christian Science, the Religion of Jesus Christ."

*Peoria Herald-Transcript.*

### At Davenport, Ia.

Judge William G. Ewing of Chicago appeared before a large audience at the Burtis Opera House Saturday evening (April 28). He delivered a powerful and interesting lecture, taking for his subject, "Christian Science, the Religion of Jesus Christ." Judge Ewing is an excellent speaker and he was given the closest attention throughout his lecture.

The speaker was introduced to his audience by J. D McCormick of this city, who said in part:—

Friends, we are invited here this evening, to listen to an able speaker, who by appointment through the constituted authority of the Board of Lectureship and under the auspices of the local First Church of Christ, Scientist, will tell us something of Christian Science, that new religion, which is possibly to-day engrossing the minds of the peoples of the world, as is no other religion; he will, I assume, tell us what it is, and what it is not.

In looking over this intelligent assembly, I believe I am safe in saying it is made up largely of representatives of the various churches of this city; each, as a soldier for Christ, believing that he or she is enlisted in the proper army and under the proper leadership; all, however, as liberal-minded Christians, conceding that all are traveling in the same grand highway, and seeking the same goal. Many of you possibly are gravitated here this evening as seekers after Truth; if such be the case, open wide the windows of soul, and let it in, if what you shall hear appeals to your consciousness as being the Truth.

Thanking you, I now take pleasure in introducing to you Judge William G. Ewing of Chicago, who will address you on the subject of Christian Science, the Religion of Jesus Christ.—*Davenport Daily Leader.*

### At Creston, Ia.

Judge William G. Ewing of Chicago, one of the most prominent exponents of Christian Science in this country, lectured to a fair audience last evening (Tuesday, May 1), at Patt's Opera House. County Attorney James G. Bull introduced the speaker. Judge Ewing is a fluent talker and quite a logician, so he not only entertained but instructed his audience. He spoke with generosity towards those who were prejudiced against the doctrine he advocated, and attributed such prejudice to hereditary influences. Neither did the lecturer desire to provoke a quarrel with the medical profession, but suggested that as the world was advancing rapidly there was naturally a change of views in matters both secular and religious, and that liberality of thought and forbearance was wise.

## Cleansing One's Way.

In a Boston boarding house roomed sixteen clerks, honest and well disposed, and belonging to good families. All of them were of the age when the boy, just merging into manhood, generally makes decisions as to his conduct that result in final good or evil. Three of the young men, who occupied one of the rooms together, were recent acquaintances, and their first Sunday in the house brought a trial of moral courage which is interesting to relate.

The hours between breakfast and church time must be whiled away somehow, and two of the roommates busied themselves with miscellaneous reading. The third felt a desire to take out his Bible and read it, as he had been taught to do at home. Fearing ridicule, he hesitated a good while, but conscience presently impelled him to go to his trunk and lift the lid. Cowardice suggested that it would look "sanctimonious" to be seen reading the Bible. He shut the lid down and walked away.

After nearly half an hour of struggle, conscience triumphed again. He rose and went to the trunk a second time. His hand was on the Bible. Again his courage failed him. As he was turning away one of his companions called out: "What's the matter, Ike? You're as uneasy as a weathercock." Ike laughed, and told the truth like a man. To his surprise both the others confessed that they had had the same struggle and defeat. Each thought that he ought to read his Bible, but was afraid to be seen by the rest. The next minute all three had their Bibles in their hands, and read them together during the next half hour. They agreed to do this every Sunday. The ice was broken.

The next Sabbath morning, while they sat quietly reading, two of the clerks from another room came in. "Hullo!" they exclaimed. "What is this, a conventicle?" The three Bible readers frankly told of their agreement. The visitors confessed that only cowardice had kept them, too, from the same duty. They promised to begin at once, and they did so. The example spread till each of the sixteen clerks in the house spent his Sunday mornings reading the Bible. Every one of these youths is to-day a useful man. We cannot, of course, say that the mere reading of the Bible on those Sabbath mornings made these men what they are.

We can say, however, that the principles of the Bible must have influenced their lives for good, and the associations which, with such a habit, they would naturally seek must necessarily have been honorable and elevating, and have tended to their success in life. One of them, who afterward became a minister, related the facts we have given. One boy's courage to do right may determine not only his own future well being, but that of many others besides.—*Youth's Companion.*

## The Unfailing One.

BY FRANCES RIDLEY HAVERGAL.

He faileth not.—*Zephaniah*, 3:5.

He who hath led, will lead
All through the wilderness;
He who hath fed, will feed;
He who hath blessed, will bless;
He who hath heard thy cry,
Will never close His ear;
He who hath marked thy faintest sigh
Will not forget thy tear.
He loveth always, faileth never;
So rest on Him, to-day, forever!

He who hath made thee whole
Will heal thee day by day;
He who hath spoken to thy soul
Hath many things to say.
He who hath gently taught
Yet more will make thee know;
He who so wondrously hath wrought
Yet greater things will show.
He loveth always, faileth never;
So rest on Him, to-day, forever!

He who hath made thee nigh
Will draw thee nearer still;
He who hath given the first supply
Will satisfy and fill.
He who hath given thee grace
Yet more and more will send;
He who hath set thee in the race
Will speed thee to the end.
He loveth always, faileth never;
So rest on Him, to-day, forever!

He who hath won thy heart
Will keep it true and free;
He who hath shown thee what thou art
Will show himself to thee.
He who hath bid thee live,
And made thy life His own,
Life more abundantly will give,
And keep it His alone.
He loveth always, faileth never;
So rest on Him, to-day, forever!

Then trust Him for to-day
As thine unfailing Friend,
And let Him lead thee all the way,
Who loveth to the end.
And let the morrow rest
In His beloved hand;
His good is better than our best,
As we shall understand,—
If, trusting Him who faileth never,
We rest on Him, to-day, forever!

Man is glorious and happy not by what he has, but by what he is. He can receive nothing better or nobler than the unfolding of his own spiritual nature.—Channing.

The *Churchman* says, "Christianity is not a thing that we can keep to ourselves. The more we spread it abroad, the more we have it at home."

The *Pacific* says: "Living is giving, and giving is living. Always he who seeks to save his life loses it, and he who gives it saves it."

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Card.

*Beloved Students:*—In reply to the eager questions from the Field, Does Mrs. Eddy purpose to attend the next Annual Meeting of the Mother Church?—Will say, I shall not be with you personally, but do not let this prevent your attendance. MARY BAKER EDDY.

## Preconception and Misconception.

THE extent to which the world of thought and action has been governed by preconception and misconception, is a theme worthy the serious consideration of philosophers and thinkers. Preconception, based on right premises, is for the world's good. Preconception based on misconception works evil for mankind.

To illustrate: Perhaps in all past ages, the world believed that the only means of locomotion on land was by the propulsive force of the legs of man and animals. No other was deemed possible. Every preconception was to that effect. Not until, by a long series of experiments, steam was proved to be a propulsive force, was this preconception overcome. These experiments were made in the face of the opposition, scepticism, scorn, and derision, which have ever greeted the innovator and reformer.

The preconception, based on misconception, that "the lightning of the heavens," or electricity, could not be utilized as a propulsive power, has only recently been overcome by actual demonstration.

Until recently it was a fixed preconception that men could converse with each other only as they came face to face, or close together. That preconception, founded on a misconception, has been effectually exploded by actuai proof.

A year or two since the possibility of telegraphing without wires was an apparently settled preconception. That preconception, founded upon misconception, no longer exists, for wireless telegraphy has been proved; it is now a fact.

The strange antics of liquid air would not now be believed to be possible were they not being daily proved, although the tests are yet so far experimental that its possibilities are only hinted at. The degree of cold obtained is incredible except as a matter of indubitable proof.

And so we might continue our illustrations almost indefinitely. They might be multiplied up into the millions to show wherein the preconceptions of the human mind, founded on misconceptions, have been set at naught by inventive genius and discovery; yet for long ages these preconceptions ruled the world.

Have these preconceptions and misconceptions been confined to secular things? Have they not entered into the realm of the religious? Have men been deprived of spiritual achievements and blessings through preconception founded on misconception?

For instance, for many years, thousands of sincere people accepted as true the doctrine of infant damnation as formulated in the Presbyterian creed. What indescribable pangs pierced the hearts of scores of such believers because of fear that their infants had been eternally lost under this decree! Yet now the Presbyterian or other person who believes this horrifying dogma would be a rarity. It was a sad preconception based on a sad misconception. It has been swept away by a better understanding of God.

Many other doctrinal preconceptions, based upon misconceptions, are, in like manner, passing away. The religious world is rapidly progressing away from false conceptions to truer conceptions of God, of man, and of the universe; and men are beginning to concede the possibility of overturnings and innovations along religious as well as secular lines.

There are many Christian people outside the ranks of Christian Science who admit the possibility of healing sickness through divine means. Some go farther, and admit that sin may be destroyed by the sinner's reforming himself, or being reformed, through the ministrations of others, under a spiritual or divine law not heretofore generally understood. Nay more, even the possibility of the restoration of the dead, is not entirely scorned by some. And so, preconceptions based upon misconceptions in the religious realm, are going down before higher and better conceptions and accumulating proof.

A better day has dawned. God and man are nearer together. The mists of preconception and misconception are dissolving in the sunlight of Truth.

## The Need of a Confession of Works.

WE cull the following from an editorial which appeared in a recent issue of the *Seattle Post-Intelligencer.*

The demand within the Presbyterian Church for a change in the expression of its creed is causing a widespread discussion of religious formulas in general and of the Westminster Confession in particular.

The construction of a creed seems to be one of the most difficult and dangerous feats of intellectual engineering that can possibly be undertaken. It is hardly probable that it will ever be satisfactorily performed.

The deepest religious feeling of the time lays its stress upon action rather than belief, and is convinced that the religion which Christ taught, has to do above all else with the life we now live. Theological discussion about a state of future punishment seems futile, almost childish, to the man who looks out upon the world and back into his own heart, and sees that punishment for sin is not only inevitable but immediate. Nemesis is less than a day's journey behind us all. We suffer now for yesterday's misdeeds. We are judged at sunset for the morning's sin. Hell is being what one would not be, and most of us are in it. Who has to await some far-off judgment day to feel the worm that dieth not?

So, too, with the doctrine of eternal life, for it also is here and now, whether or not it is over yonder as well. "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou has sent"—that is to say, the man who is able on the one hand to divine and to yearn for infinite goodness, tenderness, justice, power, and on the other hand to recognize and to strive to follow the pattern of these qualities incarnate, is already leading the life eternal. There are thousands of reverent Christians who believe that the word "eternal" throughout the New Testament is used in this sense of quality rather than in any sense of duration; and who, therefore, when questioned as to the groundwork of their belief that that which is eternal is immortal also, can only plead the everlasting fitness of such a survival, and Christ's words, "If it were not so, I would have told you."

Digitized by Google

If, then, it is possible to deduce with equal plausibility from the New Testament these doctrines which are the last words of liberal Christian thought, does it not seem that the time has come when a religious creed may safely be based upon something else rather than upon expressions of opinion? Why not substitute for a confession of faith a confession of works? It is possible for devout Christians to be as far from one another in their intellectual beliefs regarding Christianity as the east is from the west, but in deeds they must be one. How would it do, then, to make the test of orthodoxy not beliefs but actions?—to know men by their fruits: to ask no longer, "Does he think like a Christian?" but to demand instead, "Does he feel and act like a Christian? If so, he is an accepted member of the Church Triumphant."

Our Master said, "Ye shall know them by their fruits." This shows there is need of a "confession of works" as well as a confession of faith. Works, which are the demonstration of Truth, make eternal life a present reality. As has been suggested, the expression "eternal life" refers to the quality of life as well as its duration. Inasmuch as mortals have awakened to the fact that Life is God, and are manifesting that Life in thought, word, and deed, they are departing from the false sense of life, which is mortal, and are gaining the true sense, which is eternal.

The works of the Spirit are manifest in the healing of sickness and sin. These works demonstrate that to-day is the day of salvation from everything unlike God. Such a "confession of works" illustrates the practical side of Christianity which makes God a present help. The world is feeling the need of such a confession and is looking to works more than to words for evidences of God's saving power.

## Lecture at Lynn, Mass.

JUDGE WILLIAM G. EWING will deliver a lecture on Christian Science, at Lynn Theatre, Saturday evening, May 26, under the auspices of First Church of Christ, Scientist, of Lynn.

## Railroad Rates.

THE reduction in railroad fare to Boston as announced last week has also been authorized from Trunk Line, Southeastern, and Central Passenger Associations territory. These Associations cover all territory east of Mississippi River to and including St. Louis, Peoria, and Chicago.

There is no doubt that the Western Passenger Association will concur in these rates.

# Among the Churches.

### Opening Service at Montreal, Can.

Easter Sunday was a red letter day with the Christian Scientists of Montreal, Can., as it marked the opening of their new church on Closse Street, Western Square. This event is of special interest from the fact that it is the first church of this denomination in this province, and the first church of the kind in the British Empire which has primarily been built especially for Christian Scientists. In other places within this realm churches have been purchased by the Scientists and subsequently remodeled, but, in the present instance the Christian Scientist, of Montreal purchased the land some three years ago, and have now erected their handsome church as a thanksgiving to God for the blessings which nave come to them through the religion of Jesus as given to the world in the Bible, and practically applied in the teachings of Christian Science.

The church, which stands on Closse Street, Western Square, is a very neat one, both as regards the external appearance and the internal adornment. The walls of the auditorium are beautifully tinted in grey greens. Five trusses span this portion of the structure, rendering unnecessary the use of pillars. Electric lamps on each of these give a soft, uniform light. The outer walls are built in the Tudor Gothic style of architecture. All are of solid brick. The facade is of pressed brick with Indiana limestone trimmings. The pews are made of polished oak.

The building was designed and the work superintended by Messrs. Hutchinson & Wood, the well-known architects of this city.

The following touching message sent by the Rev. Mary Baker G. Eddy gladdened the heart of every hearer, and will nerve each member to strive for that Mind which was also in Christ Jesus.

Concord, New Hampshire, April 15, 1900.

First Church of Christ, Scientist, Montreal, Can.

Beloved brethren, accept my thanks for your tender Easter greeting. May the risen Christ illume the history of your church and the lives of its dear members with eternal light and love. MARY BAKER EDDY.

The services were of a simple character, in keeping with Eastertide, and were not dedicatory, as the church is as yet incomplete. The building was appropriately decorated with flowers and plants which lent an additional charm to the already beautiful interior. CHAS. W. PEARSON.

### Charter Rights are Sought.

The re-application of the First Church of Christ, Scientist, of this city, for a charter of incorporation in the local courts yesterday calls attention to the growth of this remarkable cult in this city. Five years ago there was no organization of the adherents of Mrs. Eddy's new-found philosophy, and they numbered only twenty. To-day the active membership is 103 and the church is in vigorous condition.

The first time application was made for a charter was nearly five years ago, but the grant was refused. The main purpose of securing a charter, the members say, is to enable the church to buy or hold property. Some time in the future ground will be purchased and a house of worship erected, but at present there are no plans along these lines. The congregation is abundantly able to build a church, however, as among its membership are a number of people of wealth and influence.

The first application for charter was made October 5, 1895, in Common Pleas Court No. 2 before the late Judge Thomas Ewing. He refused to grant incorporation on the grounds that the application did not set forth specific enough reasons as to the doctrines and teaching of Christian Science.

Despite the vigorous opposition of a Scotch Presbyterian community, the growth of the church has been rapid. From a membership of twenty at the time of the church's organization on July 19, 1895, less than five years ago, the list has quintupled, so that now the membership is 103. This, however, does not include the great number of persons who attend the service more or less, but who have not embraced membership. Every Sunday morning and evening in the beautiful little chapel on Fifth Avenue, Oakland, there are two hundred and fifty or three hundred attendants at service. Every June and December at communion new members are taken in. The house of worship was formerly the chapel of the First United Presbyterian Church, which recently completed its magnificent stone structure

Digitized by Google

across the street, in the vicinity of Fifth Avenue and Boquet Street.

It is almost impossible to state just when Christian Science began to gather adherents in this city. It is safe to say that as soon as Rev. Mary Baker G. Eddy gave to the world that remarkable book, "Science and Health with Key to the Scriptures," many years ago, and announced what she and her followers believe it to be, a truer interpretation of the veiled meanings and sublimities of Scripture, some hearts here beat in spiritual unison with her teaching. For quite a long while, however, there were not enough followers here to justify a banding together and securing a charter. Gradually they drew together and selected as a meeting hall the building on Diamond Street, now occupied by the Pittsburg Academy. A year or two ago the present chapel was secured.

The Scientists here, as they call themselves, do not relish publicity as a rule, so it was difficult to get the names of many of them, outside of those who hold official positions. They represent all walks of life, however, the rich and the poor, as well as people in moderate circumstances. Mrs. Alice Butler, the popular actress, is a devout Scientist.

Mr. Charles Hunter Miller, employed with Howe, Brown & Co., is the First Reader, and Mrs. Lewis M. Slack of Marion Avenue, Allegheny, Second Reader.

The Christian Science service is a simple and noble ceremony and one of impressive beauty. Unlike some denominations, in whose churches most of the singing is done by choirs, Scientists believe in congregational singing.

According to the adherents of this form of religion, most of their members were received on account of physical healing. When *materia medica* had proven futile to relieve or cure them, they came to Christian Science healers as a last resort, most of them with sceptical notions. According to local Scientists, many of the present members of the church have been cured of consumption, nervous disorders, and other organic and neurotic diseases. It is asserted that many miraculous cures occur in the church.

*The Pittsburg (Pa.) Leader.*

### The Work at Creston, Ia.

The editor of the *Daily American,* in an interview with Lansing W. Hurlburt, First Reader of First Church of Christ, Scientist, gleaned the following facts concerning the growth of Christian Science in our city.

Mr. Hurlburt spoke as follows:—

In September, 1896, we commenced holding meetings in private houses. April, 1897, found such an increase in number that we were obliged to seek larger quarters. We then secured the large hall over the Creston National Bank, which was fitted up for services, the first service being held there on April 1, 1897. In July, 1898, Edward A. Kimball of Chicago, Ill., member of the Board of Lectureship of the Mother Church of Boston, Mass., lectured at Patt's Opera House on Christian Science. This lecture was free and much benefit was derived from it.

October 12, 1899, nine class students met as charter members and agreed to secure a state charter for First Church of Christ, Scientist, of Creston, Iowa, as heretofore we were only a society. The charter was secured and we are now an organized church with an average attendance of from twenty to fifty and still increasing in number. The congregations of Christian Science Churches consist largely of those who have been brought from the bondage of sin and sickness into the glorious liberty of freedom, health, and happiness.

The services of this church are held every Sunday at eleven o'clock and Wednesday evening testimonial meetings at 7.30, over Creston National Bank, entrance Montgomery Street. All are welcome to these meetings. The Wednesday evening testimonial meeting is to tell of the benefits received through the understanding of Christian Science as taught in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, Discoverer and Founder of Christian Science.

A building fund has been started, from which it is expected, in the near future, to erect a fine church edifice.

### The Work at Santa Cruz, Cal.

The account of the good work of the little church in Vermont, encourages us to add our experiences and achievements, although in comparison with the reports of most of the churches, they may seem very small and almost unworthy of notice.

Since our organization in October, 1897, our growth has been slow but steady. September 19, 1898, Mr. Edward A. Kimball of Chicago delivered a lecture on Christian Science in the Opera House. There were over five hundred present, which was considered a very fair audience for this place, as the seating capacity of the Opera House is only six hundred.

We have twenty-nine members enrolled, but some have moved away, so there are only twenty who are really active members. Many of these have frequent demonstrations, some of the best have been given by the children in Sabbath School.

Santa Cruz is a seaside resort, and often we have Scientists from abroad to attend our services for a week or two, or even a month at a time. They always express themselves as being much benefited by the spirit of Love that is manifested in our little society. There have been many cases of healing both at the Sunday and week-day services.

We have established a reading room in the Old M. E. Church where we hold our services, but hope very soon to place it more nearly in the centre of business, although it is now only two blocks from the main business street.

We selected for our church motto, "Divine Love always has met, and always will meet, every human need" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 490).

MRS. LORRAINE A. CORNISH.

### Christian Science in Canon City, Col.

First Church of Christ, Scientist, Canon City, Col., was organized in 1894 by fifteen members. Previous to this a little band, known as a Christian Science class, met each week for the study of the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. As their numbers increased they would secure larger quarters. At present they worship in the church building, corner Fifth and Main Streets, recently vacated by the M. E. congregation. The attendance is about ninety.

The Sunday service consists of a lesson-sermon taken from the *Christian Science Quarterly,* which is read alternately by two readers, as the Bible and Science and Health are the only preachers in the denomination throughout the world. The Readers in the local church are Miss Perlita Wolff and Mr. C. W. Talbot.

The Wednesday evening meetings are well attended, for the people of many denominations gather to listen to the testimonials, which prove Christ's healing to be a living factor in this age of the world, and many cases of physical and spiritual healing equal those of the early Christians (who were healed until the third century), proving, at least to the satisfaction of those so blessed, that God is good, "the same yesterday, to-day, and forever."

In connection with this church is a reading room, where inquirers are always welcome. Christian Science literature is on the table and a practitioner is always in attendance.

*Canon City Record.*

### From Canyon, Tex.

So far as we have been informed the first seed of Truth was sown here the latter part of August, 1899. Some time in December a few of us arranged for some Quarterlies, and on January 7, 1900, we met and read the Bible-Lessons and have been doing so ever since. We have been distributing literature and have succeeded in arousing interest sufficient to cause an investigation of Christian Science.

We have had some good demonstrations. Scarlatina, slow fever, typhoid, etc., have been healed in from one to four days, while other cases apparently of the same nature under the care of *materia medica* have lasted six weeks and some resulted fatally.

We have started a fund and hope soon to be able to comply with all necessary requirements and be recognized by the Mother Church, The First Church of Christ, Scientist, at Boston, Mass. We feel that our regular visitors, the *Journal* and *Sentinel* are indispensable.

EDNA HENSON, Canyon, Tex.

### Christian Scientists Will Build.

The Trustees of First Church of Christ, Scientist, of the Oranges, have bought a plot of land on the easterly side of Cleveland Street, 100 feet front by 106 feet deep. The plot is directly north of the Temple Sharey Tefilo. The price paid was $5,750. The purchase money has been nearly all paid, only a small balance being required to make the lots free and clear. As soon as this is accomplished the Trustees will at once begin preparations for building, and hope to be able to make a start during the present year. No definite plans have as yet been made, but the intention is to build on ecclesiastical lines that will appeal to the public as a house of worship. The church has had a remarkable growth in the Oranges. It was organized and incorporated in April, 1898, and the increase in membership for the first year was fifty per cent and during the second year, just about closing, 62½ per cent.

*Orange (N. J.) Chronicle.*

### Church Organized at Tecumseh, Neb.

Five years ago two persons met in a private house to read the lesson. Their numbers increased until they were enabled to open a reading room and hold the services there. Afterward they rented the Universalist Church in which to hold services. But so many of the little band moved away from time to time, it was not until this spring we were enabled to organize as a church. We obtained our charter and met Easter Sunday, April 15, for the first time as an organized church. We have thirty charter members, and the interest and attendance is increasing. The reading room has been re-opened and we are striving to conduct our affairs in strict accordance with the Christian Science teaching. We trust that time will prove our church to be built on a sure foundation, the Rock—Christ.

EDWARD T. HART, *Clerk.*

### New Church Formed at New Bedford, Mass.

About forty Christian Scientists, representing those who have been holding meetings during the past few months in Cornell Hall, met last Monday evening, and organized Central Church of Christ, Scientist.

The new church has an unusually gratifying membership. Services will be held Sundays at 10.30 A.M., and Wednesday at 8 P.M. Central Church of Christ, Scientist, is a regularly authorized branch church of the Mother Church of this denomination, The First Church of Christ, Scientist, in Boston, and is a sister church of Church of Christ, Scientist, on Fourth Street.

*The Evening Standard.*

## From Our Contributors.

### A Few Suggestions.

BY F. W.

IN a recent issue of the *Sentinel* there was a request for contributions "such as can be written from the standpoint of experience and demonstration." This request should cause us to ask ourselves if we are doing our whole duty by our publications. Do they have the support we can and should give them, or do we try to assure ourselves that we are "too busy" to prepare suitable articles for publication, since there are plenty of others who have both the time and ability to do so? Suppose there are others who can do this work as well, or even better, than we can, have we not a duty to perform? May it not be that it is just as important and just as necessary for us to do our part of this work as it is to do the many things that seem to demand all our time and attention?

If patients, students, and church seem to demand all our time and talents, might it not be well to "take time" to do our duty by our publications and see whether patient, student, and church will not be the better for it?

It may be that we are impressed with our lack of ability. If so, can we not at least make an honest effort to do the very best we can, and then leave the results with Truth?

Possibly a few suggestions as to how we can, according to one writer's view of the question, serve the cause of Christian Science, may not be amiss.

The request is for articles "written from the standpoint of experience and demonstration." Christian Science is nothing if it is not practical. Finely argued theories amount to but little if anything. The things that have helped us may help others who are passing through a similar experience, and is it not a most worthy labor of love to give others the benefit of our experience, by contributing, from time to time, to our most excellent publications, the *Journal* and *Sentinel?*

We know the character of the articles wanted, then the question arises, How should the work be done? We answer, anything that is worth doing at all, is worth doing well. This suggests that our work should not be done in a haphazard, slipshod manner, but it should be done well. In fact so well that it is not necessary for us to apologize and say "I scratched this off in a hurry." Of course we shall heed the oft-repeated request to write with ink and only on one side of the paper. We should not fail to make *all* quotations exact even as to punctuation, and also be sure to state where they can be found so they may be easily verified.

We want the high standard of our publications maintained, and should we not do our best to make our contributions worthy of a place in them? Of course we realize there must of necessity be more or less revising done by the editors, but have we a right to impose upon them the task of doing what we could and should have done ourselves?

After an article has been carefully prepared, the next thing is to mail it to the Editorial Department of The Christian Science Publishing Society. It should be a free-will offering to the cause of Christian Science, and when it is dropped in the mail box it should, in a certain sense, cease to be ours. There should never accompany it a request that it appear in the next issue of the *Sentinel* or next month's *Journal*. We should cause our editors to feel they are at liberty to make such use of it as may seem best. If its publication is delayed, we may know there is a good reason for it and we can learn the lesson of patience. If it should never appear, there is no occasion to feel offended. We want our periodicals to contain the very best there is in the storehouse, and nothing but selfishness on our

Digitized by Google

part could desire to have our contribution occupy a place that might be filled by a better.

The writer has been a contributor to our publications for a number of years, and he has endeavored to follow the suggestions herein given. Not all his contributions have been found available for publication, but he does not consider that his labor was lost, or that he failed to receive the reward of his efforts. Experience has often caused him to wonder if, after all, the writer of an article does not derive more benefit therefrom than does any one else. Do we not know that every honest and sincere effort is blessed of our Father who wisely judges all things according to the motive? Should we then neglect to do our part in furnishing suitable matter for our publications?

In this, as in countless other ways, may be verified the Scriptural declaration that "it is more blessed to give than to receive." What work is so important as that done by our publications, which every month and every week go out into the world preaching the gospel of health and holiness? Let us all send in our tithes that the storehouse may be filled to overflowing, then the windows of heaven will be opened, and a great blessing will be poured out upon us.

## Wisdom and Understanding.

BY HERBERT S. FULLER.

The fear of the Lord, that is wisdom; and to depart from evil is understanding.—*Job*, 28: 28.

I SUPPOSE there is not a Christian Scientist in the world who is true to the teachings of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and who is loyal to her who discovered and founded this great Truth cure, who does not daily, yes, hourly, pray for wisdom and understanding.

Nobody so realizes the absolute need of possessing these great qualities as does the Christian Scientist, for he knows that they are the virtues necessary to illumine his pathway, and that it is by their practice that the sick are healed and the sinful reformed, and that above all other things they are to be desired. "More to be desired are they than gold, yea, than much fine gold."

Great as they are acknowledged to be from a material or worldly standpoint, they are magnified an hundredfold when the searchlight of Truth is turned upon them, and their spiritual meaning is revealed in letters of light that cannot fade away.

What these words mean to the working Christian Scientist, is best brought out by the text quoted above from Job, 28 : 28. Wisdom is here seen to be not "discretion, sagacity or skill," as the dictionary defines it. It is seen to be more than knowledge, for, as Cowper says,—

> Knowledge and Wisdom far from being one,
> Have ofttimes no connection.
> Knowledge is proud that he has learned so much,
> Wisdom is humble that he knows no more.

The text tells us plainly that "the fear of the Lord, that is wisdom." That is, the loving awe inspired by reverence, makes us solicitous, yes, anxious, to avoid the displeasure of the Lord. Here the word fear does not signify, and is not intended to signify, "a painful emotion or passion excited by the expectation of evil." It does not mean anything of that kind, else God would not be a God of Love. It does mean, it seems to me, that the only way to gain Wisdom is to avoid at all times that which would be displeasing in the sight of the Lord. Do nothing but good. It means, in fact, to me: "Thou shalt have no other gods before me."

The text would indicate that the one and only way to achieve Wisdom, to reach "the secret place of the most High," is by understanding, and we are told in the same text what constitutes understanding. It is, in the words of the text, "to depart from evil." In other words: "Let the wicked forsake his way, and the unrighteous man his thoughts."

So then if we would have the wisdom and understanding that we so often pray for, we must cast aside all evil thoughts, evil suggestions, and evil acts, and know nothing but God, Good. And we must "Love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind" and "Thou shalt Love thy neighbor as thyself."

"The *Way* is absolute divine Science: walk ye in it." (Miscellaneous Writings by Mary Baker G. Eddy, p. 359.) Then will you have Wisdom and understanding.

## The (Scientifically) Correct Point of View.

BY I. H. QUINBY.

JESUS instructed mankind largely through parables, knowing that the human understanding could thus be more readily reached than by a more direct address. The story of the Prodigal Son has undoubtedly been repeated daily, both materially and spiritually, and so, all through the canonical writings, we find worldly events recorded and spiritually interpreted.

We are taught in Christian Science, as in the Bible, that we live, and move, and have our (true) Being in God, and that God is too pure to behold evil.

If we realize our one-ness with God and do all things from His standpoint, all evil seeming will disappear from our consciousness, and we shall behold all things in proper position, and see them in their true light.

In astronomy, we are taught, in locating the heavenly bodies, to *apply a correction,* called heliocentric parallax, to our earthly view, which brings them into their true position as they would appear to the observer's eye, were he looking out from the centre of the sun.

As in astronomy, the sun is the centre of the solar system, and to properly behold all things in the solar system, the earthly view must be corrected, by reducing the point of view to the sun's centre, so in Scientific Christianity, the appearance of all things in God's universe, as they seem to be from a human, or mortal mind, standpoint, *must be corrected,* so as to appear in their proper position and true light, as seen from God's point of view, God Himself being the centre and circumference of the universe, including man; then, and not till then, will all evil seeming disappear from our consciousness, and Good (God) will be seen to be the only reality, the All-in-all.

When this is done, more of the real and spiritual meaning of the word of God will be revealed to man, as it was to John, when he wrote these wonderful words, "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

## The Value of Science and Health.

BY F. A. C.

TO-DAY, when feeling the need of something more satisfying than the selfish business thoughts which clamor for so much of the business man's time, a few words from the Christian Science text-book, "Science and Health with Key to the Scriptures," came to my mind, and this pure draught of Truth at once refreshed me. Then came some thoughts as to the value of this Book, which has brought so much of blessing, of joy, and of love into my otherwise selfishly barren life.

First, I tried to think of its value as a matter of dollars, and reasoned thus: Would the price of a copy of the best

Digitized by Google

edition of Science and Health be considered for a moment in exchange for even this one statement of Truth, which had just been of such practical help to me? And without hesitation, the reply was, No; nor for any one of a hundred other such statements from that same book which God has given to me and to this age through the patient loving-kindness of our Mother. This gives some idea of its money value to me; but this money standard is wholly inadequate to express its real value.

Then came some thoughts as to its value on a higher plane as *the* "Key to the Scriptures:" how it had unlocked for me the great truths and brought to light the beauty of the Bible and given me back my childhood's love for, and faith in, and a practical understanding of, the teachings of Moses, the Prophets, and of our great Way-shower, Jesus the Christ. The value of our text-book to me as a Key to the Scriptures can only be fully appreciated by those who, like myself, were brought up by God-loving, Christian parents to believe in and to love the Bible, but who, through misunderstanding, or lack of understanding, had lost their faith in and love for that book, the true understanding of which, as brought to light in Christian Science, not only heals from sickness and sin, but when taken into our daily lives will lift us to a realization of that condition of which the Psalmist sang when he said, "I shall be satisfied, when I awake, with Thy likeness."

## Material Symbols.

THE following remarks were read by the First Reader of West Side Church of Christ, Scientist, New York City, at the close of an interesting and helpful testimonial meeting. I give them in full, believing that they may be of benefit to others, as they have been to us.

JANE B. ROEBER, *Clerk.*

We all have spoken of, and love, the air of quiet and restfulness which pervades our chapel. It has often been remarked by strangers as well as our own people.

I am afraid lest the thought rest too much in the material symbol; for, resting in that it becomes cant and idolatry. That which we love in this place is not contained in four walls, and the too close association of it with them limits the blessing that may be derived from the *impersonal* thought of God and man. This comes from, and is in, divine Mind, and ascends again to Him in grateful recognition of Spirit, as its origin and abiding-place.

If it stays in the four walls, or attaches to any personality, only a barren sense of Divine presence remains to us. The thought that attaches to the chapel, is the same sort of idolatry that attaches to the person of husband, wife, child, or friend, only the personality is larger, and is a higher claim. Blessing will come to each one, as he gives to God, Spirit, that which he finds here of helpfulness and rest.

An error that besets us is the tendency to compare churches, one with another, and to make personal "depicts" (the Mother says in "Retrospection"), that are apt to be depicts in error instead of Truth.

To associate errors with churches, is the same as to associate them with persons. Our thought should be kept on the church of the glossary (Science and Health, p. 574), the ideal to be kept always before us.

We must be watchful to keep this ideal clear and bright to ourselves, to love all Branches as in the Vine,—Christ,—and to see error impersonally, helping thus to destroy error, instead of attaching it to personalities, that symbolize, to mortal sense, the church universal. As Paul says, "For we dare not make ourselves of the number, or compare ourselves with some that commend themselves: but they measuring themselves by themselves, and comparing themselves among themselves, are not wise."

## Testimonies.

### A Soldier's Remarkable Testimony.

I wish to add my testimony in behalf of the efficacy of Christian Science healing. To the sceptic or non-believer it may sound rather apochryphal, but I can be personally interviewed at any time if my statements are doubted. While in the late Cuban war (in the Engineer Corps), I was detailed to spy duty, and came upon a Spanish outpost. A short but severe engagement took place, during which I was struck by the butt of a gun, fracturing my jaw, and also in the chest, severely injuring the bones. I also received a terrible machete wound in the knee. Wounded as I was, being on horseback, I managed to escape, but shortly after fainted and fell from my horse from weakness and loss of blood. I was soon found by our men, however, and taken to the camp of the 16th Pennsylvania, whence I was sent to the hospital at Ponce. Lingering there for some time—it seemed years—I was finally returned with my regiment to New York, where I received my discharge in December, 1898, suffering untold agony in the mean time.

I tried to follow my business, but was too enfeebled, and went to a Philadelphia hospital, where I was examined by Dr. DaCosta, who deemed operations necessary to save my life. I took the opposite view (as most patients do), and came to St. Vincent's Hospital, New York, where I underwent a rigid examination by Drs. Bryant, Phelps, Dennis, and others. Their diagnosis revealed the fact that I was a thoroughly disorganized man, suffering from fractures, ulcers, abscesses, and necrosis of the bones. They concluded that I must have a silver jawbone inserted, a silver breastbone, and that my leg must come off above the knee! My sufferings can better be imagined than expressed. I was under the influence of morphine and other anæsthetics most of the time, and when without them I was like an infuriated demon, so intense was my agony. During April my jaw was operated upon, and a portion removed, and again in May and June, which caused my jaws to lock—my only food being fluids given through a rubber tube. I was then informed that my left leg had to be amputated,—that my life depended upon it. Feeling that my earthly career was drawing to a close, I asked and received permission, a few days before the time set for the operation, to visit a few friends for the last time; for I was certain I could not survive it. With my leg in a splint, and enveloped in bandages innumerable, I managed to get to a friend's house, to whom I related my experience.

Now for the sequel. This friend, seeing my hopeless condition, advised me to quit the hospital, throw my opiates and other medicines to the winds, and place my trust in Christian Science. Being a Catholic, I laughed at him. He assured me that not only would I get well, but that my leg would not have to come off! I was impressed with his earnestness, though inclined to doubt his sanity. His interest and expostulations finally prevailed, and I forthwith left the hospital with my leg—and I've got it yet! He introduced me to a Christian Science practitioner—a gentle, forbearing, patient woman, who taught me the Truth, as revealed in "Science and Health with Key to the Scriptures," and through her ministrations, and by the grace of God, I saw the Light, and was healed—absolutely cured! My jaw assumed its normal condition, a new bone having grown in the aperture sawed out by the physicians, my jaws unlocked, and I can masticate the toughest piece of meat or anything else, my breast healed, the necrosis and suppuration ceased, my face, which was twisted out of all human shape, assumed its original appearance, the fracture and necrosis of my leg healed, and in the short space of two months from date of first treatment I was running up and down stairs with the agility

Digitized by Google

of an acrobat, and attended to all the active details of my business, immune from pain or suffering of any kind. At this writing I am in thorough bodily health, with scarcely a trace of my many wounds, except a slight scar upon my cheek (a remembrance of the surgeon's knife), and that is gradually disappearing. I am now an attendant of the Second Church of Christ, Scientist, New York City, and thankful beyond expression that I was directed in the way of health, Life, and Truth.

JOHN C. CARLYLE, New York, N. Y.

### Thankful for Christian Science.

In the spring of 1899 a lady gave me some Sentinels and a Journal to read. When I glanced over the testimonies and read the "Notes from the Field" it seemed to me impossible to understand how these seeming miraculous cures were performed without material aid. If any one had told me then that in less than ten months' time I should try to contribute to these testimonials by relating demonstrations accomplished just by the understanding gained from studying "Science and Health with Key to the Scriptures" and other books by Mary Baker G. Eddy, I should not have believed him, and yet the purpose of my writing is to give utterance to my thanks for being able, not only to overcome many physical and moral evils in myself and my children, but to help others.

A few weeks ago a man who was suffering from the effects of an accident that had happened to him three days previous asked me for treatment. He worked in the mine and had been thrown out of a rapidly moving ore car. He turned two somersaults before reaching the earth. His body was badly bruised, his nose broken, and inflammation and severe pain had to be overcome. I commenced treatment Friday night, Tuesday morning he went to his usual work free from pain, and in a few days more all manifestations of error had disappeared.

A few days later, his brother-in-law asked for help. He was suffering from apendicitis. Material remedies failed to allay the pain. The first Christian Science treatment gave him relief and enabled him to enjoy a peaceful night's sleep. In four days he pronounced himself entirely healed, and his happy appearance showed that the healing was not alone physical.—C. L., Wardner, Idaho.

### Healed by Faithful Study of Science and Health.

The half can never be told of what Christian Science has done for me, but I desire to relate my healing of inherited consumption. It was five years before I could say, with solid conviction, I am healed. Healed by the Truth as revealed to my understanding by the study of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The healing was the result of constant and earnest striving to know the Truth which will make all men free. Science and Health was my healer. My mother and all her family, and also a sister of my father's, had passed away with lingering consumption.

My sister and myself had received our so-called inheritance of the flesh—consumption. We were both given up by the doctors as incurable. I was confined to my bed the greater part of twelve years. The last physician whom I employed was a noted practitioner, a specialist in San Francisco. He was well known in Europe as an eminent physician. He knew of no climate that could help me. He said, "I can only compare you to a sensitive plant. Touch you with either heat or cold and you wither." Such was my condition until I became a student of Science and Health. I have been healed six years and am now trying to do all the good I can in the name of him who said, "The works that I do he shall do also."

If there is one who is waiting longer than they wish for their healing, I wish to say, "Be of good cheer, it will certainly come, if you trust and faint not."

MRS. LILA A. YOUNG, Los Angeles, Cal.

### What Christian Science has done for Us.

I desire to tell something of what Christian Science has done for me and my family. Nineteen months ago I had a severe attack of female weakness and a complication of other diseases. I was under the care of a physician more than two months and suffered constantly. Every day my husband went to my physician for stronger medicine, but to no avail. At last I gave up all hope of getting well.

I consented to try Christian Science on the twenty-eighth day of July, and the twelfth day of August I rode twenty-five miles in a spring wagon; the next day, the twenty-sixth I attended a picnic, and on the day following I drove the twenty-five miles back again; not feeling in the least tired.

Our little boy suffered from earache for four winters. After each spell he was quite hard of hearing, but now we are trusting all to God and we do not need to suffer. Sometimes error comes up but it does not last long, as we are trying to realize that there is no power apart from God. The Bible is a new book, full of the richest blessings.

We drive seven miles every Sunday to attend Christian Science Church. It seems as though we can hardly wait for Sunday to come. I never felt so at home in a church as I do now.—MRS. SIM BAKER, Princeton, Neb.

### A Little Child's Faith.

Elspeth is a little Christian Science girl, and she has a baby sister named Carolyn, to whom she teaches the first words of Truth, often telling her, when she falls and starts to cry, that she is God's child and error cannot hurt her.

Elspeth is just a little over three years old, but as she always tells her friends, she is really "as old as Truth;" and she has had many lovely demonstrations since her papa and mamma studied Christian Science a year ago.

She denies all error when it seems to talk to her through burns and bumps, and once when her mamma was trying hard to overcome a severe attack of toothache, which did not seem to yield, Elspeth put her arms around her mamma and said, "Why, mamma, don't you know that God is Love, and error cannot talk to you, for you are God's perfect spiritual idea? Now, just say, 'All right,' and you will *be* all well, for God will not let anything hurt you."

That lovely child-thought seemed to clear away the mist, and Elspeth's mamma knew at once that God was Love, and little Elspeth's demonstration had brought the Truth home as an ever-present help and the "jumping toothache" left instantly.—M. Q., Buffalo, N. Y.

### A Thank-Offering.

Christian Science found me so full of self-righteousness, self-love, self-will, self-pity, and every other form of self, that it has taken many stripes to heal me of the ills resulting therefrom. But, thanks to the blessed Truth as revealed by our dear Mother and Leader, the loving patience of kind and faithful teachers, and the many helpful suggestions through the columns of the *Journal* and *Sentinel*, I can rejoice in many victories over self which has relieved me of innumerable ills, such as sick headaches, rheumatism, backache, and neuralgia. A sense of lack has been, in a measure, destroyed. Truly, "out of the abundance of the heart the mouth speaketh," but no words can express my gratitude for the peace and rest that have taken the place of dissatisfaction and unrest, and for the different view of life that has come to me through the glorious light of Christian Science.

MRS. FANNIE MITCHELL, Chicago, Ill.

## Religious Items.

The (Unitarian) *Christian Register* says: "Without sun nothing will grow in the earth. Without the sunshine of the spirit free from hatred, malice, self-depreciation, unholy brooding over slights, real or imaginary, nothing wholesome will grow within. We do not wish to produce henbane and nightshade of the Schopenhauer, pessimistic sort, but wheat for the bread of life, roses, lilies, and violets for the delight of life. These grow in the soul's sunshine, not unfrequently watered by tears; for grief may be the cause of fecundity where the soil is stirred and enriched, and the deep treasures of the nature are brought to light, not by bitterness, but by a profounder faith, an intenser love."

Answering the question: "Who Are God's Elect?" the *New Church Messenger* says: "God's elect are those who do his will. They who keep the commandments are God's elect. They who love His precepts, and who walk in His ways, drawing near to Him, and looking to Him for strength and support in all things, are His chosen ones. Every really good person is of God's elect; and all can become such if they will only exercise the powers which He has given them, in the endeavor to live the life He tells them to live, and thus in the endeavor to draw near to Him."

In its account of the Ecumenical Missionary Conference recently held in Carnegie Hall, New York, the (Baptist) *Examiner* of that city says: "On the wall back of the platform hung an immense map of the two hemispheres, so colored as to show at a glance the distribution of the followers of the several great religions of the world. This map received much study during the sessions. It showed to all that Christianity has yet an enormous task to perform before all the barren wastes of heathendom are converted into fruitful gardens of the Lord."

Charles S. Kay, writing for the (Baptist) *Standard* says: "The time-worn adage, 'You cannot grind with the water that is past,' is not a sentiment extracted from holy writ; but if it were it would not be more certainly true. The sentiment is verified by the experience of at least sixty authentic centuries. The nation, the school of thought, the religious system, or the individual wholly engrossed in reminiscence has reached a state of incipient decay; for chronic reminiscence adds little to the sustentation of the present and less of hope for the future."

In its department for young people, the *Universalist Leader* says: "The absence of Hurry and Worry does not mean the absence of energy and seriousness from our daily concerns. As quickly as we can, without Hurry, as earnestly as we can without Worry, will take away much of the jar and fret incidental to our mortal career, and insure a measurably admirable accomplishment of the work God has given us to do."

In a conciliatory article entitled "Unitarian Evolution," the *Christian Register* says: "As religious controversy declines and the thorns and thistles of theological debate disappear, it will be easier for conservatives to be radical and radicals to be conservative, and for all parties to meditate in peace upon the new aspects of essential truths common to all good men and women, the saints, the seers, the poets, in all the churches."

In a recent sermon on "Paul's Doctrine of Election," Lyman Abbott said: "Out of whatever abyss of vice you may come, with whatever carelessness of God's love, with whatever repudiation of God and His grace, with whatever apostasy from Him, with whatever outward stain or inward doubts, still you are God's child; you cannot escape the fact; you are not the son of a beast, you are the son of the Almighty."

The *Outlook* says: "We propose that a dozen or twenty of the most prominent Christian churches in different cities surrender for a month their pastors; that their pastors go two by two on an itinerant evangelical ministry; that they go from town to town and from city to city to speak, morning, noon, and night, upon the need of the revival of religion."

In an editorial on "Memorizing Scripture," the *Homiletic Review* says: "The old way was to master the words, and leave the thought to take care of itself. The new way is to master the thought, and then the fixing of the words in the memory becomes a comparatively easy and pleasant task."

"Scotland, noted for its stirring religious history, will not witness this year a more important ecclesiastical event than the union of the United Presbyterians and the Free Churches, which will probably be consummated next autumn," says the *Congregationalist*.

If we would live in peace, let us make the best constructions of one another's words and actions. Charity judgeth the best and it thinks no evil. If words and actions may be construed in a good sense, let us never put a bad construction on them.—JOHN BUNYAN.

Amos R. Wells, in an article in the New York (Baptist) *Examiner*, says: "Unless the Bible is in your memory you cannot meditate upon it to much result, for the most fruitful meditations do not come with the Book open before you, but at odd moments."

"A true idea of right is impossible until we have done it; nor can any one have genuine reverence for it until he does it often and with cost," says the New York (Baptist) *Examiner*.

"Religious growth and progress show themselves in gentler manners, higher ideals, and more sympathy for those who are on the other side," says the *Christian Register*.

Ex-President Harrison, who presided at the opening session of the Ecumenical Council, also presided at the closing session on May 1.

"With what clearness and fulness we perceive the duties of our friends and neighbors!" exclaims the (Baptist) *Standard*.

"To have power with God is to have power over all the evils that threaten us," says F. B. Meyer.

"A prayer in its simplest definition," says the (Baptist) *Standard*, "is merely a wish turned Godward."

The Presbyterian General Assembly convened in St. Louis May 17.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of Selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By by Joseph R. Clarkson of Omaha, Neb.

No. 4. Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The May *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice also is given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political and Governmental Notes.

Speaking of the future of the American navy, Rear Admiral Hitchborn, chief of the construction bureau, recently said: "The American navy will rank six years from now the fourth of the world. By that time the navy will at least be composed of eighteen first-class battleships, eight first-class armored cruisers, fourteen first-class protected cruisers, eleven second-class protected cruisers, nearly one hundred cruisers of the unprotected class and gunboats, over fifty torpedo boat destroyers and torpedo boats, about twenty monitors of the first and second class, and several hundred ships of minor importance.

The charters of more than one thousand domestic and foreign corporations doing business in Texas were declared forfeited by the Secretary of State because they had failed to comply with the law in the matter of paying their respective franchise taxes to the State. Each of the defaulting companies was notified of the forfeiture, and many of them, it is expected, will have the charter restored by paying the prescribed penalty assessed.

In the case of the Germania Trust Company against the city and county of San Francisco, the Supreme Court of California has decided that the bonds of railways and other quasi-public corporations cannot be assessed for the purpose of taxation. By this decision San Francisco is deprived of taxes on bonds amounting to over $20,000,000, and the State to taxes on securities amounting to several hundred millions of dollars.

United States Vice Consul General Hunter sends from Cairo statistics of the Suez Canal traffic of 1899, showing receipts of $17,510,142, of which British shipping contributed $11,658,325; German and French, $1,627,351 and $1,100,610 respectively; American, $136,230. The total receipts are the greatest in the canal's history. The first year, 1870, they were but $838,791.

A press dispatch from Cape Town says that an open letter to the forthcoming American political conventions and to the American people, which is being signed by American residents of South Africa, requests, in the name of humanity, that the Boer war be not dragged into politics.

The United States Coast and Geodetic Survey is preparing to make a survey of the Alaskan coast the coming summer. The growing traffic with the gold fields has created a demand for exact knowledge regarding the Behring Sea coast.

Hereafter, and until the close of the Fair, money may be sent to Paris for the same fees as those charged for orders drawn on offices in the United States, Cuba, Porto Rico, and the Philippines.

### Foreign News.

News of the relief of Mafeking reached London after nine o'clock on the evening of May 18, and set the town in an uproar of rejoicing which lasted all night. For the time interest in the operations in other parts of the field of war was suspended, although on the same day news was received that Lord Methuen had occupied Hoopstad; that General Buller had taken Newcastle, and that the main army under Lord Roberts was almost ready to begin the march on Pretoria. The advices from British sources also state that the Boers are losing hope and may not be sufficiently well organized to defend Pretoria. Mafeking was isolated by the Boer forces on October 14, and the siege was ended May 15, thus making the term of imprisonment for Colonel Baden-Powell's fifteen hundred men, and seven thousand five hundred non-combatants, 214 days.

The Boer peace envoys arrived in New York May 15 and were met by a committee of one hundred citizens and escorted to their hotel. As the ship on which they were passengers passed up the bay, tugs, steamships, and all sorts of vessels with whistles, gave the envoys a noisy welcome. When the envoys appeared on the streets of New York they were cheered by enthusiastic crowds. They were given a quiet, unofficial reception in Washington.

Joseph Chamberlain, British Secretary of State for the Colonies, has introduced in the House of Commons the Australian Commonwealth bill, which provides for the ratification of the federation agreed upon by the several colonies of Australia, by which there is to be intercolonial free trade, a common tariff for all the colonies, and common control of the national defence.

Irish emigration statistics continue to reveal a decreasing population in Ireland. The report of the register-general of Ireland for 1899 shows that the number of emigrants who left Ireland in the year was 43,760, or 9.7 per thousand of the estimated population, and an increase of 9,875 over the numbers of 1898.

### Industry and Commerce.

The street car employes' strike in St. Louis was attended with less violence last week than the week before, but there was some rioting and a few people were shot. The Transit Company was unable to operate cars with any degree of regularity, as the strikers or their sympathizers persistently kept obstructions on the tracks. The conditions were brought to a critical stage on May 18, when the heads of the various labor unions resolved to recommend to the controlling central bodies that a strike in sympathy with the street car men be inaugurated, and the House of Delegates passed a bill to revoke the franchises of the various street railway companies in St. Louis in case they failed to run their cars in compliance with the terms of the city ordinance.

According to returns representing between eighty and ninety per cent of the total tonnage, the production of coal in the United States during 1899 is estimated by Edward W. Parker, statistician of the United States Geological Survey, to have amounted to $230,838,973 long tons, equivalent to 258,539,650 short tons. Compared with the production in 1898, when the amount produced amounted to 196,405,953 long tons, or 219,974,667 short tons, this indicates an increase of over 34,000,000 long tons, or 17.5 per cent.

Kansas City is meeting with great obstacles in preparing for the National Democratic convention to be held in July. The big Convention hall, which was recently destroyed by fire, is being rebuilt at an extravagant outlay, as there is a strike of building laborers on, and the highest wages have to be paid to induce men to work, while large bonuses have been paid to the contractors for steel girders, etc., to secure quick work.

It is expected by wheat farmers and grain men that Kansas will this year raise 100,000,000 bushels of wheat. Those familiar with the conditions throughout the wheat belt declare that the state will this year eclipse any previous year in her history. There are nearly 5,000,000 acres in wheat in the state.

It is estimated that $5,000,000 will be invested in mining machinery and in new vessels for the Cape Nome trade. One company is shipping six miles of railroad track and engines and cars for the complete equipment of a line from Nome to the company's mines, five miles back from the beach.

The best authorities say there are one hundred thousand acres of undeveloped peat bog in Ontario, principally in the counties of Perth, Walland, and Essex. It is now prepared for general use by a method of condensation, and is considered in many respects equal to the best of coal.

It has been planned to open in Manila in June a new Filipino college that will be non-sectarian. It will be the first of its kind in the archipelago. The provost marshal has approved the prospectus. The sum of $100,000 has been subscribed for the endowment of the college.

The total value of the Canadian catch of fish for the year 1898 amounted to $19,667,126, a decrease of over $3,000,000 as compared with the unprecedented yield of 1897, but near the average of the previous eight years.

At the recent sale of the works of art which were collected by the great Sir Robert Peel, two portraits painted by Sir Anthony Van Dyck, the famous Flemish painter, brought $121,250.

It is stated that within the last few weeks bankers of Paris have, through the Bank of France, negotiated a loan of $15,000,000 from New York bankers.

### General News.

Russia's Academy of Sciences has a prize of 1,500,000 rubles to bestow. In 1833 General Arakezeijew bequeathed to it 50,000 rubles which were to accumulate till 1925, when three-fourths of the sum should be given to the best history in Russian of Alexander I.'s reign. The other quarter was to be spent in printing the work, in having it translated into French and German, and for a prize to the second best work. The accumulations will amount to nearly 2,000,000 rubles.

It is not generally known that a great deal of the paper money that is constantly circulating about gets frequent washings. In some banks there is a regular washday every month, usually at the beginning. The dirty greenbacks that have been saved up for a month are soaped and rubbed just like handkerchiefs and are run through a wringer before being put out to dry.

An officer of the Pay Department, stationed at Iloilo, writes that our soldiers in the Philippines largely save their pay, the troops on Panay and Negros Islands having deposited $202,940 with him in the last half of 1899. One company of the Thirty-seventh Infantry deposited $30,000.

Military experts are now discussing the practicability of the bullet-proof shield for soldiers in active service. The terrible losses sustained by the British forces in South Africa from the rifle fire of the Boers have revived this subject, which has from time to time claimed the attention of military authorities.

The Board of Education of Cambridge, Mass., has issued an order authorizing the superintendent of schools to dismiss school at noon on unusually hot days during the months of May, June, and September.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## America's Own Day in Paris.

PARIS, May 12, 1900.

THE American pavilion at the Exposition was formally turned over to the authorities and public this afternoon. The inauguration took place in the presence of embassy and consulate officials, a number of high French functionaries, foreign diplomats and commissioners, and such a concourse of American citizens that many who were provided with tickets were unable to gain admittance to the building.

French municipal guards and policemen formed a cordon around the building, keeping the space in front of the main entrance, on the embankment of the Seine, free for the passage of the official party. The crowd assembled mainly on the terrace around the building facing the river, on which a special platform had been erected for Sousa's band. Before the hour set for the ceremony the crowd became so dense that orders were given to the police to keep the people at a respectful distance from the doors.

The French officers adhered so strictly to the letter of their instructions that even guests holding invitation tickets were not allowed to pass. Considerable confusion resulted from this cause, and the United States Ambassador, Gen. Horace Porter, and his party, found their passage barred until an official, perceiving him from the building, hastened to meet him, and the ambassador's party scrambled through. The arrangements for handling the crowd were very unsatisfactory, and many gave up the effort to enter.

The interior of the pavilion was brightly decorated with American flags and tri-color bunting, with which the balconies were draped, while from the summit of the dome around the golden eagle flew the stars and stripes and the French flag. The balconies were occupied exclusively by invited guests, while on the floor of the building a double line of American guards, with white summer helmets, formed an aisle through which the official party passed from the main entrance to the spot where the presentation took place. Behind these guards Americans who gained admission stood and witnessed the proceedings.

The ceremony of transferring the pavilion consisted of an address by Mr. Ferdinand W. Peck, commissioner of the United States, handing over the pavilion to M. Alfred Picard as the head of the Exposition, and the latter's response in accepting the transfer. Sousa's band provided the music, and the selections played were composed purely of American airs, except for the "Marseillaise."

Americans began arriving at the pavilion shortly after lunch, and the scene during the interval preceding the opening ceremony resembled a smart social gathering.

M. Picard ascended the steps leading to the door of the pavilion at half past two. Here Mr. Peck stood, surrounded by the members of the United States commission, and as he welcomed the French commissioner-general, Sousa's band struck up the "Marseillaise." All the spectators at once uncovered, and amid the strains of the French hymn M. Picard was conducted by Mr. Peck to the centre of the rotunda. The audience greeted the conclusion of the air with cheers, which M. Picard acknowledged. No time was lost in proceeding with the ceremony, Mr. Peck, delivering his address and M. Picard replying in a brief but eloquently worded speech, which evoked enthusiastic hurrahs from the audience.

In transferring the American pavilion to the commissioner-general of the Exposition, Commissioner Peck made the following address to M. Picard:—

"The great nation which I have the honor to represent has, by your sufferance, planted this building upon the soil of our sister republic, France. We rejoice that we have been permitted to erect this structure upon the Rue des Nations, an international avenue, destined to become the most famed and historic feature of your great universal Exposition; for these homes of the peoples of the world, standing by the side of one another, will promote in a large degree that great fraternity which should exist between the nations of the earth.

"We have builded our structure as a part of your international undertaking, and therefore it is my duty and great pleasure to transfer to you, as the executive head of the Exposition, this edifice, which is the gift of a nation gladly united with other nations in bringing to France its resources and products as a contribution to the great peace festival so happily inaugurated."

Mr. Peck here presented M. Picard with a gold key and pendant representing the pavilion, as a souvenir, and concluded with the words:—

"I know my countrymen will join me in the sentiment: 'Vive le Commissaire General Picard! Vive L'Exposition Universelle de 1900! Vive la France!'"

M. Picard replied as follows:—

"It is for me a veritable good fortune and at the same time a profound pleasure to be able, on this solemn occasion, to offer to the eminent representative of the United States my most cordial congratulations. The palace of majestic elegance which you constructed on the banks of the Seine, and which we inaugurate to-day, appears to me not only a temple to mark the progress of peace, but also a superb monument raised to the time-honored friendship of two nations.

"I feel certain that I shall be a faithful interpreter of the sentiments of my fellow-citizens in thanking the powerful republic of the United States for the friendly welcome given to the invitation of the French republic and admirable participation in the work of concord whereby all countries decided to close the nineteenth century."

In expressing his thanks for Mr. Peck's souvenir of the occasion, M. Picard said,—

"It constitutes a new pledge of the prestige of our excellent intercourse, and particularly the indissoluble bond connecting the United States and France. Gentlemen, I ask you to salute the starry banner, the folds of which are so closely blended with those of the tri-color. 'Long live the United States of America, long live their illustrious President McKinley, long live their commissioner and their head, Mr. Peck.'"

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

At the conclusion of M. Picard's remarks a general reception was held. Sousa's band gave a concert during the remainder of the afternoon.

The question of the Sunday opening of the American pavilion and section at the Exposition had barely been settled when the temperance advocates lifted their voices against the sale of liquor in the cafe of the American pavilion. The basements of all the pavilions on the now famous Rue des Nations, where are erected the official buildings of the foreign nations, are occupied by restaurants and cafes, in which are served dishes and beverages characteristic of the respective countries. The establishments look out on the Seine and the terraces in front are becoming popular promenades for foreign visitors, who gather at their respective pavilions.

The American prohibitionists feel very strongly on the matter of allowing the sale of liquor in the American cafe. The open letter column of the Paris *Herald* offered an arena for a wordy warfare between the opponents of and the sympathizers with the sale of liquor, which has been highly interesting to Parisians. At the headquarters of the American Commission it is explained that those who have been vehemently assaulting the idea of an American bar are acting under false impressions, as no bar is to be located there. The cafe will be such as is found in all American cities. Distinctive American food can be found there, and American beverages will be served to those dining.

✠

The Sunday question has popped up again. Many of the most important international contests have been fixed for Sunday, and the participation of the American athletes is a matter of doubt unless the events in which they are entered are changed to another day.

Mr. Albert G. Spalding, recently appointed director of athletic sports on the United States Commission, arrived on Friday and, after consulting with the American officials, announced that he would accept the position.

American music and the American musicians received an extraordinary welcome from Parisians and foreigners at the exhibition this week. Sousa's band made its *debut* and gave daily open air concerts on the beautiful Esplanade des Invalides. It is no exaggeration to say that these performances have been the feature of the Exposition the past week, and, while Americans are naturally delighted to hear the familiar national airs and popular marches and melodies, the intense enthusiasm displayed by the French audiences and the encomiums they have passed on the music and its interpretation, have been most flattering to Sousa's fellow-countrymen.

Each afternoon the stand has been surrounded by an assembly numbering thousands, and the spot has become a fashionable gathering place for the American colony and visitors. The climax of enthusiasm has been reached when on each occasion, during the rendition of the march, "The Stars and Stripes Forever," the assemblage has stood bareheaded as Old Glory was unfurled by two uniformed American guards. This demonstration is not confined to Americans, but is joined in by the French spectators.

This week has seen the opening of a number of foreign pavilions, including those of Spain, Belgium, Sweden, Japan, and Denmark. The German building will be opened on Monday next, but its semi-official opening took place on Wednesday in a way thoroughly characteristic of the Kaiser. Diplomats, high French officials, and exhibition functionaries were present, each having received by telegram from Berlin an invitation signed by the Kaiser himself. Thus the German Emperor really gave a reception in his own pavilion on the banks of the French Seine.

*Boston Herald.*

## The Lectures.

### At Marshalltown, Ia.

Judge Joseph R. Clarkson of Omaha, a member of the Board of Lectureship of the Christian Science Church, spoke to a representative congregation at the stone church last evening (Thursday, May 3). Judge Clarkson was, previous to the acceptance of his lectureship, an eminent attorney and law partner of Senator John M. Thurston at Omaha.

The lecturer was introduced to the assemblage by C. H. E. Boardman in a short, well-received speech.

The audience, which gave him the closest attention for nearly an hour and a half, was richly repaid for their attendance. The lecturer dealt with the origin and aim of Christian Science. Gifted with a pleasing platform manner and excellent delivery, he marshalled the evidences of the truth and divine origin of the cult founded by Mary Baker Eddy in 1866, with the skill of the trained lawyer and veteran jurist that he is. To those who admit the truth of his premises the result must have been conclusive.

The lecture throughout was replete with beautiful thoughts and striking figures. It traversed the higher levels of a new moral philosophy of such depth and breadth of assertion that its propositions startled and astounded the ordinary hearer. Whether the belief of the Christian Scientist is founded on fact or fancy, those who heard its principles enunciated by Judge Clarkson last evening will give the new religion due credit for its high spirituality and the beauty of its faith.—*Evening Times-Republican.*

The introductory address by Mr. Boardman was in part as follows:—

Our presence here to-night indicates a desire to know something about Christian Science. In order to be taught, we must give a fair and impartial hearing. Unless we can free our minds from any prejudice and bias, we shall not learn, and the object for which we came will be defeated.

There is to-day the stirring of a mighty unrest among religious thinking people. The fierce, aggressive spirit of the times is beating impatiently against the barriers of convention and creed, yearning to soar heavenward in the golden sunlight of truth.

Is Christian Science that truth? I own I cannot tell you. Because we want to know, we are here to listen and to learn. Whether Christian Science is the voice of a new prophet crying out in the wilderness of sickness and despair, singing a new song of hope; or whether it is but the echo of that song the angels sang as they followed in the footsteps of the Nazarene down the shores of Galilee or up the slopes of Olivet, we know not and we care not. The question is, Is it the truth?

We know that Christian Science is no private enterprise disguised as a religious faith. The people who espouse its cause are sufficient evidence of that. Christian Scientists may be deceived, but they are not deceivers. If Christian Science is not the truth, investigation and discussion will soon demonstrate its falsity. If it is the truth, the sooner its truth is ascertained, the better. If Christian Science will heal the sick, aid the sorrowing, and bring peace of mind, it is a duty to ourselves to know it and accept it, and a further duty to humanity to proclaim it.

It may be wondered why the professional man should even consent to attend a Christian Science lecture, for the admitted object of Christian Science is to destroy the business of the professions; but, with the lawyer's well-known desire to indulge in the luxury of telling the truth when it cannot be avoided, it must be admitted that the professions of the ministry, medicine, and the law are made necessary by the misfortunes and infirmities of the human race. When the soul is sick, you call a minister; when

Digitized by Google

the body is sick, a doctor; when you desire to make someone else sick in body and in soul, you call on a lawyer to tell you how to do it. But if Christian Science can cause a man before the tribunal of his own conscience in advance to determine correctly the question of his and his neighbor's rights, and thereby do himself and his neighbor no wrong; if the mind can minister to the body diseased, and sickness and pain be made to flee away; if man can, in the temple of his own soul, erect a shrine of reverent worship to the God of Truth, the world can well afford to pension for life the members of those professions whose careers have been ended by the failure of misfortunes.

In the metropolis of the middle west, in that city where two years ago all the world gathered to wonder at the marvels of the Trans-Mississippi Exposition, for almost two decades a lawyer labored; and, because he was a good lawyer, prospered. Clients were many, honors not few. He was nominated to the office of District Judge by his associates of the Omaha bar, the men who knew him best. He was elected to that office on a non-partisan ticket and by non-partisan vote. The office was administered honorably, uprightly, and with scrupulous fidelity to the trust imposed. No higher tribute can be paid to a lawyer. From that office he resigned to resume a large and lucrative practice. That lawyer became interested in Christian Science. Its logic appealed to him as a lawyer, and its evidence convinced his judicial mind. He became a Christian Scientist, not because it healed him, or healed others, but because he found there for the first time, he states, a religion that was morally and intellectually satisfactory, whose truth could be demonstrated. Having become convinced himself, it came to him that it was his larger duty to tell others, and, as a result, we have with us to-night that judge and lawyer, Hon. Joseph R. Clarkson of Omaha, Nebraska, who takes as the subject for his lecture "Christian Science Is the Kingdom of Heaven at Hand."

*Correspondence.*

## At Grand Rapids, Mich.

Judge Joseph R. Clarkson of Nebraska, one of the strongest and clearest of the accredited Christian Science lecturers, spoke yesterday afternoon (Sunday, May 6) in the Auditorium to an audience of nearly twenty-five hundred persons. He was introduced by Judge Wolcott of the Circuit Court who spoke as follows:—

I am asked by the board of directors of First Church of Christ, Scientist, of this city, under the auspices of which church the address of this afternoon is given, to introduce the lecturer to this audience. I do so with the more pleasure because I know him by reputation as an able and successful lawyer, an honored and learned judge, a man of earnest and scholarly convictions, and an eloquent and fearless advocate of the convictions he holds.

The work of a congenial profession, the honors of a judicial career, have been laid aside by him so that he might devote his entire time to the work in which he is now engaged. He is to speak on the subject of Christian Science.

Some time ago while in the city of Chicago I attended First Church of Christ, Scientist, on Drexel Boulevard in that city. It is a magnificent temple of worship. On one of the walls of the vast auditorium is the inscription: "Divine Love always has met, and always will meet, every human need" [from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy]. I suppose the truth of that statement is in some form a part of the written or unwritten creed of every Christian believer, but Christian Science, as I understand it, claims to take that truth out of the realm of the theoretical and speculative, and applies it, in its fullest literal meaning and significance, to the every-day life of the individual and to the myriad needs of this complex modern life of ours.

Whatever any one's form of belief or unbelief, no one, it seems to me, ought to complain if it can be demonstrated that the healing ministry of the Nazarene, not only to sin-burdened souls, but also to weary and pain-racked bodies, is to-day the common heritage of all the children of men.

The religious world has been very slow to accept any departure from its traditional beliefs. We recall that scene in that old Judæan court-room two thousand years ago, when the man of Galilee was on trial for daring to teach those truths which, if ever recognized, had been buried for centuries beneath the weight of human selfishness. In all times the tendency has seemed to be for men to hold their inherited creeds, not as aids to understanding and belief, but rather as marking and measuring the limits and boundaries of their faith, beyond which they dare not pass, but I believe the trend of thought to-day is to meet new theories in religion, not with the questions, "Are they traditional beliefs?" "Are they orthodox?" but "Are they true: have they truth's credentials? By this test must all alike finally be measured and must stand or fall.

We are to listen to a lecture on Christian Science, and it is safe to say there is no abler exponent of that faith than the distinguished jurist who is to address you. I bespeak for him a thoughtful and unprejudiced hearing. I am sure that from this lecture we shall have a better and more intelligent understanding of that remarkable form of faith which, in the course of a few years, has enrolled as followers a majestic army of half a million intelligent, thoughtful, devout men and women.

Of this thing we may be sure, whatever its merits, Christian Science has become an important factor in the religious thought of the world to-day, and as such deserves at least a fair consideration, an impartial hearing.

I have the pleasure of now introducing to you the Hon. Joseph R. Clarkson of Omaha, who will speak on the subject, "Christian Science Is the Kingdom of Heaven at Hand."—*Grand Rapids Morning Democrat.*

## At Clinton, Ia.

The threatening weather Tuesday night, May 8, doubtless kept many away from the Judge Ewing lecture, but seldom has any one addressed a more respectful or attentive audience than that which confronted the distinguished jurist. While the great majority of the audience was not in sympathy with the doctrine of Christian Science, there were no scoffers in evidence. They evidently came with the feeling that if the belief was one which a person of Judge Ewing's standing could entertain sincerely, there was much about it concerning which they had been misinformed, and perhaps something of value to learn.

The dignity and evident sincerity of the speaker commanded respect. He had no words of abuse for believers of other faiths. He said he had been baptized in the Presbyterian Church when an infant, and for more than a quarter of a century he had been an active member of the church. He said he left it not because he found it wrong, but merely because he found a higher, more exalted faith. For years he had been daily praying for health and strength and happiness, but instead of relying on God to answer prayer had steadily patronized the drug stores, thereby virtually admitting that he had no faith in the efficacy of his prayers. When he came to a realization of a more sublime faith, he did not materially alter his religion, but changed to a stronger faith in what he had always accepted in theory but not in practice. Judge Ewing was introduced to the audience by Captain L. F. Sutton, who said in presenting him:—

While it is never safe blindly to embrace every new idea, theory, or doctrine advanced, it is equally dangerous to cling with fanatic zeal to the customs, usages, and traditions of the past. The one practice tends to destroy the

Digitized by Google

stability of our social institutions; the other to defeat their proper development.

Our duty is simple. We should carefully weigh all arguments submitted for and against any proposition, and after a fair and impartial hearing, render our verdict accordingly.

One side of the subject under consideration this evening has been very ably presented to our community during the last year, and we are about to hear from the other side, from one who gained distinction in one of the most honorable professions, yet cast aside the judicial trophy to enter the list, in the defence of a science he conscientiously believes has proven, and will hereafter prove, a boon to mankind.

Ladies and gentlemen, I have the honor and pleasure of introducing to you that eminent jurist, the Hon. William G. Ewing of Chicago, Ill.—*Clinton Daily Herald.*

### At Sabula, Ia.

Notwithstanding the inclemency of the weather, it required all the seating room in the Congregational Church to accommodate those who assembled to listen to the lecture on Christian Science by Edward A. Kimball of Chicago, Monday evening, May 7. In addition to the large turnout from this city, goodly numbers were present from Savanna, Mt. Carroll, Bellevue, and Lanark, while Maquoketa, Dubuque, and Cedar Rapids were also represented. The speaker held the closest attention of the large audience from first to last, and impressed all with his own sincerity. Hon. George C. Heberling had been selected to introduce the speaker, and his remarks were a fitting opening for an evening of intellectual enjoyment.

Mr. Heberling said in part:—

*Ladies and Gentlemen:*—It becomes my pleasant duty this evening to introduce to you a gentleman who will talk to us upon Christian Science, but I must of necessity leave the gentleman himself to explain what Christian Science is and what it stands for.

He comes to us highly recommended as a deep, close thinker, a sound and logical reasoner, and an excellent speaker.

I find myself looking into the faces of a more than ordinarily intelligent audience, and I know you have not congregated here for any idle or frivolous purpose. I know at the same time that you are not all believers in Christian Science, because I have often talked with you upon this subject. I am much inclined myself to be sceptical upon any and all subjects I know nothing about, and which I cannot or do not understand, and this is one of them.

This scepticism or doubt I apprehend comes often from a want of better information and study of the subject.

The gentleman will scarcely hope to convince and convert us all at once, but he hopes probably to give us something to think about after we get home. He has given me satisfactory assurance, however, that if after the conclusion of his lecture he still finds doubters and sceptics, he shall commit no violence upon any of us.

This subject is to-day attracting and absorbing the attention of some of the best thinkers, not only of this country, but of Europe as well, so that I think we may well afford to sit and listen for a while to one of its ablest exponents.

Ladies and gentlemen, I now introduce to you Mr. Edward A. Kimball of Chicago, who will address you.

*Sabula Semi-Weekly Gazette.*

### At Manchester, N. H.

At the Universalist Church last evening (Tuesday, May 8) a large and cultured audience listened to a lecture explanatory of Christian Science by the Rev. Irving C. Tomlinson of Concord.

The lecturer was introduced by Mr. James D. Sherwood, First Reader of First Church of Christ, Scientist, Manchester, N. H., who spoke as follows:—

*Friends:*—First Church of Christ, Scientist, Manchester, cordially greets you and welcomes you.

Inasmuch as Christian Science has been for more than a quarter of a century taught and promulgated through the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, a book comprehending the entire subject and containing rules for practical demonstration, and as more than a million hopeless cases of disease have been healed by Christian Science, so that there is scarcely a city or village in the United States without a witness of what Christian Science is accomplishing for suffering humanity, I believe there is no great vital question among men to-day demanding their attention as does Christian Science. And because of a lack of understanding upon this subject, many have associated it with certain teachings which are the very opposite of Christian Science and with which it has nothing in common.

Because the multitudes are being healed by Christian Science; because of the number of church edifices being erected; and because of the phenomenal growth of this great movement all over this and foreign lands, a constantly increasing desire for correct information had to be supplied by those qualified and authorized. To meet this demand there was appointed a Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, Mass. A member of this Board was invited by First Church of Christ, Scientist, of this city, and the invitation having been accepted, I have the honor and pleasure of introducing to you the Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H. After completing the divinity course at Tufts College, Mr. Tomlinson entered the ministry, where he served faithfully ten years, until called to a higher sphere of practical, operative Christianity. He will now address you upon "Christian Science, What It Is Not and What It Is."

*Daily Mirror and American.*

### At Meriden, Conn.

There was a large attendance at First Church of Christ, Scientist, last evening (Tuesday, May 1), to hear the lecture of Rev. Irving C. Tomlinson on Christian Science. Rev. W. S. Perkins, who was acquainted with the speaker when he was in college, introduced him to the audience. The subject of the discourse was "Christian Science, What It Is Not and What It Is."—*Meriden Daily Journal.*

The following is the substance of the introductory address of the Rev. Mr. Perkins, reported from memory by one who was in the audience.

*Friends:*—Possibly you may wonder why I am here this evening. I am here for three reasons. First, because I have been invited. Second, because I have known the lecturer who is to address you this evening, in his ministerial capacity. I knew him to be an honest, conscientious worker. My third reason is that there are those who have accepted this teaching who were at one time, members of my church. I knew them as Christian people and had respect for them, and I have now. Now I know but very little about Christian Science, but what I know is good, and I am glad to be here this evening to listen to your speaker. Therefore I take great pleasure in introducing to you Rev. Irving C. Tomlinson of Concord, N. H., who will address you.—*Correspondence.*

### Lectures at Other Places.

Mason City, Ia.—William G. Ewing, May 4.
Kalamazoo, Mich.—Joseph R. Clarkson, May 5.
Sioux City, Ia.—Edward A. Kimball, May 10.
Lawrence, Mass.—Irving C. Tomlinson, May 3.

## Mr. Howe Speaks.

CHARLES M. HOWE, C.S.D., publishes a card in a recent number of the *St. Joseph Daily Gazette* in refutation of another falsehood that some newspapers have published.

After quoting from one of these newspapers Mr. Howe says:—

In regard to the above I wish to state that on the 13th day of April I had the privilege of an extended interview with Mrs. Eddy at her home in Concord, N. H., and will say that I never saw her looking better. She was walking around as lightly as any young person, with a peaceful and restful expression entirely foreign to one suffering from disease, and I am thoroughly convinced that the above statement is entirely without foundation, but is only another falsehood that is being circulated with the intent to injure her and the noble cause which she has so successfully established, the growth of which is unprecedented in history.

## To Myself.

THE following poem was written by Paul Fleming in 1600.

LET nothing make thee sad or fretful,
Or too regretful:
Be still.

What God hath ordered must be right,
Then find in it thine own delight,
My will.

Why should'st thou fill to-day with sorrow
About to-morrow,
My heart?

One watches all with care most true,
Doubt not that He will give thee, too,
Thy part.

Only be steadfast, never waver,
Nor seek earth's favor,
But rest;

Thou knowest what God wills must be
For all His creatures—so for thee—
The best.

## Buying the Big Trees.

REPRESENTATIVE DE VRIES of California, has introduced a bill directing the Secretary of the Interior to buy the "mammoth tree grove" and "South Park Grove of Big Trees" in Calaveras County, Cal., which are now owned by private persons. The idea is to make national parks of them. By far the largest of these big tree groves is in Mariposa County, and it was a part of the public domain when it was granted to California by Act of Congress, to be held for all time as a place of public resort.

If the two groves which the California congressman wishes to turn into national parks do not contain as many trees as some of the others, they have the compensating advantage of showing the biggest trees of them all, and they were also the first to be discovered. The first the world heard of these giants of vegetation was in 1852, when a white hunter named Dowd reached the larger of the Calaveras groves and found a cluster of ninety-two of these great trees covering a space of fifty acres. When he returned to civilization and told his story, he was credited with being an uncommonly talented liar.

The Calaveras groves attract rather more visitors than the others because they are a little more accessible. Ten trees in the larger grove are thirty feet in diameter. One of the fallen giants is forty feet in diameter and is estimated to have been four hundred and fifty feet high. It was the hoary monarch of the grove and died of old age, say about twenty-five hundred years. A hollow trunk called the "Horseback Ride," seventy-five feet long, gets its name from the fact that a man may ride through it upright on horseback. Just after the discovery of the grove one of the largest trees, ninety-two feet in circumference, was cut down. Five men worked twenty-two days in cutting through it with large augers. On the stump, which was planed off nearly to the smoothness of a ballroom floor, there have been dancing parties and theatrical performances. For a time a newspaper called *The Big Tree Bulletin* was printed there.

In all there are about twenty of these groups of big trees on the western slopes of the Sierra Nevadas, but eight of them, three in Mariposa, two in Calaveras, one in Tuolumne, and two in Tulare, are most important and best known. Botanists call the mammoth tree the *Sequoia gigantea*, and it is related to the redwoods that grow to an enormous size on the Coast Range, but no redwood was ever seen that was comparable in size with the big trees of the Sierra Nevadas.—*New York Sun.*

### Story of Jenny Lind.

A beautiful little incident is told concerning Jenny Lind and Grisi when they were rivals for popular favor in London. Both were invited to sing the same night at a court concert before the Queen. Jenny Lind, being the younger, sang first, and was so disturbed by the fierce, scornful look of Grisi that she was at the point of failure, when suddenly an inspiration came to her. The accompanist was striking his final chords. She asked him to rise and took the vacant seat. Her fingers wandered over the keys in a loving prelude, and then she sang a little prayer which she had loved as a child. She hadn't sung it for years. As she sang she was no longer in the presence of royalty, but singing to loving friends in her fatherland.

Softly at first the plaintive notes floated on the air, swelling louder and richer every moment. The singer seemed to throw her whole soul into that weird, thrilling, plaintive "prayer." Gradually the song died away and ended in a sob. There was silence—the silence of admiring wonder. The audience sat spell-bound. Jenny Lind lifted her sweet eyes to look into the scornful face that had so disconcerted her. There was no fierce expression now; instead, a tear-drop glistened on the long, black lashes, and after a moment, with the impulsiveness of a child of the tropics, Grisi crossed to Jenny Lind's side, placed her arm about her, and kissed her, utterly regardless of the audience.

*Exchange.*

### Interesting Bibles.

A tribute to the Bible comes indirectly from the interest which is shown in copies that are rare, or that have had peculiar associations. Many private libraries are enriched by single copies of the Bible. Mr. J. Pierpont Morgan has a magnificent copy of John Eliot's Indian Bible, printed in Cambridge, Mass., in 1663, for which he is reported to have paid $1,000. An original Mayflower Bible, evidently belonging to the Whites, the parents of the first child born in the Plymouth colony, has recently been discovered, so to speak, in a private library, where its value was not known. This Bible has notes on its pages and margins which connect it with the eventful voyage. There is even a crude pen-and-ink sketch of a ship labeled the Mayflower.—*Topeka (Kan.) Daily Capital.*

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## The Board of Lectureship.

THE By-laws relating to the Board of Lectureship have been amended by striking out of section 1, Article XXXIV., the words "consisting of not less than three, nor more than twelve members." So that the number of lecturers is now unlimited.

## Communion Services.

THERE will be held four services on the forthcoming Communion Sunday in the Mother Church in Boston, the first commencing at 9 A.M., the second at 11 A.M., the third at 2 P.M., and the fourth at 4 P.M.

The annual meeting will be held in Mechanics Hall on Huntington Ave., June 5 at two o'clock P.M. Members of the Mother Church only will be admitted to this meeting.

The Wednesday evening meeting following the Communion Sunday and Annual Meeting, will be held in Tremont Temple at 7.30 P.M.

The place where certificates for reduction of the railroad fare will be validated by the agent of the railroad company will be announced at the Communion Services.

## Appendicitis and Imagination.

UNDER the above heading appeared the following editorial in a recent issue of the *Times-Herald* of Chicago:—

"That people can imagine themselves into sick-beds has long been an accepted fact by men who practise medicine, and the belief that the bread pill is one of the most potent remedies in the physician's case was never more general than it is to-day. Since the beginning of the appendicitis fad the spread of imaginary ills has been much worse than ever before. Pains in their sides now are sure to throw about three out of every five people into a terrible state of alarm. They used to disregard these things, but appendicitis has wrought a change. A New Orleans physician, in a recent interview on this subject, related an experience that is worth repeating.

"'A nervous man recently called on me [this is the doctor's story] and asked: "In what part of the abdomen are the premonitory pains of appendicitis felt?" "On the left side, exactly here," I replied, indicating a spot a little above the point of the hip-bone. He went out, and next afternoon I was summoned in hot haste to the St. Charles Hotel. I found the planter writhing on his bed, his forehead beaded with sweat and his whole appearance indicating intense suffering. "I have an attack of appendicitis," he groaned, "and I'm a dead man! I'll never survive an operation!" "Where do you feel pain?" I asked. "Oh, right here," he replied, putting his finger on the spot I had located at the office. "I feel as if somebody had a knife in me there and was turning it around!" "Well, then, it isn't appendicitis, at any rate," I said cheerfully; "because that is the wrong side." "The wrong side!" he exclaimed, glaring at me indignantly, "Why, you told me yourself it was on the left!" "Then I must have been abstracted," I replied calmly, "I should have said the right." I prescribed something that would not hurt him, and learned afterward that he ate his dinner in the dining-room the same evening. Oh, yes; he was no doubt in real pain when I called, but you can make your finger ache merely by concentrating your attention on it for a few moments.'

"At first this medical gentleman would seem to have rendered a service to humanity in showing the absurdity of the habit of jumping at the conclusion that every pain in the side is a sure sign of the presence of appendicitis, but when we stop to consider the matter we find that he has perhaps done more harm than good. He has so definitely located the spot at which the appendicitis pang may be expected to make itself felt that the encouraging doubts which people with pains in their sides have clung to in the past must hereafter vanish from the minds of mary of those who happen to feel twinges at the fatal point."

The above is interesting and instructive in more ways than one. It shows, as stated, the effect of imagination upon the body. In other words, it shows just what the Christian Science text-book, "Science and Health with Key to the Scriptures," teaches relative to the action of fear, and that the physical manifestion is but a result of the mental condition of alarm.

The case above mentioned illustrates the whole subject of disease. The reflection of fear upon the body is by no means confined to that particular kind of ailment known as appendicitis. It enters into every form of ailment. The only reason this kind of sickness is so frequently heard from is because it is so widely published and so much talked about.

Physicians should arouse themselves to the fact that the more such things (or any kind of sicknesses) are talked of and paraded before the public mind, the greater the fear. They should, in every possible way, guard against the spread of mental contagion, for that is just what fear of sickness is. They should study this mental phase until they become satisfied that the very best preventive of disease and its spread—the very best safeguard against epidemics of sickness—is to shut off fear in the public mind.

We know of no more important function for the medical profession to perform than this. Will not the really honest, noble, and humanitarian part of that great profession arouse themselves upon this point?

We can confidently assure them the aid of every genuine Christian Scientist in such a good work.

Another instructive thing in connection with the above is, that the physician's prescription, as such, did the patient no good, for it was nothing that was curative of appendicitis. The moment the man who thought himself sick was assured by the physician that he was sick on the wrong side, he began to get better and soon was well. The physician removed the patient's fear. That was all. Was that fear mental or physical? Every sensible person will say it was mental.

Another lesson from the incident is this, that, correctly speaking, the pain in which the patient was writhing was not *real*. The physician knew it to be imaginary, yet, at the same time, he says it was real. This illustrates how loosely the word real is used. All will admit—if they stop to think—that the imaginary is not the real. The two are opposites; and the pain in this case was so clearly imaginary that it is a solecism to pronounce it real. We might extend this reasoning to its general application, but this article does not demand it.

Again: Christian Scientists are sometimes ridiculed for referring to sickness as a "belief." Our non-Scientist friends think this strange terminology; but let us think a little.

In the case we are considering, the patient was made

Digitized by Google

to believe that the pain had somehow gotten on the wrong side; therefore it cannot rightly be said to have been real, from any point of view. Hence what was it but a "belief"? The patient *believed* it to be the side on which the pain properly belonged; but he was mistaken in that belief. If the pain had happened—to the mind of the patient—to get over onto the other side, would it have been any less a "belief"?

Our outside friends will some day learn that there is not only good sense, but a deep philosophical meaning in the Christian Science use of the word "belief."

## Railroad Rates.

WE take pleasure in announcing rate of fare and one third from points in Eastern Committee and Trans-Missouri territories of the Western Passenger Association. This now gives the reduction from practically all points in the United States.

All who desire to take advantage of the reduced rates should purchase tickets and secure certificates reading *Through* to Boston.

Those who wish to remain in Boston later than June 8 may deposit railroad certificates with agent in Boston *on or before June 5*, and upon payment of fee of fifty cents, *extension* of time on return tickets will be granted to June 27 inclusive.

# Among the Churches.

### The Work in Dallas, Tex.

Some thirteen years ago, through cases of healing, the seed of Truth, as revealed through the teachings of Christian Science, was sown in Dallas. Those who heard the call of the Master stood alone, pitted against the conservatism of the South. Gradually others went to work in the same vineyard, and finally, in 1895, a church was founded. The history of the following years need not be repeated,—the long tramp up the mountain side that led to the present demonstration. Having scaled a summit, one prefers to look away across the peaks to a brighter clime, rather than turn the gaze back over the dusty way that has been traversed, the thorn path that has been trodden. The story is ever the same. However bravely the march may be begun, sometimes the most eager feet miss the way, and even the truest hearts seem not to catch the answer to the appeal, "Shepherd, show me how to go." But we have the sweet assurance in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 307, that "The desire which goes forth hungering after righteousness is blessed of our Father, and does not return unto us void." Order is heaven's first law, we are told, and it never fails of fulfilment. Hearts here have gone forth hungering indeed after righteousness, and this has wrought the demonstration of the law of heaven—harmony.

The Christian Scientists of Dallas are trying to realize the significance of that holy meeting of the Apostles in an upper chamber where they were all of one Mind. They are striving to emulate the example of the band of Joshua which marched around the walls of Jericho and shouted *together*. Under one banner they are now determined to march dauntlessly on until the great high goal is reached.

The charter of the new church was granted by the state of Texas April 12, 1900, and was signed by twenty-nine members of the Mother Church as Founders. Under the name of Dallas First Church of Christ, Scientist, they occupy their church edifice at 208 S. Ervay Street, where the customary services are held, with an attendance of from seventy-five to one hundred. There is a reading room in connection with the church where all the works of the Rev. Mary Baker G. Eddy, and all the other authorized Christian Science literature, are for sale. There has been sold in years past almost fifteen hundred dollars worth of Christian Science literature. With this seed long sown, the harvest is now ready for the reapers, who, being upwards of one hundred, with freshly sharpened sickles, should bring abundant sheaves into the storehouse. Generalled under the banner of Unity, the Christian Scientists of Dallas, with one voice declare allegiance to the Cause, their dear Leader,—the Rev. Mary Baker G. Eddy,—the Mother Church, and the Publishing Society. Fully mindful of the necessity for having God-ordained leaders, we look to these as the beacon lights to guide us into the harbor of Christian Science.—E. D. W., *Clerk*.

### Corner-Stone Laid at Cleveland, O.

On the 7th day of May, in the hush and dawn of the early morning, was laid the corner-stone of First Church of Christ, Scientist, of Cleveland, Ohio. There were present about one hundred church members, and among this joyous company were several children whose happy faces and eager interest will ever be a help as we go on in the demonstration of building and completing our church.

The ceremony was simple, brief, loving, and most impressive. In the corner-stone was placed a copper box containing a Bible, "Science and Health with Key to the Scriptures" and all other writings of the Rev. Mary Baker G. Eddy, our beloved Mother and Leader, whose consciousness of Love has made such an event as this possible to us. The box further contained a copy of the *Journal* when it was but a year old, *Journal* for June, 1894, current *Journal* and *Quarterly, Christian Science Weekly* No. 1, current *Sentinel*, the Manual, Hymnal, "The Mother Church," Illustrated History of Christian Science, a copy of lecture of each member of the present Board of Lectureship, a book containing Charter Members' names, present Board of Trustees and Readers, Church Building Committee, Reading Room Committee, Sunday School scholars, and list of church members, copy of our Church By-laws, copy of original Deed of Trust.

The ceremony was conducted by the First and Second Readers and was as follows:—

Reading from 1 Corinthians, 3 : 11–23, selections from "Miscellaneous Writings," laying the corner-stone; silent prayer followed by the Lord's Prayer with its spiritual interpretation, 1 Corinthians, 3 : 9, 11, Science and Health, p. 137, l. 27–31. LIDA S. STONE, *Assistant Clerk*.

### A New Organ.

A year ago on Easter Sunday the congregation of the Christian Science Church was agreeably surprised to find back of the altar the beautiful picture of the Resurrection, depicting Christ and Mary at the sepulchre, a gift of Mrs. W. S. Earl of this city.

This Easter Sunday the congregation was again delightfully taken by surprise, when on entering the church it found a grand, new organ, the loving gift of a member of the church. The fact had been purposely kept secret from the majority of the congregation.

The organ is a two manual, thirteen stop Lyon & Healy organ, operated by Ross water motor. Miss Marion Sim gave a splendid exhibition of the capabilities of the new organ in the prelude "Melody" (West), and for an offertory, Godard's grand Berceuse "Jocelyn," and for the postlude, "Hosanna," by Wachs. It is needless to say that Miss Sim brought out the possibilities of the beautiful instrument to the great delight of her hearers. The rich quality of tone was particularly commented upon.

## Selected Articles.

### Christian Science Again.

Editor of the *Gazette:*—

In your issue of the 17th of March, you publish an article under the heading "The True and False," in which you state, in substance, that people are prematurely hurled to the grave through the ignorance of Christian Scientists, and that, "If a patient who might have been saved with proper treatment is allowed to die through their ignorance, they should be held to account."

One of the cases recently reported, and of which it was said, "The life might have been prolonged had a doctor been called sooner," had been afflicted with heart trouble for twenty years, when two good physicians said she had but a short time to live, but as a Christian Scientist, she lived five years thereafter.

In or near Boston, three deaths were charged to Christian Scientists during a period when one thousand people died in the city under the treatment of other systems, nearly three hundred of them with pneumonia and over two hundred with diphtheria. Who is to be held responsible for these fatalities? In view of such an appalling list of deaths, on what grounds can it be held that the three cases under Christian Science could have been saved if they had been in the charge of a doctor?

The material diagnosis of disease is not necessary to Christian Science healing, and many have been cured of serious troubles that were not known to the Scientist who was treating the case. However, the Scientist practitioner does have a very true sense of disease and its remedy; and while he needs little material information regarding his patient, yet he must understand him spiritually, also the laws of Mind relative to the nature of disease and its remedy.

The Scientist must be able to do far more than read external symptoms. He must spiritually perceive the causation of discord, of which the bodily suffering is but an effect. Far from being ignorant, the practitioner of this profound system of healing possesses accurate knowledge of Mind and its operations, as the result of long and serious study of ontology.

Christian Scientists, in their belief that God is omnipotent and able to save men from the greatest of troubles, do not differ from other Christians; neither are they more ready to claim the ability to raise the dead and live without eating, but in the matter of being able to live safely without medicine, they have already proved their ability.

Christian Scientists do not deny death as a mortal experience, and they do not claim to have reached that state wherein they are not subject to this transition. They do not deny the existence of the universe. They believe that everything is real from the blade of grass up to the grandest objects of nature, but that things are not what they seem to our material sense. Our present comprehension is finite, and we therefore have limited and incorrect views of all phenomena. As we grow spiritually, we gain a better and more spiritual sense of all things.

It is stated that "Christian Science is not science in any sense of the word." All true science must begin with God, the infinite Intelligence. There is nothing beside God and His creation; hence nothing to know but God and His manifestation. A true knowledge of God is a true knowledge of His manifestation or creation. Outside of God and His universe, all is false, and this is important to know in dealing with evil or errors, and all the ills of the flesh.

When we consider the fallibility of human concept, we would ask, Is it proved that the universe is material? What is there, other than material sense, to declare that Spirit's creation is material? The proofs of the spiritual claims concerning God and creation are the effects of these claims upon matter, seen in the healing of disease, discord, and evil. Jesus said, "When He, the Spirit of truth, is come, He will guide you into all truth." When the spiritual in contradistinction to the material sense of things is come, it will guide you into all truth. The human sense of things gives neither the true understanding of cause nor effect. A spiritual knowledge of God and creation must be Christian; hence the proper use of the name, Christian Science.

ALFRED FARLOW.

In the *Saturday Evening Gazette.*

### Christian Science in Troy, N. Y.

WE have received the following, which will be found of interest to every reader of the *Observer:*—

At the northern limit of our city there is a modest granite chapel, over the entrance of which the name is plainly lettered "Troy's First Church of Christ, Scientist." Below this name over the door, on a gold background, is the inscription, "Enter into His gates with thanksgiving, and into His courts with praise."

On Wednesday and Sunday evenings this building is brilliant with light and color, and presents, even from the sidewalk, a most attractive picture to the passerby. Within are ferns and palms and flowers, overhead are arches of electric lights, and in the distance is a beautiful picture of the Resurrection by Trojetti.

A little while ago when this chapel was being built it was often prophesied that a year or so would dim the enthusiasm of the Christian Scientists who believed they had found a grand new religion, which would heal their bodies as well as their souls. Then, no doubt, the structure would be for sale and could be bought cheap, to be used as a mission house for some orthodox church. Judging, however, from the steadily increasing attendance at all the services of the solid little church, from the hopeful, healthy faces of the people who gather there, and from many signs of thrift and prosperity, this prophecy seems not to be in the way of fulfilment. Some even begin to question if, after all, those Christian Scientists are wofully misguided, for it is difficult to discover wherein the doctrines they teach are dangerously bad.

The writer has carefully watched this movement for years, and has even come to believe that the teachings of Christian Science are in accord with the Gospel. There is one thing certain about these people—they believe in God—they talk about Him and His laws, they believe in Christ and Heaven and health and happiness here and now. Only a little while ago when they asserted that the keeping of God's laws would result in healthy bodies, and that the only real cure for a disease was to be found in religion, the world smiled and called this belief a dangerous and foolish departure from known science, and denied that Christian Science ever healed disease. Now this same world begins to admit some cures, but says they are produced psychologically. It yet hurls hard words at the devotees of this faith—such words as "heathen philosophy," "pantheism," "hypnotism," "ignorance," "superstition," "money-grabbing system," "fraud" ("fad" is nearly obsolete), and the like.

To an interested outsider it is evident that the Christian Scientists have gotten hold of something which the other people have not yet grasped. However impalpable and mysterious to the outsider this may be, it is yet something. Through all the criticism, kindly and otherwise, these peculiar people move on serenely, they build churches and found societies rapidly, they grow healthier, steadier, happier, and better. Once Christian Scientists they continue to remain such, despite persuasion and persecution alike.

Asking one day one of the active members of the Troy Church what was the ground plan of the Christian Scientist

Digitized by Google

faith, we received in substance the following answer: Nearly all people admit that Jesus Christ is the perfect model for humanity to copy; that nothing finer, higher, wiser, holier, more powerful or more scientific than his life is possible to be disired or attained. That this bright example of perfection is given to mankind to be followed in every particular. It was strongly asserted that he was the perfect law-keeper and law-expounder, and that the true law for daily living can only be discovered by the study and practice of his philosophy. His constant command was "follow me." All trouble comes to the world because of departures from his methods.

For instance, he bade them to love God with all the heart and soul and mind and strength and the neighbor as themselves; but men act as if this were not possible. He healed the sick without drugs and taught his disciples, including Luke, "the beloved physician," to do the same, but modern teachers say it is a blasphemy for a modern disciple to attempt this. Some way or other, the everyday lives of Christian people fail to harmonize with his instruction. Religion has been kept for an hour or so on Sunday; it has long since ceased to be the plumb-line and square and handy tool of daily task and emergency. The Sermon on the Mount no more fits the scheme of life mortals adopt than does the principle of music endorse the jangle of a child's fingers strumming on the piano. No doubt the child believes he is making music. And so these Christian Scientists are working for a reconstruction of the plan of living, and are insisting that disciples shall begin to "follow" Jesus in all his methods.

They are even trying to understand the power of Mind, as he expressed it in the word that healed the sick and the sinner, as well as to catch his sense of the powerlessness and unreality of matter when opposed to Spirit. They are aiming high—their arrows do not always hit the mark, but I for one am going to be thankful for the existence of such a sect of people in our midst.

Suppose we give them room and time and a fair show. If it really should be that they have found what they believe they have found, it would be a most disastrous thing for us all if we could crush their hope and faith and practice. The best way to learn the trend of their methods would seem to be to go with them for a month or so, examine numbers of their professed cures, watch to see if their lives are really growing sweeter, discover if they actually do pore over their Bibles every day; in fact, study them as you would study any people or system which you wished to understand. Only I would warn you from personal experience that it is not safe for you to do this if you really do not want to become interested and perhaps convinced that Christianity is Scientific, and science is Christian.—ONLOOKER.

*Troy Observer.*

### My Prayer.

If there be some weaker one,
Give me strength to help him on;
If a blinder soul there be,
Let me guide him nearer Thee.
Make my mortal dreams come true
With the work I fain would do;
Clothe with life the weak intent,
Let me be the thing I meant:
Let me find in Thy employ
Peace that dearer is than joy;
Out of self to love be led,
And to heaven acclimated,
Until all things sweet and good
Seem my nature's habitude.

JOHN G. WHITTIER.

## From Our Contributors.

### A Financial Demonstration.

BY E. K.

I WISH to give my testimony to some of the dear ones who may be wrestling with the dread disease, limitation.

While staggering under a great load of mental depression because of an accumulation of debt due to incompetence and other qualities of mortal mind, I found myself standing in a depot in one of our great cities waiting for a train. Instead of, as usual, going to the agent in order to learn the time when my train would go, I went over to the rack in which the time-tables and folders are kept, and commenced looking over it for a folder belonging to the road over which I was traveling. In my search for the folder my eye fell upon the word "Tract," and as if under the influence of some great impelling power, I reached out for it with all my might. I retired to the centre of the waiting-room and commenced to read. I soon found I was reading something different from anything I had ever read before, and looking at the heading I found I had a Christian Science tract, and it was entitled, "Freedom." I went back to my reading and devoured all the rest of it, then went to the window and asked the agent about my train. I remembered having seen the sign "Christian Science Reading Room and Dispensary" about a block and a half from the depot, and on learning from the agent that I had an hour and ten minutes to wait, I determined to use the time in making a call and learning if possible, from a personal interview with those people, something about the wonderful news contained in the tract I had read.

In a few moments I found myself standing on the corner, within a door or two of the sign, and then commenced a battle with a sense of error which would have kept me forever from obeying the voice of Truth if it had been possible. Finally, realizing that I had walked a block and a half, through a heavy rain, to see and talk for a few moments with those people, I determined to let nothing deter me, and walked up the steps and rang the doorbell. In a few minutes a gentleman appeared at the door, and I asked him, "Is this a reading room?" and he, replying in the affirmative, kindly invited me in, and asked me if I knew anything about Christian Science. I told him I did not, adding "there is nothing wrong with me physically, but spiritually and mentally I am all out of shape."

He opened Science and Health and handed it to me, but I did not want to read, I wanted to talk, and to hear him talk, and we passed the time talking until I found I must go, when he selected several tracts, I think one of each tract published, and gave them to me. The following week I found meat and drink from those tracts; each night, retiring to my room, I read two or three of them, and again in the morning. Nothing like this had ever come into my consciousness, and my "blues" were entirely routed. I lived on the mountain top the whole week through. I soon found I could not continue in this high position until I had earned it. My creditors were all waiting for their money, and I could not rest easy up there in the mountain until all had been made right below. With a more hopeful thought I commenced my work again.

The nature of my work brought me among the people continually, and the thought of "hard times" being prevalent, I appeared to be climbing a hard, steep, and rocky, mountain all the time. I never forgot the reading room where my heart had taken on new hope, and each time I visited the city, I called again and again and renewed my talks with the dear people there. But for a long time I worked without apparent result in the matter of meeting

Digitized by Google

my debts, and many a battle was fought with morbid depression on this account. One day while working in a northern city the thought came to me, that while mentally and audibly I had always acknowledged having received great benefit from my visits to the reading room above mentioned, it had never occurred to me that there was a financial feature in connection with its existence, and that from myself was due something in this direction in return for all the immeasurable benefit I had received from it. As this new thought took possession of my consciousness, the amount which it seemed I should send appeared to be five dollars.

After thinking a while I arrived at this mental conclusion, "That is right, and I will send five dollars *just as soon as I can spare it.*" I continued working, with the same old apparent results,—uphill and creditors still waiting.

One day while walking along the road on one of our Western prairies, the thought again came to me to send five dollars to the dispensary, and placing my hand on the outside of my pocket I felt two silver dollars there, and immediately felt that those two dollars would make a start towards the five. I took them out of my pocket and placed them in an unused one, concluding to add to them until the full amount was reached and send it all in at once.

This arrangement did not appear to satisfy, and in a short time I found I was impressed to send this two dollars *now*, and on reaching the little town I was walking towards I went directly to the express office and bought an order for two dollars, and mailed it, and in this act of obedience was broken forever that awful sense of poverty and limitation which had followed me for so long. My work began to be profitable, and my thought concerning the daily supply was free from fear. In a very short time I paid the other three dollars, and soon made the first payment towards the wiping out of those old debts; and some of the most pleasing features of my experience are the expressions of gratitude which in every case has accompanied the acknowledgment of remittances. In a short time I again visited the city where I had first heard of our blessed Truth, and before leaving took necessary steps for having my name presented for membership at the following communion service, and soon became a regular subscriber to the church and reading room fund.

Sometimes the enemy will press his claim for a short time, but never again can he take possession. For a time when people asked me if I sought Truth for healing I answered no, but I have at last awakened to a knowledge of the fact, that when first God led me to that tract I was one of the sickest men in that city. I needed healing as much as any patient who ever sought Christian Science, and, thanks to divine Love, our Mother in Israel, and my own dear teacher, I am daily finding it. It is always with a deep sense of gratitude that my thought rests upon the dear friends who, at the beginning of my experience, took so much loving pains with me. Also upon all the dear ones everywhere who have been used as instruments in God's hands for handing "a cup of cold water" to the weary traveler and helping him on his way. May the conscious presence of Truth and Love forever be the glad portion of one and all.

## Science and Health.

BY T. H.

MANY people say that our text-book, "Science and Health with Key to the Scriptures" is mystic, abstruse, hard to understand, contradictory, conflicting, ambiguous, needlessly perplexing, and involved. We admit that it seemed to be so to us for many months, because we ourselves were so much involved in the mist, fog, and mire of error that we could not understand Truth.

For the encouragement of others we wish to say that one who studies Science and Health and the Bible with the innocent simplicity of a little child, trusting God to make it plain, and is willing to profit first by much which is easy to understand, such, for example, as the first sentence in the preface, "Leaning on the sustaining Infinite, to-day is big with blessings," will find it to be spiritual food, heavenly manna, or as the tree of Life with "leaves for the healing of the nations." Such persons by faithful continuance in spiritual thought and experience, will grow in the understanding and demonstration of our divine Principle, and be able to test Science and Health, proving all things by Principle, and holding fast that which is good.

All truth is in Mind, in which "we live, and move, and have our being." Truth is free to all and belongs to all by virtue of the eternal law of absolute right. One who thoroughly understands the principle of music can become master of the piano, and one who thoroughly understands the principle of mathematics becomes master of its text-books and problems. This mastery is attained by a process of growth through faithful and diligent perseverance. The study of Science and Health and the understanding of divine Principle are infinitely more important than music or mathematics, and less difficult when undertaken in the right way and with the childlike and teachable spirit "God is His own interpreter, and He will make it plain" just as fast as we are ready for the solution of the different problems which, step by step, lead up to the perfect understanding and demonstration of the healing power of Truth and Love, as demonstrated by our blessed Lord and Master, Jesus the Christ.

We have read Science and Health many times, and made it a daily study with the Bible for four years, and now find it easy to understand and to experience the healing benefits to be enjoyed by knowing the Truth which maketh free.

In proportion as we are consciously responsible alone to our divine Principle, and loyal thereto, we can "Rejoice ever more." Pray without ceasing," and in everything give thanks to God for the glorious liberty and the blessed freedom to be found in Truth and Love.

Before my wife and I heard of Christian Science in 1895 we had experienced much ill health. For the last four years we have not used *materia medica* or needed a doctor, our Saviour, physician, and medicine has been the eternal divine Mind, and we have freely enjoyed good health, happiness, and harmony. Old troubles have repeatedly come up and been destroyed by the healing power of Truth and Love. God is Spirit, and Spirit is Love, and Love is All-in-all.

"Now unto him that is able to keep you from falling, and to present you faultless before the presence of his glory with exceeding joy, to the only wise God our Saviour, be glory and majesty, dominion and power, both now and ever. Amen." This is said by some to be the most beautiful benediction in the English language. If it were universally used at the close of every religious Sunday service, how beneficent its hallowed influence, as an appropriate impressive closing thought, would prove to be.

## Letter to Mrs. Eddy.

SALT LAKE CITY, May 7, 1900.

*Beloved Mother and Teacher:*—Pardon me if this letter takes your attention from any important work. For some time it has been recurring to me to write you and say that many times when a good sense of the omnipotence of Good dawns upon me; when I catch clearer glimpses of "all is Mind," and when I see the necessity of such a revelation before mortals can be saved, I can but think that the

Digitized by Google

revelation and establishment of Christian Science is the greatest blessing the world has yet seen.

It seems to me that your revelation solves the enigma of mortal existence, dives to the depths and explains the Science of Being, and that no other writings extant do that. It seems that the other Prophets have not even hinted at this. This revelation had to come. A Scientific Christianity is a necessity; anything short of that is illogical and absurd.

The hard-fought battles I have experienced here during the past ten years, have given me a hint of what the Founder of Christian Science has had to meet. Often my heart has gone out to you in deep and tender compassion, and at times I have felt like Peter, that I would use the sword; then Love would say, "Put up thy sword," for you will not succeed that way; bear the cross and God will lead to victory.

Nothing short of the wisdom and mercy of Love can revile not and know just when to answer not a word.

No mortal on earth, Mother, could do what you have done, unless God were with him. The age is rapidly acknowledging this fact.

Jesus voiced Truth to a cruel age, so much so that he did not go into detail; but left undying words for mortals to study. Now we have the complete way revealed.

Many times when the clouds clear away, and something comes to me in demonstration, I feel sure that the thought is in "Science and Health with Key to the Scriptures," and ere long I find it there expressed better than I could have given it; showing me that that book is the revealed way, or word of God.

Our work here is going on about as usual. We have increased about fifty per cent within two years, or since the dedication of the church.

In kind remembrance, I remain,

Your grateful student,

LEWIS B. COATES.

## To Mother.

BY W. F. C.

THIS is God's sweet Eastertide.
May His peace with you abide,
And His angels, stooping low
Protect you from every foe.
As the angels, so we ought
To carry with us a sweet thought
Of Truth, love, peace, and harmony,
To think of others, not of "me;"
So, with kindness, we must go,
Demonstrating love below.

*Dear Sentinel:*—Enclosed is a little poem which was handed to me last week by the mother of one of our Sunday School children, and considering that the little fellow who wrote it is only eleven years old, it seemed to me very good. It was his Easter gift to his mother. When she read it to me I was very much pleased and thought with a little explanation of the child's age it might be all right for publication.—ABIGAIL D. THOMPSON.

From whatever angle the love of Christ is regarded, it is unspeakable. It is unspeakable in its length. It has no beginning; it knows no break; it has no end. The mercy of the Lord is from everlasting to everlasting. It is unspeakable in its breadth. It includes each and all. It is like a benediction upon every soul. It is unspeakable in its depth. It saves to the uttermost. And it is unspeakable in its height. It makes us joint-heirs with Christ, kings and priests with God forever.

REV. A. J. F. BEHRENDS, D.D.

# Testimonies.

### Testimony of a Commercial Traveller.

Five years ago last February I weighed one hundred and twenty-four pounds and could not turn over in bed when I had lain down. I was in that condition for a year. Physicians pronounced the trouble sciatic rheumatism and said it was in the marrow of my bones, and could not be cured. I also had many other diseases.

I sent for a Christian Scientist, and after talking with him some time, and asking him about the charges, etc., he informed me that Christian Scientists generally charged one dollar per treatment, but that I need not pay one cent, as I could get the text-book, "Science and Health with Key to the Scriptures," and by studying that, with my Bible, and applying what they taught, I could heal myself, but if I would not do my own work, as in any other case, I would have to hire some one else to do it.

I had one treatment and was so benefited that I purchased Science and Health, the *Christian Science Quarterly,* and all other Christian Science books, and went to work. I did not resent the teachings of Christian Science, but applied them as best I could, at the same time keeping in the company of Christian Scientists. I seemed to grow out of all my diseases. In one month I considered myself well, and could walk without being lame, but I can see it has been a steady growth out of the old into the new; out of the unreal into the real.

I used to pride myself in being a gambler, but all those things vanished, as darkness does before the light.

I love my Bible, and that, with Christian Science literature, has been my constant companion. I am a commercial traveler and generally sell about one copy of Science and Health with Sentinels, Journals and Quaterlies every month.

I never meet any opposition to Christian Science. Whether it be minister, doctor, lawyer, or any one else I meet, they generally say, "I can't find fault with anything that will do what you say Christian Science has done for you."

When we started to build our church in Toronto (as I lived there then), I wanted to do all I could to help. I had no money to give, but I put on old clothes and went down and worked whenever I could. While there working, I heard a word dropped that led me to go and look for the position I now have. Before the church was finished I had the money to give that I had desired, and double.

When I found Christian Science I had no good position and no money, but owed considerable. I had never even hoped to earn as much as I have been able to earn the past year. I do not speak of this to boast but simply to give credit to Christian Science where it rightfully belongs.

I am also pleased to add that I have been used as a means to bring hundreds to this glorious Truth.

Mrs. H. is also a Christian Scientist, we both having gone through class in Toronto, April, 1895.

My desire is to so live that all people will be drawn to Christ's way.—W. H. H., St. John, N. B.

### Found Health and Happiness.

Christian Science was first brought to my notice some sixteen years ago. At that time I was suffering from hip and spinal trouble, consumption, and many other diseases. A friend wished me to try Christian Science, but I would not listen to her. I went to a surgical institute for treatment, where I was put into steel braces, and needles, cups, and the knife were used often.

At the end of four years I was able to walk without my braces, but was a physical wreck, and was told by six

Digitized by Google

different physicians that unless an operation was performed I would never see another well day. At times my suffering was intense, my physician being compelled to remain with me for hours administering hypodermic injections of morphine.

I had been a member of the Universalist Church for twenty-five years, and had taken an active part in all its works as long as I could walk, and when compelled to stop I felt that I did not care to know anything about a God who caused me such suffering. I put my Bible out of sight and the darkness and despair that settled over me cannot be described. At that time I was compelled to put on glasses, which the oculist told me I would never again go without, and for the next five years I could not even read the daily papers or use my needle. The fear of consumption was so great with me that every winter I was confined to my room with the thought of lung trouble, but since coming into the understanding of this beautiful Truth I know that I cannot inherit anything but good from the true Parent, God.

During the summer of 1897, while suffering from nervous prostration, "Science and Health with Key to the Scriptures" was put into my hands, but I could not understand it. Soon after another friend loaned me a *Journal* and some tracts, which I enjoyed reading, and I commenced to see what Christian Science is. I then went to a healer with the thought that I would not oppose her, no matter what she said to me.

In about two weeks I was a new woman, the peace and happiness that came to me I shall never forget.

The following autumn it was my privilege to receive class instructions, error seemed to come up in every conceivable form to prevent me from attending, but through the gentleness and kind forbearance of my teacher I missed only one lesson.

As I awakened to the thought of the power of divine Love one trouble after another disappeared. Glasses were laid away, and I find that I cannot trespass on divine energy. Many battles have been fought, but I find God to be an ever-present help. My husband carries the "little book" with him on his ocean voyages, and has been able on several occasions to see the nothingness of error. Since I took my first treatment there has never been a drop of medicine taken in our family.

MRS. LUCY A. STRATTON, Berkeley, Cal.

### Several Cases of Healing.

I am very thankful that I was placed where I could learn of this blessed Truth. Christian Science was first brought to my notice through healing. Five years ago the way was opened for me to receive class instruction by one of Mrs. Eddy's loyal students. Since that time Science and Health and all Mrs. Eddy's writings have been my constant study. Through understanding and realizing the nothingness of error and the allness of God (Good) I have been enabled to demonstrate over sin and sickness for myself and others, and have helped others to come into the understanding of the Truth.

I was called to treat a lady suffering from spinal meningitis. They had had a consultation of four physicians and the priest had prepared her for death. I stayed with her all night and read Science and Health, and treated her the best I could. In the morning she was entirely free from pain.

A gentleman was doing some work on a steam boiler and a piece of steel flew in his eye. He went to the hospital and the doctor took three stitches in the eyelid. He was in the hospital five or six days and the eye became so inflamed the doctors declared it would have to be taken out or he might lose the sight of the other. He sent for me to treat him. The pain left immediately. In a few weeks the eye was healed and he could see.

I have been able to overcome typhoid fever, stomach trouble, grip, pleurisy, rheumatism, and liquor and smoking habits.

A young man who was troubled with nervous prostration caused by studying, and was unable to do any work, even to write a letter, was healed by coming to one Wednesday evening meeting. The next day he got work at type writing and is working yet. That was nearly two weeks ago. He attended the next Sunday service and at the next Wednesday evening meeting his mother told me he was quite well. The healing was done at the first meeting he attended.

Christian Science was introduced here five or six years ago. The people were slow to accept it, but the interest is increasing. Last fall twenty-four people, Scientists, and some in favor of Science, donated one hundred and fifteen dollars for a lecture. Hon. Judge Ewing delivered the lecture to fifteen hundred people. We now have Sunday services and Sabbath School. We have quite a large attendance and hope soon to organize a church.

It was my privilege to attend services in the Mother Church in Boston a year ago, which was a great pleasure. I am very thankful that our dear Mother was led to discover this blessed Truth which is doing more good than any other teaching since Jesus' time. Truly God reigns. I wish to realize it more and more.

MRS. M. F. DOAK, West Superior, Wis.

### A Speedy Recovery.

I desire to tell of a demonstration I had several years ago, over a broken ankle. A few of us met in town Thursday afternoon and read Science and Health for an hour. At one of those readings, the last paragraph on page 421 impressed me so forcibly that I was continually thinking of what it meant. Soon after I arrived at home (a distance of nine miles) my two little boys came in, the smaller one crying, saying his horse had fallen on him. His ankle was bleeding. Instantly and silently I declared, "In Truth there are no accidents." The fears of those present were soon destroyed, and the child stopped crying; and although he limped for several days he was able to be up and play every day. Sunday morning I noticed his ankle was crooked. I took him up and could plainly feel the ridge around the fracture where it was broken. In two weeks it was perfectly healed and no one could tell which ankle was broken.—C. H. BARNES, Fruita, Col.

### A Little Girl's Testimony.

I am a little girl eleven years old, and I am glad to be in Science. A dear friend whom we shall always love taught us the way. We get all our help from this work. We have many good demonstrations. I have three sisters, one of whom had the claim of biting her finger-nails to the quick. She was cured in a short time. She just forgot about it.

I had a bad claim of throat trouble four years. It would break on the inside. They thought I would never get well. The dear Truth has made me well. We shall be in this grand work always, for we have a very present help. We have nearly all of Mrs. Eddy's books. We love to read demonstrations in the *Journal*. We are alone here in the work, but we wish every one could see the good.

HAZEL M. WOOD, Cottage Grove, Ore.

There is more true love in the frown of just reproof than in the hypocritical smile of flattery. The one, if heeded, is helpful; the other may be hurtful in its deception.

It is an inevitable law that minimum thought will bring forth minimum results. Conversely, maximum thought will produce maximum results.

## Religious Items.

In a preface to an English edition of "Theologia Germanica," published in 1854, Charles Kingsley said: "In many obscure passages of this book words are used, both by the Author and by the translator, in their strict, original, and scientific meaning, as they are used in the Creeds, and not in the meaning which has of late crept into our very pulpits, under the influence of Locke's philosophy. When, for instance, it is said that God is the Substance of all things; this expression, in the vulgar Lockite sense of substance, would mean that God is the matter or stuff of which all things are made; which would be the grossest Pantheism: but "Substance" in the true and ancient meaning of the word as it appeared in the Athanasian Creed, signifies the very opposite; namely, that which *stands under* the appearance and the matter; that by virtue of which a thing has its form, its life, its real existence, as far as it may have any; and thus in asserting that God is the Substance of all things, this book means that everything (except sin, which is no thing, but the disease and fall of a thing) is a thought of God."

NOTE.—The italics, capitalization, and punctuation of the text were strictly followed.

Thomas Wentworth Higginson, in a recent address before the Harvard Religious Union on "The Transcendental Movement in New England," said: "Transcendentalism was neither a doctrine nor a tangible belief, but rather an impulse of self-emancipation, hampered though it was by the conservatism of the times. As a reaction from the old Puritan theology, it excited a storm of abuse and persecution as furious as it was undeserved. Theodore Parker was the leader of the movement. He held views on the interpretation of the Scriptures which to-day would be considered far from radical, and yet on account of them he was denied election to the Phi Beta Kappa Society in spite of his great scholarship."

In the "Young People's Work" department of the (Baptist) *Watchman* a writer says: "The attainment of Christian character is a growth, not a manufacture nor the product of magic. It proceeds according to a definite method—blade, ear, and full corn. We quote: 'By their fruits ye shall know them;' but we are also to remember that in this sense the blade is fruitage as well as the ripened product. Immaturity and imperfection are different things. A plant may be perfect for its stage of development, while very imperfect in the sense of ripe."

The London correspondent of the (Episcopalian) *Church Standard* says: "The Dean of Westminster has given his hearty consent to a petition that a memorial to Mr. Ruskin shall be placed in the Abbey. A site has been selected and a committee is formed to carry out the arrangements. Among those who signed the petition are the Bishops of London, Winchester, and Rochester, Canon Scott-Holland, Mr. Frederic Harrison, Sir Edward Poynter, Mr. Holman Hunt, R.A., and Mr. G. F. Watts, R.A."

In a leading editorial article the *Congregationalist* makes a protest against sectarian rivalry and strife and commits itself to a policy of peace in the following words: "We will labor to make our own denomination as efficient as possible to do its part in bringing the world to Christ. We will strive to do this in as close fellowship with other denominations as they will offer to us."

The Rev. Samuel Worcester says in the *New Church Messenger:* "We would not think for a moment that the Lord withholds a blessing after our minds are prepared to receive it; it would be impossible for Him to do so. But the true preparation and absolute pre-requisite for receiving any spiritual blessing consists in removing from us those things that are opposed to that blessing."

Lyman Abbott closed a recent sermon that was published in the *Outlook* with a prayer of which the following was the opening sentence: "Forgive our narrowness, enlarge our faith, and help us to know Thee a little by our trust in Thy love to minister that love to those who know Thee not at all."

The *Christian Register* announces that the seventy-fifth anniversary of the National Unitarian Association will be celebrated in Boston the last of May. Delegates from the Unitarian churches of Great Britain, Hungary, and Japan, and from the Brahmosomaj of India are expected.

The *Universalist Leader* says: "It is the aim of all Christian teaching and discipline to get man, who holds in himself this wealth of divine power, made over in the image of God, to know the secrets of his own nature, and to follow out the suggestions and hints of his nobler life."

The *Universalist Leader* says: "God is infinitely perfect, He has never gone wrong, He is never to go wrong, He is worthy of worship, He has never made a mistake, never failed in anything He undertook. He has no need to resort to devices and schemes."

The (Episcopalian) *Church Standard* says: "Somewhere or other the saintly Maurice said in words—and everywhere throughout his writings he applied the saying—that a Christian man should hate heresy with all his heart, but never presume to call another man a heretic."

"The population of Jerusalem in Christ's time was about two hundred thousand, but on the occasion of the passover this number would be increased to possibly three million," says the New York (Baptist) *Examiner*.

"No harm can happen to us so terrible as that we inflict on ourselves by nursing the fester of bitterness, until it all turns to hard unbelief or selfish and morbid self-pity," says the *Christian Register* (Unitarian).

The *Endeavor World* states that the enrollment of the Tenth Legion has reached 16,761. The members of the Legion agree to give "one-tenth of their incomes to the cause of Christianity."

I know not in history an individual so easily comprehended as Jesus Christ, for nothing is so intelligible as sincere, disinterested love.—CHANNING.

You never will be saved *by* works; but let me tell you most solemnly that you will never be saved *without* works.—T. L. CUYLER.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer,' tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The May *Journal* devotes two pages to a list of publications all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice also is given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets can be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political and Governmental Notes.

The peace envoys of the South African Republic and the Orange Free State were officially received by Secretary of State Hay May 21. They made a plea to the government to intervene between the two Republics and Great Britain in the interests of peace. Secretary Hay, on behalf of the President declined to intervene, on the ground that the United States had gone as far as it could, in the character of a friendly neutral power, to bring about a settlement of the war. They called on President McKinley May 22 and received the same answer to their petition. It is stated that the envoys will travel through the country endeavoring to arouse a sentiment in favor of their cause. Mr. Fisher is reported to have said: "We expected that our proposition would be received by the State Department in just the way it was, therefore, we are not surprised or discouraged. Our mission to America has just commenced, and we are confident of accomplishing that for which we came."

The millions of people who have frequent occasion to transmit sums of money under five dollars through the mails are at present without any cheap and convenient means of doing it. A bill is now before Congress to remedy this state of things. This bill, known as the post clerk money bill, provides that all treasury notes and coin certificates now in existence shall be replaced by notes and certificates of similar style bearing on their face blank spaces for use as checks when desired. Under ordinary circumstances these bills are to circulate as currency, with the space left blank. When the holder of one desires to transmit to another person the sum represented by his note or certificate, he writes after the words "pay to" the name and address of the payee, and sends the paper, which has now become a draft on the treasurer of the United States, by mail.

The contest for the governorship of Kentucky was decided in favor of Beckham by the United States Supreme Court May 21. Beckham is the Democratic claimant of the office. He had second place on the Democratic ticket of which Goebel was the head. Goebel was assassinated, and after his death Beckham continued the contest against Taylor, the Republican candidate, who held the office.

In Virginia an election was held May 24 deciding the question of calling a constitutional convention for the purpose of disfranchising negro voters. The returns indicate that a disfranchising amendment will be enacted.

It has been found on investigation that the revenues of Porto Rico for the year ending June 30 next, will not be sufficient to meet the expenditures.

### Foreign News.

The relief of Mafeking, reported last week, was followed by a steady, cautious advance on the part of the British, the main army under Lord Roberts forming a crescent with the two horns thirty miles apart, sweeping through the upper part of the Orange Free State nearing the Transvaal border, Buller in the east advancing to Laing's Nek and Lord Methuen seventy or eighty miles to the west of the main army advancing along the Vaal River. The Boers have avoided battle by retiring northward. They do not permit much news to be sent out in regard to their intentions, but it is supposed that elaborate preparations for the defense of Pretoria are being made.

A St. Petersburg dispatch says: "The Metropolitan Antonius has despatched throughout orthodox Russia a secret circular edict, strictly ordering all the clergy to refuse to Count Leo Tolstoi, the philanthropist and author, recognition as an Orthodox churchman. By the edict the count is declared a disobedient, hostile critic of the Orthodox Church, and a heretic. No priest of the Orthodox Church is to administer the holy communion or absolve him, nor is he to be buried according to the ritual or in consecrated ground, unless, 'before departing this life he shall repent, acknowledge the Orthodox doctrine, believe, and return to the Church.'"

The first performance of the "Passion Play" at Oberammergau since 1890 was given May 20. This drama of the career of Jesus has been given from time to time for many years by the people of the village of Oberammergau, which has a population of fourteen hundred, of whom 685 are employed in the production, fifty being women and two hundred children. The play begins at eight o'clock, and with an interval of an hour and a half at noon continues all day. The people of the village all let their hair grow long with a view to taking part in the play.

Advices from the Orient say that the Buddhist sects throughout Japan are preparing on a grand scale for the reception of the bones of Buddha, which are to be sent from Siam to Tokio to rest in the Temple in Tokio. A thousand Buddhist priests are to be sent to meet Buddha's bones halfway on the journey, and a quarter of a million dollars is to be spent in Tokio in organizing a fitting reception. The project is exciting much ridicule among the foreigners in Japan.

Siberian exile from Russia is to be abolished by the Czar's order, a bill to that effect having been unanimously passed by the Council at St. Petersburg. There are three hundred thousand Siberian exiles, one-half of whom were sent without trial. The Trans-Siberian Railroad is about completed, and the Czar wishes to settle his Asiatic realm with a desirable class of farmers. One-third of the exiles become steady citizens; the other two-thirds turn out bad men after the arbitrary treatment they receive.

The German Reichstag, on May 23, passed the "meat bill," designed by the wealthy land barons, to exclude to a large extent the imports of meat from the United States. This measure is supposed to be unsatisfactory to the emperor and to the shipping and industrial interests, but it is expected to become a law owing to political expediency.

The bill to enable women to be elected aldermen and councillors in the new borough councils, formed under the London government bill of 1899, passed its second reading in the British House of Commons May 24 by a vote of 248 to 129, despite government opposition.

A despatch from Pretoria announces that the first train north entered Mafeking, May 22, and that the first train south was expected a week later.

Queen Victoria's eighty-first birthday was celebrated by British subjects in all parts of the world on May 24.

### Industry and Commerce.

An engineering project promising the reclamation of a large portion of the arid land of western Kansas is reported to be now on the eve of execution. In Barton County there is a natural basin twelve miles long by six miles wide which can be changed into a lake by building a dam two hundred and fifty feet long, and diverting the flood waters of the Arkansas River into the basin by means of a great ditch. By a system of irrigation canals the water stored in the lake could be distributed over a great area of desert, converting it into a fertile garden, for the soil of the western dry plains is usually very rich.

St. Louis street-car lines were operated to some extent last week, but under extremely difficult conditions, as the striking employees and their friends frequently attacked the new hands and the police with stones and fire-arms. The company kept trying to run its cars, but the public has not been in a hurry to patronize them owing to the frequent riots.

The new electric power plant at the Armour packing houses in Chicago replaces 93 steam boilers, 16 engines, and 17 refrigerating machines. It develops 4,000 horsepower, and feeds 10,000 incandescent lamps, 300 arc lamps and 120 power moters, scattered over an area of more than sixty acres.

There are 1,200,000 miles of copper wire used in telephone service in the United States, and 4,000,000 calls are received daily in the telephone exchanges of the country. The wire would girdle the earth at the equator forty-eight times, or reach from the earth to the moon five times.

Exports to Asia and Oceanica in the fiscal year which ends with the month of June will, for the first time in the history of the United States, exceed $100,000,000, which is about four times as great as those of 1893. Imports from that part of the world are also growing rapidly.

The American liner Paris has been renamed the Philadelphia.

### General News.

The French Line, officially entitled La Compagnie Generale Transatlantique, whose steamship, La Bourgogne, sank on July 4, 1898, about 75 miles off Sable Island with great loss of life, has filed a petition in the United States District Court, which will, it is said, practically cut off without a cent all claimants for damages, of which there are 63 whose claims aggregate $1,500,000. The company prays for a limitation of its liability for loss or damage to the value of the ship and freight in accordance with a Federal statute passed in 1851. If this petition is granted the liability of the company would be virtually wiped out, as all that was left of the ship and contents was a boat and a life raft.

In deference to the wishes of residents along the elevated tracks of the C. B. & Q. railroad in Chicago, the general manager of the road has given orders to all locomotive engineers to abandon entirely the practice of ringing bells and blowing whistles while on the elevated tracks, except in cases of emergency.

The Kansas people are making a general effort to send corn to the famine district in India. A train load of twenty cars containing 20,704 bushels of corn left Topeka on May 24 bound for India. The railway companies are shipping it free.

A statue of General Grant, which was a present to the nation from the Grand Army of the Republic, was unveiled in the rotunda of the Capitol at Washington on May 19. The widow of General Grant, his daughter, and descendants, were present.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Palace of Minos Unearthed.

### Ancient Capital of Crete Found by Prof. Richardson.

NEW YORK, May 12, 1900.—At a meeting of the most distinguished archæologists of America, held to-day in the architectural library of Havemeyer Hall, Columbia University, a letter was read reporting what is regarded as one of the most important archæological discoveries yet made in the interest of modern science.

Writing to Professor Fowler of the Western Reserve University, at Cleveland, O., Professor R. B. Richardson, formerly professor of Greek at Dartmouth, and for the last ten years in charge of the American school of classical studies in Athens, Greece, tells of the discovery.

Under date of April 21, Professor Richardson tells of the receipt in Athens of a telegram from Crete signed by Professor A. J. Evans, who for four years has been engaged, under the auspices of British scientists, in making excavations at and around Cnosus or Knossus, the site of what is believed to have been the ancient capital of Crete and the seat of government of the fabled Minos, the great Cretan lawgiver, famous in Grecian legend as the son of Zeus.

⚜

Professor Evans, who is the director of the Ashmalean Museum of Oxford and the son of Sir John Evans, a distinguished British archæologist, telegraphs:—

"Building on my site at Knossus proves to be the Mycenæan palace, containing relics of extraordinary importance. Question of Mycenæan writing finally settled.

"Chambers [of palace] contain whole series of clay tablets analogous to Babylonian, but with indigenous Cretan script, probably palace archives. On south front, fore hall of Megaron has come to light, and in adjoining corridor large piece of fresco representing full size figure of a girl in Mycenæan costume, holding long vase. Colors brilliant and good of form. Surpasses anything yet known of this period. Remains belonging to great Mycenæan age, about 1400 B.C."

Professor Richardson, after quoting the telegram, adds: "This seems important enough for you to have it for your summary of archæological news, and as it is to go to the public, I send it to you that you may not only know it, but help to spread it."

Those to whom the letter was read to-day form the council of directors of the American Institute of Archæology. Professor T. D. Seymour of Yale expressed the deepest interest in the communication. Others who listened to the report of the discovery and commented on its great importance were Professor Goodwin of Harvard, Allan Marquand of Princeton, J. R. Wheelock of Columbia, M. Warren of Harvard, E. T. Merrill of Wesleyan, B. Perrin of Yale, C. H. Young of Columbia, A. L. Frothingham, Jr., of Princeton, John W. White of Harvard, F. C. Babbitt of Trinity, G. Howes of the University of Vermont, J. H. Thayer of Harvard, S. H. Ashmore of Union, G. S. Tisdale of the College of the City of New York, and F. W. Kelsy of Ann Arbor University.

From a philological point of view some of the scientists present were disposed to regard Professor Evans' discovery as probably of greater moment than those made by the late distinguished German-American explorer, Dr. Henry Schliemann, who uncovered what he believed to be the tomb of Agamemnon at Mycenæ, the site of Homeric Troy at Hissarlik, with the house and the gate of Priam, and made many other marvelous discoveries.

Professor Evans' confident statement, "Question of Mycenæan writing finally settled," coupled with his report of a whole series of clay tablets, apparently inscribed with the palace archives, aroused marked enthusiasm. Hitherto the only specimens of the Mycenæan writing found in Crete have been single characters, or hieroglyphics engraved upon agate or other cut stones.

⚜

As Professor Wheeler explained, the present discovery of tablets of continuous writing, with Babylonian characteristics, gives excellent ground for hope that scholars may be able to decipher it, just as the cuneiform inscriptions have been deciphered, and in this way much light may be thrown, not only upon the origin, but upon the history of this Mycenæan civilization, which antedated the adoption of the Phœnician alphabet.

"Dr. Evans' work," said Professor Wheeler, "is really a continuation of that begun and vigorously prosecuted until his death, ten years ago, by Dr. Schliemann. The fact that similar discoveries are now being made in the island of Crete to those already made in Mycenæ and elsewhere by Dr. Schliemann, strengthen the belief long held by scholars that there was a high and ancient civilization, with its centre perhaps in Crete, which afterward spread throughout the Grecian archipelago.

"The tablets may go far to establish the origin and characteristics of that civilization. That age, moreover, is commonly believed to be the era sung of in the Homeric poetry, and surely any discoveries that tend to illumine the times of the Iliad and the Odyssey should be of popular, no less than of pedantic, interest."

Professor Frothingham of Princeton remarked that the reputed discovery appeared to have a no less distinct interest to students of ancient art. The fresco mentioned by Professor Evans was evidently one which would give a perfect idea of the costume of the period. The only previous fresco of any moment discovered in Crete, so far as he could recollect, was that of a bull with a female figure running beside it.

⚜

Professor Halbherr of the University of Rome, who was originally sent to Crete by the Italian government, and is now there under the auspices of the American Archæological Institute, has uncovered some superb Phœnician bronzes and specimens of armor suggestive of Egyptian and Babylonian origin.

At Gortyna he discovered some marvelous monuments of the Cretan law, shortly after his exploration of the so-called cave of Zeus, at Mt. Ida, or the Idæan grotto. This

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

was the fabled birthplace of Zeus, the Grecian Jupiter. Professor Frothingham thinks that Professor Evans' discoveries will probably rank with those of Halbherr.

Other explorers have unearthed portions of Mycenæan palaces and temples, but the present achievement, it is thought, will do much to determine the actual plan and construction of those ancient edifices, which have been heretofore more or less open to dispute. The megaron, the south front of which Professor Evans mentioned as having come to light, is the large assembly room of the palace, located immediately inside the portico.

If the many legends of Minos, King of Knossus, are based upon anything more than tradition—and most traditions have some sound basis in fact—it may be that the structure now being uncovered on the site of the ancient Cretan capital was the palace of the famous lawgiver of Crete, whose wisdom, heroism, and strength have become a feature of Grecian legendary history.—*Boston Herald.*

## World's Fair Cost.

Now that the great Paris Exposition has at last been opened one is naturally curious to know how the financial end of such an immense exhibition is managed. While it is one thing to be able to persuade all the nations of the world to contribute to the artistic success of such an enterprise, it is quite another matter so to arrange the outlays and expenditures as to leave a balance on the right side of the book when the turn-stile has at last retired from business.

At the present moment the reports from Paris are roseate enough to lead one to imagine that there can be nothing but profit in the affair, but those who are acquainted with the nature of the expenditure do not hesitate to say that the managers of the big show will find it no easy matter to make both ends meet.

In fact, it is freely hinted that there will be an immense deficit at the close of the season, but even if this should prove to be the case, it will by no means be the first time that international expositions have been run at a loss.

Among the several nations that have held world's fairs in the past, England has been one of the most successful from a financial point of view. The first great international exhibition ever held in the world was given by Great Britain in 1851, and for that time it was a most amazing affair.

Architects from all parts of the world submitted designs, and the one chosen, that of Joseph Paxton, now comprises the buildings of the Crystal Palace, Sydenham. The entire floor space consisted of no less than twenty-three acres, while the area of the buildings covered nineteen acres of ground. No less than four thousand tons of iron were used in the structure, and when the exposition was opened at two o'clock on October 7, there were ninety-three thousand people assembled under that one roof. It is needless to say that such a novelty was a genuine success, the profits of the affair being fully five hundred and twenty thousand dollars.

It was the success of this exposition that persuaded France to inaugurate a similar movement, and in 1855 she gave her first big show at Paris. Artistically it was a great success. The buildings, which were most attractive, covered twenty-nine acres of ground, and the number of exhibitors was not less than twenty-four thousand. Financially, however, the affair was a most dismal failure, for when the gates were closed the treasurer reported a deficit of $4,350,000.

In 1861 a brave effort was made to give a world's fair at Florence, Italy, but for several reasons the nations did not respond with the alacrity that had been anticipated, and the experiment cost its projectors a round sum of money.

A year later the second big English exhibition was held at London, and it would undoubtedly have been another unqualified success if the death of the Prince Consort had not occurred. As it was, however, the receipts so nearly balanced the expenditures that there was a deficit of something less than fifty thousand dollars.

Not at all discouraged by the failure of her first experiment, France held another exhibition in 1867. This time it was a success in every sense of the word.

The floor space of the buildings alone occupied an area of thirty-six acres, and, for the first time, the exhibits were so arranged that each nation occupied a separate division. During the progress of the exhibition over four million persons paid for admission, and the books showed a surplus over all expense of nearly five hundred and forty thousand dollars.

It was this success that inspired the people of Vienna to indulge in a similar enterprise in 1873, and they went about it in a most elaborate manner. The total cost of the buildings alone exceeded ten million dollars, and no money was spared to make the affair a success.

In spite of all these efforts, however, the big show was a financial failure. Partly owing to a financial crisis in Europe that culminated in a panic, and partly to a variety of other causes over which the directors had no control, including a general election, the deficit shown when the books were balanced was not less than ten million dollars, the largest that the directors of any exhibition have so far had to face.

The next big exhibition was the Philadelphia Centennial in 1876. On the occasion of this big show there was nothing done on a small scale, and the covered space alone exceeded fifty acres and the exhibits were superior to any that had been shown at previous expositions. The attendance was also very large, more than ten million paying admissions, but, in spite of all these facts, the directors were compelled to face a substantial deficit when the books were balanced.

Great as had been the loss on the occasion of the first Paris Exposition, the deficit shown by the exhibition of 1878 was even more stupendous. This affair broke all records in many ways, the area covered being no less than eighty acres, while the number of visitors exceeded sixteen million. Favorable as all this may seem, however, the books told another story, for the loss was more than $6,200,000.

After this disastrous experiment ten years elapsed before another international show was held; but in 1889 France, still undaunted, launched out upon another gorgeous exhibition, this time with triumphant results, the books showing a profit of $1,600,000. This Exposition also excelled all others in point of magnitude and comprehensiveness, for the total area it took up was one hundred and seventy-three acres, a little less than half of which was covered in.

The next big world's fair was in 1893, when Chicago invited the nations to visit the new world. The story of the success of this experiment is still so fresh in the minds of Americans as to require no comment. With its total area of four hundred acres and its exhibits that far surpassed anything yet shown at a similar exposition, the directors were still able to show a profit of nearly $1,500,000, a result that speaks well for American enterprise and American business methods.

From this review of the world's great exhibitions it can be seen that the show that paid has been in the minority.

Digitized by Google

What, then, one may well ask, is the financial inducement for a nation to enter upon such a costly experiment? The answer is, of course, that exhibitions are run on the "free lunch" principle.

The nation provides the bread and cheese in the shape of its exhibits, with the expectation of being able to recoup itself by the enormous sums spent by the visitors it attracts. For instance, it has been estimated that as the result of the Paris Exposition of 1889 the French railroads were benefited to the extent of fifteen million dollars, the postoffice by fifteen hundred thousand dollars, the Octroi duties by two million dollars, while hotels, theatres, and merchants in general all reaped rich harvests.

In fact, it is stated that the sixty-five hundred thousand people who visited Paris on this occasion left behind them no less than two hundred and fifty million dollars.

Under these circumstances it is not difficult to imagine why the government should be so willing to grant the directors of the attraction a subsidy of sixteen hundred thousand dollars, as was the case in 1889, or why the French people should be so willing to undertake exposition after exposition in the face of so many dismal failures.

## The Granite Monthly for May.

THE May number of the *Granite Monthly* is in every sense a notable issue of that sterling New Hampshire periodical. It opens with a charming poem, "Easter Morn," by the Rev. Mary Baker G. Eddy, which is instinct with spiritual insight and aspiration. Then follows, from the pen of Mrs. Henrietta H. Williams, a superbly illustrated article entitled "Among the Christian Science Churches," in which one may find concretely set forth some of the more striking of the merely external evidences of the dissemination of this faith, as shown in its chain of beautiful church edifices which extends from sea to sea across our own continent and has its links in other lands as well.

Mrs. Williams' narrative has an authoritative character, inasmuch as its sources of information are wholly official, but she has not confined herself to a mere routine enumeration of church organizations and structures. Indeed, the statistical is practically eliminated, while, with fine discrimination, she has set forth the fundamental purposes and beliefs which have actuated the Christian Science movement and which form the basic motives for the enduring characteristics wrought into its church edifices, together with an outline of polity and administrative features, the whole combining to make a compact and comprehensive survey of a field of wide scope.

Other articles of interest in the same number are: The Peterboro Town Library, by James F. Brennan; the Congregational Church at Newport, by Arthur B. Chase; and A Prosperous Industry and Its Manager, by H. H. Metcalf, this being a sketch of the Richards Woolen Mills at Newport and of Col. Seth M. Richards.

Published by the Granite Monthly Co., Concord, N. H. Price 20 cents.—*Concord Evening Monitor.*

### Cards of Membership.

Members of The First Church of Christ, Scientist, in Boston, Mass., will be admitted to the Annual Church Meeting in Mechanics Hall, Tuesday, June 5, upon presentation of Cards of Membership. These cards may be obtained by the members of the church in the church vestry on Sunday from 9 A.M. to 5 P.M., Monday 10 to 11.30 A.M., and Tuesday, 9 A.M. to 1 P.M.

# Among the Churches.

### Opening of New Church.

The First Church of Christ, Scientist, is now completed and the initial services will be held in it to-morrow (Sunday, April 15). The church is located on a handsome lot at the corner of McKinney Avenue and Travis Street, and it is to be supplemented later on by a larger and more pretentious church edifice. When that time arrives the present beautiful little structure will be devoted solely to Sunday School purposes. It is admirably arranged for church services, however, and in all its appointments is a little gem of beauty. To the energetic and faithful workers who compose the congregation is due much credit for the creation of this splendid place of worship. The building has been completed for some days, and the members of the church were busy yesterday and to-day in adding the finishing touches to the interior decorations. A reading room supplements the auditorium—a cosy little apartment in which religious literature is to be had—and will be kept open every afternoon from two until four o'clock for the accommodation of those who desire to call. The church is handsomely carpeted with a rich velvet carpet, in which a bright green color predominates, and the seats, which are arranged at angles with the pulpit, give a pretty effect. They are of quartered oak, with carved ends, and nicely finished. A new church organ also makes up a portion of the furnishings. The harmonious blending of the furnishings is augmented by a rich flood of light, which flows in through two great art windows.

### Work Accomplished at New Paynesville, Minn.

With a desire to encourage organizations located in small towns, we submit the following yearly report of progress of First Church of Christ, Scientist, New Paynesville, Minn.

From April 30, 1899, to April 29, 1900, the general work accomplished was as follows: The work of incorporating already begun was completed April 24, 1899, when we received our charter as First Church of Christ, Scientist. The next important move was a lecture. A call was sent early in May for Hon. William G. Ewing of Chicago, Ill., and May 16, he delivered a lecture in Tuttle's Hall.

Later it was deemed advisable to change our place of service, and we left Tuttle's Hall. Pleasant rooms were fitted up in Haines' Building on Washburn Avenue, and the first service was held there April 29, 1900. During said time two new members were added to church membership. A receptacle for literature was placed in Soo Depot which has been supplied with Christian Science literature. In February the *Christian Science Journal* was placed in New Paynesville reading room; about two hundred lectures, two hundred Christian Science Histories by Judge Hanna, also numerous Christian Science Sentinels and Journals were distributed.—M. CARRIE VAN VORST, *Clerk.*

### From Le Mars, Ia.

Each Sunday a loyal band of Christian Scientists assemble in Columbia Hall, Le Mars, Ia., to hear the beautiful service of the Christian Science denomination. The little congregation is growing in numbers. A reading room has been opened and recently a lot was purchased in a very desirable location upon which a church building will be erected.

We had a lecture by Mr. Kimball and arrangements have been made to have another in the near future.

MRS. C. G. WILLIAMS, Clerk.

### Comments on Dr. Davis' Sermon.

Editor *The Advertiser.*

*Dear Sir:*—In your issue of May 1st, you publish the report of a sermon by Rev. Doctor Davis in which he quotes 1 Timothy, 6 : 20, 21; also 2 Corinthians, 2 : 2, 3.

I can endorse all that is said in respect to the admonition to Timothy as well as to the Corinthians. I realize the great importance of the avoidance of that which comes under the name of Science, and yet is not Science, and I also endorse the admonition to beware of the serpent which would beguile; but the question is, what is the serpent, and what constitutes the false Science? Our Master said, "Many good works have I shewed you from my Father; for which of those works do ye stone me?" Will our good brother name to me the evil works that have been accomplished through Christian Science? Is it possible that the healing of the sick, reforming of the sinner, the binding up of the broken-hearted, the destruction of appetites and passions, and the general reformation of mankind is the work of the serpent? That which points to God as the only power, and which advocates implicit faith in Good, which breaks up family feuds, establishes the true brotherhood of man, creates a love for the Bible in the hearts of men who have before been sceptics, and which brings God to the atheist, cannot be the serpent against which Paul warned the Corinthians.

Paul had said, "The wisdom of this world is foolishness with God;" "The natural man receiveth not the things of the Spirit of God." In the text to which reference is made Paul did not ask Timothy to beware of Science, but to beware of that which is opposed to Science. Paul was a Christian and advocated only that Science which was Christian; hence his admonition is, "Beware of the opposite of Christian Science;" and well might he give such admonition, since there is so much given out under the name of Science, even under the name of Christian Science, which is not in harmony with the true teachings of this Science.

Our good brother has doubtless unwittingly misstated the Science when he makes the statement, "All is God," and then includes in that All, the devil, evil, matter, and everything else. Such a statement would indeed be pantheistic, but such is not the true statement of this Science, but the exact opposite. Science does indeed teach that God is All-in-all, as the Bible teaches, but this statement must be properly understood. God is the only Life, Substance, and Intelligence, and while the universe, including man, does not constitute God, yet it is inseparable from God, even as the idea is inseparable from its mind. God is the Principle or Creator of the universe, the only first Cause. The creation is not a part of God, neither does it, taken together as a whole, constitute God, but is the manifestation or expression of God, as the Scriptures declare in the text, "God created man in his own image."

The assumption that Mrs. Eddy borrowed her ideas from writings of others is pointedly and emphatically refuted in the mere fact that no other teachings in existence, outside the Bible, contain any of the essence of Christian Science.

Will our friend kindly refer to the Scriptural passages which conflict with the teachings of Christian Science? I would ask him how long he has been a practitioner of Christian Science, and how many patients he has healed through the understanding of this Science, in order to prove, even to himself, that he understands its teachings? I would kindly urge him not to attempt to explain Christian Science until he is able to heal through its understanding, as a proof that he is sufficiently versed in it to teach intelligently on the subject. What would you think of a man who should undertake to expound mathematics, though he has never been able to work out a single problem to prove that he understands the rule?

We insist upon it that Christian Science must be regarded and treated as a Science before it can be understood. No one can possibly give an intelligent explanation of it who has not been a thorough practitioner of the same. While our brother may believe that he has given a true version of Christian Science, I desire to say, as one who has demonstrated this Science, at least in a small way, for many years, that he has given the exact opposite of Christian Science.

There is a strong proof that Christian Science does not destroy the individuality of man in the fact that all those who have taken up the study of the Science and have practised it faithfully, have increased and strengthened their individuality. Christian Science teaches that "In Him [God] we live, and move, and have our being." The Bible teaches that God is Spirit and God is Love; that Spirit is Truth. Who can shape or form or outline Love? Who would declare that Love or Spirit or Truth is a person in the human sense of that term? If by personality is meant infinite Spirit, we will allow that God is person. When we speak of man as the image and likeness of God, we do not mean the sinning, sick, and dying mortal. Who has ever seen a perfect or ideal man? We can conceive of the true sense of manhood only as we gain a true sense of the Godhood, and as we understand what God is, we know what we have to do to be like Him.

Our Master's statement "The flesh profiteth nothing" is no more strongly in opposition to the testimony of the senses than is the declaration of Christian Science "matter is nothing." Paul said, "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." Things which are contrary to God and war against God, cannot be the creation of God. Our Master never had any kind thing to say about the flesh, but he came to destroy all the works of the flesh. Christian Science teaches that the life and intelligence of man is God, of which man is the expression or manifestation, even as the idea is the manifestation of its mind; that sickness originates in mind before it is manifested in the body. However, we do not purpose to convince others of this by argument. The fact that hundreds of thousands of people are being healed through this work of correcting the mental condition, is the only proof which we offer that the theory is correct. When a Christian Scientist exercises his understanding mentally, and as a result witnesses the disappearing of disease, he has within himself a proof of the truth of his method, and his faith in the proposition grows stronger each day as he continues to prove it.

In your report occur statements enclosed in quotations, which would indicate that they have been taken from the teachings of Christian Science, and yet these statements are not in any sense akin to the teachings of Christian Science.

Christian Science proposes to convince the sinner of the unreality of sin, only by lifting him above the sin. Sin will never become unreal to the man who indulges it. It is fostered and perpetuated by indulgence. When the indulgence ceases, the sin ceases.

Christian Science does not teach that we "need no Saviour from sin." We do need the strong consciousness of the power of God to lift us above sin, and when we understand the powerfulness of God, we can also understand the powerlessness of sin, and this strengthens our ability to rise above it. ALFRED FARLOW.

Boston, Mass., May 11.

## Something About Christian Science.

ISAIAH says, "Come now, and let us reason together." Controversy to establish mere human opinions is inadmissible touching the doctrines and teaching of Jesus Christ. All things are proved by demonstration. In the science of the world, the true relation of the earth to the sun had to be demonstrated. Likewise in the mechanical world, the relation of one part of a machine to another must be demonstrated. When an opinion can be demonstrated, it ceases to be a mere opinion, and becomes an absolute fact. Here is where Christian Science stands, and I question if there be a Christian Scientist to-day, who is one simply because Mrs. Eddy has advanced certain theories of life and he has been pleased to believe them, but the Christian Scientist believes because she has demonstrated her ideas of life; and so has the Christian Scientist in part, so far as his understanding goes.

It is easy to say almost anything about a person, but mere opinion does not necessarily prove what they are. One may say unkind and untrue things about the purest man or woman that ever walked the earth, but this does not change the true condition. Jesus, the most perfect man, was called a blasphemer, but this allegation did not make him one. He demonstrated in his pure life that he was not a blasphemer.

However, we are not discussing personalities, but the most important question extant to-day, namely, the great Principle of life. Christian Science professes to be in harmony with all well wishers of humanity, in the endeavor and honest effort to save mankind from sin, sickness, sorrow, and death, although their way of doing it may not be in accord with the methods of Christian Science.

As to whether Christian Science is a mere fad or fancy in religion, philosophy, or medicine, is not to be determined by the expressed opinion of one unacquainted with it, but by its success or failure to demonstrate its theories.

As to the doctrines and teachings of Christian Science, I would refer you to the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and if after honest, prayerful investigation you will compare it with the Scriptures, you will agree with its author when she says she found Christian Science in the Bible, and that during her search for the great Principle of life, the Bible was her only text-book. We have the Bible, and if we will search, we may find Christian Science therein.

Touching on Christian Science prayer, allow me to refer you to the chapter on "Prayer," in Science and Health.

As to Christian Science and Pantheism, I would refer you to a pamphlet written by Mary Baker G. Eddy, entitled "Christian Science *vs.* Pantheism." Perhaps what some people understand Pantheism to be may lead them to think and say Christian Science is Pantheism, but that does not make it so. Christian Science is not Pantheism.

As to whether Christian Science believes in a personal God, depends altogether upon what is understood by personality. The published works of Mrs. Eddy will make this subject plain to an honest, unprejudiced mind seeking information.

If you wish to gain the Christian Science idea of God and Jesus Christ, I would refer you to Science and Health, especially the chapter entitled "Science of Being." You will find in it what is known as the platform of Christian Science. Many say they do not understand it: such are incompetent to judge as to its correctness.

As to the atonement, I would refer you to Science and Health. Read the chapter on "Atonement and Eucharist," and you will find the Christian Science idea of atonement, which, as Paul says, brings us into such relation with our Heavenly Father that nothing can separate us, and so places us in His hands that no man can pluck us out.

Christian Science does not make sin good, but destroys it, and good is revealed.

Touching the life and practice which the doctrines and theories of Christian Science bring out, I refer you to the church tenets recorded in the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p, 493, the last tenet reading as follows:—

"We solemnly promise to strive, watch, and pray for that mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*."

Now, any fair-minded person knows that no one trying to follow this teaching, on finding his fellow-being suffering, dying, and crying for help, would leave him in his sad condition without endeavoring to assist him.

Some may inquire why Christian Scientists refer to "Science and Health with Key to the Scriptures." I would say, for the same reason that a Methodist would refer you to the writings of John Wesley, and a Presbyterian to the writings of John Calvin,—instead of referring you to the Bible, they refer you to what these noble men gained from the Bible. So Christian Scientists are pleased to refer the people to Science and Health, for in it you will see what this noble-hearted, God-fearing, self-sacrificing woman found in the Bible.

In conclusion, I would say I have gone to a home where the mother was almost frantic because of the illness of her three children, one of whom was not expected to live, although the kind doctor had worked over him for nearly a day, but had given up hope of his recovery, and by preaching the Gospel as it is understood in Christian Science and praying as we are taught to pray, I have left them with the children convalescent and the mother happy.

I have known strong men, husbands and fathers, slaves to the appetite for strong drink and evil passions, who, having been brought under the influence of the gospel as it is presented in Christian Science, have been freed from the evil appetite for drink and tobacco, evil passions subdued, bad habits broken, and the wretched home, broken-hearted wife and mother, and half-starved children, turned into a happy home, presided over by a happy wife and mother, cheered by well-fed and well-dressed children.

I have known the young man broken down in health, discouraged by his failures, crushed to the earth, all hopes blighted, thinking strongly about seeking to deliver himself from the troubles in the fatal draught, after being brought under the influence of the Gospel as understood in Christian Science, to find deliverance and be brought into the bright sunshine of God's love, health restored, hopes revived, aspirations encouraged, and now is bringing out a happy, prosperous, God-fearing type of manhood.

Does not this show that Christian Science is carrying on that noble work for humanity which our blessed Master began, telling his disciples and all those who loved him in all ages to come, to continue?

Christian Science comes to us to-day clothed not in worldly wisdom or man's enticing words, but in the power of demonstration which is evidenced by its healing influence, its reformation of the sinner, and the deliverance of those who through fear of death were all their lifetime subject to bondage, while the natural and worldly-contented man receiveth not things of the Spirit of God. To those hopelessly enslaved to sin, disease, and the fear of death, this gospel extends a helping hand and promises deliverance.

W. W. MCARTHUR.

In the *Herald Democrat*, Leadville, Col.

### Reading Room.

The First Church of Christ, Scientist, in Boston, Mass., has established a Reading Room at 194 Boylston Street to which the public is cordially invited.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Unauthorized.

WE have just received a cut of a "bust of the Rev. Mary Baker G. Eddy," with the accompanying information that it is "manufactured and sold only by Frank C. Traverse of Kirkville, Missouri."

On the opposite side of the leaf it is said by Mr. Traverse that he takes "great satisfaction in presenting to the friends of Mrs. Eddy this descriptive booklet of her bust. No labor or expense has been spared in the production of this work, the original of which is the masterpiece of one of the most eminent sculptors of this country. Hence we are able to offer a bust of the highest excellence and superior finish not equalled by any other manufacturer in the United States."

In reference to this bust we have to say:—

1. It is wholly unauthorized by Mrs. Eddy, or by any one having authority to speak for her. We are informed that she had no knowledge that such a thing was contemplated.

2. On our own responsibility we pronounce the bust a caricature so far as it bears any resemblance to Mrs. Eddy.

We further express the earnest hope that these unauthorized attempts at foisting upon the public various exploits in Mrs. Eddy's name will cease. If they do not, it may be necessary at no distant day to make further exposures.

## The Christian.

THE Christian loves God and his fellow-man. He does everything he can to aid, comfort, and encourage his fellow-beings; nothing to injure, retard, or discourage them. He does by his fellows what he would have his fellows do by him. This he does in thought as well as in deed. The Christian's thought is right, therefore his acts are right. His thought toward every one of his fellow-beings is that of love.

This means that there is not in his mind—his consciousness—a single tinge of that which could possibly injure, impede, or even delay, his brother's progress toward the attainment of his true goal—the perfection of his selfhood.

This means that there is nowhere in his mind the slightest shade of envy, malice, hate, or any other thing that the Christian would not wish his brother to hold against him.

This means that the Christian is *absolutely honest;* honest with and toward himself; until he is this, he cannot be honest toward others. It is impossible for one who is honest with himself to be dishonest toward his neighbor. He could not be so. He would ignominiously fail if he made the attempt.

This means that the Christian is courageous under all circumstances. He will never cringe or cower before the aggressions of error. He will never permit himself to compromise his best conception of divine Principle. He will never hesitate to speak and act his best understanding of divine Truth. He will never shirk a duty that he knows Truth demands of him. He will *stand* for God—Good—everywhere and always.

This means that the Christian will always act the part of the Good Samaritan. If he finds a fellow-being sick and suffering, he will aid him in the spirit of love. If the sick person is not willing to accept the Christian Scientist's treatment—perhaps not knowing what it is—the Christian Scientist will not therefore turn a cold shoulder upon him or refuse to give him "a cup of cold water in Christ's name." He will help him in any way he consistently can. He will not make statements that, to the suffering one, are meaningless. In short, he will be *human* in his conduct, for love demands the exercise of the best there is in the human. This is a footstep toward the Divine.

This means that the Christian will be just toward the suffering one. If he has been robbed and stripped by that bold bandit, mortal mind, this helpless and naked condition will be taken due note of by the Christian, and the requisite charity extended.

This does *not* mean that charity will be indiscriminately and mistakenly given. This would be false charity, and false charity is the opposite of charity. Its effects are as hurtful as are the effects of charity helpful. The Christian cannot be honest with himself without being just to himself, and he can be just to himself only by requiring justice of others.

However naked or hungry or penniless may be the victim of the robber, when the Christian Good Samaritan has properly done his work, the recipient thereof, *if he is a Christian,* will manifest his gratitude for his benefactor by due recognition of what he has received. Love is not one-sided; it is all-sided. It demands of all its beneficiaries a due share, a full measure.

All that we have thus said is included in the teachings of that true Christian who taught and practised Christian Science nineteen hundred years ago. It is included in the great commandment to love God and man, which he pronounced to be one and the same thing. It is included in the parable of the Good Samaritan. It is included in Jesus' commands to his disciples when he sent them forth to heal the sick. It is included in the Christian Science text-book, "Science and Health with Key to the Scriptures"—the greatest reflex of the Gospel teachings the ages have brought forth, for its author, Mary Baker G. Eddy, not only caught the spirit thereof so as to be able to write of them, but so as to practise and prove, and teach others to practise and prove them, as well.

Only so far as we are making an honest, earnest, and unceasing effort to meet the conditions precedent of Christianity, as they are pointed out to us in our text-books and our preachers, the Bible and "Science and Health with Key to the Scriptures," are we worthy to be called Christian Scientists.

May we, more and more, labor to prove ourselves workmen "approved of God, . . . rightly dividing the word of truth"—Good Samaritans of the Christ-type—*Christians.*

## Notable Improvements.

SOME very notable improvements are being made in the vicinity of the Mother Church and Publishing House. The new Music Hall building occupies a large area of ground fronting Massachusetts Avenue and extending from Huntington Avenue northerly to St. Stephen Street. This elegant and massive structure is now well along toward completion, and, when completed, will add greatly to the beauty of the section it adorns.

It is now announced that plans and specifications have been prepared and placed on exhibition for the construction of a large and substantial building by the Massachusetts

Digitized by Google

Horticultural Society at the corner of Huntington and Massachusetts Avenues, extending from Huntington Avenue along Massachusetts Avenue to Falmouth Street, a distance of 210 feet, while it will have a frontage of 94 feet on Huntington Avenue and Falmouth Street respectively.

The most important feature of this building will be the main exhibition hall; it will be at the rear of the Massachusetts Avenue front, opening onto Falmouth Street. Its dimensions will be 122 by 50 feet on the ground, and 43 feet in height.

The Society's lecture hall will be in the Huntington Avenue end and will be 48 by 70 feet.

The library will be on the second floor, and will have a capacity for twenty thousand volumes.

It is said that this new Horticultural Hall will be all that a horticultural hall should be, and will be an important addition to Boston's semi-public buildings.

It is needless to say that Christian Scientists witness with much satisfaction these valuable improvements in such close proximity to their headquarters.

### "Among the Christian Science Churches."

THE May number of the *Granite Monthly*, published at Concord, N. H., contains a finely illustrated article entitled, "Among the Christian Science Churches" by Henrietta H. Williams. The article is well written and contains much of an historical nature that will be of interest to Christian Scientists as well as to the public in general.

The illustrations are twenty in number and are half-tone reproductions of exterior and interior views of the Mother Church, and various other churches in different parts of the United States, Ontario, and London, Eng.

The first number in the magazine is the poem "Easter Morn" by our Leader, Mary Baker G. Eddy.

It will be remembered that Mrs. Williams was the author of the delightful article entitled "The Founder of Christian Science" which appeared in the *New England Magazine* for November, 1899.

The *Granite Monthly* will be valuable for distribution, and the Publishing Society will receive orders and send postpaid any number of copies at twenty cents each.

### The Lesson Sermon.

A member of the Bible Lesson Committee, speaking for the committee as a whole, hands us the following explanation in answer to certain queries that have been made with reference to the Bible Lessons:—

In answer to inquiries from beginners in the study of the Lesson Sermon we repeat what has been heretofore stated.

While it is true that the Science and Health references, if carefully studied, are seen to elucidate the Bible references, it is not true that these references are chosen in every instance to parallel the Bible passages. The Bible does its part and the Science and Health quotations do their part in unfolding and enforcing the subject. Let it be remembered, then, that the Bible selections are not put down in one column and the Science and Health passages placed opposite them to explain their every detail. Taken together they form a complete discourse and fully expound the subject of the Sermon.

### To our Contributors.

Will our contributors, in sending in articles, be careful to send with their article, their full name and address. If they have a street number be sure to give it. Please do this regardless of the number of times you write. It saves much time here, and costs you no time.

Please remember we wish the name of each contributor even though only initials appear in connection with the article. It has always been the rule that articles are not published unless we know the name of the author.

### The June Class.

Those applicants for entrance to the June class of the Massachusetts Metaphysical College whose names were not placed on the list are not notified thereof. Only those who were selected for entrance are notified. This was clearly stated in the *Sentinel* for March 22, on the editorial page, and also in the April *Journal*.

### The Obstetric Class.

Those who have applied for entrance to the Obstetric Class will be admitted thereto, unless notified to the contrary on or before June 9. As nearly as can be now determined this class will begin about June 27.

## The Lectures.

### At Baltimore, Md.

Judge Ewing of Chicago, delivered a lecture on Christian Science at the Lyceum Theatre last night (Saturday, May 12) before an audience which filled the auditorium to the doors. Ex-Mayor Latrobe, ex-Police Commissioner W. W. Johnson, Mr. John B. Ramsay, and Mr. John Gill, Jr., were among those present.

The lecture was given under the auspices of First and Second Churches of Christ, Scientist, of Baltimore. Members of the two churches acted as ushers. The stage was beautifully decorated with tall palms and evergreens.

Judge Ewing was introduced by Judge Henry Stockbridge, of the Supreme Bench, who said:—

*Ladies and Gentlemen:*—Few developments in the religion, philosophy, or thought of the last quarter of a century have been more notable than the rapid growth of what is denominated Christian Science. The large accessions to its numbers have not been drawn from the ignorant or emotional, but include many among the well educated and thinking portion of our population. Such a movement, therefore, is not to be lightly regarded, or to be taken as merely a subject for cheap witticism. It may not be wholly true, but neither can any one say that it is wholly false when it gathers among its adherents so many of such earnest and thoughtful people, and that even in the very centres of philosophy and thought.

I am not myself as yet one of those who have acknowledged the claims of this denomination, but, fully imbued with the precept to "Prove all things; hold fast that which is good," I welcome with you who have gathered here this evening the opportunity to know more of Christian Science, and that from one of the most distinguished of those who are believers in it,—Judge Ewing of Chicago—who, deeply imbued with its truth, forsook alike the honors and emoluments of distinguished station in his chosen profession that he might carry its message to many peoples.

From its foundation it has been the pride and boast of Maryland that here, on the shores of the Chesapeake, religious liberty has an abiding home. The history of our Commonwealth has justified that boast. Let us, therefore, in that same broad spirit, listen to the words of Judge Ewing, in an earnest and sincere endeavor that, whether convinced or not, we may each of us carry away with us from this gathering some truth which shall make our own lives happier and brighter, and, perchance, enable

Digitized by Google

us to add a ray of sunshine to that of some other of our fellow beings.

I take great pleasure in presenting to a Baltimore gathering Judge Ewing, who will speak to you on the subject of "Christian Science, the Religion of Jesus Christ."

Judge Ewing, as he arose, was greeted with much applause, and throughout the lecture he was frequently interrupted by evidences of approval.—*Baltimore Herald.*

### At Brooklyn, N. Y.

Under the auspices of the seven Christian Science Churches in Greater New York, two of them being in Brooklyn Borough, a meeting was held yesterday afternoon (Sunday, May 13) in the Academy of Music, at which former Judge William G. Ewing of the Superior Court in Chicago, Ill., spoke on the subject, "Christian Science, the Religion of Jesus Christ." Admission was free. Every part of the lower floor and balcony was filled with an audience that listened with the strictest attention to the lecture throughout. It was an audience in which almost all ages were represented.

In looking about the audience it was noticed that the persons composing it were remarkably healthy in appearance. Very many of them were Brooklynites. It was also noticed that there was an absence of the usual signs of the prevalence of colds at this time of the year. It may be that the Christian Scientists have learned to avoid this distressing ailment. It is certain that throughout the proceedings there was scarcely a cough heard in the great auditorium. The proscenium boxes were well filled with members of the Science churches. In one of the boxes was former Judge George G. Reynolds, who listened with great attention to Judge Ewing.

The proceedings were begun by Carol Norton of the Christian Science Board of Lectureship, who introduced Postmaster Francis H. Wilson of Brooklyn as the presiding officer. Postmaster Wilson arose and said in part:

I have seen it stated somewhere, I think, that the religion you teach is no new religion; that it is an old religion, sacred to the civilized world; a divine legacy of that transcendent spirit which spake as never man spake, who lived as never man lived, whose boundless, shoreless charity and love of mankind have made him the beacon for humanity through all the ages that have passed, a beacon light leading humanity up to Light and Truth. "Grant me to see, and Ajax asks no more"—that was the prayer which the poet put into the mouth of the hero when the mists and darkness enshrouded the Grecian camp. This is the prayer to-day of every honest seeker after Truth and Light. I take great pleasure, ladies and gentlemen, in introducing to you the distinguished speaker of this meeting, Judge William G. Ewing, who will now address you upon the subject, "Christian Science, the Religion of Jesus Christ."

Judge Ewing was greeted with applause. A reference at the outset to his last appearance in Brooklyn, in the Cleveland campaign, in 1888, brought a smile to the faces of his hearers, especially when he added that he saw few of his old Democratic friends present.

*Brooklyn Daily Eagle.*

### At Cotuit, Mass.

Under the auspices of First Church of Christ, Scientist, Cotuit, Mass., a large audience had the pleasure of listening to Rev. Irving C. Tomlinson, C.S.B., at Freedom Hall, Tuesday evening, May 15. The speaker held the close attention of the people as he told "What Christian Science Is, and What It Is Not." The adjoining villages of Osterville, Centreville, Marston's Mills, Plains, Santuit, Sandwich, West Falmouth, etc., were well represented The lecturer was introduced by one of our most prominent and respected citizens, Mr. Benjamin F. Sears. The introductory address was as follows:—

*Ladies and Gentlemen:*—If I am fortunate enough to get into the kingdom of Heaven I do not expect to be the only occupant of that blissful realm on account of having lived a better life here than any one else, and because I was right and everybody else was wrong in his belief; neither do I expect to find the Baptists in one corner, the Congregationalists in a second, the Christian Scientists in a third, and the Methodists in a fourth, but all praising God together because we have learned to love and serve Him as Christian men and women together here. Most of you are aware that I am not a Christian Scientist, though I believe there are many good points in connection with it. You may ask, Why, then, am I here? I will tell you. In the first place I received a very cordial invitation from a committee from the Christian Science Society to present the speaker of the evening; I accepted for the following reasons: I have many friends among the Christian Scientists whom I know to be upright and honest, and whom I believe to be as sincere in their belief as I am in mine. As a Christian I am desirous of learning goodness from whatever source it may come, and I am willing to be convinced of the good in connection with Christian Science. As a Christian gentleman I desire to be tolerant of the opinions and beliefs of others, realizing that any who are seeking what is true and good in this world are my brothers and sisters. We have with us this evening one who will seek to point out to us the good things connected with Christian Science. Ladies and gentlemen it gives me great pleasure to introduce to you the Rev. Irving C. Tomlinson of Concord, N. H., who will now address you.

*Correspondence.*

### At Erie, Pa.

The *Times* made no mistake in urging the people of this city to go to hear Judge Ewing lecture upon Christian Science. There was a fine audience of Erie's best people at the Opera House last evening (Friday, May 18), and all who went were given a genuine treat, as Judge Ewing's flow of language was wonderful, his use of words elegant, and the presentation of his cause earnest and eloquent.

Shortly after eight o'clock Mr. W. S. Day, the First Reader of First Church of Christ, Scientist, in this city, introduced the speaker, saying:—

*Friends:*—The glory and stability of our great republic lies chiefly in the religious as well as the political liberty we enjoy. We are assembled together this evening to hear of still further freedom, viz.: freedom from false beliefs about God and man, and their inevitable consequences, sickness and discord, as elucidated in Christian Science, which is spurring the thinking portion of mankind, not only in our own land but in many others, to search the Scriptures more deeply, to be enabled intelligently to obey the command of Jesus to all his followers to preach the gospel and heal the sick.

I can testify to the value of Christian Science, having been healed physically, morally, and spiritually, after several physicians, and I may say theologians, had failed.

This is true of thousands, including the speaker who is to address you this evening, who left one of the highest as well as most responsible positions of human society to the better help humanity out of sin, sickness, and sorrow. Ladies and gentlemen, it affords me great pleasure to introduce to you on behalf of First Church of Christ, Scientist, in this city, the Hon. William G. Ewing.

*Erie Daily Times.*

### At Youngstown, O.

A large audience gathered to greet Judge Ewing and listen to his great lecture on Christian Science given in Excelsior Hall, under the auspices of First Church of Christ, Scientist, Thursday evening, May 10.

The lecturer was briefly introduced by Judge J. R. Johnston of this city, who said in part:—

It is gratifying to me to see so many present on this occasion, and I feel assured that when you have heard the speaker of the evening, you will say that your coming was equally gratifying to you. Christian Science, the subject that will be presented, is not new, in fact it is as old as the Christian era itself. There are but few intelligent, thinking men or women who now doubt the divinity of Christ. For many years after he had gone to the Father, his teaching and practice were observed and followed. But after a lapse of time Divine healing ceased to be practised. Some thirty odd years ago, however, it was, fortunately, brought forth from its obscurity, and put into practical form by Mary Baker G. Eddy, and by her promulgated to the world in that masterpiece, the work known and read almost wherever civilization exists, "Science and Health with Key to the Scriptures." The production of this work and the promulgation of this new theological idea, if such it may be called, attracted widespread attention and it has grown to such an extent, that to-day, many churches have been organized to aid in advocating this primitive Christianity, and more than a million living witnesses stand ready to testify to the efficacy of Divine healing. This is the subject to which your attention is invited, and I take pleasure in saying that we have with us a cultured, capable gentleman, one of the foremost exponents of this doctrine and idea, who will address you. I have the honor of presenting to you Judge Ewing of Chicago.—*Correspondence.*

### At Cleveland, O.

The Chamber of Commerce auditorium was filled last evening (Tuesday, May 8), when Judge Joseph R. Clarkson of Omaha delivered his address on Christian Science. Judge Clarkson is a member of the Board of Lectureship of the Christian Science Church. He was introduced by Judge Carlos M. Stone in a short address.

*Cleveland Plain Dealer.*

The introductory address by Judge Stone was as follows:

*Ladies and Gentlemen:*—I am afforded the very agreeable duty of introducing the speaker of the evening. This privilege may be due to the fact that we are both members of the legal profession and have both served in a judicial capacity in our respective states. I am not called upon to affirm what the distinguished advocate and jurist may say in the advocacy of his cause, neither need I render a dissenting opinion. The presence of this great and representative audience is abundant evidence to the Judge that he is very cordially welcomed to our city and will have a most considerate hearing.

In these days of broader culture, of liberal thought, and greater research, the people are ever ready to listen to one who comes to proclaim a doctrine and a cause which is calculated to make the world better and happier. The speaker has laid aside the duties of a jurist to advocate what he believes to be such a cause. It affords me very great pleasure to introduce to you Judge Joseph R. Clarkson of Omaha. *Correspondence.*

### Lectures at Other Places.

Scranton, Pa.—William G. Ewing, May 15.
Le Mars, Ia.—Edward A. Kimball, May 8.

## From Our Contributors.

### Blessings Christian Science has brought Us.

BY C. E. H.

UNTIL three years ago this spring and summer I cannot remember one day in my whole life that I did not suffer pain. I have heard my mother say that when I was only a babe they did not expect me to live, that I could not walk until I was two years old, and twice after that I was very ill. From that time until I was sixteen I was a constant care to my friends. Then I rallied and was able to go to school and teach until about nineteen years of age, when fourteen weeks of brain fever kept me in bed, or idle for six months.

March 7, twenty years ago, I was married in Groton, N. Y., and came West to live in the Red River Valley of North Dakota, to what was then known as the Soldier's Fort of Abercrombie. Only a house now and then dotted the prairies. For one year I enjoyed the best health I had ever known, then an accident kept me in bed nearly all summer. At last I got about, but the doctor gave me but little hope of getting well. Then a terrible blow came to us. My only brother, then eighteen years of age, who had never known a day's sickness before he came West, passed on the first of August, my father following him the next February.

After my brother's death they took me away about three hundred miles to Rochester, Minn., where I underwent a very trying treatment for about four months. Then by wearing a steel brace or belt I could walk a little at times. There would be days that I could not walk without putting one knee in a chair and holding on to the chair as a balancer; this enabled me to work some, and I taught four terms of school by being carried to and from the schoolhouse; but for between thirteen and fourteen years I felt I was a burden to my husband and mother. Everything was done that our means would permit and that love prompted. After undergoing an operation only to come out in much the same condition, I sent to my mother, then living in Chicago where she had been healed through Christian Science, asking her or my sister to come to St. Paul, Minn. She then wrote to me and wished me to try Science, adding that she could not come. I told her I had tried it, for I had had the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, for a year, and I believed I had studied it faithfully, as I was told the book would heal me; but I thought it contrary to my Bible, which was my constant companion. I told her if she would come and stay a while and tell me about it, I would try it, and the first train brought her. She came in the morning about nine o'clock, and in the afternoon I had my dress on for the first time for many a weary day, lying on lounge and bed at times. I was ready for my trip to Chicago in four or five days. I left home on the third of March, 1897, and was gone seven weeks.

My diseases were many: neuralgia of the heart, rheumatism, the old hurt, and poor eyes, ulcerated bowels, consequent bowel trouble, and last and most serious of all was a growth, said to be cancerous, and my healing was slow; but I had awakened a new spiritual being, and in four weeks more I was at home walking and working.

I was not free, but in six months I was in my normal shape once more, and can now wear anything in clothing other women wear and walk without a steel belt or any support but divine Love.

For three years we have had the lesson every Sunday in our home. We have had successful demonstrations over broken bones, fever, etc. Many temptations have met us, but we have used no remedy but Christian Science.

Tuesday, February 20, 1900, we had the most wonder-

Digitized by Google

ful proof that Christian Science is the Truth. My boy was the victim of a carbon explosion. His eyes, face, and forehead were full of sticks and burned straw, and blood was running from his forehead and one eye, which was cut badly in the ball, away from the sight. The skin on his face was burned black. The only thing he said was, "Mamma, will I be blind?" and I said, "No; God is light. *He* will not let you be blind." He could not see me, but was very patient while we picked and washed ashes, blood, sticks, and straws from his face and eyes. He asked for Miss Kinnear of Fargo. We sent for her, for I felt the need of help. It being after train time I could not get her that night, but telegraphed for her to come by next train. His throat and lungs having been burned he had constant smothering spells. Finally I said to him, "Is my boy afraid to trust God?" and he said, "No, mamma; I am not." And then he laid down and breathed naturally. His eyes swelled shut very quickly, but by morning (he was hurt about 6 P.M.) he could open one eye, and by 10 A.M. the other could peep a little. At night he could open them both, and kept saying all day, "Mamma, I can see," and when Miss Kinnear, the healer, came, he felt so much better that he turned towards the light to look at her.

She stayed all night and in the morning when she went away his eyes would open wide and he was rejoicing in the blessed thought that he could see. Thursday morning when I was going to wash his face the scabs fell off into my hand, leaving his face smooth and clean; not black, and not a scar. The next Tuesday would have been one week, but he went back to school on Monday, making in all only six days in the house, and his reports showed he was able to get his lessons, for his standing was marked one hundred. Only once after did he complain that he could not see, and that was when asked to play by lamp light he said, "Mamma, I can't see the notes," and I replied, "God is sight." Then he said, "Now I see," and he has never said anything about sight since. We cannot tell his eye that was cut from the other one now. He was twelve years old March 6. I am so thankful for Truth's deliverance and I can not and do not know how to thank our dear Mother, Mary Baker G. Eddy, for her wonderful Key to the Scriptures, which helps us to unlock the "Dungeons of Despair" which often try to frighten us. We have all of Mrs. Eddy's writings and take the *Journal* and *Sentinel*. The Lesson-Sermons are our daily food. May the time soon come when all shall know the truth that makes free.

## Faithful Study of Science and Health.

BY MRS. C. C. COCHRAN.

I SEND the following experience in gratitude for what the Mother, through "Science and Health with Key to the Scriptures," has done for me and mine, and with the hope that it may help others to see what the honest, patient reading of this wonderful book will do, when prejudice and dogmatism are laid aside.

My father passed away in the spring of 1886; a beloved uncle from our home in 1887; and in May of 1888 our mother was taken from us under the most distressing circumstances. As a sister expressed it, the very foundations of the earth seemed to be taken out from under us.

In the depression which followed these accumulated sorrows, grief was so all-absorbing, that even through its operation the lives of other dear ones were endangered. Other friends were taken away and there seemed to be no end to our sorrows—"no balm in Gilead"—though we were a Presbyterian family, from parents to the youngest child, and trying to be Christians.

At length a sister, who had heard something of "a better way," left home in the hope of finding that way. Going to Grand Rapids she began the study of mental science. This did not satisfy her, and hearing a reference to Christian Science one day, she approached the speaker, and asked what it was. The lady most kindly explained, telling what it had done for her, invited my sister to her home, and read with her in Science and Health.

It seemed as though the doors were opened and she had a glimpse of paradise. She saw at once that it was what she had been seeking. She bought Science and Health, and in a few days returned home.

When I was shown the book, and told that it contained the Science of healing, both of mind and body, my heart sank within me; I feared she had gone off to some unorthodox religion. I opposed the reading of the book upon every occasion. At length my sister said, "Why will you try to argue against something you know nothing about? If you wish to discuss the subject, please read the book first." This was reasonable, so I went to work, trying to read it. I succeeded in getting through, from beginning to end, but could see nothing in it. I felt as though I knew even less about it than before, so I began it again, and this time I seemed to get one idea, "Sin is thought before it is acted. You must control it in the first instance, or it will control you in the second" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 130). This set me to thinking. I read the chapter on Genesis again and again. "And God said, Let there be light, and there was Light." And I knew that I was coming towards it, for it was growing brighter all the time. The more I read, the less I felt like talking.

The *third* time I read the book, and began to understand that "The evening and the morning were the first day." When I had finished the *fourth* reading I felt the force of the words of Holy Writ, "The Lord is in his holy temple: let all the earth keep silence before him."

Since the year 1888 the Bible and Science and Health have been my daily food. Through their teachings I have been enabled to meet circumstances as their master, and to see the fallacy of the old saying, "It depends upon circumstances."

Were this not already too long, I would be happy to tell of the many demonstrations of divine Love and divine Power in my own home. What a glorious inheritance is given to us through the understanding of omnipresent Love.

## Christian Science and the Press.

BY B. A. MILLER.

THE press of to-day is universally conceded to be an educator and a moulder of public opinion. It reaches a class of people who cannot well be reached through any other medium. While some portions of that which goes into the columns of the average newspaper is more or less fictitious and heresay news, the average reader is very apt to give credence to newspaper articles, more especially so if the subject in point is discredited in the mind of the reader from the opposite point of observation. Herein is where articles purporting to criticise Christian Science do our people a gross injustice, and the press, we feel, should exercise a little more care in investigating what goes into their columns on this subject.

There can be found in nearly every town or city, Christian Scientists who would be only too glad to verify or deny any report that might seek publicity in the press of the city or community in which they live, and thus head off any erroneous impressions that might otherwise get into print and cause both the Scientists and editor unnecessary work in refuting the same. Many of these reports, no doubt, get into print through what is known as the Associated Press, and many times by parties known to this

Digitized by Google

Association as respectable, but the thought back of it is to maliciously injure the cause of Christian Science and its Discoverer and Founder, Rev. Mary Baker G. Eddy.

In our association with editors, reporters, and business managers of different newspapers, we have found these individuals, as a rule, a generous, public-spirited class of people, who are always willing and glad to give space to both sides of any question of general interest to the public. Here is where our Publishing Committees of the different states are finding a field for work that could not be reached in any other way. Erroneous reports sent out are at once met by the *Truth,* sent out on its mission of Love, reaching the same field and neutralizing the error.

As those in the newspaper business become more enlightened as to what Christian Science is and what it is doing for the world, the less liable are they to allow any false or unjust criticisms to have space in their columns. Articles furnished by our Publishing Committees are educating the press along this line, and can but result in good.

Our attitude toward the press should be that only of good-will and kindly feeling, and to encourage those engaged in this work to look into the subject of Christian Science for themselves, that they may be in a position to better judge the merits or demerits of our cause, when any adverse criticism comes to their notice. Christian Science is not afraid of criticisms based on *facts.*

The press is a power for good, and let us all do what we can to assist it, that this good may be seen and felt.

## More About Contributions.

BY T. P. L.

AN article in the *Sentinel* of May 17 entitled, "A Few Suggestions," recalls to my thought an experience of my own in writing for one of our publications. One day while feeling, as I thought, very much uplifted, out of the fulness of my heart I wrote an article for the *Journal* which, however, was not accepted. There was no explanation given of course, for we all know that our busy editors have no time to criticise the thousands of articles which are sent to them, but I realized there must be some cause why it did not appear, so I went to work in my own consciousness, and after a time found many good and sufficient reasons why it should not have been published. Then I said in my heart, God is good to me, and my gratitude went out also to the brave ones whose faithful performance of their duty saved me from having some things appear in print which in my more quiet moments I should not have written, and working from a higher standpoint I wrote an article which was accepted. This experience taught me many things. I learned a lesson in humility and gratitude which has been of great value to me ever since. It has been well said that our failures teach us more than our successes.

Do we not sometimes forget to be grateful to those who have enough love and courage to point out a danger or to put out a friendly hand in time to avert an unpleasant or painful experience? Does not wounded pride and self-love blind our eyes sometimes to the heroism of a friend who dares to speak the truth, and do we not often foolishly close our eyes to the light which has been lovingly thrown on our life-problem? Yet there are few things more helpful and valuable than such a friendship, born of a true understanding of Love.

God give us courage to speak the truth lovingly at all times, and what is even greater, give us humility to receive every experience in the spirit of Christ, and to be grateful for every blow which falls upon pride, self-will, and self-love! In this spirit we shall surely reap the reward of the faithful, for there is nothing which can possibly hinder our growth Christward.

## Testimonies.

### What Christian Science has done for Me.

I deem it a great pleasure to testify to the harmony Christian Science has brought into my life. About two years ago I was stricken with paralysis of the right side. I was well-nigh helpless and no words can express the gloom and darkness that settled on my mind. I longed to die, for that was the only way that I could see out of it all. My dear friends and kind physician did all in their power to help me, and as I looked in their kind faces and heard their loving words of sympathy, I knew they would quickly and gladly, restore me to health and happiness could they have done so, but the clouds would not lift; and then it was that one of my kind neighbors, with her heart full of love and sympathy for me, called one day and wished me to try Christian Science. I told her I had no faith in it, but would try anything.

I commenced reading "Science and Health with Key to the Scriptures." I did not understand it much at first, but by the first few treatments I was cured of dyspepsia, from which I had suffered all my life, and as I read on, the dark clouds began to lift. The Truth that makes free began to dawn, but I had many despondent hours and some days would resolve not to read the book any more; but I could not leave it, and as I read on the light would come.

The kind and loving words of my healer, the many promises she brought me from the Bible, and the light thrown upon it by Science and Health let me out of this wilderness of gloom and helplessness into green pastures where living waters are ever flowing out from the throne of God. Instead of death I have found Life eternal and always harmonious. Instead of gloom and darkness, I have found joy and light. "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid? When the wicked, even mine enemies and my foes, came upon me to eat up my flesh, they stumbled and fell," for God is All-in-all.

The Bible is a new book to me. I never could understand it very well and did not like to read it until I read Science and Health. Truly it is a key to the Scriptures, and it has unlocked for me many treasures. The world is fast finding out what a great blessing Mrs. Eddy has given to it in this book, Science and Health. How many weary, heavy laden, burdened, pain-racked, sin-sick, and tempest-tossed ones have and will find this Truth that opens their prison doors and sets them free. Jesus said, "I am the way, the truth, and the life." If we follow in this way we are taking steps heavenward and none of them will have to be taken over again. Each step will bring us nearer to eternal Life which is God; nearer to this mansion not made with hands, eternal in the heavens. Divine Love and Truth will lead us in this sure way if we not only keep our hearts *full* but let them *overflow,* and the overflow will bless some other life and so return to bless us again, for this is the law of divine Love, that in helping some one else we help and bless ourselves. I never weary searching for Truth in the Bible and Science and Health, and my one desire is that I may have a better understanding of what these books teach and so live that I may be able to help some one else out of this wilderness of gloom and suffering.—MRS. SETH T. MOULTON, Waterford, Vt.

### Christian Science an Effectual Remedy.

I first heard of Science in 1893. I had then been subject to sick headaches for years. I did not suffer from it all the time but I was in constant fear and would have an attack once a week and sometimes oftener. I also had rheumatism, heart failure, and constipation, often using a box of pills in a single week but without relief. I had

Digitized by Google

taken every known remedy, and received no permanent benefit. I never was without some material remedy until I received treatment from a Christian Science healer in Ulysses, Neb., where I was visiting in 1893. Since that time I have hardly known what it is to take anything. My eyes were also very bad. I could not see after night for weeks at a time, then they would seem to be better for a while. I tried everything I could hear of, as the fear was very great that I would lose my sight. My eyes were left in that condition by an attack of the grip in 1890. One treatment was sufficient to heal them entirely.

I did not accept the teachings of Christian Science until some two years later. I saw no one that believed it, had no Science literature, and had only heard the healer talk two evenings on the subject. In 1895 I had an attack of mountain typhoid fever in Colorado, where I was then living. I had no doctor, and no healer, and did not know how to treat myself, but I had heard he healer say, "God is All-in-all and does not want you to be sick and never intended you to be sick." So I would have no doctor, although my husband begged me to have one. I got over the fever all right, and was only in bed two days all day, when I seemed to be so weak I could not sit up. The rest of the time I ate anything I wanted and walked when I pleased, worked a little, and laid down a good share of the time. I was taken sick on the first day of September, and on the 27th day of the same month my husband had an attack of the same trouble.

Now notice the difference! He said, "Well, here we are both down and no one to take care of us." I said, "No; not both, for I shall get up and take care of you." The neighbors sent the best doctor in the West to see him. He pronounced the case mountain typhoid, said he must have the best of care, and would not let him eat anything but boiled milk and drink boiled water. My husband took medicine every half hour day and night. October 11 he passed away, saying, "If I had only had Science treatment I would have been all right." I came back to my home in Hamilton County, Neb., determined to investigate Christian Science. Thank God I have proved it a great many times. My only guide has been the Bible and "Science and Health with Key to the Scriptures."

Now I shall think of myself no longer as one who was healed and did not return thanks to God for it.

We have no meeting here as there are only three of us, but we expect to meet in the near future at our house and study the lessons. We have the *Sentinel* and *Journal* and they are a very great help to us. We pass them on to others when we have read them.

MRS. MABEL S. K. STULL, Ulysses, Neb.

### Many Bad Habits Overcome.

Some thirteen years ago I felt impelled to lead a better life. My occupation having been that of a cowboy, I was deprived of all moral society for the space of thirteen years or more. I contracted the habits of strong drink, gambling, the use of bad language, and every other error that goes along with these habits. Finally I tried to overcome these errors, but found to my disgust that with my understanding I was bound with a chain that seemed as if it could not be broken. I began to give way to despair, and many times wept because I indulged habits that I had resolved to stop. Finally my associates began to shun me, and this drove me to seek other fields. Afoot and alone I traveled through deserts amidst Indian troubles, under a scorching sun, on the borders of Arizona and Old Mexico. With my blankets and gun I walked for ten days, seeking employment. Every day I prayed to God, the best I knew how to pray, to show me a better way. I believed there was a God, but did not know of any but a personal God. Within one month from the time I had made a new start I had steady employment; at the same time there were many men and work was very scarce in that section.

While I was at this place in Chloride, New Mexico, my mother wrote me from Denver, Col., that there were people there who claimed to heal the sick and do the works that Jesus did. This impressed me very much, although I doubted it. About six months from the time I began to lead a new life, I went to Denver, Col., and on the second day after my arrival in that beautiful city I unexpectedly went to the house of a lady Scientist. Soon after I entered the house she began to tell me of Christian Science, and how she had been healed by three treatments after being a cripple for fifteen years.

I rather doubted, but began to investigate. It soon dawned upon me that all this time I was being led by Truth out of darkness into light; that my resolve to do better and my almost continuous prayer to lead a better life had brought me to a place where I could see light. Since then my bosom companion has been "Science and Health with Key to the Scriptures," a book I would not be without. Through this "little book" I was shown the way, and my sense of God has changed from the thought of a mysterious God to a God of Love, a God of Truth. I have found that many sacrifices must be made, but with the understanding which Christian Science gave me I was able in a short time to overcome the errors that had bound me.

All those habits have been destroyed by the gradual dawning of the light that comes to those who seek the Father in Truth. The Bible is full of meaning to me, while before it was as opaque as a stone. I have no desire to return into Egypt.—G. W. WATSON, Cripple Creek, Col.

### Grateful to the Pioneers.

It is with a deep sense of gratitude for Christian Science and all that pertains thereto, viz.: Science and Health and all other works of Mrs. Eddy, the *Journal, Sentinel,* Lectures, and Sunday morning and Wednesday evening services, that I am moved to write a short testimonial to the *Sentinel.*

In a recent number, March 29, mention was made of the *pioneer* Scientists and what a debt of gratitude we owe to them and to Mrs. Eddy, *the* pioneer. I should in all probability not have been writing this at this time but for the efforts in my behalf of two noble women, who began pioneering here some thirteen years ago. After years of study and searching after the Truth, they at last found in "Science and Health with Key to the Scriptures" that for which they had so long been searching. From that time on they have stood for the Truth in this community.

There are many in this city who are grateful to these two pioneers not only for the healing which they have received, but also for the knowledge of Mrs. Eddy and Science and Health, and the consequent spiritual uplifting which comes to those who strive to overcome error with Truth.

I realize the courage which *only* the power of divine Truth and Love *could* bestow on our dear Mother who stood alone before the whole world with her God-given doctrine, and also on those who began alone, years ago, to follow in her footsteps in their own communities. I am thankful that I can fall in line even now and help blaze the way for others.—LIZZIE S. HOLMES, Alpena, Mich.

---

The way to cure our prejudices is this: that every man should let alone those that he complains of in others and examine his own. LOCKE.

## Religious Items.

The need of a more universal adoption of the actual Christ-like living is being urged on all sides. On this subject the *Universalist Leader* says: "What if all Christians of every name were suddenly to begin to believe the Gospel, that the angels sung the truth in their Bethlehem-song, and should all go forth to re-echo that song in the ears of the world, instead of going forth to hunt for men and things to find fault with? What if all Christians should suddenly be possessed of the spirit of Christ, and start out to minister and not to be ministered unto, and should seek for opportunities to do good instead of seeking for a chance to get? What if all Christians were really to be the children of our Heavenly Father and partake of His nature and grow into His likeness and do unto others as they expect God to do unto them? Well, why not? It is a strange thing that men do not do that which will not only make others happy, but give to them the sweetest joy ever known. Why can we not *be* Christian as well as to think Christian and talk Christian? Some day we shall all come to ourselves and rise up and go unto Our Father."

The *New Church Life* published a sermon by Rev. J. E. Bowers recently from which we take the following: "It is quite evident that if those who have occupied the position of preachers of the gospel during several centuries past, had taught according to the gospel, as given in the New Testament; if they had taught the people the necessity and importance of keeping the commandments of God, as given in the Word, instead of the doctrine of salvation by faith alone, the doctrine of substitution and vicarious atonement, as based on the erroneous idea of the tripersonality of God; if they had been good shepherds, according to the admonition to *feed the lambs* and to *feed the sheep*,—the world of mankind would be in a vastly different state from that in which it is at the present time."

Dr. Newell Dwight Hillis, the Brooklyn preacher whose outspoken criticism of the Presbyterian creed recently started the movement for a restatement of faith for that denomination, said in a sermon published in the *Homiletic Review*: "God means man to be the sole proprietor of himself. It was never intended that he should not know what his occupations or plans should be until circumstances came together and made up their decisions. A thousand times better be a slave for the meanest man than become the slave for dead circumstances."

In an editorial headed "Christianity as Fact," the (Baptist) *Watchman* says: "The only infallible thing in this world is a fact. It has been finely said that you may meet an argument by a contrary argument, but you cannot meet a fact by an argument. A fact is ultimate, and it is the part of wisdom to adjust ourselves to it instead of fighting against it. In thought we must harmonize our theories with it, in action we must accommodate ourselves to it."

The (Baptist) *Examiner* says: "The soul that would preserve its peace must welcome duty, and do it with alacrity. If to any one the highest affections are transient visitors and the Spirit of grace has become a stranger, let him make inquiry of his own conscience. He will find that what he needs to do is to set his house in order—to do what has been neglected, to give up the cherished but prohibited sin. Then, of his own accord, the divine Guest will return."

Concerning man's dependence on God, a writer in the *Universalist Leader* says: "So whatever tends to increase our faith and trust in God not only increases our enjoyment, but prepares us for usefulness in the world. We must be true to our relations to our Heavenly Father. We are glad that in this age of indifference and distrust, something can be added to bring us into nearer communion with Him from whom come all our blessings."

Rev. Dr. Dunning begins an article in the *Congregationalist* on "Christ's Estimate of his Audiences" with the following words: "The sayings of Jesus are imperishable because they interpret human experience unerringly. His originality is one of the most impressive proofs that he is the son of God."

"Few have the opportunity to do great things," says the *Christian Register*, "but there is a little kingdom within where we can promulgate laws and effect reforms at will. We have no right to be bitter towards ourselves, to sit down and bemoan our powerlessness and belittle our small gifts."

Rev. Floyd W. Tomkins in an article in the *Congregationalist* says: "It is unconscious goodness that really does most to commend our faith to those about us. If we think too much about ourselves and watch ourselves too closely in detail, we become finicky, self-conscious, unnatural."

The (Unitarian) *Christian Register* says: "The policy of the next century is to be the policy of universal peace. As men have found out that every man must bear his brother's burdens, so every nation must learn that it lives for other nations."

Learn but in quietness and stillness to retire to the Lord and wait upon Him; in whom thou shalt feel peace and joy in the midst of thy trouble from the cruel and vexatious spirit of this world.

ISAAC PENINGTON.

The programme of the annual meeting of the Swedenborgian denomination, as published in the *New Church Messenger*, announces an evening for the discussion of "Mental and Spiritual Healing in the Light of the New Church."

The (Baptist) *Standard* says: "'Work while you have the light,' if you would really appreciate its blessings. It is the man who fills his life with unselfish toil who appreciates the privilege of living."

"If we could read the secret history of our enemies, we should find in each man's life sorrow and suffering enough to disarm all hostility," says the *New Church Independent*.

*Harper's Weekly* says that in a single year the Protestant churches of the world have expended about nineteen million dollars in foreign missionary effort.

There is no love of God without patience, and no patience without lowliness and sweetness of spirit.—JOHN WESLEY.

The *Congregationalist* says: "Beliefs grow in action, but doubts in idleness."

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The May *Journal* devotes two pages to a list of publications, all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice is also given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the First Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Digitized by Google

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles [illegible] by the author and published in the CHRISTIAN SCIENCE J[illegible] since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Scie[illegible] 35 pages. Leatherette covers, gilt top. Price by mail, cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political and Governmental Notes.

United States Judge Hook in a case tried before him at Wichita, recently declared the Kansas prohibition law unconstitutional, inasmuch as it involved interference with the freedom of interstate commerce. Following the decision saloons were immediately opened in many small towns of the state, where the law had been previously enforced. In the cities the law has long been openly violated. It is said that both the powerful political parties now favor the resubmission of the liquor question to the people.

Prominent members of the Grand Army of the Republic are planning, it is said, to secure the authorization of Congress for the return of the Confederate battle flags that are now in the War Department to the southern states. It is proposed to have President McKinley participate in the ceremony of presenting the emblems to the former Confederate States during the grand encampment of the G. A. R. in Chicago.

A bench warrant has been issued by Judge Cantrill of Frankfort, Ky., for the arrest of former Governor Taylor, who has taken refuge in Indiana since the United States Supreme Court decision deposing him from the office of governor of Kentucky. The warrant is based on an indictment secured several weeks ago, charging Taylor with being an accessory to the assassination of William Goebel.

James Fitzharris and Joseph Mullett, two surviving members of the Irish Invincibles, who were sentenced to prison for life for complicity in the Phœnix Park murders in 1882 and recently released on a pardon granted by the lord-lieutenant of Ireland, were refused admittance to this country by United States authorities at New York and deported last week.

Senator Lodge says that our trade with the Hawaiian Islands is over 150 per cent larger than our total trade with Austria-Hungary, 75 per cent larger than our trade with Denmark, 60 per cent as large as our total trade with Italy, nearly four times as large as our trade with Portugal, over 150 per cent greater than our total trade with Russia.

It has been decided by the War Department that the movement for the return of the thirty-four thousand volunteer troops now in the Philippines will begin in December. There are now in the Philippines, in addition to these thirty-four thousand men, about thirty-one thousand regulars.

The United States Supreme Court has decided Admiral Dewey's bounty claim against the admiral's contention. The effect is to deprive the admiral and the men engaged with him at Manila of half the amount claimed by them. Chief Justice Fuller delivered a dissenting opinion.

### Foreign News.

Reports from the seat of war in South Africa toward the close of last week seemed to agree that the power of the Boer republics is broken and the complete submission of the Dutch inhabitants of the country to British rule was generally anticipated by London papers. President Kruger left Pretoria May 30, and it was supposed that he had fled from the country. After he left the dispatches announced that the majority of the leaders in Pretoria favored surrendering on the approach of the British, but later reports indicated that there had be n a change of plans, and that the Boers would resist. Johannesburg was occupied by Lord Roberts May 31 without contest. According to the census of 1896 the population of Johannesburg was 102,076, of which about one-half, or 50,907, were whites. Of the whites all but 8,270 were British subjects; 3,335 were Russians, and 2,263 were Germans.

The Boxers, as the Chinese insurgents are called who have started an anti-foreign crusade, seem to have gathered a powerful body of armed malcontents, and not only threaten the missionaries and the diplomatic representatives of various foreign nations, but the Empire itself. It is thought that they have the countenance of the Empress Dowager and of Prince Ching. The rebels gathered in great numbers on the outskirts of Pekin, and the Imperial forces sent to disperse them were badly defeated, losing many men and a great deal of war equipment. The situation became so threatening last week that the great foreign powers, including the United States, landed strong bodies of marines to protect their legations.

A goose-market is held regularly in October at Warsaw, Poland, to which about three million geese are brought, most of them to be exported to Germany. Often coming from remote provinces, many of these geese have to travel over long distances, upon roads which would wear out their feet if they were not "shod." For this purpose they are driven first through tar poured upon the ground, and then through sand. After the operation has been repeated several times the feet of the geese become covered with a hard crust that effectually protects them.

When the Russian Government completes the Siberian railroad that route to China will be the cheapest and most rapid. A first-class passage from London or Paris to Chinese and Japanese ports by the oceanic route costs $360 to $368 including food, whereas the overland journey by the Siberian railway will only cost from $160 to $190. The journey from London to Yokohama, by the Siberian railway, will occupy but eighteen days, against twenty-five days by the North American route, and thirty-five days by the Suez Canal.

Count Isaac de Camondo of Paris has refused an offer of $250,000 for the marble clock made by Falconnet. It was bought by an expert in 1855 for $300 and sold for $1,400. The father of the present possessor of the clock paid $20,200 for it in 1881. The clock is composed of statuettes of the Three Graces, holding festoons of flowers, surrounding a broken fluted pillar which serves as a base for a two-handled vase, decorated with wreaths and oak leaves.

The intention of the British government utterly to wipe out the independence of the people of the Transvaal and of the Orange Free State, is no longer in doubt. At a dinner on May 29, Lord Salisbury, the British Prime Minister, said: "Our only certainty of preventing a recurrence of this fearful war is to insure that never again shall such vast accumulations of armaments occur, and that not a shred of the former independence of the republics shall remain."

Merely as a naval experiment the 4,870-ton turret ship Belle Isle, was fired upon by the battle ship Majestic at Portsmouth, England, last week and sunk. The experiment was conducted under the authority of the British Admiralty. The Belle Isle is reported to have cost $1,200,000.

James Francis Smith, the District Messenger boy, who was entrusted with a message of sympathy to President Kruger from the Philadelphia schoolboys, arrived in Pretoria May 29, and handed his message to President Kruger as the latter was preparing to leave.

Russia announces the payment of its debts incurred in the Crimean and Turkish wars, and that no more bank notes will be issued for the Imperial treasury. The debt was $496,460,000 in 1881, and $382,130,000 in 1892.

### Industry and Commerce.

At the reunion of the United Confederate Veterans in Louisville, Ky., June 1, a resolution was adopted to the effect that the convention of Confederate Veterans recognized with appreciation the friendly words of Gen. Daniel E. Sickles, the orator of the annual reunion of the Army of the Potomac at Fredericksburg, and that the Confederates reciprocated the feeling of good-will shown toward them by the men of the Army of the Potomac.

There was further rioting and bloodshed in St. Louis attendant upon the street car strike. The citizens have been called upon by the sheriff to assist him in supporting the police, and a posse comitatus of two thousand five hundred men is being organized, armed, and drilled. All classes of citizens have been summoned to arms, including professional and business men.

It is reported that the Western Union Telegraph Company has made arrangements to go into the telephone business on a large scale as a rival of the Bell Telephone Company. The Western Union Company has recently authorized an issue of bonds to the amount of $20,000,000.

Upwards of two hundred and fifty thousand volumes of Government publications, handsomely bound in calf, have accumulated in the Capitol. It is now proposed to make an inventory of these, and prepare some scheme of distribution.

A press dispatch from Topeka says: "Twenty thousand men can secure employment in assisting the Kansas farmers in harvesting their wheat. One county alone is calling for two thousand men."

### General News.

A Leipsic compositor named Krüger, who has just celebrated his fiftieth year of service, has been occupied with one book for nearly all that time. He has set with his own hand almost all of Grimm's great German dictionary that has appeared since Jacob Grimm turned in the first batch of manuscript in December, 1851. Though thirty-two thousand pages of the Wörterbuch have been printed, the work is not half done yet, and Herr Krüger will have to live to be one hundred years old to see it finished.

The eclipse of the sun, which occurred May 28, was total over a large area of the south and almost total throughout the northern states. Astronomers from all the great colleges and scientific institutions observed the phenomenon from stations in the South and much interesting data was obtained.

Twenty-one women now have the right to plead before the United States Supreme Court. The first woman to secure this privilege was Belva Lockwood, in 1879.

Of the 285,056 buildings in Philadelphia, according to the annual report of the assessors, 258,685 are dwellings.

## Annual Church Meeting.

### The Largest Attendance in the History of the Mother Church.

THE Annual Meeting of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., was held in Mechanics Hall on Huntington, Avenue, June 5, 1900, and was the largest in the history of the church, upwards of thirty-one hundred members being present. The meeting was most interesting and encouraging and will long be remembered by all present, especially by those who for the first time had the great pleasure of attending the annual Communion in the Mother Church and remained in Boston to attend this meeting.

The meeting was called to order by the president, William P. McKenzie. The hymn, "Shepherd, show me how to go" by Rev. Mary Baker G. Eddy, was sung. The sixty-fifth chapter of Isaiah was then read. This was followed by a selection from the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, pp. 564 and 565.

Then came the usual silent prayer followed by the Lord's Prayer.

The president then suggested that as the meeting was open for business it would seem appropriate that the first thing to be done would be the sending of a message of love to our beloved Teacher, Leader, and Mother in Israel, and asked the pleasure of the meeting.

It was moved that a "committee be appointed to prepare an appropriate response to our beloved Leader and Teacher and Mother for her God-inspired annual message to which we listened last Sunday."

The president then appointed the following committee: Captain Linscott of Washington, D. C.; Mrs. Mims of Atlanta, Ga.; Mr. Buswell of Beatrice, Neb.; Dr. Fluno of Oakland, Cal.; Judge Ewing of Chicago; Mrs. Stetson of New York City; Dr. Tomkins of Camden, N. J., and Mr. Bates of Boston.

The committee retired at once and soon returned and submitted the following message as their report, which was unanimously adopted and was transmitted at once to Mrs. Eddy at her home in Concord.

To Rev. Mary Baker Eddy, Pastor Emeritus of The First Church of Christ, Scientist, in Boston, Mass.

*Beloved Teacher, Leader, and Mother:*—Your annual message of love and guidance to your Church, and through your Church to the whole world, has inspired the gratitude of all your children; and this moves us to renewed efforts and holier consecration to the work you have given us to do for all mankind.

We recognize in your message a demand upon us to "press toward the mark for the prize of the high calling of God in Christ Jesus."

We are grateful that our spiritual senses discern more clearly the spiritual idea in its final manifestation, which fulfils the Scripture and the vision of true prophets and seers in all ages, and we rejoice that we understand how to yield intelligent obedience to the Way-shower and the law of Spirit revealed by her. The benefits that have come to us all, through your consecrated labors, include healing of disease, cure of sin, and the opening out to consciousness of spiritual joy and peace unspeakable.

Never before have the workers in Christian Science been so completely one in love, because their conflict with error during the past year has shown its vanity and powerlessness, and also because they are looking for and seeing the reflection of the Father-Mother God in the faces of their brethren.

Your loving children, the members of The First Church of Christ, Scientist, assembled at the Annual Meeting in Boston, June 5, 1900.

It was announced that the following persons had been elected to fill the offices of the Church for the ensuing year. Edward P. Bates, C.S.D., President; Stephen A. Chase, C.S.B., Treasurer; William B. Johnson, C.S.B., Clerk; S. J. Hanna, C.S.D., First Reader; Mrs. Eldora O. Gragg, C.S.D., Second Reader.

The retiring president, Rev. William P. McKenzie, then introduced Edward P. Bates, president-elect, as follows:—

The order which is next upon the programme is the introduction of your incoming president. The old rhetoricians decided that introductions were intended to conciliate audiences. I must say that this is the most conciliated audience I ever stood before, and therefore there is no necessity for my doing that. I think, however, that this condition of reconcilement and love is due to the fact that Christian Scientists are understanding that the true history of man is not local, not connected with the methods of church operations, but is in spiritual development; and difficulties which seemed irreconcilable are being harmoniously settled simply by growth in grace.

The gentleman whom I have to introduce to you does not need an introduction as if he were not known to you, for his good work has been celebrated by our Leader in that book which you all have studied, "Pulpit and Press," and further record of his endeavors to upbuild the cause and establish the Church which we all had the pleasure of dwelling in last Sunday, are also spoken about in that interesting and well-arranged story of the building of that Church, "The Mother Church," by Joseph Armstrong.

I will only say that it gives me gr at pleasure to introduce to you as your next president, my friend, Mr. Edward P. Bates of Boston.

Mr. Bates addressed the meeting as follows:—

*Mr. Chairman, Brothers, and Sisters:*—In accepting this position, I trust that the only motive which actuates me is the desire to serve you and our Cause. Jesus taught us that the greater honor was in serving the brethren.

I thank our Board of Directors for again electing me to this office, and I will try to be a faithful servant to our beloved Church.

I do not find in our order of exercises any place appointed

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

for the president to make an address, and as this order is complete it is not in my province to vary it. However, if you will allow me a moment or two, I will speak of what comes to me at this hour.

As my eye rests on this vast concourse, the thought presents itself to me with force: What is the motive or incentive for this great gathering at our Annual Meeting? What do we gain by this mutual assembling together? One member comes from Melbourne, Australia, another from Christiana, Norway, others from the British Isles and the continent of Europe. The Pacific coast sends a liberal delegation. I think every state and territory is freely represented. New York with its seven churches taxes the capacity of the railroads and steamboat lines, and finally makes a grand closure by chartering special trains. Chicago comes to us with a special train of eleven Pullman cars solidly filled with our members, and all the regular trains on the trunk lines are crowded with students hurrying to the Mother Church in Boston. What is the advantage to be gained? Much, in every way. Each for himself knows that the spiritual communion in the Mother Church is well worth taking a trip from any part of our globe were it necessary. Christian Science is developed in us by constant, gradual growth, and it is sufficient for the average student to know that our dear Mother instituted the communion season and the Annual Meeting for the benefit of her children, and we her children receive this benefit in proportion as we avail ourselves of it. As those present are of one body, the church, may I ask you what about the fruitage of this great vine to which we belong? Paul tells us that Jesus became "the first-fruits of them that slept." Also that there should be other fruit, in another age. It is unnecessary to call your attention to the wide difference in value of unripe and mature fruit, and yet can we say that we are mature in the true Scientific sense?

Our Mother has been laboring for thirty-four years to bring out this spiritual maturity in us; shall we not work with her, and thus honor her that we, the eighteen thousand members of her church, may rapidly develop into ripe fruit, and that we may become an offering pure, holy, and acceptable to the Father.

After the president's address, "Hear, O Israel" was sung by Miss S. Marcia Craft, the solo singer of the Mother Church.

The following report was read by the Clerk of the Church:—

Members of The First Church of Christ, Scientist,

*Dear Brothers and Sisters:*—The Love that God has given to us through our beloved Teacher, that has raised our bended hopes, opened our eyes to a spiritual light of unfailing promise, has brought us once more together from all parts of this broad country to bow with her before one Supreme, Infinite God. Although our Leader and Teacher notified us several weeks ago through the columns of our weekly paper that she would not be with us in person, yet this large number of Christian Scientists has come here in love and loyalty to her teachings and to our Cause.

To-day there are many who meet with us for the first time, and whose presence here as new members gladdens our hearts.

Since our meeting of a year ago nearly thirty-six hundred members have been admitted to the Mother Church, which make the total membership to-day 18,131. Of this number a large percentage were formerly communicants and faithful workers in Evangelical churches and also in other faiths.

The growth of Christian Science in this country, in Canada, and in Europe, Africa, and Australia has been steady; and the prospect for very rapid advancement is larger to-day than ever.

The Mother Church has now 416 branches. Of this number 38 have been established during the past year. Reports from 415 show that the membership at the time of their organization was 7,390 which at this time has increased to 21,040. Many of these churches have either erected or purchased costly and elegant church edifices. Toward some of these our beloved Teacher has liberally contributed. Many of those who have united with these churches as well as with the Mother Church have brought kind recommendations from pastors and from churches of other denominations to which they had formerly belonged.

Not only in these churches are services held every Sunday, but also 125 associations convene, and in hundreds of families on or about the same hour each Sabbath the same sermon from the *Christian Science Quarterly* is read.

Does not this meeting of many thousands at the same hour, having the same Mind, and listening to the same sermon from the Bible and our Christian Science textbook, "Science and Health with Key to the Scriptures," point to the beginning of the fulfilment of Jesus' prophecy, "There shall be one fold and one shepherd."

By request of our Leader, Rev. Mrs. Eddy, the Christian Science Churches have established Christian Science Reading Rooms. There are 212 of these where the Bible and all the works of our Teacher and all genuine Christian Science literature can be read. Besides these, others have been opened and supported by individual effort. The patronage and the appreciation that the public has shown toward these rooms prove her foresight and her wisdom in providing them. In these pleasant places,—these harbors of rest,—in the midst of the rush of the business districts,—the merchant and the shop-hand can escape from the whirl of daily life and find a resting-place where on a work-day they can think about God, and return to their tasks with sweeter thoughts, strengthened courage, and regenerated hopes.

An hour and a half was then spent in listening to the most encouraging and helpful reports of the progress of the work in different parts of the Field. A message of greeting was read from First Church of Christ, Scientist, Edinburgh, Scotland, and also from First Church of Christ, Scientist, St. Joseph, Mo.

The reports from the workers in the Field showed growth and progress in every department of the great work of Christian Science.

One of the significant signs of the times was the work that has been and is being accomplished to provide permanent church homes for the local organizations. Since the last Annual Meeting many handsome and costly church edifices have been erected and dedicated to the cause of Christian Science. Many others are in process of erection and will soon be dedicated free of debt.

In many places suitable buildings have been purchased and remodeled to suit the needs of the local church. Many others have secured desirable building sites upon which modern churches will be erected in the near future. Still others have taken the first steps toward providing a church home by establishing a building fund to which willing offerings are constantly made.

There was a general report of increase in membership and attendance upon all the church services, and, best of all, there is an encouraging growth in unity and brotherly love.

The work of the Sunday School is most satisfactory. The attendance is good and the interest manifest on the part of the children is very encouraging.

There has been a general compliance with the request of our Leader to establish reading rooms where the public

Digitized by Google

can have access to genuine Christian Science literature. One church organized in 1895 with twelve members, reported that the sale of literature during the past year amounted to over two thousand dollars, and the sale of Science and Health averaged one copy each day.

The good work that is being accomplished by the lectures in correcting false impressions and preparing the public for Christian Science, was generally recognized. The work of the Publication Committees is also doing much good in correcting the errors made ignorantly or intentionally, and there is generally noticed a satisfactory change in the attitude of the press.

The above are some of the more important facts brought out in the reports that were received from the following churches:—

Chicago, Ill., First Church; Minneapolis, Minn., First Church; Toronto, Can., First Church; Second Church of New York, N. Y.; Ottawa, Ont.; St. Louis, Mo.; Denver, Col.; San Diego, Cal.; Buffalo, N. Y., First Church; Kansas City, Mo., First Church; Toledo, O.; Brooklyn, N. Y., First Church; Baltimore, Md., First Church; St. John, N. B.; Second Church of Brooklyn, N. Y.; Des Moines, Ia.; Omaha, Neb.; Atlanta, Ga.; Washington, D. C., First Church; London, Ont.; Cedar Rapids, Ia.; Pittsburg, Penn.; Hartford, Conn.; Rock Island, Ill.; Salt Lake City, Utah, First Church; West Side Church, New York, N. Y.; Atchison, Kan.; Third Church, Philadelphia, Penn.; Memphis, Tenn., Second Church; Montreal, Can.; Concord, N. H.

Many others were anxious to make reports of the work in their church, but the time was insufficient to hear from all. The meeting lasted nearly three hours and closed by singing the doxology, "Praise God from whom all blessings flow."

The members of the Mother Church felt greatly strengthened and encouraged by the attendance at the Communion service and the Annual Meeting. They separated to go to their respective fields of labor there more faithfully to work for humanity in living, teaching, and demonstrating Christian Science.

## Wonderful Engineering Feat.

AMERICAN brains, American enterprise, and American mechanics are now engaged in erecting in India one of the highest bridges, if it is not the highest bridge, in use by any railroad in the world, says the Philadelphia *Telegraph*. To America and the country's great iron and steel industry, this contract is much more important than was the Atbara bridge in Egypt, of which one reads so much. The awarding of the contract for the building of the bridge to an American firm over English competitors is but another instance of the superiority and skill of the American workman over his European competitor. Innumerable difficulties had to be overcome by the American contractors for the work, but the firm which was awarded the contract was able to guarantee the work completed in less than half the time wanted by the English bridge builders.

Some time ago the British government invited proposals for the building of a viaduct across the Gokteik Gorge, in Burmah, India, located about eighty miles east of Mandalay, which latter place has been made famous by Rudyard Kipling in one of his poems. The bridge site is one hundred and fifty miles inland from the principal seaport of Burmah, known as Rangoon. Among the firms which submitted bids was the Pennsylvania Steel Company, whose works are located at Steelton, Pa. Chiefly for the reason that this company agreed to complete the work in such a brief space of time, was the contract given to the company, and work begun.

Immediately after the negotiations for the work were completed, thirty-five expert American mechanics were sent to India to look after the principal operations. They employed two hundred and fifty natives to assist in the work, nearly all of them having some knowledge of machinery, and capable of doing excellent work. In the mean time, the company had started the making of the structural iron work at Steelton. When completed, the shipment was made from Steelton to India, via New York and Liverpool. From Steelton, 320 cars, which coupled together would have made a train two miles in length, were required to transport the material. Three steamers were also required to ship the iron work between ports.

At the present time the work is well under way, and notwithstanding the many vexatious delays caused by floods, the work will be finished inside of the contract time. Until recently, the gorge over which the bridge crosses was a wilderness, which fact alone compelled the company to transport special clothing, portable houses, medical stores, and other necessary articles for the Americans. A special military guard had to be provided by the Burmah Railway Company for their protection, on account of the hilly regions being infested with savages.

As no wood could be obtained in that locality for the erection of scaffolding, and especially for the building of the crane to lift the heavy girders, a crane was built here of iron and steel and shipped abroad. It has an unprecedented overhang of 164 feet, and weighed complete more than two hundred thousand pounds. This was capable of picking up a girder weighing twenty-five tons. After one section of the bridge is completed, the giant crane is pushed forward 160 feet to continue the work. A complete pneumatic plant and five hoisting engines were also sent with the shipment, and also special machines for placing the rivets in position.

Just as the company was about to begin operations in Burmah, that country was visited with unprecedented rains, which washed away nearly four hundred and fifty miles of the railroad leading to the site of the bridge. Several months were then required to rebuild the railroad, which was accomplished only after the greatest difficulties were encountered.

The bridge itself when completed will be twenty-three hundred feet in length, close upon half a mile. All the supports are of structural iron, and vary in height from 20 feet to 320 feet, or twice as high as the Barnegat lighthouse. The base of the highest tower covers 135 feet on each side. The highest building in New York represents the height of the bridge over the deepest part of the gorge.

When the bridge is completed it will open a direct road from Rangoon, the seaport of Burmah, to China. The proposed railroad which passes through this section will open up the south-western districts of China, which abound in mineral wealth and which to-day are practically undeveloped. The border line between India and China is only one hundred miles east of the bridge. The northern part of Burmah, through which the road will pass, is known as the Shan States, and is inhabited entirely by savage tribes, which the railroad officials will have to drive north. The railroad which is building the bridge, known as the Burmah Railroad Company, is partly owned by the British government, which exercises a powerful control in its management.

Prominent engineers of this city, who know of the building of the Atbara Bridge, in the Soudan, say that the work now being carried on by Americans in India is of far greater importance to the engineering world, and is one of the most wonderful feats in engineering attempted in recent years.—*Boston Transcript.*

May the time be hastened when the lion of prejudice shall lie down with the lamb of tolerance, and child of love shall lead them. M. A. CORNELIUS.

### Regarding a Life Insurance Case.

Editor of *The Advertiser*:—

In your issue of May 17, you state: "We notice lately a very interesting question which is causing no little interest in Iowa, and which is connected with and grows out of the Christian Science theory. The case grows out of the death of a man who held a policy in an insurance company. While in his last sickness, he dismissed his physician and substituted Christian Science treatment, dying a few days afterward. One of the rules of the company which issued his policy is that a doctor's certificate must accompany the proof of death before the policy will be paid. The physician who attended him refuses to give a certificate, and no other one can do it, so the company refuses to pay the policy."

I have in my possession, a letter in the handwriting of the chief recorder of the above said insurance company, in which he states that the policy referred to was promptly paid. The statement which you have copied from the Iowa papers is without any foundation whatever. He writes me that the only requisites made by the company are to know that the man is actually dead, and that before his death his dues were all paid and his standing with the company good.

I should like to add here a few points of interest to your readers. I have talked this question with a number of insurance men who tell me that they consider their clients more safe under Christian Science than in the hands of physicians, and they prefer the clientage of Christian Scientists: first, because Christian Scientists are not so liable to sickness as people ordinarily are; secondly, because many of their clients have been saved through Christian Science after other remedies had failed.

Your statement that Christian Scientists claim that sickness and pain are imagination, does not give the true sense of Christian Science. These are real to human experience until they are overpowered and dissolved by the Truth, though the troubles which are mountains to us are nothing to God. Furthermore, Christian Scientists do not claim to have reached that period in the progress of this new method of overcoming discord, when they consider themselves absolutely impregnable to sickness; and while we believe in the Scriptural promise that the time will come when there will be no more death, yet we believe that possibly ages will pass before Truth is sufficiently established to bring about this result.

Your statement that Christian Science teaches the unreality of matter, abstractly put, and without the qualifications which a teacher of Christian Science would give, is misleading and seems to be a declaration that everything we see is unreal. Christian Science teaches that everything is real from the blade of grass up to the highest form of creation, but that none of these are what they seem to our finite, material sense; that the beauties of nature, the harmony and substantiality of all that we see, will appear even more beautiful and enduring when we have grown sufficiently, mentally and spiritually, to grasp the true sense of God and His creation and see them as they are.

ALFRED FARLOW.

In the *Montgomery (Ala.) Advertiser.*

### An Introductory Address.

IN his introduction of Judge Clarkson, who delivered a lecture at the Grand Opera House at Marion, O., Tuesday evening, May 15, Dr. Max Wertheimer said in part:—

I want to give appreciative expression of gratitude to the divine genius of the American government, which has bestowed upon down-trodden and persecuted mankind, among other priceless gifts, the inalienable right of religious liberty! Religious liberty is not a beseeching favor that is begged for and begrudgingly granted and tolerated. It is an absolute personal right of every citizen. We need not discuss or question that. It has been fought out and satisfactorily settled over a century ago. Like Daniel Webster, each one of us may exclaim every day and every hour: "Thank God, I, too, am an American." And as such I know you will give intellectual hospitality to every new benevolent thought, irrespective of creed or color, denomination or race, and let me tell you it is high time that the thinking world became cognizant of and alive to this. For not always did the world accept this as a truism. Century after century has social conventionality tried to dictate to the thinkers and teachers, and emphatically to impress upon them not to depart from the habitual ruts and accustomed grooves of orthodoxy.

Had the world always been governed by superstition there would have resulted little progress. If the oft-repeated and threadbare theory, what was good enough for our sires is good enough for us, be true, then you have no right to travel in modern steamboats, electric conveyances, Pullman sleepers, and horseless carriages. Then you have no right to adopt the perfect printing press nor the mechanical contrivances to facilitate toil and save human exertion. You have no right to make any different arrangement in your mentality, to think differently from what your fathers and grandfathers thought and imagined; then the pagan has no right to depart from his hobbies to adopt our civilized institutions.

If whatever is, is right, and always was right, then Lincoln had no right and authority to emancipate the colored slaves, but should have let things go their usual way. "Let well enough alone." Is that so? Then a soldier need not shoulder the musket and defend his home, his country. Then Edison has no right to solve new problems and bestow the harvest of his mental work, his inventive ingenuity, upon the over-burdened toiler. Then Shakespeare had no right to dramatize, and Beethoven had no right to shower melodious strains of sweetest music upon posterity; the modern physicians should never have left the old school of medicine, that is the system of leeching and cupping, of clipping and bleeding. Then modern preachers should never have forsaken the mediæval regime of gloomy and pitiless dogmatic theology; then manufacturers, inventors, and philanthropists had no right to deviate a particle from clumsy, imperfect parental patch and guess work.

"Let well enough alone." "Whatever is, is right, and always was right." Is that so? Then a Jewish Rabbi, ignoring all prejudice and sacrifice, had no right to accept Mrs. Eddy's teaching, follow in her wake, and live her mission, and then a lawyer and judge had no right to leave the bench and do likewise. If whatever is, is right, and always remains right, then why did Paul speak and Peter preach, and Luther protest, and Wesley thunder against the false systems of their times?

Why? Because majorities may decide in politics, but not in religion. The consecrated prophets, apostles, and sainted company of martyrs have spoken and still re-echo down through the galleries of the ages these facts: "One with God is always a majority." Not, might is right, but right is might. Infinite progression of Good is the law of God's providence.

We live in glorious times, the dream of the ages is about to be realized; we stand on the threshold of a gorgeous era of celestial promise. The world is to be regenerated and blessed. The question is, through what means? How shall the bastions of vice, disease, discord, and despotism be overthrown? By colossal death-dealing, infernal machines of war? No! By an army of human

Digitized by Google

giants, whose animality will by blood, torture, or starvation compel surrender? No! By the monopolizing, panoplied hercules of corporeal power? No! A million times, no! "Not by might, nor by power, but by my spirit, saith the Lord of hosts." This mighty Truth scientifically understood is to make captive sufferers free.

I am here not to preach, but to introduce to you an eminent official representative of Christian Science. Fortunately, his fame has preceded him. Yet there is a tie that binds me to the gentleman in question. Like myself, he did not swim with the current, and, like myself, he did not let well enough alone. He proceeded to the better, nay, the very best. He cut loose from material advantages. He flung aside the practice of secular law and has exchanged it for the divine law of Christian Science. He comes highly recommended; listen to him, for I can assure you, he will present to you facts, stern facts, scientific facts, undying facts of the world, stirring truths of genuine Christian Science, and as you listen to his argument, pray judge calmly and unbiased. I would have you be guided by the maxim, in essentials, unity; in non-essentials, liberty, and in "all things, charity." And now, as you are mentally prepared to receive and hear him, I have the delightful honor conferred upon me of introducing to you the lecturer of this evening, the Hon. Joseph R. Clarkson of Omaha.—*Marion Daily Mirror.*

## A Christian Scientist's View.

"CONSIDER the lilies of the field, how they grow; they toil not, neither do they spin: and yet I say unto you, That Solomon in all his glory was not arrayed like one of these. Wherefore, if God so clothe the grass of the field which to-day is, and to-morrow is cast into the oven, shall he not much more clothe you, O ye of little faith?"—Jesus.

"The Man with the Hoe" "will not down." He stands through the ages a sad, tragic, interrogation point, whence? where? whither? He is the epitome of the problem of human misery. What is the answer? Does socialism give it? Does the property qualification theory remedy the condition? No! Or taxation, or human government? No! On any human basis the equality of to-day is the inequality of to-morrow. Is there any remedy? Yes!

There is but one evil under the sun, of which the amplifications are sin, poverty, disease, death; this one evil is a false sense, or lie, about God, man, the universe, and their relations. This false material sense Jesus classified as a lie, liar, and the father of lies, and "a murderer from the beginning," a causeless illusion; for God, Truth, is Cause, Creator.

There is one remedy for this one evil. It is to know the truth about God, man, and the universe. Jesus proved that the understanding of this truth could destroy the works of the devil, or one evil. "The Man with the Hoe" was forever answered when Jesus fed the multitude, by the recognition of God's true relation to man, as the infinite ever-present Mind, the true Substance, the infinite never-failing Source, from whence are all things. He reversed the standpoint from which to view man. He said "Call no man your father upon the earth: one is your Father which is in heaven." John and Paul declare "we are now sons of God, and heirs [not of poverty or disease] but heirs with Christ," of power, glory, and dominion. Jesus said, "Look up," and "the harvest is already ripe," it is in Mind, not in the ground, nor from it.

Man as a spiritual being is the image of Spirit and has dominion over all material conditions. In the true spiritual account of creation God made "every plant of the field before it was in the earth, and every herb of the field before it grew, . . . and there was not a man to till the ground."

Isaiah said, "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?" and Paul said, "The children of the flesh, these are not the children of God," and "henceforth know we no man after the flesh," and Jesus said, "Ye shall know the Truth, and the Truth shall make you free." To awake out of the Adam dream, material existence, into the divine actualities of celestial scientific Being, and find man unfallen, pure, and free, exercising his rightful heirship, dominion, is to find the true solution of the problem of life.

Man's true environment is the infinite Good, but, like poor, blind children, mortals have been seeking for that which is already here.

Where is the sea, the fishes cried,
As they swam the crystal clearness through,
We have heard from old of the ocean's tide
And we long to look on the waters blue.
The wise ones tell of an infinite sea—
Oh! who can tell us if such there be?

The lark flew up in the morning bright
And sung, balanced on sunny wings;
And this was the song: I see the light,
I look on a world of beautiful things.
And flying and singing everywhere,
In vain I have sought to find the air.

So Christian Science is saying to every one: "Awake thou that sleepest," and Christ, the Truth of Be-ing shall shine on thee.

Behold, God is here. He is everywhere, and we live, and move, and have our Be-ing in Him; the ocean of infinite Love encompasses all things, the atmosphere of divine Intelligence reveals to us what "eye hath not seen nor ear heard, nor hath entered into the heart of man to conceive." Immortal Love changeth not, the music of the spheres still chants the eternal harmonies of Be-ing, as when "the morning stars sang together, and all the sons of God shouted for joy." We only need to know the actualities of Be-ing and to be satisfied only as we awake in the divine likeness.

SUE H. MIMS, C.S.B.

## Unavailing Prosecutions.

OPINIONS differ respecting the merits of Christian Science in the treatment of disease, but it is quite evident that prosecutions of Christian Science healers like that in progress at Topeka, Kan., must fail.

In all these prosecutions the charge is that the patient or patients died under the care of Christian Science practitioners, and that life would have been saved had regular physicians been summoned.

This proposition is manifestly incapable of proof. No judge or jury can say what would or would not have been the result of one treatment or another. It is pure guesswork, and law cannot be administered upon supposition. The courts of last resort would not sustain a judgment based upon such grounds. Therefore, the Christian Scientists are safe from successful prosecution.

The patient must exercise his own judgment in choosing a physician. The law cannot protect him against his own unwisdom, nor can it avenge him if he lose his life in consequence.—*Chicago Chronicle.*

A wonderful old Bible has just been discovered in Venice, the fortunate finder being Leo S. Olschki, a well-known antiquary of Florence. It is in five large volumes and was printed in Rome, in the printing house of Don Pietro Massimo, in 1471 and 1472. Soon after it came from the press it was purchased by a patrician family of Venice, and it was in the archives of this family that Olschki discovered it.—*New York Herald.*

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## Communion Service at the Mother Church.

THE annual Communion service of the Mother Church was observed on Sunday, June 3, 1900. With the exception of the Mother's visits, this service was the most important event since the dedication of the Mother Church, January 6, 1895, and was the occasion of the assembling of the largest number of Christian Scientists that ever visited Boston at one time. The day was one long to be remembered both by the visiting Scientists and those who reside in Boston and vicinity. The visiting Scientists were numbered by thousands. They came from all parts of the United States, Canada, and foreign lands. Hundreds of these visitors had for many years been looking forward to the time when they might enjoy the blessed privilege of worshiping in the Mother Church, and their cup of joy was full to overflowing. Many of them had been healed by Christian Science after all material means had failed, and no sacrifice of time or money was considered too great for them that they might know from experience what it means to attend the annual Communion service in the Mother Church.

It had been announced that services would be held at 9 and 11 A.M. and 2 and 4 P.M., but it was early seen that these would not be sufficient to accommodate all who desired to attend, so arrangements were made to have an additional service at 7.30 P.M. At this last service, as well as the four former services, the auditorium was completely filled, and many were content to find standing room.

The most important feature of the service was the message of the Rev. Mary Baker G. Eddy. The Scientists came expecting a message, as on former occasions, and they were not disappointed. They went away feeling that the Mother's letter to her children had so completely covered the ground and answered all their questions that nothing remained to be said.

At the four o'clock service it was suggested that some expression of gratitude should be extended to our Leader for the most helpful and inspiring message received on this occasion, and the congregation rose *en masse* in passing a vote of thanks. A message was then sent to Mrs. Eddy at her home in Concord, making mention of this pleasing event. With this exception the five services were identical.

The organ voluntary was followed by hymn 166 of the Hymnal, "Here, O my Lord, I'd see Thee face to face." A Scripture selection was then read, consisting of Psalm 91 : 1–7, and Revelation, 22 : 3–5, 16, 17, which read consecutively as follows:—

"He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty. I will say of the Lord, He is my refuge and my fortress: my God; in him will I trust. Surely he shall deliver thee from the snare of the fowler, and from the noisome pestilence. He shall cover thee with his feathers, and under his wings shalt thou trust: his truth shall be thy shield and buckler. Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day; nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday. A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee."

"And there shall be no more curse: but the throne of God and of the Lamb shall be in it; and his servants shall serve him: and they shall see his face; and his name shall be in their foreheads. And there shall be no night there; and they need no candle, neither light of the sun; for the Lord God giveth them light: and they shall reign forever and ever. . . . I Jesus have sent mine angel to testify unto you these things in the churches. I am the root and the offspring of David, and the bright and morning star. And the Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely."

After the Lord's Prayer, our Leader's hymn, 163, "O'er Waiting Harpstrings of the Mind," was sung by the congregation, and in its order the Message of our Leader was effectively read by John W. Reeder, C.S.B., First Reader of the Roxbury branch.

The musical programme is given in full in the article from the *Boston Herald* which we herewith republish.

The following Boston papers published good accounts of the meetings: the *Herald, Transcript, Globe, Post, Journal,* and *Advertiser*. The *Herald* published the message in full, and most of the other papers published extracts from it. Space will not permit us to republish the accounts given by all these papers. The following is from the account given in the *Boston Herald*:—

The annual Communion of The First Church of Christ, Scientist, the Mother Church of Christian Science, was celebrated yesterday in the edifice at the corner of Norway and Falmouth Streets.

Five times was the spacious auditorium occupied by an overflowing congregation, the service being repeated until all who wished had been afforded an opportunity to worship at this shrine of their faith, and enjoy religious fellowship with its widely scattered membership.

This Mother Church membership is unique in its character. The congregation was the first gathered in the name of Christian Science. Its Founder and first pastor was the Rev. Mary Baker G. Eddy. The ground upon which this edifice stands was her gift to the congregation, and the structure was erected as a loving testimonial to her from her followers.

Out from this first church went the influence of the Leader of the movement which now claims to have reached one million men and women in all parts of the world. All other churches of the denomination are its offspring. In order that the sacred relationship between this cradle of the faith and the distant dwelling followers of Christian Science may have the more significance, it has been ordained that any Christian Scientist, living no matter where, may hold membership in the Mother Church.

These members dwelling in far-off places worship ordinarily in the temples near their homes; but once a year as many of them as can, journey to Boston to commune in the Mother Church. The service is a simple one, with little ceremony and no ecclesiastical pomp whatever. The distinctive mission of Christian Science is to oppose materialism, and even in its communion service it emphasizes the spiritual by the absence of the bread and wine.

At these annual gatherings the service is almost the same as an ordinary Sunday service in one of the churches. The communion consists of a few moments of solemn silence, devoted to introspective thought and prayer to God, followed by the audible repetition of the Lord's Prayer. The only other deviation from the ordinary

Digitized by Google

routine is the substitution of the annual message of Mrs. Eddy for the usual lesson.

Despite the absence of spectacularism and stirring incident at these annual gatherings, the throng which comes from distant states and lands grows greater every year. Yesterday's communion drew the largest host of Christian Scientists that ever assembled in Boston. It was the first time that five services were needed to accommodate those who came to worship. It is estimated that at least six thousand persons were present at one or the other of the services. Many of them came from the Pacific coast, many more from the West and South, large numbers from the British provinces, and a few from more distant foreign lands.

The day was ushered in with the ringing of the church chimes. As early as 7 A.M. the streets in the vicinity of the church were thronged with would-be worshipers. The Christian Scientists residing in Boston had been requested to remain away from the earlier services, in order that those from a distance might be provided with places.

By 8.30 A.M. the large auditorium, seating eleven hundred persons, was completely occupied, and hundreds were glad to obtain standing room. The beautiful church presented an attractive appearance. The pulpit platform was nearly hidden beneath palms and ferns and hydrangeas and other bright-hued flowers, and in other portions of the edifice the floral display was profuse and tasteful.

At 9 A.M. the first service began. Other services were held at 11 A.M. and at 2, 4, and 7.30 P.M. At each of these services every pew in the church was filled. Judge Septimus J. Hanna, First Reader of the Mother Church, conducted the services, assisted by Mrs. Eldora O. Gragg, the Second Reader.

The music was simple. Congregational singing is a feature of the Christian Science service. The organ was presided over by Mr. Albert Conant, with Miss S. Marcia Craft as first soprano and Mr. J. Melville Horner tenor. After the offertory, Miss Craft sang with exquisite sweetness and expression the communion hymn, "Saw Ye My Saviour?" written by Mrs. Eddy. The music of this hymn was composed by Mr. William Lyman Johnson, a member of the church, and son of one of the Christian Science Board of Directors.

The order of exercises at each of the services was as follows:—

Organ voluntary, fantasie, op. 154, Rheinberger; hymn, No. 166, Christian Science Hymnal; Scripture reading from the ninety-first Psalm and the last chapter of Revelations; silent prayer followed by the audible repetition of the Lord's Prayer with spiritual interpretation; hymn, "O'er Waiting Harpstrings of the Mind," written by Mrs. Eddy; notices; reading Church Tenets; offertory, "Vox Angelica et Adoratio," Dubois; soprano solo, Miss Craft, communion hymn, written by Mrs. Eddy; reading of Mrs. Eddy's message; silent communion; singing Doxology; Scientific Statement of Being; benediction; organ postlude, "Hallelujah Chorus," Handel.

It was announced during the service that upwards of twenty-three hundred new members had been added to the congregation of the Mother Church at this annual communion, a number equal to more than twice the seating capacity of the church. The membership is now about 18,300.

We have the pleasure to announce that our Leader's message will soon be issued in pamphlet form.

### By-law Repealed.

The By-law which appeared in the 13th edition of the Church Manual as section 1 of Article XXXII., has been repealed; so that only the Church Tenets are now to be read at the Communion services.

## Among the Churches.

### New House of Worship.

The First Church of Christ, Scientist, occupied its new edifice, formerly the Chestnut Street schoolhouse, Sunday, May 20, when the service was held at half past ten o'clock, and Sunday School at twelve.

The building has been completely renovated and extensively repaired, and is now a very convenient and comfortable church edifice, though, of course, not of imposing exterior. The outside of the building has, however, been greatly improved by a coat of paint, and the brick work has been penciled in black, so the walls look as good as new. A tasty porch has been erected over the door, a gravel walk has been laid from the street to the door, and the lawn is to be beautified with shrubs and flowers and put in first class condition in every respect.

Great improvement has been made inside the building. The old plastering was upon the brick walls, and this was conducive neither to beauty nor comfort, as a building so constructed is sure to be damp at all times when not thoroughly heated. Studs were therefore set against the walls, and over these lath and plastering have been placed. The walls have in this way been made perfectly true. They are tinted a light cream color, and the ceiling is white. New Florentine windows have been placed in the building. The window casings are new, and the changes have been such that the interior of the building has the appearance of entire newness.

The platform is at the east end of the auditorium, which will seat three hundred people. The main portion of the floor is covered by a large and handsome rug, and the seats are cane-seated opera chairs. The society has a piano which will be used in connection with the musical part of the services. There are curtains at the windows, and a more inviting place for public worship could not be desired.

In addition to the auditorium there are two other rooms, one of which may be utilized as the reading room maintained by the church, and the other as an office for Mr. McDonald, the First Reader, although this has not yet been fully decided.

The Christian Science Church in this city is still young, but it is growing and flourishing in a way that must be very gratifying to its adherents. It is to be congratulated on its early acquirement of such a pleasant and comfortable church home as it has on Chestnut Street.

*Evening Transcript*, North Adams, Mass.

### From Albion, Mich.

First Church of Christ, Scientist, in Albion, Mich., has purchased a handsome residence in the central part of the city in which to hold their services. By the removal of a partition, three large rooms were thrown together, making a pleasant audience room. Another room has been fitted up for a reading room which is open daily.

Since our removal into our new home, there has been a very noticeable increase in attendance and interest, and we may soon find it necessary to remove another partition.

LENA M. HUNT, *Clerk*.

### Organization at Dawson City, Alaska.

After a winter of persistent work, with little gatherings of two or three in his name in our little cabin, we yesterday, a perfect Easter Day, established the First Church of Christ, Scientist, in Dawson, in McDonald Hall, the finest in the city, with a piano for our singing and a good number of people, several Scientists among them, at our services.

HELEN LEWIS.

## The Lectures.

### At Pittsburg, Pa.

William G. Ewing of Chicago, a former judge of the Superior Court of Illinois, delivered a lecture in Carnegie Music Hall last night (Friday, May 11) on Christian Science, before a large and representative audience. Judge Ewing is one of the most prominent of the converts to this religion, and he came to believe in it through being healed of a malady regarded as well-nigh incurable. He is a man of pleasing personality, and he spoke slowly and clearly. The lecture was given under the auspices of First Church of Christ, Scientist, of this city, and was free to all. Samuel Andrews, superintendent of the Pittsburg schools, introduced the speaker. Mr. Andrews said:—

We are here to have a subject discussed that should be near and dear to every individual. We all know how science has revolutionized the world. We are proud that we live in a great country and a great city, where many of the benefits and advantages we possess we owe to science. We are not slow to recognize science in our business pursuits, and we should not be slow to recognize it in that which pertains to human welfare. It is my opinion—and I know I am speaking to persons who probably are not Christian Scientists—that, in a sense, we should all be Christian Scientists, and should certainly give scientific consideration to any subject that pertains to our future welfare. That religion is to be pitied which will not stand investigation. Therefore we are here to-night to listen to a discourse by one who will speak on the subject of Christian Science from the heart; one who is, please understand, not only an advocate of it, but one who is a living example of that which he will talk on to-night.

The gentleman really needs no introduction to you, because his reputation as a jurist is known throughout the United States, and he is a man among a thousand who has not only considered legal matters deeply, but has given to this subject the most careful and thoughtful consideration. It is not for me to talk upon the subject in his presence, for he knows very much more about it than I do. I am here, as well as you, to listen to him to-night; and I ask for him that careful consideration and attentiveness on your part for which Pittsburg audiences are well noted.

Judge Ewing was accorded a flattering reception and when the applause had subsided and he had stated that his ancestors lived in Washington County and that he felt himself almost a Pennsylvanian and was much interested in the growth and development of Pittsburg, he started his lecture.—*Pittsburg Times.*

### At Waterloo, Ia.

At Brown's Opera House, Saturday night (May 5), an audience of five hundred people greeted Judge William G. Ewing of Chicago, who was announced to give a lecture on "Christian Science, the Religion of Jesus Christ."

The well-known jurist was introduced to the people by Judge F. C. Platt, who said:—

I feel highly honored in being called upon to introduce the distinguished gentleman who will address you this evening. I presume that one reason why I was asked to do so is that he was recently one of the judges of the Superior Court of Chicago, and that it was thought fitting that one of the judges of this district should perform this function; but one always feels honored and satisfied when one gets into good company, and so I feel honored and satisfied at this moment.

I do not pretend to know much about Christian Science, but if one may judge of a system of religious thought from the character, habits, and disposition of the people who believe in it, he is compelled, if he be an honest man, to entertain the most profound respect for Christian Science. I have noticed that men and women who were despondent, careless, blasphemous, or immoral have been transformed into happy, helpful people, anxious and willing to do the will of the Master and to labor for the welfare of all mankind, and that such transformation was brought about by a belief in the teachings of Christian Science. So, in my opinion, any system of religious thought that will produce these results is entitled to the recognition and moral support of all good people.

We have with us to-night one of the most distinguished and honored citizens of the great city of Chicago; a gentleman who has held many positions of honor and trust, and who now, as always, holds the respect and confidence of all who know him. His brilliant attainments in the law, in science, art, history, and general literature, have eminently fitted him as a leader in advanced thought, and knowing that you are impatient to become acquainted with him, I will dispense with further preliminary remarks and with great pleasure now introduce the Hon. W. G. Ewing, who will address you.

As Judge Ewing stepped on the platform he was greeted with a round of applause.

He spoke without notes, and launched at once into the heart of his subject. He is a pleasant talker, earnest and impressive, and commanded the closest attention of the audience.—*Waterloo Daily Courier.*

### At Centreville, S. D.

An audience that was a compliment to any man greeted Mr. Edward A. Kimball last Friday night (May 11). The gentleman was most pleasantly introduced to his hearers by Attorney Alan Bogue, Jr., in substance as follows:—

*Ladies and Gentlemen:*—I feel that it is an honor to have the privilege of introducing to this audience the distinguished lecturer of the evening. I am not a professed Christian Scientist, hence I have no special fitness for the pleasant duty that lies before me. However, I am of the number of those who believe that freedom of speech is the privilege of every man, and that there should be no restriction upon every honest movement of man, and we note with pleasure that people are beginning to recognize that fact. We are living in an age of investigation and wide tolerance, an age in which men think for themselves and are liberal enough to concede the same right to every other man. We believe that every church which has been organized, has been organized because of a seeming need, and that need was a desire to make men better. The idea existed in the mind of man long before it worked itself out in the form of an institution, hence we believe that every church institution on the earth has a mission to perform, and that mission should be the true development of all the faculties with which God has endowed him, fitting him for both time and eternity. We all have the right to make a choice of the institution of our preference, but why we have chosen a particular church remains for each individual to explain. Each institution holds out what it has to offer freely and without reserve, and asks men to consider it—it does not force its offer upon any man, and we are the judges of what it has to offer. If I understand Christian Science aright, its adherents are asking us to consider, in the light of reason, whether or not they are right in the position that they take in reference to the revelation of God. As an interpreter and expounder of their doctrines and promises, I now have the pleasure of introducing to you Edward A. Kimball of Chicago, whose masterly logic and scholarly attainments alone are well worth our careful attention and consideration.

### At Sheboygan, Wis.

Judge Joseph R. Clarkson of Omaha talked to an audience at the First Church of Christ, Scientist, last night (Tuesday, May 22) that comfortably filled that spacious building above and below, his theme being Christian Science. He proved to be a clear, forcible speaker and logical reasoner, and doubtless gave those who heard him a better understanding of the tenets of that doctrine.

The distinguished speaker was introduced by Judge Andrew Gilbertson in a few excellently chosen words.

*Sheboygan Telegram.*

Judge Gilbertson's introductory remarks were in part as follows:—

*Ladies and Gentlemen:*—On a similar occasion about a year ago, Mrs. Bangs did me the honor of asking me to perform a similar duty, and I well remember what a pleasure it was to us all then to listen to that scholarly address by Judge Ewing. It may seem a little strange to some of you acquainted with the fact that I belong to no denomination, to see me here, and I will be free to admit my attendance at church services has not been so regular as it might have been; but be that as it may, I think the presence of so large an audience as this on an occasion of this kind is a tribute to the spirit of liberality and tolerance of the people of this city. We all feel that our minds and hearts should be open to the truth, no matter by whom proclaimed. The day has gone by when ignorance, bigotry, and superstition can close the avenues to knowledge.

Perhaps as member of the bar of this city it is fitting and proper that I should perform this duty of welcoming a brother of the same profession who comes to us from a distant state, and I assure him that it is with fraternal regard we welcome him to our city. It is now my very great pleasure and honor to introduce Judge Clarkson of Omaha.—*Correspondence.*

### At Lowell, Mass.

"The Truth about Christian Science" was the topic of a very able and interesting lecture given by Rev. William P. McKenzie, Tuesday evening, May 8, at Odd Fellows Hall. There was a large number present and the lecture proved both instructive and entertaining.

Rev. George Kenngott of the First Trinitarian Church introduced the speaker in the following words:—

I felt honored when I was asked to come here and introduce a man whom I have seen for the first time this evening. It is a great thing to believe in Christ and to have an unshaken faith in him. It is indeed a wonderful thing to have faith, and we ought to make the most of it. Because I am here to-night it does not follow that I am a Christian Scientist any more than that I should be a Methodist if I went and spoke at a Methodist meeting to-morrow night. I am a Christian and a firm believer in the power of the Almighty, and I am glad to meet a brother in Christianity. It is Christian courtesy not to disagree openly and to speak kindly of these things wherein we do agree. Religion is not a science, but an art, and an art is a science applied. Faith is the substance of things hoped for. Christian Science has rendered a great service to the world in that it has impressed the laws of God and the results of their violation more thoroughly upon the mind.

We are to hear the truth about Christian Science, and it gives me pleasure to introduce to you one who will tell us the truth, Rev. William P. McKenzie of the Christian Science Board of Lectureship of the Mother Church in Boston.

*Exchange.*

### At New Bern, N. C.

An audience which filled every seat in the Court House greeted Mrs. Sue Harper Mims, C.S.B., last night (Friday, May 25).

It was not only a large audience, but it was an attentive one, and even when, after an hour's speaking the lecturer descended from the platform, the audience sat for several minutes, as if not satisfied, expecting some more.

The audience which, as before stated, was a large one, was largely composed of ladies, but there was a sprinkling of men through the room.

William H. Oliver, Esq., in a few words, gave a pleasing introduction of the lecturer, Mrs. Mims.

Mrs. Mims is a lady of most pleasing address. Her remarks on the work and devotion of the Scientists in this city, were most complimentary and encouraging to the little band who are organized here.

There were many prominent visiting Scientists from Wilmington, Kinston, Goldsboro, and many of the adjoining counties.—*New Bern Daily Journal.*

### At Buffalo, N. Y.

The Star Theatre, pit, balconies, aisles, boxes and all, was filled with the audience that responded to invitations to a free lecture given yesterday afternoon (Sunday, May 20) under the auspices of First Church of Christ, Scientist, by the Hon. William G. Ewing, one of the leading exponents of the Christian Science belief in this country. The speaker formerly was a judge of the Superior Court of Chicago, and is now a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston. He was introduced by County-Judge Norton of Allegany County, another well-known Scientist. Mr. Ewing took as his subject: "Christian Science, the Religion of Jesus Christ."

Mr. Ewing has an earnest manner and a splendid flow of language. His discourse was able and eloquent. His claims for Christian Science were temperate and mostly general, and most of the lecture was an argument for thought rather than for conversion.—*Buffalo Express.*

### At Ludington, Mich.

A large audience assembled at the Opera House Tuesday evening (April 3) to listen to the Christian Science lecture by Edward A. Kimball of Chicago. Mr. Davis Olney introduced the speaker with a few remarks upon the object of the lecture.

Mr. Kimball said he did not expect to convert those of the audience to his faith who were not already Scientists. Rather he proposed to give an expository address upon the subject of Christian Science and interest his hearers to a further study for themselves.

Mr. Kimball spoke in no way disparagingly of other faiths or of the medical profession. But he urged a further study of the subject of which he naturally could not give a complete presentation in one lecture. He was listened to attentively throughout and his remarks undoubtedly furnished food for further thought.

*Ludington Appeal.*

### Lectures at Other Places.

Yankton, S. D.—Edward A. Kimball, May 12.
Sharon, Pa.—William G. Ewing, May 17.
Mason City, Ia.—William G. Ewing, May 4.
Rochester, N. Y.—William G. Ewing, May 20.

Let us only be patient, patient, and let God our Father teach His own lesson His own way. Let us try to learn it well and learn it quickly; but do not let us fancy that He will ring the school-bell and send us to play before our lesson is learned. CHARLES KINGSLEY.

It is impossible to enslave, mentally or socially, a Bible-reading people. The principles of the Bible are the groundwork of human freedom. HORACE GREELEY.

## Testimonials of Healing.

BY F. J. R.

NEARLY every Christian Scientist has been confronted with retorts of sceptics, when cases of healings, as related in the Field, have been repeated to them. The retort is substantially the same in every case, and is in effect that patent medicine dealers present similar testimonials of the efficacy of their nostrums.

There is this very important difference: One may take up any of these Field testimonials, and in almost any American city of ten thousand population, find a parallel case among the inhabitants. In nearly all cities of the size indicated are men and women who have been healed through the agency of Christian Science of ailments, ranging from cancer to consumption, indigestion to insanity, and including drunkenness, ill-temper, tobacco appetite, rheumatism, and paralysis.

The real seeker for the truth concerning the efficacy of Christian Science as a means of saving suffering humanity from sickness and sin and their consequences, will investigate so far at least as palpable evidences are afforded by his neighbors or those who live in the same town. Permit me to use my home as an illustration.

I was for many years a sceptic, not only concerning Christian Science but all Christianity. Several of those whom I held dear had embraced the faith but I refused even to consider it. A much-respected friend who had long been an invalid, a man who occupies a high position here, startled me by appearing, suddenly it seemed, the picture of health. I asked in astonishment what had accomplished the metamorphosis.

He prefaced his answer by saying: "I suppose you'll laugh at me," and then, lowering his voice that no one else might hear, he added, "Christian Science did it."

I did not laugh; I congratulated him, and said I did not care what the agency was called so long as it restored health. Then I began to think and to ask about Christian Science, but none here whom I knew understood it. Within a short time I became ill. I was threatened with nervous prostration. My physician was candid. She said I didn't want medicine: what I needed was rest and Christian Science. For a moment I feared that my friend and physician needed a straight jacket, but as she had once, as she termed it, guided me to cure myself, I said, "I will try it." She did not know anything about it except that it had cured some of her patients whose cases had defied her skill and that of other doctors.

One of these cases I cannot omit to mention. It is that of a postman who had been so ill for years that it was with difficulty he could hold his employment. He weighed only about one hundred and thirty-five pounds, though he is six feet tall. Being a Union veteran, he applied for a pension and was told by the examining surgeon that he might live to draw one quarter's check. He is now one of the healthiest men in the city, and when he was measured for a new uniform, a year or thereabouts after being healed, his tailor thought he had made a mistake and sent to verify the record. It was all right. The man who had weighed only one hundred and thirty-five when first measured, then weighed two hundred and twenty-five.

Though I cite only these two incidents I might give almost a score.

As soon as practicable I sought out Christian Scientists, got books, attended services, and, instead of an aggregation of cranks, as I imagined I might meet, I found a score of intelligent, genial, healthy people, and am happy to be recognized as one of them.

I recovered my health slowly. My former physician soon refused to prescribe, studied Christian Science, and is now a well-known practitioner in a large city. I am now in excellent general health.

If any doubter will seek the Truth he can find the living evidences of the healing power of God manifested through Christian Science and, in most cases, without traveling beyond his home city or county.

## Overcoming Temptation.

BY MRS. BELLE THOLEN.

THESE words of Jesus, "Get thee behind me, Satan," mean a great deal more to us as Christian Scientists than they ever did before. We often think it is hard when we are tempted, but that is not where our trouble lies; it is yielding to the temptation, however small it may be, that makes our burden heavy. Jesus was tempted of the devil forty days in the wilderness. Did he hesitate or stop to think what a hard time he was having? No! He knew at once, that it was error trying to dethrone his perfect understanding of God, he also had implicit faith that God—his Father—was able to protect him from all forms of evil.

Is not every temptation the effort to convince us that there is another power besides God, that God is not an ever-present help in all kinds of trouble? When these whisperings come to us do we not sometimes listen just for a moment, but long enough for error to gain ground, be it ever so little, in our consciousness? After the door has been left open even a little, we then commence to try to get rid of our unwelcome visitor. We all know how much harder it is to rid ourselves of this guest, than it would have been had we not admitted him in the first place; this to my sense is where the hard part comes in. It all lies with us whether we make our pathway up the Hill of Truth of easy ascent, by overcoming each and every temptation as it comes to us to-day, or whether we make the way burdensome by stumbling and falling over the seeming rocks (discords of every sort) that error has placed in our way. If we were never tempted, we should never have an opportunity to know how firm we stood for Truth, or whether we would stand at all. It is putting on the whole armor of God that makes us strong and ready to withstand every dart from the wicked one. Jesus was clad with the full armor of Truth and Love, and it was his perfect understanding of God's protecting power that enabled him to overcome all temptation. If Jesus had been overcome of evil, when tempted in the wilderness, do you think he would have overcome evil in the form of sickness as he did, later on in his career? No. The fact that he did overcome instead of yielding, proved the powerlessness of error to touch him. And we can do the same, when, like Jesus, we are ever ready to speak with authority to every form of error as he did. We read in Matthew, 4 : 10, "Then saith Jesus unto him, Get thee hence, Satan: for it is written, Thou shalt worship the Lord thy God, and him only shalt thou serve," and we are told that the devil left him and angels came and ministered unto him. Have we not had the same angels minister unto us when we have battled with and overcome a claim of discord, no matter what phase it may have assumed?

Dear brother or sister, we need not worry over the number of trials that present themselves to us; but our part is to watch carefully the number that overcome us, and see that we have very few to our credit. We are told in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 276, "Through great tribulation we enter into the kingdom. Trials are proofs of God's care." Also on page 408, "Every trial of our faith in God makes us stronger." In James, 1 : 12, we read, "Blessed is the man that endureth temptation: for

Digitized by Google

when he is tried, he shall receive the crown of life, which the Lord hath promised to them that love him;" also the second and third verses of the same chapter are helpful to us.

## Christian Science in Paris.

*Extract from a Letter.*

WE have been in Paris nearly a month, and have grown to love the little Science meetings very much The two Scientists at the head of the work here seem very earnest, loving, and loyal. Of course we called on them the day after we arrived, and they gave us a cordial welcome. The services are held in a private hall in the Hotel Continental, a beautiful, commodious room, which seems in itself a distinct demonstration, as also the apartment in which these Scientists live. It seems they were asked to leave their former quarters on account of their faith, and Love has given them one of its "many mansions" which is all they could have wished, and far better than the former one.

Sunday mornings the service is in English and the audience mostly American. Each Sunday now there are more, as visitors are arriving for the Exposition. Last Sunday the room was fairly full, perhaps sixty were there. In the afternoon the service is in French. The only reading in English at this service is from Science and Health. Mrs. B. reads each paragraph from Science and Health as it comes, in English, and then Mlle. D. translates it into French. It seems to me her translation is a beautiful demonstration. One doesn't seem to lose the sense at all. The French people who are interested come of course in the afternoon. It would touch your heart to see a man, as I have, following with his finger each word as it is read from our text-book, first in English and then in French, that he may get the full meaning of it,—a man who works till ten o'clock every night and gets up Sundays at four o'clock in the morning that he may get through his work in order to come Sunday afternoon. His great longing is to learn English and H. and I offered to help him, but he has no time. He has caught the Spirit and the lack of the letter cannot hinder him. His wife is with him but not so strong a character as he.

We are having some work done by a French woman who is being healed through Mlle. She never expected to walk again. She has taken her boy out of a convent, and she is now going through a class and seems to drink in the Truth. I just cite these two cases; there are I should think from fifteen to twenty who are interested, and we are becoming acquainted with them all. When you realize that all they get of Science and Health is Mlle.'s translation on Sunday and the treatment sometimes, you can see how beautiful this work of the Spirit is.

The Wednesday evening meetings are at Mrs. B.'s, and each night the attendance is larger. It is possible they may be adjourned to the hall during the summer, if it can be obtained. Only the two or three French people who understand English go to these meetings. The hours for the working people are long, and many could not go even if they knew the language. These meetings are very informal and sweet. In a parlor, nobody rises, but one speaks and then another, and what one says suggests a thought to another, so that it is like a group of friends talking. There are a few American Scientists who live here; we have enjoyed them very much. Last Wednesday one told her *last* demonstration, then another said, "My last was yesterday," and another, "One of my neighbors came to me two days ago, and wanted help," etc., so that it seemed to be an evening for the demonstration of Science as a daily, almost hourly, help. Then of course we all talked at least half an hour afterward, and parted with fresh courage for the upward climb.—LILLA AMES.

## The Light of Life.

BY M.

Say, is your lamp burning, my brother?
I pray you look quickly and see,
For if it were burning then surely
Some beam would fall brightly on me.

THIS verse from the little hymn suggests many thoughts as to our duty toward each other; but the questioning should be with self. If our lamp has been lighted, if we have apprehended the Truth as taught in Christian Science, then although "free in Christ" yet we are, in the bonds of Love, under obligations to all humanity to live the Light that has given us a new and true sense of life and its requirements. If this great blessing is ours, we in turn must bless others, or our light will become dim and uncertain.

How may we know that we are reflecting the true Light "that lighteth every man that cometh into the world"? By the loving thought that never fails. If my brother offend "seventy times seven," still this shall in no wise make itself seem to be a reality, for God *is*, and reflects Himself in every manifestation of Life. That which recognizes evil is a false sense,—nothingness,—therefore it cannot deceive those who understand the Truth. How carefully we should watch lest we make error real, and so perhaps hinder the brother, and the light which we should reflect be darkness to him.

If our lamp is aglow with divine Light, every one within the radius of our thought will feel its beneficent influence, and be gladdened and strengthened by it. Every thought of Truth lived, lessens the seeming consciousness of error for universal man, and so crowns all with blessings. To think and speak Truth is not enough; we must live it in the sight of all men, and so glorify God and honor our patient and tender Leader, "for this is our reasonable service."

## Distribution of Literature.

BY MRS. ROBERT WATTS.

IT may be interesting to learn something of the good being accomplished in spreading the truths of Christian Science by placing our literature in the railroad depots.

Our church subscribed for thirty-two copies of the *Sentinel* for general distribution.

In each department of the three depots of Rock Island there has been placed a box on which is printed "Christian Science," and in which, every week, are placed Sentinels and Journals.

The person who carries the literature always finds the boxes empty, and we frequently hear of good done and interest aroused through the reading of it.

One gentleman, waiting in the depot, saw the sign, took out a *Journal*, and becoming interested in the accounts of healing, decided to take it home to his wife, who was an invalid. She had never heard of Christian Science, although the notice of our church services is in the city papers each week.

She read the *Journal*, at first probably through curiosity, but soon became so interested she decided to look into the subject farther. On inquiry she learned that a reading room in connection with our church is open daily, so went there one day. She had a talk with the lady in charge, and finally bought "Science and Health with Key to the Scriptures." Later through the simple reading of this book she was healed of great nervousness and fear, from which she had suffered for years.

We are sure that many who might not otherwise be willing to look into Christian Science, are in this way,—while waiting for trains,—led to read and thus get a glimpse of the Truth, and so the seed is sown, falling often, we believe, on good ground.

# Testimonies.

### Christian Science brought Many Blessings.

The writer of the following testimony came to Cedar Rapids some six years ago in a mover's wagon, or what is known here in the West as a "prairie schooner." All his worldly belongings were in this wagon. He found his way to our dispensary and was healed. To-day he owns a few acres of land and has built a little home. The wife has supported them doing washing, while the husband has added to the home. They are a happy and grateful couple and regular supporters of our church financially as well as spiritually.—ABBIE D. WEEKS.

It has been my desire for a long time to tell how I was rescued from the grave by the Truth as taught in Christian Science.

I was given up by six doctors who said there was no help for me, as every organ in my body was diseased. After examination one of them said my left lung was gone and the other was badly affected, that it was useless to give me anything as I would last only a short time.

Glory to God! I am still on the earth, a stronger and a better man than ever. I never enjoyed such good health as now. The tobacco habit is gone, I have no desire for it whatever.

I am enabled to demonstrate over many different forms of sickness among the animals on my place. I am often led to say "Praise God from whom all blessing flow."

I am trying each day to know more of this blessed Truth that makes free. I desire to express my love and gratitude to our loving Mother, Mary Baker G. Eddy.

MILLARD MERRILL, Cedar Rapids, Ia.

### Much to be Thankful for.

We as Christian Scientists have much to be thankful for. This blessed Truth as explained by Mary Baker G. Eddy in "Science and Health with Key to the Scriptures" has been the key that unlocked the door of our consciousness and given the Light to show how we had been in bondage to sin, sickness, and death. It has so plainly pointed the way out of bondage and shown the way to eternal life—continuous life with God. When we know God as Good, and Good as All-in-all, where is there room for anything but Good?

To know Good is ours and that the omnipotent and omnipresent Good is with us, is certainly a grand thought. Do we accept this? Do we practise this without doubt or limitation? It reminds me of the story of the father who had two sons, and he sent each to the granary to bring him a handful of wheat. One brought what he could hold with his hand shut tight, afraid to scatter any; and the other dipped his hand down deep in the bin of wheat and started with a heaping handful, the grain falling all the way, to his father, and yet he had more than his brother, he started with more and he arrived with more, as he knew there was plenty and to spare.

Thus it is with the love of our Father in Heaven; there is plenty and to spare. Do not shut yourself up and hold the good you have; but scatter the seed of Truth by the wayside. It will grow and you will have more.

I. NELSON WARD, Memphis, Tenn.

### Healed while Attending a Christian Science Lecture.

Almost two years ago a neighbor invited me to attend a lecture on Christian Science, and I promised her I would. The night of the lecture was a very stormy one, but I felt that I *must* go and at least keep my promise. The lecture was almost without meaning to me, but the happy, intelligent, and peaceful expression on the Scientists' faces, made me feel that they had something priceless. The next day after the lecture, I felt perfectly well and happy, and I did much without reaching the point where I felt that I must not do any more that day, as I had used up all the strength I had.

I spoke to this friend about my joy and strength and asked her why I felt this great change, and she said, "Perhaps you were healed at our meeting last night, as there have been such cases." With deep gratitude I can honestly say I was. The troubles were organic; one of them a case of hemorrhoids that I was told was inherited, and no permanent cure could be effected.

If we were only healed physically in Christian Science, some would not be members of that church to-day, but Christian Science is the religion of Jesus Christ and that is what we want and have been hungering for.

E. G. B., New York, N. Y.

### From a Trained Nurse.

I have been helped in so many ways by Christian Science I hardly know where to begin to tell of my blessings. After taking a course of training in a hospital, where mental diseases only were treated, I spent several years caring for people who suffered from these diseases, and I can truly say I saw the utter unreliability of material means. Finally I found myself with the same troubles, suffering the greatest depression, and on applying to specialists, whom I knew, and having them tell me there was no help in drugs, I lost faith completely. I had malaria for five years, and wore glasses about the same length of time, but through the help given me by a loyal Scientist these errors were overcome. Surely Christian Science is the Comforter leading into all Truth.

With the beginning of the new year I had the great privilege of class instruction by a loyal, loving student of Mrs. Eddy.

Words fail to express my gratitude to God for the revelation of Christian Science to this age through the one whom He appointed.—GENA N. DORSEY, Brookline, Mass.

### A Child's Demonstration.

I would like to give a little testimony which may help others in realizing this wonderful Truth which our dear Mother has given us.

Last week while in school, sense said I had a headache. I said to myself, "No! I have no headache. Error is a liar. Error has no power to try to rule God's child. Error is nothingness. God fills all space, so there is no place for error to get in." Just then the thought came to me. Why! I have said error five times and God only once. Is that right?

Then again I began to realize, but this time I said God five times and error only once, and in five minutes I was perfectly healed.

Thanks to God for the wonderful Truth which He has given us.

I am a little girl nine years old.

ELSIE J. BOLLN, Omaha, Neb.

### Fear of Future Destroyed.

Through Christian Science I have been relieved of a great fear of the future, a fear that no kind of persuasion or reasoning could even mitigate.

I had out of curiosity gone to a clairvoyant. This mind-reader read some events in my past and present rather accurately, and so laid the foundation of that fear which only the Truth could destroy.

But Christian Science has done more than remove the fears, it has explained the phenomenon, clairvoyance, and has vouchsafed me glimpses of the Life that knows no mortal changes, a Life, whose past, present, and future are eternity.—E. S., St. Louis, Mo.

## Religious Items.

May 20 was the one hundred and fiftieth anniversary of the birth of Stephen Girard, the wealthy Philadelphia merchant who founded and munificently endowed Girard College, that great institution for the support and education of orphan boys. This recalls the remarkable provision in Girard's will excluding ministers and missionaries even from the grounds of the college Following is the exclusio clause taken from the *Church Standard* with that paper's comment:—

"I enjoin and require that no ecclesiastic, missionary, or minister of any sect whatever shall ever hold or exercise any station or duty in the said college; nor shall any such person ever be admitted for any purpose, or as a visitor, within the premises appropriated for the purposes of the said college. In making this restriction I do not mean to cast any reflection upon any sect or person whatsoever, but as there is such a multitude of sects, and such a diversity of opinion amongst them, I desire to keep the tender minds of the orphans who are to derive advantage from this bequest free from the excitement which clashing doctrine and sectarian controversy are so apt to produce; my desire is that all the instructors and teachers in the college shall take pains to instil into the minds of the scholars the purest principles of morality, so that, on their entrance into active life, they may from inclination and habit, evince benevolence toward their fellow-creatures and a love of truth, sobriety, and industry, adopting at the same time such religious tenets as their matured reason may enable them to prefer." These are not the words of a misanthrope or an infidel.

The *Boston Transcript* says: "Something new in Bible making has been thought of by a Coventry, Eng., publisher, who has had the temerity to put the New Testament before the Old. He explains himself as follows: 'The Old Testament is meant as a candlestick upon which the New Testament should stand; yet we have largely made it an extinguisher which puts out its light. . . . If the Christian Scripture is the medium by which we draw near the supreme manifestation of God on earth, should it not be placed first in fact as well as in theory?'"

Grace F. White says in the *Universalist Leader*: "That we and all the world might be started aright, encouraged and sustained in our life journey, and saved from error in our choice of ideals, and our motive for growth, our Saviour came to live the perfect life among men. From his 'Come unto me' to his promise, 'Lo, I am with you alway,' his ministry is loving, persuasive, victorious. Blessed are they who respond to his call and who walk daily in his companionship."

A writer in the (Unitarian) *Christian Register* says: "While religion, as held by all persons and all churches, stands for goodness instead of wickedness, a mighty emphasis has always been laid upon other things first, so that this purpose has often been covered up and lost sight of; and the end of righteousness has not been attained. These other things have been so much easier that they have been done, and more important things left undone."

The (Baptist) *Standard* says: "Let nothing tempt you to cross the sacred line of perfect integrity; neither the smallness of the transgression, intention to repay shortly, the example or bidding of others, the temptations of pleasure, or even the pressure of keenest necessity. One lie in word or act opens the door to a thousand. Truth is the magician's circle, to cross which is to break the spell and turn all to darkness."

The (Baptist) *Watchman* says: "Did you ever observe how affection for another vivifies all your powers, gives range and sweep and outlook to your faculties? Fear benumbs and weakens: hatred dries up the very fountains of your force: but love quickens and liberates, and hope expands and uplifts. It is a great thing in religious activities to learn to work by the sweeter emotions."

Commenting editorially upon the demand within the Presbyterian denomination for a revision of its creed, the (Episcopalian) *Church Standard* says: "It is a curious fact that most of the troubles of the Christian Church during the past nine hundred years might be traced to the re-introduction of the philosophy of Aristotle into Europe through the Saracens."

The (Baptist) *Watchman* says: "The deep and almost inarticulate question of our time is but a modern phrasing of the Baptist, 'Art thou he that should come? or look we for another?' There is behind it a longing for completer evidence, for rectification of ideals, and a demonstration of the competency to meet the world's needs and aspirations."

In the Presbyterian General Assembly, at St. Louis, May 23, by an almost unanimous vote, the report of the committee on bills and overtures providing for a committee of fifteen to inquire of the presbyteries their views as to the revision of the confession of faith was adopted. This committee will report at the next general assembly.

The *Congregationalist* says: "It was a wise saying of Bishop Butler, 'Let us remember that we differ as much from other men as they differ from us.' If we set up our own view of our own character as the standard by which we are to judge the lives of others, we shall find it hard to live in charity and think in kindness."

"When the twentieth century is well on its way, what churches will be most securely fixed in the affections of the people, those that concern themselves most with the things of the spirit, or those that give most attention to the transient events of the passing day?" asks the (Unitarian) *Christian Register*.

Few men suspect how much mere talk fritters away spiritual energy,—that which should be spent in action spends itself in words. Hence he who restrains that love of talk lays up a fund of spiritual strength.

—*Selected.*

The New York *Observer* says: "There is a mastery and majesty in goodness which have it in their power to command and compel respect. Sin is cowardly 'The wicked flee when no man pursueth: but the righteous are bold as a lion.'"

The seventy-fifth annual meeting of the American Unitarian Association was held in Boston the fourth week of May. The Rev. Samuel A. Eliot was elected president.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to the Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from the Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto belong to the Editorial Department, and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of Selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, 3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The June *Journal* devotes two pages to a list of publications, all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice is also given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp. THE ORIGINAL STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political and Governmental Notes.

The New York state convention of the Democratic party was held June 5 and elected 72 delegates to the Kansas City convention instructed to work and vote for the nomination of Mr. Bryan for president. The platform adopted contains no re-affirmation of the Chicago platform of 1896, but a declaration that the party in the state will support the platform of the Kansas City convention. The platform declares against war taxes in time of peace; declares for parity of gold and silver as currency; demands abolition of all customs and tariffs between Porto Rico and the United States; condemns trusts and monopolies and entangling alliances; demands just and liberal pension laws and election of United States Senators by the people, and favors the nomination of W. J. Bryan.

Up to June 8, twenty-four states had held Democratic conventions; of these twenty-two, representing 456 delegates, have instructed for Bryan. Maryland and New Jersey are unpledged, the former having sixteen and the latter twenty delegates. Bryan now lacks only thirty instructed votes of having a majority of the convention delegates. The convention will be composed of 930 delegates and as many alternates. Under the two-thirds rule, however, a rule which has been enforced in Democratic national conventions for nearly forty years, the nominee for President or Vice President must receive two-thirds of the entire vote given. Bryan therefore lacks 184 votes of a nomination on the basis of instructed delegates.

According to a carefully prepared statement of the appropriations of the first session of the 56th Congress, made by Senator Allison, chairman of the Senate committee on appropriations, and Representative Cannon of the House committee, the total appropriations were $709,729,476. This includes $131,247,156 estimated to be on account of or incident to the late war with Spain, the remaining amount, $578,482,321, representing the ordinary appropriations made for the support of the government.

United States transports Seward, Athenian, and Lawton have sailed from Seattle, bound for St. Michael and Cape Nome, carrying soldiers and building supplies for the north. The whole expedition is under the command of General Randall, military commander of the Department of Alaska.

Adjutant-General Corbin recently stated that the War Department will maintain a force of forty thousand men in the Philippines after the return of the volunteers, for as long a time as may be necessary. The army in the Philippines at present numbers sixty-two thousand men.

The people of Honolulu are planning to have a great public jubilee on June 14, when Governor Dole is inaugurated as first governor of Hawaii as a territory of the United States. The day will be set apart as a public holiday for all time.

Cambridge, Mass., will celebrate the 125th anniversary of Washington's taking command of the American army July 3. The elm under which tradition says Washington stood, is still flourishing.

Congress adjourned *sine die* on June 7.

### Foreign News.

On June 5 Secretary Hay received a dispatch from Minister Conger from Pekin, saying that the Boxers had surrounded the city, and were expected to enter it at any moment; that the twenty thousand native troops guarding the city were plainly in sympathy with the Boxers, and that they would probably offer no resistance to their entrance. A special dispatch from Shanghai, dated June 6, says that the members of the majority of the legations at Pekin, including the members of the British legation, are sending their families away. A severe battle is reported to have taken place between the Imperial troops and the Boxers on June 7, in which the Boxers were repulsed with considerable loss. It is reported that the naval commanders of the great powers, including the United States, have entered into an agreement for the joint occupation of Taku, and to make it a city of refuge for the foreign population in China.

Pretoria was surrendered to the British on June 5, without a blow being struck. The defensive lines thrown around the city contested their ground stoutly during the day of June 4, but yielding to superior numbers the Boers retired within the city. During the night Commandant Botha agreed to surrender the town unconditionally and then retired with his troops, leaving Pretoria open to the British army. With the Orange Free State subdued and annexed as a crown colony and with Pretoria and Johannesburg in the hands of the British, the war is virtually over, but a large number of the Boers now in arms may neither be pacified nor subjugated for some time to come.

The total number of male citizens of voting age in Cuba is 417,993, of which 187,813 are whites born in Cuba, 96,088 whites born in Spain, 6,794 whites born in other countries, and 127,298 colored, including blacks, mixed, and Chinese. Of the Cuban citizens, numbering 290,905, there are 172,627 who can neither read nor write, 4,132 who can read but cannot write, 105,285 who can read and write, and 8,861 with superior education.

A dispatch from Japan states that the cabinet presided over by the Marquis Yamagata has resigned and that the Emperor has invited the minister of finance, Count Matsukata Masayoshi, to form a new one, but he declined, and the Marquis Ito is now endeavoring to form a coalition ministry.

The British War Office reports that Lord Roberts is to be made a marquis as a recognition of his masterly conduct of the Boer war.

### Industry and Commerce.

Boston newspapers of June 6 announced the purchase by the William H. Hills estate of about 22,500 feet of land in the large vacant lot fronting on Falmouth Street and Huntington Avenue, on the opposite side of the street from the Christian Science Publishing House. The price named was about $150,000 and the purchaser is said to be arranging to put up a large building containing studios, a hall for chamber concerts, and apartments of a kindred nature. The site purchased adjoins that of the new Horticultural Hall, fronting on Huntington and Massachusetts Avenues and Falmouth Street, for which the contractors are now excavating. The magnificent new Music Hall across the street from the Horticultural Hall site, has already been mentioned. It is nearly ready for occupancy. Meanwhile agreements are pending for the sale of 43,000 feet of land at the corner of Huntington Avenue and Gainsboro Street, a little over two blocks distant from the Mother Church, by Winslow Warren, trustee, to Eben D. Jordan, who is acting for the New England Conservatory of Music, which is expected to put up a fine large building. Concerning the future of this neighborhood, the *Boston Herald* says: "Thus the immediate neighborhood of the corner of Huntington Avenue and Massachusetts Avenue seems destined to become the music centre of the city. It would be difficult to find a section as available for the purpose."

The street-car strike in St. Louis was attended with as much violence and bloodshed last week as during previous weeks. The situation had become very grave and Governor Stevens is said to be thinking of calling out the National Guard.

### General News.

A dispatch from Rockport, Ind., says that the Spencer County Council has voted an appropriation of $800 to buy the tract of land surrounding the grave of Nancy Hanks Lincoln, the mother of Abraham Lincoln, at Lincoln City, in Spencer County. The property to be bought is a beautiful natural park of sixteen acres. The grave is near the summit of a large hill, almost in the centre of a wood, and at present is marked only by a neat stone of granite and railing of iron.

The people of St. Louis expect to spend on their exposition the same amount of money that was paid for the Louisiana territory in 1803—an area of 1,182,755 square miles. Napoleon first asked 100,000,000 francs, but Mr. Livingston got him down to 75,000,000, and it was afterward disclosed that if we had offered 50,000,000 francs it would have been accepted, for the French commissioners were instructed to insist upon that sum if they could not get more.

Robert S. Brookings and Samuel S. Cupples, millionaires of St. Louis, Mo., have transferred property valued at $5,000,000 to Washington University, to be expended in making that institution one of the best equipped in the world in buildings, as well as in professorships. The property transferred earned more than $400,000 in dividends last year, and it is said the income will steadily increase.

By the provisions of the will of the late Jonas G. Clark of Worcester, Mass., substantially his entire fortune is bequeathed to Clark University providing the people of Worcester raise a fund of $500,000. The estate is estimated at as high as $10,000,000.

William R. Hearst, proprietor of the *New York Journal*, is to start an afternoon newspaper in Chicago, the first issue of which is expected to appear on July 2. The newspaper will be conducted on lines similar to the *Journal's*.

In New York City the Metropolitan Street Railway Company has 284 miles of track, and last year carried on them 255,835,000 passengers, or about half the number carried on all the steam railroads of the United States.

A recent re-arrangement of the agricultural museum of the University of Illinois brought to light an old ox yoke made by Abraham Lincoln and presented to the university in the early 70's.

Lovers of Dickens will be interested to learn that Bleak House in England is for sale, the price being $15,000. There is some talk of making the house a memorial museum.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Testimonial Meeting in Tremont Temple.

TREMONT TEMPLE at the Wednesday evening meeting, June 6, was not only crowded as to every inch of seating and standing room, but there were several hundred who were unable to obtain entrance. To accommodate these an impromptu overflow meeting was held in one of the sub-halls. This hall was also well filled.

The meeting was opened by the singing of our Mother's hymn, "Shepherd, show me how to go," after which there was silent prayer and reading from the Scripture and "Science and Health with Key to the Scriptures," by the First Reader of the Mother Church. He then spoke substantially as follows:—

It has been a glorious experience to me, the annual meeting and communion at the Mother Church. It was a magnificent gathering. These hearts of love that have come to us from all sections of the country aid and encourage us and aid and encourage each other in this mighty work; and I know whereof I affirm when I say that never has there been such a manifestation of love as we have felt and witnessed throughout this entire season of communion, for the communion season, thank God, is still on, and will last forever.

Now it has been impossible for some of us who are laboring here at headquarters to see you all and to shake hands with you all, much as we should enjoy doing so. We would like to see and shake hands with you who have come from long distances, but you know the impossibility of doing so upon such occasions and when we are so crowded with necessary work. We love you all, and why do we love you? Because you are the ideas of Infinite Love, each and every one of you; and how can we love God except we love His idea? How can we love God except we love also the Son, and how can we love God and the Son except we love the brethren? I speak not only for myself, but for all at headquarters.

We know the love is reciprocal. We know you all love our brave and watchful Leader; and we know that she loves us in ways that pass our understanding.

✤

"O'er waiting Harpstrings of the Mind" was sung by the audience. The singing of these hymns without the presence of a single hymnal in the hands of the great audience was most impressive. We are glad to be able to furnish the substance of some of the testimonies given.

A gentleman said, "Five years ago I could not turn over in bed. My knees were all drawn up. *Materia medica* said it was impossible for me to get well, that I could never be cured. I had been a professional gambler. Christian Science was brought to my notice and I looked into it In a few months no one would have known I had been sick. I then weighed only 124 pounds, but now I weigh 194."

Another gentleman said, "On the tenth of last month a gentleman came to our office in New York City in great distress. The doctors said his son must die, or if he lived that he would be a raving lunatic. His son had been sick for some months. The family doctor did not know what the matter was with him. They called in a specialist who diagnosed the case. Then two other specialists were called, and decided, after consultation, that the man had paresis and could not live long, or if he did he would be insane. The physicians could do no more.

"The father was determined to have Christian Science, although a Christian Scientist could not come into the house. He asked if we could not give absent treatment, and we told him we could. The following Wednesday his son was treated and slept all night. Very soon he was up and dressed. The Saturday before the 28th of May the father came into our office and said his son had been up to Central Park with his wife and children, enjoying himself. Sunday he came to church and next morning went to work. The father came to a Wednesday evening meeting of the Second Church and testified that his son was perfectly well, notwithstanding the opposition from all the rest of the family."

✤

A lady said, "When I was a child I used to steal out on the housetop of my father's home hoping to see an angel. After years of waiting I became discouraged. I went to my mother and said I had waited for years to see an angel, but that I had not seen even a footstep. Through the gathering years, being ill, I kept up the search, not on housetops, but in the world. Thirty-six physicians had treated me. I had been under the knives of surgeons four times. Had been in six sanitariums. I sought health from the Great Lakes to the Gulf and in many climates. I went into a Christian Science temple one day and there I found the angel of peace. I have come to my first communion in the Mother Church. I want to send a loving message to that other Mother that I have at last seen, not the footsteps of an angel, but the whole concourse of the heavenly throng."

A gentleman said, "A few months ago a neighbor called for help. He had been blind twenty years. He lost his appetite for tobacco after the first treatment. A few weeks later he could see objects quite clearly. He said he could see his hair was gray."

Another gentleman said, "Another testimony for Science and Health. I have read it for five years. I was healed of consumption after the doctors had given me up. Do not fail to study Science and Health for it will heal anything."

A gentleman from Toronto, Can., said, "I would like to give an account of my healing, impersonally, by reading Science and Health. I am an Englishman, but I had to go to Canada, the land of sunshine, to find the Truth. For twenty-five years I had smoked every sort of tobacco. For thirty-three years I had indulged in alcoholic stimulants, having taken to port wine when four years of age by order of the doctor. I have suffered from chronic asthma all my life. Have suffered from eczema from the time I was six months old. I have taken sufficient arsenic during my life to poison a herd of elephants. Two and a half years ago Christian Science was brought to my notice and I bought the book. Before reading three hundred pages all taste for tobacco left me. I forgot to smoke. Three months later I was completely healed of the belief in alcoholic stimulants.

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

Have never had an attack of asthma since coming into Christian Science. Have gotten rid of the eczema. I thank God for our dear Mother in Israel. I thank God for 'Science and Health with Key to the Scriptures.' I thank God for The Publishing Society, for the editors, directors, and all in high places in Boston."

A gentleman said, "I was healed by reading the book Science and Health, twelve years ago. When I first heard of Christian Science it did not occur to me that I might be healed. I had found God—that satisfied me. I was healed of what the doctors call consumption before I knew it. I read the book through three times and found myself healed. That is not the best of it, however, for I find the book still healing myself and healing others. I am now a reader in a Christian Science Church and have had the pleasure of seeing three cases healed in the last three months just by the reading of the Scriptures and Science and Health; one of the liquor habit, one of the habit of selling whiskey, and one of an incurable disease. These cases were healed by listening to the reading of Science and Health and the Bible."

Then another gentleman immediately arose and said that he had been healed of consumption by reading Science and Health.

A gentleman said, "I was healed of Bright's disease after suffering ten years. I had the best physicians in this country, one from Boston. I have been completely healed, and since then have taken up the study. I thank God for the privilege of being taught by a loyal student of the Mother. I have been practising Christian Science six years."

A lady said, "A hopeless case of a little child with epileptic fits came to me. In less than two months the child was riding a bicycle and the mother was made very happy. She was a woman who had everything from a material standpoint, to make life worth living, but she was anxious and miserable over this child. The child learned, and she learned that 'God is Love.'"

A gentleman said, "It is just six months since I came into the understanding of Christian Science. My business affairs were badly unsettled, but putting into practice the teaching of Christian Science brought success out of chaos. An old belief of deafness, loss of eyesight, and catarrh have been healed. For twenty-five years I was deaf in my left ear and was gradually getting worse. While I cannot hear a pin drop now, my hearing is perfect for all practical purposes. I wore glasses two years. I have no further use for them now, as my eyes are in a good condition. I had a very bad case of catarrh of over six years standing which is now thoroughly healed."

Mr. Wertheimer being introduced to the audience said, "Friends:—I have not been healed of any of the physical ills that flesh is heir to in order to come into Christian Science, but of theological blunders, and I am very glad of it. Last Sunday morning for the first time I was a personal participant in the spiritual communion service. I asked myself, Why is it that they sit in breathless silence, a whole community composed as it was of almost six thousand during the day at the five services, almost spellbound? I said to myself, It is not because they believe, but because they know; not because they have guessed, but because they understand; not because they must come, but because it is the impulse of Divine Love.

"I knew that because of the outside blows of persecution there was within consolidated power, cementing them together in the one hope, into meeting as one, and my gratitude goes out, not only to the Church to which I have the privilege to belong, but to that exemplary Mother in Israel, who has so admirably guided, for these many years, this ship, as it were, through all the darkness and onslaughts from without, and safely moored it at last in a haven of security. I will say that darkness will vanish, day will dawn, Truth will triumph, and there will be light. I thank you, friends, for you are the hope of the world, the uplifters of the despised and rejected of men. Onward and upward. Forward, to heal and to soothe, and upward to perfection."

Another gentleman said, "Seventeen years ago physicians pronounced me incurable with tubercular consumption. I bought the blessed book, Science and Health, and two weeks after beginning to read it I was healed. Many people said I did not have consumption because I do not look like it now, but my brother and sister who went to Colorado at the same time I did, have both passed on with this dreaded disease. The physicians said that neither medicine nor anything else could save me, but they were mistaken. The book saved me, and since that time I have been fast in the work. Thank God and our dear beloved Mother, Mary Baker Eddy. Through her efforts we have been able to overcome many claims. Some time ago a lady came to me from Chicago for treatment. She had one trouble she thought never could be reached, so she did not mention it. In a few months she was healed of a goitre in the neck, which physicians had said could not be healed.

A lady said, "I want to lift my voice in gratitude to God for having given us this understanding of ourselves through our beloved Mother and Teacher, and for enabling me to meet at this Communion service. Christian Science has done so much for me that it is almost impossible to tell it to any one. It has healed me of troubles resultant from spinal meningitis by the reading of the book. It has healed many members of my own family and community. It was instrumental in the healing of a case of Bright's disease in one treatment. But this is very, very small when compared with the spiritual uplifting that comes to one and the destruction of this sin of mortal self. Again I want to thank God for this Truth and the faithful workers, and especially for our beloved Mother. My heart overflows and I cannot express my thanks."

Another lady said, "I was for many years an invalid and had traveled everywhere for health. There seemed to be no help, no hope, no happiness or peace or health. Some one loaned me the book and by the time I had read twenty-two pages I was healed of a disease the physicians could not heal. I was able, through the understanding of Truth to heal my family and friends. Although I had not had the privilege of meeting or knowing a Christian Scientist for three years afterward, I was able to overcome everything unlike Good which tried to creep into my home. I feel grateful to God and to our Leader that I am here to-night to tell what Christian Science has done for me and for my family. I have seen all manner of diseases healed. I saw one who had seemingly passed on, arise, and that person is now well."

---

### OVERFLOW MEETING.

Edward A. Kimball, C.S.D., of Chicago, led the overflow meeting and it proved a happy and most helpful one. Many impressive cases of healing were related, some of which were in substance as follows:—

A gentleman said in part: "As one who needed spiritual light and physical healing, I wish to testify to the infinite worth of the Christian Science text-book, 'Science and Health with Key to the Scriptures.' I was reared in infidelity and read the Bible only to ridicule it. At about fifteen years of age I was afflicted with dyspepsia, and for three years went through the catalogue of human remedies. For nearly a year I lived principally upon bread and milk and light cereals. At this time Science and Health was placed in my hands, and after reading it two weeks, I was entirely healed and received a spiritual

Digitized by Google

light and joy that I never thought possible to attain. And now to me the Scriptures are the only guide to salvation from my human errors."

One person said, "For fourteen years I had been an invalid, and in three weeks I was perfectly well with an understanding of God that gave me the power to heal both the sick and sinful."

Another spoke as follows: "I have received so much from the Annual Meeting that I feel I must relate the following case of healing. I was called to treat a patient who had been twenty years an invalid, who it was claimed could never be healed, and she thought that her only salvation was death. She called for treatment and in three months was perfectly healed. Through the healing of this one person, I presume that nearly sixty persons were brought to Christian Science."

Then another arose and said, "I desire to express my gratitude to God to-night for what Christian Science has done for me. I desire to acknowledge the healing power which saved me when other means failed. I thank God that it is my privilege to stand and testify to what Christian Science is doing for me and others.

A lady told how the Christian Scientists in Paris had obtained permission to place Christian Science literature in the Exposition.

A gentleman said, "Through Christian Science I have been raised from the depths of tribulation. I have been a profane man. No oath has passed my lips for the past two years. I have used liquor; I have been a smoking man. For twenty years I was not able to read without glasses. I can now read the finest print without glasses."

One who had been an invalid for many years said, "I was an invalid from the time I was six years old. I exhausted the skill of eleven physicians. I have been sent to the mountains, have had electricity; in fact everything that the skill of physicians and friends could give to me. Five surgeons took me to the hospital and performed an operation which was not successful. At this time my system utterly refused to take medicine, and morphine was given me. A person called and told me of Christian Science, but did not urge it upon me. At that time I had an utter contempt for Christian Science; I thought it was for weak-minded people, or people who had nothing the matter with them,—but man's extremity was God's opportunity."

The following testimony was given by one of the grateful ones: "After weeks of torture I took Christian Science treatment, and was healed in a very short time, and brought down a great deal of ridicule upon myself. Christian Science has brought to me life, health, and harmony and the blessed privilege of helping other people. In my experience I have known of healing of curvature of the spine. I am grateful for the physical healing, but this is nothing compared with the moral uplifting I have received."

Then another said, "I had been an invalid for fifteen years and had baffled the doctors' skill. I suffered everything. Then Christian Science was brought to my notice; inside of three weeks I became quite comfortable, and in a short time was entirely healed."

For the purpose of showing how the Truth may be gained and its healing power proved by reading the Christian Science text-book one speaker related the following incident.

"Some time ago I was introduced to a man who had been stricken with paralysis by which one arm and one leg had become nearly useless. He heard of the book which, he had been told, had healed people through the understanding of Truth which they had gained by reading it. He procured a copy of 'Science and Health with Key to the Scriptures,' read it earnestly, and his health began to improve, and it was only a short time before he was entirely healed. His friends who had seen him when he was in his sad condition and observed him after he had been healed marveled at the change, and asked him what had brought it about. He told them that it was through reading the book Science and Health.

"It was not long afterwards that a friend called upon him and wanted him to go and see a woman who had been given up by the medical doctors. At first he was very much perplexed, but he thought that the Truth which had healed him would heal others. He went to see the woman, told her of his experience, and spoke to her about the book. He visited her a few times and read to her, and in a short time she entirely recovered from her sickness. Not long afterwards he was called upon to see another person who was very ill. He repeated his experience to this person and talked about the book, and through his testimony and what he read to her from Science and Health, she recovered rapidly and was finally entirely healed.

"When healing has resulted from reading the Christian Science text-book, 'Science and Health with Key to the Scriptures,' it has often been spoken of as impersonal healing, but it should be remembered that all the healing that has been done in Christian Science has been brought about through personal effort. The hopelessly sick do not become suddenly well, and the cripple instantly discard his crutches and walk naturally and with ease without the Truth that healed them coming through some personal effort, and a visible means being used whereby the change has been wrought. All the healing done by Christian Science is accomplished through the spiritual illumination of the Scriptures which is revealed in the teachings contained in Science and Health which was given to us through one whom we love and revere, the Rev. Mary Baker Eddy, who has demonstrated beyond all others today the Truth contained in her writings and who has labored incessantly to teach others to follow her example."

## From the Boston Papers.

THE Boston papers gave good reports of the Wednesday evening meetings in Tremont Temple and Lorimer Hall. From these reports we cull the following.

*Extract from the Boston Globe.*

Every inch of available space in Tremont Temple was occupied last evening at the last service of the Annual Meeting of The First Church of Christ, Scientist, of Boston, the Mother Church. The occasion was also the regular Wednesday evening testimony meeting of the Mother Church.

As there are about six thousand Christian Scientists in Boston now, and as any one who cared to come was admitted to this meeting, the place could not fail to be filled. No larger auditorium could be secured for last night, however. People began to arrive by five o'clock to get the better seats, and scarcely a seat remained unoccupied an hour before the meeting was opened.

Organist Conant of the Mother Church played selections on the organ for fifteen minutes before the opening of the meeting, at 7.30. Precisely at this hour Judge Septimus J. Hanna, First Reader of the Mother Church, announced the opening hymn, "Shepherd, show me how to go," written by the Rev. Mary Baker G. Eddy. The congregation arose and sang the hymn as one great chorus, from memory.

Silent prayer was then offered, followed by the audible repetition by the company of the Lord's Prayer. Judge Hanna then read from Psalm 97 and from Revelation 21. Another hymn by Mrs. Eddy, "O'er waiting Harpstrings

Digitized by Google

of the Mind," was sung by the audience, after which the leader of the meeting read selections from the Christian Science text-book, "Science and Health with Key to the Scriptures."

He then announced that an overflow meeting was in progress in the hall below for the benefit of the hundreds who could not be accommodated here.

Judge Hanna said he had been asked to give his experience, this being an experience meeting. He continued, "I have never seen such a manifestation of love as I have witnessed during this blessed communion season, for, thank God, the Communion season is on, and will last forever. Although we cannot meet you all and shake hands with you, we love you all, for you are all God's children."

He suggested that the visitors be given the time at this meeting, and asked all to compress what they had to say into five minutes each.

A man in the first balcony told of healing from tumors, saying, "I could have shown you four kinds, any kind you might want," all of which, he said, were healed by Christian Science treatment.

A man said he had been entirely healed of epilepsy.

A woman told of being cured of consumption.

A woman on the platform said she had been healed of dropsy, with which she had previously been troubled from childhood.

Here Judge Hanna remarked that in these days prophecy was being fulfilled. He then presented as a recent convert to Christian Science Rabbi Wertheimer of Dayton, O., of whom all Christian Scientists had already read. The rabbi is a middle-aged man, and is a fluent speaker of English. He spoke most earnestly and impressively, saying, in part:—

"It were ingratitude on my part should I keep silent at this time. I have not been healed of any of the ills that flesh is heir to, but I have been healed of theological blunders, and I am very glad of it. Last Sunday in the Mother Church I thought, 'These people are as they are, not because they believe, but because they know; not because they guess, but because they understand.'

"My gratitude goes out, not only to the exemplary church to which I have the privilege to belong, but to that exemplary Mother who has guided this ship through the storms, and will guide it to safety; for Truth will prevail."

Rev. Dr. George Tomkins of Camden, N. J., formerly associated with the late Mr. Spurgeon in London, told of good work in Christian Science which has come into his experience.

A lady from the Fourth Church in Chicago, said, "Christian Science has done so much for me that it would be almost impossible to tell it. I was cured of troubles resulting from spinal meningitis. I have seen Christian Science heal Bright's disease in one treatment. But that is small compared with the spiritual blessings it brings."

At nine o'clock Judge Hanna said that he would be glad to continue the meeting longer, but that the time had come to draw it to a close. Some thirty-five had given testimonials, one immediately after another. Often two or more would begin to speak at once in different parts of the house, and the leader would have to stop the others till one had finished.

The overflow meeting in Lorimer Hall was attended by about nine hundred, and here also testimonials were given as rapidly as at the larger meeting. Edward A. Kimball of Chicago, a member of the Christian Science Board of Lecturers, presided, and among the speakers were Judge Joseph R. Clarkson of Omaha, also of the lecture board, and Arthur Stillwell, a well-known railroad man of the West.

*Extract from the Boston Transcript.*

It was an unusual meeting that took place in Tremont Temple last evening for the relation of experiences by Christian Scientists. The Temple was chosen because it seats three thousand people, and would accommodate more than the church on Falmouth Street; but the seats in the Temple were taken an hour or so before the time for beginning,—half past seven o'clock,—and still people kept coming until there must have been almost a thousand standing. The great auditorium was a mass of life and color. When it was seen that the hall would not begin to include all who wanted to get into it, another meeting was started in Lorimer Hall, and this also was crowded even to the limit of standing-room. Judge S. J. Hanna presided at the main meeting, and Edward A. Kimball of the Board of Lectureship conducted the other. Among the speakers at the smaller meeting was Judge Clarkson of Omaha, lecturer for the denomination.

Judge Hanna is the First Reader of the Boston Church. He led the meeting through the singing of several hymns written by Mrs. Eddy, the leader of the Christian Science movement, a period of silent prayer, read from the Scriptures and from the Christian Science text-book, "Science and Health with Key to the Scriptures," and then opened the meeting for testimonies, which he limited to five minutes each.

Then came an extraordinary series of brief speeches, following one after another, sometimes one upon another, as fast as the speakers could rise and be recognized. They told for the most part of the cure of serious and sometimes supposedly chronic cases of sickness or deformity through the study of the teachings of Christian Science, or through treatment by a practitioner. Some cases of healing were testified to have resulted merely from the study of the text-book. All the speakers showed deep feeling, and spoke earnestly, though no one could have fairly said that anything which took place showed anything of the fanatical. It was a frank and free-hearted meeting.

Judge Hanna gave a brief personal statement as the first testimonial. He said, "I have never seen such a manifestation of love as I have witnessed during this blessed Communion season, for, thank God, the Communion season is on, and will last forever. Although we cannot meet you all and shake hands with you, we love you all, for you are all God's children."

One of the most remarkable testimonials was by a woman who wished to testify for a boy who was four hundred miles away and who had been born deaf. The hearing came gradually and slowly under Christian Science treatment. "I wish you could have seen him the day he first heard the birds sing," said she. "He had previously been in a school to learn the language of the fingers, but was obliged to leave the institution because he became able to hear too well to remain. Last Sunday he sang two of the Mother's hymns through. I stood fifty feet away from him and he answered a question which I asked him at that distance. He wanted me to tell them in the Boston church, for it might open someone else's ears."

---

*Brief Extract from the Boston Post.*

Seldom has Tremont Temple held so great a gathering as that which crowded into it last night to listen to the testimony of those who were there to witness to the efficacy of Christian Science in the healing of physical infirmities and ailments.

Tremont Temple itself was filled long before the hour appointed for beginning, and after the four side aisles, the choir gallery, platform, ante-rooms, and passage immediately anterior to the pulpit, as well as every nook and

Digitized by Google

corner in the several balconies, had been filled, announcement was made that an overflow meeting was to be held in the hall below. Nearly four thousand attended the Temple meeting, nine hundred the overflow meeting.

Both meetings were entirely given up to the giving of testimony and relating of experience. Judge Septimus J. Hanna presided over the up-stairs assemblage, while E. A. Kimball of Chicago conducted the meeting in the lower hall.

Speakers were limited to five minutes each. About thirty-five persons spoke at the main meeting. Nineteen of these were men.

---

*From the Boston Herald.*

The Christian Scientists ended their annual gathering last night with a testimony meeting in Tremont Temple. The great hall was filled to the doors, not even standing room remaining, and an overflow meeting was necessary in the hall below. The latter, too, was filled before the hour for the main meeting. The assemblage was pronounced by many present to be the most notable public one of Christian Scientists ever held, as, indeed, the meetings of the week have eclipsed anything witnessed before by those who have not yet missed an annual convention.

The hall was decorated with flowers and plants, and profusely draped with the national colors.

The exercises consisted wholly of testimony from unidentified speakers, standing up here and there in the audience, who told of their experiences before and since their acceptance of Christian Science doctrine. The five-minute rule was rigidly enforced, though some merely spoke a few words proclaiming their allegiance. There were over thirty such experiences given in the main hall, and half as many in the lower hall.

The extended experiences were almost invariably relations of cures effected, often of dangerous and incurable diseases. The standard text-book of the religion, Science and Health, was freely quoted. Ex-Rabbi Wertheimer was the only speaker introduced by name, and he briefly announced his cures from errors of belief alone.

## Reading Rooms Opened.

### At St. Augustine, Fla.

There has been, recently, a general movement among the churches and smaller societies of the Christian Scientists, both in this and foreign countries, to provide centrally located and commodious reading rooms, furnished with all the literature of Christian Science, where any wishing to investigate its teachings and the work it is accomplishing may have easy opportunities for doing so. In many of the cities these rooms have already been furnished and opened, in many cases in the busiest business blocks, with the result that many of the business men, as well as those in other professions and callings, find time to drop in often for a few minutes of quiet reading or study. In unity of sentiment with the rest of the field, the Christian Scientists here have decided to re-open, during a portion of the week, their room, 120 North Charlotte Street, where the Sunday service is held at present, as a reading room, free to all. The writings of the Discoverer and Founder of Christian Science, Rev. Mary Baker G. Eddy, with the other publications of The Christian Science Publishing Society, will be kept there for general reading, and also copies for sale to those wishing them. The one having the room in charge will be glad to give all information and help possible.—*The Evening Record.*

### At LaGrange, Ill.

The First Church of Christ, Scientist, has opened a public reading room in the parlors of their church in the Cossitt Block, over Huntley's dry goods store. The object is to place in its true light before the people of LaGrange the teachings of the Christian Science Church, and to afford them an opportunity to inform themselves, through its literature, including the works of Mrs. Eddy, as to its teachings, tenets, claims, and purposes.

All the current literature of the society will be kept on file in these rooms. The rooms will be open on week days only from 1.30 to 4.30 and from 7.30 to 9 P.M., at which times there will always be some one in attendance. The rooms are very homelike in appearance and furnishings, and the public is cordially invited to visit them as freely as desired, and to take advantage of the opportunities offered.—*The LaGrange Call.*

### At Cortland, N. Y.

First Church of Christ, Scientist, of Cortland, opened on Friday afternoon, April 13, a reading room in connection with its church work, on the second floor of Samson Block, Main Street. Here will be found on sale and for reading room use all authentic Christian Science literature, including the works of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, and the publications of The Christian Science Publishing Society of Boston, Mass.

This reading room will be open to the public on Tuesday, Wednesday, Friday, and Saturday of each week, from 2.30 to 4.30 P.M. All wishing to learn of the teachings and practice of Christian Science will be welcomed at the reading room, where the desired information will be gladly furnished, and literature on the subject supplied.

*Cortland Standard.*

### At Quincy, Ill.

First Church of Christ, Scientist, has opened a public reading room in one of the most commodious business blocks in the city. It is centrally located, handsomely furnished, and well supplied with Christian Science literature. It is in every way worthy of the cause it represents. Each day since, we have added proof of the wisdom of the loving Mother, who is ever on the lookout for our good. Day by day do her loyal children learn that loving obedience to her slightest wish is attended with happiness and prosperity.

M. J. S.

### At Chillicothe, Ill.

The Christian Scientists, who have in the past held their services in Kauf's Hall, have rented the rooms over Dan Kelly's grocery store, heretofore occupied by him as residence rooms, and will fit up the same at once for their future place of worship. The front rooms will be remodeled into reading rooms and the rear part transformed into the auditorium room. They expect to spend quite a sum in fitting up the rooms, and when completed will have one of the finest places of worship in the city.

*Enquirer,* Chillicothe, Ill.

### At Little Rock, Ark.

It is with grateful hearts that we know divine Love is holding our small band together and "leading us into paths before unknown."

One year ago we began holding our service in the Whipple Building, Fourth and Scott Streets, and now have the hall opened for a public reading room with authorized Christian Science literature.

Visitors are welcomed by ladies in attendance each afternoon except Sunday, and gentlemen each evening.

MRS. ANNA ROBINSON.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## Church By-laws.

THE following amendments to the Church By-laws have been made:—

ARTICLE XXX.

*Officers.*—Section 1. There shall be a Board of Education under the auspices of the Massachusetts Metaphysical College, consisting of four members,—a president, a vice-president, a teacher of Christian Science, and a teacher of obstetrics.

*Auspices.*—Sect. 3. The Board of Education shall act under the auspices of the President of the Massachusetts Metaphysical College, who shall also be president of the Board.

*Vice-Presidency of College.*—Sect. 4. The word "vice-president" is inserted for the word "president" in line 4, page 68 of the sixteenth edition of the Church Manual.

The officers of the Board consist of Mary Baker G. Eddy, President; Septimus J. Hanna, Vice-President; Edward A. Kimball, Teacher of Christian Science, and Alfred E. Baker, Teacher of Obstetrics.

Section 1 of Article XXXII. is hereby amended as follows:—

Strike out the last clause of said section beginning with the word "One" and ending with the word "examination," and insert in lieu thereof the following:—

There shall be but one teacher during each College term, and no member of the Board shall be present but this one teacher.

## Communion Thoughts.

IT is well for us to think of the significance of this word Communion. To commune is to be in unity, or to be at one. In truly communing with God we are at one with Him. If we are at one with God, we are at one with each other; and if we are at one with each other, we are at one with God. These two are one. Oneness with eternal Good is oneness with every idea or reflection of eternal Good. This is spiritual union, or union in Spirit.

In so far as Communion services tend to lead us toward and into a better conception of our oneness with God, Good, in its real and eternal relation, they are helpful. Let us know, then, that God, as eternal Good, is our divine Principle; that this union is eternal, therefore, indestructible and inseparable.

This union is a glorious one. Think of an eternal oneness with eternal Good, and Good as infinite Love! This is the oneness whereof Jesus spake in that prayer of ineffable tenderness recorded by John:—

"Neither pray I for these alone, but for them also which shall believe on me through their word; that they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us: . . . I in them, and thou in me, that they may be made perfect in one; and that the world may know that thou hast sent me, and hast loved them, as thou hast loved me."

## Retrospective.

THE annual Communion season of the Mother Church in 1900 was an occasion long to be remembered by the thousands of loyal Christian Scientists who were permitted to enjoy the many blessings afforded by the occasion. Beginning with the preliminary meetings on Saturday, June 2, when upwards of twenty-three hundred members were admitted to the Mother Church, and concluding with the grand Wednesday evening meetings in Tremont Temple and Lorimer Hall, an account of which is given in this issue of the *Sentinel,* every moment was filled with good things for all who were here to participate.

The workers came from all parts of the Field bringing their sheaves with them, and because they came to give of what they had gathered from experience they were prepared to receive of the great good that had blessed the lives of their brothers and sisters in Christ.

Our Leader was not present in person, but she sent us a strong, loving, and exceedingly helpful message which was the important feature around which clustered the unnumbered other blessings of the occasion. Five times was the message read on Communion Sunday, that all might have the blessed privilege of hearing what our Leader had to say to her loyal and faithful followers. It were useless for us to attempt to describe the feelings of those who were permitted to hear it. Those who were not present will soon have the privilege of reading the message for themselves, as it will be issued in pamphlet form, and will then receive more fully of the blessings in store for them.

Closely following the Communion service was the Annual Meeting on Tuesday afternoon, the largest in the history of the Mother Church. On this occasion the members of the church were made to rejoice because of the growth and prosperity of our Cause as evidenced by the reports that were received from thirty-five churches scattered throughout the world. These but hinted at the story that could have been told had there been time enough to hear from all who came prepared to give a report of the work that has been and is being accomplished by their respective churches.

As a fitting conclusion of the Communion week came the two magnificent gatherings on Wednesday evening. These meetings brought out the practical workings of Christian Science made manifest in healing the sick and reforming the sinner. One important fact that is worthy of notice was the great number of testimonies from those who had been healed by the reading of our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

These meetings mean much to the Cause, and much to the individual workers in the Field, to those who were absent as well as those who were present. There went forth a wave of Truth and Love that will touch every honest heart, and only the future can reveal how much good has been accomplished. We have great reason to be encouraged in our work, and the coming year should be one of watchfulness and prayer. Every individual worker should have on the whole armor of God, that he may be prepared successfully to meet and master evil in all its forms. The Christian Scientist realizes that he must *work* out his *own* salvation, and because he knows that no right effort can fail to accomplish good results, he is content to improve the present opportunity and wait patiently for the reward that will certainly come in due season.

### A Correction.

We were mistaken in saying last week that Section 1 of Article XXXII. of the Church Manual had been repealed. We should have said that the clause thereof requiring this By-law to be read at the Communion services was repealed.

Digitized by Google

### By-law Repealed.

The Church By-law relating to class instruction by husband and wife, has been repealed. This By-law was published in the *Sentinel* of April 19, last.

## Among the Churches.

### Christian Science in Syracuse, N. Y.

"First Church of Christ, Scientist," is the gilt-lettered inscription on the sign that hangs in front of a stately old colonial residence at No. 704 East Fayette Street. It is no longer a dwelling-house, but, remodeled for its present purpose, it serves the Christian Scientists of the city as a sanctuary.

The interior of the building is very unlike any other place of worship in the city, and the services are altogether unique. The front room on the first floor is fitted up as the reading room. On a large easel in one corner stands a crayon portrait of Mary Baker Eddy, the New England woman who is the Founder of the faith. On the table is displayed an abundance of Christian Science literature. From two to five o'clock every day the reading room is open and some member of the church is in attendance to welcome visitors who may come from either curiosity or conviction.

The audience room is in the rear of the reading room. Every Wednesday evening at eight o'clock a testimony meeting is held here, and every Sunday morning at 10.45 a regular Sunday service. There is no dim light streaming through stained-glass windows, there is no pealing organ to recite the Gospel story in sacred anthem, there is no preacher ordained to minister to the religious needs of this peculiar people.

Instead a flood of golden sunshine pours through the windows and its brightness is accentuated by the soft maize yellow of the walls, which in turn are relieved by the dull white of the woodwork and the white inside blinds. As the visitor first enters the room his attention is attracted by the motto on the wall at the end of the room. In raised letters of silver is proclaimed the simple truth "God is Love," with the name of the author, "John," beneath.

The audience is seated in opera chairs which face west toward the side of the building, where a niche of the right size has been utilized for the platform. Over the white arch are the words: "Hear, O Israel: the Lord our God is one Lord." And on the wall in the background in raised letters of silver is the sentiment: "Divine Love always has met, and always will meet, every human need."—Mary Baker G. Eddy.

The congregation that gathers is one that has come to worship in sincerity and in truth, however mistaken their notions may seem to the world. They are not there as the followers of a fashionable faith or a popular God. On the contrary, the majority of them have known what it is to suffer persecution for their espousal of a religion that is ridiculed and denounced. To ignore the entreaties of their friends, to defy public opinion, and to endure the social ostracism which is meted out as the penalty, has cost them an effort. The struggle and the victory are written in their calm faces.

Among them are society women who have humbled their pride to be ranked with cranks, the sons and the daughters of clergymen who have renounced the faith of their fathers, the wives of physicians who rely upon another philosophy than that whose teachings their husbands are practising. In the greatest numbers of all are those whom the Scientists call their "recruits from the graveyard," the converts who eagerly profess their rescue from what is supposed to have been an incurable disease.

*Post-Standard*, Syracuse, N. Y.

### Christian Science Service.

The society of Christian Scientists known as the First Church of Christ, Scientist, in Orange, a branch of The First Church of Christ, Scientist, in Boston, Mass., has rented the house, No. 188 Main Street, for the promotion of the interests of the cause of Christian Science in Orange and vicinity. The house and grounds are the property of the Lackawanna Railroad, and have been put in excellent condition for the Scientists.

The front room on the first floor has been attractively furnished and is the reading room of the church body. This room and the large room adjoining are both used for the testimonial meetings held every Wednesday evening at eight o'clock. A Sunday service is held at Berkeley Hall at 10.45 A.M., and children's Sunday School at noon.

The testimonial meeting Wednesday evening was the first held in the new quarters, the society having recently moved the reading room from No. 589 Main Street, East Orange. The meeting was largely attended, and gave evidence that the seating capacity of the rooms would soon be inadequate to accommodate the congregation.

After a short address by the First Reader the meeting was given over to the audience. Individual testimonials of healing of sickness and sin were then offered and were characterized by a spirit of deep earnestness and gratitude. The entire service was conspicuous for its quiet dignity and absence of emotional zeal. Cases of healing are not infrequently reported as occurring during the services.

The reading room is open to the public daily. All Christian Science literature may be found upon its tables and also for sale. Visitors are cordially invited to all services and to the reading room.

*The Orange (N. J.) Journal.*

### Christian Scientists in Montreal.

Of the many denominations holding Sunday, and occasional week day, services in Montreal, it is doubtful if any are so little known as the Christian Scientists. Yet they have been in Montreal for ten years, and on Easter Sunday opened a pretty little church at the West End.

There are now five hundred branches in all the principal towns and cities in America, and also churches in London, Paris, and Berlin. The Boston Mother Church, which started twenty-one years ago with twenty-six members, now has from fifteen to twenty thousand.

Each branch is under its own local government, and is thoroughly congregational.

The branch in Montreal was started between nine and ten years ago by Miss Shannon, a graduate of Massachusetts Metaphysical College, the college of the denomination. This starting was in the parlor of a house, No. 106 Stanley Street. They next moved to 2268 St. Catherine Street, then in 1889 Lindsay Hall was rented. In 1891 Harmony Hall was started.

It was in December, 1890, that the Montreal church was organized, however, and it then had fifteen names on its roll, with Miss Shannon as pastor. A year ago they moved to Karn Hall, and last November they commenced work on their new church building opposite Western Square, and this neat little edifice was opened on Easter Sunday in an unpretentious way, with seventy-five members on the roll. The land and building cost $14,000, and when all work is completed will cost $20,000.

*Montreal Daily Star.*

The *Church Standard* quotes an English clergyman as saying that "the man who should make the world understand what prayer really is, and what are its laws—its invariable conditions of success—would be, perhaps, the greatest benefactor of the race who has appeared for a thousand years."

## The Lectures.

### At Haverhill, Mass.

City Hall was comfortably filled last evening (Monday, May 28), when Hon. William G. Ewing of Chicago delivered a lecture on Christian Science. The audience consisted of many out-of-town people, including persons from Boston, Newburyport, and nearly all the surrounding towns. Mr. Ewing is a most able speaker and presented his subject in a clear, straightforward manner that was pleasing to his hearers. He was introduced by Lawyer Robert D. Trask.—*Haverhill Evening Gazette.*

The introductory remarks of Mr. Trask were in part as follows:—

*Ladies and Gentlemen:*—A review of the history of Christian civilization, discloses the fact that intolerance, in some form, appears in every stage of its development. Intolerance, the offspring of the meaner sentiments of the human mind, has ever been an enemy to true Christianity and true progress, and oftentimes an enemy in disguise. Beginning with the earliest history of Christianity, it appears in the persecutions. We find, first, the Christian persecuted by the Jew and the Pagan; then, Waldenses and Protestants persecuted by Catholics; later, Catholics and Nonconformists persecuted by the Established Church, and the Jew by everybody; and still later in our own New England, we find one branch of the Pilgrims fresh from the persecutions of the Established Church of England, persecuting all other branches not adhering to its theology. Happily the days of the religious persecutions are past, but the spirit of intolerance is still present with us. It may be seen in the church in an ardent devotion to one's creed and a severe hostility to the creed of one's neighbor, demonstrating the truth that some of the teachings of Christ have been either entirely overlooked or misconstrued. It may be seen in politics in the intensity of party prejudice, resulting in the countenancing and unholding of great political wrongs. And it may be seen in social life, nurtured by wealth and fashion, tending toward the permanent establishment of caste, which is so contrary to the spirit of liberty and Christianity.

There are two things in the world that have never yet been cornered in any market of the world; two things that are not yet controlled by any combination or trust. These two things, are *trouble* and truth. I have never known of a single instance, where a man went out looking for trouble, pursuing his search industriously and persistently, that he did not find what he was looking for. And his success did not depend upon his social standing nor upon the fact of his being either a millionaire or a beggar. The search for truth is more difficult, for truth and error are so interwoven in the texture of life, that it is not easy to get at the threads of truth and follow them; but the man who honestly, diligently, and persistently seeks truth, finds it; and it makes no difference whether he be a plutocrat or a democrat.

This meeting is under the auspices of the Church of Christ, Scientist. I am not a communicant of this church nor of any church; but there is at least one plank in the platform of Christianity on which I stand firmly, and on which every unchurched, honest, thinking man and woman stands in common with the Catholic, the Protestant, the Christian Scientist, and the Agnostic. It is the plank containing these words: "Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets." I am here to introduce to you as the speaker of the evening, an eminent member of my own profession, of national reputation; and I assure you that whatever may be our own views we have a great treat in store for us as listeners to his speech. I take great pleasure in presenting to you, Judge William G. Ewing of Illinois. *Correspondence.*

### At North Adams, Mass.

Rev. William P. McKenzie of Boston lectured last evening (Monday, May 21) at Grand Army Hall under the auspices of First Church of Christ, Scientist, to a large audience composed both of the members of the local church and those interested in learning the tenets of the new faith. In fact, it was to this latter class that the lecture was more especially directed, the subject being "The Truth about Christian Science." The speaker was introduced by Superintendent of Schools I. F. Hall, and spoke for about an hour and a half in an easy conversational way concerning the basis on which the Christian Scientist builds his faith. He explained that the Scientists lay such stress upon the healing of the sick because it is so eminently a practical and Christian-like way of showing forth to the world the power given to the true believers.

*Evening Herald.*

Professor Hall's introductory remarks were as follows:

*Ladies and Gentlemen:*—When I accepted your kind invitation to introduce the eminent speaker whom you are convened to listen to this evening, I forgot that Cicero once told his pupils that an introduction is never tolerable unless it is necessary to *conciliate* your audience. Before such an audience as this, therefore, may I not be pardoned for declining to fulfil my promise exactly as I made it? May I not be allowed, instead of *introducing* the distinguished gentleman, to extend to him a hearty welcome to our young, prosperous, and progressive city, where there are evidently *more* than a *few* people liberal, open-minded, and broad-minded enough to give a listening ear to the presentation of truth in a new form by an earnest seeker after truth.

Unfortunate, exceedingly unfortunate, is that man who, having obtained one glimpse of some inspiring truth, is satisfied with that, and closes his eyes forever afterward to all the varied manifestations of life's great verities. Blessed, thrice blessed, is the man whose mind is open day by day to new revelation of the old, old story. Especially is this true of those things which pertain to our social relations. In the progress of humanity upward from the lower forms of life to those which are more complex, one truth is most apparent, that we are every one of us a part of that great organism which we call society, that whether we will or no, we touch elbows in mind and heart continually, and come to be more and more a constituent part of one great whole—human society.

As the hand cannot say to the eye, "I have no need of thee," and the eye cannot say to the lips, "I have no need of thee," so it is not possible for any one of us to say to our neighbor or friend, or even to our enemy, "I have no need of thee." We are so bound together in this organism of which we are a part that what helps one, helps everybody else; that which purifies and uplifts one life, must purify and ennoble every life. And what is of more worth to society (when it is full of aspiration for what is noble and pure) than a human life seeking earnestly for truth in heart, and thought, and deed? As Dr. Storrs expressed it many years ago, at the time of the great California fever, so let me say, with a slight variation, "Better than a hundred Californias or Porto Ricos every year is one pure and holy life in the history of a nation that would be noble." Therefore I am glad to present to Mr. McKenzie an audience who will give him their undivided attention and their sympathetic interest. *Correspondence.*

### At Des Moines, Ia.

Judge William G. Ewing of Chicago, delivered his lecture on Christian Science before two thousand persons yesterday afternoon (Sunday, May 6). The threatening weather doubtless kept many away. Seldom has any one addressed a more respectful or attentive audience than that which confronted the distinguished jurist. While the great majority of the audience was not in sympathy with the doctrine, there were no scoffers in evidence. They evidently came with the feeling that if the belief was one which a person of Judge Ewing's standing could entertain sincerely, there was much about it concerning which they had been misinformed, and perhaps something of value to learn.

The dignity and evident sincerity of the speaker commanded respect. He had no words of abuse for believers of other faiths. He said he had been baptized in the Presbyterian Church when an infant and for more than a quarter of a century he had been an active member of the church. He said he left it not because he found it wrong but merely because he found a higher, more exalted faith. For years he had been daily praying for health and strength and happiness, but instead of relying on God to answer prayer had steadily patronized the drug stores, thereby virtually admitting that he had no faith in the efficacy of his prayers. When he came to a realization of a more sublime faith, he did not materially alter his religion, but changed to a stronger faith in what he had always accepted in theory but not in practice.

Judge Ewing was introduced to the audience by Miss Mary Stewart, who said in presenting him:—

I am very happy to greet you in the name of First Church of Christ, Scientist, of Des Moines. We appreciate very greatly the presence of so many on this uncertain day, showing as it does a broad-minded readiness to hear a new declaration of the great old truths of Christianity —new only in the sense of a greater practicability and adaptability to human needs of that which has always been true. We are fortunate in having with us to-day one who is clothed with authority, being a member of the Board of Lectureship of the Mother Church of this denomination; one who has tested and experienced the beneficent power of Christian Science; one who has delved deeply into the study of it, and who by reason of deep research and actual demonstration knows whereof he speaks.

The message of our Master was love and peace and joy. This is the message of Christian Science. I have the great pleasure and honor to present to you the Hon. William G. Ewing of Chicago, who will speak to you of "Christian Science, the Religion of Jesus Christ."

*Daily Iowa Capital.*

### A Sign of the Times.

What a significant sign of the times was there when at the General Methodist Conference held in Chicago this week the conference in a body refused to declare "we are as much as ever in favor of observing the kneeling attitude." Among all the various outward changes that have taken place in religious matters, this breaking away from ancient discipline in the conventional bodily attitude for prayer is one of the most significant. Any one who has prayed truly and from the heart knows that such aspirations form themselves without regard to the postures of the body. They may take shape in the mind first and then in words, or they may never pass the lips to the hearing of man. They are "the soul's sincere desire—uttered or unexpressed." And this is to be the whole world's definition of prayer in the days that are coming.

## From Our Contributors.

### A Song of Light.

BY WILLIAM BRADFORD DICKSON.

"LET there be light," and lo, across the darkened consciousness there gleams the softening dawn of Truth's eternal day.

"Let there be light," behold a newly kindled torch,—awakened life,—re-lit with heavenly fire from Love's refulgent land.

"Let there be light," and o'er earth's barren wastes the Holy Spirit's fadeless beacon cheers the sick and fainting heart.

"Let there be light,"—forth springs the perfect man,—the child of Light,—reflecting Spirit's changeless glow.

"Let there be light,"—thus vanishes the night of matter's reign,—thus gleams the Christ-day over all.

"Let there be light,"—forth from the bosom of the Infinite,—the Father of all Light,—the sun of righteousness with healing in His wings,—bursts forth o'er all the earth.

Let there arise in every heart the one true Light which lighteth all the world with peace and love.

"Let there be light;" "Let there be light."

### What Christian Science has done in Our Home.

BY CARRIE BARSTOW PHELPS.

FROM my earliest recollection the dark, sad shadows of sickness and suffering had been over our home most of the time, until September, 1898, when Christian Science came to us; now we have health and happiness where care and sorrow had seemed to reign for many years.

My case was one of weak constitution, inherited from my mother, whose life seemed largely made up of suffering. I do not remember an afternoon in school that I did not have a headache, and many times mother would have to help me to bed as soon as I reached home so that I might sleep away the pain and nausea. I always had to be careful about my food, and as I grew older had more and more trouble from dyspepsia and sick headaches, until I was obliged to be put under a regular course of medical treatment.

After months of treatment, and with only partial relief at times, another physician was called and he tried faithfully to build me up, but I only seemed to add more ills. Then followed more examinations, and one of the physicians said I was suffering from diabetes. The other examining physician advised an operation for a serious eye trouble for which I had been under treatment by an oculist for some months.

I then went to New York and was treated a number of weeks by Dr. D., who is called one of the specialists of the world in eye troubles. I came home quite improved generally, but it was only temporary. In a few months the old troubles were renewed and another and more serious one appeared. This brought me down to the bed, where I was confined ten months. When at death's door Christian Science came to the rescue and I came back to life and health.

We called a prominent physician of Hartford to consult with the local physician. He pronounced the trouble appendicitis, but said I must be made stronger before an operation could be safely performed.

After many weeks had passed I had a relapse, and the consulting physician was again called and one of the best trained nurses of another city came to aid them. It was agreed at this time that the difficulty had become tubercular, and that inflammation of the bladder had set in.

For nine weeks they nourished me by nutritive enemas, as I could only take liquid food and in the smallest quantities. They tried to keep me comfortable by giving mor-

Digitized by Google

phine hypodermatically. This faithful physician had talked my case over with other doctors, and finally brought it before the County Medical Board, but they were unable to suggest anything more than he was doing. After seven more weeks of patient work from this untiring nurse and physician, during which I failed rapidly, I had a second relapse, when my physician gave me up, for my stomach could no longer retain anything.

As the physician left the house he expressed sorrow at what seemed to be the inevitable. He had directed the nurse not to try to give me any more medicine, but just to use the morphine. The nurse said, "Then that is all that we can do," and he said, "Yes."

That afternoon my parents re-read a letter which we had received about a month previous from the Second Reader of the church in Denver, advising us to try Christian Science and giving the address of a practitioner in Hartford, and father took the train to go and look up the address. He told the Scientist I might not be living then, but he took my case and came out with father.

Before the morning of my first night's treatment I was able to drink three glasses of cold water, and when my nurse looked to see how the purple bed-sore was after the night without rubbing or applications, she was speechless for gladness and hope, for the flesh was white.

For my breakfast I ate bread, potato, and meat, and drank a cup of coffee. From that time I ate heartily of whatever I liked, and the little down pillow and padded ring used to keep the bones from the bed were soon dispensed with. The third night after treatment the stoppage of the bowels, which had for weeks resisted everything tried under the doctors, was relieved. When this trouble disappeared mother and the nurse were happy in the full sense of that word; father, too, was with them, and I was turning my face away from my grave, hoping for life instead of beseeching them to pray that I might die.

In five days I was able to be put in a chair. In less than two weeks was walking about my room, and in about six weeks went away on a visit of several weeks.

After mother saw what Christian Science had done for me she was ready to have the same treatment. From childhood she had never been strong, had always been troubled with dyspepsia and sick headaches, and for the last twenty years or more was rarely able to be away from home more than to take a short drive. Two severe attacks of spinal meningitis left her more feeble than before, and the old difficulties were so much aggravated that she was confined to her bed about half of nearly every week for six years; two years of the six, she did not get about the house excepting as she was moved in her chair. It was a great trial to see the sufferings of our gentle, loving mother through the many years of her invalidism, patiently hoping for some abatement of the siege of illness; but all hope was blasted by the appearance of a disease that medical testimony says has never been known to be healed.

We know now that these things were not God's realities, and were only real to the mortal sense that believed in them, They are not incurable in the light and understanding of God's healing through Christian Science; but at the time they appeared they brought the full measure of fear, for we believed them to be real. When mother commenced with the treatment she began to eat of everything that she liked. There were many struggles, but she ate, and now she says she would not know that she has any stomach.

The goitre commenced to diminish in size and the pain and choking sensation ceased, until there was nothing in appearance or sensation to indicate that she had ever had any such disease.

She also suffered from deafness that had grown upon her until she could only hear the words that were spoken loudly near by. This was also healed, and now she easily hears the clock tick from the adjoining room.

This account would not be complete without mentioning that the man who worked for father was also healed of dyspepsia. He has united with the Mother Church, and has himself successfully treated others, though he has had no advantages to gain an understanding of this Science except from the study of the books.

To say that we are grateful for such great blessings as are ours, and that we love Christian Science and love to call the Founder of this great Cause, Mother, is to express but a small part of what Love has brought to our home.

## Casting Bread upon the Waters.

BY CARDIE F. HILLMAN.

IN the Christian Science Hymnal we find these words:—

Cast thy bread upon the water,
Thinking not 'tis thrown away.

If we give to our brothers and sisters, the bread of heaven, knowing that God will bless the gift, we shall surely see the hungry ones fed and comforted.

I desire to relate an instance to show how faithfully we should obey the call of Love to help our fellowmen.

Last summer, or early fall, I met a young girl in a business way. She spoke of her poor health, and of the suffering her mother was in. Christian Science was presented and she was told to rely upon God as the only help and strength. As the thought of His protecting care was brought out, tears filled her eyes and she said the doctor told her that worry had caused her sickness. Thus the mental cause was recognized. It was brought out in the conversation, that her work in the mill was their only material source of support, and she was so afraid something would happen to shut this off that the very fear had prostrated her, throwing them on the kindness of their neighbors.

The invitation was given for her to bring her mother to the reading rooms of the New Bedford Church, and we parted. Some Sentinels were mailed to them, and about two weeks later the mother called at the reading rooms the afternoon that I was in charge.

She said that years ago their family was well-to-do, but the husband was in poor health and they traveled around, trying to find relief. They exhausted their money in doctors' bills and medicine to no avail. He passed away and left her penniless, with a son and daughter to care for. Before long the son was taken with a severe sickness. One day the doctor pronounced him recovering, but in a few hours he passed away. The same doctor said the daughter could hardly live to be twenty years old, as she was very frail indeed. So the mother constantly worried about the daughter's health, making herself miserable, and this in turn frightened the daughter. Thus they both held strongly the thought of death for each other.

In this hour of utter darkness the light of Christian Science came to them. She went home from the reading rooms brighter and happier for the talk, taking literature to study and promising to come to the church service soon. She did so, and I loaned her a copy of "Science and Health with Key to the Scriptures." One day she said, "I am being healed by that book. I believe every word in it, and must own it."

For some time after that, we did not see her. About Christmas she came to the reading rooms with three dollars to buy the priceless book—Science and Health—that was healing her daughter and herself, and bringing sunshine and cheer into their home. Week by week she had saved a few cents, and as she began to realize God's ever-present care, the way opened for her to earn a little daily. She went without whole shoes, to save the money for the book. Her neighbors said she would die from exposure, but she

Digitized by Google

was more healthy this past winter than she had been in years. With beaming face she purchased Science and Health, which was to be a Christmas present to her daughter.

The Scientists told her she had made a demonstration for the Truth and she would now have the shoes also—as of course she did. "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you."

Words can never tell the help they have received from that blessed book that heals them when errors come up and has destroyed the awful fear of death.

Let us all cast the bread upon the waters, knowing that every crumb will help some one, some where. Let us never withhold the comforting, healing Truth, but humbly, gladly, give to others that which has fed and clothed us.

## A Step Forward.

BY E. E. E.

I WANT to express my gratitude for the article in the *Sentinel* of April 19 entitled, "True Possessions." It showed me that I had allowed a dulled sense of the truths brought out in the article, to take possession of me. I was aroused to a better realization of the importance of watching my thoughts, that they be winged with love and healing, and not with doubt, impatience, anger or any of evil's dark brood. We need to remind ourselves often of the words of Jesus which our Leader has so wisely caused to be placed on the first page of the *Sentinel*.

We are apt to fall into the way of letting our thoughts run on without examining them, forgetting that wrong thoughts even though unspoken, do harm.

I was led to examine myself, and found that instead of "Love long continued and faithful," I was impatient, with somewhat of resentment because some of my friends whom I was anxious should accept Christian Science, did not see it as the Truth. I was blinded to the fact that this would only tend to drive them further away.

I turned about, and at once wrote a letter to them with love in my heart, and now I am striving to be patient and loving to all the doubting and fearful ones.

Our Leader has given us these lessons over and over again, but alas, so often to ears that are dull. I am learning more that Love is the one thing needful.

## Letter to Mrs. Eddy.

Concord, N. H., June 4, 1900.

Mrs. Mary Baker Eddy.

*Beloved Mother:*—Once again I make the pilgrimage to Concord to look upon your face—not through any sense of personality—but had it not been for your teaching I should never have looked upon the face of any one again. Christian Science healed me of a claim of blindness. The one sweet look you cast upon me as you passed me in your carriage last summer, so uplifted my spiritual thought that many beautiful demonstrations were made on my return home. One I will tell you of, knowing that you love to hear of the wonderful cures of both sin and sickness being made through the teachings of your book. A gentleman having a claim of paralysis for fifteen years came to Christian Science for treatment. He was a man very fond of the pleasures of the world. Both limbs were dead to sense. He had been treated by many noted specialists and his case abandoned by them as incurable. To-day he is walking. Beloved Mother, in humility and love, I send this little note to you—only another acknowledgment to you—that through your teachings, the Truth has again caused the blind to see and the lame to walk. Yours in Truth and Love,

FANNIE C. BRADY, St. Louis, Mo.

## Testimonies.

### A Severe Case Completely Healed.

One Wednesday evening a few weeks ago I was making all possible speed toward a prompt attendance at our usual meeting. I had been frying fish and had a quantity of grease in a skillet as I was cooking them as one would doughnuts. My dinner was served and I thought to remove the smoking fat. So I took hold of the handle of the skillet, went down to the cellar, opened the furnace door, and threw the grease in on a hot bed of coals. The flames burst forth and from my waist up I was a mass of fire. Instinctively I placed my hands over my eyes and hair, then stepped up into the coal bin, took my apron and beat out the rest of the fire. I called out but no one heard me. I then walked up stairs. My daughter came out in the kitchen and said, "Mamma, what is the matter?" I said, "I guess I am burned."

My daughter wished to go for some healer, but I said, "No; I do not need any one. If you wish to please mamma you will go down and eat your dinner, do up the work, and then come back. I want to be alone." There came no doubt, no fear, nothing but an absolute reliance on God. I read a little in our text-book, "Science and Health with Key to the Scriptures." Then I went to work. This accident occurred about half past six in the evening; by half past nine the same evening all suffering was destroyed and I was asleep.

The next morning one eye was closed so I could see only a little daylight. On the eyelid and just below the eye were large puffed places. From the top of my forehead down to my breast, and from where the hair grows back of my ear to my nose and half the other side of my face was a solid burn. I had inhaled the flames and in my mouth were blisters. My upper lip was so swollen that the end of my nose and lip nearly met. My face on that side was beyond all recognition, terribly disfigured, black, and altogether unsightly. One hand was burned. The greater part of three fingers and nearly to my elbow a solid burn, with the exception of a small strip on the inside of my arm. No applications were used, I simply washed my face with soap and water to remove as much as possible of the grease and coal dust. I was my own patient.

The neighbors became quite excited; one gentleman came in and said, "What are you doing for that?" I said, "I am taking care of it myself." He knew I was trying to be a Scientist. "Well," he said, "well, but you should do so and so." I told him I did not need anything, and that seemed to settle it. A few days after his wife, who was with him at the time, came in and said, "Well, I never saw anything heal like that." I had no thought of being disfigured until people outside of Science came. Then I had to know God's idea could not be disfigured or marred.

In ten days I was back in church. I stood talking a long time with a lady. She did not notice a thing out of the way. There was nothing. Some one called her attention to my face with an entirely new skin on one side. There is no discoloration on either face or arm, no scars or appearance of any kind to indicate such an experience.

This is much, but nothing compared to what Christian Science has done for me in making me a better woman, in implanting in my consciousness a desire for higher and holier things. All this is due to the Discoverer and Founder of Christian Science, Rev. Mary Baker G. Eddy, who with her face turned heavenward, calls us on to higher work. May we fit ourselves to follow. And when the voice calls come higher may we have oil in our lamps, and our ears open to catch the faintest whisper of Love. From my heart of hearts I thank her for what she has done, not only for me but for all mankind.

MRS. MARGARET S. HOWLETT, Kansas City, Mo.

### Found Happiness and Contentment.

It is about two years since I first heard of Christian Science. At that time I was a most unhappy, discontented woman. I had nothing to look forward to. I had no religion, did not read the Bible, and had no faith in God or man. One day I picked up a *Journal* that some one had lost and I read every word in it from beginning to end. The Truth that I had been waiting for all my life was there, and I took it in as the parched ground takes in an April shower. I soon got "Science and Health with Key to the Scriptures," and have read it with the Bible ever since. It has indeed revealed a new heaven and a new earth for me.

I had no need of physical healing, the blessing of good health has always been mine, but the moral healing has been everything to me. After beginning to read Science and Health I lost a temper which had made me very unhappy. I began to feel my burdens lifted one by one, and the old discontent and weariness are gone and in their place is a peace that passeth all understanding.

I left off my glasses about a year ago, after wearing them for years. Christian Science has helped me wonderfully in business. I have done more work and with less fatigue than ever before. People whom I meet ask me, Have you found the water of eternal youth? and I answer truly, Yes; and then I talk for Science.

Our coming into Science reminds me of a tiny brook which starts from its icy bed in a snow-capped mountain, leaping and dancing for joy, that it has found the blessed sunlight. The world is new to it; it babbles and murmurs on its way till it comes to a small obstacle, by overcoming which it gains strength to meet the next, still working its way, with the glorious ocean in view. So it goes on through gloomy forest and rocky glen, gaining in strength, till it sweeps over the falls and through the peaceful valley, now and then finding a short resting place in some beautiful lake with lilies on its bosom and under the cool shadow of the trees which line its shores. It has become a mighty river by this time and on it goes into the heart of a great city where it is tried as by fire, by dams and mills where its mighty power is used for the cause. By this time it has waxed strong, and the impediments in its way are as chaff, and nothing can hinder its way to the ocean.

So with this Truth which has come to us through Christian Science. If we keep on the right course, overcoming day by day as we receive strength, we shall grow in Love and Truth till no obstacle can hinder our demonstrations over error, and we shall indeed be witnesses for God (Good).—E. E. BURGESS, Philadelphia, Pa.

---

### Christian Science in Obstetrics.

I did not come to Christian Science through healing. I had possessed a copy of Science and Health for several years before I became a Scientist, and all I read seemed good common sense. It has proven to be such in every instance of my four years experience. After I took a stand for Christian Science I discovered plenty of spiritual healing to do, however.

I have found that I have made progress in many ways, especially in relying on Principle to guide my family and myself. I had been inclined to do all the planning, and to arrange matters for days to come which maybe would never materialize.

I gave birth to a baby girl with no help whatever but Christian Science, the healer not even being present. I was on my feet when the baby was but six hours old. The second day I walked up and down a long hall, also the third day. The fourth day I put my clothes on and went to meals. The eighth day I drove two hours or more. The tenth day I was shopping half the day and made no difference in my usual habits from that time. I ate everything I pleased from the time my baby was an hour old. This was much pleasanter than to be restricted to food usually allowed at that time. Many of my friends who were not Christian Scientists said that in time I would feel ill effects, but they were mistaken, as a year and a half has gone by and I am still perfectly well.

The help in making a financial demonstration has been much to my husband and myself. Until January of the present year my husband was in the patent medicine business, which became more and more distasteful to him as he grew in Christian Science. He did not seem to be able to leave it until the first of this year, when his position was taken from him and we had to rely on divine Love to take care of us, and we are realizing more and more every day that God is the source of all supply. My husband and myself received class instruction two years ago from one of Mrs. Eddy's loyal students, who has guided us upward in the paths of Truth, helping us to know God is All-in-all and will guide and take care of us in every instance.—H. E. HAMLIN, Chicago, Ill.

### Healed by Reading Science and Health.

About ten years ago, I was instantaneously healed of typhoid fever by the reading of the preface in "Science and Health with Key to the Scriptures."

Later, when I was down in the very depths of despair, when my heart seemed to be crushed and torn and bleeding, until I was well-nigh unto death, I felt that could I only hear our blessed Mother speak, she would most surely comfort me. I took up "Retrospection and Introspection," and the first thing my eyes rested upon were these words on page 98, "Nothing except sin, in the students themselves, can separate them from me." Again, on page 39: "Early had I learned, that whatever is loved materially, as mere corporeal personality, is eventually lost." I read those two passages and re-read until I was answered. I was helped onward in this beautiful way through my experience, far beyond my dearest hope. I have been enabled to help others to know and understand Christian Science as never before.

With a heart filled to overflowing with gratitude I can testify that I am healed, not only physically, but mentally.

CARRIE E. NYE. Los Angeles, Cal.

---

### Thankful for Many Blessings.

I feel I must again express my gratitude for the blessings of Christian Science; first to our dear Mother, Mrs. Eddy, for all her labors in giving us "Science and Health with Key to the Scriptures" and her other writings, as our guide to the knowledge of our true being. I want to thank her for those few sweet words in the *Sentinel* last August, "Peace, be still! our Father is at the helm." They have come to me constantly since and have smoothed away many seeming difficulties; her words so often give us a joy that we long for the whole world to understand.

I am so thankful, too, for the Bible Lessons. Such beauty and depth of meaning is thrown upon the Book when read in the light of Christian Science. A dear old clergyman years ago used to call the Bible "the Father's letter to show us the way home," and how truly *now* does it show us the way to Life and Immortality.

I am thankful for all things, daily blessings, for all things are blessings, even the difficulties, if we but know that one Mind, the Mind that is Love, governs all.

M. C. L., London, Eng.

---

The *Watchman* says: "The men who really seek to understand the Bible and regulate their lives by it, develop the best type of human character that the world has ever seen. That simple fact is an argument for the divinity of the book."

## Religious Items.

"Nothing is more touching in the history of our Lord's earthly life than his manner of intercourse with the despondent and even desperate," says the *Congregationalist*. "His presence inspired them almost inevitably with courage, and he evidently addressed them in a way to which they were unaccustomed and which others seldom used. No matter how forlorn the case, how despondent the heart of any man or woman whom Jesus met, he never rebuked them unless rebuke was actually the one means of revealing his absolute comprehension of their heart's necessities. That was the thing which had to be done if they were to confide in him and receive a blessing from him, and once in a while it could be done only by sharpness of speech."

In a sermon recently published in the New York (Baptist) *Examiner*, the Rev. Dr. Wayland Hoyt says: "The wonder of my boyhood was an old pear-tree in the back yard. By nature it was the commonest sort of tree, producing fruit so acrid that a pig would scarcely touch it. But that tree had become regenerate. There had been grafted into it the luscious Seckel pear. And the grafts of this sweet and dainty pear transmuted the juices of the natural roots and trunk into exquisite fruitage. A Christian may not bring forth bitter, harsh, worldly fruitage. He has been touched to higher issues. Sad for him if, professing to be grafted into Christ, the fruit of the Spirit does not hang upon the branches of his life. Good works are a mighty matter for a Christian."

The (Episcopalian) *Church Standard* says that "Edward Markham, the poet of 'The Man with the Hoe,' while speaking in New York in the West Side Auditorium, said: 'There have been trials for heresy recently. There have been people put out of the Church. Do you know who ought to be tried for heresy? Whenever a man is found not to give food to the hungry; whenever a man is found not to give a drink of water to the thirsty; whenever a man is found who will not visit the sick and carry Christ's comfort to the dreary home, that man ought to be tried for heresy.'"

Counselling Unitarians in regard to their conduct toward people of other convictions, the *Christian Register* says: "We must learn how to be narrow enough to have a definite purpose without being bigoted, how to be broad enough to include all human interests without being vague and thin, how to have zeal without wrath, charity without weakness, belief without bigotry, moral perceptions without censoriousness, broad sympathies without laxity of judgment. Then we must go ahead seeking fellowship and co-operation on every hand among those who are like-minded.

"My friends, we must *desecularize* ourselves. We must get above the chink of the dollar, the swish of the silk, and the rustling leaves of the essay. All the valuable secular helps in the church should be nothing other than the means to the end. We object to that kindergarten kind of worship where forms and objects become an end in themselves. But we too often err in allowing the secular things of life to be our end and aim."—Extract from a paper read by the Rev. Charles E. Varney before the Wisconsin Unitarian Conference.

In an editorial the *Universalist Leader* tersely says: "Every time you denounce a wrong, proclaim some good. That is the Gospel method. If you know a good word speak it; if you know a good song, sing it; if you know a good deed, do it, and let your speaking and your singing and your doing be known, that others may take heart. . . . If you have multiplied your talent let it be known, not in boastfulness, but that your success may turn some discouraged brother from burying his talent in despair."

A writer in the (Swedenborgian) *New Church Life* says: "The old theology caused men to fear God, because it was imagined that He is a wrathful and revengeful Being. But it is those who depart from God, because of an erroneous idea about Him, and by an evil life which is contrary to the Divine Law, who fear God and even hate Him. God is the Divine Love itself, and in the spiritual sense to *fear* God means to *love* Him."

Rev. O. P. Gifford, D.D., in a sermon published in the (Baptist) *Watchman* says: "The Christian world stands at the dawn of a new century, challenged by the Spirit of the living God to a new application of the old secret. The man, or the church, that separates himself from the living sympathy that ends in sacrifice to meet the world's need, will find himself banished from the sympathy of angels, and of the redeemed, and of the living God."

In his first sermon as a Congregationalist, preached recently in Plymouth Church, Brooklyn, Dr. A. C. McGiffert said: "Our creeds have not been altogether blessings to us. The transcendent God we have worshiped for ages is giving way to the imminent God. The world needs not a hand stretched out from another sphere, but a heart and life throbbing here among us."

Rev. Floyd W. Tompkins writes in the *Congregationalist*: "It is the healthy, fresh, natural, loving life that appeals most to men. The happy smile, the thoughtful act, the consistent doing of right, but the doing of it quietly and unostentatiously—these speak of the Christ-spirit within."

The *Sunday School Times* says: "The Hereafter can have little practical power on the life and character of a person who neglects the present. As Dr. Stalker says, 'Religion should be not an insurance for the next world, but a programme for the present world.'"

The Methodists have removed the time limit on pastorates, so that, if mutually agreeable, pastor and people may remain together indefinitely beyond the five years heretofore fixed.

The *New Church Independent* says: "For all right judgment of any man it is useful—nay, essential—to see his good qualities before pronouncing on his bad ones."

The realization of God's presence is the one sovereign remedy against temptation.
FENELON.

The best way for a man to get out of a lowly position is to be conspicuously effective in it.—ANON.

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The June *Journal* devotes two pages to a list of publications, all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice is also given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy or more, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 675 pp. THE ORIGINAL STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

**One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.**

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political and Governmental Notes.

The strike situation in St. Louis is hardly to be distinguished from civil war. The sheriff's posse of armed citizens, made up, to some extent, of well-to-do men, fired upon a crowd of five hundred strikers and their sympathizers on June 10, in which two men were killed and three fatally wounded. The public is reported to be very much in sympathy with the strikers, and the deputies are hooted on the streets. Many of the deputies resigned and others are said to be intending to follow them, because several prominent men of the posse are facing the charge of murder on account of the fight of June 10. The police are accused by the non-union street car employes of showing partiality for the strikers, and neither the mayor and the sheriff, nor the mayor and the governor are working together in harmony. Violent outbreaks attended by bloodshed were of daily occurrence last week.

The naval bill, as finally passed, authorized the building of two battleships, three armored cruisers, three protected cruisers, and five sub-marine torpedo boats. The bill also authorized the Navy Department to exceed the limit of $300 per ton for armor, which will cause work to proceed on the battleships Maine, Ohio, and Missouri, authorized May 4, 1898, and delayed because armor could not be purchased at the price fixed by Congress, and contracts will also be let for the vessels authorized under the act of 1899: namely, the battleships Georgia, Pennsylvania, and New Jersey, and armored cruisers, West Virginia, Nebraska, and California. The act of 1899 provided that no contracts should be made for the hulls of the vessels until the armor had been contracted for at an average rate not exceeding **$300 a ton.** Under the bill recently passed the way is opened to let the contracts for these vessels.

Secretary Root has instructed the army engineer in Chicago, Major Willard, to investigate the current created in the Chicago River by the opening of the drainage canal, and to report on all the conditions existing, with recommendations as to what velocity of current is safe for navigation of the river and the channel. Based on this report Secretary Root will make a ruling as to what current shall be allowed. If the drainage canal trustees do not accept the edict, it is within the power of the Secretary to close the canal altogether by withdrawing the permission for a premature opening.

General Otis, who has just returned from the Philippines, in an interview in Washington, said that the Filipinos are the very best of the Asiatic races living on the Pacific coast and islands, and that they are quick to learn American ideas and eager for instruction in the English language. With regard to the progress of the war he said: "In my opinion, the conditions in the Philippines are rapidly improving. We are in effectual control of the interior of several of the larger islands where the Spaniards never secured foothold.

### Foreign News.

The disturbances in China have grown much worse during the past week, and the combined naval military forces, or marines, of the United States, Great Britain, Russia, France, Germany, Austria, Italy, and Japan are being used to protect the foreign population of Pekin. The Imperial Chinese troops seem to have openly gone over to the Boxers and have joined the latter in committing depredations against foreigners. It is reported that they have burned the Japanese legation and killed one of the attaches, and that they have surrounded the quarter occupied by the diplomatic corps, and threaten its destruction. Both Russia and Japan are said to be landing large forces independent of the other powers, and political observers believe that the partition of the Chinese Empire is about to be attempted. The foreign column, composed of marines from the ships of the various foreign nations, on the march to Pekin, had several encounters with the Boxers, in which many of the Chinese fell.

The British under General Buller succeeded last week in dislodging the Boers from Laing's Nek, where they had so long successfully disputed his entrance to the Transvaal, and now he is in a position to co-operate with the main British army under Lord Roberts. The latter was kept busy last week in driving the Boers out of the country behind him, where they dashed in and defeated and captured a battalion of yeomanry and tore up many miles of the railway connecting the British invading army with its base of supplies. President Kruger has established the government temporarily in one of the strongholds among the hills.

The Japanese Government has informed the Treasury Department, through its legation, that it has issued an order restricting emigration to the United States which will practically be prohibitive. The Japanese Parliament is now in recess, but the Government, taking advantage of an emergency privilege in its laws, has decreed that an average of only five persons may emigrate to the United States in one month, from any of the forty-seven perfectures in Japan.

The Ashantee war has proved to be a very serious matter. With the comparatively small number of men the British have had available for meeting the native hordes, they have not been able to do much toward checking the movements of the Ashantees.

A parliamentary return issued June 9 shows that thirty-six members of the House of Lords and twenty-eight members of the House of Commons are serving with the British troops in South Africa.

### Industry and Commerce.

The construction of ships shallow enough to carry economical loads on the lakes, short enough to pass the St. Lawrence and Welland canals, and withal deep enough and of proper lines to withstand the Atlantic seas, has been a problem that naval architects of the lakes have been working on for months and that they now think they have solved. To pass the canal these ships must have a draught not to exceed seventeen feet and a length of less than 245 feet. To be economical carriers they must load not less than two thousand five hundred to three thousand tons. In the past it has been necessary for all lake ships to lie by for four or five months in the year earning nothing. Hereafter ships of a size to pass through these Canadian canals will go from lakes to ocean unhindered, their location based on the state of freights.

Wheat men say that no such crop was ever before raised in the West as is being harvested in Oklahoma, southern Kansas, the Indian Territory, and southern Texas. The acreage sown was unprecedented and the quality of the grain was never better. Oklahoma alone will harvest more than 30,000,000 bushels. Besides wheat, the oat, corn, cotton, and vegetable crops were never more promising.

Of the $18,000,000,000 worth of commerce done by all the nations of the world, England's share is 18.3 per cent, Germany's 10.8 per cent, and 9.7 per cent falls to the lot of the United States, writes United States Consul Winter at Annaberg, in a report to the State Department, comparing the relative positions of the three leading countries in the trade markets of the globe.

The Phœnix Bridge Company of Phœnixville, Pa., has received the contract to build the great St. Lawrence River bridge at Quebec. The contract is the largest ever given to a single concern for the erection of a bridge, the contract price of which will aggregate $4,000,000.

For good years the average fig crop of the Smyrna district amounts to about 26,000,000 pounds, but last year the yield was only 18,000,000 pounds. The harvest time in Asiatic Turkey is November. The figs are chiefly shipped three months later.

### General News.

The London *Financial News* estimates that the fame which attaches to Stratford-on-Avon because of the fact that Shakespeare was born there is worth $5,000,000 to that town. The charges for admission to the poet's house, to Anne Hathaway's cottage, to the church, to the memorial, and to the Grammar School net $150,000 yearly—a sum which is equivalent to an income of three per cent on $5,000,000 capital. This calculation does not take into account the money received by the railways and by the Stratford tradesmen.

President Harper of the University of Chicago has been in consultation with the leading Russian educators in St. Petersburg relative to the founding of a chair of Russian in the University of Chicago and the filling of the same. He has received lavish hospitality, and the Czar and other high dignitaries have expressed their delight at the proposition, taking it as another proof of the drawing nearer of the two nations.

The eminent Italian archæologist, Signor Constantino Maes, has submitted a memorial to the government in which he affirms that three thousand bronze tables, constituting the records of Rome from its foundation to the time of Vespasian, are buried in the marsh at Ostia, near Rome, having been carried to Ostia after being rescued from the fire which devoured the Capitol in the year 69 of the Christian era.

Louisville, Kentucky, is soon to have a monument to Thomas Jefferson. It was shipped from Berlin, Germany, May 6. Moses Ezekiel, an American, was the sculptor and the casting was made at Friedrichagen. The monument is said to be extremely beautiful. Jefferson is represented at the age of thirty-two, bearing the Declaration of Independence in his hand, and standing upon the Liberty Bell.

M. Legani, in setting up the fallen columns of Karnak, Egypt, recently discovered a city gate. It is the first found in Egypt, is of great height, and bears the date of the eighteenth dynasty. A second important discovery at Thebes is a large tomb of the eleventh dynasty in perfect preservation.

The American Librarians Association, at the close of its annual convention at Montreal, June 12, passed a vote of thanks to Andrew Carnegie for his "unparalleled munificence" in helping libraries.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Communion Service at Concord, N. H.

THE semi-annual Communion service of First Church of Christ, Scientist, held yesterday at Christian Science Hall, was a notewortlry occasion, as it brought out the largest attendance that has ever gathered here for a Christian Science service, for the first time making it necessary to hold two services to accommodate the communicants. The latter service was held at 7.30 P.M., and was a repetition of the morning service. Fully five hundred people were present, three hundred in the morning and two hundred in the evening.

There were visitors from the states of Washington, Oregon, California, Montana, Utah, Nebraska, Iowa, Colorado, Kansas, Minnesota, Wisconsin, Michigan, Missouri, Indiana, Illinois, Texas, Florida, Georgia, North Carolina, Maryland, Ohio, Pennsylvania, New York, Connecticut, Massachusetts, and also from Canada and Norway. These visitors were among those who attended the annual Communion service at the Mother Church in Boston last Sunday, and who remained over to visit Pleasant View and attend the service here.

Nine new members were admitted to the church, making the present membership 122. The church was organized February 22, 1899, with 74 members, and this increase of sixty per cent is an evidence of the strong growth of the denomination in this city.

✠

The services were conducted by Rev. Irving C. Tomlinson, the First Reader, assisted by his sister, Miss Mary E. Tomlinson, the Second Reader, and were simple but very impressive. The Communion Hymn written by Rev. Mary Baker Eddy was used in opening, after which came the Scriptural reading, which was from Proverbs, 3 : 1–6; Ephesians, 6 : 10–18, and 1 John, 3 : 18–24. The congregation then united in a few moments of silent prayer, which was followed by the audible repetition of the Lord's Prayer with its spiritual interpretation as given in the Christian Science text-book.

The following letter from Mrs. Eddy was then read.

*Beloved Christian Scientists:*—Each day during the past week I have allowed myself the joy of welcoming to Pleasant View a dear multitude of Christian Scientists, who came spontaneously, without invitation or appointment, and with true hearts fervently. While I deeply appreciate their loving thoughts and desire to see Mother, yet, in order not to hinder my work for God and our Cause, my gates are now closed to visitors except by previous appointment. The reading room in our hall is open to all.

After writing the above I opened my Bible to the verses 7, 8, and 9 of the twenty-fifth chapter of Matthew.

With deep love,

MARY BAKER EDDY.

Pleasant View, Concord, N. H., June 10, 1900.

While the new members remained standing, the Church Tenets to which they are obliged to subscribe, were read. These tenets were written by Mrs. Eddy.

The subject of the Lesson-Sermon was "Sacrament;" the Golden Text: "And Jesus said unto them, I am the bread of life: he that cometh to me shall never hunger; and he that believeth on me shall never thirst." Correlated selections from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, explaining the Christian Science teaching concerning the Sacrament, were read by the two Readers, at the conclusion of which the entire congregation knelt in silent Communion for a few moments and followed in the repetition of the Lord's Prayer.

The services closed with the singing for the first time of the following new Communion Doxology, adapted by Mrs. Eddy, and sung to the tune of "Old Hundred:"—

Be Thou, O God, exalted high:
And as Thy Glory fills the sky,
So let it be on earth displayed,
Till Thou art here and now obeyed.

The chancel was beautifully decorated with palms, ferns, and blossoms. The visitors expressed themselves as having been greatly benefited by the services. Many of them drove out to Bow to see Mrs. Eddy's birthplace yesterday afternoon.—*Concord Evening Monitor.*

## Some Striking Testimonies.

THE capacity of the Christian Science Hall, in which First Church of Christ, Scientist, Concord, worships, was taxed to its limit last night to accommodate the visiting Scientists from all parts of the country, who crowded it to its doors. The cosmic nature of Christian Science was typified in the fact that delegates were present in the pretty little church from such far-distant sections as Marquette, Mich., from New York, Chicago, Washington, D. C., Boston, and from the South and West.

The usual experience meeting, held every Wednesday evening, assumed a unique character last night. An added dignity and beauty were given to the tone of happiness that characterizes every such meeting, by the cheerful and encouraging testimonies of those from other parts of the country. Indeed, last night's service was a miniature of the Annual Meeting in Boston last Tuesday, when reports were read from the Field. The key-note of the harmony voiced by all the speakers was inexpressible joy that the privilege was given of attending service in the church at Concord, the home of Rev. Mary Baker Eddy and the scene of many of her benefactions and noble labors for humanity. The unfeigned joy and gladness of the worshipers testified to the pure life and Christly influence of the Discoverer and Founder of Christian Science.

The testimonies were interesting and varied in their theme, save only that every voice spoke love for the beautiful city of Concord and the Concord church. The growth of the cause of Christian Science and the building of churches was witnessed to by many of the speakers. Among these was Mrs. Augusta E. Stetson, C.S.D., First Reader of First Church of Christ, Scientist, New York City. Mrs. Stetson told graphically of the small begin-

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

nings of the church she leads. Fourteen years ago they held their meetings in a little hall. The church increased until they now own and occupy a beautiful edifice. The membership is now over seven hundred, and having outgrown their present location they are building of Concord granite what is to be one of the largest and handsomest churches in New York City, the seating capacity of which will be twenty-seven hundred.

A lady from Chicago told of three interesting cases, the first being that of a Baptist minister, whose pulpit was the University Church, connected with the Chicago University. This gentleman came to one of the Christian Science churches for healing. He was cured entirely, without disclosing his profession, and when asked to attend the Wednesday night meeting, told who he was, expressing gratitude for what Christian Science had done for him. The second case was that of a coroner's deputy, who became interested in Christian Science from holding an autopsy in a case said to have been the result of neglect of Christian Scientists, and two weeks later asked a healer to treat his only child, who was completely restored. The third case was that of a homœopathic physician, who had been a witness of the benefits of Christian Science, and he openly stated that nothing could induce him to withhold his testimony whenever called upon to give it.

Another lady from New York City, a niece of Harriet Beecher Stowe, spoke of her own healing. She had been a great invalid and was completely cured by Christian Science in London. She traveled on the Continent and carried the first copy of Science and Health into Germany, seven years ago. At that time social ostracism would have followed her announcement that she was a Christian Scientist, but later, when she returned to Germany, and also in Paris, the best thoughts in the capitals of Europe were found to be interested in this religion.

A prominent New York business man, a member of the Loyal Legion, spoke of how he had carried the Christian Science thought into business life and had never hesitated to speak of it to his business and social friends. He had met with scoffings and derision for espousing such theories. This speaker expressed the conviction that no word of Truth, uttered, is ever lost, and gave proof by citing the case of a friend, an ex-mayor of one of the largest cities in New York state, whom he had met recently at the Communion service at the Mother Church in Boston. The friend recalled how years before he had heard of Christian Science from the speaker, and had derided it, "but," he added, "since I have seen the happy faces of the Christian Scientists you have not done it half justice."

*People and Patriot.*

### The Word.

Voice of the Holy Spirit, making known
Man to himself, a witness swift and sure,
Warning, approving, true, and wise, and pure,
Counsel and guidance that misleadeth none!
By Thee the mystery of life is read;
The picture-writing of the world's gray seers,
The myths and parables of the primal years,
Whose letter kills, by Thee interpreted,
Take healthful meanings fitted to our needs,
And in the soul's vernacular express
The common law of simple righteousness.
Hatred of cant and doubt of human creeds
May well be felt: the unpardonable sin
Is to deny the word of God within!

JOHN G. WHITTIER.

## Selected Articles.

### The Christian Science Position Regarding Bodily Suffering.

To the Editor of the *Transcript*:—

In an article entitled, "Mrs. Whitney on Christian Science" published recently in the *Transcript*, it is stated that Mrs. Whitney's criticism, "does not seek to abolish bodily suffering, which is good for us, nor does it scorn the matter into which Divinity has breathed life, nor discredit the skill and usefulness of the physician who assuages by natural means the natural woes of the body."

Bodily suffering is nothing more nor less than the expiration of a false sense of harmony, which awakens the sufferer to a knowledge of the insufficiency and unsafety of his peculiar beliefs and practices. No one knows better than Christian Scientists that suffering convinces us of the error of our ways and thus urges us out of the same. "Necessity is the mother of invention" and discovery. When one thing fails us we seek another, and thus we go on from better to better, until we finally reach the best and perfect way. One of the principal causes of suffering is our lack of understanding and practice of the true "Science of Being." When this want is supplied, the cause and necessity of suffering is outgrown. The Christian Scientist kindly acknowledges not only the usefulness but the need of the physician. He fills a necessary place in human experience, and his service cannot be dispensed with until mortals have come to the recognition of the need of a more spiritual method. The Christian Scientist, however, has outgrown the period of material medicine. He chooses for himself the entire dependence upon God as a means of healing the sick, but he asks no more of others than to be allowed to do this peaceably, and to help and teach only those who desire his service.

It is stated that Christian Scientists "claim to be able to cure the most deep-seated diseases, and totally to suppress the most poignant bodily anguish; yet they are as sensitive to a chill in the atmosphere as anybody else—as careful as any other New England people to keep up the furnace fire." The writer is presuming a great deal in making this statement. No Christian Scientist claims to have reached that degree of understanding wherein he has the ability to demonstrate all that Christian Science promises, for even a perfect way will not give perfect results until perfectly used. I will concede that a sensitive Christian Scientist is more subject to atmospheric influences than one who is not a Christian Scientist, and yet less sensitive. The statement that "a Christian Scientist is as sensitive to a chill in the atmosphere as anybody else," may be true and it may not be true, as that depends upon how much the individual can demonstrate of this Science. I know hundreds of Christian Scientists who are much less subject to the influence of climatic changes as well as to other material conditions than before adopting Christian Science, notwithstanding that they still wear overcoats and warm their houses.

I venture to say that in the matter of claims the Christian Scientist is no more extravagant than other believers of the Bible; neither is his theory further in advance of his practice than that of other Christians. Who does not believe the Scriptural promises, "All things are possible to him that believeth." "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." "If ye keep my commandments and my statutes, I will put none of these evils upon thee"? He who ridicules the Christian's hope in God as the sole preventive and cure of disease, ridicules the Bible; and to doubt the fulfilment of God's promises is to doubt God himself. Should Christian Sci-

Digitized by Google

entists be called absurd for their superior trust in God? They do not claim anything for themselves beyond what they can actually demonstrate, though they claim all for the Science itself. They have accepted Christian Science as a theory, and faithfully practise it in so far as their capacity for understanding it allows.

Mrs. Whitney's question presumes that it is easier to live without houses, clothing, and food than without medicine. I have not taken nor administered a drop of medicine in my many years of adherence to this doctrine, thus proving to myself that I can do better without it than I formerly did with it. We have not considered that we would attain to the ability to live without food and shelter, so long as the flesh exists. Nevertheless, our slight knowledge of the true Science of Being enables us to eat with less fear of consequent trouble, and to bear with better success any scantiness of material food or shelter. We thank God for small proofs of the truth of this new idea, while we press forward in the "striving" for greater results. The indulgence of material practices and usages is not claimed to be the demonstration of absolute Science, but is the choice of the lesser of two evils. We suffer many things to be so now out of necessity; things which will cease when God rules supremely in the understanding of men. We are taught in the Apocalypse that when the new heaven and earth shall appear there will be no more pain, no more death, no need of the sun! When the material sense of creation shall have been supplanted by the spiritual sense of it, the eternal newness and freshness of heaven and earth shall appear, "wherein dwelleth righteousness," purity and health, and into which entereth nothing that "worketh abomination or maketh a lie."

Christian Scientists love all nature, seeing therein the handiwork of God. They do not claim that "everything is nothing," but believe that all the visible universe is real, though materially seen and understood by our present imperfect and unspiritual perception. They see beyond sense testimony the divine Principle of all, and have a definite understanding of the spirituality of God's creation, even while it seems otherwise, and as rapidly as possible are seeking to deport themselves accordingly. John understood this; hence he declared, "Beloved, now are we the sons of God, and it doth not yet appear what we shall be." Through the Science of God we learn that we are now the sons of God, the offspring of Good; then we strive to be our true selves, His children in very thought and deed. So long as there exists disease or discord, whatever its constituency may be, and whatever we may choose to name it, there exists the necessity of overcoming. The Christian Scientist recognizes in his faith a great help in this overcoming, since he has learned the exact nature of disease and its needed remedy.

Mrs. Whitney asks the question, "If the baby inherits a dread, how then account for its fearlessness of all that it has not yet experienced?" It is possible that I do not understand her question. I am of the opinion that the babe has no conscious dread until this has been engendered by its experience, though it may and probably does inherit in some degree all the peculiar mental conditions of its parent. The child, until educated into an understanding of how to protect itself against the intrusion of evil influences, is more or less liable to disease and trouble. However, its purity and innocence is oftentimes a source of protection, since it has no fear until mortal experience fosters it. This is noticeable in the case of the child who, having wandered from its mother, plays with the venomous reptile or caresses the wild beast which would be dangerous to the adult. Could the infant grow up with the certain knowledge of the absolute allness of God, and be kept free from the belief of power in materiality, it would escape the suffering which generally accrues to mortals.

Christian Scientists believe in taking a reasonable care of themselves physically; they are cleanly; they make themselves comfortable, eat, drink, sleep, wear clothes, live in houses, are strict observers of quarantine—in fact, they are civilized people; yet they do not discard the "better part" of depending upon God as their only medicine. Whatever else of material indulgence our present condition may seem to demand, we have at least outgrown the use of drugs, and have proven our ability to do better without than with these supposed necessities.

It is stated, "We can only conquer, or be helped to conquer, by enduring; by being willing to live on through the pain." This is exactly what Christian Science teaches; that we are strengthened and uplifted by the struggle which we make to rise above suffering—not by the suffering itself, but by that exercising of our understanding which is necessary to lift us above the difficulty.

"Pain must be borne" in the sense that "that which cannot be cured must be endured," but we have a God-given right to be free from pain when we have complied with the proper requirements. We must, through proper living, attain to that condition wherein there is no pain, if we would escape it. I approve Mrs. Whitney's statements referring to the necessity of bearing with pain until we have triumphed over the condition which brings it, but if she intends to present this as in opposition to Christian Science, I must protest.

Summing up what this good woman has said on this subject, I am obliged to charge her with a deficiency in the true, spiritual sense of the teachings of Christian Science. As the musician detects the lack of understanding of the principle of music on the part of those who cannot execute it, so the Christian Scientist readily detects the want of understanding of his religious principles in those who attempt their explanation, and yet have never been able to heal even one patient as a proof of their comprehension. It is better to leave the teaching of music to the musician, the exposition of mathematics to the mathematician, the task of explaining Christian Science to the practical Christian Scientist.

ALFRED FARLOW.

In the *Boston Transcript.*

## In Re Christian Science.

As a student and a lawyer, I cannot blot from memory either history or precedent. It is never safe either to criticise or sneer at anything about which one knows absolutely nothing.

As I am not a Christian Scientist nor even a Christian, I am not prejudiced either for or against this new and to me rather strange theory of life and health. But the age is one of progress and development. The thoughts and theories of to-day may become the rubbish of to-morrow. You cannot build a Chinese wall around the human intellect. Hence for me this new departure has no terrors. If good, the people will in time accept it; if found otherwise, they will in time reject it, and in this, as in all else affecting the welfare of the race, it is safe to trust the good sense of the people.

These thoughts are suggested by the claims of the professors of this new faith upon the one hand, and by the rather harsh criticisms of those who cling to the old and at sight reject the new upon the other. These recall to my mind to-day three historic epochs in human life and conduct, as well as their ultimate results. They are familiar to all, yet it may not be amiss to mention them here and now.

When I was a boy, there suddenly appeared not far from my home amid the mountains of old Virginia, a strange man who taught and practised a doctrine new, peculiar, dangerous, and unlawful. For what he said and did this stranger was, by the people and under the laws of my

Digitized by Google

native state, tried, convicted, and hanged upon the gallows. For more than forty years the body of this strange man, who proclaimed this new faith and practice, has lain mouldering in the grave, yet the soul of John Brown still goes marching on.

Centuries before John Brown's effort to free our slaves, a devout monk, whilst ascending stone steps on his knees, as by his church required, was suddenly overwhelmed by a new thought, which soon led him to teach and preach a doctrine then new and strange. For this he was ostracized by friends, outlawed by both Church and State, denounced by Kings and Popes. That was four hundred years ago; yet this bold and courageous man of new thought and theory did more than all others of his time to assert the spiritual independence of his race, was the father of the great Reformation, and the influence of Martin Luther is to-day felt throughout the civilized world.

Long before the days of Martin Luther, there had appeared in the far East another strange man, who also taught and preached doctrines then new and peculiar. Few understood, fewer believed him. For his departure from the old ways and for what he said and did, this man was spit upon, reviled, mocked, vilified, and finally was arrested, tried, convicted, and executed. That was nearly two thousand years ago, yet the life, example, and teachings of this man have lifted up more of the bowed down, healed more broken hearts, wiped more tears from eyes that wept, than the combined powers of kingdoms, empires, and republics; and the civilized world to-day believes that the religion of Jesus of Nazareth will continue to bless and better humanity, till time shall be no more.

The mission of the first was accomplished and ended by the freedom of American slaves from human bondage; the influence of the other two, in giving spiritual and religious freedom to the world, has proven at once a blessing and a benediction to all humanity; yet their missions will not be wholly accomplished or ended so long as Christianity endures to uplift and ennoble the race. These three illustrious examples stand out as beacon lights on the hilltops of history. They succeeded for the reason that for each the time was ripe, the people believed, accepted, and adopted their theories; the one is called the Liberator, another the Reformer, the last the Saviour. Success made each more than king. But suppose, if you can, that the people had rejected them and their theories; that their followers had fallen away; that their examples, precepts, and teachings had been forgotten, swallowed up and lost in the mists of the years, what then? Each would be remembered by the people now on earth as the masses believed each to be in his country and time—simply as a monomaniac. Success or failure alike marks the difference between a revolution and a rebellion—between a reformer and a crank. Which?

All new movements have small beginnings; some succeed, others fail. Christian Science is still in its infancy. Whether it be one of "the great world's altar stairs that slope through darkness up to God," as its advocates sincerely believe; or whether the "slope" tends in the opposite direction as its detractors assert, it is not my purpose to inquire now, for time, and time alone, will determine.

I neither predict nor prophesy, for like others who stand without the walls, I simply do not know. But under the immortal declaration of the fathers of our Republic, as well as under constitutions and laws, this is a land of liberty, filled with liberty-loving people who hate oppression, and love fairness and justice. The individual citizen here has and may freely exercise, the utmost freedom of both thought and action consistent with the public good; has the unquestioned right to think and act and say and do as he pleases, so long as he does not invade the rights of others. Hence Christian Scientists and those who oppose them have here precisely the same rights and are under the same public duties.

Again, as in the olden time the blood of the martyrs was said to be the seed of the Church, so here and now. Fierce opposition but intensifies the zeal of enthusiastic believers in any religion. Men fight for it and women pray for it as for nothing else. A fervid flame of religious faith is not snuffed out by a sneer.

In this connection the advice given by Gamaliel to the High Priest and Council when they contemplated slaying the apostles may be read and studied with profit. The closing words of that great lawyer were: "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found to fight against God."

With all this in mind, considering also the vast number of earnest, sincere, reputable, and intellectual believers in this new faith—men and women of brains and learning, whose correct lives entitle them to the respect and confidence of other good people—to me it seems that the broad charity and toleration taught by the Nazarene, the citizen's absolute guaranty of equal rights and liberties, not less than common fairness and justice, alike demand that before pronouncing sentence of condemnation, the uninitiated should give to Christian Science that unprejudiced and thoughtful consideration to which, by reason of the number and respectability of its followers, it is clearly entitled. This is due to the believers in that faith, not less than to the intelligence of this age.—HENRY CLAY M'DOUGAL.

In the *Philistine*.

## An Answer to an Article on Christian Science.

*Editor People and Patriot*:—We learn from the *People and Patriot* that the editorial writer of another paper has used his editorial columns for an article on "Christian Science for Elephants." It is announced that two persons sought to bring relief to an ill-tempered brute in New York City park. This editorial writer then fills a column more or less with ridicule and abuse of these two who undertook to hasten the time prophesied in Holy Writ when of all God's creatures it is said, "They shall not hurt nor destroy in all my holy mountain."

Granting that the incident ever happened, as described by the editor, was it worth his while to inveigh against a people who believe that the kind treatment of others, even of brutes, is a help in making them kind? Is it not a fact that the disposition, even of an animal, is affected by the good or ill treatment it receives? Does not the man who is truly mindful of his flocks have good flocks, and the man who is unmindful of his beasts have ill-favored beasts? May not this be taken as a hint of the good which might be done, even to a brute, by one who understood the Science of Mind and who treated the animals in accord with the Science of Mind? To what good purpose, then, is this scorn of a large company of intelligent and thoughtful people who are taught to treat all God's creatures, even brutes, according to their highest understanding.

Our editorial writer is mistaken in saying that this religion teaches that "there is no evil and no sin and nothing wrong in the world." Only the very careless reader or the prejudiced writer could so state. It is the purpose of this system to do away with "evil and sin and the wrong" that is in the world, even as the teacher seeks to do away with the errors and mistakes made by his pupils.

It is possible that the editor's article is due to misinformation. Christian Scientists would not think of doing as the two persons are said to have done. They would

Digitized by Google

not, under any circumstances, have gone to the superintendent of the park, who was a total stranger to them, and asked to take away from him the management of his business. They do not go where they are not invited. They attend strictly to their own business and expect the same from others.

I submit, then, that either the two visitors to the park were not Christian Scientists, or that the editorial writer on this occasion, through some mistake, changed places with the writer of fiction. IRVING C. TOMLINSON.

## Rise of Christian Science.

*To the Editor:*—In the excellent editorial on "Two Kinds of Preaching," which appeared in *The Inter Ocean* recently, you speak of Christian Science "with its illogical appeal to æsthetic emotion." Permit me to say that Christian Science does not appeal to the emotions, æsthetic or otherwise, and it is not illogical, unless it is illogical to say that God is omnipotent, omniscient, and omnipresent; that He is Love, not hate; Life, not death; Truth, not error. If these statements are emotional and illogical, then the whole fabric of the Bible, and especially the teaching of Jesus, is emotional and illogical.

The reason for the "rise of the Christian Science sect" is that Christian Science is a religion of works, not of words only. It is the practical Christianity of Jesus logically applied to the needs of humanity in every-day affairs, and it is healing the sick and reforming the sinner just as Jesus and the apostles and Christians of the first three hundred years of Christendom healed and reformed them. That it is doing this work is amply proved by the testimony of thousands of reputable and intelligent men and women heard at the Wednesday evening meetings held by almost five hundred churches of the denomination. "The rise of the Christian Science sect" will continue as long as one demonstrated fact is of more value than a million opinions and theories, and I assume that that valuation will continue to the end of time.—ARCHIBALD M'LELLAN.

In the *Inter Ocean.*

## "Salvation Not Free."

THE above was the title of a sermon recently delivered by Doctor Stocking of Galesburg, Ill. The following extract is from the account given in the *Universalist Leader.*

Salvation is not gratis. It cannot be had for nothing. It cannot be had by substitution. We have in this land of ours what is known as a free-school system. School buildings are provided. No matter how poor a man may be, the instruments of education are as free to his children as the air about you. Not a cent to pay. But if the poor man's child is educated he must avail himself of this splendid provision. He must give time and application to study. He must work early and late—deny himself a good many things. No one else can study in his stead. No other one's application and self-denial will be taken for his own. Free education to a certain point—beyond that everything must be paid for. It is exactly like that with salvation.

God has provided all the means of grace. He has given to the world a great inspirational Teacher, who by precept and faultless example has shown the world the way, the truth, and the life. All free. Now if men and women ever possess themselves of the salvation offered, something must be done on their part. There must be the appropriation of means to ends. There must be the following of the great Teacher—the payment of time and endeavor, self-denial and cross-bearing. There are battles to be fought that no one in heaven or on earth can fight for us—victories to be won that no one can gain in our stead. Salvation free? Salvation by substitution? Nay! Salvation must be paid for by every one who comes to so choice a possession.

There can be no salvation apart from individual effort. There must be utmost obedience. Obey and live. Obedience is the stairway that leads to heaven—to the throne of the eternal. Obedience leads the soul on and on until it is changed into the image of Christ from glory to glory. It is not the divine decree that men shall be saved whether they be sinful or holy,—that is, regardless of the character they bear,—but all who are conducted to glory must resemble in moral and spiritual respect him who leads them to glory, the great Captain of their salvation. Salvation is conformity through a series of moral endeavors to the life of him who left us an example that we should follow his steps.

## Is Writing a Woman's Bible.

ABRAHAM G. DIXON, an old bookworm of this city, is writing a revised version of the Bible. With his great volumes of history and ancient manuscript he is now at work writing what he terms a woman's Bible. In this work, which he has almost completed, the author places woman on an equal footing with man. In speaking of his new Bible Mr. Dixon said,—

"What the so-called civilized nations need is a woman's Bible, one that represents her as she is in the eyes of God, and not as the insignificant serf, not as the secondary element of humanity she is pictured to be by the orthodox creed."

Mr. Dixon's forefathers came to this country in 1681 and settled in Pennsylvania under William Penn. The manuscript of which Mr. Dixon is the possessor, he asserts, was handed down from generation to generation, and it has been carefully guarded for centuries. In his possession is a very old character manuscript which is said to be the original of the sixth and seventh books of Moses.

*Chicago Times Herald.*

Receive Christianity as given to raise you in the scale of spiritual being. Expect from it no good any farther than it gives strength and worth to your characters. Think not, as some seem to think, that Christ has a higher gift than purity to bestow, even pardon to the sinner. He does bring pardon. But once separate the idea of pardon from purity; once imagine that forgiveness is possible to him who does not forsake sin; once make it an exemption from outward punishment and not the admission of the reformed mind to favor and communion with God; and the doctrine of pardon becomes your peril, and a system so teaching it is fraught with evil. Expect no good from Christ any farther than you are exalted by his character and teaching. Expect nothing from his cross unless a power comes from it strengthening you to "bear his cross," to "drink his cup," with his own unconquerable love. This is its highest influence. Look not abroad for the blessings of Christ. His reign and chief blessings are within you. The human soul is his kingdom. There he gains his victories, there rears his temples, there lavishes his treasures. His noblest monument is a mind redeemed from iniquity, brought back and devoted to God, forming itself after the perfection of the Saviour, great through its power to suffer for truth, lovely through its meek and gentle virtues. No other monument does Christ desire; for this will endure and increase in splendor when earthly thrones shall have fallen, and even when the present order of the outward universe shall have accomplished its work and shall have passed away.—WILLIAM E. CHANNING.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## A Request.

BY MARY BAKER EDDY.

*Beloved Christian Scientists:*—I have a favor to ask, namely: Will the Christian Scientists throughout our land subscribe one year for the *Granite Monthly,* issued monthly at $1.50 per annum in advance, by the Rumford Printing Co., in Concord, New Hampshire? It is an old, well-known, worthy characteristic magazine, from which, it is alleged, support has been withdrawn, because it prints Christian Science literature.

## Christian Science and Traveling Men.

THE work that many of the traveling men are accomplishing in Christian Science is by no means an unimportant one. Their calling brings them in contact with hundreds and thousands of people and affords them abundant opportunities to speak a word for Truth and tell of the numerous blessings, physical and moral, that have come into their lives through the understanding of God as revealed to them in Christian Science. As a result of the seed sown in this manner, many helpless and hopeless invalids have found health and happiness. Others in bondage to myriad forms of sin, have found the Truth that makes free indeed.

The great army of commercial travelers numbers in its ranks hundreds of Christian Scientists who carry with them, wherever they go, the Christian Science text-book, "Science and Health with Key to the Scriptures." They no more think of leaving this book behind than they think of leaving their sample cases. Other works of the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, as well as the *Journal* and *Sentinel,* are to be found in the grips of these traveling men. These Journals and Sentinels are gladly placed in the hands of honest inquirers and earnest seekers for Truth. In this way thousands of copies of our publications are started on their mission of love, and who can begin to estimate the amount of good these silent witnesses for Truth are accomplishing?

Going from place to place, as he does, the traveling man meets many persons who are devoting all their time and energies to the work of Christian Science. He attends the Sunday services and the Wednesday evening meetings of the various churches in his territory. His testimony of the benefits he has derived from Christian Science is helpful to all who hear it, and his report of the progress of the cause in other parts of the Field is interesting and encouraging. His periodical visits enable him to note the increase in numbers and interest, and many times he expresses himself as being greatly surprised at the marvelous growth he has witnessed.

The following extract from a letter written by a traveling man whose territory is west of the Mississippi River, tells something of the progress that is being made in the West, and also relates a most pleasing and interesting incident.

"I was surprised to find how Christian Science is growing throughout the West. The increase in congregations everywhere was very noticeable since my trip six months ago. In making seven of our Western and Southern states I attended services every Sunday and Wednesday with but one exception, and then I was on the train.

"To show how Christian Science is growing among traveling men I will give you the following illustration. Nine traveling men got off the train at a small junction above St. Joseph, Mo., to take the train for St. Joseph, and found the train about an hour late. One of the number sat down on a bench on the platform, took out Science and Health, and began to read. Soon another did the same, then another and another, until seven of the nine were sitting at that small station reading Mrs. Eddy's great book."

Who can say how much help these men derive from the daily study of Science and Health? The reading of this book on that occasion not only helped them to pass away the time pleasantly, but what was better still, it gave them wholesome food for thought, and brought into their lives something that would be of practical benefit to them in the future; something that would enable them better to serve their employers and deal justly with their customers.

Christian Science has a great work to do for the business men of the country in demonstrating that genuine business principles are not antagonistic to the Mosaic Decalogue or the Sermon on the Mount. That one can love his neighbor as himself and still be successful in business, is capable of demonstration, and the man or woman who makes the Bible and Science and Health a daily study, and puts the teachings of these books into hourly practice, has entered the path that leads to success, not only in business, but in everything that is for the general good of mankind in the present state of existence.

To grasp the scientific fact that God is Love; that Love is the One Intelligence that governs all things in perfect harmony, is to lay hold of that which not only insures success in the present, but also in the future.

"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 425, says, "Immortal mind, governing all, must be acknowledged as supreme in the physical realm, so-called, as well as in the spiritual." The realization of this grand fact is of inestimable benefit to the man in business, as it is to all mankind in all the walks of life. The burdens of life must of necessity fall more lightly upon the shoulders of him who is thus prepared to receive them, because he realizes that God, infinite Good, is supreme over all.

The following extract from a letter tells how another traveling man has found God to be a present help in time of need.

"In business changes that occurred recently I was able to say as never before, 'Thy will be done.' I was able to say it in a spirit that brought a sense of perfect rest and security, and there came to me unsolicited the most desirable and most important position the company had to offer. Since then my aim has been to show my appreciation of what divine Love has done and is doing for me in every way.

"The new position brought with it added responsibilities and work, but I enjoy it, and it is as clear to me as the noon-day sun that without Christian Science I should not have been equal to this occasion, and I might add that but for the guiding, sustaining hand of divine Principle, which came to me through Christian Science, I should not have secured the position. This is the first important practical test I have had in a business way in my short experience, and my prayer is that in all future transactions I may look only to divine Love for guidance, and always be able to say, in all faith and trust, 'Thy will be done.'"

We might easily multiply instances of this kind, where

Digitized by Google

the practical workings of Christian Science are seen and most gratefully acknowledged, but enough has been given to illustrate the all-important fact that Christianity, when rightly understood, is the most practical thing with which we have to do, because it applies to all the needs of humanity. The working out of one's salvation is the most important work in life. All things else are really but incidents by the wayside, and should be dealt with as such if one would obey the Scriptural injunction to "Seek first the kingdom of God."

## Among the Churches.

### In New Quarters.

The Christian Scientists known as First Church of Christ, Scientist, have moved their place of worship to 107 West Seventh Street. In connection with the church work, a reading room has been opened where all the genuine Christian Science literature is kept for the free use of the public. The room is open from 9 A.M. to 12 M., and from 3 to 6 P.M., and some one is always there to give any information concerning the subject that may be desired. The rooms are neatly finished in old rose, with carpets of dark green, and the windows and reading tables are ornamented with choice Rex begonias and fern.

This room was the scene of a happy gathering one afternoon last week, the occasion being the annual meeting of an association of Christian Science students, who came from all parts of the state for the pleasure of meeting each other, relating their experiences, and listening to words of admonition and counsel. A discourse was devoted to a discussion of the vital qualifications of Christian Scientists, especial stress being laid on the need of obeying every injunction of the Master, of watching and praying constantly, of overcoming evil with good, and of living a life uncontaminated by evil thoughts or deeds and consecrated to the cause of Christ. Without this, it was asserted, the prayers of the followers would be of little avail in healing the sick and reclaiming the sinner.

After the meeting a number of letters addressed to the association by absent fellow-members were read. In a humble and unpretentious way these told of how their efforts towards healing the sick and reclaiming the sinner were being blessed by God, and of their deep thankfulness therefor. Two letters were especially interesting and touching, one being from a little girl student, and the other from a physician who, after being healed through Christian Science when material means had failed, has made it his life-work.

The Christian Scientists hold services at the above-mentioned place every Sunday morning at eleven o'clock, which are conducted much in the manner of other Christian denominations excepting that instead of a sermon composed and delivered by a preacher they have a sermon composed of selections from the Bible and "Science and Health with Key to the Scriptures," the Christian Science text-book, written by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. The churches all over the world have this same sermon, which is read by two readers appointed for that purpose.

The Christian Scientists give every one a glad welcome to their services.—*Daily Statesman, Austin, Tex.*

### Christian Science in Manila.

Captain William R. Sample, Third Regiment Infantry, Regulars, wrote me under date of April 11 from Caloocan, P. I., "Enclosed find money order for a supply of Christian Science literature as a nucleus for our reading room in Manila." The order includes copy of "Science and Health with Key to the Scriptures," "Miscellaneous Writings," *Journal, Sentinel,* and practically all the Christian Science publications. The experience of Captain Sample finely illustrates the value of the Directory Department of the *Christian Science Journal.* Beginning with a recent number of the *Journal* he had his card inserted, and each letter received from him since that time indicates this as a most excellent medium of communication between field workers and the world-wide inquiring public.

A short time ago a personal card was inserted in one of the newspapers at Manila, inquiring if there was one of Mrs. Eddy's followers in the Islands; replying to this inquiry through the mail a little coterie of congenial Christian Science friends has grown up, several of whom are officers in the army and their families, and the interesting result is noted in the establishing of a reading room at Manila as noted above. It goes without saying, as a matter of course, but perhaps it is worthy of remark, that the interest awakened in this far-off locality is accompanied by the demonstration of healing the sick. I understand that Captain Sample has cabled for his wife, who during the past winter has been actively engaged, while visiting relatives in the South, in the healing work at Tullahoma, Tenn., and Birmingham, Ala., and all our readers will doubtless rejoice to know that the work is about being substantially established at Manila.

GEORGE H. KINTER, Buffalo, N. Y.

### Incorporated a Church.

First Church of Christ, Scientist, of Helena, has been incorporated by the following, who constitute its Board of Trustees: T. R. Hinsdale, Frances C. Hinsdale, Frank B. Norris, Mrs. Grace Sagle Esler, Mrs. Laura A. Wommelsdorf, Mrs. L. June Ide, and C. H. Anderson.

The articles of incorporation filed in the office of the secretary of state yesterday state that "the purpose for which it is formed is to establish a church organization known as above, and for the purpose of maintaining and spreading the doctrines of Christian Science, as contained in the text-book 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, and in connection therewith suitable and customary organizations for the purpose of public worship and religious training."

*Daily Independence,* Helena, Mont.

### From Chadron, Neb.

First Church of Christ, Scientist, of Chadron, Neb., is rejoicing in the manifestation of divine Love that has united all the Scientists of this little town into one band.

Saturday, May 5, those who have heretofore worshiped as an unorganized body united with First Church, thirty-one being admitted to membership.

This demonstration of harmony and unity has brought us to realize more fully than before that we are all the children of the one Mind, and that if we are patient one with another, when some run faster than others, and at such times trust entirely in Love to lead, every seeming bar to our advancement will be swept away.

As the result of the good healing work that has been done the growth of Christian Science in Chadron has been phenomenal, and we are now ready for further progress and individual growth.—F. B. CARLY, *Clerk.*

Be you tempted as you may,
Each day and every day,
Speak what is true—
True things in great and small;
Then, though the sky should fall,
Sun, moon, and stars, and all,
Heaven would show through.

ALICE CARY.

## "Might Have Been."

IN a new book entitled, "Might Have Been" by the Rev. Dr. Joseph Parker of the City Temple, London, England, the author with prophetic vision and lofty hope, makes the following utterances which will be of marked significance to Christian Scientists.

"If we believe the New Testament we believe that men were once made whole without medicine or doctor. If this was a fact in New Testament times, why may it not become a fact in the present day? If it is a fact it is the most beneficent fact in history, and being such it ought, if possible, to be recalled and re-established. To grasp the question wisely and thoroughly we must go back to Christ's own day and think with him. We have no concern with knaveries, quackeries, empiricisms, or frauds and pretence of any kind. All these must be banished from the mind or they will create prejudices which Truth itself cannot penetrate. First of all, let us strive after simplicity of mind that is essential to progress. Did Christ heal men? Yes, he did. Did Christ's Apostles heal men? Yes, they did. Was the healing mechanical, surgical, medicinal? No, it was not. Was the healing spiritual, sympathetic, mental? Yes, it was. Is Christ the same yesterday, to-day, and forever? Yes, he is. Does Christ still live and work and reign? Yes, he does. That settles the case. Suffering is the same, Christ is the same, love is the same. Then what is wanting? Just what was wanting in Christ's own day. Dost thou believe? Believest thou that I am able to do this thing? All things are possible to him that believeth. He could not do many mighty works there because of their unbelief. We must simply and heartily adopt the belief—a most rational belief it is—that the things which are impossible with men are possible with God. That is all. The belief must not be mere assent; it must be the ruling and ever-active principle of the life. . . . The curing of disease is a very paltry matter. To cure the disease of distrust of God is a supreme miracle. That is health. . . . What is faith but the superiority of the spiritual over the material? I have not the shadow of a doubt that the material will decrease and the spiritual will increase. The ponderous locomotive will be superseded. We shall have telegraphy without the wire. . . . We are moving towards the God-power—God is a Spirit. Mind created all things; why should not Mind rule them? With barrow and spade a day-laborer can carry the mountain into the sea. Why cannot a faith-inspired man order it out of the way and scatter it on the waves? In the end it would be so, but not until universal mind is in universal harmony, for otherwise faith would be the creator of disorder and the enemy of peace. We shall then see not the faith of one man, but the consolidated faith of all men."

## Likens Bible to a Great Temple.

THE Bible was the subject of yesterday morning's sermon of Rev. W. A. Hunter at the First Avenue Presbyterian Church, and the subject was presented in a novel manner, likening the Bible to a temple which it had taken thousands of years to build, and which contained many and varied apartments.

"In what sense is the Bible perfect?" he asked. "Not in the sense that here are all the books written by inspired men, for some of these inspired writings are not now in existence. Christ and his disciples said much not recorded in the gospels, but enough has been recorded and preserved for our guidance to salvation. So the Bible is perfect as a rule of faith and practice. It is perfect also in comparison with other books, and has made a deeper impression on the history of the world than has any other book. In a famous cartoon of the Reformation Martin Luther is represented with an open Bible teaching the explorers, the literary men, and all the great of his day and generation. This is an actual fact. The Reformation was the birth of a new life in Europe. The Bible, being closed, had been re-opened, and whenever that is done new life is instilled into all around.

"What is the secret of the power of the Bible? The Bible is great, not in the men of whom it tells, as there are as great men to-day, nor in the battles which it describes, as they are insignificant when compared to modern battles. It is great in the way in which it traces the relation of man to God. The unity of the Bible is not simply the union of the bookbinder. Jesus Christ is the centre of it all.

"The sixty-six books of the Bible, written by more than forty different authors, men of all classes and conditions, constitute one book which may be looked upon as a great temple which it took thousands of years to build. The architect is God, and the workmen are the prophets and the apostles. The 31,173 verses in the Bible are the stones or bricks of the structure which you enter through a beautiful garden. First you enter five chambers—these are the chambers of law and justice, and in pomp is the law proclaimed. Next comes a suite of twelve apartments where the historical records are kept. Then there is a gymnasium in this building—the book of Job, the saints' exercising ground. And in the music room are the harps and the sweet psalm singers of Israel. Then comes the chamber of commerce, the stock exchange of the Bible, the book of Proverbs, which contains the wisdom of ages. Just off that is a little room where Jeremiah laments.

"In this great temple we find conservatories here and there, such as Ruth and the Song of Solomon. Fifteen apartments of peculiar splendor are those of the halls of prophecy, and then comes a modern part of the building—four chambers done in spotless marble and on the walls portraits of the Saviour. These four are the gospels. The workroom is not far off. It is the Acts of the Apostles. Twenty-one rooms, represent the epistles, fourteen of which were written by the Apostle Paul. Then comes the mysterious gallery, the book of Revelation. From the extraordinary sights met here, we emerge through a beautiful meadow, trees laden with fruit for the healing of the nations. We see the City of God bathed in beauty and through the gates of pearl we enter the New Jerusalem."—*Denver Republican.*

## Fraud Exposed.

AN impostor calling himself W. R. West and claiming to come from Detroit, Mich., has been for several weeks in Chicago seeking Scientists there for financial aid. He has used my name there very freely, asserting sometimes I was his healer and at other times I was his teacher. I know no such man and have no student in Chicago. This person has also used the name of Mrs. Arvilla Doty as his healer. She has no knowledge of him whatever.

Either he or another of his kind appeared this week under the name of W. J. Richmond. He is a small young man, with blue eyes and fresh complexion. He says he was in the employ of the Grand Trunk Railway while in Detroit. He also uses the name of Doty freely. Neither the other Mrs. Doty nor myself know of this man as a patient.

MRS. ELLA H. DOTY, C.S.B.

Detroit, Mich., June 11, 1900.

### Joy.

There is no joy too great for thee
When Love is on the throne,
For God would have to cease to be
To leave thee all alone.

## Experiences Related at Wednesday Evening Meetings.

A FEW weeks ago a little girl six years old residing in Toronto was struck by a milk wagon, which turned the corner quickly as she was crossing the street. The hub hit her and knocked her down, and the driver jerked his horse up, causing the wheel to pass over the body of the child, and as the wagon contained a man and a boy, and several cans of milk, the result was serious. The little girl's back and thigh were much bruised and blackened, her nose and forehead were cut badly, and both temples bruised. She was carried bleeding to her home.

The parents being believers in Christian Science, no liniments, lotions, or poultices were used. After receiving a treatment no pain was complained of. Within a few hours the patient sat up and ate her supper, and has been hearty ever since. She was able to walk the next day, and the following Sunday she went to church and walked home, nearly two miles, the last sign of a scar having disappeared from her face. The milkman expected to pay a heavy bill of damages, and was quite relieved to find there was nothing to pay.

A gentleman said, "I did not come into Christian Science for the physical healing, as I had always been in good health, but I found Christian Science to be the pure and practical religion which I was looking for and had failed to find. When Science and Health, the Christian Science text-book, was given to me, I found it so full of what I had longed for that it lifted me and gave me fresh hope. This book taught me that God is Love,—and not a love that would afflict, but that we could practically prove every day as a healer of disease as well as sin. I came to Christian Science because I felt that it was the Truth as Jesus taught it, and that it destroys jealousy, malice, and all such evils.

"For the last eight years in our family we have had no other help than Christian Science. We know that if God cannot heal disease nothing else can."

Another said, "I would like to relate my experience in coming into Christian Science. For fifteen years my wife had chronic rheumatism. I had to carry her wherever she went. She could neither move hand nor foot. I tried the best medical men in the city of Brantford, and afterwards brought her to Toronto. We tried different doctors here. My wife was wrapped from head to feet in cotton batting. For three weeks she was entirely helpless; we had to feed her with a spoon. At this time I met a friend who told me of Christian Science. I went at once to a Scientist's house and related my troubles. I was told that the Scientist was out but that as soon as he returned he would go to my home. I went to make arrangements to have my wife's sister at the house when the Scientist should come. When I reached home, to my great amazement, I found my wife standing in the door. The Christian Scientist had come and gone. After three treatments my wife could walk a mile or more, and to-day she is as well as I am.

"After this I was taken with typhoid fever, but did not try Christian Science till there was no other hope. Physicians did all they could for me; then my wife asked me to try the one who had cured her, and I am here to-night to testify that Christian Science saved my life."

Another case is that of a gentleman who, for forty-five years (from eleven years of age) had been an excessive user of tobacco, and also drank liquor immoderately. He was healed from these habits in a short time through Christian Science, so thoroughly that he has not had the slightest desire for either tobacco or strong drink. He was healed several years ago.—W. S.

## Turn your Face to the Light.

BY CLARENCE A. BUSKIRK.

TRUTH brings only joy, turn your face to the Light,
O sister, O brother;
You work for yourselves when you work for the right,
And work for each other.

If afraid, turn your back on the shapes that affright,
As shadows unbidden;
The dark side to him who moves toward the Light
Always is hidden.

If you hide not from God He shines on your way
With light ever glorious;
And to one in God's light there is never a day
That is not victorious.

Shun ever the darkness, seek ever the Light;
In your journey, O mortal;
And remember that brightness, not shadows or night,
Streams out from God's portal.

## A Year of Christian Science.

BY J. B. TWISS.

Two sayings of Christ have recently been impressed on my thought as never before: "Seek, and ye shall find," "They that be whole need not a physician, but they that are sick."

A year ago I was sick,—sick physically,—and had been so for eight years, but more sick mentally; life for me had been a hopeless tangle, and up to that time I could see no pleasant prospect, no hope of desire fulfilled. By great effort and sacrifice on my own part and on the part of others I had received a good education and had tried to make myself useful, respected, and valuable to the world around me; but every year was lessening my hold on these things that I valued, and life had degenerated into a desperate struggle for existence, with every chance seemingly against me. Eight years of chronic diarrhœa had so weakened me that while the disease had partially left me, the discouraged heart-sickness had vastly increased. I needed a physician and I knew it, but I had tried all schools and classes of doctors with little avail. I now see that I diagnosed my needs very well when I came to the conclusion that if I gained any benefit it would be by some mental method that I had so far failed to discover.

But I then classed mental and spiritual methods as distinct and separate, hence my first move was in the wrong direction, and my first effort to seek was in the fields of animal magnetism. I had previously in my early life explored spiritual fields as presented in the evangelical churches, and for the last five or six years had dropped them as not fully supplying my needs. But mesmerism and animal magnetism proved further from my needs than all else. Finally, as I was in the Public Library in Lowell, Mass., one day, wondering if among all that array of books and literature there was yet any thought, or system, or wisdom, that the ages had accumulated that was or could be of any value to me, or was it still true as in Solomon's day that "of making books there is no end," and "all is vanity," when I sat down at a table in the reading room and picked up the *Christian Science Journal* for May, 1899, the first one I had ever seen, and, practically, the first I had ever heard of Christian Science. Before I left that table I knew that if half that I found in that *Journal* were true, I should have to seek no further, for I had found what I wanted.

Digitized by Google

I soon was able to prove to myself whether the testimony in that *Journal* was true or not, for I went from that table to the desk and learned that the book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, was in the library, and I took that home with me. I had read the book only to page 2 when this expression arrested my attention: "The divine Spirit testifying through Christian Science unfolded to me the demonstrable fact that matter possesses neither sensation nor life." What, thought I, no life nor sensation in matter? but my body is called matter and that has both, has it not? But how if I have left this body? does the body have life or sensation then? Then it is not the body but I, mind or soul or whatever governs the body, that experiences the sensations and exhibits life; and if this be so, as it must be, perhaps the author has found a way to control, through God's omnipotent power, this life and sensation. I have tried enough to know I cannot control it myself.

Thus at the opening of the book I caught somewhat its inner meaning, and before I had read more than half through it, I found a chance to prove if it be true or not, for a severe cold, sore throat, and cough set in, such as generally took my time and attention for four or five weeks with many medicines. I bravely said: "No medicines now," and in a crude way began to treat myself. In twenty-four hours the cold had disappeared. That satisfied me, and I continued reading the book. For years my diet had been confined to the simplest kinds of food and the smallest quantity I could well live upon. I did not treat myself for this condition of things, for I understood it was chronic, and I supposed it would be a long, hard, and perhaps slow, thing to heal by any method. The doctors had always so intimated. But one day in about a month I suddenly awoke to the fact that I was eating with impunity anything I wanted. *The reading of the book had healed me.*

I had not thus far seen any Christian Scientist or been to any church, owing to a feeling that those connected with Christian Science were not desirable people to associate with and had better be avoided; but having now found the Science a true Science, I ventured to investigate the Scientists, and now, after having in my travels the past six months visited perhaps as many churches and met as many Scientists as is the lot of most men, I know that there is no more unselfish, clear-headed, pure-minded, respectable, and desirable people than are to be met everywhere among them.

Christian Science found me a weak, puny man of one hundred and thirty pounds, to-day I weigh one hundred and fifty-five and still growing, physically I presume, mentally surely; my thought was not clear, memory poor, and mental work was a heavy effort, all of which is changed to-day beyond my power to describe, and wholly for the better, and this improvement physically and mentally has gone on while my work has subjected me to all kinds of exposure, riding in sleeping car with a draft blowing on my head all night without catching cold, getting thoroughly wet with perspiration, then without additional clothing riding for miles in an open buggy through a damp, cold air, and no resulting cold, eating all kinds of fare at all kinds of hotels at all hours of day or night—how is that to mortal thought for a man who only a year ago had lived for eight years in the bonds of chronic diarrhœa and dyspepsia? and the half is not told! Would I go back? Never! All the years of my life were a complete failure save as by their sharp experiences they drove me to seek and find Science, and one year of God's service in Science has given me more satisfaction than all my material life before.

**Christ came not to the man who believes himself whole—but he who is sick, and knows himself sick, physically or mentally, can find in Christian Science the physician which heals all manner of sickness to-day as of yore.**

## From Thankful Hearts.

Bourne, Oregon, March 16, 1900.

Rev. George Tomkins.

*Dear Brother in Christ:*—I have been trying to make a statement of the case of our little Percy. Gladly would I write you such a statement, clear, terse, and full of truth, had I the ability to do so. I feel that I can only tell you the nature of the case and leave the rest to you.

Small-pox and typhoid-pneumonia have surrounded us since last fall. The physicians have been busy day and night, losing many cases, and those who recovered carried their marks for weeks and months. However, we had escaped and it had not come nigh our dwelling until on Friday of one week Percy complained of a severe headache, aches and pains all over him, a cough and cold; nevertheless he went to school; on Saturday he was still under the claim, coughing and not able to eat anything; delirious all night Friday and Saturday nights, and on Sunday he rapidly grew worse, raging and raving in the fever with a severe pain in his side through to his shoulders,—eating nothing all the while, but calling for ice water or milk when rational enough to speak for it. When he grew worse rapidly and I saw no abatement whatever, I left him and ran to the office (it being but a few minutes walk from our house) and telegraphed you. It was perhaps 10 or 10.30 P.M., when I sent the message. Seeing no change for the better, I went again on Monday, thinking they had neglected to send it on, and requested that they send another message, which they did. He did not change for the better until four o'clock Tuesday morning; I then realized through your treatment that he had been healed; the sweet and perfect peace assuring me that he could not die; and our only child,—God's child,—would remain with us. At 6 A.M. that morning he was a frightful sight, but not until he had received the benefit of your treatment was small-pox laid bare before us,—there was not enough room for the point of a needle between the blisters. Then fear came creeping in around me that he would be disfigured, as all my life I had had such a fear of small-pox and the disfigurement it left behind; then came the fear also that I would perhaps be smitten with the plague; it was then that I wrote asking you to treat against disfigurement and inoculation. It will not seem strange to say to a Christian Scientist that I did not take it, or, at least, it did not take me, nor any one else coming into our home, neither was there a mark on Percy within a week from the time it was first visible. You can perhaps understand the astonishment of all who knew anything of the case.

Lovingly in gratitude,

GERTRUDE L. ROBERTSON.

FROM THE LITTLE BOY.

*Dear Mr. Tomkins:*—While mamma was writing I wanted to thank you for the light you reflected to me when mortal mind had possession of me. I have always been able to treat myself before, but error said I shouldn't at that time. Truth heard my cries and directed us to you and I am stronger for it. I hope to see you some day. I thank you again. With love,

PERCY LEAR ROBERTSON.

## My First Visit to the Mother Church.

BY. A. E. V.

The admonitory remarks to me of a friend in Science, on my departure from my home fifty miles away from the

Digitized by Google

church, "Remember, do not go with great expectations, but with the feeling that you are going into the atmosphere of the Truth realized, and it is yours to understand," prepared me and helped me to be part in the harmonious atmosphere that did prevail throughout. I found myself in a crowd, free from fear that I would not be able to enter the church and enjoy the only privilege that my limited time would permit, as I had to allow for returning train to make connections with my home train.

There was no pushing or scrambling for the best seats, rather there were those who had gained entrance to the vestibule of the church who waited patiently about, having given away to others. Once in the church, the beautiful coloring of the brightly arrayed assemblage reflected a happy spirit that prevailed through the service. The congregational singing was spirited and sounded as one voice, so earnestly did each one endeavor to do his part. In that vast assemblage there was hardly a movement perceptible through the reading of the Mother's message. No fluttering of fans or nervous coughing as is generally perceptible in large gatherings, was in evidence during the impressive service. In the atmosphere of unity of thought, the congregation with one accord bowed their knees, at the conclusion of the service and repeated the Lord's Prayer unhesitatingly and with an earnestness that made plain each word throughout the church.

The inclemency of the weather had no effect upon the outgoing congregation who clung around the spot as if loath to leave. The happy exchange of greeting was not interrupted by the variableness of the weather that besprinkled the crowd at times, then blew cold blasts through the thoroughfare upon an unmindful people. Within a radius of a few hundred feet all parts of the globe were represented. People of culture and refinement, whose station in life might make distinctive lines in society, were there, yet it was not felt among the people in that throng that knew no life but equality in Christian Science.

A happy throng! A happy people with one thought, one mind, how could there be anything but harmony?

## God's Way the Only Way.

BY LUCY J. ENELL.

WHEN error tries to make us think that discord is real we can know at once that it is not Truth that is influencing us. While sitting at the window one morning reading my lesson from a small book called "Daily Light," I chanced to look out on the street and in doing so, I saw a conductor of an electric car working quite hard to adjust the trolley-pole which is necessary to be in touch with the electric wire to enable the car to run. The minute the pole became detached from the wire the car remained perfectly still. It took quite a little work on the part of the conductor to adjust it so that it was in working order. I thought how like our work in Christian Science.

The moment we allow our own human opinions and beliefs to interfere with God's perfect law, we get off the track and it takes much work to humble ourselves under the mighty hand of God and be willing to let "God's will be done." Only by knowing "not my will, but thine, be done" will harmony be the result. To work out our problems correctly we must come under the mighty hand of God and remain there, no matter if the problem is being worked out differently from what our poor, human, finite sense thinks that it should be. God does all things well, and His ways are not man's ways. If each one of us, as a Christian Scientist, is doing his individual work aright, there will be the collective whole, each made perfect through the cross.

## Testimonies.

### Found Peace and Rest in Christian Science.

I was raised by Christian parents. I became a member of the Christian church in early youth, and served God to my highest understanding and ability for forty years, constantly looking forward for peace and rest in the grave or beyond the grave. It seemed somewhat indefinite. All the time, affliction's iron rod was oppressing me more and more, pains were multiplying and strength diminishing, although I read in my Bible that God was my strength, and that He healed all our sicknesses.

When pain seemed more than I could bear, we would call for help in the way of drugs, but now, since the Light of Truth has dawned on my consciousness, I find God's grace sufficient in every time of need. When reading the Bible and trying to understand it in a material way, I found many stumbling-blocks, but with it all I hoped and prayed that God in His wisdom would lead me in the true path.

Believing as I did, that I lived in my body, my belief was very prolific in its fruits. Afflictions of the flesh greatly increased. One sore and painful affliction, called by the doctors salt-rheum, had developed to such an extent that every nail on both my hands was loosened and came off, leaving the new nail in a roughened and ridged condition. Then followed nervous prostration, with severe pains in the head, and finally paralysis of the left arm. One doctor after another was tried, with no permanent relief, till life seemed a burden. I was a great care and worry to my family, being in such a state of mind that I could not sleep without an opiate of some kind.

When Christian Science was suggested to me through the healing of a friend, I there and then said, Sleep or no sleep, live or die, I take no more drugs. Henceforth I shall look to God, and God alone; and began to gather my drugs to consign them to the fire. My family interfered and pleaded with me not to persist in my insane notion. I told them I would not burn the drugs then, but would call a healer. I did so and she placed "Science and Health with Key to the Scriptures" in my hands. The healing took place in one week, but I was so full of fear that I might have a return of my trouble that I asked for and received another week's treatment.

Since feeling the touch of Truth, by being healed by it, the Bible seems a changed book, with the spiritual interpretation revealed through Science and Health by Mary Baker G. Eddy. I cannot find words to express my thanks and gratitude to our Mother for her great guide-book, Science and Health. I am much isolated in this part of the country living as I do on a farm or ranch as it is called in California. I have the *Quarterly*, the *Journal*, and the *Sentinel*, together with all Mrs. Eddy's works. With my old and well-worn Bible I feel I have the finest library in the world. I live fifteen miles from the nearest Christian Science Church, located in Sacramento, but Sunday morning finds my daughter and myself ready to read the lesson at eleven o'clock. Sometimes we are alone, and sometimes some of our neighbors who have been willing to read Christian Science literature are with us, and we find much help in so doing. Surely the leaven is working.

E. S. JOHNSTON, Courtland, Cal.

### Sight Restored through Christian Science.

I always derive so much good from the testimonies in the *Journal* and *Sentinel*, that I consider it is my duty, as well as my privilege, to testify to my healing through the understanding of the all-powerful and ever-present God, which comes to us through Christian Science.

At the close of the year 1897, I was suffering from a severe attack of a disease that had troubled me, more or

Digitized by Google

less, for six years and for which I had doctored a good deal, but only found temporary relief. On the last day of the old year, our little girl was taken with a severe fever. I was giving her the usual remedy, which on such occasions had always helped her. Talking with a neighbor, who was a Christian Scientist, had caused me to lose faith in medicine. The medicine failed to help her and she gradually grew worse. I realized something must be done. I was alone at home, my husband had gone to work in the morning, so I dragged myself out of bed, and managed to take the child out on the porch, thinking that perhaps the fresh air would do us good. Just then our neighbor came over to call, and it was not long before she promised to help the baby. I got up and carried the child into the house, and then and there realized that I was perfectly well. I was instantaneously healed of my trouble of six years standing. Where a few minutes before I was all aches and pains from head to foot and felt very weak, now in a moment all had changed; I felt strong and ready to do the hardest work, a fact which I at once proved, for I set to work and did one of the hardest day's work that I had done for a long time. When my husband came home at evening, he stood still in the door, and exclaimed, "Why, what has come to you? you look ten years younger!"

Our little one went to sleep and slept till morning, when all the discord had disappeared.

I had also been blind in one eye for twenty-seven years, the result of a cataract when a child. My eye was examined by one of the first oculists in London, Eng., and he told me that nothing could be done for it, as the sight was entirely gone, that I must wear spectacles continually to strengthen the other eye. After I had been so wonderfully healed through the power of Truth, the thought that "man is spiritual and not material" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 464), was so strongly with me, that I did not put on my glasses again. If man was spiritual, then sight must be spiritual also, and material spectacles could not help me to see. About ten days after the thought came to me to try the eye that was blind by closing the other one, and to my great joy I found I could see to read, even small print. I have used my eyes a great deal since, often sewing by lamplight until a late hour, with no ill effects.

I cannot say how thankful I am to God for this blessed understanding of Him that leads us out of the bondage and darkness of mortal mind, into the freedom of the children of God; and to our dear Leader, who has worked so faithfully to bring this precious Truth to us; and to our dear friend who was the means of bringing us into Christian Science. We have since had many beautiful demonstrations of the power of divine Love to destroy both sin and sickness in our own home as well as for others. My husband and myself have had the privilege of class instruction from one of Mrs. Eddy's loyal students, and the spiritual uplifting and blessing that came to us through that instruction seems to us far greater than the physical healing.—HARRIET DENTON, Pasadena, Cal.

---

### Truth Destroys all Forms of Error.

One day I went to the barn and found my horse in a bad condition, to mortal sense. She was pawing and frothing at the mouth and held her head close to the ground. I saw that she had not eaten her morning feed and that something must be done at once. The thought came to me to treat her. I tried to help her while looking at her, but could do nothing. I turned my back to her and had only treated her about ten minutes when I heard her eating her feed and knew the work was done. I felt so happy over my first demonstration with my horse that I shed tears of joy and thanked God (Good) for the ever-present remedy.

Another time I had her turned out to graze, and when I went after her I discovered that one eye was swollen shut and the water was running out of it. My wife was close by and I called her. She saw the condition of things at a glance and said, "Put her in the barn and she will be all right." I did so and my wife went into the house to treat her. I saw the mare no more until morning, and then I could not have told which eye had been hurt if it had not been for the streak down her nose made by the water.

One day last summer she was fed about a bushel of watermelon rinds, of which she is very fond. The next morning I hitched her up as usual and before I got to the central part of the city she was taken sick. I met an old livery man who was a friend, and he urged me to unhitch and put the horse in his barn, saying there was great danger of losing her. He told me if I did not I would be sorry, that he had handled horses for forty years and he had lost them when they were not so bad as she was. But I got away from him as soon as I could and began to treat her. When I went home at noon I went past my friend's barn and she was all right. I also find that since I have been studying Science my horse does not tire so easily, or become leg-weary when I make long drives; I can and do help her.

I will say to any that may read this, If you have a good horse, you surely love it, and you will find that the horse or any other animal will respond promptly to Science treatment.—FORREST V. CURRAN, Marion, Ind.

---

### A Word from a Little Boy.

As I have seen other children's testimonies in the *Sentinel*, I thought I would like to give one.

A few weeks ago I was playing baseball in a field close by. Necessity compelled us to have a pitcher who pitched swiftly but badly. One of these balls the batsman struck at, but only succeeded in making a foul, which struck the catcher on his left eye.

The boy was not a Scientist and wore glasses. The ball knocked one glass against his eye and twisted the framework of the glasses. The boy seemed to be in great pain, and exclaimed that he could not see, and that he was blind.

I began to give him good thoughts instantly, and in a minute or two he calmed down and went home for a little while. I kept treating him, and in about five minutes he came back, and said that he was all right. As far as I can tell he did not put anything on his eye.

WILLIE R. BABCOCK, Brookline, Mass.

---

### Power of Truth over Error.

I would like to tell of a little demonstration to show the power of Truth over error. One day I was out driving with a lady who was not a Christian Scientist. As we were coming down one street a man with a wagon came down another street and knocked into us so that his horse's foot caught between our horse's backstrap and the shaft pole. I began to realize the Truth, and that there were no accidents in Truth. That I was God's child and that no harm could come nigh my dwelling, and when we stopped and got the horse's foot out of the way we found that everything was harmonious.

A little girl who sat beside me in the drive told her mother about the accident. When she had finished, her mother asked her if she was afraid. She said no, because I sat beside her and I was a Christian Scientist.

I am only nine years old and have had many little demonstrations.—BEATRICE BABCOCK, Brookline, Mass.

## Religious Items.

The (Episcopalian) *Church Standard* says: "In Europe there is a great 'Nobel Prize' amounting to more than $50,000, to be given to the person who during the last three years shall be adjudged to have done the most toward the preservation of peace among nations. Art has entered the lists in the person of the Russian battle painter Verestschagin. He now makes a journey to Christiana, where he opens an exhibition of his pictures. He enters the competition on the ground that he has depicted the horrors of war in so truthful and realistic a fashion as to make many converts to the doctrines of peace."

Through the search of Representative Lacy of Iowa, what is known as the "Jefferson Bible" has been brought to light. This little volume was compiled by Thomas Jefferson, and it contains the moral doctrines of Jesus, the portions of the Scripture of a supernatural nature being omitted. So thoroughly did Jefferson go into this work that when it was completed the moral doctrines of the Saviour were posted in a blank book in parallel columns, being in the Greek, Latin, French, and English languages. This interesting book is now in an iron safe at the National Museum.

The *Universalist Leader* says: "Even the commonplace ideas of the present are in advance of many of the highest ideals which prevailed before the Christian era. The Golden Rule is finding, from year to year, a much larger place in the conduct of men. It is this that has largely brought about the reformations that have given liberty to slaves, elevated the social position of women, and made men recognize the manliness of pity, the beauty of humility, the dignity of labor, and the sanctity of marriage."

The New York (Baptist) *Examiner* says: "There are some good men whose lives have no lifting power. They are merely negatively good, and often depressingly so. Far from stimulating, they actually repress and hinder aspiration. They take their religion, as Americans are said to take their pleasure —sadly. One feels in their presence as though his enthusiasm had been subjected to a cold shower-bath. Such men are of very little use in the world—except as examples of what a Christian ought not to be."

Thoreau very pithily said that "he would not be as one who drives a nail into mere lath and plaster;" that is, he would not care to do work that would be certain to fail. And yet that is what multitudes of persons, young and old, are doing every day. A great deal of the work of the world is like driving a nail into plaster which crumbles about it, and lets it fall.—Extract from a sermon by the Rev. Hugh Macmillan, D.D., published in the (Baptist) *Watchman*.

The *New Church Messenger*, a Swedenborgian journal, says: "Let us deal with the sins we know. If we are honest and fearless and unsparing with ourselves we shall be certain to strike a chord that relates us to the fault our brother needs to correct. It is curious, if we look closely, how many forms and shades of coloring the same sin will take with varying personalities. And it is wonderful how intimately associated we find ourselves with the sinner after all."

A contributor to the (Swedenborgian) *New Church Life* says: "The man who does to others as he would have others do to him, loves his neighbor as himself. For he makes a principle of his religion to be kind, considerate, and just in all the acts of his life, in all his dealings or relations with others. And therefore he does not permit himself to do anything to another which he would not be perfectly willing to have another do to himself."

The following is a selection from the "Closet and Altar" corner of the *Congregationalist:* "It is on still waters that there comes perfect reflection of the shores and sky. It is in still souls, unaffected by the winds of worldly ambition and desire, that Christ is best reflected for the hurrying, troubled world. The peace of God becomes the shadow of God's presence for those who have no peace."

The *Boston Transcript* says: "The Bible is neglected, and will continue to be neglected until the gloss put upon it by theologians has been removed; until it is seen to be what it, indeed, really is, the literature of a race which has had the 'sense for righteousness,' for right living, most glowing and strongest. This does surely constitute for the Jews, as Arnold affirms, a most extraordinary distinction."

A unique exhibition of "workers' bibles" was opened to the public at the Congregational Publishing House in Boston, June 4. Bibles containing markings and notes, formerly belonging to Evangelist Moody, Henry Ward Beecher, Cotton Mather, and other famous preachers; and copies of the Bible in manuscript from Africa, Arabia, Asia Minor, Egypt, Holland, Japan, Siam, and other countries.

That God is, and that we are formed in His image, is demonstrated by the stirring of divine qualities within us, and our capability to apprehend, however faintly, somewhat of the attributes of the Eternal. But for this capability all mention of His powers and excellence would be as much wasted upon us as a treatise concerning sound on the deaf or a discourse on reason upon the imbecile.—New York (Baptist) *Examiner*.

Hear if you must the whisper of the slanderer; but let it stop with you, locked in the secret of your own breast. You may be voted rather uninteresting and stupid by a certain society which thrives on whispered calumnies; but you will save many a heart from being torn and lacerated by unkindness and falsehood.

REV. CORNELIUS WOELFKIN.

In a sermon by the Rev. O. P. Gifford, D.D., published in the (Baptist) *Watchman*, he says: "When you have changed a man's mind you have made a new heaven and a new earth for him. The kingdom of Jesus Christ works from within out, and not from without in."

*The Christian Life* says: "It often seems a thankless task to work for humanity's uplifting, and he who looks for reward and due appreciation is likely to be disappointed. Human nature is not yet through building monuments to those its fathers stoned."

No life can ever be grand which has not first been faithful. Without the preparatory training of small fidelities, who would be suddenly equal to supreme tests?

*Zion's Herald.*

## Notices.

### Former Requests Renewed.

Circumstances make it necessary again to request our co-workers throughout the Field to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the Publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Literature for Distribution.

The June *Journal* devotes two pages to a list of publications, all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice is also given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, 6 cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that some back numbers of the *Christian Science Journal* may be procured at five cents a copy. Address, The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias*, Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

**One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.**

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political and Governmental Notes.

The Republican National convention, which was held at Philadelphia last week, nominated William McKinley for President and Governor Theodore Roosevelt of New York for Vice-President. Both were nominated by acclamation, President McKinley receiving 926 votes and Governor Roosevelt 925 votes on the first call of states. Governor Roosevelt being a delegate did not vote for his own nomination. The platform adopted by the convention sets forth the prosperous business conditions during the past four years in contrast with the conditions of the four years prior to the assumption of power by the Republican party, and claims that the better conditions are due to Republican rule. Renewed allegiance to the policy of tariff protection against foreign competition is declared, and to the gold standard policy with regard to the national currency. Concerning future legislation or administration, the platform declares for a more effective restriction of immigration of "cheap labor;" the protection of free labor as against contract labor; the raising of the age limit for child labor; the liberal administration of the pension laws, and the giving of preference to veteran soldiers and sailors, and to their widows and orphans in employing persons for the public service; the reclamation of western arid lands of the public domain; and the granting of "the largest measure of self-government" to the Philippines and Porto Rico, "consistent with their welfare," and the final independent self-government of Cuba in accordance with the pledge given when the war with Spain was begun.

The *New York Herald* of June 20 published a severe criticism of the policy of imperialism, and declared that it is a menace to the life of the Republic. Ex-President Grover Cleveland was proclaimed to be the right man to lead the anti-expansion forces. Mr. Cleveland sent a communication to the *Herald* saying that he is unalterably opposed to the candidacy suggested on personal grounds.

According to advices received last week, dated Honolulu, June 12, the agents of the Hawaiian post-office, custom house, and internal revenue were in readiness for the change of government which was set by law to take place at midnight on June 13. At that hour the government of the Hawaiian Republic ceased and the annexation of the islands to the United States became complete.

The anniversary of the battle of Bunker Hill was fitly celebrated in Boston June 18 by a military and naval parade in which marines and sailors from the Charlestown Navy Yard and from the battleships Massachusetts, Texas, and Kearsarge, and the cruiser New York participated.

General Joseph Wheeler received his commission as brigadier-general in the United States army from the President June 18. By the latter's direction General Wheeler is assigned to the command of the Department of the Lakes, with headquarters at Chicago.

It is stated by the newspapers that Mr. Bryan will not make any speech-making tours during the coming presidential canvass.

Admiral Dewey, in a newspaper interview virtually renounced his intention of running for President, and intimated that he would not accept a nomination for Vice-President.

The population of Porto Rico, according to the recent census, is 953,243.

### Foreign News.

Major-General MacArthur, military governor of the Philippines, on June 21 issued a proclamation offering amnesty to all persons in the islands who had been in insurrection against the United States, provided they would report to the authorities within ninety days, renounce all connection with the insurrection, and acknowledge the sovereignty of the United States in and over the Philippine islands. On the day the proclamation was issued two hundred prominent Filipinos, many of whom have been leaders in the revolt against American rule, met in Manila and discussed measures for bringing about peace. Proposals were made to General MacArthur which they thought Aguinaldo would agree to if accepted by the United States. The proposals embraced: First, amnesty; second, the return by the Americans to the Filipinos of confiscated property; third, employment for the revolutionary generals in the navy and militia, when established; fourth, the application of the Filipino revenues to succor needy Filipino soldiers; fifth, a guarantee to the Filipinos of the exercise of personal rights accorded to Americans by their constitution; sixth, establishment of civil governments at Manila and in the provinces; seventh, expulsion of the friars.

All last week Europe and America were without trustworthy news as to the situation of the foreign missionaries, diplomatic agents, and other foreigners residing in and near Pekin; even the allied relief force of twenty-five hundred men was cut off from communication with the outside world, and it was rumored that they had met with disaster. The Taku forts, which command the harbor at the mouth of the Pei Ho River, one hundred miles from Pekin, opened fire on the vessels of the allied foreign squadrons at 1 A.M. June 18. After an engagement lasting six hours the forts were silenced and a storming party made up of men from all the foreign ships landed and captured the forts. The Chinese losses are estimated at six hundred. The losses of the allied forces were comparatively small.

The first municipal elections in Cuba under the new order of things were held June 16, and in Havana the Nationalist party was victorious, electing General Alejandro Rodriguez mayor by a vote of 13,073, against 6,534 votes cast for Estrado Mora, independent. Reports from every part of the island go to show that perfect order prevailed at the polls. There was seemingly no excitement over the election.

The British extended their power over a large part of the Transvaal last week without very much opposition. President Kruger, on retiring from Pretoria, moved the seat of his government to Mochadodorp. Last week the British attacked that place and Kruger retired to Alkmaar. It is supposed that peace negotiations are in progress, which may soon end the war.

Sir Wilfrid Laurier, Premier of Canada, says the policy of the Dominion Government is to give the Yukon representation in the Northwest Council, but not to give the district a member in the House of Commons until after the taking of the census next year.

The Hungarian revenues from post, telegraph, and telephone services show a surplus increased to $2,500,000. The revenues from State railways rose from $7,500,000 in 1877 to $17,000,000 in 1897.

A Shanghai dispatch says Russia has demanded 50,000,000 taels indemnity for the damage done to the Chinese railroads in which Russians are interested.

### Industry and Commerce.

There was no change for the better last week in the St. Louis strike situation. The cars were run without police guards, but most of them made their trips without passengers, owing partly to the terrorizing tactics of the strikers, who blew up a number of cars with dynamite, and partly to the order of the labor unions to their members to boycott the street railways. In a number of instances persons who did patronize the cars were attacked by mobs on alighting and several women passengers were very roughly handled by the women partisans of the strikers. No effective repressive measures were taken by the legal authorities.

Collis P. Huntington has acquired absolute control of the Southern Pacific Railway Company, having succeeded in concentrating 1,260,000 shares of the stock in his own hands, by the aid of his bankers, who are reported to have advanced to him $28,000,000. Mr. Huntington has made his nephew, H. E. Huntington, first vice-president.

The exports of cotton goods from the United States to China amount to $12,000,000 annually, or about sixty per cent of the total value of the United States cotton goods exports. Cotton manufacturers are anxious for a settlement of the present trouble in China.

The Structural Steel Association, at a meeting held in New York June 15, decided to make an average reduction of $8 per ton in the price of steel used in building.

### General News.

A special dispatch to the *Boston Herald*, dated Buffalo, N. Y., June 19, says: "The leading topic of discussion at the seventh day's session of the Supreme Lodge, Knights of Honor, was the question of the exclusion of Christian Scientists and others of similar faith regarding medical practice. After a long discussion the report of the committee on laws was rejected, and, by a vote of 64 to 13, the Supreme Lodge refused to exclude such persons.

The Federation of American Zionists has been holding its third annual convention in New York, its objects being the restoration of Palestine to the Jews. The reports show 135 Zionist societies in the United States with ten thousand members representing such widely separated points as Bangor, Me., Fort Worth, Tex., and Seattle, Wash.

A year ago John D. Rockefeller offered to give Brown University, Providence, R. I., $250,000, if $750,000 should be secured from other persons within twelve months. On June 20 it was announced by the officers of the University that the conditions had been met, and a total sum of $1,096,106 in cash and pledges had been received.

Booker T. Washington, of the Tuskegee Institute, after consulting substantial colored men in all parts of the country, is organizing a National Negro Business League to encourage the people of his race, through local branch organizations, to enter all kinds of business.

The latest statistics show that the United States has over two hundred thousand miles of railroad and less than twenty thousand miles of good wagon roads.

The National Federation of Women's Clubs has been in convention at Milwaukee. Mrs. Rebecca Lowe of Georgia was re-elected president.

## Making Homes in Arid Regions.

**Expert Elwood Mead's Views on the Needs of Irrigation.**

AMONG the several exhaustive papers on different subjects read at the Trans-Mississippi Commercial Congress, that by Elwood Mead on "Needs of Irrigation" attracted great attention. Professor Mead is the expert in charge of the irrigation investigations and office of experiment statistics under the department of agriculture, and is recognized everywhere as an authority on irrigation problems. His address in part follows:—

. The arid region embraces an area larger than any European country, save Russia, and is capable of supporting a larger population than now lives east of the Mississippi River. In this vast district, when reclaimed, homes may be made for a population of a hundred million souls. To effect this result is a task inferior to no other in the realm of statesmanship or social economics. Its public lands comprise the nation's farm, and are the chief hope of those who have little besides industry and self-denial with which to win landed independence. As it is now, this land has but little value. In many places a township would not support a settler and his family. This is not because the land lacks fertility, but because it lacks moisture. Where rivers have been turned from their course the products which have resulted equal in excellence and amount those of the most favored district of ample rainfall.

There are only six million acres of cultivated land along the Nile. It is all irrigated. Where there is no irrigation there is desert. This little patch of ground has made Egypt a landmark in the world's history. It supports over five million people and pays the interest on a national debt half as large as our own. The possibilities of many Western valleys are equally great. The Missouri and its tributaries can be made to irrigate five times the land now cultivated along the Nile.

The essence of the problem of how to secure the settlement and cultivation of these lands is the control and distribution of the water supply, since not only the enduring prosperity but the very existence of the homes created will be conditioned upon the ability to use rivers for irrigation. To reclaim all the land possible will involve the spreading of water over a surface as large as New England and New York combined. The diverse interest of individuals and communities, and even of different states, will all be dependent on streams flowing from a common source. Standing now at the birth of things, and looking down the vista of the future, we can see the dim outline of a mighty civilization, blessed with peace and crowned with a remarkable degree of prosperity, in case wise laws and just policies shall prevail in the years of the immediate future while institutions are forming. But if it be otherwise, if greed and ignorance are allowed to govern, and we ignore the experience of older countries than ours, then we may behold only a gloomy forecast of legal, economic, and possibly even civil strife.

In considering the situation which confronts us we are met at the outset by an entire absence of definite information. We do not know, nor is there any ready means of determining, how many irrigation works have been built. In only three states is the record of these ditches even measurably accurate or complete. There may be seventy-five thousand completed ditches, or the number may be twice as many; but either as to their number, or the acres of land reclaimed therefrom, we can only surmise and conjecture. This, however, is known, that the highest-priced and most productive farm lands on this continent are in the arid region; that the largest yield of nearly every staple crop has been obtained by the aid of irrigation; that not only has the growth of this industry furnished a market for the factories of the East and supported the railroads which unite the two extremes of this country, but it is the chief source of nearly every one of the arid states. Colorado leads all the states of the Union in her output of precious metals, but the value of the product of her farms is nearly double that of her mines. In California it is the grain fields and orange orchards which support the majority of their industrial population and furnish the basis for her future material growth and prosperity.

The beginnings of Utah were wholly agricultural, and without the irrigated farms the cities of that interior commonwealth would as yet be only a dream. In a less striking degree the same condition prevails in Idaho, Wyoming, Montana, New Mexico, and Arizona. This is the situation while irrigation is as yet in its infancy. The reclaimed areas, though making a large aggregate, look very insignificant relatively to the rest of the country when delineated upon a map of the arid region. The possibilities of reclamation have but begun to be realized, yet when every available drop of water shall have been applied to the soil, the irrigated land will constitute a comparatively small proportion of the entire country. The potentialities of irrigation are, however, to be the development of other resources which they will make feasible. The best and largest use of the grazing lands, the utilization of the forest, the development of mines and quarries, and the maintenance of railroads and commerce in the western half of the United States, all hinge upon the control and use of the streams in connection with the fundamental industry of agriculture. Since irrigation is essential to agriculture in the arid states, the extent and character of its development must surely measure the superstructure to be built upon that foundation.

Looking over the field at the close of the century, we find that we stand practically alone among irrigation countries in having left all the work of reclamation to the unaided efforts of private capital and in the prodigality of the surrender of public control of streams. In one respect the policy pursued has been successful. It has resulted in an enormous investment (not less than $100,000,000, and some estimates make it twice that sum) and the creation of taxable and productive wealth of many times the amount invested. We have now about reached the limit of this

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

sort of growth. There will be few large private investments in canals hereafter until we have better and more liberal irrigation laws. Our entrance on the coming century is confronted by larger problems: the storage of flood waters, the interstate division of streams, and the inauguration of an adequate system of public control which will ensure to the humblest handler of a shovel his share of the snows falling on mountains above his farm, no matter how far removed he may be.

The first step is to determine the proper control and just distribution of the water supply. The problem varies with different portions of arid region. In the south, streams are generally torrential in character, furnishing the bulk of their waters in heavy floods, which must be stored in the many natural sites available in the mountains at a distance from the places where the water is to be applied to the soil. In the north, on the other hand, the problem is not that of storage, but that of the diversion of great rivers, like the Yellowstone, the Snake, the Columbia, and the Missouri. Here works adequate to the reclamation of the areas of arid land which remain can only be built at great cost, rivaling those along the Ganges and the Nile.

Before development proceeds much further it is desirable that some common agreement should be reached concerning the true character of water rights. The idea of private ownership in water apart from the land cannot prevail without creating institutions essentially feudal in character. A waterlord is even more undesirable than a landlord as the dominant element in society. It is indisputable, as has already been said, that the man who owns the water practically owns the land. A proposition which should propose to turn over all the land to a private monopoly, and so make a tenantry of those who may have their homes upon it in the future could not hope to command popular support. But the idea of a private ownership of water, amounting to a virtual monopoly of this vital element, has been permitted to grow up in the West. To a certain extent it has obtained recognition in legislation and a protection in judicial decrees and decisions. In other countries the doctrine has largely disappeared, and in our country it should give place to a more enlightened conception and to the only principle that can safely be adopted as the foundation of the agricultural industry in the West.

The right to water which should be recognized in an arid land is the right of use, and even this must be restricted to beneficial and economical use in order that the water supply may serve the needs of the largest possible number. Ownership should be vested, not in companies or individuals, but in the land itself. When this principle is adopted, the control of the water is divided precisely like the land, among a multitude of proprietors. Reservoirs and canals are then like the streets of the town, serving a public purpose and permitting ready access to private property on every hand. Water monopoly is impossible under this method, and no other abuse is encouraged by it.

Irrigation, over and above all other industries, is a matter demanding public supervision and control. Every drop of water entering the headgate, and every drop escaping at the end of the canal, is a matter of public concern. The public must determine, through constitutions and statutes, the nature of water ownership. The public must establish means for the measurement of streams and for ascertaining how much water may be taken for each acre of land under the principle of beneficial use. The public must see that justice is done in the distribution of water among those who have properly established their rightful claims to it.

There is a strong popular demand in the West for legislation to provide public aid in the construction of works of too great magnitude and cost for private enterprise, and a growing belief that one of two things should be done, either the arid states should be placed in a position to furnish this aid by having the revenues from all the lands within their borders, or the general government should extend the work it is now doing in the irrigation of certain Indian reservations to the reclamation of the unoccupied public lands.

Only the national government can make the best and broadest study of the various economic questions related to the development of agriculture on arid lands, and the general government is already active along these lines.

Sooner than is generally realized the public or private ownership of western rivers is destined to be one of the great social and industrial questions of this country. Their waters are worth more than the land, public or private, through which they flow, and the manner of their disposal will do more to shape Western civilization and promote or retard Western development than all other causes combined. The investigations of the office of experiment stations are designed to make clear and conspicuous the farmers' needs, and it is intended that their presentation shall tend to promote the creation of an irrigation system which will make the supplying of the farmers' necessities a matter of first importance and be a source of pride to the nation.—*Denver Republican.*

## Selected Articles.

### Interest in Christian Science.

THE recent publication in the *Mail* of letters said to be the correspondence of Agrippa and Christ, in which the former asks the latter to come into his territory and heal him (Agrippa) of disease, has aroused some discussion in regard to divine healing, and incidentally has directed attention to the claims of Christian Science. The local church of that belief holds its regular Sunday and Wednesday evening meetings at Jory's Hall without any blare of trumpets, but its members claim that it is meeting with a steady growth.

Dr. C. Grattan was asked by a *Mail* reporter yesterday whether the letters referred to had occasioned much interest among the people of his faith. He remarked that it was impossible to say whether the letters were authentic or not. It was altogether possible that such letters had been written, but fraud in the matter of such relics was so easy that the letters would not probably be regarded with much interest unless strong proofs were adduced that they were really written by the persons, whose names they bear.

"But Christian Science does not rely upon such letters to draw the attention of the world to its wonderful accomplishments," said the doctor with enthusiasm. "It is gaining ground rapidly, not only among the poor and the unlearned, but among the wealthy and the educated. Not long ago a Prince and a Princess of Germany acknowledged its claims. In England, also, members of the nobility have accepted its teachings, and in this country some of the most clear-minded men and women have been made converts after careful study.

"That part of Christian Science which appeals most strongly to the ordinary mind is its wonderful cures of bodily disease, but in reality its moral cures are more important. We teach that the power to heal depends upon the degree of wisdom and purity that has been attained. The power of God is unlimited, but, as He works through human instruments, the imperfection of the instruments often hinders the efficacy of the work. The healing is always the result of the power of God, but it is applied through human agencies. The reason why such cures

Digitized by Google

as were witnessed in the early days of Christianity are not now more frequent is that we are lacking in knowledge of the Principle that governs the application of this Science.

"Two great aims of Christian Science are the cultivation of human brotherhood and the putting on, by each individual, of immortality. The attainment of these noble ends may be far in the future, but in time the race will reach them and the results will be grand beyond our conceptions."

In response to a question whether any remarkable cures had been made recently, Dr. Grattan said that cures were being performed all the time, but public mention was not made of them because the persons who were healed desired to avoid publicity. He referred to his own experience in being cured of cancer by treatment administered by himself, of which an account was published in the *Mail* some time ago.

"I had another experience a few months ago," said Dr. Grattan, "which was quite remarkable. I went to a neighbor's house about five o'clock one evening to get my little grandson, who was playing there. In the back yard of the house there was a lot of old lumber, and in some way I stumbled and fell, my hand striking four rusty nails, which were protruding upward through a board. Three of the nails pierced the palm of my hand to the bones, and the other one went into my finger. As I drew my hand away from them, the blood flowed in a stream. My grandson began to cry at the sight of the blood, but I assured him that it was nothing, and at once gave myself treatment, relying upon God for healing. I came home and washed the blood off the hand and, as I felt no pain, paid no attention to the wounds. It was Wednesday evening, and I went to the Christian Science meeting as usual. There a lady told of running a bodkin entirely through her hand, so that great force was required to pull it out. Christian Science treatment had been applied and the wound, which under ordinary medical treatment would have been troublesome for several weeks, was perfectly well at the end of a week. The story reminded me of my own experience, and I looked at my hand and was astonished to find that there was no sign of a wound except in the finger, where a slight abrasion of the skin was still visible. I told the story, which created great interest, for within three hours a cure had been effected of an injury which would ordinarily have been weeks in healing, with perhaps great danger of causing lock-jaw."

Dr. Grattan instances the remarkable effects of hypnotism to prove that the flesh is not sensitive, but that sensation is in the mind, and if the mind can be withdrawn the body may be cut to pieces and there will be no pain. If that can be done by human agencies with the aid of hypnotism, he argues that, if persons understand the operations of thought and depend upon God, they can exercise greater power than does the hypnotist, and none of the evil effects of hypnotism will be experienced. When a person has been several times under the hypnotic influence, Dr. Grattan declares that he is in the power of the hypnotist, and if the latter be unscrupulous he may use his power for evil to an alarming extent. A person who is treated by Christian Science, however, is not brought under the power of the healer, and no evil effects are possible.

The doctor this morning received a letter from a prominent gentleman of an adjoining county who is being treated for heart disease brought on by the use of intoxicants. In his letter he says that he had had no recent trouble with his heart and that he has not tasted intoxicating liquors for some time.—*The Mail*, Stockton, Cal.

## The Prayer of Faith.

ONE of the positive proofs of the utter misconception of the teachings of Christian Science on the part of many of its critics, is the fact of their insistence that Christian Scientists do not believe in prayer and hence are a prayerless people. The direct opposite is true, for probably no class of religionists believe more earnestly in the power of prayer; strive more sincerely to gain an understanding of how to pray and what to pray for, and endeavor more faithfully to put it into daily, yea hourly, practice.

This misunderstanding may be accounted for possibly on the ground that such critics may not be able to conceive of prayer otherwise than as an audible expression in words.

Prayer is the means by which man communes with God and puts himself in harmony with his Maker. The form of prayer used in Christian Science Churches is that of silent communion with God, and that communion is only genuine and fruitful when the one who prays meets the conditions involved in that sentence, so wonderfully full of meaning and so vital to Christian character, namely, "Forgive us our debts, as we forgive our debtors."

One may repeat, daily, the words of that marvelous prayer which Jesus bequeathed as a rich legacy to mankind, and still never pray.

It is the constant effort and desire of Christian Scientists so to educate the thought and to cultivate an understanding faith in the all-loving, protecting power of God, and so to dwell in that consciousness that in every moment of temptation or danger to themselves or others, the desire will go out to God involuntarily, with an abiding conviction of His ever-presence and power, and with perfect confidence that He "shall supply all your need."

This is the prayer of faith which "shall save the sick;" which should and does protect God's children when they are ready to believe and accept. It is the prayer of thanksgiving and praise; the acknowledgment of God as the giver of all good. It is the taking of the Bible at its word when it says "When ye pray, believe that ye receive them, and ye shall have them."

It matters not what words are used, indeed, one may not be conscious of having framed a syllable. The virtue consists, not in words, but in a clear, unshaken understanding that God's Kingdom is come—His will is done—and this undoubting condition of faith brings the proof that God does hear and answer prayer. Jesus said, "When thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly."

Does not the tenor of the advice given in this chapter for the preparation for effective prayer, show that the material senses and all their laws and conditions, all selfish thoughts, motives, and ambitions, should be shut out, and our purified desires be alone with God, even though bodily we may be surrounded by a multitude?

This quality of prayer is undisturbed by any sense of anxiety as to its effect upon man's ear, and cannot fail to reach the Father in Heaven. When mankind learns the spiritual meaning of prayer there will be no unanswered petitions. Knowing that prayer is the constant resource of all Christian Scientists who are striving to learn more of God, the writer has often wondered at the seeming resistance of Christians to the Christian Science interpretation of prayer, which so fully coincides with that of the Scriptures. It is based upon spiritual understanding, hence is understanding faith, rather than blind faith. Christian Scientists, as did James, show their faith by their works, through the application of an understood principle. Is it urged this is cold? James says, "If any of you lack wisdom, let him ask of God . . . and it shall be given

Digitized by Google

him." If we are not to understand these mighty truths why do the Scriptures give more than two hundred and sixty references to understanding, making a clear distinction between the human and divine understanding, the material and the spiritual? Paul, that master metaphysician, says: "I will pray with the spirit, and I will pray with the understanding also."

Because we have proofs which are distinctly recognizable that our prayers are answered through the understanding of God's law, this in no degree tends to show that understanding is devoid of any of the comforting, endearing qualities of "the faith which was once delivered unto the Saints." Does it follow that the virtue of faith is lost because one understands upon what faith is based?

It has been said that the ignorant or uneducated person may find himself unable to grasp these metaphysical statements in relation to prayer, and thereby lose its demonstration or proof. That is not true, for the fundamental statements of Christian Science, as to what God and man are in their relation to each other, bear within themselves the possibilities of demonstration, which are so positive and clear and even simple to the child-like thought, that a young child may pray the prayer that "shall save the sick" as well as the sinning, even though he might not be able to express in words that which would convey to another an explanation of his faith. Christian Scientists owe a debt of gratitude, which can never be cancelled, to the Rev. Mary Baker Eddy, author of "Science and Health with Key to the Scriptures," that in that book she has taught them how to find the meaning of Jesus' words and works; the inspired sense of the Scripture, the power of prayer, the divinity of the Christ, the Omnipotence of God.

I. M. S.

In the *Grand Rapids (Mich.) Herald.*

## Defends Christian Science.

*To the Editor of The Standard Union:*—Will you kindly grant me space to reply to the criticisms on Christian Science contained in your account of a sermon preached by the Rev. Dr. A. C. Dixon of Brooklyn. If it were true, as Dr. Dixon asserts, that Christian Science is bequeathed to modern times by philosophic Athens, and that Christian Scientists are charmed by the new, rather than the true, how could it be explained that the movement has grown so remarkably, and that the firmest adherents are those who have longest practised its teachings. The facts repudiate the statement with which Dr. Dixon begins his sermon. Many who turn to Christian Science have conspicuously opposed it before accepting its teachings. Christian Science does not profess to introduce a new truth. Truth is God, unchangeable and eternal. Every statement in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, has Biblical authority, based on the teachings of the prophets, and on the life and teachings of Jesus the Christ, as epitomized in the Sermon on the Mount.

Christian Science is neither un-Christian nor pagan. A comparison of Christian Science with any of the mystical philosophies of India exhibits ignorance of what it really is. The Indian cult, of which Dr. Dixon speaks, is a society of stoics, who do, indeed, ignore pain and suffering. This is not Christian Science, which recognizes that pain and suffering are real to those who have not overcome them. If the impression given concerning Christian Science by Dr. Dixon, is as far from correct as that conveyed to the public by his allusion to Pundita Ramabai, the effect of his remarks is not greatly to be feared. The delicate little lady, whose life work has been to elevate the condition of women in India, would be surprised to hear herself spoken of as "Ramabai" and described as "he." Is it possible that Dr. Dixon's statements are as unreliable in one case as in the other? Christian Science is not based on selfishness. In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 493, is given the tenets of our church, one of which reads as follows: "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure.*"

The very essence of Christian Science is unselfishness. The highest form of compassion is to destroy whatever causes suffering and grief. Ineffectual pity, which emphasizes one's mental and physical distress, is not Christ-like. When the sick and deformed and morally unclean came to Jesus, he did not stop to commiserate, but healed them. Christian Science does the same, because it is based on Jesus' works, as well as his words.

The Rev. Dr. Dixon errs when he charges that Mrs. Eddy propounds pantheism by denying the existence of a personal God. Pantheism, while embracing several modifications of thought, is primarily the teaching that both mind and matter are the creation of God; that the Creator is in what He creates; that there are gods many. Christian Science is as far removed from pantheism as day is from night. Christian Science teaches that God is the tender Father-Mother of the Universe. He is Intelligence, Substance, Principle. The following explanation from "Rudimental Divine Science" by Mary Baker G. Eddy, refutes Dr. Dixon's statement that Christian Science denies a personal God: "In Christian Science we learn that God is definitely individual, and not a person, as that word is used by the best authorities, if our lexicographers are right, in defining *person* as especially a finite *human being*; but God is personal, if by *person* is meant infinite Soul."

Nowhere in the writings of Mrs. Eddy, or in the literature of Christian Science will Dr. Dixon find a warrant for these statements attributed to him: "Christian Science poses as the foster-mother of ignorance. It goes beyond agnosticism, which says, 'I do not know,' and declares that we must not know. Knowledge is power simply for evil. Boards of health are unnecessary. A city need pay no attention to its sewerage, or to cleansing its streets. Filth is as healthy as flowers," and so on. I would rather think that Dr. Dixon preached his sermon after very little thought on the subject of Christian Science than to believe he had given any considerable time to a study of this religion. It is kinder to recognize error due to ignorance than error impelled by malice. Christian Scientists are law-abiding citizens, none more so; conforming, in so far as it is necessary, to the health regulations of the community, and in no way doing violence to the opinions of those about them. Christian Scientists believe in purifying their own thoughts, thereby bringing out pure and clean surroundings in the world in which they live. In so doing, disease is prevented, since diseased thoughts are not entertained, and every effect has a mental cause. If in the future Dr. Dixon should meet Christian Scientists, he, like all other opponents, will change his opinion.

Yours truly,

WILLARD S. MATTOX.

## Answers Rev. Galeener.

*To the Editor:*—In a recent issue of your paper is a report of a sermon preached by Rev. Chris Galeener upon the subject of Christian Science, and I hope that you will allow me space to call attention to a number of misconceptions voiced by him.

In the first place, let me say that Christian Science comes to humanity as a demonstrable religion—founded upon the Bible, and applicable to the needs of humanity in the every-day affairs of life. It is the Christianity of

Digitized by Google

Jesus, and it heals the sick and reforms the sinner just as it did in his day. In fact, it is the fulfilment of his promise: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." That Christian Science is doing this work is abundantly proved by the testimony of many grateful people who publicly acknowledge its healing and regenerating efficacy. Such testimony is given at the Wednesday evening meetings held by the more than four hundred churches of the denomination, and through the official denominational publications—*The Christian Science Journal* and the *Christian Science Sentinel.*

Mr. Galeener says that Christian Science appeals to people "along the line of their physical needs." In that respect it follows in the footsteps of Jesus, who did not scorn to appeal to the people of his day "along the line of their physical needs." His miracles, which were performed "along the lines of the physical needs" of humanity, are mentioned in thirty-nine of the eighty-nine chapters of the four gospels. May we not conclude that these signs are inseparable from Christianity, and that any criticism of Christian Science upon that basis is a criticism of Christianity?

He disputes the philosophy of Christian Science because a fundamental statement is "God is All-in-all." Does he mean that God is not omnipotent, omniscient, and omnipresent? I hardly think so, although that is the logical conclusion of his objection. He says that "Christian Science declares in unmistakable terms that there are no facts," but in that he is mistaken. Christian Science has but one text-book in addition to the Bible—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and he will not find such a declaration therein. He will find, however, that it declares that God is the only Creator; that He is not the creator of sin, sickness, and death, and that in that sense they are unreal and nothing more than the illusion of mortal mind. Can we conceive of God as the creator of sin? or as the creator of the creator of sin? If God is not the author or creator of sin, then He is not omnipotent if sin is real, because it cannot be real without a creator. Is it not dishonoring God to charge Him with being the creator of sin, sickness, and death; and is it not dishonoring Him, and is it not unscriptural to say that He is not the only creator?

Mr. Galeener attempts to explain the healing done through Christian Science upon some other basis than that set forth in its text-book, but the explanation is useless. Who is competent to explain the healing except he who has sufficient understanding to heal? Because Jesus healed in defiance of mortal laws "Some of them said, He casteth out devils through Beelzebub the chief of devils."

Mr. Galeener says, "We may laugh at its philosophy and either discount its cures or accept them as we please, but when we come to look into its theology, we are horrified at its blasphemy. It denies the personality of Jesus Christ and substitutes its inane ravings for the Holy Ghost." To find whether this statement is true or false, we must refer to the text-book of Christian Science, "Science and Health with Key to the Scriptures."

He asks, "What shall we say of its moral tendencies?" If he speaks the truth, he will be compelled to say that a religion which impresses upon humanity the necessity of following in the footsteps of Jesus, and which iterates and reiterates that in no other way can we be saved from the miseries of mortal existence, is a safe guide, and this is precisely what Christian Science does. He asks: "What will be the effect upon a rising generation to be told that there is no evil or sin in the world; it matters not what you do, you cannot sin?" If Christian Science taught anything of the kind, it would be worthy of all denunciation, but it teaches nothing but the highest morality and the destruction of sin.

Mr. Galeener's statement that it (Christian Science) has "a tendency to dehumanize the world" and "laughs to scorn the world's woe" is not borne out by facts, and he practically admits that such is the case. His argument that Christian Scientists are not "inhuman," but will become so, is a theory only, and seems to be a contradiction of Jesus' saying, "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles?"

### Substantial Improvements.

By all odds the best piece of macadam road bed in the city of Concord is that new piece constructed last summer from Fruit Street west, past Pleasant View, on the Hopkinton road. Its building was made possible by the generous gift of eight thousand dollars to the city by Mrs. Mary Baker Eddy.

It is understood that for charitable and public purposes Mrs. Eddy gave away last year between thirty and forty thousand dollars.—*Manchester (N. H.) Union.*

### Reprints from the Journal and Sentinel.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

The above reprints from the *Journal* and *Sentinel* will be furnished at the following prices: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

In addition to the above reprints the following tracts may be obtained: Practical Demonstration. Expressions Concerning Christian Science. Is Your Prayer Answered? Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science. Price, one hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00

### The Granite Monthly.

The May number of the *Granite Monthly* contains an excellent article, by Henrietta H. Williams, entitled, "Among the Christian Science Churches." The Publishing Society is prepared to furnish copies of this number at twenty cents each, or two dollars per dozen copies, postpaid.

The Bible rings with one long demand for obedience. The key-word of the book of Deuteronomy is, "Observe and do." The burden of our Lord's farewell discourse is, "If ye love me, keep my commandments." We must not question or reply or excuse ourselves. We must not pick and choose our way. We must not think that obedience in one direction will compensate for disobedience in some other particular. God gives one command at a time; if we obey this, He will flood our souls with blessing, and lead us forward into new paths and pastures. But if we refuse, we shall remain stagnant and waterlogged, make no progress in Christian experience, and lack both power and joy.

F. B. MEYER.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Scientists at Pleasant View.

WHILE there was no formal or public announcement of the fact, it was an open secret among the visiting Scientists during their recent gatherings in Boston, that the beautiful and spacious grounds of the Rev. Mary Baker Eddy, at Pleasant View, would be open to them. The result was that a majority of those from other places, at some time during their stay, availed themselves of the generous and loving act of their Leader and Mother, and passed a pleasant hour in looking over the grounds, and even being shown through her residence, at times when she was absent taking her customary daily ride.

Two or three times Mrs. Eddy appeared on her balcony and lovingly greeted her "children" in a short address.

Many hundreds of these children saw her for the first time, and the joy they experienced thereat is a sweet souvenir of their visit, which they alone can truly estimate. One of these children was a sweet and saintly lady whose mortal years number more than four score, who came from a western city more than twenty-five hundred miles distant, to be present at the Communion service, and see and hear "the dear Mother."

These exhibitions of tenderness and love are among the many latter-day evidences that the "Kingdom *is* come," and that the Christ-love is truly spread abroad in the hearts of men.

It is not necessary to say that all who saw our Leader were rejoiced at the opportunity afforded them, and looked with deep satisfaction upon her radiant face.

Many who had not other opportunity to see her, were greeted with bow and smile as she passed them in her carriage.

This visit, of course, crowned the otherwise festal occasion with the highest joy.

## A Pleasant Occasion.

IN the multiplicity of our labors we have thus far omitted to mention one of the pleasant events in connection with the recent annual gathering in Boston. We refer to the reception given to the visiting Scientists by Mr. and Mrs. Albert Metcalf at their beautiful home in West Newton, one of Boston's most attractive suburbs.

Their large residence and spacious grounds were placed wholly at the disposal of their guests, and when it is known that these numbered several hundred, the generosity and brotherly kindness manifested will be understood even by those who were not so fortunate as to be present.

We are sure our visiting brethren will carry away with them fond memories of this unusual exhibition of hospitality and fraternalism.

Another pleasant event was the reception tendered the visitors by Mr. James A. Neal at his pleasant rooms on Boylston Street.

These opportunities for friendly greeting and a better personal acquaintance, are cause for congratulation.

## A Mistake.

WE observe that a little story is going the rounds of the newspapers to the effect that I brought the testimony meeting held in Tremont Temple, Boston, June 6, to a sudden close because one of the speakers spoke of the healing of a person who had been pronounced dead by the physicians in attendance.

I suppose this item grew out of what one of the reporters of a Boston daily paper, who was present at the meeting, said in his report.

In reference to this I have only to say, the reporter's interpretation of my motive in closing the meeting was entirely original with him. Such a thought was not at all in my mind. It was my intention to close the meeting at nine o'clock under any circumstances, and this hour had arrived when I closed it. These meetings, when held in the Mother Church, are closed at 8.30.

SEPTIMUS J. HANNA.

## "Among the Christian Science Churches."

THE *Granite Monthly*, published at Concord, N. H., is one of the old reliable magazines of New England. It is devoted to literature, biography, history, and state progress as witnessed in the various manufacturing and other business enterprises, educational institutions, and religious organizations of the state. While it is a New Hampshire magazine and is of especial interest to those who live in the state or are bound to it by social and kindred ties, yet it contains many things of interest to all who are rejoicing in the growth and advancement of their fellow-men.

To the Christian Scientists throughout the world, the May number is especially interesting on account of the excellent article entitled, "Among the Christian Science Churches" by Henrietta H. Williams. The article is written in the author's well-known, pleasing and instructive manner, and contains much of an historical nature that is of interest not only to Christian Scientists, but to the public in general, and especially to those who are seeking reliable information regarding the great work that is being accomplished by Christian Science.

The article is illustrated by twenty half-tone reproductions of exterior and interior views of the Mother Church and various other churches in different parts of the United States, Canada, and England. These illustrations give one a definite idea of the work that is being accomplished in this era of church building. Many of these churches are substantial stone structures of modern architecture and stand as monuments to the faithful and enduring work that is being accomplished in Christian Science.

The article records the growth of Christian Science from the organization of the first Church of Christ, Scientist, by the Rev. Mary Baker G. Eddy and a few of her followers in 1879.

The reference to the prominent place that was given to Christian Science in the International Parliament of Religion in Chicago during the World's Exposition of 1893, recalls an event that perhaps did more than any other public gathering to call the attention of the world to Christian Science. Concerning this the writer says: "From this progressive event in the religious world, the first congress of its kind ever assembled in America or any other country, dates the widespread definition of Christian Science in encyclopædias, and some of the best biographies of its Discoverer and Founder were then issued."

Of the Discoverer and Founder of Christian Science, the Rev. Mary Baker G. Eddy, the author writes: "Christian Science has been built up first and last to its present influential capacity and great following of above five hundred thousand adherents, through the courage, energy,

Digitized by Google

and enlightenment of this one woman, whose capability and wisdom have been inspirational to those laboring in its ranks." Again she says: "Her writings have met with an extraordinary degree of popularity, all pessimistic prophecies and predictions to the contrary notwithstanding."

Concerning the influence of Christian Science upon the home, Mrs. Williams says: "Christian Science is essentially a religion of the home, fostering that which tends in its highest and most tender sense and relationship to hallow the ties of kinship and the sacredness of that most powerful centre for good on earth."

The article closes with a most interesting account of the building of a church edifice in Wisconsin which was entirely the work of children. All the offices of the church, with one exception, are filled by the children, and the manner in which they perform their duties might prove a good object-lesson to those who are "older grown."

The May number of the *Granite Monthly* should be given a wide and general circulation. It is especially adapted to general distribution among those who are seeking information regarding the work of Christian Science. It not only tells of the progress that has been and is being made, but it answers many questions regarding the teaching and practice of Christian Science. The Publishing Society is prepared to supply any number of copies that may be desired. For prices see page 695 of this issue of the *Sentinel*.

### Our Leader's Message.

We have the pleasure to announce that the annual message of the Rev. Mary Baker G. Eddy, to the Mother Church on Communion Sunday, will be ready for delivery on or about July 2. It will be issued in pamphlet form, same size and style of binding as "Christian Science *versus* Pantheism." Price, prepaid, 26 cents; per dozen, $2.50. Address all orders to Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Supplement to the Sentinel.

The lecture by Edward A. Kimball of Chicago, "Christian Science: Its Promises and their Fulfilment," which was delivered in Tremont Temple, Boston, Mass., April 24, 1900, is issued as a supplement to this issue of the *Sentinel*. For price of supplements see page 703.

### A Request.

The Field is requested when ordering goods either from The Christian Science Publishing Society or Mr. Joseph Armstrong to remit by express order, post-office money order, or exchange on Boston or New York. Individual checks cannot be received.

## Among the Churches.

### The Work in Rochester, N. Y.

First Church of Christ, Scientist, of Rochester, N. Y., was organized April 4, 1894. Like many Christian Scientists, we had had our triumphs and defeats, and our congregation only numbered about seventy-five persons. Since then we have outgrown two halls, and are now occupying a large one in the Cox Building, prepared for us a little over a year ago. Most of the chairs are now filled Sunday morning and Wednesday evening.

The three lectures given in Rochester, two by Mr. Carol Norton of New York, and one by the Hon. William G. Ewing of Chicago, have been of great value to the progress of the work in our city. Through them many have learned that it is the very Truth they have so long been seeking.

Our Sunday School numbers about sixty-five pupils, and excellent work has been accomplished through it.

Progress in Christian Science work has not been confined to the church. Parents have long felt the need of educating their children under the influence of Christian Science thought, hence, we opened a "Boarding and Day School for Boys and Girls," September 11, 1899. This school has far more than met our expectations,—intellectually, morally, and spiritually. The public school course for the year (except physiology and kindred branches) was finished in twenty weeks, or one half the school year, without special effort on the part of the pupils. The improvement in the deportment of the children is wonderful.

Our teachers are people of noble character and staunch Christian Scientists, and thus are able to present to the children right ideas in a wise and forcible manner.

One morning as I was entering the building, I met one of the parents, coming from the main room where he had been attending the morning exercises. With tears in his eyes, he said, "It seems too good to be true! Just realize the thought established in the minds of those children." The principal had been giving them a beautiful lesson, as he very often does, planting in their consciousness pure and holy thoughts which are reflected in glorious demonstrations.

Many incidents occurred in the opening of this school which taught the parents valuable lessons; two I will give. One parent felt that he could not meet the financial demands, but so determined was his son, a boy of about eleven years, to attend, that he worked during vacation, saved his money for that purpose, and appeared in school at the opening. This demonstration on the part of the child enabled the father to make his, and the boy remained the entire year.

In another case, a lady promised a boy of fourteen years that she would assist him in paying his tuition. The parents told the little brother that he must remain in the public school, as they could not meet the expense. The little fellow was so overcome that he remained at home and cried, saying, that he must go to the school for the children of Christian Scientists, and Mrs. S. would send him too, if she only knew. On retiring he insisted on having his school clothes by his bedside, "For," he said, "she will come to-night and I shall go to school in the morning." Sure enough, the lady called that evening, and informed the father and mother that she expected both the children to attend that school. He went and the parents have been able to assist in the payment of expenses.

We are happy in the thought that this school is not alone for the benefit of Christian Scientists in Rochester, but that all who wish may test its efficacy.

SARAH A. PINE, Rochester, N. Y.

### From Worcester, Mass.

During the month of September, 1895, two students conducted the Christian Science service at their home, two others meeting with them. The following fall a hall was secured. Gradually outgrowing that, one still larger was obtained, the Sunday service and Wednesday evening meeting being held in separate halls. As the attendance increased still larger quarters were found to be necessary, and the Grand Army Hall was rented for the Sunday service. At the present time both services are held there.

March 25, 1898, the church was organized and a charter obtained, with eight charter members. Later a Sunday School was established, which has at the present time twenty scholars. The church membership is now forty, and the attendance about eighty.

Digitized by Google

March 22 of this year a reading room was opened, located in Room 4 of the same building as the hall. All the Christian Science literature can be found here both for perusal and for sale.—WM. F. TUCKER, *Clerk.*

### Christian Science in Meriden, Conn.

Before organizing as a church in Meriden, meetings were held in a hall, but having found the old Universalist Church all furnished and vacant, in December, 1898, we moved into it and applied for a charter. We organized May 10, 1899, as a branch church with seven members. We now have eleven members and an average attendance of twice that number.

During the last year a Sunday School has been established; a reading room opened; "Science and Health with Key to the Scriptures" and "Miscellaneous Writings" placed in the Public Library; copies of the *Journal* are placed monthly in the reading rooms of two leading hotels; Journals and Sentinels have been left at the Town Farm, City Hospital, and at some engine houses.

The work is growing and the attitude of the people changing, being especially noticeable since a lecture recently given at which the attendance was about three hundred and fifty.—FRANK H. KELLEY, Meriden, Conn.

### Progress in Salem, Ore.

The Salem Church of Christ, Scientist, Salem, Oregon, was organized January, 1899, with thirty-one members and has had a normal growth. It holds two Sunday services and Wednesday evening meetings, and has a growing Sunday School. The reading room is doing good work. Since we have been organized as a church Dr. Fluno and Judge Ewing have delivered lectures here, which have done much to awaken an interest in Christian Science in the city.

In behalf of the church I wish to express its love and gratitude to our Leader, the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, for this glorious Truth that she has labored to bring to the world. Our desire is loyally and obediently to live the Truth and follow the absolute demands of Christian Science. We are also grateful to The Publishing Society for its able publications and faithful work which goes out to the whole world to sow the seeds of Truth and Love.

SARAH A. WILSON, Salem, Ore.

### Form Organization and Elect Officers.

The members of the First Church of Christ, Scientist, at a meeting held at their place of worship, over the Scott store building on Second Street, perfected a permanent church organization. The following is the list of officers elected: F. C. Wooley, president; Mrs. O. C. Zinn, treasurer; Will Bruce, secretary. Board of directors: Mrs. Wooley, Mrs. Zinn, Mrs. Bruce. It was decided to open a reading room in the chapel in the near future, where all who so desire can find literature bearing upon the Christian Science faith.—*The Hastings (Neb.) Republican.*

### New Church Edifice.

The trustees of the First Church of Christ, Scientist, which holds services at Scottish Rite Hall, 1007 G. Street, have just completed the purchase of a lot, 79 by 114 feet on the corner of Erie and Ontario Streets, one block from Columbia Road and one block from the 18th Street cars. The lot is paid for, and the estimated value is $11,000. The congregation intends to build a church edifice on this property. The purchase was made of B. H. Warner & Co.

*Evening Star*, Washington, D. C.

## The Lectures.

### At Rochester, N. Y.

The Hon. William G. Ewing of Chicago, Ill., spoke at the Lyceum Theatre under the auspices of First Church of Christ, Scientist, of Rochester, to a large, intelligent, and appreciative audience Monday evening, May 21. The subject was "Christian Science, the Religion of Jesus Christ."

The speaker was introduced by Attorney G. Frost Slocum, who spoke as follows:—

*Ladies and Gentlemen:*—The highest human attainment is the knowledge of truth. In the problem of attaining unto this knowledge, there are two factors, the one permanent, the other changeable. Truth is absolute, the same yesterday, to-day, and forever, eternally and unchangeably complete; but to human consciousness truth is constantly growing in proportion to the ever expanding capacity of the human mind for its completer recognition. Abstract truth is not truth for us, until we have discovered it, appropriated it, and applied it in our daily lives.

It is written, "Ye shall know the truth, and the truth shall make you free." To a study of the truth as it is claimed by Christian Science to have been embodied in the life, the character, and the teachings of Jesus Christ, our attention is to be directed this evening. The gentleman who is to address us, is a trained thinker and reasoner, an experienced judge, and an earnest investigator of Truth. He will give us the reasons for the faith that is in him. Whether we are in accord with his views or not, we recognize the purity of his motives and character, and the fact that he gives us the Truth as it has been disclosed to him. Those of us who have doubts about the truth of this new teaching may put our fears away. If the teaching be of God, it will abide. If not, it will run its course and pass away.

To the committee of arrangements of First Church of Christ, Scientist, in Rochester, I extend my hearty thanks for the honor accorded me by going outside of their own number and selecting me to preside over this meeting. I now take great pleasure in introducing to you as the speaker of the evening, the Hon. William G. Ewing of Chicago.

*Correspondence.*

### At Poughkeepsie, N. Y.

An address of over an hour on Christian Science was delivered by the Hon. William G. Ewing, former judge of the Superior Court of Illinois, at Collingwood Opera House last night (Thursday, May 24).

The chief point of Judge Ewing's lecture was a plea for a fair hearing. He was introduced by Mr. Frank B. Lown of this city, who said in part:—

*Ladies and Gentlemen:*—In all ages, and in all climes, one who brought a message of healing has been received with attention and joy.

As man emerged from primitive conditions, the individual who possessed or claimed to possess the power of subduing pain and of restoring lost vitality, became the most eagerly sought of all; and now the one whose attendance is most urgently demanded and most anxiously awaited, whose opinion is more fateful than the mandate of king or emperor, who holds our happiness in his hand, and whose look or nod means joy or unspeakable sorrow, is the physician.

The speaker who will address you to-night will therefore speak on a theme whose interest exceeds any other; on a theme which involves the constant effort of man to exist.

He will unfold a theory which to materialists will seem strange, possibly absurd and impossible, which they will

Digitized by Google

say removes us from the intelligence of the twentieth century, and relegates us to the superstition of the past. But this theory and belief has sufficient vitality and force to have already commended itself to a very large body of the most intelligent and cultured of the people, and is supported by evidence which leaves open for discussion the cause, rather than the effect.

I therefore take pleasure in introducing to you the Hon. William G. Ewing of Illinois, a man whom all may regard as sincere in his beliefs, and who will come marshaling facts which I am sure are entitled to your careful consideration and judgment.—*Poughkeepsie News-Press.*

### At Chattanooga, Tenn.

An audience composed of about six hundred of the most cultured people of the city gathered at the Auditorium yesterday afternoon (Sunday, June 10) to greet Judge William G. Ewing of Chicago, as he came to Chattanooga for the first time to lecture on Christian Science.

The first impression one has of this man is that he is an exponent of a religion which causes him to fairly radiate love to his fellow-men. His kindly, gentle presence at once prepossesses one in his favor, and the logical, scholarly manner in which he presents his thoughts are the result of years of legal experience. He is one of the most distinguished judges in the West, and was United States District Attorney for Northern Illinois under Cleveland. Fifteen years ago he was healed of a malady pronounced incurable by medical men. He has declined renomination to the bench, to remain free to expound the beauties of this religion to others.

Judge Ewing was introduced by Gen. Xen Wheeler, who stated that while he had many friends in the most exclusive and cultured circles who had become converts to the doctrines of Christian Science, he himself must plead guilty to having neglected an investigation of it, a fact for which he must confess a feeling of shame.

In a few gracefully chosen phrases he expressed his pleasant anticipations of the lecture and his gratification that so many had come out on such a hot afternoon to hear the distinguished speaker.

Judge Ewing did not attempt in this lecture to give any details of the work of Christian Science. He gave a number of reasons why people should feel free to depart from the ideas of their fathers on all questions, including theology.—*Chattanooga News.*

## From a Missionary in Turkey.

The following extract from a recent letter from a missionary worker in Harpoot, Turkey, may be of interest to the Field, so I send it.

"Thank you for the pamphlet on Christian Science. Yes, we have heard of it, even here, and one of our number, who is a noble Christian worker, Miss B., sends you her love. I gave her your letter to read and she said she wished she could write you, but she is one of our touring missionaries, and spends weeks and months in going about from village to village and city to city, holding meetings with the women and visiting them in their homes. Sometimes she has to sleep in a stable, but generally they can secure a room. There were few luxuries to be found before the massacre and now still less, but Miss B. bravely goes about over mountains, through streams and snow and mud and rain (and *fog* often, in winter), and she is always cheery and bright under all circumstances, trusting in the Lord and always looking on the bright side."

ADA J. MILLER, Cedar Rapids, Ia.

# From Our Contributors.

## Hope Set Before Us.

BY J. N. WHITE.

IF for Good we fain would labor,
Striving well to do our part,
We must pluck the weeds of envy
From the garden of our heart.

We must plant the seeds of kindness,
Strew them broadcast as we go;
Never give a thought to selfward,
We shall reap as now we sow.

Little band of faithful workers
Never fear shall overwhelm;
With Love's beacon light before us,
And our Mother at the helm.

## Why I am a Scientist.

BY NOLA MOLTKE ORGAIN.

BEING a child of a Methodist minister and a Methodist mother, one brother a Methodist Evangelist, four others and two sisters, pillars in the Methodist Church, and having borne the stigma of being the "black sheep" of the family on account of never having professed religion, I tried conscientiously to embrace orthodoxy, but failing to find satisfaction, I turned to Spiritualism. After studying it for several years, and finding nothing tangible in it upon which to centre my faith and hopes, after investigating many other dogmas and isms, I was what would be termed an Agnostic, doubting the existence of a God, heaven, or hell.

In the mean time, I became an invalid, suffering untold agonies from a complication of troubles; among them were muscular rheumatism, of eighteen months' standing,—a legacy of the grip,—female diseases, kidney disease, eczema, sciatica, and, as the last straw which broke the camel's back, I was seized by an attack of acute neuralgia. Having exhausted the skill of *materia medica,* and having gone to health resorts without receiving any benefit, I felt like a ship at sea, without rudder, chart, or compass, drifting aimlessly,—lonely beyond description, without one to guide me, when I floated into the arms of one who opened my eyes to Christian Science. Screaming at every move, unable to sleep or let others sleep, I turned to her in my distress, and she, in loving kindness, through her understanding of God, treated me for this trouble. After one treatment, I awoke the following morning and found that I could throw myself from one side of the bed to the other without an ache or a pain. It was with awe and reverence that I realized that some unseen and, to me, unknown, Power had healed me.

I began to read "Science and Health with Key to the Scriptures" determined to understand the true source of my healing, knowing that the Scientists had a knowledge that I did not possess. After studying diligently the light dawned; gradually my eyes were opened to the grandeur, the sublimity of that peace and rest; my troubles were all gone; fears all subsided; disease had vanished. I had found God, my friend, mother, father, sister, and brother all in one. I have been able to overcome the mortal mind beliefs that manifest themselves in a family of seven, besides many troubles of my friends. I have been healed and made "every whit whole." I now know there is a God, and that He is Life, Truth, and Love, and that I am His immortal child; and that if we obey the Bible admonition, "Seek ye first the Kingdom of God and His

Digitized by Google

righteousness," we shall realize the promise that all else will be added—health, spiritual understanding, harmony, life, and love—remembering at all times that "God is All-in-all, and there is none else."

My children, five boys, and my husband are also Scientists. My little ones often rejoice that they are allowed enough of anything they wish to eat without admonition of fear from me accompanying their disposal of good things. They often exclaim, "We have what we want and all we want. Hurrah for Christian Science!"

For ten months, all troubles have been met without resorting to medicine: two cases of stomach trouble, one of seventeen years standing, another of six years; tonsilitis; incipient stage of pneumonia; and all the little ills of childhood, such as bowel troubles, mumps, colds of every description, nails in feet, headaches, boils, styes, toothache, burns, etc. Some time ago, I was called upon to treat my eighteen-year-old son who had fallen under an engine on the turn-table at a round-house and injured his knee. He walked home, having been working at night. He was, to sense, suffering terribly, saying, "'Tis as large as two knees."

I left his side and began treating him. I kept it up all day, off and on. He went to his room and threw himself on the bed,—clothes, shoes, and all on, thoroughly discouraged, as he had just accepted this position, anxious to become an engineer, and this his first night's work. I feared at first when I saw his shoes soaking wet that he would take cold in his knee, then I declared the Truth. He went to work and never lost an hour. I saw him limping three days after. I inquired for the first time, "Why limp, my son?" He replied, "It is not sore, only stiff." After two days he said, "Mamma, come here, the leader under my knee is broken." I examined it and found that I could hear it grate as I worked it to and fro, but it caused no pain. Five days after the accident, the leg was well and the limping gone. All the gold of the Klondyke could not purchase my interest in Science. May the light of Christian Science illuminate the world and reflect its glorious divinity over all nations.

## Some Convictions.

BY N. M. D.

SOME convictions which have come into my life with the entrance of Christian Science are the following:—

Willingness to "seek first the kingdom of God" protects man from being imposed upon and surely brings the needful things. Unwillingness and fear reverse this. This has been proved many times.

Self-condemnation is not always a humble thought but may be self-love carried to the point of self-destruction. It may lead one to condemn himself without courage, and cause him to think others are condemning him also, and this is an injustice to them as well as to himself. A false sense of God's man is already condemned. We have nothing to do with that but to know it. The Discoverer of Christian Science, the Rev. Mary Baker Eddy, has assured us on page 455 of "Science and Health with Key to the Scriptures" that, "The spiritually Scientific man reflects the divine law, thus becoming a law unto himself." Also on page 156, "Science reveals the possibility of every good achievement, and sets mortals at work to discover what God has already done." God, absolute Good, must be Perfection. Man, the reflection, image, of Perfection, cannot be imperfect.

A little girl truly expressed this truth of Christian Science to her mother who was having a struggle. It was evident the child had been listening to the reading of Science and Health and her ears had been open to the Truth, for these were the joyous words she voiced, "Why, mamma, if God knew about error He would be error, and if error knew about God error would be good." Her mamma very soon realized her freedom, and gives God the glory and is grateful for Christian Science.

One cannot honestly desire to understand Christian Science, unless he is willing to take some pains to find out about it, and to make what may seem a sacrifice of time at first to read without prejudice the books that have been prepared by the Discoverer, Mary Baker G. Eddy, with so much loving self-sacrifice.

Christian Science will not only be a blessing to the thousands who now have Science and Health, but to all who are desiring the Truth. The time has passed long since, and never was, in fact, when it could be said that, "Christian Scientists do not know what they are talking about." Yet it is said of late by those who either have not known, or have forgotten the fact, that some of our best judges, clergymen, lawyers, doctors, and business men have given all to help in this work by healing, teaching, and lecturing. These are all well known in their states and many are known throughout the United States and in the Eastern hemisphere, to have lived lives of loving usefulness, and had already demonstrated to the height of a prosperous and noble Christianity before the greater possibilities came to them through Christian Science, with its demonstrable Principle. Yet, there are those who say (even when they have been fair enough to read the books, and have failed to grasp the meaning in one reading), "I don't believe Christian Scientists know what they are talking about." The proof is in "taking the little book and eating it up," giving of what we receive—living it—then we shall receive more. My conviction is that those who are not seeking are "to be let" until their ignorance "be taken out of the way" through experience, as ours has been, and yet will be.

Another conviction is that when we are prompted to write of our experience to give to the *Journal* or *Sentinel* in return for the blessings we have received, we should not listen to error in its different phases and justify ourselves in not doing so. It is safe to do our best and send it, knowing that Truth will take care that all that may not be helpful, born of our inexperience, will be crossed out. I experienced the joy of a child that has anticipated the want of a loved one, when reading to-day the call in the *Sentinel* for experience in demonstration.

## Candid Opinion of an Honest Seeker.

BY CHARLES F. BROWN.

IT may interest our friends to know the candid opinion of an honest seeker for Good. A visitor attended our church last spring and requested a conversation with a Christian Scientist.

She wished to know if her eyesight could be helped so that glasses could be dispensed with. After receiving the answer, "All things are possible with God, and *all* can prove this Truth," the visitor remarked, "I would not care a bit about my eyes if I could just have half as lovely a disposition as a friend who is a member of your church. She was treated in Christian Science and restored to health, and from being an ordinary, not over good-tempered girl, she is now so lovely that we long to have her with us all the time. She claims all the credit is due to Christian Science." Assurance was given that if the life of a Christian Scientist is faithfully lived, one could not avoid having the same sweet disposition as her friend.

"Do you know," said she, "when I came here, I had no idea what a Christian Science Church was like, and when I saw such a bright, beautiful church so crowded with refined, intelligent, well-dressed people, I felt so small and mean I wished I could get out of sight. My! but you

Digitized by Google

must have all rich people here,—and *such* a collection! I never saw so much money before; every plate was piled so full of bills the ushers had to put some in their pockets. It is all very wonderful to me."

The information was volunteered that the liberality shown in our collections is the visible evidence of our love. If we know that God is the source of supply, it is only right to prove our confidence in and show our love for Him in our deeds.

Think it over, you who are investigating Christian Science and see how much you actually trust in God and credit His love with power; put into practice your good thoughts, and noting the results, you will find Heaven is where you are, right here, for God has been revealed as practical, demonstrable Principle through the life experience of our beloved Mother and Leader, Mary Baker G. Eddy. Christian Science must be for *all*, for our Mother's selfless living example urges you to try to prove it for yourself, while hundreds of thousands gratefully testify that "it works."

## A Word of Gratitude.

*Dear Sentinel:*—The days slip by and I find I have not done what I assured myself I would do on my return from Boston: that is, just to send a word on paper, no matter how inadequate it might be, to express my sincere thanks to all who worked for our last Communion service.

Only by following the teachings of our beloved Leader as well as I know how, can I in any degree express my gratitude to her; for how can we ever repay her for her message to us, not to include the rest of the blessing.

That message is indeed the manifestation of Substance, Intelligence, beauty, and strength. I hope such a flood of Love and appreciation has come from the Field, that "the earth helped the woman," and our Mother knows by the manifestation thereof that her work is blessed.

I want to thank all those who helped to make our time in Boston so full of good, those who labored so fruitfully at the five services, our friends at The Publishing House, those who gave so much time on committees, and those who worked in the vestry.

But there are none who acknowledged their gratitude to our Leader by participating in any manner in those inspiring services who have not already received a plenteous blessing. The *Journal* and *Sentinel* convey to me a large portion of my daily food,—what wisdom they often bring from the little ones.—G. H. T., New York, N. Y.

## Gratitude for the Printed Lectures.

BY M. FANNIE WHITNEY.

I WANT to express my gratitude for the privilege of reading the printed lectures as they are given to us from time to time through the press. They always help me in some way, either mentally or physically. They have also helped me to gain clearer ideas of the practical application of Christian Science to meet the needs of every-day living.

While reading the lecture Mr. Kimball delivered in Tremont Temple, I was lifted above a seemingly darkened thought. Then the thought came to me that as the result of demonstration those lectures are written, delivered, and printed, and will surely bear fruit, for, "So shall my word be that goeth forth out of my mouth: it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it."

We hear a great deal these days about testing seeds to find out if they are true, free from weeds, and that they will produce plants. It's a pretty good thing. But it is better to test our words before planting them. Are they good, pure, true; will they produce well?"—*Farm Journal.*

# Testimonies.

### How I was Healed by Christian Science.

In the fall of 1899 I gave birth to a baby girl. When she was four weeks old, I brought upon myself, by being too ambitious for my strength, a female trouble, a very uncommon and severe one. My strength entirely left me. I could sit up but a few hours at a time, and my suffering at times was intense. This thought was uppermost in my mind and I could not dismiss it, Why did this trouble come upon me? I had planned to take such comfort with my baby and had tried to be careful lest I should exert myself too much, and, like Job, the thing I greatly feared had come upon me. I was most miserable in mind and body. I knew something about Christian Science and had read some in the text-book, "Science and Health with Key to the Scriptures," but could not understand it, and never had thought it necessary to investigate it. But now I began to think more seriously about it. I knew it had healed my mother of many ills, among which was this same trouble, after doctors, medicine, and the hospital had failed to relieve her. It was pronounced by all to be a very uncommon and peculiar weakness, and they could not seem to reach it. I knew from her experience that I had no hope in material means, and was ready for Christian Science.

One day I was complaining that I must be an invalid all the rest of my life, when my mother said, "No; you need not be like this all your life. There is a cure-all, why don't you write to Mrs. D. for treatment?" I answered that I had thought of it, but was not quite ready to mention it to my husband. Though he did not oppose Christian Science, yet he seemed to be of the opinion that it was more for people who did not have much the trouble with them, than for a severe sickness or organic trouble. I felt that he would want me to go through the category of patent medicines for female trouble first, and then try Christian Science if they failed to effect a cure. Imagine my surprise when that very evening as he was reading the testimonials in the *Sentinel*, he looked up and asked, "Why don't you try Christian Science? Perhaps it would help you." Surely the spirit of Love moved him to speak.

I wrote to a healer the next day, and she took up my case. After I sent the letter my mother came in bringing "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, for me to read. I remember thinking, "Oh, if I could only be healed without reading that book!" for I could not understand it enough to keep my mind on it. But she left it, and I opened to page 415 and read, "Never tell the sick they have more courage than strength. Tell them, rather, that their strength is in proportion to their courage." That whole paragraph seemed to apply to me and sounded so different from anything I had previously read in the book. I read it over and over and kept the book near me after that, and read constantly. My healer worked lovingly and faithfully for me for eight or nine weeks, and to-day I am in better health than I have been for years. I am perfectly well.

My healing was very slow, and for the benefit of those who expect the healing to come quickly I would like to relate some of my experiences while under treatment. I expected to be healed at once, and often wondered why it was so slow when I had turned to God first, without trying material remedies, and had so much faith in Him. In a few days I was much stronger, could sit up longer, stand on my feet longer, and in a week walked out on the street. The bodily suffering ceased almost entirely, causing me inconvenience only at times. The difficulty was not wholly removed, though I was gaining in strength all the time. I kept worrying because it did not yield entirely, and thought about it all the time, until I had

Digitized by Google

melancholia. I was almost insane; I certainly was deranged at times I believe. Nobody can know what I suffered. I would sit for hours and cry, scream so I could be heard all over the house, up stairs and down, and I used to think I would write the Christian Science Publishing Society to print nothing but testimonials of slow healing; the others seemed to discourage me. But the healer was preparing the ground and sowing the good seed and this trouble was overcome, but not for several weeks.

Several other troubles yielded during the time, but the first trouble did not give up entirely. It occurred to me that possibly I was depending too much on the healer, and ought to work out my own salvation. I accordingly stopped treatment and began to help myself, and now I am fully realizing my birthright—health and strength. The completion of my cure has been so gradual that I cannot say when it occurred. I kept improving and forgetting myself until now I am "every whit whole." It was about six months that I was in error, but, praise be to God, I am not an "invalid for life." I have planted, Apollos watered, but God gave the increase. No one can convince me that Christian Science did not heal me, and to Mrs. Eddy, and the dear woman who helped me to find the Light I owe a debt of gratitude that can be paid in no better way than by daily striving to live the Christian life they are living.—Mrs. Maude A. May, West Concord, Vt.

### Grateful for Spiritual Uplifting.

Nearly seven years ago, I became interested in Christian Science. I was not interested by physical healing, although unconsciously, I was being healed. My attention was first attracted while visiting an aunt who is a Christian Scientist. I had just finished High School and found myself on the verge of nervous prostration. One day soon after my arrival, I noticed a Christian Science tract on my aunt's writing desk, a line of which held my attention, and read something like this: "Hold in thought that God is your strength." I remember that a sense of peace followed my effort to do this.

Later on, I began to ask questions and smile at the answers. Finally, I began reading "Science and Health with Key to the Scriptures." With this effort, I was relieved of threatened nervous break-down, also of a trouble with my eyes from childhood, and likewise a weak back. My first treatment was required nearly two years after, when, for a period of about three days, I had not been able to speak above a whisper. I was relieved in one treatment.

My experience has been full of examples of the healing of Truth, but I wish to speak especially of overcoming weariness. While at my aunt's house one summer, I was helping her with the housework. One morning I had been working very hard, and about eleven o'clock I dropped into a chair nearly exhausted. The first thought was that I should have to lie down, but the thought came, "Why not meet the sense of weariness with Truth?" In not more than fifteen minutes I had mastered it and thought no more of it that day.

This winter and spring I have worked very hard and steadily, and recently have thought of it a great deal. One morning, when nearly ready to go to my work, I was overcome with fatigue and gave up entirely.

I tried to meet it myself and succeeded pretty well, but did not go to work that day. The next day I worked, but the fourth day my employer decided about lunch-time, that I looked so tired and heavy laden that she would put me to bed, as she was quite sure I would have the grip. I told her I would go down and turn my case over to a healer. I went to the healer and had one treatment. Before I left the office I felt as active as ever, and have since kept at my post.

Of course, while I am very thankful for the physical healing, it cannot be compared with the mental healing and spiritual uplifting. I am not able to tell of the peace and joy that have replaced the sense of melancholy, loneliness, and even hopelessness that unhappily was my lot, even as a schoolgirl.

Only in my desire and effort to be a true Christian Scientist am I able to show my appreciation of our Mother, Mary Baker G. Eddy.

Lurline Sheafor, Kansas City, Mo.

### Made Free Indeed.

I had no intention of accepting Christian Science when I went to a healer last July for treatment, but I had heard of the cures wrought by it, and I wanted to be healed, no matter by what means it was done. I was suffering from several diseases, one of which had bound me for over six years, rendering me unable to attend to my household duties or to do much work of any kind. Beside this I had throat disease, stomach trouble, nervousness, weak eyes, and other troubles needless to mention. I have the kindest feelings for the physicians who did their best for me, but I never knew what it was to be well until I was healed by Christian Science.

I was under treatment only ten days, at the expiration of which time I was healed spiritually as well as physically. Just after my healing I lost my servant, and though I made repeated efforts to get another I could not do so. Then it dawned on me that divine Love was giving me this opportunity to prove I had been healed. I cooked, swept, shook rugs, and did the rest of my housework with the greatest ease and to the great astonishment of my neighbors. I am stronger than I ever was before, and am happy in my release from bondage and blindness.

I had been striving for spiritual growth for some time, but how ignorantly! I did not know *how* to read the Bible; now it unfolds itself to me in ever-increasing beauty. Truth has, indeed, set me free. I now know that error exists only in belief, and that God is All-in-all.

I can never cease to be grateful to our dear Leader, the Founder of Christian Science, nor to my healer, who so lovingly and patiently helped me into this blessed understanding of Truth. I write this in gratitude and in the hope that it will induce some one else who may be in the thraldom of error to go to the source of all help—Omnipotent Good.—Mrs. C. V. Bronson, Knoxville, Tenn.

### From a Business Man.

I was attracted to Christian Science about four years ago, on account of its religious phase, but have since had the most practical proofs of its healing efficacy. First, in relief, after a few treatments, from a severe case of deafness. Second, the tobacco habit (smoking) left me, with no effort or sacrifice on my part, although it had been a daily companion since my boyhood. (I now have grandchildren who are young Scientists.) Third, I have not used glasses for the past year for any purpose, while for the previous twenty years I depended on them for all reading and writing. I have also been relieved from a tendency to insomnia and now sleep like a child, although requiring less sleep than ever before. Science keeps me from getting tired and seems to roll back the wheels of time.

As an active business man I find it an ever-present and every-day help in all the activities of life, and I am deeply grateful to the Mother for her presentation of Christian Science to this age.—James Van Inwagen, Chicago, Ill.

He who has the truth in his heart need never fear the want of persuasion on his tongue. John Ruskin.

## Religious Items.

The *Congregationalist* publishes the following prayer of Jeremy Taylor: "O Almighty God, give to thy servant a meek and gentle spirit that I may be slow to anger, and easy to mercy and forgiveness. Give me a wise and constant heart that I may never be moved to an intemperate anger for any injury that is done or offered. Lord, let me ever be courteous and easy to be entreated; let me never fall into a peevish or contentious spirit, but follow peace with all men, offering forgiveness, inviting them by courtesies, ready to confess my own errors, apt to make amends and desirous to be reconciled. Let no sickness or cross accident, no employment or weariness, make me angry or ungentle and discontented, or unthankful or uneasy to them that minister to me; but in all things make me like unto the holy Jesus. Amen."

In a recent editorial the *New Church Messenger* says: "Why preach always to the sinner in ourselves or in our brother? Better a million times to make our appeal to the slumbering spirit of good, to the captive soul sleeping and bound with chains. What are the powers of evil beside the glorious and unconquerable might of the spiritual man aroused to break the illusory bonds of a lower inheritance and habit and to lay hold of his prior birthright to a share in the limitless creation and unfoldment of the Kingdom of Heaven? In the contemplation of our infinite opportunities how our petty impulses to wrong thinking and wrong doing shrivel up and roll away like a cloud that is past, and we stand facing the glorious East with its thrilling promise of a never ending day!"

Charles William Pearson, A.M., of the department of English literature in the Northwestern University, in an open letter to the General Methodist Conference, published in the *Chicago Tribune*, says: "The question is not, Are we doing some good? but, Are we doing all the good we can? How can we in consistency ask the heathen to abandon their errors if we refuse to abandon ours—ask them to receive new truth from us if we ourselves refuse new truth? If we refuse the flood of light that the nineteenth century has poured upon the world shall we not become blind leaders of the blind? 'Be ye perfect' is the law, and when once that is deliberately set aside not only is it impossible to progress, it is impossible to stand still: the only possible thing is decline and decay."

The following is an extract from a prose poem on "The Dew," by Mrs. Merrill E. Gates, published in the (Baptist) *Watchman:* "The dew suggests the unseen, gentle, actual refreshing of our inner nature by the Holy Spirit. Not consciously always does the divine healing of the dew of the Spirit fall upon our spirits. We are renewed, we are refreshed, we are lightened we know not how. We have heard no sound of rain. We have had no shower of overflowing moisture. Yet we are conscious of invigorated vitality. It is the time of dew-fall, and so we continue to be sure of the unseen realities. The dry, the hard, the stony and implacable aspect of life is softened, some entrance for the things of God seems to be given amid the sordid, sensual, hardened, and scoffing spirit of the world."

Concerning the cure of loneliness the *Sunday School Times* says: "Selfishness is one great cause of loneliness. If a man builds walls around himself, so that he may keep all that he has to himself, he soon finds that he has built walls around himself which shut out all that might come in to him from others. So the cure of loneliness may be the overcoming of selfishness. The medicines for this disease of loneliness are potions of generosity, of thoughtfulness for others, of self-sacrifice, taken in large doses."

The New York (Baptist) *Examiner* says: "Our Saviour's heart was full of compassion for the suffering and needy, and those in whom his spirit dwells will naturally feel as he felt. Hard-heartedness and indifference in the presence of suffering is un-Christlike. It is the spirit of the world, of selfishness. We have need to beware lest the constant sight of the sorrows of poverty dry up our compassion, and render us callous to the need of our brother."

The following is from an article entitled "Cant and Business" by Charles S. Kay, published in the (Baptist) *Standard:* "We live in times when it is well to be circumspect, and to discriminate. Much supposed opposition to religion is not such at all; it is simply disgust with cant. There are few persons, indeed, no matter what their own opinions and habits may be, who, in their inmost hearts, despise 'pure religion and undefiled' as scripturally defined."

A writer in the *Universalist Leader* says: "Human sympathy and the sense of human brotherhood are larger to-day than ever before. Trade considerations and commercial advantage can no longer precipitate war against a weaker nation without calling forth a protest from the people who are waging such a conflict. And it is the progress of real Christianity which is bringing about such changes in the affairs of the world."

*New Church Life*, (Swedenborgian), says: "Outspokenness is often practised under the guise of frankness, without deserving that name. 'Plain speaking may be made a stalking-horse from behind which to shoot an envenomed dart.' To speak one's mind is commendable only when the mind is animated by charity, and by a wholesome fear of doing injustice in any way, even by mistake."

The *Congregationalist* says: "The statistics of Congregational churches for the last year indicate that the denomination is nearly stationary so far as numbers are concerned. The total membership, 629,874, is a net gain over the previous year of 1,640.

The New York (Baptist) *Examiner* says: "Lives that lift are lives that are hid with Christ in God, and so are strong in His strength who is 'mighty to save.' There is no other lifting power in the world that is of enduring value."

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

The June *Journal* devotes two pages to a list of publications, all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice is also given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price. Address The Christian Science Publishing Society.

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |

| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.00; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING,** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## The Christian Science Journal.

**Founded April, 1883,**

BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum, $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents. Forty Copies or more to one address, one year, each 40 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each 12½ cents. Forty copies or more to one address, postage paid, each 11½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $11; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 105 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1806, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 35 cents. Cloth binding, 45 cents.

SUPPLEMENT

# To the CHRISTIAN SCIENCE SENTINEL

[Reprint from the Christian Science Journal.]

## CHRISTIAN SCIENCE:

## Its Promises and their Fulfilment.

**A Lecture by Edward A. Kimball, under the auspices of the Mother Church, in Tremont Temple, Boston, April 24, 1900.**

In appearing before an audience like this I am conscious of being in the presence of those who entertain divergent views and opinions concerning nearly every question that engages the attention of man.

It is probable that you, among yourselves, differ concerning politics, religion and Christianity; concerning philosophy, economics, science, education, cause and effect, ways and means, and even what we call common sense.

I am aware that a lecture on Christian Science attracts unto itself people who widely differ in opinions concerning this subject—what it is, what it means, and what it does.

There are in this presence people whose hearts are overflowing with gratitude because they have been raised from abysmal depths of evil, and who are insistently giving thanks because Christian Science has bettered their lives and turned the currents thereof into channels of peace and health.

Others are emerging from the gloom of what has seemed to be an inevitable fate to peer wistfully towards Christian Science; to hope that it is true and that it may stay the havoc of disease and the dark hand of death.

There are others here who are indifferent; some who may be unfriendly, and others, perchance, in a state of antagonism to what they conceive Christian Science to be, but be this as it may, it matters not to me.

I have known what it means to entertain the most withering disdain for what I thought Christian Science was. I have known what it is to emerge from enmity to a state of tolerance. I have felt the fierce sting of agony and sat side by side with black despair. I have known what it means to be revivified by the faint hope, yes, the last hope, that in the purport and possibilities of Christian Science there might be some measure of deliverance for me.

I have known what it means to be healed thereby when all else had failed. I know what it means to gain some understanding of this Science; accurately to test and prove its value and to stand immovably fixed on the basis of achieved results in demonstration of its eternal verity. We Christian Scientists have traversed every inch of experience from violent antagonism on one hand to a satisfying consciousness that it is true, and that its blessings answer the dearest hopes of humanity.

In coming before you, therefore, I am impelled by a loving consideration for every man and woman in this house, regardless of your moods, regardless of what your opinions are or what they may be.

Coming together as we do, somewhat after the fashion of many men of many minds, a discussion of a subject like Christian Science is hampered to some extent by preconceived opinions and the native tendency of men to disagree; nevertheless, we can all of us meet for one moment, at least, on the common ground of universal admission that human existence is unsatisfied and unsatisfying.

This race stands historically as a self-confession of its own unhappiness, and has burdened the ages with its protest against its intolerable vicissitudes and its dreaded doom.

Meeting here as brethren in a kinship of human need, face to face with the miseries and hard conditions of the race, I ask this question: Are the ills of this existence inevitable, or is there a lawful and natural way of universal deliverance?

Is it proper and opportune for us to discuss the possibility of an imminent salvation from evil?

Assuming that you will admit the desirability of such deliverance, we invite you to give heed to some statements concerning the way made known in Christian Science.

I shall not attempt a technical exposition of this vast theme in one brief hour. The entire subject is fully stated and amplified in our text-book "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. He who would most wisely answer the sweeping question, What is Christian Science? cannot do better than to refer the inquirer to that book.

I shall, rather, speak somewhat of the promises of Christian Science and of their fulfilment.

That which I shall say will be new to some of you, and in order that I may gain my way to your mental hospitality, I ask you to remember that all revealed truth or scientific discovery comes to us by way of surprise. It revolutionizes, turns and overturns, supplants the old, supplements and substitutes, reforms and transforms. You know yourselves that the world is being called upon incessantly to discard the old and re-adjust itself to new discoveries and a more intelligent grasp of the facts of Being.

Christian Science announces itself as the Science of Being and the Science of God and man, the Science of Mind, the Science of Life, and the Science of healing; and as the Science of healing it promises that when understood it will abolish disease and eliminate it from human history. This statement is a surprise, surely, and is immediately met by old conditions of thought which declare that it is no Science at all. The issue is thus joined, and a contention is precipitated which will continue until the world shall have wrought out for itself a solution of the problem.

From whence proceeds this judgment that Christian Science is not a Science? It comes from the prevalent belief that the drugging system includes the only scientific treatment of sickness.

In submitting to the test, we are willing to have Christian Science judged by the highest standard that the mind can formulate.

One hundred years ago Benjamin Franklin wrote: "The rapid progress true science now makes occasions my regretting sometimes that I was born so soon. It is impossible to imagine the height to which may be carried in a thousand years the power of man over matter. All diseases may by sure means be either prevented or cured, not excepting that of old age, and our lives lengthened at pleasure even beyond the antediluvian standard."

I quote this as one of many utterances by men of science prophetically indicating the discovery of the Science of healing which would infallibly cope with disease and exterminate it. The inexorable demand of science is that the Science of healing *must* heal. There is no other perfect standard; no other basis from which a righteous judgment can proceed.

The world has witnessed but one exhibition that was in accord with this exacting requirement of Science. Jesus of Nazareth healed the multitudes of all manner of diseases instantaneously. Not one single case baffled him; there was no instance of failure.

There are people who have claimed that the scriptural account of his healing is spurious, and that he never did it. Others claim that he went off into India and studied occultism and mesmerized his patients, and some have declared that it was his excessive bodily vitality that effected the cures, as though the Redeemer of the world were nothing but a magnetic doctor. But Christendom unites in declaring that Jesus voiced the eternal Truth to mankind and all the centuries; that he was the very mouthpiece of infinite Intelligence and manifested divine Wisdom.

He knew more about God and man, more about law and government, more about the cause and the cure of disease than all other people that have ever lived.

He said that he came to do the will of God and to seek and to save that which was lost. In fulfilment of this mission what did he do? He reformed or healed the sinner and he healed the sick man.

In thus healing the sick did Jesus, who manifested the infinity of Wisdom, choose the best way, the right way, the lawful and therefore the scientific way, or did he choose an inferior way? He knew that drugs had been used for two thousand years; the same drugs which some people have thought God devised for the purpose.

Could Jesus have done God's will had he overlooked or disregarded a divine provision and adopted means that were positively opposite? Has God two ways? One that is perfect and effective, and a poorer and antagonistic way which manifests itself in dismal failure?

An analysis of this subject necessarily involves these questions: Was Jesus wise, and, therefore, scientific? Was his work scientific or lawless? Did he manifest natural law and God's eternal order, or did he contravene all law and present a mere spasm of supernatural interference with the naturalness of Being?

Christian Science answers all these questions, and thereby overturns all the guessing, all the preposterous theories whose only tendency has been to minimize the deep significance of our Lord's mission, and present it as a mere spectacular show.

It shows that Jesus' work was based on infinite Principle; a knowledge of which enabled him to manifest the right way, and therefore the only scientific way in which to heal. It includes, moreover, a complete declaration of the Principle, and an exposition of a faultless rule whereby it may be demonstrated.

Christian Science is forcing these questions upon all Christian people; can there possibly be more than one science of anything? Can there be more than "one Science of healing"? Did Jesus understand and practise it? Was his original Mind-

Digitized by Google

healing Scientific or unlawful? If Jesus' healing was lawful and Scientific, are methods which are extreme opposites also Scientific, or are they necessarily inadequate?

If Jesus presented the only right way, is there any other right way?

If Jesus' way was in contravention of law, how can it be a way for us to follow who are commanded to obey God's law? If it is an impenetrable mystery, how can it be of the slightest availability to mankind, who are expected to follow in that way?

Christian Science shows that Jesus was natural, lawful, and law fulfiling; that he was scientific and presented a way of healing which can be clearly understood and demonstrated with scientific accuracy. Thousands of people, once dying, are alive and well to-day in consequence of this Science and the understanding thereof, made available to any and every creature on earth.

Christian Science appears in an age when men and women, ministers and physicians, a revered judiciary and philanthropists of every type are earnestly endeavoring to Christianize the race and ameliorate its woe. It is no part of our desire to clip the wings of any righteous effort in this direction; indeed we glory in every good deed, every step of reformation, and every heavenly aspiration and desire; nevertheless, in considering all the endeavors that have been exerted in behalf of the sick, we cannot fail to notice that not one has ever attained to a state of excellence that satisfied the demands of Science or the practitioners who have ventured forth in its name.

Thousands of eminent men and professors in the different schools of material practice have confessed that, taken at their best, the results of their efforts have been inadequate and unsatisfactory.

After devoting their lives to the study and practice of medicine they have published innumerable opinions to the effect that medicine is not a science but is conjectural in theory and largely experimental or accidental in practice; that there is no theoretical or systematic classification of diseases or therapeutic agents that can be relied upon as a safe guidance in practice; that the primary cause or the essence of disease is practically unknown, and that the use of drugs as a remedy for sickness has destroyed more lives than war, pestilence, and famine combined.

If the drugging system were a manifestation of the Science of healing it would follow as a logical conclusion that Christian Science healing, which is the antipode of *materia medica*, was not scientific, but in view of the fact that it is admitted that the former is neither scientific, exact, satisfactory, nor adequate, and of the admission that there are very many diseases which it does not pretend to cure, it will be seen that it does not constitute a faultless standard that can be used to warrant the impeachment of any other system whatever.

I shall not pretend to prove that Jesus' healing was scientific, for no lecture ever proved anything, but it is proper to say that Christian Science, in explaining the Science of Jesus' ministry, removes it from the realm of the mysterious, miraculous, and unnatural.

He instantaneously healed all manner of disease. Imagination cannot possibly formulate a better way or depict better results.

The discovery of Christian Science reveals the Principle of primitive Christian healing and is re-establishing the efficacy thereof. In Principle it includes no admission that any disease is incurable, and in practice nearly every known disease has been healed thereby, including the entire list of those that have been counted incurable according to *materia medica*.

Christian Science healing of to-day is like the early Christian healing because it effects a moral reform as well as physical. It cancels temptation, destroys sin and its effects on the body. It touches the real moral and spiritual nature of man.

Through the action and supremacy of divine Intelligence divinely bestowed and directed, as the natural heritage of man, it reforms the sinner, reclaims the drunkard, heals the sick, spiritualizes thought, elevates and regenerates.

I have sat by the bedside of the dying and seen them thus withheld from death. I have seen the tear-stained cheek, the quivering lip, and the inebriate with his delirium; I have known people who were prostrated by grief, sorrow, remorse, and the inveterate anguish of disease, and I have seen all this, yes, more than this, dispelled by the touch of God as made known in Christian Science.

Another promise of deep import to the world is that Christian Science will reveal and establish an enlarged sense of the possibilities of salvation, and in this particular it overturns many old theories which have limited the deliverance of men from evil and prostrated their hopes.

Inasmuch as people have regarded the work of Jesus as miraculous and supernatural, it is no wonder that they have disagreed in their speculations concerning the scope of the salvation which he came to reveal. It seems absolutely amazing, however, that instead of allowing his own works to serve as the best interpreter of his words and his plan of salvation, the world has ignored the object-lesson, or demonstration of truth, and formulated a theoretical salvation which leaves out all possibility of divine deliverance of the sick. According to the Science of Christianity, Jesus manifested the will and law of God in man's behalf. He showed that the only way to "save that which was lost" was to heal it of sin and disease. The prevalent denial of this is a denial of the works of Jesus. It is a denial of the Christ ministry, and therefore a denial of Christ. To discard or reject it as "the way" is to mutilate Christianity and utterly abolish the efficacy of salvation and the operation thereof. Jesus said: "Preach the gospel;" "Heal the sick." "The works that I do shall he do also."

Jesus indicated his own sense of the scientific nature of salvation when he said: "The truth shall make you free." He indicated that there was nothing supernatural or mysterious about healing the sick and sinful, but that it was to be in consequence of the knowledge of the Truth or Science. His ministry was to overcome evil of every kind, and not to submit to it or urge his followers to submit. Many of the man-made theories of salvation involve the necessity of getting sick and dying in order to be saved, upon the supposition that when you are thoroughly dead you will be thoroughly happy; but Jesus never invited any man to be sick or to die. On the contrary, he taught them and urged them to gain a righteous mastery over disease.

The world which has been baffled by the mystery of evil has sought to solve the problem by assuming that evil was caused or permitted by God, and particularly that sickness and death were of divine procurement.

This dire mistake has shut out all supposition that salvation through Christ included salvation from disease.

People have speculated about evil and wondered whether they were going to hell or not, as though evil were inevitable and natural and hell a necessity. Their theories have never for a moment admitted the possibility of earthly deliverance and have never been in accord with the words of Jesus: "The kingdom of God is within you." It would seem, that instead of wondering whether they are going to hell or not, people would much better address themselves to the endeavor to get out. Go to humanity and witness its tears, sorrow, and broken hearts; its strife, woe, sin, disease, and death. Listen to its ceaseless wail of anguish and its pitiful appeal for deliverance, and you will find that it is enduring a hell upon earth. Now the question of vital concern to us is, Can we get out?

Nearly all the philosophy and religious systems declare that you cannot get out. They hold that most of the evil is inevitable and irresistible, and that salvation therefrom is impossible. They contend for the immortal continuity of evil and then assume that man can escape that immortality by the supremely evil process called death. Christian Science, which reveals the Science of salvation, declares that you can get out. It shows that evil is an abnormal and unlawful monstrosity which can be overcome, and as soon as people awaken to a perception of this, all the deadly philosophy whose siren's song constantly allures mankind to a dreadful and unnecessary doom will become extinct, and the perfectibility of man will come to light. There is no reason in logic, science, or sound theology for accepting Christ as the way revealed by infinite Wisdom and then assuming it to be the way of sickness and death, in spite of the fact that Jesus' practical example abolished sickness and death because they were unlike God and His law.

Christian Science promises to re-establish the natural, God-ordained dominion of man over evil. The Bible says that God made man in His own image and likeness and gave him dominion over all the earth.

Do you know of any man who manifests such dominion? On the contrary, do you not know that every creature on earth seems to be like a mere bubble, tossed to and fro on the sea of capricious destiny; the prey of disease and the reluctant victim of "outrageous fortune"?

Many of you have heard of the condemned felon who, on the day appointed for his execution, was turned over to some students for the purpose of experimenting with him.

They told him they intended to open an artery and bleed him to death. They bandaged his eyes; pretended to open the artery; allowed some lukewarm water to run over his arm and drop into a pail, and in due time the man, supposing he was bleeding, died. A perfectly healthy dead man! What killed him? Certainly there was no material cause, no violence, no abrasion or wound. Then why did the man die?

Will you permit me to suggest that he died simply because he did not know enough to live? He was too ignorant to live. If he had known enough to live, he might have done so, and that knowledge would have constituted his inherent dominion over his own life.

Some one has said, "What is the use of knowing a whole lot about anything if what you know isn't true?" This man knew a whole lot about himself that was not true, and what he knew that was not true was the cause of his death.

He belonged to a race that has not the slightest idea that it has any dominion over disease, and which, because of knowledge that is not true, is likewise submitting without necessity to a veritable maelstrom of evil. The whole world through ignorance, superstition, sin, and an utterly perverted sense of life and its possibilities, has disinherited and bereaved itself of its birthright of dominion. I do not know of any prevalent philosophy or religious belief other than Christian Science that induces the faintest supposition on the part of man that he has dominion over evil, and especially over disease.

At this point I want to say a word to the business men and all the practical everyday workers in this busy life.

I was for many years a successful manufacturer, accustomed to large affairs. I know that such people cannot do business on the basis of mysticism or blind faith. We find it necessary to keep pretty close to the line of legitimate cause and effect. And yet how often our best plans go amiss! How often our energy is wasted because of unseen influence, or of default on the part of

Digitized by Google

some one we have relied upon. I know that you can look in all directions; you who are merchants, teachers, artisans, clerks, professional men or housewives, and count a multitude of failures, disappointed hopes and trials that you have been unable to control. Was it because these things were inevitable or part of a relentless fate? No! It was because you never understood the mysterious hidden influences that have beset you and your affairs, and have not known how to cope with and master them.

Christian Science reaches every nook and corner of every-day work, duty, and opportunity. The understanding of it enables every man and woman to accomplish greater results in every field of endeavor.

One of the most pernicious influences that prostrates the race is fear. It palsies hope and expectation, limits and dwarfs the capacities, impairs human judgment and reason, and opens the door to many of the failures and ills that harass the world's workers and shatter their hopes. I was what is called a broken-down business man because of over-work, anxiety, and fear, but I know that I would not have broken down if I had had the understanding of Christian Science which casts out fear and cancels its penalties.

Bankers, manufacturers, merchants, and people engaged in all kinds of legitimate business or labor are gaining a dominion over their affairs which to them is more wonderful than the healing of the sick, and which cannot be comprehended by any one who is not to some extent familiar with the limitless possibilities of divinely bestowed intelligence.

In a recent address Bishop Morrison said that although not endorsing Christian Science, he thought that one of the reasons for the rapid growth of our denomination was our insistent recognition of God. In this he was right. Christian Science so reveals the nature of God that we are learning to turn to Him in every hour and circumstance of our need.

I know that if any one had told me fifteen years ago that I could be healed by the interposition of God, I would have thought it the most far-fetched proposition that could have assailed my ears, but this was because I had been educated to believe that he was a God of wrath who had instituted sickness, and who had perhaps arranged for my own damnation.

Now we are learning that God, who is the intelligent basis, source, origin, and creating cause of all that has actual existence, has ordained for man nothing but health, holiness, perfection, and life.

We are learning that humanity is awry, not because of God and His law, but because it is involved in the violation of law and has entailed upon itself the wretched penalties which it has come to regard as natural.

If Mrs. Eddy's work had done nothing more than to break the pitiful fear of God and of Divine law, that alone would have been an unspeakable boon. Christian Science, however, goes much farther than this, and is establishing the individual consciousness of God as Good, as divine Love and infinite Intelligence, and brings to pass the realization that this ever-present wisdom and power of Good is the healer of disease and is far more available to mankind in business and the different departments of life, than what people have called human judgment or energy.

The Scriptural promises have been ample and far-reaching, but human misconception of God has, to a large extent, shut out a fruition until this day of Christian Science, wherein men are learning that these promises are not a mockery, but are based upon absolute law and power which are available to them in every step and incident of their lives.

Christian Scientists do insistently recognize the fact that there is no other way whereby men can be saved or ever will be saved from the prevalent miseries of this existence, except through a knowledge of God and the sufficiency of His grace, and as they come under the government of God they find that the results are adequate and satisfying. History recounts the fact that throughout the ages, men who have lived near to God have been able to accomplish what others could not do, and this history will repeat itself until all men shall have gained dominion through righteousness over all the earth.

Christian Science promises to compose the dreadful religious strife which with appalling industry and continuity has mangled and murdered mankind throughout the ages, and still mangles it.

If you were appointed to save the race from the evil which besets it, and if you were to look for the causes of its misery, you would find that sectarian strife has been "a murderer from the beginning." You would find that for ages men have been guessing about God, the Bible, and Jesus Christ; that they have formulated all sorts of creeds and established thousands of antagonistic religious sects, which have throughout history assaulted each other with the most demoniacal ferocity. It is probable that more men have been murdered in the name of God, the Bible, and Jesus Christ than have fallen in all the non-sectarian wars waged since the beginning of history.

If you could find the countless millions that have been the victims of religious fanaticism and hatred, and ask each one for an inscription to be placed upon his tomb, he would say, "You may write, This man was torn from a happy home and family; he was wounded and tortured; he was boiled in oil, sawn asunder, and burned at the stake by people who assassinated him because he had a different guess about God, the Bible, and Jesus Christ from theirs."

You may say that this has all ceased now, that religious people are not allowed to kill each other any more. You may refer to the fact that the criminal law has largely suppressed murder in the name of God; but I ask you, "Has the criminal law suppressed the miserable quarrel? Is there not the same sectarian bitterness, the same denunciatory sermon, defamation, and hateful assault?"

If you were the Saviour of the world, would you not stretch forth your hand in deep compassion to these dear people and say, "Ye do greatly err, not understanding God, not understanding the Scriptures or Jesus Christ."

In contemplating this bitter conflict and the long duration of its woes, would you not as of old say to the world, "Ye shall know the truth, and the truth shall make you free"?

Through Christian Science, the world will learn the science of Christianity or the Christ truth which "shall make you free." It declares God aright and furnishes a key to the Scriptures which effaces mystery and makes plain the word of God to man. An exact and true understanding of God will manifest itself in a true or scientific theology, which will tranquilize the strife and establish a Christian brotherhood, whose chief aim shall be to live in imitation of Christ.

It has been declared, however, by many people that Christian Science is not the Science of Christianity, and, indeed, that it is not Christian at all.

Inasmuch as there are one hundred and forty-two Christian sects, each one different from all others, there can be no standard with which Christian Science can be compared. In the absence of any unity of Christian creed, theory, or practice, I can only state our sense of what Christianity is and leave you to decide for yourselves as to its merits.

Christianity means Christian religion, Christian theology. Christian theology includes the understanding and acknowledgment of one infinite, individual, supreme God, who is, as the Scriptures declare, Life, Truth, and Love; who is Omnipotence, Omniscience, and Omnipresence, the sole creator of the universe, including man. He is the source, origin, cause, and Principle of all that really is. He is infinitely good. He is all-inclusive and self-existent Spirit. He includes all law and government. He hath already done all things well, and there is none beside.

This understanding of God impels man to learn His will and do it. Man thus governed learns that "God healeth all thy diseases," and is an ever-present help in trouble. Christian Scientists are learning to trust this God and rely on His promises. They are proving that God is Life and means life, that He does answer the righteous prayer and lead His own in the way of life and peace.

Christianity includes the recognition of the Bible as including the inspired word of God. Not that man must believe that all the errors of translation and interpolation need be subscribed to, but that one must gain the true spiritual interpretation of the Scriptures and find therein a perfect manual of life and a sure guide to salvation.

Christianity must include the recognition of a rational understanding of the divinity of Christ. It means Christian living rather than mere profession, and it means a literal obedience to the injunction "follow Me," "Go, and do thou likewise," and "Preach the gospel," "Heal the sick."

True Christianity involves the admission of the Christ way of salvation as the only way that is according to the will of God, including the salvation from disease as demonstrated by Jesus. It includes the necessity of observing the highest possible standard of morality and of individual and social purity.

It includes prayer without ceasing; the constant desire to live righteously, to love both friend and foe, and to find the life that is void of offence before God and man.

As Christians, we believe in the atonement; the resurrection and ascension; in the spiritual import of baptism and all the essentials of Christianity as taught by Jesus.

We believe that Christianity should reconcile mortals to the abandonment of evil and should satisfy and compensate them with the joys of holiness. Christian Science has not appeared to supplant historical Christianity, but to supplement and re-inforce it, and to add new impulse and larger scope to its efficacy.

There is no need or disposition to desecrate your religious sense by odious comparison, but I ask you for a moment to sit in conscientious judgment and say if you know of any form of religion that is more calculated to reveal to man the one actual God and incline him to a willing and profitable obedience. Do you know of one more calculated to establish for him "the Kingdom of Heaven within;" to heal his diseases; annul his temptations; exalt his motives and aspirations, and make of him a loving, upright friend and citizen, full of the business of doing good?

Mrs. Eddy, in her work, "Science and Health, with Key to the Scriptures," declares with much emphasis and amplification that Jesus Christ presented to the world a complete exposition of the way of salvation from all evil, based on a faultless understanding of the Science of Being, or a knowledge of the truth about life and its normal possibilities. She shows that Christendom, instead of understanding the Science of the Messianic mission has been guessing at its meaning for centuries, and has involved itself in one vast maze of doctrinal antipathies, which have engendered a fratricidal Christian strife, instead of Christian living, and has often mangled and slain men instead of saving them.

Infinite Science alone declares itself as the interpreter of the Truth, and until men gain a knowledge of the Science of existence,

Digitized by Google

or the actual truth about Being, they will not be free from the ills that are entailed by ignorance, fear, superstition, and sin.

"Ye shall know the truth, and the truth shall make you free." Free from what? Is this a tangible and available promise based on Divine law and warranted by the fundamental Principle of being? Or is it merely a sentiment which first excites a transient emotion and then mocks the hope of the bondsman who is to look in vain for a fruition? Is it really true that knowledge of Science or the Truth will make men free from evil? Christian Science answers this question affirmatively. It discloses the Science of Life which delivers. It presents the rule for demonstration, and substantiates both Principle and rule by means of millions of proofs which are in faultless verification thereof.

The ages have hoped and prayed for the same measure of deliverance which Christian Science reveals as possible and natural.

Thousands have prophesied the time when the Truth or God, governing men aright, would abolish death, usher in the millennium, and establish the reign of heaven within. Is it possible for this prophesied millennium to occur until after some influence shall have destroyed sickness? Will it be possible until salvation from sin, disease, and death shall have become an accomplished fact, instead of a mere hope? Will it be possible until man shall have regained a lost dominion over all the earth, and until the strife of creeds shall have been composed, and all mankind shall unite in one universal, Christian brotherhood, in the common understanding and worship of our one God?

Objection has been urged to Christian Science because it has been discovered by a woman, as though woman were not fit to know the Truth, and in spite of the fact that all revealed truth has found its way to humanity through the consciousness of some man or woman, and always will.

I do not know that what I have said has impressed you at all, but suppose that we assume for a moment that Christian Science, its message, promise, and fulfilment are true, and that a supreme blessing really waits at your door for adoption.

Through whom or through what kind of a person would you desire this revelation to reach you?

Let me picture a girl born in New England of a pious ancestry, and reared in a home atmosphere of uncompromising rectitude. A girl who with Godly instinct appropriated the surpassing beauties of a deep spiritual culture, and sought prayerfully to lead a life that was without reproach before God and man.

Follow her through a consecrated childhood; through the years of education and the discipline of life's experience. Witness her researches in the depths of science, philosophy, metaphysics, and theology, as well as in the vast possibilities of Mind; her sturdy morality; her honesty; her tender love and ceaseless efforts for humanity,—indeed, sum up an instance of prayerful, God-serving womanhood, wherein are to be found the traits that adorn and dignify the human character, and then answer if you would be willing that such a woman should bear to suffering mortals a message from God that is to dispel the anguish of the ages. The Discoverer of Christian Science is and has been just such a woman, and her absolute fitness for the mission entrusted to her has been manifested by its work of healing and reform unparalleled since the time of primitive Christianity.

I represent just the difference between a live man and a dead man because of the discovery of Christian Science.

I am on this platform to-night instead of lying in a grave in Chicago only because of Mrs. Eddy's enduring faithfulness in making these things possible.

As one among a million beneficiaries of this endeavor, I would be less than man if I did not blend my voice with the others who are with sensible gratitude acknowledging the ministry of Christian Science.

Coming before you to-day as man comes to his brother man with a message of hope and deliverance, I have nothing whatever to ask of you, not even that you will bestow your approval on Christian Science or believe what I say simply because I say it. I am not here so much to ply you with discussion and entreaty as I am to tell you that we are escaping from dismal depths of woe, and to utter the hope that if ever you are stricken and desolate because of disease; if you are ever frantic with pain, or cast down by the tumult of sin, if hope turns to ashes and despair enthrones itself because of the supposed hopelessness of your lot, you will remember that Christian Science promises in the words of its Discoverer to "cure all thy sorrow and sickness and sin." It promises to bring to pass the prophecy of St. John, "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

# PERIODICALS

PUBLISHED BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY,
95 Falmouth Street, Boston, Mass., U. S. A.

## A WEEKLY NEWSPAPER

***Christian Science Sentinel***

PUBLISHED EVERY THURSDAY

Contains brief summary of the most important news; articles selected from various sources, gives the Voice of the Press and timely editorials in connection with the movement; and presents interesting contributed articles and testimonies.

Subscription Price: One Dollar a Year. Foreign subscriptions, $1.50. On sale at three cents a copy, postpaid.

## A MONTHLY MAGAZINE

***The Christian Science Journal***

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discover and Founder of CHRISTIAN SCIENCE.

Is the Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

It contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science, dissertations and lectures.

Subscription Price: Two Dollars per annum; One Dollar for six months; Foreign Subscriptions, $2.40 per annum; $1.20 for six months; Single Copies, Twenty Cents, postpaid.

## BIBLE LESSONS

***The Christian Science Quarterly***

PUBLISHED JANUARY, APRIL, JULY, AND OCTOBER.

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year, in all the Christian Science Churches.

Subscription Price: One copy one year, postpaid, fifty cents.

Foreign subscriptions, one copy, one year, 60 cents.

On Sale at 15 cents a copy.

Catalogue of prices for Oxford Bibles, Hymnals, Books, Pamphlets, etc., sent on application.

Direct orders, and make remittances payable to

**The Christian Science Publishing Society,**

**BOSTON, MASS, U. S. A.**

# Works on Christian Science, By Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Price (cloth) each . . . . . $3.18

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . 4.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid . . . . . 5.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid . . . . . $2.25

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . . . 4.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRIST AND CHRISTMAS.** An illustrated poem. Single book, prepaid, $3.00; $30.00 per dozen.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, prepaid.

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; $2.50 per dozen, prepaid.

Direct all orders for above works, and make remittances payable, to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter.*

## Items of Interest.

### Political and Governmental Notes.

Major-General Adna R. Chaffee has been ordered to sail for China at once and take command of the American military forces which are being sent to co-operate with European nations and Japan in restoring order. General Chaffee served through the Civil War, the subsequent Indian wars, and throughout the Spanish war. When he reaches China it is expected that he will have an American army of about six thousand men under his command.

Mr. Lloyd C. Griscom, United States charge d'affaires, on June 23 presented a fresh note to the Ottoman Government, insisting upon an immediate reply to the demand of the United States for a settlement of the indemnity in connection with the losses of Americans at the time of the Armenian massacres. Although vigorously phrased, the note is not an ultimatum.

The National convention of the Prohibition party was held in Chicago last week and nominated for President John G. Woolley of Illinois, and for Vice-President, Henry B. Metcalf of Rhode Island.

### Foreign News.

The allied foreign force of marines, commanded by Admiral Seymour of the British navy, which attempted to make its way to Pekin to protect or rescue the foreign ministers and other foreign residents, was headed off by hordes of armed "Boxers" and Chinese soldiers. After a continuous fight of fifteen days duration, during which 62 of the marines were killed and 312 wounded, Admiral Seymour was relieved by another force of two thousand allied foreign troops on June 27. He was intrenched eight miles from Tien-Tsin. In his report to the United States Navy Department under date of June 29, Admiral Kempff, in command of the United States squadron in Chinese waters, said that no news had been received from the ministers, but the Chinese officials report that they were safe on June 25, and that a strong body of Imperial troops was guarding them. All the great powers, including the United States, have sent regular troops to China to form a large allied army, which will be employed to restore peace.

Turkey seems to have entered seriously into the question of the construction of a railway from Damascus to Mecca, a route which, owing to the immense pilgrimages, promises to be productive of good revenue, and which, if built, will mean the opening of an important trade artery through the centre of Asia Minor. It is reported that the government is already negotiating with Krupp for rails. The Sultan has announced officially that he wil give one-twelfth of his civil income this year for the benefit of the new road, and by imperial irade has ordered an advance of 100,000 Turkish pounds by the Agricultural Bank for purchasing cars and locomotives.

The Boer war seems to have reached the closing stage, which, however, is expected to be somewhat protracted, owing to the opportunities afforded by the hilly character of the country for guerilla tactics. Two considerable commands, one under General Botha and the other under General Dewet, are in the field, there being several thousand men in each body. The British are rapidly drawing their lines tighter so that the maintenance of large fighting forces by the Boers will be impracticable. Last week the only activity manifested by the Boers was by bands small enough and well enough mounted to avoid battle with a pursuing force.

The present Lord Nelson, says *Cassell's Saturday Journal*, is still reaping the fruits of the victory of Trafalgar in the shape of a handsome pension of £5,000 a year, which was granted in 1806 to all the Lord Nelsons forever, in addition to special grants amounting to £110,000, £90,000 of which was laid out in Trafalgar House, Salisbury, in which Lord Nelson still lives. Altogether, reckoning to the end of the century, Lord Nelson's heroism has cost Great Britain £580,000, and will cost half a million sterling for every century the title lasts.

Nine of the insurgent leaders, including Generals Pio Del Pilar, Concepcion, Garcia, and Alverez, were released in Manila, June 27, upon taking the oath of allegiance to the United States government and renouncing all forms of revolution in the Philippines.

The Methodists have 142 missionaries in China, the Presbyterians 209, and the American Board of Commissioners for Foreign Missions 110.

The Emperor of Japan has given his consent to the expenditure of 50,000,000 yen toward the cost of military operations in China.

### Industry and Commerce.

California has jumped to fourth place among the States in petroleum production. The output there has increased from 1,245,123 barrels in 1895 to 2,292,123 barrels in 1899, and the prospect is that the output for the present year will be much larger than that of 1899. The importance of the development, as the *Los Angeles Times* sees it, is that the production of petroleum, by furnishing a cheap and convenient fuel, will give an immense impetus to the manufacturing industries in California, just at a time when vast markets for our products are being opened up in the Orient.

American painters have received seven gold medals in the Paris Exposition awards, a much better showing than at the last Paris Exposition. Speaking of the result, the eminent French artist, Carolus Duran, says: "I consider American art the best of all the foreign sections. The progress made has been remarkable. The American conception of art has advanced with giant strides during recent years. The diligence of American students in Paris augurs well for the future of American art."

G. M. Sherman of Springfield, Mass., is forcing the growth of all sorts of plant life. His apparatus supplies chemicals from the top of the ground to the roots of the plants, and he reports that he caused a year-old bush to grow fifteen feet high, while a companion bush under good natural conditions, grew only three feet. It is thought that shade trees nourished by this system, will grow of useful size in a year or two.

Yale defeated Harvard in the annual 'varsity boat race at New London, Conn., June 28. Higginson, the best oarsman in the Harvard crew, was disabled a few days before the race, and the man who took his pace collapsed within a half mile of the finish at a time when Harvard was in the lead. The time was 21:12 4-5.

The reign of violence in St. Louis has come to a close and the street cars were operated all last week without molestation. The striking employes have abandoned force and resorted to the courts. The only remnant of the former state of affairs is the boycott on the street car company's lines which is still maintained.

Texas, Mississippi, and Georgia, which have recently abandoned the system of hiring out convicts, have employed them to advantage on farms, especially in raising cotton. This form of employment has been found to work the least injury to free labor and to insure the best returns.

Thus far the banks have pledged the new 2 per cent United States bonds for circulation to the amount of $233,080,750, and to secure public deposits to the amount of $43,914,750. This leaves about $26,500,000 of the new 2's in private hands, or in process of exchange.

The Delaware Electric Light & Power Company of Delaware, O., is arranging to supply the whole town with a hot water heating system, the water being heated from the exhaust steam of the engines.

### General News.

Booker T. Washington, in a speech at the Harvard Dental Alumni banquet, on the "Future of the African Race," said: "No matter what adverse criticisms are made, no matter who prophesies defeat, no matter how many temptations are held before us, what we as a race must be sure of, day by day, is that we are making real, tangible, indisputable progress. In the face of such progress all that is said against us will be harmless, without such progress all that is said in our favor cannot help us."

The *Scientific American* says that every British soldier carries in his haversack what is known as his "emergency ration." This consists of a small tin cylinder, divided into two compartments. One of these is filled with four ounces of cocoa paste and the other contains a similar quantity of concentrated beef (pemmican). If consumed in small quantities, this ration will sustain strength for thirty-six hours, and is not to be eaten except in case of direct emergency.

The first contingent of the Cuban teachers invited by President Eliot to attend the Harvard summer school, arrived in Boston June 30. The total number of Cuban teachers who are now quartered at Harvard is 1,445. The fund collected by the officials of Harvard College for the maintenance of the visiting teachers while attending the summer school amounted to $66,735.34 on June 29.

The extensive docks of the North German Lloyd Steamship Company in Hoboken, opposite New York City, together with the steamships Saale, Bremen, and Main, belonging to the company, were destroyed by fire on June 30, and about three hundred persons perished, mostly members of the vessels' crews. The loss of property is estimated at about $3,000,000.

Among the distinguished men upon whom Harvard University conferred the honorary degree of Doctor of Laws, at the recent commencement exercises, was Baron Julian Pauncefote, the British ambassador to the United States.

Governor Rollins of New Hampshire has issued a general invitation to absent sons and daughters of the Granite State to return and take part in the "Old Home Week" festival from August 11 to August 18 next.

A member of the Cambridge, Mass., City Council is endeavoring to have money appropriated for the purpose of buying the house of James Russell Lowell, to be used as a free library.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Marvels Wrought in One Hundred Years.

THERE were but 5,300,000 people in America when this century opened. France had five times as many people; Germany, and even Austria, had four times America's population; Italy had three times as many, and so had Great Britain. Even Spain had double our number of people, and little Portugal was almost our rival in numbers.

We have more people now than any European nation except Russia, which alone leads us. We have as many people as live in all Great Britain and France combined. We have one half more people than Germany. We have, practically, seventy-five million people in the United States, and ten million more in our new possessions.

There were only five large cities in America in 1800. Philadelphia, with sixty-six thousand, was the largest, the seat of government, and the centre of wealth and culture. New York was next, with sixty thousand. Baltimore was third, with 26,500; Boston fourth, with twenty-five thousand, and Charleston, South Carolina, fifth, with nineteen thousand people.

Chicago was unheard of in 1800. The century was three years old before the government even built a fort where Chicago now stands, and it was not until thirty years later that a city was thought of and incorporated.

There was no western city. The mighty modern cities of St. Paul, Minneapolis, Omaha, Denver, and Kansas City were unheard of. There was a small trading-post at St. Louis. That was all. The Pacific Coast had two or three missions under Spanish control. All the rest of the West was given over to Indians and wild beasts.

✠

In what are Illinois, Indiana, Michigan, and Wisconsin now there lived six thousand people in 1800, spread over that whole territory. The "Far West" was then Kentucky, Ohio, and Western New York. Beyond the Alleghenies was practically a wilderness. Now fifty-three million people live within the area that belonged to our nation in 1800.

The United States is larger now than all Europe in point of area. It has 3,600,000 square miles—one-fourteenth of the land surface of the entire globe. In 1800 we had just 825,000 square miles.

We are the richest nation on the globe. To-day our wealth is estimated at over one hundred billion dollars; in 1800 it was two billion dollars. A man worth three hundred thousand dollars was then considered abnormally rich; to-day we have several hundred men who are worth three million dollars or more.

Uncle Sam spends each year, on his government, five hundred and fifty million dollars, not including the extra outlay occasioned by our late war and the new accession of territory. In 1800 he spent twelve million five hundred thousand dollars. In four years he now spends more than the entire wealth of the nation in 1800.

It is amazing how people lived in 1800, judged from modern standpoints. Half of them dwelt in log huts. Window glass was a luxury even in the coast towns. Some people used oil-paper; others had simple openings in the walls, which in winter were closed with planks split from logs. The iron stove was a positive luxury; the furnace was unheard of. Great fireplaces supplied heat, but could not keep these huts comfortable in winter.

There was not a mile of railroad in 1800. The first line built was the Baltimore and Ohio, in 1830. It was fourteen miles long. Three years later, when the South Carolina Railway line of one hundred and thirty-six miles was finished, it was the longest railroad in the world. To-day in the United States alone there are one hundred and eighty-five thousand miles of railroad, or more than a third of the mileage of the entire world. In 1833 there were but sixteen passenger locomotives in the United States; to-day there are ten thousand.

✠

No steamboat existed in the world a hundred years ago. Sailing vessels crossed the Atlantic Ocean and took from two to three months for the voyage. Bullet-proof packet-boats, propelled by sails, horses, and poles, attended to most of the commerce between river towns. Passage from New Orleans to Louisville cost one hundred and twenty-five dollars. It was not until 1807 that Robert Fulton built his "Clermont" and the first steam-propelled boat in the world steamed up the Hudson River.

The street car was unknown in 1800. The century was a third over before the first horse car appeared—in New York City. The trolley car came only twelve years ago. Now we have nineteen thousand miles of trolley roads in America, running sixty thousand cars.

The newspaper had hardly started. There were about one hundred and fifty publications of all kinds in the United States. About one tenth of them were newspapers, and were issued daily. Not one of them sold more than a thousand copies a day. To-day we have twenty-two thousand different periodicals of all kinds.

There were 903 post-offices in 1800. To-day we have seventy-five thousand—that is, in America alone. It took a letter sixteen days to go from Philadelphia to Lexington, Kentucky; twenty-two days to Nashville, Tennessee. The cheapest letter postage was eight cents, and to send a letter more than a hundred miles cost a shilling. Three million letters and papers were then sent in a year; at the present time the post-office handles about thirty million pieces of mail in a single day.

✠

The telegraph was undreamed of. Not until 1844 did Morse send his first telegram. When the Battle of Waterloo was fought, in 1815, unusual measures of haste were adopted to get the news to London, where it was received three days later. The guns of Dewey's fleet were hardly quiet before the result of the battle was known in New York. To-day we have one million miles of telegraph wire in America, and seventy million messages are sent over them each year. There are one hundred and fifty thousand miles of cable on ocean beds, but none of this was laid until the century was sixty-six years old.

This is how people lived in 1800. Every community was isolated from every other community. New York was farther removed from Philadelphia than Africa is now.

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

It was New Year's Day before Boston knew what had happened in New York on Christmas Day. There were practically no conveniences; people of those early days knew nothing whatever of comforts. And yet by the people of those days was laid the basis of the country which we enjoy to-day—a hundred years later.

An interesting thought: What will the people of a hundred years hence think of how we lived in 1900?

There was no kerosene nor gas; both were unheard of. The tallow dip was the standard light, and on the frontiers even tallow was scarce. There the torch of the forest was used. Lamps then were in the homes of the very rich, fed with whale or vegetable oils, but they were few, and the flame hardly brighter than the candles. For fifty years into the century these lights were used, for it was not until 1858 that petroleum was discovered, and even in 1861, kerosene was very expensive, costing sixty cents a gallon.

There was no such thing as a match. The flint and steel of the old family musket was the means of kindling a fire; or a live coal was brought from a neighbor's sometimes many miles distant. When the friction match came, in 1827, people were afraid of it and would not have it in the house. To-day we in America alone use over one hundred and twenty-five billion matches each year.

The cooking stove was unknown. The cooking was done in the fireplace in pots and kettles standing on long, slender legs well above the coals. The old brick oven was fired once a week to almost blazing heat and filled with appetizing dishes.

Table linen was made by the housewife, and it was beautiful. China and silverware were lacking. Pewter spoons and steel knives and forks were choice heirlooms and highly prized. Hand-made wooden trenchers, platters, bowls, and noggins comprised most of the tableware in use a hundred years ago. On the frontiers meals were often eaten off chips freshly cut from the forest trees.

Garments were spun by hand, every member of the family doing a part. There were a few cotton-spinning mills in operation, but the spinning jenny, the carding machine, and the loom with flying shuttle were almost unknown in America. The century was thirteen years old before the first power loom was set up—at Waltham, Massachusetts.

A woman could spin between dawn and dark from forty to sixty knots of yarn. Now, with modern machinery, one operative can spin one hundred and fifty thousand knots in the same time.

Carpets were a luxury in 1800. There were a few woolen carpets in Philadelphia and New York: a few ingrains, and here and there an imported Turkish rug. But these were used for state occasions. The rag carpet was the glory of the housewife. A few Axminster carpets were made in Philadelphia, but the century was well begun before ingrains appeared. Up to 1850 there was not a power loom for carpet-making in America.

Not a cast-iron plow existed in 1800. The farmer used the sickle, the scythe, and the flail. His plow was home-made—of wood covered with a thin sheet of iron. Seeds were scattered by hand; the hoe was the cultivator. Grain was gathered by hand, threshed on the floor during the winter, and crushed beneath a stone pestle into flour, or ground in the neighboring flour mill. The mower, the reaper, and self-binder were unheard of.

To go to New York from Philadelphia meant two days by the swiftest stage; to-day it is done in two hours. To go from New England to Oregon it took Doctor Atkinson eight months, even in 1847. To-day one can go from New York to San Francisco in one hundred and two hours.

### The True Orthodoxy.

JESUS was a thoroughly practical teacher. Some writers speak of him as visionary, as an amiable dreamer; but far indeed is this from the truth. Jesus, the anointed of God, came illumined with divine light, so that he was able to say, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." He gave certain signs by which we could recognize orthodoxy whenever we found it. That word goes back, etymologically, to two Greek words, and simply means right thinking, or judging. We recognize that every act is preceded by a thought; consequently all the action that is found in the world among men proceeds from a right basis or a wrong basis. If I am working from a right basis of thought, then my thoughts will be harmonious with all other men who are right thinking. But if my thinking proceed from the basis of a wrong theory, then there will be no possible reconciliation of my actions and thoughts with those of other men. Jesus gave us a series of signs by which we might be able to see where there was right thinking. These signs are universal. He said, if you remember, "These signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Now I would like you to observe that this orthodoxy of which Jesus spoke includes both medicine and theology; it includes both the healing of sickness and the healing of sin. So if you and I come to the point where we are orthodox in Jesus' way, being orthodox, we shall find ourselves in agreement with all men who do right thinking throughout the world; we shall find ourselves able to be well, and able to be righteous. And that understanding will not be gained by going to some one who gives us a drug or a dogma, it will not come by going to some one else for advice, but will be within us. Jesus' words understood are in the hearts of men like a fountain of water springing up into everlasting life.

Do you not recognize that such a result must come from a system of religion, an understanding of Truth, which merits the title of orthodox? The true orthodoxy is the right thinking which Jesus taught, the scientific understanding of Life which will make our lives as harmonious one with another as the closely fitting parts of some of the structures which men build; which will cause the whole building to be fitly framed together, every part supplying comfort, and strength, and beauty to every other part, fitted together into a unity which has for its head and insignia the same Mind or Spirit which was in Christ. This, then, is the problem of our lives, to have the same Mind which was also in Christ Jesus, the Mind which enabled him to let sickness and sin disappear. If that same Intelligence is operative to govern your thought, sickness and sin will disappear from your consciousness. And as the good is illumined and unfolded, and the presence of divine Love becomes a regular and a constant thing, then you will know that the kingdom of Heaven is come to earth, and that it is possible for men and women, as the children of God, to dwell in happiness and in peace, and in mutual brotherly love here below. And thus is wrought out the atonement between man and God.

No change needs to be made in the evolving of everlasting goodness, the Principle of man's life, but a change does need to be made in the consciousness and understanding of man. We need to get rid of the idea that life is in body and dependent upon matter. We must get rid of

Digitized by Google

the idea that there is any happiness in sin, or that man can find any joy whatever in anything contrary to what is good and true. And when the illusion of sickness and the illusion of sin has been displaced by the illumination of Truth and the understanding of divine Love, then is brought to pass the proof that sin and sickness are swallowed up in victory; and that there is no death, since man, understanding God, loving God, being at one with God, recognizing God as his life, recognizing God as the source of holiness, understanding that he is related to God actually as father and child are related, as Mind and idea, as Principle and manifestation, as the Sender-forth of love, and the answerer to love,—man thus developed and related knows that all that is, is Good and its manifestation as it was in the beginning when God saw all that He had created, and, behold, it was good.

Brethren, there is a warfare to which we are called. We cannot afford to spend our time fighting one another upon matters of opinion or theory. We cannot afford to engage in those warfares which divide mankind. Lately this country was aroused to enthusiasm because of war. Multitudes of men went marching to the battle-field to the beat of the drum, and the shrill sound of the bugles made their hearts thrill, and as they walked between rows of spectators, the waving of handkerchiefs, and the jubilant cheers of the multitude made them feel that war was a magnificent thing. But when they got into the tropical climate, the weariness of long marching, lack of food sometimes, the excitement of conflict, and then the sight of wounded men lying upon the field, long trenches full of the dead, and hospitals full of the sick, showed to them what war really is. But here is a warfare not against other men, not to destroy the lives of men; but a warfare against the evil theories, and beliefs, and traditions, which enslave and destroy men. It is not a war against poor, enslaved men, but a war against the error which enslaves them; and the result of this warfare is not the destruction of men's lives, but the saving of them. It is the elimination of darkness, the elimination of despair, sickness, sorrow, and the fear of death. And there is a book, "Science and Health with Key to the Scriptures" which opens the armory of God to us. Every one who will patiently, honestly, lovingly study this text-book of Christian Science, written by Mary Baker G. Eddy, can understand how to live a Christian life that is healthy and holy, and also how to bring health and holiness to others. And so friends, brethren, sisters, fellow-workers, you have the key of the world. I invite you to enlist in this great army which is spreading its work over the whole world at this present time, and I invite you as Christians, as those who are benevolent in desire and who wish to make the best of their lives, to study Christian Science, which I firmly believe will eventually redeem the world, establish the brotherhood of man, and make men and women understand the Fatherhood of God.

WILLIAM P. MCKENZIE.

## Some Statements Regarding Christian Science.

IN the sermon of Rev. T. J. Thompson published in *The Journal* of May 28, one notable admission is made, in this, that Christianity is called "Science," and the theme of the discourse was "True Christian Science."

Now, if the reverend gentleman will permit, we shall add somewhat to his definition of "science," and insist that no system of knowledge can be classified as a science, unless its principles can be demonstrated or proved by practical application to matters and facts within the scope of such science. In mathematics one can demonstrate its principle in so far as one understands it, and this is equally true in Christian Science. Thus the breach between theologians and scientists is healed by Christian Science which satisfies the demand for proof by practical demonstration of the power of God (Good) over all evil and disease. What, then, is the scope of Christian Science? And what demonstrations may be fairly demanded of its professors? One answer is, that Christian Science is the Science of Life (eternal), and hence has to do with "the life that now is," for eternal life cannot commence in a future existence, but is without beginning as well as without end. Now the Science of Life must solve the problems and correct the mistakes of life. One common mistake is in supposing that man is a slave, and subject to sin, sickness, and death. Under this mistake we have seen Americans who would resist bravely any encroachment on their civil or political liberty, turn pale and prepare for unconditional surrender to small-pox, yellow fever, etc. Whereas, when we understand the perfect law of liberty, then we shall hold with Paul that, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." "Now are we the sons of God," and one cannot imagine a son of God in sin, in sickness, or in death.

We agree with Brother Thompson in saying that the "supreme purpose," in healing is to bring men to a knowledge of God; but we affirm that one cannot scientifically understand the Truth, as it is in Christ Jesus, without being able, with the Truth, to heal the sick. "Ye shall know the truth, and the truth shall make you free." And this freedom, or "glorious liberty of the children of God," does not mean a partial freedom, as from sin only, but a full salvation from sin and sickness also. It is well to know our freedom from sin, it is better to know that we are in bondage to neither sickness nor sin. When God made man, He gave him dominion over all the earth, and this word of our God shall stand forever.

Our Lord Jesus Christ preached the kingdom of God and healed the sick. He also commanded his students (disciples) to preach the kingdom of God and to heal the sick. There is no commission or authority from Christ to preach the gospel of the "Power of God" (Good) that does not also include the command to heal the sick.

Some suppose that the command to heal is no longer to be obeyed, but our Master said, "If ye love me, keep my commandments." Who will dare attempt to make an exception of a command so humane, and hold that the rule of obedience does not apply to this, one of the best commandments? How can we think of limiting the healing power or good-will of God (who is impartial and no respecter of persons) to any period, or to any people? God is the creative and governing Principle of man, made in His image and likeness, and God's dominion is an everlasting dominion.

No man has a right to read into this beautiful commandment of Christ, "Heal the sick," his own unbelief in, or limited sense of, the presence and power of God to heal and save unto the uttermost all those who call upon Him.

Christian Science is the same yesterday and to-day and forever, and these signs shall always follow them that understand it and practise it: "In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Now the public will naturally expect such signs and demonstrations of the power of Spirit (or Mind), for God is Spirit or Mind, and as there is but one God so there is but one Spirit or Mind in reality, and this is the Mind of Christ; "but we have the mind of Christ." and by the omnipotence of this Mind is wrought the works of Christ.

Christian Science shows "How that the blind see, the

Digitized by Google

lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." Blessed is the man who shall not be offended, but shall see in such works that, "Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ." "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my father."

It is because we understand and confess that "Jesus Christ is come in the flesh," and that "Jesus Christ the same yesterday, and to-day, and forever," is with us "alway, even unto the end of the world, and that we "can do all things through Christ which strengtheneth" us. I say it is in meekly following our Master that we teach that man is the image or idea of God: and as every idea reveals its creator (Mind), so we, as sons of God, must manifest Godliness, thus revealing our God (Light, Truth, Love), to the seekers for Truth. The errors called sin, sickness, and death, not being in God, do not appear in His likeness—the perfect man. Hence we maintain that sin, sickness, and death are enemies of God and man, cast out and conquered by Christ (Truth). To such as say: "Lo, here!" "Lo there!" is Christ or Christian Science, look for their fruits of healing, and if they are barren and unfruitful in Christ-like deeds go not after them, for "by their fruits ye shall know them."

Christian Science works among us the works of God and His Christ, and does not lay aside as useless the hundreds of cases of healing recorded or referred to in the Scriptures. If any man would know how the sick are healed, let him study the Bible and "Science and Health with Key to the Scriptures," and he will come to know that God is Good, hence that Good is almighty—leaving no might for evil.

## The Rights of Christian Scientists.

*Editor of The Daily News:*—

The article in Tuesday's issue, "The Rights of Christian Scientists," would seem to give out the impression that Christian Scientists are not law-abiding people, but religious fanatics and a menace to the public health and safety. If you will please allow me, I wish to make some corrections without any desire for controversy, but simply with the desire to set forth a candid, unprejudiced view of the subject. Christian Scientists, as a rule, are fair-minded people and of ordinary intelligence. They have arrived at conclusions in regard to this Science, not as the result of impulse and blind enthusiasm, but as the outcome of much thoughtful and serious consideration, and with each step of investigation have come added proofs of its utility. They have learned that Mind can minister to the diseased body, and sickness and pain be made to flee away.

Christian Scientists are a law-abiding, unobtrusive people, with no desire to force their views upon any one or proselyte in any way. And it is well known that most of the people who are now Christian Scientists have become such because Christian Science has raised them from the couch of pain and disease after all known medical means had failed. As a last resort they went to God through Christian Science, and they do not feel much like going back to material means which have already proven useless in their past experiences.

In regard to the treatment of what are termed contagious or infectious diseases, Christian Scientists are willing to comply strictly with the law in every respect, in so far as they know the legal requirements.

Christian Scientists have gained such a realization of the true God, whose presence healeth all our diseases, that they humbly, and with thankfulness, give a reason for the hope that is within them, and with love and patience wait for the time when this grand Truth of Christian Science, which is so rapidly dawning upon a sin-sick world, shall be understood, and ignorance and prejudice will give place to an enlightened faith in the one true and living God.

Christian Science and its practical results is still in its infancy, and all who are honestly striving to follow in this line of light and reason are endeavoring to bring out better conditions mentally and physically. If Christian Science will heal the sick, aid the sorrowing, and bring peace of mind, is it not a duty to acknowledge it, and a further duty to humanity to proclaim it? If there is a failure to bring out its practical results it is certainly not the fault of the Science, but arises from lack of understanding how to apply its rules. To turn away from God—Mind—to matter or inert drugs, is to leave God out of the question. And there never was a law and never will be one that compels man to do this. Really there is but the one divine Law, yet human codes must be complied with until this is understood and demonstrated.

## The Baltimore Sun.

THE *Baltimore Sun* through its special correspondent, who was among the visiting Scientists in Boston, published daily accounts of the different meetings held here in connection with Christian Science, commencing with the Communion service in the Mother Church and including the Wednesday evening meeting in Tremont Temple.

We herewith republish in part the account of the Wednesday evening meeting, as it appeared in the *Sun*:—

A monster testimonial meeting was held in Tremont Temple to-night by the Christian Scientists who have been attending their annual meeting here.

An overflow meeting was held in the smaller hall, fully four thousand persons being present at both gatherings. The meeting in the main hall was presided over by Judge S. J. Hanna, First Reader of the Mother Church. Mr. Edward A. Kimball, of Chicago, presided over the overflow meeting. After some brief opening exercises of a religious character, the testimonies began, and for an hour and a quarter men and women in the hall told of their experiences in Christian Science.

There were thirty speakers in the main hall, and about forty-five cases of healing were given, thirty-six of which were cases said to have been pronounced incurable by physicians. Nineteen were organic and three were functional diseases. Eight cases were given where the afflicted person had been healed by reading the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, without any other treatment.

An elderly lady who attended the meeting said she had been obliged to walk on her hands and knees for many years, but is now erect. A man told of his son having been healed of paresis, after having had three specialists who pronounced him incurable.

A lady from Dallas, Texas, said she had tried thirty-six physicians, had undergone four surgical operations, had been to six sanitariums, and had traveled the world over for health, but was finally healed by one treatment in Christian Science. A man said he was cured of smoking, drinking, chronic asthma, and eczema by reading Science and Health. Two cases were given of persons having been healed of consumption by reading the same book. A man told of his having been healed of deafness of twenty-five years' standing, as well as loss of eyesight.

A case of lameness produced by an injury to the sciatic cord and the spine was reported healed. A lady told of having seen a man who was pronounced dead restored to perfect health. An instance was given of the healing of a deaf mute. Cases were also related of the healing of

Digitized by Google

cancer, nervous prostration, broken legs, tumors, epilepsy, Bright's disease, catarrh, spinal meningitis, and many other diseases of long standing.

Ex-Rabbi Wertheimer of Dayton, Ohio, who recently left the Jewish faith and resigned from his Synagogue for Christian Science, made an exposition of his reasons. He said,—

"I was not healed of physical ills, but of theological blunders. I admire Christian Scientists not because they believe, but because they know; not because they guess, but because they understand."

Rev. George Tomkins of Camden, N. J., former associate of Rev. Mr. Spurgeon, in London, also spoke of his conversion to Christian Science.

The overflow meeting was similar in its character to the one in the main hall.

We publish also the following despatch from Concord, N. H., published in connection with the above:—

Concord, N. H., June 6.—Several hundred Christian Scientists from the convention at Boston came here to-day to visit the Concord Christian Science Church and view the home of Rev. Mary Baker Eddy, the Founder of the denomination.

Mrs. Eddy is the picture of health, having a remarkable vivacity and the complexion of a young girl, contrasting beautifully with her white hair. Her associates in the house say that she is an indefatigable worker. The following Baltimoreans were among the party:—

Mrs. Summerfield Baldwin, Mrs. Henry Jones, Mrs. Eugenia Pierce, Mrs. Arnold S. Hyde, Mrs. Dr. T. S. Waters, Thomas S. Waters, Jr., Mr. and Mrs. Hermann S. Hering.

## Saved from Blindness.

Editors *Evening Democrat*:—

In the *Democrat* of April 27 is an item recording the fact that a man, a former resident of your city, was saved from blindness through Christian Science, yet the writer of the item was so little impressed by this marvelous occurrence that he was unable to report it seriously. Perhaps it should not occasion surprise that it is lightly spoken of, for it is recorded that when Jesus entered the house of Jarius, whose daughter he raised from the dead, the people "laughed him to scorn." But permit me to say that it should be a matter for serious consideration instead of levity that "these signs" are following "them that believe," and that Christian Science is a demonstrable religion which is healing the sick, giving sight to the blind, and feet to the lame, as well as reforming the sinner.

ARCHIBALD MCLELLAN.

In the *Evening Democrat,* Kankakee, Ill.

## Facts About the Bible.

A prisoner condemned to solitary confinement obtained a copy of the Bible, and, by three years' careful study obtained the following facts:—

The Bible contains 3,686,489 letters, 733,602 words, 31,173 verses, 1,179 chapters, and sixty-six books.

The word and occurs 46,276 times.

The word Lord occurs 1,855 times.

The word reverend occurs but once, which is in the ninth verse of the eleventh Psalm.

The twenty-first verse of the seventh chapter of Ezra contains all the letters in the alphabet except the letter J.

The finest chapter to read is the nineteenth of the Acts of the Apostles.

The nineteenth chapter of 2 Kings and the thirty-seventh chapter of Isaiah are alike.—*Selected.*

## Peas and Pills.

A WOMAN, who had raised with care
Sweet peas, so lovely, large, and rare,
Into a bottle the succeeding fall,
Put by for next year's planting, all
That ripened well. When winter came,
She suffered from a sense of being lame,
And hearing of some wondrous pills,
Thought she would try them for her ills.

By spring she found herself so well,
Most gratefully she sought to tell
For publishing in Daily Press,
The story of her late distress;
A picture of the miseries
Entailed by hampering rheumatiz.
Those pills—she eloquently told—
Were "more than worth their weight in gold!"

Ere long came planting day,
Vain was the search for peas she'd put away,
Instead, appeared the bottled pills
She *thought* she'd taken for her ills;
Sweet peas had wrought a magic charm,
And idle pills had done no harm;
The moral you can plainly see:—
"As a man *thinketh,* so is he!"

H.

## Reprints from the Journal and Sentinel.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

The above reprints from the *Journal* and *Sentinel* will be furnished at the following prices: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

In addition to the above reprints the following tracts may be obtained: Practical Demonstration. Expressions Concerning Christian Science. Is Your Prayer Answered? Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science. Price, one hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

## A Request.

The Field is requested when ordering goods either from The Christian Science Publishing Society or Mr. Joseph Armstrong to remit by express order, post-office money order, or exchange on Boston or New York. Individual checks cannot be received, as a charge is made for their collection.

We request that our co-workers throughout the Field carefully observe the rules on page 723.

## Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June 3, 1900, is ready for delivery. Issued in pamphlet form, leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid. Address orders to Joseph Armstrong, 95 Falmouth Street.

## The Granite Monthly.

The May number of the *Granite Monthly* contains an excellent article, by Henrietta H. Williams, entitled, "Among the Christian Science Churches." The Publishing Society is prepared to furnish copies of this number at twenty cents each, or two dollars per dozen copies, postpaid.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## A Card.

To the donors of the certificate of one thousand shares in stock of Acme Smelting and Refining Co., Phœnix, Arizona, accompanied by a kind letter, I beg to say: Accept this public, as well as my private, acknowledgment of your liberal gift, the certificate whereof, I returned with my thanks on April 24, 1900.

On June 20, 1900, I received two certificates from Ada M. Surbaugh; one representing 306, and the other 732, shares in stock of the Argus Mining and Milling Co., of Bingham Canyon, Utah. These I have also returned, in like manner, to the dear donor, with my grateful thanks for her gift and excellent letter which accompanied it.

I publish these facts to inform said givers of my action relative to these certificates of mining stock, because I have not yet heard from them in reply to my letters, and the certificates which I have returned. I am not at present, never have been, and never shall be, in any way, directly or indirectly, connected with mining stock. I am looking for my treasures above, and not beneath. Besides I am not inclined to stock-holding.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., July 2, 1900.

## The Search for Truth.

MAN is possessed of an inherent desire to know the Truth. A few desire the Truth for Truth's sake and are ever ready to make any sacrifice necessary to gain it, but the great majority are disinclined to accept it unless it is in strict accord with their preconceived opinions. It has been said that mortal man will work harder and longer, will make greater sacrifices and more of them, to satisfy himself and convince others that he already has the Truth, than he will to find out what the Truth really is. Strict adherence to one's present sense of things is oftentimes one of the greatest barriers to progress. Such conservatism satisfies the person that he already has the best there is, and this thought excludes the possibility of finding anything better.

We see this sense manifest in politics, religion, and many other phases of human experience. The politician, prejudiced in favor of his own party and principles, views all things from that standpoint and, for this reason he is oftentimes unable to weigh the arguments of his opponent in that unprejudiced manner in which they should be considered.

The adherent of some special religious doctrine is, in a like manner, prevented from realizing how much of true, genuine Christianity is embodied in the teachings of the one who adheres to another form of faith. In the study of the Bible he may be profoundly impressed with the passages which, to his sense, are in harmony with his own convictions, while he passes lightly over those passages that seem to teach something different from what he believes.

Mortals may not be as desirous of knowing the Truth as they think they are. The honest, earnest search for it requires moral courage surpassing that possessed by many. The unwillingness to acknowledge himself in the wrong is one of the weaknesses of mortal man that hampers his efforts to gain the Truth.

All will acknowledge that Truth is one and unchangeable. Every idea or statement of Truth must of necessity harmonize with every other idea or statement. Above and beyond all creeds, beliefs, opinions, suppositions, or convictions is the Truth, undisturbed and uninfluenced by mortal thought. No mortal opinion can affect it. No matter how firmly one believes a thing to be true it cannot make it so. Truth is absolute and final. Human opinion can neither make nor unmake it. It rules with a rod of iron. It makes no concessions but demands implicit obedience to all its requirements, whether it be applied to mathematics, music, religion, or anything else with which mortals have to do. It must be understood before its benefits can be fully realized. Mortals sometimes fancy that a belief, if it is honest, is sufficient to merit and receive the blessing, but this is not so, and experience is teaching this much-needed lesson.

No doubt all are firmly convinced that Truth will ultimately prevail, and that its final triumph will bring infinite blessings. The discords and failures of life result from error, and these bitter experiences are preparing the human mind for the recognition and acceptance of Truth.

One of the strange things is that mortals do not gain the Truth more rapidly than they do. No doubt the greatest barrier to progress is the unwillingness to recognize one's errors. Why is this so, since all will admit that one must see his error and turn from it before he can gain the Truth? "I am in error," is a hard thing for mortal man to say, and because it is so hard, he leaves no stone unturned to convince himself that he is not in error. He can readily see that another who pursues this course is only adding a second error to the first, both of which must be repented of, but it is difficult for him to see that he is guilty of the same folly.

It is possible that no two persons have exactly the same concept of any one thing. The present finite attainments of the human mind cause mortals to view all things from slightly differing standpoints. There may be countless beliefs regarding the Truth, but there is, there can be, but one understanding of it. In the understanding of Truth and nowhere else can true harmony and enduring unity be found. Men have sought to establish unity of thought and action by formulating beliefs to which certain persons could assent. But this has succeeded only for a time, for the individual who is really progressing has to-day outgrown the belief he entertained yesterday, consequently there is no longer complete oneness of thought between him and his fellow-men who still hold to that belief. The remedy then is not in harmonious beliefs but in understanding. True there is a growth in understanding, but the gaining of a new idea of Truth to-day does not separate one from the idea he gained yesterday, for they both agree in one.

Since Truth is Truth and nothing can change it, should there not be the heartiest co-operation on the part of all? Since the acquirement of Truth means everything, should not all be united in the earnest endeavor to gain it? Suppose the time and energy spent in endeavoring to prove that others are wrong were spent in the honest, earnest search for Truth, how much better off the world would be.

Experience is the great teacher. Theorizing amounts to nothing unless the theories are put into practice and thus found to be right or wrong. In his search for Truth one need not attempt to put every theory into practice that is presented to him. It would be foolish for him to do so. The mere presentation of some theories may serve to satisfy him that they are impractical, but it does not follow that he should leave his own work

Digitized by Google

of investigation to proclaim those theories from the housetop, and declare they are impractical and misleading. It were better for him to leave the working out of those theories to the one who evolved them, while he continues the even tenor of his way, learning through experience and practical application.

The wise man learns from observation as well as experience. He never fails to profit by the achievements of others. Instead of believing he has gained the whole of Truth he realizes he has just begun to approximate it. He realizes that his present concept of it is rather imperfectly formed and he is so busily engaged in righting the wrongs of his own thought that he has little time, and still less inclination to find fault with the imperfections of others.

Such a man is the true friend of humanity. You may not agree with him in politics, and his religious convictions may differ from yours, but you cannot help but feel that his sympathies and earnest endeavors are on the side of right. You do not fear him. You realize he is laboring for the cause of Truth and humanity, and that he will rejoice in your achievements as well as his own.

The influence of such a man is both seen and felt. He seeks not to drive men into the Truth but goes before them pointing out the way by example as well as precept. Some one has said, "He who would lift me must stand on higher ground." The wise man realizes the truth of that saying and governs himself accordingly.

In the world of business, art, or science, and more especially in the religious world, no influence is so potent as the might and majesty of a truly Christian character. Brotherly love and true charity stem the tide of sectarian bitterness and reveal the saving power of Truth. These Christian graces bring a truer concept of the one God who is Lord of all.

The ceaseless chiseling of human experience is rounding the sharp corners and smoothing the rough edges, giving graceful and harmonious outlines to the human conception of Truth's ideal. Since all who are progressing are being daily lifted into a higher, and consequently more correct, conception of Truth, would it not be well for each honest seeker to say to every other in the language of Abram to Lot, "Let there be no strife, I pray thee, between me and thee. . . . for we be brethren"? Thus each could go his own way, working from his own standpoint of experience and observation, fully realizing that in the future they will all be united in the understanding of Truth.

## Among the Churches.

### Christian Science in Winchester, Mass.

The Christian Scientists of this town who have been holding meetings and services here for about six years, the past few months as a Society, in the Town Hall, have now organized as First Church of Christ, Scientist, in Winchester, Massachusetts, having been duly incorporated under a state charter.

This Church is a branch of The First Church of Christ, Scientist, in Boston, Massachusetts—the Mother Church—the services being identical with that church, as is the rule with all the Christian Science churches throughout the United States, Canada, England, France, Germany, and other parts of the world wherever a church of this denomination is established.

A Sunday School for the children is held immediately after the morning service, and Wednesday evening meetings are also held in the same hall at half past seven o'clock, continuing for one hour, which time is largely given up to testimonies of those who have been healed by Christian Science, all testifying to a higher and clearer understanding of the Scriptures through this teaching.

On Easter Sunday this First Church of Christ, Scientist, held its first service, at which the First Reader made a brief address setting forth the growth of the cause in this community. The platform around the Readers' desk was tastefully decorated with potted plants and Easter flowers, making an attractive display, the whole occasion being one of great rejoicing and thankfulness to the Scientists here.

*Winchester Star.*

On the above occasion the address of the First Reader was in part as follows:—

*Dear Friends, Brothers, and Sisters:*—This beautiful Easter morning, amidst the evidences of returning spring, so significant of the resurrection morning, and beholding now Our Risen Lord in the consciousness of the possession of that gift of God—eternal Life—is the occasion of our coming together as an organized church — First Church of Christ, Scientist, in Winchester, Mass.

There can be seen in this event, this historical landmark, the budding of the Scriptural promise "where two or three are gathered together in my name, there am I in the midst of them."

It may prove interesting if I briefly sketch the growth of Christian Science in this community.

Some five or six years ago three children, as it were, who had seen the true Light, gathered for the purpose of studying the Bible and "Science and Health with Key to the Scriptures," that they might gain more of the Divine radiance and so be better fitted to do the will of Wisdom. The numbers and interest were slowly augmented, and about three years ago, the place of meeting was changed to the parlor of G. A. R. Hall, located in the centre of the town, and about a year later another change was made to the Grand Army Hall.

In the beginning these meetings were held on Sundays, and after a few months they were changed to Tuesday evenings, and subsequently to Sunday evenings, and when held in G. A. R. Hall partook more of the form of regular services.

Last fall we organized as the Christian Science Society and engaged our present quarters, holding here regular Sunday morning services and Sunday School, and now, still walking obediently, we have become an organized Church.

These several changes with attendant experiences have been natural, not forced. We see in each step that has been taken a fuller realization of the promise, and we are confident that the seed which has been sown by this body of faithful followers of the Christ-Truth, will flower and bear fruit, resulting in a plenteous harvest.

Our friends and neighbors will awaken to this glorious Truth and we shall have a steady and sturdy growth in our surroundings which will later on cluster around the nucleus which this church forms. Going out into the world exhaling an atmosphere of Love, the human heart, or consciousness, which needs our ministry, will reach out for the harmony expressed through the healing influence of divine Mind.

This is the healing gospel of Truth and Love to which we have individually pledged ourselves—truly a sacred promise—and with God's help we shall "pray without ceasing" that our fruits may prove our work.

Let us pray that the tones of the beautiful message of the Hillside Preacher of Galilee, reproduced in glorious grandeur by her whom we all love—"that ye love one another, as I have loved you"—may re-ehco in our midst; proving a benison to our church.

### New Quarters at Portland, Me.

The Christian Scientists of the Second Church of Christ, who formerly had headquarters up-stairs at 559 Congress Street, have removed to commodious apartments on the third floor of the Baxter Block.

Digitized by Google

The apartments consist of two connecting rooms, one being a large one fronting on Congress Street nicely lighted and fitted up with comfortable furniture, such as easy chairs, book cases, pictures, attractive rugs and druggets, reading tables, etc. This room is used for a reception and reading room, and in it can be found all the literature bearing on Christian Science. A little in the rear of this room is a much smaller apartment used for patients' quarters, where consultations with the sick are held. This room is tastefully arranged for the purpose for which it is used.

The new quarters are open every day except Sunday from 9 A.M. to 12.30 P.M., and 2 to 5 P.M. An attendant is constantly on hand who will extend a cordial welcome to all who care to call.

Reports on the progress being made by the Christian Science workers indicate a rapid growth, especially in the western section of the country, while in the east there is a steady growth, though it is not so marked as in the west.—*Portland Sunday Telegram.*

### New Quarters.

The Christian Science organization of Chattanooga, officially known as First Church of Christ, Scientist, has moved its place of meeting and reading room to 721 Walnut Street, under the Russell House. The hall is on the ground floor, with an office cut off near the front entrance, very tastefully fitted up, with a seating capacity of about one hundred and fifty. The progress of the movement in Chattanooga is very gratifying to its followers, and all are rejoicing at this new step. It is said that no Christian Science Church has ever languished, but on the contrary, all have prospered and grown more or less rapidly from their beginning. There is something refreshing about the earnestness and unity in which they work, and the happiness and peace they seem to express in their religion. They disclaim all kinship with hypnotism, animal magnetism, or thought transferrence.

*Chattanooga (Tenn.) News.*

### From Aspen, Col.

The Christian Scientists of Aspen have moved their place of meeting into a new hall on the ground floor. It has been newly fitted up. Our congregation is small as some of our members have moved elsewhere. While we miss them we know that our loss is some one's else gain. The remaining few are very earnest and doing much good in the cause of Christian Science. When we thought of changing our place of meeting some said, How can we afford it, when there are so few of us? Then we thought that all things are possible with God, and we began to raise money for the necessary expenses. Every one responded at once, and we soon had the required amount. We now have a hall that presents a very pretty appearance.

We have a free reading room open every afternoon from two to five.—MRS. JULIA WATSON, *Clerk.*

### Organization at Tacoma, Wash.

Articles of incorporation of First Church of Christ, Scientist, of Tacoma, Wash., were filed for record at Olympia, April 20, 1894, with a charter membership of six. We now have a membership of thirty-five and an attendance of one hundred and thirty. We have a children's Sunday School, and a reading room with all our Leader's books for sale. We have a church building fund and hope soon to build a church as we are crowded out of our hall.—CAPT. CHARLES A. ENELL, *President.*

## The Lectures.

### Memphis, Tenn.

Despite the fearfully inclement weather quite an appreciative audience gathered at the Grand Opera House last night (Thursday, June 14) to hear the lecture of Judge William G. Ewing on Christian Science. The jurist-lecturer was introduced by Judge W. W. McDowell.

*Memphis Commercial-Appeal.*

Judge W. W. McDowell in introducing the Hon. William G. Ewing, said:—

It is my privilege and pleasure to introduce to you a brilliant and distinguished member of the profession to which I have the honor to belong, who, during his long professional and official career, was held in high esteem by both bench and bar. As a lawyer he achieved great success. As a United States District Attorney in the state of Illinois, and as a Judge of the Superior Court in its great city by the Lake, he discharged his duties with a signal ability, alike creditable to himself and pleasing to the public. As a Democrat, he stood high in the councils of his party; yet he cast aside the judicial ermine and the alluring prospects of further public honors, to go forth, as a John the Baptist, to proclaim to the children of men a religion which he believes will not only purify the soul and give greater peace of mind, but will also bring health and joy to the sick and afflicted.

He is now an accredited lecturer of the Church of Christ, Scientist, and, upon the invitation of its First Church of this city, will tell us what Christian Science is, and give us his reason for the faith that is in him touching the church he is serving so devotedly, and loves so well, and which he, as well as the Founder of his Church, declares is the old time religion taught by Christ and preached and practised by his apostles and by Paul.

Than this learned jurist and devout student of Holy Writ, there is no man better equipped or more eminently qualified to expound to us the tenets and healing faith of this new Church, which has made such wonderful progress in the last few years, about which so much has been spoken and written, and of which so little is known and understood by the great masses of the people. In consequence of this misconception in respect to the religion of this new Church which exists in the minds of its ill-informed friends as well as in the popular beliefs of its opponents, the Mother Church in Boston, Massachusetts, has established a Board of Lectureship, for the purpose of correcting these common errors. This is the mission of him who will address you to-night.

In casting my eyes over this large and intelligent audience, I am pleased to see so many persons in its midst who, like myself, are not Christian Scientists, but are members of other churches, and have adopted articles of faith in accord with the creeds of your respective churches, each of which differs from each of the others, and yet, each and all of you worship the same God and are marching onward, under the same Christian banner, to the same camping grounds in the realms of eternal rest and joy.

This manifestation of fraternal fellowship and amity between Christian men and women evinces the fact that the sectarian bigotry, as well as intolerance, of former generations, has melted away before the effulgent light of advancing civilization, like dew before the rays of the morning sun.

I may therefore assume that the members of this enlightened assemblage, representing many beliefs, came here to learn from him who is authorized to speak for and in the name of this new Church, what the Christian Science religion is, and what it stands for.

Nineteen centuries ago, when the enemies of Christ's

Digitized by Google

infant Church in Judæa took counsel to slay his apostles, "Then stood there up one in the council, a Pharisee, named Gamaliel, a doctor of law, . . . and said unto them, Ye men of Israel, take heed to yourselves what ye intend to do as touching these men, . . . for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it."

This saying is no less true to-day, and hence, we may well give a listening ear, a patient hearing, and an impartial consideration to the lecture of the Hon. William G. Ewing, who will now address you. *Correspondence.*

### At Chicago, Ill.

Mrs. Annie M. Knott of Detroit delivered a strong address on the subject of Christian Science at the Second Church of Christ, Scientist, La Salle Avenue and Goethe Street, last night (Tuesday, June 19). She was introduced by former Judge William G. Ewing, who said that the purpose of the lecture, like many others that have been given in Chicago and other cities, was to clear the public mind of false conceptions of Christian Science and the prejudices resulting therefrom.

Mrs. Knott, in her opening remarks, referred to Mrs. Mary Baker Eddy, the Discoverer and Founder of Christian Science, as an example of all that is noblest and best —a woman deeply alive to the greatest problems of life. It was she who, having been a sufferer, knew that she had been healed through the power of God alone, and revealed her discovery to the world.

### Lectures at Other Places.

Milford, N. H.—Rev. Irving C. Tomlinson, May 10.
Chicago, Ill.—Joseph R. Clarkson, May 17.

## If We Knew.

COULD we but draw back the curtains
That surround each other's lives,
See the naked heart and spirit,
Know what spur the action gives,—
Often we would find it better,
Purer than we judge we would;
We would love each other better,
If we only understood.

Could we judge all deeds by motives,
See the good and bad within,
Often we would love the sinner
All the while we loathed the sin.
Could we know the powers working
To o'erthrow integrity,
We would judge each other's errors
With more patient charity.

If we knew the cares and trials,
Knew the efforts all in vain,
And the bitter disappointment—
Understood the loss and gain—
Would the grim external roughness
Seem, I wonder, just the same?
Would we help where now we hinder?
Would we pity where we blame?

Ah! we judge each other harshly,
Knowing not life's hidden force;
Knowing not the fount of action
Is less turbid at its source;
Seeing not amid the evil
All the golden grains of good;
Oh! we'd love each other better
If we only understood.

*Selected.*

# From Our Contributors.

## Much to be Thankful for.

BY MRS. EVA N. SWENSON.

"OUT of the abundance of the heart the mouth speaketh," and my heart should be very full of thanksgiving for this blessed Truth as revealed to us in "Science and Health with Key to the Scriptures." It has brought to me everything good. After searching through all the hedges and by-paths to find out God, I was pointed to a straight and narrow way, where I truly found all that was promised and much more than I had ever dared to hope for here. I saw it was the way and determined to walk therein, but I found I must work, watch, and pray every step of the way. Surely these are the footsteps of Truth we find in Science and Health, but it has been blessed and profitable, for it has shown me myself, my duty, and how to work out my own salvation.

Our Mother in Israel has given us strong thoughts in her pamphlet entitled, "Christian Healing." They have been very helpful to me of late. I have seen them so much clearer than ever before. One sentence has come to me very forcibly, and has shown me how extremely watchful we need to be of our thoughts. She says, "This truth is, that we are to work out our own salvation, and to meet the responsibility of our own thoughts and acts." Thus we find that our work lies within ourselves. How prone we are to wish we might change some person who to our sense seems to be doing wrong. When we see them as God's perfect child, then shall we help them to see it for themselves. How often the words of the Master come to me when I find myself wondering why some do not seem to grasp Christian Science, "What is that to thee, follow thou me." I find I must not be watching what another is doing but strive to obey. "Be ye therefore perfect, even as your Father which is in heaven is perfect." "The curse causeless cannot come." The Scripture says, "And there shall be no more curse." When we live so our thoughts and acts can cause no more curse, there can be no more curse, neither sin, sickness, nor death. Then shall we behold the new heaven and the new earth, for there shall be no more sea (error), for the former things have passed away.

How clear the Scriptures seem to us when the searchlight of Christian Science is turned upon them. Often when reading the Bible I seem to be with the disciples amid the scenes where Jesus strove to open blind eyes and cause deaf ears to hear. How my heart goes out to our dear Mother when I think of her patience amid so many trials, her great and grand work to bring the bread of life to her hungry children. I ask every day that I may never forget my duty to God, to our Leader, and humanity. It is such a blessing to know that we have carried a crumb to even one hungry child of God. It is our privilege to feed many. How watchful we should be never to miss an opportunity to say a word of Good that may cheer a heart already struggling along the way, or that may help some poor wanderer to find the straight and narrow path. Let us strive to be cheerful, always ready with a smile and kind word. We never can tell how one little act for Good may help one of His little ones. Christian Scientists have, it seems to me, everything to be thankful for.

We can afford to be patient, to watch and strive to do everything that will show the way to the dear ones still wandering in the wilderness of doubt, weary and discouraged, trying to find something to satisfy, somewhere to rest, almost afraid to reach out to Christian Science for fear of again being deceived. Oh! how closely we need to watch self, for these same dear ones are watching us to see if we indeed have found the Christ. Our acts more

Digitized by Google

than words will answer them. How we need to reflect that compassion of our Master to draw those to him for rest, peace, and joy, so they may be able to hear the "Come unto me, all ye that labor and are heavy laden, and I will give you rest." What a debt of love I owe our Leader and Mother and my dear teacher, and all who have helped by word or deed to gain this glorious Promised Land, where our feet are planted on the Rock, Christ, no more to roam. I look up with a heart full of praise to God for all His blessings to me.

## Be Not Deceived.

BY A.

If there is any one thing more than another that we, as professed believers of Christian Science, need to look at often, it is the question of deception. It is so easy to say we believe in Christian Science. It is another thing to show by our fruits that we *believe*.

No one ever became a mathematician until he had proved his claim to such by the working of not only hundreds, but thousands of problems. He had to have a sense of the principle; then to learn the rules; then solve the different problems stated to prove for himself the correctness of both principle and rules. No two rules are just the same, and yet all rules are but for the purpose of leading the student step by step up to the top of the ladder of the science of mathematics.

Studying the life of Jesus closely, we find him constantly healing human infirmities. When he taught he always illustrated by healing something considered incurable.

Our Teacher, in tune with the Mind that was in Christ, tells us in "Science and Health with Key to the Scriptures," p. 291, l. 5 to 7, what is necessary to our understanding. She has no different code from that which Jesus gave. She encourages no new line of development; but by precept and example urges upon us the need of fulfilling every requirement of the spiritual law.

Her sermons are healing every day. For example: A young man was sent to the writer to talk about Christian Science. He was asked to get Science and Health, and did so. He had been unable to read and had to leave college on this account. He took the book home and read from about four to eleven in the evening. Next day he read almost all day and was healed. This is but one case of many thousands.

This shows us, then, that if we would go and do likewise, we must live and work as she who wrote this book lives and works. We must, above all else, *do*. It is no use to say, "I am too young;" "I am too busy;" "I am preparing to enter the work," when there is no evidence of preparation. These are the elements of deception. Many are the arguments advanced by this so-called mind which would subtly and gradually rob us of a fixed purpose to do something.

We must not be so important as to require all our time for ourselves. Some may say, "I take care of myself, and sometimes I treat a friend." Is this life fulfilling the demands of Jesus, "Go ye into all the world;" "Preach the Gospel"?

This is a finite conception of the infinite scope and application of our text-books—the Bible and Science and Health. The teachings of these books, when honestly accepted, overcome pride, selfishness, and ignorance. Take the statement in "Science and Health with Key to the Scriptures," p. 157, "We should forget our bodies in remembering God and the human race." Can we ever arrive at the destination this statement implies by going the opposite way?

I rejoice in this one great fact, that there is only just *one way* to arrive at the heaven of divine Science, that is through honest, honorable, patient, ceaseless effort. This line of thought is always expressed by good works, and we can always locate ourselves by our work.

There are some questions which it might be well to ask ourselves each day and sometimes many times each day: "Is pride in any measure or way affecting my life?" "Am I honest?" "Am I working only for the advancement of our Godly Cause?" "Have I any other god than the one and only God?"

## Meeting Opposition with Love.

BY V. M. M.

An article in the *Sentinel* of May 10, in regard to the overcoming of resentment through the power of Love, reminded me that I should acknowledge a similar demonstration.

One morning a lawyer came into the office where I am employed, to borrow a certain law book. As I laid down "Science and Health with Key to the Scriptures" which I had been reading, to get the book he asked for, he picked it up, and his seeming disgust on seeing the name of my book, knew no bounds. He then proceeded in a very violent, sarcastic, and emphatic way to express his opinion of Christian Science and Christian Scientists, and talked so loud and so fast that I had no opportunity to speak a word. He was soon recalled to his own office, which is on the same floor with ours, but in a day or two returned to the charge,—his opening remark being loud enough to have been heard across the street. There were other persons present each time who seemed to support his views of Christian Science, and as before I had very little opportunity to say anything.

The statements made were very unjust, unreasonable, and unkind, and when the gentleman had gone out, the first impulse of self was to have a good cry. Then I remembered that if Christian Science were really what he thought it to be, I would be as much opposed to it as any one could be. And this admonition came into my thought, "At all times, and under all circumstances, overcome evil with Good" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 563). Also from the same book (p. 393): "Is there no divine permission to conquer error of every kind, with Truth and Love?" Then I recalled the lecture of Judge Ewing in the current *Journal* and thought I might take it to the lawyer to read. At first this seemed an impossible thing to do, but with another inspiring thought from our text-book (p. 562), to "Give them a cup of cold water in Christ's name, and never fear the consequences," I took the *Journal* and went into his office. This was about fifteen minutes after he had gone out of ours, but in this time his entire manner had changed. The "roaring lion" had become as gentle as a lamb. He received me very cordially, and thinking I had come in to see his daughter, told me where I would find her. But I said that I had come to give him some advice, but would not charge him any fee, and reminded him that in order to avoid prejudice, one should never judge in advance of the evidence for the defense. He laughed and said, "If you have something there about Christian Science, I will be glad to read it." I then spoke of Judge Ewing and said that I knew he regarded him as a sound man professionally and politically, and that I considered him sound religiously. The gentleman told me that he knew Judge Ewing, and knew that he was a lecturer on Christian Science, and that he would be very much pleased to read his lecture. I met him the next day in the elevator and he asked if he might not keep the *Journal* long enough for his wife to read the lecture, saying that she considered Christian Science a "menace to orthodoxy." In a day or two he came to me for more literature, and in a few weeks

Digitized by Google

introduced our Christian Science lecturer, Judge Ewing, telling me that it gave him pleasure to do so, as he "felt very kindly toward the Scientists."

When I meet this gentleman now he always manifests a spirit of kindliness and good fellowship that could only be brought about by the Principle of Christian Science, which is Love.

## Letter to Mrs. Eddy.

Chicago, Ill., May 19, 1900.

Rev. Mary Baker G. Eddy, Concord, N. H.

*My Dear Mrs. Eddy:*—Some years ago four physicians exiled me to Florida to end my days in comparative comfort. Well, I did not follow out their programme. Instead, I hunted, fished, and camped, sleeping on the ground in the woods weeks at a time. I have long since given the lie to the "three-score years and ten." I find Christian Science affects me much as the Bible did when I began to read it sixty years ago, *i.e.*, the more I read it the better I like it. I find in making the change from orthodoxy to Christian Science, one can answer all that is worth answering.

I enclose some verses I wrote in Florida twelve years ago. Verse ten seems to be prophetic and points to Christian Science. I look upon the verses mainly as hallucinations.

With great respect,

B. F. WILSON.

Commonly known in the slums as FATHER WILSON.

The following is the verse referred to.

Besides, you need to learn more good,
The language of the people,
Which is not always understood
'Neath cloister roof or steeple;
Then go to those of worthy deeds,
Of all the earth the leaven,
For they alone may know your needs
And the dialect of Heaven!

## Letter from a Clergyman.

The following letter was written by a prominent Episcopal minister to a friend who had sent him Christian Science literature.

Clinton, Iowa, February 27, 1899.

*My Friend:*—I have read carefully all you sent over by your little girl and wish to thank you for your courtesy.

As you know I am broad in my sympathies and independent in my thinking and have been pained at the somewhat ill-natured treatment accorded you and other disciples of Christian Science by the three pastors of the city. I would apologize for them if I felt in any wise responsible for their attitude or conduct.

The real Truth is true and never suffers from human antagonism, although it may be obscured for a time. I shall be pleased at any time to gain further light upon your system, which to a thoughtful mind, demands, at least, fair treatment and intelligent investigation. Such I am ready to accord it most cheerfully, for I foresee that so widespread a movement will confront us for a hearing more in the future than in the past. I do think, however, that, so far as I can see or judge, the movement is passing into its second epoch, one of defense and explanation under prejudice or attack. This will purify it and free it from misconception or misunderstanding. This is an inevitable feature with all new expositions or systems, and in the end will doubtless prove a blessing. With renewed sentiments of kind regard and friendly interest.

Yours very truly,

HENRY H. MORRILL.

# Testimonies.

### An Octogenarian Healed.

At my mother's urgent request, the following account of her healing is lovingly submitted. Five years ago she was badly crippled and partially paralyzed from the effects of rheumatism. Truth, as set forth in "Science and Health with Key to the Scriptures," was explained to her by a loyal student, and without further treatment than this audible presentation of Truth, she was thoroughly healed of that disease.

A little over two years ago she came on a visit to the South, and while with me, she began the daily study of Science and Health. This systematic study, with only an occasional denial, audible or silent, from me, healed her of prolapsus uteri of over forty years' duration.

One evening she suffered an attack of periodic bladder trouble. Under medical treatment this trouble sometimes kept her in bed, in agony, for days and sometimes weeks, and catheters were necessary to give temporary relief. This time Christian Science was the one thing she desired, and a half hour's treatment healed her completely.

Her long journey from Florida to Kansas was made last spring with no trace of fatigue.

A severe case of grip was met for her through one week's absent treatment last winter, and she wrote: "I *felt* your treatment the moment you began. I knew just when you were reading my letter." In a recent letter she says, "When the people express astonishment at my health and vigor and constant work, I tell them that God is my strength! I feel grateful and uplifted when I think that I am making myself useful at an age when others are usually a burden to their families, as I would be if it were not for Mrs. Eddy and Christian Science."

Though a foreigner by birth and education, mother never had any difficulty in reading Science and Health. She has overcome many simple ills by going at once to the book and reading until harmony was experienced.

She was reared a Roman Catholic, but many years prior to my own, and then her, acceptance of the Science of God, our entire family were Agnostics of the most pronounced type. Mother is now a member of the Mother Church, loves Mrs. Eddy dearly, and is an earnest student of her works. She reads *only* the periodicals issued by The Christian Science Publishing Society of Boston.

She is deeply grateful not alone for her own healing but for the healing of two daughters and two grandchildren. While only five of us have received the physical healing of Christian Science, *spiritual* benefit has been experienced by the entire family of eight. Though mother's eighty-second birthday comes on the 17th of August next, she is a walking advertisement of the rejuvenating power of Christian Science correctly and conscientiously applied.

Let those dear ones who *think* they are "too old to begin" the study of Science and Health bear in mind that Abraham was ninety-nine when the Lord appeared to him and said, "I am the Almighty God; walk before me and be thou perfect."—C. DREYER, De Funiak Springs, Fla.

### Heartfelt Gratitude.

I have long wished to give expression to the deep gratitude of my heart for what Christian Science has done for me. It is now more than four years since I was healed of many diseases contained in the regular catalogue, one being hereditary consumption.

My mother and other members of her family had died of that disease, and every indication seemed to prove to my mind that my doom was sealed, and that I had but a few months at most to call my own. While in this dark hour of suffering and despair, this God-given message came to me and lifted me above the black illusion of disease and

Digitized by Google

death into the glorious consciousness of the fact that "God is Love" and ever-present and always the same; and that He is not the author of our sickness or sorrow. From that hour to the present time I have been striving to learn more and more of this blessed Truth, to live it, to imbibe it, and to demonstrate its power in overcoming error in its many and varied forms both in myself and others. My husband had been almost an invalid for fifteen years, suffering from stomach and bowel troubles, and was healed about the same time I was, and has never had to lie down from a claim of sickness but one time since being healed, and that was for only two hours. He is sixty-seven years of age, is a farmer, and plows all day or does any work that comes to hand, and such a thing as medicine is never thought of. At times my battles have seemed very hard, and the words so often read in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, have been brought to memory: "It is easier to desire Truth than to rid one's self of error."

I am very thankful for the establishment of the Board of Education under the auspices of the Massachusetts Metaphysical College, for thereby I have had an opportunity to receive class instruction from one of our pioneer workers, a loyal teacher who was among the number selected by the Board at its first session to teach Christian Science. For this privilege words are inadequate to express my gratitude, for the light and unfolding of understanding that now daily comes to me is the soul's rich harvest that banishes forever all doubts and fears and enables me to reflect more and more the true image and likeness. After class I laid aside my glasses after having used them constantly for many years, and am able to read, write, sew, and do any necessary work. My heart is full of love for our Leader, and it is only by trying to live by her God-inspired teaching that we are able to appreciate what she has done for suffering humanity. How can any one who has received the blessings that come from this revelation do otherwise than love her. I also want to express my appreciation and gratitude to all concerned in the publication of our *Journal* and *Sentinel*, and also the *Quarterly*, all of which are of great help.

MRS. ELLEN W. HUFFAKER, Lampasas, Tex.

---

### Physical and Moral Benefits Realized.

During one and a half years just preceding my acceptance of Christian Science my wife and I lived in the home of a Christian Science practitioner. My attitude toward my host's beliefs, although I respected the rights of others, was very cynical and intolerant. I was always reasonably well myself and could see no science in a person praying over error or sickness in order to remove it. I had abundant opportunity to read and study, but refused to be enlightened about such palpable foolishness. This condition of mind was intensified because of my very great dissatisfaction with the doctrines of the Church to which I had subscribed when a mere boy. This brought me to a state of mind bordering on atheism.

Those who have suffered from stomach and bowel complaints can understand how miserable I was from an attack of this kind for several weeks until, not liking doctors but ready for almost anything which promised relief, I yielded to my wife, and a Christian Scientist was called. From the first I was surprised by the logical conclusion which seemed to be the basis of the doctrine and I began to read "Science and Health with Key to the Scriptures" to find out for myself what seemed to be working so great a change in me. On the occasion of the healer's second call we attended a midweek service at the Mother Church and I so far forgot my miserable condition as to run some distance through snow and water to catch the car and hold it for the ladies. In a few days more I was eating as usual, and at the end of each meal thanking God for a good appetite.

During my illness I had experienced no desire to use tobacco, and in a week or two after being perfectly healed I woke up to the novel surprise that I had completely forgotten my pipe. I have had no desire for tobacco since then.

This is the physical and small part. My whole life has been changed through the partial understanding of God's power and my true being. All praise to our beloved Mother, whose patience and perseverance has given the grand truths of Christian Science to this and future ages.

A. E. ALFORD, Beverly, Mass.

---

### Faith in the Bible Restored.

I was raised to believe in the Bible. My parents said, "Attend any Protestant church." For some time I tried to follow what I believed the Bible to teach, but not being able to see any particular results, discarded all belief in the Bible.

About seven years ago I became acquainted with a Scientist family and made considerable fun of their belief, but read some of their literature. After quite a struggle with myself in re-accepting the Bible as authority, I concluded that "Science and Health with Key to the Scriptures" contained the Truth.

I did not take up Christian Science for physical healing, but because it seemed to be reasonable. While an understanding of Christian Science heals the sick, the main object is to make Christians, and healing the sick follows as a necessary accompaniment. If I cannot heal the sick there is something lacking in my Christianity. My wife and myself have found the Truth equal to overcoming numerous troubles, and it is our only physician. We are expressing our gratitude to our Leader by living up to our highest understanding of Truth. We became members of the Mother Church last November.

I find that studying the faults of others, commenting on them, etc., does not improve their condition nor add to my own store of understanding and is worse than waste of time.—J. B. COOK, Weston, Ore.

---

### A Case of Instantaneous Healing.

One day while visiting with a sister at her home in Chicago a man came to the door. He had called two days previous and asked for material aid. My sister seeing that he was paralyzed and needed something more, explained to him in a few words the nature of Christian Science and directed him to the reading rooms to obtain help. He went there but becoming weak in faith he failed to ask the Scientist in charge for treatment, but asked her instead for food, which she gave him. When he appeared again on the morning of which I speak he related his experience and added, "I can't be healed, my trouble is hereditary, my father had it, and my uncle had it, and I have been afflicted seven years," etc. We both denied the error as he voiced it. A few more words of love and encouragement were given, when we were overwhelmed at a great change coming over him. At first he could not speak, but pointing to the paralyzed hand he finally exclaimed, "Oh, dear! Oh, dear! Look! Look! Look! It moves! It opens!" and his hand became red; the rigid muscles relaxed, he could move first his thumb, then his fingers, and finally raise the hitherto helpless arm! The tears rolled down his cheeks. His joy and gratitude can never be expressed by words. We stood in awe in the presence of Omnipotence.

ADELE K. KAHN, South Bend, Ind.

## Religious Items.

Bishop Paret's address before the Episcopalian Convention regarding the religious instruction of children is given an important place in the *Church Standard*. Concerning the duty of parents toward their children, the bishop says: "Common notions of these later days have confined it almost entirely to the mothers. God put it first of all upon the fathers. It was to fathers He was chiefly speaking when He commanded concerning the principles and precepts of His earlier religion, 'thou shalt teach them diligently unto thy children.' It was to fathers He said, through St. Paul, 'bring them up in the nurture and admonition of the Lord.' It was to Abraham and not Sarah of whom He said in praise, 'I know him that he will command his children and his household after him, and they shall keep the way of the Lord.'"

I cherish the virtue of humility in proportion to the scarcity of it in the world. When associated with active and energetic powers it is truly admirable. But there is great danger in that humanity which implies the sacrifice of one's own judgment to the opinions and wishes of others. In all the relations of life, public and private, I have found this difficulty constantly recurring, and, when compelled to decide, have erred, sometimes in following the dictates of my own mind, and sometimes in yielding to the persuasions of others. The only true reliance is from above.—JOHN QUINCY ADAMS.

The Rev. T. A. King, in a sermon published in the *New Church Messenger*, says: "No matter what the outward life may be—clean, polished, and cultured, or disfigured and unclean—internally the individual is an idolator until he fully and sincerely turns away from loving himself. If one is sincere in this supreme moment of his life, fire will fall from heaven, a real, genuine love will descend from the Lord into his heart, as truly as fire fell from Elijah's altar. He will then see that self has no such power; that no fire of an all-consuming divine love can come into life so long as it is self-centred and self-seeking."

In an editorial concerning the Bible, the New York (Baptist) *Examiner* says: "The printed book shall pass like all else in the fire that shall consume all things. But its truths shall remain through eternity. As history it is confirmed by evidence dug up from the depths of the earth. As philosophy John Stuart Mill said, 'It is impossible to find in the ideas of any philosophy, even the latest, a single truth which is not anticipated and ennobled by Christianity.' As morals, its teachings rest on universal experience. Happiness follows obedience to its precepts; misery is the penalty of their disregard."

The *Universalist Leader* published a children's number recently, the leading editorial of which presented some characteristics of child thought from which adults could learn much wherewith to sweeten their own lives, noting especially the trustfulness of childhood. Commenting on the opposite characteristic, the editor says: "The confirmed doubter of other people's virtue and ability exerts a harmful influence in society and in business walks, and weakens the courage of him against whom depressing criticisms are directed."

The (Baptist) *Watchman*, in an editorial article entitled "The Power of Preaching," says. "One of the most serious symptoms of the church life of our time is the gradual decline of the value set upon preaching. There is a tendency everywhere to crowd the sermon into a secondary place in the scheme of public worship, and the tone in which some ministers are described as 'mere preachers' discloses the lessened appreciation of this function of the ministry."

Miriam Hope says, in an article in the (Baptist) *Standard:* "If we spend an afternoon calling on friends we find the majority full of various worries, some one thing, some another; there is hardly a word in the dictionary more freely used—we really do not stop to think how much we worry over this, that, and the other. Distrust is a great disintegrating force that scatters far and wide blessings that might be ours."

On June 22 the town of Northampton, Mass., paid a long delayed tribute to Jonathan Edwards, the great preacher who was expelled from the pastorate of that parish in 1750. A tablet was placed on the walls of the church which expelled him, inscribed with a brief story of his life. The tablet cost $2,000 and a large part of this sum was collected in England.

The (Baptist) *Standard* quotes Richard Fuller, D.D., as saying: "The gospel is transcendently glorious because it reveals our common parentage, because it discloses God to us as a common father, a father from whom we have most unnaturally estranged ourselves, but who still yearns over us with the tenderest love."

A writer in the *Congregationalist* says: "In the sermons and the prayer-meeting talks of a generation ago the question was often asked, 'Where will you spend eternity?' That question served its temporary uses, but with our modern thought of God and of life the better question for us is, 'How are you spending eternity?'"

The (Unitarian) *Christian Register* says: "It is a rule of nearly universal application that in all lands and churches men and women of the same range of intelligence, learning, and culture, take almost identical views of religion, morals, and manners. Barbarism divides, while civilization unites."

Better one idea carried out, walking on the ground and working in the world, with real hands and feet, than a dozen beautiful fancies—than a hundred beautiful dreams.

*Sunday School Times.*

"It is hardly consistent to say that interest in the Bible is declining while 2,500,000 copies of it are being printed every year," says the *Congregationalist*.

The Reformed Presbyterian Synod at Atlantic City decided not to ordain tobacco-users to the ministry.

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," Communion Hymn," "Mother's Evening Prayer," Tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

The Publisher's Department of the *Journal* devotes two pages to a list of publications, all of which are suitable for distribution among those whom it is desirable to inform regarding Christian Science. The following notice is also given, "that pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work."

The prices now are, for pamphlets: One copy, or more, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price. Address The Christian Science Publishing Society.

### Supplements to the Sentinel.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4—Christian Science: Its worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

The price of the supplements is as follows: Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

The extremely low price at which the supplements are issued enables the workers in the Field to give them the widest possible circulation. Orders for supplements may be assorted as desired.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, C.S.D., Publisher,**
**95 Falmouth Street, Boston, Mass.**

## Items of Interest.

### Political and Governmental Notes.

The National Democratic convention, in session at Kansas City last week, unanimously nominated William J. Bryan for President. On the first ballot for Vice-President nearly two-thirds of the votes were cast for Adlai E. Stevenson of Illinois, who was Vice-President during Cleveland's last term. When it was found that Stevenson was so far in the lead, all the states which had voted for other candidates changed their votes for Stevenson and he was thus unanimously nominated on the first ballot. The platform which was adopted begins with a re-affirmation of faith in the Declaration of Independence and the Constitution of the United States and a denial of the right of one nation to impose upon another a government of force. This part of the platform deals at some length with the issues growing out of the Spanish war. The trust issue is the second plank of the platform, and promises that the party will employ the whole constitutional power of Congress over inter-state commerce, the mails, and all modes of communication, to make such monopolistic trusts unprofitable. The third plank denounces the Dingley tarift law and declares for a tariff framed solely to meet the expenses of the government economically administered. Fourth in order is the currency plank which re-affirms the demand of the Chicago platform for free coinage of both gold and silver at the ratio of 16 to 1 without waiting for the co-operation of any other nation, and an additional clause is attached denouncing the recently enacted currency law. A number of subordinate issues are briefly touched upon. Election of United States Senators by direct vote is favored. Government by injunction is denounced. The establishment of a national department of labor, with a secretary having a seat in the Cabinet is recommended. A liberal pension system is endorsed. The immediate construction of the Nicaraguan canal under the exclusive control of the United States is demanded. Statehood for the territories of Arizona, New Mexico, and Oklahoma is promised.

The National convention of the Silver Republican party, which was held in Kansas City at the same time as the Democratic convention, nominated William J. Bryan for President by acclamation, and referred the nomination for Vice-President to the national committee with power to act. After the convention adjourned the committee met and named Adlai E. Stevenson for Vice-President. The convention endorsed the Democratic platform.

Colorado is in evidence in the nation's political conventions this year. Thomas M. Patterson, a Denver lawyer, was permanent chairman of the Populist convention at Sioux City; Senator Wolcott of Colorado was temporary chairman of the Republican convention at Philadelphia, and Governor Thomas of Colorado was temporary chairman of the Democratic convention at Kansas City last week.

The United States battleship Oregon ran ashore off the island of Hoo-Kie, in the Miao-Tao group, 35 miles northeast of Chefoo, on June 28, but has been floated off and is expected to reach port safely.

A story is going the rounds of the press that Mr. Bryan predicted his own nomination in 1896 when seated in the convention in Chicago before balloting for the nomination began.

### Foreign News.

The uprising in China against foreigners is now believed to be about the most serious affair the great powers have ever had to face. Last week the report of the murder of the German minister was confirmed and fears were entertained for the safety of the ministers and other foreigners in Pekin, which number about one thousand. However, on July 7 there was a change in the character of the reports. The United States consul general cabled to Washington that the foreigners, including Minister Conger and his family, were holding out on July 3, and dispatches at the same time show that the great powers have all agreed to empower Japan to put a large army into China at once, to work in the interests of all nations. On July 9 comes the report that the loyal troops under Prince Ching have started a counter-revolution against Prince Tuan, who is reported to have made way with the Emperor and Empress Dowager and usurped the throne in behalf of his son, the heir-apparent. The report states that Prince Ching has attacked the forces led by Prince Tuan, and this revives hope that the uprising may be checked in time to save the foreigners.

A Berlin dispatch of July 6 says: "Emperor William has telegraphed to the commander of the German squadron in Chinese waters, to the governor-general of Shangtung, to the viceroys, and to others, offering one thousand taels to any one accomplishing the deliverance of any foreigner of any nationality whatever, now shut up in Pekin, who is handed over to any German magistrate, and offering to pay the expenses of the publication of this offer in Pekin.

Count Zeppelin made an experimental trip in his air ship on July 4 from Friedrichshaven to Immenstadt, a distance of thirty-five miles, when it descended, owing to the steering apparatus having become deranged. The ship was four hundred feet long and had a carrying capacity of five men. The experiment was not considered very successful.

An equestrian statue of Washington was unveiled in Paris on July 3. The statue was a gift to the French people from an association of American women. The United States Ambassador, General Horace Porter, presided at the ceremonies and Sousa's band furnished music.

Reports of events occurring in the field of war in South Africa were printed under small headlines in the newspapers last week. No important moves were made by either the British or the Boers.

An official ukase was published in the *Official Messenger* July 3 providing in a large measure for the abolition of banishment to Siberia.

The Khedive of Egypt is on a visit to England. He is receiving much attention.

### Industry and Commerce.

The largest railroad tunnel in the world is nearly completed through the Cascade Mountains west of Kalispel, Mont. It is the project of J. J. Hill, president of the Great Northern road, and will save that road twelve miles and several hours in the transcontinental run. More than two miles of work is completed, and a third of a mile remains. Almost one thousand men are at work with the latest and most powerful appliances known to rock-drilling and masonry. The sum paid for labor to date is nearly $3,000,000 and the tunnel will cost more than $4,000,000.

Probably the largest mortgage in the world was executed recently, when the Carnegie company made a mortgage to the United States Trust Company, as trustee, for the sum of $160,000,000. This mortgage covers all the properties and securities of the different individual companies which make up the great Carnegie company, to secure the issue of $160,000,000 worth of five per cent 50-year bonds, which have been negotiated abroad.

A Pittsburg dispatch says that the window-glass factions controlled by the American Window-Glass Company, that had been operating since th shut-down on June 15, closed on June 30. Fully ten thousand window-glass makers will be idle during July and August. All the flint, bottle, and chimney glass factories are also closed, the former for two months and the latter for six weeks, leaving ten thousand flint-glass workers idle also.

An agreement between the St. Louis Transit company and its former employes was signed on July 2, and the strike was declared off. The company will retain all the non-union men, but will add to the force of employes from the ranks of those who were employes of the company on May 7 last.

One Lovell, a rural postman of Luton, Eng., now retiring on a pension after twenty-six years of service, is said to have walked in pursuance of his vocation a distance equal to three times around the world, and never to have missed a day from his rounds through illness.

All the union coal miners in Alabama, about ten thousand in number, quit work July 2, pending the settlement of the wage dispute. The old wage contract expired July 1, and the miners demanded a forty per cent raise and other concessions.

The Newfoundland sealing season has been the largest in twenty-five years, 375,000 seals having been captured.

The *Los Angeles Express* estimates the capital invested in orange growing in California at $44,000,000.

Under British rule, the cotton crop of India has doubled and now amounts to 500,000,000 pounds a year.

### General News.

Washington day was celebrated in Cambridge, July 3, the observance commemorating the 125th anniversary of the taking command of the American army by Washington, an event which took place Monday, July 3, 1775, under the famous Washington elm on Garden Street, near the Cambridge Common.

Considering its great, but unknown age, the old elm is fairly well preserved. The tree is believed to be a survivor of the primeval forest. The trunk is six feet in diameter, and the tree reaches to a height of about one hundred feet, with a ninety foot spread of its branches.

The 1,250 Cuban teachers now at Cambridge in attendance at the Harvard summer school, formed in procession on July 4 and marched to the famous Washington elm underneath which they laid a wreath of roses and laurel as a tribute to the memory of Washington and as a mark of grateful courtesy to their American entertainers.

The Government this summer is going to explore the least known region within the limits of the United States—that mysterious country in western Texas, where the old-time adventurer, Coronado, was lost, together with his band of followers, while searching for the golden village of Gran Quivera.

## A Woman in Alaska.

### Her Life in a Cabin in the Klondike Region.

IT is a strange, wild life, that of a woman in an Alaskan mining camp. There are no conventionalities of civilized life, no drawing-room receptions, no enforced hypocrisy growing out of the courtesies of civilization. Here the rough miner is just what he appears—plain, rugged, and honest, with a chivalry and respect for woman unknown to a more refined civilization.

The mines of the Birch Creek district are not being worked as generally as they were a few years ago. The camp is not so extensive, the present number of miners on the creek not exceeding possibly one hundred, the camp having dwindled from four or five hundred engaged here a few years ago to this number, by reason of the new discoveries in various sections that have attracted those who had the less desirable class of claims. Then, too, the grounds on this creek have been pretty well worked, though there are a number of very rich mines that will yield handsome profits for years to come.

With my female companion, having reached Dawson in June, we came on to this camp, where we have been most of the time since, having made our home in a snug little cabin where we have been comfortable during the coldest weather, indicated by the mercury for a short time at eighty-two degrees below zero and standing for several days at sixty. My companion and myself each have a claim in this district, I having won mine at the end of a contest, as two miners attempted to take it from me. The matter was settled by submitting our claims respectively to a jury consisting of all the miners in the district. I took charge of my own case and was given a verdict by a majority vote, having been sustained by all except seven of those voting.

Our cabin is ten by twelve feet, has one door and two windows, and is warmed by the regulation sheet-iron stove of this country, which answers for both heating and cooking. The bedstead, cupboard, table, and shelves are made of whipsawed lumber, our stools being made of huge logs and covered with fur. The bed-covering consists of furs and skins, including a large robe made of the skins of thirty-two red foxes, lined with a heavy woolen blanket. On our floor we have a large moose skin and two caribou skins for carpet. The walls of our cabin, which have been hewn until reasonably smooth, are decorated with caribou antlers and wings from various wild birds of this region, together with the leaves of ferns in endless variety, gathered after having become beautifully tinted with the first snows of September; the hues of these ferns being most delicately blended. The winter following summer without the period of autumnal preparation, the emerald green of the foliage takes on a most beautiful appearance when covered with the pure white that enshrouds all nature for almost nine months in this latitude. The mountain scenery, deep gorges with the green foliage of the trees wrapped in mantle of snow, presents a beautiful and fascinating picture.

We are now in the midst of the long winter where daylight lasts not more than three hours; that portion of the year when the nightly displays of the Aurora are most fascinating and enchanting. This wonderful exhibition of nature, to be seen in all its grandeur only in this far Northern latitude, surpasses the power of words to describe. Often I sit for hours in the silence of the night, and through the little window in my cabin watch the wonderful display of the Aurora, until my soul seems to fathom the infinite, so grand and so inspiring is the appearance of this celestial visitant of the polar regions. The isolation and the dreariness of the long night is more vividly impressed upon the mind by the howling and screeching of great packs of wolves that, coming out of their hiding places in the mountains, visit the valley at night in quest of food. With the nearest neighbor a mile distant, the loneliness of a night in this bleak, cold, dark country of ice and snow, with the storm roaring and hungry wolves howling without, produces a feeling of total separation and isolation from the world.

Our wearing apparel while in our cabin is about the same as that worn in the States, save only in the matter of foot-wear, which is always in this latitude moccasins with heavy stockings; leather foot-wear being entirely out of the question. When out for some time it is necessary to keep the hands and face well protected, the body being kept warm with rapid walking. In fact, there is danger of dressing too warmly for the trail, as when this is done, the exertion causing perspiration, a moment's quiet is sufficient to freeze the garments and thus envelop the body in ice. When traveling with dog teams, however, riding a greater part of the time, it becomes necessary to dress warmly, wrapping the body well in fur robes. The traveling dress of women in Alaska is usually a short skirt, and fur cap covering the head entirely, the same as worn by men, with an extra piece buttoned across the face to protect the nose and cheeks. The gloves and mittens worn, are made by the natives, of heavy moose skins with blanket lining. The feet are dressed with two or three pairs of heavy woolen stockings and over these socks made of blankets, these covered with socks made of caribou fur and over all the moccasins. The men do not wear overcoats, but dress in heavy sack coats made of blankets, some preferring sweaters, and in very cold weather wearing a parka made of heavy drill cotton, occasionally of fur. The parka resembles a Chinaman's shirt, worn on the outside, but generally reaching to the knees. The trousers worn by men at work in the mines are made of heavy blanketing, and with socks reaching to the knees on the outside of these trouser legs, the appearance is that of a knickerbocker suit.

We think but little of distance here, and, in fact, we think no more of the mile between cabins than we would of a block between residences in town. After the morning work of adjusting matters in the cabin, we generally hitch the dogs to the sled for a drive up the creek, visiting the mines where the men are at work, the drive affording

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

pleasant recreation. Of course, news from the outside is eagerly sought, and upon the arrival of any person in the camp from Circle City, all gather eagerly waiting to hear the news brought in.

During the short summer wild blueberries, currants, low bush cranberries, and raspberries grow in the greatest profusion upon the bushes that cover the foot of the mountains, extending into the valleys. From these bushes we gathered large quantities of this fruit, which we made into jams and jellies for winter use. About the first of October the miners went on a hunt for moose and caribou, returning with sufficient supplies of meat to carry the camp through the winter. The animals are dressed and quartered, and the meat laid upon the top of the cabins, where it freezes, remaining so all winter. When wanted for use it is taken down and a steak or roast chopped off with an axe. Hence, with jellies and jams from the berries that grow upon the mountains and the sweet meat of the caribou and moose, we are living pretty well, having a good supply of other provisions, shipped into the country. In addition to this, the Indians, before the freezing of the Yukon, catch the king salmon, white fish, grayling, trout, and pickerel, curing and drying this fish for winter use, always in quantities sufficient to supply the miners. There is also a bird, the ptarmigan, white and very beautiful, strongly resembling a dove, save that its feet are covered with a thick down. These Arctic birds come down into the valleys daily throughout the winter in great numbers, enabling a person with a gun to secure all they may desire. The flesh is very much the same in appearance and flavor as that of the quail. Having learned to use a shotgun I have killed a number of birds.

During the summer I planted a little garden and was successful in growing some radishes, lettuce, cabbage, and turnips. The cabbage, though not large, was very sweet and tender, and the turnips grew very large and were very firm and brittle; some of them weighed from three to five pounds. The tops we used for greens, and from my little garden I had quite a supply of vegetables that I stored away for winter use. Of course, they become frozen as hard as rocks, but we have learned in Alaska how to cook frozen vegetables so that they afford excellent eating. A few potatoes have been raised in the valley, though they were small, but of an excellent quality. The growing season here being so very short, with almost an all day sun and very hot, vegetables grow with great rapidity, and hence are much more tender and sweet than those grown in latitudes farther south. Our supplies of staple and canned goods are brought to the camp with dog teams from Circle City, we being able to obtain evaporated potatoes, condensed vinegar, milk, and cream, canned butter, crystallized eggs, and all kinds of meats, vegetables, and fruits, dried or canned for this northern country.

There is much evening visiting among the miners, the entertainments being singing with the accompaniment of the guitar and banjo, there being in the camp a number of these instruments, or reading from the poems of Bill Devere, he being above all others the popular writer among miners. Card playing, whist and cribbage, afford a good deal of amusement for the long evenings of winter darkness. The days begin to lengthen about February and grow longer until May, when we have nearly twenty-four hours of daylight, the sun being almost visible at midnight.

On Christmas day my companion and myself entertained fifteen miners at dinner, and while I shall not attempt naming the items on the bill of fare, yet we had a dinner as sumptuous as we might have enjoyed in a good hotel in the States. So that even in this far-away, bleak, cold, dark country of ice and snow, amusements and pleasure may be found, to pass the hours of an Arctic winter. The summer of this latitude is made much more cheerful with the beautiful green covering of the valleys and mountain slopes, bedecked with a thousand varieties of wild flowers, while the myriads of small bird make the summer air ring with the music of their songs, so that even in far-off Alaska, where men are tempted to search out the hidden wealth of the frozen earth, nature has not forgotten to adorn and beautify the region.

### Christian Science Ideas.

*To the Editor of the News:*—In a recent issue, you give a report of a criticism on Christian Science by Rev. C. S. Holton. Will you kindly give space in your paper for this correction.

As Christian Scientists we cheerfully concede to all men the peaceful and undisturbed privilege of their honest opinions, and we will not even criticise a religious body which cannot conscientiously grant letters to the Church of Christ, Scientist, but will patiently wait to be better understood. We do not believe that our friends would intentionally misrepresent us, yet it is true that we are to a great extent misunderstood and therefore misjudged and misstated. The most careful investigation on the part of some who are vitally interested in this method has proved that a very large per cent of the past reports of fatalities under Christian Science treatment, are without foundation, while others are greatly exaggerated. It is also true that a much smaller per cent of patients die under Christian Science treatment than under the treatment of any other system.

It is stated by our critic that "Christian Science has disturbed many a Christian home, and been forced upon helpless children." We would ask, why have not Christian Scientists an equal right with others to choose a remedy for their children, since they have proved to their positive satisfaction that children as well as adults are more safe under Christian Science treatment than under any other method of curing the sick which they have experienced. Who is better able to judge in a matter of this kind than the Christian Scientist himself, who has based his decision upon years of personal experience, and observation?

It is admitted by our critic, "that there is a truth in this so-called science," and that "it is the relationship between mind and matter." We will agree with him that "psychology" from a material standpoint, is just what he claims it to be, but we would also affirm that Mrs. Eddy's theory and practice concerning "the relationship between Mind and matter" differ very widely from all others. It is Christian metaphysics which is based upon the idea that God, the one infinite Mind, rules, governs, and operates the universe. Christian Science is based upon the Scriptural declaration, "Not my will but Thine be done," and does not heal by the exercise of human will, but by yielding to the influence of the divine.

He who is not a practical Christian Scientist is in danger of misstating this Science when he undertakes to explain it. The mathematician would say, "No one is capable of explaining mathematics who is not able to solve problems or demonstrate propositions according to its rules." So the Christian Scientist would say, "No one is capable of giving an intelligent opinion of what Christian Science really is, without being able to heal the sick and reform the sinner through the understanding and practice of this Science." In the language of our Master we would ask, "For

Digitized by Google

which of these works do ye stone me?" So a Christian Scientist would ask for an enumeration of the evils that have occurred through the practice of this Science. Through this benign influence I have witnessed the healing of thousands of cases not only of disease, but of various sins, such as drunkenness, the use of tobacco, profanity, scepticism, atheism, and infidelity in general.

In our Master's time, a tree was judged by its fruits. In these times it would seem that some would overlook the fruits entirely, and would merely ask the question, What do you believe?

Alas for that age when dogmatical theories and beliefs are counted of greater value than good works, and when people are treated with disrespect not because their deeds are evil, but because their beliefs differ from others.

What did Jesus mean when he said, "The flesh profiteth nothing"? He was certainly a Christian and understood all things. He spoke absolute Truth on all occasions, yet he never had a kind word to say of the flesh; indeed, he came to destroy the world, the flesh, and the devil. Christian Science does not deny the existence of creation, but merely the finite, material conception of creation. The Bible teaches that spiritual things can only be discerned spiritually, that "the natural man receiveth not the things of the Spirit of God." Material sense and spiritual understanding are forever at war with each other. "For the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." If one is good, how can the other, which is opposite, be good? Indeed, Spirit is the source of all good, while matter is the source of all evil. One is eternal and the other is temporal. One is omnipotent and the other is powerless. These facts, however, must govern our lives in order to be understood, and the sinner will never get rid of his sin until he forsakes it.

I concede that encouraging words on the part of nurse and physician are helpful to the sick, and that some seeming results have been effected and are being accomplished by the mental suggestions to which our brother refers, but this sort of suggestion is all on a mortal mind basis, is not certain, is neither scientific nor Christian, is not a general success, and does not bring out the reformatory results of Christian Science, which operates alone upon the basis that God, the infinite Good, is the only real power or influence.

It must be apparent to our critic as well as to our readers that Mrs. Eddy's statement that "changes of time and tide, cold and heat," etc., will not affect the crops of the agriculturist, refers to that day in which God reigns supreme in the understanding of man, and when all lesser influences are put down. Such a perfect day may not be reached for ages, and no Christian Scientist claims it for this period. The Bible refers to that time when the "lion shall eat straw like the ox," the young lion and the fatling shall be together, and "there shall be no more pain" and "no more death." What is to bring about this state, if it is not the full establishment of Truth, and the complete destruction of error?

It is stated, "The mistake on the part of the Christian Church, is that it does not emphasize as it ought, the present personal reality and power of God." I desire to say that the "peace and content born of the genuine and hearty trust in a heavenly Father," can only come to this world as the understanding of mankind in respect to God is changed and enlarged, and the definition of God as Spirit, Love, is understood and lived.

New and better ideas concerning God must be instituted and practised by men in order to bring out new and better results.

When I first learned of the efficacy of the Christian Scientist's prayer, I thought that his method of praying was the same as mine, and that his understanding of God was the same as mine, but that he brought out better results because he had greater faith. Later I learned that his greater faith in God was due to his more exalted ideas concerning God, and what I lacked was this very understanding of the Being to whom I prayed.

It is stated, "The whole of this so-called Science rests upon the declarations and teachings of a single individual, while all the true, scientific knowledge of our day has come down to us as the priceless legacy of the greatest philosophers and teachers the world has ever known, not the work of a single individual, but of the multitude." This is true, and it is also true that each individual has in turn brought out to the world his own peculiar inventions and discoveries, which have been revealed to him in his own particular age. So has Mrs. Eddy. Progress is the outgrowth of experience, and is fostered by reason of the "survival of the fittest." Each successive step in experience interprets the next necessity, and that necessity in turn "is the mother of invention" and discovery. Why is this not true in respect to the discovery of Christian Science? The peculiar experience of Mrs. Eddy had step by step prepared her to recognize, first the insufficiency of materiality, and at last that there was nothing in it,—that it could neither afford health, prosperity, nor happiness. In this extreme moment, she turned away from all materiality to God, Spirit, and found the object of her search, Christian Science. Her use of the discoveries and inventions of others had lifted her to that point in experience where Christian Science was found.

## Spiritual Law vs. Material Law.

PERHAPS the most general and often repeated criticism made against Christian Science, is its denial of the correctness of the evidence of the physical senses, and its denial that what is termed natural or material law manifests the absolute law or nature of God.

Christian Science denies that God is both good and evil, and affirms that He is good only; therefore, that the law of God is not destructive, except to His opposite, and is not manifested in pain, disease, or death; that evil does not and cannot represent or express the law of God, or even symbolize a single quality of His Being, but denies them all.

Christian Science emphatically declares that God is the only Creator of the only real universe, and is its only real law-giver.

That whatever does not manifest His infinite goodness, love, and wisdom, does not represent His real law and nature, and is not real in the true sense, because not God-made and therefore not abiding.

Jesus taught that it is man's God-given privilege to know the Truth, to understand God, His creation and laws, and in every age to bring these laws and their glorious results, in some degree, to human apprehension and into human expression.

It should not be forgotten that while Christian Science denies the correctness of the physical senses and the material law to which they bear testimony, it explains the real facts and rules which these senses, through false education and slavish submission, misconceive, and pervert. But neither God, His creation, nor His laws are really perverted or changed by this misconception, except only to the false senses that do the misconceiving; that the right conception of God and His laws will and must destroy the misconception of them; and through this right conception must be manifested the glory and goodness of Him and His righteous kingdom. Rarely if ever has the writer

Digitized by Google

found a believer in the Holy Scriptures who is aware to what extent he denies the experience of his physical senses and what he terms natural law. If he does not deny these senses and their laws then he must deny nearly, if not quite, every event recorded in Scripture which emphatically represented to the children of men the power and presence of Omnipotence.

The Scriptures do and must ever live through the denial, not the acceptance, of this sense experience.

The demonstrations of Moses before Pharaoh, the crossing of the Red Sea and later the River Jordan; the falling of manna from the skies and the flowing of water from the rocks, the saving of the children of Israel from the plagues, the demonstrations of Elisha and Elijah, and in fact all the marked events recorded in the Old Testament were contrary to the experience of the senses and material law so-called.

In the New Testament Scriptures we find that the sayings and works of the Christ-man were one continuous round of denials of the experiences of the senses and natural law. His conception, resurrection, and ascension; his raising the dead, healing the multitudes, walking over the waves, and stilling the tempest, showed that he was not operating under a material or human sense of law; for he was overruling and annulling these laws.

He claimed to be manifesting the law and power of God in all these acts. Can any Christian reasonably deny that he was acting under and by virtue of spiritual law? A spiritual law must be a rule of Spirit, not of matter.

Then the question arises, is the spiritual law the same in nature as the material, differing only in majesty and power? The right solution of this question is of supreme importance. It is vital to the welfare of mankind. Jesus said, "It is the Spirit that quickeneth; the flesh [matter] profiteth nothing." He said, "God is Spirit." Paul says, "For the flesh [matter] lusteth against the Spirit, and the Spirit against the flesh; and these are contrary the one to the other."

Here we have the positive statement that Spirit is the opposite of matter. Then spiritual law must be the opposite of material or natural law, and it inevitably follows that the spiritual law of God—good—is made manifest not by or through its opposite, material law, but through its destruction.

So light is not made manifest by, or through, its opposite, darkness, but through the extinction of it. Good is not manifested by, or through, its opposite, evil, but through the annulment of it. Error cannot overcome error, Truth only can do this; but if Truth were akin to error it could not annul it.

So one high rule in mathematics does not overcome or set aside another, however simple this other may be; for if it did the science of mathematics would be at an end. Christ overcame and annulled not that which was akin to God, but that which was opposed to Him; hence his unqualified power over disease and death. Thus is deduced the logical and irrevocable conclusion that the positive cannot be developed by or through its negative opposite, but can only be brought into view through the annulment of this negation.

How plain and clear from this standpoint is the statement of Paul that "the wisdom of this world is foolishness with God," not because this material wisdom is of the same character as the Divine, differing only in degree, but because it is the antipode of the Divine. One form of Truth or Good is not at war with any other form, but is only at war with that which is not of its own kinship.

If, through the understanding and action of spiritual law, the Christ-man nineteen hundred years ago, from the beginning to the end of his spiritual ministry, reversed the experience of the physical senses and annulled what is called natural or material law and thereby wrought such glorious results for mankind, shall not the true Christian to-day act under the same law and employ the same methods and rules so far as he can, if he would lift humanity toward the divine.

Is there any different way to reach the kingdom of heaven now than then? Has God changed His ways whereby to draw mankind to Himself?

In Christian Science, Spirit and divine Mind are synonymous terms.

If the law of life and peace are in the divine Mind, why so diligently look in His opposite, matter, for it? If the law of Christ is in the Mind that is spiritual, then why look for it in the so-called mind that is material in its nature and methods? Is a knowledge of music gained by studying discord?

The true Christian will not look to the infinitesimal material atom for the source of life and intelligence, but to Infinite Mind.

From this wide departure must come such widely differing results as will crown human life and progress with blessings both scientific and enduringly Christian.

The supposed unity of good and evil is a partnership so unrighteously conceived and wickedly carried on, that it must, as it does, reach its climax in the silence of the sepulchre.

Revelation and reason alike proclaim that this fatal union of opposites never had any divine origin, and Our Lord's Prayer, "Thy will be done in earth as it is in heaven," recognizes that it has no rightful or abiding place even in the human consciousness. Finally, if the law of Christ in the first and preceding centuries was made so gloriously manifest among men by breaking what is called material law, must not like results be attained in all succeeding ages by the same unerring rule?

Do not the teachings and works of Jesus emphatically proclaim that the spiritual law can only be kept through the breaking of the material? J. C.

## A Golden Rule for Avoiding Sin.

Be thou in the fear of the Lord all the day long.

WHEN you *think,* when you *speak,* when you *read,* when you *write,*
When you *sing,* when you *walk,* when you *seek for delight;*
To be kept from all evil, at home and abroad,
Live *always* as under "*the eye of the* LORD."
Whatever you THINK, both in joy and in woe,
Think nothing you would not like GOD to know.
Whatever you SAY, in a whisper or clear,
Say nothing you would not like GOD to hear.
Whatever you READ, though the page may allure,
Read nothing of which you are perfectly sure
Consternation at once would be seen in your look
If GOD should say solemnly, "*Show* ME *that book!*"
Whatever you WRITE, in haste or in heed,
Write nothing you would not like GOD to read.
Whatever you SING, in the midst of your glees,
Sing nothing that GOD's listening ear can displease.
Wherever you GO, never go where you fear
GOD's question being ask'd you, "*What doest thou here?*"
Whatever the PASTIME in which you engage,
For the cheering of youth or the solace of age,
Turn away from each pleasure you'd shrink from pursuing
Were GOD to look down and say, "*What are you doing?*"

C. OVERTON.

The above was published many years ago in the form of a tract by the Church of England Sunday School Institute.

## Original Irrigators of the West.

FOUR hundred years ago, according to the narrative of that intrepid Spanish adventurer, Cabeza de Vaca, the portion of southern Arizona now occupied by the Gila Indian reservation, grew luxuriant crops of fruit and maize for the friendly Pima Indians. This explorer describes them very much as they are to-day. They occupied the same lands as at present and were industrious farmers and irrigators, as they continued to be for many years after the acquisition of Arizona by the United States. They have raised corn, wheat, pumpkins, beans, sorghum, and vegetables in profusion; they have lived in small villages and held their lands in severalty, and they are expert weavers of fine blankets and cotton fabrics. All this has been accomplished through irrigation, practised by them since before the discovery of the new world.

What is the situation in this reservation to-day? Those philanthropists who bewail the passing of the American Indian, may well turn their attention to the destitute condition of the Pima Indians, brought about by the push of the white settler and the criminal neglect of the government, whose wards the Indians are.

The Pimas have always been friends of the whites and enemies of the Apaches. They gave aid and succor to the early white pioneers and their tepees were always open to peaceable whites or Indians when hard pressed by the savage foe. It is to-day their boast that their hands have never been stained by the white man's blood. It was under these conditions that they were joined about a century ago by the Maricopas, who came as fugitives from the more powerful Yuma tribe. When the belligerent Apaches broke out upon the warpath, the troops of the United States often obtained substantial aid and subsistence from the gentle Pimas. Their agriculture has been carried on entirely by irrigation with water diverted from the Gila River. The tribes have always supported not only themselves, but have shared their world's goods with the poorer Indians to the south of them not favored by irrigation. They have learned readily at the Government Indian School and their progress towards modern civilization has been regarded as one of the encouraging features of the Indian problem. During the last ten years their irrigating water —their life blood—has been taken away from them, and they are perforce, lapsing into indolence, misery, and vice.

The waters of Gila, above them, have been diverted by white settlers, and instead of waving fields of green, they now, during the summer, look out upon the dry, parched earth. Year after year they ploughed and sowed and irrigated their crops, only to see them wither and die before maturity owing to lack of sufficient irrigation water in the dryer months. A few who are favorably located at points where water appears in the dry bed of the Gila, can still mature their crops, others can eke out a bare existence by hauling wood or other precarious employments while the larger number have become more or less dependent upon charity or have degenerated into thieves and vagabonds.

About six thousand of these Indians are dependent for their subsistence upon the lands of the reservation, which contains three hundred and fifty thousand acres, while the water supply in the Gila last year, owing to use for lands above, has not been sufficient to irrigate one thousand acres belonging to the Indians. Fully half the crops planted have not produced enough for seed, notwithstanding the great fertility of the soil. Two acres per Indian of irrigated land has been shown by competent authority, as ample land for their use and comfort.

Government engineers have pointed out the solution of the problem through the building of a storage reservoir on the Gila which will supply water not only for the Pimas, but for thousands of other Indians whom the government could then move to this reservation and commence the process of education and agricultural civilization. Statesmen have urged upon the government the necessity for such action, from standpoints of justice, humanity, and even economy, but thus far Congress has turned a careless ear to such entreaties. Had the Indians been private American citizens, they could have claimed their rights and enforced them, but being wards of the nation, others have come in and taken the water to which they have had undisputed title for four hundred years, and the government turns indifferently away, even directing its attention to new wards thousands of miles distant, while its original friends and allies are left to steal and beg an existence or starve.

The United States has expended large sums of money for the introduction of irrigation on the Indian reservations where it is desired to educate the Indian into agricultural habits as a means to his civilization. Here is a tribe of Indians who have for centuries been engaged in agriculture by irrigation, and who were, until recently, the only successful irrigators in Arizona. They are now deprived of their water through the agency of the white man, directly encouraged by the United States Government. Is it not an imperative obligation of honor upon the American people that their supply should be restored to them? The only means lies through the construction by the government of a storage reservoir on the Gila. And instead of the uncertain possibility of elevating a savage or hostile tribe the necessity presents itself of preventing the destruction of a civilization already attained among a friendly and, in times past, hospitable people.

*Galveston (Tex.) Semi-Weekly News.*

### A Request.

The Field is requested when ordering goods either from The Christian Science Publishing Society or Mr. Joseph Armstrong to remit by express order, post-office money order, or exchange on Boston or New York. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

We request that our co-workers throughout the Field carefully observe the rules on page 739.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June 3, 1900, is ready for delivery. Issued in pamphlet form, leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid. Address orders to Joseph Armstrong, 95 Falmouth Street.

### The Granite Monthly.

The May number of the *Granite Monthly* contains an excellent article, by Henrietta H. Williams, entitled, "Among the Christian Science Churches." The Publishing Society is prepared to furnish copies of this number at twenty cents each, or two dollars per dozen copies, postpaid.

### The Gift of Love.

It is in loving, not being loved, the heart is blest;
It is in giving, not in seeking gifts, we find our guest.
If thou art hungry, lacking heavenly food, give hope and cheer;
If thou art sad and would'st be comforted, stay sorrow's tear.
Whatever be thy longing or thy need, that do thou give;
So shall thy soul be fed, and thou, indeed, shalt truly live.

MRS. M. M. PAINTER.

Digitized by Google

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Readers in Church.

THE report that I prefer to have a male, rather than a female, for First Reader in the Church of Christ, Scientist, I desire to correct. My preference lies with the individual best fitted to perform this important function. If both the First and Second Readers are my students, then without reference to sex, I should prefer that student who was most spiritually-minded. What our churches need most is that devout, unselfed leadership which spiritualizes the congregation.

MARY BAKER EDDY.

Pleasant View, Concord, N. H., July 9, 1900.

## The Recent Classes.

THE Board of Education, acting under the auspices of the Massachusetts Metaphysical College, held its sessions according to announcement, commencing June 13, 1900. The maximum number of thirty-three students attended the general class in Christian Science, and there were in addition several who sat in the class by special invitation, but who, with two exceptions, were not applicants to teach.

There were in the Obstetric class a large number of students. Both classes contained representatives from all parts of this country and from some parts of Europe and the Canadas.

The course of instruction in each class was comprehensive and thorough, touching the essentials of Christian Science in their practical phases and application to the healing of sin and sickness.

Of the significance of these classes, as well to the students as to the Cause, we shall now undertake to speak only in a general way. The ways and means for this important work were provided by the Rev. Mary Baker Eddy through Church By-laws duly adopted by the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., and they have had the practical effect of establishing, on a broad and firm basis, an educational system, which if well and faithfully carried out by those to whom it has been, and may be, entrusted, will redound in incalculable benefit to our movement.

There is no more important work in connection with Christian Science than right teaching, and right teaching means that the teacher shall lay aside every personal motive and have for his sole end and aim the good of humanity. Any other motive is sordid and will result in harm to him who yields to it. The trust conferred is a sacred one and must be sacredly fulfilled. Not otherwise will the purpose of teaching be accomplished.

The proper discharge of this trust implies that the teachers shall work in harmony; that there shall be no sense of rivalry nor spirit of "mine and thine;" that each shall labor to a common end; that no unjust distinction of any kind or nature shall be made as to the students of different teachers; that the arrogance of personal dictatorship shall be scrupulously avoided; that divine Principle, and not personal will-power, shall control the teacher in all his relations to his students; that brotherly regard and Christianly consideration shall prevail among the students of different teachers and their associations, rather than an exclusiveness which is but the outgrowth of fear and selfishness. The spirit of broadest charity and closest amity must prevail, rather than that of self-righteous pharisaism or superstitious ostracism. It will be the duty of the teacher to thus teach, and the privilege of the student to be thus taught. Each may require of the other the fulfilment of this mutual obligation. The teacher and student alike are, of course, under obligation to make good this teaching in life and action; the teaching were otherwise useless.

It should be distinctly remembered that the teaching of Christian Science rests on the Bible as unfolded in our text-book, "Science and Health with Key to the Scriptures," and whenever a teacher departs from these guides it may be known that he has violated the tenor, purpose, and spirit of the authority given him.

These text-books, with the Church Manual, should be frequently consulted by the teacher.

It is the duty of those conferring the authority to see that it is properly exercised, for only on this basis can the validity of the certificate be perpetuated. Invalid teaching will invalidate the authority to teach.

It should be an accepted fact that our Leader has set in motion this new order of instruction, and there should be no doubting and quibbling as to its authorization, wisdom, and purpose. To question the wisdom of the agencies provided for the advancement of our Cause, is to question the wisdom of their author, and this is not consistent with obedience. To oppose the institutions established for promoting the Cause is to impede the work, and this is disobedience.

It will be the endeavor of every teacher so to protect himself against adverse influences from within and without that his labor shall result only in good to all mankind, and thus fulfil the divine purpose of teaching.

Each of the classes sent loving messages to Mrs. Eddy expressing their gratitude for the great privilege afforded them, and conveying, in earnest words, their deep appreciation of her unselfish labor for all who receive the blessings thereof.

## Grateful for Blessings Received.

THE apostle James tells us that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." Here is the emphatic declaration that God is the source of all that is real, and that we are indebted to Him for all that we have and are. God has created all things and freely bestowed them upon us, not because we loved Him but because He first loved us. What then should be the attitude of thought toward Him who has freely given us all things? Should it not be one of deepest gratitude,—a never-ending song of thanksgiving?

The gift of divine Love is freely bestowed, but the limitations of mortal thought prevent the recognition of this fact. The changes that take place in human consciousness cannot change God nor cause Him to do more than He has already done; but that which imparts a truer sense of God and His creation enables one to partake more largely of that which God has already bestowed.

The promises of the Scriptures are verified to those who have faith. Jesus frequently said to those whom he healed, "According to your faith be it unto you," showing that the blessing was in proportion to their ability or fitness to receive.

It is evident then that if one would enjoy greater blessings he must be prepared to receive them. Infinite Mind knows no limitation. It is human thought that seems to limit God either in His power or willingness to do. In the degree that these limitations are removed it is found

Digitized by Google

that God has already done that which mortal thought said He either could not or would not do.

Two things are necessary to remove the limitations imposed by mortal thought,—a better understanding of God and a more ready acknowledgment of the blessings wherewith He has blessed us. "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 371, says: "A just acknowledgment of Truth, and what it has done for us, is an effectual help."

The Christian Science healer has many times proved the truth of this statement. The patient who is most ready and willing to acknowledge the benefits received is soonest healed, while the one who is unwilling to see wherein he has been helped is the hardest to lift out of his discord and suffering.

This thought is applicable to all the experiences of everyday life as well as to the healing of sickness. The Christian Scientist is learning that of himself he can do nothing. God is his Intelligence and Life, from whom he receives the health and strength that enable him to perform his daily tasks. If he constantly remembers his blessings and his heart is filled with gratitude to God for all that he enjoys—even the little things—he is in a condition to receive more. But if on the other hand he fails to remember his blessings and constantly thinks of what he would like to have and feels that he should have, and especially if he is disposed to complain because of his lot, feeling that he is just as deserving as others and should be permitted to enjoy all that he thinks they enjoy, he is closing the door of his thought to the realization of the very blessings God has bestowed upon him.

Ingratitude causes one to take a limited view of all that is good and true, while the honest recognition of benefits received fills the heart with gratitude to God and makes it possible for one to receive more largely of the blessings that are ever to be found in the storehouse of infinite Love.

If one is tempted to murmur or complain he should remember his blessings. As he recounts them the sense of error will disappear and he will behold God and His creation everywhere. To him there will be a new heaven and a new earth, not because God has created all things new but because the eyes of mortal man have been opened to see things as they are. Through the understanding of God man is being saved from all evil, and the honest recognition of what God has done brings a higher idea of life and its joys.

## Among the Churches.

### What is being done in Poughkeepsie, N. Y.

I located in Poughkeepsie in July, 1897. There were then about ten persons interested in Christian Science, two or three of whom had done some good work in circulating literature. None, however, knew enough about Christian Science to make the smallest demonstration. To-day we have forty-six students in the Field who can and do demonstrate the power of Truth and Love to heal sickness and sin. Among these are some of our best-known business men; one professor in Eastman's Business College, one principal, and three teachers in public schools.

In April, 1898, our church was chartered with twenty-one members. In April, 1900, we have enrolled fifty-two members and an attendance at our services of from fifty to eighty persons. We have had four lectures. The attendance at the first lecture was eighty; at the last, given by Judge Ewing, May 24, there was an audience of about seven hundred.

We find the distribution of literature a most potent factor in our work and we have an organized literature committee whose business it is to distribute systematically our literature in a manner calculated to do the most good. Our literature committee have just placed in the library at Vassar College a complete set of Mrs. Eddy's works, and have obtained the privilege and great pleasure of subscribing for the *Christian Science Journal* and the *Sentinel* to be sent to the Vassar College reading room. Vassar ranks among the most popular schools for girls in our land, and our readers will be pleased to know that we have a number of students from the college at our Sunday and Wednesday services.

Our reading rooms, which were started before we had public services, have been an indispensable help in the church work. The reading room register at this date shows 1,425 calls since January first of this year.

Among the diseases cured here in the past three years are the following: consumption, congestive chills, tuberculosis, tumor, Bright's disease, paralysis, neuritis, rupture, deafness, rheumatism, diabetes, tobacco habit, liquor habit, insanity, dishonesty, sensuality, profanity.

I have the permission of three persons to mention their cases specially. Mrs. G. of Wappinger Falls, N. Y., was a helpless invalid for twenty years. She wore a truss for twenty-seven years and glasses for several years. She was healed of her invalidism in four weeks, of the rupture in eight weeks, and wears a truss no more. Mrs. G. healed herself of poor eyesight which was the result of old age, and she now reads the finest print without glasses.

Mrs. —— of the same village came one day directly from a specialist in New York to the Christian Science reading room here, and was healed in one treatment. The woman listened for thirty minutes to the explanation of the Truth and the Truth made her free. She was suffering with neuritis which the specialist had that day pronounced incurable, and that day the power of God proved man's wisdom wanting.

A child, who the physicians said was born with consumption, had never had the use of one leg, which was withered and paralyzed. After one treatment the little one was found in its crib kicking both feet in the air—the first time it had moved the crippled limb during its lifetime. This child's peculiar illness and the verdict of the physicians, was well known here. In two weeks time this child was perfectly healed. This was nearly two years ago, and the child is a fat, chubby boy now, as healthy as one could wish.

Mrs. W. of this city, was pronounced a victim of diabetes. Her own son, a physician in New York City, pronounced her in the last stages, and incurable. She had lost both the sense of taste and smell. These she regained instantly at the first treatment, and she was perfectly healed in two weeks. I saw a letter from her son, after an examination had been made, which stated that no traces of the disease could be found.

The above-named persons can be addressed if any wish to verify these accounts. No wonder the world doubts such wonderful stories. They cannot see how we do it, and in that the world is right, for we do not do it. God does the work and we have but to know that God can do it and know how to put ourselves in a position to allow him to do it. This knowledge we gain from the study of "Science and Health with Key to the Scriptures." Is it any wonder that we love the book and its author? Science and Health is not only the Key to the Scriptures but points the way to health, manhood, purity, and heaven on earth. The understanding of this book will heal the nations of sickness and sin, and all peoples shall call the author blessed.—J. EDWARD SMITH, Poughkeepsie, N. Y.

### Progress at Grand Rapids, Mich.

This branch of the Mother Church is growing rapidly, not only in numbers, but there are many evidences of spiritual development which we know is indispensable to every fruitful branch of the parent vine.

Digitized by Google

The past year shows an increase of thirty per cent in membership and forty per cent in attendance. The present membership is 103. The congregation exceeds four hundred. The Sunday School grows in interest and attendance, numbering between sixty and seventy. Many of the children are faithful demonstrators of Truth.

We have had five lectures, after each of which an increased interest and attendance at our services has been manifested.

The city press is very friendly. They have, at our request, without hesitation, published the lectures in full, with kindly comment. Several instances have also come to our notice of a refusal to publish articles of a critical nature which had been urged upon them by those opposed to our cause. The leading daily has for some time given us from one to two columns each Sunday morning for such articles on Christian Science as we chose to give them.

Though some of the ministry have seen fit in the past to preach against our Cause, their general attitude at present it at least tolerant, and parishioners deprecate any unkind expressions.

In February, pleasant reading rooms were opened in one of the best business blocks, with the result of largely increasing the sales of the works of our Leader and of The Publishing Society.

Our missionary committee has done good work in the jail, Soldiers Home, and other institutions. Nine copies of "Science and Health with Key to the Scriptures," as well as other works of our Leader, have been placed in the Public Library. Literature has been distributed in other institutions, Homes, etc., including the fire-engine houses.

The Church Building Fund is growing through the addition of the collection on the first Sunday of each month.

Many faithful workers are doing good healing. A general sense of harmony prevails, and though we are often reminded of the necessity for constant watchfulness we have great reason for thankfulness for the progress of our cause.

IDA M. STUDLEY.

### A New Church.

The First Church of Christ, Scientist, held services in their new edifice Sunday (June 10).

This congregation, while one of the smallest in this city, without asking for aid or resorting to festivals, restaurant, and other methods, so often and freely employed to build churches in this and other cities, has without the public knowledge completed the most cosy little church in our city, and Sunday threw open its doors to the public and invited them to "come into our new church and worship God with us." The writer was there and was impressed by the absence of allusion to debt, notes to be paid, etc. On the contrary, neither from the pews nor pulpit was a word uttered on "Our new church."

*Fort Worth (Tex.) Daily Gazette.*

### From Monmouth, Ill.

The first public service held in Monmouth, Ill., was on the first Sunday of July, 1898. Very few besides the Readers were present.

April 27, 1899, we organized as a church with nine members.

Judge William G. Ewing delivered our first and only lecture, April 7, 1900.

HARRY M. HARRINGER, *Clerk.*

---

The *Morning Star* says: "In this closing year of the century the Bible may be read in 451 languages and dialects, and before the twentieth century shall have advanced very far it is probable that men of every language will be privileged to hear and read in their own tongues 'of the mighty works of God.'"

## The Lectures.

### At Red Oak, Ia.

Judge William G. Ewing of Chicago, lectured at the Armory Monday evening (June 25) on the subject of Christian Science, under the auspices of the local Christian Science organization. Notwithstanding the extreme heat of the evening four hundred persons, including many of the best people of the city, came out to hear the subject discussed, and they were repaid by listening to a calm, scholarly discussion of a much misunderstood subject. This is the first time local Christian Scientists have appeared before the public and marks an epoch in that organization. The speaker was introduced by W. F. Dutton, who said in part:—

The words Christian and Science, are the two largest words in the vocabulary of the English language, and their meaning, in connection with the mighty movement which they designate, perhaps the least understood.

Humanity is crying out for more practice and less preaching; more of that Mind which was in Christ Jesus, and less of the medicine that he never used; more of the love which he lived, and less observance of material laws. It wants the minister who can heal the sick as well as the sinful. It wants the physician who can bind up the broken hearted, as well as the crushed limb. It wants the lawyer who can quell the storms of passion and selfishness and lead his client away from the law of "an eye for an eye, and a tooth for a tooth," into the divine idea of loving his neighbor as himself. Science declares that all these things are right, and the highest style of Christian will demonstrate these declarations and thus be Christianly Scientific, and Scientifically Christian.

Our friend who will speak to you to-night, will tell you why the religion of Jesus Christ was Scientific, and why Christian Science is the religion of Jesus Christ. He comes to us not only as an honored representative of Christian Science, but of the legal fraternity as well, with years of experience at the bar and on the bench of the courts of the great state of Illinois, and with a reputation for judicial ability and integrity that is national. As a Christian Scientist, he will speak to you from a standpoint of personal experience, as well as years of study, and we bespeak for him an unprejudiced hearing. We now have the pleasure of introducing to you the Hon. William G. Ewing of Chicago, who will address you on the subject: "Christian Science, the religion of Jesus Christ."

Judge Ewing is a man well up in years and he talked calmly and rationally of his belief, outlining the points on which Christian Science and other religions agree. As his subject indicates, he talked of Christian Science as a religion, and referred only incidentally to its power as a healing agent, yet he claimed that more than three quarters of a million persons have been restored to health and happiness and hope by it. The lecturer was given the closest attention for an hour and a half, and at the close a considerable number came forward to make his acquaintance.

*Red Oak Express.*

### At Washington, Ia.

Judge William G. Ewing of Chicago, gave his lecture on Christian Science in the Opera House last night (Friday, June 22) to an audience of over three hundred.

It is seldom that Washington audiences have the pleasure of listening to so able a speaker as Judge Ewing, who, in spite of the fact that the majority of his hearers were opposed to his views, held their entire attention throughout the lecture. He gives the impression of being greatly in earnest, and when one considers his statement that his ancestors for generations were Scotch-Irish Calvinists, it

Digitized by Google

is impossible to believe him to be other than earnest. His language was choice and at times very beautiful, and he spoke with a well modulated voice and clear enunciation. It was a pleasure to listen to him, especially his dry Scottish humor and sarcasm that occasionally cropped out pleasantly, for there was no sting in anything he said. He was fighting from the start against inherited prejudices, and for that reason spent much time showing up the mistakes and foibles of our ancestors in their connsideration of first, The Majesty of the Law, second, The Rights of Men, third, The Rights of Women.—*Washington Evening Journal.*

### At Oskaloosa, Ia.

Judge Ewing's lecture on Christian Science Sunday afternoon (June 24) in the Opera House was well attended and by a very intelligent audience. The lecturer was introduced by Judge McCoy. The chief argument was that Christian Science is Christianity reduced to practice. As Christ's mission was to heal the sick as well as to preach the gospel, and that commission was given to his disciples, he held that the Christian Scientists had gone back to first principles. The lecture was very earnest while moderate in tone.—*Oskaloosa Daily Journal.*

### Lectures at Other Places.

Newark, O.—Edward A. Kimball, May 21.
Rockland, Mass.—Rev. Irving C. Tomlinson, June 1.
Oak Park, Ill.—William G. Ewing, June 21.

## The Unveiled Face.

NOT as of old, when Moses came
Down from the mount, that burnt with flame
And shook with thunder loud;
Because the great and mighty God
Upon its rocky summit trod,
While all the people bowed;

With veiled face he must appear,
That thus the people might draw near,
And hear the word he brought,
But not upon a veiled face
Must we now look for saving grace,
If we by Christ are taught.

If without faith we read the word
Which Moses wrote, inspired by God,
Upon our hearts will lie
The same impenetrable veil;
And human skill will surely fail
To see the reason why.

But liberty his spirit brings,
And faith can clasp the hand that flings
Aside the mystic veil;
And gazing with unveiled face,
We can discern the wondrous grace
That nevermore shall fail.

Reflecting as a mirror then
The glory of the Lord, on men
There comes a mighty change;
Transformed into his image bright,
From glory on to glory's height,
The spirit's lofty range.

ANNIE E. RIDER.

## A Song of Praise.

BY LOUISE REVELLE.

WHEN the early dawn of morning
Tints the sky with jewels bright,
Painting all the face of Nature
With a calm and holy light;
Then let us render,
In accents tender,
Our praise to God;
For He is *Life.*

When the noon-tide's glorious splendor
Falls on mountain, hill, and vale,
Dissipating error's darkness
With a light that cannot fail;
Come then with singing,
Our praises bringing
To God most high;
For He is *Truth.*

When the evening twilight gathers,
Filling all with holy peace,
Breathing forth a benediction,
Bidding strife and discord cease;
In sacred union,
And sweet communion,
Give praise to God;
For He is *Love.*

## Prison Work in Detroit, Mich.

BY MRS. HATTIE M. FREDERICK.

NOT until one has had the privilege of breaking the living bread of Truth to those in bonds at the city jails, can he realize what a wealth and diversity of experience accompanies this particular field of labor. To proclaim liberty to the captive; the opening of prison to them that are bound; to tell of man's dominion over the beasts of the carnal mind; of peace on earth, here and now,—not afar off; to see the eager faces, sobered and saddened by the rough hand of sin; to hear the earnest inquiry and astonishment, when told that within each individual consciousness lies the same Christ power to annul material law and sin, so wonderfully demonstrated by Jesus—all these and many more such sacred experiences are written with the finger of God on the tables of memory as enduring as stone.

That there is a great field of work, rich in its yield, open to Christian Science in this direction, is proven beyond doubt in the brief period of our effort. When first it was decided upon that this work should be taken up, a committee was appointed, two of which visited the prison to obtain permission to present the subject of Christian Science to the inmates the following Sunday. Consent was very readily and cheerfully accorded. It being customary for representatives of different denominations to hold services there on Sunday morning, we were given that privilege with the others. The men are classified into different wards, the nature of the offense determining the particular ward to which a prisoner is assigned, the time of confinement varying from a few days to several months.

At the appointed hour the inmates are generally in waiting at the bars for the one assigned to their ward, the turnkey with his great key turns the heavy lock that raises with a clang the lever which unlocks the iron-grated door, it opens, you enter, and again the clanging of the lever indicates that the door is locked. One cannot but notice and respect the modest attempt to present as tidy a personal appearance as their limited resources will permit. These men, though awaiting trial for various degrees of crime,

Digitized by Google

have not lost that sense of courtesy inborn in every heart; immediately they silence any loud talking that may have been going on, while with brightening faces they draw toward convenient places the wooden benches for seating. With the look of expectancy and folded hands, they seat themselves, waiting like hungry children to be fed from the Master's table. Here we find all phases of human thought, the lame, the halt, the blind—physically and morally. Some with one eye blackened by sin and some with two, all ignorant of their God-given legacy and needing to know the Truth which alone can make them free.

We never fail to find listeners. The men are glad for all the literature we bring; Science and Health is kept in circulation between the different wards. The *Sentinel* is most valuable in such work as this, being in the form of a newspaper, coming weekly, it prepares thought for the text-book; and ofttimes men will read a paper when perhaps they would not read a book. Science and Health is used with care, as was apparent when it was observed that these men had re-covered it with a paper cover to protect it from the soil of use. Judge Ewing's lecture printed in the supplement form is excellent to distribute.

These men are coming and going constantly, sometimes the faces are all new, and again there is but one or two. In this way a great number are being reached; they have at least heard what Christian Science is, have read some of its literature, and are able to refute some, at least, of the falsehoods that they may hereafter hear regarding it. The most loving thought is held for their differing opinions and mistaken notions; they are treated with the greatest courtesy, for Love is no respecter of persons. We hope to win them by the spirit of Love if not by the spirit of Truth presented.

This work is carried on by two students for each ward, alternating in turn each Sunday; the literature is provided from the Association fund. The entire retinue of officials at the jail have felt the uplifting thought brought there through the ministrations of Science. Many times in making their round through the corridors, they stop at the bars outside the enclosure where the Scientist is at work to listen; again and again have they halted, attracted by the Truth. They acknowledge that Christian Science has done more towards bringing about a better condition of affairs among the men than the combined efforts of all the other denominations. Many interesting incidents of individual work could be cited, but enough has been said to encourage similar work in other fields. "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 562).

## Our Warfare.

BY B. A. MILLER.

"In time of peace prepare for war," is an old proverb.

In taking a bird's-eye view of the nations of the world, what do we find? That nearly, if not all, are either at war with their fellow-man or are making gigantic preparations for war. Millions of dollars are being appropriated for the building of battle-ships and instruments of destruction. And for defense against what? Is it not the fear, doubt, mistrust, envy, jealousy, covetousness, and similar conditions of mortal thought that are creating all this confusion? With all the religious teachings for the past hundreds of years, it does not appear that mortals are practising the teachings of the Sermon on the Mount to any very large degree. Is it not that same carnal nature in mortal man which crucified Jesus, that is predominating to quite an extent in this confusion of to-day? Imagine two opposing armies each praying to the same God to help it to annihilate the other?

If the old belief were true, that man has no chance to work out his salvation after what is termed death on this plane, what a terrible responsibility for those directly accountable for plunging a nation into a conflict that hurls thousands of her citizens into eternity—into the great unknown future—to their sense. But, thank God, the world is to-day rapidly gaining the understanding through Christian Science that takes away the sting of death and lifts mortals to a higher sense of life as God—a life that is indestructible and eternal—that it is only the testimony of a false material sense that says any thing or any body ever was killed, for "matter has no life to lose, and Spirit never dies" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 171).

While the old adage quoted at the beginning of this article seems *apropos* from a mortal-mind point of view, is it not even as much or more applicable to us as Christian Scientists? We find in our warfare against error, that the adversary likes nothing better than to be let alone or to find his victim taking his ease and off guard. Are we to remain inactive because we seem to have nothing in sight to disturb our harmony for the time being? or should we not show greater wisdom to keep diligently at work, filling our storehouse full of Truth and Love, keeping on the breastplate of righteousness, and with sentinels standing guard at the door of thought? Then our fortifications will not only be impregnable against any seeming foe from without, but we shall be in a position to help our brother when a call comes for re-enforcements against the common enemy—sin, sickness, and death.

Let us keep our lamps trimmed and burning and be obedient to every call of wisdom, and then as we put the smaller claims of error under our feet by demonstrating their nothingness and God's allness, it will aid and strengthen us to rise to a higher plane of consciousness where we can meet and master greater things. We must prove ourselves faithful over the little things that cross our pathway if we would be ruler over the greater ones. Thus we must realize that the weapons of our warfare are not carnal but spiritual—that it is God that worketh with us; and with this assurance we go forth from victory to victory until the final destruction of all error.

## Christian Science in the Paris Exposition.

BY M. H. L.

In March of this year, two Scientists, husband and wife, sailed for Paris. The Exposition was visited and permission asked to secure a place for an exhibition and distribution of Christian Science literature. Two days of patient waiting in ante-rooms, of pursuing busy men through miles of unfinished exhibits, of promised help and seeming failure, passed. The third day a space in the United States department in the gallery of the largest building in the Exposition, known as the palace of threads, yarns, textile fabrics, and clothing, was given them for a table eighteen inches wide on which could be placed pamphlets—reprints from the *Christian Science Journal*—both in French and English. When the manager demurred, saying that such matter did not really belong in his department, he was told that it was "a new robe," at which he laughed and said, "Well, I have had many friends healed by it," and made no further objection.

Permission was given by the manager of the New York reading room in the United States Building to have the *Journal* and *Sentinel* placed on the table, and the next day they were there.

The greatest discovery of the present century seemed to demand a more important place, and as a man with a consecrated pocket-book desired the privilege of furnishing the

Digitized by Google

funds, the local leaders in the Christian Science Church aided the two Scientists in endeavoring to secure more space. Having engaged their passage, they were obliged to leave Paris before the desired place was secured. The following extract from a letter of Mlle. D., gives the result of the faithful work of Mrs. B. and Mlle. D.

"Paris, June 8, 1900.

"We are very happy to have good news to tell you. We went Tuesday to the Exposition to see what we could do and we were told to come back the next day,—that we might get something. So we went Wednesday afternoon and looked at a place at the Palais de l'Optique. It is a beautiful place which attracts crowds of people to see the marvels of science. We chose a place in the great rotunda, and they told us to come back the next day for the contracts, which we did, and after some hours we had them by depositing some money in advance; so we have it in black and white *for sure* and we are glad.

"Think of it! Christian Science is going to be in four places in the Exposition; all the works of our Leader, the *Journal*, and the *Sentinel* are in the library of the Palais de la Femme, at our place at the Palais de l'Optique, at the table in the gallery at the Large Palace, and in the reading room of the United States building."

## Another Report of the Work.

THE following extracts are from a private letter, written to friends in this country by Capt. A. H. Mattox, Press Representative of the United States Commission to the Paris Exposition. Captain Mattox is a member of First Church of Christ, Scientist, New York City, and the account of the work in Paris will no doubt be interesting to readers of the *Sentinel*.

"On arriving at the Continental Hotel, where the Paris Church holds its service, I learned that the meetings were conducted in a large banquet room on the third floor. The room is gorgeous in red tapestry, gold and bronze chandeliers, and statuary, heavy portieres, red plush chairs, and profuse with mirrors. It is sumptuous enough for a Napoleonic coronation. About forty chairs were arranged in order, in the middle of the room. A piano was in the corner near the mantlepiece, and the desks were arranged at the end of the hall. These desks were covered with a magnificent piece of red velvet. After eleven o'clock, the hall soon filled, and there were finally forty-two persons present. It was Communion Sunday, and the subject, as you know, was 'Sacrament.' The hymns sung were 67, 166, and Mother's hymn, 'Saw Ye My Saviour,' which were sung with much fervor.

"After the service I met Mlle. Demarez, Second Reader. Mrs. Brookins, First Reader, being absent that day, I did not see her. The Wednesday evening services are held at 24 Place Malesherbes, which is the home of Mrs. Brookins. Afternoon services on Sunday are at three o'clock, at the Continental Hotel, and are in French. I proposed to the Second Reader that she place Science and Health, the *Journal*, and the *Sentinel* in the reading rooms of the United States Publishers Building, which adjoins my office. I have charge of this reading room and library. It contains a fine set of bound volumes of all American magazines and files of all newspapers in the United States of any importance. This reading room is becoming popular, and is full of people every day. It is just the place for Science literature, and I believe much good can be done for our Cause. I am very glad to be able to do what I can in this way to advance the Cause.

"The church here started a building fund about one month ago. The first subscription was $5.000., from a prominent lady of Marquette, Mich. This is a handsome start, and the little band here hope to have a church in Paris in two years. The fund is growing."

# Testimonies.

### Two Cases of Healing.

About a year and a half ago, a man came hobbling into my room, saying, "I have come to you because a friend has frequently urged me to do so, but I have not come until now, because, to tell the truth, I have no faith in Christian Science. I have had sciatic rheumatism for seventeen years, and have tried about everything that has been recommended for it. I am now suffering severely with the worst attack I have ever had. Winter is coming on, and how *can* I get through it in this condition? *Can* you help me?" His appeal was almost despairing.

He told much more about his case, which is omitted. He was told something about what Christian Science is and what are its possibilities, etc. He was asked if he would comply with certain conditions, if he would read some Christian Science literature, etc. He agreed to the requirements and left. In four or five days he came again limping but slightly and saying joyfully as he entered, "The pain is practically gone, and it is wonderful what I can do!" Among other things he said, "I have a little boy eleven months old whom I have never been able to carry. I could sit and hold him but could not lift him. Last Wednesday [he called on Monday] I carried him up and down stairs and up and down a hill and I can do other things which I have not been able to do for a long time."

His doubts had disappeared and faith appeared. He went to the Publishing House and bought "Science and Health with Key to the Scriptures" and he and his family read and study it. He was treated three weeks and called himself well. Somewhat later I asked the friend who had induced him to take treatment, "How is Mr. S.?" The reply was, "He says he is well, and happy as a boy." Later still I met a lady who said, "I saw your patient, Mr. S., to-day, and he says he is well, and happy as a boy."

Soon after the healing of this case, a lady came to me saying, "I have heard of Mr. S.'s cure, and have come to see if you can help *me;* but I don't know about Christian Science. I must do something. I have tried many remedies without avail and am discouraged and know not what to do. In order to account for some of the phases of my condition I must tell you that I have been shipwrecked twice and that my father, who was a sea-captain, was lost at sea. These shocks with other things have left me in a wretched state. I am full of fears and apprehensions and am extremely nervous. Can you help me?"

She was told something of the power of Truth over error, of the unlimited possibilities of the Law of Good, God, of the Omnipresence of the divine Principle, Love, of Harmony, which reveals the wholeness which exists, and which is for all.

She accepted the conditions required and came weekly to report progress. She gradually improved and at the end of a few weeks declared herself satisfied with the result of her trial of Christian Science and gratefully acknowledged the benefit thereof.

These cases are but a mite—a drop—in the great ocean of cases which have been healed through the knowledge of the Omnipresence of divine Love as revealed to us by our revered Leader and Teacher, Mary Baker Eddy.

J. M. R., Boston, Mass.

### Convinced by Reading Science and Health.

I would like to add my testimony to that of the thousands of my brother and sister Scientists as to the wonderful light and illumination which has come to me through the study of "Science and Health with Key to the Scriptures." I did not come into Christian Science through the door of physical healing as many have, but after trying for many years to live a good life in the old way,

Digitized by Google

trying to relieve the sick and suffering, also to find rest for my own soul, I at last became discouraged and disheartened. Not finding faith sufficient for these things, I stood outside the gate for a while, not taking any special pleasure in my church relations or work. I was asked to read Science and Health by one of my own family, who had found its green pastures and still waters, and who said to me, "I think, now, you are ready to read this book and understand it, and I know it will comfort you as nothing else can."

At first, when told of its wonderful healing power and that it was really the Christ-healing, like Thomas, I could not believe until I had read the "little book" for myself. At the first reading, I saw the glorious interpretation of the old truths I had been trying to practise without understanding, and was lifted up out of care and sorrow, as never before.

Then my earnest desire was for class teaching at once, and to enter my Lord's vineyard anew. It was such joyful news to me to know it possible to heal the sick as Jesus did, I could lose no time in getting the whole armor on ready for work. In March, 1897, I had the privilege of class instruction from one of our dear Mother's loyal students, and since that time, have been "proving the doctrine all divine" by casting out evil and healing the sick according to the command of the Master. The signs following have been marvelous to human sense in some instances, and the work glorious and uplifting. During this experience I have seen the hopeless invalid raised to health and happiness, and the sinful reclaimed to the glory of God. I have seen chronic stomach trouble, nervous prostration, epilepsy, insanity, tic douloureux, and like beliefs of the human mind yield to the touch of Truth and vanish into their native nothingness. I have seen the lame walk, the blind see, and have heard the dumb speak, after weeks of speechlessness, for all of which do I give thanks to divine Love who has so graciously led me into this way of light and understanding, through the labor of love of His servant, our beloved Mother in Israel, Mary Baker Eddy—VIOLETTA M. DOANE, Fenton, Mich.

### Many Blessings Received.

The past year has been one of marked blessing, in what it has brought to me and my family, in deliverance from great anxiety in financial matters, when thought had become steadfast and trustful, on account of a pleasant material situation, and also by great growth in happiness and love in our home, which has always been known as a harmonious home even when discords and trouble seemed very real.

I have also been blessed in being able to bring health to others and to lift burdens from their lives. And what more could one rightly desire? This question I have often asked myself, for it has seemed, in some ways, that the thought-problems were more perplexing than ever before; and also, that I could neither answer nor banish them. If I sought human aid all I could grasp of the reply was, "You are in discord," or "Discord is in you." Or I might more correctly say, it seemed to me that I was in discord, while the reply was, "Discord is in you." At last I concluded it was better to fall into the hands of God than into the hands of man; to try honestly and silently to live kindly and peaceably with all mankind, and trust that God's goodness would remove, in His own way and time, the sense of discord, whether it was within or around me, or both.

My desire has been beautifully answered. Easter Sunday came to me with a garment of love. I had the pleasure of being with dear friends, and enjoyed fully the music and flowers at the church service in Kansas City; and the afternoon was given to hearing Judge Clarkson's lecture, full of strength and conviction. And best of all is the fact, that from first to last, during my little visit, not one unwelcoming thought has come to me. Everywhere, from Scientists and from friends who are not Scientists, only harmony has been manifest; and I have come back to my appointed place, more ready to know that evil does vanish under the sunlight of God.

ANNIE H. WILSON, Lexington, Mo.

### Christian Science versus Materia Medica.

About two months ago the typhoid fever made its appearance. For about a week I gave myself treatment, but it did not yield. Having had a siege of the same trouble nine years ago, and remembering what I seemed to go through at that time, the fear was too great for me, and I asked for assistance from one who has helped me over many rough places. In another week the fever had entirely disappeared.

I would like to illustrate the difference between treatment by *materia medica* and Christian Science. In the first case of nine years ago a physician was employed. I was in the hospital four weeks, and after leaving there it was more than a month before I was able to return to my work. In the second case, in which Christian Science was the only means of help resorted to, I was absent but half a day from my business, and when the fever was destroyed the bad effects, such as extreme weakness, disappeared also.

I am also truly grateful for what Truth has done for me in destroying the tobacco and other bad habits. My progress has been very slow, and the temptation has come many times to give up Christian Science, but Peter's answer to the Master, "Lord, to whom shall we go? thou hast the words of eternal life," has always cleared the mists away. And Paul says, "Let us not be weary in well doing: for in due season we shall reap, if we faint not." Also our dear Leader, the Rev. Mary Baker G. Eddy, has said, "Be active, and, however slow, thy success is sure" (Miscellaneous Writings, p. 340).

J. P. LOWMAN, Minneapolis, Minn.

### Healed of a Disease Pronounced Incurable.

On the second day of May, 1899, I commenced treating a man sixty-four years old in Idaho Springs, Col., who was suffering from miner's consumption of eight years' standing,—which disease is pronounced incurable by *materia medica*. On the twenty-eighth day of the same month—less than four weeks—he pronounced himself cured and stopped treatment. Some of his friends who were not believers in Christian Science told him that that man (meaning myself) just made him believe he was healed, but he would find out he was not. His reply was, "I am healed, or my lungs are entirely gone, for they do not bother me in the least any more." That was a year ago, and last Sunday at our morning service he sat beside me. He told me he was enjoying good health yet.

There is another man in the same town who had the same disease in its first stage, to whom I gave one week's treatment last June, who was healed. I saw his wife about two months ago; she said he had never had a return of the trouble.—NAPOLEON B. MEEK, Denver, Col.

---

The *New York Observer* says, "'I can' has made many a man a conqueror, a statesman, a commercial prince, or even a monarch. 'The king,' Carlyle tells us, 'is the man who can.'"

---

To-morrow hasn't arrived yet, so there is nothing you can do to-morrow just now. Don't worry about it—wait for it to come, but get ready for it.

## Religious Items.

The *Standard* of Chicago, a leading Baptist paper, publishes an article by J. W. Weddell, D.D., entitled: "Is it a Sin to be Sick?" The article is an answer to questions brought out by a previous article by the same author on the relation of prayer to healing. After touching on his own and others' experience in receiving physical healing through prayer, he says: "The church, we must admit, has let these things slip out of its mind, has, at least, been meagerly regardful and grateful for aid administered of God to his saints in sickness, and I, for one, am ready to believe that this may be one of the ways, though it be by the wilderness, that God is bringing his people back to a larger appreciation of His marvelous helping and a fuller resort to the divine sources of aid in this vale of tears."

Christ became the Word, to take the thought out of the mind and heart of God and translate that thought so that we could understand it, so that what was before invisible and inaudible and beyond the reach of our senses, comes into our minds and hearts as something that was in God's mind and heart, but now is in ours. Beautiful indeed, is this as an expression of what Christ is to us. You want to know God; well, then, study Christ and you will know all about Him. "He that hath seen me hath seen the Father," said Jesus.—ARTHUR T. PIERSON.

To live in a perfect world would be easy. The problem is how to live in this world and not be of it; how to participate in its labors and cares, and not contract its taint of moral wrong. The problem can be solved only in the light of Christianity which shows us how to live in and yet above the world; how to be citizens of heaven and yet sojourners on earth; how to retain a devout temper of mind amid the pressures of worldly duties and difficulties. The Christian restores harmony by bringing heaven down to earth.

*Zion's Herald.*

The following is an extract from a sermon published in the *Universalist Herald* which the editor preached recently: "We are told that sinners are dead. We believe it; and that they will remain so till they are quickened. The apostle tells us plainly the beginning of Christian life. He tells us that we are born of an incorruptible seed, and that seed is the word of God; and is preached unto us by the gospel. Can we not see that the word of God that is preached unto us by the gospel, is the seed that quickens Christian life?"

The just man says, "Do not let me hurt;" the good man says, "Let me bless." The just man says, "Let me take nothing from my fellow-men;" the good man says, "Let me bestow much upon them;" the just man says, "Let me be pure;" the good man says, "Let me draw all men unto purity." One equitable; the other benevolent. The two together make perfection.

(Baptist) *Standard.*

The New York *Witness* says: "If only all Protestant Christians could be persuaded to put away from them all uncharitableness and all rationalism and all carelessness, and to take up the work of Christ in the true spirit of Christ, neither superstition nor infidelity could hold their ground very long, and even worldliness would soon be compelled to take a back seat."

The *Universalist Leader* has the following: "The world is moving God's way; slowly to human vision, but it is moving. It has been so moving from the beginning in some ways. In this century, in this generation, it is advancing in that direction in more ways and with greater rapidity than ever before."

Oaks do not grow like larches, nor do locusts keep pace with willows; but locusts cannot be twisted into baskets, nor can willows be trusted to support the weight of houses. Strong lives grow slowly, and are toughened by the exercises of patience.

*Exchange.*

Bishop Spaulding says: "The truth which makes us free makes us strong. It cannot be laid like a fossil on the shelf, it is not a collection of formulas and legal sanctions, it is life. A servile spirit can never approach that truth which gives inner freedom."

"Unselfishness seeks no human recognition," says the *Sunday School Times.* "To do good to those who do not appreciate it, to serve those who will never even know by whom the service was rendered, are marks of true unselfishness."

The New York *Observer* says: "Not the reservation, but the expression of a divine pity, redeems life from a pagan barbarity, and relates it to the skies. The world would be far happier if there were among men less reservation of pity."

The *Universalist Leader* says: "All wrong is at length pierced by its own sting. As there is a light around goodness that is the radiance from its own centre, so is there a darkness over sin that rises out of its own abasement."

*Zion's Herald* says: "A holy life is the result of deliberate effort and ceaseless watching. It does not come into maturity unless we take time for its culture.

The New York *Witness* says: "Away with all negative goodness. There is no such thing. Goodness is a positive quantity always, an aggressive force."

"Practical atheism may still subsist with religious professions, and even with the postures of worship and prayer," says the (Unitarian) *Christian Register.*

"God's love is your own assurance of the Christian hope; the life you lead is its evidence to other men," says the *Congregationalist.*

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa.*

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

Orders for supplements may be assorted as desired.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

TRACTS.

Practical Demonstration. Expressions concerning Christian Science. Is Your Prayer Answered? Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

Notice is also given that back numbers of the *Christian Science Journal,* for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

Regular meetings of the First Members of The First Church of Christ, Scientist, in Boston, Mass., are held on the Saturday next preceding the first Sunday in June and on the first Tuesday in November in each year. At these meetings candidates for membership with this Church are admitted.

Applications for membership to be presented at these meetings must be in the hands of the Clerk of the Church on or before the fifteenth day of May or October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.
Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.
Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

## Items of Interest.

### Political and Governmental Notes.

President McKinley was officially notified at his home in Canton, O., July 12, that he had been chosen for the second time by the National Republican convention as presidential nominee. Senator Lodge, permanent chairman of the convention, was spokesman of the notification committee. Governor Roosevelt was officially informed at his home in Oyster Bay of his nomination for Vice-President. The notification address was made by Senator Wolcott of Colorado.

United States Consul-General Guenther, in Frankfort, has sent a report to the State Department in Washington to the effect that on account of the protective tariffs in force in Europe, leading Swiss statesmen are considering the expediency of uniting with some other power, and an extract from the *Allgemeine Schmeizen Zeitung*, which is embodied in the report, seriously advocates annexation to the United States.

According to the bureau of construction and repair of the Navy Department, the new battleships Alabama, building at the Cramps' yards, Philadelphia, and Wisconsin, at the Union Iron Works, San Francisco, are, respectively, 97 and 93 per cent complcted, the Illinois is 84 per cent completed, and the Maine 30 per cent.

Preparations have been made for a national convention of Anti-Imperialists to be held in Indianapolis, Ind., August 15 and 16. It is proposed to have a representation of one thousand delegates in the convention.

The steamer St. Paul, which arrived at San Francisco July 10 from St. Michaels, Alaska, reported that martial law had been proclaimed at Cape Nome.

### Foreign News.

During the early part of last week there was a general revival of hope for the safe deliverance of the foreign population of Pekin, but no communication from the ministers was received, although official edicts from the Empress and one from Prince Tuan, signing himself "Emperor," were received from Pekin by the viceroys of the southern provinces and by the Chinese ministers at foreign capitals. If the Chinese authorities are protecting the foreigners in Pekin, as the official statements of the viceroys and superintendent of telegraph lines declare, then the question is asked, "Why cannot the foreign ministers communicate with their governments?" The reports published on July 15 and 16, based on Chinese rumors, were very unfavorable, but Li Hung Chang still declared that he thought the legations safe. The allies were unable to get a sufficient force together to move on Pekin, and the force of about ten thousand men in Tien Tsin were hard pressed all last week by a much superior force of Chinese well armed and well managed.

There was a slight renewal of fighting in the Transvaal last week, and the Boers were in sufficient force at several points to assume the offensive. On July 12, Lord Roberts reported that Nitral's Nek, which was garrisoned by a squadron of the Scots Greys, five companies of the Lincolnshire regiment, and two guns of a battery of the Royal Artillery, were taken by the Boers July 11 and the guns and a greater portion of the squadron captured. Lord Roberts said that he had not received a list of the casualties, but feared that it was heavy. Reinforcements were sent, but arrived too late. In most parts of the field the British generals are engaged merely in the routine work of receiving surrendered arms and garrisoning abandoned towns.

Governor General Wood of Cuba has issued an order regulating the taxation of rural estates. The most important feature of the order confers the right of taxation of estates which were not destroyed, and yet have not been worked. These will be taxed according to their present ability to produce. There are many estates such as these in Cuba, the owners of which have been retarding the prosperity of the island by refusing to work their plantations until some definite form of government for Cuba has been decided upon. Many of these owners, who are mostly Spaniards, but include a few Americans, will now be compelled either to pay for keeping their estates in idleness or to work or sell them.

George Wyndham, parliamentary under secretary of state for war, said in the British House of Commons recently that since 1895 English firms had sold the Chinese Government 71 guns of position, 123 field guns, and 297 machine guns, with ammunition for each class. He also said that a German firm sold China four hundred thousand Mauser rifles in 1899.

The electoral colleges met in the chief towns and cities all over the republic of Mexico July 9 and cast their votes for President. The returns will come in slowly from the outlying States, but a great majority of the votes were cast for General Diaz, insuring his re-election for a term of four years, dating from December 1 next.

By 1935 Chili will have received for nitrate and iodine from the Peruvian province of Tarapaca 2,350,000,000 Chilian dollars, and from Bolivia $650,000,000. Thus the war indemnity paid to Chili will reach 3,000,000,000 Chilian dollars—a greater sum than France paid to Germany.

According to information prepared by the office of military information of the United States War Department, the Chinese army on a war footing numbers 1,000,000 men of which less than 200,000 are well drilled and equipped with modern arms.

The Ninth United States Infantry arrived at Taku from Manila prior to July 7. This is the first land force dispatched to the seat of war by the United States. Other regiments are under orders to sail for China.

There has been a marked improvement in trade in Palestine since the opening of the Jaffa-Jerusalem railway. The transportation of goods from the coast to the interior is now easy.

The French Chamber of Deputies and Senate July 10 voted an additional f.14,500,000 for the purpose of carrying on France's operations in China.

### Industry and Commerce.

Negotiations for the formation of the Crucible Steel Company of America were consummated July 12, when the committee announced to the meeting of the manufacturers that the stock issue of $50,000,000 had been oversubscribed. The manufacturers connected with the new combine represent ninety-five per cent of the crucible steel interests of the country. Among the concerns absorbed are the following: La Belle Steel Company; Singer, Nimick & Co.; Howe, Brown & Co.; Crescent Steel Company; Aliquippa Steel Company; Anderson, Dubuy & Co., and Park Steel Company, all of Pittsburg. Cumberland Steel and Tin Plate Company of Cumberland, Md.; the Benjamin Atha and Illingsworth Company; Westberger Steel Works of Jersey City; Sanderson Bros.' Steel Company of Syracuse; Burgess Steel and Iron Works of Portsmouth, O., and the Beaver Falls Steel Works of Beaver Falls, Pa.

It was decided by the union employes of the St. Louis Transit Company at a meeting July 9, to resume the strike and boycott, which was settled on July 2 by an agreement on the part of the company to add to its force from a list of men who were employes prior to the strike. The decision to resume the strike was reached at a meeting of about twenty-five hundred members of the Amalgamated Association of Street Railway employes. The men allege that the company has violated the agreement by employing men not on the list. After the renewal of the strike the street cars continued to run regularly, and seemingly the patronage was not affected.

The Interstate Commerce Commission's report for the year ending June 30, 1899, gives the following figures: The number of passengers carried during the year was 523,176,508, an increase for the year of 22,109,827; tons of freight carried, 959,763,583, an increase of 80,756,276; gross earnings were $1,313,310,618, an increase of $66,284,497, and operating expenses, $856,968,999, an increase of $38,999,723. The amount of dividends declared during the year was $111,089,976.

For the eleven months ending with last May, the total exports of provisions, including meat and dairy products, was $166,707,834, against $159,378,603 for the corresponding period of the fiscal year 1899. Of this large sum the principal items are: Lard with a total export during the eleven months of $38,691,000; bacon, with a total of $35,478,000; hams, $18,192,000; pork, $9,495,000; oleomargarine, $9,409,000, and beef, $7,553,000.

An engineer employed by an American company, who recently visited the Cerro del Mercado in Durango, says that the iron in sight on the mountain is sufficient to furnish all the smelters of England with ore for a period of 330 years.

John P. Brown, a consulting engineer who makes railroad work his special study, estimates that 112,000,000 railroad ties are required each year for renewals alone.

It is estimated that the people of London spend $10,000,000 annually for umbrellas. Londoners grow accustomed to carrying umbrellas whether it is raining or not.

### General News.

The steamer Windward, which was given to Lieutenant Peary, the arctic explorer, after it had been used for the explorations of Franz Josef Land, started July 16 from Sidney, C. B., with supplies for Peary and his party, who are expected to meet the ship at Etah, in N. Lat. 79 deg. 10 min. Mrs. Peary and her little daughter are on board and will go to the meeting-place. After a brief visit with the explorer they will return with the ship.

Kruger pennies are being purchased as souvenirs throughout Cape Colony, it being assured that no more of them will be coined after the war.

According to a San Francisco paper, children of James Watts, inventor of the steam engine, are now living in California.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Speech with Europe.

### A Way Found to Telephone Across the Ocean.

At last a way has been found to telephone across the Atlantic Ocean. That old scientific bugbear, the saturation of the cable covering with conflicting currents, which prevent the voice being heard over long distances, has been overcome, and nothing except the laying of a properly constructed cable now prevents our having direct speech with Europe.

The discovery is announced by Prof. M. I. Pupin of Columbia College, and even if Professor Pupin's reputation did not vouch for the authenticity of his claims, the enthusiastic manner of their acceptance by scientific men generally proves that a most important discovery has been made. Aside from this spectacular element of telephoning across the ocean, the discovery is of such value to land telephone and telegraph lines that not only will it be possible hereafter to talk directly between New York and San Francisco, but the cost of doing so can be reduced to what is now demanded for less than half that distance.

And yet this valuable discovery, although it required years of sifting through complicated forms to perfect it, is quite simple in character. It would remind you, as far as its quality of simplicity is concerned, of the mass of complicated designs which Edison adopted and discarded before he hit upon the simple vacuum bulb as a final form for the incandescent lamp.

Professor Pupin's invention consists of nothing more than series of simple coils of wire, to be inserted at intervals of eight to a mile under the sheath of the cable. This for the ocean telephone line.

For the land wire it will be necessary merely to connect the coils in circuit on telegraph poles at intervals of a mile apart. And these little coils, which you might almost make by twisting a single strand of wire around your finger, will bring the farthermost ends of the earth together in neighborly converse; will cheapen the cost of all telegraphic and telephonic communication.

What a wonder they were not thought of before?

They were, however, thought of many times and they were even tried. But, like many another revolutionary contrivance, they were discarded because the man who thought of them first had not the scientific acumen to apply them in the right manner.

This is where Professor Pupin came in. He knew of these trials and of the failures that resulted. He knew, in view of certain long observed phenomena in electrics, that the failures were unaccountable. Truly they should have been successes, not failures, by all laws. He sat him down to calculate it out mathematically, and finally, after several years of study, he evolved a theory that put him on the track of success.

Think of being occupied several years with a problem in mathematics. This is what Professor Pupin passed through. He also made some interesting experiments. Here, in short, is the problem that confronted him.

Most people suppose that electricity travels with the speed of light. The text-books say it does, and it is a favorite illustration with lecturers. But it is so only under certain conditions. There are other conditions, as in an Atlantic cable, for instance, where electricity takes quite an appreciable time to pass from one point to another.

If the man at the key on this side of the ocean presses down his instrument so as to send a signal across, there is no manifestation immediately at the other end. The current flows in and fills up not only the long wire, but also the gutta-percha covering, which has to become saturated with a certain amount before there is any current apparent at the other end. In other words, the cable may be likened to a bucket of water, and it must be filled completely before any current will run over. The same slow process must be gone through before the cable can be emptied and another signal sent through it. Hence the speed of cable transmission is a very limited number of words a minute. It is slow work. The trouble comes when you attempt to hurry the current, as in rapid telegraphing or in telephoning.

Every one knows that electricity travels in waves, and when you speak into a telephone receiver your voice sets the diaphragm going at a rate fast enough to send thousands of electric waves over the wire in a second. In other words, the wire is charged and discharged thousands of times a second. On comparatively short wires this is quite possible, but on long lines, and particularly on heavily insulated cable lines, these rapid pulsations would not become apparent at the other end except as a wild jumble. Since the cable refuses to allow any current to leak out of the other end until every part of it is slowly saturated, it is easy to see how the innumerable electric pulsations inspired by the voice would mingle and jumble and mix up indiscriminately in the cable and its covering, and how those which reached Europe, for instance, would have lost all specific character. The phenomenon is due, as electricians say, to the "capacity" of the cable.

Now it was also known to electricians that "capacity" could, under ordinary circumstances, be neutralized by what is known as a "choke coil." This is a simple coil of wire, which, when placed in circuit with any device which generated "capacity" (say a condenser), had the effect of rendering that capacity nil and allowing the current to flow on as before. Knowing this law and recognizing the cable as a sort of huge condenser, some one put a choke coil in circuit with the cable. The effect, however, was worse than before. The jumble was greater near the choke coil. No one could understand it.

The law had been laid down by Oliver Heaviside, the noted English physicist, and, as some one has said, the most eccentric scientist in the world, that capacity could be overcome by inductance. He did not say just how it was to be overcome, but he proved it mathematically. All of which may sound particularly odd to the layman not

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

well versed in the higher mathematics. At any rate, here was the condition. According to the law we should have been able with certain apparatus to telephone across the ocean. Yet the apparatus did not accomplish the feat.

Professor Pupin thought the law might not have been interpreted aright, and he set out to study his theory. He also experimented. He caused to be set up in Columbia College an artificial telephone line 250 miles long, and he made all kinds of applications with choke coils to see if there might be some special way of applying them so as to attain the desired object. He also made another interesting experiment which any person may try and which illustrates very nicely how Professor Pupin's invention operates.

Recognizing a certain similarity in all wave motions, Professor Pupin fixed a tuning fork against the wall of the room, the prongs pointing outward horizontally. He tied a string to one of the prongs and then stretched it tightly across to the opposite wall of the room. When the fork was set vibrating, little waves passed over the strings to the wall and back. They were quite regular.

✙

But he knew that, if the string had been continued on indefinitely for miles, the waves caused by the tuning fork would have thinned out and died away until finally, when a certain distance had been reached, there would be no wave motion perceptible. He took a little piece of beeswax and attached it to the string. The wave motion immediately showed much jumbling and irregularity. This, he thought, is exactly the condition of the Atlantic cable when one choke coil is placed on it. Then he fell to experimenting with the string and he attached pieces of beeswax to it at short intervals.

After a time he found that the waves sent away by the tuning fork passed in regular order over the string, being received, regulated, and passed along by the lumps of beeswax with remarkable dispatch. This, he thought, is what the cable needs—choke coils at intervals. The point was to determine the proper intervals. So he went back to his mathematics and to his artificial telephone line.

After a stupendous amount of work, Professor Pupin decided that on a submarine cable it would be necessary to insert eight coils to the mile in order that speech could be transmitted from New York to Europe. Whereas, on land telegraph lines, one coil to the mile would be quite sufficient. Of course, the laying of a submarine cable with eight coils to the mile attached at regular distances apart within the sheathing would be a prodigious commercial undertaking, but not nearly as much as was the laying of the first Atlantic cable.

✙

The advantage to be gained, aside from the long-sought triumph of talking across the ocean, would be the immense quickening of all cable telegraphing.

The present rate of ocean telegraphing is five cycles a second. With the insertion of the coils it would be possible to operate at the rate of fifteen hundred cycles a second, or three hundred times as fast as is now possible. As Dr. Pupin points out, a cable three hundred times as fast as at present could do three hundred times as much business, and it could charge less than one-tenth of a cent a word for messages, and still earn as much money as at present.

So important do the telephone companies think Dr. Pupin's invention that they are already negotiating for its use.

With the use of the Pupin coil strung upon telegraph poles, one mile apart, it will be possible to telephone to San Francisco over thin iron wire, that will cost nothing comparatively in the building.

The use of the system on long land lines might even make a Pacific cable unnecessary, for the lines now connecting us with Alaska might be continued to Behring Strait and down again through Siberia to connect with Asia.

The New York Telephone Company placed its wires at the disposal of Dr. Pupin while he was making experiments.

*Boston Herald.*

## The Lectures.

### At Anderson, Ind.

Persons who went to the Grand Opera House, and there were hundreds of them yesterday afternoon (Sunday, July 1), were repaid by hearing as pleasing an address as has been delivered here for a long time. The speaker was Mrs. Annie M. Knott of Detroit, who has gained a wide reputation as an advocate of the doctrine of Christian Science.

Mrs. Knott was introduced by Mayor Dunlap, and at once won her way to the hearts of her auditors. She is a lady of pleasing appearance and gentle voice, and talks with a quiet earnestness that at once impresses her hearer that she believes firmly in her theme, and that that belief is not born of fanaticism or prejudice.

*Anderson Daily Bulletin.*

The introductory address of Mayor M. M. Dunlap was as follows:—

*Ladies and Gentlemen:*—In introducing the speaker of this afternoon I find it a pleasant task, especially since knowing the hospitable and kindly feeling entertained for her by many in this audience. Knowing also the liberal fairness of our people there is no question but that the utterances of the distinguished lady will be received with the utmost respect and consideration.

That the subject may be new to many of us is additional reason why it should receive attention. In all things material this is a progressive age. In the realm of science, also, there are continuous and startling revelations, and he who refuses to accept the demonstrated truth is so much behind his times.

Christian Science may or may not be a great beneficence. It may or it may not be a true Science. I do not know. But that it is striving for recognition and a place in the hearts and intelligence of men we do understand, and it is entitled to be heard and tried according to the standards of reason and justice.

I am told that Christian Science makes no war on other religions; that its followers believe in the same infinite, eternal, omnipotent God on whom all Christians rely. Then there should be no conflict, no hatred, no jealousies, no ridicule. If the teachings of Christian Science reveal the truth, real and mighty to heal and to save, the revelation redounds to the benefit and glory of all.

If it impinges on some baseless doctrine, if it brushes away some crumbling belief, if it destroys some false ideal, if it crushes some idol of ignorance, or prejudice, or unreason, is it not a blessing to mankind? The death of error is a common gain.

One of the greatest difficulties encountered by the Christian religion is the furnishing of some tangible, human evidence of its virtue and worth. There are so many in this world who want to see in "his hands" the print of the nails. It is two thousand years since the Man of Galilee walked among the people, healing the sick and casting out the devils of unrighteousness, and the story of it is as a fable in the minds of men. Yet, may it not be true that even as his disciples performed the same wonderful works in his name, these later followers of the Master may become the like instruments of his power?

Digitized by Google

Whether it be true or not, these Christian Scientists are happily fortified in their teachings by the evidence of sane men and women, who know and testify that "whereas I was sick, now I am well"—witnesses, too, whose testimony in the courts of the land would stand unimpeached and unimpeachable.

Ladies and gentlemen, the speaker, Mrs. Annie M. Knott, who will now address you.

### At Beatrice, Neb.

The renown of Judge William G. Ewing, and the subject of his lecture, were sufficient to attract a large audience to the Chautauqua Tabernacle yesterday afternoon (Monday, July 2). Whatever divergence of opinion there may be regarding the subject of Christian Science, it must be admitted that Judge Ewing is one of its ablest defenders, and his lecture yesterday was a brilliant and scholarly presentation of its doctrines.

*Beatrice Daily Express.*

### Lectures at Other Places.

Sharon, Pa.—William G. Ewing, May 17.
York, Neb.—William G. Ewing, June 30.
Witchita, Kan.—William G. Ewing, July 5.

## The Secret of Happiness.

'Tis foolish to look in the past,
Except to gain profit thereby;
Its failures good lessons should teach,
Its triumphs make courage rise high.
But here is the secret I've found,
(A treasure from Wisdom's mine),
Just do your best and wait on God,
And live one day at a time!

It seems quite easy to say,
(I'm afraid not so easy to do),
For cares and forebodings may come,
Which tend to make one feel blue;
But cheerfulness findeth a way,
And banishes every ill,
So we learn to trust, and watch, and pray,
And do our Father's will.

When troubles and trials seem real,
And we don't seem to see the way,
We should always remember the darkest hour
Comes always before the day.
So by holding fast to the good,
And pressing bravely on,
The sunshine comes where darkness had been,
And lo! our troubles are gone!

We find, when we look ahead,
The future's a misty maze,
And ne'er a vision reveals
To our inquiring gaze.
And then we see, when we look behind,
How much better we could have done,
So just be patient, and live to-day,
And wait till to-morrow comes!

EDWARD E. NORWOOD.

"If nature must be studied as a whole, so must the Bible," says a writer. "It is a collection of books by writers who unwittingly contribute to a scheme the key to which is to be found in one historical personage."

# Selected Articles.

## Masonry and Christian Science.

To the Editor of *The Union.*

*Sir:*—I have just read the letter by F. H. Coolbroth, published in your issue of the 30th ult. He writes, "That the Masons offered their assistance to the family of Mrs. Torrence of Topeka, Kan., whose death was due to Christian Science treatment, does not argue that they are friendly to Christian Science."

I think it is apparent to your readers that my purpose was not to make a plea that the body of Masons were favorable to Christian Science, though I know a great many Masons who are believers in Christian Science; and surely there can be no wrong in crediting them with kindness toward this faith. It was unjust to the Masonic order, as well as to Christian Scientists, that they should be reported as prosecuting a Christian Scientist because of her failure to heal Mrs. Torrence. Besides the public are entitled to the truth.

If Christian Science is error and its adherents are following a delusion, they can be easily beaten in a fair race, and it will not be necessary that their words and works shall be misrepresented in order that they may be defeated. Our friend challenges me or any Christian Scientist "to bring forward any case of sickness or disease said to have been cured by Christian Science," which he cannot prove to have been cured by other causes. He adds, "If the people said to have been cured will tell the truth." Are we to understand this statement to mean that the hundreds of thousands, including many of the most honest and reliable people of this country, are accused of misstating the facts when they say that, after having suffered for years and having constantly sought relief by other means, they have been healed through Christian Science?

✤

It is not strange that people who have strong faith in medicine should believe that the patient under Christian Science treatment is healed "because the medicine which he formerly used is just taking effect." Neither is it strange that people who do not believe in medicine should say, "It is because you quit taking medicine that you are well. I have always told you that you were taking too much medicine." Nor is it strange that those who believe in hypnotism should claim that hypnotism has done the work, and the Spiritualist that Spiritualism has healed the patient. It is but natural that people should attribute results to that in which they believe, rather than to something which has not been satisfactorily proven to them. When Herod heard of the works of Jesus it did not occur to him that Jesus was a new personage. He had already been somewhat convinced of the religion of John the Baptist; hence he said, "John is risen from the dead."

He believed the manifestations which he saw were caused by a revival of John's religion ("the old fashioned religion"). He was so firmly fixed in his old beliefs that it had not occurred to him that new ideas were at work, and this was why the sick were being healed.

Even the Christian Scientist in the early part of his experience, is tempted to attribute the healing results to something less than God, until the testimony in favor of the divinity of the healing becomes overwhelming.

Our friend can find many cases in his own city which will bear investigation. If these are not satisfactory, I will take pleasure in submitting to him other cases which have been healed in Christian Science. I would like to add here that only a year or two before the departure of Mrs. Torrence, her husband died of typhoid fever, the same

Digitized by Google

trouble which caused the death of his wife, and that he had proficient medical assistance. Will our friend make the statement that the physicians killed Mr. Torrence? We would ask further, in the face of these circumstances, what argument could be presented in favor of the claim that Mrs. Torrence erred in her choice of remedies? I think it is also apparent to your readers that neither in my reference to the case which was healed of typhoid fever under Christian Science treatment, nor in anything which I have written, can there be found aught that is "unkind in respect to the medical system." We have the kindest feeling toward the medical fraternity and their friends. We are simply contending for the rights of a Christian Scientist to choose his own remedy. No class of people have more "sympathy for the sick" and the troubled than Christian Scientists. We recognize the sin and sorrow of the world and we know that these are as real to mortals as the flesh, and we do not call them imaginary, yet we understand that the troubles which are mountains to us are nothing to God, that in the presence of divine Love which is infinite, human discords become infinitesimal, and no evil can live in the presence of God.

Our critic asks, "Why speak of sin, bereavement, sickness, and death? Why do they not get up a language of their own, in which these words and their kindred shall have no place, or perhaps eliminate from the English language all such words?" No doubt if nine-tenths of the talk about sin, sickness, and death were eliminated from the conversation of mortals a large per cent of the troubles common to earth would disappear.

It is allowable that one should attach any peculiar meaning desirable to a given word, even though it differ widely from that generally accepted, provided he defines his meaning. The terms used by Christian Scientists must be understood as intended, otherwise the pupil or the critic is wrongly informed. Much of the misunderstanding on the part of the general public concerning this Science is because the statements used in the Christian Science textbook and by Christian Scientists are misconstrued and not understood by others as they are by Scientists. We have no other words than the English with which to present our ideas, so we must use the English language, define our meaning as clearly as possible, and patiently wait to be understood.

Without doubt "Jesus Christ suffered on the cross." The questions are, what was the nature of that suffering? what occasioned it? what was its purpose? Christian Science teaches that suffering is more than imagination, but that it has its existence only in human experience and not in that spiritual existence which is eternal; hence the possibility of overcoming the physical sense of suffering through the spiritual understanding of God.

ALFRED FARLOW.

In *The Union*, Springfield, Mass.

## Christian Science in Hastings, Neb.

Editor of the *Republican*:—

In this city is a little band of people, quiet and unobtrusive, who meet twice a week to worship God in the way that brings to them the largest measure of peace, health, and happiness. They have no salaried preacher and no paid choir. There were but two of them a short time ago, and in their simplicity and confidence in God these two worshiped humbly by their own fireside in their own parlors. There has been no proselyting, no exhorting, no revival meetings, but these two found health where there had been sickness, peace where there had been discord. Discontent gave way to harmony and content. They knew they had gained a consciousness of the true God, who is "all presence" and "healeth all our diseases." In simplicity and with a heart filled with gratitude, they told their neighbors of the tangible and practical benefits they had received. Some sneered, some doubted, some accepted, found peace, and were healed. One after another took it up, till families met together to worship in their different homes. Then a small hall was rented and, that outgrown, a larger and better one was engaged. All classes are represented there: bankers, merchants, society leaders, and those in a salaried position with men under them. They attempt to force their views upon no one, and they criticise no one.

They are Christian Scientists. They have all accepted Christian Science, either by being healed personally or by the healing of some one near and dear to them. Their experience, through actual benefits received, robe them in a faith that nothing can shake.

One has been healed of cancer in the stomach pronounced incurable, two of consumption where medicine did no good. One had traveled far and suffered long, had been under the surgeon's knife, and all to no effect. Many other cases might be cited.

It is this understanding of God as an "ever-present help," "healing all our diseases," and following closely and practically in the steps of the Saviour as shown to us by Mrs. Eddy, that gives such faith in Christian Science.

Those who have been healed and are constantly healing the sick, are more competent to judge of the healing power of Truth—God—than those who know nothing of God's healing power and repudiate either His ability or willingness, or both.

Oh ye of little faith! What have we as Christian Scientists done to merit the many attacks made upon us from the pulpit? We have disturbed no man, no crime has been committed, we have not attempted to win converts from any other church. It is true many sick have been healed in this city, some sinners have been reformed, suffering has been alleviated, and peace and happiness increased. This and nothing more.

On last Sunday evening there was a Christian Science mother whom I know, at the bedside of her sick boy, realizing for him God's presence and care. She did not go to the doctor nor the drug store, she knew there was a greater physician and a healing balm superior to any drug. The next morning all pain was gone. The signs followed. The healing was complete. That mother had faith in God and her faith is based on actual experience.

A boy had boiling water spilled on him in such quantities as thoroughly to saturate his clothes. God was an ever-present help. No signs of burning or pain were manifest after a few moments' treatment.

Recently, in a neighboring town, a Scientist was on trial before a court. A gentleman, formerly principal of the schools in this city, who had been so paralyzed that his hand could clasp nothing, was summoned as a witness. His healer was on trial. When the witness entered the room he advanced to the judge, grasped his hand, and squeezed it so hard that he cried out with pain. "How is that for a paralyzed man?" exclaimed the man whose hand had at one time hung helpless at his side.

These cases of healing are occurring almost every day. Quietly and without ostentation one after another comes to testify that God heals and Mrs. Eddy has shown us the way.

One case of suffering relieved is worth more than a whole series of sermons or volumes of theories that bring no relief and are incapacitated for signs following because of the belief that God cannot or will not heal the sick. Why should poor, weak, mortal man limit God's power to do good? Or why does he divide it and say, "God will do this but He will not do that?" As little children in meek-

Digitized by Google

ness and truth let us acknowledge God as omnipotent and then preach and practise it.

But is God omnipotent? Some say drugs and doctors succeed when He fails. We believe He created all and all that He created was good and nothing but good was created, and that He needs no assistance from mortal man for He is supreme and omnipotent. J. G. C.

In the *Hastings Daily Republican.*

## The New Revival.

THE following extract is from a paper on the above-named subject which was read before the Illinois State Association at Oak Park, by Quincy L. Dowd, pastor of the Winnetka Congregational Church.

A demand rises now, that "*a* gospel" be given which offers a *spiritual hygiene.* God's tidings of gladness to-day, as at the first, comes to sick, ailing, and harassed people. Are we not told to restore men and women, bringing them into health of mind? Much of what Christian Scientists stand for Christian pastors should attend to in the regular course of their work. It may come to pass that seminaries for training ministers will have a professor of pathological and spiritual diagnosis. Ministers appointed in Christ's name must see to it that they minister to men's *real,* yes, even to imaginary ills. The well need no physician; but those bodily oppressed, or depressed mentally are *our* patients peculiarly. It should be recognized that the phenomenal, steady movement toward Christian Science is a sort of *revival.* Shall we lose by it, or gain by it? Possibly we preach too often on metaphysical *themes* which people do not care for, and not often enough on spiritual *therapeutics* which would help them. "Healing of the mind" is the pastor's *forte.* His message or advice misses the mark unless it brings some reviving to mortal *flesh* along with an awaking of the immortal spirit.

## Elder Harkins Pleased.

DURING his sermon last night Rev. Mr. Harkins digressed from his theme to refer to the lecture of Mrs. Knott, on Christian Science, in the Opera House. Elder Harkins said that he hoped he would never be so prejudiced and unreasonable as to decline hearing the presentation of any side of any proposition. After summarizing the popular view of Christian Science in the statement that it was neither Christian nor Scientific, Mr. Harkins told how he had been present at the Opera House lecture until he was called away, much to his regret. Then he paid tribute to the exalted character of Mrs. Knott's lecture. He said that all that part of the lecture which he had heard was chaste in language and spiritual in character. If what Mrs. Knott had said about Christian Science was a true statement of the faith, then it was altogether different from what it has been conceived to be, for it was the lifting of mankind above the materialistic and to a spiritual plane. Elder Harkins said he had not been carried away by Christian Science, but that he stood ready to testify to the Christlike character of Christian Science teachings so far as they had been revealed in the address at the Opera House.

*Anderson (Ind.) Daily Bulletin.*

### How the Bible Sells.

"Several of the literary magazines publish lists every month of the most popular books," said the representative of a large Northern publishing house who is in the city looking after the Southern trade. "These lists are compiled from data furnished by dealers and public librarians at different cities, and the volume that usually occupies first place is, of course, the novel that happens to be the fad of the day. As a matter of fact, however, none of them have ever printed the name of the book that is really most popular and actually the best seller, not alone for this month or last month, but for every month of the year. That book is the Bible. It may surprise you to know," continued the speaker, "that the Bible is selling better to-day than at any time since it was first printed. Last year, from January 1, 1899, to January 1, 1900, the American Bible Society alone issued nearly a million and a half copies. The exact figures are 1,426,801. Of course, the Society is an immense concern, but there are several others in the United States and a number in England and Europe, all turning out nothing but Bibles. They publish them in every conceivable shape, from the beautiful Oxford editions in flexible covers at twenty-five dollars apiece down to the little cheap volumes in fine print that retail for a nickel. Nowadays a very good, serviceable Bible is sold for fifty cents. It has all the latest and best notes, several colored maps, and a very useful index. The sale of that edition has been enormous and has run into the hundreds of thousands. The wars on both sides of the water have had a very marked effect in increasing the demand for Bibles. You can make a calculation of the total force in the field, both English and American, and then count on at least one Bible for each soldier. Some of the boys who went to the Philippines got upward of a dozen, and most of the soldiers' Bibles were handsome, substantial copies. I think, seriously, that the old stories of Bibles that have stopped bullets have influenced many a mother, sister, or sweetheart in the selection of a good, thick volume in preference to one of the thinner and lighter editions. Yes, the Bible is decidedly 'the most popular book.' Its copyright for six months would make a man rich beyond the dreams of avarice."—*New Orleans Times Democrat.*

### The Child Heart.

The heart of a child,
  Like the heart of a flower,
Has a smile for the sun
  And a tear for the shower.
Oh, innocent hours
  With wonder beguiled—
Oh, heart like a flower's
  Is the heart of a child.

The heart of a child,
  Like the heart of a bird,
With raptures of music
  Is flooded and stirred.
Oh, songs without words,
  Oh, melodies wild—
Oh, heart like a bird's
  Is the heart of a child!

The heart of a child,
  Like the heart of the spring,
Is full of the hope
  Of what summer shall bring.
Oh, glory of things
  Is a world undefiled—
Oh, heart like the spring's
  Is the heart of a child.

*London Speaker.*

### Bound Sentinels.

Volume I. of the *Christian Science Sentinel* bound in cloth can be had at $2.50 per volume, prepaid. Bound in half-calf or half-morocco at $3.00 per volume, prepaid. We have but a limited number of copies.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

**MRS. EDDY TAKES NO PATIENTS.**

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Honest Individual Work.

THE success of any undertaking depends upon the honest work of every individual who has a part in it. One of the greatest needs of the world to-day is for honest, conscientious work on the part of individuals, from the humblest toiler to the man or woman who fills the highest position of trust and importance. On every hand is manifest the great need of increased spirituality in order successfully to grapple with and overcome the growing forms of evil. Honesty in all the affairs of life is necessary to gain the high degree of morality that is needed. Dishonesty of any kind or character, even in little things, stamps itself upon the individual and robs him of his power to resist evil.

An engineer makes the plans and specifications for a large, steel bridge which is to span some broad river or deep gorge. He realizes that his calculations must be exact and his work must be honest, even in the minutest detail. It is not sufficient that he give seventy-five feet as the measurement of a heavy iron girder when it should be seventy-four feet ten and three-fourths inches. His measurements must be exact even to the one hundredth part of an inch.

Unless the work of the engineer is exact the builder would find that the parts of the framework, made according to the specifications given him, could not be joined together. A lack of honest work on the part of the engineer would cause the builder to fail and his work would have to be done over again. On the other hand if the specifications are exact and the builder neglects to follow them, this will likewise result in failure. To insure success the specifications must be exact and the work must be honestly done in accordance with them.

The builder is found poring over the specifications. He must not merely believe, he must *know* what is required of him. He is constantly giving directions to others. It is not always possible for him to see that his instructions are carried out to the letter, so he must trust to the honesty of the workmen.

When the structure is completed, if the contractors have furnished honest materials and the workmen, from the least to the greatest, have done honest work, it is found capable of carrying the burden it was intended to carry and it stands an enduring monument to honest individual work.

If honest work is required in the performance of that which is for time only, how much more is it needed in the doing of that which is to last throughout eternity? What greater and more important work can there be than the development of character? All things else are as nothing when compared with it. This great work is not for time but for eternity. It is an individual work. While it is true that one is helped by the achievements of others, yet, after all, his progress depends upon the faithfulness with which he does his own work.

How much it means to do honest work! Happy indeed is the man who can say of any work he has performed or any experience through which he has passed, "I have done the best I could."

Christianity is right doing, the result of right thinking. It is evident that he who does not think right cannot do right, and he who does not make an honest effort to do right will not long be able to think right. Right thoughts will not long abide where they do not find expression in action. If one would make them really his own he must make good use of them.

The earthly life of the Master made plain the way of salvation from all evil, sickness as well as sin. Not his personality but the life that he lived is the Saviour of the world. His life was the exemplification of his teachings. He was honest in the practice of what he taught, and this gave him spiritual power to overcome all forms of evil.

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, says on page 450, "Honesty is spiritual power. Dishonesty is human weakness, which forfeits divine help."

To be a Christian Scientist means more than to know the letter of Christian Science and be able to talk it fluently. It means that one make an honest use of the letter; that all his deeds be in strict accord therewith.

The letter of Christian Science is like the plans and specifications for the bridge to which we referred. The knowledge of the letter does not make a Christian Scientist, any more than familiarity with the plans and specifications constructs the bridge. As the builder must know the plans and then follow their directions, so one must understand the letter of Christian Science and then do honest work in accordance therewith. As the completed bridge is a monument to honest individual work, so the cause of Christian Science has become what it is by honest individual work on the part of Christian Scientists.

The need of more and better work is manifest. Not such work as watches another to see wherein he fails to do honest, effectual work, but the kind that watches one's self to see if his own actions, words, and thoughts are just what he knows they should be. The power of a good example to compel others to do better is little realized. Honesty is always a rebuke to dishonesty, and the result of work well done is to inspire others to go and do likewise.

We should not underestimate the importance of the work we are called upon to do. Wherever our lot is cast and whatever the work that is assigned us, it is an essential part of the great whole and should be done well. Honesty and fidelity are inseparable. If the Christian Scientist does honest work he is faithful to divine Principle, and he merits, and will surely receive, the reward of the faithful.

## A Friendly Word.

*The Southern Advocate*, published at Winfield, Kan., recently had the following to say concerning the Christian character of Christian Scientists:—

"Christian Science holds many theories that are scientifically and theologically at variance with our notions. If Christianity is an intellectuality, and if Methodism is to cast all its members into one intellectual mould, we cannot consistently keep a Christian Scientist in the church. But if character is to be the principal test, we think we may fellowship them. These Christian Scientists are not bad people. They teach that God lives and operates in us and through us; and that 'in Him we live, and move, and have our being.' They train the mind to think only the best thoughts and to believe only in good. They look on the bright side of everything and are cheerful, happy, contented, and companionable. I prefer them for my associates to some gloomy, despondent Methodists, who believe in a devil, and that such an one mostly controls the world; who believe in hell and think most of the people are going there; whose general experience is, 'How tedious and tasteless the hours;' whose favorite song is,

O Lord and shall we ever live
At this poor dying rate?

Digitized by Google

"The writer has had Christian Scientists in his church and found that the bonds of Christian love were stronger than intellectual differences. Therefore they desired not to leave the church and we were glad for them to remain. But if we nag them, criticise them, or persecute them, they will go, and in this way we have lost some valuable members."

The writer's willing testimony to the Christ-like character of Christian Scientists shows an inclination to recognize genuine Christianity wherever it may be found. His statement is an acknowledgment that Christian Science is Christian, for it makes men and women Christ-like, or at least it does not take away the Christianity they possessed before they became Christian Scientists. All true Christian Scientists know that they have not less, but more of the spirit of Christ by reason of the higher understanding of God that has come to them in Christian Science. God is more to them than He was before, and they rely upon Him more implicitly and see more clearly the necessity of keeping all His commandments. Surely any teaching that will accomplish such good results must be Christian, since an evil tree cannot bring forth good fruit.

Since evil is a unit in opposing all that is good, should not all, who are striving to gain a higher plane of life for themselves and also to elevate others, be more closely united in opposing evil? Should there not be a more just recognition of good wherever it may be found? All good is the manifestation of the one Good, and all evil is the manifestation of the one evil. Should not all Christians look for the manifestation of Good, ever recognizing its presence and power?

The honest, conscientious Christian is striving to gain the mastery over evil. He must work from his own standpoint of experience, and wherein his methods are wrong or ineffectual he will learn to change them. It is evident there can be but one right way, but in his efforts to gain that right way mortal man is encouraged and lifted up if his honest motives and sincere endeavors are appreciated. This being the case, cannot Christians help him more, and at the same time better show forth their own Christianity, by recognizing the good he has done and giving him credit for it, instead of condemning his work in toto? Surely this is what they would have others do unto them, and who will say that any man ever suffered loss by conforming his life to the Golden Rule?

### A Correction.

In the letter to Mrs. Eddy on page 721 of the *Sentinel* for July 5, the sentence "I find in making the change from orthodoxy, one can answer all that is worth answering," should read, "one can conserve all that is worth conserving."

## Among the Churches.

### Opening Service at Newman, Ill.

Last Sabbath morning (June 10) seemed unusually inviting to those who find the chief feature in life the worship and appreciation of Deity, as exemplified in His boundless gifts, preserved in the Immortality of Spirit, and guided by the infallibility of divine Intelligence. We obtain our impressions for these thoughts from the services which we attended, in dedication of the rooms now allotted to the exclusive use of First Church of Christ, Scientist, in our city, which was one of the brightest features in the life of the Christian affairs of our locality.

These rooms are set apart in Culbertson's Block, and so arranged and furnished as to impress one with the thought of extreme tidyness, as well as their superb fitness for a purpose which follows the act of building better than one knows. Nature offered testimony in the semblance of rich roses, which only June can afford, and these, with the substantial furnishings, testify alike to the enthusiasm of those who remain continually in the vineyard.

The following address was delivered by M. C. Goldman, the First Reader of the Church.

With joyful hearts and with gratitude too deep for expression, we invite you to unite with us this peaceful Sabbath day in dedicating to the service of the living God, these beautiful rooms.

May the weary and heavy laden here find rest and peace; the sick and sinful, the healing Christ; the sorrowing, the comforter, and all a refuge from the cares of the world.

To you who have already accepted Christian Science as the Truth we would say: Be not discouraged if trials seem to hinder your progress from sense to Soul, they will work for you that which you need, experience and patience. If you would know their cause, self-examination will reveal it. Then let us know and understand the Truth that will remove it. When we see in our own consciousness that which is unlike Good let us destroy it, cast it out by the realization of our own true self as the reflection or image and likeness of God (Good).

Let us think less and less of self—deny self completely—and more and more of the great needs of humanity, and let us more clearly recognize the mission of our church and its work of educating and bringing all to a knowledge of that Truth which makes us free, a knowledge of our relation to Him whom to know aright is life eternal.

Let us resolve that we will be more faithful in putting aside self-consciousness, self-interest, and self-ease, and always be present at each service. Let us be especially open-hearted and generous at our Wednesday evening meeting, the only contribution asked or expected is that we give liberally of our knowledge of the healing work. Every hour is fraught with good. Let it be known.

A little over four years ago we organized as a small band of Christian Scientists. Earnest, faithful work has been done in the face of bitter opposition and ridicule. We have grown steadily and sturdily to our present number. Our meeting place the first year was in the home. The second year the meetings were held in what is known as Thomas' Hall. For the past two years we have met in Odd Fellows Hall. For some months past a meeting place dedicated to the exclusive use of Christian Science has been held in thought, and that thought, steadfastly held, is now made manifest.

From a material standpoint it did not look as if this could be accomplished, but knowing that what we wish realized must be first in mind, continually knowing that with Omnipotent Good all things are possible, and that to us was said: "All things are yours," and "All that I have is thine," and believing as we read in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 490, that "Divine Love always has met, and always will meet, every human need," we have made our demonstration thus far, and soon our rooms will be "thoroughly furnished unto all good works." These rooms are a testimonial to all, that in this little city is established the Science of Christ, or Scientific Christianity, and that in this age of gross materialism the power of the spiritual idea of Life, Love, and Truth as eternal, self-existent Mind, infinite, ever-present, and omnipotent to destroy all error, sin, sickness, and death, has been proven by word and deed among us. And, as in olden days, the spirit of the living, palpitating Christ stands knocking at humanity's portals and in the common daily walks of life, pleading, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

To our dear Mother in Israel, the Rev. Mary Baker

Digitized by Google

Eddy, we owe a debt of endless love and gratitude for having made so plain to us the way to heaven and harmony. With sincere love we shall welcome all, whether of our own or other denominations, who may come to these rooms to worship with us.

The Christian Scientist has only cordial good-will for all who are ministering to suffering humanity, the physician, the surgeon, the minister, and all who are living up to the clearest light vouchsafed to them, and honor and respect their motives.—*The Newman Record.*

### Corner-stone Laid at Oakland, Cal.

With impressive ceremonies witnessed by about two hundred people, the corner-stone of First Church of Christ, Scientist, now in course of construction at Seventeenth and Franklin Streets, was laid at 8.45 this morning (June 20). In the absence of F. J. Fluno, the First Reader of the Church, Charles Benedict conducted the ceremonies, being assisted by Mrs. Anna V. Crabtree and Miss Eleanor Fluno, the twelve-year-old daughter of the First Reader.

An improvised altar had been constructed on the staging immediately above the corner-stone, and from this point the ceremonies were conducted. Mr. Benedict made the opening address, which was brief and chiefly congratulatory. He spoke of the privilege of gathering for such a ceremony on a quiet, balmy June morning, and regretted the absence of Dr. Fluno and his wife, who are now in Boston, and said that though they were away, they were present in thought, and this added to the completeness of the occasion.

Mr. Benedict's remarks were in substance as follows:—

*Friends:*—We have met together this morning to express our love to God and our gratitude to divine Principle, by implanting in consciousness the foundation or corner-stone of our church, whose outward symbol is First Church of Christ, Scientist, of Oakland. The true significance of Church is given us in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

As we view this symbol now being constructed, we recognize the fact that there is no other foundation except that which is laid, "Jesus Christ himself being the chief corner-stone."

The accomplishment of this object has been made possible first by the great First Cause or Divine Principle which we call God. We are taught that of ourselves we can do nothing, but that anything we may ask in His name He will do it. We are indebted to our beloved Leader, Mary Baker G. Eddy, whose love to God and desire to benefit the human race has preached the gospel to every nation, teaching us to look above the evidences of sense to demonstrate the great problems of life.

And also to Dr. F. J. and Mrs. Fluno, whose love for Truth, loyalty to Christian Science, and unceasing effort for the good of all has been demonstrated. While we rejoice in the feast of Love they have enjoyed while away, we miss them and much regret that they should be absent on this occasion, and although they are absent in person they are present in thought.

The address was then followed by a reading of a selection from the first Epistle of Peter, the burden of which was that the chief corner-stone of the church is Christ. Following this the ninety-first Psalm was read by Mr. Benedict.

There was silent prayer, followed by the whole assemblage repeating the Lord's Prayer. Mrs. Crabtree next read some selections from several of Mrs. Mary Baker Eddy's writings. When Mrs. Crabtree had finished these readings, little Miss Fluno placed a number of books, papers, and documents in the copper receptacle which was to be lowered into the corner-stone. A complete list of these articles is as follows:—

Bible, "Science and Health with Key to the Scriptures," and the following other works by Mary Baker G. Eddy, "Miscellaneous Writings," "Christ and Christmas," "Retrospection and Introspection," "Unity of Good," "Rudimental Divine Science," "Christian Healing," "Pulpit and Press," "No and Yes," "Christian Science *vs.* Pantheism," and "People's Idea of God;" also the Manual of the Mother Church, the Christian Science Hymnal, "Christian Science History," the *Journal* and the *Quarterly,* an historical sketch of the local church, its present members, officers of the Sunday School, names of the committees, the architect and contractor, and the plans and specifications of the new building, together with a copy of the *New England Magazine,* which contains an article on Christian Science, a copy of the September *Journal* of 1899, which contains an article by Dr. Fluno.

The ceremonies were concluded by readings from the Bible and from the works of Mrs. Eddy, Mr. Benedict first reading the third chapter of Malachi and the twenty-first chapter of Revelation. Mrs. Crabtree followed with a reading from Science and Health, the central thought of which was that the corner-stone of all building is purity. Following this Mr. Benedict read the hymn, "Shepherd show me how to go," written by Mrs. Eddy, and closed the ceremonies by another reading from Hebrews.

The corner-stone is of granite and is enclosed in a wall of Nevada lava stone. The stone itself is about three by two feet, and on its face it bears the following inscription, neatly chiseled:—

FIRST CHURCH OF CHRIST, SCIENTIST. 1900.

The contract for the stone work was awarded to Charles Ingersoll. The stone is a delicate pink and soft when mined, exposure to the air hardens it, until, in the course of years, it becomes as resistant as granite. Henry A. Schultz is the architect for the building, which will cost in the neighborhood of fifty thousand dollars, and will be a substantial and noteworthy addition to the many church edifices already in Oakland.—*Oakland Enquirer.*

### The Work in Ogden, Utah.

Our last year's work showed an increase in membership of over fifty per cent, and the increasing interest has manifested itself in many other ways. I will speak of one. At our annual meeting last year, it was decided to start a building fund. By November it had grown to be $350. About that time we had the opportunity to purchase the old Presbyterian Church property. A meeting was called and a committee of two appointed to confer with the owners, and find out the price and terms of payment. It was ascertained the price was fifteen hundred dollars, to be paid in ninety days. The committee was instructed to close the deal, which it did by giving its personal note for the amount without interest or mortgage. February of this year (1900), a meeting was called to listen to a report of this committee, and we were rejoiced to find the property paid for. Steps were at once taken to remodel and repair the building, which has been done. We held our first service in our own church edifice May 27, and the love, peace, and happiness manifested can be better imagined than described. We feel that this demonstration is the result of a united effort to be in harmony with each other and our dear Leader who is so faithfully and lovingly pointing the way, making the enjoyment of this great blessing possible. For all these blessings we rejoice and praise God.

Our financial demonstration has been a beautiful one, proving the statement of our Leader, Mary Baker G. Eddy, in "Science and Health with Key to the Scriptures" p. 490 (which we have printed on the wall back of and to the right of the pulpit), "Divine Love always has met, and always will meet, every human need."

Digitized by Google

Our membership is made up largely of those who might seem poor in this world's goods. We have paid for everything so far as we have gone, and will finish up the exterior, grounds, etc., and dedicate in the early fall.

We have had two lectures, one by Edward A. Kimball and one by Judge Ewing. We appreciate the fact that the lectures are a great benefit to the Field work, spreading the unadulterated Gospel of Christian Science which is healing physically, morally, and spiritually.

MRS. MARGARET UMBER, *Clerk.*

### Will Build a Church.

The consolidation of First and Second Churches of Christ, Scientist, which was effected on Monday, was made with the view of erecting a church building in the near future. Since the advent in Louisville of the Christian Scientists, five years ago, the church has steadily grown. Two years ago, the organization was divided into two bodies.

In September, 1898, the original society was incorporated as First Church of Christ, Scientist, holding meetings each Sunday at Library Hall. Two months later, the Second Church of Christ, Scientist, was formed with its meeting place in rooms in the Fonda Building. Both churches have steadily grown in membership and strength, and as each is now working under a complete set of laws, the consolidation was made in the belief that the Christian Scientists of Louisville are now a sufficiently united and influential body to have an edifice of their own.

*Courier Journal.*

### From Galveston, Tex.

The work in Galveston, Texas, is well established. Our church is regularly organized and is chartered under the laws of the state. Our Sunday morning and Wednesday evening services are well attended, our church being crowded occasionally to its full capacity. We have a thriving Sunday School of bright, happy children, who manifest as much interest in their work as the older ones do in theirs.

Our reading room is open every afternoon and a complete supply of all Christian Science literature is kept on hand.

Since the organization of the Lecture Board, we have had three lectures, the third being by Mr. Kimball in November last.

Our little church was represented at the Annual Meeting by a delegation of five of its members.

GEORGE R. CHRISTIE, *Clerk.*

### Desirable Site Purchased.

Through their agent, H. O. Baxter, First Church of Christ, Scientist, has purchased the beautiful corner at Seventh Street and Oregon Avenue.

It is the intention of this church in the future to erect a building thereon suitable for their services, including a pleasant reading room for the dissemination of information and literature upon the subject of Christian Science.

*The Santa Monica (Cal.) Daily Outlook.*

---

Professor James of Harvard credits Christian Science with some marvelous cures, and he is no dreamer. In the light of all the known facts it is just as well to leave these Christian Scientists to work out their own salvation, a thing they are well able to do.—*Haverhill (Mass.) Gazette.*

---

We commend to every thoughtful reader of the *Midland Farmer*, the study of Christian Science. It means much to suffering humanity.

*Midland Farmer,* St. Louis, Mo.

### The First Evil Step.

BY IRWIN J. MUSGROVE.

I MUSE and think and ponder
  On what the sages said,
And as my thoughts now wander
  Back through the ages dead,
I realize their words sublime
Are fitted for the present time.

What is one hour my choice
  Next hour has flown again;
Yet I have heard the voice,
  For days the sad refrain
In which our Bible prophet spoke;
"One sin another doth provoke."

With sin, alas, how true,
  We try one sin to hide,
Its ill effects undo;
  But now it is allied
To others, and the last the worst—
Then let us not commit the first

### Stand and Watch.

BY MARY ADAMS LEMBECK.

WHEN error comes to us in the form of a roaring lion, we are not slow to move out of its way, but are quick to defend ourselves against it; but when it comes in the guise of an angel of light, are we as quick to detect it? Are we not more apt to be off guard? Lost in the dream of mortal mind, the fair seeming of error pleases our senses, and we hug it to our bosom, only to be awakened from our lethargy by the sharp sting of the serpent we have so unmindfully taken into ourselves; and then what days of anguish, and "nights devoid of ease" we suffer, before we can entirely deliver ourselves. "What I say unto you I say unto all, Watch."

When we see the tall, noxious weed making its appearance in our lawn we straightway pull it up, but are we as carefully on the lookout for that low, insidious little ivy, which has such a fair appearance, and is apt to go unnoticed, unless we are keenly alive to it? It clings so humbly near to earth, that the mower does not reach it. It looks so fresh and green that we are deceived by it. And it is only with a sudden shock some morning, that we wake up to the fact that our lawn is half overrun with this ivy-weed, and our beautiful grass is fast disappearing. Then we diligently go down on our knees to uproot it; but alas! what a task we have before us, for we discover that this innocent-looking little vine is far-reaching in its effects. From the one starting-point it has branched out in many directions, running up and over the grass, throwing down roots every few inches, and forming such a screen above that the grass is choked.

Thus is it with our motives and good desires. When we let a subtle error into our thought, it darkens and beclouds us so that the very sunlight of God's love seems shut away from us. And what prayerful, earnest work it takes to follow each little branch of error, detaching the clinging tendrils, and digging down for the roots which have struck deep in the dark.

How much easier it would have been, had we only been on duty and detected the first leaf and pulled it up before it had time to spread.

It is not the glaring, self-evident evil that requires the closest work and the greatest watchfulness, but the sub-

Digitized by Google

tle, silently moving evil, which we in our apathy allow to throw down its first root, and then, ere we realize it, our consciousness is overrun with this falseness crowding out the real.

We as Scientists have less excuse for being subject to this lying serpent than have the rest of mankind. For has not our beloved Leader, Mary Baker Eddy, through her years of ceaseless toil and self-sacrifice, given us the direct rules whereby we may escape? Let us endeavor to keep constantly in our thought what she so lovingly tells us in "Science and Health with Key to the Scriptures," p. 391, "Stand porter at the door of thought. Admitting only such conclusions as we wish realized in bodily results, you may control yourself harmoniously." She does not say to lounge at ease at the door, but to "Stand" at the door. Surely with the new light which Science and Health has thrown upon the Bible, now dearer to us than ever, we should be more awake to the approach of error and quick to realize its nothingness and powerlessness. Jesus said, "Watch ye and pray, lest ye enter into temptation."

## Bread.

BY MARY J. MOORE.

How I wish I could give to you, my brother, who has not yet tasted of Science, one crumb of the Bread of Life contained therein. If you could only understand that it is a literal fact, that without the Spiritual Life, there is no life or action, how earnestly would you seek for that which would strengthen your mind and heart.

When asked what food would give me strength, the doctor replied, "It is not food she needs, but power to assimilate what she takes;" but what would supply this power, nothing on earth could give. I was starving in the midst of plenty. I knew it was the bread Jesus could have given me that I must have to live. I looked with hungry, longing eyes at Christian men and women, who, like Lazarus, rested in the bosom of Abraham and I, like Dives, would cry out from my depth of woe, for one drop of their trust in God to quench the awful craving that filled my soul and was fast consuming my body. Sometimes they would try to help me by telling me just to believe. I would take what they gave, but oh, it was not bread to me but a stone. What did they mean? I had been a Christian but could not *believe* enough to drown this agony.

At last when too weak physically and mentally to try to find help from any source, I was so hopeless, the answer to all my prayers came, God had heard me and answered me. He sent me Christian Science. I was so tired and so helpless, I said to those offering me this living Bread, "It has come too late; I cannot grasp it." Gently, tenderly, with that patient persistence Christian Science alone can give, they moistened my parched lips, fed me little by little as a loving mother would feed a wretched starving babe.

Nothing can supply the faith and love that will nurse a spiritually starved soul back to hope, but the Christ-Spirit. For months the terrors of that dark dream would return, yes, even for years; but when, like Peter, I would look at the waves and sink, there was always the dear human hand, Christ-inspired, held out to me, and I am saved. Like the ancient mariner I must tell this tale, must now and again pour out my gratitude, "lest I forget."

To you who have perhaps often in fear and trembling pressed with tender feet the thorny path, with bleeding hands have removed the sharp stones making the way clear for the little ones to follow, to you all, I would offer a tribute of praise and love, that I have not words to express.

If pride or that hateful spirit of criticism rises in me and I forget all you have done for me, and only look at the weakness or mistakes you may make as mortals, then may I repeat the song of the Jewish captives: "O Jerusalem, let my right hand forget her cunning. If I do not remember thee, let my tongue cleave to the roof of my mouth," until I do again remember that Truth and Love which is "the health of my countenance and my God."

## How Christian Science Helps in Public School Work.

BY HARRIET LEVIS.

FOR a number of years before I knew anything of Christian Science I was engaged in public school work, but never knew what it was to teach a term without being out a number of times on account of sickness, but since my healing through this blessed Truth I have not been absent a day for that reason.

The great fear I felt for my pupils, too, kept me in great bondage. If sickness came upon them or they met with any accident my sense of fear would cause me to forget all material remedies that I had learned, and all I could do would be to send them home. Now I have lost all that fear and I have many impersonal and instantaneous demonstrations in the schoolroom.

One day this past winter a little girl fell and struck her forehead on the iron support of the desk. She screamed with the pain. I put my arm around her and declared the Truth. She stopped crying and I thought the work was done, but shortly after when I looked at her a great knot was swollen up over her eye, and an ugly purple streak showing through it. I turned from her and declared the Truth again. In one moment when I again looked at her, the sweet little face was smiling up at me, every particle of swelling was gone, and the demonstration complete.

A short time ago I experienced a day such as teachers only know. There was a *seeming* careless indifference among the pupils that I did not seem able to counteract. When school closed I let in thoughts of discouragement, as error tried to voice itself after this manner: "What is the use in trying to uplift such thoughts? It is simply casting pearls before swine. Why not leave them alone and let them reap what they sow?" The *Sentinel* had been delivered to me at the schoolhouse in the afternoon. On my way home I opened it and began to read. I became so interested in the work throughout the Field, and my thoughts were so occupied with the desire to fill my own niche in this grand work, that when I reached my boarding place I was planning better work for my pupils with ususual earnestness. What had become of my thoughts of discouragement? All destroyed by the stronger thoughts of Truth.

I always say to teachers, "If you only *knew* what a help Science is, you wouldn't do without it."

## Our Duty to Our Periodicals.

AT the regular quarterly meeting of the Central Christian Science Reading Room Association of Chicago, held June 11, the following paper was read by the chairman of the meeting, Mr. Bicknell Young.

It is hardly necessary to remind this Association of the blessings that are constantly accruing to us through the wonderful love and patient self-sacrifice of our beloved Leader. Yet it is only a spontaneous pæan of praise that is ever welling up from our hearts in grateful remembrance of her labors in behalf of mankind. Through an increased understanding of Christian Science, we are beginning to comprehend better the work of its revelator, and are grow-

Digitized by Google

ing more obedient to the divine Principle which she follows and exemplifies. We rejoice in some progress in this respect as in others. May it not, however, be asked if we do not sometimes accept the blessings that are poured upon us without realizing the obligations necessarily entailed? Do we always remember that our rich legacy is also a trust to be accepted with equal joy, and fulfilled with rigid faithfulness? For instance, many of us are members of the Mother Church, and we all know that this church stands for the cause of Christian Science the world over. Does error sometimes argue to us that the care for it, and the protecting prayer, are matters that concern the dear Mother and her faithful followers in Boston only, or are we learning that they are matters of vital importance to us all equally?

Besides having the abundant evidence of our Leader's wisdom, we are also the recipients of her splendid generosity. Among her most valuable gifts to the cause and to the Scientists, is the *Christian Science Journal.* Few of us fully realize that the *Journal,* as a gift from Mrs. Eddy, belongs to us, and that like any other property, it needs some care and attention on our part. Are we supplying the need as far as in us lies? Are we all subscribers and contributors to our periodical that comes to us every month so full of the message of peace and good-will, and bearing to a sin-sick and weary world the hope and assurance of a possible deliverance? We know how beautifully edited and printed it is, and what labor this involves. We know that of all the thousands of monthly magazines that are published, this is the most important and by far the best, and its circulation should be the largest. Now it may be asked, "Do you mean to imply that the *Journal* is not prosperous?" No! not at all. On the contrary, it is highly prosperous, but that does not relieve us of our responsibilities. Let us pile its table high with overflowing praises to our God. Let us comfort and assist its faithful editors and publishers in their noble work with our assurances of gratitude, and with visible evidences of our support. Let us send in our contributions in the way of testimonies and of Scientific articles, which so many of the members of this Association are capable of writing. Let us see that all those who desire to become subscribers to our *Journal* have an opportunity of subscribing, and let it be found in every home, and by all the homeless in our city. This is our privilege.

## Extract from a Letter.

SUCH a wonderful experience came to me during the Communion week in Boston, that it seems as if I ought to tell it to some of the faithful workers there who do so much for us in the Field. During two days I felt such a sense of great exaltation, a joyful peace, so strong that I would at times, half unconsciously, sit down during my housework, thinking, I wonder what this means, it seems like heaven, can it be that God's presence can be so palpable to mortals; and tears of happiness poured from my eyes without any apparent cause.

When I went to study the Sunday lesson with the Second Reader, I found she had had a similar experience. We wondered over it together, and carried that sweet peace to our own Communion service the next Sunday.

When the *Sentinel* came speaking of the far-reaching power, or influence, of the Boston gathering, we thought that must be the explanation, that the currents of Truth had reached and blessed us, and that *we* had partaken of the Mother Church Communion. If that is true, was it not a foretaste of a glory so wonderful that it is startling to think of?

## Testimonies.

### Healed by Reading Science and Health.

I have often thought I would give to the readers of the *Sentinel* my first experience in Christian Science and also my healing, which seemed to me wonderful and beautiful, for a world of sadness was changed to a world of gladness, and a life of suffering to one of health and peace and joy.

From childhood to the time of my healing, which, to me, were many weary, lingering years, I can scarcely remember a time I was not taking medicines in some form. I was a great sufferer the larger part of the time. At last my health broke down entirely, and I lost all use of my back and limbs. My physician told me I would never be well again or able to work any to speak of. I had those who were called the best doctors in the city but received little or no relief.

It was after a winter of great suffering, I being confined to my bed, that Christian Science first came to me in the form of a tract that a Christian Scientist who had recently become my neighbor left at the door. It came to my bed and I read it wondering if it could be possible for me to be healed. I read and re-read this tract, and when my physician came I showed it to him and asked him what he thought about it. He told me it was the work of the devil. So I thought I had to give up what seemed to me my last hope, for I was getting worse all the time.

Some months after, the same lady gave me "Science and Health with Key to the Scriptures" to read, telling me it would heal me. I was then willing to try it. I was taking medicine every fifteen minutes, and was nearly hopeless. It was a bright, warm day and I was lifted into a chair and drawn out onto the porch to get the fresh air. I could only read a few lines at a time, and had been forbidden to read at all. I was reading the preface when I saw very clearly that God did not behold my suffering and that He was a God of Love. I know I was healed that very instant. I laid the book down in my lap and listened to the music of those beautiful words: "God is Love." All had seemed sad before, that beautiful day was full of sadness; now it was all changed to joy. The birds all sang that same sweet song: "God is Love," and the winds seemed to join in the chorus. Every sound I heard seemed to repeat the same sweet refrain, until I forgot all my suffering and sadness and arose and walked about the house.

That very day I threw away all my medicine and dismissed my physician. Although that was seven years ago, I have had no occasion to use drugs as medicine in any form since.

In two weeks I walked as much as I pleased, still reading Science and Health and improving all the time. I felt as one walking on air, gaining in weight until from a shadow of ninety-five pounds I reached one hundred and sixty-five pounds. Through the little understanding I had gained of this blessed Truth my husband was healed of two chronic diseases.

Not long after my healing I had the blessed privilege of receiving class instruction from one of our beloved Leader's loyal students, and later my husband also was enabled to take the same course. I have had many beautiful demonstrations both in my own family and for others.

I wish to say to those who think the price of our literature is too high, that if I could not get another copy, there is no price on earth that would induce me to part with my "Science and Health with Key to the Scriptures." Not mentioning the money paid for doctors' bills, I gave for one medical book $3.50, for another $6.75, and after studying these I found I had more diseases than before

Digitized by Google

their purchase. For the small sum of three dollars I purchased a copy of Science and Health, and through reading it understandingly found I had no diseases. It always brings a feeling of pity when I hear any one say our textbook is too costly. Who would not give three dollars to be freed from all disease? I seemed to have all, or nearly all, the ills that flesh is heir to. I will not try to enumerate them, but one that I was made free from —one that had always been with me—was a pain on the top of my head. A weight seemed to be there, and the very slightest exertion would cause the most intense suffering and the pressure would increase, with no relief. The doctors told me that I never would be freed, as my brain was too large for the space allotted to it, and that was what caused the pressure and pain. Soon after reading Science and Health I forgot I had a brain that was too large, for all the pain and pressure were gone. Oh, I can never tell how free I felt, with no pain, after so many years of suffering.

But the physical healing is only the smallest portion of the blessings I have received from the study of this book. My heart is full of gratitude to our dear Mother and also to all those who are helping daily in giving us so many good things at so nominal a price. I also wish to express my loving appreciation to those who so ably compile our *Journal* and *Sentinel*.

M. M. S., Clinton, Ia.

---

### Grateful for Christian Science.

Three years ago I was in Los Angeles seeking health and happiness. I had been treated by eleven doctors, and nothing more was offered except two operations, to which I greatly objected.

As year after year went by, other troubles were added, until at the age of forty, I was a wreck, every part of my body seemed diseased and in pain. Spells of nervous prostration kept me on the bed or lounge much of the time, and some days the room was darkened and the door locked against the talk and footsteps of my own children.

I sometimes think, Was there such a sufferer as I? and has Christian Science ever done for another all it has done for me?

After three weeks' treatment I could walk and work. From my healer I received Science and Health, "Miscellaneous Writings," Journals, and tracts. I read them or my Bible almost every hour of the day, and sometimes read far into the night.

In four weeks I could treat my children. None of them seemed to think of medicine again. Every time anything was the matter, it was "Treat me, mamma."

I had to ask for treatment for myself for one trouble or another for one whole year. At the end of that time the greatest blessing of my life came to me, the opportunity and means to take class instruction of one of Mrs. Eddy's loyal students. Since then I have been able to treat myself, the only help necessary my children have been able to give me.

I have had many wonderful experiences, and I am filled with gratitude and a willingness to consecrate my life to God and His work. I have returned to my old home where I once thought I could not live, having a dread of the cold winters here, and a belief that the high altitude caused me much suffering. I know now that God made the north as well as the south, and *all* He made is good. I am contented and willing to stay here, and have taken my stand firm on the Rock of Ages, and God is helping me through all the storms.

My children and I have our meeting every Sunday morning and every Wednesday evening. I tell the good news and loan Journals and Sentinels whenever I see an opportunity. We know of only two here who are students of Science and Health, but we know we have only to let our light shine and others will come into this beautiful religion.

I arose a few days ago with a sense of being tired out. The day had commenced very hot, there was a basket of clothes to iron, many steps to take around the house, and dinner to send to the mine by noon. It seemed impossible to accomplish it all. I saw that I must go to work in earnest. Once each hour I left my work and sat down in a quiet room. I denied the testimony of the senses and tried to realize the peace, rest, and perfection that is in divine Mind. These words from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p.100, came over and over: "The error which saith Soul is in body, Mind is in matter, and Good is in evil, must unsay it, and cease from such utterances."

At a few minutes past noon, the ironing was done, the dinner cooked and sent, and no weariness.

There was a pleasant breeze and I worked in the garden with my boys all the afternoon, thankful for a religion that we can use daily and hourly.

MRS. LIZZIE B. ALDERMAN, Grass Valley, Cal.

---

### Found Health and Happiness.

June, 1900, marked my second anniversary of being interested in Christian Science, and in gratitude I want to tell of some of the blessings that have come to me during this time.

I will briefly state my previous condition. I had many physical ills of long duration, and the more I thought of and doctored them the more real they seemed. I recollect I took seven different remedies for one complaint (catarrh) and got no relief.

There was no pleasure in life, all was sorrow and pain. I had tasted all the so-called material pleasures and the days had come when I found "no pleasure in them."

Spiritually, I was without hope. I thought God made everything, both good and evil, and if we sinned we must suffer eternally, even though we sinned through ignorance.

This was my condition when, from curiosity, I attended an evening meeting at the Mother Church. I listened to a testimony which appealed to my case exactly. I went to a Scientist and was healed of all my physical ills in three weeks.

I purchased "Science and Health with Key to the Scriptures," and there I found many passages which helped me more than the healing. Mrs. Eddy says on page 221 of Science and Health, "The purpose and motive to live aright can be gained to-day. These points won, you have started as you should . . . and nothing but wrong intention can hinder your advancement." She also says, p. 311, "Sin is forgiven, only as it is destroyed by Christ,—Truth and Love." These passages gave me new hope and I have proved them to be true.

I have found that all that is good is real, and that evil has no power and cannot master us if we are filled with Truth and Love. I have found that our heaven is everywhere, and a present possibility. I know there is no pleasure in sin, but there is pleasure and satisfaction in doing good. What joy it is to know that when we have good thoughts we not only help ourselves but others.

I have not conquered all that is unlike God, but when I look back and see what I have come out of I am satisfied. I am willing to work when old things are passing away and bright things are present and brighter ones coming.

To those who are suffering from sickness or sin, I would say, "Take hope, there is a remedy, for I know that if it has helped me it surely will help all. This world is not dark and dreary. God is Good, and Good is everywhere if we will only accept it."—E. C. CAMPBELL, Boston, Mass.

## Religious Items.

The (Baptist) *Watchman* says: "Harnack, in an article in the first number of the new Zft. f. N. T Wiss., March, 1900, discusses the authorship of the Epistle to the Hebrews, and concludes from verse 23 that there was 'a plurality of authors,' who were none other than Priscilla and Aquila, the friends of Paul. The Epistle, according to a summary of Harnack's article in the *Interior*, was addressed to a 'house church' in Rome, not the whole church; hence no church is named at the outset; it was written after the death of Peter and Paul, by persons well known as teachers in Rome, and longing to return to Rome; but the coldness of the church friends there made it more advisable to address them by letter. The names of the writers were not attached to the Epistle because Priscilla was a woman."

President Faunce of Brown University, in his baccalaureate sermon, delivered June 17, said: "The pure in heart shall see God and all that God has created; the impure in heart shall remain blind all their days. If there is in any man's soul a yielding to still lower temptation, to the seductions of appetite or passion, this still more fatally clouds the brain and makes truth impossible. The sensual man has not simply broken laws human and divine, he has deliberately gone into the cellar to live, and the vision of the sun and stars and the mountains of God is forever hidden from his eyes."

The *Universalist Leader* says: "God speaks to men, especially to those who listen for His voice and are attentive to His message that they may give it to the world. It is through men that He is imparting saving truth and energy to the world in constantly enlarging measure. Truth and goodness, virtue and righteousness, justice, purity, and love are strengthening themselves in human hearts. They are the divine and eternal forces against which the most fully equipped, the most strongly fortified, and the most bold and aggressive powers of evil can win no final victories."

W. H. Geistweit, in an article in the (Baptist) *Standard*, says: "David once said that all men are liars. He was fair, however, in saying that he said it in haste. Some one has remarked that David could have taken his time to say it, for it was true. Has it ever occurred to these supposed wits that they condemn themselves in the same breath. No, all men are not liars; there are some truthful ones—many of them: God has His chosen hosts, as He always had them; people who have not bowed the knee to Baal."

The London correspondence of the (Episcopalian) *Church Standard* contains the information that it is proposed to restore and enlarge the parish church at Clapham, famous from the fact that William Wilberforce, Granville Sharp, Henry Thornton, James Stephen, and Zachary Macaulay were regular worshipers therein, and listened intently to the preaching of Venn. Lord Macaulay has also recorded his great affection for this old church.

A writer in the (Swedenborgian) *New Church Independent*, commenting on the 91st Psalm, says: "Oh that the last motion of selfish will might die! Oh for casting down imaginations and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ! Only so can we dwell in the secret place of the Most High, and abide under the protecting shadow of the Almighty, where no evil can come."

The New York (Baptist) *Examiner* says: "The conflict between good and evil is still going on, and to the merely local or partial view it would seem sometimes as if the tendency were toward retrogression rather than progress. But such a view is speedily corrected by a general survey, historical and geographical. He who, in the light of such a survey, doubts the world's progress may with better reason doubt the solvency of his own judgment."

We often, when we say we love God with our whole soul, utter mere words; it is a sound without sense. We learned to speak thus in our infancy, and we continue, when we grow up, without knowing what we say. To love God is to make His will ours; it is to obey faithfully His laws; it is to abhor sin. To love God is to love all that Jesus Christ loved; it is to hate what he hated.

FENELON.

"There are so many petty miseries that belittle our days in passing that he who needlessly renews and repeats them assumes the wretched responsibility of making other days less serene and joyous," says Louisa E. Harris in the *Christian Register*.

A writer in *Morning Light* says: "I have heard young men talk of mean employers, but the meanest employer on earth, and the most profitless, is self, for the life of self amounts to nothing but the life of the flesh."

The *Congregationalist* says that Columbia University, New York City, has received $100,000 from a friend with which to erect a building suitable for serving as the religious headquarters of the university.

We are taught that for nations and for persons the only way of being really well-to-do is to do really well! Much *goods* may sink us, unless there is much *goodness*.

R. L. CARPENTER.

*The New Church Life* (Swedenborgian) says: "The Christian life is a journey, and he who walks in the path of life will make some progress, however slow it may be."

Thousands that are capable of great sacrifices are yet not capable of the little ones which are all that are required of them.—GEORGE MACDONALD.

If a man cannot be a Christian in the place where he is he cannot be a Christian anywhere.—HENRY WARD BEECHER.

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rchester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Is Your Prayer Answered? Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent in as early as possible. They *must* be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Digitized by Google

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter*

## Items of Interest.

### Political and Governmental Notes.

Last week President McKinley was called to Washington from his home in Canton, O., to attend a cabinet meeting at the request of the secretaries of state, war, and navy. The question of calling an extra session of Congress to authorize an increase in the army and to consider the advisability of declaring war on China was the subject discussed. President McKinley returned to his home after the cabinet meeting and the Secretary of War issued the statement that the President had determined that the facts now known do not require or justify calling an extra session of Congress.

Adjutant General Corbin has issued a statement showing the number of United States troops destined for service in China to be as follows: In China, Ninth Infantry, 1,510 officers and men; marines, 2,500; en route—Fourteenth Infantry, 1,080; Fifteenth Infantry, 540; Fifth Artillery, 142; Sixth Cavalry, 854; en route to Nagasaki, Japan, (available)—engineer battalion, 152; First Cavalry, 854; Third Cavalry, 438; Ninth Cavalry, 854; Second Infantry, 1,080; Fifth Infantry, 1,080; Fifteenth Infantry, 540; additional from Philippines—Third Artillery, 568; not designated, but available, five thousand; total, 18,072.

Governor Crane of Massachusetts, on July 17, signed the legislative bill ratifying the lease of the Boston & Albany Railroad to the New York Central & Hudson River Railroad Company. Under the laws of Massachusetts the lease could not be executed without the consent of the State, and those who believed that the surrender of the control of the road to the Vanderbilts would injure the commercial interests of New England, fought the lease bitterly.

Portland, Ore., exporters who have made shipments to the Philippine Islands have decided to institute proceedings against the United States Government for the recovery of duties paid at Manila. This action is expected to test the legal status of the Philippines, whether they constitute a foreign country or are a part of the United States.

Mint Director Roberts received word on July 19 from the mint at San Francisco that two and one-half million dollars' worth of gold has been shipped there from Australia, to be followed by three further shipments of about equal size, a month apart, making a total of about ten million dollars' worth in four months.

Captain Wilde of the United States battleship Oregon, which went on the rocks in Chinese waters recently, cabled the Navy Department from Kure, Japan, July 18, saying that his ship reached there safely and could be sufficiently patched up in a short time to return to service with the American fleet at Taku.

Brigadier General Adna R. Chaffee, who has been sent to China to take command of the United States forces, was promoted to the rank of major general on July 19.

The Chinese crisis has resulted in a large increase in the shipment of supplies from the government factories and supply stations in Philadelphia.

### Foreign News.

Reports from China concerning the fate of the ministers and other foreigners cooped up in Pekin, have been so contradictory and confused that the world at large was for a month almost as much in ignorance of the true state of affairs as though printing and the telegraph had never been invented. On July 11 the Chinese minister in Washington undertook, at the request of the United States Government, to forward a message to Minister Conger, written in the State Department cipher, which is supposed to be so secret as absolutely to preclude the possibility of the message being read by any one except Mr. Conger himself or the attaches of the legation nearest him in rank. On July 20 the Chinese minister handed Secretary Hay a message in cipher which, when translated, read as follows: "In British legation. Under continued shot and shell from Chinese troops. Quick relief only can prevent general massacre." The message was signed "Conger" in plain English, and was not dated. The Chinese minister showed messages from various Chinese officials to him concerning the transmission of the Conger message, which seemed to show that it was genuine, and that it must have been sent from Pekin July 18. Secretary Hay announced that the message was believed by the cabinet officers to be genuine, but it was not so believed in England and other European countries, but the excuse for reviving hope was welcomed by the whole world and orders were given to the allied forces to make haste to Pekin if possible.

An effort of the Chinese to overwhelm the allied forces occupying Tien-Tsin resulted in desperate fighting around the walls of that city. A relief force of about seven thousand men, composed of Americans, Germans, Russians, British, French, and Japanese soldiers and marines, including the full Ninth Regiment United States Infantry, just arrived, tried to carry the old part of the city occupied by Chinese troops, and on July 13 suffered a severe repulse, losing many men. The day following, the assault was again attempted and was successful.

A general estimate of the situation in China, made by experts at the State Department in Washington, shows that four provinces, aggregating a population of 87,000,000, and covering a territory aggregating 112,700 square miles, are in revolt against what has hitherto been recognized as the government de facto, and against all foreigners. All other provinces, aggregating a population of 236,000,000, and covering 1,200,000 square miles of territory, are neutral and under the complete control of the viceroys in charge of the respective provinces.

Lord Roberts reported a sharp battle with the Boers near Pretoria on July 16, on which both sides sustained small losses, but there have not been any actions during the past week of sufficient importance to materially alter the situation. There is enough of the Boer army left to make it necessary for the British to be extremely watchful, but seemingly not enough to execute any important moves.

The world's convention of the Young People's Society of Christian Endeavor was held in London last week. Rev. Francis E. Clark was re-elected world's president and John W. Bart, world's secretary. Both officers are citizens of the United States.

Li Hung Chang says that as doyen of the Chinese viceroys he has induced, by persuasion and advice, all the viceroys except two to join in a lengthy memorial to the throne to secure the safety of all foreigners in Pekin.

A Cape Town press dispatch says that when the South African war is over ten thousand Boers, chiefly naturalized citizens of the Transvaal, will come to the United States to settle.

The Dominion Government is putting forth strong efforts to obtain for Canada the same trade privileges with Porto Rico that were enjoyed prior to the acquisition of the island by the United States.

United States transports Flintshire, Indiana, and Wyefield started for China from Manila July 16. They carried the Fourteenth Infantry and a battery of the Fifth Artillery to Taku.

The Russian minister of the interior has issued a notice that the Siberian railway is closed to private traffic.

### Industry and Commerce.

William Waldorf Astor will shortly have another great hotel in New York City. The investment in the land and building will be about $3,000,000. The site selected is the entire block front on the west side of Broadway between Forty-fourth and Forty-fifth streets, and directly opposite the New York Theatre.

The director of the mint, in answering an inquiry recently, stated that there are $16,625,323 of five-cent pieces and $9,952,892 of one-cent pieces outstanding. Since the coinage of these pieces began the total number that have been coined is, of five-cent pieces, $17,991,298; one-cent bronze, $10,072,316.

Press reports say that Kansas has a wheat crop this year which is variously estimated to reach from 88,000,000 to 100,000,000 bushels. The most conservative grain experts place the yield at above 80,000,000, which is far in excess of last season.

It is announced by leading exporters of Philadelphia that all shipments of heavy cotton goods for the China trade have stopped absolutely, and that few if any shipments have been made since the 28th of last June.

The general superintendent of the Boston & Maine railroad has issued the following order: "On and after July 20, 1900, no car will be accepted from connecting lines which is not equipped with automatic couplers."

The reports secured by the secretary of the department of agriculture show that there will be an exceptionally large crop of apples this year in the United States.

### General News.

The Count de Lafayette of Paris, a collateral descendant of the illustrious Marquis de Lafayette, was in Albany, N. Y., July 18 as the guest of Philip Livingston Chapter, Sons of the Revolution. He made a tour of inspection of the Capitol and was shown the large portrait of his ancestor, the marquis, which hangs in the executive chamber. He also paid a visit to the historic Schuyler mansion, where his great ancestor was an honored guest on many occasions.

According to census figures and close estimates, there were in the United States in 1895 268,000 women engaged in teaching school. Twenty years ago England had 11,616 male and 14,901 female teachers. Last year there were 66,310 female and only 26,270 male teachers.

A London press dispatch announces the sale at auction of the baby clothes worn by Oliver Cromwell, which included a cap embroidered with the words, "Sweet Bab. Don't Cry," and dated 1599, the year the Lord Protector was born.

## Projectile Trains.

### Astonishing Rapid Transit Scheme to be Tried.

FIVE hours from New York to Chicago. **That is** what the American Railway Company officials say they can do with passenger, mail, and express traffic. Two hundred miles an hour. That is what they claim for their new transit scheme. Pointed compartment cars—the shape of a naval projectile—will, they say, soon make it possible to whiz from the Atlantic to the Pacific in a single day. And all this with absolute safety and comfort to the traveling public.

Electricity will be the motor power, and the single car trains will be operated by one man at the handle of a gearless motor in the point of the vehicle. The cars will be built of aluminum, and will hold fifty persons. They will travel on a single rail, elevated structure, and can be run a minute apart.

Noise will be almost eliminated, and the nuisance of burned out fuses and flashes of electric flame in the cars will be unknown, as little power will be concentrated. Instead, generating sub-power houses will be scattered over the line at a distance of one hundred miles from each other. The cars will not stop, nor even slow up at these points. The higher the speed the less the strain will be, for the new cars will be operated on the bicycle principle, with ball bearing wheels and all the weight in the centre.

✤

Each compartment will be entirely separated from the rest of the car. They will be similar otherwise to a sleeping car section, with two double seats facing each other. Each passenger will sit beside a window. There will be a private door for each compartment, and these doors will all slide open or shut at once at the touch of a single button in the motor cab.

Captain Lina Beecher of No. 231 Lincoln Place, Brooklyn, is the inventor of this wonderful scheme to revolutionize the business of the world, and he has devoted all his time to the study of it for the last ten years. He has one railroad of the kind in operation in Ontario, Can., opposite Buffalo. This is a short road at a summer resort, and runs only four months in the year.

Work will, it is said, be begun within two months on the first of these roads. It will run from Philadelphia to Atlantic City, and the charter has been granted by the state of New Jersey. That document specifies that the cars must run at a rate of at least ninety miles an hour, and that the motive power must be other than steam. The right of way is 55.6 miles long, and there is hardly a curve in its entire length. The run will be made in less than half an hour, putting the Philadelphian as close to his famous seaside resort as the New Yorker is to his.

The Atlantic City terminal has been secured, and negotiations are now being made for the station at the Philadelphia end. The road will be completed in time to begin running regular trains—and there will be at least one hundred a day—as soon as the summer season opens next year. The structure will be elevated, single rail and double track. A belt line is also to be constructed at once around a western resort. Work will, it is said, begin on the New York-Chicago road in the early fall, and it is estimated that the first train will be run over its entire length a year from next December.

Stops will be made at Buffalo, Cleveland, and Toledo. The actual length of the route is 956 miles. New York and Philadelphia capital is interested. Great secrecy is maintained at the offices of the company, No. 6 Wall Street, especially as to the Atlantic City road. In fact, Captain Beecher and President Osborn Congleton, a retired banker and broker, positively refused to tell where the short road from Philadelphia was to run. They said the American Railway Company itself, exclusive of the several roads, was capitalized for $5,000,000, and that Edward A. Green of Battle Creek, Mich., was their constructing engineer.

✤

Asked how the cars could run at the speed of two hundred miles an hour, Captain Beecher said:—

"Well, in the first place, George Westinghouse has examined our models and our short road in operation in Canada, and he is thoroughly convinced that that speed can be attained. There are many reasons for the superior speed of this system over all the existing steam and electrical systems.

"Our cars are long and narrow like arrows, and the air resistance is about one fourth that which any other system meets for a vehicle carrying the same number of persons.

"Then, too, we have the bicycle system, and there is so little friction that only one tenth of the power required on other systems is needed. A man who has only one eighth of a horse-power can propel a wheel at the rate of nearly sixty miles an hour. This is because the whole weight, or nearly all of it, on a bicycle, falls on the centre of the machine. And as only one tenth of the horse-power is used, the weight is tremendously reduced.

"Our cars are light, being constructed of aluminum, and only four feet in width, and are remarkably strong. They are to be lined with asbestos, and the sides will be perfectly smooth. They will be warm in winter and cool in summer.

✤

"One beauty of our system is that it is impossible for our cars to fall from the tracks. The traction wheels, of which there are four in each car, carry roller journals and fit into the single traction rail. The magnetic brake when applied grips this rail securely. The rail is fastened to the ties by a single rivet of steel which goes through its centre.

"Now, the security comes from the eight guide wheels, which act as the trolley. They descend from the bottom of the cars to the bottom of the ties, where there are two charged rails, one to take in the current through an insulated wire and the other to carry it away. These operate

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

on springs and are under the rails. This makes the charged rails face downward under the ties, and so does away with the possibility of getting shocked on the track.

"Two and one-half tons of balance weight has to be carried on the Empire State express for each passenger to keep the train on the track. In our road it will only be necessary to carry two hundred and fifty pounds, or one twentieth of the weight. So the reason we can beat them in speed is that we have one twentieth the weight, one tenth the power, and one fourth the air resistance.

"One hundred tons of mail matter are carried each day from New York to Chicago, and more than that much comes this way. This immense bulk of business would be increased, perhaps doubled, when by our system it would be possible to write to your agent in Chicago in the morning and receive an answer before you left your office in the evening, and without the costly use of the telephone or telegraph wire.

"By the way, speaking of telegraph wires and those of the telephone, they could be strung on our structure and would do away with the necessity for poles from city to city.

"You see with our elevated transcontinental railroads there will be no grade crossings, the road will be out of the snow in the winter, out of the dust in the summer; there will be no necessity for fencing, none for ditching or ballasting.

"The old trouble of the right of way will be done away with, as the farmer can plough his field right under our structure without danger. The speed will not have to be diminished in running through towns, as it does on the steam roads.

"As there is only a pivot to turn on, the sharpest curves can be made at top speed with perfect safety. In fact, in my experiments on short distance roads, I have turned twenty-five foot radius curves at a speed of one hundred and six miles an hour.

The cars are sixty feet long, four feet wide, and seven feet high. They have twelve compartments, each accommodating four passengers. I believe that this system will in time do away with much, if not all, the steam passenger traffic between cities and in intramural railroads. It will undoubtedly take the mail and express business, but as it now stands is hardly fitted for freight."

Captain Beecher, the inventor, was born in Bergen, Genessee County, N. Y., in 1842. His father was a railroad contractor—J. J. Beecher—and helped to build the New York Central road. Lina went to the war with the 3d New York cavalry in 1861 as a trooper, and was in command of his troop, A, at the close of the war. He accepted a second lieutenant's commission in the regular army, and served in the 7th cavalry under his old commander, General "Tom" Custer, until 1872, when he left the service and went into the railroad business.

His first job on the road was as a New York Central fireman. In 1876 he went to the Centennial at Philadelphia for the Bell Telephone Company. He remained with that company eight years. Then he went to the Rocky Mountains and took part in the building of the Colorado Midland and the Denver & Rio Grande roads.

Later he went south and helped build the Nashville & Knoxville, the Tennessee Midland, and the Tennessee Central roads. His home is in Batavia, N. Y. He invented the first portable telephone and sold it to the Bell Telephone Company. He invented four or five single-rail roads, and after studying to perfect them, visited the Latrigue system in Ireland. It runs ten miles, from Listowell to Ballybunyon, and the power used is steam. It has been running successfully for a number of years. The British have tried this system in South Africa.

*Boston Herald.*

## A Wednesday Evening Meeting.

THE Christian Science service held during the last three summers at the schoolhouse at Millard's Crossing, Minn., has been continued since last September at the village of Excelsior.

The following testimonies were given at the Wednesday evening meeting held on the 21st of March:—

One lady said, "I wish I could tell you all how much this blessed Truth has done for me, spiritually and physically. I speak spiritually first, because it has shown me God and my relation to Him. It has helped physically many times and in many ways. I will speak of only one way to-night, which perhaps may be helpful to some one who is bound in the same way that I was.

"Those who knew me years ago, and as the time has passed since, will doubtless remember that I suffered from weak eyes. The first year that I taught school in Excelsior, I passed many weary days and nights with great pain in my eyes, that always ended in severe headache. Those to whom I went for help said it was caused by snow-blindness, and that I must wear smoked glasses, which I accordingly did. My eyes were very sensitive to light, and at first caused me suffering only when out where the sunlight was on the snow, but they grew worse as the years passed, until I did not think of leaving home in the winter, or even in the soft light of a hazy summer day, without my smoked glasses, for if I did so, I would invariably return with a terrible headache which I was not able to get rid of for hours. In fact, I was a perfect slave to my smoked glasses.

Finally, about fifteen months ago, my glasses were broken, and I felt very lame indeed; but after a little while I remembered that I was studying Christian Science; that I had proved it in some ways, and decided that I would turn to Christian Science for help for my eyes. About ten days after I took a drive in a sleigh; the snow had fallen the night before and the sun was shining brightly. I was out for two hours without veil or smoked glasses. I had no need of glasses, and have had no occasion to use them since. I have been so free that I had forgotten I was ever thus bound until being reminded lately by seeing others wearing dark glasses."

Another then spoke as follows: "The healing power of Truth and Love has come to our home so beautifully in the past two weeks that I feel I must tell you of it. Last Saturday our baby was taken with a fever, and as the day went on he seemed to grow much worse. My husband was expecting us to go to St. Paul on the three o'clock train. Under the old thought I would not have dared to leave home with the baby in such a condition, yet I knew my husband would be worried if we were not there, so I started. The child seemed to grow worse constantly, and when his father came home at six, the baby did not recognize him. He lay in a stupor all the evening, and would occasionally jump and clutch at his clothes. His father was greatly alarmed, but when I told him I had left word with our healer to treat the child, he seemed satisfied. Up to this time the baby refused to take any food. We undressed him at nine o'clock and put him to bed; his little body seemed burning up with fever; but he slept well, and at four o'clock in the morning he waked up and asked for a cooky and some milk. The fever was all gone, the little body naturally cool and normal, and he was perfectly well. Only a mother can know what this meant to me. I threw myself on the bed and cried for very joy. The demonstration was so beautiful and complete that it filled us with joy."

A young lady then said, "I feel like echoing the words of our first speaker to-night and saying, 'I wish I could

Digitized by Google

tell you all, have you all *know* what a blessing Christian Science has been to me individually, and to my home life in many ways.' My first conviction that Christian Science is the Truth, came to me through reading one of the Christian Science Journals. A practitioner had been called to our home to treat a member of the family, and on her second visit had left some Journals.

One day soon after, I was suffering intensely from an old trouble of long standing. I sat down and took up one of these books. I had never known or heard anything of Christian Science until this Scientist had been called to our home, but this afternoon I picked up this *Journal* and turned to an article on "Love." I remember nothing of the wording of that article, but as I read my pain left and I realized that it was through *something* in that article. I did not know then what it was. I now know it was the impersonal healing of Truth and Love. The trouble from which I was then suffering has never returned. Realizing that there was something in Christian Science which I had not known before, something beyond anything I had ever conceived, I determined to learn what it was. I have found out in a greater or less degree, and what I have found makes me want to know more and more of the great Love that has blessed me and is blessing me every day."

✠

A gentleman said, "Friends, I have much I could tell you of what Christian Science has done for me and for my family. It would take a long time to tell you all. I will note only one or two cases of healing. First, a case of catarrh. Most of you know what this is. For many weeks at a time have I suffered from continual headache. In the spring and in damp weather I always had that dull headache. Of course I doctored, used everything I could hear of, all the patent remedies, etc., but with no relief. Since I have come to Christian Science, this trouble has disappeared, and I now know nothing of the headaches and suffering this catarrhal trouble used to cause me.

"I also suffered from stomach trouble. I was scarcely able to eat anything without wondering if it would agree with me or would I have to suffer from it. Now I eat what I wish and give it no thought, and this trouble has also disappeared.

"Christian Science has done and is doing great things for me."

A lady then said, "My friends, it is a great privilege to come here to-night. Ten years ago this month the Gospel of God's love was preached to me. A year or more before that, we had come out in the spring, as usual, to our home here on the shores of Lake Minnetonka, with my father. It had been months of suffering; it had been years of suffering. Everything that medical skill and loving care could do had been done for him. I am not the only one who thought him a man of perfect character, a perfect Christian. For weeks after we came, we went through such agony as I hope you may never see. Our physician came and did what he could for us. I can never think of his constant sympathy and great tenderness without a feeling of gratitude. He did much for us at that time; he did all he could, and yet the agony went on and we could do nothing. When the end came, I went out in the early June morning and I said, 'There is no God in the universe.' I had been taught that God sent sickness. I knew that God had not sent that sickness to my father. If I had to believe the Bible with the statement that God sent sickness, the Bible was nothing to me.

"That fall I was sent on for the second time to a well-known physician of Philadelphia. After an operation and three months of the rest cure, he very tenderly told me that I could never be a well woman. I went to Europe and was there nearly a year. The physicians to whom I went agreed upon one point, that I could never be well, and I came back home.

"For two years my husband had wished me to try Christian Science. I had known something of mental healing, so called, and supposed Christian Science was the same; and while, after my father passed away, I could not read the Bible and could not pray, I still refused to have anything to do with a system of healing which I called blasphemous. I had heard that Christian Scientists made themselves equal with God; that they claimed to be equal with Jesus Christ; and I said I would die before I would have anything to do with so blasphemous a way of healing.

"Finally, when there was nothing else to do, no place else to go, I went to a Christian Science practitioner. I told her very frankly that I had come to satisfy my husband, so that after I was gone he could say that I had done everything he had asked me to do in order to be spared to him and my children, but that I did not want her to talk to me of Christian Science, because I knew it was blasphemous. Very quietly she said to me, 'I don't see why you should not be well. God is your Life, and God is Love.' These were the most wonderful words I ever heard, in their absolute quietness and understanding.

"I went to her for a few days and began to feel within myself a possibility of getting well, and then I began asking her some questions. Every time she answered me with a text from the Bible, never a word of her own. Finally I said to her, 'You are answering me with words I have known all my life.' She said, 'Of course. This is the practical demonstration of Jesus' teachings. God does not send sickness any more than the sun sends darkness. You, in your ignorance of God, have gone away from Him. If you go away from the sun you get into the darkness, but if you come back, you are in the light.'

✠

"So, very gently, and in the *proof* of God's love, I came back; came to God, for the first time in my life. The healing was wonderful. An operation was performed which physicians had told me could not be performed without death. Christian Science performed the operation, making me a well woman.

"So, my friends, it is a pleasure to stand before you to-night. This has been my home for twenty-one years. Surely I am one with you although not here in the winter, and I rejoice with you in the establishment of these Wednesday evening meetings, where we come together as one family to testify of the love and healing that has come to us in Christian Science."

The next testimony was from a lady who came to Excelsior in January to study medicine with a physician living in the village. The Sunday after her arrival she attended the Christian Science service with a cousin and listened to the lesson-sermon on "Love." During the service there came to her, with wonderful clearness, the understanding of the allness of Love; its omnipotence, omnipresence, and omniscience; and that in Christian Science is the "healing of the nations" for the knowledge of which she had come from Maine to Minnesota. She at once gave up her plans for the study of medicine, and devoted time and thought to the study of "Science and Health with Key to the Scriptures." In the early spring she took class instruction, applying at once the rules of Christian Science with happy results. She has returned to her home, a small town in Maine, where she is at present the only Christian Scientist and where she had already sent the message of Love that "doeth all things well." M.

### Reply to a Clergyman's Article.

*Editor of The Courier:*—The article by the Rev. George Whitman, in your paper of May 28th last, intended as an answer to the public lecture on Christian Science by Judge William G. Ewing, is interesting, but ineffectual. Mr. Whitman not only does not answer Judge Ewing, but he makes admissions in the opening paragraphs of his carefully prepared article, which render futile any criticism, by him, of Christian Science.

When Mr. Whitman speaks of "disintegration" and "disaffection" among the churches, as accounting for the growth of Christian Science, he discloses, no doubt, one of the contributing causes; but he raises a point which I refrain from pressing home, for the query naturally follows, "Why is there disaffection in the old churches?"

Christian Science, properly understood, is a unifying force, not a segregating. It is a welding of faiths, not a re-action. Paul speaks of "One Lord, one faith, one baptism." Christ preached no creed, doctrine, or sect. All the multitude of these, referred to by Mr. Whitman, have sprung up since the time of Christ. They are man-made, mortal conceptions of the divine Christ, his mission and teachings. The aim of Christian Science is to present primitive Christianity, practical and simple; having no other basis of authority than the Word of God. To practise what Jesus taught, to imitate, so far as is now possible, his works, to fulfil his command: "Go ye therefore, and teach all nations, . . . teaching them to observe all things whatsoever I have commanded you." This is the life work of Christian Scientists.

I will not encroach on your space to enter into a doctrinal discussion with Mr. Whitman over the several points he raises. I would like to point out, however, that his quotations from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, are incorrectly made. For example, your article quotes from page 13: "Soul is God, unchangeable and external, and man co-exists with and reflects the soul." This is improperly quoted, and in the original it reads: "Soul is God, unchangeable and eternal; and man co-exists with and reflects Soul." Christian Science is in no sense pantheism, and Mr. Whitman's understanding of it is limited, if he believes it teaches that "God is in man," or that "God and man are one." This betrays a superficial study of Christian Science. What can be more clear than the following statements from Science and Health: "Man is the expression of God, Soul" (p. 473); "God and man are not one; but in the order of Divine Science, as divine Principle and idea, God and man are inseparable. God is the parent Mind, and man is His offspring" (p. 232).

Mr. Whitman may startle some of his orthodox friends when he says, "Any reader of the Bible needs not to be told that Christ's mission to the world was a mission to save the lost, and not to heal people." How does Mr. Whitman explain the following text: "And when he had called unto him his twelve disciples, he gave them power against unclean spirits, to cast them out, and to heal all manner of sickness and all manner of disease. . . . These twelve Jesus sent forth, and commanded them, saying, Go not into the way of the Gentiles, and into any city of the Samaritans enter ye not: but go rather to the lost sheep of the house of Israel. And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

Mr. Whitman says, "It is plain as words can make it that Jesus and the Bible writers believed in the intensity and actuality of physical pain, and, in this regard, the Scripture teaching is directly at variance with the teachings of Christian Science."

Jesus disregarded material laws, and made them null and void, by healing in direct opposition to them. There is nothing in Scripture to warrant the assertion that Jesus believed in the reality of pain and disease. In Science and Health, p. 470, we read, "If sin, sickness, and death are as real as Good, Life, and Truth, then they must all be from the same source, God being their author. Now Jesus came to destroy sin, sickness, and death; yet the Scriptures aver 'he came not to destroy, but to fulfil.' Is it possible, then, to believe that the evils which he lived to destroy are real, or the offspring of the Divine will?"

Christ did not suffer. The human Jesus did, and through his sufferings the eternal Christ was made manifest. Jesus' sufferings do not disprove Christian Science, but rather substantiate it. WILLARD S. MATTOX.

### A Physician's Views.

THE following extract from a paper by H. S. Brewer, M. D., Chicago, Ill., published in *The Alkaloidal Clinic*, August, 1899, is interesting as showing the change of thought in the medical profession.

The mind is the natural protector of the body. Every thought tends to reproduce itself, and ghastly mental pictures of disease are reproduced in the body. The body can be changed from a diseased to a healthy condition through the operation of "interior forces." This is the natural method. Drugs are artificial agencies. The only thing that any drug can do is to remove obstructions that the life forces may then have a better chance to work. The real healing process must be performed by the operation of the life forces within.

For generations these important influences that play upon nutrition have remained an unconsidered element in the medical thought of the day. The most exclusive drift of its studies is directed to the action of matter over mind. This has seriously interfered with the evolutionary tendencies of the doctors themselves; consequently the "psychic" factor in medical practice is still rudimentary. However, the twentieth century is upon us, and we who live will experience great changes.

> Our doubts are traitors, and make us lose the good
> We oft might win, for fearing to attempt.

Many foolish theories have been sifted and exploded, and yet the underlying principle, the truth, remains. God is the spirit of Goodness. Goodness is God. Be good and you'll be happy and healthy.

Do not shut out the "Divine inflow," "My words are life to those that find them, and health to all their flesh."

Would you remain always young; would you carry all the buoyancy and joyousness of youth, then have a care concerning what you allow your thoughts to dwell upon—make yourselves, as Ruskin says, "nests of pleasant thoughts," and you will find that they will be reflected outwardly.

> Some of your griefs you have cured,
> And the sharpest you still have survived;
> But what torments of pain you endured
> From evils that never arrived.

In the way of good thoughts, then, is life, and in the pathway thereof there is no death.

> For Good may ever conquer ill;
> Health walks where pain has stood;
> As a man thinketh, so is he;
> Rise, then, and think with God.

Love begets love. Hatred begets hatred. Thoughts of evil produce their like. Selfishness is the root of evil, ignorance, and crime.

The time will soon appear when to be ill is to be disgraced. The learned professions are all looking backwards. A man once journeyed into a far country, and he came to a place where he was very much shocked to see that the inhabitants thereof all walked backwards. He asked to know the reason for such ungraceful conduct, but they could give no other than that they had always done so. And what seemed to him ridiculous was to them the right thing to do. He turned a few around, the face to the front, and soon had them all going face forwards, heads up and happy, where they once were a miserable set from looking backward, and gazing on their "trip-ups" from whence they had come. In a word, precedent is a bungling way to travel.

Every day should be a fresh beginning.
Listen, my soul, to the glad refrain;
And spite of old sorrows and older sinning,
And puzzles forecasted, and possible pain,
Take heart with the day and begin again.

You may ask how I can write thus, and be a conventional, orthodox physician. God save me from being one. You might as well try to make a poet or an artist as to make a physician; he is born, not made.

## No Attempt to Affect China.

A special despatch from Chicago in the *Herald* of last evening stated that the Christian Scientists of that city were united in an effort to influence events and shape destinies in China by concentrating their mental powers upon that object. Mrs. Merwin H. Conger, the wife of the United States minister at Pekin, is said to be a believer in Christian Science, and that fact draws to the family the especial sympathies of their Chicago co-religionists.

The despatch further stated that the Christian Scientists throughout the country had joined in the attempt to rescue the imperilled Christians in Pekin, and that there is a feeling among the faithful that success is sure, and that the legations, together with the missionaries, will be later heard from in a place of safety.

Judge S. J. Hanna, First Reader of the Mother Church, The First Church of Christ, Scientist, in Boston, was seen at his home by a reporter for the *Herald* last night, and asked if it were true that Christian Scientists throughout the world are directing their mental forces toward Pekin, with the expectation of saving the besieged foreigners there.

Judge Hanna replied that he had heard nothing of the movement till he had seen the article in the paper, and therefore judged that it must be a local matter, and confined to Chicago, and, most probably, further limited to individual friends of the Conger family.

"Were it an action of the church as a whole," he continued, "we of the Mother Church, and I, as the First Reader of that church, would assuredly know all about it. Of course, it is a natural and a fitting thing to pray for friends in peril, and this action you speak of is prayer from the Christian Scientists' standpoint. We all want everything possible done for the relief of the situation at Pekin, and approve of the prayers of the Christian world to that end; but as for any concerted action among the Christian Scientists, I have heard nothing of it except in the newspapers."—*Boston Herald.*

## Another Statement.

To the Editor of the *Journal:*—

Sir,—A great deal is being made of the statement that Christian Scientists are praying for the foreigners in China, and following this trend of comment, the *Evening Journal* of July 16 has some remarks on the subject. You very wisely say that "there is nothing especially novel in this," and I wish to point out that, like all Christians, regardless of creed or sect, Christian Scientists have, as individuals, been praying earnestly and hopefully for the safe deliverance of all in Pekin and elsewhere in China. Especial earnestness was given to these petitions because Mrs. Conger, wife of the United States minister to China, is a Christian Scientist. But it is not remarkable that Scientists should add their efforts to those of the united Christian world. The newspapers do not devote much space to an account of how the Methodists or Presbyterians or Catholics are praying for their friends in China. Why, then, this interest in what Christian Scientists are doing in common with other Christians? As you say in the article in question, "the action of Christian Scientists is commendable," but it is wrong to assume that this natural act has been advertised, consciously, by any Christian Scientist. Whatever notoriety has come is deplored by followers of this religion. It is neither sought nor desired. Also, I would call attention to the fact that, so far as I know, there is no official action of the Christian Science churches, as a body, though individual prayers are being offered.

It would seem that the unkind criticism with which you close your editorial, is uncalled for. Patients of Christian Scientists are never denied medical attention when they or their families desire it. An appeal to statistics shows that the mortality among Christian Scientists is much less than with any other system of healing.

Yours truly,
WILLARD S. MATTOX
In the *Albany (N. Y.) Evening Journal.*

## Transitions.

BY AMY ALLEN.

OUT of the noisy tumult,
Out of the fevered heat,
Out of grewsome fancies,
Out of self-hood's cheat.
Into the peace and quiet
Of Soul's starry night,
Into the Love of Heaven,
Into the Soul of Right.
Out of care and worry,
Out of fear of harm,
Out of matter's dominion,
Out of the breath of storm.
Into the One desire,
To fasten faith above
Into the realm of Spirit,
Into the "Heart of Love."

## An Explanation.

IN the article entitled "A Christian Scientist's View," which appeared in the *Sentinel* for June 7, the quotation marks were omitted from the poem "Where is God?" The author is Dr. Minot J. Savage of New York.

SUE H. MIMS.

### Request to Applicants.

Persons who sent their applications for membership in time to reach the Clerk before May 15, and who have not received a notice of admission, are requested to notify the Clerk of the Church, William B. Johnson, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### An Interesting Item.

A CORRESPONDENT, who is an earnest Christian Scientist, writes us an interesting account of a conversation she recently had with the rector of a prominent Episcopal church in an important city, the substance of which was that at a convention soon to be held, which was to be composed of the brightest minds in that denomination of both England and America, they were to devote one whole day to exposing the error contained in Christian Science, or to quote the words of the rector, "they are preparing a lash to whip the Christian Scientists" of his city. He further said that each Wednesday evening one of their prayers was that God might convert all who were under the delusion of Christian Science.

Our correspondent further says that this minister was kind and courteous in every way. We submit this bit of information for the interest it may have for Christian Scientists, and with only the utmost good feeling toward our friend who charges us with delusion. We cannot, however, refrain from querying a little by the way.

Our friend must surely know that Christian Scientists are not bad people. He must know that they are a moral people, a law-abiding people; that they are sincere and earnest students of the Bible; that they are a prayerful people. He must know that, right in his own city as well as elsewhere, Christian Scientists have healed many sick people, and are constantly healing many; that they have been instrumental in assuaging the sorrow of many and thereby making them happier, and that they are daily engaged in that kind of work; that they have been the means of redeeming many of their friends and fellow-citizens from bad habits, such as drinking intoxicating liquors, inebriety, the filthy tobacco habit, and sins of a grosser kind; that through their ministrations the moral and material conditions of thousands have been improved; that many of his fellow-beings have been made better, healthier, happier, and holier in every way. He will find all this and much more to be true if he will make honest inquiry to that end.

If he is not aware of the truth of what is above said, the fault is with himself, for the facts are at his door; he is surrounded by them; they can easily be ascertained.

Now, when our friend and his co-workers, at their Wednesday evening meetings, pray for the conversion of Christian Scientists, do they ask God to prevent them from being a moral people, a law-abiding people? Do they supplicate God to stop Christian Scientists from sincerely and earnestly studying the Bible? Do they implore God to cause Christian Scientists to cease being a prayerful people? Do they petition God to compel Christian Scientists to cease healing the sick? Do they address the throne for such divine interference as will make it impossible for Christian Scientists to further assuage the sorrow of their fellow-citizens, or to continue their work of making them happier? Do they call upon the supreme power to shut off the ability of Christian Scientists to relieve their fellow-beings from the fearful and death-dealing habit of liquor-drinking, and the filthy, useless, and extravagant practice of chewing and smoking tobacco? Do they seek the aid of Omnipotence to prohibit Christian Scientists from aiding their friends and neighbors in overcoming the grosser and nameless forms of sin which many will testify have been overcome by the help they have received from Christian Scientists?

Again, our friend will find by a little inquiry, if he has not already found, that some of his fellow-citizens have been cured of diseases pronounced absolutely incurable by the medical profession, by reading the Christian Science text-book, "Science and Health with Key to the Scriptures," which book was written and given to the world by a most devout Christian woman, whose whole life has been given over to the service of God and mankind. In their prayers do he and his co-laborers ask that their fellow-citizens cease to read this book that no more may be healed thereby? Do they request God so to interfere that the Rev. Mary Baker Eddy can no longer place her healing and saving book in the hands of the people, in order that no more may be healed and saved thereby?

If these things are not prayed for, what is it that our friends do pray for, each Wednesday evening? In what sense do they pray for the "conversion" of the Christian Scientists? What do they ask that they may be converted from?

And when our friend and his ministerial brethren shall assemble in convention to expose the errors of Christian Scientists, do they purpose to show that it is error to be moral and law-abiding citizens; that it is error to be sincere and earnest students of the Bible; that it is error to be a prayerful people; that it is error to heal people of sickness; that it is error to assuage sorrow and make people happier; that it is error to redeem people from the awful habit of intoxication and the obnoxious tobacco habit; that it is error to publish and read a book which is healing myriads of sick people and redeeming them from sin; that, in short, it is error to do the works that Jesus Christ did and commanded his followers to do?

If our friends, comprising the brightest Churchmen of England and this country, shall be able to convince people that the works Christian Science is doing *are* error, they will most certainly do so at the expense of Bible teaching and the Christian religion which Jesus founded. Do they wish to do this?

Again, we cannot but query whether our friends of the Episcopal church, and other churches, had not better give their time Wednesday evenings, and other evenings, to praying for the conversion of the wicked by whom they are surrounded, and let other Christian people alone? Whether all the time our Christian friends have for work and prayer may not be most profitably spent in endeavors to stop the appalling wickedness they know abounds on all sides? Whether they have not abundance of work to do in aiding the poor and suffering,—the victims of the awful conditions which Christian Scientists are earnestly endeavoring, and with marked success, to destroy?

In Christ's name let those who seek to follow him, give their time and prayerful energies to destroying the works of the world, the flesh, and the devil. In doing so they will have no time left for the vain and foolish business of praying for the conversion of a class of Christians who are doing the greater works which he commanded, and who know what *true conversion* is better than do those who are asking the divine aid on their behalf.

## Among the Churches.

### A New Church Home at Cedar Rapids, Ia.

The opening of the new Christian Science church home last Sunday (July 1) was largely attended, nearly every seat in the auditorium being occupied. Delegations were present from Mt. Vernon, Lisbon, Mechanicsville, Anamosa, Springville, and Marengo.

The regular order of the service was followed as con-

Digitized by Google

ducted in all the Christian Science churches of the land, with the exception that on this occasion there was a brief address of welcome by the First Reader which was in part as follows:—

By request of our Leader, Rev. Mary Baker Eddy, the Christian Science churches have established, and are continuing to establish Christian Science reading rooms. The desire to obey this request brought to view greater possibilities, and the exercise of faith in God and His spiritual means and methods, has given us these commodious and beautiful rooms.

A cordial and loving welcome is extended to each and every one to this new church home and to our reading room adjoining. May they prove harbors of rest to the weary and heavy laden, whether bound by the chains of sin, sickness, or sorrow, or the universal unrest of mortals.

These rooms will be open daily, with some member in attendance. All Mrs. Eddy's works and the works of The Christian Science Publishing Society will be for sale, as well as for perusal, and all are invited to come hither. Some four years ago it was my privilege to meet for the first time with a small body of the pioneers of Christian Science workers of this city in a small back room in Granby Building.

The thought then, and voiced later, was, that I had found the true church of Christ, for I there found the poor and the rich, the blind, the halt, and the sinner, realizing one common need, come together to learn the deep truths of God and how to overcome the seeming power of sin, sickness, and death, through the inspired teachings of the Bible revealed through the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

The Psalmist sang, "Thy word is a lamp unto my feet, and a light unto my path." Paul writes in second Corinthians, "Who also hath made us able ministers of the new testament; not of the letter, but of the spirit; for the letter killeth, but the spirit giveth life." He also wrote in Hebrews, "For the word of God is quick, and powerful, and sharper than any two-edged sword, piercing even to the dividing asunder of soul and spirit, and of the joints and marrow, and is a discerner of the thoughts and intents of the heart," showing that God is supreme over body as well as soul. This is why Christian Scientists cannot pray to God for the soul's good and then turn to drugs for the body's good. His word establishes in individual consciousness the omnipotence of God.

This is our hope and confidence whereby we rest in God. Not in neglect or ease but with renewed energy and activity of thought, manifest in watchfulness and prayer, until every promise shall be realized and God's will be done in earth as it is in heaven. "For God is the king of all the earth: sing ye praises with understanding."

*Daily Republican.*

### Philadelphia Church of Christ, Scientist.

Since its organization the Philadelphia Church of Christ, Scientist, has held its services in a furnished room in the Fuller Building, 10 South Eighteenth Street, leased and also occupied by a musical club. We have now emerged from this room into another in the same building, of which we have the exclusive use. We have furnished the new room neatly and appropriately, with comfortable oak chairs, tables, etc. The walls are cream with an upper broad band of green, the ceiling between the heavy oak beams is also cream. The window shades, platform, and aisle carpet are green. At the head of the room, which is oblong and of good size, is a raised platform with the reading desks and handsome armchairs for the Readers thereon, and suspended over the two large windows on a panelled pale green board in letters of gold are the inspiring words, "Divine Love always has met, and always will meet, every human need." Mary Baker Eddy. On each side of this, across the corners on similar boards, a little lower down, are the words, "Ye shall know the truth, and the truth shall make you free." Jesus. And "God is Love." St. John.

Our first meeting in the new room was on Communion Sunday, June 10. The room was beautifully decorated with potted palms and ferns and white cut flowers. The occasion being a modest departure from a lower to a higher plane, our Communion was especially joyous and our hearts were one in praise and thanksgiving to Almighty God.

JOHN WHITE.

### Progress in Walla Walla, Wash.

The Christian Scientists of Walla Walla made an advance step Sunday, May 27, when they held their first service in their new quarters. Since 1896 we have been holding services in rooms in a block on Main Street. As our audience continued to grow our rooms became too crowded, and we were pleased to find we could lease the old Congregational Church. It was immediately secured, after which we had it freshly papered, painted, and arranged for our services, and also our reading rooms. It is in a central location and only one block from Main Street.

At the first service in the new home the room was well filled. We have a growing Sunday School and the children have many beautiful demonstrations. Our reading rooms are open each afternoon and considerable literature is being sold and distributed.

The work here has been, seemingly, of slow growth, but we cannot but feel that, as the seed we have tried faithfully to sow has been good, the harvest is sure. And as we discern glimpses of the ripening harvest it inspires us to renewed zeal and activity.

We feel very grateful to our beloved Leader who has made this demonstration possible for us by giving us "Science and Health with Key to the Scriptures," and also are we thankful for our *Journal, Sentinel,* and *Quarterly* which come so regularly to us, bringing always the very thought we seem most to need.—L. I. B.

### From Brisbane, Australia.

The Field of Brisbane, Queensland, Australia, desire as an act of loving loyalty and gratitude to report themselves.

No student or teacher has been in our midst, but our beloved impersonal teacher, "Science and Health with Key to the Scriptures," under God's guidance, has shown the light to some fifty or more humble searchers after Truth.

Glorious demonstrations of the power of divine Love are with us as signs following, healing sickness, destroying sin, banishing bondage, proclaiming joy, health, happiness, peace.

In various homes the Lesson-Sermon is read every Sunday, and we now have our own book department, where all Christian Science literature is obtainable.

As grateful children, words fail to describe our feeling toward our loving Mother, the one whom God entrusted with His glorious charge. We pray to the Giver of all to be worthy partakers of her message.

THE BRISBANE FIELD.

### Charter Granted at Sharon, Pa.

First Church of Christ, Scientist, Sharon, Pa., was granted a charter under the existing laws of the state May 21, by Hon. S. H. Miller of the Mercer County Court.

ETHEL V. CARLEY, *Clerk.*

## Reading Rooms Opened.

### Reading Room Re-opened.

Many residents remember well the excellent Christian Science reading room recently opened in the Greisheim Building, which was lately destroyed in Bloomington's great fire on the 19th inst. In the midst of the general scramble for new locations, when all available space was being snapped up, the Christian Scientists secured a location for their reading room on the second floor of the Jacoby Building, 515 North Main Street, where they are now comfortably located. At the regular meeting of the Christian Scientists on Wednesday evening the need of new furnishings, stock of literature, etc., for their new location was stated, and the members given an opportunity to contribute. In a few minutes a sufficient amount was raised, and on Friday, three days after the fire, the room was again open to the public, whose appreciation of this means of informing themselves on the subject of Christian Science was shown in the large numbers who visited this room while located in the Greisheim Building. The room is open each day, except Sunday, from 10 A.M. to 4 P.M. All Christian Science literature will be found in this room for public use, and a welcome is extended to all.

*Daily Pantagraph,* Bloomington, Ill.

### At Elkhart, Ind.

Early in May of this year the members of First Church of Christ, Scientist, of Elkhart, Ind., rented a neat suite of rooms on the ground floor, on Pigeon Street, about half a block from Main Street, and have furnished it for a Christian Science Reading Room. The front room and the room next back of it are carpeted, lace curtains drape the windows; a bamboo table and a bamboo book-rack are used on which to exhibit Christian Science literature. Pictures of the Mother Church, Concord Hall, and of Mrs. Eddy's home in Lynn where Science and Health was written, are arranged in an attractive manner. On the wall is a large engraving of "The Angelus," also a fine photograph of our Mother and Leader.

The sofa, the pillows, the chairs, etc., are contributions from loving hearts. The room is cared for each afternoon and evening by volunteers, who are willing and eager to do any service for Love, and to show their appreciation of the blessing that has come to them through Christian Science.

LOUISE LOWELL.

### At Rockford, Ill.

The Christian Scientists are waging an energetic war for the dissemination of information in regard to their beliefs. The most recent manifestation of their efforts to acquaint the public with what they claim for Christian Science is the opening of a reading room where literature bearing on the subject is displayed for all who care to investigate and profit. This room will be free to the public each day except Sunday from 2 to 5 P.M.

The room is comfortably furnished and on the tables are the Bible, Mrs. Eddy's works, and the periodicals dealing with the Science. Literature on the subject will also be on sale. The rooms are located over the McPherson bakery in West State Street, and every one will be made welcome.

The local church is drawing larger audiences to the meetings each Sunday, and has been compelled to move to larger quarters several times. A great deal of interest has been shown in Christian Science by many people.

*The Morning Star.*

### At Appleton, Wis.

Our free reading room was opened to the public shortly after the order came out. We are greatly indebted to the children of our Sunday School who furnished the *Journal* and *Sentinel* for one year, besides one thousand tracts, one hundred supplements, a quantity of pamphlets, and will soon buy a copy of "Miscellaneous Writings." This same class some time ago placed a copy of Science and Health and a copy of "Miscellaneous Writings" in the city library, and thus the good work goes on.

We feel very grateful to divine Love for the many manifestations of its presence and power.

Christian Science is making steady progress here, all our members are loyal to our Leader, Mrs. Eddy, and love her for what she has done for mankind in bringing to our consciousness a higher realization of our relation to God and what the ever-present Christ will do for those who try to follow the Master's footsteps, "in the way of His appointing."—E. G. WILLSON, Appleton, Wis.

### At Parsons, Kan.

The Christian Scientists of Parsons, Kan., opened reading rooms April first under the auspices of First Church of Christ, Scientist.

They have two nice rooms in the Pierson Block, one of the best in the city.

All Mrs. Eddy's works and works from The Christian Science Publishing Society are on hand. We feel that this was a demonstration of divine Love, and hope that through this means, many may come into the understanding of the Truth.—M. F. H.

### At Yankton, S. D.

The Christian Scientists have moved their reading room from the Pennington Block, where they have been located for the past three years, to more commodious rooms in the Bunker Block over 101 3rd Street, East. As in the past these rooms will be open to the public from three to six each afternoon, Sundays accepted. Every one is most cordially invited to visit the rooms and use the books, periodicals, and all Christian Science literature which is kept there for the perusal of visitors.

## The Lectures.

### At Omaha, Neb.

Under the auspices of First Church of Christ, Scientist, of Omaha, Neb., Judge William G. Ewing of Chicago, Ill., delivered a lecture at the Creighton-Orpheum Theatre on Friday evening, June 29. A very large and representative audience gathered to hear the speaker, who took for his subject, "Christian Science, the Religion of Jesus Christ." In introducing Judge Ewing, Attorney Robert W. Richardson said:—

Digitized by Google

In these June evenings when the open air has such persuasive charm for us, a greeting from such a splendid audience as this is truly inspiring. It is, as well, a deserved compliment to the distinguished gentleman we welcome to deliver the address of the evening, and also manifests your interest in the subject for discussion.

Judge Ewing, I would have you reflect that you are now in Omaha, one of the principal stations on the "Main Line" around the world, and never yet elsewhere have you had the pleasure of meeting a more generous and broad-minded audience.

The novelty of this new-old doctrine is in getting back to purely Bible teachings both in spirit and in practice. There is such a prevalent misconception on the part of the general public of the teaching and practice of Christian Science that the Mother Church in Boston has seen proper to establish a Board of Lectureship for the purpose of clearing away many wrong impressions concerning it and making plain its truths by the means of these lectures.

The Honorable William G. Ewing, who is with us this evening, under the direction of this Board, is too well and favorably known to require reference. He is an able lawyer, an eminent jurist, a profound and eloquent advocate of this great Truth.

Ladies and gentlemen, I now have the pleasure of introducing to you the Hon. William G. Ewing, who will address you on the subject, "Christian Science, the Religion of Jesus Christ." *Correspondence.*

---

### At Weeping Water, Neb.

Hon. E. M. Pollard of Nehawka, was present at the lecture on Christian Science in this city given by Judge Ewing of Chicago, on the evening of Monday, June 25, and introduced the speaker in part as follows:—

*Ladies and Gentlemen:*—I believe that one of the greatest criticisms that can be made upon our people of the West to-day is, that we lack charity for those who differ from us, whether it be in business, in politics, or in religion. We are prone to give a deaf ear to the presentation of any belief that is not in harmony with our own views. The custom is wrong. I believe we should be ready at all times to give an open heart to the presentation of any question, by any person, no matter how absurd or ridiculous it may appear to us. There are to-day a great many religious beliefs scattered throughout our land. The doctrines of one of the great religious bodies of to-day are diametrically opposed to the doctrines of another. Not all the great churches have the same views. For that reason our Methodist brother has no right to say that he, and he alone, is right.

I believe that we should give a patient hearing to the views of any one. I also believe that before we formulate our views, we should make for ourselves a careful research and a thorough study before we make up our minds.

Too many of our people are inclined to let others think for them. Living as we are now in the dawn of the twentieth century, I believe that we should think more for ourselves. I believe that no man has a right to an opinion, unless he can give a sufficient reason for the same.

I take great pleasure to-night in introducing to you a man who has made a study of the theme he will present. A man who has gained eminence as a lawyer, jurist, scholar, and who has left that field, with his great influence, and has taken the platform to teach mankind what he deems to be the true way to Christ.

I take great pleasure in introducing to you Judge Ewing of Chicago.—*Weeping Water Republican.*

### There is Rest and Peace on Earth.

BY E. H. B.

YES, here, now; not idle words, but words of hope and strength,—sure as that God is Love. It is *not* too late for you, despaired of by the doctors, for you, bereft of all worth living for, and dwelling in the darkness without hope or God. The very depth of suffering from failure of every hope has made you willing to give up what (unknown to you) has separated you from infinite Love, which alone can, and does, make you "every whit whole," physically, mentally, and spiritually.

Centuries ago, there appeared to an expectant people a great light, proclaiming "Peace on earth, good-will to men." It came in sweet humility, teaching purity, truth, and love,—a doctrine so strange and revolutionary that both the message and the messenger were rejected by all save a few, who recognized the Christ in the lowly Nazarene. After demonstrating man's eternal sonship with God and the Son's dominion, even overcoming death, he returned to the Father, promising to send the Spirit of Truth that should lead into all Truth. Through deviation from the Master's teaching and consequent inability to do the works that he did, the light was nearly lost sight of in a long night of error.

To-day shines forth again the promised light, revealing this time the divine Principle and its unerring Science, of the Truth Jesus gave to the world, attesting its divine source by "signs following." Jesus had said, "I have yet many things to say unto you, but ye cannot bear them now." Again ignorance, conservatism, selfrighteousness, hatred of purity and Truth, reject and revile; but the despairing invalid and sin-sick prisoners recognize their Deliverer, and are set free.

Mortals are seeking everywhere but in the right way for salvation from the multiplied ills of the flesh, that *materia medica* cannot cure nor theology destroy. Man has found a changeless principle and unerring science, for his mathematical calculations, as ever existing independent of matter; but his search for the Principle of Life in matter, or in the human mind, always ends in vague mystery. Christian Science, the Science of the Christ-teaching, finds the Principle of all Being in God, infinite Mind, and demonstrates that this Principle is a "present help in trouble." This healing power is now breaking down the strongholds of error with irresistible Scientific power, and is within the reach of all who will accept it.

Among so many conflicting statements you readily see the necessity for *reliable* information. There is but one Christian Science. Mary Baker G. Eddy is its Discoverer and Founder. Her writings, and the publications of The Christian Science Publishing Society in Boston, Mass., are the sources of authorized information.

But the works themselves must be their own proof of divine origin. Read the testimonies in the *Christian Science Journal* or the *Christian Science Sentinel*, write to any address found there, investigate the cases around you. Note the intelligence and integrity of those who accept the new-old light. Learn of their beautiful, useful lives, their peaceful homes, and their many well-filled churches. Note especially the marvelous quality of the healing. Where once life was a weary burden, perhaps without love, human or divine, to lighten ills without end, there is now permanent health, abiding peace and joy, never before known. They have found God's plenty, wherein is no lack. Sweetest of all is the power to bring to others the same blessing. Even in the spiritual growth before this new consciousness is established, there abides the positive conviction of its certain attainment. **Only divine Love *can* do this.**

Digitized by Google

Has hopeless disease cut off every hope of a useful life, or is prayer for death to end ceaseless suffering, or the being a burden to others, unavailing? Are you helpless to relieve the agony of a loved one, whose possible lingering might be worse than death? Would the change to a state of physical wholeness, a permanent cure, be the fulness of your prayer? Yet the thousands who have experienced such glad restoration, testify that the physical freedom is but an incident to the spiritual uplifting.

Have you again and again prayed to your God that some cup of bitterness might pass from you,—for some loved one to be saved from the depths of hell—for strength to overcome some heredity,—only to be apparently mocked, till you doubted if there were a God? Very many such tell, in humble gratitude, that Christian Science has shown them how power is given, here on earth, to enter into the liberty of the sons of God.

Do you say your case is exceptional, or that God would not help one so far from His standard? Are not these cases the very ones that are most in need of divine help? Christian Science declares that God is Love, and is *always* willing. Are you willing? How the objections assert themselves at this question! "No faith," "So many failures," "Healing without means seems too foolish and transcendental." But if all other methods have failed, is it not high time to try something radically different? All these objections are overruled by facts proving that Christian Science does effect permanent and perfect cures, even in cases which had been pronounced incurable. The living witnesses are with us, glad to testify.

How gladly those who are working for the good of mankind accept this infinite Mind-healing when they once realize that its unfailing power for good is as far beyond their best efforts as God's way transcends man's failures. Those who know for themselves, and are therefore qualified to judge, presume not to question the spiritual experience of another. Who can safely guide you to the same sweet peace, but one who knows by experience what to do, and what to avoid?

You cannot be more sceptical than were most of us, who only turned to Christian Science as a last resort, to learn that it was indeed God's opportunity. And how glad we are now that our extremity was urgent enough to make us willing to accede to the demands of divine Principle. How beautifully Love teaches that only by perfect obedience can rest and peace abide. The taste of its pure joy leaves no sweetness in sin's ways.

This paper is not to teach Christian Science, but to state such facts regarding it as may open the way for others to realize the truth of its title. The whole of Christian Science is contained in the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Many, wholly ignorant of what this Science is and its relation to the Bible, judging from their erroneous *belief* of what it is, object to the book, supposing it to be used as a substitute for the Bible, or a woman's interpretation of it. With the aid of this book the student can *understand* the word of God, and can also prove his understanding by his works.

No earnest seeker for Truth, Christian or unbeliever, ever understood the teaching of Science and Health, but found it made the Bible a positive guide to eternal life—not as a mysterious oracle, but in the wondrous light of the spirit of Truth it becomes a living Word, enabling him to see *how* to really obey *all* the Master's commands, *how* to "put off the old man" and become the son of God, in the present realization that man *is* the child of God, and therefore *cannot* be the child of error.

The Church of Christ, Scientist, stands on no creed, ritual, or personality, but is based on the spiritual understanding of God's Word, by which the same healing works are accomplished now as in Jesus' day. Because God's law is the "same yesterday, to-day, and forever," all those who understand and obey that law, must bring forth the same results. Members of this church have no controversy with those who do not understand their religion. By these signs must the real Christian Scientist be known.

Christian Science is unlike the mental methods of mesmerism, hypnotism, theosophy, pantheism, spiritualism, that employ the human will or mind. The Christian Scientist can do nothing of himself. He can work only as he realizes the supreme control of the one infinite Mind, as the only causation and source of action, resulting in conscious harmony. His Master said, "I do nothing of myself; but as my Father hath taught me;" so must his true followers be taught of Spirit, and obey. Herein lies the absolute unlikeness of any other method, and any deviation from absolute Science must result in inevitable failure in Truth.

Get that wonderful book, Science and Health, study it deeply, prayerfully, persistently, this alone may heal you. None may climb up by any "other," "easier," or "reformed" way. When you decide to give Christian Science as fair a trial as you have man's methods, select a practitioner from the standpoint of Christian character rather than from what the world calls "intellect," and you will be healed in much less time and at less cost than man dare promise, and without medicine, remedies, or instruments, receiving what God alone can give. It may be at once, but if slow, *persist*, and you will find truly that "heaven is within," a foretaste of the new heaven and earth that passeth not away.

## "Books in the Running Brooks."

BY EMMA C. SHIPMAN.

AMONG the many brooks which flow into one of the larger rivers in the White Mountains is one which I watched for several summers.

When the water was high in the little brook it made a very pleasing picture, gurgling gleefully over the shining stones and flowing swiftly out into the river, carrying off its own debris and also much from the larger stream that was inclined to pile up near its outlet.

After the hot summer sun had melted all the snow from the mountain peaks and dried up the rivulets that fed the little brook, it presented a different picture. Not only was it unable to get rid of its own debris, but that from the river would be borne in upon it till one could hardly see its waters and the former happy brooklet was an unsightly and almost stagnant pool.

Occasionally, children would clear the accumulated rubbish from the outlet and try to arrange stones near the mouth of the brook to keep out the river's flotage, but this gave it a better appearance only for the day. The one real remedy was for it to become a rapidly flowing stream.

This illustrated to me a helpful lesson in Christian Science. If we would send out the swift, sparkling currents of purity, we must be fed by pure Truth and take in plenty of it. Then this current of Truth and Love will sweep the error out of our own thought and help to carry off much that is floating in the larger stream of mortal mind, thereby blessing the world.

Let us be so filled with the "river of the water of life" that thought cannot lose its activity under the seeming heat of error, but we shall journey on more joyfully, knowing our source is inexhaustless Life and Love.

In the words of our beloved Leader to the White Mountain Church, "The rocks, rills, mountains, meadows, fountains, and forests of our native state should be prophetic of the finger Divine that writes in living character their lessons on our lives."

## Gaining the Victory through Truth.

BY A. E. B.

SOMETIMES when people see a Christian Scientist suffering with a trouble which does not seem to yield to treatment at once, they say, if he would only use a certain drug he might be relieved. They think it is perfectly absurd because he refuses it and persists in having Christian Science treatment, for to their sense he is doing nothing.

We read in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 67, "Belief is all that ever enables a drug to cure mortal ailments," and the Christian Scientist knows that the inert drug has no intelligence, but that all that could make it seem to help him would be his faith in it. All his life he has been educated to believe that drugs can heal, and to look to them for relief instead of to God, when he is sick. Now he has begun to gain a little understanding of Truth, and is trying to have more faith in Mind than in matter, more faith in Intelligence than in non-intelligence, more faith in God than in man. Then what does it matter if it should take a little longer to get relief? After the battle is over the consciousness of having won the victory brings a sense of peace and happiness of which the looker-on cannot have the slightest conception.

While the observer sees nothing but the physical manifestation, the Christian Scientist feels that he has fought the good fight and kept the faith, and he is filled with a great joy because he has been faithful to his God. He has gone a step higher. As Science and Health tells us on page 408, "Every trial of our faith in God makes us stronger;" and as his faith in God grows stronger and he loses his faith in drugs, the healing will be done more quickly and he will be conscious of the peace that passeth all understanding as he journeys on from sense to Soul.

## Evidences of Growth.

BY JENNIE BAIRD SCHOOLEY.

HAVING attended the Annual Meeting at the Mother Church in Boston, and partaken of the feast so bountifully prepared by our beloved Leader and Mother, we have returned to our field of labor refreshed and strengthened. We rejoice to say that burdens have been lightened, the pathway heavenward has been brightened, and we have gained a higher consciousness of the ever-present Love.

The harmony that prevailed throughout the meetings, shows great spiritual growth among the students of Christian Science. The battles of the past years have been many; but only the false sense of self has been wounded,—something of the old man with his deeds put off, and more of the Christ-nature has been put on.

Christian Scientists are rapidly being acknowledged a healthful, peaceful, and Christian class of people. Does not the demonstration of harmony among Scientists prove the individual application of a perfect, impartial Principle, the Principle demonstrated by Jesus and his disciples in the destruction of all discord?

Feltham says: "He has a poor spirit who is not planted above petty wrongs." That we may possess a rich, forgiving spirit should be our daily and hourly prayer.

All victories in life come through patient self-surrender and loving sacrifice. This is the example of our Mother, and her obedient children are found striving to follow in her footsteps.

Are we grateful enough for the priceless treasure we possess,—this glorious understanding of Truth which makes the crooked places straight and the rough ways smooth?

Verily, "All flesh shall see the salvation of God."

## Testimonies.

### How I Became a Christian Scientist.

Walking along Massachusetts Avenue, in Boston, one week-day, my attention was attracted by hearing the chimes from a church on Falmouth Street. I went to the church, walked around it, admiring the beautiful windows, and thought, "I will go into this church next Sunday." Sunday came but something prevented and I did not attend the services until a year later.

One Friday in May, 1898, found me at the evening service in the Mother Church. I well remember the night. I was very much surprised to see the church crowded, it being so warm, and at, as I then supposed, a prayer-meeting. Seeing a friend, I inquired if it were a special meeting, and he replied, "No, sometimes they have larger gatherings than this." I then thought, "There must be something here that other churches do not have."

After the preliminary services, the First Reader said that the meeting was open for remarks and testimonies. As I had no idea whatever of what was to follow, I was somewhat surprised to hear the testimony of a young man who had been healed in six weeks of consumption in its last stages, by reading the text-book, Science and Health. Others spoke of healing and of the great help that God—Good—had been to them.

The earnestness and honesty of each individual helped to convince me more than the demonstrations of which they told, although they, also, seemed wonderful.

After service I met a number of very nice people. All had a kind word not only for each other, but for me as well. As I stood watching the smiling faces of the people greeting each other, I was deeply impressed with the unity of thought, the love and harmony, which prevailed. To the question, "How did you enjoy the meeting?" I could only answer, "It was fine;" and I said, "If it is true I want it, if it is not true I want to know it."

I also said, "Before I believe it, I must have more proof that it is true, than I now have that I am right, and if you cannot give me this proof, I shall remain a Congregationalist." To this a young man replied, "If you are honest and are really seeking you will get all the proof you want."

For the next few weeks I read everything I could get relating to Christian Science, and also questioned every one whom I thought might know something about it. I remember asking one minister with whom I had some acquaintance, and he told me to have nothing to do with it. But this made me more determined than ever to get to the point where I could conscientiously say yes or no.

A lady told me that the religious side of Christian Science was beautiful, and this was just what I wanted to find out.

A student of our Leader loaned me a copy of Science and Health for two weeks. I read the book entirely through, and some of the chapters two or three times over. I finished the book June 17. As it was a holiday I stayed in and read all day, returning the book in the evening. After leaving the home of the Scientist, I felt that I had lost something. Although I could understand nothing in the book, yet I was firmly convinced that the book was what I wanted, so early Saturday morning I was at the Publishing House and purchased a copy of Science and Health for myself, and I might say here that I only had three dollars.

The way has not been a path of roses, but I know that I am on the straight and narrow path which leads to health and holiness. Before I knew of Christian Science my desire to do right was great, and all along the way I doubted, but would not let my friends know, because I felt that something must be wrong with myself. I used

Digitized by Google

to pray that God would guide me; but everything seemed dark, my God was afar off. But, thanks be to Omnipotent and Omnipresent Good for removing the scales from my eyes, for unstopping my ears, so that I might both see and hear this glorious gospel, that I might at least in part have the Mind which was also in Christ Jesus, leading, guarding, and protecting me. For all the dear friends in Truth who have helped me to realize an ever-present Father-Mother God, I am truly thankful, but most of all I am deeply grateful to our beloved Leader and Mother, Mary Baker Eddy, who has pressed on to show suffering humanity that God is Life, Truth, and Love, and an ever-present help in trouble. I have had overwhelming proof that I have found the Truth as taught by Jesus, for the signs have followed.

A year ago I received class instruction from one of our Mother's faithful students, and am going on my way rejoicing. I cannot express my joy for the spiritual uplifting I have had, and it is my desire that my life may be one continual song of thanksgiving and prayer.

My Bible is a new book and I prize it more than I ever dreamed possible, because of the light which is shed over it through the study of Science and Health. Money could not buy my copy if I could not get another.

JOHN DUNCAN, New Haven, Conn.

---

### Christian Science an Effectual Remedy.

For several weeks my little boy has been urging me to write to the *Sentinel* and tell them of the demonstration in his case. Hoping it may be as helpful to the little Christian Science children whose mothers read the *Journal* and *Sentinel* to them, as some of *their* testimonials have been to him, I have decided to do so.

He is seven years old and was healed of a severe case of scarlet fever in three days through Christian Science treatment.

He was in school as usual on Monday but Tuesday morning did not want to get up and was in bed nearly all day. Tuesday night he was so restless that Wednesday morning, as he seemed to have a high fever, I suggested that we call in some help for him.

His father told him before he left for business that he was going to send a doctor to see him; at which the child cried and said, "I don't want a doctor. I want a Christian Scientist." The result was that his father, who says he is not a Scientist, said, "Well, if you want a Scientist get one here quickly, for he is a very sick boy. I'll be home at noon, and if he isn't better I shall send for a doctor." When the Scientist arrived,—by the way she had nursed under the doctors and knew all the symptoms,—there was no doubt whatever of its being scarlet fever.

During the next two days there was not one word of complaint from the little fellow, and he said many times, "It's only old error, mamma. I'm God's little boy, I'm the spiritual image and likeness of God." About noon on Friday, when I am positive any doctor would have said it was a very severe case, as it was difficult to understand him, I left the room for a few moments, and when I returned I saw Science and Health on the bed beside him and I said, "Ellsworth, where did you get it?" to which he replied, "I went over by the window and got it, for I wanted to find the definition of *angels*." He had been learning it for Sunday School. For one brief instant a wave of fear went over me, but was quickly changed to "Praise God!" for I knew then the demonstration had been made, and that Truth had triumphed over error.

In an hour he sat up and handled heavy picture books, and a little later said, "Mamma, there is something like wax in my mouth," and after handing him a handkerchief I saw that the thick white membrane which had covered his tongue and the inside of his mouth had broken and was coming away in pieces, and before night his tongue was its normal size and as clear, bright, and healthful as it had ever been. He asked for and ate a hearty supper, and it was difficult to keep him in bed until seven the next morning, when he got up and *dressed himself* and played all day.

We felt it was right to obey the law in every particular, so sent word to the Health Department as soon as we knew what the disease was, but when the officer reached here on Sunday and found him up and well, he said he was all right and we could have the house fumigated whenever we chose. We kept him in his room until the next Saturday, when they disinfected the house, and when I told the officer we had had Christian Science treatment for the child and asked what would be necessary in order to get him back to school, he said, "It is customary to have the physician send word that the house has been fumigated, but in this case, as you had none, just have your practitioner send word and it will be *all right*."

I simply speak of this to show how Christian Science is recognized *now* compared to a few years ago.

O how thankful we are for this blessed Truth and to her through whom it came! May we so live day by day, that those about us may know that we are "abiding under the shadow of the Almighty."—L. B. B., Chicago, Ill.

---

### Grateful for our Publications.

I wish to express my gratitude for our publications. I shall not try to mention the many articles which have been especially helpful, but cannot refrain from giving heartfelt thanks for the articles from the pen of our Leader, Rev. Mary Baker G. Eddy, which make the way luminous. Her last published poem, "Easter Morn," calls us in clarion tones to arouse from the dream of life, substance, and intelligence in matter on this, our glad Easter Morn of spiritual awakening, and to become resurrected in the image of God.

The little verse, "Friendship" by Carol Norton, published in the January *Journal*, was very uplifting, as also "The Unknown God made Known" by Rev. Irving C. Tomlinson, and "A Trip to the Rockies" by James A. Logwood.

I will tell of a demonstration in which the article, "Fog from Two Rivers" by Meta F. Miller, stood out a mental picture, helping to show me that the battle is with self.

Never before had I realized so clearly that if the mists which darkening self casts over us were dispelled by the Light of Love, error would soon be reduced to its native nothingness.

A thought of resentment was voiced by a sister Scientist, and although I opened not my mouth, I was very much hurt by it, and the error grew in thought as I dwelt upon it. Her fog seemed so dense. Then I began to meet it in Science, and I saw that all I had to do to keep the error from affecting my own mental atmosphere was to clear away my own "fog," so I went to work with self, destroying for myself the error I thought I saw in another, and in a very short while the sister acknowledged that she had erred, and all was overcome.

I thought, this is indeed the universal religion when a thought given out by an unknown brother in the North can be a practical help to another Scientist in the extreme South. "God . . . hath raised us up together, and made us sit together in heavenly places in Christ Jesus." "Great is the Lord, and greatly to be praised in the city of our God." We are grateful to God for having given us a Leader, who is able in this age of materialism to show us the way to the spiritual city, which hath no boundary or limit, so beautifully described by John the Revelator.

L., New Orleans, La.

## Religious Items.

A writer in the *Homiletic Review*, treating the subject of obscure passages of the Bible, says very sensibly: "Why not let the perplexing questions wait for the hour of higher elevation and clearer light? We are like the little child in its first day of school. Eagerly turning over the pages of the book that has just been placed in its hand, it comes quickly to that which is a vast mystery to its present undeveloped mind. Now hear its impatient cry: 'Teacher, teacher, here is something that I can get no understanding of. Tell me quickly what it is. Give me the explanation now or I will close the book and leave the school.' To such an ambitious neophyte might not the voice of the teacher in all sweet reasonableness come in this fashion?—'Is it in to-day's lesson, my child, that which troubles you so greatly? If not, can you not wait until your advancing lessons bring you unto it?' "

"Now, men, my hearers, are only children of a larger size—often as petulant."

Why have so many Christian men so little joy in their lives? Because they look for it in all sorts of wrong places, and seek to wring it out of all sorts of sapless and dry things. "Do men gather grapes of thorns?" If you put the berries of the thorn into the wine press, will you get sweet sap out of them? That is what you are doing when you take gratified earthly affections, worldly competence, fulfilled ambitions, and put them into the press and think that out of these you can squeeze the wine of gladness.

ALEXANDER MACLAREN.

The (Unitarian) *Christian Register* says: "When one takes a dose of medicine, he helps or harms only himself. But he who takes into his mind that which makes for the healing of his own soul, by the same potion, ministers to all those who are about him. A merry heart gives light to a whole roomful of melancholly saints. Courage diffuses courage; hope creates hope; confidence generates confidence; and fidelity to a good cause, bravely maintained by one human being, sets the pitch of fidelity for many others."

A writer in the *Universalist Leader* says: "As we read of the ministry of our Lord in Palestine, we are impressed not only by the number and variety of his miracles, but by the simplicity and quietness with which he manifested his God-given power. Any one's need was his opportunity. By a word, a look, a touch, he gave sight to the blind, hearing to the deaf, strength and health to the weak and infirm, life to the dead."

The (Swedenborgian) *New Church Messenger* says: "The repose man should seek in life should never be a resting in the achievements of the past; it should be the peace which belongs to the recognition of eternal principles which bear in their bosom the prophecy and the promise of future attainments through future efforts. We may rest in that kind of life only which keeps us forever pressing forward."

George MacDonald says: "It is the law that the man who does evil shall suffer; it is the only hope for him. . . . When he forsakes his evil one by one the dogs of suffering will halt and drop away from his track: and he will find at last they have but hounded him into the land of his nativity, into the home of his Father in heaven."

Persons of genius are more individual than any other people, and less capable, consequently, of fitting themselves, without hurtful compression into any of the small numbers of molds which society provides in order to save its members the trouble of forming their own characters.

JOHN STUART MILL.

President George E. Merrill, D.D., in a sermon published in the (Baptist) *Watchman*, says: "Whatever the cause may be for which we stand, if it is in the cause of God, if it represents what Christ stood for, then we know that God is on our side, 'and if God be for us, who shall be against us?' Only let us be sure that the life is one of divine principle and not self-seeking."

A writer in the (Episcopalian) *Church Standard* says: "Pray, and you will have Divine aid in securing every advantage of your watchfulness. You will not be abashed, though the enemy tower head and shoulders above you. You will not be deceived, though he come with lion-like tread; nor overcome by lion-like strength."

The (Baptist) *Standard* says: "A good mother, when her son was leaving the home of his childhood and going out into the great world, knowing that he was ambitious, gave him this parting injunction: 'My son, remember that, though it is a good thing to be a great man, it is a great thing to be a good man.' "

The New York (Baptist) *Examiner* says: "The British Foreign Bible Society has printed four hundred thousand French New Testaments for free distribution at the Paris Exposition. The books, which bear the inscription, 'Souvenir de l'Exposition, 1900,' are given away outside the gates."

The (Baptist) *Watchman* says: "We are really becoming old when we outgrow our enthusiasms. The man who can sustain his interest in what is going on, and his hopefulness as to the general outcome of things, has the main characteristics of youth."

It is your duty not only to be good, but to shine; and of all the light which you kindle on the face, joy will reach furthest out to sea where troubled mariners are seeking the shore.—H. W BEECHER.

"Advancement results from the loyalty of every person to so much of the truth as is revealed to him," says Amory H. Bradford in the (Unitarian) *Christian Register*.

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

N. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Is Your Prayer Answered? Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted upon at this meeting, should be sent in as early as possible. They *must* be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $2.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents. Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.

## Items of Interest.

### Political and Governmental Notes.

Race riots prevailed in New Orleans the latter half of last week resulting in much bloodshed. A couple of negro desperadoes in resisting arrest fired upon and killed two police officers and wounded others. Then the lawless element among the whites began a ruthless war on the colored population, sparing none. One of the negroes who shot the officers was brought to bay the third day after his escape and shot eight more persons, killing three and dangerously wounding three others, before he was forced to face the police and the mob in the open by the firing of a house in which he had sought refuge. The mayor of the city organized a committee of citizens to assist the police, and the Governor sent the State troops to aid in restoring order.

At the time of the capture of the Taku forts by the foreign vessels of war, it was commented upon unfavorably that the United States squadron under command of Rear Admiral Kempff did not participate in the bombardment. The seizure of the forts being an act of war against the government of China has since been regarded as a mistake, and Admiral Kempff's report of the occurrence, which was received by mail last week, is therefore interesting. He says that he declined to join in the attack because he was not authorized to initiate war against a country with which the United States was at peace, and that his limit of authority was to protect American interests. His action was commended by the governments.

The Chicago council has unanimously passed an ordinance regulating bill boards. It provides that such structures shall not contain more than one hundred feet superficial area or be more than ten feet high, that they shall be made of incombustible material, that they must be at least three feet from the ground and twenty-five feet back from the street line, and finally it provides that the consent of the owners of three quarters of the frontage on both sides of the block must be secured before the boards can be erected on boulevards.

In accordance with instructions from Governor-General Wood, a decree will be published fixing the third Saturday in September (the 15th) as the date for the election of delegates to the Cuban constitutional assembly. The assembly will meet on the first Monday in November, when the relations of Cuba and the United States will be arranged. After a constitution is drawn up an election will be held and a government chosen, to which the representatives of the United States will deliver the government of the island.

The highest point ever attained by gold in the treasury—$429,187,260—was touched July 24. This gold is not all the property of the treasury for general uses, but is pledged to the amount of $229,699,179 for outstanding gold certificates, and the reserve for the maintenance of parity of $150,000,000. The gold which is the free property of the treasury, therefore, is about $221,000,000.

A Washington dispatch says that a copy of the State Department cipher code was stolen several years ago and was known to have found its way into the hands of the Chinese government. The code has since been changed, but Mr. Conger was one of the few officials who used the old code, and these alleged facts tend to confirm suspicion of the authenticity of the Conger message.

By unanimous vote of the national committee of the gold standard Democracy, July 25, the proposition of fusion with the anti-imperialistic movement, originating with a recent mass meeting in New York City, was defeated, as was also the plan to place a gold Democratic ticket in the field this year.

Major General William Ludlow is quoted in the daily press as follows: "Germany is the war college of the world. The kaiser's army has attained a degree of organized efficiency unequalled by that of any other power on earth."

United States Ambassador Draper has resigned his distinguished post at Rome to give his personal attention to his manufacturing interests in Massachusetts.

### Foreign News.

On July 29 the Japanese government received a message from its minister in Pekin and the German government one from the secretary of the German legation stating that the foreigners had been under fire from June 20 to July 16, when an armistice was agreed on. On July 30 the British government received a message from Sir Claude MacDonald dated July 21, which confirms the other messages and makes it certain that the legations were safe up to the date of his message. All the messages were in cipher and they were of unquestioned authenticity. They show that the marine guards have lost a good many men, but with the exception of the German minister, who was murdered in the beginning of the trouble, and the Japanese chancellor, all the members of the diplomatic corps are believed to be safe. The Chinese government, through Li Hung Chang, and through the direct representations of its ministers in various capitals, has virtually announced that it will hold the foreign ministers as hostages to be possibly sacrificed if the allies persist in advancing on Pekin. The powers will disregard the threat.

King Humbert of Italy was assassinated in Monza, a suburb of Milan, on July 29. He was shot three times and passed away a few minutes afterwards. He was the second king of Italy and was very much loved by the people. His only son, the Prince of Naples, a scholarly, liberal, and kindly man, will succeed to the throne. Italian politics are in a very unsettled condition.

Efforts are being made in Manila to substitute electricity for horses on the street railways. A concession has been granted for a new company called the Manila Tramway Company. The stockholders have voted for the electric system, and contracts are under consideration for the proposed improvement. The overhead trolley will be used.

Lord Roberts reported on June 24 that a general advance of the British from the positions held by them since June 12 has begun, and it is expected when completed to bring the war in South Africa to a close.

A treaty of peace between the government of Colombia and the revolutionists was signed at Panama, July 26, directly following the most desperate battle in the war, in which both sides lost heavily.

### Industry and Commerce.

A labor pact which guarantees an education to apprentices has been signed by representatives of the Masons' and Builders' Association and the Bricklayers' Union in Chicago. Under this arrangement, apprentices are to be permitted to attend the public schools for three months each year during the first two years of their indenture, and are to attend a technical school for three months during the third year, the wages paid the apprentice to continue during the school period.

The Russian cruiser Variag, which the Cramps have built at Philadelphia, is the fastest cruiser of any navy. A trial trip off the coast of New Hampshire on July 25, for the purpose of determining the speed of the vessel according to the number of revolutions of the screw, gave the highest speed as 24.6 knots an hour. The contract calls for a sustained speed of 23 knots an hour for a continuous trip lasting twelve hours.

One of the latest additions to the multitude of trusts is a lunch wagon trust, to be known as the T. H. Buckley Lunch Wagon and Catering Company. It is said that this concern will now control the lunch wagon business of the United States and Canada. One of the companies absorbed had a capitalization of $100,000, and it is said that the stockholders have in the past received in dividends the full face value of the stock.

A Chicago crop bureau reported on July 25 as follows: "A change in the condition of the corn crop has been brought about by one of the heaviest downpours of rain that the country has experienced during the present growing season. Rain fell in torrents nearly all day July 24. The rain was most copious in the States of Illinois, Iowa, Kansas, and Indiana. There can be now no longer any worry about drought."

One of the incidental uses for the refrigerating machine is found in mining. Refrigerating engineers declare that with the use of modern refrigerating apparatus to cool the air it will be quite possible to go several thousand feet lower in case a rich vein of precious metal, or even coal, warranted the additional expense.

### General News.

The last remaining vestige of what remained of Kaskaskia, once the capital of Illinois and the metropolis of the West, will have disappeared in a few weeks, as there are only a few hundred feet of the corporate limits of the old town left, and at the rate the Mississippi is caving it in that will all be washed away. Since the Mississippi cut through the peninsula above the old town in 1882, and formed a junction with the Kaskaskia or Okaw river, eight miles above the place where it originally emptied into the Mississippi, the waters have been washing away the land upon which the town stood.

Herbert Spencer tells the world in an autobiographical note, that it took fourteen years for him to dispose of the first edition of his first book, "Social Statics," of which he only printed seven hundred and fifty copies. His next volume, "Principles of Psychology," was taken by the adventurous public at the rate of six hundred and fifty copies in twelve and one-half years. In 1857, "warned by previous results," he issued an edition of essays of only five hundred copies, which were ten and a half years in finding purchasers.

One of the uses for which balloons may be employed is, curiously enough, the investigation of the sea bottom. It has been found by aeronauts that frequently the bottom is clearly visible from a balloon through the water. This fact was recently made use of to recover a torpedo boat which had been lost off Toulon. Not only was the boat found, but also two others which had vanished at an earlier date.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Wonders of the Pan-American Exposition.

IN the office of Secretary Frank R. Rosseel, who is the executive officer of the Bureau of Publicity for the Pan-American Exposition at Buffalo, one may read this phrase upon a gilded background:

A CITY IS WHAT ITS CITIZENS MAKE IT.

This has become the motto of the city and the citizens of Buffalo. Officially and individually, this terse utterance and splendid maxim has been adopted on every hand. In these swift modern years men seem wonderfully to have increased their capacity for effort, and with all the vim and energy that belong to an enterprising people the citizens of Buffalo are paving royally the way for the glorious Pan-American Exposition to be held in that city next year. The evidences of preparation are to be seen in the general furbishing up in all quarters, the improvement in hotel accommodations, and in the betterment of transportation conveniences within the city.

A glance at the Exposition grounds is quite enough to tell that something extraordinary is near at hand, but one may feel it in the very air of Buffalo that the people have unusual business before them to which they are steadfastly devoting their puissant energies. They who chose this site had no narrow conception of the opportunities which the Pan-American Exposition idea would ultimately disclose. The grounds, for the most part, are nearly level, and ample in their dimensions, the southern third invading the western section of Delaware Park. It is upon this park that Buffalo has lavished her money to produce a beautiful pleasure ground, and it is not strange that public sentiment would not suffer it to be desecrated with Exposition buildings. The park lands will therefore remain practically unmolested.

The dazzling white swans and ducks that sail the wooded lake and perform surprising aquatic feats, will perhaps share honors with electric launches and gondolas, and a majestic bridge will be thrown across a narrow part of the lake to make a picturesque approach to the great main group of Exposition buildings. Just within the boundaries of the park two permanent buildings will be erected, which will serve the purposes of the Exposition, and then become the property of two public organizations. One of these new ornaments will be the Albright Art Gallery, the gift of J. J. Albright of Buffalo to his fellow-citizens, costing three hundred and fifty thousand dollars, for which a maintenance fund of one hundred thousand dollars has been provided. This is to be of white marble, fireproof throughout, and after serving the purposes of the Exposition as a palace of art, will pass to the custody of the Buffalo Fine Arts Academy, to become the home of its fine art collection. The other is the New York State building, costing one hundred and fifty thousand dollars, which will become the depository of the valuable collection owned by the Buffalo Historical Society when the Exposition is over. The two buildings will face each other across the North Bay and in style will resemble Greek temples.

This lovely park, always in summer a paradise of foliage, flowers, perfume, and song, always merry with the shouts of the city's children, will wear nature's best attire during the Pan-American year. Myriads of fresh-blown blossoms, yielding a wonderful radiance of color, and distilling by a deeply mysterious process an intoxicating incense, will fringe the royal highway that guides the expectant visitor to the gorgeous red-roofed city of new-century wonders.

All through the season of 1900 the work of constructing the Pan-American Exposition will be pushed in every department. Separate contractors have the various important buildings in hand, and the enterprise is well organized. Many of the landscape features were arranged before the buildings were begun, and will need only the finishing touches when the carpenters and decorators have completed their tasks.

The installation of exhibits will begin in the fall of 1900, and the gates will be opened on May 1, 1901, closing on November 1 of the same year. Though not upon the gigantic scale which characterized the Columbian Exposition at Chicago seven years ago, the plan of the Pan-American Exposition is scarcely less comprehensive. The exhibits are classified in fifteen groups. Electricity leads in importance, as it is the purpose of Buffalo to demonstrate in a most graphic manner the wonderful usefulness of this occult force. Buffalo has already attained a marked degree of fame as the electric city of the world, owing to the installation at Niagara Falls of the greatest electric power plant on the globe.

This source of stupendous power is but twenty-two miles from Buffalo, and the energy is transmitted from the generators at the falls to the distributing stations in the city by means of copper cables of nineteen wires each, strung upon massive poles and carrying a pressure of ten thousand volts. The advance in the electrical science in seven years is little understood outside of those who are directly concerned with electrical work, but the visitor to the Pan-American Exposition will be shown a display of electric machinery and appliances absolutely new in nearly all its details. Throughout the city of Buffalo at the present time electricity from Niagara Falls is used for driving street cars, mill and factory machinery, grain-elevating machinery, passenger elevators in office buildings, and for lighting purposes. At the Exposition electric power will be employed in all the buildings for all purposes, giving life to the countless mechanical exhibits. It will also be used in the illumination of the buildings and grounds, and the electrical displays will be on a scale of grandeur never before paralleled —in fact, never before possible in any part of the world.

The building to be devoted to electricity contains seventy-five thousand square feet of exhibition space, and is one of the ornamental features of the architectural group. Close by will stand the Electric Tower built of steel and staff, and reaching skyward 375 feet. Upon the lofty dome will stand a symbolical figure of Electricity, dominating with her wonderful influence the entire Exposition. In front of the tower will be the Court of Fountains, where electric

Digitized by Google

lights will at night outline every important building and impart to every sparkling fountain a glittering and fantastic brilliancy. Among the new achievements in the electrical science since the World's Fair at Chicago may be mentioned the discovery of the Roentgen rays, the invention and development of the electromobile, the development of the storage battery, the invention of the kinetoscope or biograph, wireless telegraphy, the development of the trolley car motors, electric heaters, electric welding, smelting by electricity, electric cooking in the household, the direct application of electric motors to machinery of all sorts, making a beltless manufacturing plant a possibility. The practical uses of electric energy will be wonderfully illustrated.

In the department of Fine Arts there will be a choice display of fine American paintings and other works, and in the external features of the Exposition sculptural and other decorative details will be extensively employed in the embellishment of the architectural works.

In the Graphic Arts the latest achievements in typography, lithography, steel and copper plate printing, and the wonderful photo-mechanical processes, drawing, engraving, and bookbinding, will be exhibited. Among the new things in this department are the remarkable results in color photography, together with color printing from plates produced by the color photographic process.

In the department of Liberal Arts the visitor may learn what is newest in the educational methods and appliances. He will have the opportunity of studying the surprising feats in civil engineering, public works, and constructive architecture. Music and the drama will also have their proper attention. The Temple of Music is to be one of the many beautiful buildings of the Exposition, containing a great church organ of the latest design, now building.

In the department of Ethnology one may learn more of the races of mankind. We shall come in closer touch and learn more about the daily life and customs of our new brethren in the Philippine Islands, Hawaii, Porto Rico, and the Central and South American countries. The ethnological and archæological collection was one of the most interesting at the World's Fair at Chicago. At the Pan-American Exposition at Buffalo we shall have the benefit of seven years more of study and research to deepen our interests in archæology. The progress of mankind in labor and invention will be fittingly illustrated.

In agriculture marked progress has been the rule for many years, particularly in North America. The United States leads the world in the production of agricultural machinery and appliances, and in the development of food-plants and fruits acknowledges no leader.

In the department of Horticulture, which includes the culture of the vine and flowers, the exhibits will be extensive beyond expectation. Among the floral exhibits will be five hundred beds of popular flowers, and in the water gardens will be countless specimens of the most beautiful and interesting aquatic plants.

More than ten acres will be devoted to the display of live stock, and the collection of exhibits is expected to be the finest ever brought together in the Western Hemisphere. American breeders have ever been studious and enterprising in improving the value of the domestic animal, and at this Exposition the fruits of their hard work will be exhibited with commendable pride on the part of every participant. Accommodations are to be provided for nearly six thousand animals, and new breeds will be seen never before exhibited at large expositions.

In the Forestry building the student and sightseer will have an equal interest. Among the exhibits will be shown collections of the useful woods—not only from the Americas, but from the distant possessions of the United States.

In the department of Mines and Metallurgy will be displayed the useful minerals and metals from all parts of the Western Hemisphere, as well as many exhibits illustrating the processes of bringing them from the natural condition to the useful state.

The brainy American inventor and mechanical engineer are independent, self-reliant laborers in the cause of progress, and have to their credit more of the labor-saving devices and machines than any other people of the world. It may be said of machinery, as has been said of electricity, that the exhibits at Chicago seven years ago have been largely superseded by newer, quicker, and more serviceable inventions, so that it may be assumed that the exhibits of machinery at the Pan-American Exposition will surpass in interest, if not in number, those seen at Chicago.

The exports of manufactured goods from the United States have been growing from year to year, so that the output of our factories and mills is finding a market in almost every country of the globe. The eight years that will have elapsed between the World's Fair at Chicago and the Pan-American Exposition at Buffalo will show a marked improvement in nearly all the lines of manufacture that will be displayed next year.

The transportation exhibits, which are to be under the same roof with the exhibits of machinery, will include the latest achievements in railway rolling stock, vessels, and road vehicles. Probably the most interesting of these displays will be in the automobile department, in which the hydro-carbon motor, the steam motor, and the electromobile will sustain a sharp rivalry and, with their many points of excellence, seek the favor of those who expect to ride the public roads without the help of horses.

In addition to the special departments enumerated it is expected that there will be many isolated and collective exhibits to be housed in special buildings in various parts of the grounds. Many of the countries of South America and many of the States of the American Union will have special buildings in which will be shown and illustrated the products and resources that will interest the student, the investor, and the home-seeker.

The Midway will be over half a mile long, with over five thousand feet of frontage. Think what a string of entertainments can be condensed in a mile of frontage! It will be a town in itself, given up to the most remarkable series of entertainments that modern times and skilful inventors can bring together. It would be impossible in the short space of this article to describe the Midway. In fact, some of the attractions are so elaborate in their details that several columns might be devoted to telling of them without exhausting the subject.

MARK BENNITT.

In the *Concord Evening Monitor.*

## Thy Best.

WHATE'ER thou dost, do well—it may not stand
An hour, it may for centuries endure;
But thou shalt have performed thy Lord's command,
And thy reward shall be forever sure.

It may not be a palace thou dost rear,
It may be but a cottage for the poor;
No matter, 'tis the Lord's; be of good cheer,
Palace or cottage, thy reward is sure.

Here thou must learn to work; earth is God's school;
Let not thy hours in idleness be spent;
Bow thy stiff neck, thy stubborn spirit rule,
What thy Lord sets thee, do, and be content.

### In Reply to Rev. A. C Williams.

*Editor of the Hawk-Eye:—*

I have somewhat to say in respect to Rev. A. C. Williams' attempt to give an exposition of Christian Science.

In your issue of May 20, he is reported to have said, "It may be asked can one who is not a believer give a statement of the principles and beliefs of Christian Science teachers? Some might doubt, and insist that one must first be a Christian Scientist before one can understand it."

So far as concerns the criticism on Judge Ewing's lecture I shall have little to say. While no lecturer is able to tell all that can be said on this subject in an hour and a half's discourse, yet the judge did set forth a clear exposition of the theory and practice of Christian Science. Thus far, little attempt has been made to teach the deeper things of this Science from the rostrum. Much is left to the individual study of the Christian Science text-book. I desire to state unqualifiedly it is impossible for one to understand this Science sufficiently to give an intelligent exposition of it without first having practised it well. In the ranks of Christian Scientists few are considered capable of teaching who have not proven an understanding of their faith by at least three years of healing the sick. What would our readers think of a man pretending to expound higher mathematics who has never been able to solve even the smallest problem in addition?

✤

Here we have a man assuming to be a teacher of Christian Science, claiming to be capable of telling just what it is, who yet has never demonstrated a single problem under its rules and Principle, nor healed a simple malady to prove even to himself that he understands it! We do not question the honesty and sincerity of our brother in his mistaken position, and it is not strange he should have misunderstood and misstated his subject. Not only has he failed to give a true exposition of Christian Science, but he has also failed correctly to represent its interpretation of the Scriptures. If he really desired the public to know what the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, teaches, why did he not recommend to his listeners a careful study of the book as a whole, instead of making excerpts, dressing them in clown's clothes, and then ridiculing his own ill-formed effigies?

I will grant that Christian Science, as presented by Judge Ewing, looks better than when presented by Dr. Williams. The former speaks from the standpoint of a believer whose life has been saved through the efficacy of this doctrine, and who has sacrificed much in order to devote his time to the cause he has espoused; while the latter starts on the supposition that Christian Science is erroneous, and yields to the temptation of misunderstanding and disparaging a faith which abounds in good works, though its explanation of the Bible may differ from the generally accepted view.

✤

It is this new interpretation of God and the Bible which enables the Christian Scientist to be better, and to do better than ever before. Christian Science presented by one of its adherents, such as Judge Ewing, is a delight to the hearer, whereas a distorted misconception of it is obnoxious even to a Christian Scientist. Any system of religion or science may be made to appear ridiculous by misrepresentation.

Much is said in Dr. Williams' discourse about the teachings of Christian Science in respect to matter, and the charge is made that Christian Science is pantheism—that it teaches that "man is a part of God." The basic statement of this Science is that God is Spirit, Life, Truth, Love; this also is Scriptural. Jesus taught new ideas of worship, and he offered as his reason the proposition that God is Spirit. John said, "God is Love." Paul declared, "Spirit is Truth." We are taught in the Scriptures that man was made in the image and likeness of God, the image and likeness of Spirit; man must therefore be spiritual. Jesus said, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." His statement is equivalent to this: That which is born of God is spiritual and not material. Paul declared, "They which are the children of the flesh, these are not the children of God." Isaiah said, "Cease ye from man, whose breath is in his nostrils; for wherein is he to be accounted of?" Jesus also declared, "The flesh profiteth nothing." These statements are as strongly in opposition to the testimony of the five personal senses as any statement found in the Christian Science text-book. Will our critic reject or deny these Bible texts, which are so exactly in harmony with the writings of Mrs. Eddy, and which constitute the basis of all Christian philosophy?

Christian Science teaches that man is the reflection, expression, or manifestation of God; he is inseparable from God, and yet is not a part of God; he is the reflection of Substance, and is therefore substantial,—is likeness but not Substance. Christian Science does not teach that God's creation is unreal, but that our human conception or material sense of it is unreal. Everything in creation is real, but is not what it seems to our finite, personal sense. As we improve spiritually we shall improve in our comprehension, and shall finally see God and His creation as they really are. As we gain a true understanding of the Godhood, and shape our lives according to that knowledge, we reach in demonstration the true manhood. As we grow spiritually we grow away from the liability to sickness and discord, for it is our materiality that gets sick—not our spirituality. Goodness can never be sick. Jesus of Nazareth was never known to be ill. If we follow his example, attain to perfect manhood through right living, we shall eventually reach that condition wherein we shall be too good to be sick. The present tendency is in this direction, though it may be ages before the perfect state of existence is reached.

✤

Jesus was the highest type of divine sonship cognizant to the senses. His advent was made possible through the spirituality of the Virgin Mary, by reason of which the Fatherhood of God superseded the physical sense of generation; hence he was called "the only begotten Son of God." The high degree of spirituality of the man Christ Jesus, made it possible for him to demonstrate or illustrate his declaration, "The flesh profiteth nothing." The Christian Science text-book teaches in substance that Christ was the divinity of Jesus, which, in the presence of mortals, finally overcame the flesh entirely, ending in that experience which is called the ascension. Thus Jesus led the way out of the material sense of existence into the spiritual fact of being, proving what could be done through the understanding of God and implicit reliance upon Him. Christian Science shows how he accomplished this, and how we are to follow in his footsteps, thus verifying his promise, "He that believeth on me, the works that I do shall he do also."

Dr. Williams has presented a very unfair statement of the Christian Science view of prayer. We would urge our readers carefully to peruse the chapter on "Prayer" in "Science and Health with Key to the Scriptures." There is no class of Christians who pray more than do Christian Scientists.

We believe in the desire to be purged from sin; and the prayer given in our Church Manual, and which all Christian Scientists are requested to use daily, is as follows: "Thy Kingdom come; let the reign of Truth and Love be established in me, rule me, and rule out of me all sin."

Digitized by Google

We strive constantly to acknowledge the absolute supremacy of God, Good, and to refrain from being influenced by evil. Christian Science does indeed teach that Good is the real and evil the unreal, and yet we recognize that we shall never be rid of sin so long as we indulge it, for to indulge sin is to make it real. When the indulgence ceases sin disappears. Darkness is not considered something, but the want of something, the want of light. So evil should be understood as the absence of Good, sickness the want of health, discord the lack of harmony. Through this teaching the sinner recognizes that he is not a slave to a real, but an unreal, master, and this gives him strength to rise above the sin and overcome it through divine power, even as darkness is overcome with light.

No class of Christians or philosophers know better than Christian Scientists the absolute necessity of abstaining from sin as a means of overcoming it, and I believe the lives of Christian Scientists will prove this fact.

The statement is made concerning this Science, "It pretends to believe the Bible, though Mrs. Eddy throws out large portions of the word, and glosses over the other portions, defying every known rule of Biblical interpretation." One section of the tenets of the Christian Science church, as found in Science and Health, the Christian Science text-book, reads thus: "As adherents of Truth, we take the Scriptures for our guide to eternal life." I have been a student and practitioner of Christian Science for many years, during which time my interest and faith in the Bible has constantly increased, and this is to me positive proof that Christian Science is supremely Scriptural. It is the only theory concerning Christianity which has ever enabled me to harmonize the different portions of the Scriptures. I concede that Christian Science interprets the Word of God differently from some other systems, but as other religious denominations claim the right to their peculiar interpretation, why should not Christian Scientists?

Christian Science does not deny that "God created the heavens and the earth," but rather explains the very nature of creation. What are the heaven and earth of God's creation? God is Spirit, Mind. The result of Mind-effort, the product of Mind, is thought. Mind evolves its idea, thinks its thought. When we understand the nature of God, we can understand the mode, method, and nature of His creation. "God saw all that He had made, and behold, it was very good." Was evil a part of that good? Was the flesh or matter which Jesus denounced as unprofitable a part of that which was pronounced good? Did God make man capable of degenerating? If so, the creation of God is deficient, and is not absolutely good. God's creation is His infinite manifestation. Evil, materiality, is the dream of sense, a false concept of creation, named in the Christian Science text-book, "that which seemeth to be and yet is not." Paul said, "Professing themselves to be wise, they became fools, and changed the glory of the incorruptible God into an image made like to corruptible man, and to birds, and four-footed beasts, and creeping things. . . . Who changed the truth of God into a lie, and worshiped and served the creature more than the Creator, who is blessed forever." "But God hath chosen the foolish things of the world to confound the wise; and God has chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to naught things that are: that no flesh should glory in His presence." Here we have the clear declaration that the simple things which are not to human sense, understood and lived, bring to naught or nothing the things which do exist to material sense, that no flesh or matter should be given place or recognition in the presence of God who is Spirit. Paul further states, "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love Him. But God hath revealed them unto us by His Spirit: for the Spirit searcheth all things, yea, the deep things of God." Here we have a declaration that the five personal senses cannot comprehend or know that which is prepared or created by God, that God's creation must be seen and understood spiritually. "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." If the spiritual things of Christian Science are foolishness to our reverend brother, it is because he views them from a material standpoint, instead of "comparing spiritual things with spiritual." In Genesis we find two definite statements concerning the creation of man. One reads, "God created man in his own image." The other reads, "The Lord God formed man of the dust of the ground." The first statement is made by one who had a more spiritual conception of God's creation; the other is based upon the testimony of the senses. One starts with the proposition that God is Good, and made man in the image and likeness of Good. The other assumes that mortals are really men, and then credits their creation to God; hence the statement that the Lord God made man materially. Our readers will note that in the first statement man, the image and likeness of God, is the last and highest in the scale of creation; whereas in the second chapter, mortal or material man is the first of the creation, and all other things are made and brought to him to see what he will name them. The first chapter is a true statement of man as he really is. The second is a true statement of man as he seems to the physical senses. Both statements are honest, but one is more spiritual than the other.

Our critic states furthermore, "I have never seen a case of cure." If he would take pains to investigate the works of Christian Science he might learn that hundreds of thousands of people have been healed, including cases of almost every ill to which flesh is heir.

When John's disciples came to Jesus to inquire whether or not he was the Messiah, Jesus pointed to his works as a proof of his Messiahship, saying: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed." So the Christian Scientist does not hope by means of argument to convince the inquirer of the truth of his propositions concerning the Science of Being, concerning God and His creation, unless the inquirer has already accepted the premise from which he reasons; but he points to the healing of the sick and the reforming of the sinner, the good works, as the proof of its truth. In the time of our Master, a tree was known by its fruit. Is it possible that we have reached an age when the tree is to be known by its opinions or beliefs, and when that which elevates mankind, and establishes the very highest Christian practice, is to be laughed to scorn, and ridiculed by men who claim to be followers of him who never had a kind thing to say about matter, and whose only doctrine was, "If ye love me, keep my commandments"? Our critic's comments upon the method of Christian Science cures, together with his remark that half the people who apply have no serious ailments, is at least amusing to the Christian Scientist. Who knows better what does the healing than the Christian Scientist who has exercised himself in accordance with an understood method, to bring about that result? We will grant that the healing is done through a mental influence, but it must be understood that this influence is the practice of conveying to the consciousness of the patient the understanding of the omnipotence and omnipresence of God, and the powerlessness of disease in God's presence. Every

Digitized by Google

sort of mental argument will not bring out the grand results of Christian Science. The efficacy and permanency of the result of an argument to a patient is always in exact proportion to the truthfulness and goodness of that argument. Nothing is so potent as the idea that God is infinite Good, and is the only power; hence no method of curing mentally is equal to Christian Science, and no other method is in any sense akin to it. Christian Science is the genuine mental method of healing sickness and sin, and is spiritual, while other mental methods are counterfeits and are material.

Our critic has made the statement, "I can make good from her text-book every fact I have stated." His method of making good these facts reminds one of the oft quoted remarks of an infidel, who said he could prove by the Bible that it was the duty of man to kill, saying in Bible words, "Cain killed Abel—go and do thou likewise."

Allow me to say in conclusion that we protest against the effort on the part of the clergy to teach Christian Science before they have studied the Christian Science text-book thoroughly, and have become successful healers of the sick through what they have learned from it. Those who busy themselves in the effort to condemn new ideas simply because they differ from prevalent opinions or the traditions of our fathers, are obstructionists to progress, and are doing great injury to mankind, who need new and better things.

ALFRED FARLOW.

In the *Burlington* (Ia.) *Hawk-Eye.*

## Testimony Meeting at Portland, Ore.

THE regular weekly testimony meeting at First Church of Christ, Scientist, was conspicuous for its quiet dignity and earnestness. At such a meeting a stranger, upon entering the room, is at once impressed by the bright faces of the Scientists. All enter into the simple service with unfeigned joy and gladness. The leader of the meeting announced that the Sunday and Wednesday services were for the benefit of all who desired to attend, and that a free reading room was kept open daily in the rear of the church edifice. She also stated that while the Sunday services presented the doctrine of Christian Science, the Wednesday evening services were for the purpose of giving some of the practical effects of the application of the doctrine.

The time given to testimonies, was fully occupied. People standing up here and there in the audience, told of their experiences since accepting the doctrine. Many expressed themselves as grateful, not only for the physical healing, but for the moral uplifting and the spiritual blessings received.

A woman spoke of recently attending a gathering of six thousand Christian Scientists in Boston and hearing personal testimonies of the healing of almost every known disease. She said that thirteen years ago she had journeyed eastward to find health from change of climate, but had been forced to return home without it, and later found it through Christian Science, and that this time she had gone eastward joyously in full health. She also spoke of visiting a friend while on her trip who one year ago had been given up by physicians to die with cancer. She had been six months confined to her bed, but three weeks after beginning Christian Science treatment was able to walk about the house, and in six weeks made a journey on the cars and was perfectly healed.

Another told of having been healed of chronic colds and rheumatism. Another spoke of being healed of a strained back through one treatment of Christian Science.

A man spoke of being induced ten years ago to try Christian Science for relief from inherited trouble with his head, which had incapacitated him for his work, and of having been thoroughly healed. He said that he had had ample opportunity to test the efficacy of Christian Science for himself and others in the ten years, and found it equal to every emergency. He also spoke of being healed, through absolute reliance on Christian Science, of a severe wound in the hand, where cords and bones were cut.

A woman spoke of being healed of inherited dyspepsia. She had the best medical attendance on this coast and in the East, had traveled throughout the country to hot springs and cold springs in search of relief, but found none. Finally she was told by a specialist in Boston that there was no hope, as the coating of her stomach was gone, and advised to return at once to her home. In this extremity she heard of Christian Science, took treatment, and was healed.

One of the speakers said he was a traveling man and had ample opportunity to test Christian Science under many conditions, and that during the past four years it had given him health and peace; that he had become interested in the subject through the healing of his brother in Chicago of inflammatory rheumatism and heart trouble, who had been told he could not live six months, and who was healed in three treatments.—*Evening Telegram.*

## Bible the Keystone of English Style.

In all study of English literature, if there be any one axiom which every one has accepted without question, says J. H. Gardiner in the May *Atlantic*, it is that the ultimate standard of English prose style is set by the King James version of the Bible. For examples of limpid, convincing narrative we go to Genesis, to the story of Ruth, to the quiet earnestness of the gospels; for the mingled argument and explanation and exhortation in which lies the highest power of the other side of literature, we go to the prophets, and still more to the Epistles of the New Testament; and for the glow of vehemence and feeling which burns away the limits between poetry and prose, and makes prose style at its highest pitch able to stand beside the stirring vibrations of verse, we go to the Psalms or the book of Job or the prophecies of Isaiah, or to the triumphant declaration of immortality in the Epistle to the Corinthians.

If one were to figure the whole range of English prose style in the form of an arch, one would put the style of the Bible as its keystone; and one would put it there not only because it is the highest point and the culmination of prose writing, but also because it binds the whole structure together. On the one side would be the writing which tends more and more to the colloquial, which, beginning with such finished and exquisite talk as Dryden crystallized in his writings, runs off into the slack and hasty style of journalism; on the other side, such more splendidly and artfully colored prose as Sir Thomas Browne's or the ponderous weight of Dr. Johnson, degenerating in the hands of lesser men into precosity or pedantry. And with such explanations we fold our hands in the comfortable feeling that here, at any rate, is one question of literature settled for good; the standard of English prose style is the standard of the authorized version of the Bible; that style is so clear and so noble that there is nothing more to be accounted for.

We search the world for truth; we cull
The good, the pure, the beautiful,
From graven stone and written scroll,
From all the old flower-fields of the soul:
And weary seekers of the best,
We come back laden from our quest,
To find that all the sages said
Is in the Book our mother read.

WHITTIER.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

**MRS. EDDY, TAKES NO PATIENTS.**

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## The World's Uproar.

If we were to trust the testimony offered by the corporeal, or physical, senses to-day, we should be obliged to say that the world is in a truly pitiable condition.

In India are famine and starvation, death and desolation, in their most appalling manifestations.

In South Africa are witnessed the horrors, destruction, suffering, and death consequent upon a war between one of the world's greatest kingdoms and one of her smallest republics—both of them Christian nations. The slaughter of Christian brother by Christian brother thus far in this war, has been awful, and the end is not yet.

In the Philippines our own government is at war with the natives, thus far at a deplorable cost of life and treasure; and this war is not ended.

In South America there has been an almost continuous series of revolutions, and one of its states has, within only three days, emerged from the throes of civil strife.

It would seem as if these wars, with others of recent date, were sufficient to make up a calendar of woe, bloodshed, and carnage, which, measured by relative length of time, is without a parallel in history. Yet, superadded to all these, is another situation more terrible, by far, than all that has preceded it. Suddenly, and like a flash of lightning from a clear sky—so far as people generally knew—came intelligence of an uprising in China that eclipses anything in ancient or modern times. The magnitude of this uprising is yet unknown, nor can it with certainty be conjectured. Whether it is a revolt against the missionaries by the secret organization known as "Boxers," or whether it is aimed at all foreigners, and is intended to be a war of extermination or expatriation against these indiscriminately, is not yet sufficiently apparent to warrant a correct conclusion. There are many indications in the direction of the latter, but, as to this, we should await fuller developments. The conditions are so mixed, and the sources of information so confused and uncertain, that calm judgment and patient waiting should be the order.

So also of the question as to whether the movement is only a revolt against foreigners, or whether it is a rebellion against the ruling dynasty, or partly this and partly a contest for supremacy between rival claimants to the throne, the situation is so confused as to render an intelligent estimate impossible.

Another doubtful and perplexing feature of the situation is that there is some evidence inculpating the Chinese government in all that has thus far transpired; and it remains yet to be seen whether or not its skirts are clear and the Boxer movement so strong as to have exceeded the government's ability to control it. As to this, also, we should suspend judgment until the mists are cleared away.

As to the fate of the legationers, it now seems certain that on Sunday, July 22, the foreign ministers and those with them were safe, and that on July 16, the attack upon the legations had ceased. This, of course, does not include the German ambassador. That he was murdered is beyond doubt.

Meantime, what the *finale* of this latest and most extraordinary phase of the world's affairs will be, is a matter beyond even present conjecture. If, indeed, China, as a nation, is at virtual war with the other nations—especially the Christian nations—of the world, the situation may have a religious significance not now dreamed of. As it is against the missionaries of all denominations indiscriminately, the uprising has a distinctly religious character. If it is war, it is a religious war,—a war of Paganism against Christianity, or of the followers of Confucius against the followers of Christ. As China is the only nation that can now be said to be a distinctly Pagan nation, and if this Pagan nation is indeed at war with Christendom, what may or may not be its significance and final outcome?

Meantime, amidst this strife and contention of the nations, amidst the turbulence and turmoil of mortal mind, let us look with deeper earnestness and larger hope to the power and presence of Immortal Mind, knowing that here only is our safety, our anchorage, and our final resting-place. "Other refuge have we none."

### In Regard to Clippings.

Clippings from newspapers and other periodicals, suitable for publication in the *Sentinel*, are always acceptable, especially those that relate to the growth and progress of our cause throughout the Field. Articles which give a clear and concise statement of what we believe and practise, such as will meet the need of an inquiring public that desires to know the truth about Christian Science, are also desirable.

We request those who send us clippings to be sure that they give the name and date of the periodical from which they are taken. We sometimes receive excellent articles which we are unable to use, because we do not know the paper or other publication to which credit should be given. It is also desirable that we know from whom the clippings are received.

We especially request that those who send us clippings take pains to ascertain if all statements made are in strict accord with the facts in the case. Science is exact, and we cannot be too careful in giving honest, conscientious attention even to the little things of our work. It has been wisely said that "Trifles make perfection, but perfection is no trifle."

### Opening Services at Portland, Ore.

We are informed by private letter that the opening services of First Church of Christ, Scientist, Portland, Ore., were not dedicatory, as might be understood from the account given in the August *Journal*. In the Second Reader's address it was not intended to state that the property was entirely paid for, but that there was a substantial balance on hand after all bills due at that time had been paid.

### Services at Concord, N. H.

The Sunday services and also the Wednesday evening meetings at First Church of Christ, Scientist, Concord, N. H., will be continued during the month of August.

# Among the Churches.

### The Work in Evanston, Ill.

"Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It is with grateful hearts that the Christian Scientists in Evanston are recognizing that obedience to the teachings of divine Science makes the fruition of this mighty injunction of our Master possible now. First Church of Christ, Scientist, was organized in our city six years ago, and, year by year, the number has increased who desire to "press toward the mark for the prize of the high calling

Digitized by Google

of God in Christ Jesus." The awakening this year in our midst to a higher significance of Christianity has inspired us with a purer thought of love which has established a truer sense of brotherhood, and surely are we striving for the prize and to realize that "Love, the divine Principle, is the Father and Mother of the universe, including man" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 152).

Within the past few months an adjoining room was opened into the hall where our services are held, and it was soon filled with new faces. As the bird spreading its wings for broader and more joyous flight seeks the vast space above, so have we sought the freedom and peace of enlarged boundaries that the Truth, as revealed in Christian Science, may unfold its glorious beauties to more of God's "little ones."

The church has purchased the handsome property mentioned in the *Sentinel* some weeks ago, and the work has begun of remodeling the spacious old house which will be used as the temporary place for worship. The auditorium will have a seating capacity of five hundred, and under the supervision of the architect the building will have a quaint and picturesque appearance in the setting of beautiful trees that encircle the lot.

There are other features that give occasion for rejoicing, because of our new possession. A large room accessible by an entrance from the side street, will be made suitable for our reading room, which for more than a year has been pleasantly located in the Y. M. C. A. Building. The good seed is constantly being sown and the demand for the Science literature steadily increases.

Divine Wisdom is ever manifesting itself in ways that are bringing this sweet deliverance to the human mind, weary and tired of the strife with its false beliefs of life, and we feel gratified that the gospel of divine law and harmony as revealed in Science and Health is touching and uplifting the hearts, healing body and mind, of so many in our city.

It was our privilege to have Judge Joseph R. Clarkson deliver our last lecture, May 4, and also to have Mr. Edward A. Kimball introduce him. The close attention of the audience was an evidence of the desire of those present to gain a knowledge of the Science of Mind from these faithful witnesses to its power over sin and disease.

The spiritual growth among the children in our Sunday School gives many lessons to the older ones. The harmony of Spirit to which the child-thought responds as the blossom to the rain and sunshine is exemplified by their meekness and sweet trust in the Christ-Principle that demonstrates health, purity, and intelligence.

For the infinite radiance of light shed upon the new and old pathway which our Master trod to Life eternal, we express loving gratitude to our beloved Mother and Leader. Jesus declared the "kingdom of Heaven is within," and the abiding consciousness of love is won by taking up his cross and following Him. Science points the way, and we are learning that "to understand Good, one must discern the nothingness of evil, and consecrate one's life anew" (Miscellaneous Writings by Mary Baker G. Eddy, p. 109).

EMILY L. WARE, *Clerk.*

---

### One Year's Work at Glens Falls, N. Y.

March 11, 1900, a church was organized here to be known as First Church of Christ, Scientist, of Glens Falls, N. Y., with twenty charter members. On the twelfth of June, 1899, we held our first meeting in my parlor, with less than ten persons present, and only two of that number, beside myself, loyal students of Christian Science as taught by Mary Baker Eddy, or the possessors of the text-book. Our first service consisted of reading the lesson-sermon for that date, Bible selection, a hymn (read), and silent prayer with audible repetition of Lord's Prayer. From that time, we never wavered, and our numbers steadily increased, until the parlor, hall, and dining-room, all connecting, were inadequate.

Fortunately, on the third floor of our house, we had a very large room, originally designed for a billiard-parlor, with a seating capacity for over sixty. About the first of January we purchased four dozen camp-chairs, and moved into the "upper chamber." By this time we had an organ, and had the regular Sunday service and Wednesday evening meetings fairly well attended.

Next came the desire for a lecture, and one evening the first week in March we met to talk it over, and subscribe towards the expenses. All were not present who were interested, but in less than five minutes we raised ninety dollars, and from that time until April 23, the date of the lecture, money came to us from unexpected sources until we had enough and to spare. Our lecture was by Mr. Carol Norton, given in the new Empire Theatre to an audience of over thirteen hundred.

At this time, April 23, we found it necessary to change our "upper chamber" for a hall in the Empire Building, centrally located, and at our first service, April 22, there were eighty-two persons present.

As time goes on, I am happy in saying, I do not discover any lack of interest, but a steady growth. Our regular attendance Sunday morning will average about seventy, and we have had over sixty at our Wednesday evening meetings. At the communion service, June 10, five more names were entered in our church book, making our total membership for the year twenty-five.

Our room is open daily from two until four, and our visitors' book bears record of a great many calls and inquirers. We have two Sunday School classes, and grand demonstrations of healing are constantly being made all along the line, some of which you will hear of later.

Our path has been comparatively smooth, and we realize more and more how the pioneers in this glorious movement have cleared the way for us who follow. The ministers of the town and vicinity have said and preached some seemingly hard things of what they *think* Christian Science is, but they have not disturbed our peace. As Christian Scientists we can well afford to be charitable, "for if God be for us, who can be against us?"

Here I would like to add a word (spoken from experience) for the benefit of any one starting, or about to start, in this great work. Have no fear, go ahead, the world is ready for the Truth. Keep the Impersonal Teacher and Healer *always* in advance. Hide *yourself* behind the work. God is the only power, and to *know* this dispels discouragement. Be grateful and thankful. If you have only *one* earnest searcher after Truth, be grateful for that *one*, and the searchers will surely multiply. Jesus first gave *thanks* for the loaves and *two* small fishes, before he fed the five thousand. Gratitude for those already here will fill our churches to overflowing.—MRS. W. M. HASKELL.

---

### From Louisville, Ky.

The members of Second Church of Christ, Scientist, of Louisville, dissolved their organization May 24, and were received in a body into the membership of First Church at the communion service in June, but there was no consolidation "with the view of erecting a church building in the near future," as was stated in a clipping from the *Courier-Journal* which was published in the *Sentinel* for July 19.

As soon as our building fund is sufficient to justify steps towards owning a church edifice, those steps will be taken. At present, the commodious reading room in the Public Library Building furnishes seating capacity for the regular attendance at services.—ELLA L. MANSON, Clerk.

## The Moqui Indians.

ROMANCE confronts at every step the one who is fortunate enough to be received into the interesting family of Moqui in Arizona. Away in the highest of the mountain fastnesses, far from the turmoil of civilization, these Indians live quiet and curious lives, clinging to customs the origin of which is lost in the mists of antiquity, and worshiping anything that suggests the mystery of the supernatural, the sun, the moon, stars, wind, and atmospheric phenomena. About three years ago I left my home in Philadelphia to live among these people, and now that I have returned to the white people for a little while I gladly take the opportunity of lifting the veil from the secrecy that has prevented the American people from thoroughly understanding and appreciating the virtues of the Moquis and the attractions of their quiet lives.

The Moqui reservation is located in the northeastern part of the state, and is about eighty-five miles from the Santa Fe Railroad station at Holbrook, Ariz. To reach this place it is necessary to go by team over a sandy desert country to the Keam's Canon, where there is a government boarding school. Then begins the high climb to the mesa, where the Indians hide themselves shyly from the eyes of whites, and know no more about the doings of the world beyond their mountain home than did Alexander Selkirk on his desert island.

There are about two hundred Indians in all, living on three mesas. On one mesa is a large village and on the other two or three small villages. To the top of these high mountains the ancestors of the present tribesmen retired to live peaceably, far from the attacks of the Indians who sought to exterminate them. Having preserved all the customs and traditions of their ancient progenitors, the lives of the Moqui are full of interesting studies. All the water used in the villages is carried to the mesa by the women, a distance of seven hundred feet, little springs at the foot of the mountains furnishing all the water supply. I heard no complaint from the women, who had to toil up the hills with the water pitchers on their heads, and it did not occur to the Indians that they could transfer their villages to the water supply. They had lived on the mountain top so long that the valley had no charm for them.

All the Moqui houses are built of stone. One or two are really pretentious edifices, two and even three stories high. They are built in a curious step-ladder style, on each story being a roof, where the Indians can sit and talk and work, the next story of the house being built further back to make room for this veranda. The houses are all built in a circle and are reached by a ladder, which the Indians pull up after them. This ancient precaution from attack has been perpetuated, as all the other customs of the Indians have, coming down from the time when it was really necessary for the villagers to depend for their lives on their care in guarding the entrance to their mountain homes. In the centre of the circle of houses is a courtyard, in which the children play and the adults meet to walk and talk.

The work is evenly divided among the men and women. The men do all the spinning, weaving, and sewing. They go into the valley in the summer time, planting corn, melons, pumpkins, and beans, and caring for their peach-trees, raising produce on land where no white man could do it, owing to the scarcity of rain. The men gather the wood for fuel and build the houses, while the women cook the food, grind meal, carry water, and make baskets and pottery.

The women own the houses and are the heads of the families. When a girl wishes to marry a young man a present of meal is sent to his mother as a proposal. Then if she accepts, the girl goes to his house while the young man and his friends make wedding dresses and shoes. When the ceremonies are all over the bride takes her husband to her home with her. Every woman and girl is supplied with a blanket dress which is hung over the shoulder, leaving one arm and shoulder bare. The dress is fastened at the waist with a pretty colored belt. The little children formerly wore no clothing, the men very little. Now most of the children are clothed as well as the older people.

The women come to my house at the foot of the mesa and sew all day long, making quilts, dresses for their babies, and clothing for themselves. The men considered it very curious when the women first learned how to sew, and the new dresses were a sensation for a long time. The Moquis are like little children, having to be taught over and over again in the most simple style.

Companies of them come to the house every day for matches, needles, thread, buttons, medicine, etc., thinking that we are able to supply all their needs and can do anything, even to setting broken limbs and sewing up wounds. They do not know who God is they tell us. They think He may be the sun, moon, or stars, so they pray to all these things through their Katcina or mediating spirit between them and some higher being. When told that God made the sun, moon, and stars they were much surprised.

On Sundays we go to the villages and teach. An Indian carries a little telescope organ on his back and the people of the village, old and young, gather around to hear the speaking and to learn the songs. We have had to learn their language, as very few speak English, although most of the younger ones are now going to school.

Our people own a few sheep, from which they procure the wool for dresses. They also have burros, the patient little burden-bearers, and ponies, although I sometimes wonder what these poor animals live on, as there is not much but sage brush, fresh air, and scenery in Moquiland.

A young girl friend and myself live alone in the only frame house in the vicinity of the mesa. Our nearest white neighbors live miles from us. We get our provisions once a year from the railroad and mail once a week. The mail has to be carried on horseback one hundred miles.

MABEL W. COLLINS.

In the *Galveston Semi-Weekly News*.

## Buffalo's Electric Tower.

THE electric tower at the Pan-American Exposition to be held in Buffalo next year will be a work of surpassing magnificence and beauty. The revised plans call for a structure 375 feet high, whose exquisite proportions will arrest the eye and charm the senses of every one who approaches this shrine of the new goddess, electricity. No picture can convey to the mind an adequate idea of the refined grandeur and finished elegance of this great work.

John Galen Howard, designer of the tower, has recently caused to be made in New York a plaster model of this architectural masterpiece. The frame of the great tower will be of steel, the contract for which was let some time ago. Upon this frame will be placed the wood and staff required to complete the richly ornate work of the exterior.

As before stated, the tower will be 375 feet high and rank among the very highest structures on the western continent. The base is seventy feet square and two hundred feet high. Upon the four sides are great panels of rich open-work design, which will, at night, when the interior is lighted, show brilliant effects.

The tower crown is in three parts, the first an open loggia with pavilions and cupolas at each corner, surmounted by a high, circular colonnade inclosing a spiral stairway, which leads to the lantern or lookout—the highest point to which the visitor may go. From this lookout a panoramic view of the Exposition, the city of Buffalo, and the Niagara frontier may be obtained. Upon the summit will stand a beautiful symbolical figure of electricity.

Digitized by Google

In the southern face of the tower, at the base, will be a cascade, sixty feet high and thirty feet wide, which will be brilliantly illuminated in colors by means of a special arrangement of numberless lights. From the east and west sides of the base of the tower two curved colonnades sweep to the southward, about ninety feet, the extreme ends surmounted by pavilions that are richly embellished with statuary and other plastic ornamentation.

The exquisite detail with which all the features of the tower are worked out cannot be appreciated except by a close examination of the original model. Mention, however, may be made of the elaborate escutcheon above the cascade and the large groups of statuary on either side of the waterfall.

The tower will stand in a broad basin, and all about the base will be a multitude of hydraulic and fountain effects. This tower, it should be understood, is to be the electrical centrepiece of the Exposition. Upon it and about it will be made those wonderful displays to which so much study and expense are now being devoted.

The situation of the tower is at the north end of the court of fountains, in the midst of the main group of Exposition buildings. In this court and about this tower some two hundred thousand electric lights are to be used for outdoor illumination, producing a brilliancy never before possible and never before attempted.

Some idea of the extent of the electrical features of the Exposition may be understood when it is estimated that two hundred and fifty tons of insulated electric wire will be used in the preparation of the electrical lighting features alone. Contracts have been entered into for five thousand electric horse power from the great electric power plant at Niagara Falls, beside which about four thousand horse power will be generated upon the grounds. The greater portion of this tremendous volume of power will be employed in producing the elaborate illumination in which this Exposition will excel all former efforts.—*Boston Herald.*

### Chicago as a Reading Centre.

The report made by Librarian Frederick Hill shows Chicago to be the greatest reading centre of the world, so far as public library records go. More books were issued during the last year than in any other similar library the world over, and there could be no better indication of the character of the people than this. Generally speaking, it may be said that the man who reads is the progressive man; in any event, he is the sober citizen. Even if he reads nothing but fiction it is better than reading nothing at all. Good fiction is elevating and distinctly beneficial.

The fact that the library is free and therefore appeals with especial force to the poor and those of comparatively little education, makes it natural that the greatest demand should be for prose fiction, and yet there has been a creditable call for solid works. About twenty-five per cent of the books taken related to history, biography, geography, travel, science, art, and the foreign languages, and this in spite of the fact that Chicago is well supplied with reference libraries to which the majority of people in search of that class of reading naturally turn. It speaks well for the ambition and progressiveness of the general population of the city that there should be so large a proportion of really educational works sought.

Considerably more than a third of the lighter reading demanded was juvenile literature, leaving less than fifty per cent of all books taken to be classified as adult prose fiction. The showing is really excellent, and there is additional cause for congratulation in the increasing use made of the library. The number of volumes taken out exceeded the number for the previous year by more than fifty-eight thousand, which is ample evidence of growing appreciation on the part of the public.—*Chicago Evening Post.*

## From Our Contributors.

### Sunshine.

BY MRS. BELLE B. COLEMAN.

BRIGHTLY beams the morning sunshine,
Rolling o'er the eastern hills,
Tingeing ferns and brakes with brightness,
Clustered round the mountain rills.

And the distant mountain ridges,
Dark with over-hangings gray,
Glow beneath the morning sunbeams
As the night shades roll away.

As we note the morning sunbeams,
May we not forget, dear friends,
That the sunshine's but a token
Of the love our Father sends.

Let us, then, remember God's love
And be ready all the while,
Just to drive away some heart-clouds
With the sunshine of a smile.

### Casting Bread.

BY GRACE H. WILMOT.

THE article "Sowing Beside all Waters" by M. A. T., in our *Sentinel* of February 15, recalled a little incident in my own experience, and it may prove encouraging to some students who have endeavored to awaken a friend out of this dream of sense, and apparently failed.

Myself and whole family having been the recipients of numerous blessings, including the physical healing and the spiritual awakening which the teachings of "Science and Health with Key to the Scriptures" inevitably bring to honest seekers for Truth, I was filled with the desire that all my friends might be partakers of my joy. With the eagerness born of a heart overflowing with gratitude and love, I endeavored to spread this "Gospel of Peace" to such as seemed to need it.

Among these was a fellow-worker in my old church. A congenial friendship had sprung up which was fostered by meeting frequently in our church circles and societies. These gave me the desired opportunity to talk with her on Christian Science, for I felt convinced she would be ready to receive this new teaching, or at least accept it for healing.

To my great surprise she showed very little interest in the subject, was glad I was well and happy, but did not make any special effort to investigate it.

Nothing daunted, I waited for another opportunity which came within a few days, then I resumed the subject, and after patient and persistent efforts, I finally succeeded in awakening a little interest, which did not increase with further efforts. Finally, I dropped all reference to it.

Here circumstances separated us and we lost sight of one another, both moving from our homes in Chicago to distant cities. Until recently I never heard from her, but in thought cherished a fond hope that the seed I had endeavored to sow would germinate and yield its increase, for I felt sure the soil was of an "honest and good heart."

Last November, five years later, I received the following letter from this same friend, written from the reading rooms of Second Church of Christ, Scientist, in New York.

New York, November 24, 1899.

*My Dear Friend:*—I wonder if you remember Mrs. —— of Chicago and the seed you sowed. Well, you will see that it fell on good ground when I tell you that my hus-

Digitized by Google

band and myself and our daughter and her husband are all members of this church. Soon after going to my father's in St. Louis, Science was brought to our very door by the healing of a neighbor, a demonstration, to sense, miraculous, and as I heard about it the seed sown by yourself, and watered by a student of Miss —— of Cincinnati, sprang up and we are all very happy in our understanding of this "Word." Many things which before were dark to us, have been illumined by the light of divine Love.

I have been meaning to send this little message of love, since I read your helpful article in the *Journal* last summer. I notice by the same publication that your husband is a Reader and yourself in charge of the Sunday School, so I realize that your hearts are both full of, and your hands active in, this good work. God speed the day when all shall know its blessedness.

My kindest regard to the family and also your dear mother, and I trust by this time she may have found the "peace of God, which passeth all understanding."

Yours in Truth and Love,

*Mrs.* ——.

Was five years too long to wait for such abundant fruit? The words of our familiar hymn,—

> Cast thy bread upon the waters,
> Thinking not 'tis thrown away;
> God himself saith, thou shalt gather
> It again some future day,

echo a mighty promise. Not only must we *cast* our bread upon the waters, but we must also know that it cannot be "thrown away;" then we shall see the promise fulfilled. Let us cast it discreetly and prayerfully, knowing that in its mission it will not only feed one, but many, and it will return to us with manifold blessings.

## "Freely Ye have Received, Freely Give."

BY WILLIAM J. MURRAY.

FREQUENTLY we hear it said by those who have experienced the beneficial effects of Christian Science, that they would like to testify to such, but their cures are of such a nature that people could not believe them unless they knew the facts of the case. It is quite true that there are cures taking place under this treatment which seem incredible to the uninitiated, but this should not deter its beneficiaries from sounding the praises of the most High at our testimonial meetings. We must not expect all present to believe us and be disappointed if they do not. The testimonies of Paul at Athens caused some to cleave to him while others mocked; that of Peter on the day of Pentecost, when three thousand "were pricked in their heart," caused others to say, "These men are full of new wine." Now such utterances did not cause either Paul or Peter to discontinue their ministry; far from it, they only served to establish them firmer in the faith, and thereby rendered their labors more fruitful.

We have Scriptural authority for testifying to Truth. "Ye that make mention of the Lord, keep not silence," says Isaiah. Jesus says, "Whosoever shall deny me before men, him will I also deny before my father which is in heaven." Subtle indeed are the arguments by which error would seek to dissuade us from depositing our tithes in the storehouse, to one it would say, "You are not in the habit of addressing such a large assembly, moreover, your command of language is not sufficient to warrant your so doing." Perhaps more people yield to this suggestion than to any other. Again, there are those who think that their experience would not be appreciated; although it had been a source of great annoyance, and possibly expense, for years before coming to Christian Science, it might appear insignificant to others. To the former I can say from experience, it does not require the oratorical ability of a Demosthenes to express your heartfelt gratitude for what God has done for you through the teachings of Science and Health, and you cannot do it too often, for in this instance it is not "a vain repetition of words."

To the latter class of tempted I would say there is no demonstration so small as not to be a proof of the Principle. It is an error for us to remain silent at our meetings when we have something to say and time in which to say it, hence it is as necessary to master this form of error as any other, at least I have found it so.

Considering the great number of cures which are taking place under this treatment, it is surprising that any time at all should elapse between testimonies, and there never would if we thought more of others and less of self. There are those who come to hear what Christian Science is doing for the lame, the halt, and the blind; and there are those who are seeking they know not what; they have been tossed about on the waves of numerous religious beliefs in a vain search for a God who is *not* "afar off," and through the truthful demonstrations which are recited they realize for the first time that He is near to every one of us, that He is indeed "a very present help in trouble."

We have had a table spread for us in the wilderness, and ought we to deny the crumbs which fall therefrom to those who have not yet come into the light of this glorious revelation? Far from it! Our Leader, Mary Baker G. Eddy, tells us in "Science and Health with Key to the Scriptures" that "Giving does not impoverish us;" also we know that "The heart grows rich in giving."

Let us therefore grow richer and richer as a result of giving and continuing to give, for in this way only can we show our appreciation for what God has done for us in this day through our inspired Leader.

The prophets of centuries past have longed for this day and have not seen it, and it would seem as if we who have been so blessed are not half grateful enough.

## Abiding in Truth.

BY EMILY BOWDEN SMITH.

Abide in me, and I in you.—*John*, 15: 4.

THESE words have a new and far deeper meaning for us in Christian Science, and yet we see now that it is only their simple, literal meaning, that somehow we have always missed. They have always spoken, to those who wished to hear, of the constant presence of God, of protecting Love, and so have always brought some measure of help and comfort to those who felt they needed a help and strength outside of themselves. But the full extent of this help we were far from realizing, and only through the teachings of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, has the world caught a glimpse of what that full consciousness can and must be, —consciousness that is "cognizant *only* of the things of God" (Science and Health, p. 172), and therefore cannot be cognizant of weakness, pain, or sorrow, any more than of sin. We have always looked upon ourselves as material personalities, with a life of our own, a life so imperfect, and so unlike God, that to "abide in" Him, or in Christ, seemed to be a beautiful figure of speech, an ideal to be longed for, but not to be reached in this world. At most we have contented ourselves with trying to realize His presence with us, and in us; but our imperfections seemed to find no place in Him.

Just in the same way we have excused ourselves for disobedience to the command to be "perfect, even as" our "Father which is in Heaven is perfect," thus practically accusing the all-wise of the folly of commanding us to do what He knew to be impossible for us.

Science and Health, p. 138, l. 12–17, teaches us plainly how we may reach this ideal. The teaching of this book is

Digitized by Google

the same as that of our Lord, who constantly told his disciples to "deny" themselves, a word we have misunderstood and limited. This is not the work of a moment. The new birth "begins with moments, and goes on with years" (Miscellaneous Writings by Mary Baker G. Eddy, p. 15). It means to die to this material self, with its pleasures and pains, and to live to God; to realize Spirit as all and matter as nothing; and the way to it is "strait and narrow," and can only be reached by persistent effort.

St. Paul had a hard struggle with his carnal beliefs and desires, as he himself tells us (Romans, 7 : 14–25); yet he was able to say, "I am crucified with Christ: nevertheless I live; yet not I, but Christ liveth in me." "Christ liveth in me" is a strong expression, but it is the exact counterpart of the words of our text. To abide in Christ is not to cherish a sense of his corporeal presence or personality, but to lose all sense of personality and corporeality, which can have no abiding-place in Spirit, and so find our true union with him who is one with the Father, the immortal Son of God. Nothing mortal or material, nothing weak, sickly, or sinful, can find a place in him—oneness with the Father precludes such a thought. We must be perfect, as he is perfect. There is nothing to discourage us in this, for we have not to attempt the impossible task of making a perfect Son of God out of a weak and erring mortal. Christian Science teaches us that God's work is done, and is perfect from the beginning. All that we have to do is to destroy the false conceptions of mortal thought that hide from us the true sense of Being; and to this "end" it is "God which worketh in you both to will and to do of His good pleasure."

## Jewels.

BY M. B.

JEWELS have ever been types of beauty and wealth. In the Old Testament we read of the grandeur of Solomon's temple with its jeweled splendor, and in Revelation is described the glory of the New Jerusalem typified by streets of gold and foundations "garnished with all manner of precious stones."

In "Miscellaneous Writings," on page 202 our Leader, Mary Baker Eddy, speaks of the "jewels of character,—temperance, virtue, and truth."

Jewels are not found lying in our pathway or growing on trees ready to be picked, but each one represents much labor and care. The miner delves deep in the earth and brings out a piece of rock, embedded in which is the precious stone, and carefully he removes the valueless earth until the stone is freed from the useless matter; yet then it is not an object of beauty until it has been cut and polished to reflect the sun's rays.

So with our jewels of character which lie hidden and perfect in man's consciousness. They are not visible when covered with the rocks of selfishness and dim with the dirt of error.

We must labor according to the rules of our text-book, Science and Health, until we unearth the jewels there, and with infinite care, remove all foreign substance (false beliefs) until we have the jewel free. And then we must polish it with Love until it reflects the true Light which lighteth all the world and shines with the glory of the Sun of Righteousness reflected from its every side. As jewel upon jewel is revealed and polished, and still more of the encumbering matter (our false concepts) discarded, man will shine brighter until we may see the true man —perfect as his Father in Heaven.

Forgiveness, that noblest of all self-denial, is a virtue which he alone who can practise it himself can willingly believe in another.—COLTON.

## Testimonies.

### Found the True Way in Christian Science.

Christian Science has made me a new woman. When I caught the first glimpse of Light I was sick, discouraged, and longing for death. Leading physicians of St. Louis said, about that time, that there was not a sound organ in my body, and it was only an unusual amount of grit that kept me alive. But it was not my own physical condition that caused me so much anguish, but the more distressing illness of my husband, and the lack of means to procure the comforts so necessary to an invalid.

After getting "Science and Health with Key to the Scriptures" from the library, I do not remember anything more of my inharmonious body; and from the first talk with a leading Scientist in St. Louis, I never doubted that I had found the true way. It was many months, however, before the manifestation of health was visible, but I knew that I was *well*, and now—two and a half years later—I am a marvel to those who know me, for my daily life is full of unusually laborious tasks, and yet I am always able to perform them cheerfully; and I manifest health in plumpness, color, and youthful appearance.

But, as all dear Scientists know, the physical blessings are nothing compared to the earnest longing and striving to rise daily into a more spiritual consciousness of Life and its demands.

I have been able to overcome error in various forms, but will only mention one or two instances.

A gentleman, who was a believer in the Truth, had a severe attack of the flux during the night. He sent for me early the next morning, and I silently declared the Truth for about an hour, when the patient said he was better, and would go down town and attend to business. I did not see him until night, when he seemed to be all right. The next evening he told me what a fine demonstration had been made. He suffered intensely, all the symptoms of the disease were severe, and fear was great, because he had seen his mill hands roll on the ground in agony suffering from the same trouble.

Mortal mind would say that to eat was the worst thing to do, but he dined that day at a hotel with friends and ate heartily, growing better hourly; but there was a lurking fear that when the time came for the next movement of the bowels, some trouble would be manifested; his fears proved groundless and he realized that he had been perfectly healed in less than six hours of a trouble that held others, under different treatment, for several days and even weeks; death not infrequently resulting.

Another case. A young girl was suffering from suppression. She was in great pain and in a cold sweat caused by the agony. An hour's treatment relieved her, and by evening she was well and entertained company.

I thank God for this revelation. When a little child I often worried over the question: "If I had lived when Jesus did, would I have believed in him?" How grateful I am that I recognized Christ's impersonal appearing, the Truth that has made me free!

ROSSIE C. LUDLOW, Purvis, Miss.

### Physical and Moral Healing.

Last winter, an attack of earache in a little friend of ours was instantly met by an understanding that God is Love. The child had screamed with pain till his face was swollen and very red. His mother and a relative were doing all that they could to relieve him with material applications. I heard him and ran in to see what was the matter. I asked permission, and took him to my room, and immediately he threw the medicine into the grate and stopped crying.

Digitized by Google

For hours the mother and cousin listened, thinking they would have to take him again, but heard no sound from him. Instead, he had his hair brushed and apron changed and was asleep in less than an hour, continuing to sleep till late in the evening.

Then came the problem, with others in the house, to account for his immediate relief, so finally it came to my ears that it was because the child was so much attached to me. This was expatiated upon at great length, and all at once came to be considered wonderful. He is a great favorite and does love me very much, but we know, as I told his mother, that human love had never before cured an earache.

About the same time I overcame a case of the grip, which lasted only a few days and did not make me lie down except for a few h urs in the sudden attack with which it came upon me. Also the rheumatism in one knee disappeared very suddenly one Sunday morning. I had worked for several days, and this morning it had threatened to keep me from church.

My husband, who had been a physician, but had just come into the understanding of Truth's healing, overcame tonsilitis. It began in the evening, and had developed all its bad symptoms by ten o'clock, but the next morning he found himself well. Since then he has been healed of the tobacco habit, having smoked from early boyhood. This healing was the outcome of a steady growth in the knowledge of the Truth which makes free. We hope to show our gratitude by our lives.

MRS. GEORGE D. MCKAY, St. Joseph, Mo.

---

### How I was Awakened to the Truth.

So many tell of healing that I shall tell of my awakening into this glorious day, and how Truth found me in my need. I had heard vaguely of Christian Science through a cousin who had been healed and was living in Chicago, but I knew nothing of it. When I was starting out with a camping party a gentleman said to me, "You look very badly; if I were your mother I would not let you go." From this trip I was brought home on a stretcher. After recovering, I was so long in gaining strength that I decided to go to Chicago to this cousin. A friend said to me, "What will you do about Christian Science? I'll wager you will be one." I replied, "You know me and say that! You are a Presbyterian and I've visited your sister for weeks and weeks, and never became one."

In my room in Chicago were piled many Journals, which I surreptitiously removed. The subject was never mentioned to me, which really aroused interest and curiosity. One day I went to call upon a friend. While there a Scientist came in; they talked a few minutes, mentioning the Scientific interpretation of the word Trinity. I said nothing, but the Truth was making itself felt.

When I went home I said to my friend, "I heard my cousin say they were going to move into the Auditorium to-morrow, and I shall stay here and go without their knowing anything about it at the house." I went, and I thank God for finding me, a lost or strayed sheep. I am now a member of the Mother Church. After returning home it seemed right that I should play the organ in an Episcopal church, which I did from Christmas till Easter, and I knew that I was to be a Scientist and nothing else. Even though from that time until now I and one other have stood the only Scientists in a town of twenty-five thousand, I have never regretted my change of thought.

I have had many forms of error to meet, everything seemed to oppose me, but only once did error manifest itself to the extent that the family could remark, and that was a most severe attack of grip, which held me on the bed only one day.

I daily pray for understanding to make me a worthy child of God and a grateful receiver of His love.

KATEY M. SMITH, Pensacola, Fla.

---

### Testimony of a Child.

One day as I was coming from school my playmate seemed very ill. Her grandma called me in and asked me to stay with her. I did so. By realizing the allness of God, Good, and repeating the Scientific Statement of Being, she was able to be up and around, and in the afternoon dressed and played as usual and ate a hearty meal. This was the first she had eaten for three days, except a spoonful of ice cream. I am twelve years old and have had many beautiful demonstrations.

Christian Science helps me in my daily work, for I have to help mother before I go to school.

My mother had been trying to go to Boston to the Communion service, but could not see her way. I realized that God is our helper and provides for all our needs. One morning half the amount was handed her, mother never expecting a cent from that source, and the rest of the money was at hand. She was able to go to Boston and had a grand time, and I feel very happy for knowing the Truth. We are also thankful for our Leader Mrs. Mary Baker G. Eddy.—ISABEL TUCHFARBER, Cincinnati, O.

---

### Life is Joy.

At a time when I was very much discouraged and depressed a Scientist, to whom I had gone for help, said to me, "Life is joy, just try to realize that Life is joy." At the time I rejected the idea, for it seemed almost impossible to realize Life is joy when life at that time and under existing circumstances was anything but joyful. But what that friend said lifted my thought a little and has been a great help ever since. It may help another.

The Psalms of David are full of rejoicings and praises to God. Paul writes to "rejoice in the Lord always." "For our light affliction, which is but for a moment, worketh for us a far more exceeding and eternal weight of glory." And so we have every reason to rejoice, because we can prove that "life is joy."

Oh! is it not joy to know that sorrow, sickness, and death are the temporal—the fleeting, and that health and happiness are real and immortal?

MRS. AMY B. READ, Lowell, Mass.

---

### How the Sentinel is Appreciated.

To one living on a farm in a newly settled country where adherents to this faith are seldom met, that day each week is dear, when the Christian Science family gather round and pour their words of wisdom, encouragement, and love into his quiet home through the columns of the *Sentinel*. Yes, it does strengthen us, it does nourish us, it does feed us with the pure wheat when we are wading through the chaff of mortal mind, it does stand guard and keep out the thoughts of evil that are ever ready to rush in and fill the vacuum if Truth and Love be absent. As long as I wish to see the hand of Love laid on the forehead of pain, as long as there are those about me who are parched with a thirst for the Truth whom you can lead to green pastures and still waters, I will say, God bless every hand that is helping to place this paper in our homes.

VINTON HOLBROOK, Alexandria, S. D.

---

Often our trials act as a thorn hedge to keep us in the good pasture; but our prosperity is a gap through which we go astray.—SPURGEON.

## Religious Items.

In its church news the *Congregationalist* gives the following: "Churches have often been criticised for adopting a creed which contains articles to be accepted intellectually, but which do not require one to do anything for the benefit of one's fellow-men. The officers of the First Church, Evanston, Ill., Rev. W. E. Barton, D.D., pastor, dissatisfied with the present covenant, which deals chiefly with speculative matters of belief, have decided to present to the church a new covenant dealing with works or the conduct of life."

The *Universalist Leader* says: "The Christian disciple,—the man with brotherly love in his heart,—thinketh no evil; is not suspecting, or carping, or cynical. Such a person does not easily surrender faith in a friend, and yields to no current of censure or opprobrium against whomsoever directed; expresses disapprobation of wrong-doing, to be sure, yet with a sincere desire that the offender against God and man may be renewed in the temper of his mind and become established in wisdom and virtue."

"The Man Who Grumbles About His Work" is the title of an article in the *Sunday School Times*, which closes with the following question and its answer: "Should not one try to count for just as much as possible in the world? Undoubtedly; but grumbling never helps toward either usefulness or happiness. It never brings one either a friend or an opportunity. Fill the present place. Overflow it. Then there will be larger places empty and waiting for you. Trust God to guide you to the right one."

The (Baptist) *Watchman* says: "It is good for us that we learn that the delusive delights that were as honey in the mouth for sweetness have a twang of disgusting acidity and bitterness at last. Bless God that He does leave us, as a sign of His forgiving love, to reap as we have sown, and to make bread out of the crop, and to break our teeth sometimes in the eating of it. It would be a poor gospel that said to us: 'You may do wrong things and dodge the penalty, and that is forgiveness.'"

A correspondent of the (Episcopalian) *Church Standard* says: "The appalling situation in China should, it seems to me, cause reflecting Churchmen to ask whether the present efforts to Christianize that vast empire are of a character likely to bring success; whether the various Christian bodies have not been led by over-zeal, if not to attempt the impossible, still to attempt the *all but* impossible, in an unwise, foredoomed-to-failure fashion."

Sooner or later we find out that life is not a holiday, but a discipline. Earlier or later we discover that the world is not a playground; it is quite clear that God means it for a school. The moment we forget that, the puzzle of life begins. We try to play in school. The Master does not mind that so much for His own sake, for He likes to see His children happy, but in our playing we forget our lessons.—DRUMMOND.

In an editorial headed "Who Are Christians?" the *Universalist Leader* says: "The Gospels and Epistles have much to offer directly and inferentially, on the subject. 'Hereby shall all men know that ye are my disciples, if ye have love one to another.' 'By their fruits ye shall know them.' These are the words of Jesus to his chosen assistants."

The (Methodist) *Christian Advocate* has the following: "The spiritual life belongs to every day in the week, every pursuit in which we engage, every transaction and every department of activity. This inner life will never rise to a high stage until we learn to carry our religious convictions and principles into all things."

The New York (Baptist) *Examiner* says: "The essential thing for the believer to bear in mind is the truth expressed by our Lord, as recorded in Luke's Gospel: The Kingdom of God is within you; for only as He has His reign in our hearts can we be instrumental in furthering the interests of Christ's kingdom among men."

In an editorial the New York (Baptist) *Examiner* says: "Religion, from its very nature, demands that God be enthroned in the human heart, and true religion demands that the God of the heart be the true and real God. Righteousness cannot exist apart from a practical recognition of His absolute supremacy."

The child of God does not look backward to gain fresh energy. His energy is the energy of hope, and not of retrospection. He presses forward: his glance is ever onward. He anticipates revelations of God ever more and more glorious.—STOPFORD A. BROOKE.

The *Congregationalist* says: "Many people seem to have no special gifts, and, after all, it is the every-day, commonplace work on which society rests solidly. But he who has a talent should recognize that because of it his responsibility is increased."

Uncheerful Christians, like the spies, bring an evil report of the good land; others suspect there is something unpleasant in religion, that they who profess it hang their harps on the willows, and walk so dejectedly.—T. WATSON.

The *Watchman* has the following: "Write in one column all the things you can think of for which you should be thankful to God, and in another the reasons why God should be thankful for your existence, and see how they compare."

The *Christian Register* says: "In Japan there is a Buddhist temple for every five hundred and forty of the population, and a Buddhist priest for every four hundred Japanese. About $10,000,000 a year are spent in this."

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00.

Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Is Your Prayer Answered? Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent as early as possible. They *must* be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $1.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

## Items of Interest.

### Political and Governmental Notes.

A state election was held in North Carolina August 2, at which a constitutional amendment intended to disfranchise the negroes, was adopted by about forty thousand majority. The amendment does not specify negroes, but establishes an educational qualification which provides that every person presenting himself for registration shall be able to read and write any section of the constitution in the English language, but all persons who were entitled to vote under the laws of any state of the United States wherein he resided on January 1, 1867, or at any time prior thereto, and the lineal descendants of all such persons, are not required to possess the educational qualifications prescribed by the amendment.

Porto Rican silver coins ceased to be legal tender in that island August 1. The Porto Rican Government act provides that these coins shall be retired, and that United States silver coins shall be substituted for them. It was estimated when the law was passed that there were Porto Rican coins in circulation to the amount of about 5,300,000 pesos. There have been redeemed to date more than 4,000,000 pesos, leaving more than a million pesos still scattered over the island.

Brig. Gen. A. W. Greely, Chief of the United States army signal service, has gone to Alaska to superintend the construction of cable and telegraph lines connecting Cape Nome and the Yukon valley, with headquarters at St. Michaels.

Ex-Governor Roger Wolcott of Massachusetts has been appointed Ambassador to Italy to succeed General Draper, who resigned recently. Mr. Wolcott has announced that he will accept the appointment.

On August 1, the Union Pacific Railway Company paid the Government $661,643 interest on its notes, given in settlement of the old bonded indebtedness.

News comes from the Philippines that the War Department has set to work to fortify Manila Bay so that it cannot be entered by any hostile fleet.

The census office has made public the population of the city of Cincinnati, O. It is 325,902, an increase over the last census of 28,094.

### Foreign News.

The assassin of King Humbert of Italy was Gaetano Bressi, an Italian silk weaver, formerly a resident of Paterson, N. J. The Italian authorities claim to have discovered evidences of a plot to strike down other rulers of Europe, and through the Italian Ambassador at Washington representations have been made that the conspirators have rendezvous in Paterson, and the co-operation of the United States government is requested to break up this band and arrest the leaders, who are supposed to be directing the operations in Europe from hiding places on this side of the water. Secretary Hay has taken the matter seriously, and has called upon the governor of New Jersey to investigate. The police of Paterson are busy trying to find Bressi's accomplices.

The advance on Pekin was begun by something over twenty thousand allied troops on August 1, and the column is expected to reach the Chinese capital by August 9, if the way is not seriously disputed. The Chinese government, through its diplomatic representatives, used every argument to dissuade the powers from ordering the advance. The United States, as well as the other powers, refused to listen to any pleas for delay, after the receipt of the messages early last week from the various ministers, saying that they were alive, but in great peril. The dispatches state that Chinese troops are being hurried from all directions to outflank the allied relief force, but news of Chinese movements is very untrustworthy.

An unsuccessful attempt was made in Paris on August 2 to assassinate Muzaffered-Din, the Shah of Persia. He is staying in Paris while seeing the Exposition, and on the day in question was in a carriage going from Versailles to the Seine, when a man in the garb of a Parisian workman jumped up on the carriage step and pointed a revolver at the Shah's breast, but an officer of the household knocked the weapon out of the man's hand before he had fired it.

The government of Nicaragua has seized the property of the Maritime Canal Company, the owners of the concession for building the Nicaragua Canal. Under the terms of the concession, the company was to have ten years after the completion of the preliminary surveys to finish the work. That period expired nearly two years ago.

King Leopold has inaugurated works that are designed to make Brussels a seaport capable of accommodating ocean steamers. The plan has been discussed off and on for seventy-five years.

It is reported that Russia has borrowed nearly ten millions sterling from the Imperial Bank of Russia since the commencement of the troubles in China.

The statement is made that more than 120,000 men and 3,650 officers of the German army have responded to the call for volunteers for Chinese service.

The British have reported the surrender of over four thousand Boer troops during the past week.

The Duke of Saxe-Coburg, second son of Queen Victoria, died July 30.

### Industry and Commerce.

The wheat yield in Mexico was unusually large this year. There was a great increase in the acreage, and the grain is of excellent quality and well suited to the manufacture of export flour. There are a large number of flour mills in Mexico, and most of them do a large export business. Wheat flour is not used by the masses of Mexicans, but the mills find a good market for all the flour they are able to manufacture in the Central American countries.

Speculating on the effect of a protracted war with China on the cotton goods business of the United States, leading manufacturers say that there are 400 million people in China who wear almost nothing but heavy cotton clothing, and they depend chiefly on the United States to furnish this commodity, and though war may interrupt the trade, it cannot destroy it.

The American Iron & Steel Manufacturing Company, having immense plants at Reading and Lebanon, Pa., announced a reduction in wages of twenty-five per cent to take effect August 1. The West End Iron Works Company, Lebanon, gave notice of a similar reduction in the pay of its employees. As a result, over twelve hundred iron-workers quit work.

The total receipts of the San Francisco mint during July from all sources, including the Seattle assay office, amounted to $13,400,000. Total receipts on the Pacific coast from the Klondike so far this season are about $9,500,000, against $7,630,000 at the same time last year.

The Bethlehem Steel Company has received word that a contract has been awarded it by the Russian Government for two thousand tons of Krupp armor. The armor will be used on the three new Russian vessels, Alexander III., Orobino, and Orel, all of which are now building at St. Petersburg.

In addition to the Chicago, Burlington, & Quincy's plans for a railroad to Alaska, a Philadelphia syndicate, represented by Alfred Day, purposes building a railroad fifty miles long in Alaska to develop coal lands of Kachkemo Bay, Cook Inlet.

In noting the progress of by-products manufacturers begin to doubt if there is any such thing as waste materials. Furnace slag is now turned into fire-proof cement, plaster, and durable brick of soft grey color.

The records of the office of the comptroller of the currency show that since March 14 last he has approved 426 applications to organize national banks, of which 257 have since been organized and begun business.

Heavy rains have fallen in Nebraska and the corn crop of the State is now practically safe. The secretary of the Nebraska Grain Men's Association says the yield will approximate 300,000,000 bushels.

On all divisions of the Boston & Maine Railroad there are at present employed over twenty thousand people. They draw nearly $200,000 weekly.

### General News.

The Metropolitan park system, embracing all the parks and boulevards in Boston and vicinity, is maintained by taxes raised by thirty-eight towns and cities of Massachusetts, among which are: Boston, Cambridge, Chelsea, Everett, Lynn, Malden, Medford, Newton, Quincy, Somerville, Waltham, Woburn, Arlington, Belmont, Braintree, Brookline, Canton, Dedham, Dover, Cohasset, Hingham, Hull, Hyde Park, Melrose, Milton, Nahant, Needham, Revere, Saugus, Stoneham, Swampscott, Wakefield, Watertown, Wellesley, Weston, Weymouth, Winchester, and Winthrop. Since 1892, when the commission was organized, an indebtedness of $8,317,500 has accumulated, chiefly on account of the purchase of land.

It is announced that Professor Charles Eliot Norton and the other literary executors of John Ruskin have determined not to issue a biography of the great art critic, considering the Mr. Ruskin's "Præterita" and Collingwood's biography are sufficient. However, the executors will issue representative selections from Mr. Ruskin's diaries and letters.

The only place in the world where violin making may be said to constitute the staple industry is Markneukirchen, in Saxony, with its numerous surrounding villages. There are altogether about fifteen thousand people in this district engaged exclusively in the manufacture of violins.

Six hundred Finlanders recently sailed from Liverpool for Canada, making about eight thousand who have emigrated during the past six months.

## Ancient Document Found.

### "Last Will and Testament of Jesus Christ."

BIBLICAL scholars in Europe are much excited over a document entitled "The Last Will and Testament of Jesus Christ," the recent discovery of which was first made public at the Congress of Archæologists, held at Rome. Professors Marucchi and Lanciani are two of the eminent authorities who have examined this document and written about it. While it is not a will or testament in the sense of disposing of property, it is a long series of instructions regarding the conduct of the church; these instructions being supposed to have been delivered orally by Christ after the resurrection.

In support of the theory that this extraordinary find is genuine, it is pointed out that there are many references to such a document in Biblical tradition. In the National Library at Paris is a fragment which has been regarded as part of a similar work, while libraries in Syria possess other fragments. None of these fragments was sufficiently long to do more than indicate that the original was a lengthy document inspired directly by the Saviour.

The writing or dictating of such a document has been recently advanced as one of the reasons for Christ's stay upon earth between the time of the resurrection and the ascension. What would be more natural, has been asked, than that he should wish to leave behind him detailed, specific instructions as to the carrying on of his work? Of the first importance was the organization of the church and the formulation of rules for its government.

It is precisely of material of this character that the great bulk of the newly discovered document is made up. As thus far translated, it does not contain any of those brilliant, ringing sentences associated with the authentic utterances of the Saviour. On the contrary, it seems to have been intended not for the populace, but for the priests, telling them exactly how the government of the church should be conducted.

That this document will at once take its place among the Apocrypha is the general opinion of Biblical scholars, while there are not a few among them who claim that its authenticity has already been proved to their satisfaction.

The discovery of this astonishing document was recently made in Mesopotamia by no less a personage than Ignatius Rahmani, Patriarch of the Catholics in Syria. To his unbounded surprise and delight, this distinguished ecclesiastic found in one of the most out-of-the-way places in the world an ancient Syrian parchment bearing the strange title, "Will or Testament of Our Lord Jesus Christ."

The Patriarch, whose see is at Antioch, had gone to spend some time at Mosul, a quaint town, situated opposite and quite close to the ruins of Nineveh. Knowing that curious relics of the past have been found there, he passed many hours in exploring old ruins and looking over old manuscripts, ever on the search for one of those treasures which all archæologists dream of finding, and which so few are fortunate enough to discover. For days his quest was fruitless, for, though it appears that he unearthed a manuscript or two of more than ephemeral interest to scholars, he discovered nothing of great value until one evening when his eye chanced to fall on the imposing looking document with the Syrian title showing that it purported to contain the will or final instructions of Jesus.

This parchment was bulky and well preserved. It had evidently lain forgotten for centuries in the old monastic building where it has now at last been unearthed. The Patriarch, who is a noted archæologist, as well as an eminent Biblical scholar, recognized its exceeding value at once, and straightway took possession of it, with the intention of examining it thoroughly, and then of translating it into Latin, the translated version to appear beside the original Syrian in parallel columns. The reason why he recognized its value at a glance was because he knew that tradition had pointed to the existence of such a document.

Furthermore, he knew that there was one fragment in the National Library at Paris and two or three others in the libraries of Syria. The complete work, however, was now in his hands. It consisted of the following parts:—

First, a discourse of the Saviour to the apostles regarding the end of the world.

Second, a discourse about ecclesiastical canons.

Third, instructions in regard to the constitution of the church and precise regulations in regard to the material, form, and ornaments of the buildings.

Fourth, rules in regard to the episcopacy, including the liturgy for the ordination of bishops, and the mode of life to be observed by them.

Fifth, regulations in regard to the sacrament.

Internal evidence shows, it is claimed, that the instructions recorded herein were delivered by Christ to the apostles soon after he arose from the tomb, and presumably near Emmaus, where, as the Bible tells us, he was seen by two of his disciples. At the close of the document a statement appears to the effect that this, Christ's will or last testament, was delivered by him *viva voce* and was taken down in writing by the apostles, Matthew, Peter, and John, after which it was distributed from Jerusalem through the various countries by several disciples, among them being Silas, Magnus, and Aquila, all of whom acquired a goodly reputation by their zeal in spreading the Christian faith.

As a result of their labors it is known that the document was translated into Coptic. The presumption is that it was also rendered into many other languages. That the tongue in which it was originally written was the Greek seems evident, and the Patriarch Rahmani says that it was transcribed into Syrian in the year 687 of our era.

That the will or testament is of great age, its references to the liturgy and to certain prophets clearly indicate. Furthermore, from the instruction in it in regard to the communion, scholars who have examined it are satisfied

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

that it dates back to the age before Tertullian, since at that time the communion was administered by the bishops, whereas before that time it was administered in accordance with the rules laid down in the will—namely, by deacons, who were instructed to give it to the congregations.

The chapter in the will which treats of sacrifices, reads like a chapter out of the Pentateuch, so quaint and primitive is its phraseology, and so similar in many respects are its rules to those in use under the Mosaic law. Sacrifices, says the will, are to be offered on the Sabbath. The bishop on that day is to offer three loaves as a symbol of the trinity, and on the following day, Sunday, he is to offer four loaves, the design being to represent in this manner the four evangelists. When the ceremony begins, the veil of the sanctuary is opened, and remains open while the bishop offers the bread to the priests, deacons, sub-deacons, widows, deaconesses, and other privileged members of the church.

The loaves are to remain on the altar, and first the bishop is to place his hands on them, and then the priests, the congregation meanwhile observing a great silence, which is only to be broken by the words of the deacon saying the proclamatis super eucharistiam, which, in Latin, reads: "In cœlum corda vestra—Si quis odium contra proximum habet, reconcilietur," etc. (Lift up your hearts to heaven. If any one among you bears hatred toward his neighbor, let him be reconciled with him, etc.)

After this, the bishop is to pronounce the customary words: "Dominus noster vobiscum" (Our Lord be with you) and then comes the thanksgiving, in which is embodied the formula for the consecration of the bread and wine. A prayer for the living and dead follows, and it is memorable because, referring to the dead, it says: "Memento eorum qui in fide obdormierunt" (Remember those who sleep in the faith). A familiar expression this is, and one which the document proves to be of great antiquity.

Among European archæologists and Biblical scholars the news of the Patriarch's discovery has aroused intense interest, and several among them, including Professors Funk of Tubingen, Bickell of Vienna, Duchesne, director of the French school at Rome, and Marucchi, also of Rome, have thoroughly examined the work, and have written their views in regard to it. The document has also been critically examined by Professor Lanciani, the distinguished Italian archæologist, whose opinion on a matter of this kind is of exceptional value, since years of training and of assiduous research enable him to speak with authority. As to his views and those of the other archæologists, it need only be said that, while they do not agree as to the exact age or authorship of the document as a whole, the sentiment among them is unanimous that the discovery is one of great importance.

That Jesus dictated certain portions of this so-called will is believed by some to be very probable, if not actually proven.

In this connection it should be noted that the word "testament" or "will" appears not only at the beginning of the document, but also in the middle, where it occurs in the following passage, which the Patriarch has thus rendered into Latin: "Modo nostis omnia quæ sum vobis locutus dum vobiscum enem et in hoc quoque testamento quod sum tradetis gentibus voluntas Patris mei adimplibitur."

At the present time the matter rests thus: "All attainable evidence goes to show that this document was written in very early times, that a large portion of it is devoted to the elucidation of Christian truths and doctrines which are entirely in harmony with the words of Christ as set forth in the Gospels, and that the existence of such a last will or testament is quite in accordance with an old tradition, which says that Christ gave many instructions to his apostles before he finally ascended to heaven.

Professor Marucchi states the case clearly when he says: "We gladly recognize the fact that the testamentum is of great antiquity, even though we are unable to admit that it is an organic whole, or that it was compiled by one author at one time. There seem to be a few discrepancies in it, and hence it may be that it was written by different persons, and subsequently compiled into one work. In any case, however, it is a most important contribution to the study of ancient Christian literature, as well as to that of Christian antiquities, and therefore its discovery at this time should be welcomed by all who are interested in these subjects."

*New York Herald.*

### Valuable Bibles.

Great interest is manifested in the free exhibition of a collection of Bibles and sacred literature at the Bible room of the Congregational House in Boston, Mass. The greater part of the collection consists of what are known as "workers'" Bibles, and are from the library of S. Brainard Pratt of Boston. It is probably the finest collection of Bibles to be found in the United States, and the existence of a better one in the world is not known.

One of the books which is attracting rather more attention than any of the others is the illuminated Bible long used by the late Dwight L. Moody, and containing many notes in his own handwriting. Mr. Moody once said in Boston: "Bible marking with the insertion of side notes, marginal references, etc., converts the margins of one's Bible into a notebook at hand at any moment," and he evinced his faith in the statement by making copious notes in his own Bible.

Another Bible which is of general interest is the one used for more than thirty years by the Rev. Henry Ward Beecher. In the thirty years in which he had this Bible in service he wore out the binding and then he had the book cut down and rebound. For twenty years after that, or until his death, he used the Bible at funerals.

Almost equaling the Beecher Bible in interest is the John Knox Bible, with oak covers made from wood from the John Knox house, Netherboat, Edinburgh, Scotland. Knox was a Roman Catholic priest in 1530, a Protestant reformer in 1543, and for two years a galley slave. It was said of him that Mary, Queen of Scots, was more afraid of him than she would have been of a regiment of soldiers.

Another remarkable Bible is one used on the march and in three prisons during the Civil War by the Rev. Dr. Henry Clay Trumbull, a chaplain in the Federal army. He preached from this Bible while confined in Libby prison, and used the marginal leaves for a sort of diary. There is also in the collection an ancient Bible owned by Philip Melancthon, professor of Greek in the University of Wittenberg in the sixteenth century, between whom and Luther there was the most touching friendship. This Bible is accompanied by Luther's translation of the Psalms, published in Leipzig in 1541. There is a Geneva Bible of 1577, which is said to have once been owned by Queen Elizabeth.

One of the rarest books in the collection is that used by the Apostle John Eliot in preaching to the Indians. There is said to be no person alive who can read this Bible, but Mr. Pratt has been offered one thousand dollars for it. He is a collector, however, and never sells a book.

A unique New Testament is the "Midget," the pages of which are only five eights by three fourths of an inch in size, and there is a Bible with pages 1¼ by ⅞ inches. This Bible contains eight illustrations.—*Philadelphia Record.*

Never does a man portray his own character more vividly than in his manner of portraying another.

### Christian Scientist's Reply.

REV. DR. J. D. JORDAN'S sermon at the First Baptist Church last week on Christian Science has excited considerable comment. Dr. Jordan spoke plainly of the belief, calling it mere "jingle-jangle." "Idealism without an idea or ideal; Christianity without a Christ; science without a scientific fact stated or demonstrated; theological without theology; professing to be scriptural, it denies all Scriptures; a revelation without revealing anything except 'jingle-jangle;' claiming to be a revelation from God, which shrouds God in darkness and veils Him with mystical nonsense."

The leaders of Christian Science in Savannah, when asked about Dr. Jordan's sermon, had little to say. Mr. Edward H. Carman of Atlanta, has this to say in reply to the sermon:—

Dr. Jordan's text, on which he bases his sermon against Christian Science, "Prove all things; hold fast that which is good," is a favorite text with Christian Scientists, because from the teachings of Jesus, explained and illumined by "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, they are enabled to prove that Jesus meant what he said, when, just before the ascension, or disappearance from human sight, he said, as given by Mark, 16: 17, 18, "And these signs shall follow them that believe [understand]: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

This command has never been revoked, and stands to-day as a command to all true believers, just as truly as it did the day it was given, and believers are to be known by their fruits. Like the doctor, the writer, when he first read Science and Health, said, "It is all nonsense, or jingle-jangle." Unlike Dr. Jordan, the writer reached his conclusion from the very opposite standpoint. Being an infidel and materialist, he said, "The system of Christian Science is founded on the miracles of Jesus, and miracles of any kind are not admitted by the materialist; therefore, it is nonsense."

Three years after this conclusion was reached, one of the believers and practitioners of this new-old religion, believing that she understood sufficiently the words of Jesus when he said of the believer, "The works that I do shall he do also," healed one near and dear to this infidel of diseases pronounced incurable by eminent physicians, thus far proving all things, holding fast that which is good, demonstrating that the day of miracles was not past.

The doctor quotes from the Bible: "All [persons] have sinned, and come short of the glory of God," and immediately following this quotation he dwells at length on the personality of God. If all persons have sinned and come short of the glory of God, and God is a person, then God must have sinned and come short of His own glory (or character). If this is true, then all must finally end in confusion.

The doctor says, "If God is principle and not person, then there can be no love in the universe but principle, and loving principle is folly."

Mrs. Eddy says in answer to the question, "Do I believe in a personal God?" "I believe in God as the Supreme Being. I know not what the person of Omnipotence and Omnipresence is, or what the Infinite includes; therefore, I worship that of which I can conceive, first, as a loving Father and Mother; then, as thought ascends the scale of Being to diviner consciousness, God becomes to me, as to the Apostle who declared it, 'God is Love,'—divine Principle,—which I worship; and 'after the manner of my fathers, so worship I God'" (Miscellaneous Writings, p. 96).

This is the true sense of worship, for, says John, "God is Spirit [Rev. Ver.]; and they that worship him must worship him in spirit and in truth" and not as a person. What is spirit? Webster defines spirit as substance. Locke says, "The true import of the word [substance] is, in plain English, standing under or upholding." Dr. Hampden has said, "In its logical and metaphysical sense, is that nature of a thing which may be conceived to remain when every other nature is removed or abstracted from it." Fleming says, "Underlying all causes, we conceive of one universal and absolute cause, one substance in itself persistent, and upholding all things." Then if God is Love, and God is Spirit, and Spirit is substance, Spirit must be the real and only substance, filling the universe, for all that the human mind calls substance is subject to discord, decay, and death, is not real in the eternal, infinite sense. Then God must be all in all—as the Bible declares.

The doctor quotes from the first chapter of Genesis: "In the beginning God created the heaven and the earth." In this same chapter we read: "Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over all the earth, and over every creeping thing that creepeth upon the earth."

"So God created man in his own image, in the image of God created he him; male and female created he them. . . . And God saw everything that he had made and behold it was very good." If everything is good, whence comes evil?

This statement of creation Christian Science accepts as the true statement, and from this basis reckons the Christ as the ideal man whom God created with power and dominion, and that this idea manifested itself to the human mind through the man Jesus.

Merely to believe Jesus' words and accept them as true is of no practical value to any one. We are told "Work out your own salvation with fear and trembling;" that is, apply the teachings of Jesus to the overcoming of evil and thus destroy it. We are to deny and overcome the false claims of evil daily and hourly as did he who said, "I am the Way, the Truth, and the Life." He overcame all temptation to sin, and finally proved the power of Spirit by overcoming the false sense of death for himself, thus proving that "the last enemy that shall be destroyed is death." He set for us an eternal example, that if we meet and destroy evil, the suggestions of sin and sickness, we can make even death as nothing. As we practise his teachings, we can prove all things and hold fast that which is good; for it heals us physically and uplifts us morally and spiritually.

The doctor says: "Christian Science is Christianity without Christ." The Discoverer and Founder of Christian Science, in answer to this question, "Do I believe in the atonement of Christ?" says, "I do; and this atonement becomes more to me since it includes man's redemption from sickness as well as from sin. I reverence and adore Christ as never before. It brings to my sense, and to the sense of all who entertain this understanding of the Science of God, a *whole* salvation" (Miscellaneous Writings, p. 96).

*The Morning News*, Savannah, Ga.

### Reply to a Sermon on Christian Science.

*To Daily Leader:*—

I have read with considerable interest your account of the sermon by Dr. Weddell, entitled "Christian Science and the Science that is Christian." I ask space in which briefly to present my impressions of the sermon.

Digitized by Google

In his sermon, the doctor does not attempt to say that Christian Scientists do not heal; in fact, he admits that they do heal. He does not claim that healing the sick was not an essential element of Jesus' teaching, but emphasizes the facts of Jesus' healing; he does not deny that Jesus commanded his disciples throughout all times to heal the sick and cast out devils, to give sight to the blind, hearing to the deaf, and to make the lame walk. No; all these things are plain teachings of the Bible, and must be accepted by any one calling himself Christian. Neither does he attempt to give a reason why we, at the present time, should not be able to practise this essential of Jesus' teaching.

Your article states: "The doctor handles the subject from the standpoint of the theologian, and does not attempt to go into its philosophy. A careful study of the doctor's sermon emphasizes this statement. His preconceived ideas of Christianity, gathered through study of speculative theology, prevent his accepting the grand truths contained in Christian Science, and thus we find him presenting statements utterly unwarranted by any teaching of Christian Science.

The presentation of Christian Science from the standpoint of its "philosophy" brings out certain unanswerable facts, fatal to his train of reasoning. According to Webster: The objects of philosophy are to ascertain facts or truth, and the causes of things or their phenomena; to enlarge our views of God and His works, and to render our knowledge of both practically useful, and subservient to human happiness.

The fundamental question involved in the doctor's sermon is not, "Do Christian Scientists heal?" for he admits the healing; but he takes exception to the claim that our healing is from God, taking the ground that because of our difference of opinion on mere doctrinal points, we are outside the pale of Christianity, and this in the face of Jesus' explicit commands: "Go ye into all the world," "preach the Gospel," "heal the sick."

Theories about God and man are powerless to overthrow demonstrated facts. Christian Scientists are building upon a foundation of demonstration. Theory has given place to the practical application of Truth, thus healing the sick and reforming the sinner, and any attempt to reflect discredit upon Christian Scientists because of their belief in the Omnipotence of God, amounts to a practical denial of the fundamental teachings of Christianity.

Your article states: "The doctor declares there are two essential things in Christ's religion and life that find no place in Christian Science." "His sympathy with men in sorrow, pain, and death," "It fails to recognize Jesus as the man of sorrows and acquainted with grief;" and second, "The atonement by the blood of Jesus for the sins of the world. But sin is not recognized." These statements are an inversion of the facts, and merely show the superficial nature of our critic's acquaintance with this Science which he presumes to criticise. Let me here quote the words of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 365: "The physician who lacks sympathy for his fellow-being is deficient in human affection. . . . Not having this divine affection, he lacks faith in the divine Mind, and has not that recognition of infinite Love which alone confers the healing power."

Sympathy with suffering humanity does not imply a recognition of the reality of suffering in the sense of making it more real to the sufferer, but true, Christ-like sympathy manifests itself in the destruction of sin and suffering, by supplanting erroneous belief with the recognition of spiritual harmony. Jesus never said to poor, suffering humanity, "Yes, I see you are sick, and I am very sorry for you, but it is the will of God." No; his sympathy took a more practical method of expression, and he healed them of all their diseases. This is also the way in which Christian Scientists are endeavoring to demonstrate loving sympathy for mankind.

The other point raised, "the atonement by the blood of Jesus," is a doctrinal question, and in common with the ologies and isms which attempt a satisfactory explanation of the question, we insist upon our right to present our views, based upon demonstration. We read in Science and Health, p. 323: "Atonement is the exemplification of man's unity with God, whereby he reflects divine Truth, Life, and Love. Jesus of Nazareth taught and demonstrated this oneness with the Father, and for this we owe him endless homage."

Also: "The efficacy of the crucifixion lies in the practical affection and goodness it demonstrated for mankind. The Truth had been living in their midst; but until they saw that it enabled their Master to triumph over the grave, his own disciples could not admit such an event to be possible. After the resurrection, even the unbelieving Thomas was forced to acknowledge how complete was the proof.

"The spiritual essence of blood is sacrifice. The efficacy of Jesus' spiritual offering was infinitely greater than can be expressed by our sense of human blood" (Pp. 329, 330).

It is impossible for me, within the limits of this article, to take up in detail the charges which the doctor makes in his sermon, but suffice it to say, that to my sense, he has built up an elaborate fabric of the imagination, having no more resemblance to genuine Christian Science than has a snow man, built by boys, to the image and likeness of God, which is the real man. And, as boys do sometimes when their creation is not quite satisfactory, he is engaged in trying to knock it down.

To those desiring the truth about Christian Science, I would recommend the study of its text-book, Science and Health by Mary Baker G. Eddy.

Respectfully,

JOHN L. RENDALL.

In the *Davenport (Ia.) Leader.*

## God's Protecting Power.

ATLANTA Christian Scientists are deeply interested in the fate of Sara Pike Conger, wife of Edwin H. Conger, the United States minister in Pekin. Mrs. Conger is the representative of the Christian Science movement in the Flowery Kingdom, and as such she is known throughout the world.

It has been reported that Christian Scientists all over the country were concentrating their thoughts on Mrs. Conger, and that the centre in the movement of focusing mind force upon China is the Christian Scientist denomination of Chicago. The alleged reason for the selection of Chicago is that Minister and Mrs. Conger have close family ties there.

When seen by a *Journal* reporter to-day, Mrs. Livingston Mims said,—

"Christian Scientists never focus mind on anybody, because their method is not human will, mesmerism, nor hypnotism. But each Scientist who knows of the seeming peril of the Congers endeavors to think of them as safe and perfect in the Divine Mind. That God is ever present Love with them, protecting them and saving them. They believe that the 91st Psalm realized is a sure protection from all evil; that Christian Science applies the great truth of the omnipotence and omnipresence of God to all human conditions."

Mrs. Mims then spoke of two recent accidents which have lately been a shock to the people of this state.

"These accidents," said Mrs. Mims, "have illustrated the protecting power of Christian Science. One of them is the

Digitized by Google

accident with the late report of Captain Brown's death. A young man who was standing on the platform with Captain Brown was thrown from the car at the same time, and lived. The young man was a Christian Scientist, as also was his mother, and she was thinking of him as God's child, under the Divine power and protection. He was enabled to continue his journey to Cumberland, and returned safe, well, and happy.

"The other accident I mention is the one which occurred between Atlanta and Macon, in which so many people lost their lives, and so much mention was made of the strange phenomenon that two ladies right in the midst of the wreck were absolutely untouched and unbruised.

"It was easily comprehensible to all Christian Scientists who learned that one of these ladies was a Christian Scientist, who realized the power and presence of God as a protection from all ills.

"I have known students in yellow fever districts who have had their homes and families as safe as if a cordon of angels were about them, by this same realization of God as the ever-present Love, and abiding in the conviction that God's promises set forth in the 91st Psalm are true: 'He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty,' and no plague shall 'come nigh thy dwelling.'

"Should it then be surprising," continued Mrs. Mims, "that Christian Scientists are filled with love and gratitude to the Discoverer and Founder of Christian Science—the Rev. Mary Baker Eddy—who has made such glorious things possible to us, and that the far away aisles of the seas, and even distant China and all other nations of the world are calling her blessed?"—*Atlanta (Ga.) Journal.*

## The Secret of Long Life.

UNDER the above heading appears an editorial in the *Boston Herald* of August 1, which is of interest as it recognizes at least one of the phases—although a comparatively unimportant one—of Christian Science teaching and practice.

We quote from it:—

There was much comment in the newspapers a few months ago upon the rules which Dr. Pearsons of Chicago had adopted, in order that he might live to be a hundred years old, he being now eighty or thereabouts. Many of these rules were such as only a person having abundant means and complete command of his time could observe. Lately a woman, Miss Mary Yardly, died, at the age of 105, having a green and vigorous life in her later years. She left behind a set of rules which she considered largely responsible for prolonging her existence. They differ in many particulars from those prescribed by Dr. Pearsons. She thought that she owed much to the fact that she always preserved an even temper and a cheerful disposition, never worrying about her physical condition. She made it a point to be always occupied about something. She was not especially rigorous about her diet, except to take care that it was suitable in kind, and sufficient for the needs of her body.

### Watch Your Thoughts.

You never can tell what a thought can do
In bringing you hate or love,
For thoughts are things, and their airy wings
Are swifter than carrier doves.
They follow the law of the universe;
Each thing creates its kind,
And they speed o'er the track to bring you back
Whatever went out of your mind.

*Selected.*

### Christian Science not a Fad.

Christian Science cannot be classed among the fads or manias of the ignorant. It is emphatically the faith of exceptionally cultivated people, well to do, and thoughtful. This is the most significant thing about it, and grave professors of psychology, like Mr. James of Harvard, are inclined to give the sect credit for many remarkable cures. Christian Science is apparently a protest against the gross materialistic view of life that prevailed twenty years ago. It is an intellectual revolt. There is much in it which conservative people object to, but the fact remains that hundreds of thousands of the educated class, both in England and the United States, are believers, give money freely to build superb church edifices, and are all enthusiastic beyond the wont of modern religious bodies.—*Mexican Herald.*

### Request to Members of the Mother Church.

Persons who have become members of the Mother Church during the last two years, whose names appear in the Church Manual, and who have not received a notice of admission, are requested to notify the Clerk, William B. Johnson, 30 Norway St., Boston, Mass.

### Imagination and Disease.

IN "A Journalist's Note-Book" Frank F. Moore tells an amusing and significant story of the influence of imagination upon health. A young civil servant in India, feeling fagged from the excessive heat and from long hours of work, consulted the best doctor within reach. The doctor looked him over, sounded his heart and lungs, and then said gravely, "I will write you to-morrow."

The next day the young man received a letter telling him that his left lung was gone and his heart seriously affected, and advising him to lose no time in adjusting his business affairs. "Of course you may live for weeks," the letter said, "but you had best not leave important matters undecided."

Naturally the young official was dismayed by so dark a prognosis—nothing less than a death-warrant. Within twenty-four hours he was having difficulty with his respiration, and was seized with an acute pain in the region of the heart. He took to his bed with the feeling that he should never arise from it. During the night he became so much worse that his servant sent for the doctor.

"What on earth have you been doing to yourself?" demanded the doctor. "There were no indications of this sort when I saw you yesterday."

"It is my heart, I suppose," weakly answered the patient.

"Your heart!" repeated the doctor. "Your heart was all right yesterday."

"My lungs, then."

"What is the matter with you, man? You don't seem to have been drinking."

"Your letter!" gasped the patient. "You said I had only a few weeks to live."

"Are you crazy?" said the doctor. "I wrote you to take a few weeks' vacation in the hills, and you would be all right."

For reply the patient drew the letter from under the bedclothes, and gave it to the doctor.

"Heavens!" cried that gentleman, as he glanced at it. "This was meant for another man. My assistant misplaced the letters."

The young man at once sat up in bed and made a rapid recovery.

And what of the patient for whom the direful prognosis was intended? Delighted with the report that a sojourn in the hills would set him right, he started at once, and five years later was alive and in fair health.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY, TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Keeping the Faith.

WHEN nearing the close of his earthly ministry Paul wrote, "I have fought a good fight, I have finished my course, I have kept the faith." The Apostle frequently alludes to the Olympic or Isthmian games among the Greeks. In the text quoted he refers to the boxing and running contests, and the lesson he teaches is worthy of our most careful consideration for it shows the wisdom of employing only right means and methods in all the affairs of life.

There were certain rules that all who took part in these games were required to observe. The least violation was not tolerated. If, perchance, one should come off victorious, but in so doing had violated some law of the game, he was not crowned, because he did not strive lawfully. All his work counted for naught; it was as though he had taken no part in the contest. On the race course it was not enough that a contestant was far in advance of his competitors when he stopped to rest by the wayside. He must run the full course and be first to reach the goal, if he would receive the prize.

Applying all this to himself, as he recalled the part he had taken in the greatest of all contests, Paul said, "I have fought a good fight, I have finished my course," and then, as if to assure Timothy of his firm conviction that he would receive his reward, he adds, "I have kept the faith." In his contest with evil in all its forms, he had kept the faith. In thought, word, and deed the law of divine Love had reigned supreme. He had gained the victory, and gained it lawfully, hence he could say, "there is laid up for me a crown of righteousness."

The comparison of the Christian life to the contests of the Grecian games offers many helpful suggestions. As those who took part in the games must strive lawfully, so must the Christian. If he does not so strive he is not crowned, even though it does seem that he has come off victorious.

The disposition of mortal man is to attain the desired result, be it by fair means or foul. Some would even feel justified in doing evil if they thought that good might result. So fully convinced are they that their conception of right should triumph that they resort to questionable means and methods in their endeavors to succeed. Of this day and age it may be said, "the kingdom of heaven suffereth violence, and the violent take it by force," or at least attempt to do so.

In Christian Science such methods receive a strong and well-merited rebuke. In the endeavor to gain the mastery over evil one must be governed by the law of God. Evil cannot be mastered by evil. Good alone conquers evil; Truth destroys error; and the immutable law of harmony remedies discord. "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 127, says, "Unless an ill is rightly met and fairly overcome by Truth, it is never conquered."

The schoolboy is sometimes more concerned about getting the answer to his problem than he is about how he gets it. There is but one way in which the problem can be solved. He must begin at the beginning, and each succeeding step must be according to an established principle and rule. When each step has been taken, he finds himself at the end of the course, and if he has kept the faith, *i.e.*, if his work has been scientific, it is correct, and need not be done over again.

It sometimes happens that the pupil makes an error, and subsequently makes a second error which counteracts the first. When he has finished his work he finds that the result is just what he should have. He thinks he has solved the problem, but in reality he has not done so. One error cannot correct another. Certain numbers on the blackboard do not constitute the solution of the problem, even though they do seem to have been arrived at by mathematical calculations. His work has not been scientific, so he must go back to where he first departed from principle, and then, if his work is exact, he will gain the solution of the problem, but if he should again depart from the principle of mathematics, his work will have to be repeated until all errors are eliminated.

Thus it is with all the problems of mortal existence. There is but one way to reach a correct conclusion, while there may be many wrong ways that would seem to bring the desired end. As there is a principle of numbers which governs the solution of all problems, from the simplest sum in addition to the most complex problem in higher mathematics, so there is a Principle that governs all the affairs of life, from the least unto the greatest.

This Principle is unchangeable, "the same yesterday, and to-day, and forever." Principle is "no respecter of persons," and must be understood and obeyed if one desires to arrive at a correct conclusion in solving the problems of existence. There are laws of harmony, health, and happiness. These are not laws of matter, neither are they rules of mortal mind, but they are unerring, unchanging laws of divine Mind. These laws are clearly set forth in the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures." They are so plain that "wayfaring men, though fools, shall not err therein."

Christian Science teaches the importance of keeping the faith in all the affairs of life. One's work must be in strict accord with the demands of divine Principle or he cannot hope to achieve any lasting results. If the tree is not good it cannot bring forth good fruit. A good work cannot be accomplished by wrong means and methods. Sometimes the effects produced by error so closely resemble the works of Truth that one might easily be deceived by them. A correct conclusion cannot be reached by estimating results from a material standpoint. The house built upon the sand presents as good an appearance as the house built upon the rock, and in fair weather it seems to answer the purpose just as well, but when the storms come the great difference is made manifest, for the house built upon the sand goes down before the flood, while the other stands, because it is founded on a rock.

How was the work accomplished? is an all-important question. Was it through the exercise of the human will and the exaltation of personality, or was it through meekness and humility, that surrender all to divine Mind? Was every step taken in accordance with the Principle and rule of perfect and eternal harmony, or did the errors of mortal belief enter into the work and affect the result? Even though one may seem to have achieved success, his work will not endure if he failed to obey the immutable and eternal law of right.

It is well to keep the high goal always before the thought, but one should also remember that one is "not crowned except he strive lawfully." It were better to fail than to achieve success through unscientific means and methods, for "shall not the Judge of all the earth do right?" and shall not each one receive "a just recompense of reward"? It is no small matter to keep the faith. It means much to work from the standpoint of Principle; to obey the laws of

Digitized by Google

Truth and Love. Happy indeed is the man who, as he reviews the work of the past, can honestly say with the Apostle, "I have kept the faith." He will surely hear the joyful welcome as he turns his gaze heavenward, "Well done, thou good and faithful servant."

### No Services at Concord.

In our last issue it was announced that services would be continued during the month of August, at First Church of Christ, Scientist, Concord, N. H.; but at the Wednesday evening meeting held August 1, it was announced that the Concord church would adjourn until the first Sunday in September.

### Services at Chelsea, Mass.

The Sunday morning services of First Church of Christ, Scientist, Chelsea, Mass., will be continued through the month of August.

### Regarding Vacations.

In answer to inquiries, we will say that, so far as we are aware, the Branches may or may not hold services during the vacation season. It rests with them.

## Among the Churches.

### New Temple in Memphis, Tenn.

The Christian Scientists of Memphis purchased a lot yesterday on the northeast corner of Linden and Hernando Streets, upon which is to be erected a handsome stone church.

The edifice is to cost $35,000, and from all accounts, is to be one of the finest structures in the city.

The plans of the Scientists came to a head at a business meeting held Wednesday, after the regular testimonial meeting at the Odd Fellows Building.

At this meeting a large amount of money was raised for the purpose. The donations were mostly from members, but there were two large sums given by outsiders. One was from a woman in St. Louis, who had received material service in the way of healing by the Christian Scientists when she was here recently. The other was from a Memphis merchant.

Of course, the money secured was nowhere near the sum that will be required for the construction of the church. The Scientists are confident, though, that the total sum will be raised, and they fully expect that within a year the church will be completed and paid for. The church will be of the regular type, and will appear no different from any other church in Memphis or elsewhere.

The basement will be used as reading rooms, which will not only be for the convenience of the members, but for the public as well. The Sunday School is to be also in this part of the building. The services will be held above, and it is for no other purpose. It frequently occurs at these meetings that persons who are not even members receive physical healing as well as spiritual. Many of the wonderful cases of impersonal healing are brought about during these services.

This church is known as "Second Church of Christ, Scientist." It will be the first building of the kind erected for this purpose in Memphis. The Christian Scientists have two churches here in the city, but they are in different office buildings up town. First Church is in the Randolph Building, while Second Church is at present in the Odd Fellows Building.

A peculiar feature about the way the Scientists designate their churches is that although there is a First Church in many cities, there is only one in the United States known as "*The* First Church." This one is at Boston, and is, in a manner, the Mother Church. The article "the" is never used in conjunction with any of the others.

Second Church was organized here in 1894, the services being held in the Cotton Exchange. In 1895 a move was made to the Lyceum Building, which place was used for two years. Rooms in the Odd Fellows Building were secured in 1897. The next move will be made in 1901 to the church at Hernando and Linden Streets.

*Evening Scimitar.*

### New Quarters at Chillicothe, Ill.

The new rooms which the Christian Scientists have been fitting up over Dan Kelly's store for the past few weeks, are now all completed, and were dedicated on the first Sunday in August.

The rooms as they are now fitted up are fine, and tastefully arranged. Arriving at the landing of the stairs, one enters the hallway, which has been most pleasantly repaired and re-papered. On the front are two rooms, the north one being a toilet room, while the south will be used as a library and reading room. But it remains for the back, or auditorium room to show the real taste of those who have been to considerable expense and pains to fit the same up. The ceiling is covered with steel of beautiful designs, a skylight having been put in to admit more light. This room is furnished with elegant opera chairs upholstered in morocco and arranged in three groups facing the reader's rostrum. All the rooms are newly papered, carpeted, and painted throughout, and give to the Scientists by far the finest, most complete, and most comfortable place of worship of any society in the city.

*Chillicothe Enquirer.*

### Reading Room at Barre, Vt.

The attendance and interest in the services of First Church of Christ, Scientist, at Barre, Vt., is increasing. In May, 1900, a Reading Room was opened to the public in the room in which our church services are held. It is supplied with all the writings of our Leader, the Rev. Mary Baker G. Eddy, and the publications of The Christian Science Publishing Society.

The wisdom of sending out the pamphlet "Christian Science History" in such large numbers has been partially shown to me by the way it has been received in some instances where I have been especially thanked for sending it. I have been glad to find that it gives a more definite idea of the work of our Leader.—F. A. WALKER, Barre, Vt.

### Site Secured at Bowie, Tex.

The Christian Scientists of Bowie have purchased, for church purposes, the lot on the west side of and on the same block with the National Hotel. The lot is 45x90 feet, fronts three streets, with an alley in the rear. The property is right in the heart of the town, and its location could not be improved upon. It was purchased of Mr. M. R. Sanders, who, it is understood, reduced the price of the lot from $300 to $250, in consideration of the fact that it was to be used for church purposes. The Scientists will build on their lot as soon as their circumstances permit.

*Bowie Cross Timbers.*

### From Keokuk, Iowa.

When First Church of Christ, Scientist, of Keokuk, Iowa, was organized in June, 1897, it occupied a small room, and now, June 15, 1900, has moved into larger quarters where there are two rooms, centrally located, well lighted, and neatly furnished at 716 Main Street.

In connection with the church a free reading room is opened, where Christian Science literature may be obtained.

## The Lectures.

### At Green Bay, Wis.

An audience which considerably more than half filled the Green Bay Theatre listened attentively to the lecture delivered last night (Thursday, July 19) by ex-Judge William G. Ewing of Chicago, upon the subject, "Christian Science: the Religion of Jesus Christ."

The speaker was introduced by County Judge H. J. Huntington.—*Green Bay Advocate.*

The introductory address was as follows:—

*Fellow Citizens:*—I have the honor of introducing to you to-night Judge William G. Ewing of Chicago, a man duly commissioned and abundantly able to speak for that large and fast growing organization, known to us as the Christian Science Church. A large number of us, I dare say, know little or nothing of Christian Science, and our ignorance is due to prejudice, I think, more than to all else. We hear exaggerated or erroneous statements of the doctrines held by its votaries, and at once decide the whole case against it, and will hear no more. As illustrative of the way we speak, it was only yesterday I heard one say of a case of death in a Christian Science family: "Why did they not cure that member?" I have never understood the Christian Science people to claim that the change we call death can always be averted. Let us be fair. We may demand too much in the way of evidence of the truth of their doctrine.

I believe, however, that we are becoming sufficiently liberalized, even in our churches, to give all respectable advocates of a new truth, or a new phase of an old truth, or a revival of an old truth, a fair hearing. So far as Christian Science is concerned, we must give it a hearing, willing or unwilling. It will be heard. We may stop our ears to the words that come from the platform, we may shut our eyes to Christian Science literature, but the voice of a friend who has suffered and been healed we cannot ignore. By their fruits ye shall know them. That religion which makes men better, we should welcome.

We shall all be glad to learn of one competent to teach about these things, and without further detaining you from the feast that is before you, I take pleasure in introducing the distinguished jurist of Illinois, Judge Ewing, who is to talk to us to-night.—*Correspondence.*

### At Lincoln, Neb.

Judge William G. Ewing of Chicago lectured yesterday (Sunday, July 1) on Christian Science at the Auditorium. Notwithstanding the intense heat a large audience was present and listened attentively to the speaker. R. D. Stearns, who introduced the lecturer, said:—

*Ladies and Gentlemen:*—The lecture which you are convened to listen to this afternoon is delivered under the auspices of the Christian Scientists of Lincoln. Most of you know something about Christian Science. Many of you, I take it, know from observation that it makes men and women happier and better, and this of itself is a sufficient justification for its organization and existence in society. There is no valid reason why Christian Science should not have a fair and impartial hearing before it is either condemned or rejected. If it can do what its devotees claim for it, all the combined forces and powers of earth cannot prevail against it. If it be false no power on earth can sustain it.

Christian Scientists do not claim that their doctrine is a new one; they claim that it was taught and practised some nineteen hundred years ago. They claim to be the followers of the meek and lowly one, who lifted up more of the bowed-down, healed more of the broken-hearted, and wiped more tears from the eyes of those who wept, than all the combined kingdoms, empires, and republics of earth, and the civilized world to-day believes that his religion will continue to bless and better mankind until time shall be no more.

I have now the pleasure of presenting to you the learned and distinguished lecturer, Judge W. G. Ewing of Chicago, who will address you upon the subject, "Christian Science: the Religion of Jesus Christ."

*Lincoln Evening News.*

### At Brandon, Manitoba.

Edward A. Kimball, C.S.D., delivered an instructive and interesting lecture in the Congregational church on Friday evening (July 20). The lecturer is a clear, forcible speaker, who would command the attention of thoughtful men and women on any subject. In a plain, business-like way he discussed Christian Science in its different aspects. Scientists have been accused of all sorts of things by people who do not understand either their system of theology or method of work. The lecturer corrected a number of these misconceptions, and explained the difference between Scientists and other religious sects.—*Brandon Saturday Times.*

### Lectures at Other Places.

Marquette, Mich.—William G. Ewing, July 21.
Marinette, Wis.—William G. Ewing, July 20.
Waterford, Wis.—William G. Ewing, July 16.
Millville, Pa.—Arthur R. Vosburgh, July 17.
Rockford, Ill.—William G. Ewing, July 15.

## "Old Glory" Floats There.

AMONG the lands lately acquired by the United States is a small island situated in the Pacific Ocean, about seven days out from Honolulu, which is the largest and most populous of the group known as the Samoan or Navigators' Islands, and is called Tutuila. It rises from the sea from twelve hundred to two thousand feet, and is covered with a rich, luxuriant vegetation. Bread-fruit, banana, cocoanut, orange, pine-apple, and cassia trees abound, and afford not only food for the natives, but shade for their roads and houses, and clothing and material for building, etc.

The island has several excellent harbors, of which that of Pago Pago (or, as it is pronounced, Pango Pango), on the southern side of the island, is the best, and is connected with the sea by a very deep, but narrow channel. At this place, on a convenient point of land, all the wharves, sheds, etc., of the United States coaling station are to be erected.

A little back from this proposed station is the house occupied by Boatswain Hudson, with his wife. The former is the naval officer in charge of building the station. Back of his house, on a small hill, is the flagstaff on which old glory first floated over the island.

The village of Taga Toga is only a few minutes' walk from this house, and lining the shore in front of the village are the long native warships, which hold one hundred men apiece, with from thirty to forty oars on each side.

The government on this island is very simple. The natives have no written laws, but are governed by the high chiefs, of which there are three, one for each of the districts. At the point of death each chief appoints his successor, almost always from his own family. There is also a chief for each family appointed in the same manner. On all matters of any great import there is a meeting of these high chiefs, who settle all questions. The people live in a communistic manner, all things being free and equal, all moneys are divided among the family, and no one of the family has a right to dispose of any lands or property without the consent of the entire family.

Their food consists of the fruits of the island mostly, and

Digitized by Google

of these I have spoken. There is not much use trying to raise wheat or rice on the island, as the rats destroy it as fast as it is planted, and at the present time no wheat or grain of any kind is being raised there.

The houses or huts of these people are queerly and wonderfully built. In building, the natives first enclose an elliptical-shaped piece of land with a stone wall about a foot in height. This is then filled in with broken coral, then on this wall of stone, posts or stubs of about five feet are erected, and these are joined together at the top with a batton or hoop set in a groove. This forms the sides of the house. In the centre are placed two sticks, Y shaped, and fifteen or twenty feet in length, for an extra support for the roof. The latter is composed of thick thatch tied on small poles, closely and neatly woven together, so that nothing whatever can get through. These roofs are far superior to the shingle roof, as the shingles in this climate will warp and shrink in a very short time.

Captain Tilley of the U. S. S. Abarenda, who has been appointed military governor of the islands of Tutuila and Manna, announced the 17th of April as the day for taking formal possession of Tutuila in the name of the United States. For several days previous to this there was a steady stream of natives coming to this spot, both by sea and land, and in all their queer finery, etc.

The warboats came into the harbor four abreast, each with a hunchback or some other representative of its particular chief standing in the bow, dressed in war toggery, dancing, singing, and brandishing a club or spear, while the sixty or eighty oarsmen joined in the singing, and kept perfect time, with their brown shining bodies swaying backward and forward, as they raised and dipped their oars in perfect unison.

There were two days of games and sports, and on the 16th the American flag was raised, with all the ceremony of the occasion, in the presence of a large number from the different islands, including the United States and German consuls and their wives, the German and United States officers, and detachments of marines and bluejackets, all assembled on the little hill back of the house.

Captain Tilley read the convention between the United States, Germany, and Great Britain, from President McKinley, and the orders from the secretary of state. Then there were addresses by Samoan people. Religious services followed, with the proclamation of the establishment of the islands of Tutuila and Manna as a colony of the United States. Then came the raising of the flag by Mrs. Hudson, and the salute by the United States and German warships in the harbor, the whole ending with an address by United States Consul-General S. W. Osbourn.

The next entire day was devoted to games and sports by the natives.—*Boston Herald.*

### Spring Cleaning.

The tidy house-wife prides herself on keeping a very clean house, but when spring comes she takes up the carpets and has them carried out and beaten, which reveals a lot of dust and dirt, and perhaps moths, and so on through the furniture and draperies she uncovers the accumulated dirt. She lets the light into many dark corners, and is forced to admit that all this dust and dirt came out of the best room.

If we would search ourselves as thoroughly and force ourselves to see and admit the fact that we are concealing in the dark recesses of our hearts selfishness, anger, jealousy, suspicions, malice, envy, etc., and bring these thoughts into the light of Love, we would find them fast being destroyed, and their places filled with love and peace.

Thinking evil thoughts or making detrimental remarks about your neighbors is like trying to throw ashes against a strong wind. In both cases your dirt is blown back in your own face.

## From Our Contributors.

### Reply to "If We Knew."

(See Sentinel of July 5.)

BY IDA HODNETT.

If we *felt* the bitter anguish
That our thoughts and words have sent
To the brother we are judging,
The cruel bow might be unbent.
Could we see the hidden motive
In the heart of him we blame
Where self-righteous lips have scorned him
The proud head might hang for shame.

*Good* is supreme; and through the ages
Feeble hands stretch out toward Good,
We should aid, where now we hinder,
"If we only understood."
Larger light is coming, coming;
The song of hate shall die unsung;
The song of Love is swelling, swelling,
And shall be heard from every tongue.

### Prison Work.

BY JULIETTE M. MINK.

Some time ago I was impressed by an article in the *Journal,* the title, or thought of which was, "In due season we shall reap, if we faint not." To-day, after many months of continuous work in the County Jail in Salt Lake City, one whom I visited there, and later at the penitentiary,—attended our church. On seeing him enter, the above beautiful text occurred to me.

Wednesday of each week is visiting day at the prison, and with other Scientists, representing both churches of the city, it has been my privilege, pleasure, and sacred duty to be a messenger and witness for Truth.

One remarkable feature, noticeable from the first, is the receptivity to the teachings of Christian Science. Although of varying age and sex; from the lower walks of life to the cultured gentleman; some serving sentence for petty larceny, others awaiting trial for murder,—but one in the many, has declined to converse or accept our literature; even this one, who is now in the penitentiary, has sent me a word of kindly greeting, showing that even there, some impression was made. My thought at this time is to let the men speak for themselves; some of the extracts following are from men now in the jail, some from those at liberty and some from others who have gone to the penitentiary.

February 6, 1900.

I firmly believe in Christian Science and all its teachings, through the good work of Miss M. and Mrs. B., who have done such good work here in the County Jail. We all look forward to Wednesday, and thank them sincerely for the good they have done. The more I read of Christian Science, the more I believe its teachings. We have books and papers always at hand. Any person who will read Christian Science thoroughly will certainly believe it is true. I was treated and healed here in jail.—B.

February 20, 1900.

Words are too small for me to explain the benefit I have received from Christian Science. Though confined in prison, I realize that God is Good, and that I am not forgotten. It is a great comfort to me to learn from Science and Health that God is Good, and does not forget us in our trouble. You know I have studied only a short time, but I realize as I read the Christian Science literature that I am progressing, and that God is All-in-all.—H. T.

Digitized by Google

March 1, 1900.

I have studied but little, but what I have read, and what I have learned from you, I believe to be the most perfect, and best teaching one can follow.—L. P.

I am gradually quitting the cigarette habit, and my heart is getting better right along. I don't know how to appreciate the kindness since I have been arrested, and the influence of that kindness has guided and directed me into a better plan of living. I am greatly interested in Christian Science, and read a great deal in the book you loaned me, called "Rudimental Divine Science." I read it every day, and am greatly benefited by it, it is my comfort during the distressing hours in this place.—W. H.

February 4, 1900.

I never heard of Christian Science till I came to this jail, so hardly feel able to express myself, but as a friend I can say, I have felt great benefit from Christian Science since I have been here, through the noble work of the ladies who brought us Christian Science. I consider it has no equal. If I stand the strain and trial before me, I will not only live to be a free man, but will be able to join you in the work you are now engaged in, and be a faithful member in your church.—W.

Also from same man now in the penitentiary.

May 10.

This little confinement here will do me no harm, for I have learned more, and taken more interest in this work you have taught me, than I ever before knew. I believe that I was called here for that purpose, more than to be punished. I consider that I am not only gaining in health, but in salvation, which I must say is due to the beloved works of Christian Scientists. I think of you in gratitude, not alone for the kind acts shown in a time of bitter adversity, but for causing a new light to spring up in my heart. If I am not free it is a blessing to know salvation is free.—W.

May 15, 1900.

It affords me great pleasure to express my opinion of the doctrine of Christian Science. While I am not advanced in the study, yet with what knowledge I have from Science and Health, I am thoroughly convinced its Principle is perfect in every respect, and I deem it a favor and a blessing from God that the doctrine was ever introduced to me. I am seeking to become more enlightened in the word, and will always be a worker in the same.—H. E.

Praised be His name forever! not only in the healing of my soul, but also in the healing of my body. Yesterday, I was so lame I could hardly walk, with pain in foot, hip, and back; but lo! on getting up this morning I was every whit whole, and walked many miles to-day, and did not feel the least inconvenience. Praise God!—M.

"Science and Health with Key to the Scriptures" and "Miscellaneous Writings" were the first and only religious works that I could ever read fifteen minutes without becoming disgusted with what seemed to me silly writings, now I miss the *Journal* as much as I miss the visits of my Science friends. An incident here serves to show a little how the others feel. It was the occasion of the first Science meeting here; the jailor announced that there would be two meetings that Sunday, but that all who didn't care to, need not attend the Science one; but the attendance proved the choice, as every one attended, and all were sorry when the meetings were stopped.—W. J.

It is the greatest and most beneficial gift that I have received in my life, to be confined here for ninety days, for it has brought me into the Light and Love and Truth of Christian Science. My future life shall be Truth and Love.—R.

## Leaving All for Truth.

BY ALBERT HORSTMEIER.

THE account of the healing of blind Bartimæus (Mark, 10: 46–52) shows us plainly what disposition it is that receives the reward in Christian Science. The blind man did not heed the rebuke of some bystanders that he should hold his peace, but "cried out the more a great deal," and then when Jesus commanded him to be called, he, "casting away his garments, rose and came to Jesus." And just so, when in spite of the many times well-meant advice of some of our friends that we submit to what appears to them inevitable, we persist in appealing to Truth to "have mercy on us," to give us our sight, because we feel it to be our inalienable right to be whole, and then hear Christ encouraging us to come to him, we shall do well to do as did the blind man, cheerfully cast aside our out-grown and outworn garments of hygiene, scholastic theology, speculative philosophy, and all the et cetera of human means of covering the nakedness of mortal existence; and we need never fear that in casting aside the errors that we have perchance hugged so closely about us, we shall be in any danger of losing aught of Truth that we may already possess, for as our revered Leader, Mary Baker G. Eddy, says in "Unity of Good" (p. 10), "All that is beautiful and good in your individual consciousness is permanent."

But many who sincerely desire the Truth often overlook this point. They fear, because Christian Science demands that they leave all unreservedly for Truth, that it is their duty to give up what they know to be right and true. Now there could not be a greater misapprehension of the teaching of Christian Science on this point, as will be seen by studying "Science and Health with Key to the Scriptures" and the other works of its author, Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. How illogical it is to suppose that Truth can ever ask us to give up what we already know to be true! Christian Science burns up the dross, but only refines the gold.

It is wise to have no other gods beside God. As we fix our eyes steadfastly on Him, have no other affection, no other ambition, than to be the instruments of God in His great *reforming* movement, Christian Science, we shall see more and more clearly the difference between Truth and error. Spiritual sense does not pluck up the wheat with the tares. Christian Science will refine our virtues and make them more surely our own. Not understanding the Principle of Good, a good man may sometimes not reflect those good qualities which have at other times been manifest in him, but when he does understand the Principle, he will not be untrue to his better, his real, self. Hence the great need of understanding Christian Science.

Christian Science, from its very nature, repudiates the doctrine of total depravity; for if that were possible, evil would be more powerful than good, which is diametrically opposed to the Biblical teaching of the Omnipotence of God, Good. It shows that evil is only a false claim to existence, and that Good is really never absent. Physics teaches that a vacuum exists only in theory, because it is not possible to completely exhaust air from any place, and that black, the absence of color, exists also only theoretically, because it is impossible to exclude light and color entirely. Christian metaphysics show us that these are but proofs of the grand fundamental Truth of the Bible, that God is All-in-all, that there are no vacuums, that Good can never be really separate from His creation, man. The man who seemingly is a most abandoned sinner, has some faint inkling of what is right and good. It is clear that when the sunlight of Truth floods into such a consciousness, that trace of Heaven's light which could not be excluded, will not be lost.

This is also true of every one who, having caught some glimpse of Truth "through the mists of mortality," comes

Digitized by Google

to Christian Science to acquaint himself intelligently with the fountain of all Truth.

That broad, true liberality which fitted Paul for his great work is pre-eminently characteristic of Christian Scientists, who are taught in their text-book to honor Truth wherever found."

Timid one, why hesitate to come to this fountain of Truth, to drink the water of Life, and bathe in the sunlight of Love?

## Christian Science is Practical.

BY CARRIE B. WOLCOTT.

THERE came a time in my life when *materia medica* had failed, and I had little to look forward to. I had never been strong from childhood, and while I believed and earnestly endeavored to live the teachings of Jesus, I did not know that they afforded relief from sickness, and in my efforts to help others I felt myself losing health and strength. At this time Christian Science was brought to my notice, and I was persuaded to take treatment. At once hope was awakened, and I began to feel that I should be restored to health, for I felt the healing was of God—divine Love made manifest. In my case the healing was a steady growth in the right direction until the work was complete. I was helped and encouraged to press forward in this new-old way of God's appointing by discerning at the outset that Christian Science was an exact science, as much so as the science of mathematics. That understood, it furnished the rule for the solution of all human problems. I saw that it would meet every human need.

There were many problems that I wanted solved, and often as I read the book, "Science and Health with Key to the Scriptures," the desire was with me to understand the Truth it contained, so that I might apply it to some particular need, and as I read one thought after another would be made plain to me, and the problem be solved.

At first, I hoped to be able to use this Truth only after years of study, but I found that the Truth understood was at once available, and my joy knew no bounds. Claims of sickness and of sin vanished before the application of the first simple rules that I discerned in Christian Science. In the endeavor to understand and demonstrate Christian Science, the more I felt alone with the book, in the confidence that God was with me and would help me, looking neither to the right nor to the left, but with a patient waiting for Truth's appearing in my thought, the more my understanding opened; and the proof to me that I was right came from the practical results in the destruction of sin and sickness.

When I have sought human aid in gaining added understanding I have gone to those whom I had reason to believe were clearest in understanding and demonstration, and I have had abundant reason to be thankful for help received.

I have never had any reason to be anything else but thankful, for divine Love has blessed every experience that has come to me.

Christian Science reiterates and illuminates the teachings of Jesus, so that all may apprehend their meaning and apply them, as Jesus did, in the destruction of sin, sickness, and death. Jesus did not make men comfortable in sin and sickness. He destroyed both the sin and the sickness, and left mankind more Godlike. So to-day the Christian Scientist overcomes these evils in human consciousness by first destroying them in his own.

The student who would gain an understanding of Christian Science must study its text-books, the Bible and Science and Health, and make practical their teachings in daily life. Christian Science is one with the teachings of our Master. It clasps hands with the teachings of the meek and mighty Nazarene, and wherever the human need is greatest there will its disciples be found.

## Testimonies.

### A Testimony from England.

After reading the article in the *Sentinel* entitled "A few Suggestions," I feel ashamed of myself for never having contributed to the *Journal* or *Sentinel* my share of acknowledged blessings. I think the difficulty is, one never knows which one to specialize, as blessings are so numerous. Perhaps, as this is my first contribution to our publications, I should retrospect a little, and tell how I heard of Christian Science.

I have been in Science nearly two years, and I wonder how I could possibly have lived without it before, but it came to me as it comes to every earnest seeker for Truth—just when I most needed it. Two loyal Christian Scientists, visiting the little seaside resort on the coast of France where I then lived, were the first to tell me the glad tidings. I knew it was the further revelation of Truth and Love I had been longing for. As I have so often expressed to friends, it seemed as though the cord that had tethered me so long in the narrow limits of mortal mind had been suddenly cut, and I knew myself free! I was filled with joy! My first impulse, and one which I acted on, was to tell the wonderful news to all my friends and relatives near and far. Here I had my first lesson to learn. To my surprise and disappointment, not one of them believed my report. Then I found out my mistake, and by degrees learned the lesson all young Scientists must learn, that we must be wise as serpents and harmless as doves, and not thrust our views upon others, even though they are very real and true to us. Our zeal must be according to knowledge, for actions speak louder than words. As some one has well said, "One truth *lived* is worth a thousand only uttered." I know that sooner or later all peoples shall know the Truth, from the least to the greatest, and every sincere Scientist can hasten this good time by living the Truth in thought, word, and deed, in whatever sphere he or she may be placed.

Very soon after hearing of Christian Science, I was called from my home and led to work for Truth in England. I lived near London for some time before coming to Coventry, Warwicks, where I am now, and so was able to attend the services in our little church there, and meet with the Scientists. This helped and encouraged me a great deal when taking my first steps in Science. But greater still was my delight when I found that with even my limited understanding of Truth I was able to overcome false beliefs in myself and others. It is such a glorious revelation to know that we can make the Bible teachings practical at all times, and prove that the Kingdom of Heaven is at hand,—in fact, within us.

Before hearing of Christian Science I had been a close reader of the Bible, but it seemed to me a closed book. There were passages that seemed quite impracticable, and I longed for the Light. Science and Health threw its rays on the loved pages, illuminating them with wonderful beauty and revealing the gems of Truth that had been hidden away through our lack of understanding and the need of spiritual interpretation.

The Bible, dear as it was to me before, is a thousand times more precious to me now, and my heart is full of gratitude to our beloved Leader who has given us the spiritual interpretation we so much needed.

BEATRICE M. WHITLEY, Coventry, England.

### Tobacco and Liquor Habits Destroyed.

It is nearly four years since I became interested in Christian Science. A friend gave me some Christian Science literature and asked me to read it. I did so, but as I had always possessed good health I paid very little attention to it. My friend continued to give me literature from time

Digitized by Google

to time. One day my eye caught something in the *Journal* that seemed to me to be sound common sense, and by reading a little more I learned that Christian Science was quite different from what I had thought it to be. My friend then loaned me "Science and Health with Key to the Scriptures." I set to work to find out all I could. I had not read it very long before I pronounced it the most wonderful book I had ever seen. Well do I remember how I enjoyed reading that book! I could not have been more interested and delighted over a gold mine had I discovered one, and to-day, after nearly four years of patient and persistent study, it is worth to me more than all the gold the world has ever seen or ever will see.

Before I began the study of Christian Science my custom was to sit down every night after supper with my jug of beer, my pipe, and my newspaper, and read and smoke and drink until it was time to go to bed. I commenced to read Science and Health in my usual way, with my pipe and jug of beer, and would sit reading until morning. Often I went to bed just because I thought I had read enough for one night. After I had been reading Science and Health about a month my wife informed me that my beer was nearly gone and I had better see about getting another barrel. I told her that I thought I would not get any more beer. I wanted to get a copy of Science and Health of my own instead of the beer. She said I could please myself about it, but told me it was foolish of me to think I could get along without the beer when I had used it over thirty years, and had proved that I could not get along without it.

About a year previous to this I had made up my mind to stop drinking and did not drink anything for over six weeks. The result was that I lost flesh to such an alarming extent that I became frightened and commenced drinking again. I soon regained my usual weight. My wife knew this and used it in support of her argument. I admitted the fact but told her my mind was made up to buy Science and Health and let the beer go, that I should now prove the truth of what I had been reading. I bought the book in place of the beer, and the result is that instead of losing flesh I am to-day thirty pounds heavier than I ever was before. My pipe was consigned to the stove about the same time, and now for over three years I have neither smoked nor drank, nor do I have the least desire to do so.

I love and cherish that book more than any other earthly possession. It has taught me to love and enjoy the beautiful. It has made me a happy man. I have put in use what little knowledge I have. I have treated many persons with good results. I have never had class instruction. My teacher has been Science and Health. I take the *Journal* and *Sentinel*, and how I do long for their coming.

One case that I treated was that of a boy who had a cataract on each eye and was to have an operation. In less than three months his eyes were perfectly healed and his sight restored.

Another case was that of a lady who wore glasses for years. In less than six months she could and can now see to sew the finest work without glasses.

DAVID DAWSON, Barre, Vt.

---

### All Questions Answered in Christian Science.

It is about seven years since I became interested in Christian Science. One whom I used often to visit at his bedside was lifted up through the healing power of Truth, and upon my first visit after that event my friend read to me from the text-book of Christian Science, "Science and Health with Key to the Scriptures."

Up to this period in my life I had never become interested in religion, and had formed no definite ideas concerning God and our relation to Him; but was looking for some explanation that would satisfy an aspiration to know something about such matters.

The little that was read to me from Science and Health at once impressed me as presenting the true philosophy of life, religion, etc., for which I was looking, and I immediately obtained a copy of the book, and have been studying it since. I find that it answers all questions of reason and logic. Through that slower process the same conclusion is reached which the intuitive perception at once recognized as the satisfying Truth which directs the thought, for a rational explanation of life, to the spiritual or divinely mental nature of everything,—the Creator and creation.

It shows that, right here, in the midst of so much false evidence of material forces, laws, organization, etc., through Christian Science we can begin to realize how our sense of causation and laws governing existence is to be so changed as to make life become permanent, continuously healthful and blissful, and exempt from the discords, imperfections, and mortality which accompany a material sense of life.

For instance, I have been depending entirely upon Christian Science in my encounters with sickness; and when I have witnessed the direct control of Mind over the body in my own experiences, the manner of the disappearance of all imperfections is suggested, and the universal adaptability of Christian Science to all mankind and every sort of disorder is seen. Many common ailments which used to cause me annoyance and suffering have disappeared. When Christian Science displaces a sense of disease and establishes health, it is understood that just so much immortality has been brought to light, because it removes a so-called material condition through a purely mental process, and demonstrates the eternal fact of mental power to maintain perpetual health.

Of the efficacy of Christian Science to effect moral reformation I am assured by the manner in which it exposes wrong motives and evil thoughts, and drawing one aside from himself far enough to enable him to turn around and behold what manner of man he is when he loses some of his self-satisfaction and is blessed with a desire for improvement. In the pursuit of the renewing of the mind the value of this Mind Science is appreciated.

With the magnificent system presented by the text-book of Christian Science, sustained and elucidated by the other works of our Leader, which abound with beautiful images of thought and practical observations and explanations of the subject, together with our valuable publications, which concentrate the rays of Science and Truth revealed to the individuals engaged in its demonstration throughout the world,—the facilities at the present time for gaining an understanding of the right method of obtaining health, happiness, and more abundant life are very great. I am thankful for all the benefits I have derived from Christian Science.—C. DOUGLAS HOTCHKISS, Hartford, Mich.

---

### Protected by Love.

I desire to relate an instance where Truth came to my rescue in overcoming error. Two children were manifesting a sense of disagreement. I said, "Children, Love is here, and where Love is, error cannot be. If we build a stone wall and throw a rubber ball against it, the ball can make no impression upon the wall, but will immediately bound back again. So it is with us: if we are filled with Love, error can make no more impression upon us than can a rubber ball upon the stone wall." With this declaration of Truth, came such a strong sense of Love, that we felt its presence and power, and the faces of the children beamed with love and joy. They both said, they knew Love was there and they wanted nothing else.

MARY A. LINDSAY, Asheville, N. C.

## Religious Items.

The "London Letter" in the (Episcopalian) *Church Standard* of a recent issue, contains the following: "When Dr. Farrar exchanged his Westminster canonry for a deanery he was succeeded at the Abbey by Mr. Wilberforce, and the marked resemblance between these gifted men is very curious. They are both natural orators, and masters of an almost incredible wealth of terms, admonitory, descriptive, derisive, and defiant. They have the same severity of mien, the same noble disregard of consequences, they both lack, and equally, the sense of proportion and the sense of humor."

In a sympathetic review of a book concerning Bible interpretation, the (Baptist) *Examiner* says: "Some things can only be described poetically, and written accounts of them recognized when their poetical character is recognized. The truth is that half the difficulties and half the controversies of the world have been caused by prosiac-minded men, who turn poetry into prose. They are like the dog in the fable, who dropped the meat to grasp the shadow; for they lose not only the truth, but also the sweet symbol which was its constant witness."

Under the head of "Friction in the Church," the *Congregationalist* says: "The trade in lubricants is larger than many of us know. The chemist of the Pennsylvania Railroad told the students of one of our universities not long ago that friction cost his company about $1,000,000 every year. What it costs the churches every year who shall have skill enough to reckon? It is not to be told in mere figures of money lost or wasted. It must rather be reckoned in terms of wasted opportunity."

Concerning the "Spiritual Worth of Charity in Trifles," the *New Church Messenger* says: "Our natural man is so impressed with the external greatness of things that we are unconscious, practically, of this law, and go through the world lamenting our lack of spiritual opportunities, when in fact our life may be full of the most pressing opportunities, only we are thinking of things externally great, while such greatness is not at all necessary for the opportunity."

The *Christian World* says: "The secret of the joy of living is the proper appreciation of what we actually possess. That kingdom of the unpossessed for which we so foolishly thirst is not half so good as this of what we have. A child sobs with grief over the toy that is broken, and is not comforted by the thought of all its glorious assets of youth and health and coming years. It has not got the thought. We who are older are often hardly wiser."

In an editorial article on "The Rescue of the Bible," the (Unitarian) *Christian Register* says: "We still need, and probably long will need, that which in the Bible, from first to last, is the spirit, the *Word* of God,—the Life, the Light,—the moral purpose pointing the way ever forward. Badly interpreted at times, badly voiced, yet we are conscious that, in the true sense of the expression, God speaks, not supernaturally, but naturally."

"Every one desires to be happy," says the (Baptist) *Standard*. "But how many try the wrong road! Seeking great things for ourselves is the common road. Some strive to reach happiness in a splendid turn-out, or hope to find it in a superb mansion, or to climb up to it by some dizzy ladder of ambition. Strangely do all such forget that happiness is not in externals; it dwells within us, or nowhere."

The *Congregationalist* says: "We need to love perhaps more than our neighbor needs to be loved. We need the softening, mellowing ennobling experience of learning to see the divine likeness in every fellow human being and to treat each one with the affection of true brotherhood, more than they, or perhaps any one of them, needs such sympathy and help as we can give."

The *Universalist Leader* says: "Don't be satisfied to measure men by a petty judgment of their failings, but rather seek to find and to magnify the good that must be in them. Consider yourself and your liability to error, when you would censure the word or deed of a neighbor. This same kindly consideration which you exact from others, be careful to render to them in turn."

Concerning "Communion in Prayer" the New York (Baptist) *Examiner* says: "How incalculably much is lost by failure to recognize prayer as the opportunity for communion, as of sons with the loving father—for absorption, during however brief a space, into the divine nature, whence to emerge with spirits chastened, purified, unburdened."

Sometimes we hear men say: "Oh, I don't see any harm in this. My conscience doesn't condemn me." It isn't your conscience or your consciousness, that is the rule of right and wrong. The law is the standard. By the law is the knowledge of sin. Sin is the transgression of the law; not of conscience.

BONAR.

"Denunciation of sin, like the circles spreading outward when a stone is dropped in a pool, should begin at the centre, with one's self, and grow less energetic with the enlarging circles," says the *Christian Register*.

The (Baptist) *Watchman* says: "Recoil from self-denial and suffering is characteristic of all men. But there have been so many proofs of gain by losing that we ought to welcome the cross to receive a crown."

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on Boston or New York. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William P. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Is Your Prayer Answered? Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent as early as possible. They *must* be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Digitized by Google

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

## CHRISTIAN SCIENCE: IS IT CHRISTIAN?

**Lecture delivered at Atlanta, Ga., December 21, 1898, by Mrs. Sue Harper Mims.**

To tell of Christian Science in one brief hour is like trying to count the stars in illimitable space, or to number the unceasing waves of the sea—this Science of Infinite Mind—whose Principle is God.

This divine revelation of Truth has come to us, not only in the eventide of a century, but of an era—a dispensation. The same expectancy of some great change, or event, that preceded the first advent of Christianity, already beats in the hearts and minds of a weary, waiting world. Nearly nineteen hundred years ago in response to this intense longing and desire, Truth appeared, doing its mighty works, but many perceived it not, some even bitterly opposed it. Is this second coming also with its wonderful works to be equally unknown and unacknowledged? A thousand tongues of joy and praise respond, No! "The earth helps the woman," and, God-crowned, she, to-day, has brought the little book, "Science and Health with Key to the Scriptures," that forever answers the questioning sphinx of human longings, desires, aspirations.

The whence? where? whither? is satisfied in the understanding it gives us of Jesus' words, "I came forth from the Father, and I go to the Father." This is the divine premise and conclusion of Christianity.

Herbert Spencer says: "The entire history of anything must comprise its appearance out of the invisible into the visible, and its disappearance out of the visible into the invisible." Had he only seen this entire fulfilment in Jesus, and its mighty lesson and import to humanity, he would have given a more vital philosophy to the world.

We must all learn that this "little noise between the two silences," this unsatisfactory, fleeting, material sense of existence like the "flower of the grass"—"to-day in the field, to-morrow cast into the oven"—is not life. Nor can this "puling infancy," and bent and withered age be man.

### IS CHRISTIAN SCIENCE CHRISTIAN?

What is it to be Christian? to be Christ-like? Is it not to imitate Christ Jesus? What did he do in his brief ministry of three years? He taught, he loved, he patiently endured bitter persecution, he healed all manner of disease. He cast out devils, he destroyed sin and triumphed over death and the grave. To do as he did is to be Christ-like, to be Christian. He commanded his disciples to follow him in these demonstrations, saying, If ye believe in me the same works that I do ye shall do also. For this is the way of Life; the healing of the body was not the end, but the means to the end, the way of learning and proving the omnipotence and naturalness of Good, Life, and Love.

Thus he showed us how to work out for ourselves the problem of celestial being, gaining through tears, struggles, trials, the triumphant victory at last, of unity with Good—God—the omnipresent, divine consciousness. This struggle and progressive attainment brings out the fruits of Spirit: peace, joy, health, harmony, heaven, here and now.

Do Christian Scientists, more or less than other Christians, follow this divine exemplar, and approximate to this divine teaching? As a rule Christian Scientists do, more absolutely than any other class of Christians, come out from the world to be separate—not to sit in condemnation on others; but because, when the lustre of this great light dawns on them, worldly pleasures vanish as ephemeral shadows, Christian Science so abundantly satisfies the affection and aims; so absolutely answers the demands of reason and logic; so stimulates to noble, spiritual endeavor, that to "know God" and thereby bless men, becomes the one motive in life. It is so absorbing, so full of peace and joy and triumph that worldly ambitions and pleasures fall of their own weight, as naturally as the frail petals of a blossom fall when the fruit begins to form.

I believe it is generally conceded by all who know them that no body of Christians more reverently and assiduously obey the injunction, "Search the Scriptures," and I have never met a fair-minded, spiritually enlightened Christian who did not confess to pleasure and profit in discussing with them the spiritually scientific interpretation of the Bible, as in Christian Science. None others do the healing by the logical, scientific understanding of cause and effect, that Good cannot produce evil—and while they are but in the infancy of their understanding of this infinite Truth, it is but just to say, that there is scarcely a disease known to the modern world that has not been healed by this spiritual method. Greater works remain to be done, as their growth increases and human resistance lessens.

These "signs of discipleship," coupled as they always are with the reforming and regenerating power of Spirit, make Christian Science the most comprehensively philanthropic movement on earth, for it includes in its work everything that the noblest philanthropy strives to accomplish. It is health-giving, it is divinely educational, it is the true and only asylum, the only true socialism; acknowledging but one Mind, one Father, one family, the brotherhood of man, all heirs of the same affluent Love—each having all, as he claims it by divine birthright and heirship. Is not this Christian?

Indeed, all that poets have dreamed of, all that philosophy has striven for, all that science has toiled for, in laborious marches toward the conquest of material forces and laws, is gathered in one grand sunburst of Truth, and its Discoverer, the Rev. Mary Baker Eddy, has named it Christian Science.

Through it, all will some glad day sit at the feet of Jesus and acknowledge one Cause, one Intelligence, and its perfect harmonious phenomena, man, and the spiritual universe.

Glimpses of the reality of the spiritual cosmos have lightened the darkness of material history for centuries, from Plato to Emerson, and brightens like a fine thread of gold the woof of German transcendentalism, but it was left for one woman to clinch this glimpse of Truth with the incontrovertible logic that if the spiritual is the infinite Real, then correspondingly the material must be the unreal.

Two opposites cannot possibly both be real. She, in her teachings in Christian Science, holds to this unswerving, divine logic, brings its beneficence to meet human needs, and proves it absolute.

This divine Science summons each individual to choose which shall be made real to his or her consciousness; the perfect, spiritual, harmonious, and eternal, or its opposite, the imperfect, material, discordant, and mortal, unreal. It calls the slumbering world to awake, understand, and apply the power of spiritual thought.

### POWER OF THOUGHT.

Think truly, and thy thought
Shall the world's great famine feed,
Speak truly, and each word of thine
Shall be a fruitful seed;
Live truly, and thy life shall be
A grand and noble creed.

Let us learn to think no evil, but to think Life, Love, Truth—think it constantly. Let our "conversation be in Heaven." Let us talk and write of beauty, purity, health, holiness. Think no evil and it will cease to be. Mind is the only Substance, causation. When we cease to think sin, disease, and death, they will cease to be, for they are not of God, or Truth, and without human belief in them they have no basis. Jesus taught this divine metaphysics, saying: "Not that which goeth into the mouth defileth a man, but that which cometh out of the mouth, this defileth a man." It is not what one eats, but what one thinks that injures and defiles.

In Christian Science this transcendentalism of Jesus, lifting humanity from the finite sense of origin to the infinite, divine, is proved by him and his followers to be at the same time the most practical system ever given to mortals. It is applied Christianity, revealing a divine Principle, ever active, ever operative, an ever-present help in trouble, here and now, as the Scriptures declare God to be. This very reliance on God for the full salvation from sickness as well as sin, requires a closer walk with Him, a daily, nay, hourly, communion with the Principle that heals, blesses, sustains, supplies, and governs man; it forces the warfare with all

Digitized by Google

fleshliness, till the unity with Life and Love is attained, and harmony, or the heaven within us, is reached.

When, therefore, the transfiguring power of this mighty Truth is doing its work in our consciousness and lives, and all existence is bathed in the glow of a higher conception of God, and His man, and His universe, "perfect and immortal" because He, the Creator—Cause—is perfect, when the Bible is seen to be the metaphysics of God, and all other literature pales into insignificance beside this book, illumined by "Science and Health with Key to the Scriptures;" when we hear the imperative call: "Go ye into the world, proclaim the glad tidings," and we are met with the indifference or scorn of other Christians, the condemnation of pulpit and press, a rude shock for the moment startles us, for not less, but more of God, not less of Love, but more, does Christian Science offer to all. "The bond of peace and unity of faith," is the aim and desire of true Christianity everywhere. But, looking down the centuries, we see that this is ever the greeting that Truth receives, the sword, the cross, the spear, the scorn of materialism, the steady opposition to whatever disturbs the settled indolence of old systems, creeds, convictions. But God's law of infinite progression is ever operative and nothing can stay its divine force. It is man's sublime destiny to unfold more and more to the unending bliss and unspeakable joy that God has for them who love Him.

This sublime system is not confined to bodily healing. Our Leader says: "It is only the bugle call to higher action;" it ramifies every condition, its influence is silent like the dew, but it dissolves the mists of poverty and ignorance, it enlarges the scope of true government and harmonizes nations. God is seen to dwell with men. It wipes away all tears, for it is the Comforter, leading into all Truth, explaining the infinite meanings of God's ways to men. A true Christian Scientist must be a good citizen, a good neighbor; he must prove that honesty is the only true policy; that God—Good—is with the upright; that there is a divine way to have all that the "Gentiles seek after," and that is to "seek first the Kingdom of God and His righteousness, and all these things shall be added," as the divine sequence of the understanding of Good. This recognition of Love's willingness and ability to supply can still fill the widow's cruse and multiply the meal. Jesus proved the harvest was not from the ground, but from God—omnipresent Mind.

### DIVINE LOGIC.

Outside of Christian Science there is really no logical declaration of God and His relation to His universe and man. Since God—Good—(they are the same word) is the only Creator, there can be but one creation, which must be as perfect, harmonious, and immortal as its Creator. Jesus said: "Be ye perfect, even as your Father which is in Heaven is perfect." God, speaking through Moses, said: "Be ye holy, for I am holy." Throughout the Scriptures this logical recognition of cause and effect is constantly acknowledged, and this recognition, and the steadfast abiding in it is the basis of all Christian healing. Jesus said: "Call no man your father upon the earth; for one is your Father, which is in Heaven." This is the very stepping-stone to Heaven. It has lain for centuries an unused pearl, scarcely accepted. Only the revelation of the power of thought as received in Christian Science enables us to appreciate and utilize it.

Paul and John, in tender earnestness, repeatedly assure us that we are now the children of God, the offspring of Spirit, and heirs, not of hereditary sin and disease, but of power, and glory, and dominion. We are learning that as a man understandeth, so is he. There is no more proof that man is, or ever was material and mortal, than that the earth was once flat, and that the sun and moon rose and set to lighten a stationary planet. It is in each proposition, the same physical sense testimony, which is the carnal mind's enmity to Truth or Science.

Nothing but perfection, harmony, and immortality can be the logical deduction from the basis of one Creator, who is infinitely wise, loving, and good. Otherwise we have the impossible inference that the omnipotent Creator is at war with his own body—manifestation; Creation (Cause) at variance with its own effect. Omnipotence is dethroned, and God, or Good, is not supreme. All this is inconceivable to enlightened thought—hence honest infidels and thinking agnostics. Christian Science asks the world to rest in the contemplation of a nobler conception of God as the infinite Principle, universal, impartial, unchanging Truth, Life, and Love, and His spiritual universe, including man. One Cause, governing by spiritual law His own manifestation, image, or reflection, the same "yesterday, to-day, and forever."

It is this infinite Perfection that is our refuge from the seeming ills and discords of the material sense existence. Only on the basis that infinite Life and Love can have no opposites, does Christian Science deny the reality of evil, disease, and discord, and affirm the eternal reality of Good. He made all that was made, "and without Him was not anything made that was made," and He pronounced His creation Good. Jesus emphatically calls evil the lie and not the Truth of Being. He said to the sick woman: "whom Satan hath bound," and to the sick man, "Go, and sin no more," thus recognizing error, not Truth, as the cause of sickness and death. Truth makes free from these illusions. It comes to the understanding, judging not by the "seeing of the eye nor the hearing of the ear," but judging righteous judgment. It comes a sword, separating between the holy and unholy, the clean and unclean, dividing the real from the unreal—as we look not upon the seen and temporal, but upon the unseen and eternal.

I hope that these few words, added to the noble lives led by its followers in demonstrating this Truth, may help to prove that Christian Science is Christian; it remains to be seen if it is Scientific. The charge that Christian Science is neither Christian nor Scientific needs more than a passing notice, although "The fossil clever woman calls this charge: of wisdomless wit."

### IS IT SCIENCE?

For centuries the word science has been so appropriated by materialists, and claimed to have relation only to physical causes, and their phenomena, that quite a shock was felt when it was first applied to religion. The term science is properly applicable to anything that shows the relations between laws, principles, and systematized facts, whether material or immaterial. Webster defines it as,—

1. Ascertained Truth.

2. Accumulated and ascertained knowledge which has been formulated and systematized with reference to the discovery of truths by the operation of laws.

3. A collection of the general principles, or leading truths, relating to any subject arranged in systematic order.

Pure Science is built upon self-evident truths. Exact Science is knowledge, so arranged that prediction and verification by experiment are possible. Applied Science is a knowledge of phenomena as explained, accounted for, or produced by means of powers, causes, or laws.

Christian Science fulfils every demand of these definitions—it is a provable or demonstrable truth.

Professor Hoffman, in his book, "The Sphere of Science," defines the term thus: "Science is logically arranged and systematized knowledge, or, more fully, that kind of knowledge which consists of facts, accurately verified and logically put together in a system." Elsewhere he says: "The facts of the universe that are open to investigation are of two kinds: mental facts, which are the most certain of facts, and material facts." It is clear that Science must have a Principle. Webster defines Principle as the Cause, Source, Origin of anything; that from which a thing proceeds; in Science an admitted truth. Has Christian Science a Principle? It has admitted truth as its Principle. It is an admitted Truth that there is one God; God is infinite; that He is omnipresent, omnipotent, and omniscient. God is Spirit, God is Love, God is Life, God is Good, God is the one Cause or Principle. Webster defines Spirit as "Intelligence conceived of as apart from any material organization; vital energy, force, as distinct from matter; an immaterial, intelligent substance."

Now let us look for a moment at Webster's definition of a syllogism, and then ascertain if Christian Science is pure Science, which Webster has before defined as built upon self-evident truths. "A syllogism is the regular, logical form of an argument, consisting of three propositions, of which the first two are called the premises, and a conclusion. The conclusion necessarily follows the premises, so that if these are true the conclusions must be true." It is an admitted fact that God is Spirit; it is also an admitted fact that God is infinite. These premises being true, the conclusion that Spirit is infinite must be true. Now Spirit, according to Webster, is "Intelligence or Mind apart from any physical organization," and infinite is limitless. Therefore, the conclusion of our syllogism may be stated thus: Immaterial intelligence is limitless, or Mind is All-in-all, which is the fundamental statement of Christian Science. God is Good, and "in Him there is no evil." God is omnipotent or all powerful, and evil is powerless.

God is Truth, God is Life and Love. There

Digitized by Google

is nothing true but Truth; hence, as things equal to the same thing are equal to each other, there is nothing true but Life and Love. Christian Science has as its Principle God, infinite Good, an admitted Truth, and is, therefore, pure Science, because it is built upon self-evident truths. A science must recognize law. Webster defines law as "a controlling regulation, or a rule, as being so certain and constant that it is conceived of as imposed by the will of God, or some controlling authority." Christian Science finds in the Scriptures the laws of Being, and by applying these laws understandingly, its followers are enabled to verify by experiment or prove that it is exact Science. It explains phenomena of every kind, and is, therefore, applied Science. What proper place has faith in Science? Let us quote from Professor Hoffman: "Faith, considered as a mental act, is exercised in the formation of every Science. There could be no Science without faith any more than there could be extension without space." Webster defines faith as "The assent of the mind to a statement or proposition on the grounds of its manifest truth."

Christian Science is not dependent on faith as the term is commonly understood, but is founded on the "assent to the manifest truth of a statement;" there is but one God, and that God is Spirit; there is but one Cause, and the law that like produces like. Christian Science lifts the definition of faith to Paul's apprehension, as "the substance of things hoped for," the "conviction of unseen realities," which is the literal translation of that passage, "Evidence of things not seen."

Thus we see that Science belongs as much to the laws governing mental phenomena as to physical causes and effects. This was for a long time absolutely ignored, and when Wisdom wedded those two words, Christian Science, in indissoluble and eternal union, old opinions felt a strange convulsion. That word is now the lode star of the age. The millennial age must be the scientific age, when the Mind that is Love will rule with the rod of unerring Principle, the whole world; not by physical law that blasts while it blesses, but by spiritual law, that says to the tempest, "Peace be still," and hears the "still small voice" above the ocean's roar. This will be the spiritually scientific age.

Since the discovery of Christian Science more than thirty years ago (which rent the fetters of the finite mind) the development along the line of subtle forces has been truly wonderful. That still unknown quantity (except to the spiritually scientific thought), electricity, has been brought from the clouds and chained to the uses of man; continents clasp hands with the throbbing cable beneath the ocean's depths; friends speak almost face to face along the lines; more and more subtle is it found to be, till now it is whispered that the wire is not needed; thought needs no wire. Thus even what we deemed the physical is rising to higher and subtler forms out of matter, and we enjoy the many conquests of science in every direction. More clearly are we learning that unerring law governs everything, even the wandering comet yielding to its unswerving demands. Is Omniscience and His government alone unscientific? Is God's revelation of Himself lawless?

Christian Scientists take the "Scriptures for their guide to eternal life." (S. & H.) David repeatedly prayed "to understand Thy law;" "I meditate on Thy law;" "Make me to see wondrous things out of Thy law," evidently recognizing it as something to be spiritually discerned. As above and beyond the so-called physical law Jesus said: "I came not to destroy, but to fulfil the law." To complete the demonstration of the immortal law of endless life, Paul said: "The law of the Spirit of Life in Christ Jesus hath made me free from the law of sin and death." Also: "The carnal mind is not subject to the law of God, neither indeed can be." Since God's law is a law of infinite Spirit, this carnal mind is outside the infinite Reality of the divine law of life and love.

John said: "Sin is lawlessness." Therefore, sin is outside the Reality of the infinite law of God or Good, where Spirit is supreme.

This brings us to the Reality of the law of Good, of Life and Love, and thus we see that Christianity as a revelation and demonstration of divine law is not Christianity unless it is Scientific.

As there is one Law Giver, even God, there can really be but one infinite Science, which is and must be Christian Science, whose law is a spiritual law, a moral force, governing all the phenomena of Spirit in immortal harmony. In this Science the Christianity of Jesus is lifted out of the mists that have obscured it, and those who love it and prove it, and try to live it, know that it is establishing the kingdom of God, the law of Love, on earth. The character and the works of Jesus are illumined and revealed in their majesty and glory. In this Soul-light the meek and mighty Nazarene is seen to be the only truly Scientific man who ever lived; the only one who demonstrated or fulfilled the law of Life, that "makes us free from the law of sin and death." If Jesus did his works according to God's law in destroying sin, sickness, and death, that law, or divine Principle, must be the unchanging, universal, eternal Principle of man and the universe, and must be, as Jesus certainly taught, available to any of his followers who understand him; a Principle for all time and for all men. If ye believe on me [understand me] ye shall do the works that I do, even greater works, because I go to the Father.

If his followers do even the smallest problem according to this Principle, finding the true result, even if it is not the ultimate conclusion, it is as truly scientific as if it were the greatest; just as two and two making four is just as true as that two millions and two millions make four millions.

We have scarcely dared to grasp the stupendous possibilities of Scientific Christianity. In our blindness we forget how glowingly St. Paul speaks of the fact that Jesus hath "abolished death," that he took the ordinances or laws that were against us, triumphed over them openly, and nailed them to his cross.

Are the eyes and ears of this generation too gross to comprehend the infinite demands of Christianity? The prophets ever foreshadowed, and even partially demonstrated, this supremacy of Spirit, but Jesus alone solved its problem to its triumphant finale.

Understanding his unity with the Father, his Divine cause, he attained in his brief ministry his God-given dominion and heirship. From his recognition of the outspread affluence of Love, he fed the multitudes, because he knew that Life was and is God, the Mind of all, and that neither are in, nor of matter; he raised Lazarus, knowing that Spirit is substance, and matter illusion; he walked over the waves, understanding himself as reflecting infinite Intelligence; he spake as never man spake.

Behold this transcendent being, and knowing that he is our Elder Brother and Way Shower, applying and demonstrating a universal law or principle, are we rash in saying that some day, and not far distant, all art, philosophy, science, including chemistry, will sit at the feet of the Anointed One, and all find themselves included in the infinite Love, the divinely intelligent Principle of the universe? In his Science, Christian Science, which is the Comforter, the Spirit of Truth, leading into all truth, taking of his words and works and interpreting them to us in the light of Spirit, we see him not the victim to appease the wrath of God, but the scientific victor through selfless love, over every limitation of matter, rending its veil from top to bottom, and revealing the eternal co-existence of God and man; then ascending to his invisible (to us) spiritual individuality in Soul, Mind. To his followers he said: Go ye into the world, proclaim the glad tidings, heal the sick, "and these signs shall follow them that believe: They shall take up serpents, and if they drink any deadly thing it shall not hurt them. They shall lay hands on the sick and they shall recover." That is, if they understand me and my method, they, too, shall follow me in demonstrating the supremacy of the spiritual law of harmony, illustrate the reality of Life and Love, annulling the material law of sin and discord. "To him that overcometh will I give to sit with me in my throne, even as I also overcame, and am set with my Father in His throne." Thus we see that the true Christian life must be a constant growth in the understanding and application of divine, spiritual law to human needs in all the relations of life—a progressive life, constant gain in spiritual attainment till we, too, are one with the Infinite Love.

### WHY HAS IT TAKEN SO LONG?

Why has it taken so long for this Science to come? some one will ask. Let us read a few words from Dr. Hepworth, of New York, one of the most distinguished clergymen of that city. He writes,—

"Look at Christ. What did he do and see? So much that he did not think it wise to tell it all. We have been trying to digest his philosophy of life for many ages, but have only succeeded in getting ourselves into a theological snarl. He wanted to tell us how to live, but we have persuaded ourselves that he only wanted to tell us what to believe. He is the Stranger in our great company even now. If he were to return and repeat his words, we would turn our backs

Digitized by Google

on him as they did of old. The bottom facts of Christian society and of a Christian life are not appreciated nor recognized. We are millions of miles distant from the Truth he taught. How close the Father was to him. And yet no closer than He may be to us. How calm under the stress of affliction he was, and yet no calmer than we can be when we get our spiritual food from the same source. We must realize these things, must meditate upon them, until they become a part of us; must appropriate them to our own use. Then the bitterness of life will give way to sweetness. There will be more hopefulness in our hearts, and our religion will be a series of lighthouses, enabling us to steer clear of shoals and rocks and to anchor in the haven of Heaven at last."

Dr. Hepworth is only one of many who are awakening to the fact that the religion of Jesus has been obscured by "creeds, and doctrines of men." The age seems barely able to grasp it yet, as is evidenced by the opposition to Christian Science, which is an explication of Jesus and his doctrine, life, and works. We should not be surprised that it has taken eighteen hundred years to grasp the infinite meanings of this transcendent life; this life so absolutely unique, this doctrine so entirely revolutionary; this promise of man's spiritual origin and conclusion, of his ascension out of matter into Mind, this denial of material birth and evolution, so relentlessly radical. Jesus always reckoned himself spiritually. This made him the Way-shower.

It needed all these years for the divine leaven to work, preparing humanity for the Science of Being. It needed a scientific age.

THE REVELATOR.

In this Science of Being, man is the divine ideal, inseparable from the Father or divine Mind. Through Christian Science this ideal is elevating and purifying human life and character. Christian Science offers to all a system by which each one may prove for himself or herself the transfiguring power of this ideal, held steadfastly in thought, subduing all things unto itself, dispelling the illusions of sin, sickness, and death, until this ideal becomes the only real. How exquisitely St. Paul described this wonderful, transfiguring, universal process. "We all, with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, even as by the Spirit of the Lord." "Then will come the statelier Eden back to man," then will the desire of all nations be realized,—

When from the lips of Truth one mighty breath
Shall, like a whirlwind, scatter to the breeze
The whole dark pile of human mockeries:
Then shall the reign of Mind commence on earth,
And starting as from a second birth,
Man, in the sunshine of the world's new spring,
Shall walk transparent like some holy thing.

A consciousness—permeated with this abiding Christ, or divine ideal of ever-present Love—radiates health and holiness as spontaneously as the sun emits light.

The Spiritual Idea of Truth, manifested by Jesus, has been slowly working all these centuries, till in this age, near the close of this century, one human consciousness has been clear, pure, spiritual enough to let in the Light of infinite Love, and the Rev. Mary Baker Eddy gives us "Science and Health with Key to the Scriptures" that unlocks its hidden treasures and solves the mysteries of Being.

In the plenitude of her maturity, she in selfless love and matchless wisdom, is leading this great movement toward the physical and spiritual freedom of the race.

It is, perhaps, a surprise to many that this Science of Sciences should have come through a woman—a woman meek and mighty. Strong in the strength of spirit, brave with the courage of a God-bestowed evangel. Nor is this strange. Truth is not a tower of Babel, a structure of material hypotheses and theories, reaching Heaven on a material basis. It is a revelation, descending from God, out of Heaven. It is spiritually discerned by the pure in heart. The transparency of a purified affection, a selfless glorified life of love and tenderness were the requisites. Woman first proved the divine fatherhood of God. First at the sepulchre, she saw the immortality of man proven and rise superior to fleshly conditions and material laws, and now woman has given us the Science of Infinite Being, revealing the limitless possibilities of man, as heir through divine birthright of all good, eternal life and perfection.

# PERIODICALS

PUBLISHED BY

**THE CHRISTIAN SCIENCE PUBLISHING SOCIETY,**
**95 Falmouth Street, Boston, Mass., U. S. A.**

## A WEEKLY NEWSPAPER

***Christian Science Sentinel***

PUBLISHED EVERY THURSDAY

Contains brief summary of the most important news; articles selected from various sources, gives the Voice of the Press and timely editorials in connection with the movement; and presents interesting contributed articles and testimonies.

Subscription Price: One Dollar a Year. Foreign subscriptions, $1.50. On sale at three cents a copy, postpaid.

## A MONTHLY MAGAZINE

***The Christian Science Journal***

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discover and Founder of CHRISTIAN SCIENCE,

Is the Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

It contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science, dissertations and lectures.

Subscription Price: Two Dollars per annum; One Dollar for six months; Foreign Subscriptions, $2.40 per annum; $1.20 for six months; Single Copies, Twenty Cents, postpaid.

## BIBLE LESSONS

***The Christian Science Quarterly***

PUBLISHED JANUARY, APRIL, JULY, AND OCTOBER.

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year, in all the Christian Science Churches.

Subscription Price: One copy one year, postpaid, fifty cents.

Foreign subscriptions, one copy, one year, 60 cents

On Sale at 15 cents a copy.

Catalogue of prices for Oxford Bibles, Hymnals, Books, Pamphlets, etc., sent on application.

Direct orders, and make remittances payable to

# Works on Christian Science, By Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 695 pp. Revised and Enlarged 1891. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Price (cloth) each . . . . . $3.18

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . 4.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid . . . . . 5.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1885, with revisions and additions. Price (cloth) each, prepaid . . . . . $2.25

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . . . 4.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book containing a brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 25 cents; $2.00 per dozen, prepaid.

**CHRIST AND CHRISTMAS.** An illustrated poem. Single book, prepaid, $1.00; $10.00 per dozen.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, prepaid.

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.00; $5.00 half dozen; $9.00 per dozen, prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.00; $5.00 half dozen; $9.00 per dozen, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 50 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**CHRISTIAN SCIENCE versus PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1895. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 20 cents; $2.50 per dozen, prepaid.

### Political and Governmental Notes.

William J. Bryan and Adlai E. Stevenson were officially and formally notified by the Democrats of their nominations by the Kansas City convention for the respective offices of president and vice-president, at a great public gathering in Indianapolis, Ind., August 8. The ceremony took place in one of the parks of the city, and many thousands of people witnessed it. J. D. Richardson, chairman of the National Democratic Convention, made the address of notification to Bryan, and Governor Thomas, temporary chairman of the convention, formally notified Stevenson.

According to the recent United States census, the population of Chicago is 1,675,000 against 1,099,850 in 1890. The count shows an increase of about 50 per cent in ten years, but Chicago people are disappointed, for the school census as well as the directory census gave over two million. The population of Washington is 278,718 against 230,392 in 1890; Buffalo, 352,219 against 255,664 in 1890; Louisville, 204,731 against 161,129 in 1890; Milwaukee 352,219 against 255,664 in 1890.

Former Congressman Charles A. Towne, who was nominated for the vice-presidency by the Populist national convention, held at Sioux Falls in May, on August 7 sent a letter to the Hon. P. M. Ringdal, chairman of the committee on notification, withdrawing his name from the ticket, in order that the way might be open for the nomination of Adlai E. Stevenson.

In consequence of the arrival at Taku of Rear Admiral Remey, commander-in-chief of the United States Asiatic naval station, Rear Admiral Kempff has started for Manila, turning over the command of the squadron in Chinese waters to his senior officer.

The Second regiment United States infantry has been ordered to leave Fort Thomas, Ky., for the Orient this week.

### Foreign News.

On Sunday, August 5, the advance body of the international relief expedition, numbering about 12,000 men, encountered resistance from the Chinese troops at Peitsang, a place twelve miles from Tien Tsin on the road to Pekin. A brief engagement resulted in the rout of the Chinese and the loss of 400 allies, mostly Japanese, who led the attack, supported by Americans and British. The Russians and French were co-operating, but were not in position to take part in the engagement. The day following the capture of Peasang, the allies advanced to Yangtsun, a stronghold a few miles further on, and after four hours' fighting occupied it, driving the Chinese out of their trenches. The losses of the allies at Yangtsun were about 200, the casualties among the American troops numbering about 60. The position captured is regarded as an important one.

The State Department of the United States received a cipher message from Minister Conger on August 7, as follows: "We are still besieged. The situation is more precarious, the Chinese government insisting on our leaving Pekin, which would be certain death. Rifle firing continues on us daily by the imperial troops. We have abundant courage, but little ammunition or provisions. Two progressive Yamen ministers have been beheaded. All connected with the legation of the United States are well at the present moment." The message was signed "Conger," and was undated, but the department officials say it may have been written not earlier than July 30, and perhaps not later than August 2. It was put on the wires at Tsinan, a large city about eighty miles southeast of Pekin, on the same day that it was received in Washington.

A second message was received by the United States government from Minister Conger on August 10, stating that the Chinese government had informed the ministers that their governments were urging China to send the diplomatic corps and other foreigners under safe conduct to Tien Tsin, and upon this ground the ministers were being pressed to agree to leave Pekin. Mr. Conger said that the ministers replied that without instructions directly from their own governments they could not consent to leave their posts. The French and British governments received the same message from their ministers.

Acting on the information contained in Minister Conger's message, the United States on August 9, sent a communication to the Chinese government, demanding the immediate cessation of hostile attacks by imperial troops upon the legations, and recommending that the government show its friendly spirit by co-operating with the relief force. It is thought that this demand will force the Chinese government to stop the attacks on the legations, for a refusal to do so would invite a declaration of war from the United States and all the other powers.

The British Parliament adjourned August 8, after the appropriation bill had been passed by both houses. The Queen's speech, after relating that the relations with the Powers of Europe and America continue friendly, and a reference to the establishment of the Commonwealth of Australia, refers to the war in South Africa, "which has placed in the strongest light the heroism and high military qualities of the troops brought together under my banner from this country, from Canada, Australasia, and my South African possessions."

The London *Graphic's* Moscow correspondent asserts that the forwarding of troops to the Amur is very unsatisfactory, owing to the Siberian Railway failing to stand the pressure of the heavy troop-laden and ordnance-laden trains. He says that all the faults and weaknesses of the hastily laid line have been revealed. The rails employed are too light, and the sleepers are too far apart. A great part of the ties are half rotten.

The subscription list to the new British Government loan closed August 7. Indications favor American applicants getting at least half of the loan, if not more. It is likely that the pro rata allotment system will not be strictly adhered to, American applications being favored. Two American houses alone are said to have applied for $25,000,000.

A press despatch from British sources says: General Botha's commando, originally 750, now consists of only sixty-three burghers. Other commandoes have been reduced in like proportion, owing to desertions. The remaining burghers have divided into two parties, one for peace and the other for war. The peace party is the stronger.

A Constantinople dispatch of August 8, says that advices received from Bitlis, Asiatic Turkey, say that 200 men, women, and children have been massacred in the Armenian village of Spaghank, in the district of Sassun, by troops and Kurds under Ali Pasha, the commandant at Bitlis. He is also said to have ordered the village to be burned.

Ample rain has fallen for the present agricultural requirements in Rajerat, and the greater part of Rajputana and central India. If the present favorable conditions continue, considerable autumn crops will be secured, and the tension will relax. There are now about 6,356,000 persons receiving relief.

Field Marshal Count von Waldersee has been appointed to the chief command of the German forces in China. He cannot reach the field of operations in le than six weeks, when, if peace shall not have been restored, he is likely to have supreme command of the allies, as he is of acceptable rank.

### Industry and Commerce.

Willie Sing, an Americanized Chinaman, of Bristol, Conn., has an acre and a half of land, on which he raises many Chinese vegetables. The heads of lettuce he raises weigh almost ten pounds each, and much resemble cabbage, only that the leaves are more tender. He also raises a variety of beans, the pods of which measure about ten inches in length.

A movement started some time ago to transport negro plantation hands from Louisiana to the Hawaiian Islands, is rapidly taking shape.

Deposits in the Massachusetts savings banks have increased $24,696,935 since June 30, 1890, and $15,643,741 since last October.

Telephonic communication between German and French cities was opened August 6.

Lincoln, Neb., has a creamery which turns out 30,000 pounds of butter a day.

### General News

The final volume of the largest literary work ever undertaken and executed in the world, dealing with the American civil war, has just been completed at the Government Printing Office in Washington. The title of the work is "War of the Rebellion, a Compilation of the Official Records of the Union and Confederate Armies." It consists of 128 huge royal octavo volumes of 1000 pages each, and in addition a gigantic atlas in thirty-five parts. The publication was begun twenty-six years ago, and has proceeded uninterruptedly since.

An inventor now comes to the fore with an apparatus by means of which a fire is made to burn more brightly by pouring water over it. The water is sprayed over the surface of the fire; it decomposes into its elements, hydrogen and oxygen, and the hydrogen burns. It is estimated that 120 pounds of water used in an ordinary coal stove will double the amount of heat produced and halve the fuel used.

"Old Home Week" was celebrated in all the important towns and cities in Maine last week. It was a season of great rejoicing. Among the celebrated sons of Maine who returned to the "old Home" for the occasion, was Thomas B. Reed, former speaker of the House of Representatives.

The Congressional Library at Washington now takes over 3,000 regular periodicals, representing every printed language and almost all conceivable subjects. Yet they are only a small fraction of all issued.

## Letters from China.

### Mrs. Conger tells of Visit to the Empress Dowager.

LETTERS written within the past eighteen months by Mrs. Edwin H. Conger, wife of the American minister at Pekin, to a friend in Des Moines, were made public recently. They told of the visit of the foreign ministers' wives to the empress dowager and royal family, of a visit by the ladies of the American legation to the wife of Li Hung Chang and of the return visit, of the ceremonial new year visit of the yamen to the American legation, and of the new year's courtesies extended by the servants of the American legation.

These letters from Mrs. Conger reveal her friendliness for the Chinese, and her hope that an era of better feeling between China and the western world was about to open. The first letter, telling of the visit to the empress dowager, follows:—

"China is such a strange land, but each day I see more that I count of value to me. The Chinese do not seem to have hard, severe, grieved, anxious, revengeful, unresigned, unhappy expressions on their faces, as a class. No, their faces do not have lines that indicate these feelings. They take everything that comes to them as a matter of course. I am told that they are ungrateful. But may it not be that they take the good things that come to them as a matter of course as well as the ills? If they are not to grieve over their misfortunes they are not to rejoice over their successes. Our house boys do not seem like married men with families. But they are. They are so quiet, and careful, and tasty, and exact about their work that they seem more like gentle, careful, well-bred girls than men. I wish that I could understand their feelings. What do they think? They wear long gowns, sleeveless jackets, broad white cuffs, velvet hats, and boots. They look real nice. I have become much attached to all our servants.

"On New Year's day the three house boys came to the drawing room before breakfast and with a Chinese courtesy from all at once, the first boy said: 'Happy New Year.' This was done to each member of the family. It seemed very nice. After breakfast the first cook, second cook, washerman, first, second, and third coolies, first mafoo, cart mafoo, and 'little mafoo,' gate keeper, gardener, and 'little gardener,' and first and second messengers, came, all dressed up, into the large hall. First boy said to us, 'Servants want to wish you well.' We went to the hall and each courtesied with right hand to the floor, to each of us. This was done in a quiet, dignified manner, but with smiling faces. After this was over first boy came again and said: 'Mrs. Squires, servants want to wish you well.' Then their four boys, three mafoos, three cooks, five coolies, etc., came into the hall and did the same thing. Later, first boy came once more and said: 'Soldiers want to wish you well.' We stepped to the door and in front of us stood twenty Chinese soldiers. They saluted and courtesied. These soldiers have been guarding the United States legation at the gate of the compound since the trouble in the fall.

"The Chinese new year is February 11 this year. It isn't always on the same date. They will have a great time for a week or more.

"On the 5th of January the yamen made their official New Year's calls. They came in three companies of ten or twelve in each company. They had sent word three days before to all the foreign ministers that they were coming. They came in great style. They are men of wealth and official standing. They came in sedan chairs, lined with fur, carried by four coolies, escorted by many outriders and men on foot.

"These men were richly dressed in the finest of long fur overgarments, rich, heavy silk and satin undergarments, velvet and fur boots, fur hats with official buttons and feathers. They were rather fine looking men. Our four boys in uniform escorted them to the drawing room, where the minister, First Secretary Squires, and two interpreters received them. They were shortly escorted to the dining room, where a table was spread for them. They remained about three quarters of an hour, chatting all the while. More cards announced the coming of the second company. The first company took their departure. The second remained until the coming of the third company. The whole thing was novel and interesting.

"There is one more thing I must tell you about, because I think you will see much in it. It is of a visit that the foreign ministers' wives made to the empress dowager. It is stated, and said to be true, that she had never seen a foreign woman and that a foreign woman had never seen her. The idea was conceived that the empress dowager be asked that she allow an audience to the seven foreign ministers' wives. They wished to pay their compliments to her on her 64th birthday. This audience was granted after some delay, and December 13 was decided upon. At 10.30 mounted escorts, sent by the yamen, went to each legation, and escorted the ladies to the British legation, Lady MacDonald being doyenne. Each lady was in a sedan chair, having five chair bearers and two mounted mafoos. From the British legation we started at eleven o'clock for the 'Forbidden City,' to see the empress dowager. Can you see the picture? Seven chairs with five bearers and two mafoos each, and from fifty to sixty mounted Chinese escorts sent by the yamen?

"When we reached the gate of the 'Forbidden City,' we had to leave our chairs, bearers, mafoos, escorts, all. Inside the gate were seven red upholstered chairs, in a line, with six bearers each and many escorts on foot. We were taken to another gate, where, inside, we found a fine railroad coach, given by France. We entered this fine car, and many eunuchs, dressed in black, pushed and hauled us to another stopping place, where we were received by many, offered tea, etc. This railroad passed through a beautiful city, clean and imperial. After tea serving, we

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

were escorted to the palace. Our heavy garments were taken and we were ushered into the presence of the emperor and empress dowager. We stood according to rank, the longest time in Pekin, and bowed. Our first interpreter presented each lady to Prince Ching, and he, in turn, presented us to the empress dowager. Then Lady MacDonald read a little speech in behalf of the ladies. The empress dowager responded through Prince Ching. Another bow on our part, then each lady was escorted to the throne, where she bowed and courtesied to the emperor, who reached out his hand to each. Then a bow and courtesy to the empress dowager. She reached out both hands, and we stepped forward to her. She took both of ours, then placed upon the finger of each lady a beautiful heavy chased gold Chinese ring, set with a very large, fine pearl. After thanking her, we backed from the throne and took our places below as before.

"From here we were escorted by many richly dressed, highly painted, decorated young Chinese women and Chinese officials, to the banquet hall, where a large table was filled to overflowing with Chinese and European food. Prince Ching, Princess Ching, and five other princesses sat at the table with us. The empress dowager and Princess Ching were dressed in most exquisite embroidered rich satins and silks, with large pearl decorations.

"They were not painted and their hair not extended to the extreme. The young princesses were beautifully and carefully dressed in rich, fine embroidered satins, in bright colors. They had painted faces, hair extended and elaborately ornamented, and had long gold finger protectors. They were pictures. The empress dowager and all her court have large feet. They are Manchurians. The binding of feet is losing its popularity among the highest classes. Everywhere with us were Chinese interpreters, who spoke English and French well. After this meal we were invited into other rooms and offered cigarettes and tea. The table was cleared away and we were invited into the hall again. There sat the empress dowager, and we gathered about her as before. She seemed bright and happy. Her face was aglow with good-will. There was no trace of cruelty to be seen. In simple expressions she welcomed us, but her actions were full of freedom and warmth. She arose and wished us well. She reached both hands toward each lady, and then to herself, and said, with much enthusiastic earnestness: 'One family, all one family.' Everything she said was in Chinese. She presented to each lady the empress, the emperor's wife, who gave her hand to each. The empress is young and what is called a beautiful Chinese woman. She wore the decorations, paint, etc., of the young women.

"The empress dowager bade each lady good-bye and then went to the theatre. We soon followed with our large and beautiful escorts and listened to and saw a Chinese theatre at its very best. After about one hour's stay, interpreters explaining the plays, being served tea all the while, we were escorted back to the banquet hall and seated as before at a table laden with food. Again we were taken to other rooms and the tables cleared away.

"Once more we were permitted to see the empress dowager. She was very cordial, and when tea was passed to us she stepped forward and [illegible] each cup of tea to her own [illegible]. She took a sip, then lifted the cup to the other side [illegible] 'One family, all one family.' Here she presented us more beautiful gifts. [illegible] we returned home at five o'clock. [illegible] No foreign woman ever saw the rulers of China before, and no foreign ruler ever saw a foreign woman before.' December 13, 1898, was a great day for China and the world. Think of this: English was the first language spoken to them by foreign women. English is the commercial language of China and woman took English into the forbidden city and to the very throne of China and gave it in an English woman's thought.

"In these foreign countries Americans and English are almost, if not quite, one people. It is often, very often, said by the English, Americans, and other foreign countries that 'English and Americans are all the same.'

"My first boy tried to impress upon me what a great thing had come into my life in this visit to royalty. 'Madame, much grand thing came to you.' 'Emperor came down from heaven.' 'No foreign lady see him—few Chinamen.' 'He came down from heaven.' 'You very blest.' He opened his eyes, rolled them up, shook his head, and pointed up to impress upon me the great honor and blessing we had received. To him it was all to see the emperor, little or nothing to see the empress dowager. She is a woman. The emperor is a sacred person to the Chinese. He is walled in his city and is not to be seen by his subjects, nor is he to see them. He learns nothing of his country or countrymen by observation or experience. How can this empire grow in strength and glory, in such bondage? Everything about this China is made up of the seeming improbable. It is the extreme of all we can dream.

"While our loved thoughts often turn homeward, on the whole we are getting much value out of China, and I predict that through good cheer and good will we may not come away with any feelings of regret in ourselves or others that have come to this far-off land. Mr. Conger's labors increase as new questions keep coming up to be met."

Under date of April 20, 1899, Mrs. Conger wrote to the same Des Moines friend who received the letter quoted above, a description of a call made to the wife of Li Hung Chang, and the return visit paid to the ladies of the American legation. This visit is notable in that it is the only time Earl Li's wife has ever met foreign women. As Mrs. Conger points out, the fact that the ladies of the American legation were thus honored, in disregard of Chinese tradition, may be taken to indicate the high position occupied by the country in the estimation of Earl Li. The letter follows:—

"The government affairs seem quiet now, as a whole, but in the interior there is much trouble coming to the missionaries. I want to tell you just a little of what we have been doing. About three weeks ago Earl Li Hung Chang, the great 'Chinese king,' returned from a trip into the interior to investigate the Yellow River flood district, where he was sent by the empress dowager. He made an official call on Mr. Conger, then called for the ladies. We received him in the drawing room. He remained nearly an hour and was at his best socially. We enjoyed his visit greatly. I said to him that I would be pleased to pay my compliments to his wife, if agreeable to him. The reply was: 'She is not accustomed to receiving foreign women, but she may be pleased to receive you and your young ladies, and I will let you know.' In a few days we received a letter telling or asking me to come at a certain day and hour and to bring the other ladies of my family. There were five of us who started from the United States legation, the second secretary's wife, a young American lady who is visiting us, [illegible] We were each in an official sedan chair, with [illegible] chair bearers and [illegible] on horseback [illegible] We were received at the gate of the [illegible] by Mr. [illegible] an American [illegible] Hung Chang's private secretary. He presented [illegible]

Digitized by Google

Hung Chang's youngest son, who speaks English well. This young Mr. Li escorted us to the home and presented us to his mother, Lady Li, his wife, sister, and cousin. They each received us standing near the door and shook hands with us. It is their custom to clasp their own hands in greeting people. We remained about thirty minutes. They served tea and cakes. These ladies, whom we never see on the streets or elsewhere, except in their homes, were exceedingly interesting to us. They were dressed in the choicest satins, richly trimmed, and many precious jewels, hair ornaments of precious stones and fine pearls. Their feet are extremely small, the smallest I ever saw. Their faces were painted. The young man is bright and seemed pleased with any compliment. He asked me what I thought of their costume. He said the gentlemen can dress in pretty colors too. He was a picture in his satins and velvets. They never do a stroke of work, not even to wait upon themselves. Their hands and motions show it. They are very graceful. Their homes have very little in them. In a few days a letter came to us that the ladies would be pleased to return our call on such a day at such an hour. Lady Li sent her compliments, but the young ladies came, escorted by Mr. Li. The letter informed us that no foreign gentlemen were expected to be present. They came on chairs, with many escorts. Each lady had her alma (maid) to assist her to walk on those little feet. They could not walk alone. Mr. Li informed us that this was the first time that the ladies had ever entered a foreign home. In speaking of these visits to those who have been here long, they say this is surely a great compliment to the American minister. Li Hung Chang's American doctor said to us this is a great departure, an unheard-of thing for Li Hung Chang to do. He is very choice of that daughter and will let her go nowhere. He has greatly complimented the American minister. This is the first time. Do you see anything in it? I can indefinitely see something through the clouds, or at least I think so. It has been permitted to us to go to many places of interest and instruction, to some places where foreigners are seldom permitted to enter. I appreciate these grants, because it gives us an insight into the thought of these people for centuries back. I never even read of such a people, such steadfastness to customs, to worship, and living. We must learn how to reach them; then follow in that line. Their remarkable memory serves them at all times. It has come through the ages and is the greater part of the Chinese make-up. With the great ever-present memory they quickly put this and that together and almost invariably get ahead of the foreigner."—*Des Moines (Ia.) Leader.*

## Rules and Lessons.

WHEN first thy eyes unveil, give thy soul leave
To do the like; our bodies but forerun
The spirit's duty. True hearts spread and heave
Unto their God, as flowers do to the sun.
Give Him thy first thoughts then; so shalt thou keep
Him company all day, and in Him sleep.

Walk with thy fellow-creatures. Note the hush
And whispers amongst them. There is not a spring
Or leaf but hath his morning hymn. Each bush
And oak doth know I AM. Canst thou not sing?
O leave thy cares and follies! Go this way,
And thou art sure to prosper all the day.

When the world's up, and every swarm abroad,
Keep thou thy temper; mix not with each clay;
Dispatch necessities; life hath a load
Which must be carried on, and safely may.
Yet keep those cares without thee, let the heart
Be God's alone, and choose the better part.

HENRY VAUGHAN. 1621–1695.

## A Communication.

*Editor of Transcript:*—In a recent issue of your paper you published a letter in which it is stated that "the Rev. Mary Baker Eddy holds a position among Christian Scientists similar to that of the Virgin Mother with Catholics, that, unlike the founder of the first Christian Church, this one has made a fortune by her teaching and her books."

Now, I am not sufficiently informed as to the position held by the Virgin Mother in the minds of Catholics, to write intelligently on that subject, but I would ask the privilege, since this question has been introduced in your paper, to define the position of Mrs. Eddy and her relationship to her church, as I have observed it during many years as a faithful adherent of Christian Science.

Mrs. Eddy from early childhood has been credited with a high degree of spirituality. Her peculiar experience through a life fraught with disappointments helped her to learn the insufficiency and the utter emptiness of mortal existence, concerning which Longfellow has aptly said, "Life is but an empty dream," and "Things are not what they seem." Being the one specially prepared to accept the proposition that matter is but "an empty dream," she was of course chosen as the proper one to present to the world the idea that "Spirit is the only reality." Having first introduced the idea, and having founded the Church of Christ, Scientist, she became its natural leader and adviser. She has proven herself a faithful and wise guide, and has never been found wanting. For this reason she has been perpetuated in this leadership, but has occupied no position in the movement which has not been cheerfully accorded to her by her entire following. Indeed, the tenderness and self-sacrifice which she has manifested in watching over the great cause of Christian Science, the parental interest shown, has earned for her the endearing name of "Mother." Christian Scientists are not bound to her by any sworn allegiance nor by any absolute monarchism on her part, but simply by the bonds of love. By common consent Mrs. Eddy is given the position as director of this movement, and Christian Scientists follow her as she follows Christ.

Now, in respect to her fortune, I desire to say she has labored in this movement during a period of thirty-three years. The same amount of business tact, the same degree of wisdom and industry, would have made her a millionaire in any legitimate line of business. That she has saved a comfortable though moderate fortune, and is thereby spared the humiliation of being an object of charity is very gratifying to Christian Scientists who have been her patrons. It is well known to all Christian Scientists that she could have had much more of the wealth of this world if she had not repeatedly, and for the sake of Christ, placed herself in a position to cut off her income. At the present time she has no income whatever except from the sale of her books. Within the past three or four years she has given away almost as much as one half of the sum total of the receipts from the sale of her books from their first publication. The insinuation that Mrs. Eddy is mercenary, or that she has in any way labored for "filthy lucre," is absurd to those who know her best. What she has in the way of worldly goods is but the well-earned wage of a hard-working woman. Those fortunate enough to be numbered among the Christian Scientists who have contributed to her earthly supply by, in a small way, paying for her service, are more than satisfied with their investment, and consider themselves still greatly indebted to this noble woman. This being true, a third and outside party has little right to complain. Respectfully yours,

ALFRED FARLOW.

## A Statement of Facts.

WE publish with pleasure, a letter of Mr. Willard S. Mattox, of the Christian Science Publication Committee, New York City, in answer to an editorial in the *Chronicle* of the 6th ult. In a letter to the *Chronicle,* Mr. Mattox says, "Your editorial is marked by its fairness and reasonable attitude, and stands out from the bitter criticisms of many other papers in this state, for which all Christian Scientists must be gratified." In connection with this, we can say, in truth, that the *Chronicle* has tried to be fair, and at the same time candid, towards Christian Science, especially so when speaking of its claim of possessing miraculous power, both corporeal and spiritual. It is a fixed rule of the editor, to avoid, at all times, either harsh or bitter criticism, that is so common with a portion of the press. We speak plainly, openly, but never in animosity. A profession of faith is too serious a matter to be ridiculed, either wantonly, or from prejudice, even if the profession is open as a debatable assumption. That the *Chronicle's* candor, and unprejudiced opinion, have met with the approval of a prominent representative of Christian Science, is a source of pleasure and gratification to the writer, and it will stimulate, and encourage to a continuance of that line of procedure.

New York, July 26, 1900.

To the Editor of the *Chronicle*.

*Sir:*—My attention has been called to your issue of July 6, containing an editorial in which you refer to conflicting reports of the condition of Mrs. Eddy's health. You close your statements by saying that "silence upon so grave a subject would tend to confirm the story of her sickness."

I agree with you entirely, and to that end, and for the benefit of your readers, I would ask you to print the following letter, which I sent to the *New York Sun,* and which was printed by them on July 4. My card in the *New York Sun* answers fully all the points raised by the correspondent of the Portsmouth paper, and I am qualified to offer the proof you deem requisite, because I have had the honor of a private interview with Mrs. Eddy.

Yours truly,
WILLARD S. MATTOX.

New York, June 16, 1900.

To the Editor of the *Sun*.

*Sir:*—I desire most emphatically to refute the series of incorrect statements concerning Mrs. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, which appeared in your issue of June 15, credited to the *Portsmouth Times*, in a dispatch from Portsmouth, N. H. The truth about Mrs. Eddy has been published so often, it would seem incredible that false accounts should find lodgement or credence in the public press or mind. I was of that company of Christian Scientists which visited Concord, N. H., last week, and from my personal knowledge I am able to say it is not true that "very few, if any of them, got a glimpse of Mrs. Eddy." Hundreds saw her as she drove out on Tuesday of last week; hundreds more saw her on Wednesday. I was in Concord on Thursday, and, with over five hundred others, saw Mrs. Eddy and heard her speak. On this day she delivered an address to those who were assembled on the lawn of her home.

I had an opportunity to determine the falsity of all such assertions as your correspondent quotes. Mrs. Eddy is in perfect health, and her presence suggests strength and vigor. Her carriage is erect and firm. All who saw her were impressed with her courtly grace and the charm of her simple dignity. Her complexion has the freshness and color of youth. In speaking, her voice was distinctly audible in all parts of the lawn. The assertion that some one else is made to take Mrs. Eddy's place in the daily drive, is false, and the truth is easily capable of demonstration. There is ample evidence to corroborate my statements. Mrs. Eddy attends to a great deal of correspondence every day, and with her own hand answers many letters. She is an extremely busy woman, and an indefatigable worker.

Christian Science commands the attention of the dignified and the thoughtful, and for such the reference to "kissing the front doorstep at Pleasant View" needs no denial. To the fair-minded, such statements are discredited before they are disproved, and carry their own refutation.

In addition to my individual testimony, I have the authority of one of Mrs. Eddy's household to deny specifically the allegations concerning her health.

WILLARD S. MATTOX.

In the *Chronicle*, Wappingers Falls, N. Y.

## A Wednesday Evening Meeting.

LAST Wednesday seemed a time of special thanksgiving to those gathered in our "upper room." After the usual opening exercises, a selection from a recent number of the *Christian Science Sentinel* was read, which ended with these words: "There are some questions which it might be well to ask ourselves each day, and sometimes many times each day: 'Is pride in any measure or way affecting my life?' 'Am I honest?' 'Am I working only for the advancement of our Godly Cause?' 'Have I any other god than the one and only God?' "

After this followed the testimonies. One person spoke of having been healed of dyspepsia by Christian Science after spending many weary years in searching for relief in material remedies. He spoke of the certainty of the healing when the Divine law is followed, saying that this law must be studied, and as carefully followed as a rule in mathematics in order to gain a correct result. One might read many pages of his arithmetic, and gain no result, but if he carefully follows the rule given he will find the answer he seeks.

Another told of the rest and peace which the little understanding she had gained of Christian Science had given her. She spoke of the certainty of God's sending to mortals just the help which they needed, of how prophets and apostles had been sent in their time, then, when the thought of the world was prepared for it, this beautiful exposition of the Truth which makes free was given to the one whom God had specially fitted for the work. Now multitudes are healed through this last and greatest gift from God, Christian Science.

A lady told of having been healed of a so-called incurable disease by Christian Science, and of the joy which came through the Spiritual understanding which was given, saying she had never before been satisfied with any religious teaching, but in this she found what she had so long been seeking, and that now she rejoiced in giving thanks for the benefits she had received.

A gentleman told of being healed of poor eyesight, saying he had before been unable to read at all, but the Christian Science healer told him he could read Science and Health, and he did read it, and after a time he was able to discard his spectacles, and could now use his eyes, for they were perfectly healed. He also told of a relative who had been afflicted for a long time with spinal disease, who was healed by Christian Science.

Another gentleman spoke of being healed of rheumatism, saying he tried at first to read the text-book, Science and Health, but could not understand it, then a brother Scientist told him to ask God for understanding, and he did so, and was quickly restored, besides gaining this wonderful light.

Others were ready to speak, but the time for closing had come, and, after a hymn, there was a joyful exchange of greetings, and the hour was over. S. F. S.

## Christian Scientists as Insurance Risks.

THE action of the Supreme Council of the Knights of Honor in relation to Christian Scientists, at their meeting in Buffalo, N. Y., last month, has been so widely commented upon by the religious and secular press throughout the entire country, and has been discussed on such an erroneous basis, that I would like to bring out a few salient facts in connection with this subject. In the first place, the Knights of Honor did not vote to class Christian Scientists as hazardous risks as was generally reported, but by a vote of 62 to 13 rejected such a proposition. All the discussion based on the supposition that the Knights had voted to exclude Christian Scientists was therefore unfounded. It brought out, however, two false claims against Christian Science, which show how very generally this, what might be called the "renaissance of the religion of Jesus Christ," is misunderstood and misrepresented. These two claims are that Christian Science healing is contrary to the Bible teaching, and that Christian Science does not heal and therefore its treatment is dangerous.

The religious papers were especially bitter in their denunciation of healing without drugs as being un-Scriptural. This seems strange in view of the fact that the Word of God, and especially the life and teaching of our Lord and Master Christ Jesus in the four Gospels, and the experiences of the Apostles as given in Acts, contain not only the results of healing through prayer alone, but the direct commands for all his followers so to heal. And not only did the Apostles heal thus, but also Christian believers in general, during the first three hundred years of the Christian era, and some few since that time. The greater part of the work of our Saviour while on earth, as recorded in the New Testament, was the healing of physical disease through spiritual power alone; and this was an important part of the work he commanded his disciples to do, and to which he referred the disciples of John the Baptist to prove his Messiahship.

The main reason why so many people consider Christian Science dangerous is because they believe that medical aid is the only aid, and that when patients give up medicine for Christian Science they give up something for nothing, and thus lose their only chance of getting well. Here again their premise is wrong. They either believe that God works through drugs and does not work without drugs, which pantheistic beliefs would make God either kill or cure and make Him the author of evil and death, or they do not know that the power of God is infinitely greater than drugs and entirely independent thereof.

My investigations have shown that many people who were given up to die by the physicians have been healed through Christian Science, and that but very few deaths occur out of the many thousands who are under treatment. Therefore, there is not the slightest justifiable ground for any one saying or believing that Christian Science practice is dangerous. In fact, the universally excellent health of Christian Scientists and their increased longevity clearly disprove this. Insurance men who are thoroughly versed in the effects of Christian Science upon its adherents, prefer the clientage of Christian Scientists. Some of them claim that they consider their members more safe under Christian Science than under any other cure or preventive of disease. HERMANN S. HERING.

In the *Baltimore (Md.) Herald.*

## Christian Science and Insurance.

*To the Editor of the Journal:*—In a recent editorial you stated that Christian Scientists had been excluded from insurance by the Knights of Honor by a recent act of the supreme lodge of that order. In justice both to the Knights of Honor and to the cause of Christian Science I ask that you publish the following letter, as it gives the facts in regard to the action of the supreme lodge in this matter.

"St. Louis, Mo., July 23, 1900.—J. E. DeBelle, Reporter No. 346, Atlanta, Ga.—Dear Sir and Brother:—Yours of the 21st is received, and in reply I will say that there is nothing in the laws of our order to prohibit a Christian Scientist from becoming a member of it. A resolution was introduced at the last session of the supreme lodge to make persons who were believers in the faith cure hazardous risks, but the proposition was defeated by an overwhelming majority. If you will refer to Section 1, of Article VI., subordinate lodge constitution, you will see there that they are not in any way restricted.

"Yours fraternally,

"B. F. NELSON, *Supreme Reporter.*"

EDWARD H. CARMAN.

In the *Atlanta (Ga.) Journal.*

## Christian Science and Life Insurance.

A GREAT deal of rot has appeared in papers concerning the rejection of persons who believe in Christian Science, as risks for life insurance. Probably no sanely conducted company would permit the prejudice of its medical department to prevent it from accepting a risk upon a life which was otherwise unexceptionable, just because the applicant was a Christian Scientist. The fact is, that most physicians believe that the average man is too prone to take medicines, and that a man who would not take them at all would, if in thoroughly good health at the outset, be quite likely to live as long as the average man, who doses himself every time any little thing goes wrong. Medical science has not yet become an exact science, and while some of the views of Christian Scientists and believers in faith cures, are most amusing, all physicians are aware that mental conditions have as much to do with cures as the medicines.—*Insurance World.*

### Request to Members of the Mother Church.

Persons who have become members of the Mother Church during the last two years, whose names appear in the Church Manual, and who have not received a notice of admission, are requested to notify the Clerk, William B. Johnson, 30 Norway St., Boston, Mass.

### Supplement to the Sentinel.

The lecture by Mrs. Sue Harper Mims of Atlanta, Ga., "Christian Science: Is it Christian," was issued as a supplement to the last number of the Sentinel. For list and price of supplements see page 823.

### Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

Let me always remember that it is not the amount of religious knowledge which I have, but the amount which I use, that determines my religious position and character.

ALEX. MACLAREN.

He who can at all times sacrifice pleasure to duty approaches sublimity.—LAVATER.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY, TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Question Answered.

BY MARY BAKER G. EDDY.

A FAD of belief is the fool of mesmerism. The belief that an individual can either teach or heal by proxy is a false faith that will end bitterly. My published works are teachers and healers; my private life is given to a servitude, the fruit whereof all mankind may share. Such labor is impartial, meted out to no one more than another. Therefore an individual should not enter the Massachusetts Metaphysical College with the expectation of receiving instruction from me, other than that my books afford, unless I am personally present. Patients do not anticipate being helped by me through some favored student. Such practice were erroneous; and such an anticipation on the part of the sick a hindrance rather than help.

My good students have all the honor of their success in teaching or in healing. I by no means would pluck their plumes. Human power is most properly used in preventing the occasion; otherwise its use is abuse.

## Church By-law.

VACATION.

The services of the Mother Church shall be continued twelve months each year. A Christian Scientist is not fatigued by prayer, by reading the Scriptures, or the Christian Science text book. Amusement, or idleness, is weariness. Truth and Love rest the weary and heavy laden.

## The Common People.

IT is recorded in Mark (12 : 37) that the common people heard Jesus gladly. It is well, always, when considering Scriptural quotations, to observe the connection in which the quoted words were used. There has been too much laxity in this respect, both by the professional and non-professional expirent, and much confusion as well as outright misunderstanding has been the result.

Jesus was teaching in the Temple when it was said that the common people heard him gladly. He evidently was telling the people who Christ was. He had asked the question, "How say the scribes that Christ is the son of David?" And he thus answers: "For David himself said by the Holy Ghost, The Lord said to my Lord, Sit thou on my right hand, till I make thine enemies thy footstool. David therefore himself calleth him Lord; and whence is he then his son?" Then says the record, "And the common people heard him gladly."

The term "common people" may have been then, as it is now, somewhat elastic. It may have referred to a class of people who were willing truth-seekers regardless of social position, or it may have been used in the present-day sense of the expression. Be that as it may, it seems clear, from the Gospels as a whole, that the "common people" were a class apart from the scribes and Pharisees, whether Jews or Gentiles. The scribes and Pharisees were the learned among the Jews. They were the educators of their times, and to them were the Jewish people wont to look for their instruction in religion and philosophy. Jesus recognized this. His query, "How say the scribes that Christ is the son of David?" indicates that the scribes had maintained that Christ was the son of David in the line of fleshly, or material, lineage, rather than the son of God in the spiritual sense.

Jesus reminds the scribes that they were thus denying David's teaching, for he, speaking "by the Holy Ghost" —that is, through spiritual understanding—declared him to be, not the son of the flesh, but of Spirit.

The common people gladly accepted this version of it; not so the scribes. They continued to dispute Jesus' doctrine. They adhered with stubborn persistence to their preconceived traditions and philosophies, for they were seeking cause in material appearances and life in matter, or the flesh, rather than in God, or Spirit.

Had, therefore, the teaching of Jesus been dependent for its acceptance on the scribes and Pharisees, or the philosophers and scholars, of that time, it had not been received, and the Christian religion had not been inaugurated. It was the "common people" that then saved the day. It was the common people that, in a large sense, made it possible for Jesus to perform his mission and prove, by actual evidence, that Christ was born, not of flesh and blood, but of Spirit. It was the common people who were healed and converted through Jesus' ministry, and it was from the common people that he recruited his disciples and followers. They, and not the technically learned, became the preachers of the saving Gospel and the demonstrators of the healing Truth.

And so has it been ever since. Every great religious reform has found its strength in the common people, or those who have not constituted the professional leaders of sect or system. This is true of the great German Reformation. Luther's followers, with rare exceptions, were composed of the common people, not the ecclesiastics or the teachers within the established schools.

The Wesleyan reform was supported chiefly by the non-professional and non-ecclesiastical classes. It was severely condemned by the authorities of the established church, and the Wesleys were persecuted and ostracized by the ecclesiastics of their time.

In later times the same relative conditions have existed, and they have not yet disappeared.

We have cause to thank God, then, for the common people; the great rank and file who to-day constitute the world's stay and support, who constitute the very backbone of the churches, and to whom the future must look, in large measure, for the progress and development of that healing and saving religion of which Jesus was the exponent when the "common people heard him gladly."

We have used the term in the sense in which it evidently was used in Jesus' time, the non-ecclesiastical classes, who, by reason of their freedom from professional bias and foreclosed perceptions, had listening ears and receptive hearts.

### Applications for Instruction.

The Board of Education hereby give notice that applications for instruction at the next term of the Massachusetts Metaphysical College will not be received until notice thereof is published in our periodicals.

It is not denied that the prayer of the Christian avails much in saving the sinner; why then is it powerless to heal, unless drugs are administered? The healing of sickness is no more a miracle than the healing of sin. The only reason the sick are not healed by spiritual means alone, is because of mortal errors that seem to resist the power of Truth.

## Among the Churches.

### Require a Larger Church.

First Church of Christ, Scientist, of Mount Vernon, which has been holding services for nearly three years past in the Ferguson Building, has engaged larger and more suitable quarters in the Fairfax Building, First Street and First Avenue.

The rooms are being thoroughly renovated, decorated, and furnished, and will be ready for occupancy about August 1.

The reading room, a comparatively new feature of the organization, will be opened to the public every Monday, Wednesday, and Friday afternoon, from 2.30 to 4.30. Inquirers will here find plenty of literature bearing on the subject, and those willing to explain somewhat of this interesting science.

The church started about five years ago with five members, and has had a steady growth. It is in a very satisfactory condition, both financially and numerically.

"Christian Science," says a member of the society, "has spread to every country on the globe, and is being investigated by the press, the clergy, and laymen everywhere. It is found to be a deep religious system founded on and following the teachings of Christ, the corner-stone being that a pure mind, free from worldliness and sin, maintains a pure body, free from discord and disease. There are adherents of Christian Science in South America, Hawaii, the Boer Republic, Manila, and the Klondike."

*Daily Argus*, Mount Vernon, N. Y.

### New Quarters at Lancaster, O.

First Church of Christ, Scientist, have moved their place of worship to Blair Block, second floor, on Broadway. In connection with the church work, a public reading room has been opened, where all Christian Science literature may be found. Every day, except Sunday, there will be some one in attendance at the rooms from 10 A.M. to 4 P.M. to receive visitors who may come to read or to make inquiries with reference to Christian Science.

The opening services were held Sunday at 10 A.M. The rooms are very homelike in appearance and furnishings, and were made more attractive for this service with potted plants and cut flowers. Several visitors were present.

*Lancaster Daily Eagle.*

### From Staten Island, N. Y.

The first Christian Science service in Staten Island, N. Y., was held on the first Sunday in May, 1896, and First Church of Christ, Scientist, was organized August 26, 1897. It was legally incorporated with twelve charter members April 30, 1900.

The growth of the church has been gradual. Until January, 1898, our services were held at the house of our First and Second Readers, but at that time we secured a spacious room in the Masonic Hall at Port Richmond, Staten Island, N. Y. The work is opening in various directions, and we are thankful for the understanding of God which breaks the bonds of material sense, and sets the prisoner free.—MRS. ELISE F. FISH, *Clerk.*

Unless it is spiritualized, the national life is doomed to destruction. We can only remain a sound nation if we are sound at heart. But we can only be sound at heart as a nation if we are open to and affected by spiritual and religious influences.—*The London Spectator.*

The men who stand straightest in the presence of sin bow lowest in the presence of God.—F. B. MEYER.

## The Lectures.

### At Pocatello, Idaho.

Tuesday evening, July 24, Judge Joseph R. Clarkson of Omaha, delivered a lecture at the Pavilion in this city, under the auspices of the local society of Christian Scientists, to a fair-sized and appreciative audience embracing every shade of religious thought. The distinguished lecturer was introduced by Judge J. H. Richards, Mayor of Boise City, who came here, at the invitation of the committee for the purpose. The following is the substance of Judge Richards' remarks:—

*My Friends:*—It is a privilege to have a part with you on this occasion. The Christian Scientists of the capital of your state send greeting to those of the Gate City. They congratulate you that the opportunity for the material advancement of your city will soon expand. They rejoice with you that the opportunity for your spiritual unfolding has already expanded. The true American spirit is ever seeking to open the avenue to larger opportunities. Thus we move on, ever seeking, ever finding.

So far we have not discovered the limits of our possibilities. Hope, the advance agent of faith, ever impels us on. Faith, the forerunner of understanding, ever cries "Let there be light," and through the understanding light is ever breaking. "Wherefore by their fruits ye shall know them." We judge of the value of an idea to-day by its usefulness to mankind.

This is the practical age. It is the age of application of theories to present human needs. Humanity cannot be satisfied to-day with a religion even, which, in any measure, forgets the present, though it may promise a rich reward in the future or in another world. The sick, the broken-hearted, the weary, and the unfortunate, though loving the good they see, cannot be longer inspired with the teaching that God is omnipotent and the Soul of love and compassion, and yet cannot give respite from present sorrow. They are told that God is Omnipotence, Omniscience, and Omnipresence, that is, all power, all science (or perfect understanding), and all presence; that He is Love and that prayers to Him will be answered, yet when the sick pray as they do, and as they are taught, their supplication gives back but the echoing cry, "My God, my God, why hast thou forsaken me?" The world begins to see that "Ye ask, and receive not, because ye ask amiss." Humanity begins to understand that intelligence not ignorance is the source of power; that Mind not matter embraces this intelligence. Humanity begins to realize that if "ye ask, and receive not, because ye ask amiss," that understanding alone can prevent us from asking amiss. You have faith in the science of mathematics, you believe in other and material sciences so called. Is it not possible that there might be a science of Mind, especially in view of the fact that all science must spring from Mind? Anything is scientific to the extent that it works by unfailing rules and to definite and intelligent results.

You believe God is Omniscience, which word divided spells and means omni-science, or all science. If God is perfect Mind, then He must work by scientific and never-failing rules. If we are His image and likeness, then we should be governed by equally scientific and unfailing rules. If God is perfection and we are His image and likeness, then we must be the image and likeness of perfection. Can it be possible that the sick, the blind, the deformed, the sinful, and the depraved as we see them—I say can it be possible that these blighted things are the image and likeness of the perfect One? No, no, it cannot be.

If you judge of a man's methods by what he accomplishes through those methods, then you must conclude that Jesus worked understandingly, yea, scientifically, because he never lost a case. He never failed. He even overcame

Digitized by Google

the last enemy, death; rose triumphant on the wings of love from his earthly tomb, and demonstrated scientifically that matter could not encompass or control Mind. Then it may be possible that there is a scientific Christianity, and if so, the certain way to health and holiness or wholeness has been found, and all may walk therein. We gather here at this time to hear something of this scientific Christianity, a religion applicable to our present needs, from one who, by purity of life, high intellectual attainments, special training, and personal experience, is fitted to inform us.

You may wonder why I, a man of affairs, a lawyer, should be interested in Christian Science. I will tell you. Its blessing has rested on my home, lo, these many moons, like a benediction. Its power has touched my life. The one nearest to me, in a worldly sense, had suffered continuously for nearly a quarter of a century from a physical ailment, so called. She had suffered more from many physicians, but I could forgive them for they knew not what they did. I say this in all kindness to them, for, noble men as they were, they did all they could to bring her relief and heal her, and I love them for it, but the culmination of their efforts only brought great despair to our anxious hearts when one of the leading physicians of this nation informed us that her prospects for recovery without resort to surgery were hopeless, and that surgery would probably prove fatal. But as "man's extremity is God's opportunity," she turned hopelessly to Christian Science at the solicitation of a friend, and when it dawned upon her understanding that Truth had made her free and that health is her rightful heritage, as the image and likeness of God, she broke forth into such a song of thanksgiving as only the redeemed can sing. I like the logic on which Christian Science rests. I love the Truth it teaches. I enjoy the practice of its precept. I am strengthened by its power. I am grateful for its blessing.

I now have the pleasure of introducing to you a man who has adorned the legal profession, elevated in public esteem the judiciary, drunk from the fountains of literature, loved his neighbors as himself, whose virtues shine forth in eloquence, and who speaks with authority as a member of the Board of Lectureship of the Mother Church. I therefore deem it a high privilege to present to you Judge Joseph R. Clarkson of Omaha, who will now address you.

The lecture, the first ever given in Pocatello, marks the most important event in the history of Christian Science in south-eastern Idaho, and is sure to result in great good to all Scientists in this vicinity, by stimulating their zeal in the work, besides arousing the interest of other seekers after the Truth as unfolded in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Judge Clarkson made a deep impression upon those who were so fortunate as to hear him, and we already see the effect of his coming in the increased interest manifested by those who have hitherto maintained an attitude of indifference, and in some instances of hostility, to the subject.

*Correspondence.*

### At Wausau, Wis.

Judge W. G. Ewing of Chicago, one of the ablest disciples of the Church of Christ, Scientist, lectured on Christian Science at the Grand Opera House Monday evening (July 30), and those who were present enjoyed a rare treat and were given new and correct ideas of this comparatively new interpretation of the teachings of Christ. Judge Ewing was introduced by Claire B. Bird who said:—

*Ladies and Gentlemen:*—We are learning something new every day. That is, we should be. If we are not, it is our own fault. The person who will not accept a new truth because he has not heard of it before, never will know more than he knows now, and the person who refuses to believe anything new simply because it is new, will never make any progress. I remember, not very long ago, of going over an old library and finding a text-book on mechanical engineering, and among one of the propositions there stated was a demonstration that a railway locomotive never could be built so as to run at a rate exceeding ten miles an hour. This was demonstrated by mathematical demonstration and was taught in the schools at the time. But Stevenson discovered something new in that line.

I can imagine the little fellow asked in school to demonstrate that proposition, replying, "It is not so. It will go faster. I know it will." So Stevenson probably was placed on the stool with a dunce-cap on his head because of his dense ignorance and foolishness. But those who laughed and derided have long since passed into oblivion, while Stevenson, because he knew something that no one then would believe, has left a name that will not soon be forgotten.

The lecturer this evening is a man who has achieved a reputation that is bounded only by the limits of the nation for thought in the lines of practical development and accomplishment and in bringing things to pass. The well-known reputation of the lecturer requires our thoughtful attention to the proposition which he submits to us, and it should be calmly and carefully considered. It will not do for us to say: "I do not understand this, therefore it cannot be so." Those of us who are unable as yet to accept the doctrine which will be explained to us to-night, perhaps because we do not understand it, or perhaps because we have not investigated the matter or given it sufficient thought, are undoubtedly just as glad as are those who do believe, that the lecturer is here and can present this subject to us to-night. I know that he will receive from all of us here the most careful and earnest attention, and I know we shall all go away wiser and better informed than we were when we came here, and I bespeak for him your most cordial and enthusiastic reception. I know we shall all be benefited by it. It is a special treat to have him here to-night to explain those things to most of us who have not heretofore given it sufficient thought. Now, we know the lecturer. He needs no introduction himself. We know him better than we do the doctrine of Christian Science. Judge Ewing, we shall be glad to hear you.

*The Central Wisconsin.*

### At Ouray, Col.

Judge Joseph R. Clarkson of Omaha, Neb., delivered his lecture on Christian Science at the Opera House, Saturday evening (July 21), to a large and appreciative audience, who listened very attentively through the entire lecture. Mayor Scott introduced the lecturer.

Judge Clarkson made no attack on other denominations but explained very logically the doctrine of Christian Science, and spoke of its wonderful growth since its discovery in 1866 by Mrs. Eddy, who is to-day the recognized Leader of this movement.—*Ouray Herald.*

### Lectures at Other Places.

Winnipeg, Man.—Edward A. Kimball, July 22.
Chadron, Neb.—Joseph R. Clarkson, July 27.
Marion, O.—Joseph R. Clarkson, May 15.

Oh bond of union strong and deep!
Oh bond of perfect peace!
Not even the lifted cross can harm,
If we but hold to this.

Then, Jesus, be thy spirit ours;
And swift our feet shall move
To deeds of pure self-sacrifice,
And the sweet tasks of love.

SAMUEL LONGFELLOW.

## The Bible as Judicial Authority.

SOME of the reasons why our judges so often quote Scripture are not far to seek. The magnificent Arch of Titus, reared to commemorate Judah's downfall, the desecration of her altars, the dispersion of her people, the total extinction of her laws, and the final and grandest triumph of imperial Rome, is but a crumbling ruin—a favorite haunt of the owl and the bat. For almost twenty centuries the children of Judah have been wanderers on the face of the earth, exiles from their own land, strangers and pilgrims, without a government, a city, a temple, or a home. While all other peoples have multiplied (the Anglo-Saxons having increased about sevenfold during the present century), Judah has remained stationary. At the date of the crucifixion the Jews numbered about seven millions, which is about their present numerical strength. But the Mosaic law, which the admirers of Titus so ostentatiously consigned to endless oblivion, remains a living, growing force. Translated into hundreds of languages, printed in thousands of editions, scattered broadcast by hundreds of millions of copies, that law has penetrated to the remotest corners of the earth. In this closing year of the nineteenth century there is no spot on the habitable globe where either female virtue, personal liberty, private property, or human life are safe, unless that spot has been visited by the Bible and subjected to its teachings. In the Anglo-Saxon jurisprudence of to-day there is very little to be found which cannot be traced to its source in the Mosaic code; and the little thus found is scarcely worth either fighting or praying for. To readers who do their own thinking, who delve beneath the surface, who follow the truth wherever it may lead, we commend the subjoined quotation.

It is borrowed from a charge given almost sixty years ago to a jury in one of the Atlantic States; and it doubtless voices the prevailing sentiment of the Anglo-Saxon bench and bar. Replying to some criticisms of the Mosaic code, made by counsel in the course of argument, the judge said this:—

"When these giants in human intellect can tell me whence Moses derived his science in legislation without admitting the superlative and divine authority of the ten commandments, I shall begin to listen with more reverence to the teachers of human perfectibility. In that short and comprehensive code we find given us a perfect rule of action, covering the whole ground of man's existence; a rule not only prescribing our duty to God and man in our external behavior, but reaching to the thoughts and feelings of the hearts in every possible condition of life, and in all our relations to our Maker and our fellow-beings. The wisdom of ages, the learning and philosophy of the schools, have never discovered a single defect in that code. Not a virtue which is not there inculcated. Not a vice in its most doubtful and shadowy form which is not there prohibited.

"Whence, then, I ask, did the great Jewish lawgiver derive his spirit of legislation? If that code was written by the finger of the Almighty, let us bow to it with reverence and seek no better rule of life nor any wiser principle of action. But if they emanated only from the capacious mind and were dictated by the wisdom of Moses, then Moses was a wiser, a more learned man than any of our new teachers; and I had rather be under his jurisdiction and keep his commandments than learn new rules of civil polity and social intercourse from the most wise and learned of the present day."—*The Mechanical Adjuster.*

---

Christian Science has made its wondrous strides by seizing on this all-powerful truth, that God is not very far from any one of us; that we can come in touch with Him and stay in touch, and thus living, all the power of death and hell cannot vanquish those that are rooted and grounded in this living faith.—*Literary Digest.*

# From Our Contributors.

## Teach the Children.

BY MRS. J. N. WHITE.

TEACH the children Truth's pure lesson,
Lead them gently day by day,
In the straight and narrow pathway,
Love illumining the way.

Teach them to be meek and lowly,
Pure in thought, and word, and deed,
Ever selfless, ever holy;
Thus we're sowing well the seed.

Taught thus the lives of guileless childhood
Will flow grand and full and free;
E'en reflecting the completeness
Of our Saviour's purity.

---

## Christian Science in our Home.

BY CLEMENS SCHROEDER.

MY story is plain and short. Because of its plainness it may appeal to some one who finds himself in a quandary, as I did, and throw a light on his pathway which may enable him to pursue his course in a happier frame of mind.

I was brought up and educated in Germany, leaving the United States at the age of eight years. At the educational institution I imbibed much of the material views and erudition for which the German schools are famous, and the influence exerted by these teachings soon undermined what little religion there was in my make-up. When I returned, ten years later, I was an acknowledged agnostic, having drifted away from my church, the Roman Catholic, as soon as I was beyond the pale of family control. My aim in life was to get as much enjoyment out of it as possible, and my ambition to be considered not a half bad fellow. Money had no attraction; it went as fast as earned, squandered not so much in riotous living as in social enjoyment,—in theatres, concerts, and clubs.

After my marriage discord seemed to start. Business trouble at the very outset of married life, sickness, almost from the first day, discontent and vexations struggle against existing conditions, brought me into a veritable Slough of Despond. Two children born to us manifested the discordant condition of the home, both were weak and sickly, and were not expected to live. Thus matters stood when, as a last resort, I sent my family to Germany, hoping that a year's stay under changed conditions and under the physicians' care would be of permanent benefit. The year passed by,—a long, agonizing year,—the family had improved and gave promise of complete restoration to health. They returned apparently fully restored, and we started on a new life, full of buoyant hope. The drain on my small savings during the long years of sickness had left me high and dry financially, but what mattered money if only health had been regained!

One month after their return our little girl was down with a lingering fever. Hardly had she risen from the sick-bed when one day I was called from my office to attend the consultation of the family doctor and a New York physician over the case of our boy, who was seriously ill. Anxious days and weeks went by, but he improved, and soon was able to be about again. Six weeks later the mother was taken down with same disorder, and again the home was turned into a hospital and *materia medica* held undisputed sway. She, too, rose from the sick-bed, but it was found that another internal disorder required constant attention, and for nearly a year there-

Digitized by Google

after she would go to New York (we were living in a suburban home in New Jersey) once or twice weekly and consult her physician, with indifferent result. My state of mind cannot be described. I look back with horror upon that period. It was a nightmare—darkness all around and not a gleam of light to give hope. I felt my physical and mental resistance give way.

And then, like a spectre, rose the guant figure of despair whispering into an unwilling ear, "Make an end of it—there is rest for wearied minds;" and when I crossed the ferry on my way to work the waves would beckon and the undulating watery surface would cause my brain to reel. Another suggestion would make its seductive appeal: "Drink! drink forgetfulness out of the cup that cheers! Leave the cares behind you and enjoy the sweet solace of the hour!"

Yet the better man in me would answer: "Don't be a coward; don't give up. Fight it out!" and with grim determination I would set my teeth and drag on.

A year passed by. We had removed to New York, and again hope rose high in our hearts. The health of the family seemed to have benefited by the change, we had been immune from the doctors' visits for several months. Then came the relapse, and my wife's condition was worse than before. All her disorders seemed to re-appear in more aggravated form, and the only course her physician, kind, patient, and careful, could suggest, was an operation.

At this stage we heard again of Christian Science. A few years previous we had heard it mentioned and its wonderful possibilities pointed out to us, but had paid no attention to it. We now listened with eager interest and soon after attended a testimonial meeting. Much that was said was Greek to us—we had been completely weaned from all religious thought and simply could not understand the exalted thoughts propounded in this wonderful book, "Science and Health with Key to the Scriptures," which all the speakers made so much of. My wife's limited knowledge of the English language precluded her understanding anything but the most commonplace phrases, and I was too highly amused at the wonderful, pretty stories told to take them seriously. Yet there was an undeniable earnestness about everything, and a certain indescribable atmosphere of good cheer, hope, and calm reliance pervaded the congregation, such as I had never before experienced. I was introduced to the First Reader and condescendingly remarked that I did not know anything about Christian Science but thought it very interesting. Her short answer was, "Seek, and ye will find!"

That was rather peculiar—"Seek!" I had never sought religious information; for fifteen years I had not been inside of a church except on such occasions as weddings or funerals. I never thought it advisable to seek, for it would only lead me on thin ice. That short sentence gave me something to ponder.

I have sought and I have found far more than the keenest expectation ever dared to picture before the hungry gaze—greater and higher altitudes than the soaring aim of ambition ever dared to reach.

The operation was never performed. For three years no physician has entered our home and no drug has been used. My family has enjoyed the best of health, the children have grown up to rosy, cheerful childhood, bright as the morning sunshine. My old ideals and pursuits have dropped away, my habits changed—drinking and smoking are things of the past. My home has become a home indeed, sweet forbearance taking the place of fierce, self-assertive dictation. I have learned to look upon my fellow-man as my brother and to give him the kind consideration which Love has taught me.

Gratitude, heartfelt and overflowing, goes out to her who taught us the way out of our misery and gave us the means of pursuing our course with confidence and sweet assurance. Christian Science to me was "the light that shone on a darkened path." My relatives, bitterly opposed at first, are beginning to respect me for the stand I have taken, my friends have stopped their sneering comment at my refusal to join them over the foaming cup; they know and begin to see that I have found something which they lack, and I see unfailing signs that more than one is doing a lot of thinking on this subject.

## A Homely Comparison.

BY S. M. W.

My first attempts to ride a wheel were painfully slow and labored. Though assured by friends that the reward would soon come, one declaring, "All at once you will be riding easily, without knowing how you do it," still I struggled, having much fear and clutching the handle-bar so tightly that hands were blistered and muscles strained. An instructor pointed out mistakes, directing that the toes, instead of the middle portion of the foot, rest lightly upon the pedals; and that hands clasp the bars gently, needing only to turn it for guidance; also that I look ahead and keep my feet going. I tried to obey, but leaned upon my teacher, begging him not to let go. This continued for three evenings, and on the fourth, my teacher could not come and my husband offered his services.

After several turns up and down the street, he suddenly let go of saddle and handle-bar and I found myself riding alone. It seemed very cruel at the moment for my husband to say, "Now turn around and come back, you don't need my help;" but that night the task was accomplished, and bicycling became an easy method of transit and a charming diversion, instead of a painful and timid struggle as before.

My entrance into the straight and narrow way of Christian Science afterwards, was similarly labored and slow, owing to fears, doubts, and misgivings. There was a period of indecision and of resorting to material helps when need arose; and later, a weak dependence upon others' understanding and demonstration. There was often a tendency to wonder just how and why certain effects should follow certain conditions of thought. So timid and conservative was my attitude, so stubborn my misconceptions, so high the pile of rubbish to be removed in the false consciousness of worldly wisdom and intellectuality, that our precious text-book was labored through more than a dozen times before I was enabled to run and read, or to recognize its perfect truth and consistency.

Testimonies in our *Journal* and the counsel of others encouraged me. A dear friend said one day, "When you have had one demonstration, you will no longer doubt and question and worry over the process, but will know the Truth and be free." That prophecy was soon fulfilled, and this wondrous sentence from "No and Yes" by Mary Baker G. Eddy, page 25, became illumined to my understanding: "Matter, or evil, is the absence of Spirit or Good. Their nothingness is thus proven; for God is Good, ever-present, and All." The very day and hour of this revelation of divine Truth is recalled, January 7, 1898, at four o'clock P.M. Since that moment Christian Science has been religion, medicine, comfort, and strength to one who was before a very "reed shaken with the wind."

There have been times when Good seemed hidden: times when evil seemed so real and formidable that I neglected for the moment to realize the Truth, and so halted and stumbled, just as in bicycling I forgot sometimes to keep my feet going, and so, frightened and confused, fell; but these discouragements are less and less frequent.

With constant recognition of God's presence and power, my feet rest firmly and the wheels run smoothly; with frequent reference to our guide-book, handle-bars cannot

Digitized by Google

move mistakenly; with eyes looking only toward the spiritual verities, no dangers can confuse or frighten. When we experience the spiritual recognition of divine Truth, we are no longer anxiously concerned about details of the process or worried about results.

As Jesus replied to Nicodemus when he made inquiry, "How can a man be born again?" "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit. . . . We speak that we do know, and testify that we have seen."

## He Calleth Thee.

BY EMILY BOWDEN SMITH.

Be of good comfort, rise; he calleth thee.—*Mark*, 10: 49.

THE Christ, the Healer of all ills, calls, and has called, all men continually. Why, then, is the world still full of diseases and troubles? Why do so few hear the voice of the Healer? First, because for many centuries we have been assured that the Healer was no longer here, and that we must wait for a future-world salvation. Isolated cases of cure by holy, uplifting faith occurred, but were looked on as exceptions, as miracles, or even as impostures, or instances of self-deception. Now, however, it has been proved that the Christ is still here, and still the Healer.

The other cause of our blindness is our own unwillingness to give up our material beliefs, although we have often tried them and found them wanting. As each cherished prop gives way, we try another, try anything that we can see, rather than trust the Invisible alone.

Even when Christian Science has taught us the nothingness of all material things, and that in Truth is all good, physical, mental, and spiritual,—we are apt to lean upon some material prop, and so fail to realize the blessings of Spirit. We cannot serve God and Mammon. If healing is slow and uncertain, let us see what is holding us down to earth. We cannot take our earthly beliefs with us into the realm of Spirit. However dear they may seem to be, they are illusions, and in Spirit we shall find the real, which alone satisfies.

Bartimæus had proved that there was no help or hope for him in matter. He felt convinced that a Power was present which could heal him, and joyfully obeyed the call, and his faith was rewarded.

The rich man clung to a belief of pleasure, or pride, in his material possessions, and went away sad, when called to follow Christ.

When mortals prove that there is nothing to be gained from any other source they are ready to hear and obey the call, that all will hear at last, to enter into the Kingdom of Heaven, where all sin and sorrow is unknown, and man is forever in the image and likeness of God.

### God's Requirement.

We live by faith, but faith is not the slave
Of text and legend. Reason's voice and God's,
Nature's and duty's, never are at odds.
What asks our Father of his children save
Justice and mercy and humility,
A reasonable service of good deeds,
Pure living, tenderness to human needs,
Reverence and trust and prayer for light to see
The Master's footprints in our daily ways?
No knotted scourge or sacrificial knife,
But the calm beauty of an ordered life,
Whose very breathing is unworded praise,
A life that stands, as all true lives have stood,
Firm rooted in the faith that God is good.

JOHN G. WHITTIER.

## Testimonies.

### Christian Science brings Many Blessings.

I was invited to attend Christian Science services at a neighbor's house three years ago. As I had been to call on them in a social way, and found them pleasant people, I went to one service, and then decided not to stop until I knew how the works were accomplished of which I heard them speak. I found in a short time that I could demonstrate the Truth, and that error in all forms could be overcome. The Bible became a new book. I got all the Christian Science literature. I took treatment for a short time, and to-day, I would not go back to the old way for anything.

I was healed of constipation of years' standing. I had tried different medicines and doctors, but I saw myself getting constantly worse. When Christian Science found me I was miserable, and had exhausted material remedies. I was greatly benefited for catarrh of the head, and never have the headache any more. This past winter I was healed of a severe attack of grip in a few days. My husband and two daughters soon saw how much I was helped, and they all commenced attending the meetings with me. My husband has been greatly benefited in many ways.

My husband and I are members of First Church of Christ, Scientist, of Chanute. We have a chartered church, and it is with the greatest pleasure we look back over the past three years and see the demonstrations made in our church work. We met for a short time at the home of Mr. and Mrs. C. I. Williams, who are the First and Second Readers in our church. But the meetings were so well attended that we had to rent a room down town in a very short time. We now have our room neatly furnished, a carpeted rostrum, matting on the aisles, and an organ. We use our church room for a Christian Science reading room during the week. We had a lecture last November, by Judge Clarkson of Omaha, Neb. It is surprising how much a few can accomplish in Christ's name. The people here in general feel kindly toward Christian Science.

I have had some beautiful demonstrations. One was over a burned hand. I lifted a hot stove hook, and felt that the whole palm of my hand was on the hook. But I shut my hand and realized the allness of God. I read Science and Health a while, and had no inconvenience from my hand afterwards. Another was a case of accident in our family. One of our daughters came from school, having been hit in the eye with a base-ball. She seemed to be in great pain. Her father gave her one treatment, and she went back to school with no swelling, and her eye not even discolored. It does not take us long to see the value of Christian Science, and also to realize that only by our lives can we prove that we are thankful for all these benefits.—MRS. M. F. WILSON, Chanute, Kan.

### Healed after all Material Means had Failed.

For twenty years of my life I was a helpless, hopeless invalid.

In 1876 I met with a serious runaway accident, followed in two weeks by the birth of a little girl. Soon after this I became a chronic invalid. I did not take a journey from Chicago in ten years without the attendance of my physician. Everything that means and the unselfish devotion of a loving husband could suggest was tried, but to no avail.

I have only loving words and thoughts for the many faithful, conscientious, courteous physicians, who did all in their power for me, always hoping for success, but from allopathy, homœopathy, surgery, etc., the same promise but no help.

Four years and a half ago I turned to Christian Science. My healing was slow. I now am very grateful for this,

Digitized by Google

though I was not willing to have it so, as my slow healing has been a constant educator.

Words fail to express what Christian Science has done for our family, in every thought of health, harmony, and happiness. Many times the experiences which seemed bitter, and which we would have put from us, have proved our greatest blessings, causing us to draw nearer to God, and we always found His grace sufficient for us.

My husband, daughter, and myself, as well as the house-servants, are humble, devoted students of the Bible and "Science and Health with Key to the Scriptures;" and let me say to housekeepers, that the realization of the One Mind and the brotherhood of man has been a wonderful help to me in meeting the apparent annoyances and complications of the domestic department by mentally changing the positions of employer and employed, with the Golden Rule in thought. We have made no change in our help since our acceptance of Science, over four years ago, and all troubles have been met for them, for which they are very grateful.

When I first learned in Science and Health that the practice of Christian Science was to understand and demonstrate God, my old theological sense of God rebelled at the seeming presumption of poor humanity in attempting to demonstrate God, but I learned also from Science and Health, that the ancient Saxon term for God was Good, and then it seemed not only possible but beautiful that we should demonstrate Good,—the Universal Good, our Father-Mother God.

Then thought suggested the beloved disciple's statement, "God is Love." Thus the practice of Christian Science is to *understand* and demonstrate Love, and just so far as we manifest unselfish, impersonal love, we demonstrate God, by reflecting His qualities.

When we realize that we have ownership in nothing, either as creator or preserver, but are willing to work with God, by reflecting Him, we have all. To me has come the thought that the sense or consciousness of reflected Good is the real man, and that eternal Good is our only ancestry.

Language is inadequate to express our gratitude to our dear Mother, whose purity, devotion, unselfishness, and self-sacrifice has made it possible for her to bring to humanity the understanding which makes God available at all times, as "a present help in trouble." We wish to express our gratitude also for the *Journal*, *Sentinel*, and *Quarterly*, and to those who, with untiring energy, zeal, and faithfulness, provide such a bountiful spiritual repast for those "who hunger and thirst after righteousness."

ANNAH BROOKS, Chicago, Ill.

---

### Fear Overcome.

Many, many times since my journey in Christian Science began, I have thought I must write something to express my love and gratitude for the help I have received in this up-hill journey.

Like the impotent man at the pool of Bethesda, I relied many years upon man's help, but it always failed when most needed. When Truth found me I think I was plunged into darkest Egypt. I was simply waiting for the summons whom most people dread, but to me it would have been most welcome. However, that summons never came, but rather the opposite, Arise, take up thy bed, and walk. My healing was not a quick one. There were many defeats as well as triumphs, but I still pressed on, confident that it was the right way, and my labors have not been without reward.

June 27, 1900, my little girl and myself went to our Wednesday evening services. There was a storm coming up as we started, but we went on, not thinking of being absent on account of a storm. Soon after reaching the hall, another lady arrived, and we sat there talking when, without warning, the storm burst upon us. The room was filled with dust before we could get things shut up, which we did as quickly as possible.

The air was filled with dust; it was thundering and lightening, and the wind was blowing a gale. Not one thought of fear came to me, but the thought that God is present everywhere was my support. As we started home we saw evidences of the storm on all sides; also there was much fear, and surprise was expressed that we were not afraid. Fear is one of the great enemies that I have had to overcome; but, thanks to the Truth as taught in "Science and Health with Key to the Scriptures," I have made a beginning. Words are weak things to express my love and gratitude to the dear Mother in Israel who has labored so unceasingly that poor, frail humanity might be redeemed from its bondage; also to the many faithful workers at headquarters, and throughout the entire field.

MRS. MINNIE ELGIN, Lincoln, Kan.

---

### Saved from the Operating Table.

Two years ago last February our daughter, aged eighteen, was brought home sick with abscess of the spine. For weeks we cared for her night and day, and when she was able to be up again she still suffered great pain, and had no appetite. The next winter we took her to a doctor, who treated her for five weeks, then gave me medicine and directions to complete a cure. We brought her home the second day of February, 1899, and the sixth day of February the abscess broke again. We kept on with the treatment, and in July took her to another doctor, who said she had let it go so long, she must have four or five operations before she would be any better. We decided to have no operation.

We knew nothing of Christian Science, but had heard of a lady who healed by faith, and as we thought "All things are possible with God," her father took her to see this lady, who proved to be a Christian Scientist. He left her there, came home, and told me not to worry, I could not give her better care than she was getting. She stayed six weeks, and came home for a visit, but as she did not get along very well, I took her back, and the twenty-third day of December, 1899, she came home healed.

The first change I saw was not in her physical condition, but I observed how much more patient she seemed, and such a look of peace and contentment as was on her face I had never seen before. Since she has been healed, I have been able, with the help of the dear healer, to overcome many ills. Every day and hour I praise and bless God that He, through Christian Science, has opened our eyes and understanding.—MRS. MINOR CANNADAY, Reams, Wis.

---

### Christian Science in Dentistry.

I am a little girl ten years old, and have had many demonstrations. I am very much interested in reading the children's demonstrations. I thought some of the children might like to hear one of mine.

I had to go to the dentist to have some teeth filled, and as I always had been very much afraid of going before, I thought I ought to overcome fear, so I read Science and Health, and treated myself several days before going, knowing that "perfect love casteth out fear," and God did not send fear or pain. I did not have any fear or pain. I had to go to the dentist twice and he said I was very good. Then I knew I had really made the demonstration, but I knew it was God that made it, and not myself. I go to Sunday School every Sunday, and to church too. We are all Scientists, and love Christian Science very much.

IVY GWALTER, New York, N. Y.

## Religious Items.

The *Universalist Leader* prints an interesting article by the Rev. Anthony Bilkovsky on "The Nation's Enemies," among which the writer classes the growing practice of families living in hotels. He says: "The Jew is the miracle of history. He has been preserved by his religion: and that religion has thrown an exclusiveness, like a girdle of steel, about the family, and especially about the meals. The kind of food, the preparation of food, the ceremonies at its eating, have prevented the Jew from merging into surrounding populations. Throughout four thousand years, and through incredible hardships, the family customs have preserved the nation."

The Rev. W. H. Mayhew, writing for the (Swedenborgian) *New-Church Messenger*, says: "While our early childhood does, in a measure, reflect the ideal of life, it is not itself ideal, and no mere traveling back to that stage of the earthly experience would prove satisfying. The little child has innocence, and by its innocence is allied with the heavens so closely that the Lord could say, 'Of such is the kingdom of heaven,' but it is the innocence that comes through ignorance of evil, and not that which is attained by a voluntary shunning of evil and putting away of evil. Hence, although it is a state that suggests the ideal life and provides a basis for its future and voluntary realization, it is not in itself ideal."

In an editorial on "Truth and Freedom," the New York (Methodist) *Christian Advocate* says: "It must be acknowledged to the credit of humanity generally that there never has been a time when men did not manifest a thirst for truth and a passion for freedom. The purposes of the human mind for the acquisition of these two rare possessions have found expression in as many ways as there are phases of truth and possibilities of emancipation. Error and bondage are alike repellant to the human mind, although they may be endured for a season with the hope of ultimate deliverance from their sway."

In a missionary article published in the (Baptist) *Standard* we find the following: "But we are told that we cannot have this Christ life on earth, the flesh is too weak and the temptation of the devil too strong. O beloved, do not take from us our inheritance in Christ Jesus. Do not limit the Almighty. Jesus said, 'As thou hast sent me into the world, even so have I also sent them into the world.' God would never send His servants out to represent Christ, 'in Christ's stead,' till He anointed them with the same Holy Spirit and power with which Christ was anointed. (Acts, 1: 8; 10: 38.)"

Discussing "The Universality of Religion and What It Means," the (Swedenborgian) *New Church Messenger* says: "That all men should hunger and thirst for some kind of a religion, is a fact in human life as full of meaning as the rising and the setting of the sun are facts in the phenomena of nature full of meaning. It embodies some divine truth in reference to man and his nature, with as much certainty as the complicated actions of sun and planets are expressions in the phenomena of nature of great scientific laws underlying their operations."

The New York (Baptist) *Examiner* notes with approval what it calls the "Recrudescence of the Spiritual," and says: "In the coming century, therefore, it is not too much to claim that we may confidently look for the universal triumph of the spiritual, and the union of Religion and Science, of conscience and reason, in the tribute they alike dictate to him who has the effulgence of the Father's glory and the impress of his substance.'

Upon the three noble arches of the Milan Cathedral are three inscriptions. On one is written, "All that which pleases is but for a moment," and a beautiful wreath of roses is carved over the words. On the second is written, "All that which troubles is but for a moment," and with these words is sculptured the cross; but over the great central entrance are these words, "That only is important which is eternal."—SELECTED.

The (Baptist) *Watchman* says: "There are few things more helpful to the inner life than an illuminating interpretation of a passage of Scripture that meets our case. In spite of all that criticism has done to create distrust of the inspiration of the Bible, there are very few of us who can rid ourselves of the conviction that its statements stand on a unique level of authority."

*Zion's Herald* says: "Those who cry out about the decay of religion are commonly under the influence of hallucination. The world is no doubt bad enough, but it is better than ever before. Irreligion is in evidence, but it is less rampant than in the past. We need more religion, but we never before had so much effective religion as now."

A writer in the (Baptist) *Watchman* says: "It needs the best men and the best churches to carry the best cause to victory; the men and the churches of the finest manhood, of the tenderest sympathy and self-forgetful love; men and churches who will have no purpose but such as can be entirely subordinated to the glory of God our Redeemer.

From idle words, that restless throng
And haunt our hearts when we would pray,
From pride's false chime, and jarring wrong,
Seal Thou my lips and guard the way.
JOHN KEBLE.

God is so great that He communicates greatness to the least thing that is done for His service.—JOHN WESLEY.

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on Boston or New York. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6. Christian Science. Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15, fifty copies or more to one address, $2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Notice is also given that back numbers of the *Christian Science Journal* for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent in as early as possible. They *must* be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 6.00
Twelve or more to one address, each, prepaid . . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen: $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, $1.06: $5.00 half dozen: $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents: $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 21 pages. Price by mail, 26 cents: per dozen, prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents: per dozen, $2.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents: $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy: $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy: $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A: for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents: 12 copies, to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U. S. A.

SEPTIMUS J. HANNA, C. S. D., Editor. CAMILLA HANNA, C. S. D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. Post Office as second-class mail matter*

## Items of Interest.

### Political and Governmental Notes.

The National Anti-Imperialistic League held a liberty congress in Indianapolis last week, and passed resolutions recommending that all who opposed the policy of the present administration in regard to Porto Rico and the Philippines, give their support and their votes to Bryan and Stevenson. All the four hundred delegates, except twenty, voted for the resolutions. The committee which proposed the platform was composed of 7 men who in 1896 voted for Palmer and Buckner, the gold Democratic candidates, 10 who voted for McKinley, 7 who voted for Bryan, and one who did not vote. The committee was unanimous.

A race riot of extent and violence almost equaling the recent riot in New Orleans, raged for two days last week in the heart of New York City. Colored people, wherever found, were attacked by the mob without mercy. To stop the disturbance the police raided the streets, severely drubbing every one who did not move quickly. The measures taken to quell the riot were severe, but successful.

The population of two boroughs of Greater New York, according to the census, is: Borough of Manhattan, 1,850,093; Borough of Bronx, 200,807, making a total of 2,050,600. The gain from 1890 to 1900 is 535,299. This embraces all the territory known as New York City prior to the consolidation of all the metropolitan district as one city under the title of Greater New York.

A dispatch of August 12 from Nicaragua says that the concession to the Eyre-Cragin syndicate to build a canal across the isthmus, was forfeited on that day because of the non-payment of money due, and that this leaves the Nicaragua government free to deal independently with the United States with regard to building the proposed canal.

A society styled the National Association of the Army of the Philippines was organized in Denver last week with General Francis V. Green of New York as president. All officers and men who served in the American army in the Philippines and the sons of such men are eligible to membership.

The report of Commissioner of Patents Duell for the fiscal year ending June 30 last shows a total of 26,540 patents granted, including re-issues and designs. There were 1,660 trade-marks, 682 labels, and 93 prints registered. Patents that expired numbered 19,988.

Officials of Sing Sing prison, the greatest prison in the United States, decided recently to abolish the lock-step for first term prisoners, one of the traditional requirements of prison discipline. A military march has been adopted.

As nearly as figures can express it, the cost to the United States of the war in the Philippines has been $186,678,000 in cash and at least 2,394 lives of American soldiers.

### Foreign News.

Minister Conger and the other foreign ministers, together with the members of their households, the marine guards, and other foreign residents of Pekin, were rescued by the allied forces on August 15. The march to the Chinese capital was accomplished with much greater ease than was expected, there being but two battles fought on the way and another at the gates of Pekin. The fact that a foreign force of probably less than twenty thousand men was able to penetrate to Pekin and enter its gates, indicates that the vast armies of rebels so recently in full possession of Pekin and the surrounding country, have dispersed.

Italy is the most heavily taxed nation of Europe. Her debt is 12 per cent of the total wealth of the nation, as compared with 2 per cent for the United States, and 5 per cent for Great Britain. Half of her annual budget of $320,000,000 goes for interest on the debt and pensions, and only a little more than a third is available for expenses of the government. As a result all departments of the government are suffering, while the people are staggering under the burden.

A Paris dispatch of August 12 says that during the manœuvres of the French fleet off Cape St. Vincent, the night of August 11, a collision occurred between the first-class battleship Berennus, flying the flag of Vice-Admiral Fournier, commander of the fleet, and the torpedo boat destroyer Framee. The Framee sank immediately. Only fourteen of the crew, consisting of four officers and fifty-six men, are known to have been saved.

England is now in the heat of a general political canvass, and one of the issues is the conduct of the Church of England. Lords Portsmouth, Kinnaird, Wimborne, and Grimthorpe are at the head of an agitation to prevent the church from "reverting to the principles and practices of the Church of Rome."

Since the assassination of the King of Italy the Berlin police have been enforcing the passport regulations very rigidly, and Americans intending to visit that city have been advised to take passports.

The Chinese minister at Washington on August 12 handed the Secretary of State a copy of an imperial decree appointing Li Hung Chang a special commissioner to treat with the powers for peace.

The British landed troops at Shanghai last week to offset the action of Russia in occupying Niuchwang.

### Industry and Commerce.

An authoritative statement of the world's visible supply of cotton shows the total to be 1,278,427 bales, against 2,836,226 last year. Of this the total of American cotton is 768,427, against 2,115,226 last year, and of all other kinds, including Egypt, Brazil, India, etc., 510,000, against 721,000 last year. The total world's visible supply of cotton shows a decrease compared with last year of 1,557,799 bales.

A consolidation of the most important manufacturers of heavy fire apparatus in the United States has been effected under the name of the International Fire Engine Company. All the companies in this country manufacturing steam fire apparatus are included in the combination, which is said to have a capital of $9,000,000, all taken up within the companies included.

Work was started last week on section B of the East Boston tunnel. This section runs under the harbor and calls for greater engineering skill than any work that has ever been undertaken in or around Boston. A shaft will be sunk to a depth of fifty feet and from this point the work will be carried under the water.

Charles M. Schwab of the Carnegie Steel Company is about to start a trade school for boys in the neighborhood of Pittsburg. He will pay the salaries of the teachers and provide a library.

It is estimated that about 1,500,000 persons are employed in the coal mines of the world.

### General News.

"Old Home Week" was observed in New Hampshire last week and there were joyful reunions in about every city, town, and village in the state. A dispatch from Concord, N. H., to a Boston newspaper concerning the festival, says: "The good influence of Old Home Week, which was instituted last year by Governor Rollins, has been great. Within the last year many old homesteads have been bought by people from other States, and abandoned farms have been taken up. Another influence which the idea has exerted is to induce both residents and visitors to aid in marking historical places and in compiling local town and family histories."

During seven minutes of August 17 every wheel and spoke of commerce throughout the great Southern Pacific system of railroads and steamship lines was stopped during the burial of Colis P. Huntington in New York. At exactly eleven o'clock in New York, every hammer in all the shops of the company ceased clanging; engines paused upon the rails, and steamships floated lifelessly upon the water. During the short suspension of business fifty thousand men in all sections of the United States remained idle.

Estimates of the number of Jews in the world, more or less approximate, calculate their total at about 10,000,000 of which 4,500,000 are comprised in the Russian dominions, and 1,800,000 in the Austrian. The United States comes third with 930,000, of which 350,000 are in New York alone. Germany and Roumania have respectively 560,000 and 300,000, the British Isles but 150,000. Asiatic Turkey a like number, European Turkey, 120,000; France, 72,000; Algeria, 49,000.

A. D. Shaw, commander-in-chief of the Grand Army of the Republic, is reported to be in favor of changing the date of Memorial Day from May 30 to the last Sunday in May, because as it is now the day is largely devoted to sports and amusement, and he believes that the change would result in a more seemly observance of the day.

The Cuban teachers who have been attending the Harvard summer school, left Cambridge and Boston August 16. After visiting New York, Philadelphia, and Washington, they will leave the United States and are expected to arrive at Havana August 28.

In France the oxen that work in the field are regularly sung to as encouragement to exertion, and no peasant has the slightest doubt that the animals listen to him with pleasure.

London is twelve miles broad one way and seventeen the other. Every year sees about twenty miles of new streets added to it.

Topsfield, Mass., celebrated the 250th anniversary of its incorporation as a town last week.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Telephony Without Wires.

### System which Utilizes the Terrestrial Currents.

IN a little workshop in Philadelphia, a young inventor has devised and is fast perfecting a system of telephony whereby the human voice, as well as the signals of the Morse alphabet, is transmitted through earth and air without the use of wires.

A practical demonstration of wireless telephony was given last Tuesday and a company organized to exploit the system named after Prof. A. Frederick Collins, an electric engineer, formerly of Chicago, but now residing in Philadelphia.

The Collins plan is quite distinct from the Marconi system. It uses no coherer, which is the salient point of the Marconi system. This coherer is a very delicate device, that must be adjusted to the minutest nicety.

Out-of-door tests have been made under favorable and unfavorable conditions, and apparently the new wireless telephony and telegraphy is a success. Though still in a crude state, the verity of the principle that terrestrial waves of electricity are as inductive as the ether waves utilized by Marconi, Dolbear, and others, seems to have been proved. Larger machines are to be built at once, and tests of the most rigid character will follow.

✤

Professor Collins is not yet thirty-five, but he has been a worker of no mean sort in the field of electrical endeavor for a good many years. After taking the scientific course at Chicago University he joined the Thomson-Houston Electric Company and did a great deal of experimental work for them. In his spare moments he studied telephony. When Marconi's system of wireless telegraph was brought out, several years ago, Professor Collins read a description of it.

He promptly set to work to construct a similar apparatus and succeeded in duplicating Marconi's feats on a small scale.

In response to a request for a not too technical account of this system for the benefit of the lay reader, Professor Collins said,—

"It is really too soon to set myself up as an Edison or a Tesla, and I do not want to pose as anything else than a student of telephony. Such success as I may have attained is due in no small degree to my wife. She has encouraged me, and by her knowledge of mathematics and interest in telephony has aided me with practical suggestions.

"In the first place, it should be said that while the earth is a poor conductor of electricity, the currents projected through it meet with no such resistance as the ether waves utilized by Marconi. The network of telephone, telegraph, and electric light wires, trolley wires, tall steel skeleton structures, and the hundred and one obstacles that divert and disrupt air currents are not encountered under ground. Again, some strata of earth are pretty good conductors of electricity, while others are non-conductors. Thus, it is possible to project two currents, say, at different depths, and to secure perfect insulation.

Now, as to syntony, or electric tuning, a term the layman does not understand usually, let me explain. In listening to a phonograph, say, one may distinguish the notes of a certain instrument in a band if he tries to. He simply attunes his ear and his mind to the vibrations produced by that one instrument. So also in wireless telephony. Everybody understands how a tuning fork will respond, that is, will sound to a certain note struck on the piano. A scientist would say it vibrated when something with the same rate of vibration was set in motion.

✤

"Electric tuning is analogous. A given receiver properly tuned will respond to a certain number of ether or air vibrations per second. So it will to terrestrial vibrations, but it will remain unaffected by another rate of vibrations. Thus, any number of ether or terrestrial waves vibrating at different rates would not interfere with one another, nor would any set of vibrations affect any receiver, except the one specially attuned to its rate.

"Now," continued Professor Collins, "we take an ordinary Bell receiver and pick up the vibrations set loose at a distant point with no connecting media save mother earth. Each instrument (transmitter and receiver) is connected by wire with two copper plates, or, rather, a copper coil and a copper plate proper. The plate is buried in the earth at varying distances from a foot to thirty feet. The copper coil is incased in the cabinet. The sounds—that is, the vibrations—are transmitted over the wire to the sunken plate, thence through the earth to the corresponding plate buried at the receiving point connected with the receiving instrument. Of course, the layman will understand that there are batteries attached to the cabinets, and a Crookes tube as well.

"The induced current passes simultaneously with the earth current.

✤

"At present I am working on a system of electrical resonance or syntony where two, two hundred, or two thousand subscribers may talk without conflicting. I do not think this problem will be harder than articulate speech without wires. A more or less mechanical device I am giving time and thought to is a bell for signalling, all devices extant not being applicable to our telephone. On each telephone we shall have to place a couple of discs resembling the combination lock on a safe. Then, when Smith wants to call Jones, whose number is 142, for instance, he will turn the dial to 142. This will put his 'phone in tune with Jones'. That is, the number of ohms resistance regulated by this combination-lock illustration, anywhere between two thousand and one hundred thousand ohms will equal the resistance indicated by Jones' instrument, and then Jones' signal will be rung.

"If Brown and Robinson are talking in the same locality they will not hear Smith and Jones, nor be heard, for the resistance on their circuit is different, and so on."

## Among the Churches.

### Opening Services at Berlin, Ont.

Sunday, August 5, 1900, is a day that will ever be remembered in the history of First Church of Christ, Scientist, of Berlin, Ont., as on that day the doors of the beautiful new edifice, on the corner of Water and Francis Streets, were opened to the public for the purpose of consecrating this church home to the worship of the living God.

The opening ceremonies held on Sunday were most interesting, and notwithstanding the sweltering heat, the auditorium and gallery were crowded at each of the three services. The nominal seating accommodation is four hundred, but over five hundred persons attended on each occasion. Had the general public known what renowned vocalists had been secured, the building would not have been able to hold even a small proportion of those who would have sought admittance. In the forenoon Mr. Edw. P. Johnston, a rising young Canadian tenor, now of New York, sang, and in the afternoon and evening, Mr. Ernest Sharpe of London, England, a world-noted baritone, assisted in the service.

Among those who attended were included a large number of visitors and representatives from the various Scientist churches in the different cities of Ontario and the United States, and even from London, England. Some of the cities represented were Boston, Mass., the home of the Mother Church; Cambridge of the same state; Cleveland, Ohio; Buffalo, Brooklyn, Rochester, and Troy, N. Y.; Toronto, Ottawa, Hamilton, Brantford, Guelph, Kingston, St. Thomas, etc. The total number of those from a distance was about two hundred.

The congregation of the denomination in this town numbers about one hundred and fifty persons, though there are only fifty-two actual members enrolled. Their achievement in erecting this church building is therefore all the more creditable to them.

The past eight years, the length of time that has elapsed since the inception of the movement here, have been marked by steady progress and growth. The movement was begun in Berlin by Mrs. S. J. Williams, who was referred to in most feeling terms of endearment by the different Toronto workers, with whom she was associated before her removal to Berlin.

The preliminary work incidental to the preparation for building a permanent house of worship, was begun over a year ago. The design of the building, which is of a striking and imposing nature, being of the Old English style, was prepared by Mr. Jos. H. Taft, architect, of New York City. The foundation exterior is decidedly unique, being of large boulder stone, laid at random. The upper portion of the structure is of timber and plaster, and combines to produce a solid, substantial as well as impressive effect. The extreme length of the building is one hundred feet, with a two story tower at the intersection of the two streets.

There are two entrances on Water Street, one leading from the hallway into the auditorium, and the other directly into a roomy, cosily fitted up reception and reading room. This reading room will be open to the public every afternoon in the week, and is liberally supplied with the literature of the movement.

The seating capacity is four hundred, and the comfortable oak pews are placed in semi-circular form. The seating alone cost $740. The general interior is finished in black ash panelled wainscoting, Georgia pine floors, and delicately tinted rough plastered walls. There is an abundance of light, the numerous windows being of heavy stained glass. A massive sunburst of amber shades has been placed in the front gable, at the rear of the gallery. This was presented by the Sunday School, as were also the substantial desks for the two readers.

The building is illuminated with electric light, the fittings, which are of old brass finish, being very fine.

The basement will eventually be fitted up for Sunday School quarters, and it is the intention to put in a fine large pipe organ in the future.

The cost of the structure and fittings to date is about eight thousand dollars, and when completed, will total fully ten thousand dollars. The amount of expense incurred up to the present is all provided for, and there will be no mortgage on the building.

Before the hour set for morning service the auditorium was completely filled with happy people, a large number of Christian Scientists having arrived from other places in Canada and the United States, and the local church members and friends made up the rest of the great congregation.

After the usual opening exercises, the clerk of the church, Mrs. Williams, who was the pioneer in the movement here, read an address which was in part as follows:—

To-day, as we open our new church home to the public, we extend to one and all a heart-felt welcome; we are glad to see you here, and if this is the first time, we hope it will not be the last. This church is yours and ours, and we trust that you will find it pleasant and profitable to come here often in the future.

We say to our fellow-workers, visiting Christian Scientists, Beloved in the Lord, your presence crowns our day of gladness. Love has brought you, and you have brought love to this our common rejoicing. "The seekers of the Light are one."

Friends, we have not invited you to see what we have done, but to see what God hath wrought. "This is the Lord's doing; it is marvelous in our eyes." For a little company like ours, only fifty-two members, to build a church like this is a marvel to human sense, and had we known a year ago the proportions that this building would take, the expense involved, and to what extent our faith, hope, and love would be tested, we should have said, "It is impossible;" but God said, "Arise and build," and our part was to obey. "Except the Lord build the house, they labor in vain that build it."

This church, which is a branch of the Mother Church in Boston, Mass., was founded on the healing, and these walls tell of the destruction of sin, sickness, sorrow, poverty, fear, and pain. "Thou shalt call thy walls salvation, and thy gates praise."

The direct inspiration of the building of our visible church came from the public lecture given here a year ago last April by Mr. Carol Norton, C.S.D. The interest manifested by the community in that event, and the vitality thereby imparted to our church, gave us faith to go forward, and building operations were commenced about a year ago. The lot was a gift from one of the members, and the triangular point, held by the town, a very essential part of the site, was granted by a unanimous vote of the town council. We, who know that the Church of Christ, Scientist, stands for all that promotes the welfare of the community—for all that is good, pure, and ennobling, know also that "this land will yield her increase."

The corner-stone came from Concord, N. H., the home of our Leader, the Rev. Mary Baker G. Eddy, whose followers here and all over the world are now rising up to call her blessed. God is never without His representa-

Digitized by Google

tive in the world. We know that our revered Leader is God's messenger to this age, because she brings the Word of God to human understanding, whereby mortals are delivered from all evil. "He sent His word and healed them."

After the address the regular Sunday Bible Lesson for the day was read by the Readers of the local church, Miss E. F. Edwards and Mr. Herbert J. Bowman.

At this service Mr. E. P. Johnston, of New York, sang very pleasingly, "Fear ye not, oh Israel."

Long before half past three, the time set for the opening of the afternoon service, every available seat was taken and many were standing.

Rev. A. R. Vosburgh, C.S.B., of Rochester, N. Y., presided, and gave a brief address on Christian Science and what it has brought to the world as an unfolding of Christianity that entitles it to be added to the list of organized bodies in the religious world. He said,—

When a Christian Science Church is erected in a community it will surely be asked, What mean ye by these stones? What is this new movement in Christendom that has called so many out of the established lines of Christian work and worship, and is establishing itself in church homes of its own?

Christian Science has set for itself no ideal that has not been held before God's people in all ages. That which the Bible teaches and demands is righteousness. That which must be sought with hungering and thirsting desire is righteousness. And righteousness is simply rightness; right conditions of thought; right relations to God and man. Human thought needs no philosopher's argument nor prophet's message to convince it that something is wrong; that there is something to be made right, and that which will right the wrong, is the righteousness, the rightness, which will establish the Kingdom of Heaven on earth. This must come to mortals through a right purpose, a right motive, and a right method.

The old Jewish religion established the first. It was the Jews' mission to awaken conscience, to establish an ideal of living that should embody a right purpose. And this the Jewish thought did establish; and produced a type of intense conviction that was represented by such men as Saul of Tarsus.

But a right life springs from a right motive. This came in Christianity and Saul of Tarsus became Paul the Apostle, who finds that love is the fulfilling of the law.

Thus Judaism appealed to the conscience and awakened a right purpose; Christianity appealed to the affections and awakened a true motive; and now only the human reason needs to be spiritually illumined to satisfy the whole man. This is the mission of Christian Science, to so inform human thought with the knowledge of God and His Christ that Christian experience shall be enabled to go on from the child-condition of faith to the full manhood of understanding, "Till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

In this Science is come in his fulness the promised Comforter, to guide into all Truth. In this Science comes such a knowledge of God and His ways, and such an understanding of man made in the divine likeness, that we see how the perfection that Christ enjoined is to be unfolded in us; and how the Kingdom of Heaven shall come on earth; and how they that hunger and thirst after righteousness—rightness—shall find that rightness and be filled. And in human consciousness thus illumined and transformed evil will cease to seem to be a reality, and sin, sickness, sorrow, and sighing shall disappear; for the former things shall have passed away.

In conclusion, he congratulated the workers here on the blessing which has rewarded their labor, and then announced that owing to the fact of the Toronto guests having to leave at five o'clock, the addresses of visitors would be given in the afternoon instead of the evening.

The first speaker called on was Mrs. Betts of Troy, N. Y. She said she wished to speak a few words of love, congratulation, and comfort to her co-workers here. She likened the beginning of the work in Berlin to the planting of an acorn, and the present fruition to the branching, sturdy oak. "Nothing in the world can hinder you," said she, "if you follow God's teachings, from bringing all the earth under this tree." She urged upon them all to give to the afflicted, to feed the hungering soul, and give to heavy hearts that which will make them happy. It is the good in others, and not the evil, that should be looked for, and by seeking for and doing the good the present will be to us Heaven, "There is no need to die to go to Heaven."

Miss Stocking of Cleveland, Ohio, followed Mrs. Betts. To her, it was a cause for rejoicing, that fidelity to Principle, trust, and self-abnegation, had resulted in this structure being erected and opened. There is reason for joy at the hopeful outlook for a great ingathering to the household of the Mother-Love.

Other brief addresses and fraternal greetings from the various churches represented by them were given by Mrs. Stewart, Toronto; Mrs. Leonard, Brooklyn; Mr. Robb of London; Mrs. Maybee, of the Second Church, Toronto; Mr. Higman, Ottawa; Mr. Kinnear, Kingston; Mr. Moderwell, Buffalo; Mr. Wilson, Hamilton; Mr. Kerr, Brantford; and Rev. W. P. McKenzie, Cambridge, Mass. A letter of greeting from Mr. Carol Norton of New York, who lectured here over a year ago, was read by Miss Edwards. The church at London, England, was represented by Mr. Ernest Sharpe, whose singing at the afternoon and evening services will long live in the minds of those who were fortunate enough to be present. Mr. Sharpe, who has a reputation in England and Germany as a vocalist of the highest attainments, possesses a rich bass voice of great power and purity, and his solos, especially his rendering of "Peace be still," made a deep impression on his hearers. He sings not alone to bring out the harmony of the composition, but to give the realization of the thoughts expressed.

On the programme for the evening service was an address by Rev. William P. McKenzie, C.S.B., of Cambridge, Mass., who, like the chairman of the afternoon, Mr. Vosburgh, of Rochester, is a member of the Board of Lectureship of the Mother Church of Christian Science in Boston, Mass. Mr. McKenzie spoke in part as follows:—

The thoughts which I have to present to you will gather themselves round one phrase, "The glorious liberty of the children of God." We go back in thought to the land of Egypt for a type of physical bondage, and we see the Israelites toiling in the dust of the brick fields. We think of the shepherd life which the patriarchs had lived, following their flocks over the open pasture lands, and then we think of their descendants, forced to toil in the monotonous labor of brick-making, becoming wearied and hopeless, and stung into activity by the lash of the task-master when they faltered. We can see that not only were they in bondage to outward masters, but were also controlled by thoughts of hatred and resentment towards their rulers. When Moses, having received the best education that the wisdom of the time could afford, felt himself moved to

Digitized by Google

compassion, and tried to help them in a human way, by slaying an oppressor, they could not receive his good intent, and so he had to flee into the wilderness. During forty years in retirement he learned, from communion with God, a diviner way of liberating his brethren. And yet, when they were set free from the Egyptian bondage, they were still such slaves in thought to superstition, selfishness, ignorance, and obstinacy that it required a discipline during forty years of wandering in the wilderness before they had gained a sufficient sense of freedom to enable them to possess the promised land.

We know how the Jewish people preserved what they had gained through Moses and the prophets who followed after him, and yet, when Jesus appeared on earth, he found them hopelessly enslaved by the traditions which had grown up concerning their sacred writings. They were also acquainted with political oppression, and it is difficult for us to realize the contrasts between the glory and the power of the then conquerors of the world and the distress and abjectness of the conquered. The world-rulers of that time traveled with glittering retinues, and their palaces were magnificent with the rarest work of the world in marble and precious metals, mosaic and silken hangings. All this luxury was the reward which came from successful war, so that one of their beatitudes might have been, "Blessed are the makers of war." And as the spoils of war were gained through cruelty and oppression, we can see that they would necessarily have despised meekness and mercy.

✠

Jesus came to bear witness to the Truth of the unseen Kingdom of God, and he began by stating it as an axiomatic truth that those who were accounted destitute would inherit that kingdom, and those who were meek in heart should find its beauty upon the earth. Among those who believed that the hilarity and recklessness of feasting was to be desired he proclaimed that those who amid such scenes were mourning, were ready for spiritual comfort; and that those whose hunger and thirst was after righteousness should be satisfied with good. Where cruelty was almost universal he exclaimed, "Blessed are the merciful, for they shall obtain mercy." And, ignoring the success of the warriors, he declared that the peacemakers should be called the children of God; and amid a condition of unexampled corruption in morals, he declared that the pure in heart should be able to see the invisible God. Thus may we see that Jesus did not attempt to establish freedom for a limited number of persons, but to set forth the axiomatic truths according to which all men should be free. Moses was "faithful as a servant," in freeing a selected people from bondage, but Christ Jesus was "faithful as a Son," in setting forth the glorious liberty of the children of God.

When we come down to modern times we recall the great awakening which came to the people of this continent when they saw the wickedness of slavery, yet in that great conflict for the emancipation of slaves, evil passions were so stirred that those who were fighting for the liberty of the African race were themselves enslaved by murderous and cruel thoughts, by resentments and prejudices which prevented them from understanding the liberty which loving brings. We remember also that, then and since, enslaving diseases held multitudes in bondage; that pain and distress of mind and poverty and fear were like taskmasters, driving multitudes to unrewarded labor. Amid these conditions the discovery of Christian Science brought again before men the truths of the kingdom of Heaven. Moses expected instant recognition of his desire to liberate his people, and Mary Baker Eddy, seeing the mental and physical slavery of the modern time, expected that her presentation of the liberating Truth which she had learned through being healed, would be gladly accepted. But her experience was like that of Moses. As Paul did after his spiritual illumination, so did she retire from the world for a time, that she might become enlightened as to the wise method for presenting to the world Christian Science, which restores to Christianity the lost element of healing.

Christian Science was finally presented through its textbook, "Science and Health with Key to the Scriptures." The question might be asked, Is the teaching of this book necessary if Jesus fully set forth the truths of the Kingdom of Heaven? The fact was, that men had accustomed themselves to argue that the teaching of Jesus was not practical, and that the Sermon on the Mount had no connection with ordinary life and business. Moreover, all expectation of healing through Christ had faded away from modern thought. For generations people had been looking to material drugs, believing that God had stored in them certain magical efficacy. New drugs for this purpose were continually being invented by men, because of the failure of those in use, and it never seemed to occur to people that if drugs had been chosen by God to heal, they could not fail to heal.

✠

In founding Christian Science, Mrs. Eddy, the Discoverer, began herself to practise healing, and taught those whom she had healed, sending them out to heal and teach others. Those who have been faithful to her teachings have experienced from their Leader an exquisite love and wise guardianship which no previous experience in life had prepared them to expect. The beauty of holiness manifested in Mrs. Eddy's life fills all who perceive it with wonder and joy, and those who do perceive it hunger and thirst after similar rightness, mercy, meekness, purity, and love. Thus the Leader in this movement illustrates the beatitudes, and proves the Sermon on the Mount to be practical.

Christian Science offers to this age through its textbook, Science and Health, the scientific method for living a blessed life here on earth,—rich in its own inward health and joy, and so, liberal in its goodness to others.

This church which has been built, bears witness to the gratitude of those who have experienced its healing power. The redeemed throughout the world are becoming a "multitude which no man can number," and if you will join them you will find that the joy which was transient in your lives will become permanent, and that you will be deprived of no good thing or thought you ever rejoiced in. Christian Science shows that good is not haphazard, and by setting men free from all forms of slavery to sickness, and sin, and the fear of death, establishes the glorious liberty of the children of God."—*Berlin News-Record.*

✠

The letter from Mr. Carol Norton, which was read at the afternoon service was as follows:—

Eastport, Me., July 28, 1900.

First Church of Christ, Scientist, Berlin, Ontario.

*Beloved Friends and Co-laborers in Christian Science:*—Accept my grateful thanks for your cordial invitation to be present with you at this feast of dedication, the liberal fruition of your righteous labors. Regretting my inability to be present with you in person I am with you in thought, sympathy, and interest, and joyously share with you all the happiness and satisfaction of this event, the opening of your own house of worship. I remember with loving interest my visit to your city some months ago. I deeply enjoyed the privilege of speaking to the people of your community, and remember the impartial and interestingly broad introduction of your mayor on that occasion. I have always been grateful that the lecture district to which I have been appointed includes the cities of two nations,

Digitized by Google

Canada and the United States. As I have gone from one city to another, first in the Dominion and then in the States, laboring prayerfully and honestly to sow the seed of demonstrable Christian Science in the soil of listening hearts and searching minds, I have been renewedly impressed as the days have gone by with the essential unity existing between the subjects of your revered Victoria and the citizens of our great republic. Great as is the unity begotten of common political aims, racial tendency, and governmental ideals, still greater is the unity begotten of the blessed truths of the Spirit revealed in Christian Science.

To-day more than any other one factor operating upon the mind of humanity Christian Science stands without a peer as the unifier of races, peoples, hearts, and lives. My friends, there is but one Lord, one Faith, and one Baptism, one ruling Mind, one spiritual optimism and healing grace, and but one regenerative baptism of Pure Mind. There is but one universal language, one world-wide government, but one real commonwealth, and but a single crowned head. This is the Love that is supersensual, healing, reconstructive, redemptive, infinite. It knows neither time nor space, latitude nor longitude, bond nor free, rich nor poor, heathen nor religionist.

But one love *is*,
All else is false,
One universal Nature rules
This and all worlds,
As one vast universe.

But one real passion *is*,
All else is naught;
One instinct governs man
And rules all life in purity,
Through Love's eternal plan.

But one real freedom *is*,
Born of the all-knowing Soul
No license doth it know;
A law unto itself,
It governs man
In righteousness and peace;
It brings to slaves,—release,
It gives the passion of One Soul;
Reveals perfection as man's goal,
And maketh one in Truth and Love,
Creation's one great host.

To this Love this beautiful temple of the Holy Spirit bears witness. Above the fogs of corporeal sense and human justice this Love interprets to you and to me the message of the Prophets, the mercy as well as the justice of Moses, the compassion, chastity, and saving love of Christ Jesus. It connects us in thought and sympathy with the seers and sages of all ages, religions, and climes, exalts the Apostolic Succession of pure hearts throughout all eras, interprets the Christian Scriptures, displaces the Israel of the flesh with the Israel of the Spirit. Above all else it lifts us into an understanding consciousness of our true debt of discipleship to our beloved Leader and Mother, Mary Baker Eddy. Love triumphant over personality, revenge, and sensuality alone can make us childlike and put us in possession of the spiritual significance of the inspired writings of our Teacher.

May the Holy Spirit of Love brood over this church. May the upturned eyes and open ears of all who worship herein receive the pure intuitions of divine Mind, untouched by personal sense and human interference; may the Great God, whose servants you are, lead you beside still waters and into green pastures of physical and spiritual wholeness, and may your honest labors continue to receive their just reward and compensation in growth in grace and the possessions of spirituality.

Lovingly and faithfully in Christian Science,

CAROL NORTON.

## Respect for Others' Views.

IN the annual baccalaureate sermon at Tufts College, June 17, 1900, the president, Elmer H. Capen, D.D., spoke in part as follows:—

It is important that we should get the point of view of even an opponent. Failure to do this is, I think, the source of most contentions. Seen from the piazza of the Fabyan House, Mount Washington presents the appearance of a gigantic eagle. From some parts of Gorham its sides seem notched and scarred, mighty and terrible, but without much suggestion of beauty, while from the bridge at Shelburne, where you see the whole mountain from foot to summit, set in its gorgeous framework of surrounding hills, you have a picture of a vast and living pyramid floating in a landscape that is liquid with beauty, and yet it is the same old mountain all the time. They who have looked upon but one side of it know but a fraction of its reality. It is the same with truth. Most men see only a segment or some particular aspect of it. This often leads them to think that to be true which other men see is not true at all.

For, after all, differences are superficial and similarities are profound. If we regard only the externals of human society, if we look only at what appears in the different orders of civilization, if we observe only the various customs which prevail among men, we shall very likely reach the conclusion that vast and irreconcilable differences divide the races, and even the nationalities, of the world. But when we look deeper we reach another conclusion.

But lest you should somehow draw the conclusion that opinions and even convictions, are matters wholly of indifference, that human happiness, and even human progress are best secured by conformity, and that whatever happens we must avoid opposition and conflict, I desire to say that all this deference, patience, sympathy, and breadth of judgment which I have been advocating is not incompatible with the most intense conviction. It may rather be a symptom of it.

The reasons for this are perfectly patent. To begin with, this attitude of mind opens the doors of other minds, and without an open door and the hospitality which it implies, nothing can be accomplished. By this process all the truth of all the world in every age of human history is gathered up, conserved, and compacted together for the illumination of mankind, and to it added the new conclusions which have been reached in the most recent fields of research.

Moreover, this method disarms resistance. When a man has invited you to the sanctuary of his hearthstone and then unfolded to you all that is most precious and sacred in the private experiences and convictions of his life, and you have listened with sympathetic and cordial approval, he cannot well take offence at what you unfold from the depths of your own inner being. He cannot, from very graciousness, fail to go with you as you lead him on to new and nobler heights of vision than he had ever before imagined. And do you suppose that when he has once had a glimpse of the new beauty, that he will wish to go back to the tame and dreary outlooks of his former dwelling? Will he not rather say, it is good to be here, let us make tabernacles and abide here forever? It is indeed difficult, if not impossible, to resist the obligations which high courtesy imposes.

*Boston Herald.*

**Wanted.**

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

Love is the beginning, the middle, and the end of everything.—LACORDAIRE.

Digitized by Google

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY, TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### "Jingle-Jangle."

FROM an article republished in the *Sentinel* of August 9, from the *Morning News*, of Savannah, Ga., it appears that the Rev. Dr. Jordan, in a recent sermon, spoke of Christian Science as being "mere jingle-jangle." It appears further that the learned doctor had reference to the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

The doctor's compounding of words turns our thought to Paul's famous similes in 1 Corinthians, 13: "Though I speak with the tongues of men and of angels, and have not charity [love], I am become as sounding brass, or a tinkling cymbal."

If love be absent, either on the part of author or reader, speaker or hearer, mere words are as sounding brass or a tinkling cymbal, or, as our friend puts it, "mere jingle-jangle."

What is "music in the sinner's ear," and "life and health and peace," is often jingle-jangle to the self-righteous, blinded by his own preconceptions. To some the sacred Psalms of David are "mere jingle-jangle." To some the sweet music of the Beatitudes of Jesus are "mere jingle-jangle." To many the prophetic words of John in the Apocalypse are "mere jingle-jangle." To many the Bible, as a whole, is "mere jingle-jangle." Why? Because love is absent from the mind of the reader.

What to this learned minister of the Gospel is "mere jingle-jangle," to multiplied thousands, during the past thirty years, has been a message truly of "life and health and peace." This message has healed the sick, bound up the broken-hearted, relieved of sorrow and distress, saved life, redeemed sinners, reclaimed infidels and atheists, and daily is doing this Christly work in divers parts of our globe.

Daily, hourly, is going up to the God who is Love, from thousands of honest hearts, the deep, earnest prayer of thankfulness for the words of Love and Life and Truth, of hope and joy and cheer, contained in that book whose utterances are "mere jingle-jangle" in the ears of our brother of the Southern pulpit. If only the accumulated and hardened wax of prejudice could be removed from those ears, that which now sounds like jingle-jangle therein, would become a sweet pæan of Love, of Life, of Truth, carrying with it to him, as it has to the mighty host who have had open ears, the joy and peace and hope that come from conscious communion with the Heavenly Father.

For more than seventeen years have these thankful hearts been sounding their loud hosannas through the *Christian Science Journal*, each year adding scores to the number.

For two years, both the *Christian Science Journal* and *Sentinel*, monthly and weekly, have been sounding forth these notes of joy. We could reproduce volumes of them to show that the words of that wonderful book which seem like jingle-jangle to stopped-up ears, have been to these redeemed ones the very music of Heaven—life-giving, health-giving, soul-inspiring, for they have come laden with the Balm of Gilead, the sweet manna from the bounteous hand of divine Love. No, no; to these dear souls the words of the Christian Science text-book are not "mere jingle-jangle."

As we say, we could reproduce thousands of these, but we shall confine ourselves to the very issue of the *Sentinel* in which we quote the doctor's words.

First, we quote from some confined in prison, sinners according to the world's estimate; but was it not such as these that Christ came to save? Is it not such as these that our learned friend desires to save if he is true to his profession? Says one, on page 799:—

"I firmly believe in Christian Science and all its teachings. . . . The more I read of Christian Science, the more I believe its teachings. . . . Any person who will read Christian Science thoroughly will certainly believe it is true. I was treated and healed here in jail." To this needy soul the words of our text-book were not "mere jingle-jangle."

Says another, same page:—

"Words are too small for me to explain the benefit I have received from Christian Science. Though confined in prison, I realize that God is Good, and that I am not forgotten. It is a great comfort to me to learn from Science and Health that God is Good, and does not forget us in our trouble. . . . As I read the Christian Science literature I realize that I am progressing, and that God is All-in-all."

Although bodily imprisoned this earnest heart is spiritually reaching heavenward. To him the words which are redeeming him are not "mere jingle-jangle."

Another says, page 800:—

"Praised be his name forever! not only in the healing of my soul, but also in the healing of my body. Yesterday I was so lame I could hardly walk, with pain in foot, hip, and back; but lo! on getting up this morning I was every whit whole, and walked many miles to-day. . . . Praise God!"

Are these words of thankfulness out of a full heart the fruit of "mere jingle-jangle"? If so, let the heavenly music come like showers of refreshing rain.

Yet another, same page:—

"It is the greatest and most beneficial gift that I have received in my life, to be confined here for ninety days, for it has brought me into the Light and Love and Truth of Christian Science."

Think of it! This prisoner giving thanks for his imprisonment because thereby he has found the words of Light and Love and Truth, which, to the ecclesiastical ear of our friend, are "mere jingle-jangle."

Read the concluding words of a testimonial from Coventry, England, and then say if it was not a glorious kind of jingle-jangle that brought such an experience:—

"The Bible, dear as it was to me before, is a thousand times more precious to me now, and my heart is full of gratitude to our beloved Leader who has given us the spiritual interpretation we so much needed."

Ah, for more of such jingle-jangle!

On the next page we read the testimony of Mr. David Dawson of Barre, Vermont. For four years he has been reading the text-book and he says he loves and cherishes it more than any other earthly possession; and why? He tells us:—

"Before I began the study of Christian Science my custom was to sit down every night after supper with my jug of beer, my pipe, and my newspaper, and read and smoke and drink until it was time to go to bed. I commenced to read Science and Health in my usual way, with my pipe and jug of beer, and would sit reading until morning. Often I went to bed just because I thought I had read enough for one night. After I had been reading Science and Health about a month my wife informed me that my beer was nearly gone and I had better see about getting another barrel. I told her that I thought I would

Digitized by Google

not get any more beer. I wanted to get a copy of Science and Health of my own instead of the beer. She said I could please myself about it, but told me it was foolish of me to think I could get along without the beer when I had used it over thirty years, and had proved that I could not get along without it.

"About a year previous to this I had made up my mind to stop drinking and did not drink anything for over six weeks. The result was that I lost flesh to such an alarming extent that I became frightened and commenced drinking again. I soon regained my usual weight. My wife knew this and used it in support of her argument. I admitted the fact but told her my mind was made up to buy Science and Health and let the beer go, that I should now prove the truth of what I had been reading. I bought the book in place of the beer, and the result is that instead of losing flesh I am to-day thirty pounds heavier than I ever was before. My pipe was consigned to the stove about the same time, and now for over three years I have neither smoked nor drank, nor do I have the least desire to do so."

Mr. Dawson, surely, found much more than "mere jingle-jangle" in his reading of the book.

On page 802, we read this from C. Douglass Hotchkiss:

"Of the efficacy of Christian Science to effect moral reformation I am assured by the manner in which it exposes wrong motives and evil thoughts, and drawing one aside from himself far enough to enable him to turn around and behold what manner of man he is when he loses some of his self-satisfaction and is blessed with a desire for improvement. In the pursuit of the renewing of the mind the value of this Mind Science is appreciated."

Let us pray for more of such jingle-jangle as will bring the kind of moral reformation here described. As well might our learned friend pronounce as "mere jingle-jangle" the words of Isaiah, as thus to characterize our text-book, for in its holy work it is but fulfilling Isaiah's prophecy:—

"The Spirit of the Lord God is upon me; because the Lord hath anointed me to preach good tidings unto the meek; he hath sent me to bind up the broken-hearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound; to proclaim the acceptable year of the Lord, and the day of vengeance of our God; to comfort all that mourn; to appoint unto them that mourn in Zion, to give unto them beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness; that they might be called trees of righteousness, the planting of the Lord, that he might be glorified."

As well might he call these words of Jesus "mere jingle-jangle," for the teaching of our text-book is in direct line therewith, and the work being done by virtue of such teaching is in strict compliance with his command:—

"And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

## The Legationers.

IT is now certainly known that all the legationers at the Chinese capital have been rescued by the allied forces. This is cause for rejoicing and thankfulness, and millions of hearts are uniting in praise to Him who guides the destiny of nations, for the safe delivery of the representatives of the nations, including our own faithful ambassador and his devoted family.

Let us trust that the same Wisdom that has thus far guided, shall bring out of the present seeming chaos that order which shall still further tend to establish the kingdom of righteousness and harmony among the nations, for which the people of the world are longing, and which inspired prophecy distinctly foretells.

## In Defence of Christian Science.

*To the Chattanooga Times:*—I wish to say a few words concerning Rev. Mr. Br ugher's sermon on Christian Science, not in any sense of controversy, but simply to correct some misstatements made which would lead to incorrect conclusions. I am sure Mr. Brougher is sincere and honest in criticising Christian Science, and thinks he is doing his congregation and the community in general a good service. I will frankly say that if that were Christian Science which one would deduce from a dispassionate perusal of his sermon, I, for one, would never have accepted it. But it isn't. The trouble with all who thunder against our system is, they simply set up a straw man which they label Christian Science, and then tear it to pieces (creating quite a litter the while), and the Christian Science man goes on, totally oblivious of it all, for he knows he has not been touched.

Of the twelve references from "Science and Health with Key to the Scriptures" used by Mr. Brougher, five were totally incorrect, and all were detached sentences, separated from their context, and thus were more or less misleading. One could take the Bible and by quoting isolated passages, make it appear contradictory and absurd to the highest degree. Is it fair thus to hold a system up to ridicule by such unjust methods? We seek investigation, but ask that such be pursued in a spirit of justice and honest inquiry, otherwise little knowledge of Christian Science will be gained.

Mr. Brougher asks: "Can the followers of Mrs. Eddy be called Christians in the real sense of the term?" I might say in passing, we are not followers of Mrs. Eddy, but of Christ, for that godly woman disclaims all personal following, and is continually turning people from her personality to the impersonal Christ. But we do claim to be Christians, and think we can prove it by proving our religion according to the teachings of Christ, as given in the New Testament, and also, I trust, by the lives we are endeavoring to lead.

The reverend gentleman is mistaken when he says we insist that those who accept our views abandon their former church connection and unite with us. We never insist upon any one leaving any church, as it is a matter of individual decision, but if, after studying Christian Science for a season, they desire to unite with us, we justly demand that before joining our church, connections with other churches shall cease, which is but natural, and done by all. In the true sense of the term, we believe our church to be truly evangelical, for we endeavor to demonstrate the teachings of the Master.

Mr. Brougher says: "If the Christian Scientists are right then the Christian church is wrong, and has been ever since the apostolic days." That the Christian church has been less powerful and efficient since the third century, is a fact admitted by all members of it; and we hope and believe that Christian Science (the understanding and demonstration of the Science of Being as Jesus taught it) will be the means of restoring the power and spirituality of the primitive church, lost through materialism.

Our critic says: "Heretofore I have been in the habit of using my eyes and ears and other senses in the study of the world and its contents, but the Founder of Christian Science will not allow that I have any eyes or ears." He is incorrect here, for Mrs. Eddy makes no such statement, but simply in other words repeats the statement of Paul, when he says: "The natural man receiveth not the things of the spirit of God, for they are foolishness to him; neither can he know them because they are spiritually discerned." The five material senses testify only to their own manifestation, the material universe, but can take no cognizance of God, heaven, or spiritual things. We cannot see, feel,

Digitized by Google

hear, taste, or smell Spirit or spiritual things, yet these senses are all that testify to sickness, discord, sin, and death. Can we work out our salvation by their aid?

When Jesus said, "Be of good cheer, I have overcome the world," he could not have meant the world in the full sense of the term, for he had preached to only a handful, but he did mean he had overcome sinful sense. He had been tempted at all points, yet he proved the powerlessness of sin, and told them so for their encouragement, that they, by following his teachings, might do likewise.

Brother Brougher objects to Mrs. Eddy's phraseology; yet it is clear to those who are students of her works, and I dare say there were carpers in our Master's time at his parables, and at the language of Paul and the four evangelists. When we speak of God as Love, all understand it to be the very Principle or essence of all genuine love; likewise of Him as our Life, for we are because He lives. Then why should it be thought strange when we also speak of Him as Intelligence, Mind, Soul, Substance, Ego, Wisdom, Truth, Spirit, etc.? They are all proper synonyms of Deity, for He is the Principle of all goodness. We are in no sense of the word pantheists, but the exact opposite, for pantheism is a belief of mind in matter, the worship of God in nature, which doctrine is totally foreign to Christian Science.

Mr. Brougher objects because we deny the reality of sin. If sin is real, it is of God, for He made all things and pronounced them good. Jesus said of the devil (evil): "He is a liar and the father of it." If sin were a reality, an entity, God-made, how could we ever hope to overcome it? The questions he asks refer to mortal man, who is indeed a sinner, and who certainly deceives himself if he says he has no sin. But we believe the mortal is the counterfeit of God's man, made in His image and likeness, the old man with his deeds which must be put off before the real man can come to light. As the false is destroyed the true is manifested, and this true spiritual man is our real selves.

Dr. Brougher seems to expect the Comforter to come as a personal mortal, but a careful study of Jesus' statements in reference to it shows it is to be the Spirit of Truth, leading into all Truth. Is there any personality to this?

To my sense it is very beautiful and comforting when Mrs. Eddy explains the text, "The soul that sinneth it shall die," to be, not God's child who is lost, but the false sense of sin destroyed. We believe God to be divine Love, Good, the eternal, and evil His supposed opposite, the temporal and unreal. Man is saved when he works out his salvation by rising above all sin and proving his sonship with the Father.

Our critic mistakes when he says Christian Science declares that sickness is imaginary. We say no such thing. But we do say it is mental, a latent or conscious fear, imaged upon the body. He asks: "How can Christian Science heal disease if it does not exist?" Disease is as real to the patient as his false thought makes it, just as a child in a dark room is assured of the reality of ghosts. But when this state of fear is cast out of consciousness by the realization of God's allness, God's supremacy, and the impotence of evil, he no longer suffers, for it is logically proven to him his suffering is unnecessary, because it is not of God, hence has no right to exist.

Our reverend brother is mistaken when he says "They do not cure all diseases; they fail more times than they succeed." I venture to say that seventy-five per cent of the patients who give Christian Science a fair trial are healed, and when we remember that nearly all come to us as a very last resort, this is truly a remarkable record. I have at times refused to treat people who came, because they would not follow my directions, which are simple enough. I have seen nearly every organic and acute disease that *materia medica* has named but could not cure, healed in Christian Science during the past seven years. While Christian Science is remarkably successful as a system of mental therapeutics, it is a religion, and its followers believe it to be the revival or restoration of primitive, apostolic Christianity, which has come with "signs following" to prove its genuineness.

As to the quotations from Pundita Ramabai, she could not have made more errors of statement about Christian Science in the same number of words had she tried for a month. She is absolutely mistaken in every particular when she compares it to the teaching and philosophy of the Hindus. There is no connection between the two whatever, save that perhaps both investigate mental phenomena: the one the phenomena of mortal mind, and from a material basis, and the other the cause and explanation of the Science of Being, and from a spiritual basis.

In conclusion I would say to Brother Brougher and all: "Read carefully the Scriptures in the light of 'Science and Health with Key to the Scriptures.' Read the two books carefully, prayerfully, understandingly. Do this for six months, and I will venture to say more light will be gained of Scriptural subjects, more understanding of the Science of Life, more knowledge of God and His love to His children, than you ever had before."

EDWARD E. NORWOOD.

In the *Chattanooga (Tenn.) Times.*

## Spirit vs. Matter.

IN a material age the word Spirit, or spiritual, fills many minds with a sense of mystery and aversion, the word finds no place in the nomenclature of the chemical laboratories, and is not therefore supposed to represent anything that has any actual, substantial existence.

In Christian Science the word Spirit is synonymous with God, Substance, Mind. It is the real and immortal, of which the material is but a misconception, a finite, imperfect, limited view.

Spirit, as God, has no material counterpart, the material and the spiritual cannot co-exist, "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." Man is not material, nor is he a miniature spirit, developed out of the infinite Spirit; man reflects Spirit; he is the image, the likeness of God.

St. Paul tells us that Spiritual things are spiritually discerned. We are not surprised, therefore, if the material fails to apprehend the spiritual, if the finite does not discover the Infinite, or the temporal reveal the Eternal. The two do not co-operate, they have nothing in common by which they can establish relations and hold communication. Again the same Apostle writes, "Walk in the Spirit and ye shall not fulfil the lust of the flesh [the material senses]" which is a blind belief that life is in matter.

Notwithstanding the difficulty which the so-called material thought has in finding its way out of itself, into a recognition of the substantial reality of Spirit, this entire theme is coming daily nearer the apprehension of men. The way in which, in our day, a rapidly increasing company of good people are turning to God for help in sickness, as well as in sin, proves that there is coming a fuller recognition of, and a deeper reliance upon, Spirit and the spiritual. Never before did men turn to God with so much confidence; never were there so many evidences to prove the faith of the ages, that God, Spirit, hears and answers prayer uttered with the understanding.

Thought, which, in many cases, almost instantly dispels the sense of anger, or resentment, or envy, or fear,

Digitized by Google

or dishonesty and love of evil, relieving suddenly physical pain, is the true prayer and religion, the signs which follow prove the thought to be right and in accord with the true Principle of Being.

Is not this the power of Mind over matter? Will not power, coming from the divine Spirit, destroy that which is evil, and which comes not from Spirit? What can that higher life be, toward which it is said the ages are advancing, if it be not man's increasing power of apprehending and demonstrating spiritual and eternal things, redeeming from sickness, sin, and death? The understanding of our immortality in Spirit, wrests us from the elements that decay—from the false sense that life inheres in matter.

Truly the Bible contains the Word, the seed or leaven, which has spoken in every age and clime and has been the great regenerator of humanity's hopes, picturing that royal state, "The Kingdom of Heaven." The true transcendentalism of which the ages have spoken, of which poets have sung in metaphor and rhyme, prophets announced, divines and statesmen prepared the way, and which the Revelator, while yet on earth and in the flesh, was permitted to behold, is divine; in this vision of the spiritual state of man, heaven and earth (finite conditions) had passed away. The proverb also confirms this Christian idealism when it says, "Where there is no vision, the people perish." In Spirit is no night, no sickness, no death, nothing that defileth or maketh a lie, even death and hell are delivered up and cast into the lake of fire (utterly annihilated). Evil must cease, its power is a falsehood. To admit that evil is necessary to existence, is evil. It is saying and believing that Good is not perfect and complete within itself. Mankind, or what is called civilization, advances in proportion as this religious Principle is perceived, and the omnipotence and goodness of Spirit is demonstrated by mortals.

The mortal thought, seeking satisfaction in the material and never relying upon Spirit for aught, teaching the belief that all things are developed from and through unintelligent physical forces and relying upon these inanimate (though supposed to be life and mind producing) energies for everything, this enthrones matter as divine, and Spirit receives no place. In such a scheme, the knowledge of Spirit, God, even if recognized, is limited to the study of physics, which in Science, is but a study of effects, not the study of the Supreme Cause. Now an effect is not explained by an effect; effects are only understood when seen in the light of their Cause. And Science recognizes that only what is intelligent, mental, and living, has power to originate, to order, to create, to cause to be. Matter never contained such power.

Therefore God is not physical and we cannot know Him physically; we perceive God mentally as Spirit, Mind, the *giver* of law and order, therefore the knowledge of God is meta-physical, a perceiving *beyond* matter, into Mind.

The eyes closed to spiritual sight, Jesus tried to open by the use of parable, "Therefore speak I to them in parables; because they seeing see not; and hearing they hear not, neither do they understand. . . . For this people's heart is waxed gross, and their ears are dull of hearing, and their eyes they have closed; lest at any time they should see with their eyes, and hear with their ears, and should understand with their hearts; and should be converted, and I should heal them."

For their ultimate salvation—the discovery of their immortality—men surrender their physical theories, turn away from chemical laboratories to the Divine Healer. We find the Great Physician, not by looking into matter, but by looking *through* it, until its veil disappears; and that which brings to us this transforming power of Spirit is the Christ, the Saviour.—*Coos County (N. H.) Democrat.*

## From Our Contributors.

### I Will Not Fear.

BY IDA FULLER MOORE.

WHAT though there be dark, lowering sky?
What though the waves leap mountain high?
On land or sea, I know that He,
Who ever ruleth righteously,
Is Lord of all in His vast realm;
"Our Father's at the helm!"

So when my thoughts foreboding seem
And heavy with a fearful dream;
Or turbulent as troubled sea,
And mighty billows compass me;—
Though error would the heart o'erwhelm,
"Our Father's at the helm!"

His angel whispers, "Peace, be still,"
And peace my heart doth straightway fill.
The waves are calm, the errors flee,
All things repeat obediently,—
The timid flower, the fearless elm,—
"Our Father's at the helm!"

### Prison Work.

BY M. A. O.

THINKING it may be of interest to the Field to know something of the results of the work in our state prison I send the enclosed letter from those who are making a study of Christian Science in the Washington State Penitentiary, located in Walla Walla. We meet these men each Sunday and read the lesson with them. They are each supplied with a copy of "Science and Health with Key to the Scriptures," the Bible, and the *Quarterly*. We read the lesson text responsively, then have silent prayer followed by the Lord's Prayer and its spiritual interpretation, from Science and Health, then the Lesson-Sermon, closing with the Scientific Statement of Being, repeated in unison. The men bring their books into the class and turn with the reader to each reference. They give their thought as to the topic of each citation, showing study and thoughtfulness.

Several of the men own a levant Science and Health and subscribe for the *Quarterly*. The writer of the enclosed letter has also a cloth edition of Science and Health to loan. As some of the men have no means to buy any of the literature, the class took up a collection and subscribed for one copy of the *Journal* and two copies of the *Sentinel*, and also pay for the Quarterlies. Two men have "Miscellaneous Writings," and several have "Unity of Good." All the men who have been in the class any length of time have overcome the use of tobacco. One man said, "I found in reading the 'little book' that I could not be a Christian Scientist and continue to use tobacco." In three days he overcame the habit which had held him for more than twenty years. He was also healed of a "tobacco heart."

This man was one of two who first began to read Science and Health; and Christian Science came to him just in time to prevent having one of his legs amputated. It had already been opened and the bone scraped, but at the time they decided to amputate the limb he knew a little of this Truth, and would not submit to the operation. An officer said to me, "He cannot live long, and will only be a burden. I wish he might obtain a pardon." Instead of being a burden he was healed through his study of Science and Health, and in place of spending so much time in the hospital has been able to attend to all his duties, and has

Digitized by Google

done much to interest others. Through him the Indian, who wrote the enclosed letter purchased the "little book" and was healed of consumption, before he came into the class. I do not think any one who has not done work of this kind can appreciate what a ray of light, hope, and comfort Christian Science brings into their darkened lives, transforming their hopeless faces and attitude into cheerful, smiling countenances,—indeed, giving them a "lively hope" as they grow in the understanding and demonstration of divine Love which "corrects and governs man" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 311). As soon as one man becomes interested and begins to get glimpses of what Christian Science really is, he becomes a missionary to some one else, and when they are sufficiently interested to study the lesson they have the privilege of coming to our service, and are furnished with the necessary books.

The children of the Sunday School have placed two copies of Science and Health in the library of the Penitentiary and a *Journal* and *Sentinel* subscription. On Easter Sunday one little girl of six years, requested the privilege of sending to this class some flowers "with thoughts of Love," which request was granted and the incident explained to the men.

Several of the men have been healed of physical ills; and although they have been joked and sneered at quite a good deal, the class has grown from the original one to between twenty and thirty, and there are some thirty more who are reading Christian Science literature. We have spoken to all the prisoners, and can have our turn with the other denominations who hold service in the large hall, whenever we wish. The warden has been very kind, giving us every privilege possible.

The time allotted for such a service is only about twenty minutes, which is too limited a time for our Lesson-Sermon, and we feel that our present method is of more help to the men, and that those who come to our service are really interested to know the Truth which sets free, as the other service, which is held at the same time, is short and the music attractive.

One young man, who has now been out a year, said, "The first time I looked in Science and Health I saw the word God, and closed the book, thinking that I had no use for such a book," but through the influence of his cellmate it was not long before he was studying and owned his own pocket edition, which he now continues to study.

Two of our workers go to the County Jail each Sunday and read the lesson and talk to the men there, and there have been some very good results. There are several in the class at the Penitentiary who first became interested while in the jail. Whenever one is released they always come to our reading rooms to express their gratitude and appreciation for this Truth which has shown them how to be free indeed.

One man from the jail said, "You came to us so differently from all other workers, as though you were not afraid that your God could not take care of you, and as though you knew you had something that would do us good, and you have, you have given us a hope, and I have come to thank you." This same man passing through the city a year later called to tell me of his mother, who is now a Christian Scientist, and of her being healed from the results of an accident.

Some of these men have sent the *Sentinel* and other literature to their families, and some have done absent work of healing, as well as helping their fellow prisoners. They all express their gratitude to Mrs. Eddy as they begin to understand that greater freedom which Science and Health reveals for all men.

The following is the letter enclosed.

Washington State Penitentiary.

*Editor of the Christian Science Sentinel:*—Inmates of this prison for a long time have felt it a privilege as well as a duty, to tell their fellow-beings through the columns of the *Sentinel* how God has blessed us and restored us to health through Christian Science. We are thankful to say that the present tendency of the warden is to treat us so kindly as to let the adherents of this faith come to our rescue. We know that this tendency will increase as time goes on, and the benefits of Christian Science are familiarized. It is something more than a year and a half since this wonderful seed of Truth was planted here. Praising God, we can say from the depths of our hearts, the seed is germinating. After years of tribulations, drifting to and fro, with the numerous and conflicting tides of materialism, we have been transformed by the one Principle, and united in the one hope of our faith. Now we earnestly desire to attain the high ideal of character which is set before us in "Science and Health with Key to the Scriptures" by the Rev. Mary Baker G. Eddy. Words are inadequate to express in any degree our deep sense of gratitude to the beloved Leader for the sacrifice and patient labor of love, which has blessed us. We shall not cease to give thanks and praise to her who has pointed the way to Life.

We value the knowledge of the Christ-teaching which has come to us through Christian Science. It has lifted us out of despondency and sin. It has healed our wounds, it has filled our hearts with joy hitherto unknown, it has made us different men, and life now has a meaning and a purpose to us. Its teaching is undoubtedly the true religion, bearing fruits of healing to the "broken-hearted, deliverance to the captives, and recovering of sight to the blind." We are truly thankful for the blessings of God, and we know that words cannot express half the gratitude we feel for our beloved teacher who has given us the glorious light of Truth, even here in the wilderness of material sense, and we can now clearly see our way out of darkness.

The writer is an Indian, and in these few lines feels inclined to give you a brief history of his own case. My bad reputation is largely due to my constant visits to bar-rooms, gambling-tables, and race-tracks. I tell you this because I feel I must be honest with the kind students of Christian Science who have done so much for me and my fellow-prisoners. I also add that my reformation is all due to the destruction of sin through the revelation of Truth, which has come to me through the book we all love, Science and Health. When my time expires, I shall come forth a reformed and a "free man," free, not only from behind the prison bars, but also loosed from the grave-clothes of superstition and fleshly indulgence, which had heretofore bounded me.

"To The Editor."

Bravest in war and peace
So may thy joys increase
Abundantly.
Boundless be thy reward
Say we with one accord
Praying our gracious Lord
To cherish thee.

H. C. T.

## Resolution.

BY FLORENCE K. RICE.

To preach was ever easier than to practise, but how much more good is accomplished when the preaching is preceded and accompanied all the way by proof, the right living which makes Truth manifest.

First we should desire to know the Truth, then let us resolve to *live it*. Resolve to give more attention to Spirit than we do to the body.

**Shall we serve Heaven**
**With less respect than we do**
**Minister to our gross selves?**

Should we not ask ourselves each morning this question?

Digitized by Google

What is to be the line of thought to-day that good results may follow? We often forget that our lives are wholly the result of thought, and that the measure of our happiness depends upon our mental attitude.

Above everything else, let us resolve to think good thoughts, to love good, to do good, to be good, to see good, and to feel good toward every human being. And how can this wealth of goodness become a part of us?

By resolution,

> Assert thyself; rise up to thy full height;
> Shake from thy soul these dreams effeminate,
> These passions born of indolence and ease,
> Resolve, and thou art free.

We must remember that the body responds to thought, and that health is ours in proportion as our thoughts are governed by Truth. We often hear the remark that he or she is in "poor health," when there is but one quality of health, and that perfect. Why do we blunder through this beautiful world calling it a "vale of tears"? Simply because we do not realize our birthright sufficiently to subdue that over which God has given us dominion.

As we are governed by what we believe, how necessary it is to think forcibly enough to believe that which is true, and, ignoring outward appearances, bring our lives into accord with all that is real. "There is courage enough in every soul to overcome fear; there is love enough in every heart to bid peace reign in place of strife; there is light enough always to overcome darkness; why need we tarry longer in a helpless state? We live in a new world when fear is abolished. Look within.—begin the work now, and the voice to strengthen you will whisper, 'Lo, I am with you alway.'"

## Freedom.

BY FRANCES H. COIT.

"Ye shall know the truth, and the truth shall make you free."—Christian Science comes to proclaim freedom to the citizens of the world, to set the captive *free*, and to break the bands of slavery to the dreary thraldom of materialism. No language can express the sweet peace and joy which breaks upon our enraptured senses when we fully realize the grand verity that we are indeed and in truth *free*.

When Abraham Lincoln issued the emancipation proclamation, the slaves, in some instances, were apparently unable to understand the word freedom, but were seemingly dazed by the great light which had dawned upon them, and it was necessary to arouse them and repeat to them: Slavery is abolished! you are free! And so we are captives still, and know not the meaning of the words of Jesus: "Go ye into all the world." "Preach the Gospel." "Heal the sick." "Cast out devils," and "The Kingdom of Heaven is at hand!" until we come into an understanding of the Truth, as taught in Christian Science. In proportion as we understand and obey the divine command, are we blest with health, happiness, and holiness.

I were ungrateful not to mention my own case of healing of a very severe case of acute indigestion and gastritis. From repeated attacks I had become very much emaciated, unable to partake of any solid food, and, to mortal sense, about to pass away, when a Christian Scientist was summoned. I immediately began to improve, and in three weeks was entirely healed; but the physical healing is not to be compared to the spiritual uplifting which is simply indescribable, and to me is a foretaste of Heaven.

> He prayeth best, who loveth best
> All things, both great and small;
> For the dear God who loveth us,
> He made and loveth all.
>
> COLERIDGE.

# Testimonies.

### Found God a Present Help.

I do not presume to have a message for those of ripe experience in Christian Science, nor for those who, from their hard-won citadels of Truth are directing the battle against the errors of mortal mind. I think of those countless thousands of well-meaning men and women who are struggling to-day as I was struggling a year ago, surrounded by an environment of prejudice and ignorance of the Truth, which is the unknown barrier between them and present happiness. To such as these, I long to say in words of soberness and truth, "Ho, every one that thirsteth, (and who does not?) come ye to the waters, come ye to Christian Science, and drink of the water of life."

I have been benefited in every way by the acceptance of the teachings of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy; and, in common with thousands of others, I desire to testify to a deeper sense of gratitude to her—to this benefactor whom I have never seen—than to any other human being with whose life my own has been brought into spiritual contact.

I would say to all who will hearken to a word spoken in solemn truth, I have found that which enables me to *know* that "God *is* a present help in trouble." And by the word "trouble" is meant every one of those ills which form the daily burdens of humanity,—sin, sickness, worry, debt, poverty, lack of opportunity, lack of employment. Bearing in mind two texts of Holy Scripture, and keeping before one the written messages of Mary Baker Eddy as found in Science and Health and "Miscellaneous Writings," one has what seems to my experience to be an unfailing guide to all needful success. The two texts to which I refer, and which Science teaches us to understand in a spiritual but practical manner, are these:—

"But seek ye first the Kingdom of God, and His righteousness; and all these things [what ye shall eat, and wherewithal ye shall be clothed, etc.] shall be added unto you." "Not slothful in business; fervent in spirit; serving the Lord."

Although thirty years a worker in the church, I never could demonstrate the truth of those two texts, until, less than a year ago, I began the study of Christian Science. The revelation of Truth in other lines of thought has been equally uplifting.—E. H. GILKEY, Columbus, O.

### Healed Physically and Morally.

I became interested in Christian Science in February, 1895. A Scientist called on us frequently, and during the general conversation he always managed to touch upon Christian Science. To please him I promised I would read "Science and Health with Key to the Scriptures," provided I could borrow it, as I did not care to spend three dollars for a book of that kind. The first night I had the book I surprised myself very much by reading till the morning hours, something that I never before had done. I became so interested that I found in a few weeks I was able to put off my glasses, which I had worn constantly for three years for astigmatism. After I began to read Science and Health our first child was born, naturally under the care of a doctor. Although I had only been reading for about four weeks, it appealed so to my reason that my wife agreed with me to discharge the doctor and let a Scientist take charge of her case.

My wife had been up and around, but was ordered back to bed for another three weeks, all the while suffering greatly, and it was this suffering, together with my slight understanding of Christian Science, that caused us to do this. It is enough to say that the suffering soon ceased, and the three weeks was reduced to three days.

Digitized by Google

I had been subject to headaches and biliousness for ten years, and these complaints have both disappeared.

I was also a slave to tobacco, but I soon found that my cigars did not taste as well as they had, and in a short time I lost the taste for tobacco entirely. I had used cigars for eighteen years, and during that time I had often tried to break off the habit, but was never successful.

Words cannot express my gratefulness to our dear Mother for the Truth as she has taught us in our text-book, Science and Health, and whereas before I was unwilling to spend three dollars for the book, I now have three copies, and if I were unable to replace them, I would not part with them for any price.

JUSTUS STRAUB, Germantown, Penn.

### Received the Blessing.

It was not my privilege to attend the annual communion service, but the thought came to me as given in "Miscellaneous Writings" by Mary Baker G. Eddy, page 150, "Space is no separator of hearts. Spiritually, I am with all who are with Truth, and whose hearts to-day are repeating their joy that God dwelleth in the congregation of the faithful, and loveth the gates of Zion."

So I listened, heard the voice of Love, received the message, and was blessed in the consciousness of His abiding presence, which filleth all space.

The following Sunday, in our own dear church (Fourth Church of Christ, Scientist, of Chicago) we had our first communion service. I thought of words recently spoken. "The communion service is on and will last forever." I said, Surely this is a foretaste of heaven, for Love reigned supreme, and I knew all had shared the blessing, for only Love was expressed.

In 1893 I first began to look into Christian Science, but I was very slow to grasp its meaning, and for three years I drifted, but, thank God, the word was finally voiced to me, and I awakened.

It was my privilege to sit in a class taught by one of Mrs. Eddy's loyal students. Since that time I have advanced (sometimes my progress has seemed slow) in the knowledge of the Truth as contained in our text book, "Science and Health with Key to the Scriptures," demonstrating the power of Love in the destruction of sin and sickness. I have had many beautiful demonstrations for myself and others. I am striving daily for a clearer perception of Truth and a deeper realization of Love, that they may be reflected in my life. I desire to help others gain the Truth as revealed in Christian Science, and so prove my loyalty to our Leader and Teacher, Rev. Mary Baker Eddy.

MRS. ANNIE F. LONSDALE, Chicago, Ill.

### An Expression of Gratitude.

I have received so much benefit from the following letter, as well as other letters written by this little girl, that I feel I want to send it to the Publishing Society that others may receive good also.

The good thought of love, trust, and obedience is so clearly brought out that it showed me how much wrong sense I had to overcome before I could fall in with the true. We truly must become like little children before we can enter the kingdom of heaven.

MRS. BLANCHE SHERMAN, New York, N. Y.

Boston, Mass.

[illegible]

I was born with an inherited turn of the eye. I have been treated by doctors, who said there was no cure for it unless I underwent an operation, and I would have to wear glasses all through my childhood. But I have been cured through Christian Science. I have tried to realize, as you told me, that my sight is spiritual and not material. By working hard I have learned to overcome many things.

I now own one of the best copies of Science and Health written by our dear Mother, Mrs. Eddy, and have joined the Mother Church, as I am now twelve years old.

With love

SARAH J. BERRY.

### Healed through the Study of Christian Science.

During my vacation last year I was working with a Christian Scientist. He talked to me about Christian Science, and let me read some *Journals*. I became very much interested in it, and found it to be the Truth.

It was about the middle of September when I first went to a Christian Science church. I enjoyed the services very much, and since then I have gone regularly.

For three years I had suffered from a double rupture, but when I came to understand the Truth I saw that I did not have to be in bondage, so I took off the truss, and now I do not suffer the least from the rupture. I also had a trouble, caused by the mumps, which I had had since I was three years old. The doctors said it could not be cured until I was twenty-one years old (I am now fifteen); but since I found Christian Science, I am as healthy as any one can be.

Error tries to creep in, but the understanding of Truth destroys all error.

I am very thankful for what this blessed Truth has done for me.—CHAS. DAHL, Brooklyn, N. Y.

### The Power of Truth Demonstrated.

Not long ago a proof was given me of the power of Truth when a member of the household came in and said to a student, young in Science, that he had overturned a bottle of carbolic acid on his arm, while cleaning out a dark corner in the cellar. He had tried to demonstrate for himself, but the pain was so severe and it was blistering so fast that he felt he must have help.

The Scientist said to him, "The spirit quickeneth, the flesh profiteth nothing." She gave him a treatment, and in fifteen minutes saw him again. He had kept at his work, and said he had almost forgotten the accident, the pain having entirely disappeared.

The burn healed very rapidly, so that by night the only evidences of a burn were several spots which looked like pink stains. He pressed his arm with the other hand, and said there was no soreness there whatever.

J. F., Minneapolis, Minn.

### Healed without an Operation.

I wish to add my testimony to those appearing in the SENTINEL and to tell of my gratitude and restoration to health through Christian Science. I suffered for ten years with a lump in my left side. The physicians called it a floating tumor, and pronounced my case incurable without a surgical operation, to which my husband and parents objected. I had given up all hopes of ever being well, when a Christian Science healer visited our neighborhood and took my case. I was under his treatment about one week, and no one can imagine my joy in finding my trouble gone. To-day I am thankful and cheerfully say I am well and cured through Christian Science.

MRS. MARTIE WATSON, Kansas City, Mo.

## Religious Items.

Rev. Julian K. Smyth, in the *New Church Messenger* says: "Not to cry 'Peace, Peace!' where there is no peace; not out of mere weakness or good nature pretend that all is well when there is so much that is ill; not in weak sentimentality to declare that God is so good that He will just pet men with soft hands into heavenly states of life—that was not the mission of the Son of Man, but rather to awaken in men a consciousness that with his help it is possible for them to take the sword of the spirit and overcome the evils that would hold them in slavery, and enter deeply and harmoniously into the varied powers and faculties of their natures."

Among the editorial brevities in the (Unitarian) *Christian Register* appears the following: "In the *Preacher's Magazine* we find the question, 'Is there, then, any punishment left for us to bear?' The answer given is: 'No. He [that is, Jesus] has borne all.' Can any statement be more opposed to the facts of experience? What repentant sinner ever finds himself released from the penalties of his wrong-doing in this life? If the penalties are not removed in this life, what reason is there to suppose that in any life they will be removed until they have done the work for which they were appointed?"

The *Universalist Leader* says that one of its subscribers has proposed to deposit with the Universalist Publishing Society the sum of $50 as a subscription endowment fund, the income of which will pay for the paper to be sent to her during her present life, and thereafter to go on while time and the publication last, as a missionary subscription. The publishers urge that two thousand loyal Universalists pay twenty-five years' subscription in advance at two dollars per year on the same plan, and thus give the *Leader* a subscription endowment of $100,000.

William Elliot Griffis, D.D., says, in the (Baptist) *Examiner:* "The Scribes made mere ink and paper the word of God, the Pharisees substituted cups, platters, and garden herbs for the real thing in religion. Jesus saw the priest leaving his true business, which was to interpret God to men in worship, and fossilizing on the mere facts—things done and often dead, or 'stranded on the shore of the oblivious years.' Jesus as a prophet lived and proclaimed the truth which was, and is, and is to come, ever interpreting afresh God to man."

Discussing the small value of argument as a means of convincing any one of the truths of religion, the (Baptist) *Watchman* says: "We sometimes wonder that the truths of Christianity were not stated in the gospels in the form of intellectual propositions. There is something elusive in the biographic form in which the story is cast. You always feel that your interpretation of the incident you are studying may not be the ultimate one, and that the parable or the miracle may contain in itself unsuspected depths of meaning."

"In our strivings for the betterment of life, and while engaged in the search after happiness, we should keep clearly in mind that individual happiness is strictly a personal matter," says the *Universalist Leader*. "It has its seat within; outward things may increase it, but it must be of one's own identity in its actual existence. . . . Forced smiles are often bitterer than tears; and assumed gladness and gayety are like music and dancing at a burial. Happiness must well up from fresh and full fountains deep in the heart."

A writer in the *Christian Register* says: "What terror is it that fills you when the hands reach forward to some deed of evil, and, when that deed is done, what cruel knife is it that rends your inward parts, and makes you bleed and wail and weep? The righteousness of God makes its appeal to man's conscience, the holiness of God speaks to the instincts of holiness in men and women. The great Judge stands in every heart, and what is best in you perceives: the moral man perceives that God is a righteous God."

The New York (Methodist) *Christian Advocate* says: "If love be the inward temper, loving service is the external badge of the true child of the kingdom. Every one having a right estimate of himself is sure of having a right estimate of others, and of his relation to others and to God. Such an estimate will inevitably lead to swift obedience to the will of God and the gracious desire for the good of others."

A writer in the *Homiletic Review* says: "The eminent ability of Henry Ward Beecher in the pulpit was largely due to his knowledge of men and of the thought adapted to the occasion. He was pre-eminently a psychological and anthropological preacher, rather than theological."

The New York (Methodist) *Christian Advocate* has the following: "Greatness in a worldly sense may be an accident, but in the spiritual sense it only follows desert. The world honors a man for what he does; God honors a man for what he is."

"Religion is, not by accident or chance, but by its own very nature, the happiest of all lives. Just so far as it ever grows sad and gloomy, it grows irreligious," says the *Standard*.

Absence of occupation is not rest;
A mind quite vacant is a mind distress'd.
WILLIAM COWPER.

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healin the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent in as early as possible. They *must* be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

## Items of Interest.

### Political and Governmental Notes.

The population of Cleveland, O., according to the recent census, is 381,768, against 261,353 in 1890, an increase of 120,415 or 46.07 per cent. Cleveland now ranks as the largest city in Ohio, the population of Cincinnati being 325,902. The new census gives Toledo a population of 131,822, against 81,434 in 1890, an increase of 61.88 per cent, and Columbus 125,560, against 83,150 in 1890, an increase of 36.01 per cent.

The population of Greater New York, as indicated by the count just completed at the census office, is 3,437,202. This includes the population of the boroughs of Manhattan and Bronx, previously announced, and those of Brooklyn, Richmond, and Queens. An approximate estimate of the increase since 1890 shows it to have been 37.9 per cent.

The State Department has received advices from Minister Storer at Madrid to the effect that a treaty of amity, commerce and navigation, and general intercourse has been signed provisionally by the minister of state and himself. This practically marks the last step in the complete restoration of relations between Spain and the United States.

Omaha, Neb., is the first city thus far counted in the twelfth census to show a decrease in population during the past decade. The count of the population of Omaha, just completed, shows 102,555. The population in 1890 was 140,452. This indicates a decrease in ten years of 37,897, or 26.98 per cent.

The census office gives the population of Philadelphia as 1,293,697, against 1,046,964 in 1890, an increase of 246,733 or 23.57 per cent. Philadelphia ranks third in population among the cities of the United States, following New York and Chicago.

William J. Bryan received official notification from the Populist party of his nomination for President in Topeka, Kan., August 23. At the same time he was notified of the indorsement of his candidacy by the United States Monetary League.

A floating post-office, which is to be a substation of the San Francisco office, is to be established in Chinese waters for the accommodation of the American soldiers and legation people. This post-office will have its base at Nagasaki, Japan.

Boston's total assessed valuation of May 1, 1900, is $1,129,130,762 as against $1,089,808,120 last year, showing an increase in valuation of $39,322,642. The gain in real estate is $35,713,400 and in personal estate the gain is $3,609,242.

### Foreign News.

In his correspondence with the State Department Consul General Osborne says that the new electric underground railway in London, which was recently completed at a cost of $17,032,850, has proved an immediate success. As but one fare is charged, the grades or classes of carriages (first, second, or third) are abolished, and there is no longer any distinction of passengers. The newspapers call attention to the fact that the new system has not only emptied the omnibuses, but has actually thinned out the crowds on the pavement.

Since the capture of Pekin by the allied forces, Li Hung Chang has been importuning all the powers concerned to appoint peace commissioners and permit negotiations to be opened for an amicable settlement. The United States has replied in substance that it is willing to begin peace negotiations, but not until it has proof that there exists a responsible government in China, and that it has power to maintain order throughout the empire.

A message from Minister Conger, dated August 19, announced that the allies then occupied the entire city of Pekin, except the imperial palace, and that was expected to be taken immediately. The Japanese, Russians, British, Americans, and French had divided the city up into districts for police purposes. The message stated that no representatives of the Chinese government were in sight, the imperial family and the Chinese army having fled.

Among the foreign commissioners figuring in the list of decorations conferred by the Legion of Honor is United States Commissioner-General Ferdinand W. Peck of Chicago, who is appointed a grand officer of the legion.

An automobile service has been started between the Senegal and the Niger. The automobiles are of French make, and are run by Frenchmen.

### Industry and Commerce.

A New York financial paper announces that a great combination has been formed to control the bituminous coal trade, including the coal mining companies controlled by the Pennsylvania Railroad Company, Baltimore and Ohio Railroad Company, Norfolk and Western Railroad Company, and the Chesapeake and Ohio Railroad Company. The combine is said to have apportioned the markets of the United States among the various mining concerns and assigned to the Baltimore and Ohio Railroad Company the business of exporting coal to foreign countries. For the purpose of shipping coal economically it is stated that the combine will build a fleet of enormous coal ships of the size of the Kaiser Wilhelm der Grosse.

The National Negro Business League held its convention in Boston last week. Booker T. Washington, the great negro teacher, leader, and benefactor of his race, started the movement to encourage negroes to engage in business for themselves, which movement this organization represents. About three hundred delegates were present. Mr. Washington was elected president. The convention was addressed by Mayor Hart of Boston, and William Lloyd Garrison, son of the great abolitionist.

About forty nations possess trading ships of one kind or another, and as the supply increases year by year the total is gradually assuming colossal dimensions. In the middle of 1899 the vessels numbered 28,180, representing a tonnage of 27,673,528; now the respective figures are 28,422 and 29,043,728. Close on fifty per cent of this enormous tonnage is owned by Great Britain and her colonies. The United States is second in both the number of ships and tonnage.

The production of iron ore in the United States for the year 1899, according to the annual report of the United States geological survey, amounted to 24,683,173 long tons, an increase of 5,249,997 tons, or 27 per cent, over 1898. The records for 1898 and 1899 represent the largest output of iron ore mined in any country in one year, the nearest approach being a total of 18,062,040 tons mined in 1880 in England.

Newspaper reports say that by a deal which it has just closed, the Carnegie Company will control the iron production of the Lake Superior region for the next fifty years, and that it has made a contract with the ore companies calling for a total of ten million tons of ore a year. Last year the Carnegie Company produced six million tons from its own mines.

The product of honey in Evansville, Ind., is said to have reached such a magnitude that people are beginning to complain of the swarms of bees. The city authorities are considering an ordinance which shall require owners of hives to move them beyond the city limits.

It has been officially announced that the cars of the Metropolitan Street Railway of New York, on Twenty-Eighth and Twenty-Ninth streets, will be running with compressed air as a motive power within a few weeks.

Announcement is made of the organization of the National Starch Company with a capitalization of $13,000,000, of which $10,000,000 will be issued.

### General News.

An exchange says: "Much of the hesitation in Chinese diplomacy results from the canon that every minister of state is personally responsible for the advice he gives. There is also a rigid point of etiquette that no one shall speak first. The first of these makes the minister hesitate to give advice, and the second makes them all speak at once; and it is said that the activity of Rugby forwards with the football is nothing to be compared with their dexterity in passing questions from one to another."

Professor Du Bois, a negro alumnus of Harvard, gives the following statistics as to the effect of the higher education upon those of his race who have enjoyed it. He has found 2,414 negroes, including 235 women, who have taken degrees from institutions of every sort. All of these, so far as he can ascertain, have been self-supporting, and letters from half of them report an average assessed valuation of real estate of $2,500.

The *Catholic Citizen* says: "Humbert enjoyed the distinction of being the most highly insured king in the world. He carried policies aggregating $7,000,000 and had $20,000,000 invested through the Rothschilds. He is said to have saved most of this out of his civil list of $2,620,000. It is probable that his private income amounted to $1,000,000 a year."

Rosewood and mahogany are so plentiful in Mexico that some of the copper mines there are being timbered with the former wood, while mahogany is used as fuel for engines.

In New York City there is a maximum density of one thousand residents to the acre, and this is more than double that of the most congested cities of Europe.

Mount Edgecomb, in Alaska, has one of the largest craters in the world, being five miles in diameter, and filled with dense forest 2,000 feet below the rim.

There is $50,000,000 worth of United States Government property, as appraised locally, within the boundaries of the Greater New York.

The island of Cuba, with her exhibit at the Paris exposition, has achieved a notable success. The exhibit received 140 prizes.

The State of Washington has decided to publish all the text-books in use in its public schools.

## Concord's Old Home Day.

### Address by Governor Frank W. Rollins.

NEW HAMPSHIRE'S second celebration of Old Home Week was a success in every respect. Friday, August 17, was Concord's great day, and it was a fitting climax to the week's observances. Addresses were delivered by Governor Frank W. Rollins and United States Senators, William E. Chandler and Jacob H. Gallinger.

Governor Rollins spoke in part as follows:—

We are gathered here to celebrate the second Old Home Week. Last year it was an experiment—this year it is an established fact, an established custom or institution. I need hardly say that it is a matter of deep gratification to me that the idea has met hearty recognition, and that it bids fair to do so much for New Hampshire. We were more than successful last year in calling back to the old hearthstones those who had wandered afar and joined their fortunes to those of other commonwealths. Every town received its quota of returning children with wide-open arms, and I venture to say that these occasions were the happiest and merriest, as well as the saddest, ever celebrated in any of these ancient hamlets since they were hewn and carved out of the primeval forest.

✙

Not all of those who returned to us on Old Home Week went away again. There were some here and there to whom the sight of old friends, the handgrasp of early associates, the visits to boyhood's scenes, acted like a magnet, and they were not able to withstand the pleadings of their renewed youth. They have come back to us permanently; have taken up the old homestead. I could give you a long list of such cases, and a longer one where directly and indirectly the celebration has resulted in good to our towns. And what shall we say of the good brought to the individual, to our own people? Who can tell of the renewed hope, the renewed courage, the broader outlook, the higher ideals, inspired by the gentle optimism of love and kinship? We learn that we are not forgotten, that the pulse of all those who are scattered over the world still beats true to their native state.

Dr. Tucker said last year that every state holds sovereignty over its kindred wherever they may go. It seems to me that this is particularly true of New Hampshire. Am I deceived, am I over-partial in thinking that the son of New Hampshire loves his mother state more fervently than the son of any other state? I am not deceived; I am not over-partial; I honestly believe it is so. And it is not quite clear to the outsider why it is so. Most of the children reared in this state have been reared among scenes of toil, their lives were not all rosy as the dawns which swept over the eastern hills as they drove their cows to pasture. Life was a struggle, but sweetened by loving counsel, sage advice, and wholesome example. Then, too, while the soil was cold and unready to give up its secrets, life was lived amidst the most beautiful scenery and surroundings. They became art lovers and idealists without knowing it, and the pictures of those early scenes and surroundings are indelibly photographed on their brains, and whenever they are brain-weary or discouraged or ill, there comes sweeping back this picture, and their feet turn involuntarily toward the old hill farm. There, they know, is peace, there is balm, there is healing. There is where they sought the protection of mother-love, and the soothing hand, when o'erwhelmed by childhood's pains and troubles, and there still, although the real mother may have long since passed to her well-earned rest, is Mother Nature ever ready to soothe the wanderer and nurse him back to health and vigor. Home and mother are the two sweetest, tenderest words in the English language, more dear to all true men and women than all other words, and the two are intertwined and indissolubly blended. You cannot think of one without the other; so when we ask you to come home, it is your mother's voice; and though she may not be here to greet you, the sweet memories and dear recollections will partially take her place,

> And the night shall be filled with music,
> And the cares that infest the day
> Shall fold their tents like the Arabs,
> And as silently steal away.

One of the benefits to be hoped for, and indeed already accomplished, in some degree, is a re-awakening of pride. Now pride is a great thing, a great incentive, a great preventive, whether it is pride of ancestry, pride of locality, pride of state, or pride of accomplishment. A person, a community, or a state without pride seldom amounts to anything. Pride in the individual incites to emulation of the meritorious acts of one's predecessors, prevents bad habits for fear of tarnishing the family name, and is a constant check and "exciter." In a community it leads to local improvement and municipal advance; it builds roads; it cares for the trees; it provides libraries and schools, and it watches over the fame of its children. In the state it bands men together for defence, or it leads them in the path of progress, and it arouses a healthy rivalry with sister states.

✙

One of the chief troubles with some of our oldest country towns of late years has been that their pride was dormant, sleeping. In several instances Old Home Week has aroused this pride, and the results have been magical. The true-born Yankee is as full of pride and independence as he can stick, and as long as it is active he and his community are pretty sure to go right; but let it get rusty and the results are direful. The coming back of so many old residents to compare the present with the past, to encourage, to incite, to give the helping hand, has given this pride a tonic, and stiffened some backbones which had grown lax and flexible. Instead of waiting to see what will drop into their laps, some of these towns, like New Hampton, are reaching out eagerly to grasp the rich fruits which lie so readily at hand, only waiting to be plucked.

The world is ready to cheer on and assist any one who is willing to work cheerfully himself. If we sit down and simply bemoan our present troubles, and point sadly to our glorious past, we sha l get little help or sympathy.

Copyrighted, 1900, by Mary Baker G. Eddy.

Digitized by Google

It is a world of activity, and if we would keep abreast of the times, we must be up and doing. We must watch the trend of events; we must seize our opportunity as it gallops by, and, springing into the saddle, ride to achievement. And I might add that opportunity is galloping by our New Hampshire towns with their matchless scenery and superb summer climate all the time.

The business man who succeeds to-day must push and hustle. He must advertise and spend money, or he is "left at the post." It is true, also, of states and towns. What would I do? I would spend a million dollars in good roads, distributed over a term of years. I would give the fish and game commission $50,000 a year if necessary, rather than $8,000. I would make a park of the White Mountains and of Lake Winnepesaukee and protect them from ruin. In other words, a liberal expenditure now is the greatest economy for the future. The state sold thousands of acres of timber land a few years ago for $25,000. What is it worth to-day? Hundreds of thousands. We are throwing away an opportunity not to be regained if we don't act soon. The purchase of this timber land for a park is a good investment, if nothing else.

During this week, from where the white waves lap the sands of Rye to the pine-clad forests of Canada, from the winding of the Saco to the intervales of the Connecticut, there is merrymaking and glad re-union. Old friends are recounting the thousand incidents of childhood, valueless to the world, priceless to them. Old places see again the well remembered faces. Beside the ocean, in the cooling shades of hillside groves, under the whispering pines of the lake shore I can see them in my mind's eye. The past is renewed, the present discussed, and the future predicted.

The late lamented Charles H. Bartlett eloquently said, "It is often said of all New Hampshire born that they carry New Hampshire thoughts, ideas, and principles with them wherever they go. No child of hers ever roamed so wide as not to feel in his heart of hearts that he was still within the shadow of her mountain peaks. Out of her borders many have gone to wage life's battle, but never yet one out of her heart. Behind the departing she shuts no door. She keeps the lamp burning in the window, and builds her beacon fires on all her heights as a standing, loving invitation to come back again when ambition has had her fill to be registered anew in the ever swelling catalogue of her precious jewels."

The homes of New Hampshire are the true source of our greatness. It is from these Christian homes that have gone forth the thousands of men whose names are on the country's scroll of fame. Their success is due in no small degree to the moulding of character at the hands of God-fearing, God-loving parents; to the habits of industry and thrift inculcated by those who knew what hardship and self-abnegation meant; and to that respect and reverence for holy things and constituted authority now frequently noticeable by its absence. If we would continue to pour forth this stream of strong, fearless, masterful manhood, we must look to the homes—we must keep our standards high, our ideals pure—we must not allow the waves of scepticism and materialism to swamp our natural inheritance of steadfastness to truth and our God. Let us not be ashamed to acknowledge our reliance on a superior being, our belief in the beautiful teachings of Christ. Let us recognize our dependence, and let us support the church, which is the backbone of the home. Instead of spending our time in denominational strife, let us concentrate our efforts. If the town is too small and poor for several churches, join hands in the hearty support of one, throwing aside non-essentials of church government, if necessary, for the true essentials, the heart and core of Christ's teachings through which "we live, and move, and have our being."

## Six Gutenberg Bibles in New York.

In honor of the five hundredth anniversary of the birth of John Gutenberg, or Johann Gensfleisch of Gutenberg, the inventor of typography, a celebration was begun on June 25 in Mentz, Germany. The *Saturday Review* therefore gives a short description of the various examples of Gutenberg's press which are to be found in this city in public and private book collections. Outside of New York, the *Saturday Review* is not aware that Gutenberg's press is well represented in the various libraries throughout the country, the only specimen of his work being the "Catholicon" of Balbus de Janna, which the inventor and first practiser of typography is thought to have printed at his second press in 1460, a copy of which is one of the treasures in the magnificent library formed by John Carter Brown of Providence. The latter is the Nodhull copy, which fetched £310 in London in 1886.

At the present time there are in New York six copies of the Bible, which Gutenberg printed at Mentz between 1450 and 1455, without including the Kamensky copy of the Old Testament portion, which Bernard Quaritch bought for £760 at Sotheby's in February, 1884, and sold to Theodore Irwin of Oswego, whose collection was purchased by J. Pierpont Morgan this spring. This showing, the *Review* is confident, cannot be equaled by any other city in the world. First in the list, in order of time, comes the Wilks copy on paper, for which Wiley and Putnam paid £500 in London in 1847, securing it for James Lenox against the competition of Sir Thomas Phillipps, the famous English collector. Henry Stevens's "Recollections of James Lenox" tells how Mr. Lenox at first considered his treasure a bibliographical white elephant, refusing to take it out of the Custom House. Later the distinguished bibliophile thought better of his purchase, which may be now seen at the Lenox Branch of the New York Public Library.

In 1870 an imperfect paper copy of the Gutenberg Bible was discovered in the Archiv of the Predigerkirche of Erfurt, and appeared for sale in Berlin at 4,000 thalers (about $3,000). It was purchased by Henry Stevens for George Brinley of Hartford, Conn.; the seventeen leaves which it lacked were supplied in facsimile from the British Museum copy, and in 1881 Hamilton Cole paid $8,000 for it at the third Brinley sale. Mr. Cole sold it afterward at private sale for $15,000 to the under bidder at the Brinley sale, Brayton Ives. At the Ives sale, in 1891, James W. Ellsworth paid $14,800 for the book and removed it to Chicago. Last year, however, it came back to New York, with Mr. Ellsworth's many other fine book possessions.

The fine copy on vellum which J. Pierpont Morgan secured about two years ago makes the third in the present list of Gutenberg Bibles owned in New York. The fourth copy is in the library of the General Theological Seminary, over in Chelsea Square. This copy, which is on paper, fetched £3,900 at the Thorold sale, in London, in 1884; was resold for £2,950 in 1898 at the Rev. William Makellar sale, and in the spring of 1899 was purchased for the Chelsea Square collection, Dean Hoffman paying Quaritch about $15,000 for it.

The fifth and sixth copies now in New York are in the collection of Robert Hoe. He and Henry Perkins are probably the only collectors in the history of the world who each possessed two copies of the Gutenberg Bible, one on vellum and one on paper. The former, indeed, came from the Perkins sale, in 1873, when Lord Ashburnham gave £3,400 for it, Quaritch paying £4,000 for the same copy when it was resold at the first Ashburnham sale, in 1897. At the Perkins sale there was considerable discussion about two leaves said to be in facsimile, but one of

Digitized by Google

these could not be discovered at the time and the other is very doubtful. It is, nevertheless, an extraordinary copy of an extraordinary book, the first book ever printed and the glory of Gutenberg.

In 1454 or 1455 the world's first press passed out of the hands of Gutenberg into those of John Fust and Peter Schoeffer, who then printed the Psalters of 1457 and 1459 (no copies of which are in this country) and the "Durandus" of 1459 (of which the Lenox Library possesses two lovely copies). About 1460 a new press was started in Mentz, at which was printed the "Catholicon" of Balbus de Janna, which was the fourth book printed with a date. This rival press, which produced the dated "Catholicon" and three small undated books, is regarded by most people as Gutenberg's last effort, after his defeat by Fust and Schoeffer, and as the result of an attempt to retrieve his position with diminished resources. In the Lenox collection there are two copies of the "Catholicon," which is one of the six books produced in the first decade of typography that must be held to surpass in interest anything accomplished after 1460. There is also a copy in the fine collection of early printed books formed by the well-known authority on the subject of incunabula, Gen. Rush C. Hawkins. Another copy, we believe, is in a private collection in Brooklyn. This is the famous Sunderland copy, which fetched £285 in 1881. Rebound by William Matthews, it was resold at the Ives sale in 1891 for $1,700.

## The True Grandeur of Nations.

Originally too limited in operation and too short in duration, the Truce of God must again be proclaimed for all places, and all times—proclaimed to all mankind and all nations.

Recognizing those two transcendent ordinances of God, the *Law of Right* and the *Law of Love*,—twin suns which illumine the moral universe,—why not aspire to the true glory, and, what is higher than glory, the great good, of taking the lead in *the disarming of the nations?*

. . . . . .

It is a beautiful picture in Grecian story, that there was at least one spot, the small island of Delos, dedicated to the gods, and kept at all times sacred from war. No hostile foot ever pressed this kindly soil, and citizens of all countries met here, in common worship, beneath the ægis of inviolable Peace.

So let us dedicate our beloved country; and may the blessed consecration be felt in all its parts, everywhere throughout its ample domain.

The Temple of Honor shall be enclosed by the Temple of Concord, that it may never more be entered through any portal of war; the horn of Abundance shall overflow at its gates; the angel of Religion shall be the guide over its steps of flashing adamant; while within, in its happy courts, purged of Violence and Wrong, Justice, returned to the earth from long exile in the skies, with equal scales for nations as for men, shall rear her serene and majestic front; and by her side, greatest of all, *Charity*, sublime in meekness, hoping all and enduring all, shall divinely temper every righteous decree, and with words of infinite cheer inspire to those deeds that cannot vanish away. And the future chief of the Republic, destined to uphold the glories of a new era unspotted by human blood, shall be first in Peace, first in the hearts of his countrymen.

Extracts from an oration delivered by CHARLES SUMNER before the authorities of the city of Boston, July 4, 1845.

---

The word "reverend" occurs but once in the Bible. "He sent redemption unto his people: he hath commanded his covenant for ever: holy and reverend is his name." Psalm 111 :9.

# Selected Articles.

## Answers Dr. Fitch.

No one will question but that Mr. Fitch thinks he is honest, just, and very broad when he says he has been an unprejudiced reader of all he has seen on Christian Science. A careful reading of his article will show that he does not accord to others the same sense of honesty that he claims for himself. He quotes from Judge Ewing's lecture, in which the judge states that "thousands of absolute cures" have been made in Christian Science, and yet he would have Mrs. Eddy, Judge Ewing, "or some one recognized by her as a representative of Christian Science," come to Dalton and make public demonstrations before he will accept it as being "New Testament religion." Jesus said: "Blessed are they that have not seen, and yet have believed."

Judge Ewing, before coming into Christian Science, was a national character. Within the last year he has addressed as many large and intelligent audiences as any man in the United States, with possibly one or two exceptions. His statements would not be questioned upon any subject outside of Christian Science, but here, as it has ever been, the old religious beliefs yield slowly. Jesus never hippodromed the country with spectacular performances. He healed those that came or were brought to him. Jesus evidently shrank from any public display of his power. He was continually "going to the other side," "disappearing from their midst," "going apart in the mountain to pray." If Mrs. Eddy, or any one of her followers were to accept the challenge to a public garish, dramatic performance, which Mr. Fitch wishes to have in his church, they would be doing just what Jesus said they should not do—"tempt the Lord thy God." On many occasions he said, "Go, and tell no man."

In the Christian Science churches, during their services, wonderful healings have taken place: cripples have been known to leave their crutches in the churches; the deaf have had their hearing restored; the blind received their sight; aches, pains, and disorders of every name and nature have been dispelled. But why should a public demonstration be required of Mrs. Eddy? Last year at the Wednesday evening meeting in Tremont Temple, Boston, which followed the Annual Communion service, where there was an attendance of about thirty-five hundred, Judge Hanna requested all who had been healed by Christian Science to stand up. It was estimated that over half of those in attendance arose. Then he said all who have been healed through reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures," please rise. Between three and four hundred arose. It is estimated that nearly one million people have been healed by Christian Science. A few of this vast throng are in Dalton; their testimony would be accepted upon any other question.

Mr. Fitch gives what he says are five facts in regard to cures effected by Jesus. Let us look at them from the Bible standpoint.

1. "They were all made openly and before the people."

When he raised Jarius' daughter from death he suffered no man to follow him except Peter, James, and John, the brother of James. (Mark, 5: 37.) Those that were tried and true. "And they laughed him to scorn. But when he had put them all out, he taketh the father and the mother of the damsel, and them that were with him." Again, when he healed the deaf and dumb man, "He took him aside from the multitude." (Mark, 7: 33).

2. "They were instantaneous."

Jesus' first realization of Truth for the man healed of blindness did not bring instantaneous relief, for he said, "I see men as trees walking."

3. "They were complete."

Digitized by Google

So are the cures in Christian Science complete for both body and mind, but Jesus said to those he healed, "Go and sin no more, lest a worse thing come unto thee."

4. "There were no failures."

In Mark 9: 17–29 is given the account of the boy who was demonized, when the disciples had failed to heal, and Jesus' first treatment did not heal him, for he "was as one dead; insomuch that many said, He is dead." The disciples asked him, "Why could not we cast him out?" Jesus answered, "This kind can come forth by nothing, but by prayer and fasting." The disciples had been with Jesus daily in his demonstrations of love, mercy, and healing, yet they failed, but their failures evidently were incentives to greater meekness and concentration, for afterwards they rose to those higher demonstrations, healing all manner of disease, and even raised the dead.

✠

Why should his humble followers to-day be expected to make public demonstrations? They are working their problems as did the disciples. In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 71, we read, "Whosoever reaches the understanding of Christian Science, in its higher significations, will perform the sudden cures of which it is capable; but this can be done only by taking up the cross, and following Christ in the daily life."

5. "They were without money and without price."

"And certain women, which had been healed of evil spirits and infirmities, Mary, called Magdalene, out of whom went seven devils, and Joanna, the wife of Chuza, Herod's steward, and Susanna, and many others, which ministered unto him of their substance" (Luke, 8: 2, 3).

Jesus sent out the twelve, saying, preach, teach, and heal, and the laborer is worthy of his hire. Let us come a little closer to the point at issue. Is not Mr. Fitch following the same apostolic command when he preaches the saving gospel, that the Christian Scientist is when he is proving that spiritual and physical healing is the gospel or good-spell? Does not Mr. Fitch receive a compensation for his labor? Would he deny to the Christian Scientist that which he claims for himself? We think not. He had not looked at the work of the Christian Scientist from this standpoint.

Just a word about the question of the reality of suffering pain and evil. As long as we look upon ourselves as material instead of spiritual, the belief of evil, with its concomitants, suffering and disease, will be with us, but as soon as we begin to follow Jesus' command, deny (contradict) self (the human sense) and realize God as omnipotence (all power), omnipresent (everywhere), omniscience (all truth), and that we are His offspring, or idea, created in His image and likeness, with power and dominion, we can overcome diseased thoughts just as we are taught to overcome sin by not yielding to it, because Christ, Truth, saves us from sin as well as disease. E. H. CARMAN.

In the *North Georgia Citizen*, Dalton, Ga.

## Christian Science Cures.

*To the Editor*—Recent expressions in your columns adverse to Christian Science lead me to ask the privilege of making a statement or two regarding the subject, in the hope of correcting some of the erroneous impressions that exist regarding its teaching and practice, as it is believed it is these false conceptions of what Christian Science is supposed to be, and not what it is, that calls forth criticism. Under editorial heading, "Slaughter of the Innocents," the terms recently applied to Christian Scientists are unjust in the extreme, and are no more warranted or founded on fact than the present false impressions of the Chinese regarding the work of the Christian missionaries.

Christian Science numbers among its adherents many thousands of honest and law-abiding citizens, and these people, being possessed of at least a moderate amount of intelligence and common sense, would not place dependence for health and happiness for themselves and families upon Christian Science, had they not proven for themselves its true worth.

In many instances Christian Science has given to the bed-ridden sufferer and chronic invalid health and strength where, after years of trial, *materia medica* had failed, and because of this the individual so healed is naturally more willing in time of physical distress to trust himself or family to its care than to the old methods, and in so doing he believes he has sought the very best means of cure. Reliance upon Omnipotent aid, rather than upon drugs, he has learned gives surer and better results, and it is his privilege to seek this aid. It is the earnest and honest opinion of many people that children should receive medical attention if not capable of choosing for themselves, which opinion is certainly worthy of respect, but may not some little consideration also be due those who are equally honest of conviction and provide Christian Science treatment for their little ones?

While it is not the desire to discredit the earnest efforts of the medical profession, let me ask if the prevailing systems of medicine give evidence of such results as inspire the utmost confidence and promise sure relief? And should the failure to seek material aid constitute a crime against humanity if one has greater faith in the promises of the Great Physician to heal and save?

✠

In the diphtheria case cited by *The Oregonian*, granting that the child in question received Christian Science treatment, which the mother has stated was not the case, was there any positive assurance that the child would have recovered had a physician been early summoned? And had the result been the same under the physician would he, too, have come under condemnation? *The Oregonian* records several other fatal cases of diphtheria at the time of the above occurrence, all presumably under medical care, and the mortuary report, as published for the month just past, gives an average death-rate of nearly one child per day. It is not known that any were under aught but medical treatment, and should these not have been saved were it infallible? Christian Scientists have no quarrel with the medical profession, but hold in high regard those who are so earnestly striving to give relief to suffering humanity, and honor their noble purpose worthy of a system which affords more satisfying results.

The quotation of to-day's paper from the Philadelphia *Times*, styling Christian Science a "humbug," asserts that its "claims to cures are meaningless" and that its teaching is not Christian.

As to the latter, let me state that no class of religionists rely more implicitly upon the teachings of the Founder of Christianity, and none strive more earnestly to follow his example not only through preaching the gospel, but by healing the sick.

Christian Science received just recognition as a Christian denomination at the World's Parliament of Religions, and was given warm welcome and glowing tribute by its president, Hon. C. C. Bonney.

As to its claims of healing the sick, there is scarcely a village throughout this country that does not contain worthy citizens who have been recipients of the healing power of Christian Science, and will willingly testify in its behalf. Any one seeking facts regarding the results of Christian Science, I will gladly help by furnishing the names and addresses of persons in Portland and vicinity

Digitized by Google

who have been healed by it of Bright's disease, consumption, indigestion, stomach trouble, rupture, nervous prostration, blood-poisoning, insanity, and many other diseases. To those who are qualified to judge through investigation of the results of Christian Science, who understand somewhat of its Principle, through benefits received, it is indeed no "humbug," but the Truth of Being of which the Master declared, "Ye shall know the truth, and the truth shall make you free."

DAVID B. OGDEN.

In *The Oregonian*, Portland, Ore.

## The Doctor's Prescription.

SOME years ago a lady, who tells the story herself, went to consult a famous New York physician about her health. She was a woman of nervous temperament, whose troubles —and she had had many—had worried and excited her to such a pitch that the strain threatened her physical strength, and even her reason. She gave the doctor a list of her symptoms, and answered his questions, only to be astounded at his brief prescription at the end: "Madam, you need to read your Bible more!"

"But, doctor ——" began the bewildered patient.

"Go home and read your Bible an hour a day," the great man reiterated, with kindly authority. "Then come back to me a month from to-day;" and he bowed her out without a possibility of further protest.

At first his patient was inclined to be angry. Then she reflected that at least the prescription was not an expensive one. Besides, it certainly had been a long time since she had read the Bible regularly, she reflected with a pang of conscience. Worldly cares had crowded out prayer and Bible study for years, and, though she would have resented being called an irreligious woman, she had undoubtedly become a most careless Christian. She went home and set herself conscientiously to try the physician's remedy.

In one month she went back to his office. "Well," he said, smiling, as he looked at her face, "I see you are an obedient patient, and have taken my prescription faithfully. Do you feel as if you needed any other medicine now?"

"No, doctor, I don't," she said honestly. "I feel like a different person—I hope I am a different person! But how did you know that was just what I needed?"

For answer the famous physician turned to his desk. There, worn and marked, lay an open Bible. "Madam," he said, with deep earnestness, "if I were to omit my daily reading of this book I should lose my greatest source of strength and skill. I never go to an operation without reading my Bible. I never attend a distressing case without finding help in its pages. Your case called not for medicine, but for sources of peace and strength outside your own mind, and I showed you where to find them unfailingly. I gave you my own prescription and I knew it would cure."

"Yet I confess, doctor," said his patient, "that I came very near not taking it."

"Very few are willing to try it, I find," said the physician, smiling again. "But there are many, many cases in my practice where it would work wonders if they only would take it!"

This is a true story. The doctor d'ed only a little while ago, but his prescription remains. It will do no one any harm to try it.

HELEN ROSS LAIRD.

In the *Midland*.

As soon as we lay ourselves entirely at His feet, we have enough light given us to guide our own steps; as the foot-soldier, who hears nothing of the councils that determine the course of the great battle he is in, hears plainly enough the word of command which he must himself obey.

GEORGE ELIOT.

### Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

### He Fixed Him.

The traveling eye doctor came along.

The man of the house was out in the barn sorting potatoes for seed. His wife told the doctor that she guessed her husband wanted some glasses, for he had been complaining about his old ones. So she went out and called him. He came slowly in through the shed walk, dusting the grime off his hands.

"Yes," said he to the doctor, "I have been having quite a tussle with them eyes of mine. Guess I've either got to have some new specs or git tongs to hold my paper with. Hain't got much ready money jest now. Jest got up March hill, ye see, and it's seed and fertilizer and all that to buy. But trot out yer glasses, mister, and we'll see if we can trade."

So the doctor opened his case and commenced to try on the glasses.

As each was fitted on his nose the farmer first looked gravely on to the page of the weekly paper and then off at the wall.

"No, that ain't it yet," he would say.

At last he seemed to get discouraged. "I don't believe ye've got anything in your stock," said he, "that's goin' to do me any good. Guess we might's well stop tryin."

Quoth the doctor: "Well, try these. It's the last pair we haven't tested. If they don't fit, we'll call it a bad job."

And he carefully placed the glasses astride the farmer's nose and passed the paper over to him.

The farmer read for a while in silent delight, and then he looked at the doctor.

"Complete!" cried the farmer ecstatically. "I hain't seen so well to read for years. These are just what I call fust class!"

"I'm glad I suited you," said the doctor as he tucked three dollars in his vest pocket and hastened away. "I thought I could fix you before we got done."

"And he did fix me," said the farmer, telling about the matter the other day. "When I went to look at them glasses after supper, blamed if I didn't find that they were nothin' but jest bows—not a speck of glass in either of 'em. It cost me three dollars to find out that my old eyes are pretty good to read with, after all."

*Lewiston (Me.) Journal.*

### Not a Physician in the County.

Morton County, Kan., has reported to the State Board of Health that there has not been a physician in the county for a year. There is a good reason for this condition, for there has not been a case of sickness demanding a physician. There are four hundred persons in the county.

*New York Sun.*

Now our wants and burdens leaving
To his care who cares for all,
Cease we fearing, cease we grieving;
At his touch our burdens fall.

As the darkness deepens o'er us,
Lo! eternal stars arise;
Hope and faith and love rise glorious
Shining in the Spirit's skies.

SAMUEL LONGFELLOW.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY, TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### "Godliness with Contentment."

PAUL declared that "godliness with contentment is great gain." With him this was not a statement of theory but of fact. He said, "I have learned, in whatsoever state I am, therewith to be content." He had learned that satisfaction and contentment are not to be found in material things, conditions, or surroundings, neither could they deprive him of the sense of peace and harmony he had found in the realization of God's presence and power.

How unlike the experience of Paul is that of most men. Mortals are rushing hither and thither to find some thing that will satisfy, some place where they will be contented. Abiding satisfaction they know not from experience. Most people can tell what would satisfy them if they could only attain it. But when the one who has already acquired that which others think would satisfy them, is asked if he is contented with his lot, he answers in the negative; but perhaps he, too, can tell what would bring lasting harmony and joys without end.

Thus it is that satisfaction, from a mortal and material point of view, is a veritable will-o'-the-wisp, it may be in sight, but never found when the place is reached where it was supposed to be. It is always just a little farther on. There is a good and sufficient reason for this. Material things cannot satisfy and the material senses cannot be satisfied. It is universally admitted that material things are mortal and doomed to death and decay. If they seem to satisfy to-day they will not do so to-morrow. The very fact that material things do not satisfy, is evidence of the existence of something beyond matter. In this something that is above and beyond matter, humanity must find satisfaction if it is to be found at all.

The Psalmist declared, "I shall be satisfied, when I awake, with thy likeness." Christians believe that joy and satisfaction await them in the future beyond the grave. It is thought by many that only after death will man awake in the likeness of God and realize the joys of that awakening. It is argued that man must "fall asleep" before he can awake; but Science teaches that the testimony of the material senses constitute the dream from which the Psalmist realized he must awaken before he could know the likeness of the Infinite.

The Scriptures declare that "now is the day of salvation." Now is the time to be saved from evil; now is the time to find peace and joy and satisfaction. That which can satisfy exists to-day as much as it ever will, and that which can be satisfied constitutes man's true being. Why, then, do not mortals know from experience what it is to be satisfied? Simply because they are not looking in the right direction. They are looking to something that cannot satisfy, to still the longings of that which cannot be satisfied. Nothing but the real can satisfy, but even the Truth cannot satisfy a false sense. Because the material sense of life and its joys is a false sense, it can never know the Truth of Being, and so long as mortals seek harmony through the material senses they must expect to meet with disappointment.

To many the mission of Christianity is to save from suffering,—more especially in the future. There is a type of mortal mentality which questions whether a healthy, happy man can be a Christian. It is too often thought that Christianity is for the helpless invalid or the one bowed down with fear, care, and anxiety. While it does come to the sick and heavy laden, bringing joy and harmony to the human heart, yet its highest mission is to prevent suffering by taking away that which makes suffering possible. It brings the eternal realities of Life and thus it takes away that which seemeth to be, but in reality is not.

Christianity saves man from the false sense of existence, the sense that is not and cannot be satisfied. So long as the mortal and material consciousness constitutes man's identity, he can expect little else than disappointment, discord, and dismay. All that he can cognize through the material senses is mortal, and he cannot hope to find satisfaction in them. It is only when man is born again, when he begins to recognize himself as a spiritual being, one whose origin is in Spirit, not in matter, that he gains the idea or conception of life that is real and harmonious.

Spirit is real and spiritual consciousness, or the consciousness of Spirit, is also real and eternal. This is man's true identity. To the human sense it may seem that if the things of Spirit constitute the sole reality of existence there is but little to live for. But this is because mortal man is more conscious of matter than he is of Spirit.

Having learned from bitter experience that material things do not satisfy, man is at length compelled to turn to Spirit, the source of all good. As he begins to seek happiness through spiritual consciousness he is surprised to find that the joys of Soul are so many and so real. They never disappoint, they never leave a sting.

As he grows in wisdom and stature, he finds that Spirit is indeed the reality of existence. He knows not less but more of life when he learns that Spirit, God, is his Life. He has not less but more intelligence when he learns that divine Mind is the only Intelligence, and that this infinite Intelligence is forever reflected in man. He realizes more real joy and is more fully satisfied when he learns that pleasure is spiritual.

Thus we begin to see how it is that "Godliness with contentment is great gain." Godliness, or godlikeness, ever conforms to the law of God, and he who is content to seek harmony and happiness only in accordance with God's law, has certainly become possessed of a treasure of inestimable value. He has reached the place where the allurements and temptations of the world have little power over him. The loss of material things disappoints and discourages the one who is looking to them for happiness, but not so with the one who has learned in whatsoever state he is, "therewith to be content." Because he is not looking to matter to supply his needs, he has no fear that it can deprive him of the blessings he has found in divine Mind.

When writing to the Hebrews, Paul said, "Let your conversation be without covetousness; and be content with such things as ye have: for he hath said, I will never leave thee, nor forsake thee." The Master said, "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?"

Thus did Jesus and Paul seek to turn the thought from material conditions and surroundings to the spiritual consciousness of existence. The more one becomes conscious of Spirit the less he is conscious of matter and the less influence do material things have over him. He requires less of what the world calls matter to satisfy him. He instinctively views all things from the standpoint of Mind instead of matter. He looks more and more to Mind to supply his needs and satisfy his desires. If he looks in faith, nothing doubting, he is not disappointed.

Digitized by Google

It is most important that one learn the lesson of contentment, learn to be "content with such things as ye have," while solving the problems of life. Unreasonable expectations may do much to hinder progress. Christian Science declares the absolute Truth and sets before us the perfect ideal, declaring that only that which is perfect is real in an absolute sense; but it is most unreasonable for one to expect to attain perfection in a day or a year. It is a great work to meet and master all the claims of evil, but only by so doing can one reach perfection.

On one occasion when Jesus was asked by the soldiers what they should do, among other things he said, "be content with your wages." Wages is the reward for labor and is presumed to be commensurate with the value of the labor performed. In the working out of his salvation one always reaps as he sows. If he sows sparingly he reaps sparingly; if he sows bountifully he reaps bountifully. There is, therefore, good reason why one should be content with his wages. If he does not receive as much as he desires, it should stimulate him to greater endeavors. Then if he honestly does the best he can he will be satisfied with his "just recompense of reward."

The true Christian realizes that all his time and talents should be honestly and faithfully employed in the service of his Master. His own sense of right is a rebuke to carelessness and indifference. He must work if he would receive a reward. If he does the best he can he has a right to expect a just reward, and he is content with his wages. Even to-day he can say with the Psalmist, "Thou openest thine hand, and satisfiest the desire of every living thing."

## Among the Churches.

### From Rangoon, Burma.

I find that the English-speaking natives, chiefly Madrasi servants, clerks, etc., like the lectures. At first I distributed them free, but now they willingly pay a small sum for them, and a great many more have been distributed since they began to pay for them.

My ayah, a Madrasi woman, formerly a Roman Catholic, is doing much in the way of telling her friends of Christian Science and giving out the lectures, and new enquirers are always coming—one tells another. My ayah has been a year and a half in Christian Science. She has done some good healing very quietly and goes steadily and happily on, although she has met with much opposition at times. Christian Science is known now among the Europeans, but society is always changing here. Some hear of it gladly at first and then seem not to care t go on.

Two or three Buddhists are interested and have had small demonstrations which pleased them greatly, and it is known in one or two Buddhist schools where the children who are able to read Engl'sh study the lectures, Journals, etc. One lady who is a Buddhist and looks after Buddhist schools in Ceylon, is studying Science and Health there, and already sees something of the Truth. Many people of all kinds have heard of it here, but as yet there is not much to be told about it.

It is a great happiness to have this beautiful Truth to give people—it breaks down the barriers between sects and races.—F. A. H. HAMILTON, Rangoon, Burma.

### The Work in Plymouth, Mich.

First Church of Christ, Scientist, of Plymouth, Michigan, was organized April 26, 1898, with twelve charter members, and received a charter from the state June 24, 1898. Our membership has increased to twenty. Our services are held in a pleasant hall in a central location on Main Street. Our Sunday morning and Wednesday evening services are well attended. Occasionally our hall is crowded to its full capacity. We have a thriving Sunday School of bright, happy children who manifest as much interest in their work as the older ones do in theirs.

January 30, 1899, we established a reading room in our hall which is open from two to five o'clock every afternoon except Sunday. A supply of all Christian Science literature is kept on hand.

Sunday afternoon, July 23, 1899, we had our first lecture, by Judge William G. Ewing in the Town Hall, which was filled to overflowing and the lecture has accomplished a great deal of good.

At a meeting of the members it was decided to start a building fund, the contribution of the last Sabbath of each month to be set aside for that purpose. The first collection was taken December 30, 1899. In five months we had more than enough to purchase a lot. June 27, 1900, a corner lot on Main Street was purchased having a frontage of 50 feet and 132 feet deep, in a very desirable location, and before long a beautiful church edifice will be erected.—WILLIAM HIRSCHLIEB, *Clerk*.

### Christian Science in Waukesha, Wis.

Christian Science was first introduced in Waukesha in 1890. Some healing took place which awakened an interest to the extent that six or eight people began to hold services at the residence of one of their number. After a time the services were discontinued.

In May, 1900, two loyal Scientists came from Chicago and the services were again revived. They are now held in the G. A. R. Hall every Sunday morning at 10.45 and every Wednesday evening at eight o'clock, with an average attendance of fifteen at the Sunday services, and eight at the Wednesday evening testimonial meetings.

The society has been organized with seven charter members, and although not incorporated, has its rules and by-laws.

The first communion service was held the second Sunday in June uniformly with the other Christian Science societies and churches.

All expressed themselves as being very much pleased and benefited by this service.—EMELYN M. TOBEY.

### Christian Science Chapel.

The Christian Scientists of St. John held their first service Sunday, July 1, in their new chapel, built and neatly fitted up for their use by a zealous adherent, to express his gratitude for the healing of his wife through Christian Science. The service consisted of the usual devotional exercises, the regular Lesson-Sermon, composed of Bible texts and corroborating passages from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, which is the text-book of that denomination. The church was decorated with many beautiful flowers and filled to the doors by an attentive audience.

*Colfax (Wash.) Gazette.*

### New Quarters at Leavenworth.

The Christian Scientist congregation which has been worshiping in the Christian Church for more than a year, has secured the Conservatory of Music on Fifth Avenue as a permanent place for their meetings.

They also have reading rooms in the Manufacturers Bank Building, where all Christian Science literature is kept for perusal and sale. These rooms are open from 9 A.M. to 5 P.M. each day, with some one in attendance to welcome any one who may wish to call.

## The Lectures.

### At Rapid City, S. Dak.

Judge Joseph R. Clarkson lectured in Rapid City, S. D., on the subject of Christian Science to an attentive audience on Saturday evening, July 28. He was introduced by Judge Levi McGee of the Seventh Judicial Circuit Court, who spoke in part as follows:—

The Christian Science Church has what is termed a Board of Lectureship, composed of a number of its ablest exponents, of which the speaker of the evening is a member. These lectures are educational in character and are intended to remove erroneous impressions and wrong ideas of Christian Science caused by prejudice, the zeal of its early advocates, and the misrepresentations of the ignorant and malicious.

The speaker who is soon to address you, has had a wide and varied experience in the active affairs of life; he has been a member of the honorable profession of the law for over twenty years, and served with honor and distinction as judge of the District Court in the city of Omaha, and at the time he embraced Christian Science, about three years ago, he was a member of one of the leading law firms of that city and enjoyed a large and lucrative practice. Notwithstanding this, he left it all and is devoting his entire time and life to this work.

Examples of this character are worthy of the consideration of thoughtful people, as bearing upon the truth of those things taught by this church. And let me here say that Judge Clarkson's case is not an isolated one, for it is remarkable what a large percentage of its followers are persons of wide experience in the world. One of the most noticeable things to me has been the large number of lawyers found among its advocates. Not that lawyers are smarter than other people, but you know it is a common slander against us lawyers that we are sceptical and irreligious. Now whether this accusation be true or false, we as a class are not very credulous: our business is of such a nature that it tends to take all the credulity out of us: we are constantly in search for cold, hard facts.

This is also, I think, worthy of consideration as bearing upon the probability of these men being deceived as to certain things which Christian Scientists claim to be able to demonstrate.

Now, ladies and gentlemen, I am not going to deliver a Christian Science lecture, for should I attempt to do so I fear my Science friends would, when I got through, tell me that I didn't know anything about it, but we have one with us who does know something about it, and I will ask you to listen to him. Judge Joseph R. Clarkson of Omaha, will now address you. *Correspondence.*

### At Faribault, Minn.

Judge William G. Ewing of Chicago, Ill. delivered a notable address on Christian Science in the Opera House Thursday, July 26.

The lecturer was introduced by Mr. Merritt Moore of Northfield as follows:—

Within the memory of those present changes have occurred in various lines that have startled the world. The century now closing has been crowded with astounding revelations in the line of steam and electricity. The changes in the thought of the world along religious lines have been no less startling. The orthodoxy of to-day is as different from that of a hundred years ago, as are our means of locomotion and communication from the stage-coach of a century ago.

Because, therefore, a thing is new, or startling, or revolutionary even, is in itself no reason why thoughtful men and women should discard it.

Christian Science asks and earnestly invites your candid, thoughtful investigation. If it is true, if it is a boon to humanity, if it is an agency through which the sick are healed and the sinful are made better, if it brings joy and gladness and light and blessing to all who accept it, if, in a word, it honors God as no other system does, and emphasizes the fatherhood of God and the brotherhood of man, then, surely, we may reasonably ask your candid and unprejudiced attention to the words of the distinguished speaker of the evening, Judge William G. Ewing of Chicago, who will now address you.

*Faribault Journal.*

### At Lead, S. Dak.

Hon. Joseph R. Clarkson of Omaha lectured at the Opera House in Lead on Monday evening of this week (July 30), on Christian Science. About thirty people from Deadwood went up to attend the lecture. Judge Clarkson was formerly on the district bench at Omaha, and is recognized as one of the prominent men of that city. Christian Science is spreading with wonderful rapidity and now numbers among its adherents some of the brightest minds of the world.

It is a wonderful doctrine these Christian Scientists put forth, and seems almost too wonderful to be true. They hold that sickness, suffering, and unhappiness of all kinds are the results of error, and that they may be cured by divine healing. They point to more than a million unmistakable instances of healing under their treatment. They do not even require faith. Many of those cured say: "I had not the least faith, but I was healed."

Christian Science has been much ridiculed, but in this intelligent age it is well to investigate before condemning.

*Equality*, Deadwood, S. D.

### Land of the Midnight Sun.

The temperature in Norway is one of the numerous charms of that wonderful Land of the Midnight Sun. Even in Christiania, the warmest part of the country, the thermometer never rises above sixty-one degrees, even in the month of July. The mountains and their beautiful streams add to the charming diversity of the landscape, and the tumbling waterfalls in the hundreds of rivers make it the land of shining, cool romance.

All Norway is a paradise for the sportsman, for it is the most sparsely populated country in all Europe, with only a couple of million persons scattered over its wide extent. The rivers and lakes teem with fine game fish. Trout weighing as much as thirty pounds are caught in some of the deepest waters, and the mountain trout offer good sport for the skilled fisherman. The interior of southern Norway enjoys a winter two hundred days long, and the vast stretches of pine and fir forests shelter bears, wolves, and lynxes ready for the rifle of the hardy sportsman. On some of the larger islands the red deer is to be found, and in some parts the reindeer and glutton offer food for the hunter's weapon. There are grouse, woodcock, ptarmigan, and the strange "rype," for those in search of small game. Notwithstanding the small number of the inhabitants, the schools for children are the best in the world, serving as a model for many educators from other lands.

*Washington Post.*

The keynote of all Jesus' preaching was, "I came that ye might have life, and have it more abundantly." It was not a future life to which he invited us, but a present one. This present is to be taken and used. Its use shall fit us for whatever may be the details of the coming years. So then it is for us to live that each day shall be one of the eternal days.—Rev. Dr. L. S. McCollester.

## A Remarkable Case.

BY C. W. CHADWICK.

THE Field will no doubt be interested to hear of certain persecutions recently visited upon Christian Scientists in Omaha, Nebraska.

On the 7th day of last June, J. B. Sedgwick, residing at 910 South 25th Avenue, an earnest student of Christian Science, was thrown from his buggy, sustaining what might have proved to be very serious, if not fatal, injuries, had it not been for the protecting power of Christian Science. The scene of the accident was near his home, so that his wife was soon at his side declaring the truth of God's power and presence, as he lay in an apparently unconscious state. A few moments later a physician who chanced to be at the Presbyterian hospital near by, learning of the mishap, hastened to the scene of action, and attempted to make an examination. He was politely told that his services were not needed and asked to leave the man in God's care. This proposition seemed to him too absurd for consideration, but being informed that the two ladies at his side were the wife and daughter of the injured man, and that they were Christian Scientists and did not need his help, he concluded to take his departure, which he did, expressing himself in very un-Christian language.

The developments of the next few hours proved that the "carnal mind," had been stirred to its utmost. The hospital telephone was brought into immediate service, word being sent to police headquarters that there was an "insane woman" near at hand who should at once be taken into custody; communication was also had with the office of the city physician and with the board of insanity, and several officers of the law were instructed to visit the home a few hours later. In the mean time, while all these forces were being summoned to protect the public from further danger from contact with an "insane" Christian Science woman, the patient had been carried into his home, and God was being allowed to do His perfect work. A practitioner was sent for; consciousness was soon restored and all suffering destroyed. The man was practically healed within three hours after the accident, but mortal mind did not want to have it that way. In spite of the widest possible publicity, however, and numerous calls at the home, with thought aroused to a high pitch, the patient held his own. Sunday morning, the third day after the accident, he attended Communion service, and has not missed a meeting since. Just how serious his injuries were, no one knows, but the physician who first saw him pronounced him in an apparently dying condition, and the thought was given out through the press that the conditions were most precarious. The assistant city physician, a friend of the patient, who called to see him at his home and was allowed to make a cursory examination a few hours after the accident, has since told the gentleman that he was certainly in a very critical condition at the time he saw him. As soon as it became evident to unbelievers even that the man was recovering, one of the papers came out with the following: "If he gets well it will prove that he had simply a superficial scalp wound; if he dies the hypothesis of a fractured skull will be confirmed." It is almost needless to remark that honest, thinking people are free to acknowledge that Christian Science must have healed the man, and that it was nothing short of a miracle, while others are trying in vain to account for the demonstration outside of the realm of cause and effect.

On the afternoon of June 13, a warrant was issued and served upon the Christian Science healer, Mrs. Mary M. Lantry, at her home, to appear before the County Judge and answer to the charge of "practising medicine without a certificate" from the State Board of Health, describing her as "being an illiterate woman and unskilled in the art of medicine and surgery, and intending by divers unlawful means falsely and unlawfully to deceive and defraud."

The accused, a cultured New England lady, widely known throughout our state and highly esteemed, employed counsel, appeared before the court within the time specified, pleaded "not guilty," and gave bond for her reappearance for a hearing before the same court on the 22d inst.

In the mean time spies had been sent out to collect some possible evidence from other practitioners. The writer had the pleasure of a twenty minute interview with one of these, which was amusing, to say the least.

The time arrived and the Scientist was present to bear witness to the Truth, but not one of her accusers was there. The newspapers accused them of being "short on nerve." The deputy County Attorney, in behalf of the state, asked for a postponement, as several important witnesses were not in the city. The Court asked if the witnesses had been subpœnaed, and the reply was that they had not been. The Court argued that the prosecution had certainly had ample time in which to collect their evidence, and that inasmuch as they had none to present, he would declare the case dismissed and the prisoner released. This ended the prosecution of the healer.

A new form of persecution awaited the Scientists. Mrs. J. B. Sedgwick, a God-fearing woman, a devoted wife and mother, who relied upon God as "a very present help in trouble" to save her husband's life and refused to let the doctors take charge of him at the time of the accident, was notified to appear before the Board of Insanity of Douglas Co., Neb., on the 28th instant, and submit to an examination by this board upon the charge of being "insane and a fit subject for custody and treatment in the Nebraska Hospital for the Insane." The complaint further stated that "her being at large is dangerous to the community." This charge was filed by the physician whose services had been refused, as above stated, and was not concurred in by any of his colleagues, so far as is known. One of his own witnesses, a physician and an expert on insanity, testified under oath that he himself would not have signed his name to any such complaint under the conditions described by his friend.

The accused employed counsel and appeared at the time specified for examination, but the examination did not take place. The counsel for the defence had asked for a dismissal, but the Board wished to hear the doctor's evidence, if he had any, so the case proceeded. It was evident from the start that error was biting viciously at the heel of Truth, but when asked by our counsel if he was not prosecuting this woman simply because she was a Christian Scientist, the doctor wished it distinctly understood that Christian Science had nothing to do with it; however, when making his closing plea, the error was completely uncovered and Christian Science denounced in strongest terms. The animus of his position was now evident to even the members of the Insanity Board, who, although ignorant of Christian Science, were inclined to be fair-minded from the start.

The accused, in company with her husband and married daughter, and perhaps sixty others, the most of them Scientists, sat "as calmly as though she were in the midst of a prayer service" (as described by one of the press reporters), and listened to the so-called evidence of the prosecution, but was not called upon to say one word in defence of her own position. The doctor's own testimony and that of his witnesses was sufficient. Witnesses for the defence were present, but their testimony was not needed. Error had re-acted upon itself. If there were any lingering doubts as to the rights of Christian Scientists to refuse

Digitized by Google

medical aid without being adjudged insane, these were completely dispelled after an eloquent and dispassionate appeal for religious liberty, justice, and common sense by our counsel, which closed one of the most unique, and, in one sense, farcical, scenes ever enacted in a court room.

The President of the Board announced that they would take the matter under advisement and make their final report at 11 A.M. the next day. They did so, and the following is a verbatim copy as spread upon the District Court records of Douglas County, under the heading of "Insanity Record No. 4, Folio 91."

*In re* Insanity of Mrs. Josephine L. Sedgwick.

Omaha, Nebraska, June 29, 1900.

Board met pursuant to the call of the President. Present, Dr. Geo. Tilden, Commissioner and Physician, J. L. Kaley, Commissioner and Attorney, and Frank A. Broadwell, Commissioner and Clerk.

Upon this day the Board met, pursuant to adjournment, at the Board Room, 406 N. Y. Life Building, at 11 o'clock A.M. and having heard and considered the evidence adduced in support of the charge of insanity preferred against Mrs. Josephine L. Sedgwick, find that the allegations contained in the Complaint are not sustained by the testimony offered; the Board also finds the said Patient Mrs. Josephine L. Sedgwick to be sane, and in accordance with the findings pronounce her sane, and the motion to dismiss is hereby sustained.

Whereupon the said accused by her counsel expressly waives the making and filing of the Physician's Return as is by law required.

It is therefore by the Board ordered and adjudged that the accused is sane, and that the said complaint be and the same is hereby dismissed, and the said Mrs. Josephine L. Sedgwick, fully discharged.

Whereupon the Board adjourned.

Attest:—

FRANK A. BROADWELL, *Clerk*,
J. L. KALEY, *President*.

It will thus be seen that First Church of Christ, Scientist, in Omaha, enjoys the unique distinction of having among its members one perfectly sane person, officially declared to be so by a duly constituted Board of Insanity in and for Douglas County, Nebraska.

The Scientists faced these most ungracious attacks with calmness and kindliness. Their prayer was and is, "Father, forgive them; for they know not what they do," and this will continue to be their prayer, even though they should be compelled to admit that "the end is not yet."

In closing we would express our keen appreciation of the able and dignified manner in which our attorneys handled the work entrusted to their care.

## Educating the Children.

BY MARY C. BARBER.

IN the opening sentence of the chapter on "Creation" in "Science and Health with Key to the Scriptures," Mrs. Eddy says:—

"Eternal Truth is changing the universe."

Every human being who gains even a glimmering of the Truth is helping on this change from a material human dream of the universe to an awakened sense that the only universe is the spiritual consciousness. Those of us who have wandered long in the old dream can understand best the sweet privilege of those who are having the Science given them at the very opening of their earthly journey. But this boon in itself entails an inevitable responsibility, "For unto whomsoever much is given, of him shall be much required."

There seems to be a wide-spread impression among us that the children of those who are trying to be Christian Scientists are going to have a perfectly smooth passage through this dream simply because of their acquaintance with the Truth. A little earnest thought upon the subject will reveal this subtle error, for we read of him who is our ensample that he "was in all points tempted like as we are, yet without sin," and this notwithstanding his more spiritual birth. Science gives the children a perfect armor before they are worn and spent with life's contests, but it does not fight their battles for them. They must work who would win the crown of a perfect manhood, and those who love the children best will try to make this a deep conviction with them instead of putting them to sleep in a dream of conceit and self-satisfaction. The good that a teacher of children can do is inestimable, and he earns the reward of him that turns many to righteousness.

We love to give testimony to healing of every kind, and it does seem that all our friends the world over ought to hear something about the work that has been going on quietly in a New England town the past year.

I refer to the school for boys at Stamford, Conn., and it is fitting as well as joy-inspiring that one who has watched its work and progress from a disinterested position, but with a deep and loving concern, should bear witness to the purpose and efforts of those who have this school under their care. They have striven faithfully to instil into the minds of the boys the practical nature of Science and the imperative necessity of looking in every smallest detail of daily living to Principle and not to personality, making it plain to them that we cannot begin too soon to learn this lesson. Such labors have had their fruits as they always do have, sooner or later.

The following are some of the results that have been accomplished during the year.

One boy who was so morbidly sensitive that he would not play with other boys, and who had a physical trouble that interfered with the happiness of living, has been completely healed, physically and in temperament, and now enjoys everything that any other good and happy boy would enjoy.

Two boys who had been poor students in other schools, after a few weeks under the loving and inspiring care of Scientific thought, asked to have their allotment of work increased.

A boy whom I have known well for several years seems to have been completely healed of certain disagreeable traits of character which have been eradicated through the transforming discipline of Love as reflected by these dear Scientists.

These are only a few of the blessed fruits of this school's work in one year. There are other results not easily presented, but which are important in the unfolding of the true sense of man's duty to his fellow-man. It goes without saying that the coming year promises an increase in the number of those who are to be members of the school.

The blessing of the infinite Good is surely with this work as it is with everything that is done to advance the growth of the understanding of the reality of the spiritual man's dominion, and of the possibility of bringing it out here and now.

## To be Watchful and Fair.

BY A. M.

How strange it is that we sometimes think we cannot love our neighbor! How true it is, and how forceful the thought, that our love of God is always proportionate to our love of our fellow-man! If we love not them whom we have seen, how can we love Him whom we have not seen? How closely we, as exponents of the highest and purest teaching ever known to humanity, should watch our thought along this line.

Digitized by Google

The New Testament would not lead any one to think Jesus spent much time or energy in condemning or criticising Judas, yet we read he "needed not that any should testify of man: for he knew what was in man." Had Jesus spoken of Judas in an unfavorable manner, the disciples would not have asked the question at the last supper, "Is it I?" Beyond question he tried, in a way we as yet know not of, to rescue Judas from sin, which Jesus well knew was and is the only death.

We see how Jesus was repeatedly compelled to avoid his enemies, barely escaping with his life. How the dull disciples constantly brought grief and arduous struggle. And yet how eternal stands his unfaltering, unchanging love for God and man.

Can we, as followers of him do less than adhere with the same persistency to the leading of divine Love? Is it expedient, in our march in and toward Love, that we pause long enough to hate something or somebody? Can we afford to be envious? and if so, of what are we envious? There is surely nothing in mortal mind to be desired by one who has had his hopes crushed and heart-strings snapped by its utter hollowness and inadequacy to meet and satisfy human needs. And such an one, having discerned the allness and bounty of Infinite Love, knows that there is plenty for all.

Let each and every one who would grace the table of our Lord, see to it that he does not let any idle word pass his lips. Let us pray every moment for humility. It is the stepping-stone to the understanding of Love.

## Reflection.

BY ADELAIDE M. KINNEAR.

I WAS sitting in an east room, late one afternoon, studying the Sunday lesson, when suddenly the sun illumined my book with all the brightness of the morning rays. Knowing that the sun does not set in the east, I looked up quickly to find the cause of this sudden illumination. I discovered that the orb of day, as it neared the western horizon, had cast its rays on the window of a neighbor's house, and the reflection was so bright that it lighted up my book, just as if the sun itself were shining there.

As I pondered the incident, a lesson in life's problem was unfolded to me. The reflected ray illumined my book, but the sun itself was not there.

In like manner we reflect God. He is not in us, but when we let Him shine through us, our thoughts brighten all who come in contact with them. The window was clean, hence it was a good reflector. As we become more and more pure in thought we shall reflect in greater and greater degree the divine goodness, until, at last, the dream of mortality will vanish and we shall awake in His likeness.

I saw more clearly than ever before the *modus* of Christian Science healing. God is the healer. He is not in us any more than the sun was in that window, but His thoughts shining through us, His mind reflected in us, casts the healing power upon the sick, brightening their lives so that the darkness of error called disease and sin vanishes like dew before the morning sun. In this way God works through human instrumentality. The healing is divine, but the so-called healer is only a reflector of that divinity. How brightly burnished with Truth and Love should we keep our lives that there may be no dark spots to hinder the reflection of the perfect One.

Looking into the window I saw the sun reflected, and yet the sun was not there; so in man we see God made manifest, yet God is not in man but is reflected by him.

If a good face is a letter of recommendation, a good heart is a letter of credit.—LORD LYTTON.

# Testimonies.

### Grateful for Many Blessings.

For fifteen years I suffered (periodically) untold agonies with female difficulties, which became chronic. I tried all kinds of doctors, all kinds of treatment, all kinds of patent medicines, but every year grew worse. The pain became more acute, until I had to resort to morphine. I used that for about two years,—the last year the habit became chronic.

In July, 1897, I discovered a hard lump about the size of a coffee cup. The first thing I thought of was a tumor, as I had always been afraid of having a tumor. I nursed that thought, being helped on by my husband's fear, until I was almost constantly confined to my bed. The tumor grew until it became as large as a cocoanut. My husband took me to a noted doctor to see what could be done. He said I would have to have a surgical operation performed, and advised us to go to San Francisco to the hospital, as an operation of that nature would be a very serious one, and might result fatally.

When we were about ready to start, I was again confined to my bed, not able to move without help. This was the first of November, 1897, and I suffered terribly for two months. The only medicine I was taking at the time was morphine in regular doses. Hot applications were also resorted to. December 30, 1897, a friend called, and told us of the wonderful cures of Christian Science. I consented to be treated. I wrote to a healer. She gave me two absent treatments, and then came to see me. She arrived at 10 A.M., New Year's day, 1898. She had only been in the house about ten minutes when I was resting easily. When I went to show her the tumor, I found, to my utmost astonishment, there was nothing there, where at six o'clock that same morning a hard, sore lump, nearly as large as a person's head, had been. At noon no appearance of the trouble was to be seen, and has not been since.

Was I grateful for all that? I regret very much to say I was not. I began the study of Christian Science, but only in a half-hearted way. Then we moved to San Francisco, where we were among people who were not Scientists. I cannot exactly tell how, but I gradually wandered away from the fold. To say that I *suffered* would be putting it very mildly. My suffering this time was not physical, but mental.

But the Good Shepherd reached out and brought me back to the fold. I had never sacrificed anything to buy any of Mrs. Eddy's works on Christian Science nor any of the other literature, but since returning to the flock, I have "Science and Health with Key to the Scriptures," which *no amount* of gold could buy, could I not get another. The *Journal*, *Sentinel*, and *Quarterly* are all loving companions. Since taking up the study in earnest for the spirit, and not for the loaves and fishes, I have had some good demonstrations.

Before closing, I wish to express my sincere thanks to God who has sustained me in my many trials and temptations, and has at last anchored me in the haven of Christian Science; to our blessed Master, who showed us the Way for all time and eternity; to our beloved Mother in Israel, who, with patience, sacrifice, and love has revealed to this age the way to overcome error; to all the dear Scientists who labored long and patiently with a self-willed child who had to learn by sad, bitter experience the way to Truth and Love; to the *Journal*, *Sentinel*, and *Quarterly*; to the dear sister who came to my rescue when mental suffering and intoxicants had almost driven me to desperation. My husband and I are all alone here, but we are very happy, and read the lesson nearly every Sunday together.

MRS. F. M. OWNBEY, Angels Camp, Cal.

### Tobacco and Liquor Habits Overcome.

My attention was first called to Christian Science by the healing of a lady friend. The last time I saw this lady before her healing, I asked her husband what was the matter with his wife, and he said, "It will be but a short time before I shall be without a wife. The doctors say there is no hope for her, and that the end is liable to come any time." When I saw her a few months later, the picture of health, my curiosity was aroused. I congratulated her upon her healthy appearance and told her she looked ten years younger than she did the last time I saw her. She said, "Christian Science has done it all, for God has healed me."

At this time I had some troubles of my own. I walked with a cane on account of rheumatism; I had worn glasses five years; I had used tobacco for thirty-five years, and I had not been perfectly sober and free from the influence of liquor in fifteen years. This lady knew my failings, her husband and myself having been intimate friends for twelve or fourteen years. I believe she thought she had a good subject to work on, and she gave me a good dose of Christian Science, which I willingly took. The next Sunday afternoon found me at the home of my friend and I received another dose of Christian Science. Time went on in this way a few weeks and I attended a Sunday service. This was in January, 1896, and I have gone regularly ever since. I had not been to the meetings more than a month when I laid my cane away and have not used it since. In a few weeks I discovered that I could see as well without my glasses as I could in my boyhood days. The next to go was the tobacco habit and at the end of six months the liquor habit was overcome. The last to go was the use of profane language.

While this was going on there were clouds continually arising to test my sincerity. I can look back to the many times I was tempted and went to my friend, the living witness, who would always tell me to be faithful and I would receive my reward; and at times, when it would look dark, she would say, "We all have our cross to bear, and this is yours; take it up and bear it and you will receive your reward.' So I feel to-day that only for the kindness shown me by this friend I would have fallen by the wayside.

At the end of two years my wife saw what the Truth had done for me and accepted Christian Science herself. She became an active student of the blessed Truth, and I can say that the two and a half years since she adopted Christian Science have been the happy part of my life. On the second of last June we were admitted members of the Mother Church.

On June 7, an accident befell me, rendering me unconscious, and a doctor from a near-by hospital appeared upon the scene. My good wife informed him that his services were not needed, that we were Christian Scientists. My wife's understanding of Christian Science and her confidence in the all-power of God upon this occasion undoubtedly saved my life.

Words cannot express my gratitude to our dear Mother for this blessed Truth which has severed the claims of bondage and made me a free man.

J. B. SEDGWICK, Omaha, Neb.

NOTE.—The above testimony is from the gentleman referred to in the article entitled "A Remarkable Case," which appears in this issue of the *Sentinel*.—ED.

### The Value of Science and Health.

I enclose a letter I received from a young married man who went to Alaska in June. It shows what a comfort "Science and Health with Key to the Scriptures" is to all who faithfully study it, and of what immense value it becomes to them. When I hear of people complaining of the price of Science and Health I feel as was stated by some one in a recent *Sentinel*, a sense of pity for them, for well we know that if, even in a small degree, they comprehended the peace and joy, to say nothing of the health the "little book" brings to all, not only would they be willing as this young man says, to pay a passage to Alaska for it, but they would also realize why our hearts are so full of love and gratitude to our beloved Mother and Leader, the Rev. Mary Baker G. Eddy, for giving it to us. They would feel with us how much we owe her for the steady, earnest faithfulness with which she patiently overcame material sense, and hence was able to discern the life-giving Truth taught and demonstrated by Jesus, and again set forth to the world in our priceless text-book, Science and Health.

In connection with the author of this letter and the purchasing of Science and Health I want to say that he came to my office to say good-bye, and had intended purchasing a copy of Science and Health, but found that after his ticket and outfit had been bought he only had twenty dollars left, so had decided he could not possibly take one with him as he would have to take a pocket edition, and felt that it was out of the question to spend a fourth of his remaining capital on a book. I told him that that was a matter to decide for himself and said good-bye. He only had then about twenty minutes in which to go more than half a mile, check his baggage, and catch the train, but in a few minutes he came running back and said he must have one anyway. I told him he had chosen well, his letter shows he realizes that he did.—H. W. E., San Jose, Cal.

I study the "little book" every day and would not be without it for the price of a passage to Alaska. It is the means of much relief, and I feel very grateful to you for your advice, insisting on my having a book with me. I shall make good use of it.

I have no medicine with me except Science and Health, and am feeling excellent. I shall write again to you and would be pleased to hear from you.

Your kindness and thoughts of my little children are continually present in my mind, and I feel that the family at home will be all right during my absence.

Yours very truly,

W. A. T.

### A Word for the Sentinel.

I wish to acknowledge my gratitude for help I received through reading an article in the *Sentinel* of July 26.

As I passed through the house shortly after the *Sentinel* arrived, I picked it up for the purpose of looking it over, as I felt I had not time to sit down and read it through.

My eye fell upon the article, "Grateful for our Publications," by L. I read it through carefully and with the thought therein, that we should seek to cast out of self the claim of error that seemed to be in another, I was enabled to make a demonstration similar to the one mentioned in the article. I have been endeavoring for some time to meet similar claims and apparently without success, but with the aid of this thought the error was overcome and harmony restored.

With the feeling of gratitude which followed the demonstration, came the thought that as Christian Scientists we cannot be too careful about the kind of reading we pick up in our odd moments. We each have all we can do to keep our thought clear in the realization of Truth, without imbibing at odd moments that which will add to instead of diminishing our sense of discord.

The *Sentinel* is indeed a guard and guide, but we must be ever anxious to heed its warnings and follow its directions in order to receive for ourselves the benefits it bestows.—OTIS D. REED, Rochester, N. Y.

## Religious Items.

Concerning the "Law of want," a writer in the (Baptist) *Watchman* says: "He who would 'gain the whole world' must be willing to 'lose his own soul.' He who wants God must give up self. He who wants righteousness must surrender his sin. There must also be the element of patience, the want must endure. Long forces work slowly. You may not have what you want in one minute, or in one day. The law holds good in the long run. The want that wins is the want that waits. Let the want be single and supreme; let it be woven into the fibres of the being, and built into the foundation of the life. Then, sooner or later, with a fulness that will fill the soul, that which you want will come to you."

The *Boston Transcript* says: "Professor Herman von Hilprecht has written the University of Pennsylvania that he has discovered the great temple library and priest's school at Nippur, which was destroyed by the Elamites 228 B.C. He says the library consists of sixteen thousand volumes written on stones, and covers the entire theological, astronomical, linguistic, and mathematical knowledge of those days. At the same place there has been unearthed a collection of letters and official documents, making, with the temple library, twenty-three thousand books in stone."

A writer in the (Episcopalian) *Church Standard* gives the following advice to the boys belonging to the Brotherhood of St. Andrew: "Be fair. Make sacrifices gladly. Be ready to make the first advance in our quarrels. In fact, preach the Gospel by our own characters. 'Let your light so shine before men, that they may see your good works and glorify your Father which is in Heaven.' This is the command of Christ. We can bring others to love the Gospel when they see it as we live it."

The following is the introductory paragraph of an article on "The Spiritual Opportunities of the Housekeeper" in the *New-Church Messenger:* "The spiritual opportunities of the housekeeper are many and of high order—among the highest, indeed, which the world affords. But because clad in humble guise, they are often unrecognized; home duties are miscalled drudgery; and family life with its inestimable blessings gives way to the characterless existence of a hotel."

Louis Albert Banks, D.D., says in the *Homiletic Review:* "Among the autograph manuscripts in the great Peel Library are four pages from the famous Dr. Johnson's memorandum book, containing prayers, meditations, and resolutions. Among the resolutions written there are the following: 'To read the Bible this year.' 'To try to rise more early.' 'To study divinity.' 'To live methodically.' 'To oppose idleness.' 'To frequent divine worship.'"

The *Universalist Leader* says: "The Christian must be always in a state of forgiveness toward every human offender; he must be always eager to bestow pardon wherever pardon will be, under its insuperable conditions, received. Forgiveness, in a word, is the natural and never-failing charity of love in the soul. It is imitation of the all-enduring and never-ending charity of the Father."

The following is from a list of recommendations adopted by the Federation of Churches of Pittsburg and published in the (Baptist) *Standard:* "The wearing of mourning costume is scarcely in harmony with the hope of the gospel. It is not a suitable expression of grief. And we recommend the discontinuance of this custom to the thoughtful consideration of Christian people."

The New York (Methodist) *Christian Advocate* says: "We do well to fortify ourselves in an effort to forgive those who have offended us by reminding ourselves of God's merciful dealings with us. A man who can recall the divine mercy without being moved to a new compassion and gentleness shows himself by that fact unworthy of it."

Rev. James Sheerin says in the (Episcopalian) *Churchman* that "one serious trouble with our postulants for the ministry now is that they are too often made unfit for meeting and knowing men by the sheltered and monastic-like nature of their early training in schools where they associate with but one class of men."

The best thing we can do—infinitely the best; indeed, the only thing, that men may receive the truth—is to be ourselves true. Beyond all doing of good is the being good; for he that is good not only does good things, but all that he does is good.

GEORGE MACDONALD.

The precepts of Jesus are the essential element of his religion. Regard these as your rule of life, and you build your house upon a rock. Live them out, indeed, and you have entered the kingdom of heaven,—you even now enter it.—CHANNING.

The *New Church Life* publishes a double number combining the numbers for July and August, making a magazine of over 120 pages, all of which are devoted to giving an account of the Swedenborgian General Assembly, held recently.

The *Morning Star* says: "It is pitiful how some men will reduce Christianity to a few very minor maxims and points of conduct, and dwell so exclusively upon these as to miss entirely its loftier meaning and applications."

## Notices.

### Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

*We again ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies or more to one address, $2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

### Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent in as early as possible. They *must* be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

### Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Digitized by Google

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Price (cloth) each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem.

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents: $2.00 per dozen, prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

## The Christian Science Quarterly.
