THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address, twenty-five copies, seventy-five cents; fifty copies, $1.40, one hundred copies, $2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

National.

The imperial edict forbidding the importation of arms and munitions of war into China is not satisfactory to the foreign ministers. It ignores the vital fact that the prohibition applies to the government, and is a part of China's punishment. The edict makes it appear to be merely the government's voluntary act, prohibiting Chinese subjects from importing arms and munitions on the ground that the country is disturbed by brigands. The ministers have decided, however, to accept the edict.

Commissioner of Internal Revenue Yerkes has issued amended regulations as to the treatment of goods imported from Porto Rico, in the course of which he calls special attention to the fact that as articles of merchandise received from Porto Rico are not now subject to customs duties, the same are not entitled to entry in customs bonded warehouses, and that the temporary storage of such articles is for the purpose only of detaining the articles until the internal revenue tax due thereon has been paid.

The signal service has nearly perfected a system of wireless telegraphy, which is to be put in operation on the Pacific coast, and which is claimed to be an improvement on the Marconi system. The general plan as laid down by Marconi has been kept in mind by the Government inventors, but the general principle is that of the Hertzian waves. The signal corps people are satisfied that they can receive signals at a distance of thirty miles.

At the request of the Treasury Department, the attorney-general has entered an opinion that the Chinese residents of the United States are entitled to enter the Hawaiian Islands freely, there being nothing in the immigration laws or the Geary exclusion law to forbid such action. The attorney-general says nothing as to the right of Chinese going from the United States to re-enter this country.

Commissioner of Internal Revenue Yerkes has stated that articles brought from Porto Rico which are subject to internal revenue tax when brought to the United States for consumption, may be brought to this country and then re-shipped to a foreign port without payment of the tax.

Chou Fu, the provincial treasurer, has published throughout Chi-Li a circular letter ordering that all religions be tolerated by the Chinese, who will be allowed to accept any religion. The letter says there must be no intimidation or persecution of any sect.

The Post Office Department expects to establish a system of international money orders with Peru and Bolivia by December 1. Chili is at present the only South American Republic with which we have this relation.

Rear Admiral Sampson heads the Navy Department's list of witnesses who will be called before the Schley court of inquiry. This was followed by a supplemental list of those whom Admiral Schley wishes summoned.

The French Government will erect a new embassy building at Washington, D.C. About three hundred thousand dollars will be expended on the building and grounds.

The annual report of the general superintendent of instruction for the Philippines states that no compulsory laws will be required, as the natives are eager to learn.

Commissioner Rockhill has agreed to delay his departure from Pekin until he has closed the present negotiations. As soon as this is done he will withdraw.

Industrial and Commercial.

There are in the United States 38,900 Indians who earn their own living by farm work. Last year they sold their farm products for $1,408,865 over and above the expenses of living. Practical farming is now being taught in many of the Indian schools of the southwest country.

The Osage Indians are generally considered the most industrious and are the richest Indians in the United States. Last year they farmed twenty thousand acres of land, from which they raised one hundred thousand bushels of wheat, ten thousand bushels of oats, and five hundred thousand bushels of corn.

The advent of railways in Asia is leading to much speculation as to the future of that continent. There are about 470,000 miles of railway in the world, and only thirty-four thousand miles of this vast amount is in Asia, a continent containing about one-third of the earth's landed area and more than one-half of the earth's population. Europe has a mile of railway for every twenty-four hundred inhabitants, the United States has one mile for every four hundred inhabitants, while Asia has only one mile of railway for every twenty-eight hundred inhabitants.

According to a statement given out by the *Independent*, the apple crop is a very important feature. This statement values the crops of 1899 as follows: corn, $629,210,110; hay, $411,926,187; wheat, $319,545,250; cotton, $305,467,041; oats, $198,167,975; while the value of the apple crop for 1900 is given in round figures at $430,000,000. It will be seen that in point of monetary value the apple crop was second only to the corn crop.

The Southern Pacific Railroad proposes to construct a tunnel through the heart of the Sierra Nevada mountains at a cost of from three to five million dollars. The tunnel will be twenty-seven thousand feet in length, will save a climb of fifteen hundred feet, and shorten the line about seven miles.

Statistics of the agricultural interests in Alaska were gathered by the Census Bureau for the first time in 1900. Twelve farms containing 159 acres in all, produced $8,046 worth of crops, mostly vegetables and hay.

The Northern Pacific railroad will build two giant steamships for the Pacific and China trade. They will be of twenty-eight thousand tons, or with three times the capacity of an average ocean freighter.

The Santa Fe Railroad Company has secured a charter to build fourteen separate lines of railroad with a total length of 815 miles. These lines will traverse Oklahoma, Indian Territory, and Kansas.

General.

Secretary of Agriculture Wilson is conducting through Mark A. Carleton, cerealist, experiments to ascertain in what sections of the country macaroni wheat can be grown profitably. There is a great demand for it both at home and abroad, and the secretary is confident that its cultivation will become a great industry. Mr. Carleton is now in the West, and the drought that has damaged the corn has assisted him materially in testing the adaptability of macaroni wheat to arid or semi-arid lands. In reporting to the department he says: "Macaroni wheat is having another chance to show its superior drought-resisting quality. In South Dakota, where the crop is already harvested, this wheat is giving excellent results. From one locality it is reported that the yield of macaroni wheat will be from thirty-five to forty bushels per acre."

There are at the present time 5,383 public, society, and school libraries in the United States, having one thousand or more volumes. These 5,383 libraries contain no less than 44,591,851 books, an increase of more than 11,500,000 volumes in five years, or nearly 35 per cent. There is one library for every 14,118 inhabitants of the United States. The general libraries number 1,979; there are 1,725 school and 689 college libraries. That these institutions are largely patronized is shown by the fact that during the year ending July 1, 1901, 2,405 libraries issued for home use 48,410,128 volumes.

An aerial globe to surpass the Eiffel tower and the Ferris wheel, is projected for the coming World's Fair at St. Louis. It is to be an immense steel sphere, seven hundred feet high. It will contain restaurants, a roof garden, a "coliseum," circus rings, hippodrome tracks, music hall, and observation tower. Incidentally there will be elevators and walks on iron bridges around the globe.

The Maryland Steel Company has just completed the largest floating steel dry-dock in the world. It is 525 feet long and 126 feet wide. It can raise a fifteen thousand ton battleship. The weight of the dock including equipment is 6,865 tons, and the complete cost is $810,000. It was built for the United States Government and will be towed to Algiers, La.

The Chicago Board of Review has decided to make a test case of its right to assess local municipal franchises. It is estimated that there are upwards of two hundred and fifty franchises, valued from one thousand dollars to five million dollars each, which the county attorney says may properly be assessed by the local authorities.

Seven of the women teachers from Cuba, who have been attending the Harvard University summer school, will enter the New York State Normal School at New Paltz. In October they will be joined by forty-three others who will take a forty weeks' course in English.

The state of Connecticut will receive fifty Cuban pupils into the normal schools. These pupils must be recommended by the Cuban department of education, and approved by the United States government.

According to the mortality statistics of the eleventh census, the average length of life for the decade ending 1890 was 31.1 years, as compared with 35.2 for the decade ending 1900.

The twenty-eighth triennial conclave of the Knight Templars was held last week in Louisville, Ky. The next meeting will be held in San Francisco the first Tuesday in September, 1904.

Booker T. Washington of Tuskegee, Ala., was elected president of the National Negro Business League which met last month in Chicago.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The Bible and Character.

Address at a Meeting of the American Bible Society, by Vice-President Theodore Roosevelt.

THERE are certain truths which are so very true that we call them truisms; and yet I think we often half forget them in practice. Every thinking man, when he thinks, realizes what a very large number of people tend to forget that the teachings of the Bible are so interwoven and entwined with our whole civic and social life that it would be literally—I do not mean figuratively, I mean literally—impossible for us to figure to ourselves what that life would be if these teachings were removed. We would lose almost all the standards by which we now judge both public and private morals; all the standards toward which we, with more or less of resolution, strive to raise ourselves. Almost every man who has by his life-work added to the sum of human achievement of which the race is proud, almost every such man has based his life-work largely upon the teachings of the Bible. Sometimes it has been done unconsciously, more often consciously; and among the very greatest men a disproportionately large number have been diligent and close students of the Bible at first hand.

Lincoln—sad, patient, kindly Lincoln, who, after bearing upon his weary shoulders for four years a greater burden than that borne by any other man of the nineteenth century, laid down his life for the people whom living he had served so well—built up his entire reading upon his early study of the Bible. He had mastered it absolutely; mastered it as later he mastered only one or two other books, notably Shakespeare; mastered it so that he became almost "a man of one book," who knew that book and who instinctively put into practice what he had been taught therein; and he left his life as part of the crowning work of the century that has just closed.

✤

In this country we rightly pride ourselves upon our system of widespread popular education. We most emphatically do right to pride ourselves upon it. It is not merely of inestimable advantage to us; it lies at the root of our power of self-government. But it is not sufficient in itself. We must cultivate the mind; but it is not enough only to cultivate the mind. With education of the mind must go the spiritual teaching which will make us turn the trained intellect to good account. A man whose intellect has been educated, while at the same time his moral education has been neglected, is only the more dangerous to the community because of the exceptional additional power which he has acquired. Surely what I am saying needs no proof; surely the mere statement of it is enough, that education must be education of the heart and conscience no less than of the mind.

It is an admirable thing, a most necessary thing, to have a sound body. It is an even better thing to have a sound mind. But infinitely better than either is it to have that, for the lack of which neither sound mind nor a sound body can atone, character. Character is in the long run the decisive factor in the life of individuals and of nations alike.

Sometimes, in rightly putting the stress that we do upon intelligence, we forget the fact that there is something that counts more. It is a good thing to be clever, to be able and smart; but it is a better thing to have the qualities that find their expression in the Decalogue and the Golden Rule. It is a good and necessary thing to be intelligent; it is a better thing to be straight and decent and fearless. It was a Yale professor, Mr. Lounsberry, who remarked that his experience in the class-room had taught him "the infinite capacity of the human mind to withstand the introduction of knowledge." Some of you preachers must often feel the same way about the ability of mankind to withstand the introduction of elementary decency and morality.

A man must be honest in the first place; but that by itself is not enough. No matter how good a man is, if he is timid he cannot accomplish much in the world. There is only a very circumscribed sphere of usefulness for the timid good man. So, besides being honest, a man has got to have courage, too. And these two together are not enough. No matter how brave and honest he is, if he is a natural born fool, you can do little with him. Remember the order in which I name them. Honesty first; then courage; then brains. And all are indispensable; we have no room in a healthy community for either the knave, the fool, the weakling, or the coward.

✤

You may look through the Bible from cover to cover, and nowhere will you find a line that can be construed into an apology for the man of brains who sins against the right. On the contrary, in the Bible, taking that as a guide, you will find that because much has been given to you much will be expected from you; and a heavier condemnation is to be visited upon the able man who goes wrong than upon his weaker brother who cannot do the harm that the other does, because it is not in him to do it.

So I plead, not merely for training of the mind, but for the moral and spiritual training of the home and the church; the moral and spiritual training that have always been found in, and that have ever accompanied the study of, this book; this book, which in almost every civilized tongue can be described as "The Book," with the certainty of all understanding you when you so describe it. One of the highest tributes of modern times to the worth of the Bible as an educational and moral influence of incalculable value to the whole community came from the great scientist Huxley, who said:—

"Consider the great historical fact that for three centuries this book has been woven into the life of all that is noblest and best in our history, and that it has become the national epic of our race: that it is written in the noblest and purest English, and abounds in exquisite beauties of mere literary form; and finally, that it forbids the veriest hind, who never left his village, to be ignorant of the existence of other countries and other civilizations and of a great past, stretching back to the furthest limits of the oldest nations in the world. By the study of what other book could children be so much humanized and made to feel that each figure in that vast historical procession fills, like themselves, but a momentary space in the interval between the eternities?

"The Bible has been the Magna Charta of the poor and of

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

the oppressed. Down to modern times, no State has had a constitution in which the interests of the people are so largely taken into account; in which the duties, so much more than the privileges, of rulers are insisted upon, as that drawn up for Israel in Deuteronomy and Leviticus. Nowhere is the fundamental truth that the welfare of the State, in the long run, depends upon the righteousness of the citizen, so strongly laid down. The Bible is the most democratic book in the world."

The teaching of the Bible to children is, of course, a matter of especial interest to those of us who have families —and, incidentally, I wish to express my profound belief in large families. Older folks often fail to realize how readily a child will grasp a little askew something they do not take the trouble to explain. We cannot be too careful in seeing that Biblical learning is not merely an affair of rote, so that the child may understand what it is being taught. By the way, I earnestly hope that you will never make your children learn parts of the Bible as punishment. Do you not know families where this is done? For instance: "You have been a bad child—learn a chapter of Isaiah." And the child learns it as a disagreeable task, and in his mind that splendid and lofty poem and prophecy is forever afterward associated with an uncomfortable feeling of disgrace. I hope you will not make your children learn the Bible in that way, for you can devise no surer method of making a child revolt against all the wonderful beauty and truth of Holy Writ.

The immense moral influence of the Bible, though of course infinitely the most important, is not the only power it has for good. In addition there is the unceasing influence it exerts on the side of good taste, of good literature, of proper sense of proportion, of simple and straightforward writing and thinking. This is not a small matter in an age when there is a tendency to read much that even if not actually harmful on moral grounds is yet injurious, because it represents slip-shod, slovenly thought and work; not the kind of serious thought, of serious expression, which we like to see in anything that goes into the fibre of our character.

The Bible does not teach us to shirk difficulties, but to overcome them. That is a lesson that each one of us who has children is bound in honor to teach these children if he or she expects to see them become fitted to play the part of men and women in our world.

Again, I want you to think of your neighbors, of the people you know. Don't you, each one of you, know some man (I am sorry to say, perhaps more often, some woman) who gives life an unhealthy turn for children by trying to spare them in the present the very things which would train them to do strong work in the future? Such conduct is not kindness. It is shortsightedness and selfishness; it means merely that the man or woman shrinks from the little inconveniences, to himself or herself, of making the child fit itself to be a good and strong man or woman hereafter. There should be the deepest and truest love for their children in the hearts of all fathers and mothers. Without such love there is nothing but black despair for the family; but the love must respect both itself and the one beloved. It is not true love to invite future disaster by weak indulgence for the moment.

What is true affection for a boy? To bring him up so that nothing rough ever touches him, and at twenty-one turn him out into the world with a moral nature that turns black and blue in great bruises at the least shock from any one of the forces of evil with which he is bound to come in contact? Is that kindness? Indeed, it is not. Bring up your boys with both love and wisdom; and turn them out as men, strong limbed, clear eyed, stout hearted, clean minded, able to hold their own in this great world of work and strife and ceaseless effort.

If we read the Bible aright, we read a book which teaches us to go forth and do the work of the Lord; to do the work of the Lord in the world as we find it; to try to make things better in this world, even if only a little better, because we have lived in it. That kind of work can be done only by the man who is neither a weakling nor a coward; by the man who in the fullest sense of the word is a true Christian, like Great Heart, Bunyan's hero. We plead for a closer and wider and deeper study of the Bible, so that our people may be in fact as well as in theory "doers of the word and not hearers only."—*The Watchman.*

Direct Sun Power.

THE following editorial on the above subject in the *Boston Herald* will be read with much interest:—

The fact that a perfected type of solar-motor has been in practical operation in southern California for many months, doing actual and regular work with remarkable economy, indicates that a real achievement has been reached in a field where nothing has been looked for by scientific investigators or technical experimenters, as a rule—at least so far as application to industrial conditions of the present or the near future is concerned—except theoretical results that might become of practical service at some distant day. Fuel is so abundant and cheap, so large an amount of working energy is stored up in a pound of coal or a gallon of petroleum, that there is comparatively little inducement to resort to the aid of the great natural forces unless their use be made tempting by uncommon opportunities for economy. Yet no fuel at all is, of course, cheaper than the cheapest of fuel, and there are conditions of fuel supply in various parts of the world that make a natural source of energy a most desirable industrial factor when accessible.

Two such sources, water power and wind power, have long been extensively utilized. Yet the cheapness of fuel tended to make even water power a diminishing factor until the development of means for electric generation and transmission of energy brought it to the front again. Two other great sources of power, in the tides and the waves of the sea, have yet been practically developed little, if at all; and the idea of turning directly to the very fountain-head of all our forms of terrestrial energy in the sun itself has seemed insuperably daring to most practical minds, though appealing correspondingly to visionary imaginations. Yet the main instrumentalities for doing this have long been known, and the problem has been simply one of economic development of their possibilities. Modern science, with its command of light and cheap materials, appears to have done this.

Contrary to the history of most of our recent great developments in invention, the practical form of the solar-motor is the outcome of long and gradual evolution under the direction of no one inventive genius, and is finally the product of thoroughly grounded and infinitely painstaking engineering skill. The result is a mechanism of extraordinary lightness and cheapness, coupled with giant dimensions that make the average windmill look small in comparison. Briefly, the apparatus may be described as consisting of a gigantic reflector composed of numerous small mirrors of silvered glass, so shaped as to reflect the sun's rays upon all sides of a boiler of peculiar shape, the steam thus generated being transmitted to an engine of ordinary type. The mechanism is held rigidly in shape and kept true to the sun by a strong and light framework of steel. In appearance the machine has a strong resemblance to an enormous Japanese umbrella, inverted and tilted, the boiler occupying the position of the handle. With a diameter of about thirty-three feet and a reflecting surface of about six hundred and forty square feet, the maximum efficiency is stated as something like eleven horse power.

The purpose held foremost in the development of this mechanism was a comparatively modest one, rather than

Digitized by Google

to furnish a gigantic energy that should to a great extent supplant the use of fuel. The idea was to make possible for the arid regions of the far West and Pacific coast a cheap source of power in comparatively small units that should pump water for irrigation and meet other mechanical needs of the settler, with a simple device of low cost, comparable in these respects to the windmill. The amount of power developed, however, proves unexpectedly large, and the field seems to include practically all forms of industrial use in those parts of the earth which may be called the sunlight regions—lands where the sun shines through the greater part of the year. For instance, there is one large section of the country where the daylight hours are ninety per cent sunlit, a yet larger section where the percentage is eighty, while in something over two thirds of the vast area of the United States there is at least seventy per cent of sunlight for the days of the year.

The patient experimentation and scientific research in the quiet development of this invention, mainly carried on here in Boston through many years past, have been of immense scientific service, beyond regard to the main purpose of the work. There has been brought out a remarkable amount of accurate knowledge in relation to solar physics, and at the same time it has been made evident that there remains an immense amount of valuable information yet to be acquired—information that should be of infinite value, both scientifically and practically. Enough has already been learned in the course of these investigations, we understand, to change radically our conceptions of the power resident in the sun's rays. It has been generally supposed, even among scientists in general, that the basis of our knowledge in relation to the sun's heat was very completely established as the result of researches more or less recent. But, when inquiry was lately made of one of the world's foremost authorities in the field of solar physics as to the accuracy of the data upon which estimates of the sun's heat are founded, the frank reply was received that they are "mere guesswork." Indeed, these carefully recorded investigations indicate that we are yet but in the infancy of our knowledge of even the primal facts concerning the character and properties of the sun's rays, and show that the sun is vastly hotter than had been supposed. Consequently the amount of heat that comes to the earth must be very much greater than is allowed in the accepted estimate.

This knowledge points to a vast increase of efficiency yet possible for an apparatus of the existing dimensions. One little change, for instance, has resulted in an extraordinary improvement. A glass of good quality had been used for the mirrors, but it had a greenish tinge, and the substitution of a special kind, as colorless as possible, resulted in a gain of something like forty per cent of heat reflected. It should be stated that, in estimating the power of the sun's rays, certain important factors have heretofore not been taken into consideration, and that observations made in the course of experiment lead to inferences as to the existence of hardly suspected qualities in their properties and their effects. This is not to say that scientists have been in error, but that their work has very much farther to go before definite conclusions can be reached.

As to the uses for solar energy mechanically utilized, it is evident that even in the most sunlit regions there are hours, and even days, when clouds would prevent the operation of a solar-motor. But the storage battery enables the conversion of intermittent power into continuous power, and the grouping of such solar generators into batteries permits the supplying of steam to engines of large power. An interesting application of solar energy in a kindred field, of minor importance but of considerable domestic utility, is that of the use of thousands of solar heaters in southern California—a simple contrivance that is placed on the roofs of houses to give a steady and ample supply of hot water for domestic purposes.

The Lectures.

At Macatawa Park, Mich.

An appreciative audience greeted Judge William G. Ewing at his lecture on Christian Science at Macatawa Park, Mich., Thursday, August 15. Between five and six hundred people were present, and gave the closest attention to the speaker. He was introduced to the audience by Judge Alfred Wolcott, who spoke as follows:—

At this pleasant resort by the lake there gather every summer a great many people. They come from many cities and from different states. They represent many avocations, and are of all creeds and opinions. They come here for the quiet and restfulness of the woods, and the shore, and the great lake with its many voices and its ever-changing moods.

This auditorium has been built here in the grove for religious and other uses. Open on all sides to the hills and woods, it suggests the leafy temples of the first worshipers. It is dedicated to no particular church or creed, but all alike may have a voice and a hearing from this platform.

We are to listen to-day to a lecture on the subject of Christian Science. As a religious organization it is of comparatively recent growth; but it claims to teach, as I understand it, no other system of faith and practice than that first taught by the Nazarene to the fishermen and peasants of Galilee. If, indeed, Christian Science comes, as it professes to do, not to destroy, but to broaden and extend the boundaries of faith; not to meet one need only, but all the needs of humanity; not to bring a new faith into the world, but to throw a new light on the old faith, then there is room and a place for it in the world to-day.

I have been requested to introduce the lecturer of this evening, and I esteem it a pleasure and a privilege to do so. I have enjoyed the personal acquaintance of Judge Ewing for some years. I have known him by reputation much longer, as one of the leading lawyers in Illinois and as an honored and learned Judge of the Superior Court bench of the city of Chicago. This work and these honors he has voluntarily relinquished to devote his life to Christian Science. Knowing him as I do, I am certain it means that it has the profound and deliberate approval of his mind and conscience.

The fact that Christian Science has, since its inception, had a growth almost unprecedented in the history of religious movements, having, it is said, to-day a half million or more adherents, drawn for the most part from the intelligent and cultured classes of the community, a large proportion of whom claim to have been not only blessed, but healed by its ministry—this fact, I say, challenges the attention of thoughtful people and entitles it at least to a fair and unprejudiced hearing. Such, I am sure, this audience will accord the speaker this evening.

I have the pleasure to introduce to you the Hon. William G. Ewing of Chicago.

At Billings, Mont.

Notwithstanding the oppressive heat of last evening (Thursday, July 18) the Opera House was well filled with an intelligent class of people, who were there for the purpose of listening to a lecture on Christian Science by Judge William G. Ewing of Chicago.

Judge Ewing is an elderly gentleman, and for more than thirty years has been a leading attorney of the Illinois bar. He proved to be a most interesting and entertaining talker on the subject of Christian Science. His preface was in the nature of pointing out the vagaries of our forefathers in their beliefs and practices, not only along religious but economical lines, illustrating thereby the advancement of thought within the last third of a century. In introducing the subject of Christian Science he said he was not there to

Digitized by Google

influence any Christian man or woman who felt they had all they needed in a spiritual sense. These he urged to remain in their present state of contentment. He only desired to speak to those who felt there was more balm and greater balm in Gilead than they had yet been permitted to apply.

He outlined the beliefs in which the Scientists and the older churches were fully in accord with each other, God the Father being the fountain-head of one as well as the other. The Scientists did not come proclaiming a new God, nor a new Bible, but they simply accorded the Creator more power than did the older faiths. He then went into minute detail concerning the tenets of the Church of Christ, Scientist, all of which was very interesting to his hearers.

From the standpoint of religious teaching the lecture was thoroughly interesting and instructive throughout.

The Billings Daily Gazette.

Board of Lectureship.

THE following constitute the Board of Lectureship for the year beginning June 1, 1901:—

EASTERN SECTION.

The lecturers for the New England States are:—

Rev. Irving C. Tomlinson, C.S.B., 17 N. State Street, Concord, N. H.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

Maritime Provinces, Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

The Province of Quebec, the cities of Ottawa and Kingston, Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

MIDDLE SECTION.

For the States of New York, Pennsylvania, New Jersey, and Delaware, and the Province of Ontario:—

Carol Norton, C.S.D., 1123 Broadway, New York.

Rev. Arthur R. Vosburgh, C.S.B., 901 Powers Block, Rochester, N. Y.

SOUTHERN SECTION.

Mrs. Sue Harper Mims, C.S.B., 575 Peachtree Street, Atlanta, Ga.

John Freeman Linscott, C.S.D., 321 Bond Building, Washington, D.C.

WESTERN SECTION.

For the Western States and all Southern States west of the Mississippi River:—

Edward A. Kimball, C.S.D., 5020 Woodlawn Avenue, Chicago, Ill.

Mrs. Annie M. Knott, C.S.D., Suite 508 Chamber of Commerce Building, Detroit, Mich.

Judge William G. Ewing, C.S., 2932 Indiana Avenue, Chicago, Ill.

Silas J. Sawyer, C.S.D., Room 301 Masonic Building, Milwaukee, Wis.

PACIFIC COAST SECTION.

F. J. Fluno, M.D., C.S.D., 1319 Grove Street, Oakland, Cal.

Abraham A. Sulcer, M.D., C.S.B., 1062 Ninth Street, Riverside, Cal.

GREAT BRITAIN.

Christian Science Editorial Receives an Apt Answer.

Editor *Muncie Times.*

I have just had the pleasure of reading your vivacious editorial of the 18th ult., entitled "A Comforting Thought." I am a grateful adherent of Christian Science, but I enjoy a bright piece of raillery like that notwithstanding, for it affords a most genial contrast, at least, to the dull and dismal effusions against Christian Science with which a certain newspaper syndicate has been plying so many Indiana newspapers lately.

I recognize that humorists do not hold themselves to a very rigid exactitude in respect to the facts upon which they build up their phosphorescent fabrics of fun. A few years ago, Mark Twain was employed to write an article against Christian Science. He began it by admitting that he knew next to nothing about his subject (which speedily became quite apparent), and then he proceeded to bombard the "man of straw" which it suited him to call Christian Science, with his characteristic brilliancy.

Permit me to say that you do not give the name of "A Christian Scientist in the east," nor do you quote his words, merely giving to your readers what you conceive to be the meaning of what he is alleged to have said or written at some place which is not named, and at some time which is not stated. But a certain misty indefiniteness is probably quite useful, at times, in the trade of ridicule. Facts are often such stubborn things that they knock all the fun out.

Will you kindly permit me to explain the attitude of Christian Science in respect to "weather," etc. I ask it because some of your readers might take your "man of straw," which you riddle so mercilessly, too seriously, and form erroneous conceptions as to Christian Science.

Christian Science deals in a practical way with sickness and sin. It proves the truth of its doctrine by its works. It asks the world to obey the Scriptural command to judge of a tree by its fruits. Already, it has healed thousands upon thousands of those who had been abandoned by drug doctors as incurable. Already, it has reclaimed hundreds of drunkards, libertines, and slaves of morphine, etc. Already it has converted thousands of infidels and agnostics to the Christ-truth, from which they had been repelled by the man-made theologies which teach a revengeful Deity.

To do these things, Christian Science finds it necessary to seek and teach the truth respecting what the material universe (including the weather, etc., of your editorial) really is and is not. It finds that the popular concepts as to these things are as much in error as were those concerning the phenomena of the revolution of the sun about the earth, before Copernicus. Copernicus knew when he asserted that the sun does not really rise in the east, as it appears to do, that he would encounter the sneers of popular ignorance as well as the persecutions of churchcraft. Christian Scientists knew equally well that their doctrine respecting the unreality of matter is not the popular concept; but it is seeking what is true, whether popular or unpopular. It states its doctrine clearly and unmistakably, not abating one jot or tittle in order to placate popular prejudice or to avoid ridicule and opposition.

It teaches that to be reality which is eternal and unchanging, and that all else is transient, temporal, and apparent, and therefore, unreal. Its teachings closely correspond to those of philosophy, which divide everything into noumenon (the essence or reality), and phenomenon (the appearance to sense-perception). Its teachings closely correspond also to those of Paul when he writes of "things seen" and "things unseen." Its teachings are rapidly being adopted by many of the greatest modern physicists of late years. For instance, Professor Huxley, one of the greatest natural scientists, near the close of his life, wrote these remarkable words:—

Digitized by Google

"What is this terrible thing called matter, after all, except the unknown, hypothetical cause of states of our own consciousness?"

Let us try to illustrate what he means by that profound statement. Your sight-perception says that a certain object is opaque. But if your eyes were constructed so that they possessed an X-ray power of vision, that object might appear transparent. So what we call the qualities of opacity and transparency are not, after all, qualities inherent in objects, but they are merely attributed qualities; that is, qualities attributed to them by our sense-perception. So with heat and cold. What appears to the editor of the *Times* to be rather chilly weather, would appear altogether too warm to the Esquimaux. If his sense-thought of heat and cold were like that of the mythical salamander of the ancients, instead of his wit rising to such a brilliant altitude along with the rise of the mercury lately, he would have been wrapping his furs about him like a cross and stupid polar bear. But I have space only to indicate some of the more important finger-posts of Christian Science thinking along these lines.

Study what Christian Science really teaches on the subject "of this terrible thing, called matter," and you will find it to be quite different from the popular misconceptions on the subject. I know its lines of thought are not easy to indolent thinkers. I know that they may easily be burlesqued. But the same is true of many great verities. Christian Science is a great spiritual thought-advance, and the fact that it moves, without fear or favor, against popular beliefs, seeking no faint-hearted or sinuous compromises with ignorance or falsehood, can retard its beneficent progress only temporarily if at all.

A Ship's Chronometer.

THERE is a popular belief that chronometers, those delicate pieces of mechanism which enable the mariner to tell to a nicety where he is upon the ocean, are made only in England. One will be told even in Maiden Lane that England is chronometer-maker to the world. This was true at one time, but now, according to shipmasters, America turns out excellent chronometers. There are, however, only three American makers as against numerous British firms. Many of the instruments in use in the United States navy are of American make. These chronometers are purchased on trial. The delicate instrument is subjected to extremes of temperature, by means of which its variations are ascertained. No instrument leaves the maker's hands until it has been thoroughly tested, or before it is three years old. In this period there is ample opportunity for developing its peculiarities. When it is understood that an error of four seconds on the part of the chronometer will put a skipper a mile out of his course, the necessity for the most careful and thorough test is apparent.

Even when an instrument has been tested to the satisfaction of the experts, and has been finally adjusted, only a skilled man can be allowed to carry it from the workshop to the ship. One firm alone has a dozen of these carriers constantly employed. They are not, of course, dealing all the time with new chronometers; there are from four hundred to five hundred always in stock from ships arriving in this port from all parts of the world. As soon as a ship comes into port its chronometer is usually sent ashore for rating, that is to say, it is carefully observed until the ship is ready to sail, when the variation is reported to the captain, who can then make his calculations accordingly. The chronometers of the transatlantic liners are sent ashore for rating every time they come into port. The greatest care is taken of chronometers on board ship, and on all first-class ships there are usually three, one being for deck observation. The most perfect one of the lot is usually placed in a dry, but well ventilated apartment amidship, where it is firmly screwed down, and should there be fear of dampness, wrapped in a heavy woolen blanket. On the government vessels the chronometer is placed in a case lined and padded with curled hair, which keeps it from being jarred. The smallest speck of rust on the balance spring might cause a chronometer to lose its accuracy. A first-class chronometer costs $250, and one of the same grade capable of telegraphing its own time, sells at $450.—*New York Evening Post.*

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

Mr. Farlow's Address.

After September 1, the office of Alfred Farlow, C.S.D., Publication Committee of The First Church of Christ, Scientist, in Boston, Mass., will be located in Huntington Chambers.

New Edition of the Manual.

The twenty-second edition of the Church Manual, containing the names of the members admitted in June, 1901, is now ready for delivery. Send all orders to The Christian Science Publishing Society, 95 Falmouth St.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL.

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Notice.

Beloved Students:—Being apportioned to sow for others to reap, whatever is new and true means for me to say or do, while others make the best of the situation. I am again startling you with a new movement called forth by circumstances. Students who have not passed examination, as per Manual, at the Massachusetts Metaphysical College, are not now on the list of eligible teachers of Christian Science. The cause for this our state laws explain, in that one law liquidates another, and the last one supersedes the first. The new By-law on this subject, please find in our Church Manual.

Teaching Christian Science is of less importance than healing the sick and reforming the sinner. So comfort yourselves, dear ones, by thinking of the good you have done and are doing. Let this recompense you, and the future explain the present. MARY BAKER G. EDDY.

The Concord Fair.

ONE of the most interesting and successful annual State Fairs of the country was that which has just been held at Concord, N. H. It had all the attractive features which usually pertain to such occasions, with many unusual and novel attractions. These were so varied and numerous that an attempt at their enumeration is practically out of the question in any general account of the Fair. Such an attempt will not, therefore, be made in this account. Suffice it to say, that annual fairs conducted as was this one are of immense benefit to the people of the state in which they are held. They tend not only to show that the people are wide awake to public interests, but that they have a special pride in showing the world the results of their industry and enterprise. They moreover stimulate a laudable ambition on the part of the citizens, causing them to take greater pains to produce the best results and keep up with the latest in all departments of industry, not the least of which are those of the agricultural and horticultural interests. These interests were admirably represented at the Concord State Fair, while all other leading industries made a most creditable showing.

The Old Granite State is surely to be congratulated on the evidences of the great enterprise and material conquests exhibited at this annual exposition. Her citizens may well be proud of the showing. The general interest in the Fair was shown by the large attendance of people from all parts of the State and from many places outside the State. The present year eclipsed last year in the number in attendance.

August 27 was Children's Day at the Fair, and all the children were admitted to the grounds without cost. Rich and poor alike availed themselves of the opportunity, and the grounds were crowded with children, to whom the day was indeed an enjoyable and a memorable one. A leading feature of this day was a contribution by our Leader, the Rev. Mary Baker G. Eddy, of about two hundred pairs of shoes to children. Mrs. Eddy had given out word that she would contribute a pair of shoes to all children who needed them, and the number mentioned availed themselves of her generous offer. She did not present them in person, but made arrangements with a shoe dealer to have a man on the grounds to whom the children could apply for orders for the shoes. The hearts of the little ones were made glad by this thoughtful act of charity.

Wednesday, August 28, was Governor's Day at the Fair. It was known that Governor Chester B. Jordan of New Hampshire was to be present and deliver an address, and it also became known, a short time before that day, that Mrs. Eddy would be present as a guest of the authorities of the Fair. These facts were sufficient to attract a very large concourse of people from all parts of the State of New Hampshire and many places outside the State, amounting, it is estimated, to not less than fifteen thousand.

Shortly after one o'clock, P.M., Governor Jordan, with his staff and members of his council, arrived, escorted by a band. He was welcomed by Hon. Edward N. Pearson, and received an enthusiastic greeting. He made a brief speech in which he spoke of the Fair in a general complimentary way, dwelling upon its beneficent results to the State at large, and concluding his remarks by the following kindly and beautiful, yet well deserved, reference to Mrs. Eddy:—

"The noble, good woman who has done so much to beautify these grounds and buildings, and who is to be with us to-day, has given another evidence of her generosity in giving to the children of your city over two hundred pairs of shoes.

"I regret that the committee did not invite me yesterday. I have two boys for whom I should like to have had some shoes, but it looks now as though they would have to go to school next winter without footwear.

"The science which has such a large measure of Christianity attached to it is to be desired by all."

Governor Jordan also paid his compliments to the visitors from Boston. "The water and men of New Hampshire run down hill to Massachusetts," said Governor Jordan, "and I am glad to-day to see that many of them have come to get a breath of pure air and the inspiration of a day's enjoyment."

At the close of the Governor's speech the regular programme of exercises was resumed and many interesting features exhibited, not the least of which were some trotting and pacing races, a balloon ascension, and acrobatic feats, the latter of which were especially interesting to the Christian Scientists present because of the manner in which the performers exhibited a lack of fear and the subjection of the physical body to mental operation, or mind.

At 2.45 P.M., occurred what, by the common consent of all, was the most interesting feature of the day, namely, the appearance within the gates of Mrs. Eddy in her landau, drawn by the well-known pair of beautiful bays. Seated in the carriage with Mrs. Eddy were Judge and Mrs. William G. Ewing of Chicago, while Mr. Calvin A. Frye, her secretary, sat on the box, her carriage being under escort of Chief-Marshal Batchelder and Assistant-Marshal Hadley on horse-back, while another aide, a grandson of Senator Chandler of New Hampshire, rode behind the carriage, followed by several policemen. The reception accorded Mrs. Eddy was of a most dignified, and yet most cordial character. It was wholly free from the spectacular or sensational, but was rather the quiet yet spontaneous expression of the kindly feeling entertained for her, and the high esteem in which she is held by the officials of the State and the Fair, as well as the populace of her native State. This fact was deeply appreciated by the Christian Scientists present. Upon Mrs. Eddy's arrival opposite the grand stand the bands struck up the familiar air, "Columbia, the gem of the Ocean," the efficient rendering of which added greatly to the spirit of the occasion and seemed peculiarly appropriate. Upon the conclusion of the music Mr. George H. Moses, as spokesman of a committee appointed by the authorities of the Fair, delivered an address of welcome to Mrs. Eddy as she sat in her carriage in front of the grand stand. Mr.

Digitized by Google

Moses' remarks, which were especially timely, respectful, and appropriate, were substantially as follows:—

"Mrs. Eddy, the gates of the Concord State Fair swing inward to-day, and we salute our friends far and near. But among all the throng here present I am privileged on behalf of the management to say—and the distinguished jurist from Chicago will affirm my judgment when I say it—for no one have we a warmer welcome or a heartier greeting than for you, our nearest neighbor.

"We bid you welcome to these grounds: to these grounds which adjoin your own beautiful estate; to these grounds your liberal generosity has permitted us to adorn and beautify; to these grounds where we count it among the keenest of our satisfactions to welcome you and your friends, and where in future years we hope to have the pleasure of greeting you again and again.

"Mrs. Eddy, on behalf of the Concord State Fair Association, I bid you welcome, and I tender you the freedom of these grounds."

At the conclusion of Mr. Moses' remarks, Mrs. Eddy indicated her high appreciation with a graceful bow. Judge Ewing, who sat in the carriage with her, also bowed his acknowledgments. The carriage then drove the entire length of the grand stand, and turning, faced the tower from which the high diver, Norin, was about to perform his daring feat of jumping a distance of some ninety feet into a shallow pool of water. This performance was most artistically and gracefully done, and indicated in a striking way what fearlessness will do in enabling the human mind to compel the human body to do its bidding. In other words, it was a good exhibition of the power of mind over matter.

While Mrs. Eddy was greeted by the great numbers present, both in the grand stand and out of it, in a spontaneously cordial manner, it was free, as has been said, from any boisterousness or effusiveness; this out of deference to her well-known desire to avoid anything of that character. The Christian Scientists present evidenced their feelings by simply waving handkerchiefs, while others quietly applauded.

Mrs. Eddy in her thoughtfulness and generosity had purchased one hundred seats in the grand stand for the accommodation of the First Members of The First Church of Christ, Scientist, in Boston, Mass., who were her invited guests for this day. It was known also that Mrs. Eddy was glad to have as many other Scientists present as desired to attend. A large number were present. They were conveyed to Concord from Boston by special trains, the first train, conveying the First Members, left at 9.20; the other special train at 9.30 A.M. Later trains also carried large numbers. The seats reserved for the invited guests were among the most available in the grand stand, and would be well entitled to the distinction of seats of honor. Among the non-Scientists occupying seats on the grand stand with the invited guests was Gen. Henry M. Baker, ex-member of Congress from New Hampshire, and a relative of Mrs. Eddy.

After witnessing the feats of the diver and other interesting things, Mrs. Eddy's carriage drove away from the grounds, and she returned to her home at Pleasant View, which adjoins the fair grounds.

We are sure that the hearts of Christian Scientists all over the world, as soon as they learn of the respect, courtesy, and kindly recognition shown to our beloved Leader at the time and in the manner above described, will go out in gratitude toward those who were instrumental in bringing about this happy event. All adherents of the teachings of Mrs. Eddy naturally love and respect her from whom they have received so much, and to whom they owe so much; therefore they feel that all attentions and kindnesses shown to their Leader, extend, in large measure, to all her followers, and thus they feel a double sense of appreciation. They will be especially grateful to New Hampshire's chief executive, Governor Jordan, for his truthful reference to the Christian character of their Leader.

The occasion, as a whole, is additional evidence of the fact that Mrs. Eddy, her life, character, Christian virtues and labors for and on behalf of humanity, are reckoned at their true value, even outside the Christian Science ranks, by those whose opportunities are most favorable for knowing of them. As time goes on and the world becomes better acquainted with the Discoverer and Founder of Christian Science and her reformatory mission, and the practical beneficence of her teachings in healing sickness, removing sorrow, and destroying sin, the more it will rejoice in the fact that God, in this age, has given her to the world. Nor is this said in any sense of personal laudation, but by way of respectful tribute to one whose sole purpose is to do the unqualified bidding of the divine Father-Mother, to whose guidance she has committed her whole life and her life's work.

Mrs. Eddy presented to the gaze of all present the most indubitable evidence of good health and excellent spirits. This fact will disprove the current falsehoods relative to her condition.

Press Comments.

The Boston daily newspapers gave correct accounts of the Fair and Mrs. Eddy's visit there, from which we are glad to extract briefly. From the *Boston Globe* we take the following:—

At least fifteen thousand people attended the State Fair to-day. Some three thousand people entered the grounds as soon as the gates were opened at eight o'clock this morning, and the crowds kept coming all through the day and evening from all parts of the State,—from all parts of the country for that matter,—as this fair has at least one attraction that is able to bring people from the farthest corners of the land right into the grand stand, which no other fair can hope to possess.

That attraction is Mrs. Mary Baker G. Eddy, the head of the Christian Science Church. She lives just back of the fair grounds on a little hill, and she has taken a keen interest in this fair since its inception a year ago. She has helped beautify some of the buildings and the grounds, and she has visited the fair both years.

The fact that she was to visit the fair to-day having become widely known, was sufficient to bring thousands of Christian Scientists to the grounds just to get a passing glimpse of the Founder of their Church—"Mother" Eddy. And so to-day the fair had visitors from all over the country and from Canada.

Two special trains left Boston early in the forenoon with about six hundred eminent Christian Scientists, and hundreds of others came from the summer resorts and the mountains in every direction.

Mrs. Eddy had purchased one hundred reserved seats in the grand stand for her special guests, mostly First Members of the Mother Church in Boston. So that to-day there was a curious blending at this fair of the usual curiosity seekers who revel in the midway, enjoy the horse racing, the music, etc., and the religious element which came for a different purpose and for whom the strenuous and picturesque side of the fair had very little attraction. Yet they all seemed to enjoy themselves.

One enthusiastic Scientist remarked: "You see Mrs. Eddy is an up-to-date woman; she enjoys much of the world as it is." Her disciples can do no less, certainly.

To-day the receipts of the grounds were swelled considerably through her presence.

This was marked on the programme as "Governor's Day," and Governor Jordan, with his staff, came on the grounds about half past one, preceded by a band of music. He made a little speech, in which he lauded New Hampshire and welcomed the guests from other states, and he was applauded, but he was, after all, only a side issue compared with Mrs.

Digitized by Google

Eddy. It was really her day as well as the governor's, and when her landau came on the grounds more necks were strained to get a glimpse of it than were to see the governor and his staff and brass band. Not that the people think less of Governor Jordan—if it had been President McKinley it would have been just the same.

Referring to Mrs. Eddy's looks the *Globe* also says:—

Mrs. Eddy looked well and cheerful. She wore a pearl colored dress and carried a sunshade that was just a trifle darker than the dress. From the press stand she appeared to be in good spirits, although she did not manifest any particular enthusiasm in what she saw.

From the *Boston Post* we take the following:—

This was Governor's Day at the Concord State Fair, and the presence of Governor Chester B. Jordan, with members of his council and military staff, was one of the principal attractions that drew a crowd of twenty thousand people.

The visit of Mrs. Mary Baker Eddy was another attraction.

The Governor arrived shortly after dinner, and was welcomed by the Hon. Edward N. Pearson, first vice-president of the Fair Association, the president, ex-Governor Frank W. Rollins, being absent in Europe.

Mrs. Eddy arrived on the fair grounds at 2.45 P.M. She was halted in front of the grand stand, where George H. Moses addressed Mrs. Eddy, while the other fair officials stood by with bared heads. The vast audience in the grand stand arose and stood during this address.

After witnessing a part of the afternoon programme, Mrs. Eddy turned about and drove away. As Mrs. Eddy approached the grand stand the afternoon entertainment was suspended until Mr. Moses had finished his address. As she approached and passed, the grand stand was one great white sea of waving handkerchiefs, but there was no boisterous demonstration, it being known that Mrs. Eddy is averse to such.

In a brief address during the afternoon Governor Jordan referred to Mrs. Eddy's gift of shoes to needy children of Concord, and said in closing: "The science which has such a large measure of charity attached to it should be desired by all."

From the *Boston Advertiser* we make the following extract:—

Mrs. Eddy was the great attraction at the Concord State Fair here to-day. It was Governor's Day, but the governor and his glittering staff were completely eclipsed in public interest by the head of the Christian Science Church.

It is estimated that twenty thousand people were crowded into the fair grounds to see "Mother" Eddy. Special trains throughout the morning were moving thousands of pilgrims into the city.

Mrs. Eddy drove upon the track in her handsome turnout, and was welcomed by the fair officials, G. H. Moses, chairman of the executive committee, acting as spokesman.

After witnessing part of the afternoon programme, Mrs. Eddy turned about and drove away. She seemed to be in good spirits, was in excellent health, and, if possible, was more youthful in appearance than last year, when she appeared in a like manner.

As Mrs. Eddy approached the grand stand, the afternoon entertainment was suspended until Mr. Moses had finished his address.

It is estimated that at least ten thousand people must have attended the fair to-day out of a sole desire to see Mrs. Eddy. A number of special trains poured several thousands of visitors into the city during the course of the day. Of these five hundred at least came in a special train of seven cars from Boston.

The *Boston Herald* contained a good account, from which we make the following extract:—

Almost perfect weather and other most favorable conditions served to make to-day, Governor's Day of the Concord State Fair Association, a record-breaker in the matter of attendance. The number of visitors to the grounds is estimated to have been from fifteen to twenty thousand.

It had been widely understood for some days that Governor Jordan and the Rev. Mary Baker G. Eddy, Founder of the Christian Science Church, would attend the fair as guests of the Association, and the result was the attendance mentioned, which was sufficient to congest the spacious grounds of the exhibition. Special trains from the north, south, east, and west, heavily laden with people, arrived early in the forenoon, and between eleven and twelve o'clock two trains from Boston brought about six hundred members of the Christian Science Church in that city. At Manchester it was necessary to make up a special train of twelve cars to meet the demand for transportation to the capital city.

The programme of the forenoon included exhibitions of Devons, Herefords, and short-horns; brood mares, pulling oxen, trained steers, and ladies' saddle horses; and a base-ball game between the Bristols and the original Shamrocks of Manchester.

At 12.45 Governor Jordan, accompanied by Mrs. Jordan and two children, reached the grounds. In the party were also Gen. A. D. Ayling, Gen. W. P. Buckley, Col. H. L. Worcester, Col. L. W. F. Richards, Col. J. P. Quimby, Col. Lycurgus Pitman of his staff; and Councillors J. B. Tennant, L. B. Bodwell, C. H. Hersey, E. E. Truesdell, and E. N. Chamberlain.

The Governor and party were escorted to the grand stand and given the seats reserved for them. Hon. Edward N. Pearson, in behalf of the Association, extended a formal welcome to the Governor, who, in response, complimented the officers of the Association on the success of the exhibition, and thanked those present for the cordial greeting. He spoke of the prosperity of the farmers in New Hampshire and in the ation, and concluded by welcoming the Massachusetts visitors to the grounds.

From the excellent account published by the *Boston Journal* we also make the following brief extract:—

Mrs. Ewing, who sat beside Mrs. Eddy in the landau, was becomingly attired in black, with white lace trimmings, and she also carried a beautiful white parasol.

The event had been well timed. Norin was ready, and clad in red tights, he climbed the dizzy height for a plunge. Lower leaps preceded the grand climax. Once when nearly at the top he jumped backward, and, turning in the air, went down with a splash. This act brought a smile of approval from his distinguished spectator, and the audience noticed that Mrs. Eddy leaned on the side of her carriage to speak to Major Pratt, who stood near.

The final jump from the summit of the staging was watched by Mrs. Eddy with keen interest. She saw him lean forward in mid-air to a horizontal position and fall with great swiftness, turning his head downward, and go into the tank with the mightiest splash of all.

Norin came up out of the water, bowed, and started off to get into dry clothes. Mrs. Eddy gave the signal for departure, waved her handkerchief as she passed the grand stand, and with stately deliberation was escorted down the midway to the gate.

From *The Daily Patriot* of Concord, N. H., we publish the following:—

Governor Jordan, as he arose to speak, was greeted with hearty applause. He congratulated the officers of the Fair Association on the success of the exhibition and thanked those present for the cordial greeting. He said that various things had conspired to bring him to Concord. He had read in the newspapers that the good woman who had done so much for the city and the fair, was to give a pair of shoes

Digitized by Google

to every deserving boy and girl. "I arrived in town with my boy and girl just one day too late and now my boy and girl will have to go barefooted all winter." He paid tributes to the memory of the late Hon. Moses Humphrey and E. B. Woodworth, and also paid a high tribute to the officers of the Association and to Hon. N. J. Batchelder, whom he declared to be a king among organizers. He spoke of the prosperity of the farmers in New Hampshire and in the nation, and concluded by welcoming the Massachusetts visitors to the grounds. His speech was delivered in a happy vein, and at the close he was again applauded.

From *The Concord Evening Monitor* we republish the following:—

All records broken is the story of Governor's Day at the second annual Concord State Fair.

There are more people on the grounds to-day than there ever were before, and there is more for them to see.

Yesterday it was a most pleasing sight to view the couple of thousand children who spread themselves over the infield and ran in droves from one point of interest to another; from the stage to the diver's tank, thence to the balloon camp, and back again.

The sight to one who looked down upon the grounds to-day was more than pleasing; it was grand. As soon as the dozen excursion trains had emptied their loads into the park this noon, the spacious enclosure was fairly black with humanity and the crowd continued to grow until the middle of the afternoon.

The main magnet in drawing this human mass into one circumscribed area was, of course, the visit to the fair of His Excellency Chester B. Jordan and his private and official families; Mrs. Jordan, Miss Jordan, the Masters Jordan, and the members of the governor's council and staff. It is to be hoped that his pleasure in the day was one tithe that of the thousands who gave him so warm a welcome.

The annual visit to the grounds of Mrs. Mary Baker Eddy was another potent attraction of the afternoon, especially for the members of her First Church at Boston, who always delight in an opportunity to see their leader and never hesitate to make long and tiresome journeys for that purpose. Mrs. Eddy's interest in the fair, so often and so substantially manifested, is but another token of her constant and cordial desire to aid in whatever goes for the upbuilding and beautifying of her home town, our Capital City of New Hampshire.

To-morrow the fair will have still another distinguished visitor in the person of a member of President McKinley's cabinet, Postmaster-General Charles Emory Smith, famous editor and man of affairs, to whom the people of New Hampshire owe an especial debt of gratitude for the introduction of the free rural mail delivery system.

The New York *Sun* of August 29, 1901, also had the following to say of Mrs. Eddy's visit and appearance:—

Mrs. Eddy was on the grounds for about twenty minutes, and her carriage remained for ten minutes within six feet of the great throng within the track oval. The closest scrutiny was possible. Mrs. Eddy looked to be in perfect health for one who bears the weight of four score years. She was dressed in pale lavender with hat of white illusion, and carried a white silk sunshade. Her movements were suggestive of vivacity. She sat upright, held the sunshade firmly in her right hand, and conversed frequently with the two favored guests seated within her carriage. The movements of her head, from side to side, were as quick and natural as those of a young girl.

It was pretty clearly demonstrated to many thousands of people that, notwithstanding the responsibilities and duties that are upon her, Mrs. Eddy is physically a remarkable woman, and her appearance will long be remembered.

Mrs. Eddy's Appreciation.

Under the above heading the *Concord Evening Monitor* publishes a letter of thanks from Mrs. Eddy, which, with the *Monitor's* introductory remarks, we also publish:—

The Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, whose visit to the Concord State Fair on Governor's Day, last Wednesday, was so highly appreciated by the officers of the Association and by the thousands who were present, is not unmindful of the courtesies shown her on that occasion, and she has sent the following appreciative letter as indicative of her feeling:—

Pleasant View, Concord, N. H., August 31, 1901.
Officers of the Fair Association and Mr. Moses, Editor of the *Monitor*.

Dear Friends:—I am almost proud of your general management of the Concord State Fair. Your special reception of me and eloquent address were more to me than the homage of thousands—you represented the animus of my native state—and its chief executive, Governor Jordan—than whom who is more like her granite in goodness and grandeur?

I beg to say that my brief visit to the grounds was a pleasant rest for me—your polite, tender, impressive reception of me, Judge Ewing, Mrs. Ewing, and the visiting Christian Scientists greatly appreciated. Accept my thanks, and long live my fair neighbors.

Most respectfully,
Mary B. G. Eddy.

The Lectures.

Notice is hereby given that the Hon. William G. Ewing is eligible for calls to lecture throughout the entire Field,—United States, Canada, Mexico, and Great Britain.

Commendatory of Mr. Conger.

We clip the following from the *Universalist Leader*:—

The *Journal and Messenger* (Cincinnati) says, August 15: "We regard it as very fortunate that the Republican party in Iowa did not nominate Mr. Conger for governor. Conger is greatly needed where he is, as Minister to China, for the protection of the interests of the United States. . . . Mr. Conger took a very manly stand when here on his vacation. He said, if the people of Iowa wanted him as governor he would accept, but he would make no effort to secure the nomination. Others did make effort, another man has been nominated, and Mr. Conger will remain where the world just now needs him—in China."

We agree with our esteemed contemporary in this view of Mr. Conger's usefulness in China. He is the right man in the right place, and his sympathy with the missionaries and his efforts for their protection, shows him to be a broad-minded, tolerant, and humane man, who dignifies his position and worthily represents our country and our common Christianity. China will see the day when it will be proud to count Edwin H. Conger among its best and most far-seeing friends.

Work.

Work is the seamless garment of grateful praise to God, its hems broidered with living flowers of hope and faith, its fruit the peace which passeth all human understanding, its crowning benediction, "Well done, good and faithful servant."—Grace White.

For he who sings the love of man
The love of God hath sung.

Whittier.

Prayer.

BY JOSEPH S. EASTAMAN.

IN days gone by I often heard the minister in church say, "Let us pray." So I say, "Let us pray;" first, that we enter not into temptation, and let us look ahead far enough to be sure this prayer is from the heart and genuine. Many of us when children had father, mother, or friends, to us loving, tender, and good, who used to teach us to bend our knees in prayer. The aim was to insure to us a useful future, and the lisping of our prayers, no doubt, was to them "sweeter than honey and the honey comb." As a rule, we were taught to pray to a seemingly good and terrible God, who when angry would punish with eternal hell-fire in the hereafter. Our parents did the best they knew to teach us rightly, but perhaps failed in many instances to teach us God as Love.

I had a praying father, a good man in many ways. He meant to give me sure guidance, so that I could escape the fires of hell. His instructions seemed right to him, but they filled me full of fears of what "the Lord" would do to me unless I did this or that, which to little me appeared impossible. Oh, how I feared God at times! I was even afraid to be left alone lest He should come and punish me, or take me away. Was that the way to make me love God? Could I look upon God as Love? Even after many years of trying to love God I found I still feared Him more than I loved Him. But, my dear friends, we have cause to thank God to-day that we have changed our views, and, I hope, have forgotten such instructions, and are learning the prayers that will demonstrate for us here and now that God is Love.

The Lord's Prayer we know is sufficient to cover all human needs; but repeating "and lead us not into temptation, but deliver us from evil," without a more clear apprehension of the real meaning of those words, is apt to impress upon our thoughts that man has not sole dominion and power. Now study that prayer through its spiritual interpretation as given in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and you will see that divinely bestowed power does enable man to do what Jesus taught,—*command* the evil to depart. It was through the prayer of understanding that Jesus did his healing. To the man with the withered hand he said, "Stretch forth thine hand." To the epileptic boy tormented, he said, "Thou dumb and deaf spirit, I charge thee, come out of him, and enter no more into him."

Jesus did not make terms with the tempter when he was upon the pinnacle of the temple, but he rather defied the tempter. Can we as Christian Scientists do otherwise? The Christian Scientist is supposed to be "instant in prayer," and to succeed in healing he has to be; he has to follow Jesus' command, as well as the instructions of Science and Health (p. 393) to "speak to disease as one having authority." In that way he will not only master the temptation on behalf of the patient, but will also deliver himself out of temptation, and in part overcome "the world, the flesh, and the devil."

Christian Science teaches men how to do good and how to overcome evil. But if the Christian Scientist relapses into the method of worldly people and of worldly pleasures, the same old errors which beset him before he studied Christian Science, will again rise to tempt him, and he will again depend more upon the sense of petition in prayer than upon the divine authority that says, "Get thee behind me, Satan."

What should we do if when called to the bedside of the sick we should see with human sympathy the sufferings of the patient? Should we not petition God to deliver us and the patient? Do we not rather in Christian Science cling to God as the divine Principle, as the only life, health, and all good, and thereby assure ourselves and the patient that evil is *not,* but good is All? Do we attempt to make terms with the supposed disease and timidly await its departure? Do we not rather use the two-edged sword of Truth to destroy the error, and so with spiritual assurance deny and denounce all claims of evil, sin, and disease, as they seem to exist in our patients? Do we not make use in a sense of the spiritual interpretation of that part of the Lord's Prayer that says, "And Love leaveth us not in temptation, but delivereth us from evil,—sin, disease, and death" (Science and Health, p. 322), or in our language say, there is neither suffering nor temptation to suffer here, for God is all there is, and so show the lie and the liar to be one same *nothing?*

The thought is master of the act. A good thought is sure to be rewarded, and a bad thought brings with it some belief in suffering. Science and Health (p. 130) says, "Sin is thought before it is acted." So the prayer is heard before we pray. Many are the blessings we receive for which we have not prayed.

Science and Health (p. 130) says, "He laid great stress on the action of the human mind, unseen to the senses." That shows us that the senses can be ignorant of many good things; also that the senses can be ignorant of sin. This shows us the importance of being "instant in prayer."

In Science and Health (p. 130) we read, "Evil thoughts and aims reach no farther, and do no greater harm than one's belief permits." Belief may direct evil thoughts to us, but while our own thoughts are pure and prayerful, error is powerless to harm us. Our dear Leader said in her address to the Mother Church in June, 1900, "Work—work—work—watch and pray." Let us obey her and "give thanks unto the Lord for he is good."

To the Glory of the Father.

BY HERBERT S. FULLER.

THE first verse in the responsive reading in the lesson-sermon on "Love," which we all read with profit so recently, was as follows: "Let your light so shine before men, that they may see your good works, and glorify your Father which is in Heaven."

It is plain from these words, which were spoken while our Master was delivering that wonderful sermon, the words of which have come down through the ages, and the spirit of which is being exemplified by Christian Scientists who are living to-day in harmony with the teachings of the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, that he did not intend for us to hide our candle under a bushel; in fact, he had just said we were not to do so, but to let it shine forth and light others on their way from sense to Soul. The candle is our understanding of Truth. The text means that we are to let the words of Truth shine forth, and not hide the light.

This passage of Scripture seems to be in accord with the statement on page 371 of Science and Health: "A just acknowledgment of Truth, and what it has done for us, is an effectual help." Considered from this point of view, the words of the text quoted would seem to supply the basis for demonstration to those who have an honest desire to tell in our Wednesday evening meetings what Truth had done for them, or for others through them.

Jesus says in this verse: "Let your light so shine before men, that they may see your good works." The good works that we as Christian Scientists have to show are the works of Spirit, and it seems to me that one of the best and most practical ways to show these works is by telling in our Wednesday evening meetings what the Christ-Truth has done for us or through us, and thus give to the world the knowledge that all are waiting for, and which it is our

Digitized by Google

privilege to give to them. In this way we do let our light shine.

But seeming error steps in at this point, and in words that sound specious, argues with the one who would do his or her duty, that the telling of demonstrations savors of elevating personality, and that they would be exalting self in saying what Truth has done. If this form of error were met with the closing words of this verse, "and glorify your Father which is in heaven," the nothingness of this mental argument would be apparent at once, and would be overcome. Tell the demonstrations to the "glory of the Father," and the sense of self will be eliminated, and the bread cast upon the waters rightly.

If we would only apply this verse, we would lose the sense of personality in doing all to the glory of God, and then our light would shine so that our good works would be seen, and those who saw them would lose sight of us, and "glorify our Father which is in heaven."

Positions Outgrown.

BY J. W. M.

SOMETIMES when the way in Christian Science seems very straight and narrow, we are tempted, like the Children of Israel, to sigh for the fleshpots of Egypt, and to look back with longing to our old ways of thinking and living, when so much less seemed to be required of us intellectually and spiritually. When one is confronted with a difficult problem it certainly does seem much easier to say, "It is beyond my understanding," than to set about the work of solving it, but since we know that sooner or later each individual must, with God's help, work out of seeming ignorance and confusion, and solve his own problem, we may well be thankful that we have made a beginning, and that it is impossible to go back to old conditions of thought.

Our Leader says, in "Science and Health with Key to the Scriptures" p. 240, "In Christian Science there is never a retrograde step, or return to positions outgrown." A little experience a short time ago helped me to see the truth of this statement. I wished to make a small water color sketch of a friend, and after beginning it, I thought I did not care to work long enough or thoughtfully enough to paint it in what I now see to be the true way of working, and I knew that my friend would be better pleased with a picture more quickly finished in my old way. I had left this old way because I had seen that it could never lead to truthfulness of expression, but at this time I looked back with longing upon what had seemed pleasing in the past, and forthwith attempted to return to it. After working for a while, I found that I had attempted an impossibility,—that I could not arrive at even the *old* results,—that having a higher ideal I must strive for it; and so I was forced to throw aside my poor beginning, take a fresh paper, and work from the true standpoint.

And so it seems very clear that as we gain more understanding in Christian Science, we must look for better results in all that we undertake. Though the ideal seems far beyond us it must always be our guiding star, and we can never lose sight of it if, working faithfully and honestly, we keep our vision clear. Then we shall have the joy of finding ourselves, each day, a little nearer perfection in all that we attempt.

Who are We?

The greatest mistake that we Christian Scientists can make, is to think that because we have "come into" Science that we have entered the infallibility zone.

Humility and self abnegation befit us best, and we should be serene yet confident, fearless but meek in demonstrating the precepts of the great Nazarene prophet, the master Healer of the ages, who said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."—BERT POOLE.

Testimonies.

Spiritual Meaning of the Scriptures Revealed.

For over twenty years I had been afflicted with a discharge from one of my ears. It was very troublesome at times, particularly so if I took the least cold. It became chronic and I lost the hearing in that ear. During these years I had been treated by the best specialists in San Francisco, and underwent severe treatment. Various acids were used to burn out the cause of the trouble, and one physician frequently heated to a white heat an instrument that he applied in my ear. After undergoing all this, the cure was not effected, and I decided I could not be healed. I had a wash I used, which prevented any odor, but it was very embarrassing to me at times, to feel that others might notice my trouble, and then, people always seemed to choose my deaf ear to whisper or speak low in, and it often put me to great disadvantage.

In August, 1897, it was suggested that I try Christian Science. I decided the treatment could not harm me, and went to a Scientist. I stated my case to him; he gave me a treatment, also some tracts on the subject of Christian Science that he asked me to read, and to call again in two days. I attempted to read the tracts, but they did not enlighten me at all. I was not seeking light, but healing. I went to see the practitioner three times, but as my ear seemed worse than it had for a long time, and I did not grasp the spiritual meaning of what he said to me, I thought I had had about enough of Christian Science, and did not call for further treatment.

My ear seemed so much worse, I decided I did not want any more of Christian Science. I did not know at that time that error often screamed the loudest when being destroyed by Truth. This was the last of the trouble, and my ear has never discharged since.

Christian Science did for me in three treatments, for three dollars, what the best specialists had tried to do, at different times, without success, during a period of over twenty years, and for which they had been paid large sums of money, to say nothing of the tortures I underwent.

I did not realize for some time that I had been healed, and fully expected the old trouble would reappear, but as it did not, I finally was convinced that I had been healed, and could but give Christian Science the credit.

At that time I knew nothing of the spiritual side of Christian Science, as I had not been sufficiently interested to investigate. Being a member of the Presbyterian Church, and a teacher in the Sunday School for many years, I never thought of looking for religion outside of my own church. I went to Christian Science for healing, and never gave a thought to the means employed. I now look back in wonder at the ingratitude and indifference displayed, and am often reminded of the ten lepers whom Jesus cleansed, and but one returned to give thanks.

At another time I decided to try Christian Science treatment for severe headaches, as I had suffered greatly from these. I went to a healer in Oakland, who had previously practised medicine for eighteen years, but having been healed in Christian Science, after the physicians had said she could not live, she had given up her profession for this great Truth.

After talking with her for a short time, I told her I was willing and glad to study and read the Bible, but I did not want to read Science and Health, or anything else on the subject; having in mind the tracts I had been given before. My healer said I could read nothing better than the Bible, and during our conversation quoted many familiar and helpful passages of Scripture; she also quoted from Science and Health. All she said to me was so beautiful it helped me to a more spiritual understanding of the Bible passages.

The doctor made Truth so clear to me that I decided, after three visits, that I wanted her religion. Here mortal

Digitized by Google

mind tried to assert itself, and said, "You had better wait until you are healed before you give up your church for Christian Science." I replied to this thought as to a person, "I don't care whether I am ever healed, this is Truth, and I want it."

Shortly I began to realize where Christian Scientists got such a beautiful and practical religion. I had always had the Bible, so had they. But how about the book I had so despised? I quite wisely decided it must be this that had revealed the spiritual teachings of the Bible to the doctor, as I had never been so uplifted in thought by any sermon I had ever listened to as I had by the three visits to this healer. I made up my mind I wanted this book and wanted it at once. This was March 9, 1900. I never shall forget the date of my spiritual birth, for such I deem it. The contrast between the old thought and the new was greatly in favor of the new. We are to *do* as Jesus did, not merely hear and talk about it.

Our text-book, "Science and Health with Key to the Scriptures," has indeed unlocked the Scriptures and revealed their spiritual meaning, to me, as neither person nor other book has ever done, and I am most grateful to the author, the Rev. Mary Baker G. Eddy.

The spiritual help has been so much to me that I almost forgot to mention the fact that the trouble for which I sought Christian Science has been overcome, and I have had many beautiful demonstrations of Truth over error for myself and others.—HELEN F. WIGHTMAN, Oakland, Cal.

Love Overcomes Evil.

Since coming into a slight understanding of what Christian Science is, the great good it is accomplishing in raising men above self into a desire for holiness and the understanding of how to obtain it, as well as a willingness to forsake all else in the search for it; into an understanding, although slight as yet, of what it means to be worthy the name Christian Scientist, of the earnest, consecrated, watchful, persistent effort necessary in order to keep one's face Godward, and to help instead of hinder our fellow-man in his march, it has been my desire at no time to let a word or thought of criticism pass my lips or dwell in consciousness, remembering Jesus' words, "Judge not, that ye be not judged."

Ofttimes I seemed to fail, and one of the most persistent arguments suggesting itself as an excuse has been that some one else, who seemed not to see the importance of making an unreality of error, asserting itself through others, was the cause; that this was the surrounding atmosphere, and, while not voicing the error myself, I could not prevent being more or less touched by it.

Gradually, however, has come this recognition: that the friends for whom I had a genuine affection were not long criticised in my presence. Perhaps nothing was said to stop the error, but the love in my heart for them left no room for any response to the unkind words that were voiced, and sooner or later these criticisms ceased to be voiced.

Thinking it over and trying to learn the lesson it would teach, I came to see that we cannot hope to advance nearer to the realization of God's presence until we learn to love each other, learn to think good of each other; and these thoughts can find no lodgement in our thoughts while Love's opposite fills our thought.

While we must learn to see error's claim, we must never forget it is error, not people, and we are repeatedly told by our Leader that error is no-thing. If we will learn to think of it in this way, we shall have no disposition to talk it over on all occasions to see how to meet it.

The little child's definition of the Golden Rule, given in one of the recent *Sentinels*, can perhaps help each one of us to realize what living this Truth means. "Thinking of others as God thinks of us." God is Love. Then let us know that only by loving can we hope to know anything of God, and if Love is in our hearts it will appear in our lives. The way has been shown us in the Bible and "Science and Health with Key to the Scriptures."

MISS CAROLINE LORING, Dallas, Tex.

Christian Science a Practical Religion.

When I look back a year and a half, which was the time I first became interested in Christian Science, it shows me more plainly than anything else what it has done for me, and what it means to me.

Then I attended church occasionally, from a sense of duty. I tried once in a while to read a little from my Bible, but I could not understand it at all, and many times I felt most unhappy when I thought of going through my whole life really having no religion. When I realize that in such a comparatively short time I have found God, that I love my Bible, that in attending church I find one of my greatest pleasures,—and that it is the knowledge I have gained of the Truth of Christian Science that has given me these blessings,—my only wonder is that I am not more grateful, for I have truly come out of the darkness into the Light.

Every trial in the way of opposition, though seemingly hard to bear at the time, has afterwards proven to me the truth that is given to us in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, "Trials are a proof of God's care," for afterwards I find myself more sure than ever that Christian Science comes from God, for it shows me Him in time of trouble. I realize now that if there were nothing to meet I should not have grown as much as I have, and those very trials have each been a stepping-stone upward, though I was far from seeing it at the time.

I have been helped physically. In three treatments I was healed of a trouble of ten years' standing, which doctors had only helped and which, during the year before treatment, was gradually growing worse. I have been a sufferer from bad head-colds all my life, having them every few weeks during the winter. I have not had one since I have believed in Christian Science, although at times I have had the fear to overcome, but I have been able to do the work for myself, and each time the symptoms disappeared without my knowing when they went.

This revealing of the practical Christ religion means a very great deal to me, and I desire more than all that my daily living may testify what it has done and is doing for me.

I wish to express my love and thanks to our dear Leader, to the dear and patient healer who has led me so carefully, and to the many friends whose example and words are always helpful to me.—A. T. Y., Brookline, Mass.

A little boy, not a Christian Scientist, expressed his idea of Christian Science in such an original and beautiful way, that I thought it might be of interest to others. He was in the habit of buying a little gift for each member of the family on their birthday, and that he might not forget any one, he wrote in his calendar each name against the right date.

His cousin, in looking over it, came to a date which had in place of the name, a round circle in the centre of which, he had written, "In God we trust." "What does this mean?" she asked. "O, she is a Christian Scientist," he replied.—C. A. F., Brookline, Mass.

The weariness and sadness of life come from persistently closing our eyes to its greatness. . . . There is no life so poor as that which through too close a grasp of visible things has lost all conscious hold upon unseen realities. Lifted into the atmosphere of Infinite Greatness, the soul itself grows great; unfolded within the Perfect Love, the life itself becomes love.—LUCY LARCOM.

Religious Items.

The *Outlook* has thus answered a correspondent who was troubled about the orthodoxy of the editor:—

The *Outlook* has never intimated that the story of the Virgin birth is a myth, or that the worship of Christ is man-worship, or that he is not the supreme Son of God in a sense not shared by our common humanity, or that he is not to be the object of our faith in himself as a divine being, or that he is simply a great prophet born of an earthly father. We believe that Jesus Christ is the Son of God and the express image of his person; that God was in Christ, and that Christ was God manifest in the flesh. And we believe that this was true in such a sense that he who has seen—that is, known—Christ has seen—that is, known—the Father. We emphatically deny that any theological theories respecting the relation of Jesus Christ to the Father are a condition of acceptance with Christ. We condemn such a misconception respecting the relations of intellectual theories to the religious life as irrational, unscriptural, and pernicious. It is irrational because it substitutes theories about life for life itself. It is unscriptural, because it substitutes a mediæval and scholastic test of character for the simple test which Christ prescribed,—"if ye keep my commandments, ye shall abide in my love." It is pernicious because it shuts the door of the kingdom of God against the humble, the uneducated, the little children, and because it turns the zeal of men away from doing the work of the Master in simple loyal service and incites them to doubtful disputations about words and phrases which have different meanings to the different disputants, and to many mean nothing at all. To be a Christian is not to have a theory about Christ's relation to the Father, ancient or modern, conservative or liberal. It is to love him because he loves us, to give ourselves to him because he has given himself to us.

How much more some people believe than they think they do. Technically, some theologians hold to the total depravity of men; that there is absolutely no good in them. Some hold that there are many who, if not elected to be damned, certainly stand no chance of being saved. And yet these same people enter heart and soul into the work of saving these totally depraved men because they really believe they are worth saving, and they work with confidence in spite of their theories that many must be lost, because of their real belief that they are not only worth saving, but that they can be saved if the saviors will only work hard enough. What sacrifices are made, what heroic effort, what splendid consecration displayed by those who, if held strictly to their formal belief, must be heartless and indolent. If the religious world would only make its creeds as Christian as the hearts of those who profess to believe that which their lives contradict, they would magnify the divine attractiveness of religion.

The Universalist Leader.

Neither the word doubt nor the word scepticism adequately represents the questioning attitude of many young people toward the doctrines which they had formerly accepted on trust from the home or the churches. "Inquiry" would be a better term to describe this common mental attitude. Fortunate indeed is that young man who holds fast to the faith of childhood while constantly growing in his mental apprehension of the formal doctrines by which the content of that faith is expressed. This is the ideal type of growth in the spiritual realm—an unbroken line of faith, of trust in God, of reliance on the Saviour, of prayer and thanksgiving, binding together the years of intellectual transition; so that the young man, saying with Paul, "Now that I am become a man, I have put away childish things," the childish speech, the childish feeling, the childish reasoning concerning God and the universe, may yet add, as Paul, the converted prosecutor, could not add, "But the child's heart and the child's trust I have never lost."

The Standard.

George Irving Adams says in *The Christian Register*:—

"Formerly it was thought and taught that the ministry alone was a sacred calling. By peculiar intimations God summoned the young man to preach and minister in his name. Other professions and occupations were termed secular. They were chosen through personal inclination or drifted into through circumstance or necessity. Not by divine leading did men engage in any other life-work than that of the minister and religious teacher.

"Happily for the general uplift of life, this conception of the life calling is becoming less. We are learning to look upon all useful labor from a higher standing ground. It is not that the ministry is other than a sacred calling, it is not that the young man is not called to preach the gospel now as distinctly as he ever was, but we are coming to see that all forms of occupation truly beneficial to the world—hand work, head work, heart work—are equally exalted."

We should recognize that in all the relations of life, moral and Christian principles have application; and endeavor to cast our forces into every public organization which seeks, or can be persuaded to seek, to lift men upward and help them love God and one another. We have by no means risen to the heights of our opportunity in this respect, and are inadequately represented in the concerns of general and public welfare. To neglect this opportunity is to ignore wholesome and Christian power.

In a word, we should seek more thoroughly to be participants in every public, as well as private, effort to Christianize the home, the school, the factory, the office, the trade, the business, the parks, the libraries, the politics and the whole social life. We have scarcely appreciated, much less entered into, the possibilities of the public influence.

The Watchman.

The *Church Economist* has polled about half of the two thousand churches of various denominations in the United States which use the individual communion cup in an effort to test the sentiment of the clergy and laity after their experience with the new method. Only one answer received was unfavorable, two or three were doubtful, all the others were favorable, and most of them emphatically so. Thirty-one states of the Union are included in the poll, and a few churches in Canada and Nova Scotia. Sentiment and prejudice will slowly vanish before light and reason in this matter as in so many others. The formalist and the traditionalist will cling to the past; the lover of essence and spirit will live up to the light of the present.

Says Washington Gladding, D.D., in *The Watchman:* "All our communings with Nature make it plain to us that God, the Author of Nature, must be the God of peace; for all the greater operations of Nature are carried forward in tranquil silence. The wonderful upspringing of life from the earth, the daily miracle of evaporation, the movements of the starry hosts through space—how silently it all goes on! Energy is going forth for which we have no measurements; yet it is all as peaceful as an infant's breathing. And it is in these greater operations of Nature that God most clearly reveals Himself to us; not in the earthquake nor in the storm so much as in the still, small voice of the silence that follows."

A crusade is being carried on n Milwaukee that has for its object the exalted purpose of suppressing all the street noises that are a nuisance to the community. This is certainly a step in the right direction, and the movement should become general throughout the country. In some communities it is impossible to get refreshing sleep at night because of the ringing of bells and blowing of whistles of locomotives. In other places the ringing of church bells is so frequent as to degenerate into a positive nuisance, and no doubt in many instances this absurd custom has retarded the recovery of sick persons.—*The Christian Advocate.*

It is useless to force the thinkers in the older churches to give up their habits and to put away the forms of speech which are familiar to them. But we may be certain that, when the new freedom is pronounced enough and the new thought has filled and comforted the hearts of many who adhere to the old standards, the change will come of itself, like that in the springtime when the free, fresh life of the world reasserts itself, buries the old things out of sight, and causes them to be forgotten in the fresh delight of the new time.—*The Christian Register.*

In a sermon preached, not many days before his death, in Durham Cathedral to miners and their families, Bishop Westcott told them that, in a long and laborious life, he had found the love of Christ the most prevailing power to sustain right endeavor, and obedience to Christ the secret of a noble life. So the most learned of English Biblical scholars and the lowliest of her handworkers met on a common ground.

The Congregationalist and Christian World.

Every one has the burden of ignorance, which can only be borne in humility; of weakness, which can only be lifted by prayer; of sin, which only repentance and a new heart toward God can do away; of sorrow, which a childlike spirit toward the heavenly Father can alone bear. But we have also the duty to be strong. Bear the burden, and it will really bear you.

HENRY WILDER FOOTE.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the Publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Leatherette covers, deckled edges; 50 pp. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

PRESIDENT McKINLEY SHOT.

Friday, September 6, 1901, a few minutes after four o'clock P.M., while holding a public reception in the Temple of Music in the Pan-American Exposition, President McKinley was shot twice by a young anarchist named Leon Czolgosz, *alias* Fred Nieman. His parents are Russian Poles, and he was born in Cleveland, Ohio.

Both shots took effect. The first bullet flattened against the breast-bone; the second passed through the abdomen, near the apex of the heart, and is believed to have lodged in the muscles of the back.

The public reception which was in progress at the Temple of Music had attracted thousands who had come to have a hand-shake with the beloved President.

The would-be assassin had no difficulty in getting to the President's side. He concealed a 32-calibre revolver under a handkerchief in his right hand, so arranged as to give the hand the appearance of being injured, and while shaking hands with the President with his left hand, he fired the shots with his right. The first bullet was easily removed by the surgeons. The second has not yet been definitely located.

The President bore up with remarkable fortitude, and is now believed he will recover. The latest reports are most encouraging.

The following is from an editorial in the *Boston Herald:* "The National Good Roads Association of the United States is to hold an international Congress of Good Roads in the city of Buffalo from the 16th to the 21st of September, and to this convention all those in all countries interested in improving methods of road construction are invited. The Congress has the official support of the United States Department of Agriculture, and it is believed that the result of the gathering cannot fail to be of service to the United States, and possibly to other countries on the American continent where the science of good road construction is even less understood than it is with us. The National Association, co-operating with the United States Department of Agriculture and the Illinois Central Railroad, has undertaken during the last few months an interesting and, as it is affirmed, successful campaign in an effort to give the people of the central West a series of object lessons in road construction."

Commenting on the cotton crop, the *Boston Herald* editorially says: "The South is beginning to count up the profits of this year's cotton crop. The Atlanta *Constitution* holds that the price of cotton will not go below eight cents, and probably will rule higher than that. A 10,000,000-bale crop at eight cents a pound means $400,000,000 for the staple. The by-products will be worth $100,000,000 more, and the part of the product manufactured in the South will add $160,000,000, making a grand total of $660,000,000. The *Constitution* holds that a section which has $660,000,000 to distribute from the year's crop of one staple cannot fail to be progressive, and to receive an immense impetus in all its parts."

Twelve million dollars will be expended in the erection of buildings and the beautification of the landscape for the world's fair in St. Louis. Thirteen million dollars will be expended in collecting and placing exhibits. Thus the total cost of the exposition, according to the plans announced by world's fair workers, is to be $25,000,000. At present $16,000,000 of this amount is available. Where the additional $9,000,000 is to come from has not been made public.

It is reported that the Danish government and U. S. Minister Swenson have agreed upon the price of the Danish West Indies as 15,000,000 kroner ($4,020,000). This report seems to lack definite confirmation, but is believed to be accurate. This will add to Uncle Sam's possessions the Danish West Indies.

Chief Clerk Michael of the state department and Director Fox of the bureau of American republics arranged for a special excursion of the members of the diplomatic corps, their secretaries and wives, to the Pan-American exposition.

It appears from Washington despatches that the United States government has tendered itself and offices to the governments of Venezuela and Colombia in the present complications. War has not yet been declared between the two countries.

The War Department has been informed that the postal authorities have decided to place a portrait of Gen. H. W. Lawton, who lost his life at San Mateo in the Philippines, on one of the new issue of postage stamps.

The steamer Ventura has arrived at San Francisco from Australia with $750,000 in gold coin for Goldman, Sachs & Co., of New York City.

The President has appointed William H. Hunt of Montana to be Governor of Porto Rico.

Foreign.

The French have formally handed over the Palace of Ancestors and the imperial city to the Chinese plenipotentiaries, and only one French battalion remains in the old French quarter. Paotingfu and the other points adjacent that were occupied by the French have been evacuated.

At a meeting of the ministers the edict forbidding the importation of arms into China was approved after the elimination of the preamble which reflected on the foreigners as violators of existing Chinese regulations, which make the sale of arms to the people illegal.

A despatch to the *Standard* from Brussels says that Mr. Kruger has received a report from General Schalkburger, acting president of the Transvaal, assuring him that the position of the Boers is improving owing to daily accessions of Afrikander rebels.

The report that the Sultan has appealed to Germany to use her good offices to settle the dispute with France is confirmed. Germany, it is understood, will advise the Porte to settle with France as soon as possible.

The king is to have another high sounding phrase to his name. "King of all the British dominions beyond the seas" is the way in which the empire is to be recognized in the royal title.

Industrial and Commercial.

A special despatch to the (Boston) *Transcript* from Denver, Col., says: "The figures announced by the smelters and the reducing works and miscellaneous mills, place the August output of the Cripple Creek district somewhat higher than announced at the end of August. The new total gives the month's production of gold as $2,535,000, the highest amount, by almost half a million, thus far this year. Increased production and better road facilities account in large measure for the increase. Dividends paid by the listed mines during the month amounted to $139,050, making the total dividend disbursements thus far this year $3,226,065.50. Since the Cripple Creek district was opened, public dividends have reached $24,750,000. This does not include close corporations or mines under individual ownership.

In a report to the State Department dated July 13, Consul General Stowe at Cape Town contends that, published statistics to the contrary, in 1900 the United States exported a greater amount of goods to South Africa than ever before. As to the future, Mrs. Stowe says that $50,000,000 is the estimate of the cost of contemplated railways, $5,000,000 for public works, $15,000,000 on harbors, $500,000 in electric lines in Natal, $25,000,000 to be expended in the Transvaal, and a proportionate amount in the Orange River colony.

The *Financial Chronicle's* returns for the first half of the present year, covering 179 railroads and 164,498 miles of track, show an increase of 10 1-3 per cent ($68,545,091) in gross earnings, an increase of 14¼ per cent ($26,934,083) in net earnings, and an expansion of 8¼ per cent ($36,610,108) in operating expenses. In both gross and net revenue gains the Southwestern roads make the best reports.

The exportation of wheat has been stimulated recently by the low charges for ocean transportation, which were about two cents a bushel for Liverpool last week, against six cents one year ago. Exports of wheat (flour included) from Jul 1st to August 23d have been 50,679,000 bushels, against only 22,640,000 bushels in the corresponding weeks of last year.

General.

The National Bank of the Republic of Chicago has a novel safeguard and labor-saving device. Checks are recorded by a photographic apparatus operated by electricity. The machine takes pictures of ten thousand checks an hour. The pictures are then rolled on reels and stored. The instrument will perform the work which it would take nine clerks to do, and there is no opportunity for mistake.

The farmer in 1800 could only produce a bushel of wheat by three hours' labor. Today, by the aid of agricultural machinery, the time required is only ten minutes. Today man can create an artificial climate under glass and grow fruits, flowers, and vegetables in winter. These glass gardens of the United States yield annually $17,500,000 worth of products, of which sum $4,500,000 is cut flowers and flowering plants.

It is reported that water and not champagne, will be used when the new cruiser Cleveland is christened at Bath, Me. Whether they are total abstainers or not, owners and builders of ships in Maine are preferring spring water or flowers for the christening of ships, and the use of champagne is declining.

Peterboro, in New Hampshire, established the first free public library in the United States in 1833, and as early as 1849 a general law authorizing taxation for library purposes was passed.

The royal park of Copenhagen contains forty-five hundred acres. It is said to be the largest deer enclosure in the world.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Palestine for the Jews.

Remarkable Rise and Growth of the Zionistic Movement.

Is Palestine to be reclaimed by the Jews? Will this people return to its own and re-establish its former glory? Recent movements in all parts of the world would seem to indicate that the wandering Jew is near the end of his wanderings. The fourth annual convention of American Zionists has just been held in Philadelphia, and the fifth annual congress of the world's Zionists will shortly be held in Europe. Plans for the complete recovery of the Holy Land are going steadily forward; large colonies have already been established in Palestine, and every month sees substantial additions to the Jewish population of Judea. What do these movements indicate? At the last Zionists' Congress held in London, Professor R. Gottheil of Columbia University, fairly outlined the matter. "It is time," said he, "that the nations understood our motives. Our purpose is gradually to colonize Palestine. We political Zionists desire a charter from the Sultan authorizing us to settle in our Holy Land, and we ask the powers to approve and protect this charter."

The story of the wandering Jew is a particularly sad one and weaved in with legends of his travels are the creeds of many who believe his condemnation to be a prophecy of the second coming of Christ. In its deepest import, says one, the tradition is simply a wonderful picture of people forever suffering and yet undying; forever doomed to wander; without a home or any fixed abiding place; safe nowhere, and yet immortal; trampled and beaten; robbed and persecuted; and yet, strangely, living and flourishing in spite of all. The most vigorous, virile, and healthful people under the sun; the bravest and most enduring in battle and siege; the most patriotic and loyal of all people, they steadfastly, through all their wanderings and sorrows, cling to a land which is but a memory or a dream.

✠

Now, it seems their dream is about to be fulfilled. Already the leading Zionists are seeing visions of a new nation among nations, peopling a country which embraces within its bounds the temperatures and productions of all climes, where from this vantage ground, the inherent genius of the Jews for things religious will reassert itself, and they will lead the nations of earth into the kingdom of spiritual man.

The history of the Jewish people is too well known to need retelling. They have been driven from land to land and persecuted for centuries. The war between Semitism and Anti-Semitism has waged fiercely in every country on the globe. Now, as it shows signs of abating and when Jews and Christians are beginning to understand one another, this Zionistic movement starts in. Strangely enough, many, even from the early part of the Christian era, have believed that when the Jews themselves would recognize Christ as something else than a false prophet, there would come a recolonization of Palestine by the Jews.

The present Zionistic movement began four years ago, and was started by the publication of "Der Yuden Staat" (The Jewish State) by Dr. Theodore Herzl, one of the editors of the Vienna *Neue Freie Presse*. Herzl advocated the purchase of Palestine from Turkey for the purpose of building a Jewish state under the suzerainty of the Sultan and the protection of the powers. He mapped out a system of government, a national bank, a military organization, and even suggested a flag—white containing seven gold stars. The book created a sensation, and when Herzl called a congress of Zionists to meet at Basle, Switzerland, four hundred delegates responded. Herzl's plans were considerably modified. The idea of an independent state was temporarily abandoned as premature and liable to injure the cause. But the visionary scheme had become an idea, and with his usual pertinacity and perseverance, the Jew set about to materialize the dream of Zionism. The first essential to ultimate success was money. Accordingly the Jewish Colonial Trust, Ltd., was formed, with ten million dollars capital, and head officers in London. There are two million shares of five dollars each, and at this writing about one million dollars has been paid in—not by the rich, but by the poorer classes. In this country twenty thousand shares have been taken by almost as many subscribers. The trust was established not merely to furnish transportation for emigrants, but to establish factories, build railroads and telegraph lines, and to help the colonists to a state of financial prosperity.

✠

In this country the movement was taken up in 1898, but because of the war with Spain little was done, the Jews fearing an unjust accusation of lack of patriotism in advocating a return to Palestine at a time when their present home needed them. At the first convention there were fifty delegates; at the one just held there were represented twelve thousand members, one hundred and forty-eight societies from twenty-eight states and eighty-nine cities, including Manila, where there are forty-five Zionists in the United States hospital corps, and Matanzas, Cuba, where eight troopers of the Second Cavalry are interested in the movement.

How far the settlement of Palestine has progressed is best shown by reports of the various settlements. These settlements occupy about six hundred square miles in Judea, Galilee, and in Bashan, as the eastern or Trans-Jordan portion of Palestine is called, or one per cent of its entire area. The oldest settlement is at Mikoeh Israel near Jaffa, containing six hundred acres. This colony is the agricultural centre of the Zionists. An agricultural school with one hundred pupils and fully equipped with the best American implements, is located there. Five miles to the south is Rishon Zion, with two thousand acres and five hundred settlers. Their principal occupation is the raising of silk-worms. There are twenty thousand mulberry trees, wells, a fine school, a synagogue, a library, and a cask manufactory. In the latter are made the casks in which the celebrated Carmel wines are shipped. The factory is lighted by electricity generated on the premises, and all the machinery is modern. Each family has a pleasant two-story house. Another five miles to the south is Wadi-el-Hannin (the Dale of Roses), containing six hundred and seventy colonists. The principal industry is the cultivation of grapes. Adjacent is Rohobath, consisting of twenty-five hundred acres and two

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

hundred and fifty settlers. Ekron, further inland, contains one thousand acres. Its two hundred and fifty colonists raise wheat, fruit, olives, and silk-worms. Gadrah to the west, has nine hundred acres, on which are two thousand selected Burgundy vines. Atruf, at the foot of the Jordan mountains, contains only twenty families, while Kastinia, in Philistia, east of Ashdod, supports one hundred and twenty families of Bessarabian Jews on its twelve hundred acres.

Petakh Tikneh, north of Jaffa, is a more important colony. It has seven hundred and fifty inhabitants, who till thirty-five hundred acres, raising oranges, lemons, and various flowers (especially roses and geraniums), for essential oils. El Heiderah, north of Tantura, contains six thousand acres. It is settled by Russian exiles. At the time of their arrival there, seven hundred acres of their colony were swampy marshes, and in consequence, malaria and typhoid threatened the success of the undertaking. Baron Edmund de Rothschild, on learning of this state of affairs, drained the swamps and planted fifty thousand eucalyptus trees, so that at present the health of the colonists is not endangered. Tantura itself contains a large glass factory. Zikron Yakub, on the slopes of Mount Carmel, contains five thousand acres, supporting two thousand Roumanian Jews, mainly engaged in grape growing. This settlement is surrounded by others at Shefaya Umm et Tut and Umm el Jemail. Rosh Pinah, another of the more important colonies, has sixty houses, fine gardens, three springs, half a million vines, eighty thousand mulberry trees, and a silk factory, employing sixty hands. Yessud Hammalah, near by, is a Polish settlement. It contains nine hundred acres, the occupation of its settlers being the growing of flowers for essential oils, bee farming, and silk weaving. To the southwest, just north of Safed, and on the summit of the range of Upper Galilee is Ain Zeitun, at which place there are three hundred thousand vines. Other colonies are Mishmar na Yarden, Mechanayim, Metulla, Beni Yehudah, and Sahem el Janian (in the Trans-Jordan).

Everything in these settlements is up to date. The best machinery is installed, and electricity plays a prominent part in the mechanical life of the colonies. The great wine cellars at Rishon Zion are an example of this. All the grapes from the vicinity are taken to the storage cellars, where they remain until modern machinery converts them into luscious Burgundy, soft Sauternes, and delicious sweet wines.

The colonies are governed by a board elected annually at a general meeting. There are no courts, and all grievances are adjusted by the board. Decisions are invariably obeyed, for the board controls the entire water supply, and any recalcitrant member of the colony is brought to terms by having his meed of water stopped. Early this year a colonist was accused of a grave crime, and as the board did not care to take the responsibility of punishment on its own shoulders, a meeting of the colonists was called. It was decided unanimously to expel the offender. His farm was purchased by the members of the settlement in which he lived, and he was ignominiously expelled.

The schools are essentially modern. Mathematics, literature, geography, Arabic, and French are taught. Hebrew is spoken, but modern words, such as locomotive, electricity, etc., have been introduced in Greek form. Another interesting feature of Zionistic life is its mounted militia. Like all Arabs, most of the colonists ride and shoot well. A number of them have been formed into an irregular cavalry corps, mounted on Arabian horses and armed with magazine rifles. They dress in white, and make an excellent showing.

So much for the life of the colonists themselves. The Zionists are now using their utmost endeavors to obtain from the Sultan a charter guaranteed by the powers, which will give them the rights of colonization on a large scale. The Sultan has been particularly kind to the Jews in his dominions, for they are racially descended from the same parent stock as the Turks and Arabs. Emperor William has endorsed the project, and President McKinley has considered the matter at a special cabinet meeting.

The dream of the rehabilitation of the Jewish race as a nation is nearer realization than might seem at first glance. It is a great work which the Zionists are doing, and it carries with it a wonderful promise of a new nation that shall come into its own.—*Denver Republican.*

Forestry in the Philippines.

CAPTAIN GEORGE P. AHERN, who has charge of the forestry interests of the United States Government in the Philippine Islands, discussed the subject interestingly with a visitor the other day. "Forestry and lumbering in the Philippines," said he, "are very different from the corresponding industries in the United States. As a rule, Philippine timber runs to the hardwoods, while American timber has a larger proportion of soft. Then the methods of handling timber in the two countries are very unlike. There is no one in the islands now who understands getting the valuable stuff out of the dense forests and preparing it for market. Timber can be cut on the public lands by any one who secures a permit from the forestry office. No charge is made for this permit, but the wood to be removed must pay a tax on every cubic yard. Each transaction, with all its details of names and figures, is made a subject of record, and the accounts are strictly kept.

"To one accustomed to American forests and industry, the slow gait at which work goes on in the Philippines, in spite of the high value of timber properly cut and prepared, is a marvel. Out of one hundred and twenty thousand square miles of dense forest, for the most part in a virgin state, only twenty million feet of lumber was taken between the first of July, 1900, and the middle of May this year. Moreover, of this absurdly small cut not more than one-quarter found its way to the mills, the rest being used rough-hewn for construction purposes, or as firewood. It is very hard to get efficient labor for forestry work or lumbering in the Philippines. The lack of roads is a serious drawback, but does not compare with the labor problem. The natives acquire prejudices against many employers, and will not work for them at any price; and even when they consent to work they are not worth a great deal. Being of small stature, they cannot handle weights nor stand a long strain of hard work. One Irishman would be worth ten Filipinos in an island forest. I have seen four natives struggle with a wheelbarrow which any sound-bodied laborer here could pick up and run away with. One would seize it by the handle-bars, and the other three would pull on a rope attached to the front of the body, and then barely move it. From this illustration you may judge what a handful of these little men could do with a log six or seven feet in diameter.

"Speaking of big logs, there are several varieties of trees in the islands which attain gigantic size. The natives have never been able to work this big timber, yet here and there we find hardwood tables of large dimensions whose tops are one solid piece. The mystery is explained when you learn that after cutting down the tree from which such a slab can be got, they slice out this single piece by hand, and leave the remainder to rot. They have neither the means nor the ingenuity to get such a log to market. Here is where skilled American labor, dummy engines, wire cables, and other facilities familiar here will come in play to some purpose.

"A mistaken idea prevails in the United States that most of the Philippine timber is of varieties very valuable for cabinet-making. There are seven or eight varieties which take a fine finish, but apart from these none of the native woods are likely to find their way to the United States. The

Digitized by Google

commerce which has already sprung up in a small way between the islands and the Pacific coast is restricted by the uncertainty of profit on the stuff that comes this way, as well as by the uselessness of some of our wood in the Philippine Islands. The white ant, which is the terror of the forest in the archipelago, will eat pine, fir, and other soft woods, but will not touch cedar. The Quartermaster's Department has made some experiments in shipping fir, redwood, spruce, and pine from the Pacific coast for the construction of storehouses and other military buildings, but the ravages of the ant doom these structures to a short life. On the other hand, cedar is pretty expensive and not strong enough for use in much structural work. The native woods which are proof against insect plagues will probably continue to be used chiefly for buildings there.

"The Philippine forests offer exceptional attractions to American capital bent on developing the country. We have scientific parties exploring the different islands, and they have found thus far some six hundred and sixty-five different varieties of trees, with a prospect of adding three or four hundred to the number. As time permits, our bureau will test each variety for strength, resistance to water, invulnerability to the white ant, and other particulars on which lumbermen and builders will depend for guidance. Many investments have already been made in Philippine timber, but there is room for all that are likely to go there for some time to come. Each investor will be held to a strict accountability under the forestry laws. He will not be allowed to clean up any tract of forest land, but only to cut trees of a certain size and at a certain stage of development. It is the Government's intention to maintain permanent forests; hence this restriction against widespread cutting. Lumbermen trained in the extravagant practices too common here, complain of all this, but it is really a restriction in their interest, with an eye to the future.

"Rubber will probably come to be one of the most important products of the Philippines. We have there a considerable belt of rubber and gutta percha. In several of the islands the explorers are now studying gum trees, and by next fall we expect to have data enough available to form an intelligent idea of the extent of the gum forests. A good deal of gum has already been shipped from the Philippines to Asiatic ports, but the industry is only in its infancy. As in all other lines, the natives who make a living by gathering gum are quite unskilled. The gum of the gutta percha tree flows very slowly. Not having the patience or the shrewdness to devise any better plan, the natives always cut down a gutta percha tree for its valuable juice, thus insuring a famine for the future. Our first effort will be to teach them better ways than that."—*Boston Transcript.*

A Fortune for a Book.

"FIVE hundred dollars for eight pages of dingy reading! That's a good deal of money, you will acknowledge, to invest in four small leaves of print paper," observed a Walnut Street dealer in rare books the other day. "However, that is the price I offered a man a few days ago. The eight pages wanted were of old Pennsylvania laws. My offer was declined with thanks, the owner being something of a bibliophile himself, and knowing that the scarcity of these pages would permit him to fix his own figure for his set. The pages would be passed over or destroyed by the ordinary reader, yet there is not another known copy in existence. You will readily understand that they are valuable when you consider the size of my offer.

"I bought a pamphlet for fifty cents from another bookseller several weeks ago, and sold it within a few days for forty dollars. That was merely a stroke of luck in business. The pamphlet was on this bookseller's shelves for sale at a stipulated price fixed by himself.

"Dealers in rare books seldom make purchases from strangers unless the latter can give satisfactory information of how the books came into their possession. This is done partly from a selfish motive, and partly from a desire to protect their customers.

"The dealer in rare books has his regular customers. His mission is akin to that of the confidential lawyer with a client. He is familiar with the literary taste of each customer. His first thought in purchasing is that such a person would like such a book. The book is put aside and word sent to that customer. No dealer depends entirely upon the trade of his own city. There are in New York and Brooklyn perhaps a hundred or more private libraries of rare books that are most valuable. Philadelphia has fifty or more. I have customers in every State in the Union. One of my best is in Portland, Ore.

"There is little chance for deception, even if a dealer were so inclined. A true bibliophile knows the value of a volume the minute he reads the name. Therefore, when I get hold of a scarce book, all I do is to acquaint my customers with the fact and its state of preservation. Next to Philadelphia in the taste for old books and rare books come, in their order, Chicago, New York, and Boston. In some of the smaller towns and villages some of the most valuable libraries may be found.

"I got three hundred dollars for the first Masonic book published in America, and it is no larger than the ordinary child's primer. It had a double value, because of the fact that it was printed by Benjamin Franklin. There are few copies in existence. A book that is valuable to one dealer may not be valuable to another. For instance, a Trenton bookseller came in to see me and asked if I wanted a book that he had in his pocket. I told him I did, and offered him twenty dollars. This was satisfactory to him, and he volunteered a willingness to trade the book for books on my shelf. He selected fifteen volumes, the combined price of which amounted to twenty dollars. I felt that I had bettered my stock, and he, no doubt, thought he had bettered his.

"You will likely be surprised when I tell you that in this God-fearing country there is practically no demand for rare theological books. It is almost impossible to sell them. No one seems to want religious books."

The dealer here brought out a recognized edition of Martin Luther's works, printed at Ienae, 1556. They are in four volumes, bound in old vellum. This particular copy survived destruction by fire at the hands of the ecclesiastical authorities of the day, who took exception to the great reformer's writings. The covers show unmistakable evidences of having been in contact with flames, and the leaves are like punk, showing the effect of intense, dry heat, and where the flames did not touch. For practical use the books are destroyed, although all the reading is there. But the demand for religious books is so slight that the volumes are on a shelf containing the cheaper grade of books.

"Scarce books on American history sell as fast as we can get our hands on them," the dealer continued. "Early colonial laws prior to 1776 are among the rarest of all American publications. This is due to the fact that they have probably been destroyed. At least, only now and then does one bob up. During the Civil War the price of paper was so high that nearly everything in the way of old books, magazines, pamphlets, and papers was sold for paper pulp to be made over. That was before inventive genius had devised other and cheaper ways of manufacturing paper, and better qualities, too. Many volumes of American books must have been destroyed, particularly in the Southern States, where at times during the war newspapers were printed on the back of wall paper.

"During the war and for years after, bookbinders cut down the margins of magazines and pamphlets intrusted to their care to an outrageous extent. I have on my shelves many volumes bound in those days, and in some there are absolutely no margins to the pages. The binders did this because they could get sixteen cents a pound for all their waste scraps. The succeeding generations of bookbinders

Digitized by Google

followed the pace of their predecessors without knowing why they did so.

"Close trimming is merely a relic of the old practice during the war. We are getting back to ante-bellum days though, and the volumes from the best publishing houses nowadays are turned out with rough edges, as in the days of yore."—*Philadelphia Times.*

Relic of Revolutionary Days.

THE following unique and interesting relic is in the possession of Mr. Foster Morse of Roxbury, Mass.

By the Honorable William Heath, Esq., Major-General in the Army of the United States of America.

PROCLAMATION.

Whereas the Honorable General Assembly of the State of MASSACHUSETTS BAY, were pleased on the 30th Day of April last to pass the following Resolve, viz. "If any Person or Persons (other than such as are or may be appointed by Order of Court) shall sell or dispose of any Wine, Spirits, Ale, Beer or Cyder, or any Kind of Provisions to any British or foreign Troops included in the Convention, within the Limits assigned to any of the Officers and Soldiers of said Convention, or shall exchange with any of them Paper money for Hard Money, he, she or they so offending shall be subject to Military Prosecution and Punishment; and that General HEATH be, and he is hereby empowered and requested to carry the above Resolve into execution."

IN Order that the foregoing Resolution may in all its Parts be effectually carried into Execution, the Major-General calls upon all Persons who reside or may come within the Limits assigned to the Officers of the Troops of the Convention of Saratoga, within the State aforesaid, to pay strict Attention to the foregoing Resolve, as they would avoid the Pains and Penalties of Military Prosecution; and all Officers of Guards within said Limits are hereby required to take Notice of, and confine all Offenders against the said Resolve, whether Inhabitants or Conventioners.

GIVEN under my Hand at Head-Quarters, in BOSTON, this 10th Day of July, A.D. 1778, and in the third Year of the Independency of the United States of AMERICA.

W. HEATH.

By the General's Command,
SETH LORING, Sec'ry.

Dare to Try.

Dare to try!
What though a thousand critics wait
To cavil at the thing you do?
Have courage—gaze upon the great
Names written high,
And know that they had critics, too.
Whose glory men acknowledge now—
Had Colon harbored in his breast
Dread of the critic's scorn, his prow
Had ne'er been pointed to the West.

Dare to try!
Not one immortal line or word
Of Hamlet would enrich our tongue,
And no man ever would have heard
The bitter cry
From Lear's poor, bleeding bosom wrung,
Had he that touched but to adorn
Sat down in dread of critics who
Forever wait to laugh to scorn
The things that other people do.

S. E. KISER.

Selected Articles.

In Answer to a Correspondent.

New York, August 19, 1901.

To the Editor of the *Oswego Times.*

Dear Sir:—Every evidence that Christian Science is making friends in Oswego is welcomed by thousands of Christian Scientists here in New York City, and in various parts of the State. As an evidence of appreciation, I take a statement which appeared in your issue of August 10, from the pen of a correspondent who writes under the heading of "Local Notes by the Scribbler."

"I believe," writes your correspondent, "that it is doing a certain amount of good to many nervous, weak women, and some men too, and I rejoice that it has come for their help." This sentiment deserves the more to be praised because your correspondent has heard certain stock criticisms which require explanation by those who know Mrs. Eddy personally and are actual and active Christian Scientists.

Referring once more to the story of the souvenir spoons which were made and sold for the benefit of a citizen of Concord, let me emphasize again that Mrs. Eddy neither intended to receive any returns from their sale, nor did in reality receive any. The whole transaction was intended as a favor to the person for whom the spoons were issued. Mrs. Eddy has never told me her motive for no longer taking patients, but I can imagine that the growing demands made upon her time by those who desire her advice and counsel on matters pertaining to the large denomination as a whole must make it impossible for her to take patients at present.

Your correspondent will understand the Christian Science explanation of the crucifixion by remembering the vital distinction which Christian Science makes between the man Jesus, who suffered and died, and his title of "The Christ," or that Divinity which could not by any means either suffer or die.

Perhaps your correspondent is not familiar with the following words of Emerson, in his essay on "Compensation," in which the nature of evil and of all that is unlike God, is depicted in his characteristic manner:—

"The soul is. Under all this running sea of circumstance, whose waters ebb and flow with perfect balance, lies the original abyss of real being. Existence of God is not a relation or a part, but the whole. Being is the vast affirmative excluding negation, self-balanced and swallowing up all relations, parts, and times within itself. Nature, truth, virtue, are the influx from thence. Vice is the absence or departure of the same. Nothing, falsehood, may indeed stand as the great night or shade, on which as a background the living universe paints itself forth; but no fact is begotten by it; it cannot work; for it is not. It cannot work any harm. It is harm inasmuch as it is worse not to be than to be."

As to the bacilli and beasts of prey, Christian Science does not deny their existence, but teaches that they are in reality benign and harmless, and are only as dangerous as universal consciousness makes them. When mankind shall have put off all fear, in the knowledge of the Omnipotence of God (Good), then these seeming dangers will vanish, and Isaiah's dream of a little child leading the wild beasts will be actually manifested. Many a step will have to be taken before that time arrives. Many a selfish, material thought will have to be destroyed in our consciousness, many a fear; but the promise is in the Scriptures, and the first fruits of this promise are already apparent in the destruction of sin and disease by spiritual understanding. Christian Scientists look for the co-operation of all Christians in hastening the advent of this glorious dawn.

Yours truly,
W. D. MCCRACKAN.

Letter from an Operatic Tenor.

WE clip the following from a recent issue of *Melbourne Age* published in Melbourne, Australia.

Baron Berthald, the new tenor of Musgrove's Opera Company, is a loyal adherent of Christian Science, the new American religious organization, which has a woman (Mrs. Eddy) as its Founder, and a work called Science and Health as its chief text-book next to the Bible.

Referring to an article republished a few days ago from the London *Daily Mail*, headed "Christian Science Craze," Mr. Berthald writes to the *Melbourne Age* that he had read it with interest and wonder.

"With wonder," he says, "because of the evident ignorance displayed by the writer regarding this Science and its Founder, Mary Baker G. Eddy. His very expressions, 'illiterate' and 'school-marm' type, as applied to Mrs. Eddy, prove my assertion, since we are not wont to designate by that title a woman who, besides having practised as a homœopathic physician, became also an ordained minister. It is useless to argue the impossibility of explaining by the quotation of a few paragraphs a science which counts as adherents over a million of people, among whom are numerous physicians and clergymen, and is absorbing the attention of thousands of investigators. When Galileo first openly declared the testimony of one of the five senses as to the relative movements of earth and sun to be a delusion, the 'wise ones' of his day were not slow to pronounce him crazy. To-day even the children at school marvel at the short-sightedness of those 'wise ones.' Yet this is just one of the cardinal points in Christian Science, to wit, the untrustworthiness of the five physical senses, which fact is corroborated by the long observations of the foremost professors of physical science of the day.

"Christian Scientists take for their guide the Bible which is spiritually interpreted. They believe absolutely in the power of divine Mind over matter, as explained and demonstrated by Christ Jesus, who also showed how this ascendency of mind was to be attained; namely, by the forsaking of false idols, and the practice of brotherly love, whereby man would prove his relationship to God, Love. No Christian Scientist claims to have completely risen above all material sense of pain and pleasure, but believes that this sense will be lost in proportion as the perfect Christ life is demonstrated. If among the thousands of cures of all manner of ailments by Christian Science, from the 'robust hypochondriac' to the consumptive, as attested by physicians, some failures shall disprove this scientific Christianity, how can other sciences be maintained, as for instance the science of medicine, practised by thousands of 'regulars' with their countless failures in curing sickness, particularly in view of their own admissions, of which the following is a sample: 'The effects of medicine on the human system are in the highest degree uncertain; except, indeed, that it has already destroyed more lives than war, pestilence, and famine all combined' (Dr. Mason Good, of London).

"When I read the writer's remarks about the young man with the dangerous affection of the eye, whom he called 'a fool' for having tried Christian Science, I wondered if he called or considered all those people fools who, under the treatment of oculists and 'medical faculties,' are daily deteriorating in eyesight and general health. We all know how little brain matter it requires to deny or ridicule a subject we know nothing about; but how about disproving recognized facts? The writer evades that difficulty by simply ignoring them, and devotes his criticism solely to the secondary part of this religion. I may confirm, however, that the healing is not the greatest benefit claimed, but it is the realization in Christian Science of man's true estate, his eternal, spiritual, and inseparable co-existence with God, the only life and intelligence that brings about a universal unity of thought and action inspired by the supreme power, Love, and thereby the establishment of a brotherhood of mankind."

Eclipses.

In Christian Science there is an eclipse which is under our control and against which we must protect ourselves: this is the passing of dark, material thought between us and the ever-present light. The Light is ours always, as surely as that the sun was not changed on May 28, 1900, when its shadowed light reached the earth through a cloudless sky. The Chinese believed that at the time of an eclipse, a great dragon swallowed the sun; this surely is suggestive. The great dragon, error, the belief in a power apart from God, is all that ever passes between us and the ever-present Light.—A. J. M.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

New Edition of the Manual.

The twenty-second edition of the Church Manual containing the names of the members admitted in June, 1901, is now ready for delivery. Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

The Obstetric Class.

Applications for the obstetric class of the Massachusetts Metaphysical College for 1901 must be sent at once to Alfred E. Baker, No. 25 N. State St., Concord, N. H. The class will convene October 21.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

President McKinley.

THE attempted assassination of William McKinley, President of the United States, is among the most appalling events of modern history. The circumstances surrounding the attempt to kill the President, make the act one of so dastardly a nature as to raise the question whether it could have been perpetrated by a sane person. Yet Leon Czolgosz, the would-be assassin, was evidently not insane. He is an anarchist of the violent type, and claims that he did the act entirely on his own responsibility, having been incited thereto by a speech he heard delivered by Emma Goldman. This, however, is not credited. The act is believed to be the result of an anarchistic conspiracy. Miss Goldman is suspected. She was in Buffalo a day or two before the tragedy, but has disappeared and has not yet been found.

Czolgosz says her words "set him afire," and moved him to the commission of the deed. He maintains that he only did his duty, and that all rulers of nations should be put out of the way. This man voices the sentiments of an element which is growing in this country, and here is presented a deep and serious question for the consideration of our lawmakers and authorities, as well as law-abiding citizens generally.

The deed was so cunningly done that the culprit eluded detection until it was too late. Feigning a wounded hand by dexterously covering it with a handkerchief, he moved along with the hand-shaking procession in regular line until it came his turn to shake the President's hand. While shaking with his left he shot the President with his right hand. He intended to assassinate the President, according to his own confession. That so great and good a man and chief magistrate as President McKinley should thus be at the mercy of a wicked and irresponsible young anarchist, is one of the sad facts of this mortal life. This murderous element must be stamped out. The spirit of Cain—the murderous spirit—will never right wrongs. Reforms cannot thus be established.

Mr. McKinley stands before the world as among the best and greatest Presidents this country has ever had. A man of high purposes and noble instincts, a man of an unusually equable temperament and genial nature, he is universally respected and loved.

Fortunately the shots from the would-be murderer's pistol were not fatal. The President lives, and there is every prospect of his recovery. The prayers of good people from all over the Christian world are going out for his recovery. May these prayers be answered. We hope, trust, and believe they will be. From all quarters of the globe, from foreign potentates and crowned heads, as well as the heads of sister republics, and thousands of private citizens, have poured in to the President's private secretary, telegrams and letters of condolence and sympathy. The whole world was shocked by the terrible affair, and emphatically it is expressing its abhorrence.

On behalf of Christian Scientists the following telegram was sent:—

"*The Secretary of the President*:—We beg you to present to the President and Mrs. McKinley assurance of the sympathy and love of all Christian Scientists in this hour of their and the nation's affliction."

This was signed by Septimus J. Hanna, William G. Ewing, Joseph Armstrong, Irving C. Tomlinson, and Alfred Farlow.

Judge Ewing had an appointment to deliver a lecture on Christian Science at St. Johnsbury, Vermont, Friday evening, September 6, but on hearing of the sad calamity he sent the following telegram:—

"*L. A. Ladd, St. Johnsbury, Vt.*:—The lecture to-night must be postponed. I can be with you late in September, and will be glad to pay all the expenses now incurred. The wicked assault upon the life of President McKinley invokes the tender sympathy and love of good people all round the globe. Mrs. Eddy and Christian Scientists everywhere lovingly unite in such holy duty

"W. G. EWING."

We rejoice to say that the latest word of the President's condition is most encouraging for his recovery.

"The Revelation of Christianus."

"THE Revelation of Christianus and other Christian Science Poems" by the Earl of Dunmore, is the title of a book of poems by Lord Dunmore printed by the University Press, Cambridge, U. S. A., and now on sale by The Christian Science Publishing Society. This book is a volume of sixty-two pages, beautifully bound in white ribbed cloth, with gilt top, and lettered in gold on the back and sides. The pages are red-ruled, with red initials.

The entire work is excellent in its mechanical aspects, fulfilling the best in our latter-day book-making; while the poems, both in form and substance, are of a meritorious order.

The volume is affectionately dedicated to "Our beloved Mother and revered Leader," Mary Baker Eddy. In the Preface the author informs us that "this work is, with a few additions, a reprint from a former volume of Poems, entitled 'From under the Southern Cross,' which were written by me during a sojourn of a year (1900) on an island in the South Pacific Ocean. Some of these poems have been already printed in *The Christian Science Journal*."

The book, as a whole, is a credit to both author and printer, and will be appreciated accordingly.

See Publisher's notice on preceding page.

Not Authorized.

A LETTER just received informs us that Miss Sue Ella Bradshaw and Frank W. Gale, First and Second Readers of First Church of Christ, Scientist, San Francisco, Cal., have authorized no one to use their names in connection with the Willamette Oil Company, or any other similar company; and that neither of these Scientists has any interest in the said oil company.

We have heretofore, through our periodicals, expressed our views with reference to efforts to enlist Christian Scientists in enterprises of different kinds. We have nothing to say as to what individual Christian Scientists shall or shall not do in relation to private business affairs, but we do not approve of any efforts to interest Christian Scientists in business enterprises or stock companies upon representation that it is a Christian Science affair, or that Christian Scientists are interested. Let each act upon his individual judgment, wholly uninfluenced by what other Christian Scientists may or may not do.

We notice that there are other names mentioned in the same connection as those of Miss Bradshaw and Mr. Gale. We assume that there is no more authority for the use of these names than for those of the San Francisco Scientists.

Organization in the City of Mexico.

UNDER the above heading we published in the *Sentinel* of August 22 an account of the organization of Church of Christ, Scientist, of the City of Mexico. The account read as if a church had been organized. We are now informed that it should not so read. A society was organized under the title mentioned, but it is not an incorporated church. We gladly make this correction.

"What shall we think of Christian Science?"

THE *Chicago Record-Herald* recently published an extract from an interesting and able sermon delivered by the Rev. C. C. Morrison, in the Monroe Street Church of Christ, West Side, Chicago, in response to the above question, in which he said many kindly things of Christian Science. A part of his remarks indicate that he is laboring under some of the current misapprehensions relating to Christian Science. Christian Scientists, however, know this results from lack of a thorough understanding of its tenets, and therefore place these misapprehensions on the same list with those of other misapprehensions which come to their notice.

Speaking of the attitude of some of the orthodox clergy toward Christian Science, Mr. Morrison says:—

"The fanatical utterances of the orthodox pulpit in nowise do justice to the phenomenon known as Christian Science. It is hardly possible that over a million people living on a plane of, to say the least, average intelligence, could be persuaded to stand together on a platform which is wholly bad. To say, then, summarily, that Christian Science is of the devil, is unscientific, and while it may help some perplexed pastor to restrain a few of his more docile people from an investigation of this interesting movement, it does not in any degree meet the facts."

Referring to the "good elements" of Christian Science, which he said "meet the real need of the human soul in these modern times," Mr. Morrison continues:—

"What are these good elements? In the first place, Christian Science stands for the spiritualization of nature and of life. It is a protest against the gross materialism which prevails almost universally in modern society. Unseen things are practically bowed out of existence. The spiritual is an illusion, mind is a functioning of the brain, and the brain is matter.

"But our materialism is not a merely theoretical and academic attitude, but a practical one as well. We determine our life by materialistic standards of success. Our God is the golden calf. Success is measured by the accumulation of wealth. The young are encouraged to seek education on account of its utilitarian advantages. Even friendship, that master passion, is debased to serve sordid and commercial ends. The ministry, also, is in danger of losing that dignity which once pertained to it; for to-day churches seek out the clergyman who possesses keen business instincts, and pass by the man whose strength is in quiet character, superior scholarship, and a sympathetic love for fellow-man.

"Now, Christian Science is a protest against this conception of things which places matter above mind, the world above its creator, success above spirituality, the five senses above reason and intuition. When Christian Science says that all is Mind, and matter has no real existence, its protest may be irrational and absurd, but even so, such a protestantism will find its votaries among those who are disgusted with the prevailing conception and practice.

"Again, Christian Science stands for calmness and quiet in the midst of the din and strife of our feverish age. It is a protest against the almost universal disquiet which obtains. The transition period in which we live is one of incalculable waste of energy. Men and women rush hither and thither, unhappy, excited, worried over the morrow, impatient with the tardiness of success, nerve-racked, pursuing something, they know not what, but which, like a will-o'-the-wisp, is evermore eluding their grasp.

"Is it not clear that to a man or woman like this, the appeal of Christian Science is like a new gospel?

Is our Trend Religious, or are Churches and People Retrograding?

THE REV. DR. BOYD VINCENT, Bishop of Southern Ohio, in an article entitled as above, published in a recent number of *Success*, answers his own query in a very thoughtful and able manner. His conclusions differ from many of the current theological views of the time, being much more optimistic than those of a large number of his co-theologians.

From his able and analytical article we take the liberty of quoting the following:—

There is less apparent religiousness than at other times in the old century. Religious organization and sentiment do not dominate entire communities as when these were smaller, and general intelligence was less and the population less mixed. Religion is less demonstrative in its appeals to entire communities. The old revival methods are less in evidence. There is not so general and regular an attendance at church. Modern, natural science, and Biblical criticism have disturbed some of the old, stiff, orthodox views of the Bible and its teachings, just because these views were so often the uninspired interpretations and unwarranted inferences of men instead of the direct declarations and revelations of God. All this has created a temporary mental attitude toward religion which is not so much hostile as uncertain; with the result that many men, really religiously inclined, have come to hold their religious opinions and attachments in suspense, waiting for more definite scientific conclusions and, so, for final religious convictions of their own. And all this looks, I say, to a superficial observer, like the eddies and back currents of religious indifference and reaction.

But what are the larger and more important, though less noticeable facts? Why, such as these: (1) There never has been in the world's history a more profound and reverent concern than to-day for the ultimate truth of the living God. Men are not so much concerned as formerly with certain detailed activities of the churches. But they are going down again, in religion as in every other department of truth, to the bottom of things, and asking, not contemptuously, but eagerly and anxiously, whether there be any such things as God and the human soul, and what relation these sustain to each other, consistent with the facts of the natural world as now known. The science of history and of comparative religion, instead of undermining the relative importance of Christianity, are at last exalting Jesus Christ to a position higher than ever before, admitting the incomparable power for good he has been and can be in the world, and speaking his name with a reverence unknown before to secular thought. The latest, most critical methods are re-establishing the authority of the New Testament records of Jesus' life and teachings; and the whole Bible is being given an authoritative place again in the history of God's dealings with the world, greater even, because more reasonable, than ever before.

Is modern thought really leading us back, then, to God, instead of away from Him? I believe that it is; and that it is steadily laying fresh foundations, in addition to the old, for our faith in Him. The newly demonstrated unity and harmony of the natural universe point straight to the conclusion of one common origin for it all: viz., in God. The universal reign of law in the natural world, and the reduction of all known forces to one universal fact of force, point likewise to one Supreme, Personal, Divine Will, as the only explanation of it all. (2) Again, all this leads up, too, to the old truth of the immanence of God in His world. This

Digitized by Google

means that God is not merely before and above and apart from His world, but always in and through it all, animating and inspiring it all, matter and mind alike, at all times. In other words, God is in us and we in God; and this determines the true relation of God and the human soul.

It is along the line of just such fundamental truths as these that religion is readjusting itself to the needs of devoutly thinking people, and to a renewed and stronger hold upon them. And what is all this but a revival, through modern processes of thought, of the old truths, too often neglected and forgotten? This is the true explanation of the wonderful success of that new cult called "Christian Science." Not that it has discovered anything new, or that the orthodox churches denied such truths or did not have them, but that they did not appeal to such truths as the realities which they are; while, on the other hand, the votaries of this new cult do believe, and undertake to live as if they believed, that God is the one all-pervasive, all-important, and all-powerful reality in the world and in themselves. All this is something of what I mean by the force and depth of the onward religious trend in our day.

And then as to its breadth. It is true—is it not?—that the largest activities of the most elastic and progressive churches of to-day are no longer merely along the old lines of saving individual souls by a religious profession, and getting the foreign heathen baptized for a future salvation, but in reaching out into the daily lives of Christians, demanding Christlikeness in daily conduct; and then still farther out into the masses of long neglected heathen in the great cities, —carrying the touch of a Christian brother's hand, lifting them up out of their degradation and ignorance and vice, and so infusing them with a longing for the full light and love and life which Christ has brought to us.

Now, on the other hand, it is true that our churches here in America are not reaching in their membership so large a proportion of the population as formerly. It is true that there is an enormous foreign element pouring in among us, year by year, which is either indifferent to religion or bringing in new ideas and customs, violating our old Sabbath traditions. It is true that the almost compulsory giving up and giving over of all home teaching, secular and religious, to the exclusively secular control and teaching of our public school system, has either deprived the young of religious training altogether, or given it only to a small percentage of our children, in Sunday Schools, half an hour a week on Sunday morning. It is true that the growing wealth, especially the inherited wealth of our people, above all, the insatiate greed for more, has created a selfishness and self-indulgence which is undermining our old American sturdiness of character and making many personally indifferent to religion. All this looks like, and is, plain degeneration for the time being. But for my part, I believe that it is only temporary, at best, and that it will eventually be reached and remedied, even here in America.

"Some Heretical Nobles."

THE *Boston Transcript* republishes from the *London Daily Mail* an article bearing the above title, which contains some suggestive items. By way of preliminary suggestion the *Mail* says:—

"To be pronouncedly unconventional in religious convictions is an ordeal that few people—even those moving in humble social circles—have the courage to face. How much more difficult, then, must it be for well-known and highly placed personages to publicly effect striking departures from the orthodox. Yet the British peerage contains several examples of an unflinching adhesion to religions that no doubt entail many sacrifices socially on the distinguished followers of those beliefs."

As to the religious belief of Lady Sarah Sladen the *Mail* says:—

"Latterly failing health has prevented Lady Sarah Sladen appearing as frequently as was her wont in the drawing-rooms of the West End. But on the rare occasions on which Lady Sarah—who is a daughter of the eighth Earl of Cavan—now enters society she makes a novel and much observed figure. She is generally dressed in the uniform of a Salvationist, with the stereotyped bonnet and the gilt 'S' on the collar of her tunic. Lady Sarah is a 'sergeant major' in this organization, which works for the spiritual improvement of classes at the opposite pole to that in which the titled Salvationist was born. It was by degrees that Lady Sarah Sladen came to join the army. Circumstances seemed to work to an inevitable end. First, the distinguished officer who ultimately became her husband was a zealous religious worker. Lady Sarah met him at Woolwich on her return from a visit to Canada, and he was showing her round the arsenal when, stopping before a furnace, the young lady observed: "That glowing fire reminds me of the refiner who will, one day, try the silver. Not long after Captain Sladen and Lady Sarah were married.

"Some time later, Lady Sarah, according to *All the World*, attended a Salvation Army conference in Edinburgh, and to her astonishment an official requested her to 'pray next.' Lady Sarah refused; the official thereupon pleaded on his knees that she should be granted 'a spirit of liberty.' Lady Sarah yielded to the appeal. For the first six months she was an 'auxiliary;' then she became a 'soldier' and wore the uniform. Lady Sarah, it is said, had to endure much at the hands of her friends; but she came through it all triumphantly."

After speaking of the religion of the Earl of Mexborough, the *Mail* proceeds:—

"Everybody knows that the Earl of Dunmore is a Christian Scientist. He attended the recent meetings at Boston, Mass., for the furtherance of the movement he has so much at heart. His lordship is a great traveler. His most eventful journey was to the Pamirs, where he shot the famous *Ovis foli*. Lord Dunmore's devotion to Christian Science can be well understood if, as is said, he was cured through its agency of a serious malady which had defied every practitioner consulted.

"Lady Ramsay is another distinguished Christian Scientist. Moreover, several of her daughters are 'healers.'

"The Duke of Northumberland is an Irvingite—the faith established by Edward Irving, Carlyle's great friend. His Grace is a quiet, reserved man, not much given to society. The Percy family, by the way, possess the unique distinction of being entitled to burial within the walls of Westminster Abbey."

What's the use of blaming others,
For the faults we know are ours?—
Shirking duty clear as daylight—
That we use God-given power;
That we be as brave and noble,
As in mind and soul we might,
Loving every line of duty,
Blessing God for truth and right?
This our world is ever wondrous,
This our life a gift divine—
Reaching up to God's dear heaven,
Where the stars forever shine.
Why are we so prone to spoil it,
Casting jewels in the dust,
Taking tender flowers to crush them,
Letting polished beauty rust?

WM. BRUNTON.

Love your Saviour; yea, shew one to another that you love him, not only by a seeming love of affection, but with the love of duty. Practical love is best, which stands in self-denial, in charity to my neighbor and a patient enduring of affliction for His name.—JOHN BUNYAN.

A False Claim.

BY JAMES J. ROME.

THE peculiar use of certain words in the Christian Science vocabulary seems strange at times to unaccustomed ears. To the sensitive, critical ear it may come as a somewhat startling shock, while to the more moderate it may simply suggest a questionable use of terms. In any case it is likely to have the beneficial effect of arousing a spirit of inquiry which, even if mixed with doubt, is better than a mental torpor or false peace.

One such rather unusual expression frequently made use of in the testimonials given in our periodicals, and in the experience meetings, is the term "claim" or "false claim," when reference is being made to physical ailments.

One object in using such a term is to dispossess the thought of sickness of some of its awful seeming reality and terrorizing power. Some counteraction is certainly needed along this line, for as we glance over the columns of the newspapers, or listen to the general trend of conversation around us every day, we cannot fail to notice how much attention is given to diseases and ills of different sorts. These are discovered, announced, and discussed in all their newest forms until the very atmosphere seems laden with colds, contagion, and catastrophes, and every one is taught to expect a periodical spell of sickness in some form or other. No wonder that Christian Science should cause a commotion, when it steps forth to combat all these evil influences and tendencies. What! it is asked, do you mean to tell me that I am being deceived by a mirage, or ghostly fancy in thinking that the things I actually see, hear, and feel are real and to be feared?

Let us see on what ground Christian Science questions the actuality of these things which men consider so real and terrible. It starts with the inquiry, Are these evil discordant conditions that we see around us normal and real, or abnormal and unreal? After a course of close reasoning it decides that they are the latter, and bases this conclusion on the Bible record that God made all that was made, and that "God saw *everything* that he had made, and, behold, it was *very good*."

If the natural, normal, and real state of all things is good and harmonious, then the endeavor to establish evil, discord, and suffering as realities is an error, a mistake, a *false claim*. If, however, when this claim presents itself, we admit it as valid, and keep constantly thinking and talking about it, we may make it seem very real to us, and become subject thereto. If, on the contrary, we resist the claim, knowing that the only proper and normal condition of existence is righteousness, health, and peace; and that these are in accord with the divine and only law; then we may grasp a sense of dominion that will deliver us from evil and enable us to declare our divine rights, and thus enter into our rightful inheritance.

To illustrate: Let us suppose that we have found ourselves cast out in the world, destitute of means or resources. In our distress a kind friend has come to us and told us that we need not be troubled any longer because of want, for we are heirs to a comfortable home and rich estate, so that we need want for nothing.

Greatly relieved by such intelligence, we at once take possession of our home, procure an abstract of the title, and feel grateful to our friend for the interest shown. After a time a person walks into our pleasant abode and claims to have a right there, that we have been misinformed, and he has come to take possession. In distress we seek our friend, who tells us that the person's claim is false, so that we need have no fear. We return and assert our rights, and the claimant leaves. He soon returns, however, with quite an array of arguments. We are not so much afraid since we believe that his claim is false, but we turn to our friend again and are told to examine our title thoroughly for ourselves. This we do by studying the abstract, and can now understand that we, and we alone, have the right to occupy our home without fear of molestation, and that this claim, being false, is no claim at all. We feel confident and strong, for we are sustained by law. Since there is but one law governing the case, the false claim is without law, and has nothing to support it. The only ground it ever had to even seem real was our fear that it might be so. When that is removed by our better understanding, the claimant and the claim, which are really one, disappear.

What is this false claimant, or claim, but mortal belief in its various forms of discord which would rob us of our true home, our harmonious relation to God and the universe? In the Science of Life and revelation of Truth, we find a perfect title to our inheritance which is "incorruptible and undefiled, and that fadeth not away." A very complete abstract we have in "Science and Health with Key to the Scriptures," by a careful study of which we can attain such familiarity with our true title that we can successfully dispute any false claim that presents itself.

The word "belief" is also used by Christian Scientists in much the same sense. If I believed that some one else had a better right to my home than I, and acted on that belief, it would be the same to all intents and purposes as if he had. But if, by a better understanding, my erroneous belief is corrected, then the power of the claim is destroyed. In this sense do we find these words, claim and belief, used.

May there not be a possibility, however, of a too frequent use of such phraseology, resulting, it may be, in a mere change of terms, while the mental concept remains only slightly changed, if changed at all. "That which we call a rose by any other name would smell as sweet." It is well to choose wisely our forms of speech, but we need to extend our watchfulness further than our words. As was tersely remarked in one of our Wednesday evening meetings, "It is better to say sick and think belief, than to say belief, and think sick." To go to an excess in the use of peculiar idioms and phrases of speech may seem to others to border so closely on the ridiculous as to detract from the force of our remarks. In our zeal to counteract evil influences of false laws, bad customs, and wrong methods of thinking and talking, we ourselves need to guard against manners of expression that would be distasteful or repugnant to people of good intelligence. "A wholesome tongue is a tree of life." "Let your speech be alway with grace, seasoned with salt, that ye may know how ye ought to answer every man."

For Favors Received.

BY MARY ALICE DAYTON.

FOR three years the *Sentinel* has faithfully visited many homes, and done an immense public service through free distribution. Each week has added fresh interest, making its arrival more welcome, and its mission more clear. It comes sowing seeds of Truth, watering them likewise, and bringing its own sunshine of Love to quicken and renew their growth in the heart. A veritable Sentinel watching over its own work, and quick to catch harmonious tones struck in the general consciousness; creating ever the pure atmosphere, in which spiritual thoughts reveal their "eternal freshness and fairness," and may be cherished in human affections.

After three years, shall we not reasonably expect a bountiful harvest from this trusty messenger of Good? Thousands can bear testimony, even as I gladly do, to individual benefit from its visits. It has come as a gift and a responsibility to those who love Science. From the first it found a warm welcome. The wonder is now, how did we live without it?

In its mechanical form, literary style, and convenient

Digitized by Google

classification of topics, the *Christian Science Sentinel* is altogether a delight to the eyes. Rightfully, this weekly exponent of the Cause takes a place among other literary claimants for favor, quite their peer in appearance, and Scientists are justly proud of it. Only words of appreciation can be offered to the editors and contributors who have so ably and unselfishly wrought together to make it truly a spiritual power; while a grateful recognition is due to the guidance of our Leader, first, in establishing and naming the *Sentinel,* and then enriching it so liberally with her treasures of wisdom.

Not a contributor to its columns in these three years has gone unrewarded, nor one reader perused it unblessed. And why? Because this little missionary is "fulfilling the royal law of Love," and Love is ever-present with its idea, rewarding the giver and uplifting even the unconscious recipient.

Professor Henry Drummond pondered the text, "He that hath not the Son of God, hath not life," and deduced the proposition of "Natural Law in the Spiritual World." Students of Christian Science perceive that through the Son of God, or manifestation of divine Mind, spiritual law is brought into operation in "the physical realm, so-called, as well as in the spiritual." The *Sentinel* is an important channel for this work which God is doing so marvelously in our age.

Its interest is inexhaustible, since its province is to cull and sift current thought, and conserve its best gifts to a history-making epoch, and most particularly to present the active, practical bearing of Christian Science, with its pure and perfect ideals fulfilling prophecy, and marching as the vanguard of altruistic endeavor.

This paper occupies a unique position—a middle ground between "the life that now is," in the flesh, and "the life which is to come," the spiritual realm now appearing. It is a herald of "things hoped for." In the future, we shall better understand and more truly value the wealth of spiritual ideas which is pouring itself into empty human existence through Christian Science literature. Every report from the field-work has a vital place in the economy of God's present purpose for the world.

In the recent annual home-coming of Scientists from the four corners of the globe, an awakened observer could not fail to remark the unity of expression in their testimonies for Truth. Quite plainly this showed the results of an educational system as widespread as Christian Science literature; and this marks another feature of its worth. It has a distinct function, also, in uniting field-work and holding it to the strait and narrow way—Spirit and its spiritual methods. Affiliating with its inspired motive, one may feel the pulse of "all-harmonious Mind-action," recognize the steady heart-beats through "the mental avenues of mankind for God and humanity" (Communion address by Mary Baker G. Eddy) and know that Christ-Truth is at hand. The extreme purity of its speech, high-toned morality, and manifest genuineness of spirit must leave a lasting impression for good on its readers, and command their respect.

A lover of our publications, wishing to make a Christmas gift at once profitable and enjoyable, selected a subscription to the *Sentinel* for one who desired it. It proved a timely choice for that home, and on one occasion reading it broke an attack of insomnia, which had prevailed for several nights, and brought peace to the troubled heart.

It has been my pleasure to send extra *Sentinels* to several branch reading rooms for free distribution to inquirers. Not long since, a lady applied for treatment, who had made her first acquaintance with Science in one of these same reading rooms, where, among other kindnesses, she had been given a *Sentinel* to carry home. This bread cast on the waters quickly returned. A Lecture Supplement was handed a patient. She in turn passed it to a friend, who was pleased voluntarily to subscribe to the *Journal.* So the seed sown bears fruit after its kind.

We should not be unmindful of the words of counsel in regard to our literature spoken so opportunely in Tremont Temple at the Wednesday evening meeting last June; nor fail to learn for ourselves through happy experience, that we may reap a hundred fold if we sow the right seed, "with the hand of love."

How Christian Science Illumines all Truth.

BY ADDA HINCHMAN MENTZER.

YEARS ago, fifteen at least, these lines from Edward Sill deeply impressed me:—

Forenoon, and afternoon, and night,
Forenoon, and afternoon, and night,
Forenoon and what?
  The empty song repeats itself—
  No more? This is life.
Make this forenoon—sublime—
This afternoon—a psalm—
This night—a prayer,
  And time is conquered, and thy crown is won.

I remember that I tried to bring this realization into my daily life, but I sadly failed. To elevate the common conditions of life into a psalm or a prayer, or anything sublime, happened as exceptions, but not in daily practice. So the inspiration lost its meaning until I came into Christian Science, and knew its depth.

One morning a dear little girl brought an injured bird into our home. She got her Science and Health, and read something, then sat there quietly repeating the twenty-third Psalm and Lord's Prayer. By-and-by she put the bird softly down in her doll's cradle. Several times during the day she came to peep at it, offering it crumbs, and declaring "God is your life." About five o'clock the bird fluttered, began to chirp, came out and flew to the window-sill. I called her, and she came and took it out on the porch. It hopped about, then to a bush, then to a tree, where it trilled and sang a most beautiful melody of thanksgiving. Was not this making that "forenoon sublime?"

I saw a young lady thrown from her wheel at the intersection of three electric car lines, each track carrying a car bearing down upon her. Men on the sidewalks were paralyzed with horror.

In less time than it takes to write this, the cars were stopped, and before a man had left the sidewalk, she arose, picked up her wheel, and quietly walked away. Truth had saved her and made "that afternoon a psalm."

Many times, since coming into Science, I have seen claims of error manifest themselves as the night fell, and I have seen them overcome by the Truth ere the morning dawned. Is not this making "this night a prayer"?

And thus Christian Science illumines all Truth that ever was sung or said, and he who accepts its wonderful teaching, can prove every "morning sublime," every "afternoon a psalm," and each "night a prayer." Error is conquered, and Life, Truth, and Love are won.

I must express also our thankfulness for the periodicals and the Lesson Sermons. Our home is in the mountains, twenty-five miles from a railroad, and if ever we were thankful for anything we are thankful for these periodicals, and for every loyal Scientist who is helping to make them. Thankful for our Christian parents; thankful for our Leader, Mary Baker Eddy, who sees the great human needs; thankful for our teaching from one of her loyal students. A handful of us gather each Sunday to read, and it surely is a foretaste of the "Unity of faith," that we who are so far from churches and people, enjoy the same sermon, and feel the same Love demonstrated daily through its teaching, as do the largest congregations assembled in the most beautiful of temples. Christian Science surely proves the prophecy of Isaiah, "And the glory of the Lord shall be revealed, and all flesh shall see it *together.*"

Digitized by Google

Testimonies.

Physical and Moral Benefits Received.

During the last year, I have had much to be grateful for. Our dear little girl is a daily lesson to us. In the midst of the many ills about us, especially among the little ones, so many of them constantly under the care of doctors, our little one has grown steadily, manifesting the truth of Science and Health.

Though my husband is not a Scientist, he has never suggested a material remedy for our little girl. Recently, we had quite a little to meet and would hardly have been surprised had there been anxiety manifested, or even a doctor suggested, but the trouble lasted only a very short time, and the calmness of the unbelieving ones was wonderful to us. It seemed to be almost a perfect trust and confidence.

I write of our home first, as I have tried to work from this out to the broader field, realizing that our lives and homes must be pure, loving, and good to reflect these qualities to others.

Were it not that I know that our Leader's heart rejoices over even "*one* sinner that repenteth," I might be discouraged, when I think of the visible results of the past three years' work here. It has seemed like a repetition of the healing of the ten lepers, only *one* returning to give thanks. It may encourage others who have had a similar experience to mention a few of the healings and give an idea of the work here.

Five have united with the Mother Church, eight copies of Science and Health and four copies of "Miscellaneous Writings" have been sold, besides many Sentinels, Journals, and tracts distributed. Three copies of Science and Health are kept in circulation. (These three are not counted in the eight referred to as sold.)

Four friends have come into Science because of a desire for higher spiritual life. An invalid for years, afflicted with lung trouble and a fear of a tumor, was restored, both troubles disappearing soon after treatments began.

Two cases of nervous prostration were healed. The first was *very* severe and intensified by many other claims.

A case of partial paralysis of wrist and fingers was healed very quickly. The lady was an organist, but was unable, after the injury, to use the wrist or fourth and fifth fingers. In a short time she found, to her surprise, that she could use them in playing the piano and soon resumed her position as organist.

A severe case of salt rheum yielded in four treatments and has never returned.

A young girl afflicted every winter with inflammatory rheumatism in her feet so that she was obliged to lose much of her school, was perfectly healed, and has had no return of the trouble.

A case of diseased eyelids resulting from scarlet fever was healed in a short time. The lids were thick and inflamed most of the time, and there were tumor-like growths on them. All remedies had been exhausted without deriving any benefit.

A sprained ankle, which was so severe that the person required assistance in walking, was healed of all pain and most of the soreness by the next morning. The person could move the foot about and walked around the house doing her work as usual. In the evening she attended the Eastern Star Lodge, not a vestige of lameness remaining.

A friend was healed of a trouble with eyelid—a hard white growth on the edge of the lid—while reading Science and Health.

Intemperance and many discordant elements have been destroyed during our work here. These are only a few instances to show that we are not idle or allowing the "one talent" to be lost.

The opposition to Science in the family is rapidly melting away under the sweet and genial influence of Love, and we are learning that there is only *One Mind,* not two or more in the home.

We are grateful and happy over the result of the recent legislation at Albany. "The weapons of our warfare are not carnal, but mighty through God to the pulling down of strongholds."—E. M. H., Phoenix, N. Y.

Christian Science brought Peace.

Not quite a year ago I came to Christian Science for help, after all material remedies had failed to give more than temporary relief. I knew little of Christian Science, and had little confidence, but as I seemed to be slowly but surely passing away, and as my suffering was constant, I wrote to a relative in another state, who had, during the years that had intervened since I last saw her, become an earnest Christian Scientist. She wrote me that I could be healed, and lovingly took up my case. At the same time she advised me to get "Science and Health with Key to the Scriptures," which I did, but could not read with any understanding for some time.

My healing has been slow, and I think it has been best in many ways, for while following it up to gain my health, I have found the peace that passeth understanding. I can never be thankful enough to my healer who by her patient, loving efforts led me out of bondage, and pointed me to the Great Physician who healeth all our diseases. It has been a constant warfare against error, but Truth is mighty. My diseases were many, some of long standing, but the anguish of mind was far worse, for I was daily becoming more of a burden to those I loved.

Words are inadequate to express the wonderful healing, both spiritually and physically, which I have experienced. The Bible is a different book, and while but a beginner I know that each day I may advance farther. I have a different concept of God from what I ever had before, and I can truly say, "All things are become new." Christian Science reveals a God that I can love, for I once thought He sent all those afflictions on me, and I feared Him more than I loved Him. The words of the Psalmist come to me as I write, "Many, O Lord my God, are thy wonderful works which thou hast done, and thy thoughts which are to usward: they cannot be reckoned up in order unto thee: if I would declare and speak of them, they are more than can be numbered."

I have been enabled to overcome error in many ways for myself and others through my understanding of the Truth as taught in Science and Health. I have studied the lessons in the *Christian Science Quarterly* since last October, most of the time alone. I take the *Journal* and *Sentinel,* also have "Unity of Good," and in time I intend to have all of Mrs. Eddy's books.

One lady in the town has become interested in Science, and we have begun to read the lessons together. To my knowledge there are no others in the county. I have had the privilege of hearing a lecture by Judge Ewing at Anderson, which was very helpful.

I desire to express my love and gratitude to our beloved Leader, who has revealed this wonderful Truth to us, and to the Publishing Society for the wonderful help found in the periodicals, and to each and every one who is assisting in this glorious work.—MRS. E. M. HERBST, Ogden, Ind.

Happiness found at Last.

At an early age I lost both my parents, and went to live with my grandparents. Although I had much to make me happy, all that kind friends could do, I was very unhappy all the time, was envious of nearly every one, was so sensitive that I imagined people were talking about me wherever I went, always thought I was being slighted, and that no one cared for me. Nothing could describe my condition of thought.

As I grew older, these troubles, instead of growing less,

Digitized by Google

became more noticeable, until I was miserable, and made it very unpleasant for those around me. After an outburst of passion, I would many times go to bed and cry myself to sleep, wishing I could be better. After some years I united with the church, but could not see any great difference in my life, as I seemed to be as full of trouble as ever. Whenever I allowed myself to think of it, it troubled me a great deal. I wondered if I were really saved, and what would become of me if I should die. People used to remark upon my unhappy appearance.

Through a case of healing in our family, my grandmother became an earnest adherent of Christian Science. I was very well contented to have Science treatment when ill, but did not care to investigate it for myself. I found that I must look into it if I would be free from the ills that surrounded me.

About two years ago, I commenced the study of Christian Science in earnest, and through the help of one of Mrs. Eddy's loyal students, and class instruction, these errors have been overcome in a wonderful measure, so that many people remark what a different looking person I am, compared to what I used to be. The two years that I have been in Science have been the happiest of my life.

During the last few months, I have had to part with my dearest earthly friend, and the grief that once would have completely crushed me, was almost entirely overcome by Christian Science. I have been benefited physically in many ways, but that is nothing compared to the wonderful spiritual uplifting that has come to me. I was indeed "without hope and without God in the world," but I have found them both in Christian Science, which has saved me from more than words could ever tell, and it is my daily prayer that I may be more faithful to the teachings of our dear Leader, have more of that Mind that was in Christ, and gain a better understanding of that Truth which is so rapidly illuminating the whole world.—F. L. S., Sherburne, N. Y.

Thankful for the Opportunity to Learn the Truth.

For eleven years I have been the recipient of blessings from Christian Science, and never until now have I sent even a line to our precious periodicals in gratitude.

I have always thought that I was too young in years to write anything that would be of interest to the Field, but I have received so much benefit from reading the testimonies of others, that I thought mine might be the means of bringing some unbeliever to where he would investigate, and find God as the only Life, Truth, and Love, as taught in Christian Science.

There were no Scientists in the little town in Ohio, where we lived when first this Truth was brought to our notice, but my mother, who had been in a very poor condition, physically, for a number of years, immediately made arrangements with a practitioner some thirty miles away, whereby she was enabled to take treatment, one present and several absent. She began to improve at once, and had in a short time entirely recovered. To-day she is stronger, and some people say younger in appearance, than she was ten years ago.

Before this she tried many kinds of medicine, and I do not know how many physicians, all to no avail. Since finding this Science of Christianity we have had no need of any other medicine than divine Love, for surely "There shall no evil befall thee, neither shall any plague come nigh thy dwelling," when you let Love govern.

I always feel as though we can never be thankful enough for the great opportunity we have in this age, of learning through "Science and Health with Key to the Scriptures" how to demonstrate the nothingness of sin, sickness, and death; the unreality of all evil, and the omnipresence of God, thereby being able to realize that the kingdom of Heaven is at hand, when so many generations have passed on, firm in the belief that it was God's will that they should suffer all kinds of torment, and finally die, before they could even taste of heaven.

If every one could be as fully convinced as we are, that Christian Science is the straight and narrow way, I should be glad indeed.—WINFIELD E. MCBRIDE, Chicago, Ill.

What Christian Science does for Us.

The understanding of the omnipotence of divine Love which has come to me through Christian Science, has brought me such peace and happiness that it has transformed my life both spiritually and physically. I shall mention a few of the ways in which I have found it such a wonderful help.

It raises us above all the troubles and worries of everyday life, for we learn how to realize that they are nothing, —they have no existence,—since Good—God—is the only reality, and nothing can harm us if we be followers of that which is Good.

It gives us courage to do our duty under all circumstances, realizing that our power will be in proportion to the purity of our motive. It destroys fear, for we learn that "perfect love casteth out fear."

It teaches us how we can forgive absolutely those who were, to our belief, our enemies, and instead of harboring a thought of malice against them, hold a thought to help them to overcome the error which led them to appear to us in the light of enemies, and to realize that if we can feel hurt or offended by others there is something wrong in ourselves, for, as Mrs. Eddy says, "It is our pride that makes another's criticism rankle, our self-will that makes another's deed offensive, our egotism that feels hurt by another's self assertion" (Miscellaneous Writings, p. 224).

I do not know anything that helps us so much to conquer selfishness as the Christian Science thought of the brotherhood of man,—that we are all reflections of the One Mind,—all-powerful, ever-present, infinite Love; and the way we are taught in Science to watch our thoughts, —as all error must be thought before it is acted,—and therefore never to admit a discordant thought, brings to us such peace, and happiness, and joy, that our lives are transformed, and we can indeed say that we have learned what is the "peace of God which passeth understanding." I have been enabled also through Christian Science to overcome extreme nervousness, so that I can now go on the concert platform without fear, which formerly used almost to paralyze me.—C. T., London, Eng.

One day last winter I was playing hockey, and in trying to stop the ball, I was hit with it just above the eye. The force was so great that it nearly knocked me backwards, but I declared the Truth at once. The pain was intense for about two minutes, but after that my eye hurt me very little, only feeling a trifle stiff and sore. My friends wanted me to go into the house and apply material remedies; but I refused, and said that I would prefer to finish the game.

On going in to tea, several people came up and informed me that I would have a fearful black eye the next day; however, when I got home I found my eye only the least bit red and swollen. The next day it was well, being neither discolored nor swollen.

A short time before I had seen a similar accident at hockey, but the girl, not knowing of Christian Science, relied on material means, with the result that she had to call in a doctor, and wore a shade over her eye for more than a week, it was so fearfully discolored.

I must say before ending how wonderfully I have found animals respond to Christian Science. I have known cases of horses, dogs, and birds, which were in a very bad condition but were cured in a short time.

SYBIL BISHOP, Kintbury, Berks, Eng.

Religious Items.

Under the head of "Rest not in Flight, but in Work" the *Christian Advocate* truthfully says:—

Probably every Christian, when confronted by peculiarly difficult and trying conditions of life, has given utterance to the almost despairing cry of the psalmist, "O that I had wings like a dove! for then would I fly away and be at rest." What sweet solace these words, wrung from the soul of a man sorely oppressed, have given to human hearts! That David was in difficult straits when he wrote the psalm in which the words occur is seen from these passages from it:—

I am restless in my complaint and moan;
Because of the voice of the enemy,
Because of the oppression of the wicked;
For they cast iniquity upon me,
And in anger they persecute me.
My heart is sore pained within me:
And the terrors of death are fallen upon me.
Fearfulness and trembling are come upon me,
And horror hath overwhelmed me.

But if David ever got rest or found peace for his disquieted soul it was not by flying away like a dove on its wings; for there is neither rest nor satisfaction of soul in flight. Rather, one's distresses increase and multiply if he attempts to avoid them by fleeing from them.

In the course of debate in the House of Lords, August 1, on the new accession oath recommended by the committee appointed to draft a new form of oath, the Earl of Kilmorey moved an amendment, which, among other things, limited the throne to members of the Established Church. Whereupon Lord Tweedmouth objected, pointing out that such a declaration was a distinct limitation, and a reflection upon the majority of Protestant Christians in the Empire who are not Anglicans. For his part, he said, he knew of nothing which prevented a Wesleyan or Congregationalist from being king. Whereupon the Bishop of Salisbury asked the Marquis of Salisbury—the premier—whether he agreed with Lord Tweedmouth's "remarkable statement that a sovereign might be a Protestant Nonconformist of any denomination." The Marquis of Salisbury declined to answer "legal or legislative conundrums." "Do I understand that the noble marquis accepts Lord Tweedmouth's opinion?" reiterated the Bishop of Salisbury. "I neither accept it nor refuse it," replied the premier. That he did not refuse it is somewhat significant, he being so pronounced a Churchman. The issue raised is one that sooner or later may rise to vex Britons.
The Congregationalist and Christian World.

In these days we have become accustomed to doing and to seeing things done on a large scale. It is the largest ship that attracts and absorbs attention, the highest building, the heaviest locomotive, the longest bridge, the deepest mine, the greatest corporation; and there is that in the atmosphere which makes it easy and almost natural for men to live, move, and have their being in superlatives that are related to the idea of vastness. To turn aside and devote one's attention to things of a humble sphere, even though of as much importance, and perchance of more, is to be confronted by an impatient spirit and an instinctive unwillingness to perform the less ostentatious part. Most people seem to prefer to stand in the front row and to sit in the chief places, and whether they are worthy to do so or are entitled to the distinction such conspicuousness involves, is a secondary consideration. They forget the reproof administered by our Lord to those who richly deserved it in his day: "Woe unto you, Pharisees; for ye love the uppermost seats in the synagogues, and greetings in the markets."—*The Christian Advocate.*

He who reads God into every event of life, however unable he may be to fathom the divine purpose, has good reason to be brave, for however helpless he may be in the crowding of circumstance and condition, he has an anchor that holds him fast and will not let him go down utterly. The little children are often restless, sometimes grieved and rebellious, frequently mystified by the action of those in authority over them. Even if convinced of the love of father and mother, the acceptance of conditions and obedience of commands are not always joyous, but often grievous. We are but children of a larger growth, but our Father is infinite in wisdom and love and might. Where we err, He makes no mistake. Where we are blind, He sees with perfect vision. Where our limitations lead us astray, He guides aright. Surely, if we exact the faith and obedience of the little children and expect their affection whatever our counsels may be, because of our larger intelligence and our longing and love for them, surely we owe to our Father, who knoweth all and who doeth all things well, a similar confidence, an equal obedience and affection.—*The Universalist Leader.*

Speaking upon the subject of joy in religion the *New-Church Messenger* says: "We might say, 'Study your religion;' 'Obey your religion;' 'Support your religion;' 'Make known your religion.' The Lord has placed this word 'joy' upon the lips of his followers. As he uses it, it is expressive of the whole purpose and spirit of his religion. 'These things have I spoken unto you that my joy might remain in you, and that your joy might be full.' Something is wrong with that Church or that individual where there is not this spirit of joy. If religion is a burden, if it is an anxiety, if it is unattractive, if it calls forth chiefly criticisms or complaints, something is wrong. The Lord's followers are to 'rejoice and be exceeding glad.' Their mission, like the Lord's, is to carry joy where the Lord has brought them; to spread beauty for ashes, and instead of mourning to anoint with the oil of joy."

Tolstoi's reply to the Holy Synod of the Greek Church of Russia, which has promulgated an edict of excommunication against him, has been translated and printed in this country. It is not so serene as one would expect a philosopher's reply to be, nor so severe as the usual heretic's counterblast. He defends himself from some aspersions and vindicates himself from the charge of duplicity. For the rest he admits that he does not believe what the Church teaches nor respect what she practises. The most interesting and valuable part of his reply is that in which he explains his real convictions and manfully asserts his right to be called a sincere follower of Christ. He asserts that he is loyal to Christ's principles and is seeking to impart them to his fellow-men, by private teaching and by the influence of his books.—*The Universalist Leader.*

Under the head of "How to enjoy going to Church" the *New-Church Messenger* says: "The first requisite for the enjoyment of a good dinner is to be hungry for the food that is to be served. If we are not hungry, no allurement of dainty dishes will give substantial and durable enjoyment. The Church table is the Lord's table. The food to be served is his bread and wine. It is food for the hungry soul, drink for the thirsty soul. It is the bread that comes down from heaven, the water of life that at his bidding becomes wine to strengthen the heart. The partaking of the Holy Supper, which service alone the Lord commanded in remembrance of him, is our typical Church service."

Our orthodox exchanges often speak of Unitarians as if they were chief among sinners in the aggressive work of "pitching into other denominations." But when the strife between Unitarian and Trinitarian Congregationalism was at the hottest, in the early part of the last century, it was mild compared with the contest between Methodists and Congregationalists.
The Christian Register.

The fatherhood of God and the brotherhood of man cannot consistently be advocated by any person who believes that drought and rain, tempest and calm, sickness and health are adequate gauges of moral character. The lesson of the book of Job is not yet obsolete.
The Christian Register.

In the *American Baptist Flag* we find the following question and answer: "What was created in God's image, the spirit-man or the natural man? The spirit-man, of course, for God is a spirit (John, 4:24), and, therefore, the dust man is not in God's image, for he is not spiritual."

While a healthy body helps to make a healthy soul, the reverse is yet more true. Mind lifts up, purifies, sustains the body. Mental and moral activity keeps the body healthy, strong, and young, preserves from decay, and renews life.
JAMES FREEMAN CLARKE.

A handwriting on the tablets of our hearts proclaims that the service of others is our divinest freedom, and that the law of love is the charter of our liberty.
GEORGE BROWN.

The total number of Bibles and testaments issued by the American Bible Society during the year ending July 31, 1901, was 1,554,128, an increase of 147,327 over the preceding year.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory *vs.* Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

President McKinley died at 2.15 Saturday morning, September 14, 1901. The funeral services were held at the Milburn house in Buffalo Sunday morning at eleven o'clock. The remains lay in state in Buffalo's City Hall from noon until midnight. On Monday the body was taken to Washington where services were held on Tuesday, after which it was taken to Canton, O., for interment.

Theodore Roosevelt took the constitutional oath of the office of the President of the United States at Ansley Wilcox's residence in Buffalo at 3.35 on the afternoon of September 14. The oath was administered by Judge John R. Hazel of the United States District Court.

The first official act of President Roosevelt was the issuing of a proclamation appointing Thursday, September 19, a day of mourning and prayer throughout the United States.

It has been announced that there will be no extraordinary session of Congress. The constitution does not demand it, and after discussing the matter with the members of the cabinet who were in Buffalo on Saturday last, President Roosevelt decided it was not necessary.

Money is still piling up in the treasury as a result of the continued excess of receipts over disbursements. This excess for the present fiscal year to date amounts to $6,693,266.72, and the available cash in the treasury, after deducting the reserves, amounts to $179,652,312.25. Though the revenue reduction law was estimated to cut the internal revenue receipts down $40,000,000 per year, there has been an increase of $11,776,565.70 since July 1. September 4 last year, instead of a surplus, there was a deficit for the fiscal year amounting to $5,083,298.98, and the available cash balance was $135,419,600. The present surplus is not due to an increase in receipts, but to a reduction of expenditures.

The Schley court of inquiry convened at Washington on September 12. Rear-Admiral Schley objected to the service of Rear-Admiral Henry L. Howison. Three witnesses were brought out to support the statement that Howison had previously expressed an opinion favorable to Admiral Sampson as against Admiral Schley. The court sustained the applicant's challenge and Howison was relieved. Admiral Ramsay was selected to serve in Howison's stead.

Chief Clerk Edwin C. Jones started for Manila September 6 to instal the new $110,000 government printing office in that city. The type left New York for Manila via the Suez Canal some time ago, and the type-setting machines will be shipped in a day or two. A force of skilled men will accompany Mr. Jones to put the shop in working order.

Although commissioners, a majority of them being Cubans, were appointed to make a new tariff for Cuba, and their report is in the hands of Colonel Bliss, collector of the port of Havana, it is understood now that the present tariff will be retained, with a few changes that can easily be made by military order.

On the afternoon of September 16, the grand jury of Erie county, New York, reported to Judge Emery an indictment against Leon F. Czolgosz, alias Fred Nieman, charging him with murder in the first degree. The trial will begin Monday, September 23, before Supreme Court Justice White.

At the National encampment of the Grand Army of the Republic, which was held in Cleveland, Ohio, last week, Judge Torrence of Minneapolis was elected commander for the coming year.

The immigration during the last fiscal year reached the largest figure since 1893. The total number of immigrants from all countries was 487,918.

Foreign.

Seldom have so many American war vessels appeared simultaneously in English ports. Scarcely had the Hartford and Essex arrived in the Thames before the Chicago excited the curiosity of Portsmouth's citizens. Then the Dixie arrived at Southampton, and now the Buffalo's crew are being entertained at Greenock. The Hartford and Essex have since left, but the others remain. They are all receiving the most hospitable treatment, but the English officers regret that the vessels could not all come to one port, so that a welcome could have been organized.

Renewed interest in the South African war has been awakened by the expiration of the limit of Lord Kitchener's proclamation, in which he declared that the Boer leaders who did not surrender by September 15 would be banished. The effect of the proclamation is still in doubt. Six weeks ago it was estimated that there were twelve thousand Boers in the field; during that time some three thousand have been accounted for in surrenders, captures, and casualties.

When the death of President McKinley became known in foreign lands there was a universal expression of sorrow and regret. Messages of sympathy and condolence were sent to Mrs. McKinley, and also to the officials at Washington. In Madrid several papers published editorials in which they spoke of the departed President in terms of greatest respect.

The Crown Prince of Prussia may visit the United States in 1903. Emperor William has mapped out a tour of the world for his son and he wishes that the young man shall see as much of other countries as possible. The prince will go to India next year and will study the government of that part of the British Empire.

The Canadian Northern, Canada's new transcontinental line, will be completed through the Manitoba grain fields in time to handle a part of this year's crop of wheat. At the terminal on Lake Superior an elevator having a capacity of 1,000,000 bushels will be ready for use in October.

Industrial and Commercial.

Prairie, the former merchant steamship which was bought by the Navy Department during the war with Spain, and which for several months has been undergoing an extensive overhauling at the Charlestown Navy Yard, will probably be ready to go in commission the latter part of October. It is understood that notice has been sent to the department to the effect that the Prairie will be ready for sea by October 9, but according to present indications, it is more than likely to be a couple of weeks later. Soon after the Prairie arrived here she was put out of commission and all her fittings were torn out. Since the war she has been used as a training ship, but the $200,000 which have been spent in rebuilding her will make her much better suited to training young men for the navy. She will be practically a new ship, excepting the hull and machinery.

Basing computations upon the last Government crop reports, the statistician of the New York Produce Exchange estimates that the total wheat harvest for this year will be 644,835,000 bushels, as against 522,229,505 last year. About 3,200,000 more acres were planted for the current crops. Corn is estimated at 1,335,093,000 bushels, as against a harvest of 2,105,102,316 last year, the acreage this year being about 400,000 less. These figures are not materially different from those which have long been accepted by conservative authorities.

The great steel strike, which was inaugurated June 30, was ended September 14, at a conference held between the leaders of the Amalgamated Association and the officers of the subsidiary companies of the United States Steel Corporation. An agreement was reached by which the men were to return to work on the following Monday morning in the mills which have been idle.

The rapid expansion of the Australian shipping trade continues undiminished. In New South Wales it was larger in 1900 than in any previous year. The total number of vessels entered and cleared was 7,082, against 6,400 in 1899. Of these 6,308 were under the British flag and 724 under those of other countries.

It is said in Pittsburg that the Pennsylvania Railroad Company has decided to spend $5,000,000 in improving alignment and reducing grades between that city and Nineveh.

General.

The total wealth of the United States is estimated at $90,000,000,000. Our farms produce $2,500,000,000 a year, our mines $600,000,000, our forests, $1,000,000,000, and our fisheries $50,000,000. In 1800 we produced 160,000,000 bushels of grain. To-day we produce one-third of the grain crop of the world. Our output is fifty-two bushels for each inhabitant, against thirty bushels in 1800. In the amount of our banking capital we stand first among nations, with $1,030,000,000. With minerals it is pretty much the same as with crops. In 1800 the world produced 11,600,000 tons of coal, and of this quantity 10,000,000 tons came from the mines of Great Britain, the United States contributing only 200,000 tons. To-day the world's output of coal is 600,000,000 tons, and our contribution is 175,000,000 tons.

Mrs. Eugenia M. Jones has assumed the management of the *Press-Post* of Columbus, O. She has announced a unique policy of management. All the employes are to share in an equal distribution of half the profits which is to be made on Christmas and the Fourth of July. Conditions of employment are "that intemperance among editors and employes shall not be countenanced; that every editor and proofreader shall have a college education, and that no business of any sort shall be transacted with any individual, firm, or corporation without recognized financial standing."

The Peary Arctic steamer Erik, which sailed north with the relief expedition of the Peary Arctic Club last July, arrived at North Sydney, C. B., September 13. Word was brought that Lieutenant Peary had reached the farthest point north in the Western Hemisphere—83 degrees 50 minutes.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

A World Language.

ENGLISH is becoming increasingly a language for the world's business. It is more and more becoming the language of science, as Latin once was. In various countries, such as the Scandinavian nations, Holland, and Japan, men of science now write their works in English instead of in their own language, in order to bring them to the world's attention. The fact that English is now tending to supplant French as the language of diplomacy is a matter of prime significance. There is no good reason why it should not. The adoption of French for such purposes was due to the rank of France as a world power at the time, as well as to the standing of the country as a centre of civilization. But the English-speaking peoples are now the most powerful and their language takes a corresponding rank.

English has superior qualifications as a world language. It is more readily acquired than French, and it is far more easy to gain a mastery of its grammar, its idioms, and its pronunciation. The only serious drawback is its barbarous orthography. But for this, its adoption would be far more rapid. It has been suggested, and the suggestion appears to have met with favor, that a special form of English be adopted for world-language purposes by making its spelling strictly phonetic, according to the simplest possible method. In this form it would become, it is claimed, the universal speech of business and of diplomacy, while the language in its existing orthography would be retained as at present by the peoples using it. The chief obstacle to learning the language would thus be removed. It would be acquired, for speaking, reading, and writing, with extraordinary facility and celerity. It would thus become the common medium for the peoples of the world in communicating with each other, just as "Pigeon English" is the medium between occidental nationalities and the Chinese.

Should this ever really be done it would be enormously to the advantage of the English-speaking world, whose prosperity would naturally be promoted along with the consequent broadening of its commercial opportunities that would develop with a much easier communication with its peoples. The present direct value of a language so widely diffused as ours is beyond estimate, and to make it cosmopolitan would correspondingly enhance its worth. That English could be learned with extraordinarily little pains if it were phoneticized hardly needs argument. The experience with Sir Isaac Pitman's admirably simple phonetic system, with its special alphabet, demonstrates that. Under that system foreign children have been known to master English in a few weeks, and with the facility thus gained they have very easily acquired a knowledge of the language in its ordinary form. For a world language, however, a special phonetic alphabet would not be so practicable. The ordinary European alphabet would more naturally be employed, with some modifications, such as the representation of the th consonant by a single letter. The vocal values would most conveniently be the continental—as in German, Italian, and Spanish—but what are known as the pure, broad sounds, in distinction from the obscure and flattened vowels represented in the French. English thus written would look oddly in our eyes, to be sure, but we should soon get accustomed to it. Our standard works would be put into that shape, and thus would be made accessible to all the world. We ourselves would quickly become conversant with that form of the written language, and it would be widely adopted for business purposes among ourselves. And since it would be so easily acquired, it might naturally become the medium for instruction in schools, on account of the enormous saving in time which it would effect. Thus, by a process of gradual substitution, it is conceivable that the "Wurld-Inglish" form might in time replace the existing orthography, which would then acquire a look as old-fashioned and obsolete as that which the English of Chaucer or Spenser has to-day.

Foreign jealousy, however, might seek to interpose all possible obstacles in the way of such a use of English, for other nations might not unnaturally be displeased at the prospect of the advantages that it would give us. World processes, however, are not easily stayed. Everywhere people would really have to learn English. And a consciousness of such advantages might promote their practical acceleration on our part. In these days of syndicates and trusts, why might not a perception of these advantages, and of the profits to be gained in many ways, lead to the organization of a powerful combination for the purpose of making it effective? The task, great as it looks, would hardly be titanic, involving nothing more than the publication of dictionaries, grammars, and text-books, together with the printing of various standard works in the new form, and the organization of methods of instruction on a universal scale. Such an undertaking would hardly be beyond the powers of existing great schoolbook publishing combinations, with their resources of many millions. The market for methods of simple instruction in English that is now open in all parts of the world would in itself present an enormous field for such work, and that market would thereby at once be immensely extended.

Other world-language undertakings are also under way, and these would naturally be looked upon with more favor by other nationalities than those of our own tongue. An artificial language called Volapuk, had a considerable vogue a few years ago. But the movement has died out now. The looks and the sound of the name had an unfortunately emetic suggestiveness for English-speaking people. A new composite language is now said to be growing in favor as a candidate for a world tongue. It is made up of the leading root words in all the leading modern languages, simplified to the greatest possible extent. The language is likewise said to be exceedingly simple in every respect—grammar, pronunciation, phonetic spelling, etc., and it is claimed that it can be mastered perfectly in a few weeks, so as to speak, read, and write it with facility.

Wireless Messages across the Oceans.

THE public is never unprepared for announcements of new discoveries and inventions by Nikola Tesla, the wonder-worker in electricity. It means much to the industrial and commercial progress of the world that this tireless wizard is concentrating his inventive skill and research upon the

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

one great problem of evolving and perfecting a long-distance system of wireless telegraphy. Ever since Mr. Tesla conducted his remarkable experiments on Pike's Peak, Colorado, the public has been confidently looking to him for further developments in a form of electrical transmission that may revolutionize present methods of telegraphic communication.

Mr. Tesla was quick to see that the greatest field for the immediate utilization of wireless telegraphy was in the transmission of messages across the seas. His experiments have therefore been largely directed toward the solution of the problem of marine communication. The announcement from New York that the complicated apparatus by which he expects finally to establish wireless transatlantic communication is completed portends some remarkable feats in this direction. Three stations have been arranged for Tesla's experiments on the other side of the Atlantic—one in Portugal, one in France, and one in Germany. By the end of this month it is expected that all the mechanism designed by Tesla for the transatlantic service will be in position.

That great things are possible in this field of electrical invention is indicated by the recent successful establishment of communication between Nantucket lightship and the Lucania, over a distance of seventy-two miles. This is next to the longest distance covered by wireless sea telegraphy of which there is any record. Officers of the British navy have sent wireless messages from ship to ship in the Mediterranean over distances roughly estimated at over one hundred miles. On land this distance has been considerably exceeded, messages having been sent from Crookhaven, Ireland, to Poldhu, Cornwall, a distance of 223 miles. In the sea experiments the interesting fact has been noted that wireless messages may be sent through fogs and storms, and that they are not seriously interfered with by electrical disturbances in the atmosphere.

If wireless messages may be flashed from ship to ship in the Mediterranean over distances exceeding one hundred miles, there would appear to be no obstacles in the way of establishing a continuous patrol of the Atlantic from New York to Liverpool. But if the predictions of Tesla are fulfilled there will be no need of ship-to-ship stations. Wireless messages may soon be flashed across the ocean without intervening stations as easily as messages are now sent by cable. In the light of the progress already made the predictions made by Tesla cannot be dismissed as the wild dream of an electrical enthusiast.

An Electrical Geodetic Apparatus.

AMONG other new things in the mining and scientific world is what is styled an "electric survey." Men have always claimed ability to tell where mineral is located, by surface indications, and it is not strange that, with the new order of things, the old divining rods and "dousing sticks" should be discarded and electricity brought into the effort to indicate the location and course of mineral veins. F. H. Brown of Los Angeles, Cal., has a patented device that he styles an "electro geodetic mineral finder." He furnishes the following explanation of its operation:—

"The instrument used is a modification of the common form of the Wheatstone bridge, the modifications rendering the instrument capable of overcoming the inaccuracies of measurement heretofore caused by earth currents and abnormal resistances set up by electrolysis when battery currents are sent into the earth from a metallic electrode. In using the machine the custom is to make many measurements of the resistances of the same definite length of earth in a given locality. If there are no ore bodies within one-half of the distance between the electrodes from the surface of the earth, the current will find the path of least resistance in the moist earth nearest below the crust, and close its circuit through that path. Under this condition, all the resistances in the locality will approximate the same. In taking these different measurements, however, should we measure the resistance of a certain definite length of earth underneath which lay a body of ore, less than one-half the distance between the electrodes, from the surface, then the current would find the path of least resistance, in passing down vertically to the ore body to a point nearest the positive electrode or rod, would pass laterally through the ore body to a point nearest the other rod or electrode, then vertically upwards to the other electrode.

"The lateral resistance through the ore body would show comparatively no resistance, and the reading on the instrument would be only one-half to nine-tenths of the amount indicated on the instrument by the other definite lengths under which there was no ore.

"To tell the depth of the ore body from the surface it is only necessary to vary the length of earth measurements, as for example: If a body of ore were one hundred feet beneath the surface, one hundred-foot measurements over this ore would not indicate its presence, for the reason that the current would have to go down one hundred feet to the ore, pass laterally through it and up through another one hundred feet of earth resistance, thus passing through two vertical earth resistances of one hundred feet each, aggregating two hundred feet of earth resistance as against only one hundred feet on the surface, in which case the path of least resistance would be near the surface. In order to indicate the presence of this ore body one hundred feet beneath the surface it would only be necessary to take surveys of a little over twice the depth, say two hundred and twenty feet. In this condition the two vertical resistances of the earth, aggregating two hundred feet, would be less than the surface resistance of two hundred and twenty feet, and the current, seeking the path of least resistance, would go down to the ore, pass laterally through it, and go vertically up to the other rod; and to locate it, it would only be necessary to take several parallel or radial measurements of the same definite length. A measurement taken over the ore vein or body would be low. The other measurements taken of the same definite length, for comparison, being removed from and not over the ore body, would be higher, and it is only necessary to shorten up the length of earth measured to arrive at a point where the current will leave the ore body and pass through the crust to approximate the depth. The variations of the instrument, being very marked, will show the depth."

Its inventor claims that it is "thoroughly scientific," and that he can locate gold and other metals by its use.

Mining and Scientific Press.

Let Something Good be Said.

When over the fair fame of friend or foe
The shadow of disgrace shall fall; instead
Of words of blame, or proof of thus and so,
Let something good be said.

Forget not that no fellow being yet
May fall so low but love may lift his head;
Even the cheek of shame with tears is wet
If something good be said.

No generous heart may vainly turn aside
In ways of sympathy; no soul so dead
But may awaken strong and glorifred
If something good be said.

And so I charge ye by the thorny crown
And by the cross on which the Saviour bled,
And by your own soul's hope of fair renown,
Let something good be said.

JAMES WHITCOMB RILEY.

Testimonial Meeting at Concord, N. H.

THE regular meeting of First Church of Christ, Scientist, in Concord, N. H., on Wednesday evening, August 28, was largely attended, many visitors from out of town, who had been in attendance upon the State Fair at Mrs. Eddy's invitation, being present.

After the opening exercises, Rev. Mr. Tomlinson, the First Reader, said, "The meeting is now open, and we shall hear grateful testimonies from loving hearts."

A gentleman from Canada testified to the beneficial effects of Christian Science teaching as felt all over the globe. In his work as a professional electrical engineer for the Canadian government, he was frequently called upon to put his knowledge of Christian Science into operation, proving that "there is no sensation in matter."

Two years ago, he was making an electrical test where the power was five hundred volts, like that used in trolley lines, and had to be handled carefully. The binding posts were not properly placed—were too near together. In putting his hand on a lever to pull it open, a connection between the wires was too quickly made, causing the electrical current to jump from one wire to the other going through his hand, making a report like the discharge of a cannon, going under the thumb and laying it open, tearing the flesh under the four fingers, and on one hand over the fingers, and burning the nails to a crisp. For a moment the pain was intense. He was urged to apply a salve used for burns. He replied, "I have a salve of my own. I will rub it in." He retired to his room, applied the Truth as given in our text-book, "Science and Health with Key to the Scriptures," and in ten minutes the pain was gone, he returned to the test-room, and finished his work without pain or inconvenience. In a few days the wound was healed and there was nothing to snow for the accident but a new skin which had formed.

A teacher in the public schools of Chicago, spoke of being healed in Christian Science, then studied the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. She asked for a letter of dismissal from her former church in Germany, in order to join the Christian Science Church. From that date her father refused to write to her.

In June, 1900, she started East to spend a month. While visiting in Concord, N. H., she received a letter from her sister in Germany, saying that since their mother had passed on, their father seemed very different, and was really considered insane. He is seventy-six years old, and the sister prayed that God would take him. This teacher answered with a Christian Science letter, containing declarations of Truth. "God created man in His image and likeness." "God is Mind and is everywhere." Where, then, could her father go, since God fills all space?

While getting ready to take a drive in Concord, she received another letter from Germany, saying the father had been taken to an asylum, and placed in a straight jacket. At first she thought she could not take the drive. Then came the thought, "I can work just as well while driving, I can realize the Truth wherever I am."

As soon as they were seated in the carriage, the friends proposed a drive around the insane asylum grounds. She was tempted to get out of the carriage, but the words came, "We must prove our statements in Christian Science." Faithfully she worked, and a happy consciousness followed. She saw clearly that she must not believe the lie which said her father was insane; God's creation was finished, and was pronounced good, and could not be changed. Only our false concept must be removed. Her father was in the One Mind, and reflecting the One Intelligence. Upon her return to Chicago, she received a letter from the father, in his own handwriting. He was a well man. When the sister in Germany received the first letter, written in the spirit of Love, she took her Bible, and went to the asylum. The doctor said her father was well. The attendant declared, "If I did not know that the day of miracles was past, I should say that Jesus Christ had healed him."

The doors of her home were no longer closed to her. She had just returned from her home in Germany. She found her father clearer in thought and better than he was nine years ago. Truly Christian Science, the Word of God, is blessed of our Father, and does not return unto us void.

A gentleman said he had been in Christian Science fifteen years. It grows in beauty and goodness. While he felt grateful for the physical healing, he was vastly more grateful for the spiritual benefits received.

The interest in Christian Science is growing, and the demand for literature increasing because it is demonstrable truth. He spoke of a case of blindness of twelve years' standing healed through Christian Science treatment.

A New York gentleman spoke of the healing of an eye trouble, also difficult financial problems were solved through the power of the Word, both for himself and others.

Another gentleman cited a case of impersonal healing. A lady came to his office with a trouble of the nerves of the eye, ear, and tongue. Specialists in New York had said she was incurable.

His first thought was, "I cannot heal." Second and the true thought, "God is the healer." After a half hour's talk she returned home, and never had a return of the disease. Previous to this, the trouble would be severe twice a week.

He pointed the way in Truth, gave her some literature, and she was healed. That was three years ago.

A Scientist from New York wished to corroborate the statements just made by giving three cases of healing through repeating the Lord's Prayer as found on page 322 in "Science and Health with Key to the Scriptures."

"One," he said, "was a woman who had only heard of Christian Science a few days. She seemed to be in great mental distress. I talked with her. Next morning she came to see me, said she had not been able for many weeks to lie down all night on account of chronic inflammation of the kidneys. Prompted by Love I repeated the Lord's Prayer with its spiritual interpretation. Just as I had finished, I was called out of the room. Returning in ten minutes I found the woman radiant, the pain gone, and all ill feelings dropped."

The other two cases were equally remarkable. This Truth regenerates sinners, heals the sick, and comforts the sorrowing.

A gentleman from Brooklyn, N. Y., formerly a well-known Methodist minister, gave an interesting account of his journey from the old into the new. Many years ago he was healed in Christian Science after eminent physicians had given him up. He accepted the physical healing, but could not give up his theological views until compelled by sickness in his family, to come face to face with the great question,—Which is true? When he called upon a Christian Scientist to ask help for his loved ones, the question confronted him,—Why do you, as a minister, come to Christian Science for physical help? Do you not heal the sick? Can you expect to receive benefit for your loved ones unless you acknowledge the help already received by yourself?

He had been afraid to send others to Christian Science for help, lest they should become interested in its theology and be lost.

The question brought Truth home. The time had come when he could give up some of his theories and listen, and light dawned as never before.

Two of his church members were sick, one with quick consumption, one with insanity, and he had felt sad at heart that he could not tell them what Christian Science had done for him.

The time came when he must decide the question. One Sunday morning he attended Christian Science services.

Digitized by Google

On his way home, in order to dodge his parishioners, he called upon the lady who was sick with consumption. While praying with her, she was seized with a severe hemorrhage. He cut his prayer short, arose from his knees, declaring that Christian Science could heal her. He acknowledged what it had done for him. Next Sunday this woman was in his church a well woman.

This led to class instruction in Christian Science. Then came the crucial hour. Truth did the work and the twentieth day of September, 1900, after a day's conflict, alone with God, he resigned his pastorate.

Light had dawned and in the beginning of this new century he stepped out in this new-old Truth, and to-day had looked upon the face of the one he had longed to see—the Founder and Discoverer of Christian Science.

He closed by saying that the case of insanity already referred to, had been healed. He is happy in his present religion, and his whole family are now rejoicing with him in the truth of Christian Science.

A worker from Poughkeepsie, N. Y., said: "To-night my heart is filled with a greater sense of divine Love than ever before. Christian Science brings the light of understanding to those who are thirsting after righteousness.

"Jesus said, 'I have yet many things to say unto you, but ye cannot bear them now,' but in this century, Christian Science is unfolding the fulness of his teachings, and we are able to understand and demonstrate them, lifting the burdens of others as well as our own.

"How compassionate we should be in this great work, and love our neighbor as ourselves. Jesus had compassion for all, and this compassion brings to us a sense of meekness, of childlike trust and simplicity, so tenderly expressed in the poem entitled, 'As a Little Child' by William P. McKenzie." (See *Christian Science Journal* for October, 1897, p. 389.)

A Scientist from Brooklyn, N. Y., told how, when turning the searchlight of Truth on her own thought to find why she was not bringing out a certain demonstration, she saw the word "Obedience."

Turning to "Miscellaneous Writings" by Mary Baker G. Eddy, page 117, she read: "Never absent from your post, never off guard, never ill-humored, never unready to work for God,—is obedience; being 'faithful over a few things.'" Then came the query, Are you ready thus to obey? Again the book opened to page 391.

> That when a wrong is done us
> It stirs no thought of strife;
> And love becomes the substance,
> As item, of our life.

That which seemed to stand in the way was quickly uncovered, Truth's power to destroy sin and sickness was readily seen, and the patient was healed.

This address on "Obedience" merits careful study. As we are turned to Truth for guidance, we find the impersonal healing, for when Christ speaks the sick are restored, the sorrowing are comforted, the broken-hearted are healed, and the unbeliever accepts the word of Christian Science, and we find how to rise above the false sense and love our neighbor as ourselves.

A practitioner from Chicago said: "I was healed of severe chronic troubles by reading 'Science and Health with Key to the Scriptures.' It was a blessed experience exemplifying the words found in that text-book on pages 319–27. Yet after years of active work in the cause of Christian Science, I gradually came under a severe and trying affliction. Though working with more understanding than during my first healing, the trouble baffled me continually. The infirmity was lameness and swelling of feet and limbs so that walking was quite difficult, and it seemed a messenger of Satan to buffet me. Months went by and I received only temporary relief, sufficient to enable me to carry on my work in Science. I could walk through no power resident in matter, but through the power of God only.

"Then came a call for help from one whose suffering was similar to my own, but in a more aggravated form. Through long cringing the muscles had become drawn till the surgeon said the cords in the toes and knees must be cut.

"I shrank from taking the case, thinking, 'How dare I touch it, when I cannot help myself!' Then came the thought, 'If your household were attacked and you saw a murderous hand stretched toward your husband or children, would you not strike as best you could for God and liberty?' This showed me what duty demanded, and I began to talk positive Truth. In less than a week she was healed, and *I too.*"

The First Reader from Orange, N. J., said, "When I came to this testimonial meeting it was with this prayer, 'O Lord, open Thou my lips; and my mouth shall show forth Thy praise.' The testimony just given by a sister Scientist, in which she quoted our Leader's words (Miscellaneous Writings, p. 117): 'Never off guard,' etc., and 'Suffer no claim of sin or sickness to grow upon the thought' (Science and Health, p. 389), remind me of a recent quick demonstration.

"A week ago, as I was dressing to go to our testimonial meeting, I was suddenly attacked by pneumonia or pleurisy. The suffering was acute. Mortal sense said, 'You are not fit to go and conduct that meeting.' Love answered, 'This is God's service, God will take care of it and you.' So I went forth without fear of suffering or failure. The next day I attended to my duties, going out of doors and into damp places. That night there was a sharp struggle, but with the morning came absolute relief from pain; only a sense of weakness as great as follows a prolonged illness. Saturday I was free, and on Sunday read as usual the church service.

"Not for a moment had I doubted ultimate victory, shared by the faithful co-workers who were with me, for we were fighting on the side of God, and we knew He was our strength and shield, and that God was all about us."

A Boston Scientist spoke of a demonstration that brought joy. A young man who always suffered from seasickness, came for help before taking a trip upon the water. During this trip he suffered no inconvenience. He later became a student of Christian Science and is now helping others.

Correspondent.

The North Dakota Chautauqua.

Judge Ewing's Lecture.

THE second year's work upon the Chautauqua grounds at the beautiful lake, miscalled Devil's Lake, has been a source of gratification to the Scientists. A fund for the building of a cottage was started before the opening of the Assembly and forty-five dollars in cash was secured. A large tent was again rented for this year, and a carpet and some additional furniture was put in, making a pleasant reading room and resting place. A large amount of literature was distributed and a number of people experienced their first interest in Christian Science through their visits to the tent. The Christian Science tourists expressed much appreciation of the privileges of this common meeting spot. A lecture for July 14, under the auspices of First Church of Christ, Scientist, of Devil's Lake City, was put upon the regular Chautauqua programme. The lecture was delivered by Judge William G. Ewing. The following account of this effective lecture appeared in the *Grand Forks Herald*.

"Notwithstanding the excessive heat of Sunday afternoon an audience of about twelve hundred gathered at the auditorium to listen to the lecture delivered by Judge William G. Ewing of Chicago on the subject of Christian Science. At three o'clock the speaker appeared on the platform with

Digitized by Google

the manager, Rev. Mr. Swift (Baptist). Mr. Swift spoke briefly upon the breadth of Chautauqua platforms, which here embraced lectures by Catholic priest and Christian Scientist on consecutive Sundays. He then referred to the well-known ability and Christian character of the lecturer and proposed that, in deference to the speaker and his subject, the audience greet him by the Chautauqua salute. A multitude of handkerchiefs instantly fluttered in the air as Judge Ewing rose and moved toward the footlights. The address covered, possibly, an hour and a half. Nearly one hundred believers in Christian Science were present, representing Chicago, Winnipeg, Iowa City, and localities in North Dakota. These lectures are not, however, for the benefit of Christian Scientists, but for the information of the world in general, and this was a gathering of thinking people, as was evidenced by their motionless attention. The speaker elucidated the fact that the object of Christianity, as demonstrated in Christian Science, is not bodily healing, but the healing of sin, and that physical wholeness will always follow when the fossilized misconceptions of God are dispersed by the light of the Science of Being. He said preaching was only a part of Christ's work. Jesus preached by teaching and healing the sick, and so should we. The records accredit him with preaching but one regular sermon and that was but once delivered. One of the objections most frequently hurled at Christian Scientists is that it is blasphemy for them to claim that God has endowed them with power to heal the sick, but this objection is absolutely without force, because there is nothing to hurl it against. There is not a Christian Scientist in the circuit of the sun who ever claimed that God endowed him with power to heal the sick. Even Jesus did not claim to possess this power. He said he could of himself do nothing, the Father did the works; and so his followers to-day in Christian Science claim to have no healing power. It is God alone who heals. Mr. Ewing spoke lovingly and gratefully of Jesus, the Galilean Saviour, whose sinless life is without a parallel. He also referred in affectionate and grateful terms to the Rev. Mary Baker Eddy, the Leader of to-day, who has given to the world the divine Principle of Jesus' healing work.

"The closing words of the address, given with lowered voice and rapt face, dwelt adoringly upon the loving presence and tender care of the dear Father of all. But the beauty and sublimity of this conclusion could hardly be reproduced by my poor pen. When the speaker turned away, Rev. Swift came forward and said: 'It used to be a custom among the monks, at their religious services, to take the central thought of the psalm sung and repeat it twice. This afternoon the lecture has been a psalm to me, a beautiful glorification of the Master; therefore, I propose that we rise and repeat twice, in concert, as a benediction, the words, "I am the Way, the Truth, and the Life."' With one accord the people rose and repeated the inspiring words. The lecture was well received, a desire being widely expressed by non-Scientists that Judge Ewing speak again in the evening. But this was not feasible."

A number of lectures have been delivered in the state, and it was very evident upon this occasion that they had stirred men's thoughts to a change of base, there being more friendliness and thoughtful interest manifested than ever before. People came to the reading room from the lecture to get literature, and three young men to inquire where the text-book could be obtained.

Late in the afternoon a request was made for contributions to the cottage building fund, and the Scientists on the ground subscribed funds to amount to $225 including $42 already on hand. It is estimated that five hundred dollars will construct and furnish suitable headquarters. While the Scientists are interested in this branch of work, it is a matter of regret that more did not add spirit to it by their actual presence, especially upon the occasion of the lecture. This would be most fitting, and only error admitted can prevent us from demonstrating that, Love's work and Love must fit." Contributions to the building fund are expected to be all in by the middle of next May. The building is to be done in that month or at least begun in May, as the Chautauqua Assembly opens the last week in June.—MARTHA SUTTON THOMPSON, Grand Forks, N. D.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

The Obstetric Class.

Applications for the obstetric class of the Massachusetts Metaphysical College for 1901 must be sent at once to Alfred E. Baker, No. 25 N. State St., Concord, N. H. The class will convene October 21.

New Application Blank.

It is desired that persons who apply for membership in the Mother Church will send for the blank forms of application that are issued on and from September 20, 1901.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Notice.

THE Church By-laws on the qualification of students to teach Christian Science have not recently been changed. My notice in the *Sentinel* of September 5, 1901, contained nothing new on this subject or that would naturally alarm the Field. It meant simply that those students who have neither taken courses of instruction at the Massachusetts Metaphysical College, nor passed examination there by the Board of Education, are not now expected to teach Christian Science. Please turn to page 47, section 3, and page 71, section 3, in Church Manual, and you can verify the above statement. MARY BAKER G. EDDY.

Mistake Corrected.

WE republish from *The Daily Patriot* of Concord, N. H., the following letter from Mrs. Eddy:—

Dear Editor:—In reference to two reports that found their way into the kindly notices of the press relative to this year's State Fair in Concord, I beg to say: One mistake that was made last year was repeated this year, namely, that our governor invited me. The invitation came from the officers of the Fair Association; and my small gift to the children came from my love for children, and it would have pleased me not to have had that gift emphasized. I find it more troublesome to be overrated publicly than underrated, since conscience requires a bit of my time to correct the former, while happily the latter old time will correct. MARY BAKER G. EDDY.

Pleasant View, Concord, N. H.,
September 7, 1901.

Memorial Service.

IN accordance with the Proclamations of President Roosevelt and of Governor Crane, memorial services for the late President William McKinley, were held in the Mother Church, The First Church of Christ, Scientist, of Boston, Mass., Thursday, September 19, 1901, at 10.30 A.M.

Christian Scientists constituting the congregation which worship in the Mother Church, as well as those worshiping in the various branches thereof, spontaneously united with other Christian peoples in responding to the proclamations of those in authority, and large numbers attended these special services in Boston and elsewhere. In common with good people everywhere, Christian Scientists deplore the sin which led to the assassination of the great and good President, and unite their prayers with others for the continued prosperity of our great republic under the administration of the late President's successor, President Roosevelt, also for the latter's divine guidance and protection. With sorrowing, but not hopeless, hearts, those of our faith assembled and offered their devotions. Their desire went out for the speedy coming upon earth of the government through Divine Love whereof Holy Writ prophesies, and for the coming of which earnest hearts are everywhere praying—that government wherein the supreme God shall be recognized as Supreme, the wise ruler, the true potentate, the real authority.

Following is the order of service in the Mother Church:—

1. Hymn 183, "Shepherd, show me how to go."
2. Selections from the Scriptures, and correlative passages from "Science and Health with Key to the Scriptures."
3. Lord's Prayer.
4. Hymn 69, "Lead, kindly Light."
5. Reading Proclamation.
6. Address by the First Reader.
7. Hymn 158, "Nearer, my God, to thee."
8. Scientific Statement of Being and correlative Scripture and benediction.

Before delivering his address the First Reader read the following letter from the Rev. Mary Baker G. Eddy to Mrs. McKinley:—

Pleasant View, Concord, N. H., September 14, 1901.

My dear Mrs. McKinley:—My soul reaches out to God for your support, consolation, and victory. Trust in Him whose love enfolds thee. "Thou wilt keep him in perfect peace whose mind is staid on Thee, because he trusteth in Thee." "Out of the depths have I called thee." Divine Love is never so near as when all earthly joys seem most afar.

Thy tender husband, our nation's chief magistrate, has passed earth's shadow into Life's substance, through a momentary mist he beheld the dawn. He awaits to welcome you where no arrow wounds the eagle soaring—where no partings are for love—where the high and holy call you again to meet.

"I know Thou hearest me always,"—are the words of him who suffered and subdued sorrow. Hold this attitude of mind, and it will remove the sackcloth from thy home.

With love,
MARY BAKER G. EDDY.

During the reading of these touching and tender words of sympathy and love, the large congregation was visibly affected. All eyes were suffused with tears, and a wave of deeply responsive love went forth.

ADDRESS OF FIRST READER.

In compliance with the proclamations of the President of the United States and of the Governor of our State, we have assembled in this, our Mother Church, to add our tribute of love and respect for the late chief magistrate of our nation, to unite with all other good people in deploring the wicked manner of his taking off, and to extend our deepest sympathy to the bereaved widow and relatives of the deceased.

William McKinley, President of the United States passed away at 2.15 o'clock A.M. of Saturday, September 14, 1901, as the result of wounds inflicted from pistol shots in the hands of Leon Czolgosz, an anarchist and assassin. The President was attended by some of the most eminent surgeons and physicians this country affords. They labored faithfully and assiduously to save the life of their distinguished patient, resorting to every means known to modern surgery and *materia medica*. Yet their earnest and heroic efforts failed, and President McKinley is no more on earth.

His illustrious career as statesman and chief magistrate is ended; a career in many respects not less distinguished, not less honorable, and not less useful than that of the greatest of American citizens or of the ablest and best of his long line of illustrious presidential predecessors; a career that justly enrols his name upon the scroll of fame with earth's greatest and best statesmen and rulers.

The people of this country are indeed mourning over the sad event. Pitiful truly is the condition of mind and heart of any citizens of this country, or even residents here, who

Digitized by Google

do not unite in this feeling of sorrow and sympathy. The nations of the world also are mourners at the bier of the assassinated President. With uncovered heads, as it were, and sorrowing hearts, they join the great procession of mourning ones; while deepest sympathy from the world's great heart goes out toward her who so faithfully bore with the late President his heavy burdens, who so modestly shared his high honors, and who so heroically and bravely bears up under the sad affliction through which she is called upon to pass.

The loss is more than a national one. It is international —world-wide. This is so, not only because of the late President's high character and fine integrity, but because of his real ability and skill in the craft of statesmanship. For many years before he became President he had occupied a high position in national affairs, and stood for that which is best and ablest in practical American statesmanship. A sincere, conscientious, and indefatigable worker, he was among the leaders of the House of Representatives, both in committee service and as a debater upon the floor of the House. Perhaps his greatest achievement as a member of the House was the tariff law known as the McKinley Bill, of which he was the author.

Of his administration I shall not now stop to speak at length. Suffice it to say that as a whole it stands before the world unsullied in its cleanness, unimpeachable in its highness of purpose and goodness of motive. All people believe Mr. McKinley to have been an honest and sincere man. This honesty and sincerity he carried unswervingly into all his public and official acts. He was, moreover, a Christian man,—living, as is universally believed, up to his highest conception of true Christianity. His trust and faith in God were breathed in his last audible words.

But even in a greater sense than that mentioned, Mr. McKinley's unfortunate demise is of international significance. The manner of his taking off raises the question as to how long this nation and other nations will tolerate in their midst, and by tolerating tend to nurture, the lawless and irresponsible element to whose existence this sad calamity is due? How long before a wise and systematic method shall be pursued to suppress the violent forms of so-called anarchism which find their legitimate expression in such dastardly acts as that we are now considering? How long before the nations of the world shall unite in a concerted and well-devised method of suppressing this same element wheresoever and howsoever it exists? We think it entirely safe to say that anarchism, in its essence, is anti-religious, anti-Christian. Any system which has as one of its tenets the removal of any of its fellow-citizens through murder, opposes itself to every form of religion and Christianity. The murderer everywhere and in all ages is exemplified by Cain who, through envy, slew his brother Abel. Envy and evil lie at the base of all forms of murder. Wrong never has been righted through murder and never will be. It has been true through all the ages that all murderers have shared the fate of Cain. The voice of Truth and right has ever called out to the murderer, as did the Lord unto Cain, asking, "Where is Abel thy brother? . . . The voice of thy brother's blood crieth unto me from the ground. And now art thou cursed from the earth, which hath opened her mouth to receive thy brother's blood from thy hand; when thou tillest the ground, it shall not henceforth yield unto thee her strength; a fugitive and a vagabond shalt thou be in the earth." And sooner or later every Cain, in the anguish of his remorse, will cry: "My punishment is greater than I can bear. . . . I shall be a fugitive and a vagabond in the earth; and it shall come to pass, that every one that findeth me shall slay me."

The lesson of Cain and Abel illustrates an inevitable law; a law from the effects of which there is no escape.

While we mourn the lamentable death of so great and good a man as Mr. McKinley, we are not among those who mourn without hope. We know that while dead to mortal sense, the real life manifested by Mr. McKinley in his individuality, still lives and shall live forever.

Mr. McKinley is no longer President. Vice-President Theodore Roosevelt has become his successor. Without a single jar in the movement of our governmental machinery, the change in the chief magistracy of the nation has taken place. The wheels of government move on uninterruptedly. The nation lives on. Out of this deplorable event may there be evolved a spirit of higher purpose, nobler achievements, and better results for all people. May the sorrowing hearts unite in closer bonds of fellowship and unity, imbued with a deeper sense of the eternal Fatherhood of God and the universal brotherhood of man.

Expressions of Condolence.

THE following message of condolence was sent to Mrs. McKinley:—

"In this hour of national bereavement over the loss of our President, the late William McKinley, the members of The First Church of Christ, Scientist, of Boston, Mass., send to Mrs. McKinley assurance of tender sympathy.

"May divine Love sustain her and verify to her the promise, 'God is our refuge and strength, a very present help in trouble.' WM. B. JOHNSON, *Clerk.*

"Boston, September 4, 1901."

FROM CHICAGO.

The following is a copy of a telegram sent to Mrs. William McKinley at Buffalo:—

"We are directed by all the Christian Scientists of Chicago to convey to you an expression of their high appreciation of the exalted civic and Christian character of your distinguished husband, and of the loss to you and the world compassed by his cruel death. They tenderly sympathize with you in your lonely grief, and lovingly commend you to the great Shepherd's unfailing care.

"ROBERT P. WALKER,
"MRS. EDWARD A. KIMBALL,
"WILLIAM G. EWING."

Make Your Own Climate.

THE following editorial in the *Utica Daily Press,* is along Christian Science lines, and is worthy of careful perusal and thought by all:—

"To those who have stuck all summer to their posts of duty, who have turned deaf ears to inviting calls from mountain and seashore, it may perhaps be gratifying to know that people who annually make pilgrimages to some health resort are victims of a fad. This, in effect, is the statement of one of the speakers at the convention of weather bureau officials. The principal components of the air, he declared, are practically in the same proportion the world over, and it has not been shown that excessive humidity or absence of moisture are specific remedies. The change of climate so often recommended works benefit, we are told, by its influence on the senses. Mind is victorious over matter. 'One may fight a winning battle against disease in almost any climate.' All one wants, probably, is to have control of one's senses and get into the right environment. Only foolish folk are compelled to seek the right environment away from home. Happiness ever flees from those who pursue. Make your own climate and make it congenial. Don't be bothered by tiresome trips to other zones where other influences are exerted. Live above the weather."

Christian Science Lecture at Buffalo.

Judge William G. Ewing will lecture at Buffalo, N. Y., Sunday, October 13.

Among the Churches.

Opening Services at Mason City, Ia.

First Church of Christ, Scientist, held their first services in the new chapel on Eighth Street, Sunday, August 4. Since this is not considered a permanent church building the exercises were not in the nature of a dedication, but consisted of the usual form of service with the addition of brief remarks by each of the Readers.

The room was beautifully decorated with palms, growing ferns, and golden rod, producing a pleasing effect against the pure white walls.

During the early part of the service the choir rendered most acceptably that glorious anthem, "Jubilate Dei," and later Mrs. Lee Long sang a solo, "By the Waters of Babylon." Her sweet and perfectly cultivated voice added greatly to the beauty of this ideal service.

The subject of the lesson for the day was "Spirit," consisting of alternate readings from the Bible and Science and Health.

There was no collection taken, an innovation most surprising to a church-going audience.

Preceding the lesson Mrs. Markley reviewed the work of Christian Science in Mason City as follows:—

"It is our privilege and pleasure to-day to greet you for the first time in our new home. We welcome you most cordially, and feel that your presence with us to-day is an expression of your friendly interest in our efforts to help carry on the church activities of Mason City.

"While we do not regard our little chapel as meeting the permanent need of our society, when we remember that fifteen years ago Christian Science was almost unknown in Mason City, we can rejoice not only that our present need is supplied, but that this little hall is required. In 1886, I believe, Christian Science was first introduced in our city, by one woman fortunate beyond her friends in being led to know and test this new method of healing.

"The early history of a church, like that of an individual, may seem unimportant to all save very near friends, but the first step always counts for much, and perhaps the greatest step ever taken in our church was when three or four students met together and decided to hold regular Sunday services at private houses.

"In 1883 a hall was rented and more public services inaugurated. In 1892 First Church of Christ, Scientist, of Mason City, was organized and incorporated under the laws of the state. From one rented hall to another more commodious, and now into this little chapel of our own, has been the material history of the church. But in Science the church is not material but spiritual, not a place in which to worship God, but that habitation of thought wherein God is worshiped, that consciousness that God is omnipotent, omnipresent, and omniscient which makes his opposite—evil—powerless.

"We are often confronted with the query, What is the need of a new church organization for this? We say, with all reverence and regard for our sister churches, that we feel we have enough in common to bid them and to receive from them a hearty Godspeed in working out of material into spiritual living; but that through the exalted spirituality, faith, and work of Mary Baker Eddy has come to this age a clearer light on the Scripture, a higher idea of God, and a Scientific application of the word of God, which heals the sick and sinful and ameliorates every form of human misery, that to attain the best results this Science needs to be taught and practised in its purity, notwithstanding the seeming conflict with time-honored customs.

"Having been the beneficiaries of this new light and way, having demonstrated though perhaps in very small degree, that the works which Jesus did we can do also, is it any wonder we wish to consecrate ourselves to the teaching, preaching, and demonstration of the principle and rule by which we believe those works were done? That we wish to establish and maintain a church whose central point is the supremacy of spiritual law over the material in daily living now as well as nineteen hundred years ago or nineteen hundred years in the future. We read in Psalms, 'One generation shall praise thy works to another, and shall declare thy mighty acts. . . . They shall speak of the glory of thy kingdom and talk of thy power.' Our Wednesday evening meetings are maintained to give voice to this faith that is in us, that we may call the Lord our sure salvation, to make known to the stranger within our gates what this new understanding of God does, and to learn what it has done for them."

After the regular lesson Miss Sheldon made a brief address as follows:—

"Many are the rich blessings bestowed upon us to-day, and if we were to count them we would exclaim with the Psalmist they are more in number than the sand.

"Our Great Master, the gentle Nazarene, gave us the grand and inspiring promise that we should know the Truth, and the Truth should make us free, and through the teachings of our Leader, Rev. Mary Baker Eddy, as given to us in 'Science and Health with Key to the Scriptures,' this promise is being fulfilled, and we are gaining the liberty of the sons of God. For we 'know that the Son of God is come, and hath given us an understanding, that we may know him that is true, and we are in him that is true, even in his Son Jesus Christ. This is the true God and eternal life.' And while we are thankful for our new church home we do not forget that, whether in grand cathedral with towering dome or in the humble cot, 'God is a spirit;' and 'they that worship him must worship him in spirit and in truth;' for the Father seeketh such to worship him.

"We take pleasure in meeting the friends who have accepted our invitation to meet with us to-day. We cordially invite you to come again, and while perhaps our views may differ, we know that it is the same God and loving Father watching over all, and saying to you and to me, 'The Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely.'"

Mason City Times-Herald.

Opening Services at Colfax, Wash.

Sunday, August 4, 1901, the members of First Church of Christ, Scientist, of Colfax, Wash., held their first service in their new church home on South Main St.

The church is a neat, homelike structure, built by the love-offering of the students without any solicitations whatever. The children of the Sunday School were proud and happy to bring all their tithes into the storehouse, thus aiding in the demonstration.

The interior of the church is tastily furnished and fitted up. There is a cozy reading room in the front which is kept open every afternoon from two to four o'clock, where all Christian Science literature is on sale.

There were two services held, which were well attended, many visiting Scientists being present from neighboring towns, among them Rev. and Mrs. M. G. Mann, of Lewiston, Idaho. Mr. Mann acted as First Reader, and also read the following loving message from the Lewiston church:—

Lewiston, Idaho, August 3, 1901.

Church of Christ, Scientist, Colfax, Wash.—*Greeting:*—Church of Christ, Scientist, of Lewiston, Idaho, congratulates you and rejoices with you on the completion of your house of worship. The prophetic statement may also be applied to the Colfax Church: "And thou Bethlehem, in the Land of Juda, art not the least among the princes of Juda: for out of thee shall come a Governor, that shall rule my people Israel."

After many struggles, strict adherence to divine Prin-

Digitized by Google

ciple, and walking in the footprints of Truth, having faithfully performed your part, you now realize and re-echo the language of the Psalmist: "Yea, the sparrow hath found an house, and the swallow a nest for herself, where she may lay her young, even thine altars, O Lord of hosts, my King and my God."

The visible monument which you have erected to testify your love for and your devotion to Christian Science, is second only to the more enduring ones—in the living temples erected and resurrected in the spiritual consciousness of God's children. Your faith has been tried and has not been found wanting in visible fruits. The sick have been healed in your midst, sinners reformed, the spiritually blind and deaf have been made to see and to hear; the weary and heavy laden have found rest; the hungry have been filled, and the homesick heart satisfied in the all-supplying Love of our Father-Mother God.

Your efforts, governed and crowned by the one divine Mind, will be to us an incentive to holy emulation, and thus you have made us debtors, in showing us the way, and have become an example of self-denying energy.

We wish you much prosperity for the future as a church. May the Shechinah, that represented the constant presence of Jehovah in the ancient temple service, fill not only your house, but also your hearts with the understanding of the Emanuel—the omnipresence and everpresence of divine Love.

M. G. MANN, *Clerk.*

Mrs. Sarah O. Bragg, the regular First Reader of the church, read an address of welcome and congratulatory telegrams from the Churches of Christ, Scientist, of Walla Walla, Wash., and Portland, Ore. The Lesson-Sermon, the subject of which was "Spirit," seemed especially prepared for this occasion, and was listened to attentively by the audience, many of whom had never attended a Christian Science service before. The beautiful solo, "The Holy City," was well rendered by Mrs. Charles Larkin, hymns 178, 128, and 150 being sung by the choir.

The address of welcome was as follows:—

My dear friends, neighbors, brothers and sisters: in behalf of First Church of Christ, Scientist, of Colfax, I extend to you a glad welcome to this little home which is consecrated to Truth, Life, and Love.

We have labored here for ten years in the Master's vineyard, for what? To establish Truth? No, for Truth *is*, was, and *always shall be* established, but to help to bring to human understanding the possibilities of man guided by the Mind which was also in Christ, the Divine Mind which ends human bondage.

That we have made some progress in this most holy undertaking your presence here bears witness. I cannot close without paying loving tribute to our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the study of which healed me of many ills, and planted my faltering footsteps firmly in the pathway of life eternal.

K. B. MCCROSKEY, *Clerk.*

Opening Services at Cranford, N. J.

The opening of the church edifice of First Church of Christ, Scientist, Cranford, N. J., took place on Sunday, July 28, with the regular morning service at eleven, which was attended by a large and deeply interested audience, and a special service at half past three, at which the church was not only crowded to the doors, but the reading room was also used to accommodate the overflow. Large numbers came from the New York and Brooklyn, the Staten Island, Newark, Orange, and Englewood sister churches, and many strangers came also.

The Lesson-Sermon, "Love," seemed particularly appropriate to the hour, for Love had manifested itself to us in many ways and in large measure, and each one realized the debt of love we owed to our Leader, through whose pure consciousness this Truth has been revealed to us, and this demonstration made possible.

Both services were conducted by the regular Readers of the church, Mrs. Annie L. See and Joseph B. See. Solos were beautifully rendered by Mesdames Delano and Clark of the choir of First Church of New York. The occasion was a joyous one for all who participated in it. We know that joy is a power.

The church is centrally located at the meeting of the county road and Eastman Street. Outwardly it has the appearance of a veritable wayside chapel, and we trust that many a weary traveler may find rest within. It is painted in white with dark green blinds, and the windows are of white colonial glass. The interior, which is gothic in architecture, is finished in oak with the walls a pale buff in tone.

It has a seating capacity of two hundred and is fitted with opera chairs upholstered in dark green leather. A dark green carpet covers the platform and extends down the main aisle. The platform is furnished with reading desks and chairs of dark oak and a rich, full-toned organ, the gift of Love, through a friend of the cause. The platform was banked on this occasion with palms and masses of the wild carrot, making a symphony in color of green and white, emblematic of purity and immortality.

The reading room opens from the church and also has two doors, front and back, opening on to porches. Three windows and the upper half of the doors, all of the white colonial glass, afford ample light, while the soft green walls and carpet unite with the white woodwork in giving a restful, harmonious effect that impresses the visitor at once. The room is commodious and is well supplied with Christian Science literature for all who come seeking the Truth.

Those who saw this structure two months ago, when it was an unused, neglected building, originally built for the Cranford Town Hall, know what a demonstration has been made. At that time, realizing the necessity of enlarging our borders, a meeting of the church members was called, and with the ready and united action that has characterized this church from its organization, this hall was chosen as the most suitable place for a temporary church home. The money necessary for its thorough renovation and furnishing was quickly raised, and negotiations for its possession were immediately begun.

A lease for three years was secured, with option for two more, and work was rapidly and harmoniously carried on until the transformation was completed. All this was done independently of the building fund, which steadily increases through the weekly envelope system, as well as by special contribution. This growth covers a period of less than three years, the church having been organized October 15, 1898, with seven members.

L. D. AUSTIN, *Clerk pro tem.*

A Word of Appreciation.

I just want to say how deeply grateful I am to our Mother for the little book containing her Message to the Mother Church. I find it a beacon light in showing the way, and in making the demonstration over the claims of error for patients. The statements explaining God and man, are so clear and so deep, that each reading brings new thought-treasures to the surface. Each perusal endows good with new beauty and power, while the belief in evil grows more unreal, and my heart is filled with gladness and thankfulness.

LILLIAN P. WEATHERWAX, Rockford, Ill.

Mind, it is our best work that He wants, not the dregs of our exhaustion. I think He must prefer quality to quantity.—MACDONALD.

From our Contributors.

Loving Father.

BY CHARLES H. GLIDDEN.

LOVING Father, Truth triumphant, Counselor and King,
Here we gather to adore Thee, here our hearts we bring.
Bud and blossom bring Thee incense, birds Thy praises swell;
In Thy courts harmonious we would always dwell.

When the way is dreary and the sun has gone,
When the shadows lengthen, and the night comes on;
Oh! Be near us, Father, stilling every fear,
Let Thy Light illumine all our pathway here.

In Thy brooding presence we commune with Thee;
In Thy secret covert Thou hast set us free.
We will do Thy service gladly while 'tis called to-day,
Loving all and loving ever, in the Christ's own way.

"It is more Blessed to Give than to Receive."

CHRISTIAN SCIENTISTS are glad that their efforts at honest Christian living are bearing such fruits as, in comparison with other good people, enable a Christian minister to give the following unqualified words of commendation: "I have studied Christian Scientists for years, and I never found such a uniformly good people in my travels. They are purely Christ-like. They are all willing to endure stripes, to go naked and hungry, if by any means they may save some."

Christian Scientists may indeed justly rejoice because of the frequent praises of their lives and works from the best men and women in the world. But as a sincere student of Christian Science, I want to say to all other honest students, we have yet no cause to be proud. Our Christian demonstration falls so far short of our profession. We may be measurably gratified, quite unconsciously resting in our successes and honest worldly approval, but we should be watchful not to be *satisfied* with anything less than the Psalmist reached out for,—to "awake in His likeness."

How much of actual God-likeness do we now consciously possess and reflect? From my own knowledge and experience, as compared with our Teacher's and Leader's exemplification of the Christian ideal, we have hardly touched the foot of the cross. If the honest world but knew of our dear Leader's persistent efforts to lift her students and hold them to the Christ-standard, it would have little praise for us, and much for her to whom it rightfully belongs. Doubtless the Mother is glad that her children, in comparison with other children, are favorably spoken of; but I feel that the time has come for us to evidence to the world what is more praiseworthy than anything the world has yet seen in Christian Scientists; namely, proof of their true filial integrity. We know how much more everybody would be blessed by our devout Leader's consecrated life, if they could but know her as we know her, in every-day living. Aside from her own writings, how shall the world learn of our Mother, except through her numerous children? As one of her students, the very least of her children, I am sorry to have to say to my fellow-students, that the world is much the loser for judging of Christian Science from its students, instead of from the life of its Discoverer and Founder.

Dear fellow-workers, this loss to the world, at this time, is blood that shall surely be upon our heads, for we know the truth and have not told it. That is, in our selfishness, we have hardly in the past pointed the world to Mother's untiring efforts to make us what we are, and much more, if we had only received as honestly as she has given.

Let us reflect a moment. About fifteen years ago, how did the blessing of healing and the beginning of regeneration in Christian Science come to us? Was it not the direct and true knowledge of our Teacher, her good works, and her writings, which reached us? Now, God, for many years, has called her to work personally apart from the world. The world can no longer meet her and learn of her as we older students have received of her and were blessed. What, then, is our duty, if we would be faithful in doing unto others as we have been done by? Is it not to bear witness to such a life, and in every way to lead or direct others always to her works,—as we were brought to them and as we now understand them even in the true light of her life? But we should not, in our selfishness, be satisfied, or allow the people, by our present feeble demonstrations of Christian attainments, to be deprived of the blessings we have received.

We should justly appreciate the world's acknowledgment of the good it sees in us. If in our infancy, through the teachings of Christian Science, we are enabled to be examples for other professing Christians, what good may we not do as we become men and women in this Science? Our motto is: practice, not profession,—even as Science always demands proof. As students of Christian Science we have to be honest and just beyond what the world knows or sees.

The world calls us "Christian Scientists," but I question our right, even in a small degree, to that holy name. "Science and Health with Key to the Scriptures," our textbook, tells us: "We are Christian Scientists, only as we quit our reliance upon material things, and grasp the spiritual. We are not Christian Scientists until we leave all for Christ" (p. 85). Relatively speaking, in the light of this standard, I know to-day of but one Christian Scientist. The world would make us think otherwise, and from the official census reports, we should believe that there were a million or more Christian Scientists. Without doubt, there are millions of students or believers in Christian Science, and this we may honestly claim; but I know of but one who constantly "leaves all for Christ."

Our Teacher once gave a student a lesson which I shall never forget. She said to this student: "Remember, you are no more than you *do*, and not what you merely profess or others may think of you!"

The good people everywhere must admire and praise good children; but no one would call a child a *man* or a *woman*. Nor can a child become a man or a woman without first being an honest and true child. What would be thought of the child claiming full manhood or womanhood, or even claiming to approximate these virtues, while never having honored his mother or even acknowledged her? Is there a surer sign of a noble child than that its first consideration is always of its father and mother? Jesus' last care was for his mother. What great *man* or *woman* is not first solicitous for his or her mother? We may with propriety be called promising *babes* in Christian Science; but the older children must watch lest they be flattered into believing that they are men and women before they have learned to honor Mother.

If the world calls us Christian Scientists, let us be honest henceforth, and humbly acknowledge our unworthiness of the name, till we know our Mother. By so doing, we shall be the more respected as true children; others will see our Leader as we see her, and will know of her great and good works from honest lips, and so be led to seek and find her writings; and they will be blessed as we have been blessed, and all will see in her a Christian Scientist indeed, whom we are worthily striving to emulate. We shall do more good as honest children who prove to the world that we love, honor, and protect Mother, than we can possibly do by claiming or allowing that we are already as wise as Mother, or wiser.

It is painful to see the self-conceit, blindness, or dis-

Digitized by Google

honesty in some students who try to answer important questions in Christian Science in a way that would make it appear that their answers are original; whereas they are but talking or writing from memory what they have received from their Teacher's lips or her writings. How much better for themselves and for those whom they would enlighten, if, in certain instances, students would refer seekers to our Leader's writings, and in their own writings they would quote from her books honestly! Thus they would show these points already authoritatively dealt with, and questions more correctly answered, than with their own lack of understanding, they could themselves gather from her writings. Again, when our writings appear with borrowed quotations, but, without quotations-marks, are we keeping the "Golden Rule"?

Brethren, let us turn about,—start anew, and be so honest that even unconsciously we cannot be made to swerve from rectitude. Let us honor God, bless the world, and give to our beloved Leader her just dues. Thus we shall be obeying our great Master in rendering "unto Cæsar the things that are Cæsar's, and unto God the things that are God's." Then we shall also realize the truth of the Scripture: "It is more blessed to give than to receive." Is it more blessed "to give" to our beloved Leader what we *know* is her due in God's sight, than "to receive" from the world, short-lived credit for what God knows is not honestly ours?

From a sincere student,

JUSTITIA.

From Darkness into Light.

BY EMILE E. CHARPIOT.

SICKNESS brought me to Christian Science, and healing led me to accept this Science for my religion. And now, after eight years of experience, I can truly say that I have found Christian Science to be a religion that satisfies and saves; a religion that heals not only physically, but morally and spiritually; a religion that does not promise happiness only in the future, but gives it right here, in this present life, where it has been thought it could not be found.

Again and again I have witnessed the most convincing proofs of the divine influence and power of Christian Science, and I believe in this Science because, after having seen what I have seen, I cannot believe in anything else. After a life of twenty years of sickness and misery, of infidelity and atheism, Christian Science has brought me into a new life of perfect health and happiness, and above all, has given me a God whom I can worship with a heart full of love and gratitude.

Concerning sickness, my story would be a long one if told in detail, but briefly stated, it was pain and suffering one day, suffering and pain the next day, and doctors and drugs all the time and for all kinds of troubles, chief among them being dyspepsia, which tormented me for nearly twenty years. Without God and without hope of any help from above, the doctors were my only possible saviours, but they were saviours that could not save. I was treated by many of them, and to give an idea of the quantities of medicines I took during those many years would be an impossible task.

In June, 1893, a friend told me such wonderful things about Christian Science, that I decided to try this Science even if, at first, the idea seemed absurd and ridiculous. Before going to see the Scientist, I had taken a large dose of medicine, but, thank God, it was the last dose, and since that day, or for more than eight years, I have not taken a particle of medicine of any kind, and have not ceased to enjoy perfect health. I have enjoyed more real happiness during these eight years than during all the years of my life previous to my conversion to Christian Science.

In the old condition there were many things I could not eat. I had to consult my stomach, to learn what it would be pleased to accept, but now I give it what I please and it never says a word. I eat anything that is set before me; I ask no question, I take no thought, and nothing hurts me.

I am very thankful for the physical healing, but words cannot express my gratitude for the moral and spiritual healing found in Christian Science. A purer heart, a clearer mind, a greater desire to do good and to love God and my neighbor, have made of me a better man, and I owe all this to Christian Science. I know that nothing else could have done for me what Christian Science has done, for it was impossible for me to believe any longer in the God of the world.

I was raised in the Lutheran faith, and in youth believed implicitly every teaching of my church, but when I was able to do my own thinking, blind faith would no longer satisfy. Many questions, many doubts, came to my mind, and I wanted to know the Truth. I began a study of the Bible with a desire to learn what the book really taught about God and about man and his destiny. But my study without the light of spiritual understanding, failed to remove the darkness of error and to reveal what I was seeking. I found many beautiful things, many precious gems in the grand old book, but also so many contradictions, and so many things so hard to understand and to believe, that I concluded the Bible had not been written for me, and I would give it up.

At this time of struggle with darkness and doubt, a friend who was an atheist asked me if I had ever read the lectures of Ingersoll. My answer was no; and a few hours thereafter this friend brought me his lectures. I read them, and in a short time I was as rank an infidel as Ingersoll himself; and for twenty years I was without God and without hope in this world.

But, thanks to Christian Science, the book I had rejected has become a most precious volume. The light thrown upon its pages by our text-book, "Science and Health with Key to the Scriptures," has illumined these pages with a new meaning which has removed my former difficulties and has solved satisfactorily the great problem about God and about man and his destiny.

When the text-book was placed in my hands by my healer, I studied it with the deepest interest; and I must say that its beautiful teachings impressed me most deeply. Its teachings brought my reconciliation with God by revealing to me the God of the Bible as a God of Love, divine, infinite Love; and giving me a religion founded on Love and having Truth for its corner-stone.

Christian Science is indeed the pearl of great price, and the more I study it, the more I love it, and the more it makes me love my Bible as a most precious friend. Words cannot say how glad and how thankful I am that in a moment of despair I knocked at the door of Christian Science. The door was opened, and with greatest kindness and love, the way to salvation was pointed out to me.

Truth Explains Itself.

BY HANSON W. WHEELER.

WE are often met with the statement that if Christian Science is the Truth we should be able so to explain it as to be understood by those who maintain that they cannot see it as we do. Such friends overlook the one cardinal fact primal to an understanding or unfolding of any thought presented, and that is that the real explanation is not with the one who gives the thought, but is absolutely with the one who receives it. A seed is planted, but nothing that the planter can do can possibly cause that seed to grow; that process lies within the seed.

If, instead of trying to convince our friends, we would recognize this principle of action and leave it for them to ask and receive when they are willing to do so, we would share a blessing with them.

Testimonies.

Healed by Reading Science and Health.

When Christian Science was first brought to my notice I was suffering from troubles caused by childbirth, and the doctor told me I must go to the hospital or I would never see another well day. The thought of going to a hospital was terrible to me, and I thought I would certainly go crazy if I had to go.

About two weeks later a friend asked me why I did not try Christian Science. I had never heard of it before, but said I was willing to try anything that would save me from an operation. She was not a Scientist, but said the lady that lived in the house with her was, and had been healed by Christian Science of nervous prostration, and I could see her and talk with her, and she would let me have some papers to read.

I was somewhat acquainted with Mrs. S. I saw her and she told me I could be healed. She said she had Science and Health, and that I could take it to read during the evening, and she would have it during the day. As I read page after page, I felt as though it was all true, and that if I could only read the book, I would be healed without treatment, and I was. I had only read fifty pages when I realized I did not need to wear glasses. I had been a slave to them for fourteen years, and had suffered much with my eyes. I have not felt the need of the glasses since I put them away.

As I read "Science and Health with Key to the Scriptures" I felt better every day, and I knew the healing was going on. I could walk without pain, and could even run upstairs. I felt a new life and the world looked bright. I was glad I was living, and I felt as though I must fly instead of walk. As I continued my reading my troubles left me one by one. Little errors I was not thinking about, as larger ones occupied my thoughts.

When I finished the book I felt I could truly say "I am well," but the physical healing seemed small compared to the spiritual uplifting. The fears I had concerning my child, the fear of the diseases supposed to be a necessary part of a child's life, all left me. I knew they were not necessary, and as my fears left me his health began to improve. To-day he is a well, strong boy twenty-two months old. He eats anything, and lives out of doors. I have no fear for him, he is God's child, and God gives him perfect health.

I have Science and Health. It seems a new book to me every time I read it through, and I understand it better. There is much to learn, and one can never study it enough. It makes the Bible seem a new book. With the little understanding I have, I have been able to help others.

While living in Westbrook, I attended a number of Wednesday evening and Sunday meetings at the First Church of Christ, Scientist, at Portland, and they were a great help to me.

There are only three of us here, my mother, a friend, and myself, but the Truth is here, and I know it will do its work in time. If God is for us, who or what can be against us?

MRS. W. A. MAXFIELD, Bucksport, Me.

Truth Makes all Things New.

I was led to Christian Science two years ago through the healing of my little girl. A lady came to see me, and during her visit explained Christian Science a little to me, and told me it was not right that my little girl should suffer. She also gave me a *Journal* to read.

I was then living without God, and all was error and discord. After I had read the *Journal* I could see my error, and was determined to live a better life. In consequence of my better understanding of God how different it is now!

My little girl had rickets, her little arms and legs being all crooked. I had had two doctors for her, and both of them said she would never walk, and that she would never cut her teeth. But after the lady began to give her Christian Science treatment, I could see a difference in the child every day, and very soon she could run about and had also cut her teeth.

I am thankful to say that so far as I have demonstrated Truth it has made all things new for me.

I would like to give two of my joyous proofs that Life is not in matter, which I have been able to demonstrate through my understanding of Christian Science.

My little girl a year and a half old, fell on the stones and knocked one of her front teeth loose. My neighbor brought her in to me screaming. I took her on my lap and repeated the Scientific Statement of Being over and over again, and said to her: "God is Love,—God will make Cissy better." She stopped crying, and looked up to me and smiled. The accident happened in the morning, and by teatime she could eat bread and butter, and the tooth was not a bit loose.

I was very happy; it was a lovely demonstration, and I am grateful to God for Christian Science. I cannot express my thankfulness. I find Christian Science a comfort and guide; it has taught me to overcome error by the power of Truth. It has given me a new life altogether.

On the eighth of last December I gave birth to a son, relying entirely upon my own understanding of Christian Science. Slight pains commenced at twelve o'clock at night, but I was able to stop them at once, and at two o'clock in the morning baby was born without one pain. My nurse told me to be very careful, as I should be sure to have very bad after-pains, but I did not have one. I can truly say, God is my Helper, and I am sure I have a life-long gratitude to Christian Science.

The Bible is much plainer to me since I have studied "Science and Health with Key to the Scriptures." I know that divine Love is all in all. I am sure it is my duty to spread Christian Science whenever I have the chance.

ELIZABETH TILL, Somerset, Eng.

Learning to Trust God.

After a year and a half of help and comfort from *The Christian Science Journal* and *Sentinel*, I feel that I owe them a written acknowledgment. I find these periodicals a continual feast of good things.

For many years I have been an earnest seeker for a religion that would enable me to trust in God. Having been tormented all my life with fears of all kinds, I thought if I could only trust in God, my sufferings would be over. For fifteen years I hoped I had found in the New Church (Swedenborgian) the religion that would give me that trust. But at last I was convinced it was not there. So I tried a mixture of the teachings of Swedenborg and mental science. It is needless to say I did not find what I sought. My fears increased, accompanied by the physical manifestation of acute nervousness and sick headaches.

There Christian Science found me two years ago, and a most fractious patient I was. I had been fooled so many times by fair sounding phrases that I did not believe what the Scientist told me. I read "Science and Health with Key to the Scriptures," but at first I received very little comfort from that, for I did not believe it was true. After several weeks of treatment the healer made what seemed to me a very unreasonable request, namely, that I read for a while nothing but Christian Science literature and the Bible, not to discuss Christian Science with my friends, and to pray earnestly for the Truth to be revealed to me.

My obedience saved me, for I obeyed each request, and my sufferings of mind and body rapidly disappeared. I am now rejoicing in over a year of such trust in God as I never expected to know on earth.

Science and Health grows more precious each day. My gratitude to our beloved Mother keeps pace with my appreciation of her gift to us.

MARY R. NOYES, Chicago, Ill.

Religious Items.

One of the recent finds made by archæologists is that of an edifice adjoining the Roman Forum at the base of the Palatine Hill, which was turned into a Christian church probably at the end of the fifth or beginning of the sixth century. The ruins have something more than this mere fact of their antiquity to arouse interest. Writing in *Biblia* (August), Professor T. M. Lindsay says:—

"The peculiar interest of this old church—Old St. Mary's it was called—consists, in my opinion, in the fact that the Christians of Rome in the end of the fifth century were able to secure *this* particular building for their public worship. This leads us to ask what the ancient edifice was, and why it was such a triumph for Christianity to secure it for a place of worship.

"The answer, briefly, is that the ancient pagan building, which, as the excavations reveal, was used as a Christian church from the end of the fifth on to the eighth century at least, was originally the cradle of that peculiar Roman state cult which deified the ruler of the empire, and which demanded that every subject in the vast realm should worship him. To refuse was treason. Every collection of *Acta Martyrum* shows us that the last test of loyalty imposed on Christians when brought before Roman magistrates, was that they should sacrifice to the *Divus*, or to the living emperor. Refusal meant imprisonment, torture, death in the amphitheatre or by the executioner. The central shrine for this pagan state cult in Asia was Pergamos, and we have evidence of the abhorrence and dread with which this worship inspired all Christians when the author of the Apocalypse describes the city as that 'where Satan's seat is.' If Pergamos was so regarded, we can imagine the triumph of Roman Christians when they were at length able to take possession of what may be called the very cradle of the offensive cult."—*The Literary Digest.*

On the subject of prayer *The Christian Register* says:—

"Most respectable people, I suppose, teach their children to say their prayers. They maintain the custom of coming, at least occasionally, to public worship. And yet the modern mind is full of uncertainty with regard to the meaning of prayer and worship. We are all quite sure that a cloud of pure superstition covers one side of the subject. No one, for example, doubts that the praying machines which people use in some parts of the East are a relic of superstition. How many people in our own country really believe that in the recent drought in Kansas it was by real and direct answer to prayer that rain fell in certain counties only, while over the line equally devout worshipers prayed in vain?

"On the other hand, we have the strongest impression that the reality of prayer in some true sense must be involved in the reality of God and religion. As sure as God is, as sure as goodness is at the heart of the universe, there must be some valid intercourse or communion between God and the hearts of men. If there is no God whom we can approach in prayer, if there is no intercourse between the infinite Spirit and our spirits, then all religion is vain, and all meeting in churches would be a mockery."

John B. Gough, the late great temperance orator, during a service of song in a Christian church, was asked by a man in the pew with him what was to be sung, as the announcement had not been heard. The questioner was most repulsive in appearance because of a nervous disease that disfigured his face and form. When the singing began, Gough was driven almost to a frenzy by the harsh and discordant tones of the singer by his side. But when the wretched creature sang,—

Just as I am, poor, wretched, blind,
O, Lamb of God, I come, I come,

he lifted his sightless eyes to heaven and sang with his soul. The great orator in his impassioned and inimitable way said: "I have heard the finest strains of orchestra, choir, and soloist this world can produce, but I never heard music until I heard that blind man sing,—

O, Lamb of God, I come, I come.

The Standard.

Quite appropriately with the appearance of the new American Revision this week, a copy of what is said to be the oldest Bible in the United States has come into public notice. It is owned by Rev. John Herr, of Lima, Ill., in whose family it has remained for twelve generations. It must have considerable value, since there are but three copies in existence of the original edition of fifty. The Denver (Col.) *Republican* describes the volume as a fine example of mediæval printing, and says that the original binding of beechwood covered with stamped Russia leather is yet almost intact. The Bible was printed in 1553 at Zurich by two apostate Carthusian monks who were burned at the stake, three years later, for printing in German when Latin only was permitted to be used in religious books. It contains a picture of the last judgment, and wood-engravings with hand-painting.—*The Literary Digest.*

In the Church the reformer often rises up from inferior station, and thus seems to be arrayed against the powers that be. The latter are then diverted from attention to the substance of the reformer's assertion or message, according to whether he be one sent or self-constituted. Considering him as a rebel, the first duty is to suppress him, or, failing in this, to undermine his influence.

When the reformer occupies the highest station he is in danger of being charged with grasping after new powers; his zeal, confused with tyranny, is mistaken for self-will, his declarations of what should be, of what shall be, and of what must be, for arrogant assumptions.

The Christian Advocate.

One of the divinest things about the Bible is that it never declares revelation to be finished. It is a portico that has never been walled up at the end that looks toward the future. The Old Testament looked forward to the salvation of the Messiah. John the Baptist pointed to one greater than he, that would follow him. Jesus promised the Comforter, who would complete what he had to leave unfinished. The Apostles looked for the return of Christ. There is always more to follow. It is "grace for grace," and "from glory to glory," and the last word of God is never said.

Sunday School Times.

The Truth Seeker thinks there is no room for greatness in a theological seminary, because such schools take good care that no ministerial student shall use his own brains. This is an exaggerated statement of a patent fact, yet it is too generally true that theology is made to order, ready hashed and dry, in the theological schools, so that there is no need for students to think much. Our theological graduates, in the main, are slow and shallow thinkers.

The American Baptist Flag.

In old New England days the evening meetings of the church were often held "at early candlelight." The people came to the place of meeting in the last twilight glimmer, each with a candle, which he lighted as he took his seat. According to the number of the people was the illumination of the room, for every comer added his own share of light. So ought it to be in the illumination of the world, which Christ made the special office of his church. According to the number of disciples should be the shining of the light of life.

The Congregationalist and Christian World.

The third Methodist ecumenical conference will meet in London September 4. These conferences are held once in ten years and representatives from all parts of the world assemble to discuss questions of importance to the denomination. In 1891 the conference met at Washington, D.C. The total membership of the Methodist churches in the world is 7,402,913. Of these 6,201,250 belong to the American churches. The value of the church property in the United States is twenty-two million dollars.

Count Tolstoy has recently said: "Jesus and Lao Tse have been greatly misunderstood and misrepresented. Jesus meant plainly what he said in the Sermon on the Mount, 'I say unto you that ye resist not evil;' and it is because the world does not believe Jesus that it is filled to-day with war and the clash of contending interests." The Countess Tolstoy is much more conservative than her distinguished husband.

The question of pulpit speech or silence on a given theme depends so much on who is in the pulpit. No man should speak on disputed points who has not first earned the right to speak—a right centred in the trust and esteem of his hearers and gained as the wage of character and service.

J. BRIERLY, in *London Christian World.*

This universe is God's kingdom. He is its one centre. His law is the one force that rules everywhere. All his creatures are the subjects of his kingdom and under its government. So justice for one is justice for all; truth for one is truth for all.

DR. F. E. MARSTEN.

Life, true life, is not mere guarding against sin, but growth in good and toward good.—BROOKE HERFORD.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa.*

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9 00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebb'ed cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

In round numbers the population of the United States as found by the census made last year was 76,000,000. According to the advance copies of the annual report of the commissioner of pensions the list of pensioners has almost reached a round million. The expense of meeting the requirements of the general and special legislation for pensions was, in the year ending June 30, about $138,500,000, exclusive of the outlay for administration and for medical examinations. Thus the millions paid to pensioners in 1900-1901, if paid per capita, would make it necessary for each man, woman, and child to hand over to the collector of taxes something like $1.80 each year.

A movement which is popular in certain parts of the West favors an appropriation by the national government for the construction of irrigation reservoirs for the reclamation of arid lands. It is claimed that one acre of land of the kind that would be made available in this manner will be far more productive than four acres under ordinary conditions. More crops can be raised with practically an assurance against failures. Owing to the productive power of irrigated lands a homestead could be reduced to forty acres.

It is proposed to instruct the delegates of the United States to the Pan-American Congress, which will soon assemble in the City of Mexico, to submit a plan for the establishment of an International Court of Claims. It is thought that the establishment of such a court will pave the way for the ultimate adoption of a general scheme of arbitration between the governments of this hemisphere.

Information has been received from Washington that all the members of President McKinley's cabinet will retain their places under Roosevelt. Mr. Hay will remain as Secretary of State until after the Hay-Pauncefote treaty is concluded, when he will probably be succeeded by Mr. Root.

The sessions of the Schley court of inquiry were resumed September 20. It is thought the trial will be concluded within a month or six weeks. Rear Admiral Francis J. Higginson, who as captain commanded the Massachusetts during the Spanish war, was the first witness called.

The census bulletin on vital statistics containing the preliminary statistics of deaths in the States and territories and the principal registration cities shows that the death rate has decreased by nearly ten per cent.

The new Philippine tariff, as approved by the War Department, was enacted into law September 17, to take effect November 15.

Foreign.

The new Hungarian system of telegraphy has proved a marvelous success. The system has been installed between Budapest and Fiume, a distance of three hundred and seventy-five miles, and is in practical working order, at a speed of forty thousand words an hour. The system is an ingenious combination of the telegraph, the telephone, and photography, the messages being written on sensitized paper by ray light, and developed and fixed by an automatic process.

Great Britain proposes to establish a federal city in Australia which will be modeled after the city of Washington. To this end the District Commissioners have received an official communication from the representative of the British government in this country asking for details of the plan and government of the city of Washington.

A new type printing telegraph system has been introduced between Paris and Berlin which promises to revolutionize the telegraph business between those cities. It has been demonstrated that by means of the new system one line will be sufficient for all the telegraphing between the two cities, which has heretofore required five lines.

A delegation of twelve prominent labor men of Great Britain, who were elected by popular vote in which all classes of wage earners participated, visited the Buffalo Exposition for the purpose of studying American methods. The trip was made under the auspices of the Red Letter, a leading labor paper of England.

The improvements now being made in Buckingham Palace under the direction of King Edward will include the addition of three American automatic electric elevators, which are to be constructed at a factory near New York.

The Duke and Duchess of Cornwall and York arrived at Quebec on the Royal yacht Ophir, September 16. They were received by the people of the Dominion of Canada with a great demonstration of loyalty and enthusiasm.

Governor Ross of Yukon will recommend to the Dominion Government that the royalty on gold taken from the Canadian mines be abolished, and an export duty placed upon it, the same to be collected at the boundary line.

The French sugar bounties have occasioned a loss of $2,800,000 to the Government. The minister of finance has ordered that they be reduced fifty-five per cent in order to cover the deficit.

The empress dowager of China has issued an edict ordering the institution of a system of general education by means of primary schools, common schools, and colleges in every province.

The evacuation of Pekin took place September 17 and the Americans and Japanese simultaneously handed over the forbidden city to the Chinese authorities.

The New Zealand government has appointed a trade commissioner to travel throughout the world in search of new markets for New Zealand products.

Andrew Carnegie has given £10,000 to build a town hall at Motherwell, Lanarkshire, Scotland.

Industrial and Commercial.

The asbestos mines of the Province of Quebec supply nine-tenths of the asbestos produced in the world. The mines were discovered in 1878. In 1888 the output amounted to less than four thousand tons, while last year's production aggregated seventeen thousand tons. Some eight hundred miners are employed. Asbestos has also been discovered in Russia, Sweden, Corsica, South America, and lately in Siberia, but the Canadian asbestos is said to be the best of all. Large quantities are now used for the manufacture of fire-proof paper.

The Colorado Fuel and Iron Company is the greatest industry west of the Mississippi. The company has a capital of forty million dollars and employs fifteen thousand men. The income of the company last year was thirteen million dollars, and the expenditures over ten million. The monthly payroll is upwards of $500,000. Last year the company marketed over four million tons of coal and 728,000 tons of steel, and orders for 250,000 tons more were refused.

The White Star liner Celtic, which recently made her maiden voyage from Liverpool to New York, is the biggest ship in the world. Her length is seven hundred feet, breadth, seventy-five feet; depth, forty-nine feet. She has nine decks. Her displacement at load draft is 37,700 tons, nearly double that of the Kaiser Wilhelm der Grosse, and 10,300 tons more than the Great Eastern.

The Interstate Commerce Commission's statistics show that the railroad companies of the United States now operate 192,556 miles of road, use 37,663 locomotives and 1,365,531 freight cars, employ 1,017,653 persons, and have an annual net income of $688,500,000.

General.

A Chicago syndicate has secured from the Government of Honduras a grant of sixty-four thousand acres of land on condition of settling it with Americans. The company has made arrangements to send Indiana, Illinois, and Ohio farmers who want to go to Central America and raise bananas and other tropical products.

It is reported in Glasgow that Mr. Ellerman, of the Leyland Line, has bought for J. Pierpont Morgan and his associates the old City Line of fourteen steamers engaged in the East Indian trade, for about $5,000,000. If these be added to the Leyland Line's property, that line's fleet will consist of 74 vessels, having a tonnage of 301,000.

By means of a co-operative scheme nearly two million Londoners will be given an opportunity to enjoy a daily dinner at a cost of four cents. "The Agricultural Organizing agency (Limited)" has built a complete steam bakery and kitchen, covering more than an acre of ground. Meats, cereals, vegetables, and dried fruits will be served.

One of the curiosities of the Bank of England is to be seen in the printing room. A man sits at the desk and every three seconds a machine delivers to him two complete £5 notes. If he sits there six hours he receives over $350,000 and in three hundred days over $300,000,000.

The city of Washington now has eighty thousand trees within its limits, and the work of planting is going on in a systematic manner. Washington bids fair to equal the record of Paris which spends sixty thousand dollars a year in caring for and planting shade trees.

Queretaro, Mexico, is a place of interest to all American tourists. It was there that the Mexican congress ratified the treaty with the United States in 1848 by which all the territory east and north of the Rio Grande was ceded to the United States.

It is said that so great is the demand for canned salmon in the United States that no shipments will be made of this season's pack from the Puget Sound to England. The English market practically will be left to the canners of British Columbia.

It has been decided that the first of the America cup races will be sailed September 26. The succeeding races will be sailed September 28, October 1, 3, and 5.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Wednesday Evening Meeting at Cleveland, Ohio.

At the regular Wednesday evening meeting of First Church of Christ, Scientist, Cleveland, O., June 26, the following testimonials were given. The first speaker said:—

"During the past few weeks it has been my great privilege to visit a number of the Christian Science fields. I must speak first of a little one in Elmira, New York. I found quite a little band,—scarcely a handful, who were earnestly working in Christian Science. They had recently opened a small church in a hall, and were gradually gaining. Their earnestness, love, and loyalty to the Cause would certainly be a lesson and inspiration to any who should see them.

"I also attended the church in Cambridge, Mass., where I found a very goodly number of earnest Christian Scientists. Their testimonial meeting on Wednesday evening was very good indeed. There were testimonies from many different places.

"And the Mother Church,—of course you all know, or most of you, what that is, what a privilege it is to be there. The testimonial meeting I attended was two weeks ago to-night. Six different states were represented that night in testimonies. One especially interested me.

"A lady spoke of two different physicians, quite prominent, who had been driven to Christian Science. One had been suffering from the grip, and had grown worse and worse until his condition became such that he knew *materia medica* could do nothing for him. He was very despondent, and felt that neither he nor any other doctor could heal him. He was about ready to give up all hope, when he passed the doors of a Christian Science church. For some reason he went in, he did not know why himself. He was very much interested, and felt uplifted by the meeting. It led him to turn to Christian Science, and he was healed.

"Many interesting testimonies were given that night from all over the country. It was certainly an inspiration to be there and hear them and feel what a great work Christian Science is doing all over this world."

A lady thus related the healing of her little boy:—

"I wish to express my gratitude to-night for a demonstration this past week, and I want to read you two lines of the hymn we just sang:—

Within Thy Love is safe abiding
From every thought that giveth fear.

"Sunday afternoon we had been invited out. One of my little boys had gone by himself to visit his little cousin, and was not with us. When we returned, we found him sick in bed, apparently with a very high fever. I read these two lines, because in the old thought anything of that sort seemed to fill me with fear. There seems to be something so much alive in the fever of a little child. I felt in this case not the slightest fear, for I knew I had a remedy at hand. The case was very aggravated, and all that night the little boy was out of his head; but not for an instant did I fear, for I knew that God was the only Presence, and that He would answer prayer if I had faith. The next morning he was well enough to get up, and he stayed up nearly all day. But Monday evening he seemed to have a relapse. I still continued to treat him, and knew that our prayer would be answered. Tuesday morning he came to my room and called out, 'Mamma, I feel perfectly well.' These things make us very grateful for Christian Science."

The next speaker told of the healing of a young man of lung trouble, as follows:—

"A few months ago a young man came to this city who had lung trouble. He came expecting to take a position in a manufactory, but when he got here he was too weak to work. He had had one hemorrhage and coughed almost incessantly. His appetite was gone, and he could not sleep. The fear was very great, and he was evidently going down about as fast as he could. He came to Christian Science for help and was perfectly healed. When he came here, he had been working in a laboratory, but had been obliged to leave on account of the chemicals irritating his lungs. He was able to go back to the laboratory, but before he did that he did some outside work. He would go all day with wet feet, and suffered no inconvenience from it at all; and he not only worked, but part of his work was at night. And he did with very few hours' sleep, and worked, I think, sometimes as much as fifteen hours of the twenty-four."

A lady spoke as follows:—

"Yesterday morning during the forenoon I had some ironing to do and a good deal of it that I was anxious to finish. The heat was very oppressive, and when I was about half through I thought for a moment I would have to give up. The close air was affecting me so much that I was becoming dizzy. I desired to do a certain amount of the work before getting dinner. I reasoned that if God was our strength, as we are taught in Christian Science, He would give me the strength to do the work if it were the proper thing for me to do, and I felt that it was. In a short time all feeling of being overpowered by the heat was gone. My eyesight became clear, and I finished the work with very little inconvenience from the heat."

A gentleman said:—

"St. Paul said in the twelfth chapter of Romans, 'I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service.'

"When we as Christian Scientists, begin to imbibe the spirit of the words, that is, to get the spiritual understanding, we have a desire to give our lives a willing sacrifice unto God, to work for our fellow-men, and assist in bringing about the Kingdom of Heaven on earth.

"Paul says in the second verse, 'And be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God.' So as we go on working in Christian Science, we are gradually transformed. Christian Science teaches us how to think good, wholesome thoughts, and this constantly transforms us. We are constantly putting off the old man, as Paul says, and putting on the new, the spiritual life, the Truth which makes us every whit whole."

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

A lady spoke as follows concerning the spiritual benefits received in Christian Science:—

"It is a great comfort to us in Christian Science to feel that we have a God who is always near. We do not have to cut ourselves, as the prophets of Baal did, to call down our God to help us. We do not have to continue calling upon Him as if He were in a far country; but He is close at hand, ready to meet every human need, whether sickness or sin or sorrow or fear,—error of any kind.

"I was very joyfully reminded of this the past week in being able to destroy, through the Christ who strengtheneth us all, the fear of appendicitis. The fear seemed to be very intense, so great that when I received the telephone message, the sense of fear for a moment almost overcame me. But God was present, and in a few hours the trouble was overcome.

"While we are so grateful for what is called the physical healing, so grateful to be able to help others as well as ourselves, we are always more grateful to hear of the change that comes in the turning of the thought toward the desire for the good. A young woman who came to Science for help a short time ago for nervous prostration, said after she had been lifted out of the physical suffering, 'I feel that while I am grateful for that, I am still more grateful for Science and Health. As I was about to go away for a vacation, I told my mother I thought I would not take the light novels that I had been in the habit of filling my trunk with, but would take books of deeper interest that really meant something, as well as my Science and Health. God is beginning to be near to me, and I feel that there is something beside a mere passing amusement.' "

A gentleman related the following incident:—

"In the affairs of men, there are times when they seek to change and wish to go in another direction. Sometimes it is adopting a different plan from that which they have heretofore used in business. This change we look upon as a transition state, when it is turning from one to the other. It is so with me in taking up Christian Science. I feel now as though I were in the transition state. I feel as though I should walk direct according to the law of God without wavering or without fear, in that narrow path, the road that leads to everlasting life.

"And so in relation to that and in connection with this, I wish to relate a little circumstance that took place last week while coming from Wheeling to Cleveland. As I got on the cars in the morning at Wheeling, four ladies got on, going to Mount Clemens. They were all going for the benefit of their health, two being invalids, one of them apparently very ill. As the cars moved out from Wheeling this lady became a good deal distressed apparently. I sat in the seat back of them. As they seemed to be at a loss to know what to do for her, I felt as though it was my duty as well as privilege to offer assistance. I asked if I could be of any service to them, and they said they thought not. I said that probably I could be of service in destroying the pain. I said I was not a physician, but I believed in metaphysics, and was trying to carry it out. If in that way I could be of any service, I would be very glad indeed to do so. They said they thought that I could not be of any service.

"Soon two of them moved to the opposite side of the car and sat with their seats turned over the other way. To make myself plain in regard to it, and not have them feel as though I had trespassed on their rights, I stepped over and apologized for having offered my assistance. One of the ladies remarked that there were a good many people who were disturbing the world in this way and putting themselves forward. I told them that was not my object at all, and said, 'I am a professed Christian Scientist and feel as though whenever I can lift up humanity and destroy error in any form, it is my duty to do it.' At learning that I was a Christian Scientist, they seemed quite interested. One said, 'I do not know anything about it, but I have heard a little. I wish you would sit down in this seat and tell me something about it.' I said that I would be very glad to give them what light I could. Then in a few words I told them something of what it is. They became very much interested. I had Science and Health with me. One of the ladies said, 'Where can I get that book?' I told her that as they were to stop at Detroit, they could probably get it at the Christian Science Reading Rooms there. She said, 'I must have it.'

"As I talked with them they became so much interested that one of the sufferers was able to lie down in the seat. The other, who was suffering great pain in her arm, came and listened to our conversation. When I got up to leave, I shook hands with them and bade them good-bye, and the lady whose arm had been lame from rheumatism shook hands with me and said the pain had left her arm, and she felt very much lifted up and perfectly free from pain. I enjoyed the conversation very much, and feel as though a seed was sown there which will bring forth fruit."

The next speaker said:—

"Yesterday my little daughter came to me, saying she had a severe headache, accompanied with dizziness and pains in the stomach. We talked about the Truth a few moments, and she seemed to feel better; but a little later the trouble seemed to come up in a much worse form, and she said she would be unable to sit up any longer. She lay down on the sofa and I talked the Truth to her, realizing that she was spiritual, that she was governed by the laws of God, the laws of Spirit, not of matter. In about five minutes she arose and said, 'I feel all right; it has all gone. There is no more headache.' She went to bed last night perfectly free, and there has been no return of the headache.

"This was a trouble that she used to have very frequently, and sometimes it lasted for several days. And so in this way we see that if these troubles do appear, we have a very present help."

A lady said:—

"One of the greatest blessings I have received in a physical way in Christian Science is freedom from sick headache. I was a great slave to it. Every hot day I would have sick headache. If I rode in the cold or did not get my regular sleep, or did not have my meals at just such a time, or ate certain things, I always had a sick headache. At least once in two weeks those attacks came, and I would be confined to bed a few days,—a day or two coming on and going away. Finally there was sick headache most of the time. Now the thought seldom presents itself, and when it does, I am able to destroy it."

A traveling man related the following interesting experience:—

"I am very grateful for what Science has done for me. About two years ago, before I was a Scientist, I had trouble with my eyes. In trying to read or write letters, I found that everything would blur. The printing seemed like Chinese figures, and the trouble grew worse. Finally I got as far as Cincinnati, being a traveling man, and went to consult an oculist. He tested my eyes, and said I would have to wear glasses for the rest of my life, and every two years would have to change the glasses and get stronger ones. I took my glasses, and every day I wore them in writing letters and in reading. After I had been wearing them for about a week, I was in Pittsburg, and there met a friend who was a Christian Scientist. I had known her for a great many years. When she saw me with glasses, she said, 'What does this mean?' I said, 'I had to come to it.' She said, 'You do not have to wear those glasses.' I said, 'I do not want to, for I can't hold them on my nose. Half the time they fall off and are a perfect nuisance in

Digitized by Google

every way.' She said to me, 'Do you want me to treat you for it?' 'Certainly,' I replied.

"That was on Tuesday, and on Wednesday I was in Wheeling, and wore the glasses in reading and writing. On Thursday I wore the glasses. Friday I was in Columbus. I wore the glasses in the morning, reading the papers and attending to business all day. After supper in the evening I went to my room. I had to write a long business letter. I wrote the letter of about ten pages, enclosed it in an envelope, put on a postage stamp, wrote the address, and put up my hand to take off the glasses. I found no glasses there. I had written a ten page letter without glasses, and was not conscious of it. I have not seen the glasses since. I was healed of that trouble in three days. I do not even know what became of the glasses.

"In regard to my family in New York, my father and mother were both invalids. My home was like a private hospital. Within the past year Christian Science has turned my home into a beautiful home of happiness and health. There is not a sign of sickness left in my family, and we owe it all to Christian Science."—E. A. M.

Letter to Editor of "The Outlook."

Chicago, September 2, 1901.

Editor *Christian Science Sentinel,* Boston, Mass.

Dear Brother:—Many of our readers will recall a criticism in *The Outlook,* following the publication of the Mother's message of June last. *The Outlook* published the reply from a member of the Christian Science Publishing Committee.

A friend of mine, who is a member of another church than ours, answered the criticism appearing in *The Outlook.* His letter was written to the editor and not intended for publication, but it is such a beautiful tribute to Christian Science that I have obtained his consent to present it herewith, and I know it will be profitably read by all.

Yours in Truth,
IRA C. HUBBELL.

The following is the letter:—

Kansas City, Mo., July 22, 1901.

My Dear Sir:—Although you do not know me, I have known you for a long time. I have read your sermons and articles for years, and on the first Sunday I spent in New York, some years ago, I went to hear you speak. You have helped me as you have helped many others who want to know the Truth. You have been especially helpful because of a spirit of fairness and tolerance (the real tolerance that Phillips Brooks wrote about), and your evident desire to learn more of the Truth yourself.

The article in *The Outlook* two weeks ago on Christian Science may not have been written by you, but it seems to me to be yours, especially as I recall one or two allusions to the subject heretofore. The writer of that article apparently fears that Christian Science teachings concerning the averred unreality of evil and sin will lead to increased indulgence; and so did our fathers fear the teachings of those who dared to ask whether there were a literal pit with a lake of fire and brimstone.

The pith of this particular question (the spirit of this teaching by Christian Scientists) seems to me so well stated in an editorial of their current weekly (the *Christian Science Sentinel*) that I take the liberty of mailing the paper to you. The article is entitled, "Overcoming, not Overlooking." If one will take the paper as an example at random, and with an open mind read everything in it, he must find food for thought if he has looked upon Christian Science as an illusion that will have its day and disappear.

I am a member of a Congregational Church, and trying to be of some service in it. My wife, once a member with me, has for several years been in one of the two Christian Science Churches here. She is a better wife and mother, a better friend than she was before. This subject has been brought home to me, so that I have watched it as I might not have done otherwise, and it is on this account that I make bold to write you.

At the end of five years I am convinced that the spirit of God is in this movement. At the same time I have not come to their view of the physical universe, although I do believe that if the Gospels are true, as they must be, they teach the healing of *all* our ills through the mind of Christ, —now as well as nineteen hundred, or sixteen hundred, or three thousand years ago. We have not really known God as our refuge and strength, our very present help in trouble. The promises are beginning to break with new light upon me because I am trying to look less at the things that are seen.

Of course, the letter of Christian Science cannot save, any more than the letter of any other church or doctrine. Many who call themselves Christian Scientists have that yet to learn. But I have seen scoffers converted, men of the world cured of drunkenness, profanity, and lust. Women whose lives were shallow and selfish, changed into helpful, hopeful Christians at the same time that they were helped physically by their new teaching.

This movement has been striding where we have crept in the effort to recruit our church forces during the past decade. Why is it? For one, I do not believe it is because they have baited or bribed the multitude. The people are hungry for a more practical, workable religion than has been offered them. This is not saying one needs only to join a Christian Science Church to realize the millennium.

They have much to learn as well as we, and they are very human as yet. But there is a *leaven* working there that we shall some day be compelled to recognize. And we shall do well if we live their covenant—"to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 493).

Perhaps I should apologize for writing you this letter, but, my dear sir and brother, I believe you will accept it in the spirit in which it is written, whether or not you agree with me. You are helping to shape a nation's thought, a Christian nation's. You are a leader, too, among our own church people, and I yearn over our own churches because of the mistake that they sometimes seem to me to be making in their attitude toward this movement. They might at least have more charity—love—toward these others, who also are moved by conscience. We should grant them the liberty that we justly claim for ourselves, and we are not always doing that.

With much respect, I am, sincerely yours,

S. W. RIDER.

A Word for the Journal.

The Christian Science Journal, published at Boston, as the official organ of the religious following whose name it bears, comes out for August full of good things as usual, including a number of articles illustrating the peculiar tenets of this branch of religious thought, both in precept and example. The poetic muse is not forgotten, as will be seen in the following final stanzas of the opening article in this number. It is entitled "Doubts Dispersed," and is by James J. Rome.

Soon the clouds of sense will vanish,
Soon the arid wastes will bloom,
Soon the smiles of heaven will banish
All the shades of mortal gloom,
If we fix our heart's affections
On the perfect love divine,
And through lives of consecration
Let the light of heaven shine.

"Faultless."

Jude, verse 24.

"FAULTLESS in His Glory's presence!"
All the soul within me stirred,
All my heart reached up to heaven
At the wonder of that word.

"Able to present *me* faultless?
Lord, forgive my doubt," I cried;
"Thou didst once, to loving doubt, show
Hands and feet and riven side.

"Oh, for me, build up some ladder,
Bright with golden round on round,
That my hope this word may compass,
Reaching Faith's high vantage-ground!"

Praying thus, behold my ladder,
Reaching unto perfect day,
Grew from out a simple story
Dropped by some one in the way.

Once a queen—so ran the story—
Seeking far for something new,
Found it in a mill, where, strangely,
Naught but rags repaid her view.

Rags from out the very gutters,
Rags of every shape and hue,
While the squalid children, picking,
Seemed but rags from hair to shoe.

"What then," rang her eager question,
"Can you do with things so vile?"
"Mould them into perfect whiteness,"
Said the master, with a smile.

"Whiteness?" quoth the queen, half-doubting;
"But these reddest, crimson dyes—
Surely naught can ever whiten
These to fitness in your eyes?"

"Yes," he said, "though these are colors
Hardest to remove of all,
Still I have the power to make them
Like the snowflake in its fall."

Through my heart the words so simple
Throbbed with echo in and out;
"Crimson"—"Scarlet"—"white as snowflake"—
Can this man? and can *God not?*

Now upon a day thereafter
(Thus the tale went on at will),
To the queen there came a present
From the master at the mill.

Fold on fold of fairest texture,
Lay the paper, purest white;
On each sheet there gleamed the letters
Of her name in golden light.

"Precious lesson," wrote the master,
"Hath my mill thus given me,
Showing how our Christ can gather
Vilest hearts from land or sea;

"In some heavenly alembic,
Snowy white from crimson bring,
Stamp his name on each, and bear them
To the palace of the King."

. . . . . .

Oh, what wondrous vision wrapped me!
Heaven's gates seemed open wide,
Even *I* stood clear and faultless,
Close beneath the pierced side.

Faultless in His glory's presence!
Faultless in that dazzling light!
Christ's own love, majestic, tender,
Made my crimson snowy white!

MRS. HERRICK JOHNSON.

The Lectures.

At Portsmouth, N. H.

Before quite a large and very interested audience in Philbrick Hall last evening (September 5) Judge Ewing, the eminent member of the bar, delivered a very interesting address on Christian Science.

J. H. Bartlett of this city introduced the speaker. Among those present were Rev. Irving C. Tomlinson of Concord and other well-known Scientists. The address received the close attention of all, and was very instructive and interesting, being a very full outline of the faith and its work.

Mr. Bartlett introduced Judge Ewing by the following remarks:—

Sydney Smith once said that the best book reviewer was one who had never read the book and knew nothing about it. It must have been the same test of fitness that suggested me as the one to introduce a speaker on the subject of Christian Science.

Amidst the whirl of the myriad activities that possess this world, we are inclined to be ignorant of even great forces. But when we see a half million people becoming moved by a common impulse, as progressive men and women, it is time we were learning about it. And a great opportunity is, therefore, afforded us to-night to learn of the teachings and faith of these people from one who can speak with authority.

Whatever may be our present religious beliefs and our reasons for them, there is one belief that is well-nigh universal in America, and that is that every man has a right to worship God according to the dictates of his own conscience; and we are now, as a people, going one step further than even this liberal doctrine, and that is, learning to see and respect the good there is in every belief or so-called religion. We are on the alert for the truth as to the great future, and the multiplication of creeds is only tending to unify the one truth in them all.

The religious teaching we received at our mother's knee, as children, is sacred to us, and none of us desire to put it off for anything new, and so I am sure we who are unacquainted with the belief will feel less distant toward the speaker of the evening when I read you a clipping from one of his reported speeches, as follows:—

"My mother's sublime and beautiful faith in the measureless goodness of God I have not surrendered, nor shall; its simple memory is an abiding benediction, jewelled with joy, and luminous with love."

The speaker of the evening is a guest whom we should feel proud to welcome to our city, because of his reputation as a man. He was in youth a friend and admirer of that distinguished lawyer, statesman, and emancipator, Abraham Lincoln. He was trained in the legal profession, acquired great prominence as a lawyer in the State of Illinois, and later became one of its distinguished judges.

The words of such a man you will receive with rapt attention, and it therefore gives me great pleasure to welcome to our city and to introduce to you, Judge William G. Ewing of Chicago, who will address you on the subject of Christian Science.—*The Portsmouth* (N. H.) *Times.*

The Forester and his Work.

THE forester has no serious quarrel with the lumberman, but differs from him in this, that the forester replants, or reseeds the ground from mother trees, protecting the soil and starting a new forest in place of the old. In America the lumberman denudes large areas, and is often criticised for it; but in Saxony, where forestry is most highly developed, skilful foresters do the same, except that the Saxon, under State supervision, replants his areas. American forests can probably be lumbered less destructively than at present, and with equal profit, but what interest has the lumberman in a distant future, or what incentive to greater care? Most of the leading European nations, except England, which has let her forest interests decline, have been forced to bring their forests under direct State control, finding the problems involved far too vital to the national life to be intrusted to private management. In this country New York, Pennsylvania, and the Federal Government, have clearly recognized the same principle. New York has expended more than a million dollars and acquired more than a million acres of land toward the proposed State park in the Adirondacks. When fully acquired, it will include the greater portion of those mountains. The State has purchased also about seventy-five thousand acres in the Catskill mountains. Pennsylvania has purchased about one hundred and fifty thousand acres in her mountains to protect the headwaters of the Ohio and the waters of the Susquehanna and the Delaware.

Through the influence of the American Forestry Association and the Department of the Interior, President Harrison was given the power, and was induced in 1891 to begin the policy of withdrawing timber land in the West from sale as part of the public domain, and to create forest reservations. He set apart thirteen and a-half million acres. This policy has been followed by later presidents, Mr. Cleveland setting aside in one act on Washington's birthday, 1897, seventeen million acres. President McKinley set apart six and a half million acres. With the national parks, about fifty-six million acres are now reserved. It is expected that upon these reservations continuity of forest growth will be guarded, and lumbering under proper conditions permanently carried on.

Three additional national parks have been proposed. Their establishment has been urged upon Congress by various scientific associations and quite generally by the press. The first of these is the Southern Appalachian Park in the mountains of North Carolina, Tennessee, and the immediately adjoining States. About Mount Mitchell, the "great black dome," highest in the Alleghany range, are extensive forests of spruce, while on lower ranges about Grandfather Mountain and the bases of the Great Smoky range are wide-reaching forests of deciduous trees. These are practically the only remaining hardwood forests untouched by lumbermen. The second proposed national park is in northern Minnesota, in a wilderness of lakes that rival those of the Adirondacks. About their shores and upon their islands are found what are said to be the only remaining forests of ancient white pine, and the lumbermen are already making inroads. The third proposed park includes the Calaveras or Mammoth grove of giant trees in California. The remarkable longevity of these trees, from four to six thousand years, has led to the belief that naturally a tree has no limit to age. It may live indefinitely unless destroyed by fire, insects, fungus, wind, or by the hand of man.

Valuable as are the national forests and national parks, they are very far from solving the American forestry problem. The price of lumber is already advancing because of the exhaustion of the first easily obtained supply. Logging is now carried on more carefully, and farther up the streams and mountains. The pressure is likely to grow stronger. The protection of remaining forests from fire, the checking of erosion over vast denuded areas, the prevention of destructive floods—these cannot safely be neglected. The next step forward in forestry is a keener appreciation of their needs on the part of the people, leading to State control of non-agricultural land.

New York Outlook.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to.

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Annual Meeting.

The regular meeting of the Mother Church is postponed until June, 1902. WILLIAM B. JOHNSON, *Clerk.*

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. It is desired that applicants will use the blank forms of application that are issued on and from September 20, 1901.

Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

The Obstetric Class.

Applications for the obstetric class of the Massachusetts Metaphysical College for 1901 must be sent at once to Alfred E. Baker, No. 25 N. State St., Concord, N. H. The class will convene October 21.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Tribute from Mrs. Eddy.

IN response to a request from the committee on arrangements for the memorial service at Concord, N. H., September 19, the Rev. Mary Baker Eddy sent the following tribute to President McKinley's life, and words of sympathy to the chief mourner. It was published in many daily newspapers in Boston and elsewhere These strong and powerful, yet deeply tender words, will go down in history as among the greatest tributes paid to the beloved President.

Their conciseness is as remarkable as their great depth of meaning. They are indeed worthy the careful perusal and study of all thinking and patriotic people It was as follows:—

"Imperative, accumulative, holy demands rested on the life and labors of our late beloved President, William McKinley. Presiding over the destinies of a nation meant more to him than a mere rehearsal of aphorisms, a uniting of breaches soon to widen, a quiet assent or dissent. It began with heavy strokes, measured movements, reaching from the infinitesimal to the infinite. It began warming the marble of politics into zeal according to wisdom, quenching its volcanoes, uniting the interests of all peoples, and it ended a universal good overcoming evil.

"His home relations enfold a wealth of affection,—a tenderness not talked but felt and lived. His humanity, weighed in the scales of divinity, is not found wanting. His public intent was uniform, consistent, sympathetic,—and, so far as it fathomed the abyss of difficulties,—was wise, brave, unselfed. May his history waken a tone of truth that shall reverberate, renew euphony, emphasize humane power, and bear its banner into the vast forever.

"While our nation's ensign of peace and prosperity waves over land and sea,—while her reapers are strong, her sheaves garnered, her treasury filled, she is suddenly stricken,—called to mourn the loss of her renowned leader! Tears blend with her triumphs; she stops to think, to mourn, yea, to pray, that the God of Harvests send her more laborers, who, while they work for their own country, shall sacredly regard the liberty of other peoples and the rights of man.

"What cannot love and righteousness achieve for the race? All that can be accomplished, and more than history has yet recorded. All good that ever was written, taught, or wrought, comes from God, and human faith in the right. Through divine Love, the right government is assimilated, the way pointed out, the process shortened, and the joy of acquiescence consummated. May God sanctify our nation's sorrow in this wise, and His rod and His staff comfort the living as it did the departing. O may his love shield, support, and comfort the chief mourner at the desolate home."

The Memorial Services.

THURSDAY, September 19, *Anno Domini*, 1901, will be a memorable day in the world's history. In this country everywhere services were held in memory of the beloved and lamented deceased President, while in every part of the civilized globe people assembled to publicly pay tribute to his greatness and goodness. Truly is it said that "the world yesterday laid its wreath on the tomb of William McKinley."

Never before in the world's history was there such an event. The occasion was as remarkable as it was touching and tender. While the last rites were being observed in Canton, the late President's home, in every city and hamlet in this country, people spontaneously assembled in churches and halls to hold memorial services. Across the water, also, there was a not less remarkable and not less spontaneous gathering together of people for a like purpose. Services were held in historic Westminster and in St. Paul's in London; at Paris, at Berlin, at Rome, at St. Petersburg, at Copenhagen, at Pekin, at Bombay, and numerous other places. The tender chord of love and sympathy truly encircled the globe.

A deep wave of righteous indignation at the direfulness of the calamity and the sin which inspired the awful act, also swept round the whole earth. The world mourns the great loss, and deplores in unspeakable measure the wicked cause thereof.

Out of the great sorrow may good come. May the nations unite in closer bonds of union, and the peoples of the earth advance speedily to a better conception of the words of him who said, "Seek ye first the kingdom of God, and his righteousness;" and "Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets."

The Sermon on the Mount, in the depth of its meaning, *must* become the watchword of the nations ere anarchy and bloodshed shall cease in the world.

We look out from the gloom nevertheless with hopeful eyes, for we know that God reigns and that His rainbow promises will be fulfilled. Our government lives, and shall live, despite all foes.

Those at the helm will surely have the support of all good citizens.

CHRISTIAN SCIENCE SERVICES.

Christian Scientists quite generally held memorial services at their usual places of meeting. In common with all other Christian people they met to pay their tribute of love and respect to the memory of the nation's departed chieftain. These services were simple and touching. We have already received accounts of a large number for which we are thankful, but they are too late for publication in this number of the *Sentinel*. Whether, for want of space, we shall be able to publish them in another issue, we cannot now determine, as no doubt many more are yet to come. Whether published or not, our friends will know that we appreciate the spirit in which the accounts were forwarded to us, and they know also that the good they were designed to accomplish has been already compassed.

Among the fifty vice-presidents of the Memorial Meeting held at Concord, N. H., Thursday, September 19, was Rev. Irving C. Tomlinson, First Reader of First Church of Christ, Scientist, of Concord.

A striking incident of this occasion, also, was the fact that among the pictures displayed were two portraits of Mr. McKinley which were presented by him to Mr. Tomlinson when the former was a candidate for Congress. The pictures were taken during the Cleveland-Blaine campaign in 1883.

It is worthy of note that the two favorite hymns of the late President, "Lead, kindly Light" and "Nearer, my God, to Thee," which were so generally sung at the memorial services, are also favorite hymns of Christian Scientists, and are embraced in the Christian Science Hymnal used in all Christian Science Churches.

Philosophy.

THERE are, and ever have been, philosophies many, but how much true philosophy apart from the Bible? The world has grown gray with speculation along philosophical lines based on material premises, or in attempts at the admixture of the material and the spiritual; and with what result? The result that the larger part of it is still speculating, and is as far away from the goal of real philosophy as ever. To find the true Philosopher's Stone mankind must turn away from the material to the wholly spiritual,—in other words, to the Bible; especially to the life and teaching of Jesus. This life and teaching, correctly understood and demonstrated, comprehends the best there is of all philosophy. The Sermon on the Mount is the greatest treatise on the subject. Rightly interpreted, it furnishes the best philosophical text the world affords The philosophy which teaches the love of God and man, making the one co-equal with the other, is the true philosophy. The life and teaching that proved divine Love to be all-powerful in healing disease and destroying sin, is the true life and teaching.

The life and teaching which to-day most nearly approaches the life and teaching of Jesus, furnishes the best criterion of true philosophy. Where is to be found a work or text-book on religious philosophy which sets forth a system of healing sickness and curing sin on a strictly spiritual basis, save the Christian Science text-book, "Science and Health with Key to the Scriptures"? And where is to be found to-day a person who for upwards of thirty-five years has devoted (and is now devoting) to the establishment of this system of healing disease and curing sin, the whole of her time, save the author of this text-book, Mary Baker G. Eddy? There is but one such text-book, there is but one such author, in the world now.

This text-book teaches the unreality of matter, but upon what basis? Not a material or a semi-material, but an absolutely spiritual, basis. God is Spirit, and God is all. Nothing but God and His ideas exist. These ideas are the universe and man. If God is Spirit, His ideas—His creations—must reflect Him. Spirit cannot reflect or create matter, if matter is something apart from or opposite to Spirit. Can Spirit evolve matter as an entity apart from itself—Spirit? The only logical answer is, No. Spirit manifests the spiritual, nothing else. This, in a word, is the simple, yet invincible, logic of the Christian Science text-book. Who can consistently gainsay such logic?

The attempts sometimes made to show that because Bishop Berkeley asserted the non-existence of matter, he anticipated the premises of the Christian Science text-book, are untenable in the face of the real facts, and show the superficiality of the thought lying back of such attempts.

Bishop Berkeley did not lay his premises in the spiritual, much less in the all-ness of God, Spirit. He manifestly had no conception of God as the only Spirit and man as His spiritual idea or reflection. Yet this is the basic teaching of the Christian Science text-book. Brief quotations from Bishop Berkeley's writings will show at once that his premises were mixed; that his effort was to resolve things from the double premise of Spirit and matter as co-existing.

From his leading work, "Principles of Human Knowledge," we quote the following: "The ideas imprinted on the senses by the author of nature are called *real things;* and those excited in the imagination, being less regular, vivid, and constant, are more properly termed *ideas* or *images* of things, which they copy or represent."

The teaching of the Christian Science text-book is that nothing is real of which the physical senses take cognizance; that all sense-testimony is illusive. Hence the two positions are at direct variance, and are wholly irreconcilable. If we correctly understand Berkeley's philosophy he based his theory of the non-existence of matter on the proposition that matter is "not without the mind, but within it, and that that which is generally called matter is only an impression produced by divine power on the mind by means of invariable rules styled the laws of nature."

Mrs. Eddy in her "Message to the Mother Church" of June, 1901, on page 35 of the pamphlet containing her Message, after quoting from Berkeley as above, says:—

"Here he makes God the cause of all the ills of mortals and the casualties of earth."

This is the direct opposite of Mrs. Eddy's teaching, for she distinctly separates God from all relation to earth's casualties and discords, even from all responsibility for sin, sickness, and death.

It is unquestionable that Bishop Berkeley, however much he may have speculated on the non-existence of matter, relied upon it in his illnesses, for he became in his later life a strong believer in the efficacy of tar-water as a healing and life-saving agent. See page 36 of Mrs. Eddy's Message, where she thus quotes from one of his works on tar-water: "I esteem my having taken this medicine the greatest of all temporal blessings, and am convinced that under Providence I owe my life to it."

Surely here was a reliance upon both Providence and tar-water at the same time; a position wholly contrary to Mrs. Eddy's philosophy.

In his later life, and long after he had written and published his speculations upon the non-existence of matter, Bishop Berkeley wrote two treatises on tar-water, one entitled, "Siris, A Chain of Philosophical Reflections and Inquiries concerning the Virtues of Tar-Water," and "Further Thoughts on Tar-Water."

Nothing we have said is intended in the least to discredit Bishop Berkeley's character as a man, a prelate, or a philosopher. We simply wish to distinguish his doctrine from that of Mrs. Eddy, and to show the injustice and inconsistency of any attempt to place his writings on a par with hers, or to show that she, in any sense, based her writings and deductions upon anything he wrote. In her said Message, page 36, she distinctly says:—

"I had not read one line of Berkeley's writings when I published my work, Science and Health, the Christian Science text-book."

Words of Praise.

WE herewith publish extracts from some of the more eloquent and timely eulogiums pronounced on the late President McKinley at various memorial services:—

HIS PASTOR'S TRIBUTE.

Bishop Edward G. Andrews of the Methodist Episcopal Church and pastor of President McKinley, conducted the funeral services in the rotunda of the Capitol, September 17. His address was eloquent and impressive. He spoke in part as follows:—

"William McKinley was a man of incorruptible personal and political integrity. I suppose no one ever attempted to approach him in the way of a bribe; and we remember, with great felicitation at this time, for such an example to ourselves, that when great financial difficulties and perils encompassed him, he determined to deliver all he possessed to his creditors, that there should be no challenge of his perfect honesty in the matter. A man of immaculate purity, shall we say?

"No stain was upon his escutcheon; no syllable of suspicion that I ever heard was whispered against his character. He walked in perfect and noble self-control.

"He was a man who believed in right, who had a profound conviction that the courses of this world must be ordered in accordance with everlasting righteousness or this world's highest good will never be reached; that no nation can expect success in life except as it conforms to the eternal laws of the infinite Lord. It was deeply ingrained in him that righteousness was the perfection of any

Digitized by Google

man and of any people. Simplicity belonged to him. I need not dwell upon it, and I close the statement of these qualities by saying that, underlying all, and overreaching all, and penetrating all, there was a profound loyalty toward the great King of the universe, the Author of all good, the Eternal Hope of all that trust in Him.

"And now may I say further that it seems to me that to whatever we may attribute all the illustriousness of this man, all the greatness of his achievements, whatever of that we may attribute to his intellectual character and quality, whatever of it we may attribute to the patient and thorough study which he gave to the various questions thrust upon him for attention, for all his successes as a politician, as a statesman, as a man of this great country, these successes were largely due to the moral qualities of which I have spoken.

"His qualities gave him reputation—not in this land alone, but throughout the world—and made it possible for him to minister, in the style in which he has within the last two or three years ministered, to the welfare and peace of human kind. It was out of the profound depths of his moral and religious character that came the possibilities of that usefulness which we are all glad to attribute to him. And will such a man die? Is it possible that He who created, redeemed, transformed, uplifted, illumined such a man will permit him to fall into oblivion? The instincts of morality are in all good men. The divine word of Scripture leaves us no room for doubt. 'I,' said one whom he trusted, 'am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live: and whosoever liveth and believeth in me shall never die.'"

SENATOR GEORGE F. HOAR.

"This hour is devoted to the memory of the dead President. I can only repeat now what, I thank God, it was given me to say while he lived, that he was our best beloved President, save only Washington and Lincoln.

"The tributes to the excellence of President McKinley do not come from personal or political friendship alone, and are not born of a present sorrow. Men who differed from him in opinion most widely on the great questions of the time loved and honored him, if only they knew him.

"Is there in history or in poetry the story of a knightlier chivalry than that of this man's devotion to the wife of his youth? In his home, the foremost household of the republic, has been the foremost example of that household virtue, the love of husband and wife, which is the one best thing man has gained so far in the uncounted years of his evolution.

"We will place William McKinley in our Valhalla. He was a favorite of the people. He was a leader of men. He knew the people that he ruled. His power was of the sunshine, not of the tempest. Whether the great measures with which his name is inseparably connected were wise or unwise, righteous or unrighteous, must be settled by later and more deliberate verdict than ours. History will declare, I think, that he believed them right and wise, that he loved his countrymen and loved liberty."

JUDGE FREDERICK D. ELY.

Judge Frederick D. Ely of the Boston municipal court, who served with the late President in the 49th Congress, delivered an address at the memorial service held in St. Paul's Episcopal Church, Dedham Centre, in which he spoke in part as follows:—

"He had served through three Congresses at the period when I knew him, and by unblemished character, intellectual vigor, rectitude of intention, fearlessness in the maintenance of his opinions, a dignified person and demeanor, a strong, eloquent, and impressive oratory, and an accurate and extensive knowledge, especially on economic questions, and ceaseless and untiring industry, had achieved a standing of grasp and influence in our national councils attained by few either in the past or the present. I had no predilections in his favor. So far as I know, my judgment was unbiased. But I then regarded him as a man of remarkable parts, and, as I afterward saw him advance steadily step by step, until he reached the highest office in the gift of the people, I was not surprised. It seemed to me due to the size and fitness of the man."

BISHOP WILLIAM LAWRENCE OF CAMBRIDGE, MASS.

"The fundamental note in his public character and influence, was his confidence in the people and institutions of this nation. There are statesmen who, standing on high prophetic mountain-tops, see far beyond the vision of the people, and by courage, skill, and power, lead the people to the consummation of their schemes. Such great statesmanship was not that of Mr. McKinley. Still, he was a stateman. Believing, as he did, in American people and institutions, he had confidence in the intelligence, the self-restraint and the virtue of the masses. He did not throw away the idea of leadership, but he did believe that his most efficient work for this nation was in representing what he felt to be the good sentiment and wisdom of the people, and in guiding, turning, and, when feasible, leading them toward right action.

"Mr. McKinley was a man of peace. To him militarism was abhorrent. His interests were not in the arts or strategies of war, but in the development of commerce, the increase and distribution of wealth, the education of the people and their uplift in character and happiness. Men may disagree whether his policy in some of these things was wise; he never asked that all men should agree with his policy; but I believe that all must agree as to the purity of his intention."

HON. WILLIAM E. CHANDLER OF NEW HAMPSHIRE.

"Mr. McKinley was a man of intelligence and sagacity. His knowledge was wide and always available. He did not depend too much upon others for his conclusions on public questions, and when he acted he did so with that reasonable courage and confidence which his full mind justified him in feeling. His rhetorical gifts were of a high order. What he knew, what he wished to say, he could clothe in apt and pleasing words, and could utter with captivating eloquence.

"Above all, Mr. McKinley was a man of virtue. In him there was no guile. Personal integrity, personal innocence, personal good conduct, were his highest aim in life. The past has not shown, future scrutiny will not reveal, any serious fault in him. His virtue was based on religious convictions, and so he went through life from boyhood to his martyrdom, trying to obey God and help his fellow-creatures; gentle, lovable, kind-hearted, but also firm, unyielding, and strong in his devotion to the performance of virtuous duty, whether in private life or in public station."

EX-PRESIDENT CLEVELAND.

"The man who is universally mourned to-day acquired the highest distinction which this great country can confer on any man, and he lived a useful life. He was not deficient in education, but with all you will hear of his grand career and his services to his country and his fellow-citizens, you will never hear that either the high place he reached or what he accomplished was due entirely to his education.

"But you will, instead, constantly hear, as accounting for his great success, that he was obedient and affectionate as a son, patient and faithful as a soldier, honest and upright as a citizen, tender and devoted as a husband, and truthful, generous, unselfish, moral, and clean in every relation of life. He never thought any of these things too weak for manliness.

"Make no mistake, he was a most distinguished man, a great man, a useful man, who has been distinguished, great, and useful because he had, and retained unimpaired, qualities of heart which, I fear, university students sometimes feel like keeping in the background or abandoning."

Digitized by Google

CONGRESSMAN SAMUEL W. MCCALL.

"And, now, having spoken of this crime, let us take a whole heaven's leap to that which is farthest from it, and turn to the sunlit life of its illustrious victim. It was my pleasure to know him somewhat, and nothing which has been said of his gentleness and kindness has been exaggerated. His life was typical of freedom. It was the wonder of freedom that such a life as his could be led. He was born amid humble surroundings. He had no powerful friends to help him on. The only resources he had were those which God gave him, and yet we saw him go on and up to the highest place in the world. When but a mere boy he became one of the heroes of the war that was fought in behalf of freedom. From that he went into public life. He served the nation in Congress, and it is remarkable that the only public service he ever rendered the nation as a whole was as a representative of the people."

Among the Churches.

Church Remodeled at Houston, Tex.

The work of remodeling and enlarging the church building of the Second Church of Christ, Scientist, of Houston, Texas, located on Main Street, between McKinney and Lamar Avenues, has been completed and the church turned over to the congregation, and the first services will be held therein to-day. The morning service will be held at eleven o'clock, and the evening service at eight o'clock .

The seating capacity has been increased to about three times that of the old building, which became necessary on account of the rapid growth of the attendance at this church.

On September 4, 1898, this congregation held their first service in a small building erected for them on the present site, but the rapid growth soon filled the building, and for some months it was apparent that larger quarters must be arranged for. Accordingly, arrangement was made for additional land, and contract let for the enlargement of the building, which is now completed and turned over to the building committee.

The new building presents a very beautiful and tasty appearance, and adds another to the list of Houston's beautiful church edifices.

It is of frame construction, 38x70 feet. The main entrance is through an entrance porch, and from there to a right and left vestibule, opening into the main auditorium, which is 35x51 feet, exclusive of rostrum, which is in an arched alcove. On each side of the rostrum are retiring rooms. The side entrance is at the rear of the auditorium.

The inside of the building is wainscoted three and a half feet, and papered in light blue, broken at the corners by heavy mouldings. The church is lighted by gas, and has electric fans reaching every portion of the building.

The regular services will hereafter be held every Sunday at 11 A.M. and 8 P.M., Sunday School at ten o'clock, and Wednesday evening meeting at eight o'clock. All are extended a cordial invitation to attend these services.

The services of the Christian Science denomination are very unique, being conducted by two readers, a lady and a gentleman, who read correlative passages from the Bible and Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The lesson sermon is prepared under the auspices of The First Church of Christ, Scientist, of Boston, Mass., the Mother Church of the Christian Science denomination, and the same lesson sermon is read every Sunday in every Christian Science Church in the world.—*Houston Daily Post.*

A Word from Galveston, Tex.

Having received so great benefit from Christian Science, and knowing from experience how much is derived from the testimonials in the *Journal* and *Sentinel,* I desire to add mine to express in a small way my gratitude, besides letting the Field hear a good word from our Island City. Though visited nearly a year ago by what was conceded by mortal man to be the worst storm ever known, the cause of Christian Science has grown here, and our little band is doing good work. We sometimes think our progress is slow, but when we sum up the work for the past three years we realize what rapid strides we have made. Our beautiful little church betokens the love which the faithful workers in this part of the Master's vineyard have for our great cause.

Our demonstrations are many, for we are called upon many times to prove by our works the truth of our words. I think truly that great demands are made upon Christian Scientists, and am happy to say, they are found equal to it. Through the blessings of Christian Science and the love that "Science and Health with Key to the Scriptures" teaches, we are able to meet all the demands made upon us. To overcome self is to me the proof of all. For the struggles that one has to make in the business world it is certainly required. I think the Christian Scientists have a practical way of showing their faith. I can truly say that in my office duties I have found it an ever-present help in keeping my temper when coming in contact with others who do not, and in solving perplexing problems that one meets in business competition. To me the practicality of Christian Science is beautiful, for it is all the time with us. We are never alone. When we are watchful, as we ever should be, we are never taken by surprise.

Some of our best citizens are becoming interested. At our Wednesday evening meetings we have as many as thirteen testify. Our meetings are well attended, and every one goes home feeling well paid for the time given. At our last meeting we heard from five ladies and eight gentlemen how beautifully victorious Truth was over all kinds of error in every instance. All in our beautiful little city on the Gulf coast render up our thanks for past blessings and know we shall receive in future as we deserve, and we are working to be deserving. I always read with pleasure all business testimonials, for the business world needs Christian Science and surely, but seemingly slowly, the leaven is working, and at no distant day we shall see the fruits of our labors in that field.—A. J. S., Galveston, Tex.

Reading Room at Madison, Wis.

When the request to open reading rooms in connection with Christian Science Churches was received, First Church of Christ, Scientist, of Madison, Wis., quickly complied. January 30, 1900, temporary quarters were provided in the audience room of the Jewish synagogue, where regular church services have been held since 1895. With the addition of a few necessary pieces of furniture, this room—well-lighted, airy, pleasant, and central—met the present needs quite acceptably.

One year later a suite of two rooms was secured in a comparatively new building with modern conveniences, in the very centre of the city, fronting the Capitol Park. The furnishing of these rooms was made possible through voluntary contributions, the children's Sunday School collections aiding materially in the work by placing upon the walls the picture of our Leader, Hoffman's "Head of Christ," and "A Little Child Shall Lead Them."

Since the opening of this reading room fifty-seven copies of "Science and Health with Key to the Scriptures" and seven copies of "Miscellaneous Writings" have been sold, as well as many copies of Mrs. Eddy's smaller books, also *Journals, Sentinels, Quarterlies,* pamphlets, etc., from the Publishing Society in Boston.

The wisdom of establishing this branch of Christian Science work was discerned only by our Leader, whose watchful eye and loving care are ever leading to higher thought and development of the great possibilities of our noble cause; while instant obedience to the call on the part of the Field, has proven its benefits in increased sales of

Digitized by Google

genuine Christian Science literature, as well as affording an opportunity for strangers to gain information on the subject of Christian Science. The reading room is open every week-day from 2.30 to 4.30 P.M., when members of this denomination are always in attendance.

MRS. L. P. G., *Superintendent.*

Memorial Service at Rice Lake, Wis.

The Christian Scientists of Rice Lake, Wisconsin, have scored a victory that tells more plainly the growth of the cause in this city and community than words can possibly do. The leaven which has been silently working for years past, has so changed public sentiment that an invitation was extended to the Church of Christ, Scientist, of this place to conduct the Memorial Service of the town on Decoration Day. The invitation was joyfully and thankfully accepted.

Opera Hall was beautifully and appropriately decorated for the occasion; a profusion of potted plants and flowers, with the gracefully draped Stars and Stripes for a background, adorned the stage, making an attractive picture for the large audience to contemplate, and serving as an inspiration to those who rejoiced in that Love which had given them such an opportunity as a means of voicing the word that "shall not return unto me void."

The subject of the Lesson Sermon was Spiritual Warfare, Golden Text: "Even the Lord God of hosts; the Lord is his memorial."

Responsive reading thirty-third Psalm.

Harmony prevailed throughout, and the close attention paid by all present showed plainly that wisdom had governed.

The many hearty expressions of satisfaction and appreciation prophesy of still greater victories for our loved cause in our city.—MRS. M. C. SMITH.

New Reading Room at Yankton, S. Dak.

For the past few weeks the Christian Science reading rooms have been in the hands of the carpenters, painters, and paper hangers, and are now very pleasing and attractive in their appearance.

The rooms are conveniently and centrally located in the Bunker Block over 101 Third Street, E, and will be open to the public each week-day afternoon from two until five. All are most cordially welcomed.

The object of the rooms is not only to provide a quiet place for reading and study to those interested in Christian Science, but also a place where the general public can investigate for themselves and learn from the literature authorized by the Discoverer and Founder, Rev. Mary Baker G. Eddy, what Christian Science really is. Until a thorough investigation is made one only discusses their own opinion of any subject. One room is set apart for the exclusive use of readers. The use of room and literature is absolutely free to every one during the hours named. During these hours visitors will be received in the reception room, where information on Christian Science will be given, and literature sold.—*Yankton Daily Gazette.*

The Directors instructed the Clerk of the Mother Church to notify branch churches having a membership above a certain number according to last report, that the Mother Church and branch churches would hold memorial services September 19, 1901.

So, when thoughts of evil-doers
Waken scorn, or hatred move,
Shall a mournful fellow-feeling
Temper all with love.

WHITTIER.

From Our Contributors.

Good Work in Christian Science.

Chicago, Ill., July 16, 1901.

Dear Mrs. B——:—

In many parts of Missouri there are rich agricultural sections inhabited by people of intelligence, refinement, and culture equal to any that may be found in the most aristocratic communities of Kentucky, Virginia, or the New England States. In one of these localities it has been the good fortune of myself and wife to make frequent visits in the last ten years. One year ago nothing was known of Christian Science in that neighborhood except such information as was contained in the criticisms of the various periodicals. These people were earnestly striving to live such lives, spiritually, as would be in keeping with their intelligence, scholarship, wealth, and high character. In that community lived an allopathic physician, who for over fifty years had been the recognized leader of its best thought, and who is the most beloved by all classes of any man I ever knew. Of him it might be said as was said of the poet John Keats, "When he passes on, the flowers in the cemetery will grow towards his grave."

To his home about a year ago we made a visit and found his son-in-law slowly slipping into the shadows—dying with indigestion, dyspepsia, and other complications. You are familiar with our experience in having him come to Chicago in October, 1900, and take Christian Science treatment, and remember how soon you sent him home well and strong. You are also familiar with the circumstances which brought his brother-in-law (the physician's son) and a cousin to my home, one resigned to blindness and the other to consumption. You remember that very soon you sent them back to their loved ones to tell the wonderful story of health and harmony, and to present themselves as proofs of God's power to heal the sick.

You will also recall that following these came others to our home, victims of various troubles, and you will remember how stubborn some of their old beliefs were in yielding to the declaration of Truth. Some of these did not seem to get hold of the spiritual uplift or to receive any physical benefit until they had returned home and observed the change which their thought had undergone. Back to their homes each one carried a copy of Science and Health. The marvelous changes in these people attracted others, and very soon a large number of their neighbors were *en route* to Quincy, St. Louis, Kansas City, and Omaha, all in search of some good loyal Christian Scientist. It is a noteworthy fact that within less than a year over sixty people have turned to Christian Science in that neighborhood, and of that number only three claim not to be entirely cured. Two of these admit that they were greatly benefited, and are going to take more treatment.

On July 6 my wife and I again arrived at the home of the good old doctor for a brief visit. Almost every plantation and farm in that section has a telephone, and very soon the entire community knew that we had arrived. A goodly number came to see us that evening (Saturday), and the next afternoon there were forty-six people called upon us, all anxious to learn more of Christian Science and to express their thanks for the part we had played in bringing it to their consciousness.

We were invited to visit a great many families in different parts of that country, and at each place people gathered to see us and to know more about this new-old subject. Everywhere we were told that since Christian Science had been introduced into that section, old family feuds had melted away, and many who had been enemies for years were now friends and are spending much time in talking over the good old days before error wove its web of bitterness (and nothingness) into their consciousness. They told us how for years the old Bible had lain upon the parlor

Digitized by Google

table and used only when the preacher came, and that now it is their daily companion. They told us that this good old physician, with a reservation that may be pardoned, recommends Christian Science heartily, and their statements on that point were verified when he requested me to take one of his patients and urged the patient to accept Christian Science treatment. His attitude towards the Science was further shown in the fact that his wife requested my wife to treat her for rheumatism, and his married daughter requested me to treat her little girl for tonsilitis.

These people meet every Sunday and read the lesson sermons, and will, as soon as possible, organize a church on a business basis. On Sunday evening, July 7, my wife and I, at their request, read the lesson for them, and followed the order of service as given in our churches. They noted this order carefully and will follow it in future.

I must tell you of one poor woman who was unable to leave her home, being confined to her bed by neuralgia, rheumatism, and catarrh. One night she sent her husband three miles to know if I could not come the next morning and give her a treatment. Of course I complied with her request, and before sundown of that day the message had traveled over all the telephone wires in that neighborhood that this poor sufferer had experienced an instantaneous cure. When I left for Chicago this case was attracting great attention, and I cannot help thinking that her speedy recovery will greatly strengthen the work in that section.

I might tell you about many other interesting occurrences, which, with the ones I have already related made our vacation the most enjoyable we have ever taken. I might tell you of a great many questions asked, and how Truth seemed marvelously to use me and my wife as mere instruments in making answer. You will not misunderstand me, I am sure, when I say that it seemed to me to be the only time in my life when God actually sent me to do His work, for you will remember that I shrank from the task, and preferred to take no vacation at all. Sincerely yours,

J. E. FELLERS.

Be Ye Perfect.

BY E. ROSE COCHRANE.

THOUSANDS of years ago the children of Israel were taught, "Thou shalt be perfect with the Lord thy God."

Jesus repeated the same thought and said, "Be ye therefore perfect, even as your father which is in heaven is perfect." To-day we rejoice that the same teaching is made plain to those who, "having eyes," see that what was possible thousands of years ago must be possible in our day, if God is what the Bible deciares Him to be, "the same yesterday, to-day, and forever."

In the beginning God was good, all that He made was good, and He made All, and as "Unity of Good" by Mary Baker G. Eddy, says, "this convinces us that, as we get still nearer Him, we must forever lose our own consciousness of error" (p. 5). Jesus taught the way—we must love God, and our neighbor as ourselves. Can we do this unless the perfect model is ever in our thought? The good, the perfect man, we must begin to look for *at once.*

How possible it would be for each one of us to see the real, the good, in our brother if we were living near God and *proving,* by deeds, our right to be called the children of God. We would see the good, expect the good result, and find just what we look for, as perfection always underlies reality.

Do we find ourselves ready to tell our brothers the good we see in them, do we always make a point of encouraging the good seed, that thus enriched might grow up and make the seeming wilderness a glorious garden?

In the parable of the tares and the wheat that were left to grow together until the harvest, we can learn this lesson. Let us leave to God the separating at the harvest. There is danger, even to-day, from the over-zealous workers who, forgetting that "patience" must do its perfect work, so that they may be perfect (James, 1 : 4), try to pull up the tares, and the result, as of old, hinders rather than hastens the harvest.

Through the teachings of "Science and Health with Key to the Scriptures" and all the other writings of Mary Baker G. Eddy, the way for Christian Scientists to work and to bring in the glorious harvest-time is plain. In "No and Yes," p. 15, we read, "By the love of God we can cancel error in our own hearts, and blot it out of others." Could a happier or more satisfactory way to work be given us? We can begin at once, in ourselves and for others, to encourage every good seed (the wheat) with all the loving thought and deeds that give life to mankind. The wheat will then become so large and healthy (whole) that the tares will be choked.

God's Kingdom will then be on earth as in heaven. "And there shall be no more curse [tares]: but the throne of God and the Lamb shall be in it: and His servants shall serve Him" (Revelation, 22 : 3); "For the upright shall dwell in the land, and the perfect shall remain in it" (Proverbs, 2 : 21).

Truth Lifted Up.

BY LOUISE SELFRIDGE.

"AND I, if I be lifted up from the earth, will draw all men unto me."

Until Christian Science shot a gleam of light into mental darkness, about five years ago, this was to me one of the least comprehended of all the so-called "hard sayings" of the Master.

My thought was of the personal Jesus, lifted up through *death* to a vague, far-away place called Heaven, where, *through death,* some time in the dim, distant future, those who were very good would get near enough to see him, perhaps even to talk with him.

But the ever-living, ever-present Christ, Truth, forever drawing to himself the sons and daughters of men, was first revealed to my consciousness through reading the wonderful text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Then I began to see that wherever Truth is "lifted up" in the heart, illuminating thought, thereto flock the lame, the deaf, the blind, the *dead* in trespasses and sins, to be healed of their infirmities, and to be drawn into the true consciousness of life from out the tombs of sense and self.

These reflections took shape in my thought a few days ago, when there came into my experience what seemed an especially pointed illustration of the everlasting fact.

In the middle of the night, finding myself rather wakeful, I arose from bed, lit my lamp, and began to read from "Miscellaneous Writings." Soon a great sense of peace took conscious possession of thought, lifting it on upward wing. The door of my room softly opened, a child stole in, saying she had not been able to sleep from an aching tooth. In less than five minutes I found that little cheek grown cool, and I placed the sleeping child on my bed, where she slept till morning. In a day or two it was thought best to have the tooth extracted, and when the dentist saw it and pronounced it abscessed, he remarked that it must have caused the child a great deal of suffering. The fact was, however, that since that night there had been hardly a suggestion of pain, and nothing more than a wrench when it was taken out, although it was a double tooth, and the good doctor declared that it "came as hard as if it had been a second tooth instead of one of the first set."

Afterwards I asked the child how it happened that she came to me, and she only knew that she was "walking in the hall and saw a light through the crack."

"The people that walked in darkness have seen a great light."

Testimonies.

Healed of Many Ills by Christian Science.

I was never very strong, but suffered during my childhood from headache and backache, which finally culminated in a life of invalidism. For nearly twenty years I was never for a moment free from pain. I was confined to my bed, unable to sit up at all, for sixteen years. I suffered the most excruciating agony from neuralgia, caused by a broken-down nervous system, spinal affection, and internal troubles. I, too, suffered many things of many physicians, who I believe did the best they could for me, but only one seemed to give me any relief, and that was but for a short time.

For fourteen months I wore a plaster of paris brace, and was worse at the end of that time than when I began. Last of all I tried the electropoise, and after using it eight months I thought my days on earth were numbered, as did all my friends. I wrote what I believed to be my last letters, and quietly waited for the end.

At this time I heard of Christian Science, and decided to try it just as an experiment. I began to improve at once, and gained steadily, though my recovery was slow. With many others, I could see that this was an advantage rather than a drawback, as I gained spiritually. A realization of this great Truth began to dawn upon my understanding, wherein old things pass away and all things become new. I received three months' absent treatment from a faithful practitioner in Baltimore, Md., who led me so patiently and tenderly but firmly into this new-old Truth. After the three months' regular treatment she stopped treating me, and I called for help when I needed it until I finally came out of the error that had held me in bondage for so many years. I soon began to demonstrate for myself and to help others.

About eighteen months after my first treatment, with my own feeble understanding of Truth I was able to have eleven teeth extracted without the slightest pain, and without using an anæsthetic. The dentist afterwards recommended Christian Science to other patients. I have been brought out of great mental trouble, typhoid fever of five weeks' duration, rheumatism, and many other seeming ills, by Christian Science. My heart goes up to God and to our Leader in great gratitude for the benefits I have received, and for the revelation to humanity of this glorious Truth.—Florence Winfield, Chocowinity, N. C.

Made Free Indeed.

When I was a young member of the Freewill Baptist Church, questions would arise that to me seemed of vital importance. I asked older church members for an explanation. Some would tell me the Bible was never meant to be fully understood, others would say I must look to God and do the best I could. I was not satisfied with the answers I received. I wanted to understand God, and I could not accept a blind faith. Not being able to understand the Bible it did not give me much happiness, and I became so much afraid I would not do right that I magnified everything until it seemed I never could do right. One hope, one pleasure after another failed me, until I was a wreck in both mind and body.

Just at this time, while at the home of a friend in East Saginaw, I heard of Christian Science, and read the pamphlet "No and Yes" by Mary Baker Eddy. While I did not fully comprehend its meaning, I was convinced it was what I had been looking for all my life.

In a few months I met the Scientist who became my healer and teacher. I shall never forget the time spent at her home during the class instruction. I never expected to realize such heaven on earth. I fell at the feet of Truth utterly broken, and the light which came to me broke every bond, mental and physical, and I was free indeed. Then came the trying of my own wings. I have fluttered back to earth many times, very often it has seemed as if I would never rise again, but divine Love did not permit me to be utterly cast down. After ten years of struggling I am thankful to say I am able to demonstrate this great Truth, and am praying daily and hourly that divine Love may govern me.—Miss Anna S. Hayes, Detroit, Mich.

Fear Overcome.

While in the country this summer, I learned a lesson that helped me. One afternoon I was out for a drive. As a child, and all my life, I had been afraid of horses, as I had been in a runaway once. This afternoon we were to take a long ride to the ocean. It was indeed delightful, for nature was in its beauty, the birds so free in their flight and song, and I was away from the noisy city. We had driven some ter miles, when I saw an automobile before us, letting off a lot of steam. I was alarmed, for it was a new sight to the horse we had. The driver said he did not like the looks of things. I asked to get out, and was ready to jump, when my thought was changed, by a thought from the lesson on "Love," and a reference in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, came to me. "It is ignorance and belief alone, based on a material view of things, which hide spiritual beauty and goodness." "Divine Love cannot be deprived of its manifestation or object." "That joy cannot be turned into sorrow." Then this thought changed my fear into joy, for I knew "God's word is not void of power." Then I thought how God's plan is ever unfolding to us, and yet we fear, and see things materially, through our ignorance and belief, and hide the spiritual beauty which would afford us such joy. The horse did not mind the automobile, I did not get out of the carriage, and my fear subsided in much less time than I have taken to write this.

Truly there is but one Mind, and that is Love. The belief of another mind tried to take away my joy. How watchful we should be every hour, to cling to Principle, then we have spiritual power.—M. J. T., Boston, Mass.

Thankful for Christian Science.

I had been sick for about fifteen years and was taking medicine all the time. I was treated by twenty doctors, but received no help. In May, 1898, I did not think that I would live from one day to another. About this time, I was told of Christian Science by a dear friend, and I wrote to a Scientist for treatment. I began to improve at once.

The doctors said I had liver trouble, indigestion, heart trouble, catarrh of the head, and female trouble. I did not expect I would ever be any better, but now I feel like a new person. My healing has been slow, and I have been slow in gaining the understanding of Christian Science, but I thank God and my healer that I am getting along as well as I am. I can eat anything I choose without suffering, whereas before I knew of Christian Science my food caused me great distress. I sleep as sweetly as a babe. I give all the credit to Christian Science, for it has saved my life, and is a great benefit to me and my family. I can see proofs of God's power every day.

I am thankful for the *Journal* and *Sentinel*. The testimonies are a great help to me in overcoming error. I study my Bible and Science and Health as much as I can.

About a month ago my little girl Bertha had a severe attack of fever. She had a large boil under her arm at the same time. She received Christian Science treatment and was soon healed.

I am thankful that I have been led into Christian Science. I hope that some day my name may be added to the Christian Science Church, for I believe it is the true church.

Annie Prescott, Hendersonville, N. C.

Religious Items.

It is startling at times to see men and women of pure minds and right conduct apologizing for the act of a man who leaves his wife and children, and consorts with a woman whom he regards as his mental or moral affinity. We hear it said, "Oh, he did not intend to do wrong; but he was misled by his poetic instincts and generous affections." Several times of late we have found good men and women recognizing and trusting those who were covering gross moral offences with a veil of sentiment. Their explanation was that all this was past; the guilty parties intended no wrong; and, now that affairs had been adjusted and some legal formalities had been complied with, it was better to forgive and to forget. In an easy-going society where morals count for nothing in comparison with pleasure and comfort, such treatment of the sins of men and women is consistent with the low standards adopted. But, carried into circles that represent the best forms of social virtue, such notions and practices can only tend to degradation. The evil world that is seeking always a decent cover for its offences, gladly quotes the saints who, through a mistaken interpretation of Christian charity, say that wrong is not wrong, and that possibly wrong may even be right.—*The Christian Register.*

The New York Observer has the followin to say regarding the need of spiritual power: "What the Church of Christ to-day needs is not less machinery, but more of this inner, energizing power. We have method in abundance, and men in multitudes. We are organized excessively. What is demanded, then, is the inflow upon the Church of a baptism of divine power which will drive all the machinery to useful purpose, just as the pressing, throbbing, steam starts the whee's, gearing, looms, and spindles of a great mill, otherwise idle and purposeless, into intensest activity. Formal Christianity can never be a success. What is needed is a 'living spirit in the wheels.' There are at present in numerous quarters an alarming apathy regarding spiritual interests. Pastors, teachers, editors, and other watchmen upon the walls of Zion are all taking note of this sad condition. Now, therefore, is the time for the Church to put o her strength. There is no deficiency in the sources of divine grace. The question is rather one of human capacity and willingness to receive from the Lord enabling power. God is, as we well know, ready to bestow this most valuable gift, and still the Master's word to the disciples is echoed pleadingly in our ears. 'Receive ye the Holy Ghost.'"

Three classes come under the censure of our Lord. They correspond to the classes he rebuked in his ministry,—religious rulers who opposed his teaching and himself in the name of their religion; the multitudes indifferent to him, except when they thought he would gratify their natural appetites or sordid desires; and those who, though they failed grossly, sought to understand his teaching and attach themselves to him as his disciples.

For the first class Jesus had only condemnation; they assumed as official representatives of God authority over the consciences of the people and the divine right to teach them how to live. They repeated the commands of the divine law to others and themselves disobeyed those commands. "They say and do not," was his contemptuous comment. Their selfishness was intelligent, deliberate, inexcusable, though they were blind to their wickedness and thought themselves righteous while they despised others. No more scathing words are in any literature than those which Jesus pronounced against the Pharisees and Sadducees who sat in Moses' seat. Such charges made against accredited religious leaders to-day would awaken profound indignation.
The Congregationalist and Christian World.

In one of his parables Jesus likens the coming of God's kingdom to seed cast into the ground which springs and grows up, first the blade and then the ear and after that the full corn in the ear. He says, Learn a lesson from nature. She is patient. She doesn't hurry. The processes of life are slow and gradual. After the sowing comes waiting, watching, watering, cultivating—obedience to the fixed laws of growth. It is long before the full corn in the ear and the time of harvest.

We recognize this law in the realm of the physical, but often fail to apply it in the realm of spiritual things. We want our doubts removed at once. We want the problems of life solved in a moment. We want a full knowledge and a perfect faith. We desire spiritual manhood without the years of spiritual infancy and youth. We wonder why truth is so slow and why so much of real good and beauty is withheld from our outstretched and eager hands.

What a contrast there is between God's ways and our ways, His patience and our impatience! Law and order and growth are His method. REV. FANNIE E. AUSTIN.
In *The Universalist Leader.*

The Christian Advocate tells its readers when singing is and is not an act of worship. The *Advocate* says: "Let us sing as an act of worship. Are there not some who sing merely as a form, or to display a well-cultivated voice, or to give a certain tone to the worship, or to entertain the hearers? This may be well enough in certain places and at certain times; but in the house of God and on the holy Sabbath singing should always be an act of worship. We cannot worship the Lord in song unless our hearts are in tune. One may have the voice and culture of the finest artist, and sing so as to attract and entertain thousands, but if the heart is not in harmony with the sentiment there is no worship in it all. There is no worship in a musical composition or he tones of a voice. They that worship God must worship Him in spirit. If our hearts be in harmony with the spirit of God, and the song be in harmony with the Gospel of His Son, we shall worship Him in the beauty of holiness."

"The more one tries to help others, the more one loves to do it," said Horace Greeley. This statement embodies a profound principle of moral and spiritual philosophy. What one accustoms himself to do that is good and helpful the greater interest he takes in doing it, and the more quickly he responds to the call for service; indeed, those who are well established on the Christian ground of helpfulness do not wait for specific requests for assistance or acts of neighborly kindness; but, quickly discerning opportunities to do something that shall add to others' comfort or happiness, the doing promptly follows the discovery of each opportunity. As time passes the love of doing good, of serving others helpfully, becomes deeply rooted in their hearts. Almost before they know it they have developed, in large part, into genuine Christians!—*The Universalist Leader.*

Dr. C. A. Bartol was in the habit of saying that he could believe the record of any historic miracle of which he could see even the small beginnings in human experience, but he could not believe in miracles which contradicted the laws of chemistry or biology. He could believe in the miracle of healing because he could see the wonderful influence of the human mind over the mind or body of another person; but he could not believe that bread was produced which never grew as wheat in the field, was not ground in a mill, or baked in an oven. He did not believe that fishes could be made ready for the eating which had not been cooked by fire and had never swam in the sea.—*The Christian Register.*

Has the time not about come when such expressions as "up to date," "up against it," "the whole push," and others of the same nature, be put aside as inelegant, if not positively vulgar? Under certain circumstances bright, suggestive phrases often add to the piquancy of speech or conversation, but slang never rises beyond a common level, and its use betrays a tendency of mind which is to be deplored. To be bright and interesting one does not require the vocabulary of the Bowery or Billingsgate. Public speakers and even ministers occasionally sin against good taste by using words and terms which savor not merely of the street, but of the curbstone.
The Christian Advocate.

Dean Farrar thinks that while there is less of open and ostentatious infidelity in these days than there was in the days of Charles II., or in the early days of the eighteenth century, there is a far more widely spread spirit of doubt, and even of positive unbelief, than there has ever been, even among men who have never professedly abandoned allegiance to the religion of their fathers.—*The Literary Digest.*

What a man can do best, that is the task given to him by God. What his neighbors most want, that is the path to which he should direct his talents. No scorn is to be tolerated toward those every-day duties which God has given to us.
R. L. CARPENTER.

The grand sum-total of the world's business is brought to pass, not by the irregular impulses of a few energetic spirits, but by the joint harmonious action of myriads of humble, faithful workers.
JOHN JAMES TAYLOR.

God will not disdain to use our prayers, our self-denial, and the little atoms of justice that personally belong to us, to establish his mighty work,—the development of mankind.—THEODORE PARKER.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory *vs.* Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

National.

The trial of Leon Czolgosz, anarchist and the self-confessed murderer of President McKinley, was begun September 23. The case was tried before Justice Truman C. White of the Supreme Court of Erie County. The prisoner pleaded guilty, but the plea was not permitted to stand under the law, and a plea of not guilty was at once ordered by the court. The trial began at ten o'clock Monday morning and at half past four the following afternoon, after being out only thirty-four minutes the jury returned a verdict of guilty of murder in the first degree. On Thursday afternoon, September 26, the prisoner was sentenced to be electrocuted at the state prison in Auburn during the week beginning October 28. The prisoner declared that he had no accomplice, that no one told him to commit the crime, and no one paid him to do it.

Congress will make special provision for the payment of all expenses incurred by the death of President McKinley, as was done in the case of President Garfield. Congress not only paid President Garfield's funeral expenses, but also made liberal provision for Mrs. Garfield. She received her husband's salary for the rest of the year, a pension of five thousand dollars a year for life, and the franking privilege, by which she can use the mails without payment of postage. Mrs. McKinley will certainly be treated with equal liberality.

The will of the late President McKinley was filed September 27. All the property is left in trust to Mrs. McKinley, but an annuity of one thousand dollars is given to Miss Helen McKinley, sister of the late President. It is said that the value of the estate is between $225,000 and $350,000, of which $67,000 is life insurance. The remainder consists of bank deposits in Washington and real estate.

President Roosevelt has announced his intention of attending the Yale bicentennial celebration which begins October 19. It is intimated that he will receive the degree of doctor of laws. This honor was conferred upon President McKinley in 1898 during the Spanish-American war.

The National McKinley Memorial Association, a permanent organization having for its purpose the erection of a suitable monument to the late President, has been formed at Canton, O., and will be incorporated under the laws of the State.

Secretary Gage recently received $6,150 conscience money from an unknown person. The sender stated that duties had not been fully paid as the law required, and this amount was sent to make up the deficiency.

In compliance with his own request made to the department at Washington recently, Admiral Sampson was detached from duty October 1.

Aguinaldo's body-guard surrendered September 23. They immediately took the oath of allegiance and were released.

Foreign.

The business community of Hong Kong is greatly interested in the proposed American cable to Manila and its eventual connection with Hong Kong. The present cable tariff between the United States and Hong Kong is from $1.65 to $1.75 per word. The proposed rate of an American cable company of not more than one dollar per word would be a great boon to the business men of the Orient.

The total number of postal packets delivered in the United Kingdom in 1900 was 3,723,817,000. The public deposited in the savings banks $202,582,180, and the total amount due to depositors at the end of the year was $677,748,225. The telegraph department, which is a branch of the post-office, showed a deficit of $3,260,520. The total post-office revenue was $79,977,350, and the expenditure was $50,324,515.

The Department of State has been informed by Mr. Rockhill, United States Commissioner to China, that a decree will shortly be issued by the Chinese Government prohibiting, for the period of two years, the importation into China of firearms and ammunition, as well as material serving exclusively for the manufacture of arms and ammunition.

The British Foreign Office has intimated that it will readily concede reasonable payments for the losses of property and for personal inconvenience incurred by Americans in the South African war. The demands of the Americans will be voluntarily scaled down by the United States embassy.

In accordance with the proclamation issued by Lord Kitchener on August 7, ten Boer leaders who have been captured since September 15 have been permanently banished from South Africa.

Emperor William of Germany has conferred the grand cross of the Red Eagle upon Prince Chun, who was the head of the Chinese mission of expiation for the murder of Baron von Ketteler.

It is reported that Andrew Carnegie will comply with the request of Countess von Waldersee to endow the Y.M.C.A. movement in Germany.

Industrial and Commercial.

The Commercial Pacific Cable Company, with a capital stock of one hundred thousand dollars, was incorporated at Albany, N. Y., September 24. The company will lay a submarine cable from California to the Philippine Islands by way of the Hawaiian Islands. The cable will be about eighty-five hundred miles long. The portion from California to the Hawaiian Islands will be in operation within nine months and the whole completed within two years. The new company does not ask any subsidy or any guarantee. It is claimed that present cable rates from the United States to the Philippines and to China and Japan will be reduced from thirty to sixty per cent.

A corporation formed and chartered under the laws of the State of Massachusetts has purchased a twelve thousand acre tract of land in the province of Puerto Principe, Cuba. The tract of land is heavily timbered and is located on the line of the new Cuban railroad.

The New York Merchants' Association recently adopted resolutions favoring "the immediate establishment, as a part of the Federal Government, of a Department of Commerce, the secretary of which shall be a member of the President's cabinet.

Pennsylvania is the leading State in the manufacture of glass, employing some twenty-three thousand persons in this industry.

General.

The negro business men of Louisville have an organization for the uplifting of the young negroes of that city. Stores for negroes, to be conducted by negroes, is the plan first contemplated, and if these are successful, other industries will be added. Small dry goods stores and corner groceries are to be established, and young negroes are to be employed as clerks, the idea being to put business principles in their minds and to teach them to practise economy, with a view of starting in business for themselves with a fair chance of success.

The constant growth of a knowledge of English in Mexico is made evident by the new demand on the part of Mexican youth for books and periodicals in this language. One dealer in books and periodicals says that half his customers are Mexicans. They have learned the language with such a degree of thoroughness that they demand English reading. How many people to whom English is a mother tongue buy Spanish books and periodicals? The native booksellers say they are very few.

There are one hundred and thirty-two miles of street car line in New York City over which nothing but horse cars are run. Twelve hundred cars and six thousand two hundred horses were necessary to carry the horse car traffic in 1900, which amounted to sixty million cash passengers and ten million transfers. The reason horse cars are still used is because it is against the law to operate overhead electric trolleys, and the expense of installing an underground system is too great.

William McKinley, president, was born at Niles, Ohio, January 29, 1843. William McKinley, his father, an iron worker, was born in Mercer County, Pennsylvania, in 1807. James McKinley, farmer, grandfather of the president, was born in Pennsylvania in 1783. David McKinley, farmer, great grandfather of the president, was born in Chanceford township, York County, Pa., in 1755. John McKinley, weaver, was born in Ireland about 1728.

The American people are becoming greater sugar consumers with each succeeding year. In 1900 we consumed 2,219,847 tons of sugar, or an average of sixty-six and one-half pounds for every man, woman, and child.

The national council of the Order United American Mechanics met at Hartford, Conn., September 24. There are nineteen state councils and 719 subordinate councils, with a membership of 47,011.

The "Bay Psalm Book" was the first book printed in the United States. It was issued in Cambridge, Mass., in 1640. Copies are extremely rare and bring a high price.

A vessel can sail from the Atlantic ocean to the head of Lake Superior without ever leaving Canadian waters. The distance is 2,260 statute miles.

The one hundredth anniversary of the graduation of Daniel Webster from Dartmouth College was commemorated September 24, 1901.

The largest wrought iron pillar in the world is said to be at Delhi. It is sixty feet high and weighs seventeen tons.

California is said to be the most prolific in fruits of the tree, vine, and shrub of any equal area of the earth's surface.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

A Demand for Fair Play.

THE following vigorous words of the Hon. Clarence A. Buskirk, ex-attorney-general of Indiana, will be read with much interest:—

To the Editor of the *Indianapolis Journal.*

Christian Scientists are not seeking to proselyte through the newspapers. Their opponents, however, have been engaged in the work of attacking them and their doctrine by means of very frequent articles in the newspapers. These attacks have not been argumentative, but have been filled with false and malignant statements and abusive names and epithets. A part of them have been fake news items of alleged deaths occurring in Christian Science households. Three of the latter class I have investigated and exposed during the last six weeks—one of them as to the "Eberty" case in Kosciusko County, one of them as to "Captain Hubbell's wife," and to-day one of them the "Hamilton, O., case." Various newspapers printed these fake specials in good faith of course, but would their columns be open to "specials" concerning deaths of infants and others under drug treatment, with abusive and misleading headlines and comments?

Christian Scientists seek the right of defending themselves and their doctrine when they are thus attacked. They appeal to the newspapers of Indiana, as elsewhere, to give them fair space for such defences. Does not this appeal touch the sense of justice of every Indiana editor? We seek to worship God and to do good to suffering humanity. We have never questioned the right of others to do the same. We have never sought to prevent people from employing drug doctors if they wish to. We have never sought to prevent people from worshiping God as Methodists, Presbyterians, etc., or to interfere with them in the exercise of their religious privileges.

Why are Christian Scientists thus traduced, their doctrine misrepresented and ridiculed, and popular prejudice sought to be inflamed against them? Why are our Indiana newspapers plied with fake specials against them? Thoughtful persons may well ask whether some business interest or frightened profession is behind this nefarious work. And when the Christian Scientists are threatened with the courts of Indiana, and the legislature is asked to enact laws which overturn the most sacred principles of religious and personal liberty which are guaranteed to the humblest citizen of Indiana by our Constitution, no matter what his religion may be, the inquiry as to the motive behind it all becomes strenuous.

Christian Science is a religion. As a religion it seeks to obey the commands and follow the example of Jesus in "healing the sick." Jesus performed those "works" to furnish evidence of the truth of his teachings. He promised to all generations and countries: "He that believeth on me, the works that I do shall he do also." Christian Scientists merely claim the right to believe this and to prove their belief by their "works." They merely ask that the Scriptural rule of evidence be applied to them and the tree be judged by its fruits. They assert—and they prove it by the very best of documentary evidence—that already several hundred thousand of "the sick" abandoned by drug doctors as incurable have been restored to health through Christian Science. Their opponents are admitting it to be true by the most forceful implication in their persistent hostility. If these "works" were not being performed as claimed by Christian Scientists their doctrine would perish of inanition, and no one would be found taking the trouble to ply newspapers with fake specials and abusive assaults upon it. Does this not stand to reason?

AN ABSURD PRETENCE.

The pretence, then, that the medical boards of Indiana are resorting to the courts and the newspapers in order to protect the citizens of Indiana against their alleged idiocy in employing Christian Science, and not employing the drug doctors, becomes flagrantly silly and absurd, as well as dishonest. I have not had a drug doctor professionally in my house for about seven years, and before that scarcely a month passed without one or more. Five in my family has been the average. Seven years ago one of us was cured through Christian Science after two reputable physicians had failed. Serious ailments have been repeatedly overcome since that time without drugs or drug doctoring of any sort.

As the head of my family I have tried to learn what Christian Science is. I have read and thought and observed much. I care for my own life and health, and for my family. I think I know whereof I speak. I think I know what Christian Science is, and is not, better than those who are turned aside from it by hasty misconceptions or flippant ridicule. And I solemnly say that I understand it to be the Christianity taught by Jesus. . . . Where we had almost constant invalidism in my household we have health. Where we had agnosticism we have Christian faith and hope. Also, we have a literature from which we are taught the highest ethics, because they are the ethics of primitive Christianity. Who, then, has the right to say to me, "You shall employ a drug doctor whether you wish to or not"? Who has the right to say to me, "You and your family have no right to worship God according to the dictates of your own consciences, and to understand and practically apply the teachings of Jesus as commended by your own reason and the experiences of the last seven years"?

Let those employ drug doctors who wish to. I do not wish to. And I sternly deny the right of any man or set of men to compel me to do so. I plant my feet upon those inalienable rights to religious and personal liberty guaranteed to me as a citizen by the Constitution of Indiana. I make no war upon the drug doctors except in self-defence. I know that among them are many bright intellects and conscientious students. But they belong to a system of healing which ignores God and deals with man as a material mechanism and not as a spiritual being "in the image and likeness of God."

In its dissecting rooms and its classes, in its diagnoses and therapeutical agencies, it deals with man, from the cradle to the grave, as a being "without God in the world." There is nothing in the medical profession, in all its literature and practice, which in the least manner recognizes God's existence or God's power over human health and

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

existence. It is true to its pagan origin in this; and it is plain that Jesus wholly ignored drugs and drug doctoring and "healed the sick" by dealing with man as a spiritual being. And he declared that what he did was done of the Father and not of himself. Besides, no candid drug physician claims that drug medication is a science. It is as experimental now as it was in those ancient days when Asa departed and went to the Egyptian physicians, "and Asa slept with his fathers."

If medicine were a science it would not still be experimenting with the lives of rabbits and men, but would have some exact knowledge as to the action of drugs, instead of mere theorizing and experimentation. In ignoring God and dealing with man as a mere machine, or animal, drugs and drug doctoring started with a wrong initiative. Let the medical boards of Indiana first recognize God as an immanent influence over the lives and health of men; let them teach and practise in such a way that the infidels and atheists among them do not come up to the full measure of medical attainments and learning. Let them make a science out of the administration of drugs rather than a dangerous system of experimenting with poisons upon human lives. Then there would be a more legitimate basis, at least, for them to make themselves the self-constituted guardians of the consciences and of the bodies of all the citizens of Indiana.

A Demand for Justice.

I write this defence of Christian Science because of an article in your paper of August 18, entitled "Practice is Condemned." I regret to observe in that article that the attorney-general's office in Indiana is made to father the statement, in substance, that Dowieism, Mormonism, and Christian Science belong in the same category. There is really no excuse for so ignorant a statement. Dowieism recognizes Dowie and his particular elders as endowed with some special and peculiar power in healing sickness. Christian Science is the antipode of this teaching, for it recognizes that no man has such a special or peculiar power, but that the "works are of the Father," just as Jesus declared. Mormonism has nothing in common with Christian Science whatever. Christian Science teaches the highest morality in all things. Why this confusion? Is it for a sinister purpose? It is absolutely untruthful, at least.

I regret to see also that upon the cover of a brief for the prosecution in a case appealed to the Supreme Court from Clinton County, in a case where a Dowieite was the defendant, and not a Christian Scientist, appears the phrase, "Christian Science and Dowieism," as if they were both in issue in the case. This is "going outside of the record" to make a gratuitous attack upon a class of people whose doctrines are not in the case at all. Is it the intention to try to get a decision from our Supreme Court against Christian Scientists without their having "their day in court"? If not, what does it mean? I speak more plainly on this subject, because it is a notorious fact that the medical board of this state has employed attorneys to assist in the preparation of the brief referred to, and because the papers report a member of that board to have boasted that a decision would soon be had which would settle the matter as to Christian Scientists in Indiana. We are to be tried and condemned, then, without the privilege of making our defence? Why are they so afraid of treating us as all others are treated who are charged with crime? All others have their "day in court," and "the right to be heard by counsel."

These are constitutional rights, and I fear not that our learned and impartial Supreme Court will fail to recognize these rights before condemning Christian Scientists as criminals unheard, especially so when our alleged crime would be that of Jesus, of the early disciples and Christians, if one earth to-day. Clarence A. Buskirk.

In the *Indianapolis Journal.*

Feeding a Ship's Passengers.

The huge size to which the modern Transatlantic steamship has grown, and the bewildering amount of provisions that have to be taken aboard for a single trip across the ocean are wonderful. A mere tabulation of the various kinds of food which go to replenish the ship's larder during the few days which she spends in port, fails to convey any adequate idea of the vast amount of stores taken aboard.

The dimensions of the vessel are: Length, 686 feet; beam, 67 feet, and displacement, twenty-three thousand tons; her highest average speed for the whole trip is 23.36 knots, and she has made the journey from Sandy Hook to the Lizard in five days, seven hours, and thirty-eight minutes. In considering the question of feeding the passengers on a vessel of this size, the thought is suggested that there are other hungry mouths within the hull of the ship besides those to be found in the dining saloons of the passengers and the mess-rooms of the crew; mouths that are so voracious that they require feeding not merely at the three regular meal hours of the ship, but every hour of the day and night, from the time the moorings are cast off at one port until the vessel is warped alongside at the other. We refer to the one hundred and twelve furnaces in which the fuel of the sixteen boilers in the boiler-room is consumed at the rate of 572 tons per day. Now, although the voyage from New York to Hamburg lasts only six or seven days, according to the state of the weather, the bunkers of the ship are constructed to hold a sufficiently large reserve of coal to cover all contingencies, her total coal capacity being about five thousand tons; and at each voyage care is taken to see that they are pretty well filled.

The total number of souls on board the vessel when she has a full passenger list is 1,617, made up of 467 first cabin, 300 second cabin, 300 steerage, and a crew of 550, the crew comprising officers, seamen, stewards, and engine-room force. Sixteen hundred and seventeen souls would constitute the total inhabitants of many an American community that dignifies itself with the name of "city," and it is a fact that the long procession, wending its way through the assembled provisions on the quay, by no means represents the length of the line were the passengers and crew strung out along Broadway or any great thoroughfare of this city. If this number of people were to march four deep through Broadway, with a distance of say about a yard between ranks, they would extend for about a quarter of a mile, or say the length of four city blocks.

To feed these people for a period of six days requires, in meat alone, the equivalent of fourteen steers, ten calves, twenty-nine sheep, twenty-six lambs, and nine hogs. If the flocks of chickens, geese, and game required to furnish the three tons of poultry and game that are consumed were to join in the procession aboard the vessel, they would constitute a contingent by themselves not less than fifteen hundred strong. The ship's larder is also stocked with seventeen hundred pounds of fish, four hundred pounds of tongues, sweetbreads, etc., seventeen hundred dozen eggs, and fourteen barrels of oysters and clams. The seventeen hundred dozen of eggs packed in cases would cover a considerable area, while the one thousand bricks of ice cream would require one hundred tubs to hold them. Of table butter there would be taken on board thirteen hundred pounds, while the twenty-two hundred quarts of milk would require sixty-four cans to hold it, and the three hundred quarts of cream eight cans.

In the way of vegetables there are shipped on board one hundred and seventy-five barrels of potatoes, seventy-five barrels of assorted vegetables, twenty crates of tomatoes and table celery, two hundred dozen lettuce; while the requirements of dessert alone would call for four and a half tons of assorted fresh fruits. For making up into the daily supply of bread, biscuits, cakes, pies, and the toothsome odds and ends of the pastry cook's art, there are taken on

Digitized by Google

board at each trip ninety barrels of flour, each weighing one hundred and ninety-five pounds, this item alone adding a weight of eight and a half tons to the cook's stores. To this also we must add three hundred and fifty pounds of yeast and six hundred pounds of oatmeal and hominy.

Under the head of liquids the most important item is the four hundred tons of drinking water. Last, but not least, is the supply of forty tons of ice.

Of course, it will be understood that, as in the case of the coal, it is not to be supposed that all this supply will be consumed on the voyage. There must be a margin, and a fairly liberal margin, of every kind of provision. Moreover, the extent to which the larder and cellar are emptied will vary according to the conditions of the voyage. In tempestuous weather, where the trip is a succession of heavy gales, and the dining-room tables are liable to be practically deserted for two or three days at a stretch, the consumption will be modified considerably. Stormy voyages of this character, after all, occur at infrequent intervals, and as a rule the supplies are pretty well consumed by the time the passage is over.—*Scientific American.*

No Place for Anarchy.

WILLIAM J. BRYAN in his weekly newspaper called *The Commoner* thus expresses his views on anarchy:—

"There is no place for anarchy in the United States; there is no room here for those who commit, counsel, or condone murder, no matter what political excuse may be urged in its defence. The line between peaceful agitation and violence is clear and distinct. We have freedom of speech and freedom of the press in this country, and they are essential to the maintenance of our liberties. If any one desires to criticise the methods of government or the conduct of an official, he has a perfect right to do so, but his appeal must be to the intelligence and patriotism of his fellow-citizens, not to force. Let no one imagine that he can improve social or political conditions by the shedding of blood.

"Free governments may be overthrown, but they cannot be reformed, by those who violate the commandment, 'Thou shalt not kill.'

"Under a government like ours every wrong can be remedied by law and the laws are in the hands of the people themselves. Anarchy can be neither excused nor tolerated here. The man who proposes to right a public wrong by taking the life of a human being makes himself an outlaw and cannot consistently appeal to the protection of the government which he repudiates. He invites a return to a state of barbarism in which each one must, at his own risk, defend his own rights and avenge his own wrongs.

"The punishment administered to the would-be assassin and to his co-conspirators, if he has any, should be such as to warn all inclined to anarchy that while this is an asylum for those who love liberty it is an inhospitable place for those who raise their hands against all forms of government."

Denial.

"Denying ungodliness and worldly lusts, we should live soberly, righteously, and godly, in this present world." "Denying ungodliness and worldly lusts"—how much this means to the Christian Scientist! These earnest words of St. Paul are a part of our daily work. In denying ungodliness, we let godliness appear; in denying worldly lusts, the hunger and thirst after righteousness appears and we find in Truth the bread of life and the water that forever quenches thirst, even that offered by the Master to the Samaritan woman. Samaria means a watch-tower. Is not this deeply suggestive of that plane of thought in which Truth's voice becomes audible: the watchful, eager, thought, alert to catch the diviner harmonies of life above the discords of sense?—A. J. M.

Testimonies.

Benefits Received from the Study of Science and Health.

Since studying "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, among other errors that have been destroyed is the fear of death, from which I suffered severely, it having come upon me at an early age. But I now have the assurance of eternal life, knowing that "Mind alone possesses all faculties, perception, and comprehension; and is not at the mercy of organization and decomposition" (Science and Health, p. 484).

The predisposition to catch cold has also been overcome. This error always found me an easy victim, often keeping me in bondage until the uttermost farthing was paid.

When coming from the West to live in this lovely semi-tropical state of Florida, as months passed on I became regularly subjected to malaria, rheumatism, headache, chills, fever, and sometimes dengue or break-bone fever. I was also fearful of catching the yellow fever, should the proper authorities announce the appearance of that dreaded germ. Preparation was always made in mind beforehand where I could be comfortably located in the pine woods, as I then believed, as many do now, that the aroma from these trees would protect from the disease by destroying the germ.

Since coming into Christian Science I am free from all these complaints and have been for about four years. I have escaped contagious diseases that have been going around in the community from time to time.

At first the old fears would present themselves, but by reading Science and Health for a while, trying to understand as I read, the fear was always destroyed, and I was well again. Seeing these results from the mere reading of a book proved this way to be more effectual by far than running after drugs and doctors. There was nothing distasteful in it, and my physician was always near. It is so economical that I wonder any one could ever question the price of Science and Health, and allow this to prevent them from obtaining it.

Although living in the same place as before having Science and Health, I find no ill effects from atmospheric changes or being exposed to the weather; yet these changes come and go the same as before; the fog is just as thick, and the rainy season comes just as often; but now there is no fear of any of these things.

Science and Health tells us, page 376: "It is latent belief in disease, as well as the fear of disease, which associates sickness with certain circumstances, and causes the two to appear conjoined, even as poetry and music are reproduced in union by human memory." I know this change has not been produced because I have become acclimated, for the same complaints are common among those who have lived here for years; yes, even those born and raised here. It was not climate but Truth that worked the change.

A physician I once talked with here thought that in order to avoid having these ailments, I should live in a house that had an upstairs, and should not stay here the whole year. But having lived in such a house before, and complained, I failed to see at the time the logic of his statement, and do yet, since it is not at all necessary for me to live North part of the year to keep well.

While I was always a great admirer of nature before I knew of Science, now I love her more. Her smiles seem to rest on this ancient city by the sea. Through the inconsistencies of Presbyterianism and *materia medica*, religion and doctors, and through all of mortal mind's ways and means, I was led to investigate Christian Science. I always enjoyed hearing it talked; those friends desiring to do so always finding me a willing listener. I always desired to understand, believing that since others had, I could. I did not come into Science through being healed. My growth has been slow compared with some others, but I never have doubted the teaching of Christian Science.

Digitized by Google

I had the privilege of class instruction last October from a loyal teacher of Christian Science. I am pressing on, trying to know more of the Truth. The Bible, which had been closed so far as making it a study went because of seeming contradictions, is now an open book, to be studied and enjoyed. I have found the Truth and I need not look farther, for I am satisfied, knowing that there is a Source from which to draw that which does resuscitate and sustain.—ETTA M. WISHER, St. Augustine, Fla.

Found Life and Health in Good.

Three years ago I was looking to a plaster of paris jacket for strength and support. I was a weary, discouraged wanderer in the wilderness of material sense, looking for life and health in matter, thinking I was looking to God.

Being a young wife and mother, with no prospect but that of deformity and helplessness, I turned gladly to Christian Science when my husband's father, who was the only one in the family who had been led to this glorious light, came asking us at least to try. How thankful I am to the eternal Good, that he caused us to seek and find.

All that *materia medica* could offer had been tried. Soon after beginning treatment, I was able to walk without the aid of the jacket. I began to get out of bondage and gained my freedom physically as the Truth unfolded in consciousness, and the facts of being began to be understood. I am convinced I would not be here to-day, had I not found Christian Science. Can my heart find words to express my gratitude to our beloved Leader, Mrs. Eddy, and to all who so lovingly encouraged and helped me from darkness to light? As I look back into what would have been my experience, had not the Christ-Truth saved me, I pray that I may be faithful and obedient to divine Principle.

One of the most gratifying experiences was when our baby Ruth Zoe came, through the aid of Christian Science treatment, to rebuke mortal sense fear and ask "O child of God, why is thy faith so small?"

The first premonition was early on Sunday morning, and my first thought was "What our Leader says," so well known to Scientists. My faithful practitioner and dearly loved friend were beside me pouring out words of love, so there was no room for aught else. There was a suggestion of pain which was quickly destroyed. I arose and had my breakfast. My husband went to the service, no word having passed between us on the subject. A few moments before the little daughter was born, I read aloud at my healer's request, "Emergence into Light" from "Retrospection and Introspection." Truly, at that hour divine Love filled all space to my consciousness, and Love ruled and governed. I dressed, came out and sat in the rocker by the fire, and took baby, who found nourishment at once, and waited the return of my husband. When he came he was introduced to our daughter, and with grateful tears dropped on his knees beside me, and silently, reverently thanked God for this evidence of His ever-present care. My husband had no sense of anything unusual having taken place, all was law and order, peace and harmony, every one in their place at dinner, and every meal.

Through the power of divine Love, its guidance and protection, I was enabled to go to church the following Sunday. This was with much rejoicing, and to the surprise of many who did not understand the power of Truth. Truly, divine Love meets every need. One part of the demonstration I feel should be mentioned for the benefit of some mother who may have a like condition. When our son was born under *materia medica*, the physicians said that, owing to unnatural conditions, I could not nurse my baby, and the breasts had to be lanced, and after much suffering, the milk was dried up and baby given a bottle. Not so with this one. Every condition was destroyed, breast cord broken, action free, and baby has no bottle. She is now six months old.

MRS. EDNA GRAY, Chicago, Ill.

A Speedy Recovery.

I desire to give a demonstration of a quick recovery from an accident, through Christian Science treatment. On the evening of Saturday, June 29, I was out on my wheel, and on my way home coming down a steep hill, I took a header, and must have been unconscious for a while. I remember picking up my wheel and going to a house near by, which proved to be a policeman's. He took me to the Police Station and a doctor was called. The doctor sewed up a cut in my head and dressed the wounds, and I was able to come home on the electrics.

My wife sent for a Scientist the next morning, and we also sent for our old family physician, who removed the bandage and made a thorough examination, and found a very bad hemorrhage of the eye, the eye swollen so it was closed, a fracture of the left cheek-bone and right jaw-bone, and my nose broken.

We thought at first my nose would have to be put in splints, but this did not have to be done. My face was also very badly scraped, so much so that the doctor had to dig the dirt and grit out with the point of his scissors. He worked on me for two hours, and yet, at the end of that time, he found my pulse perfect.

With the exception of the time he was digging out the dirt from my face and hand, I was entirely free from pain, and according to the old way of thinking, with such a fall as I had, I would have suffered a great deal.

According to my present belief this was due to the Christian Science treatment I had received previous to the doctor's visit. The treatment was continued for two weeks. The doctor found me doing so well he did not remove the bandages until the following Thursday, when he took off the outer ones, and on Saturday they were all removed. Sunday I removed the crusts that had formed on my face, with the exception of the one on my nose. Monday that was off, and it was found that new flesh had been formed, leaving no scar, and the fractured jaw was healed. The nose shows no signs of having been broken. Tuesday I went to have the stitch taken out of my head, and the doctor made the remark, "Can it be possible I was mistaken about the fracture?" He was surprised to find it healed. He said I would not be able to eat any solid food for about three weeks, but I was eating some the first week, and the second week I was eating anything I wanted. In ten days from the time of the accident I was at work again.

Within the past year my wife and son have both had treatment, and we as a family are all interested in Christian Science, and feel we have cause to be thankful for even our slight knowledge of it.—FRANK L. DAVIS, Boston, Mass.

Effects of Accident quickly Overcome.

About the first of the year my wife and I and a friend went to call on some friends. In walking from the car line to our friends' house, my wife mistook a deep ditch for another path and stepped into it, spraining one of her ankles severely. We assisted her to our friends' house, where we remained about two hours. Returning home that evening about ten o'clock, I wanted to call for a Christian Science practitioner, but my wife dissuaded me. She slept little and suffered much pain during the night. In the morning she could not put her foot on the floor, so intense was the pain. The accident happened Thursday evening. Friday morning about eight o'clock I telephoned to a Christian Science practitioner, who informed me he would take up the case. At noon I returned home and found my wife walking around the house leaning lightly on a cane. She informed me that about twenty minutes after I left home (this would make it but a very few minutes after the absent treatment was given) all pain left her, that she walked to the door with a lady friend who called to see her, and found no inconvenience from so doing.

The Sunday following we walked to Sunday service and

Digitized by Google

back, a distance of over a mile, and in the afternoon she walked out again without any appearance of lameness and with no inconvenience or bad effects. In a very short time all swelling disappeared and the ankle looked like the other. We are very thankful for this beautiful proof of the power of Truth.—GEO. TOLMIE, Ogden, Utah.

Fear of Death Overcome.

The subject of Christian Science is one that had been discussed for quite a long time in our family, and as I did not understand it I had put it aside and would say to myself, Why "art thou come hither to torment us before the time?" But there was something about it that I could not let alone, and it was in 1899, while in the West, I was reading some passages in our text-book, Science and Health, that it dawned on me, "This is the Truth. This is that something that I have been longing for;" and the sense of satisfaction and perfect peace that came over me was wonderful.

I had always, even when a child, had a great fear and dread of death, but never since that first realization that Christian Science is the Truth, have I felt that fear.

I have been healed of a number of diseases, but the most beautiful thing to me is that through the understanding of Christian Science we can help our fellow-man and love our neighbor as ourselves.

The *Sentinel*, which comes every Monday morning and tells us to "Watch!" is a welcome visitor, and I want to thank all those who are interested in it, as it helps us who are in the Field more than we can tell.

GRACE BLACK, Franklin, Pa.

God Ever-present and Omnipotent.

I had been struggling for several weeks with the grip, and had seemed to master it when an alarming symptom of heart failure made its appearance. I can truly say: "Though I passed through the valley of the shadow, God was with me," and it was demonstrated that the heart did not govern man's life, but that life was God ever-present and omnipotent.

Being in a boarding house at the time, where there was only one other person who believed in Christian Science, there was a great clamor for a doctor, as they thought I was dying; but I said, "No, I want Christian Science." To those around me there would have been no hope, even from medical treatment, much less Christian Science.

A Christian Scientist came immediately, and I began to revive, continuing steadily to improve until I was a well woman once more.

I feel I have reason to be grateful for Christian Science and the help of the dear ones who were with me during my experience.—FRANCES FERRIS, San Francisco, Cal.

In the fall of 1899, I was working in a hop yard, near Jefferson. On September 26 of that year I hurt myself by lifting too great a weight. I went to a doctor, and he informed me that I was ruptured. He also said that, to be cured I would have to undergo a surgical operation. To this I would not consent.

Soon after, my attention was called to Christian Science by a very dear friend, with whom I was staying. I had heretofore scoffed at and ridiculed Christian Science and the healing it was claimed had been done through it. I now began to see my mistake. I at once began to study "Science and Health with Key to the Scriptures," and now I can say that Christian Science has done for me what the physicians could not do. I have been cured of my rupture by studying Science and Health, and now I can lift as much as I please without it troubling me in the least.

CHARLES A. EPLEY, Sidney, Ore.

Obstetric Notice.

Any one having a degree of C.S.B. or C.S.D., may become an applicant for the obstetric class, which convenes October 21, 1901. This includes the 1901, June class. Applications must be made to Alfred E. Baker, 25 North State St., Concord, N. H. BOARD OF EDUCATION.

Christian Science Lecture.

A LECTURE on Christian Science will be given under the auspices of The First Church of Christ, Scientist, by Hon. William G. Ewing of Chicago, in Symphony Hall, corner Massachusetts and Huntington Avenues, Tuesday evening, October 8, at eight o'clock.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Annual Meeting.

The regular meeting of the Mother Church is postponed until June, 1902. WILLIAM B. JOHNSON, *Clerk.*

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. It is desired that applicants will use the blank forms of application that are issued on and from September 20, 1901.

Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mrs. Eddy Explains.

CONCORD, N. H., September 25,—The opinion of Mrs. Mary Baker G. Eddy, the head of the Christian Science denomination, on the death of President McKinley has been obtained through an answer to the question: "Why did Christians of every sect in the United States fail in their prayers to save the life of our late lamented President?"

Mrs. Eddy says:—

"My answer to this inquiry is briefly this: Insufficient faith or spiritual understanding, and a compound of prayers wherein one earnest, tender desire works unconsciously against the *modus operandi* of another, would prevent the result desired. In the June message to my church in Boston, this year, I refer to the effect of one human desire or belief, equally sincere, unwittingly neutralizing another.

"In the practice of *materia medica*, croton oil is not mixed with morphine to remedy dysentery, for those drugs are supposed to possess opposite qualities, and so to produce opposite effects. The spirit of the prayer of the righteous heals the sick; but this spirit is of God, and the divine Mind is the same yesterday, to-day, and forever, whereas the human mind is a compound of faith and doubt, of fear and hope, of faith in truth and faith in error. The knowledge that all things are possible to God excludes doubt; but differing human concepts as to the divine power and purpose of infinite Mind, and the so-called power of matter, act as the different properties of drugs are supposed to act,—one against the other,—and this compound neutralizes itself.

WHY PRAYER FAILED.

"Our lamented President, in his loving acquiescence, believed that his martyrdom was God's way. Hundreds, thousands of others believe the same, and hundreds of thousands who prayed for him feared that the bullet would prove fatal. Even the physicians may have feared thus.

"These conflicting states of the human mind, of trembling faith, hope, and of fear, evinced a lack of the absolute understanding of God's omnipotence, and thus they prevented the power of absolute Truth from reassuring the mind, and through it resuscitating the body of the patient.

"The Divine power and poor human sense, yea, the spirit and the flesh, struggled, and to mortal sense the latter prevailed. Had prayer so fervently offered possessed no opposing element, and his recovery been regarded wholly contingent on the power of God, the power of divine Love to overrule the purposes of hate, and the law of Spirit to control matter, the result would have been scientific and the patient would have recovered.

"St. Paul writes: 'For the law of the spirit of life in Christ Jesus hath made me free from the law of sin and death.' And the Saviour of man saith: 'What things soever ye desire when ye pray, believe that ye receive them, and ye shall have them.' Human governments maintain the right of the majority to rule. Christian Scientists are yet in a large minority on the subject of divine metaphysics, but they improve the morals and the lives of men; and they heal the sick on the basis that God has all power, is omnipotent, omniscient, omnipresent, supreme over *all*.

"In a certain city the Master 'did not mighty works because of their unbelief,' because of the mental counteracting elements, the startled, or the unrighteous, contradicting minds of mortals. And if he were personally with us to-day, he would rebuke whatever accords not with a full faith, and spiritual knowledge of God—he would mightily rebuke a single doubt of the ever-present power of divine Spirit to control all the conditions of man and the universe.

"If the skilful surgeon or the faithful M. D. is not dismayed by a fruitless use of the knife or the drug, has not the Christian Scientist, with his conscious understanding of omnipotent power, reason for his faith shown by God's works, even under constant stress of the hindrances aforesaid?"—*Boston Journal.*

The Granite Monthly.

The Granite Monthly for October, 1901, contains a beautifully written and interesting article by Henrietta H. Williams, entitled, "Christian Science and the Children." The theme is the teaching of Christian Science to children.

A brief quotation will serve as an index to the scope of the paper:—

"Consider the advantage to the child who begins his career, from his earliest cognizance of the external world, by an immediate acquaintance with Love, in an environment in which fear is never mentioned and seldom thought of, where in his first lispings he learns the word Good, and constantly in the objective realm sees, hears, and feels the effects of this Love and Good in deeds of gentleness, unselfishness, and affection, recognizing beauty everywhere about him because it typifies God's intelligence and power, in limitless, ever-unfolding expression. His earliest language acquaints him with truth, harmony, and kindness. Disease is no more discussed than fear, and the attacks of sin or sickness common to childhood (and from which Christian Science children are signally free) are known simply as discord, and error, or evil, and are neither to be accepted nor yielded to but are to be overcome, put out of thought and expression. His first lesson is prayer. . . . The children's text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, teaches them that 'Obedience is the offspring of Love, and Love is the Principle of Unity, the basis of all right thinking and acting.'"

Under the sub-heading, "How Christian Science reached them in Pioneer Days, and where they are now taught," is given a brief history of the Christian Science Sunday School organized in 1882 by Dr. Asa Gilbert Eddy, Mrs. Eddy's late husband. Under another sub-heading, "Their Understanding and Application of it," Mrs. Williams interestingly sets forth the manner in which children assimilate and apply the teachings of Christian Science, and how through their child-like faith and understanding their elders are often brought into Christian Science. Following this is a concise history of the "Busy Bees." In connection with this history is published for the first time a letter written by Mrs. Eddy to the Sunday School children, dated Concord, April 16, 1891. Following this is a description of "The Mother's Room in The First Church of Christ, Scientist, of Boston, Mass." Brief mention is also made of Mrs. Eddy's gifts to the children, and the article concludes with a benediction from her to the children, quoted from "Pulpit and Press."

Accompanying this article is a portrait of Mrs. Eddy, and also cuts of the Mother Church, of the Mother's Room, and of the Busy Bee badge.

Copies of this valuable number can be had of The Christian Science Publishing Society, at 20 cents per copy, or $2.00 per dozen.

Be not Deceived.

COLERIDGE thus critically analyzes Shakespeare's characterizations of sin or vice:—

"Shakespeare has no innocent adulteries, no virtuous vice; he never renders that amiable which religion and reason alike teach us to detest, or clothes impurity in the garb of virtue. . . . If he occasionally disgusts a keen sense of delicacy, he never injures the mind; he neither excites nor flatters passion in order to degrade the subject of it; he does not use the faulty thing for a faulty purpose, nor carry on warfare against virtue, by causing wickedness to appear as no wickedness, through the medium of a morbid sympathy with the unfortunate. In Shakespeare vice never walks as in twilight; nothing is purposely out of its place; he inverts not the order of nature and propriety—does not make every magistrate a drunkard or a glutton, nor every poor man meek, humane, and temperate."

This analysis is keen and correct. There is no more misleading error than that false sentimentalism which seeks to gloss vice over with a veneering of virtue, or which would cover sin with a cloak of saintliness.

Shakespeare mercilessly lays bare this weak tendency of human nature, and Coleridge truly estimates Shakespeare's conception of that weakness. This tendency is not always due to hypocrisy; it too frequently is, but often it is a mistaken view of sin. This mistaken view is far too often the result of easy indifference or sheer slothfulness. It has ever been a trick of Satan (Christian Scientists will understand the sense in which we use this term) to lull his victims into the "deep sleep" of unconsciousness touching his purposes, for when once his victim is thus somnambulized, Satan knows he is accomplishing his end, and is likely to become the captor of his dupe.

Satan is well aware that he must first approach his well-intentioned victim by smooth and easy stages. He cannot be abrupt with such an one. He must at the start conceal his horns and hoofs—that is, his ulterior purposes. He must take on the guise of the angel of light. He must be wily and plausible. He must *beguile* and *deceive*. He must play now the role he played in the Garden of Eden. He must come with stealth upon his intended victim,—with serpent-stealth,—and smoothly whispering in his ear words of flattery and praise, offer him a better and an easier way.

Ay! Shakespeare was right. There is no virtuous vice, no pure impurity, no good badness. Vice is vice and nothing else. Impurity is impurity, and nothing else. Badness is badness and nothing else.

Let us no longer be deceived by the Satanic, the serpentine, admixture of vice and virtue, purity and impurity, good and evil.

There is but one Good and that is God—omnipotent Love.

Czolgosz' Trial.

MONDAY, September 23, 1901, at 10 o'clock A.M., the trial of Leon Czolgosz, for the assassination of President McKinley at Buffalo, began. It took place in part 3 of the Supreme Court at Buffalo, Criminal Section, before Justice Truman C. White.

Czolgosz was arraigned and pleaded guilty, but under the practice prevailing, this plea could not be accepted, and the court ordered a counter-plea of not guilty to be entered.

The prisoner was represented—under appointment by the court—by Ex-Judges Loran L. Lewis and Robert O. Titus, and Carleton E. Ladd, Esq., while the state was represented by District-Attorney Penny and Assistant District-Attorney Haller.

A jury of twelve men was soon selected and such evidence as was necessary to prove the commission of the deed was formally introduced. No testimony was presented on behalf of the prisoner. Judge Lewis addressed the jury on his behalf, the chief point of his remarks being in the nature of congratulation that the prisoner was tried in a court of justice in an orderly and dignified manner, surrounded with all the safeguards known to the law. The jury were briefly addressed also by the counsel representing the government.

The trial was ended by 3.26 o'clock P.M. of Tuesday, September 24. After an absence of thirty minutes the jury returned a verdict of murder in the first degree.

Thus formally and without sensation was conducted and finished a trial which, in some of its aspects, is among the important criminal cases of the world.

From every human standpoint the speediness with which the case was brought to trial, and the fairness and deliberation with which it was conducted, are matters for congratulation.

The degree of the crime was such that the criminal, under the law, must be sentenced to execution. This sentence was pronounced by the Court Thursday, September 26. The sentence was that the prisoner be electrocuted during the week beginning October 28, 1901.

When asked if he had anything to say why sentence should not be pronounced, the prisoner said: "There was no one else but me. No one else told me to do it; and no one paid me to do it."

And so ended that part of the great tragedy. May the world never again witness its like.

The Metropolitan.

The Metropolitan Magazine for October, 1901, contains a short article from the pen of Mr. W. D. McCrackan, entitled, "Are Faith and Reason Reconciled in Christian Science?"

The paper, though brief, is clear and convincing. It should, and doubtless will, do much good in the way of clearing up certain prevalent misconceptions of Christian Science.

Notices.

We have set apart the page of the *Sentinel* just preceding the editorial page for the publication of notices of an official character. There they will always be found. We deem this better than to have such notices sliding about irregularly on the editorial pages, or elsewhere. The reader's eye will easily catch them when he knows just where to look for them. We call especial attention to the notices, in this number, of the obstetric class and Judge Ewing's lecture in Boston.

Memorial Services in the Branch Churches.

As we stated in our last number, memorial services in various branch Churches of Christ, Scientist, were held. We should be glad, if our space would permit, to notice them all *in extenso*, but they were too numerous to make this possible. We shall have to content ourselves with extracting from some of the addresses delivered on that occasion. We are glad to see that in some places union services were held by the different branches existing in such places.

LONDON, ENGLAND.

After the close of the morning service on Sunday, September 15, 1901, in First Church of Christ, Scientist, London, England, those present were invited to remain for a few minutes.

Mr. William N. Miller, the First Reader, then said:—

"It is but fitting that we should give expression to our sincere sorrow for the death of the late President McKinley and our unqualified condemnation of the heartless crime that caused it.

Digitized by Google

"While, as Christian Scientists, we desire to have our thoughts filled with life instead of death, yet we are not lacking in human sympathy and its manifestation. Christian Scientists pre-eminently comfort the afflicted as well as heal the sick.

"A resolution, which I am sure will express the thought of all present, will now be moved by one of our members."

It was then moved by Captain Baynes and seconded by Mrs. Thomson:—

"That the members and adherents of this church—First Church of Christ, Scientist, London, England—desire to express their heartfelt sympathy with Mrs. McKinley and the family of the late President McKinley and the citizens of the United States of America in their great loss through the sad demise of the President, and their deep detestation of the base and heartless crime which occasioned his death, and direct that a copy of this resolution be forwarded to Mrs. McKinley and the government of the United States of America."

In supporting the resolutions Mrs. Thomson said: "I do not think any words of mine are needed to give expression to the feelings of this country and of this church on this occasion. One of the greatest men who ever filled that great place once said these words: 'With malice towards none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in.' We know, as Christian Scientists, that if we do that faithfully, we are hastening the dawn of that glorious day of which we have just read, when the kingdom of God will come to every individual consciousness, when each will know that 'there will be no more death, neither sorrow nor crying, for the former things are passed away.'"

The resolution was then passed unanimously—all present rising, and the meeting dispersed after singing the 154th hymn.

It may be interesting to note that the late President's favorite hymn, "Nearer, my God, to Thee," was sung by the congregation just before the resolution was passed, although at the time they did not know that it had been in his last thought.

New York City.

In Greater New York appropriate services were held in all the branches, although we have received accounts of only two. In these we have a synopsis of the remarks of only one of the speakers—Mr. Simonsen.

In First Church of Christ, Scientist, Brooklyn, the Rev. S. E. Simonsen said in part:—

"Never before in the history of mankind have mortals beheld such a scene as we behold to-day,—the whole civilized world in mourning. Never before has man's heart beat in such unselfish unison with his fellow-man as at the present hour, and when we are asked, 'Who is this man whom all the world mourns?' the answer comes, that he is a man born in a humble home, under limited circumstances. But we know in Truth, that the home that could produce such a man as our dear departed President, must have been a home of the highest type. It was a Christian home. It was a home where God was worshiped in spirit and in truth. A home where he was taught in early childhood to do God's will, and to love his Master. His mother, when asked about the President's childhood days, said that he attended school and church, and obeyed his parents. These three points are the cardinal points in the foundation of his noble character,—education, religion, and obedience. He was a leader among men, but a leader of the highest type,—not one who forced himself upon the people, but one who made himself so valuable to the people, that they inevitably chose him as their representative and leader. The career that was mapped out before him was not an easy one by any means. It often required him to take a stand, in the face of great obstacles, but he was a man of great courage, a man that dared to follow his own convictions, irrespective of what others might think. His future political career, at times, seemed to be in jeopardy, on account of this stand, and when friends pointed this out to him, he said, 'If this be so, let it come, but I must stand true to my principle, and to what I believe to be right.' Men had confidence in his honesty and integrity, and when seeming financial reverses came, and his future seemed ruined on account of this, his friends came to his rescue because they had implicit faith in his honesty and integrity as a Christian gentleman. He held, as we know, the highest offices that are the gifts of this people, and he performed his duty so well that when his first term as President had expired, he was given the second, not because all the people who supported him believed in his party, but they had implicit faith in the man. They knew that he was safe, and that the country was safe in his hands. His presidential career was full of crises of the gravest kind, but all the world knows to-day that he piloted the ship of state through the stormy sea with perfect safety, bringing this nation in touch with all the world, as it had never been before. He stands pre-eminent among all our great leaders, and no President has ever exerted such an influence on other nations as did President McKinley. Some will say that circumstances made this possible for him, but we know that he, as it were, created circumstances that compelled this to come about, and to-day he is loved and esteemed by all civilized nations of the world. They all mourn our loss and thank God, with us, for such a man as Mr. McKinley. The whole country, and in fact the civilized world, felt that they could trust a man who had that tender, deep, and abiding love for his mother, and that tender care and unfaltering devotion to his life-partner, which circumstances brought out so grandly before the public.

"These glimpses of his family life, bring out before us something of the depth of love, and true manliness, and the true Christian character that was his. His last public address will go down in history as one of the greatest that he ever delivered."

Chicago.

From the able address of Mr. Edward A. Kimball delivered at the services held in First Church of Christ, Scientist, Chicago, we make the following extract:—

"We are met here, dear friends, within the shadow of a nation's grief. The dark hand of evil has made a hideous assault upon one of the noblest of men, and humanity stands aghast in contemplation of a senseless, monstrous crime and its dire consequences.

"Man's inhumanity to man, which has been a murderer from the beginning, still murders; the race continues to pay the penalties of its unloving strife; tears flow; heads are bowed, and we are again reminded that 'when Christ reigns, and not till then, will the world have rest.'

"Although we execrate this wretched deed, we have come here in no mood of anger to cry out for vengeance or violent reprisal. Let us rather emulate the Christian words of our fallen chieftain. Let us have a righteous pity for a pitiless man 'whom Satan hath bound,' and, remembering that 'vengeance is mine, saith the Lord,' let it be ours likewise to say, 'May God forgive him.'

"The history of this hour clusters about a man whose life was of such surpassing purity and sweetness that no words or flowery speech can possibly ornament its simple grandeur or add to the fragrance which perfumes the memory of him who was ever intent on the business of doing good.

"The earthly career of President McKinley lies before you like an open field. There is no need that I should linger here to paint the lily; no need that I should seek to reinforce your respect and love for this genuine man and for that which made him lovable. When history dips its pen to inscribe the long list of his virtues and the annals of his

Digitized by Google

righteous life, it will declare that in the midst of a wicked and perverse generation, he was unsullied; when surrounded by the foam and turbulence of human passion and hatred, he loved much; when assailed by seething temptation, he yielded not.

"In the hour of danger he was brave; in the time of excitement he was calm, wise, and prudent. It will be said that this Christian life was hallowed and glorified by the practice of charity, mercy, and forgiveness; that he was slow to wrath, tender-hearted, faithful to duty, to family and friends, faithful to mankind and to God.

"As we survey the many temptations and frailties which beset the pathway of our fellow-men, the storms which shipwreck character and blast the faltering manhood of the age, is it any wonder that with one accord the world unites to proclaim its joy over one true man who was faithful unto the end? Is it a wonder that we mourn the loss to this generation of one whose life furnishes pretext for the hope that through Christian grace mankind may some time be altogether lovely?

"In this hour, when evil seems so real and sorrow hard to bear, our hearts go out to that bereaved wife whose tender, loving companionship has been so ruthlessly shattered. Oh, may she realize that the divine presence rests upon her always. May He who saves even unto the uttermost, lead her safely through these troubled waters and bestow upon her an eternal, satisfying consolation.

"Coming here as we do, to add the flowers of our gratitude and love in memory of this illustrious man; coming perchance to shed the tear which falls in compassionate sympathy, and to lament the rude shock which has sorely wounded the world, we would surely miss the lesson of this day and this deed if we remained here but to mourn and give ourselves up to unavailing grief.

"It has been said of the dying President that in the hour of his extreme emergency, he uttered the words: 'Thy will be done,' and murmured to himself the verses of that sublime hymn, 'Nearer, my God, to Thee.'

"Some of you who have been healed by Christian Science, know what it is to sit face to face with that which seemed to be impending death, and have felt the deep emotions that surge to and fro at such a time; and now you know that the man whose Christian living has led him to the peaceful utterance of such trust in God, has on earth traveled many a league towards heaven.

"The event which we deplore touches us with severe and startling impact. The slumbering thought is aroused, and once again we are forced to recognize the fact that the world's social and political system is sadly awry.

"The two extremes of society—the despotism and selfish greed of power and wealth on one hand, and the sullen, distracted, supplicating poor on the other hand, like upper and nether stones,—have been grinding against each other in irritating and destructive friction. By a strange anomaly of fate the humane man who stood on the middle ground of moderation and good-will to men, is crushed between these stones—a martyr to a social system ungoverned by God.

. . . . . .

"When all men shall say, 'Thy will be done,' and mean it, then will dawn the present and eternal welfare of us all, and when the universal prayer shall be 'Nearer, my God, to Thee,' the door of our salvation will open and all will be satisfied with the government of God.

"According to Christian Science the remedy for all evil lies in the power of Mind—the power of right thought which is in the image and likeness of God—of divine Intelligence.

"The scene of the redemptive work which is to transform society is within you. The enlightenment of your own consciousness and the purification and exaltation of your own understanding is the first object to attain. If you would make one supreme effort to reform the world, reform yourself, and throw the weight of your own Christian and righteous thought and example on the right side, then exert the power of Christian Science against the errors of human belief and eliminate them.

"Let us learn first what it means to be near God ourselves and to be governed by divine law. He who peers timidly towards a remote or unknown somewhere, in hopes to be near God, as though He were isolated and aloof, finds Him not, and misses the true sense of divine immanence.

"Christian Science teaches us that God is always 'God with us.' It means Good with us; Life with us; Wisdom with us. It means the power and action of Good with us. It means health, dominion, abundance, harmony, and completeness with us. It means Love with us—a loving and beloved brotherhood. It means the guidance of divine Love and all that is included in its pure embrace.

It is this God that answers prayer, heals the sick, and saves sinners. In this near God only can we 'live, and move, and have our being.' If men would change their sense of God as being an austere person who afflicts, to the understanding of the infinite presence of all that means boundless good and the perfection of being, then they would instinctively, yes, ardently, turn thitherward the footsteps that have been tired because of sin and ignorance and pain, and speedily find Heaven within.

"Turning from the prevalent assumption that this lamented death was of providential enactment, instituted or permitted for any good purpose whatever, we proclaim that God is Life and always means life for man.

"We are thankful at this time that Christian Science is extricating us from the desolating supposition that God is the procurer of death or any other evil, and so acquainting us with the divine nature that we may with ever-growing fervency and cheer utter the supreme longing, 'Nearer, my God, to Thee.'"

Detroit, Mich.

At a memorial service held in First Church of Christ, Scientist, of Detroit, Mich., Mrs. Annie M. Knott, First Reader, said in part:—

"The members of this Church, in common with the Mother Church and other branch churches, meet to-day in heart-felt response to the proclamation of President Roosevelt. It is an hour when the people of this country should ask themselves how they can best measure their loyalty and affection for those who are appointed to rule over them.

"The people of this nation have so advanced morally, intellectually, and spiritually that no man can be called to the presidential chair who does not embody and express in some measure the domestic virtues which are the only true foundation for the nation's greatness, and at the same time something of the vital spirit of Christianity. Perhaps no words can be found which would more fittingly express Mr. McKinley's character and attainments than those written by Tennyson of one of their great soldier statesmen at the time of his decease:—

> Oh friends, our chief state oracle is mute,
> Mourn for the man of long enduring blood,
> The warrior, statesman resolute,
> Whole in himself a common good.
> Mourn for the man of amplest influence
> Yet freest from ambition's crime,
> Rich in saving common-sense,
> And, as the greatest only are,
> In his simplicity sublime.

"Perhaps the American people might learn some useful lessons from European nations in their sincere affection for their rulers. Do our people rightly appreciate the great burden of cares and responsibilities which rests upon those who hold the highest offices of state? Would not the love of the people make the burden lighter and the possibilities for good infinitely greater, and might not many of the vexed social and political problems of the present day be thus solved? We should certainly strive to under-

Digitized by Google

stand that the divine government is both real and permanent,—that God cannot be shut out of our human affairs, and as we understand this more clearly we shall look for, and ultimately witness, that consummation devoutly to be wished; viz., our statesmen pure and incorruptible, sustained by the affection and trust of a free and happy people.

"In closing we quote again from the English laureate:—

All is over and done,
Render thanks to the giver,
Oh nation, for thy son."

NEW ORLEANS, LA.

Services were held in First Church of Christ, Scientist, at New Orleans. From the New Orleans *Picayune* we take the following account:—

"As an introduction the Second Reader then read extracts from an editorial in the morning *Picayune,* showing the high esteem in which the people of the South held President McKinley, and how they, with one accord, would echo his own words to a southern community, delivered a few years ago in Atlanta:—

" 'Reunited; one country again, and one country forever! Proclaim it from the press and pulpit; teach it in the schools; write it across the skies! The world sees and feels it; it cheers every heart, North and South, and brightens the life of every American home. Let nothing ever strain it again. At peace with all the world and with one another, what can stand in the pathway of our progress and prosperity?' "

The editorial's final comments were:—

"It is not difficult to see why the people of these southern states had conceived and cherished a high regard for him who relieved them from the ban of sectionalism, and why to-day, when his ashes are being committed to the tomb at his late home in a far northern state, they are shedding their tears and paying funeral honors under these southern skies. There is no mystery here. It is the love begotten of love."

BUFFALO, N. Y.

First Church of Christ, Scientist, of Buffalo, held appropriate services. Mr. Charles D. Holcombe, Second Reader of the church, delivered an address in the course of which he said:—

"William McKinley has left us a united country. To him there was no North, no South, but a United States, a united people. At his healing touch all differences disappeared, and in their place was a bond of union strong and sweet, a union which to-day lifts a united voice in grateful homage to eulogize the memory of one so near and dear to us all. His first thought was always of others. His words of forgiveness and simple truth manifested the spirit of the man. Down the centuries of what the world calls time, those words come to us like the echo of another voice, 'Father, forgive them; for they know not what they do.' The Master, whose strength and gentleness was so truly exemplified in his own life, had trod that path before him, and in tracing the footsteps of his Saviour, the Christ-like spirit of forgiveness and trust simply found expression in words like those of his Master as a natural sequence.

"May the life of William McKinley be the power of a great inspiration in the hearts of our people, and a never-ending redemptive influence in the affairs of our beloved country. And we know that this good, true man, like Enoch before his translation, 'had this testimony, that he pleased God.' "

CINCINNATI, OHIO.

In First Church of Christ, Scientist, of Cincinnati, Miss Emma A. Estes, in the course of her remarks, said:—

"Three times in the annals of our history have we been called upon thus to mourn the loss of our chief executive. May we to-day pray with fervent hearts that no more of our dear ones be laid as human sacrifices upon the altar of ignorance, bigotry, anarchy, and error, but that the whole world, by a baptism of repentance, may awaken to the necessity of understanding and becoming amenable to the true government of divine Love—Christ, Truth. 'Ye shall know the truth, and the truth shall make you free.' "

KANSAS CITY, MO.

In First Church of Christ, Scientist, Kansas City, Mr. Charles E. Finlay made a brief address from which we quote the following:—

"To-day our republic is in tears. This is, indeed, a sad occasion, but be not depressed or cast down. 'Life and death never mingle.' Life is real. Death is unreal. Our President is not dead. Good is enduring and everlasting. God rules and governs the whole world, and man is the highest type of His creation. God is life. A leaden bullet cannot separate man from his creator. Ignorance and hatred provoked this awful tragedy, but where God rules there can be no hatred, for His law of Love is supreme. Where infinite wisdom reigns, there can be no ignorance. Where life is, there can be no death. Our President's true existence was, is, and always will be in divine Mind, where

There is no sorrow, nor any sighing,
Nor any tears there nor any dying."

PITTSBURG, PENN.

In this branch the First Reader, Charles Hunter Miller, prefaced the service with the following remarks:—

"*Friends:*—We gather here with hearts oppressed by the culmination of the act of an assassin. The beloved President of the United States, William McKinley, to mortal sense lies silent in the embrace of death. In countless numbers of pulpits to-day will be preached to Protestant and Catholic, Hebrew and Gentile, native and foreigner, sermons bearing on this tragic event. Pastor, rector, priest, and rabbi, will in church, cathedral, and synagogue, deliver tearful, eloquent tributes to the worth of him we all loved. In spirit we may join in these tributes.

"In the Christian Scientist's Church the Bible and the Christian Science text-book are the only preacher. The sermon of the impersonal pastor alone is preached. We do not to-day depart from this custom, and yet there are no assembled worshipers that more truly than we love our country, more truly reverence and obey its laws, have greater abhorrence of the spirit that would seek to right evils by manifesting the spirit of Cain, the murderous spirit. To no assembled worshipers to-day comes sweeter consolation of the gospel than comes to us. Our silent prayer may be for us all a truly sweet communion with Infinite Love."

ST. LOUIS, MO.

The First Reader in this branch, James A. Logwood, spoke in eloquent terms of the President. He said in part:

"With most sincere respect and in common with all religious bodies, more than five hundred Christian Science Churches and Societies met to-day, in compliance with the proclamation of the President of the United States, to hold appropriate services in reverence and honor of our dead chief executive, President McKinley, and with deep, loving compassion for his bereaved family and our nation.

"In our text-book our beloved Leader states, 'Trials are proofs of God's care.' This statement was born of her own individual and sorrowful experience, and thus we see this remarkable statement exemplified in our lamented President. When face to face with the last enemy to be destroyed he gave the world a deeper insight and a higher appreciation of the pure, burnished gold of his noble Christian character. With him it was not 'an eye for an eye and a tooth for a tooth.' In his own language, he said of the deluded culprit, 'Do not let them hurt him. May God forgive him.' And again, when the broken reeds of earth had failed to resus-

Digitized by Google

citate, his thought sought refuge in God, finding expression in the beautiful and inspiring hymn, 'Nearer, my God, to Thee.'"

Washington, D. C.

Union services of the two branches at Washington, D. C., were held. In the course of the brief eulogy delivered by Mr. John F. Linscott he said of the late President: "His elevation to the chief magistracy was no accident;" also that he found in the President's meekness, courage, gentleness, integrity, and general manhood such reflection of the divine attributes as to fit him completely for the place he has taken in the world's history.

Scranton, Pa.

Mr. D. N. McKee, First Reader of the Scranton branch, delivered a touching eulogy from which we take the following:—

"A great man and a Christian citizen has fallen. The genius of our country, the true spirit of freedom, has been assailed. It is fitting that Christians who are demonstrating the liberty of the children of God should meet and pay tribute to the memory of this good man and learn, perhaps, the lesson of his burial. He who assailed William McKinley assailed also the priceless liberties symbolized by our national flag. We look upon our flag and read a history and a prophecy. It is an emblem of freedom, of strife, and of larger liberties which are yet to come; its bars of white and of red are fitting symbols of our successive steps of freedom already won, but won by our successive baptisms of blood. The white stars on the azure blue of heaven are prophetic symbols of a bloodless peace that through the spiritual Christianity of our people shall come to all the world from heaven. Here let me reproduce the prophet's vision of that peace: In that day no anarchist shall be there nor any ravenous beast, nothing shall hurt nor destroy in all that holy mountain, the innocent shall be there and the selfless shall be there, for the life that is love shall fill the earth as the water covereth the sea. A spiritual Christianity under the American flag is haply that providence of God, which shall repress anarchy and bring out a diviner order in human affairs. In this country it shall not only enunciate but exemplify in human practice that law of love which even now

> O'er thrones and globes elate
> Sits empress, crowning good, repressing ill."

Cambridge, Mass.

From the remarks of William P. McKenzie, First Reader of the Cambridge branch, we extract the following:—

> "Oh, sometimes gleams upon our sight,
> Through present wrong th'eternal Right;
> And step by step, since time began,
> We see the steady gain of man.

"Amid the mourning in our country, and among other nations, one good thing rises supreme; it is the recognition of manhood and love for its worth. The routine of official duty, political theories or even prejudices, what are they but as raiment of changing fashion easily thrown aside as transient, while the world sees as eternal the fidelity to home love, the honesty to public trust, the Christly gentleness that forgives even its slayer? Before that apocalypse of developed manhood how much of a nonentity appears the coward who represents its opposite. Will not the world take the man for a model, and be attracted from useless cruelty and heartless destructiveness, ever towards the higher beauty of the life of service and brotherly love?

Brotherhood among men is implied by the American flag appearing on every ship of the German navy, and by the crape on the arm of every British soldier. One can feel the thrill of kindness; and obedience to the law of kindness is the sure destruction of anarchy.

"It is the privilege of Christian Scientists to comfort those who mourn, and we know that only pure love can do this. Therefore let us free our minds from any contagion of resentment against the agents of crime; let us be free from any harsh judgment, so that the whole area of thought may be full of the sunlight of kindness and tender love. So shall we bless with assurance of divine Love, the bereaved home and stricken nation.

"Let us not give attention to the perversion of honor and manliness shown in a criminal, but rejoice that manhood is enduring and all good eternal. So severe is sin's own punishment of itself that we can add nothing to it; but while as yet the world's grasp on eternal good is tremulous, we can re-assure the hearts of men by our confidence in Life and Love, by our reliance upon this eternal Mind, the inexhaustible fount of good."

Syracuse, N. Y.

From the remarks of Mr. Charles L. Ohrenstein, First Reader of the branch at Syracuse, N. Y., we publish the following extract:—

"It will not be needful to eulogize at length, one so near and dear to all, one whose patriotic deeds are newly written in our hearts, deeds that will enrol his name forever among the great and good of earth.

"Without dwelling on the atrocious crime committed in our midst, it would be impossible to find words that should express our condemnation of it, or the doctrine that prompted it—anarchy.

"That a government like ours, which has brought the greatest blessings to mankind, which has given the most absolute and perfect liberty to each and all, which is the Messiah of freedom to the governments on earth,—that this government should have within its boundaries the advocates of its destruction is beyond all belief. Being and government,—the law of being,—as Christian Scientists know,—are co-existents, and no government has room in it for the doctrine of non-government, which anarchy is."

Logansport, Ind.

Judge S. T. McConnell delivered an eloquent eulogy at the Logansport, Indiana, branch, from which we make the following extracts:—

"For the third time within the memory of many of us a President of the United States has fallen and perished at the hand of an assassin. Two of these were gifted and honored sons of the great commonwealth of Ohio, James A. Garfield and William McKinley.

"On the day the bullet did its fatal work, William McKinley may well have been and was, a truly happy man. He held the highest office in the gift of any people.

"He was made twice happy by the 'glad hands' and hearty greetings of a multitude of his countrymen. And while about to greet the cruel wretch, nameless forever, he was slain. Oh, the pity of it! He

> Hath borne his faculties so meek, hath been
> So clear in his great office, that his virtues
> Will plead like angels, trumpet-tongued, against
> The deep damnation of his taking-off.

"He was a soldier brave, faultless, and capable as a commander of men.

"He was a patriot, proud of his country, alive to its dangers, an American in every sense of the word.

"He was a Christian gentleman with a tender grace that charmed all who came in contact with him, magnanimous, even to the dastardly wretch who sent him to his death. His infinite love for his delicate wife was the romance of his manly life that has won him the love of all the nation.

"Mr. McKinley is an immortal example of how greatness and goodness may go hand in hand in life's journey. His achievements demonstrated his greatness. He had no mean part in making the United States the great and progressive nation that it now is, the greatest, the most humane and most progressive in the world.

Digitized by Google

"Great in life, he was surpassingly great in his death. For no cause, in the very frenzy of wantonness and wickedness, by the red hand of murder, he was thrust from the full tide of this world's interests, from its hopes, its aspirations, its victories, in the presence of death, and yet he did not falter.

"The assassin of McKinley has destroyed his mortal body but the principles,—life, truth, and love,—reflected in the personality of our beloved President are immortal, and beyond the touch of the assassin's bullet or dagger. While envy, jealousy, and hatred exist in mortal mind 'It must needs be that offences come; but woe unto that man by whom the offence cometh!' "

RACINE, WIS.

We extract the following from the remarks of Mr. William Van Arsdale, First Reader of the Racine branch:—

"May the nations of earth and all peoples, may our nation and our people, may our rulers and leaders and may we all, learn to love the law of Christ which is the law of righteousness and Truth, for through this law alone can we be made free.

"May the light of mercy and justice and peace, of goodness and Truth and Love be so reflected by those who strive for it, that the destruction of evil will be hastened.

"May the Christ-Truth shine so clearly that the powers of darkness will shrink back and flee before the brilliancy of its appearing. It will be in this way that we can best honor and revere the good example and life of our beloved President."

UTICA, N. Y.

In the course of her address at the Utica branch Miss Marie M. Adams expressed sympathy for the nation, and particularly for Mrs. McKinley. She said this is a service of love and of life. She dwelt on McKinley's greatness and what constituted it. These qualities cannot die. They live on to ennoble the lives of all other men. They call to the people to learn lessons, to think better thoughts and live better lives, in order that the instinct of evil in human lives may be destroyed and we finally reach a time when no such crime can be committed. The crime itself created no greater shock than the thought that it could be committed in the United States. We must have a better idea of freedom and more unity with God. This will prevent crime. In our sorrow we must not forget to try to support the nation with our prayers and right thinking for the one on whom the burden of state has fallen. Do not indulge in unwarranted and unjust criticism, as these pull down instead of building up. With right thinking and right living we look to the time when this world shall become the kingdom of our Lord and of His Christ.

RIVERSIDE, CAL.

At First Church of Christ, Scientist, Riverside, Cal., Dr. A. A. Sulcer said in part:—

"To the proclamation of our Chief Executive for the assembling of the people of the United States at their respective places of worship to-day to pay grateful tribute to the memory of the late President William McKinley, whose life, public and private, was ever an incentive to higher, purer, and nobler purposes, we, as Christian Scientists, most cordially and sincerely respond.

"Such was the universal love for President McKinley that his tragic passing away has draped a world in mourning. Certainly no greater or more heartfelt tribute of respect could be paid to a mortal man.

"Our friend and brother gave much to the world in his example of noble manhood and in his wise, unsullied statesmanship, and in departing took nothing away; for all that we loved, all that was lovable in him, was the good he reflected, and that good is eternally present. The most perfect ideal that was ever presented to the world said. 'Why callest thou me good? there is none good but one, that is, God.' It should be our ceaseless prayer to know more and more of the omnipotence of that good, and less and less of self; to realize more the divine possibilities of man created in the spiritual image and likeness of God."

BALTIMORE, MD.

The two branch churches in this city met together and held a joint service, and passed appropriate resolutions.

TORONTO, ONT.

Just as we go to press we receive a brief account of the service at Toronto, as published in the *Toronto Evening News*. We quote:—

At the Sunday and Wednesday evening services of First Church of Christ, Scientist, Toronto, appropriate remarks were made by the Readers and other speakers, referring to the exalted character and exemplary life of President McKinley; his great influence for the advancement of the American people, and the unification of the nations; his sincere and unswerving devotion to God and his country; his kindness of heart, and forgiving spirit towards his enemies, even to those who would take his life.

At a special meeting of the congregation the following message of condolence was authorized by a standing vote, and wired to Mrs. McKinley at Washington, D. C.:—

"The congregation of First Church of Christ, Scientist, Toronto, send you their deep sympathy in this, your solemn hour, and pray for the light of Love to unfold to you the omnipotence and strength of the eternal Presence. 'He shall give his angels charge over thee, to keep thee in all thy ways.' "

JOHN H. and ISABELLA M. STEWART, *Readers.*
JOHN O'CONNER, *Clerk.*

Services were held in many other branches, but our space prevents any further notice of them, much as we wish to publish them.

Gradatim.

I COUNT this thing to be grandly true,
That a noble deed is a step toward God,—
Lifting the soul from the common clod
To a purer air and a broader view.

We rise by the things that are 'neath our feet;
By what we have mastered of good and gain;
By the pride deposed and the passion slain,
And the vanquished ills that we hourly meet.

We hope, we resolve, we aspire, we pray,
And we think that we mount the air on wings,
Beyond the recall of sensual things,
While our feet still cling to the heavy clay.

Wings for angels, but feet for men!
We may borrow the wings to find the way,—
We may hope, and resolve, and aspire, and pray;
But our feet must rise, or we fall again.

Only in dreams is a ladder thrown
From the weary earth to the sapphire walls;
But the dreams depart, and the vision falls,
And the sleeper wakes on his pillow of stone.

Heaven is not reached by a single bound;
But we build the ladder by which we rise
From the lowly earth to the vaulted skies,
And we mount to its summit round by round.

JOHN GILBERT HOLLAND.

Religious Items.

The Standard thus editorially eulogizes the late President:—

"The grief of the people knows no distinction of party or section. The loyal heart of the new South feels the blow as keenly as the North. The West mourns with the East. The world sympathizes with the American nation in its loss. President McKinley has unquestionably won the heart of the people more than any president since Lincoln, and the recognition came in his lifetime, as Lincoln's did not. The startling and unprecedented events of his first administration and his popular policy throughout had much to do with this general admiration of Mr. McKinley. But his personal qualities, his apt and stirring public addresses, most of all his hearty and courteous reception of all with whom he came in contact, won for him a kind of affection among multitudes of his supporters seldom accorded to a political leader. He had the confidence of his entire party, and belief in his sincerity and conscientious devotion to duty extended far beyond partisan boundaries. As a man, particularly as a chivalrous and devoted husband, he stood as a high type of Christian statesmanship. His piety was not of a sanctimonious sort, but his frequent public and private utterances touching upon religious subjects showed plainly his warm sympathy with religious and missionary enterprises."

A writer in *The Christian Advocate* says regarding the content of spiritual poverty: "Those who have attained most in the kingdom of grace are the ones that are least content to stand still in their present spiritual state. They are ever pressing forward with zeal and earnestness to attain something higher and better in the spiritual life. 'Not as though I had already attained, but I follow after—I press forward,' is the language of one who had made large attainments in the spiritual life, but who was far from being contented with what he had attained. But the morally and spiritually poor are very well contented to remain as they are, and their content is always proportioned to their spiritual poverty. It is only because they have not much religion or spirituality that they are content to remain as they are. . . . Their content is due to their spiritual poverty. It was a saying of Sir James Mackintosh that 'it is right to be contented with what we have, but never with what we are.' The man who has attained a spiritual state where he is content to remain *statu quo*, has evidently been caught in a snare of the devil. And here again the best indication of increasing spirituality is a spirit of discontent with present attainments. Men who are perfectly contented with the states in which they are will never aim at or strive after any state that is higher."

Books are like persons in a number of particulars. They have characters. They create an atmosphere that is felt by all who associate with them. They impress after their own kind. It is not difficult to determine how this is done. A good man or woman talks good things and lives accordingly. They create ideals in other minds. The young form in their imaginations pictures or images of these good men and women which become to them models after which they will try to shape their own lives. So bad men and women, and those who are indifferent to the higher standards, mould into their own likeness those who often frequent their company.

The leading characters portrayed in books influence readers in the same way, either for good or evil; strongly sketched characters become to the imagination much like real persons. . . . In this connection may no reader of these lines forget that the greatest and best book the world has seen is the Book of Books. As a teacher, counsellor, and inspirer of the young and old alike that book has no peer.

The Universalist Leader.

The Congregationalist and Christian World calls Sunday, September 15, "An Unparalleled Sunday," saying, "In the memory of many living there has never been a Sunday like the last. . . . Never was the essential Christian character of our country better evidenced than in the throng of worshipers last Sunday and in the words of consolation, interpretation and incitement to better living that fell from the lips of ministers of God. The essential unity of Christendom, too, was made manifest. No Methodist Church thought of claiming Mr. McKinley as belonging specially with its fellowship, while the tributes from every branch of the Protestant communion and from the Roman Catholic churches, almost without exception, showed that in the presence of the elemental realities of life and death men of varying religious classifications are one."

By defining revelation too narrowly, the Church has cheated us of a great part of our birthright. Why does not every addition to human knowledge affect us like a revelation? Why does not each perception of duty command us like a Voice from heaven? Why does not an awakened feeling of self-respect or self-reliance operate like an assurance: "The Lord is with thee"? Why do not friendship, love, veracity, justice, honesty, and all the genuine every-day virtues take rank as graces of the Spirit? Why does not a luminous thought touch us with happy awe, as if we had been honored with a celestial vision? So it would have been in ancient days, else had we never heard of divine messengers or of sacred Scriptures. The best use we can make of the Bible is to accept it as a testimony that he who spoke in time past to "holy men of God" will still speak to all who are fit to receive the messages of truth and duty.—CHARLES G. AMES.

On the subject of "Belittling Things" *The Christian Register* says: "There is no character so sacred and revered through great public services, untiring labors, unselfish devotion to the cause of humanity or of country, that it cannot be made to look small and mean by some penny-a-liner or officious gossip who puts a microscope over the little foibles, faults, and frailties that are incident to human nature. How many a cold douche has our enthusiasm taken by the whisper of the belittler who would befoul the very niche where with artless joy we have enthroned our hero! . . . Something excellent and worthy of imitation has been half spoiled for us by a tongue that loves to pick holes in great reputations, to even up the level of its own insignificance by dragging somebody down."

In an article entitled "The Delectable Mountains," *The Christian Register* says: "It was one of these supernal heights that Moses climbed when he received the tables of the law and saw the burning bush. It was here that Jesus was transfigured when his face shone white with glory. It was here that Saint Francis of Assisi was ravished and lifted up toward heaven. The burning glory of God shines into the soul of man. These rays pierce us from the Delectable Mountains. The very tradition of such splendor and fulness of experience, if we have not experienced it ourselves, has in broken, reflected gleam like the sun's pale ray thrown from a prison wall into some convict's cell, is still the earnest of man's highest dignity and worth. It is the God-consciousness made manifest and present in the soul."

The Examiner thus feelingly refers to Mr. McKinley:—

"In his personal characteristics Mr. McKinley was one of the most lovable of men. Always courteous, always fair, no leader in the House was ever more thoroughly liked; none ever provoked less of personal antagonism. And these winning traits he carried into every department of life. His home was the sanctuary of all that is sweetest and tenderest in the domestic relation. He was the ideal American husband, faithful to the wife of his youth, tenderly solicitous for her happiness, and chivalrous to an unusual and most beautiful degree in all his bearing toward her. The home-loving American people will fondly cherish the memory of his manly devotion to the gentle companion of his heart and home."

Love is the whole of the true Christian life. Whatever is not of love is not of Christ. Love is always gentle. It is patient, thoughtful, kind. It is forgiving, forbearing. It seeketh not its own. It doth not behave itself unseemly. It is not easily provoked. It is always ready to serve. There are many people, however, who seem never to have learned anything better in life than to expect others to live for them, to do things for them, to serve them. But that is not the Christian way. Jesus himself said, "The son of man came not to be ministered unto, but to minister." When we get into this attitude toward others, all others, and begin to live to serve, to help, then we are Christians.

Wellspring.

A writer in *The Universalist Leader* says: "Christ's character has been a transmuting influence during the past nineteen centuries. It stands clear against the background of the ages,—more palpitatingly real than any other spiritual fact in the realm of creation. Admiration and devotion make it the central sun or moral solar system. Thus auspiciously placed it sends forth its beautifying beams."

It is not enough to have the love and do the duty in silence. We live not by bread alone, but by every word that proceedeth out of the mouth of those we love. Out of the mouth,—it is the spoken love that feeds. It is the kindness offered that furnishes the house.—W. C. GANNETT.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

The agrostology division of the Department of Agriculture in the report of its work since organization in 1895, states that of the unoccupied public lands about 365,400,000 acres are not regarded as fit only for grazing purposes, and in addition there are 124,300,000 acres of forest land, the greater portion of which is also used for grazing. Within the United States are grown over one thousand species of grasses, and perhaps one hundred or more other plants of sufficient forage value to justify their investigation and cultivation.

The Postoffice Department has closed its books for the fiscal year ending June 30, 1901. The year's business is shown to be as follows: Receipts, $111,631,193; expenditures, $115,554,921; net deficit, $3,981,521. The deficit is about $1,500,000 smaller than for the preceding year. Owing to the extension of rural free delivery and other augmented appropriations in every department, the expenses were $8,200,000 greater than the preceding year. The receipts increased $9,250,000.

The new law regarding second-class mail matter went into effect October 1. As a result of the new law many publications which were entered at the postoffice as second-class matter, for which a rate of one cent a pound was paid, will now be classed as fourth-class matter and pay a rate of eight cents a pound. It is expected the new law will bring a large increase in postal receipts.

Company C of the Ninth United States Infantry which has been doing duty on the island of Samar, the third largest of the Philippines, was suddenly and unexpectedly attacked while at breakfast on the 28th ult., and forty or more officers and men were killed. The insurgents captured all the stores and ammunition of the company, and all the rifles except twelve.

Having purchased bonds to the amount of twenty million dollars, Secretary Gage has announced that bond buying on the present basis will cease until further notice. The Secretary has assurance that when Congress meets further reduction in taxes will be made so as to prevent the accumulation of a surplus of any considerable size.

According to a recent report of Commissioner Evans of the Pension Bureau, the number of pensioners on the rolls June 30 last, was 997,735. This was the largest in the history of the Government. There were 45,860 claimants for pensions during last year. The total disbursements for pensions from July 1, 1790, to June 30, 1901 was $2,763,350,033.

Hon. Binger Hermann, commissioner of the General Land Office, has completed his annual report, which shows that during the year 15,662,796 acres of the public domain were disposed of and that the receipts of the office were $4,972,160. The receipts exceeded those of last year by $592,402 and the land disposals by 2,108,908 acres.

Secretary Gage reports that the government receipts for the past three months were one hundred and thirty-six million dollars, being fifteen million dollars in excess of expenditures.

President Roosevelt seems to have more definitely committed himself to woman suffrage than any other chief magistrate we have had except Lincoln.

The National Farmers' Congress met at Sioux Falls, S. D., October 1.

Foreign.

Lord Kitchener has requested twenty-five thousand more mounted men for service in South Africa, also larger powers for dealing with the Boers in the field. According to the British military journals, the situation in South Africa has become so grave that a military draft may be necessary to obtain a sufficient number of reliable troops, as very few of the Imperial yeomen are re-enlisting.

Information is received from London that the famous astronomer, Sir Robert Ball, will represent Cambridge at the bicentenary celebration of Yale. He will deliver a course of lectures at Lowell Institute, and will then visit Yerkes Observatory at Chicago.

Queen Wilhelmina of Holland has instituted a reform, the special feature of which is to try to awaken a better religious feeling in the army and navy, and also to do what she can toward controlling alcoholism, both there and elsewhere.

Thursday, October 3, every commercial organization in Cuba participated in a celebration, the object of which was to emphasize the appreciation of the United States Government and its administration of Cuba.

September 3 a new Italian emigration law took effect, which provides for the supervision of emigration. It makes Naples, Genoa, and Palermo the only Italian ports from which emigration will be permitted.

The Boers have made an appeal to the administrative council of the permanent Court of Arbitration at The Hague. They say there is no hope of ending the war except by arbitration.

The French government has decided to prosecute a paper for publishing an objectionable caricature of King Edward.

A Canadian judge has decided that a divorce secured in the United States was not valid in Canada.

Industrial and Commercial.

The greatest power producing plant in this country was successfully started October 1. Even the Niagara Falls Power Plant is surpassed by the St. Lawrence Power Company at Massena, N. Y. Water from the rapids in the St. Lawrence River flows through a canal, 265 feet wide, twenty-five feet deep, and about three miles long. The water passes through a number of large turbine wheels and produces seventy-five thousand horse-power. At Niagara power is furnished at the rate of twenty-three dollars per year per horse-power, at Massena the rate will be thirteen dollars per year per horse-power. The company has expended five million dollars in the construction of the plant. The success of the enterprise is assured, as nearly all the power to be produced has been contracted for.

The Pittsburg special to the *Journal of Commerce* and *Commercial Bulletin* says that in spite of the strike which cut down the output of steel, tin plate, sheets, and hoops to a considerable extent, the production of all kinds of iron and steel, the present year will be the largest in the history of the trade.

The American Locomotive Company will spend $1,250,000 to enlarge the capacity of the several plants owned by the company. This amount will bring the plants up to a capacity of about two thousand locomotives a year.

English tube manufacturers have secured ten experienced welders and cutters from McKeesport to go to the Lloyd works near London under a five years' contract to teach American methods to English workmen.

The American Sugar Refining Company and the National Sugar Company have announced a reduction in price of sugar. The net price for standard granulated sugar is 4.85 cents a pound.

The total value of minerals of all kinds produced in this country in 1900 was $1,070,108,889.

General.

For the second time the Columbia successfully defended the America's cup. She won the three consecutive races which were sailed September 28, October 1, and October 4. The Columbia was given a time allowance of forty-three seconds, and it was this allowance which enabled her to win the last race by forty-one seconds. All the races were over a thirty mile course. In the first race, a beat to windward of fifteen miles and return, the Columbia won by one minute and twenty seconds. The second race was over a triangular course in which the defender outsailed her rival by three minutes and thirty-five seconds, corrected time. The third race was a run of fifteen miles before the wind and a beat back to windward.

Mrs. Roosevelt has rented what is known as "The President's Pew" at St. John's Episcopal church, on the corner of Sixteenth and H Streets. Mrs. Roosevelt was reared in this communion, and although usually attending religious services with her husband, has decided to establish this second church home. The President has taken a pew at the modest little Grace Reformed church in order to worship in the faith of his Dutch ancestors.

Hammerfest, Norway, has the distinction of being the northernmost town in the world, lying in latitude 70 degrees, 40 minutes 11 seconds. At Hammerfest the sun does not set from May 13 to July 29, and does not rise from November 18 to January 23. It is the centre of the fishing trade and has twenty-five hundred inhabitants.

The negroes of Alabama held a State meeting and denounced the new constitution. They have little hope of the new constitution being defeated and declare they will test it in the United States Supreme Court, and if it stands the test they will leave the State.

It has been ascertained by careful weighing that five thousand bees without loads will weigh about one pound. But when loaded with honey as they come in from the fields it requires only about one-third that number to weigh that amount.

The Cunard liners Lucania and Campania recently communicated for two hours in mid-ocean by means of wireless telegraphy. Many messages were exchanged, some of them at a distance of sixty-five miles.

A Holyoke, Mass., paper mill has received a contract for one hundred and seventy-five tons of high-grade writing paper to be used in the Government printing office at Manila.

Abraham Isaak of Chicago, Anarchist leader and editor of *Free Society*, has been denied, at least temporarily, the use of the mails for the distribution of his paper.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Testimonies given at First Church of Christ, Scientist, Dayton, O.

The leader of the meeting said in part:—

"It affords me great pleasure to speak of a case of healing of one who is with us this evening. A Christian Scientist has no desire to bring in his own personality, realizing that it is the impersonal Truth that does the work. It is one case among many thousands in its wonderful nature, and yet I am glad to say that it is one of three almost similar cases I have had in my practice in the last seven years. While the case I wish to speak of is not as the one that was born blind as we have had in this evening's lesson, yet I am pleased to say for the Truth's sake that this lady has had her sight restored after twelve years' total blindness. She is acquainted with some of the members of this church who will greatly rejoice to learn the good news, this being the first time it has been made public. After the oculist pronounced the optic nerve dead, twelve years ago, there existed no hope, her family and friends looking upon her as hopelessly blind, never expecting that she would see again, so when the change came it was almost impossible for them to comprehend that such a thing could be done.

"From the reports of the testimonial meetings now held in all the larger cities and in many of the smaller towns, Christian Science is teeming with unparalleled success, pointing to over a million cases which have been healed. The masses seem unable to comprehend how this can be possible. When we think of the great number who have been healed we are forcibly reminded of what the disciples said to Jesus and his reply, as given in the tenth chapter of Luke's gospel. 'And the seventy returned again with joy, saying, Lord, even the devils are subject unto us through thy name. . . . And he turned him unto his disciples, and said privately, Blessed are the eyes which see the things that ye see: for I tell you, that many prophets and kings have desired to see those things which ye see, and have not seen them; and to hear those things which ye hear, and have not heard them.' In giving his charge to seventy disciples Jesus told them of the things with which they would have to contend, and as they journeyed from city to city healing the sick, he said they should say unto them, 'The Kingdom of God is come nigh unto you,' and in such places as they refused to accept the Truth he reiterated the same teaching, 'notwithstanding be ye sure of this, that the Kingdom of God is come nigh unto you.'"

Another gentleman stated that for the past ten years, he has been acquainted with the lady referred to, and had not heard until that day that her sight had been restored. It was indeed joyful news, for prior to a few months ago she had to be led around wherever she went. She can now tell accurately the time of day with a watch, and distinguish different colors, picking out the tints of flowers.

A lady spoke of a case of healing of her little grandson of measles. As soon as the family were satisfied that the trouble was measles, the case was reported to the Board of Health, and the house quarantined. In one week from that time the child was reported to them as perfectly well. The health officers came out and removed the placard. The family were well pleased with the progress the child made under Christian Science treatment. Another good demonstration of healing of measles was spoken of, this also yielding quickly to the Truth.

Three mothers, each having small children, spoke of the practical application of Christian Science in meeting all the complaints of their little ones without resorting to material remedies. They found this Truth able to relieve suffering more quickly than when material remedies were wholly dependen on. This certainly proves the accusation false that the application of this Christ Truth is inhumane, when applied to little ones.

The natural reformatory work of Christian Science was spoken of. A lady told of the healing of a case of consumption. The sufferer was a young lady who seemingly did not try to live a good life. She went to another city and then took Christian Science treatment. When she returned she assured those of the household that she was not only well physically but healed of sin, and from this on expected to live a good Christian life. A relative remarked that if this teaching would cause her to lead a different life then she wanted to know something about it, and commenced to investigate, receiving many blessings herself.

The healing of a case of paralysis was related. The lady speaking of this dwelt much more on the fact that Christian Science had changed the man's life. He now desired to live right; before this he was a bad man. The physical benefits received were wonderful.

A Scientist stated that one evening a lady working for her complained of not feeling well. She asked her what she wanted, that is if she wanted medicine. She replied, "No, read to me." She continued, "On previous occasions it had been my custom to read Science and Health, but this book being down stairs I picked up 'Miscellaneous Writings,' and commenced to read an article from our Leader. I had not read more than two thirds of it before the pain was relieved. In the morning about five o'clock she awakened me, stating that she felt that old trouble again, and asked me to read. I did so, finishing the article commenced the evening before, and by the time this was read she felt well and has not had a return of the trouble since. This was several days ago. My efforts to help her resulted in bringing relief from a trouble that had been giving me considerable annoyance."

The healing of a case of typhoid fever was given. Word was received by a Scientist to treat a woman for typhoid fever who was unconscious at the time the letter was written. In five days the fever was overcome and she was able to be up. At the expiration of one week she informed the Scientist that she did not need further treatment.

A traveling man gave his experience:—

"Until four years ago I had been a victim to the alcoholic habit for nearly twenty years. I drank to excess. I was also a great smoker and had been for twenty-five years.

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

Four years ago a lady spoke to us about Christian Science, but I laughed at the idea. My wife seemed to be a little interested. Finally an invitation was given us to attend the mid-week meeting of the Scientists, and I went. The ladies and gentlemen present were very intelligent. I was impressed with the sincerity of what was said. It set me to thinking.

"Shortly after this we attended another meeting. I said to my wife, 'How do they do this thing? Get some literature, if they have any.' We secured some Journals and commenced to read. The more I read the more I became interested. Finally I came across a letter in the *Journal* which afterwards appeared in tract form. This greatly impressed me. I resolved to change my life, but this I attempted with my own strength and failed. I had not drank any for two or three months, but meeting an old friend from Colorado I got on a protracted spree. Sunday I had promised to be at church. On my way home I thought of Christian Science, and said if Christian Scientists can do the wonderful things they claim, I am going to see if they can do something for me. I got home and went into the house, and asked my wife if she would send for that Christian Scientist, I wanted to take treatment. She did not arrive for about an hour. I was then sound asleep. She gave me treatment at once, and in twenty minutes I was perfectly sober and in my right mind. I have not taken a drop of whiskey since and have no desire to do so.

"We talked Christian Science. I said that I felt so good that I thought I would smoke. The Christian Scientist rebuked the thought, and from that moment I made up my mind that I would not smoke, and have not done so. I told my wife I must know what this thing is that had done me so much good, that had healed me in twenty minutes and wrought such a change in my life. I began to read Science and Health, and all the literature on the subject I could get. In addition to being healed of these sins I was healed of catarrh. My wife has been healed of several diseases. I am very grateful to God and Mrs. Eddy for this Truth."—*Dayton Herald.*

Like Heaven.

WHEN you hear of good in people—tell it.
When you hear a tale of evil—quell it.
Let the goodness have the light,
Put the evil out of sight,
Make the world we live in bright,
Like to Heaven above.

You must have a work to do—pursue it.
If a failure, try again—renew it.
Failure spurs us to success,
Failures come, but come to bless,
Fitting us for righteousness,
In the Heaven above.

Do the woes of life surround you—face them.
Do temptations hover 'round you—chase them.
He who ruleth over all,
He will help you, though you fall,
Gladly hears you when you call,
From His Heaven above.

Have you any wrong to right—right it,
Do you have a sin to fight—fight it.
God, Himself, will help you win,
Let His Spirit enter in,
Making right the heart within,
Fit for Heaven above.

JOHN STERLING.

Christian Science Explained.

Editor *Record.*

Dear Sir:—Christian Scientists have read with much regret the extraordinary misconceptions placed upon Christian Science by the Rev. Charles A. Tibbals in a sermon printed in a recent issue of your esteemed paper. In that sermon he not only misrepresented the teachings of Christian Science, unintentionally I have no doubt, but he also considered it necessary to repeat certain grave charges which have been categorically denied and disproven in public periodicals.

Christian Scientists have no bitterness in their hearts against any critics, but they cannot permit misrepresentations of their faith to be constantly repeated without placing the actual facts before the public. It is from a sense of justice, therefore, that I ask for space to correct the errors in the sermon in question.

Mr. Tibbals says truly: "No lie will ever attract and hold any large number of people." Christian Science cannot, therefore, be the "morbid growth," nor the "monster of false science," nor the "money-making scheme," which he imagines it to be, for it does "attract and hold" a very large and a rapidly increasing number of people. The secret of its success lies entirely in the fact that it fulfils its promises and carries with it its own blessing. If Christian Science did not give health and happiness to those who practise its teachings, it would neither "attract" nor "hold" the earnest and devoted Christians who fill its churches.

There is no proselyting done, no preaching of sensational sermons, no attacks on other Christian denominations. All visitors are made welcome, and the best seats are reserved for strangers, in pursuance of the spirit of brotherly love which characterizes Christian Science. The enormous growth of the denomination is due solely to the help which those receive who come to it in a sincere spirit.

It is open to Mr. Tibbals to judge of Christian Science for himself, and to follow the example of the many clergymen who are now to be found in the ranks of Christian Science. Over against Mr. Tibbals' estimate of Christian Scientists, let me place that of the Rev. E. Winchester Donald, rector of Trinity Church, Boston, and successor to Phillips Brooks in that parish. This distinguished divine said before the Episcopal Congress in Providence last November: "Is Christian Science leading men out of the darkness of unbelief into the light of God? Is Christian Science winning men from dreadful wickedness into cleanly living? Yes, it is; there can be no doubt of that. You and I know too many Christian Scientists whose lives are blameless, who are living near to God, for us to doubt the reality of their Christian life and of their trust and belief in God. No man, I venture to assert, disputes that fact who is capable of understanding and appreciating what is spiritual in the life of another."

This favorable estimate, and I might add many others from clergymen of various denominations, does not agree with Mr. Tibbals' characterization of Christian Science as springing from "purely speculative philosophy," or as releasing men "from responsibility," or as making "an utter confusion of right and wrong," or as being "the very spirit of disorder and lawlessness."

Where has Mr. Tibbals gathered his impressions for such accusations? As a matter of fact, Christian Science accomplishes the very opposite of what he imagines. Christian Science is based entirely upon the Scriptures, and owes nothing whatever to "purely speculative philosophy." On this point Mrs. Eddy, the Discoverer and Founder of Christian Science, says explicitly in her recent Message to The First Church of Christ, Scientist, in Boston, Mass.: "What I have given to the world on the subject of Metaphysical healing or Christian Science is the result of my own observation, experience, and final discovery, quite independent of

Digitized by Google

all other authors except the Bible." Any one who truly understands and lives according to the teachings of Christian Science, can bear out this fact, that no previous writer, secular or religious, has ever explained the Principle upon which Christian Science rests.

I commend to Mr. Tibbals the excellent definition of Christian Science to be found in The Standard Dictionary. It reads in part: "Christian Science is based on the teachings of Scripture, which it interprets, giving the Christ Principle and rule in Divine metaphysics which heals the sick and sinner. It explains all cause and effect as mental, and shows the scientific relation of man to God."

To illustrate the fact that Christian Science is the very truth for which Mr. Tibbals, did he but know it, is seeking, let me quote from his sermon. He says of Christian Science:—

"It appeals vitally to us all. If only it were true, how gladly should we yield consent, seize upon and hold such faith as our dearest possession." And again:—

"For so Christian Science holds out two great hopes to mankind, the two greatest, I may say, which stir in our hearts: the hope of perfect health and the hope of what we call salvation—health and heaven."

Let me tell Mr. Tibbals that Christian Science answers to this very description of his, and fulfils these promises. It is true, because hundreds of thousands of earnest seekers have found health and harmony, or heaven, through its teachings. It is the "pearl of great price" which Mr. Tibbals hopes to find, but which is found already.

The reason why the reverend gentleman has not recognized in Christian Science the Truth for which he is looking, becomes apparent when he attempts to explain the teachings of this faith.

Christian Science distinguishes carefully between the real, *i.e.*, the indestructible and eternal, and the unreal, *i.e.*, the perishing and temporary. Christian Science judges from a metaphysical, and not a physical standpoint, and teaches that Spirit is real, and all that is unlike Spirit, unreal. Sin and sickness are not indestructible and eternal facts in the universe, or else the universe would end in chaos. They seem real, but belong to the realm of the unreal, and when so treated their seeming reality can be destroyed with Good.

Christian Science does not teach that our bodies are unreal or our life unreal, but shows that the human concept of our bodies as material, and of life as dependent upon material conditions, is false. Man is spiritual and immortal, and as this eternal verity is more completely realized we draw nearer to God, who is Spirit.

Christian Science is not "one of those guesses at truth which occupy the minds of thinkers," because it proves itself to be the truth by the only test admissible in science, namely, by actual demonstration. It *does* reform the sinner and heal the physically sick, and it produces these results by obeying and honoring the Christ, who said, "Heal the sick." The failures to heal are very rare. Some time ago the newspapers contained reports of failures, but upon investigation they were found to repose in almost every case upon errors of some sort. The people whose names appear in such reports are not generally Christian Scientists at all, but belong to various groups who, for some reason or other, refuse medical attendance.

It is an entire misrepresentation of the grand work of Christian Science to say that by it "old people and children, who are defenceless, are abandoned to the ravages of disease and to die." Does the reverend gentleman maintain that praying to God with a spiritual realization of His omnipotence is abandoning a patient? Has he so little trust in and reverence for the power of Omnipotence that he considers those "defenceless" who are intrusted to the care of the One Power? If he holds these views, he must count himself a materialist first, and a Christian only when matter fails.

But the accusation brought by Mr. Tibbals against Christian Science which deserves to be most emphatically branded as false is contained in this sentence: "Almost divine honor is paid to one who associates herself with God as in divine Motherhood."

Where does Mr. Tibbals find his authority for a misrepresentation such as this? Mary Baker G. Eddy is the Discoverer and Founder of Christian Science. She is the author of the text-book, "Science and Health with Key to the Scriptures," and as such she is a well-equipped Leader of the Christian Science denomination, whose advice is gladly asked and followed. No "divine honors" have ever been paid to Mrs. Eddy, and as one of those who were present at the recent visit to her home, to which Mr. Tibbals supposedly refers, let me say that no "divine honors" were paid to her there. Much love and gratitude was indeed expressed on that occasion to the woman, through whose teachings hundreds of thousands have found health and happiness. The occasion was, in point of fact, very much like a large family party, except for the many meetings of friends from the ends of the earth, which gave it a peculiar world significance.

The veiled allusion contained in the word "motherhood" must not be allowed to go unrebuked. Mrs. Eddy is affectionately called "Mother" by her students and friends, but it is absolutely false to insinuate that this term "associates" her with God. No one could be more shocked at such a statement than Mrs. Eddy herself. She has always taught in all her writings that there can be but one God and one Christ, and Christian Scientists know this to be true.

In conclusion, let me say that I look forward to the time when Mr. Tibbals will investigate Christian Science for himself, and not depend upon hearsay or gossip. He will then read its beneficent and benign results in the lives of Christian Scientists themselves.

Thanking you for this necessary correction, I remain,

Yours truly,

W. D. McCRACKAN.

In *The Record*, Marlborough, N. Y.

Inverted Witchcraft.

To the Editor of the *Spectator*.

In an article entitled as above in the *Spectator* of May 25th (1) you begin by saying you "can find no promise in Scripture from which a hope might be deduced of a possible second revelation." Here surely you are in a minority among students of the Bible. How, for instance, do you interpret the promise of "the Comforter . . . whom the Father will send in my name" (John, 14 : 26), "who will guide you into all truth" (16 : 13)? Also, what does Peter refer to in 2 Peter, 1 : 19, 20, if not to a great revelation? Christian Scientists believe that this "knowledge of Christ's teaching," now revealed in Christian Science, is the "light that shineth in a dark place," the "day star" that should "arise in your hearts."

(2) You then proceed to adopt the usual method of most of those who attack Christian Science. You dress up a grotesque figure and label it "Christian Science," and pelt it with stones and mud; meanwhile the real Christian Science walks on,—a different person, in a totally different dress. You say, "What we do not understand is why an intermediary should be required. . . . They do not leave the cure to God, . . . they do not rely on faith. . . . They simply assert that if the patient believes sufficiently, not in God, but in them, . . . they will do wonderful things," etc. All this quotation simply proves that you do not know what Christian Science is. No intermediary (as you call it) is "required." A vast number of the cures are effected without any intermediary, simply by studying and applying the precepts of "Science and Health with Key to the Scriptures."

If people would only take the trouble to understand the

Digitized by Google

teachings of that book for themselves, most of them would be able to obtain the healing without going to another, whose only superiority perhaps lies in the fact that he has through long and prayerful study obtained a higher understanding of the omnipresent and eternal Principle. Christian Scientists do, moreover, proclaim without ceasing that God alone is the healer, and that "I can of mine own self do nothing," as Christ said. Nevertheless, they claim the precise promises of Christ that "He that believeth on me, the works that I do shall he do," and "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover," the power being God's entirely, absolutely, as Christ proclaimed it to be in his days. And yet you call these people "white magicians,"—do not magicians claim to have power in themselves?

I can easily understand, and heartily sympathize with, your difficulty in trying to master the deep spiritual meanings of Science and Health. The task which Mrs. Eddy set herself, of describing spiritual matters in a language only suited for material purposes, was a vast one. An anonymous writer says well: "To undertake to account for spiritual by the logic of material phenomena is an infinitely greater paradox than to express a mother's ecstasy in algebraic terms, or to analyze grief by the chemistry of a tear;" and yet, Mr. Editor, I notice that this is precisely what you have been attempting to do.

(3) You say "it is but a craze, and will pass:" only time can put this to the test, and Christian Scientists have no fear of the result.

(4) You then discover (as though for the first time) that Christian Scientists link together sickness and sin. What said Christ on this connection? "Thou art made whole: sin no more, lest a worse thing come upon thee" (John, 5 : 14); "For whether is easier to say, Thy sins be forgiven thee, or to say, Arise and walk" (Matthew, 9 : 5). In a recent article in the *Christian World*, Professor Frederic Godet, D.D., writes: "It is a law derived from the divine holiness, that suffering, interior or exterior, is the inevitable consequence of sin." Isaiah in his prophecy of millennial blessedness says: "The inhabitant shall not say I am sick, the people that dwell therein shall be forgiven their iniquity" (33 : 24), thus showing that health comes as the result of iniquities forgiven.

(5) I confess I do not understand your reference to "heredity." You say: "Those who think thus [presumably Christian Scientists] always have to affirm heredity in an extreme form." But Christian Scientists do not affirm heredity in any form; they deny it entirely, and point to the prophecy in Jeremiah, 21 : 27, 30, 31, and again in Ezekiel, 17 : 2, 3, 4, 19, 20. These prophecies are even now being fulfilled, for I learn that Sir Douglas Powell (physician to the King) and others with him have actually declared that there is no heredity of disease. Thus the days have come in which "they shall *no longer* say, The fathers have eaten sour grapes and the children's teeth are set on edge. The righteousness of the righteous shall be upon him, and the wickedness of the wicked shall be upon him." I take the title of this letter to mean "The Opposite of Witchcraft," for such certainly is Christian Science.

I am, Sir, etc.,

B. HAWORTH-BOOTH.

United University Club, S. W.

In *The Spectator*, London, Eng.

From the Christian Guide.

To Editor *Christian Guide*.

My attention has been called to an article that appeared in one of your publications, detrimental to Christian Science, wherein it is stated that Christian Science is neither Christian nor science.

The person who wrote this article, handled it entirely from a material standpoint. It is my understanding of the teachings of Jesus Christ that things that are real are unseen, and that also the things pertaining to the spiritual or real man are not understood through material reasonings. There is nothing visionary about Christian Science; for on the basis of the Principle adopted, the sick are healed and the sinful are turned from their wrong doing and filled with an everlasting desire to be more Godlike.

A great many people who were hungering after righteousness, have come to Christian Science, and have had their want fully met. The statement that it has no tendency to make people better is not borne out by the facts, as can be discovered by any one, who will make an unprejudiced investigation thereof. Christian Science does not undertake to pull down any of the other churches.

The writer was healed through Christian Science of physical ills that the doctors had pronounced incurable; and I know it has made me a better man, mentally and morally, a better husband, a better father, and a better business man. This is not only the fruit of my experience, but of many thousands of others, which certainly should be taken into consideration by the person who wrote the article referred to. Our earnest desire is to be meek, loving, just, and pure, and we daily strive for "that Mind, which was also in Christ Jesus." If these principles are not in accordance with that preached by other religious denominations, the fault, if any, certainly is not chargeable to Christian Science.

To borrow in part from what a prominent writer has recently stated: "It is not strange that this generation is confronted by the question, Is Christian Science a failure? There is but one answer to be given." Those who have not tried it are in no position to pass judgment thereon.

B. S. JOSSELYN.

Sight Restored through Christian Science.

RICHMOND, VA., September 3.—Mr. Charles W. Tanner, a member of the City Council and one of the best known business men here, has recovered his eyesight by Christian Science.

His case is attracting wide attention among medical men and laymen. Mr. Tanner says that he has been almost blind for twenty-eight years, and barely been able to recognize his acquaintances.

He says he began to take the treatment July 5 from a lady in this city, having first understood clearly that he should surrender none of his own religious opinions.

After five visits on consecutive days, at each of which the practitioner sat with a hand shading her eyes and in absolute silence, Mr. Tanner, at her suggestion, attempted to read.

He failed, but was told to make a determined effort that night. He did so, and began to read a book at 10.45, and continued it until 2 A.M.

He visited the Scientist once more, and became convinced that he was cured. He now reads with perfect comfort.

Mr. Tanner has no theory regarding the method of his cure.—*New York Journal.*

Just a Hint.

OH gentle guest, 'tis our request
That while beneath this roof you rest,
You will not try with voice and eye
To scorn the faith we're living by.

Our cause is meek. It does not seek
To draw from you remarks unique.
If you indeed this could concede,
We shall regret to say "God speed."

Selected.

The Lectures.

At Chicago, Ill.

The first lecture given under the auspices of Third Church of Christ, Scientist, of Chicago, in their new church edifice, was delivered by Mr. Edward A. Kimball, C.S.D., September 27, 1901.

The fifteen hundred seats in the auditorium were filled and nearly two hundred persons stood throughout the lecture.

The First Reader, Rev. Jesse L. Fonda, introduced the speaker as follows:—

It is a pleasure, friends, to welcome you to our church and this our first lecture under these pleasant auspices. What we offer you comes with the simple thought of kindness and helpfulness. In our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, it is said that "the heart and soul of Christian Science is Love," that is, benevolence, generosity, kindness, helpfulness. We never urge anything upon anybody, but we offer our literature and our lectures and healing with the pure motive of kindness and love.

Some have tried to account for the progress of Christian Science; it must be found along these lines. One great reason for its progress is that, in its teaching and practice there is what people need. When they find that out and accept the teaching and the great need is met, then they hold to it firmly and courageously.

When their needs have been met, in a most truly natural, kindly, and brotherly way, they tell somebody else who has a similar need, how theirs was met, and he comes to the Science and becomes satisfied. And thus it goes from individual to individual, like the leaven, from particle to particle, till the whole will be leavened.

These lectures are a chosen and much valued means for giving a true idea of the scope and truth about Christian Science. They tell the world where Good can be found. Mr. Kimball's long connection with the Cause, the high position that he holds in the educational system of our denomination, all assure you that you will have an authoritative presentation of Christian Science. I have the pleasure of introducing Mr. Edward A. Kimball.—*Correspondence.*

Pony Express Letters.

"In looking over some old papers the other day," said a wholesale merchant, "I ran across a very singular document. It was a letter of instruction sent forty years ago by one of my uncles, then in St. Louis, to his agent in San Francisco. It related to the disposal of a lot of goods which had been shipped by way of the Horn, and, although it contained over fifteen hundred words and a copy of a good-sized invoice, it was written on just two sheets of paper. The paper itself was of a sort of tough, opaque tissue, very thin and light, and when folded the letter slipped easily into an envelope about three inches wide.

"Why it was got up in such a peculiar style was explained by the stamp in the corner, which was one of the old pony express series of Wells, Fargo & Co., and was embellished with a picture of a man on horseback, spurring at a dead gallop across the plains. I knew, of course, that the Pacific mail of the period was carried by relay express riders, but I never before realized what great pains were taken to reduce the weight to the lowest possible point. I am told that the letters were stored in little flat pouches under the flaps of the saddle, and that they were always written on a specially prepared tissue.

"The one I have described must have occupied an expert clerk several days, for the penmanship, while microscopic, is beautifully executed and as clear and as legible as print. The stamp was of the denomination of fifty cents, and taken altogether it would be hard to find a more striking reminder of the astonishing progress that has been made in this country in a trifle over one generation. Everything about the little brown letter—its lightness, its compactness, and the cost of its carriage—spoke of dangers, difficulties, and rude, primitive conditions. It is difficult to realize that the route it traveled is now a great highway.—*Philadelphia Times.*

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50 prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Obstetric Notice.

Any one having a degree of C.S.B. or C.S.D., may become an applicant for the obstetric class, which convenes October 21, 1901. This includes the 1901, June class. Applications must be made to Alfred E. Baker, 25 North State St., Concord, N. H. BOARD OF EDUCATION.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. It is desired that applicants will use the blank forms of application that are issued on and from September 20, 1901.

Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Loving Acknowledgments.

THE following letters of love and appreciation were sent to our beloved Leader, the Rev. Mary Baker G. Eddy, by the First Members of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., and First Church of Christ, Scientist, in Concord, N. H.

Boston, Mass., October 5, 1901.

Dear Mother, Teacher, and Leader:—We, the First Members of The First Church of Christ, Scientist, in Boston, Mass., have this day assembled for the purpose of writing to you a few words of love and cheer. We would express our deepest, most heartfelt gratitude for the revelation of Christian Science and all your ceaseless toil and sacrifice, to establish the Christ cause, and to keep the truth unadulterated before the world.

We therefore make special mention of your three recent letters on the occasion of the death of our late President, William McKinley, and would express our greatest possible appreciation of their benefit to us as well as to mankind in general.

Your letter to Mrs. McKinley was not only one of tender condolence to her, but a comforting message to every heart aching because of earthly losses.

Your contribution to the union memorial service was most just, most Christian, most loving. It has emphasized, for example's sake, the splendid statesmanship and citizenship of this noble man, and has placed on record the most sublime and intelligent tribute to Mr. McKinley that this age could produce.

Your answer to the question, "Why did not the prayers of millions save the President?" is invaluable, since it clearly sets forth the requisites of effectual prayer and saves the waning faith of Christians in the efficacy of prayer.

We are indeed deeply grateful to you for your constant, loving, watchful care over us, your children, and we long to have you know our appreciation and gratitude.

May God continue to bless you, Mother, and may we be ever loving, loyal, and obedient to your wise counsel, is the prayer of the members of your church.

MARY E. LANDY,
JOHN W. REEDER,
ALFRED FARLOW, *Committee.*

The letter from the Concord Church was as follows:—

First Church of Christ, Scientist, Concord, N. H.
Rev. Mary Baker G. Eddy, Pleasant View.

Beloved Leader and Mother:—Our "dear little church in Concord" has voted unanimously to thank you for your loving messages relative to our late honored President McKinley.

We rejoice that the committee of arrangements for the Concord memorial meeting very wisely requested from you a tribute, and we are grateful for those true and tender words from Mother, whose good has blessed us beyond measure.

IRVING C. TOMLINSON, *President.*
MABEL C. GAGE, *Clerk.*

October 3, 1901.

From Harper's Weekly.

WE take pleasure in republishing from that old-established and valuable publication, *Harper's Weekly*, the following merited tribute to Mrs. Eddy's utterances relative to the lamented death of President McKinley:—

"All the preachers preached on President McKinley; all the editors wrote about him. There was a great deal to say, and most of it seems to have been said. Of course thousands of writers and speakers said about the same things, for they dealt with the same facts, and they were moved by the same feelings. Among others who have spoken was Mrs. Eddy, the mother of Christian Science. She issued two utterances which were read in her churches, one a communication on the death of the President, the other a letter of sympathy and advice to Mrs. McKinley. Both of these discourses are seemly and kind, but they are materially different from the writings of any one else. Reciting the praises of the dead President, Mrs. Eddy says: 'May his history waken a tone of truth that shall reverberate, renew euphony, emphasize humane power, and bear its banner into the vast forever.' No one else said anything like that. Mother Eddy's style is a personal asset. Her sentences usually have the considerable literary merit of being unexpected. Her letter to Mrs. McKinley was short, sympathetic, religious, and very much to the point. Her position in the country as the head and chief spokesman of an important religious body is very curious and highly interesting."

Judge Ewing's Lecture.

IF any additional evidence of the unflagging interest in Christian Science were needed, it was forthcoming on Tuesday evening, October 8, 1901, at Symphony Hall, Boston, on the occasion of Judge Ewing's lecture. This lecture was held under the auspices of the Mother Church, and certainly, from every point of view, it was a most gratifying success. The great and beautiful hall was filled to the extent of its seating capacity, including the capacious stage. The stage was reserved until a few moments before the lecture began, when the doors leading to it were thrown open and it was quickly filled.

The number present could not have fallen far short of three thousand, and in point of intelligence and evident appreciation of all that was said, the large audience was all that could be desired or hoped for in any public gathering. For almost two hours Judge Ewing held his audience up to a point of interest approaching the highest intensity. In no part of the great chamber, during this time, was there the slightest evidence of uneasiness or lack of interest from beginning to end.

Of the lecture itself it may be said, without any suggestion of flattery, that it was masterly in its every aspect. Its logic was sound, its rhetoric superb, its simplicity grand. One of the lecturer's strong points is his deep sincerity, his honesty of statement and earnestness of manner. But stronger than all else, he had a *subject*,—a subject in which he is wholly absorbed, a subject which he knows throughout the whole compass of his being, includes a message from God to man, the understanding and heeding of which will bring harmony and happiness to earth. Hence the depth and breadth of his sincerity.

When one witnesses such an occasion, gazes upon such a sea of eager, expectant, and happy faces, hears such words of life and health, and knows somewhat of the deep significance of it all, one cannot but regret that she through whom the Father of all has so spoken as to make these things possible, could not be present to witness and participate. But we know that in her quiet, yet incessant, labor at her home, the Rev. Mary Baker Eddy is doing far more for the world than if she gave her precious time over to attendance upon public gatherings.

Digitized by Google

Her absence was, in part at least, compensated for by the reverential references to her and her great work on the part of the lecturer and the gentleman who introduced him. No sincere person could hear these just tributes without reciprocating the love and gratitude which gave them utterance.

Judge Ewing was gracefully and appropriately introduced by Mr. John B. Willis, President of the Mother Church, who spoke briefly as follows:—

Friends and Fellow Citizens:—In behalf of The First Church of Christ, Scientist, I welcome you to this place and this opportunity. To kindred opportunities the Scientists of this and other lands are gladly welcoming all those who in the struggle of life have come to feel the need of a more practical apprehension of the teaching of him who said, "I am the Way, the Truth, and the Life."

The Truth, and the whole truth, for which he stood, all men concede to be a supremely valuable and blessed thing, and all men at their best are Truth-seekers. This is one of the grounds of an intelligent optimism; and in the measure of their sincerity and earnestness all Truth-seekers should be Truth-finders, and they would be the more surely if there were nothing in its human expression to mar its fair proportions.

Christian Science, the knowledge of God and His manifestation, is an incomparably great and glorious thing. It has come to this age through one whose high-mindedness and clearness of spiritual perception have peculiarly fitted her for this ministry. In the Rev. Mary Baker Eddy the world is rapidly coming to recognize one whose wisdom and womanliness have made her strong, whose love and "gentleness" have made her great. Christian Science has come to bring all who receive it into closer touch with all that is good and beautiful and true; to give "beauty for ashes, the oil of joy for mourning, and the garment of praise for the spirit of heaviness." It has come to lead men to love God more, to love the Bible more, to love the great Exemplar more, and to love their fellow-men more, and as such it must appear to all as greatly to be desired.

Some may fail to reach this true estimate for the reason that while the history of Christianity is indeed a history of the divine concession, there comes a time for every individual when some of the human concepts by which we would limit the Truth have to be given up, for, like the vigorous tree, Truth rends the bark that would fetter its growth. Ultra conservatism may thus lead us to the misapprehension and declination of that which would bring us a heavenly benediction if we but gave it a more hospitable welcome.

Now while placing the largest emphasis upon spiritual facts and fitness, we feel there is occasion for a permissible self-gratulation, that he who is called to be the exponent of our cause to-night is one who upon the arena of human endeavor has achieved an enviable distinction, and who has been the recipient of the largest responsibility and confidence at the hands of his fellow-citizens; and that while a "Prince in Israel," he is also a meek and modest man whom "to know is to love."

It is with very great pleasure, therefore, that I present to you the lecturer of the evening, Judge William G. Ewing of Chicago, who will speak to us of "Christian Science—Physician and Redeemer."

The North American Review.

THE October number of *The North American Review* contains another article from the pen of Mr. W. D. McCrackan, New York member of the Christian Science Publication Committee, entitled, "The Strength of Christian Science—A Final Word."

The editorial review of the contributors and contributions in this number thus refers to Mr. McCrackan and his paper: "W. D. McCrackan, a short biographical note of whose career was published in the August, 1901, issue of the *Review*, contributed an article entitled, 'The Simple Logic of Christian Science' in that number, which attracted much attention as a reply to an article by Dr. J. M. Buckley, published in the preceding number. Dr. Buckley, writing a second article on 'The Phantom Fortress of Christian Science,' replied in turn to Mr. McCrackan, in the September issue, and now, in the present issue, Mr. McCrackan gives a final word on his side of the question. In these four articles, two upon each side of the question, the *Review* has opened its columns to probably the most exhaustive discussion of the subject that has appeared in current periodicals. And with this final word the discussion is closed."

We like the manner of Mr. McCrackan's "discussion." We would hardly so term it. It is rather an affirmation of what Christian Science is than a discussion of it. Its strongest feature lies in the fact that it answers criticism by a statement of simple truth. It gives facts; and the only way to negatively answer facts is to bluntly deny their verity. Such a denial is neither argument nor logic. Mere assertion weighs nothing against facts; especially when assertion is based upon misunderstanding and misconception and their resultant prejudice. Prejudice always unfits one for fair judgment or just criticism. He only can wisely or justly estimate facts who *knows* facts.

When Mr. McCrackan, therefore, writes in the manner indicated by the first paragraph of his paper, he disarms criticism, for the would-be critic is either silenced or driven to the refuge of the bigot or the bully—that is, he must flatly deny facts and rest there. We quote the paragraph:

"The strength of Christian Science lies in its practical results. It is a positive force. It arrests attention by its dynamics. On every hand people speak of the happy changes it has wrought in their friends or families. They know of former drunkards who through it have lost all desire for stimulants, morphine fiends who are freed from the drug, dishonest men and women made honest and pure, boorish and selfish persons becoming refined and loving, lifelong invalids rendered hale and hearty, chronic grumblers turned into cheery good fellows, consumptives healed, and the insane restored to their right minds. They see husbands and wives reunited and harmony enter homes where discord once reigned. They find gross materialists taking pleasure in spiritual matters, and agnostics and so-called atheists coming like little children to learn of the Scriptures."

When critics can successfully deny such substantial facts as these it will be time to speak and write of "The Phantom Fortress of Christian Science." Until then, we feel sure every fair-minded, thinking person will agree with us that a discreet silence and a respectful attitude toward a system which can accomplish such results, is the wiser course. So much at the very least. We might with great propriety maintain that such facts as Christian Science unquestionably presents to the world, demand the sincere co-operation of all claiming to be good people or Christian people. Such people should gladly unite in the work of enlarging the scope of a system which is thus furthering, in the world, the redemptive work of Christ.

If the works referred to by Mr. McCrackan are not in line with the teachings and works of Christ Jesus, pray where will our critics find such as are?

Mr. McCrackan meets the criticism made against Rev. Mary Baker G. Eddy in the same way he did the criticism of Christian Science—by a recital of facts; facts which are well known to all who have cared to inform themselves.

It is beyond the power of any critic, or any number of critics, to refute successfully this statement of facts in Mr. McCrackan's paper: "Mrs. Eddy has shown a deep spiritual nature from her very girlhood. She grew up in New Hampshire in a strict New England environment,

Digitized by Google

and to this day she speaks affectionately of the devout clergymen who were in the habit of visiting her father's house. 'As early as 1862 she began to write down and give to friends the results of her Scriptural study, for the Bible was her sole teacher' (Science and Health, Preface, p. viii.). In 1866 she discovered 'the system which she denominated Christian Science' (Preface, p. viii.). 'The first edition of Science and Health was published in 1875' (Preface, p. x.).

"In the year 1878, Mrs. Eddy was called to preach in Boston at the Baptist Tabernacle of the Rev. Daniel C. Eddy, D.D. In 1879 she founded the first Christian Science Church.

"These dates seem very recent when we consider the enormous work done in the interval, and they point to Mrs. Eddy as a woman of very remarkable gifts. She is now receiving the loving gratitude of great multitudes who have never seen her but have read her books and benefited by them. In response to a spontaneous desire to express their affection, Christian Scientists have endowed her with the endearing name of 'Mother.' This does not mean that they worship her personality, as has been stated. They reverence her as the person who has by a new spiritual interpretation of the Scriptures shown them the way out of sin and sickness."

We might enlarge almost *ad infinitum* the scope of this statement of facts about Mrs. Eddy. But even so brief a mention is sufficient—in connection with the *works* which have resulted from her lifelong effort—to answer every adverse criticism that has ever been made, or ever can be made, against her. One whose spiritual nature has outflowed to mankind in "happy changes wrought in their friends and families, in drunkards reformed, in morphine fiends disenthralled, in dishonest men and women made honest, in the impure made pure, in selfish persons made unselfish, in chronic grumblers made into cheery people, in consumptives healed, in lifelong invalids rendered hale and hearty, in the insane restored to soundness of mind, in gross materialists taking pleasure in spiritual matters, in husbands and wives reunited and harmony in homes where discord once reigned, and in agnostics and theists coming like little children to learn of the Scriptures,"—one whose spiritual nature, we say, has thus outflowed into the channels of human life, washing it and making it clean, has passed safely beyond the unfair criticism of the world. One thus panoplied in divine Love, may truly be said, in the language of the sacred Psalmist, to "dwell in the secret place of the most High, and abide under the shadow of the Almighty." One thus radiating the spirit of the Christ may well "say of the Lord, He *is* my refuge and my fortress: my God; in Him will I trust." And one thus doing the works which Jesus commanded, may confidently declare of the Heavenly Father, "Surely He shall deliver thee from the snare of the fowler. . . . He shall cover thee with His feathers, and under His wings shalt thou trust: His truth shall be thy shield and buckler."

This is a true analysis of Mr. McCrackan's "final word" published in *The North American Review*, and earnest people will so see it. They will see, furthermore, the wide difference between an impersonal presentation of indisputable facts, and a personal philippic based on either an ignorance of facts or a bold attempt to override them.

Extraneous Methods.

We occasionally receive inquiries relative to various ways of presenting Christian Science to the public which are extraneous to the regularly established methods. It seems almost superfluous for us to say that the safer way is to keep within the regular lines. As a rule these lines have been carefully and conscientiously mapped out for us by our Leader. Is it not an entirely safe rule to follow the methods thus planned by her? Every one familiar with the real situation must answer this question in the affirmative. She who had the wisdom to write the book which forms the basis of every true Christian Science method, also has the wisdom to guide and direct matters relating to the best interests of the Cause. Various seemingly plausible, yet subtle devices for the introduction of Christian Science to the public are constantly on foot. Without now stopping to enumerate all of these, we will mention one which has just been brought to our attention. It is a proposition to place Christian Science before the public by means of theatrical performances through the branch churches and societies. This proposal does not meet with our approval.

Nothing here said is intended to reflect upon the drama. We simply place the proposition in question on the same ground as other propositions, business as well as ethical. We have heretofore, several times, expressed our views upon the business aspects of this question.

Good in Christian Science.

In the *New Church Independent* we find the following brotherly reference to Christian Science, its Leader, and one of her hymns. We assure our brother that his words of tenderness find a grateful place in the hearts of all Christian Scientists:—

We publish in this number a criticism on Christian Science, by one of our talented contributors, comparing Swedenborg's statements with Mrs. Eddy's system. We have found a great deal of good in this Christian Science faith. It is peaceful—quieting—uplifting—spiritualizing. It comes to the troubled heart, tossed about on the stormy ocean of life, like the voice of Christ stilling the tempest. We quote from one of Mrs. Eddy's beautiful hymns:—

> And o'er life's troubled, angry sea,
> I see Christ walk,
> And come to me, and tenderly,
> Divinely talk.
>
> Thus Truth engrounds me on the Rock
> Upon Life's shore,
> 'Gainst which the winds and waves can shock,
> Oh, nevermore!

When Christian Science is accused of using a hypnotic influence in curing diseases, it betrays ignorance of the real facts. Mrs. Mary Baker G. Eddy denounces hypnotism, mesmerism, spiritualism, etc., in her great text-book, Science and Health. A careful study of this work will richly repay those who take it up in an unprejudiced spirit.

Czolgosz.

The Watchman makes this editorial suggestion as to the possible influence which caused Czolgosz to commit the awful crime for which he is to be executed:—

"There are some phases of Czolgosz' mental operations that create the suspicion that he was hypnotized by some stronger nature. Though we have not seen that theory suggested, the facts readily fit into such an explanation, and it is directly confirmed by his own declaration that the words of Emma Goldman 'burned into his brain.' Certainly there is an uncanny realm of speculation developed by modern theories of the power of hypnotic suggestion."

Be Happy in your Work.

John Ruskin, who believed that every one should have a sense of happiness in his work in life when doing it in the best possible way, says three things are needed to accomplish this result: "They"—men and women—"must be fit for it; they must not do too much of it, and they must have a sense of success in it—not a doubtful sense, such as needs some testimony of other people for its confirmation, but a sure sense, or rather knowledge, that so much work has been done well, and fruitfully done, whatever the world may say or think about it."

From Our Contributors.

A Letter to a Friend.

THE following letter was written by a recent graduate of one of our large technical schools to a classmate, and though it may contain stronger expressions than older Scientists allow themselves, we find it, on the whole, of value.

Joplin, Mo., July, 1901.

My Dear C.:—Your letter about Christian Science reached me, with the sermon by the Rev. Dr. —— enclosed. The most satisfactory way to reply will be to answer it paragraph by paragraph.

The best answer, you can find in the article sent you with my last letter, and it reads something like this: "If Christian Science were really what its opponents say it is, and taught what its opponents say it teaches, it would be indeed a heinous belief." Remember that Christian Science is forced to put the new wine of the Spirit into the old bottles of the letter, with the result that till one comes, through spiritual growth, to *understand* Christian Science (as the Rev. Dr.—— claims to—to the amusement of any one who really does), the superficial meaning of the Christian Science precepts is quite different from their true and deep meaning. Let me illustrate.

In the court before St. Peters at Rome there are two great peristyles of columns. To one wandering about inside the court, the columns appear to have no arrangement at all, but to be in complete disorder.

Embedded in the pavement of the court is a black marble star, and if you persevere till you find it, then look at the columns once more. They are aligned as perfectly as any regiment on review. Not one is out of place, and they form together a symmetrical whole.

It is the same with the teachings of Christian Science. While deep in the study of matter, read the writings of our Leader, and to your mortal sense they may appear contradictory. Then think it all over, try applying our Principle, however strange it may seem, to your own life, and soon you will have found the black marble star. Re-read our Leader's books, and you will look in them for contradictions and fantasy as vainly as in the various books on arithmetical science. Then Christian Science will be to you,—

> The Sovereign Alchemist that in a trice
> Life's leaden metal into gold transmutes.

The Rev. Dr. —— would be no more ridiculous standing in the court of St. Peters using yard after yard of lurid invective against the architect who made such a botch, when a step forward would put him on the marble star, than he is to us when thundering out an invective that would have made Catiline himself slink from the Senate—innocently objurgating his own sense of Christian Science, not its true Principle, all the time.

As to the healing of my own trouble, you suggest that it was changing to the "free, natural life of the West," and giving up violent drugs, alcohol, and tobacco that worked the cure, instead of Science.

Not long before coming into Christian Science I spent three months in the Rockies without the slightest benefit, and during my first six weeks in this state, my trouble was never worse. Yet in one week after accepting its teachings, Christian Science did for me what seven years of drugs and appliances had not accomplished. Giving up alcohol and tobacco was a result of my healing, not a cause of it, and as for "violent drugs," I had used medicine during the previous months only when forced to it for temporary and unsatisfactory relief.

Next you say that "any Christian who takes his religion seriously is free from tobacco and alcohol." Think over your acquaintance, C——, and you will have to reconsider such a statement, I am sure. But the point is that in my case Christian Science destroyed my desire for those things. Before coming into Science I had given up smoking, at times, with a violent exercise of will, but from the standpoint of the black marble star, smoking looked so different that one day, without an effort, I threw a freshly lighted cigar into the gutter, convinced that it was my last.

You ask if I have the "face to declare that there is no such thing as disease," and the answer is "Yes," but you can hardly have an idea of the vastly different meaning the words convey to our minds and to yours. Now God created everything that was made and called it very good. If any one gave a man cancer, boiling in oil would be conceded too good a fate for him. You read that "God is Love," omniscient, omnipotent, and omnipresent, yet you believe that He could create cancers, call them "very good," and send them to the sheep and goats of His flock indiscriminately! Never!

You will say, without doubt, that such awful visitations are sent as punishment for sin. To us that reason assumes the "consistency of the theory of infant damnation" before the fact that many of the noblest characters the world sees are punished in the last decade of beautiful Christian lives by agony indescribable, while the average plug-ugly is as healthy as you please.

Suppose the circle could be squared, and the above explained away. Then why did Christ cure every form of disease, neglecting to use or mention the herbs which his Father sent (?) for the evasion of His own punishments; and why did pure insight into the teachings of Christ enable Christians to remit divinely sent penalties, by physical healing, for generations after the death of all those who saw Jesus—in fact, until the influence of decadent Rome dominated Christianity?

In bringing up Pasteur and the germ theory of disease, you voluntarily crawl out to the end of a long high limb, and hand me a large, sharp saw. Statistics compiled in New York show that the death-rate among ambulance surgeons whose daily work is bringing contagious cases to the hospitals, is no greater than the death-rate of any other class. Why? Is it not because they have no fear?

You live, move, and have your being, to mortal sense, in a swarm of microbes. A drink of water makes you an aquarium for the deadliest bacteria, and yet no disease appears. You may become physically "run down" and come up again with no sign from the germs. Then isn't our explanation the natural one? A negative state of your mortal mind comes as the result of fear, hate, or jealousy, and then the representatives of disease find your body an easy mark. If a mental state keeps ambulance attendants immune from contagion, does it not follow that an opposite mental state makes you subject to it? Immunity is one of the results of the mental condition our Science brings—of the "Peace that passeth understanding."

You say, "The words of Christ and his Apostles were not meant to be twisted and distorted by metaphysical cranks." I am afraid you do not know what "twisting and distorting" means, C——. To get a clearer understanding of the meaning of the words, listen to an explanation, by an orthodox clergyman, of the following Bible passages.

"And God saw everything that he had made, and, behold, it was very good." "Whatsoever God doeth, it shall be forever: nothing can be put to it, nor anything taken from it."

"And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick and they shall recover. . . . And they went forth, and preached everywhere, the Lord working with them, and confirming the word with signs following."

"Be ye therefore perfect, even as your Father which is in Heaven is perfect."

"And Asa in the thirty and ninth year of his reign was

Digitized by Google

diseased in his feet, until his disease was exceedingly great: yet in his disease he sought not to the Lord, but to the physicians. And Asa slept with his fathers, and died."

That is enough on this subject, C——; and in conclusion let me urge you to take a good look at Christian Science the next time it knocks at your door, after years perhaps, in hope of finding the black marble star where one can stand and say,—

> And oh! of all tortures,
> That torture the worst
> Has abated,—the terrible
> Torture of thirst
> For the naphthaline river
> Of Passion accursed,—
> *I have drank of a water*
> *That quenches all thirst.*

Well, I shall not apologize beforehand if I've said anything irritating, because if we were capable of offending each other it would have shown long ago in our many arguments from Newton to Oswald, and Bach to Wagner, and those have only resulted in my signing myself,

Your very sincere friend,
R—— R——.

The Christian Science Sermon.

BY JOHN CARROLL LATHROP.

A WORD of commendation of the capable and superior service rendered by our Bible Lesson Committee may not be untimely.

These faithful servants are performing a work for the cause of Truth which is creditable to a high degree. Working silently and unseen in a sweetly impersonal atmosphere by which they are surrounded, this committee is rendering an increasingly intelligent and effective service to the world, the far-reaching good results of which are tremendous.

Their task is a weighty one, fraught with responsibilities which few exceed at this hour, and they execute their mission with a true breadth, strength, and progressiveness which is presenting to humanity these chosen subjects and the Word of God, both long shrouded in mystery, in a light which may be said to be at once plain, practical, simple, and complete.

Of these weekly lesson-sermons our beloved Leader has spoken in no unmistakable terms, and refers to them as lessons "on which the prosperity of Christian Science largely depends." Thus it is impressed upon one, that in the preparation and delivery of these messages of Truth, an opportunity is offered of vast importance, and it can be earnestly desired that, throughout our field of labor, the high standard of efficiency displayed in the preparation of these lessons, be universally maintained in their delivery.

At this point it is interesting to note as a matter of common observation, the relation which a Christian Science congregation bears to the Christian Science sermon. In the Christian Science Church a large proportion of the congregation have their Sunday sermon before them all the preceding week, and to this extent each individual has been fulfilling the usual office of a preacher, and he deems it a duty daily to study the forthcoming sermon, and to assimilate and reflect to human consciousness the essence of Truth contained therein. Then when Sunday arrives, this portion of the congregation gather and unite their silent thought with the audible words of the Readers, in delivering to a waiting world a sermon, the healing and saving fruits whereof are boundless, and just in proportion to the realization and discernment of the Spirit of Truth.

Here it may be well again to call attention to the construction of these sermons. It is found that each is divided into sections and that each section expresses a distinct idea of the lesson subject, which idea usually ascends in force and conclusion with each succeeding section, producing a remarkably harmonious and complete discourse.

It is found that in some sermons, these footsteps may not be readily discerned, but that it is necessary to search diligently for them. Repeatedly going through the lesson, with an earnest determination to find the missing thought, one finds it does not long elude him. Moreover, the footsteps must be discerned if one expects to comprehend thoroughly the lesson, and it is found as before stated, that only to the extent of the comprehension of the subject is it reflected, and the prosperity of Christian Science enhanced.

As the logical outcome of such earnest application and spiritual energy, it is interesting to note that the strangers in a Christian Science congregation will quite usually discern even the footsteps of the lesson as the Readers proceed, so clearly have the latter comprehended them, and so forcibly are these central ideas silently brought out in thought.

Thus the Christian Science sermon is being preached weekly to an immense concourse of both present and absent, thus the sick are being healed, the sinner awakened, the blind eyes opened, and the ears of the deaf unstopped, for is not he who is with us "alway, even unto the end of the world," now in our midst, and as the Spirit of Truth, is he not renewedly fulfilling the Scripture, "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord. . . . And he began to say unto them, This day is this scripture fulfilled in your ears."

Watch and Pray.

BY Z. S.

"WHAT I say unto you, I say unto all, Watch." When our Leader gave those words of Jesus as a motto, she knew the need of the hour, and how carefully at this present moment, hour, and day, should we guard ourselves with sentinel thoughts. The motto and the name of our Christian Science weekly are one in thought, as the definition of the word Sentinel shows.

Allow only the likeness of the good, the true, the perfect, to find an *abiding* place in your thought, and complete harmonious action of all things will be manifested unto you.

The first step to be taken to accomplish this is to meditate on God, for only as we know God, can we perceive the good, the perfect, the true. We shall find it in God, for Jesus said, "Why callest thou me good? There is none good but one, that is, God;" and again, "This is life eternal, that they might know thee, the only true God, and Jesus Christ, whom thou hast sent." In this last quotation from Jesus' words, we are shown plainly that the knowledge of God is eternal life, and life to be eternal must be immutably and absolutely harmonious.

Harmony must be sought for at its source, God, so the question resolves itself, "*What* is God?" "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, answers the question thus: "God is divine Principle, supreme incorporeal Being, Mind, Spirit, Soul, Life, Truth, Love." Let us look into the definition. "Divine Principle" first, because this thought of God gives us the view of God as Life, the only Creator and governing power, as He is portrayed in Genesis 1 : 1 and in John, 1 : 1–4.

Some say when you give them this thought of God as Principle that you have taken away their loving Father-God and have left nothing, as Principle seems distant and cold. But these are they who seldom if ever work for themselves for the knowledge of God that they possess. All the knowledge of God they have is a mere say-so of some one else—mere hearsay evidence, which cannot be relied on in the hour of need. God to be God to you, must be All-in-all, the overlying, underlying, all-pervading Life of man and the universe, and this Life must have no opposite in your thought.

Digitized by Google

To know yourself truly you must first know God and His attributes. You must find for an absolute certainty that God is Life before you can truthfully say "I live." "But," you will ask; "how am I to prove with absolute certainty that God is?" In demonstration alone is this proof to be found. Finding God to be absolute perfection,—which He must be, to be at all,—we find ourselves in that perfection, in life eternal, because "God, without the image and likeness of Himself, would be a nonentity, or Mind unexpressed" (Science and Health, p. 199).

To know Jesus Christ is another condition of this life eternal which must be gained. Read the Gospels carefully, make a study of them, and see how that Mind that was in Christ Jesus governed all things.

That law rendered all so-called material laws null and void, no matter how time-honored. Go ye and do likewise, for ye have authority so to do in Jesus' answer to the disciples when they marveled at the withering of the fig-tree: "If ye have faith, and doubt not, ye shall not only do this which is done to the fig-tree, but also if ye shall say unto this mountain, Be thou removed, and be thou cast into the sea; it shall be done. And all things, whatsoever ye shall ask in prayer, believing, ye shall receive."

Appreciation.

BY S.

My thought has been very much occupied lately in thinking of that beautiful word—appreciation. In almost all denominations of Christians, we find that the thought of prayer is mostly looking for God to do something good,—asking Him to do something good and looking for Him to do more and more good. Christian Science tells us that God has already done all good, infinite good, and that we are right in the midst of infinite good, and I have been asking myself, "Well, then, if this be true, what is it that is wanted? Is it more good?" Surely not. It is simply more appreciation of the good. If a man wishes to enjoy a beautiful gallery of paintings, it is not only necessary for him to find the beautiful gallery of paintings, but he must educate himself to the point where he can appreciate the artistic beauty that is around him, or else it is absolutely nothing to him. If one wishes to hear a famous musician, he must have cultivated himself to the point of appreciation, or he will hear nothing but sound.

And so it seems to me that we are like the musician who seeks music with no appreciation of it, or the one who seeks the gallery with no artistic appreciation. We are in the midst of good, but do not know how to understand it or appreciate or apply it. We do not feel it because there is a lack in ourselves of appreciation. And I would like to suggest to every one that each one may receive the same benefit, and to that end he should ask himself sincerely from the bottom of his heart, "Am I trying daily to appreciate the good that I already have? Do I, as a child, take what is done for me by my parents as a matter of course and always look for more, or am I trying to find within myself an appreciation of what is done? Do I as a parent expect the good done by my child and not appreciate it? Do I take the actions of love from day to day as a matter of course, or do I appreciate and cultivate appreciation for every bit of good that I already have?"

Without this, I believe we shall never find any more good, until we learn to appreciate what we have. George MacDonald says, "The very kingdom of heaven may lie at a man's feet, and if he is not able to step down and look at it, it might as well never be there."

The end of life is not thought, but action. Great is the power of intellect, but at best intellect is only the vehicle that conveys us to the goal named, a good deed and a holy purpose.—HILLIS.

Testimonies.

How I was Converted to Christian Science.

It has been over eight years since my wife and I took up the study of Christian Science, and during this time we have had many proofs that Christian Science is the panacea for all human ills.

I had been suffering from insomnia caused by financial losses and sickness in our family, and after all else had failed to give me sleep and peace of mind, in my sore distress I turned to Christian Science for help and found relief. The understanding that Life knows no earthly woes came to me by slow degrees, and it was years before my fears of insomnia were overcome. My wife had been hungering for this Truth, and when a friend told her of Christian Science and loaned her Science and Health to read she was very happy. In a short time she was able to demonstrate the Truth that heals the sick and casts out error, and was soon freed from periodical sick headaches that she had had since childhood.

Christian Science found me an infidel. I hated the Bible more than anything else, for I believed it was the greatest mischief-maker in the world. This error, too, was met and overcome by Truth and Love, and the dark clouds of infidelity and the fears of insomnia were dispelled together.

Love for the Bible came through the understanding of the writings of our beloved Leader, and I can now see that it would be impossible for an infidel to continue reading "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and remain a sceptic of the Bible, for it was that good old Book from which she received the inspiration that gave Christian Science to the world.

In my own case I can see the truth of the statement "man's extremity is God's opportunity," for I was compelled to accept what was best for me.

In those dark days my wife saw that my fears and delusions were needless and groundless, and she lovingly declared the Truth for me every night for weeks, and I would respond to the treatment by dropping off to sleep. She never once failed to quiet my fears in this way.

At first I thought it was a hypnotic power that she had acquired by reading Science and Health, and I was eager to find out what the power was, so I tried to read the book for myself, but my prejudices against anything founded upon the Scriptures prevented me. I would pick up the book and read a few words and then throw it down in almost despair. Finally I did not try to read it at all.

It was then that my wife showed great wisdom and patience. She read portions of it to me, or such passages as I would listen to. These she read over and over until finally the beautiful light broke through the darkness of mortal mind, and I found the Truth that made me free. To-day the Bible and Science and Health are my companions constantly.

I have no doubt now that Jesus was immaculate, that he is our divine leader and guide, and we should strive to mould our lives after this pattern, even to healing the sick and casting out devils (evils), and I shall never cease thanking Mrs. Eddy for the blessed comforter that she has given to the world through her writings.

N. F. WHIPPLE, Oakland, Cal.

Healed after Material Means had Failed.

It was in the year 1899 that I first heard of Christian Science. For ten years before that I can say I nearly lived on drugs, being almost continually under the care of some physician. I had been through one operation, and then took local treatments twice a week for nearly two years. I also used an electric battery and took patent medicines of all kinds. Notwithstanding all my efforts to find health, I grew gradually worse until in October, 1898, I became too ill and weak to stand and had to remain in bed.

Digitized by Google

For six months I lay there, being attended constantly by our home physician. Four other physicians were called at different times for consultation, and all of them decided that the only thing they could see that was left for me to do was to go through a severe operation as soon as I could get the strength to endure it.

With all this I had severe bowel and stomach trouble with extreme nervousness. About the only thing I could eat was a small piece of toast and about one tablespoon of cream each day, and even this would distress me.

When Christian Science was first brought to me I was so weak and emaciated I could not raise my hand to my head, and had to be lifted like an infant. From my normal weight of one hundred and sixty pounds I was reduced to eighty-four pounds. There were no Christian Scientists who gave treatment where I lived, so a healer who lived ten miles away was spoken to about me, and she kindly consented to take my case. It was all new to me, but I grasped at it as a last hope. In three weeks from the time I took my first Christian Science treatment I was able to walk all about the lower part of the house. In four weeks I could go up and down stairs. In five weeks I could call upon my neighbors, and in six weeks I took a ride of ten miles on the cars to the city of Davenport and had a number of teeth extracted, returning to my home in the afternoon of the same day. This was my last week of treatment.

Since I was healed, which was two years ago last May, I have been a well woman. The Bible, "Science and Health with Key to the Scriptures," the *Quarterly*, *Journal*, and *Sentinel* have been my constant companions. Words are too feeble to express my gratitude to God and to Mrs. Eddy for this precious truth of Christian Science. I must also express my love and thanks to my healer who so patiently worked for me and with me to help me to see the nothingness of the material claims, and the allness of God.

MRS. AUGUSTA J. LAFRENZ, Eldridge, Iowa.

Healing Pronounced Wonderful.

In the fall of 1899, my son, eleven years old, was taken sick. He complained that his leg hurt him and the following day he was unable to use it. Two physicians examined him and said he had inflammatory rheumatism, and that the large bone of the limb was splintered but not broken. The limb was bandaged and then poulticed. In a short time an abscess formed and an operation was deemed necessary. Up to January, 1900, they operated many times, each time taking away slivers of bone. His leg became so drawn that it was fully six inches from the floor, and he was unable to straighten it out. At this period the doctor suggested taking him to the hospital.

I had heard of Christian Science through the healing of a man living a short distance from us, who had been healed of a cancer. Another neighbor had also been healed. This neighbor inquired about my son, and my wife told her we had about decided to try Christian Science. The next morning she accompanied my wife to Detroit to see a healer who began to treat him at once. In one week he was able to step on his foot, in nine weeks he was healed. His leg is perfect and he enjoys good health.

I met one of the doctors one day, who asked me what I had done for my son. I told him he had been healed in Christian Science. "Well," he said, "I don't believe in it, but I am glad the boy is all right." The other physician was very curious about the case when he heard that Christian Science had healed him; he wanted to see the boy, so we called on him and he at once wanted to see the limb. After examining it he said, "That's all right; it is healed splendidly."

This doctor told me that at a meeting of physicians in Ann Arbor he reported the case and they agreed that it was wonderful to know that the limb had been saved.

I thank God that we have learned the Truth, for we have been saved from many troubles. We have "Science and Health with Key to the Scriptures," and the *Sentinel*, and attend the meeting at Monroe, Mich.

WM. STUMPMEYER, Steiner, Mich.

Grateful for the Light of Truth.

I desire to express my gratitude through the *Sentinel* for the wonderful light which has come in my life through the teachings of Christian Science, by telling of two demonstrations which may help some seeker for the Truth.

The first was the healing of a sprained ankle. Before I knew of Christian Science I had sprained my ankle four times. At one time I was compelled to wear a plaster cast for several weeks, and twice I had to walk with crutches for a period of from four to six weeks. I wore a rubber bandage on the ankle at all times, and did not dare go without it. Five years ago when I became a Christian Scientist, I threw away the rubber bandage and a short time afterward sprained my ankle at a distance of three miles from home. I managed to get home with but little difficulty, and instead of being on crutches and disabled for weeks, was perfectly healed in two days and have had no return of the trouble.

Another demonstration was in the case of my boy seven years old who was hit by a ball, while playing golf. The ball was struck four feet from where he stood and hit him in the eye. Often, people being struck in the head by one of these balls become senseless, but the boy did not for one moment lose consciousness. The eye remained closed for two days and very much swollen, but the fifth day was as perfect as the other.

These are some of the proofs we have of this wonderful Truth that Mrs. Eddy has given to this age, and which all are privileged to share. I am deeply grateful and thankful for the help the *Journal*, *Sentinel*, and *Quarterly* have been to me in my study of Christian Science.

HARRIET E. HAMLIN, Chicago, Ill.

Opposition Growing Less.

Perhaps we have all felt the opposition to Christian Science of those representing *materia medica*. But we little know or feel or understand how much the Christ is penetrating that thought of opposition, alleviating its sting. To-day I was on a street car with one of our prominent physicians, and he was asking me how our church was getting on, when we expected to get in it, etc., and he seemed quite interested. After a while he stated that I ought to read of the meeting which occurred in Minneapolis or St. Paul not long ago,—a convention of the allopathic physicians. There was one noted physician who stated that the world would no doubt feel a change in the methods of medicine very shortly which would be as radical as the change from allopathy to homœopathy, and that the line on which this change would be would not be in matter. Going on from that point, he referred to several features of it, and finally came to Christian Science. He elaborated considerably on what he knew about Christian Science, and stated to this assemblage that inasmuch as so many thousands of people were looking into Christian Science, were taking it up and adopting it, it was not to be scoffed at, and it would be well for physicians in general to look into it and see what they could find in it to help them in their administering to the sick.

This seems to be a great step, a great alleviation of that sting and opposition which we have all felt from *materia medica*.—E. A. M., Cleveland, O.

Live in a thankful spirit, and you will find more and more to be thankful for. Begin by resolving not to forget your mercies, and you will gradually come to feel that thought of them a constant inspiration of happiness.

Religious Items.

In the first instance we believe what we have been taught. That is, we accept our beliefs on authority. To the end of our days and over a much wider range of topics than we think, this remains true of a portion of our beliefs. No man can know adequately more than a fraction of the things that he knows something about. The opinions he holds beyond what he actually knows are resting on authority. But he is all the while learning the facts as to many subjects of belief, or learning that things supposed to be facts are not so. This changes both his beliefs and the grounds of them. Coleridge said he could most sincerely subscribe to all the articles of the English Prayer Book Confession in September, 1831. He could not have made that statement in September, 1901. How insensibly are outgrown many once cherished beliefs! It does not follow that this comes from access of light always. Darkness, spiritual penumbra, created by intervening ambitions, studies, habits, may be the cause. Purity, sincerity, candor, love,—these are the greatest aids to the soundest faith.—*The Universalist Leader.*

The commemoration last week in England of the thousandth anniversary of the death of King Alfred was obscured by the world-wide lament over the death of President McKinley. But the ceremonial was admirably adapted to bring to mind the great debt Anglo-Saxon civilization owes to Alfred. While we may not all accept the dictum of Freeman, which has been adopted by Frederic Harrison, that "Alfred is the most perfect character in history," no one who becomes familiar with the story of his personal life, and who realizes the great part he filled in binding together the tribes of England into a nation, in founding English literature, English seapower, and English constitutional law, can fail to recognize that his life was one of the great gifts of God to the English speaking races, and through them to the world.

The Watchman.

All Christians who are in earnest must show, alike by their arguments and by the whole tenor of their lives, that neither the advance of scientific knowledge, nor the conclusions of the Higher Criticism, nor any modification of a purely scholastic theology, necessitate the slightest change in the eternal and fundamental beliefs of any who accept Christ as their Lord and King, and who live in the conviction that this age, as the German poet sang, is "the Age of the Holy Ghost." Christ himself taught us that it was expedient for us that he should go away, and that by the indwelling of his promised Spirit we are—or may be—nearer to him now than if, like Peter, we could clasp him by the hand, or, like the beloved John, could lay our head upon his breast.

FREDERIC W. FARRAR.

To-morrow may be given to you for the completion of a task, for the entrance upon some new field of activity. But to-day has its particular gifts which may be yours as far as you will receive them; but having passed them by they are nevermore offered to you. To-day is too precious for vain discontent, for idle dreaming, for half-hearted endurance. It is crowded with fine suggestions awaiting your touch for radiant realities. Learn to choose wisely, then, that each day shall give of its best to you, that you may grow rich in accepted opportunities of study, of service, of friendship, of beautiful sights and sounds. Thus each day shall be as a polished stone to build into the fabric of the years, and make possible a holy temple for your gift to God.

The Universalist Leader.

In the full tide of worldly prosperity, when the skies are clear and the future bright with promise, men easily persuade themselves that there is no God, or that, if there is, He takes no interest in the world's affairs. But let sorrow come, with its clouds and darkness, and the human heart instinctively turns heavenward, and cries out for Him who lives and reigns forever. However perversely they may shut their eyes to the truth in the hour of success and gladness, men know in their heart of hearts that it is only folly that denies the existence of a Supreme Being, who presides over the destinies of the universe, and who can and does intervene in the affairs of the race His power has created.—*The Examiner.*

A Methodist paragraphist, who is evidently seeking to gain or maintain a place in the ranks of the more advanced thinkers, speaks of John Wesley as an old back-number. This contemptuous reference to the illustrious father of Methodism finds origin in the fact that many of his views, as expressed in his writings, are not in accord with the views of many present-day Methodists. In some circles the disposition to honor Wesley as the founder of the society bearing his name is becoming less and less. And, though in England this religious body is known by the name Wesleyans or Wesleyan Methodists, there are in America those who at times seem ready to deny their ecclesiastical parentage.—*American Baptist Flag.*

PRAYER.

Our Father, who art in heaven and on earth and near unto every heart, help us to grow stronger and nobler by this world's varying good and ill, and, while we enlarge the quantity of our being by continual life, may we improve its kind and quality not less, and become fairer and tenderer, and heavenlier, too, as we leave behind us the various events of our mortal life. So, Father, may we grow in goodness and in grace, and here on earth attain the perfect measure of a complete man. And so in our heart, and our daily life, may thy kingdom come, and thy will be done on earth as it is done in heaven.—THEODORE PARKER.

It is a touching and convincing proof of the unity of the spirit which lies behind all the differences of the religious life that the two hymns which are now to become by common consent national hymns—"Lead, Kindly Light," and "Nearer, my God, to Thee"—were written the one by a Catholic and the other by a Unitarian. Because of the use made of them by the President in his last hours and their acceptance by the people everywhere as expressive of the universal hope and trust, they will henceforth come into use on all similar occasions.

The Christian Register.

You cannot perfume the corner of a room with musk. It will impregnate the whole apartment. You cannot confine genuine religion to a section of a man's life. Its influence will be felt in every department of his activity. A true Christian cannot be made on the plan of the water-tight compartments of a ship. Business and pleasure and religion cannot be kept apart in any such fashion. Religion has such a pervasive quality that if it is in a human soul at all no bulkheads can keep it out of any part of his life.—*The Watchman.*

The Watchman says: "We have often found better fortune was in store for us than we dreamed of, and that when things looked darkest with us we were just upon the point of turning a corner beyond which was radiant brightness. A larger part of our troubles than we often think for can be traced to the habit of not allowing for the blessings that may be hidden from us in the coming day. If, often it does not arrive; neither by any means does the anticipated evil always come."

The purest and best literature in existence is the Holy Scriptures. The Bible as the Book of Books should be in every home throughout the world. It should be read daily and its teachings fully observed; but often on entering the home we find the Bible covered with dust. READ! READ! and drink from the pure stream that flows from the heart of God for the uplifting of humanity.—*Southern Christian Recorder.*

We must cultivate a just respect for laws. There can be no civilization or progression without this. And we must insist upon respect for laws, not only by one class, but by all classes; not merely by the poor, but by the rich as well. The death of President McKinley will not have been in vain if it calls attention to what seems to be a growing disregard for law and order on the part of all classes in this country.

REV. R. A. WHITE.

It is universally acknowledged that God is infinite. That man is finite is equally clear. That the finite cannot comprehend the infinite is also beyond dispute. But no graver error can be made than to draw the conclusion that as man is finite and God is infinite, God is unknowable.

The New-Church Messenger.

Experience proves that purity and benevolence of heart, blending with earnest devotion, tend to produce a calm unwavering conviction of the presence and sympathy of God, which equals, if it does not surpass, in certainty our reliance on the proven facts of physical science.—CHARLES B. UPTON.

The Sacred Scripture contains within its letter infinite Divine Truth, and is thus the Word of God in heaven and on earth, teaching the way of life, consociating men with angels, and conjoining all with the Lord.

The New-Church Messenger.

There never was a call to men and women to be more solely and fully religious than now. We need to put forth the power of our religion in active duties, to live it out in our social circles as well as personally.

CHANNING.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory *vs.* Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The true Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen: $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

Secretary Hay, representing the United States, and Lord Pauncefote, representing Great Britain, will formally sign the new isthmian canal convention next month.

The new convention will abrogate the Clayton-Bulwer treaty. It confirms the neutrality of the projected waterway and concedes to the United States the right to protect its own interests in time of war. With these exceptions and the necessary changes which accompany them, the treaty will not differ materially from the Hay-Pauncefote convention as originally submitted to the Senate by President McKinley.

The administration is confident there will be no difficulty in securing the ratification of the treaty when Congress convenes in December.

According to the *Washington Star* there are over eight thousand women employed in the different offices of the national government in that city. More than nine hundred of this number are paid salaries ranging from one thousand to eighteen hundred dollars a year, there being three paid the top figure. These figures are based on estimates of the civil service commission and do not include some of the employes of the bureau of engraving and printing and the census office. During the past seventeen years 2,044 women have entered the service of the Government at Washington by means of their competitive examinations. There are now fifty-seven examinations open to women.

The William McKinley National Arch Memorial Association was organized at Washington, D. C., October 9. It is the purpose of the association to raise funds with which to construct a memorial arch to the late President at the Washington side of the proposed memorial bridge across the Potomac.

President Roosevelt has appointed Thomas Goode Jones to be United States district judge for the northern district of Alabama. Mr. Jones is an ex-confederate, an ex-governor of Alabama, a gold Democrat, and a man of high standing in his own community.

President Roosevelt has decided that the official designation of the President's residence during his administration shall be "White House," and not "Executive Mansion" as heretofore, and shall be so designated on personal and official stationery.

The Post Office Department has decided to place the late President McKinley's head on the new issue of postal cards which will appear shortly after December 1.

Rear-Admiral Schley, having reached the age of sixty-two years, was retired October 9, in accordance with the law.

Foreign.

The London *Spectator* says there are now 546 coöperative societies in Ireland, of which 270 are concerned with the manufacture of butter or with the preparation of the cream out of which it is made. But there are also seventy-eight societies "which carry on various rural industries, from flax-scrutching to the making of lace, and also include the improvement and marketing of poultry and eggs;" 111 societies which aim at cheapening production by the joint purchase of honest seeds and manures and of farming implements; and eighty-seven agricultural banks which lend money chiefly on the security of the character for honesty and industry borne by the borrowers.

The American contributions to the Queen Victoria Memorial Fund amount to seventy-five thousand dollars, which, according to the king's consent to a request made by the American Society in London, will be applied to a clearly designated portion of the memorial. This will be designed and executed by an American sculptor in harmony with the memorial's general artistic design. It is expected that this sculptor will be selected after some form of preliminary competition in the United States.

Prince Ching has written to the ministers of the Powers requestin; the withdrawal from Pekin of the foreign business establishments. He says that foreign business houses have been illegally established there, because Pekin is not a treaty port. He further states that all such should be removed to treaty ports, and requests the ministers to secure their removal. Goods required by the legations can be ordered from treaty ports and when so ordered are not dutiable.

Mr. Kasao Hatoyama of Tokio, Japan, will deliver a course of lectures on Japanese law at Yale College. Mr. Hatoyama is a graduate of Yale law school from which he received the degree of D.C.L. in 1881. He is professor of law in the University of Tokio and president of the State Semmon Sakko, a private institution of Tokio, where fifteen hundred young men are students of law, literature, and political science.

The total of British exports and imports during the last year is the greatest volume of business ever tran acted in one year by any country in the world, and amounts to nearly eighty million dollars' increase over the preceding year.

Industrial and Commercial.

The United Traction and Electric Company, which operates the street railroad systems of Providence, R. I. and the near-by places, has announced a liberal plan of pensioning employees. The plan provides for a weekly pension, beginning at age seventy, of percentages of the average weekly wages received by the employees during the ten years previous to attaining seventy, the lowest being one per cent for those having been employed less than twenty years. The scheme further provides for life and accident insurance at a low cost.

According to revised computations on the production of gold and silver throughout the world during the year 1900, there were mined $255,924,654 of gold, and $112,205,742 of silver. The United States leads the production of both these metals, having produced during the year 1900 $78,159,674 of gold, and $36,576,900 of silver. Australasia ranks second in the production of gold, her output being $73,467,110, and Mexico ranks second in the production of silver, her product for last year being $34,269,494.

The great Aspen tunnel on the LeRoy-Bear River cut-off of the Union Pacific Railroad in Utah has been completed at a cost of over three million dollars. The tunnel has been two years in the course of construction. It shortens the line ten miles and reduces the grade over that portion of the road from seventy to forty-two feet to the mile.

During the last year the United States produced 198,500 tons of beet sugar and seven hundred tons of cane sugar. The southern states produced three hundred thousand tons, Porto Rico one hundred thousand tons, and Hawaii three hundred thousand tons. Three years ago our beet sugar product was only thirty-two thousand tons.

The *New England Homestead*, in the final estimate published October 12, places the total yield of spring and winter wheat in the United States this year at seven hundred and fifty-two million bushels. The largest previous crop was that of 1898, estimated by the same authority at seven hundred and fifteen million bushels.

The Puget Sound Bridge and Dredging Company of Seattle, Wash., has been awarded the Government contract, valued at two million dollars, for dredging the harbor of Manila and completing the other Spanish breakwater.

Belfast recently placed an order in the United States for twenty thousand tons of steel, the greatest ever placed in America. Our steel exports last year amounted to seven hundred and eighty million dollars.

General.

The new year-book of the Department of Agriculture contains some interesting facts regarding the potato, which is now the king of garden products. The crop in 1900 was, in round numbers, 211,000,000 bushels, worth on the farm almost ninety-two million dollars. The great potato states are, in the order named, New York, Iowa, Pennsylvania, Michigan, Illinois, Ohio, Wisconsin, Nebraska, Minnesota, Missouri, Kansas, and Maine. The New York crop is twice that of any other state, and represents one-eighth of the money value of the total.

An extension of thirty days of the time allowance for the ransom of Miss Ellen M. Stone, was made. Miss Stone is a missionary who was captured by Bulgarian bandits and a ransom of $110,000 demanded for her release. October 8, $35,000 of the required amount was paid to the representatives of the brigands. Miss Stone has been treated well, and there is no doubt that the required amount will be raised within the time specified.

At a meeting of railroad presidents held in New York City October 7, it was unanimously decided to abolish all transportation favors and interchange of courtesies between railroad officials, and completely eradicate the pass system. Practically all the railroads of the country, except those of the southwest, will be affected.

The first monument to be erected to the memory of the brave soldiers of Valley Forge will be dedicated on the 19th inst. by the Daughters of the Revolution. The monument is a handsome obelisk of granite, fifty feet in height.

Dean Lung, a Chinaman, has added twelve thousand dollars to the one hundred thousand dollars from an anonymous donor for the purpose of establishing a chair of Chinese language and literature in Columbia University.

A census bulletin shows a total of 3,895 commercial floricultural establishments in the United States, their lands and buildings valued at thirty-three million dollars. The value of the output for 1899 was eleven million dollars.

It has been estimated that $20,465,016.67 will be necessary to meet the expenses of the public schools in New York City for 1902. The estimate for 1901 was $18,512,817.60.

Seth Low, who has been president of Columbia University for twelve years, has resigned his position to enter the contest for the New York mayoralty.

The total registration of the various departments of Harvard University this year is 4,043.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Testimonv Meeting at London, England.

TOWN is supposed to be very empty now, but we have had very full and good testimony meetings. Following is an account of the meeting held August 14.

A gentleman first rose, and said, "A gentleman here in London who had been seriously ill for some months of Bright's disease and heart trouble, having been under several eminent physicians, decided, at the request of a near relation, to try Christian Science. The doctors had told his relatives that his case was hopeless, and that he should be informed that he was a dying man. He had been more or less wandering in his mind for some time.

Christian Science treatment began on Friday evening, nine weeks ago. He was downstairs the next day, and was completely healed of Bright's disease and heart disease in a very short time. He has been healed also of dyspepsia, indigestion, and insomnia of long standing. He has now slept peacefully, like a child, for weeks. There is no question that according to *materia medica* the man was dying of Bright's disease. There is also no question now as to his being perfectly well.

Another speaker told what great pleasure and profit she and her husband had derived from the Communion service at Boston, from seeing the Mother and hearing her speak at her home in Concord, and from the great meeting in Tremont Temple, at which three thousand people were present. She narrated an amusing incident of the voyage —that a doctor on board, whose children had the mumps, allowed them to mix freely with the other children, to the annoyance of the passengers, one of whom begged the speaker's husband, a Christian Scientist, to remonstrate with the doctor.

She told how Christian Science treatment destroyed suspicous symptoms of mumps in her own children, how it enabled them all to meet the intense heat in America and in Canada, and the changes of temperature—in one case a sudden drop of thirty-five degrees—without suffering; and how it had entirely cured her of sea-sickness, from which she had formerly been a great sufferer. On this trip she found the motion made no difference to her, and she was able to enjoy watching the waves. She ended by saying how much she had been helped by talks with some of the oldest workers in Christian Science, and said, "One thought is very helpful to me, that we have not to concern ourselves with what is past, but with the present,—to live to-day well, and to know that the future is ours."

A gentleman told how he had been trying to explain to a lady that Christian Science healed the so-called *real* diseases, organic and functional, quite as readily as it healed the imaginary diseases of hysteria, etc., and that it, Christian Science, healed diseases upon the basis of their *unreality*, although *to the one suffering* they might *appear* very real indeed. He said his wife's diseases were very real to her, until through Christian Science they were healed, some four years ago, and thus shown to be unreal, a belief only of mortal mind. The lady who brought Christian Science to his wife, was, he said, herself a living proof of the power of Truth and Love through Christian Science to heal the so-called real diseases, for she had been healed of hereditary consumption and heart-disease, after all hope had been abandoned, and she was upon what the physicians termed her death-bed.

This lady is now, and has been for the past five or six years, perfectly well, and has been very successful in helping others to know the Truth. One case which she treated was that of a woman who had been a slave for years to the morphine habit, and had become so fixed in its repulsive grasp that all hope of her release had fled. In three days' treatment by Christian Science she was completely healed, the habit destroyed, and she herself is now in the work of Christian Science, helping others.

He ended, "I personally have received great benefit in many ways from Christian Science, physically, morally, and spiritually, and it is with great love and reverence that I testify to my gratitude for Mrs. Eddy's wonderful revelation. Any one who honestly investigates will find that this healing work of Truth and Love is going on all over the world, and that thousands of earnest workers are obeying Christ's command, not only to preach the Gospel, but to heal the sick, thus proving that the Principle of Christian Science is divine."

A lady said she wished to express her gratitude to Christian Science for all it had done for her. When she first heard of it, she was in a very poor state of health, her eyesight was bad, and she was afraid to open a book or paper, or try to do any needlework, for fear of losing her sight altogether. But after attending the Wednesday evening meetings for a little while, and reading Science and Health, her sight gradually returned, for which she said she was truly grateful, and she has never had any trouble with her eyes since.

A gentleman from California gave a most interesting testimony, first, of his own healing, in one treatment, of a chronic throat complaint, from which he had suffered for years, and for which he had undergone several operations, without any permanent relief.

Several leading physicians had announced that his wife would be a confirmed invalid unless she submitted to a severe operation. She was healed in three months, after having been a sufferer for years.

He told of many other cases personally known to him, —the healing of a gentleman at San Francisco from the results of an accident for which physicians could do nothing; of a lady at Sacramento of blood-poisoning, after the doctors had given up her case as hopeless; of a gentleman at Los Angeles healed of creeping paralysis, after doctors could afford him no relief. (This gentleman presented a handsome check to First Church at Los Angeles, in token of thanks.) He told of the healing of a gentleman in San Francisco of an injury to his foot, from which he had suffered for years, wearing a steel clamp, but getting no relief, until healed by Christian Science.

A young lady stenographer in this gentleman's office was healed in one treatment of a severe ailment of the eyes. Another young lady, a relative of his, was also

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

healed of severe trouble with the eyes, from which she had suffered for several years. Another gentleman in San Francisco was also healed of severe trouble with the eyes, which almost compelled him to give up his position.

A gentleman at Lodi, California, was healed of epileptic fits, from which he had been a sufferer continually for seventeen years. His brother was healed of severe nervous stomach disorder, from which he had suffered for years. A lady at San Francisco was cured of a serious ailment, for which she had been treated in vain by doctors for over six years. She was healed by Christian Science just as she was on the point of entering a sanitarium, a confirmed invalid for life. Her husband was healed of extreme nervousness caused by severe stomach trouble. Another gentleman was healed after the physicians had given up the case, and pronounced death near at hand.

The wife of a judge in New York was healed of cancer in the breast after physicians had offered no hope of her recovery. He ended by saying that there were so many cases of healing in San Francisco and the vicinity, cases that are well known and are generally considered marvelous by those not knowing the power of Christian Science, that he hardly knew where to leave off.

E. M. Bowden Smith, London, Eng.

The Lectures.

At Grand Rapids, Mich.

Devotees of the faith given to the world by Mrs. Mary Baker Eddy assembled in Powers' Opera House last night (Tuesday, October 1) to hear an address on Christian Science by Edward A. Kimball, C.S.D., of Chicago. Nearly every available seat in the parquet was filled, many seats in the balcony, and the boxes were occupied.

It was an eminently intelligent and well-dressed audience and the ladies and gentlemen were about equally divided in number. A public speaker could hardly ask closer attention than was accorded Mr. Kimball from the opening to the close of his address. His advantage of speaking on a subject in which nearly all present were intensely interested and his pleasant address and commanding presence all contributed to a most enjoyable and helpful evening for all present.—*The Grand Rapids Herald.*

The lecturer was introduced by Mr. John Carveth as follows:—

The closing years of the century, from which we have so recently passed, give glorious promise of the achievements of the new one, whose many doorways we feel assured will open wider and wider to hitherto hidden treasures of wealth in every line of the world's abounding and ever advancing needs.

The recent past has brought to light many surpassing wonders which throughout the long ages had been supposed to exist only in the domain of the miraculous, but in every case when understood were found to be more natural and reasonable than were the lower methods that were supplanted.

To-day we find thoughtful and scholarly men and women, in every land, prophesying for the century marvelous unfoldings which are to outshine all the past and awaken mankind to the benign possibilities within the grasp of all who rightly seek and strive.

Every line of noble thought abounds with sweet messages of a higher truth bringing to the weal of man something more precious and permanent than fleeting gold or crumbling earthly monuments.

The sick and hungering heart looks not forward to a crown of jewels to assuage its sorrow, but for the Christly word that speaks the peace of health and holiness.

The world to-day is not in great need of military armament, greater factories, broader canals, more rapid transit, more extended commerce, more fertile fields, or more abundant flocks and herds. It is, however, in sore need of the ways and works of Christ Jesus, whereby both mind and body are so healed by the divine energy and nature, that men may do unto others as they would that others should do unto them.

Disease, sin, and suffering stalk through the land, loudly claiming supremacy over age and youth, rich and poor, weak and strong. Their cold and heartless claims go forth substantially unchallenged by the worldly ways and schools of the present and past. Men in every age and land, in every rank and walk, and in every school and trade, have vainly searched for the remedy that would uproot the seeds, or chain the strides of disease and sinful woe.

This worldly and human search has ever been made in the fields of matter. Jesus and his followers evidently found their sure remedy away and apart from this fruitless source, in the realm of Mind that is eternal, divine, and perfect.

What greater boon could the awakened thought of this quickening period prophesy or conceive for men than the discovery and application of the ever potent remedy of our great Master; that his matchless work in the field of divine metaphysics in the dawn of the Christian era is coming silently down the ages to crown the twentieth and succeeding centuries with ever-increasing health, hope, and happiness?

The gentleman who will speak to you to-night has come to bring to you the glad news that our Saviour's remedy for the woes of mortals is again being applied with remarkable and growing success. He comes to you not only as one of the rejoicing beneficiaries of this discovery, but as one who has for years been demonstrating the might and uplifting majesty of this spiritual healing. He therefore comes equipped with a measure of demonstration that Truth always demands, as its severe but sure test, of those who would pluck in the gardens of its heavenly treasures.

I now have the pleasure of presenting to you Mr. Edward A. Kimball of Chicago, who needs no introduction to a Michigan audience.

At Montreal, Can.

Judge William G. Ewing of Chicago lectured on Christian Science in Karn Hall, September 29, 1901. The lecture was given under the auspices of Second Church of Christ, Scientist, Montreal, and was listened to by a large and appreciative audience.

Judge Ewing was introduced by Mr. Ormond Higman of Ottawa, in the following language:—

Friends:—The lecture to be given this afternoon is under the auspices of Second Church of Christ, Scientist, and on behalf of the church I bid you a very cordial welcome.

The lecture is not given simply for the purpose of entertaining you for the space of an hour or so, though I am sure it will not fail in this respect. Its purpose is to instruct, to dispel some of the misconceptions entertained as to what Christian Science really is. The public are fighting, not Christian Science, but their own erroneous conception of it. If they knew that it was a spiritual revelation of the teachings of Jesus Christ, they would not antagonize but love it, and seek to bring themselves within its benign influence.

Some people will tell you that it is a fad and its advocates are composed of women and a few weak-minded men. Others again say that it is the cult of a few cultured people who make the training of the human reason the groundwork of their propaganda. The facts are, however, that the Christian Science Church, like most other churches, draws its membership from every walk in life, with this difference, that they are snatched as brands from the burn-

Digitized by Google

ing. With one foot in the grave and the other on the brink, when all human aid has failed, they turn in their despair to Christian Science and are healed of their diseases.

Eleven years ago I myself was fast succumbing to the dread effects of what is known as Bright's disease. Two of the foremost physicians of the city where I live had done all that medical science could do, but were impotent to stem the ravages of the disease. In that dark hour a Christian Scientist came, like an angel of light, to our home, and with less than three weeks of Christian Science treatment I was made every whit whole. The distinguished jurist who is to speak to us this afternoon, as well as myself, is a living example of the healing power of Christian Science.

With the object of dispelling some of the misconceptions entertained by the world at large with respect to Christian Science, the Mother Church at Boston has established a Board of Lectureship, and the members of this Board are engaged throughout the United States, Great Britain, and Canada in educating the public mind as to what Christian Science really is. You will find that it is no new code of ethics, no new doctrine that they are trying to inculcate; but the old, old story told by the Nazarene prophet on the Galilean shores nearly nineteen centuries ago, and spiritually revealed to this age in that wonderful book, "Science and Health with Key to the Scriptures," written by Mary Baker Eddy the Discoverer and Founder of Christian Science.

We have with us this afternoon from the Board of Lectureship one of its most distinguished members, whose thoroughly trained analytical mind, as well as the personal experiences which he has had of the healing power of the Christ-Truth, fit him pre-eminently for the sacred duty which he has to discharge.

Friends, it is with very great pleasure that I introdnce the Honorable William G. Ewing of Chicago, who will speak to us on the subject of Christian Science.

Correspondence.

At Kalamazoo, Mich.

Nearly every seat in the Academy was occupied Sunday afternoon (September 29), during the lecture upon Christian Science by Edward A. Kimball of Chicago. The lecture was under the auspices of First Church of Christ, Scientist, of Kalamazoo.

Mr. Kimball spoke for nearly two hours. He is an entertaining talker, and besides being thoroughly conversant with his subject his apparent earnestness held the attention of the large audience throughout the lecture.

Kalamazoo Morning Gazette-News.

Laugh and Live Long.

Thackeray truly remarked that the world is for each of us much as we show ourselves to the world. If we face it with a cheery acceptance we find the world fairly full of cheerful people, glad to see us. If we snarl at it and abuse it, we may be sure of abuse in return. The discontented worries of a morose person may very likely shorten his days, and the general justice of nature's arrangement provides that his early departure should entail no long regrets. On the other hand, a man who can laugh keeps his health, and his friends are glad to keep him. To the perfectly healthy laughter comes often. Too commonly, though, as childhood is left behind the habit fails, and a half smile is the best that visits the thought-lined mouth of the modern man or woman. People become more and more burdened with the accumulations of knowledge and with the weighing responsibilities of life, but they should still spare time to laugh. Let them never forget, moreover, and let it be a medical man's practice to remind them, that "a smile sits ever serene upon the face of Wisdom."—*London Lancet.*

"My Dearest of Mothers."

"My dearest of mothers." I heard the words repeated in soft tones by my next-door neighbor at an island farmhouse where we were sojourning, "My dearest of mothers." My friend was a widow, and her son, an affectionate, talented fellow, was an engineer in Idaho. In one of his late letters he said at the close, "And now, my dearest of mothers, good-bye." Did he guess, I wonder, how the little petting phrase would please the heart that loved him so? Did he think that she would say it over softly to herself as she sat alone in her room?

The home days were over. The babies, with their sweet ways, their joy-giving and their trouble-making, had grown to noisy boys, then to self-asserting men; they were out in the world making their way; brains busy, thoughts absorbed, hearts full; yet here was one who remembered the mother, still in middle life, loving and needing love the same as when her boys were her very own in the dear child's home. He wrote her long letters, describing his adventurous, changeable life; the strange companions by whom he was surrounded; the wondrous scenery of the wild western world. It was all intensely enjoyed; but better than all were the love-phrases that showed the son's affectionate heart. I wonder if the "boys" know how dear they are to their mothers, and how a little attention, little gifts, tender words, flying visits, cheer and warm the hearts that have borne the test of years and sorrows?

Life is a little chilly to the mothers whose homes are things of the past. Even if they remain in the old home, the rooms seem very bare and silent after the children are gone. It is as if summer had flown, with its nests and bird-songs, and autumn winds were blowing. Then the love of the sons and daughters is like sunshine or warm fires to the hearts that sadly miss them. Let us hope there are many sons who write, "my dearest of mothers."

Selected.

Appalling Depths of Space.

In a recent lecture Sir Robert Ball said that a telegraphic message would go seven times round the earth in a second, and if a telegraphic message could be sent to the moon, it would reach its destination in a little more than a second. It would take something like eight minutes to arrive at the sun; but how long, think you, would it take to get to Alpha Centauri, traveling thither one hundred and eighty thousand miles a second? Seconds, minutes, hours, days, weeks, months, would not be long enough; it would take no less than three years, traveling all the time at that tremendous pace, before it would reach its destination. If that is the case with respect to the nearest of the stars, what must be said of those which are farther off?

There are stars so remote that if the news of the victory of Wellington at Waterloo had been flashed to them in 1815 on that celestial telegraph system, it would not have reached them yet, even if the message had sped at the pace indicated, and had been traveling all the time. There are stars so remote that if, when William the Conqueror landed in England in 1066, the news of his conquest had been dispatched to them, and if the signals flew over the wire at a pace which would carry them seven times around the earth in a single second of time, that news would not have reached them yet. Nay, more, if the glad tidings of that first Christmas in Bethlehem, nineteen centuries ago, had thus been disseminated through the universe, there are yet stars of which astronomers could tell us, plunged into space in depths so appalling that even the 1901 years which have elapsed since that event would not have been long enough for the news to reach them, though it traveled one hundred and eighty thousand miles in every second.

Divine Healing.

REV. A. G. ANDREWS of Murray, Utah, recently delivered an address on the above subject at a meeting of the Salt Lake Ministerial Society.

The address as published in the *Deseret Evening News*, was as follows:—

This subject is not chosen because the speaker is anxious to do so, or that he esteems himself qualified to discuss it; but rather as a matter of enquiry, whether or not it is not a doctrine for to-day as well as for past ages. In the great plan of the ages, God saw that pure minds would need stirring up by way of remembrance, sometimes. This was frequently the case with Israel, and sometimes by methods very unwelcome.

Have we not been slow in getting back to apostolic simplicity of faith and doctrine, as well as practice? One of the fundamental doctrines of the Apostolic church—the second coming of the Christ—was almost ignored, sadly neglected, at best. This doctrine has been the rallying cry of the Apostolic church, and was declared by an angel as the wondering disciples gazed up into heaven, desiring one more look at their departed Lord. For this coming we are constantly urged to be ready; for this is the crowning or rejecting day. Notwithstanding these many admonitions the doctrine of the second coming was so neglected that it would seem that Satan took an opportunity to bruise the church, by leading one to take up this doctrine, and others to carry it to the other extreme.

. . . . . .

If "Divine Healing" is a doctrine of the Old Testament and New Testament, is it not a doctrine for the ages of the ages?

I. Is "Divine Healing" a Bible doctrine?

Let us examine a few passages. "If thou wilt diligently hearken to the voice of the Lord thy God, and wilt do that which is right in his sight, . . . I will put none of these diseases upon thee, which I have brought upon the Egyptians; for I am the Lord that healeth thee" (Exodus, 15 : 26). "Ye shall serve the Lord your God. . . . And I will take sickness away from the midst of thee" (Exodus, 13 : 26). "And the Lord will take away from thee all sickness" (Deuteronomy, 7 : 15). We remember Solomon's prayer for Israel's restoration from sickness when they should look toward heaven. It was promised that this should be heard. (1 Kings, 8.) "Who forgiveth all thine iniquities; who healeth all thy diseases" (Psalm 103 : 8).

These passages are very clear promises of healing, and that they were fulfilled when the conditions were complied with, none but sceptics will deny.

As early as in the days of Abraham, "Abraham prayed unto God: and God healed Abimelech, and his wife, and his maid-servants" (Genesis, 20 : 17).

Hezekiah, and even Naaman, a heathen, were healed of incurable diseases; and others were raised to life from the dead. We love to think of that simple faith which led Israel to look and live when thousands were dying from the serpent's bite. These cures were multiplied just according to their faith and obedience. It was the fulfilment of the divine law: "According to your faith be it unto you."

All of these and many more are a part of the Old Testament history. We are told also that "God is the same yesterday, and to-day, and forever." "In him there is no variableness, neither shadow of turning."

Did He intend that these wondrous healings should continue in the new dispensation? All except the sceptics agree that these miracles of healing did continue through the Apostolic age. We are so well agreed on this part as not to need any recital of proof.

Just here is where the diversity of opinion comes in. While all are of one mind that, for spiritual healing, God's hand is still stretched out to heal the soul, it is withheld as regards the body. The unchangeable God has changed, and the power once so powerful to heal the body has now become inoperative, if not impotent.

To give any solution to this strange problem, or intelligent reason for such a change, the writer has heard none save this: "That healings are obsolete—they do not take place, they are something of the past."

No one ought to have more charity for those who take this view than the writer himself. He was taught from infancy that this blessing of the Church had been withdrawn, and that it was no longer needed to confirm the saints or convince the world. Therefore, he looked no further than his own home to learn, if possible, whether these things continued or not. He had taken the sayso of others, others whom he thought he could trust, and that was the end of investigation.

II. How much is covered by the atonement?

The Mormon Church confines it to the body. I believe Christians believe it includes both body and soul. This only could mean a perfect atonement. If we accept the fifty-third chapter of Isaiah as teaching the atonement, how shall we separate our sicknesses from our sins? Both are included in our loss through Adam; both seem to be restored through the second Adam—Jesus the Christ. Some of the best Rabbi scholars and others agree that the fourth verse of the fifty-third chapter of Isaiah has a better rendering, where it is quoted by the Master in Matthew, 8 : 17, which reads: "Himself took our infirmities, and bare our sicknesses." If one is in the atonement is not the other? Now when we take the last command of Jesus (Mark, 16 : 15–18) to go and teach all nations faith and obedience, and that certain signs should follow, does it not seem in harmony with Matthew, 8 : 17?

III. What reason can we give why these signs are not multiplied as in the days of the Apostles?

1. The great apostasy is a natural reason.

The great body of the church drifted out from God into the world, living a selfish and unspiritual life, until faith in God and His promises was little known, and thus gradually one by one the doctrines of God and of Christ were forgotten and selfishness and sensuality substituted in their place. Is it not high time that we should go back to the New Testament for the simplicity of its teaching and faith? This alone will bring unity and convince the world that our religion is of God, and that we are honest in it.

2. Is it not owing to a lack of faith that these signs do not follow to-day, as in the Apostolic age?

Faith is the first requirement, without which there can be no results. "According to your faith, be it unto you." And we are almost staggered when we hear that Jesus could not do many mighty works in a certain place because of their unbelief. If this were such a hindrance to Jesus' success in his day, what may we expect when an overwhelming majority of his disciples to-day are not only disbelieving the doctrine of healing, but absolutely opposing it? Whence comes the authority to declare that these signs were intended to continue only through the apostolic age?

Is there anything in the Old or New Testament to indicate or even hint that this blessing of the church should be withdrawn? Does not every promise of the millennium indicate that this blessing shall reach its crowning glory when that day shall fully dawn? The writer remembers well when he was like the man who went to India to hunt lions and tigers. He came back and in reply to inquiries regarding missions, he said he found nothing to show that missionaries were doing anything. But he found lions and tigers. These he was hunting.

IV. Do these signs follow in the least to-day? I reply yes.

Consumption has been Cured.

MR. JOHN WHITE of Philadelphia, publishes the following letter in a recent number of *The Philadelphia Times*:—

The following is an extract from a letter sent by Miss Florence Staley to Rev. Russell H. Conwell, which she has authorized me to publish:—

"*Dear Sir*:—I noticed with pleasure the article in *The Philadelphia Times* reporting your favorable attitude toward Christian Science and toward Rev. Mary Baker Eddy. I have been benefited in many ways by Christian Science, and it is gratifying to note that you, with your wide influence, can commend such an uplifting teaching. There is one remark, however, in the report in Monday morning's *Times* to which I must take exception, and it is where you say consumption cannot be cured, and that diseased lungs cannot be replaced by sound and healthy ones. I myself have been healed of consumption, after my case was deemed helpless and hopeless by several physicians, and a famous lung specialist of this city had said the cavity in one of my lungs was as large as his fist.

"To-day I am perfectly sound and well. I have not taken any medicine for nearly three years. During all last year I did not miss one day on account of ill-health. My profession being that of teaching, I have been obliged to go out in all kinds of weather, and having night pupils as well, I have had to be out in the evenings.

"I have continued teaching during this vacation period, and have managed my work with ease and comfort, through the beneficent and health-giving truth of Christian Science.

"Before coming into Christian Science this would have been utterly impossible, as I was considered weak and sickly from birth."

"Prayer for Dyspeptic."

To the Editor of the *Brooklyn Eagle*.

In an article, printed in your paper on August 12, reviewing a book called "Christian Science and Kindred Superstitions," reference is made to a "prayer for the dyspeptic," taken from a text-book written by a Mr. Hazard, who styles himself "President of the New York School of Primitive and Practical Christian Science."

I beg to state that Mr. Hazard is not a Christian Scientist and that his so-called school of "Primitive and Practical Christian Science" is not an institute where Christian Science is taught.

I beg further to state that in Christian Science treatment there is no such thing as a formula; to the Christian Scientist there is no such thing as an hypothesis of God, his religion proving, beyond a doubt, by its results, that God is a real, eternal, existing Being, and that man is His idea and reflection.

Thousands reached by your valuable paper are anxious to know what Christian Science really is. With the end in view that the general public may know that such things as the "prayer for dyspeptic" are not in accordance with the teachings of Christian Science, or practised by its followers, I beg that you will give this correction space.

F. H. LEONARD.

In the *Brooklyn Daily Eagle*.

The Power of Kindness.

How often in life do we find our pathway o'erhung with clouds! Grief comes an unbidden and unwelcome guest. Sorrows and misfortunes gather around us, causing our hearts almost to sink beneath their weight. It is in those dark hours that the heart needs the comfort and kindness of a sympathizing friend. We are so constituted that, to a great degree I think, our happiness is dependent upon others; the heart is formed for friendships, and we need the smile and light glowing forth from the face of others as much as the little flower needs the warmth of the sun or the cooling shower. Words of kindness fall upon the heart like the gentle dew. We know not, and may not know, the good we might do in this world by simple deeds of kindness. They are worth more than silver or gold. How like angels of mercy we might become if we would be guided more by the law of kindness—kind to all, especially to the poor and to those who have strayed from the paths of rectitude. It is kindness alone that will soften their hearts and win them back to virtue. Thus we shall find happiness in making others happy.

MRS. EZRA MILLER.

In *Lutheran Observer*.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, in now ready for distribution. Deckled edges; 50 pages. Price, 50 cents;. per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Obstetric Notice.

Any one having a degree of C.S.B. or C.S.D., may become an applicant for the obstetric class, which convenes October 21, 1901. This includes the 1901, June class. Applications must be made to Alfred E. Baker, 25 North State St., Concord, N. H. BOARD OF EDUCATION.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Dec. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL.

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Science, Physician and Redeemer.

THE above is the title of the lecture delivered by Judge William G. Ewing at Symphony Hall in Boston, Tuesday, October 8, 1901, to an audience of nearly three thousand people. The occasion was among the important events in connection with the history of Christian Science. We have Judge Ewing's kindly permission to publish the following abstract of his lecture. We have great pleasure in doing so. Judge Ewing said in part:—

It seems reasonable to say that if Christian Science is proximately what its adherents claim for it, its merits should command thoughtful, candid investigation; that if it has prophylactic or therapeutic force, of even slight efficiency, afflicted men and women everywhere should know that fact; and certainly if it heralds in any measure the message Jesus brought to the world the weary children of men all round the globe should know that fact. I stand before this great audience to-night with the single purpose of encouraging honest, dispassionate investigation of a subject that has profoundly impressed my own highest sense of truth. I do not invite controversy or denominational wrangling, but simply an honest, patient seeking after truth with the utmost freedom of thought and expression, and yet with the fullest recognition of the unchallenged right of others to think and express their thought. I recognize the fact that my cause is confronted by sectarian prejudice and by the antagonism of all the schools of material medicine; and it is to these prejudiced ones I especially address myself, fully recognizing the fact that where prejudgment is not, truth heaven-panoplied will meet and satisfy honest investigation.

The general impression of the people who have never investigated Christian Science is that its sole purpose is physical cure, that it is something that pertains solely to bodily welfare, while the truth is, that physical healing is but an incident of Christian Science. It is true that Christian Scientists do insist and indeed many of us know, indeed there are a thousand people in this hall to-night who do know as certainly as Paul knew that his Redeemer lived, that Christian Science does bring surcease to the heartache and heartbreak of men, that is does give roses for ashes, peace for pain, love for hate, health for disease, and life for death, to men, and yet neither one of these nor all of them combined is Christian Science, they are the results, the inevitable product, of Christian Science understood and lived; while Christian Science itself is a religion pure and simple, the religion of the Bible, our fathers' Bible, without prefix or suffix, without apology or excuse, the religion that Jesus came into the world to establish, the religion that he taught in the Temple, the religion that he preached throughout all Judea, the religion that he so lovingly and tenderly practised among all his people, and it is all of this or it is not anything that is worthy of your thought or mine for a single moment. In my advocacy of Christian Science I plant myself absolutely upon the proposition that Christian Science is given to the world by the life and teaching of Jesus Christ. I believe, and I am persuaded you all believe, that the religion of Jesus Christ is worth more to men than everything else that has been or can be crowded into this universe, and whatever impinges upon that, whatever lessens the sweetness and song and love of that, will meet with my opposition, and in all conscience should meet with yours; and on the other hand, I am sure that if Christian Science is the message Jesus brought to earth it will receive your cordial endorsement and active effort to give it to the world. Now while the healing power of Christian Science is a mere incident, still strangely enough it is the feature of our belief that meets the most derisive opposition. I propose this evening to discuss briefly with you these two phases of Christian Science, namely, as a therapeutic agent and as a religion, the highest concept of God as Father, Preserver, Saviour.

MENTAL THERAPEUTICS.

I assert that the medicinal force of Christian Science appeals as strongly to the common understanding, common sense of men, as does the curative quality of any drug. In asking your attention to this feature of Christian Science I only ask that you will try it by the same rule, apply to it the same test, that in all the past has been and to-day is invoked to determine the merits of material medicine. It is clear to my mind that if the therapeutic virtue of Christian Science is measured by its works, its fruits, its cures; if determined by precisely the same rules applied to the use of the medicine of men, you will find that it meets all the requirements demanded by medical science in determining medicinally the value of drugs and furnishes every reason, every possible reason, for your accepting the medicinal force of Christian Science as a preserver of health and as a destroyer of disease that the medical profession has at any time asserted for reliance upon material remedies. It is an uncontroverted proposition that the use of material medicine from the beginning has been and now is based wholly upon experiment, with dumb animals when opportunity offers and with men when seeming necessity requires; and yet it is apparent that from such experiments you can only learn the result of the use of drugs, and never the primal cause of the result. By closest observation and most persistent search you will not be able to discover why any specified drug has a specific effect any more than by searching you can ascertain why you breathe or see or hear, a mystery that the genius of the world has not been able to solve. I certainly hazard nothing in saying that there is not a physician living who can tell you why any drug has its reputed effect; and with much investigation I have not been able to learn that any writer upon material medicine, from the Egyptians to our own time, has ever attempted to solve the mystery of the action of medicine, to state the reason why, etc., and doubtless for the simple reason that the comprehension of the cause of the action of medicine is not to the human understanding attainable. I assert that the aggregate medical learning of the world cannot inform you why arsenic or strychnine in given quantity acts as a tonic, and in an infinitesimally increased quantity becomes a remorseless poison; or why a given quantity of opium will lull you to sleep, and a little more sweep you to death. All the doctors know or can know respecting the active properties or therapeutic force of the remedies they give is what they have learned, or may learn, from experiment.

No one will deny that the entire practice of the administration of drugs is based solely upon observation of actual tests, and is wholly dependent upon the theory that a remedy effective in a large majority of cases, involving similar conditions, is a safe remedy to administer in that class of cases; that is, if upon trial, actual test, covering perhaps thousands of cases of a named disease, the cases being similar in early manifestations, condition of pulse, respiration, digestion, secretions, etc., it is found that a given drug produces a favorable result in sixty, seventy, or eighty per cent of the cases tested, then, by the concensus of medical men the world over, it becomes a rule, a law of material

Digitized by Google

medicine, that the given drug is a safe one to prescribe in all cases coming within the scope of the experiment made; and the result of such test is absolutely the limit of the physician's knowledge upon the question of the choice of medicine to be used. I have stated the rule by which the value of each drug is tested, and I beg you to understand that I am not complaining of the rule, that I find no fault with the modus employed by the doctors in reaching their ultimate standard of judgment respecting the choice of the remedies they use; in fact, it might be freely conceded that none better could, or can, be suggested, and for the sake of this argument I do concede, that the rule the doctors have adopted is the very climax of human precaution touching a subject that human reason cannot compass; and I refer to this rule, not to criticise or lessen its force, but simply to invite all who are satisfied with such a test of the virtue of material medicine to try by the same rule the medicinal virtues, or healing power, of Christian Science.

Some facts respecting the practice of Christian Science will aid you in reaching a conclusion respecting its medicinal virtue. This Science has been practised in this country for about a third of a century, in a very limited way for a while, but for the last two decades quite extensively, so that now its practitioners are numbered by tens of thousands, and its patients by hundreds of thousands. Within twenty-five years, in the United States alone, quite one million people, including both sexes and all ages, in every variety and condition of climate, have been treated by Christian Science methods and cured of all manner of diseases, named and unnamed, substantially covering the whole range of mortal afflictions. There were some failures, it is true, but the percentage of these failures is many times smaller than the percentage of failures under the methods of *materia medica* in any age of the world. If we add to this statement of cases cured the fact that a large proportion of the cures effected by Christian Science were of persons confessedly beyond the reach of material remedies, we shall have an experimental test of mental therapeutics, divine healing, in every way more satisfactory and conclusive than is afforded of the curative quality of any drug in the whole history of medicine.

I submit this simple proposition: If, as intelligent men and women, you may determine the virtues of material medicine by experiment; if, by human observation and experience, you may ascertain satisfactorily to your reason the efficacy of a given drug, by a percentage of cures effected by its use, then is it not clear beyond controversy that the same test will measure with equal accuracy the medicinal virtues of Christian Science? And in common fairness, and by the logic of the axiom that things equal to the same thing are equal to each other, are you not driven by relentless logic to accept the hundreds of thousands of closely observed tests of the merit of mental medicine in forming your judgment of the curative force of Christian Science? The time has long since passed when any intelligent man, without a shock to his moral sense, can say that Christian Science does not have its victories over disease; that it does not restore health; that it does not reclaim the drunkard; that it does not heal wounds of bone and flesh; that it does not give vision to the eye and hearing to the ear; that it does not "minister to the mind diseased." In almost every city, village, and hamlet of our country, examples of these cures exist, and may easily be known by reasonable observation; there are tens of scores of persons so healed in this audience to-night. It is conceded that the practice of Christian Science has not been an unbroken success; there have been some failures; not all treatments have resulted in perfect cures; there have been some fatalities; but these have been comparatively few, and as an indication of how very few comparatively, let me tell you that in this country the states of Colorado, Nebraska, Missouri, Iowa, Minnesota, Wisconsin, Illinois, Michigan, Indiana, Ohio, Pennsylvania, and New York present the largest growth, organization, and practice of Christian Science in the United States, and comprise more than one half of the population of the entire country; and yet, in the whole lifetime of Christian Science, the aggregate fatalities under its practice in these twelve states, during a period of thirty years, are not equal to the deaths occurring under material medicine in any one week, in the last two years, in the cities of Chicago and greater New York. If this be true, is there any possible reason why an intelligent man, having faith in the practice of material medicine by reason of experimental tests, should scorn to be influenced by similar tests of Christian Science healing? and is it a satisfactory explanation for not doing so for such a one to say that to his mind mental healing is unreasonable, because beyond his comprehension, when it is evident that the same person, with all the aid of medical science, would be unutterably confused in an effort to determine why a pellet, or powder, or lotion, had wrought a cure in any case? Surely it is the extreme of inconsistency for any man to pride himself upon his wisdom in accepting as a basis of action the result of an experiment in the medicine of man, if he rejects like tests respecting the medicine of God.

REDEEMER.

I address myself to all thinking people who regard Mind as master of matter; who recognize an infinite Intelligence as *All* Cause—the Principle that created and governs all things; the supreme Good whom men call God, revealed in the Scriptures as the object of our love, worship, and adoration, and of whom Jesus Christ said, "God is Spirit; and they that worship Him must worship Him in Spirit and in truth." I thus address myself because the recognition of the supremacy of Spirit, Mind, God, is the basis, the inspiration, the soul of Christian Science. It follows that, in our thought, Christian Science is a religion, and only a religion; the gentle, beautiful, hopeful religion of love that Jesus preached and taught and practised. If God is spirit, infinite in goodness, mercy, truth, and love, then it is not difficult to understand (in fact we cannot avoid the conclusion) that He is the only God, the only Spirit, the only Good, Truth, and Love, the first and only cause, the principle of all that is. If God is *all*, then, of course, He is everywhere present; always with us; "A circle, the centre of which is everywhere and the circumference, nowhere." With this concept of God, we can easily understand how He is in absolute reality "our strength and our Redeemer," in whom literally "we live, and move, and have our being." And we may easily know also that man,—God's man,—is not a mold of clay, a fashion of matter, but is spiritual; the image and likeness of Spirit, the reflection of God, and hence abides in health, truth, eternal life.

The Christian world has for centuries asserted the belief that a knowledge of God is the beginning of wisdom. Certainly God intended that man should know Him; the Scriptures were given that man might know Him, and thus have eternal Life; and eternal Life includes eternal health, hope, harmony.

We can never reach a knowledge of God through human understanding; human philosophy cannot compass Him. God is Spirit, and by spiritual understanding alone may be apprehended. We make the knowledge of God difficult by vain attempts to describe Him. The only mystery of godliness is born of the incessant struggle of the finite to measure the Infinite. If, in absolute verity, we did accept God as Spirit, Mind, Principle, instead of attempting to fashion Him with form and parts, with passions and pride, with limitations of beginning and end, then we might easily know Him and thus have life as limitless as His.

The striking distinction between the conclusions of the human senses and Christian Science respecting God, is the difference between an atom and the universe—between

Digitized by Google

the finite and the Infinite. The former reduces God to the semblance of man; the latter elevates man to the image and likeness of God. The primal principle of Christian Science is the infinity of God. This basic principle of our religion no intelligent man, I am sure, will presume to question; for, in all generations back to the very morning of religious thought, men have been taught the infinite power and mercy and goodness of God; and these annul the claims over man, of evil, sickness, or sin, which would countervail the majesty of Infinite Good.

Every Christian organization in the world teaches the power and willingness of God to heal the sick; hence Christian Scientists are not peculiar in this. The difference between Christian Scientists and the people of the old churches is one of trust—faith. Christian Scientists rely upon their belief in God's healing power; they practise their belief; in the love of God and man, they lay their hands on the sick, and the sick recover; and thus Christian Scientists prove their belief by the test Jesus gave, and the only test by which Christian belief can be measured.

Christian Scientists are simply trying to live the life that Jesus lived. His mission was not only to preach the Gospel but to heal the sick. This was the prophecy of Isaiah concerning him, a prophecy Jesus declared fulfilled by his own presence on the earth. The declaration of Jesus to his disciples, "the works that I do ye shall do also," was made to the people of this day as certainly as to the apostles and the people among whom they wrought; and Christian Scientists have demonstrated that they were included in this declaration of the Master by accomplishing many of the marvelous works that Jesus did.

It must not be understood that Christian Scientists heal or pretend to heal the sick by virtue of any power of their own, but only by virtue of the power of God. They do ungrudgingly all that Jesus gave them to do, and rely unfalteringly upon all the promises that he made. They believe, too, in the inexorable law: "With what measure ye mete, it shall be measured to you again;" that you cannot enthrone human reason without in the same measure dethroning God; that if you give shadow for substance, you will receive the bitterness of hollow seeming for abiding reality.

With the Holy Scriptures as their guide to eternal life, and the great Master as their teacher and exemplar, Christian Scientists hold, with much force of reason, that theirs is the religion that Jesus established, taught, and practised.

The pathway of Christian Science has not been smooth and carpeted with flowers; thorns and crosses have everywhere beset it, as long ago they stung and held in crucifixion the sweet herald of "peace on earth."

Christian Science meets to-day, and for thirty years has met, the ecclesiastical antagonism that every new phase of religion or new thought of God has been compelled to encounter; but sooner or later, in God's own time, the clouds will break, and, crowned and glorified, the truth will be seen, like a star, "dwelling apart" in its own glory—always its own.

We do not complain in bitterness of the opposition that Christian Science has met. It has been simply the assertion of inherited beliefs that have for centuries antagonized every new thought of God. Our fathers endured this before us, and their fathers before them; yet the world has constantly grown brighter and freer and better. It is our duty to add to the good that came to us from the generations gone, and to it our children will add still other good, born of the greater light of their own day; until, by-and-by, free from superstition and superior to fear, "the *mystery* of godliness" will be lost in the sweet simplicity of perfect *Love*.

Intellectual integrity is not easily attained. We must, though ever so reluctantly, concede the fact, that while it is comparatively easy to appear honest with our neighbors, it is extremely difficult to know that we are honest with ourselves. In some to-morrow we shall recognize the incomparable deception practised by men upon themselves in the vain effort to find a logic of saying more potent than the logic of doing.

Christian Science is not a religion of beliefs but of works; not of theories, but of demonstrations. There is nothing concerning which people so persistently deceive themselves as about their religious beliefs. It is so much easier to say than to do; and then one cannot know what he *believes*, in the sense in which Jesus used that word, except by what he *does*.

Belief is more than intellectual conviction; it includes the elements of trust, faith, reliance; hence the repeated assurance of Jesus, "By their works ye shall know them."

What a man says he believes is not infrequently the very antipodes of what he really believes; for instance, if a man says he believes that "In God we live, and move, and have our being," and then resorts to a druggist, doctor, or climate for life and health, you will know at once that he has mistaken his belief. Jesus came recognizing God as the healer of all our diseases—as our life, strength, and redeemer; and, knowing this, by the power of God he healed the sick, bound up the broken-hearted, gave hope for despair, song for anguish, life for death; these were the works of the Master, the beautiful works by which Jesus the Christ demonstrated his own divinity and the power of God to heal the sick.

Christian Science was discovered, re-discovered, or uncovered some thirty odd years ago by the Rev. Mary Baker Eddy, a native of New Hampshire, and still an honored, loved, and revered citizen of that historic state.

It may strike you as a little strange and yet it is strangely true that one of the objections urged against Christian Science is that it is the product of a woman. It would probably be safe to say to any audience of gentlemen in the great cosmopolitan commonwealth of Massachusetts, that this objection evidently had its origin with some one, who, in some wild and jagged flight of fancy, thought himself a man; but to you, and to every gentle, thoughtful man, it is evident that if Christian Science is the product of a woman, that fact inevitably carries with it two conclusions: one, that it is absolutely honest, and the other that it is absolutely pure. Every gentle, thoughtful man knows that from the world's morning until its high noon of to-day, woman has been the holy, patient, faithful guardian of its spiritual thought; knows,—gratefully, lovingly knows,—that for two thousand years, woman,—not man, but woman,—has kept the religion of Jesus Christ on this earth, and she will keep it there, until the kingdom of this world becomes the kingdom of our God, and His Christ. All of doctrine, philosophy, and practice of Christian Science is given to the world in Mrs. Eddy's book, entitled, "Science and Health with Key to the Scriptures," and may be easily known and understood by every man who has the energy to read, and the ability to think. The latter part of the title of this marvelous book to my mind is very significant, for I cannot avoid the conclusion that a great value, if not *the* great value of Mrs. Eddy's wonderful gift to men, lies in her clear, reasonable, and demonstrable interpretation of the Holy Scriptures, God's revelation of Himself to you and to me, for our guidance to eternal life. The critics of Christian Science, and especially among our clerical brethren, dwell most, and with most pretence of learning, upon Mrs. Eddy's book as an exegesis and its author as an exegetist of the Christian religion, and unfortunately, as a rule, these good people elaborate their views in languages dead for centuries before their auditors were born. Mrs. Eddy may, or may not be familiar with the language with which Jesus spoke, or the language in which his speeches and the events of his life were reported, but it must not be forgotten that Jesus interpreted his own Gospel by his life in the universal language of love and kindness, a language known to every weary child of earth,

Digitized by Google

and Mrs. Eddy is scientific master of that tongue, master of the significance of the pure, holy, gentle, Christ-like living, and can, and has, told it to the world. In all her loving search for this great Truth, she took as her only guide the Word of God, and as her only counsel the great, loving God Himself. I hesitate not to say to you to-night, as a man among men, and not fully lacking in appreciation of the beacon lights of history, romance, song that have illumined the centuries as they passed, that in my judgment, this great book of this great woman contains more of sweetness, and song, and hope, and help for men than all the product of the printers' art, save only the Bible, your Bible and mine, our fathers' Bible.

In the resplendent glow of this dawning century, rich in the accumulated good of all the past and richer far in the promise of good with which its high noon will bless the world, may we not, in the grace of lofty Christian manhood, make our grateful acknowledgments to Mrs. Eddy for her wonderful contribution to the joy, song, and redemption of the world?

Not Authorized.

UNDER the above heading we said in the *Sentinel* for September 12, 1901, that a letter received from Mr. Gale and Miss Bradshaw of San Francisco informed us that they had not authorized any one to use their names in connection with the Willamette Oil Company. We are in receipt of a letter from the gentleman who sent out a circular relating to the above company in which he says he only referred to Mr. Gale and Miss Bradshaw and other Scientists, for his personal standing, and that he had no idea any one would infer that the Scientists named in the circular had any connection whatever with the company. He further says that had he thought for a moment he was doing wrong he would have refrained.

We are glad to publish this gentleman's explanation, and to exonerate him from any wrong intention. He now sees that the use of names in the connection mentioned was liable to be misleading.

The gentleman thus finally writes:—

"I did not fully realize the magnitude of my action. The results of my action prove beyond question that I erred. . . . It is a lesson that will be beneficial in the future."

Not the Fault of Principle.

IF a pupil in mathematics makes a mistake it is neither the fault of the text-book of mathematics nor of the author of the text-book. Neither has the principle of mathematics upon which the text-book is based been impaired or destroyed by the blunder or failure of the pupil.

So, in the demonstration of Christian Science, if the student blunders or fails to prove the Principle of the Christian Science text-book, it is neither the fault of the text-book nor of its author. Neither has the Principle of Christian Science upon which the text-book is based been impaired or destroyed by the blunder or failure of the Christian Science student.

True devotion is chiefly in secret, but the bulk of a believer's life is laid out in common duties and cannot be hid. Lift up your heart to God and lay out your talents for the world; lay out your talents for the world and lift up your heart to God.—WILLIAM ARNOT.

Remember that if the opportunities for great deeds should never come, the opportunity for good deeds is renewed for you day by day. The thing for us to long for is the goodness, not the glory.—F. W. FARRAR.

From our Contributors.

Onward.

BY WILLARD G. FLEMING.

YE toilers in the upward way
Worn by the burdens of the day,
Your armor gird, your courage keep;
Press forward, though the path be steep.

Why would ye halt with timid gaze,
And seek to pierce the distant haze?
Why doubt the way-marks all along?
O ye of weakened faith, be strong!

The wage is earned when day is done;
The prize is gained when the race is run;
Think not the Master's crown to wear
Till thou his cross hast learned to bear.

The God of Love has ever led,
Though clouds at times hung close o'erhead;
So, though the path seems sometimes dim,
Still journey on, and trust in Him.

Evil must be Overcome.

BY DAVENPORT BROMFIELD.

SOME experiences I have had within the past year impel me to write these lines in order that others, as well as I may be on guard and remember the injunction of Jesus to his disciples: "Behold, I send you forth as sheep in the midst of wolves; be ye therefore wise as serpents and harmless as doves."

It seems that there is danger that students of Christian Science, especially those who formerly belonged to what is called the orthodox church, may have a one-sided or narrow understanding of the teachings of Christian Science and of what they demand of the student, before he can demonstrate them practically.

We learn in Christian Science that God is "Principle; Mind; Soul; Spirit; Life; Truth; Love; Substance; Intelligence" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 578). It is upon this latter synonym of God that many of us at times fail to dwell. God is just as much omnipresent Intelligence as He is omnipresent Love, and we must "*Know* what we worship" before we can expect to manifest harmony.

About a year ago, being a civil engineer, I was employed by the trustees of a certain city in California to prepare plans for a sewer system for them. A written agreement was drawn up, the terms of which were that for the consideration of a certain sum I was to prepare proper plans and estimates for the work.

The usual method adopted by cities in such work is to employ a competent engineer to prepare plans at an agreed cost, and when the plans are accepted, an election is held at which the citizens vote upon the proposition. If the people vote favorably the work is carried out, and usually the engineer who prepared the plans is employed to superintend the construction of the work, and this is the most profitable part of the work, from a financial standpoint, for him.

In making my agreement with the trustees, I acted upon the assumption that if I prepared acceptable plans and gave them general satisfaction, that they would afterwards employ me to carry out the work, which they in justice should have done.

My plans were accepted and I was paid in part for them. For the balance of my fee I had to wait until the election was held some three or four months afterwards. The citizens voted affirmatively on the proposition, and a few days

Digitized by Google

afterward the trustees sent me the balance of my fee with a notice to the effect that they had employed another engineer to carry out the work of construction. Of course I protested, but all the satisfaction I could get was that they had carried out their written contract with me and that I should be satisfied. The construction work went on, but with considerable trouble to those concerned.

Naturally, being a student of Christian Science, I began to look into the matter to see, if possible, where the error lay. It seemed that I had acted in good faith, and that everything should have gone along all right. One day my eyes rested upon the words of Jesus quoted above and I saw where my error of judgment lay. It seemed as though I had read the passage in this way: "Behold, I send you forth as sheep in the midst of shepherds; be ye, therefore, as sleepy as owls and as harmless as doves."

I had acted in this business proposition with the worldly minded in blind faith, supposing that because my intentions were to do my best for their interests and those of their city, that they in turn would appreciate this and reward me accordingly.

"Behold, I send you forth as sheep in the midst of wolves." Earnest students of Christian Science at the present time in what is called commercial business are as sheep in the midst of wolves. This is the reason that we must be "as wise as serpents, and harmless as doves."

In our *Sentinel* of July 18, 1901, is an excellent article on "Overcoming, not Overlooking." It says, "There is a wide distinction between overcoming evil, and overlooking evil." I have read this article several times already and expect to read it many times more.

Students of Christian Science sometimes fail to see this distinction. We cannot look over evil; we must look into its false claim and at its false claim until we demonstrate its nothingness. It is much easier for the time being to overlook the claim of evil and endeavor to satisfy our thought with the statements of Truth, but we must sooner or later come face to face with the claim of evil and meet it practically with the understanding of the Omnipresence of Good. In the article above mentioned, the statement it made that "evil is all that stands between mankind and God."

No doubt some reader will ask, "How, then, should you have acted with this Board of Trustees from the standpoint of a student of Christian Science?" In answer I will say that I now see that man reflects Intelligence, he reflects the common sense of divine Love, and in this transaction I should have been wise enough to see and know that some of those with whom I was doing business were not even professing Christians, and that while endeavoring to be as harmless as a dove in my business relations with them, I should also have been wise enough to see that they were not in the dove business. I should have been wise enough to have had all my agreement in writing and not a portion in writing and a portion in my own imagination. I had no intelligent reason for expecting that my efforts to reflect Good would be appreciated.

Some few months ago a friend of mine, also a student of Christian Science, told me of an experience he had which also illustrates this necessity of reflecting the Wisdom of God, and not overlooking the claim of evil. It seems that certain students in our city had been making a practice of visiting the county jail and reading to the inmates from our text-book and talking with them, a great and noble work. Some of the inmates seemed very much interested, and to all appearances became converted to the doctrines of Christian Science.

After their liberation from the jail, an attempt was made by these working students to get them employment. My friend kindly offered employment to one and he was put to work doing chores about the house. All went well until one Sunday, a week or ten days later, when my friend was absent from his house at Sunday services, this supposedly reformed man broke into the house and stole several hundred dollars worth of goods. My friend told me that he had since done a great deal of thinking on this matter and became convinced that the claim of evil had been overlooked and not overcome.

"Be ye *wise* as serpents, and harmless as doves." "Be not overcome of evil, but overcome evil with Good." My understanding of the teachings of our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is that the Omnipresence of God, Good, is the eternal Fact and that the belief in evil is all the evil there is. We do not get rid of this belief by simply saying there is no belief, but by proving its nothingness in our daily work, applying the teachings of Christian Science and demonstrating God as All-in-all, practically. Using the word belief in place of the word evil does not help us out, but the striving earnestly every moment to know this fact and prove it in every act of our lives does. Every day I see more and more the great Love and Wisdom manifested by our beloved Leader in all her dealings with her students, and my earnest desire is that I may be a faithful follower and learn to demonstrate the Wisdom as well as the Love of God.

Christian Science Services on Shipboard.

BY LOUISE F. KOLLMORGEN.

We sailed from New York July 4th, on steamer Barbarossa, North German Lloyd, and in the afternoon, as I was sitting on deck reading our text-book, "Science and Health with Key to the Scriptures," a lady stopped to ask me if I were a Christian Scientist. I gladly answered, "Yes." I then heard that this lady, Mlle. Demarez from Paris, was on her way home from Boston.

On Saturday we studied our Sunday lesson together in my cabin.

We were informed that there were among the passengers twenty-three physicians and fifteen ministers. The ministers had been sent to the W. C. T. U. in Boston, and were now returning to Europe.

One minister heard from a friend of mine that there were Christian Scientists on board. He asked for an introduction, and then informed us that on Sunday there would be English and German service in the dining salon, and he hoped that we would be present.

We accepted the invitation, and on the following day—Sunday—went to their service.

After all had come back to the promenade deck we thought we would go to my little cabin and read our lesson. A young lady who had been helped by Christian Science followed us and said, "I wish you would let me listen, and really my mother wants to come also." That moment another lady from Minneapolis joined us, and told us that several people would like to listen, and she proposed that we read the lesson in the ladies' salon. Then some one said that we ought not to do so without asking the captain's permission, as this would be service. The lady from Minneapolis offered to write a note and send it to the captain, who was on the bridge at that hour. She did so, and immediately the captain came to us and offered us the dining salon, that we might have music. He also offered to have the chief steward put up a notice inviting the passengers, as it was now time for luncheon. The notice read: "Christian Science service in the captain's dining-room at 3 P.M. All are invited."

We had but one hymnal, so we quickly wrote several copies of Mrs. Eddy's hymns, Nos. 161 and 178, and as last hymn we selected, "Nearer, my God, to Thee," which we did not copy, it being so well known by all denominations. (I wish to say here, that after the service we collected those copies and tore them up.) A lady, an opera singer, offered to play for us.

When we entered the dining salon we found from

Digitized by Google

seventy-five to one hundred passengers awaiting us. Mlle. Demarez selected the 91st Psalm for Scripture reading, and as this was July 7 the subject of our lesson was "God." The reading of our lesson was listened to with great respect and peace. It all came about so easily and naturally that when I look back it fills me with gratitude that we were permitted to read that beautiful lesson to all nationalities, all denominations.

"Seek to Define God to your own Consciousness."

BY IDA HODNETT.

IN our Leader's Message of June, 1901, a message that has sounded the bugle call to all Christian Scientists to advance, she says on page four: "As Christian Scientists you seek to define God to your own consciousness, by feeling and applying the nature and practical possibilities of divine Love."

On my second reading of the message this sentence stood out as if written "with the point of a diamond." Here was the whole of Christian Science—of practical Christianity. Here was the line of my own work plainly marked out. "What must I do to be saved?" I must seek to define God correctly to my consciousness, and keep this definition in full view. How can I do this? The answer follows: "By feeling and applying the nature and practical possibilities of divine Love."

According to my reasoning, I must think correctly before I can feel correctly. "Elias truly shall first come, and restore all things." The true concept is made apparent to thought. This is "preparing the way of the Lord." "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, illumines the Scriptures and enables us to perceive the true concept or idea of God. At first, this is but faintly apparent, and is colored by our previous misconceptions. In proportion, however, as we perceive, we begin to feel the nature of divine Love. Then if we are faithful and obedient in applying its "nature and practical possibilities" to our thoughts and actions according to our best understanding, we find that we are perceiving more clearly and feeling more deeply the nature of divine Love. We are becoming alive to God and dead to sin, or erroneous concepts.

The Hidden Image.

BY ANNETTE COLE.

IN the early part of the sixteenth century the old master, the great sculptor, Michael Angelo, under the potent influence and inspiration of Savonarola, became deeply imbued with an artistic and religious fervor. He accepted an abandoned block of marble to model his world-wide famous David, now adorning a salon in the Academy of Fine Arts in Florence.

The artist saw within this rude, irregular mass of stone an image of David triumphant in his contest with Goliath. This champion of the Philistines had defied the armies of Israel, and said, "Give me a man, that we may fight together." David replied to the Philistines, "Thou comest to me with a sword, and with a spear, and with a shield: but I come to thee in the name of the Lord of hosts. The God of the armies of Israel, whom thou hast defied."

Fast flew the flakes of marble as the chisel of the artist-seer wrought the miracle, and his poetic soul cried out, "As the marble wastes the image grew."

Yes! this is the mystery of godliness, of Christian progress, self-immolation, the entire surrender of our will to the Divine will.

The persistent denial of self will reveal to us the true image of God.

Testimonies.

Many Proofs of God's Love.

A little more than a year ago I was suffering from chronic constipation, severe spinal trouble, and neuralgia in all its various forms. When I would get relief for my stomach, then the pain would go to my left side or the back of my neck. I was gradually growing worse, with the prospect of becoming helpless, although for several years I had tried all that *materia medica* could suggest in the line of different treatment. Finally it was decided I must have an operation to relieve my spine and another weakness from which I had suffered for thirteen years. I came to New York and consulted one of this city's foremost surgeons, who told me he could cure me.

In all the years of my suffering, I had heard practically nothing of Christian Science. While I was not prejudiced in the least, yet when it was presented to me I had no faith in it, but I told the practitioner, if she could cure my constipation, I would have faith in its efficacy to heal my other greater troubles. She most lovingly and modestly told me that she of herself could do nothing, but that Truth was able to accomplish all I desired. I then asked her to give me treatment, which she did. She told me to leave all to God and use no material remedy. This I promised to do, and kept my promise for a couple of days. When I found that Christian Science had not done what I had hoped for, I turned to *materia medica* again and went to the hospital and underwent the operation I had in thought. It seemed that I passed through the valley of the shadow of death, and what did I gain after putting my whole trust in man's ability to heal me? Why, nothing but a few more aches and pains and no relief, and a dreadful darkness and hopelessness took possession of me. I then saw that I had tried to bargain with God, and my eyes were opened and I turned like a tired child, weary of earth, to the Father-Mother Love.

I went back humbly to the Great Physician and said, Not my will, but thine, be done. I had but four present treatments, when I felt that I was born again. I went home and surprised them all beyond words at the great change that had taken place in me. I was still treated absently for about three weeks, when I laid aside my glasses, which I had worn for over six years, having, as the doctor told me, astigmatism in its worst form, so much so that I could not go sight-seeing, or attend the theatre, or even go shopping, without suffering intensely from the pain in my eyes and head.

Previous to coming into Christian Science I was a staunch Episcopalian, and even went so far as to tell my healer, that though I might be healed in Science, I could never be anything but an Episcopalian, but I soon found that nothing would satisfy me but the whole Truth. I wrote to my healer, saying I would be most happy when I could testify to the healing power of divine Love, but in my home I could not acknowledge what the Truth had done for me, as my people were antagonistic to religion, and especially to Christian Science. In about six weeks after I began treatment, it was discovered in my home, that I had been treated in Science, and I was then obliged to decide whether I would give up my home and its dear members, or Science. Grateful am I to be able to say that without hesitation I decided for the Truth. Then in my need God opened the heart of my brother, and he gave me a warm welcome and a home, until I could find employment. In less than six weeks more I secured a position. I have been blessed beyond all hope of expression, for I have felt the sustaining arms of the Infinite about me, in that He raised up friends who assisted me. My healer gently and lovingly led me on into the straight and narrow path that leadeth unto all righteousness.

Many and numerous have been the demonstrations I have

Digitized by Google

experienced of God's ever-presence and lovingkindness to those who look to Him as the giver of every good and perfect gift, and although I am an orphan, yet have I realized that I have a Father who will never forsake me nor leave me. I have found a home whose doors will never be closed against me; even though I stray away, yet will I hear the Shepherd say: "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Page 150 of "Science and Health with Key to the Scriptures," comforted me greatly and made me steadfast in my purpose to give up all for Truth, and my heart goes out in deep gratitude to our dear Mother in Israel, who has given to the children of men a true realization of their dominion and the power of good over evil, and I thank God that I was deemed worthy to suffer for the Truth.

MISS NELLIE ROSE NIXDORF, New York, N. Y.

A Testimony for the Wednesday Evening Meetings.

In my search for Truth I was led to read the Christian Science text-book, and while I did not understand it, I felt the Truth was there if I could only grasp it. An acquaintance had spoken to me of the Wednesday evening meetings, saying they were very interesting, and thought I would like them if I would attend.

One Sunday, after reading considerably in "Science and Health with Key to the Scriptures," and wishing I could understand it better, the thought came, that if I should attend the meeting, I might receive the help needed. I decided to do so. I had a little curiosity, as I had never attended a meeting, and did not know what was said or done, but I seemed to feel sure I should receive light in some way. During the reading from the Bible and Science and Health, I began to feel glad that I had come. It seemed very simple and informal, and the atmosphere of the place seemed to calm my thought, making me feel peaceful and composed.

When the testimonies were called for, as one after another spoke of the healing they had experienced, I could only listen in wonder at it all. It seemed very strange and mysterious to me. I knew there was healing in Christian Science, but had never heard a personal experience related before, and it made a deep impression upon me. I shall never forget it. I wondered how it was done, and what it seemed like. I was sorry when the meeting came to a close. I was so fascinated with what I had heard that I could have listened much longer.

After returning home, and going to my room, and while my mind was filled with what I had heard to the exclusion of everything else, I was suddenly recalled to a consciousness of my surroundings, by a new sensation, such as I had never experienced before, and which I find it difficult to express. My room seemed filled with a presence which I felt very vividly, and which was uplifting and exhilarating in its effects, and was very beautiful. While wondering what it was, the thought came very suddenly and forcibly, it is the presence of Love which I feel so sensibly. Then I seemed to know that it *was* Love.

It lasted a few moments and passed away. I now think it came to me as the assurance of the presence of divine Love, and its power to manifest itself to my consciousness.

E. J. W., Taunton, Mass.

Faithfulness and Patience Rewarded.

In looking over my experiences since I began studying Christian Science, I find so much to be grateful for, that I want to tell others of these blessings. This is the first summer for seven years that I have been free from a severe trouble with my eyes. For four years I tried everything that *materia medica* suggested, but without help. I was told that I would never be entirely free from it.

Four years ago this fall, when suffering with a severe attack of rheumatism, I sought help from Christian Science, and was healed. This one trouble with my eyes seemed to be the problem through which I was to learn the meaning of the text, "Work out your own salvation with fear and trembling, for it is God that worketh in you, both to will and to do of His good pleasure," and I am very grateful that I have learned its meaning and followed the command.

The way has been rough and up-hill many times, but through it all God has sustained and comforted me. Amid the fears of my family (who did not understand Christian Science), the scoffing of friends and the predictions that I would go blind if something were not done, I pressed on, trusting in God, and Truth has prevailed.

I have found that, as I have said, "Thy will, not mine, be done," and have silenced mortal thoughts to listen to thoughts of peace, harmony, contentment, love, etc., these qualities of the new man have been manifested, and the old qualities have disappeared.

Though the healing has been slow, I would not take anything for this glorious experience, for it has brought me into closer communion with God, and has shown me man's perfection and at-one-ment with Him.

Do not despair, dear one. Though the way may seem dark and drear, and the path long and narrow, remember, God is nearest in the darkest hour, and if we are faithful we shall receive the reward of the faithful. "In all thy ways acknowledge him, and he shall direct thy paths."

GRACE M. DONAHUE, Burlington, Ia.

I am most grateful for the great good received from "Science and Health with Key to the Scriptures," also for our periodicals, the *Journal* and *Sentinel*, which, when read, are passed on, feeding others who are awakening to this blessed Truth. In return I feel that I should tell of benefits received.

I had tried many physicians for many years until my disease was supposed to have become chronic and incurable. When Christian Science was brought to my notice through the healing of a friend, I also sought aid, receiving absent treatment. At that time I had been wearing glasses for six years for astigmatism. My eyes were healed instantaneously. Six years have elapsed, and my sight still remains perfect. Other ailments seemed more prolonged, being almost a year before yielding. My recovery was attended with many doubts and fears, but it has caused me to work more earnestly and trust more fully, knowing that with God all things are possible, and that to know the least of Christian Science one has been infinitely blessed.

I have since received class instruction from a loyal student for whose loving help I am most grateful.

FLORA B. CARNAHAN, Missoula, Mont.

I was badly crushed by a locomotive in 1893. I laid in plaster of paris for seven months. That was taken off and I then wore a jacket made of leather and steel. This was very disagreeable in addition to the suffering which continued all the time until I met a Christian Science friend.

This friend told me there was no need for me to suffer as I had been doing, and told me how I could be cured. I immediately tried Christian Science and was healed in two or three treatments. I have suffered no bad effects from these injuries since.

Through this friend I was also healed of an attack of pneumonia which the doctors said was very severe.

I am very thankful to God for what has been done for me through Christian Science, and to my friend who led me to Christian Science. I cannot say too much for Christian Science and our Leader, Mrs. Eddy. I am reading Science and Health and I hope some day to be better able to explain to others that they may reap the same great blessings that I have done.—WM. WYATT, Louisville, Ky.

Religious Items.

Rev. Edwin D. Byington writes in *The Congregationalist and Christian World*, of the favorite hymns of Mr. McKinley. We quote from his excellent article:—

"In the future histories of hymnody the most conspicuous and interesting incident narrated concerning 'Nearer, my God, to Thee,' will be that it was breathed from the lips of our martyred President in his last conscious moments; and that, on the day of his burial, millions of hearts and voices the world over joined in singing it. It has now been sealed with a sacrificial seal and crowned with the diadem of martyrdom.

"It deserves the honor. Written by a Unitarian, Mrs. Sarah F. Adams, in 1841, the word 'cross' gives a meaning to every line that appeals to all and repels none. All Protestants have adopted it; Romanists are satisfied with it; the Jews do not turn from it; even a Mohammedan might use it. Distinctively Christian, it still might become the universal hymn.

"One cannot forget that it was a woman's words in this hymn that soothed his dying moments and brought peace to the sorrowing woman by his side. Of all hymns written by women, this hymn by Mrs. Adams the Christian Church has declared the greatest.

"Methodist though President McKinley was his favorite hymn, next to this by a Unitarian, was 'Lead, kindly light,' composed by one who was first an Anglican and then a Romanist, Cardinal John Henry Newman. It was written some years before the change in his faith, at a time of great depression. While traveling in Europe he was taken seriously ill in Sicily. He became homesick as well and longed to return to England. After several weeks' waiting he secured passage in a fruit boat, bound for Marseilles. It was becalmed a whole week in the straits of Bonifacio. Here, feeble in body, heavy of heart, delayed and distressed, he wrote the hymn that has calmed so many anxious hearts."

From an article relating to Modern Zionism in *The Literary Digest* we quote the following from Rabbi Maurice Thorner:—

"Modern Zionism, however, in its present phase will hardly solve the difficult problem presented by the Universal Jewish question. Conducted, as the new movement actually is, by emotional enthusiasts rather than by men of action and practical insight, and counting now among its chief leaders such as had long been out of touch with the Jewish masses, religiously and socially, Zionism for some time to come cannot be expected to make any considerable headway toward the consummation of Jewish national hopes and dreams. Religious and even racial Judaism has never been dependent for its existence upon Jewish nationalism, but *vice versa*. History shows that religious revivals were strongest among Jews while in exile or when their national unity was nearing its dissolution. The Jews of to-day are lacking many of the advantages necessary for their national regeneration. Their very cosmopolitanism stands in the way of their nationalism. Instead of having given a centre, a solid geographical and political foothold, whence the movement could draw its vital powers and where its efforts of unification could converge, there is given a large number of politically and geographically disconnected sections of a circle held together only by an historical and spiritual central force. The ever potent issue of 'To be or not to be,' it would seem, resolves itself for Jewish nationalism into the alternative of either a narrow, uncompromising, and self-absorbed spirit, indifferent to other and larger world interests, the assumption of an attitude of selfish national egotism on the one hand, or, on the other, the final and irrevocable adoption of a policy shaped by the iron logic of its history, a broad, all-harmonizing ideal cosmopolitanism, ready even to suffer national annihilation, if necessary, for a world's redemption."

Under the head of "Spiritual Anarchy" *The Interior* editorially says:—

"Many of our contemporaries are wasting time and type upon the folly of the anarchistic movement. Crime is grounded not in perversion of the logical processes, but in corruption of the spiritual nature. No man can see the light whose eye is darkness. Even moral axioms are not self-evident to moral degenerates. There is no one so blind as he who will not see. That the anarchist is poisoning the fountain from which he drinks, girdling the tree beneath which he rests, and burning the roof under which he sleeps, does not appeal to him at all. He is blind with envy, jealousy, hatred.

"But has it never occurred to the multitude of men that they are, in the kingdom of God, pursuing the same mad course? In the Evangelist's day, as well as in our own, the violent rejecters of righteousness said, 'We will not have this man to reign over us.' In the Psalmist's day they took 'counsel together against the Lord and against His Anointed, saying, Let us break their bands asunder, and cast away their cords from us.' They hate authority and are impatient at reproof. Godly living is only a band, and uprightness of conduct only a cord. The philosophic evidence of the being of God makes no impression upon them, because of their moral antipathies. The 'reprobate' mind, which does 'not like to retain God in [its] knowledge,' is at once cause and effect of rebellion against the requirements of divine order."

The Detroit *Evening News* (August 31) says:—

"It may yet prove that the American experts were more honest than wise in more fully showing to the world the errors of King James's translators. When simple Christians who believe without seeing, come to learn, for instance, that the word 'God,' used in the old text, has no relation whatever to the word 'Jehovah,' in the original, which it pretends to translate, the fact may shock him. He may look farther, and some higher critic may tell him that Jehovah was the proper name of an individual god worshiped by the ancient Hebrews, as distinguished from other gods worshiped by other similar surrounding peoples. He will learn that the word translated into hell, 'sheol,' had no such significance to the prophet who wrote it, as 'hell' has to the Christian; that, in fact there was no word in the whole Hebrew text which conveyed the meaning attached to hell."

"I believe in telling folks," once remarked a saintly Christian woman. She had seen people hungering for sympathy and appreciation and, for one, she would not withhold her words of cheer. There are good men and women who can converse upon almost every topic save the good characteristics of their acquaintances. There are those who have telescopes with which to discover the faults, but inverted microscopes with which to look at the virtues of their friends. There are plenty of people to tattle unpleasant gossip, and few to repeat kind opinions. But what a different hue the sky would take on, how the east wind would be softened, how the wrinkles would be relaxed, if occasionally folks would "tell folks."—*The Standard.*

Service is love at work and seen in act. The sacrifice of self is the price love pays for its opportunity to serve. That principle worked out in human nature, applied to the sinful hearts of us men by the Spirit of God, makes us Christians. To apply daily the principle of love, to employ the method of service, to pay the price of sacrifice is something practical. It costs, but it counts. No one knows how hard it is but he who makes the attempt, and he also alone knows how good it is. The Christian way is no primrose path. The believer is to live out the principle of love in a life of daily service.—*The Standard.*

This is the true Christian attitude. If we have been slaves to prejudice or superstitious observance, Christ came to set us free. But liberty is not license, and it is not tyranny over others. We are to covet earnestly the best gifts, and then to supplement them by the law of love. We are not to be indifferent, but tolerant. Even where we disapprove we must seek to understand and make allowance. We obey no earthly lord, but we have one heavenly Master, for conduct and for brotherhood—and that is Christ. *The Congregationalist and Christian World.*

The Southern Christian Recorder, published at Atlanta, Ga., official organ of the African Methodist Episcopal Church, thus refers to President McKinley:—

"Coming up as he did from the common people, he was always close to them and had their confidence and sympathy as no other president had. No class of citizens were more affected by his untimely death than the Afro-Americans; and with the nation we pray and offer our tribute of sympathy and condolence."

The legacy the late President McKinley left the country in his own Christian character can hardly be overestimated. Probably there is not a ruler of a European nation who would not be called conventionally a Christian, and we have no right to say that all of them do not live the Christian life; but President McKinley's devotion to the principles of the Gospel was unmistakably real and actual, and not merely professional and formal.—*The Watchman.*

No more cheerful conclusion has come out of modern biology than the discovery that, given wholesome conditions, the human constitution tends to throw off ancestral impurities, and that even in the life of one individual great progress can be made in rooting out the causes of moral and physical evil transmitted from an unworthy ancestor. *The Christian Register.*

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

The Government has just concluded a money order convention with Bolivia and conventions with Peru and Greece are under way. The money order business of he United States increased nearly forty million dollars during the fiscal year ending June 30, 1901.

The business in money orders now averages about one million dollars a day, and when it is remembered that the business is done in thirty thousand offices, it is interesting to know that in the year just ended the depart ent lost only $174. This sum was for the most part made up of cases where a postmaster paid money to the wrong person owing to the fact that there were two or more persons of the same name in the place.

The coast and geodetic survey has established a magnetic observatory at Sitka, Alaska, and is constructing another at Honolulu, Hawaii, to cooperate with the British and German Governments in investigating problems of the magnetic forces and needle variations throughout the world. This is in connection with two British expeditions and one German for the South pole. It is expected that the work of the expeditions will occupy two or three years.

Secretary Long has stated that in his annual report he would ask Congress to authorize the construction of three new battle ships of the first class, two armored cruisers of the highest type, and twelve gunboats.

The amount appropriated by Congress for the navy for 1902 was $77,924,535.60. The estimates for 1903 are $98,910,984, a net increase of about twenty-one million dollars

The balance of trade with foreign countries has been in our favor every year since 1893. Last year it was $544,541,898. For the first nine months of this year the balance in our favor was not so large as for the corresponding period of last year; however, the exports were $309,270,540 in excess of the imports.

Postmaster-General Smith has said that in his annual report he will recommend the reëstablishment of the pneumatic mail service in Philadelphia, New York, and Boston, and its extension as far as practicable to other cities.

Foreign.

The Crystal Palace Company of London is promoting a scheme for holding an exclusively American exhibition in that city from May to October of next year. In view of the influx of visitors to see the coronation fetes, it is believed that the undertaking will afford American exporters an excellent opportunity to display their goods.

The exhibits are to include machinery; mechanical industry; natural and agricultural products; prepared food products; pharmaceutical preparations; surgical appliances carriages and vehicles; furniture; hygienic, lighting, heating, and ventilating appliances; textile fabrics and clothing; musical instruments; photographic and optical apparatus for education and science; naval and military ordnance; painting and sculpture, and woman's work. The only condition imposed on the exhibitors is that the articles must be of American manufacture and production absolutely.

King Oscar of Sweden is said to be the most accomplished and versatile of all living sovereigns. He is an accomplished musician and composer, a poet, author, historian, and dramatist, sketches well, paints in water colors, reads and writes eight languages and speaks five. He is also the most eloquent orator in Sweden, where oratory is held in high esteem.

Among the British newspapers there are now 160 Advertisers, 150 Timeses, 149 Newses, 128 Gazettes, 120 Chronicles, 119 Heralds, 104 Journals, 95 Expresses, 68 Observers, 48 Standards, and 42 Mercurys. There are 40 Free Presses, 38 Telegraphs, 31 Mails, 30 Posts, 29 Independents, 23 Couriers and as many Examiners, and 22 Echoes.

Herr Maurer, editor of the *Neues Leben*, an Anarchist paper of Berlin, was sentenced to four months' imprisonment on account of the publication of an article approving of the assassination of President McKinley.

Information is received from London that Marconi has succeeded in transmitting messages through the air for nearly three hundred and fifty miles, which is almost double the maximum distance hitherto attained.

Industrial and Commercial.

A report on trade and labor organizations has been prepared under the direction of the Industrial Commission at Washington. It gives a rough estimate of the aggregate membership of the labor organizations in the United States on July 1, 1901, as follows:—

Unions affiliated with the American Federation of Labor	950,000
Custom clothing makers	3,800
Lithographers	2,100
Bricklayers	39,000
Plasterers	7,000
Stonecutters	10,000
Box makers	5,500
Piano workers	7,700
Engineers, marine	6,000
Engineers, locomotive	37,000
Firemen, locomotive	39,000
Conductors, railway	25,300
Trainmen, railroad	46,000
Switchmen	15,000
Letter carriers	15,000
Knights of Labor and unenumerated organizations, say	191,600
Total	1,400,000

At a conference of the Illinois Central Railroad and the Order of Railway Conductors and the Brotherhood of Railway Trainmen, on October 12, it was agreed that five thousand employes of the road, including practically every conductor, brakeman, switchman, and yardman, except the negroes in the far South, should receive an increase in wages within the next month. This increase in wages will increase the annual expenditures of the road between four and five hundred thousand dollars. It will be the largest single increase of wages granted by a western road in ten years.

Secretary of Agriculture Wilson says that last year we exported about $480,000,000 worth of farm products and bought but half of that amount from foreign countries. The Secretary also says that in the course of a few years the beet-sugar growers of the United States will supply the home market.

General.

The South Carolina Inter-State and West Indian Exposition will be held at Charleston, S. C., December 1, 1901 to June 1, 1902. The purpose of the exposition is to show the marvelous development of the South in the last quarter of the nineteenth century, and to encourage the development of the rich commercial possibilities now open to the United States in the West Indies. Full exhibits of the resources of every State in the Union and of the principal islands of the West Indies will be made. Central and South American Republics will also participate, and the leading countries of Europe will be represented.

For seven years a unique pigeon post has been in operation between Avalon on Santa Catalina island, and Los Angeles, in California, a distance of over fifty miles. Over twenty miles of this distance is across the Pacific ocean. In the ordinary course five hours are required between the two towns, but the pigeons often cover the distance in less than an hour. Private messages, business orders, etc., are forwarded at prices varying from fifty to seventy-five cents per message.

Johann Most, the Anarchist, was sentenced to one year in the penitentiary October 14, by Justice Hinsdale, presiding in the Court of Special Sessions in New York, for publishing in his paper, the *Freiheit*, an alleged seditious article on the day following the shooting of the late President McKinley. The article in question was entitled "Murder against Murder."

A banquet was given in honor of Sir Thomas Lipton at the Athletic Club in Chicago, October 15. A massive silver loving cup was presented to Sir Thomas, who replied in a brief speech in which he alluded to the many kind messages he had received from all parts of the country since he arrived for the yacht races.

The twenty-seventh annual convention of the American Bankers Association met at Milwaukee, October 15. The membership of the association is upwards of five thousand, and the combined assets of these members, including capital, deposits, surplus, and undivided profits, will exceed eight billion dollars.

The sale of American stoves in Germany has been unusually large of late. The best fuel for these stoves is anthracite, and with the hope of finding a market for anthracite coal in Germany a cargo of thirty-six hundred tons will be shipped to Stettin for sale in Berlin for $7.80 per ton.

Some German scientists who are making investigations in the south quarter of old Babylon, have discovered what they believe to be the finest of the Babylonian palaces, and have therefore concluded that it must have been the palace of Nebuchadnezzar.

The commercial apple crop, according to the final report of the *New England Homestead* of October 19, is placed at twenty-three million barrels. The crop last year was forty-eight million barrels, and nearly seventy million barrels in 1896.

According to General Booth the Salvation Army is now operating in forty-seven countries, has literature in thirty different languages, and has more than 7,200 different societies.

An effort is being made to secure the attendance of ten thousand delegates to the Christian Congress of negroes, which will be held in Atlanta in August, 1902.

Krupp, the German gun-maker, has a fortune of nearly fifty million dollars, an income of four million dollars, and a pay roll of eighty thousand persons.

The twenty-eighth annual convention of the Woman's Christian Temperance Union will be held at Fort Worth, Tex., November 15 to 20.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Selected Articles.

Christian Science not a Faith Cure.

Editor of the *Courier-Journal.*

My attention has been called to an article on faith cure, which appeared recently in the *Courier-Journal.* Upon reading the article I find it mentions Christian Science in the same connection, although the writer is fair enough to say that Christian Scientists do not believe in faith cure. No, there is nothing whatever in common between Christian Science and "Dowieism," nor is there anything in common between Christian Science and faith cure, except only that both believe that God is the best and only true physician, and neither believe in the employment of material means for healing the sick. The fact of these healings in Christian Science, which number more than a million and embrace many diseases pronounced incurable by *materia medica,* is no longer open to doubt, for they have been publicly conceded by distinguished divines and others prominent for their learning in the various departments of professional and scientific knowledge. Only this spring a minister of one of our oldest Protestant sects said to the writer of this letter: "Many of our ministers believe you Christian Scientists have hold of a great truth with which you are healing the people, and that it is a rebuke to the church."

The eminent Presbyterian divine and educator, Dr. Brimm of Columbia Theological Seminary, Charleston, S. C., during the last year, in a letter to the Charleston Presbytery, sets forth his views as follows:—

"I believe that miracles belong to this whole dispensation, and not merely to the first century of it; that they were given to sustain the truth of Christianity, and not merely to guarantee the deity of Christ and the inspiration of the canonical writers; that they are needed for their apologetic value as much as they were in the apostolic age; that miracles of healing are a special characteristic of this dispensation and are the special privilege of God's children.

"I believe that these human ills, being part of the penalty that we suffer for sins, are involved in the atonement made by Christ. So that in a literal sense he bore our infirmities, and with his stripes we are healed; but, just as in the case of justification, we get the benefit in accordance with our faith; and so, when we come to God confessing our sin and believing His promise, that we may expect to be healed; that, just as in the case of the healing of soul-sickness God repudiates the assistance of human works, so in the healing of the body He will not divide His honors with human medicines and devices."

Here is a plain statement by one whose life's labors peculiarly fit him to know whereof he speaks, that the healing of the sick by trusting to God alone is part of the scheme of redemption, is part of the work which Christ came to establish, and is as much a living, working activity to-day as when the Saviour was bodily on earth; and, furthermore, that the employment of drugs or other agencies to heal sickness may actually prevent Divine interposition in behalf of the sick. If a member of Dr. Brimm's family were sick and the doctor preferred to appeal to the Great Physician alone for healing, would it be wise to leave the matter to Dr. Brimm, or should the law interfere and summon a jury, or call in the service of the nearest justice of the peace, or perchance the coroner, to say to what physician the doctor should intrust the life of his sick child? Besides, what particular mode of treatment would the law prescribe?

If it be answered that the "ordinary remedies" should be employed, who is to say what are "ordinary remedies"? Is the jury or the coroner to say what remedies should be used? Remedies which might now be considered "ordinary," or which might be so considered in one locality, would have been considered quite extraordinary a few years ago, or even now perhaps, in another state or territory.

I submit it is not fair to construe the Saviour's words, "They that be whole need not a physician, but they that are sick," to mean either that he recognized sickness as a reality, or that he recommended the calling in of a doctor of medicine in case of sickness, any more than it would be to suppose he meant to regulate the weather bureau when he said to the Pharisees, "When it is evening, ye say, It will be fair weather: for the sky is red. And in the morning, It will be foul weather to-day: for the sky is red and lowring. O ye hypocrites, ye can discern the face of the sky; but can ye not discern the signs of the times?"

The history of medicine begins about two thousand years before Christ, and if the Saviour meant to recommend the employment of a physician he must, of course, have expected him to use the "ordinary remedies" then in vogue. I do not know what these remedies were, but I find in a medical authority published more than seventeen centuries afterward, entitled "Experimental History of Materia Medica" by William Lewis, M.B., F.R.S., now listed among the scientific works in your Polytechnic Library, many remedies which I do not believe the Master would have recommended. I quote two specimens in the author's language and leave it to your readers to say whether they think the Saviour would have approved this treatment of the sick, viz., page 594:—

"The viper or adder, a viviparous reptile, about an inch or less in thickness and twenty or thirty in length, with a small, sharp-pointed tail. It is found in the heat of summer, under hedges in unfrequented places; and in winter retires into holes in the earth. . . .

"The flesh of the vipers is perfectly innocent, and has been greatly commended as a medicine in sundry disorders. . . .

"I have known a viper taken every day for about a month, in disorders of the leprous kind, without any apparent benefit. The form in which they are used to best advantage is that of broth, of which an elegant preparation is directed by the London College."

Page 385:—

"Millepedes, woodlice; an oblong insect, with fourteen feet and its body composed of fourteen rings, rolling itself up into a round ball on being touched; found in cellars and under stones and logs of wood in cold, moist places. . . . Millepedes have a faint, disagreeable smell and a somewhat brackish, sweetish, unpleasant taste. They are

Digitized by Google

celebrated as resolvents, aperients, and diuretics; in jaundices, asthmas, scrophulous, and other disorders; but that their virtues are so great as they are generally supposed to be may be justly questioned, at least when given in the customary doses. I have known two hundred taken every day for some time together without producing any remarkable effect; in large doses, indeed, it is probable that their activity may be considerable. . . .

"These insects may be commodiously swallowed entire, as they spontaneously contract themselves, on being touched, into the form of a pill."

My dear sir, cannot the civil law and anybody who loves humanity afford to let these people alone? L. H. JONES.

In *The Courier Journal.*

"Shall Christian Scientists be Persecuted?"

To the Editor.

Some months ago an article with the above or a similar heading appeared in *The Express.*

As it was from the pen of a member of the Christian Science Church, and may be regarded as somewhat prejudiced, I have thought it may not be out of place to have a few lines from an orthodox standpoint. I am a member of one of the leading orthodox churches, and have been for nearly forty years, but believe that any one who professes to be a true follower of Christ, under whatever name, should be tolerant, and so love his fellow-men, of whatever creed or sect, as to be able to tell the truth about them, and in the absence of the facts from which to make his statements, hold his peace.

No one could be more prejudiced against Christian Science than the writer until within the past few months. By mere accident a copy of Science and Health by Mrs. Eddy, the Founder of the Christian Science Church, fell into my hands. I decided to read it for the purpose of learning what the teachings of Christian Science really were. I read it carefully and prayerfully. I then attended their meetings at the different churches in the city. The result was that I came to the conclusion that my prejudices against that church were founded wholly upon misrepresentations and misquotations.

At the first Wednesday night meeting I attended of one of the churches, which corresponds to the prayer meeting of the other churches, I found between two and three hundred persons present, a larger number than I have seen present at a similar meeting in any other church in the city, except on some special occasion, and, moreover, the week night meetings were much larger in proportion to the Sunday attendance than of any other church.

Instead of the congregation being made up of "cranks and dyspeptics, principally women," they were as naturally intelligent, well-educated, refined, and as healthful-appearing people as I have seen in any church in Los Angeles after a residence here of some ten years.

As to the doctrines, I came to the conclusion that it is nothing more or less than apostolic Christianity, and that is all it claims to be. From a spiritual standpoint it is science, and, contrary to what many suppose, it is purely, I may say intensely, Christian.

If the statements I have made are true (and upon investigation they will be found true), why should Christian Scientists be persecuted? To condemn Christian Science is to condemn Christianity. I would advise every one who has anything to say against this people to investigate before they speak, and if they are true Christians at heart, I am quite certain they will never say it.

Christian Science may have its hypocrites, enthusiasts, and impostors, but how about the other churches? My opinion is that Christian Science has come to stay. Not that it will supplant all other churches, as some predict, but its good features will be copied into their articles of faith, or at least their rising members will absorb so much of them that it will become the prevailing faith, and true goodness (Godliness) will be the test of membership rather than the ability to perform certain ceremonies or the willingness to subscribe to some dogmatic creed.

J. F. M'CAMANT.

In *The Los Angeles* (Cal.) *Express.*

Punish Less and Reform More.

Too long the criminal has been a subject of public indifference. So that he is caught and punished, the majority of people care little what becomes of him after, nor do they often question whether or not his punishment is proportioned to his offence. But slowly the public attitude on this matter is changing. The work of the reformatories in curing criminals when mere punishments had only made them bitter, and the reluctance of juries to find just verdicts, lest the men on trial receive unjust sentences, have shown society to be wrong in its theories. Men who sin in ignorance are better lifted from their sins than forced to expiate them, when it is partly the fault of society that they are ignorant and sinful. A most significant change in the treatment of the criminal has been made in recent years by the introduction of the indeterminate sentence system in several of the states. This puts it into the power of men who may have been harshly judged in the first place, and whose mere conviction was penalty enough, to earn their freedom.

The hope of liberty is in itself a stimulus to effort in the reformatory schools and training classes, and the man reproved of the law goes back into the world stronger than when he left it.

In addition to the parole, or indeterminate sentence, a few of the states (Massachusetts, notably) have adopted a probation system which goes into operation before sentence. Certain men and women attend trials in the lower courts and act as intercessors in cases that promise reform. The probation officer is the opposite of the prosecuting attorney, in that the latter brings up everything bad against the prisoner, while the probation officer finds all that is good. It is no longer necessary to confine a man even if he is guilty: he can be placed on parole instead. These probation officers can, with a paroled man's consent, collect his wages and give them to his family. He then has no power to buy drink or squander his means, and if he misbehaves in anywise his liberty is forfeit and he can be sent to prison.

That the warning of an initial arrest suffices in a majority of cases is proved by the records, for few of the paroled ever imperil their liberty again, and something like four thousand persons are conditionally released in the State of Massachusetts every year. It will not be alleged in consequence of these mercies that Massachusetts makes a bad showing in respect to criminal records.

People who misunderstand the nature of these reforms cry out that the prisons are made too comfortable; that sin is encouraged by cleanliness, air, light, sufficient food, and the use of books and papers; that prisons ought to be made places of terror, so that the hesitating might be frightened from them. If mere punishment is the aim, then it were wiser to return to old methods and to whip and rack the offenders, put them into stocks and pillories, crop their ears, take away their property, divorce them from their families, deny their civil rights, even take their lives. But did those punishments prevent crime, or save society? No. The severer the laws the worse the behavior. When stealing was a capital offence thieves abounded in every city, they were in every street, they picked pockets in the church; property was not safe either in the home or on the person; highwaymen infested every road.

As laws modify and the sacredness of life is better appreciated, the causes of offence diminish, and deprivation of liberty is punishment enough.

A prison should not be an inferno, but a purgatory. The

Digitized by Google

criminal is almost invariably weak of will and mind and body; he does not understand himself or his relation to society; his ideals are wrong, his passions have never known check. In this state of barbarism he is dangerous, and society in its own defence sends him into the exile of a prison. If it does no more, he returns, at the end of his sentence, worse than he went in. When it opens his cell door it must open the way to a new life. The prison must be a school, a shop, a church, rather than a place of penitence; for, till the mind and conscience are wakened, there will be no penitence: only anger and nursing of revenge. Mere punishment consigns its victim to darkness and hopelessness, but the probation officer and the reformatory bring him to the light. CHARLES M. SKINNER.

In *The Saturday Evening Post.*

Christianity an Affair of the Life.

SENATOR HOAR, in his address at the opening of the Unitarian Conference in Saratoga, called attention to the remarkable unanimity of the recognition of President McKinley's character and habit as representative of the true Christian life. "Men of all Christian sects," he said, "are taking this occasion to declare what it is that makes the true Christian, what sort of example men ought to imitate, and what entitles them to the favor of God. We hear nothing of Athanasian creeds, or the five points of Calvinism, or Unitarian statements of faith, or church covenants, or decrees of councils; but Catholic and Protestant, and Calvinist and Presbyterian, and Universalist and Unitarian, and Methodist and Episcopalian, speaking by their most trusted representatives and their highest authorities, declare that this man's life was Christian, and that this man's faith was Christianity." That is a just statement of what the nation has lately witnessed. There never has been a more universal acknowledgment that a pure and upright life is the essential proof of acceptable Christian faith, independent of creed or confession, than the comment on President McKinley since his death. We have observed no lament anywhere that he did not belong to another sect than the one to which he did belong, no intimation that he was a heretic regarding whose future, if Christianity be true, there can be a doubt.—*Boston Herald.*

Dr. Mitchell's Sage Advice.

IF no better reason can be found, a decent consideration for the comfort of others should prevent one's talking of ailments. Besides being bad manners the subject is wholly without interest for any but the speaker; the hearer only listens more or less perfunctorily in hopes presently to seize the chance of telling her own melancholy condition. Besides, to talk of ills, mental or bodily, helps to fix them in the mind, to intensify them—and is all too apt to suggest the exaggeration of them in order to make a good round tale. Moreover, if you talk about them too much or too often even the long-suffering physician may grow tired of being battered with symptoms whose catalogue he has heard recited a hundred times over, and thus the very means taken to impress them will bring about its own defeat.

Still more determined, if you are nervous yourself, should be your stand against letting others talk of their ills to you. Even the healthy cannot stand the continual presentation of disease to them without liability to imaginary infection therefrom. DR. JOHN K. MITCHELL.

In *Harper's Bazar.*

Where are the Originators?

PROF. OSCAR LOVELL TRIGGS, in an article recently published in the *New York Times,* replying to certain criticisms alleged to have been made by him, in the classroom, with reference to poetry, literature, sociology, etc., makes a somewhat elaborate explanation, in the course of which he says:—

Where, now, are the "makers," the originators, the poets in American history? Poe and Whitman perhaps in the field of literature; Washington and Lincoln, let us say, in respect to politics; Story and Marshall in the courts of law; Mrs. Eddy in the realm of religion. Plainly the creative spirit does not manifest itself greatly in these fields. We are inheritors of literature, laws, politics, and religion. We brought with us, for instance, the distinction between Catholicism and Protestantism and inherited all the disputes of the Protestant sect. We have created nothing new in religion unless it may be Christian Science. It seems to me that in one respect only have we been inventors and "makers." What we are creating on this continent is an industrial democracy. The real "poets" are working in the field of industry and upon the structure of the ideal commonwealth. A thousand others besides Mr. Rockefeller might be mentioned as showing the direction of the social energy. Some day the same social energy may issue in literature and a greater than Shakespeare may arise in the Western world. But meanwhile the best explanation I can offer my classes of the absence of a Shakespeare in America is that the Shakespeare energy is to-day absorbed in other than literary activities. Is America in the twentieth century to be considered less in the total of its energy than England in the sixteenth century?

Hymn Inspired by Jacob's Dream.

THE hymn, "Nearer, my God, to Thee," which President McKinley made famous in his dying moments, and which was sung at funeral services the world over on September 19, has an interesting history.

It is said to be the best metrical expression in modern psalmody of the desire for a more intimate spiritual acquaintance with God.

Its imagery embraces the associations of one of the most sublime and interesting religious experiences recorded in the early Hebrew scriptures, Jacob's vision at Luz.

"And he lighted upon a certain place," says the Scripture, of Jacob's wanderings, "and tarried there all night, because the sun was set; and he took of the stones of that place, and put them for his pillows, and lay down in that place to sleep. And he dreamed, and behold a ladder set up on the earth, and the top of it reached to heaven: and behold the angels of God ascending and descending on it."

Mrs. Sarah Flower Adams, author of the hymn, was a daughter of Benjamin Flower, an English writer and editor. She was born in 1805. In 1841 she published a dramatic poem in five acts, entitled, "Vivi Perpetua," in which she portrayed the experiences of the early martyrs.

The hymn "Nearer, my God, to Thee," was a record of her own religious experiences, and was written as a memorial of answered prayer, probably without any expectation that it would be of public service. It was furnished with thirteen other hymns to Charles Fox's collection of "Hymns and Anthems," published in London in 1841.

Hearst's Chicago American, September 19, 1901.

Let us ever remember that our interest is in concord, not conflict, and that our real eminence rests in the victories of peace, not those of war. We hope that all who are represented here may be moved to higher and nobler effort for their own and the world's good, and that out of this city may come, not only greater commerce and trade for us all, but, more essential than these, relations of mutual respect, confidence, and friendship which will deepen and endure. Our earnest prayer is that God will graciously vouchsafe prosperity, happiness, and peace to all our neighbors, and like blessings to all the peoples and powers of earth.—WILLIAM MCKINLEY.

The Lectures.

At Lockport, Ill.

The lecture delivered by Edward A. Kimball at Lockport last Sunday afternoon (October 6), was well attended. Norton's Opera House was filled with an intensely attentive audience, the subject discussed being "The Cause and Cure of Disease from the Standpoint of Christian Science." There was no attraction in music or specially gifted oratory to bring people from Joliet, Plainfield, Wheatland, and other towns. It was simply to hear about this new presentation of an old religion.

Charles B. Jamieson, Second Reader of First Church of Christ, Scientist, of Joliet, presented the speaker in the following well-chosen words:—

My Friends:—We have been invited to assemble here this beautiful Sabbath afternoon to hear somewhat of the promises of deliverance made by our loving Father-Mother God, through Christian Science—promises extended to all who may be beset by any ill—whether it be physical, mental, moral, or spiritual. Also to have the hope of the fulfilment of these promises strengthened by hearing somewhat of the healing of sorrow, sickness, disease, sin,—of the destruction of false appetites and vicious passions that already has been and is now being accomplished through Christian Science.

Under the auspices of the local society of Christian Scientists, arrangements have been completed whereby Edward A. Kimball of Chicago, a member of the Christian Science Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will talk to us this afternoon upon Christian Science.

The subject is so great, so vast—indeed infinite—that we cannot reasonably expect the speaker to do more than touch upon its more salient points.

I trust we have come here without prejudice, that we may give to the speaker our sincere and undivided attention, and that we shall go from this place to ponder in our hearts, the things that shall be said to us here this afternoon.

With much pleasure I now introduce to you Mr. Kimball.

Mr. Kimball has a forcible manner of addressing an audience without any attempt at oratorical effects. His story is told kindly and plainly, with the mark of deep-seated conviction, which convinces his hearers of his sincerity and of his desire to show the way of truth, as he sees it, to the world. In his introductory remarks he offered no justification for his presence more than to explain as best he could the science of health from an actual definite knowledge which corrects the discords of existence.

Mr. Kimball held the closest attention of his audience for an hour and a half, and the Christian Scientists were highly gratified with the kindly way in which his words were received.—*Joliet Daily News.*

At Buffalo, N. Y.

The Hon. William G. Ewing of Chicago, spoke to a large audience in the City Convention Hall yesterday afternoon (Sunday, October 13), on "Christian Science: Physician and Redeemer." Mr. Ewing is a member of the Board of Lectureship of the Mother Scientist Church in Boston. He spoke here under the auspices of the four Scientist churches of this city and the admission was free. Long before the time set for beginning the exercises, three o'clock, the auditorium was more than half filled. By the time Mr. Ewing walked to the platform, accompanied by Adelbert Moot, about half as many more persons had arrived. Many, rather than take seats so far from the speaker, stood along the walls near the platform.

"In coming here to-day to speak words of introduction," said Mr. Moot, after seating Judge Ewing on the platform, "I do so because it gives me great pleasure. It is indeed a great pleasure for me to introduce a member of my own profession, one distinguished for his accomplishments and respected for his ability.

"I am a heretic, myself, as I suppose that some of my auditors are. But heretics, I trust, that are never too old to learn, never too old to listen, never too old to find out what truth there is that has escaped them. Like myself, you probably recognize that in this world health and joy, life and happiness, are matters of right living, to be enjoyed by obeying nature's laws. All will agree, no doubt, that there is the great source of life and light. We enjoy life and its pleasures in proportion as we obey those laws, and in proportion as we disobey them, as we walk in the ways that we may call vicious, we suffer.

"I am not here, however, to make a speech; I am here to introduce a distinguished speaker. It, therefore, gives me great pleasure to introduce to you the Hon. William G. Ewing."

Mr. Ewing arose, and whether he spoke, or read from his manuscript, he articulated with deliberation and loud enough so that he was distinctly heard by all present.

Judge Ewing made some strong assertions in favor of Christian Science. Being a thorough believer himself, he naturally speaks with great effect. One of the interesting facts he noticed was that many persons opposed to the belief are those who have not studied the subject thoroughly. Most persons will admit the truth of that remark.

Buffalo Express.

At St. Johnsbury, Vt.

A good sized and representative audience gathered in Music Hall last Tuesday evening (October 1) to listen to the lecture on Christian Science by Hon. William G. Ewing of Chicago. In the gathering were many from the surrounding towns, some of whom had come many miles to hear this lecture.

Judge Ewing was introduced by George P. Moore and spoke without notes in an interesting and logical manner. His address was very religious in its tone and followed closely the teachings of Christ. The audience paid him excellent attention and seemed deeply interested in his lecture. He gave a statement of the belief of Christian Scientists, and said the race was in bondage to the old-time customs and beliefs of our ancestors, but gradually the human race was being freed from these doctrines that fettered us.

In the course of his lecture he paid a warm tribute to Mrs. Mary Baker Eddy, and to all the noble women of the past and present age, beginning with the mother of Christ. After the lecture Christian Science literature was distributed at the door.—*St. Johnsbury Caledonian.*

At Bobcaygeon, Ont.

A meeting in the interest of Christian Science was held at the Town Hall, Bobcaygeon, on Tuesday evening (October 1), and after the hall and stairways were closely packed, a large number were unable to gain admission. A party of nine came from Peterboro, including Mr. and Mrs. Morrison and Miss Giles. Mr. J. Workman, Miss Workman, Mrs. Allan, and others came from Lindsay, and about twenty-five came from Fenelon Falls and vicinity, also Mrs. McKay of Toronto and Mrs. Grant of Argyle, came to help on the cause. All churches were represented.

Mr. Todd occupied the chair, and the lecturer was Rev. A. R. Vosburgh of Rochester, who presented his subject in a manner that left a decidedly favorable impression upon his audience. He clearly proved his views by the Bible, as the exponents of all sects do, with the difference that while others prove doctrines and theories chiefly the inventions of the third and fourth centuries, and totally opposed to the broad principles laid down by the Founder,

Digitized by Google

Mr. Vosburgh aimed to carry out the actual plain teachings of Christ as recorded by the Apostles.

Lectures at Other Places.

Delavan, Wis.—Edward A. Kimball, October 7.

Big Ben's Rival.

It will come as a surprise to many to be told that the great clock erected on the tower of the works of a sewing machine company at Kilbowie rivals Big Ben in point of size, says *London Tit-Bits.* When Big Ben took up his present position in the clock tower, fifty years ago, it was rightly regarded as one of the wonders of the clock world, for it was by far the largest timepiece ever seen in this country. It must now take second place in regard to size.

A comparison of the two giants is interesting. Big Ben's dial is one hundred and eighty feet above the ground, over sixty feet higher up than its rival at Kilbowie. The diameter of the dial over all of the latter clock is twenty-six feet, whereas Big Ben comes a good second with a dial diameter of twenty-two and one half feet. At the same time Londoners will be pleased to hear that in the dimensions of the hands Big Ben can easily afford to smile. Its minute hand, which is of fine steel, is twice as long as the one at Kilbowie, being fifteen feet in length. When it comes to the figures, the Kilbowie clock scores, for its figures are two feet six inches high, against Ben's two-foot figures.

The pendulum of the Kilbowie giant is twelve feet in length and weighs eight hundred and forty pounds, being much heavier than that of the famous Westminster clock. Although the pendulum is of such a huge weight, it is as delicately fixed and balanced as the pendulum of an ordinary drawing-room clock. The great bob swings two feet six inches thirty times per minute, or one hundred and fifty miles per week; in the course of a year it swings a distance of seventy-eight hundred miles.

The minute hand of the great clock moves one third of an inch at every swing of the pendulum, or one mile and a half in a week. The distance between the minute divisions is ten inches. The total weight of the dial is twenty-two tons. The driving force is obtained from a weight of one thousand pounds, wound up through a height of forty-five feet once a week by three men. The winding up of such large clocks is decidedly hard work. It takes two men several hours three times a week to wind up Big Ben.

A Parrot at Breakfast.

A funny parrot lives in Brooklyn, and is very fond of the lady she lives with. When the breakfast bell rings in the morning, she will push open the door of her cage with her bill, fly down to the breakfast table, take her own chair, which she always knows and occupies at each meal, and wait until the family assemble. If they should not gather as quickly as she thinks they ought, she will call out, "Hurry up, folks, hurry up!" and at the same time hop over to the oatmeal dish and attempt to lift the cover, for she is very fond of oatmeal, and will make her entire breakfast of it. She would not touch the oatmeal, even if able to lift the cover; for she is a very good Polly. After finishing her breakfast, she flies right back to her cage.—*Exchange.*

"Whatever the weather may be," says he,
"Whatever the weather may be,
It's the songs ye sing, an' the smiles ye wear,
That's a-makin' the sun shine everywhere."

JAMES WHITCOMB RILEY.

Notices.

Judge Ewing's Lecture.

In the last issue of the *Sentinel* was published an abstract of the most interesting and instructive lecture delivered by Judge William G. Ewing at Symphony Hall in Boston, Tuesday evening, October 8.

This number of the *Sentinel* is especially adapted for general distribution. The lecture clearly and satisfactorily answers many questions which honest inquirers are daily asking regarding the teaching and practice of Christian Science. To meet the demand for extra copies of this number of the *Sentinel* a large issue was printed. We are able to supply any number of copies at the following prices. Single copies, three cents each, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Address all orders to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Dec. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Spead vs. Tomlinson.

THE above is the title of a lawsuit brought in the Superior Court at Concord, N. H. In what we here say, we take our facts from the daily newspapers reporting this case, rather than from private sources. According to the newspaper accounts a suit was brought by Mrs. Jennie A. Spead against Rev. Irving C. Tomlinson, First Reader of First Church of Christ, Scientist, of Concord, N. H., who is also a Christian Science practitioner, to recover six thousand dollars damages alleged to have been sustained by her through the treatment of Mr. Tomlinson.

THE PLAINTIFF'S CLAIM.

The Concord *Daily Patriot* thus briefly sets forth the plaintiff's claim:—

"The plaintiff claims that in November, 1899, she consulted the defendant when she was suffering a severe pain from appendicitis; that the defendant professed to her that he could cure disease and that he could save her harmless from the effect of pain from which she might be suffering; that it was his duty to use reasonable skill and care in the treatment of the disease and the relief and removal of pain; and the defendant did not use reasonable skill and care, and that the plaintiff thereby suffered damage."

This is as the plaintiff claimed, not in accordance with the testimony of Mr. Tomlinson.

THE DEFENCE.

The same paper gives the following statement of the defence:—

"The defendant has filed a plea and a brief statement, which accurately sets forth the principles followed by all Christian Scientists in the treatment of sickness and disease, and which show that they rely on and apply the principles of their religious system, and, in the treatment of sickness and disease, rely for relief upon the power of God, sought through prayer. In other words, the Christian Scientists rely solely upon spiritual means in distinction from the ordinary physician, who relies solely upon material means to effect relief."

THE STATEMENT.

Merrimack ss. Superior Court.
October term, 1901.

Jennie A. Spead *vs.* Irving C. Tomlinson.

Defendant's plea and brief statement.

The defendant says that he is not guilty as the plaintiff has alleged and of this he puts himself on trial.

By his attorneys,

STREETER & HOLLIS.

And the plaintiff doth the like.

The defendant makes the following brief statement of defence under the above issue:—

(1) The defendant has never held himself out to the plaintiff or to the public as a physician or surgeon, or advertised as such, or used the title of M. D. or Dr. or any title which has shown or tended to show that he is a practitioner of any of the branches of medicine, and with reference to the treatment of sickness and disease the defendant says that he teaches and practises according to the faith of the Christian religion as revealed in the Holy Scriptures, as exemplified and practised by Christ Jesus.

(2) That as a Christian Scientist, the defendant, in the treatment of sickness and disease, relies solely upon the power of God, sought by prayer, to effect relief; that in seeking to obtain relief from sickness or disease for those who may desire his help, he uses spiritual means alone and makes no use of drugs, instruments, or material means of any kind whatsoever; that he has never represented or claimed to the plaintiff or the public that he has any knowledge of the science or methods of medicine or surgery as those terms are generally used and understood, or that he has ever attempted to make use of those methods in seeking to bring relief to those in sickness or disease.

(3) That the defendant since January, 1899, has been and now is First Reader or pastor of First Church of Christ, Scientist, in Concord, N. H.; and that the foregoing method of treating sickness and disease by the power of God alone, through prayer, is a part of the religious belief and practice of the defendant and other Christian Scientists, and is the only method taught at the religious services of said church or elsewhere or used by the defendant or other members of the denomination; and that the plaintiff for some months prior to November 15, 1899, was a regular attendant upon such religious services, and was fully informed as to the foregoing religious teachings and practice of the defendant in the treatment of sickness and disease as a part of his religious faith.

(4) That the plaintiff, with full knowledge of all the foregoing facts, voluntarily sought the aid of the defendant, and the defendant thereupon, at her request, treated her solely in accordance with the foregoing method taught by the religion of Christian Science and practised by the defendant as a follower of that religion.

(5) That upon the foregoing statement the plaintiff has no legal cause of action against the defendant.

By his attorneys,

STREETER & HOLLIS.

Concord, N. H., October 8, 1901.

The above statements of plaintiff's claim and of the defence give a fair idea of the questions which came before the Court and jury. After a four days' trial, elaborate arguments by counsel, and the charge of the judge to the jury, the case was finally submitted to the jury. After several hours' deliberation the jury reported that they were unable to agree. The Court thereupon discharged them. This leaves the case undecided. It remains, in its legal aspects, just where it did before the trial before this Court and jury began. Inasmuch as the case is still pending we withhold comment, confining ourselves to what actually transpired. Were the case finally disposed of we might feel inclined to comment at considerable length upon it, or some phases of it.

MR. STREETER'S ARGUMENT.

The Hon. Frank S. Streeter, counsel for Mr. Tomlinson, according to the newspaper reports, made a strong argument on his side of the case. He submitted some pungent and far-reaching propositions in the form of interrogatories which sooner or later will have to be answered before the bar of public opinion, for the same queries so patly presented by Mr. Streeter are pressing themselves upon public attention everywhere. The following is in part what Mr. Streeter is reported to have said:—

"I understand that there are but two questions which are to claim the attention of the jury. First, whether this defendant was negligent; and second, whether he made any false representations knowingly.

"Why was this suit brought? Was it brought for damages, or for making an attack on a religion which to-day has one million followers?

Digitized by Google

"The attack is an attack upon the theory that disease may be cured by prayer.

"From the time of Mrs. Spead's first attack until Mr. Tomlinson's services were first requested, she was under the general care of Dr. McMurphy. This term of treatment amounts to six hundred and sixty days.

"Mr. Tomlinson treated her four days. She paid him one dollar, and now wants this jury to award her damages in the sum of six thousand dollars, because a Christian minister for four days sent up his prayers to Almighty God on her behalf.

"I ask you with all candor where did she get her hurt during the four days that Mr. Tomlinson was treating her? She tells you she was so sick on one night that she could not reach a glass of water that was near her bedside, and yet that her mother left her alone that night. Do you believe, gentlemen, that a mother would leave a daughter that way?

"If Mrs. Spead was in that deplorable condition, why is it that her mother and sister have not been here to testify to that fact? Why are they silent here, and why were nearly twenty-four hours allowed to elapse between the discharge of Mr. Tomlinson and the call for Dr. Walker?

"The fundamental thing which Mr. Tomlinson taught her was that he relied solely on the power of God, sought by prayer, to effect relief, and that in trying to help those who seek his services he uses spiritual means alone. She was fully informed that he made no pretensions to the knowledge and skill of the ordinary medical practitioner.

"Was this man sincere in his belief? He has stood here, in the face of this court, jury, and public, and endeavored to state his belief. This woman has not dropped a single suggestion that his character as a Christian gentleman is not above reproach. So far as any evidence that has been offered she stands to-day a believer in the absolute sincerity of these people.

"In my belief this woman is no more a factor in this litigation than is the gilded dome of the state house a factor in making our laws. This is an assault on the Christian religion. Mr. Tomlinson may be wrong. I don't know. Do you?

"You will be asked to say that prayer is fraud.

"Didn't she know exactly what kind of thing she was going to get? Was there the slightest delusion on her part or deceit on his?

"Take the proposition which these two counsel say is a lie. Mr. Tomlinson's proposition is that the power of God can cure sickness through prayer. I don't envy the condition of mind of men who stand up and say it is a lie. That the power of God can't heal. I don't envy these gentlemen the honor of standing before the courts of New Hampshire and a jury and charging that when a Christian man says the power of God can be invoked to cure disease, he is not right; that such a man is a fraud, a humbug, a cheat, a charlatan, and a quack, just because he claims that prayers will cure. They are welcome to the glory they might get out of the establishment of such a statement. We might as well meet the issue now as any time, and the people who support these churches might as well have the case decided as to whether a man who believes in prayer is a hypocrite; who believes that prayer will heal is a fool.

"Before guilt can be placed on this man you must find that he knew he was fathering false teachings. What evidence is there of this? Not a syllable, gesture, or inference. Is this man a cheat because he believes that prayer will cure the sick? Then you have got to declare against the Christian ministers who stand in the pulpits in these United States.

"But they say Mr. Tomlinson took money. Do they want to sneer at payment for Christian service? Then they sneer at the Supreme and Superior Courts who engage clergymen to open their sessions with prayer. When President McKinley was stricken down, almost every head in the broad land was bowed in prayer, and are you prepared to say that those who prayed are humbugs?

"I tell you, gentlemen, there is something in me that rebels against an assault of this exercise which I cannot help regarding as sacred. Within recent years we have had our state advertised as a place of abandoned farms; then later we were pictured as decaying fast religiously, our rural religion being held up as most deplorable.

"But one more thing need be added, and that would be to have a jury of New Hampshire citizens say that the man who believes in prayer to God is a cheat and that the corner-stone of the Christian religion is a fraud."

Judge Stone's Charge.

Judge Stone closed his charge to the jury at 6.45. It was followed with breathless interest, and was in part as follows:—

"We are now near the close of this unique and very interesting case. It only remains for the court to make such suggestions to you as he thinks proper, and then the issues will be left to your decision.

"The subject of religion has been referred to many times during the trial. Religion in the abstract is man's relation to God and to his fellow-man.

"There is no more sublime subject that the human mind can contemplate than the subject of religion. It is not for you or for me, gentlemen, to say whether one sect or faith or church is right, or another. Man's relation to his God is a very sacred subject. It is personal to him. His religion is guarded with the greatest vigilance by our laws.

"It will be a sad day when any of those things ever come before a court or a jury for adjudication, but they never will, so long as this country, or federal constitution and state constitution, remain intact as they are now.

"Let us see if Mr. Tomlinson is guilty of negligence as set forth in the first count.

"Did he bring to the knowledge of that case and the treatment of that case the average knowledge of Christian Scientists, and did he treat that case in the manner in which Christian Scientists do? If he did that in all respects, and was guilty of no carelessness or negligence, then your verdict will be for the defendant, because he has not been careless or negligent.

"Mr. Tomlinson treated this lady, and it is for you to say whether he treated her prudently and skilfully, with the average knowledge of a Christian Scientist. If he did in every respect, he is not liable.

"If he did not, if he was careless and did not treat her with the average prudence and learning of a Christian Scientist, if you should find that way, then you will inquire: did she know as much about this matter as he?

"Because, if she knew all about this, as much as he knew in every particular, she can't complain here. She can't say that she was imposed upon here if she had the same knowledge that he had in every respect.

"Unless you should find that it is common knowledge, that it is universal experience that one suffering from appendicitis must refrain from eating solid food, must refrain from exercise, that they must refrain from doing anything which she says he told her she might do, he would be liable.

"The third count embodies this idea, that when the defendant, Mr. Tomlinson, told this lady in answer to her question, if he could cure her of appendicitis, and he answered, 'I can, and if you will follow my directions I will,' did he make that answer fraudulently, intending to mislead and deceive that woman and to induce her to obtain his services, procure his services for hire.

"Did he knowingly and fraudulently make that statement to this woman to mislead her? That is what the third count amounts to.

"I want to say to you gentlemen, that this is a case, as

Digitized by Google

counsel have said to you, of a great deal of importance to both these parties. They both of them have their rights, and you have but one duty to perform—render a verdict according to the law and evidence. This is your full duty."

There are two points especially prominent in this able charge: First, that the defendant is liable only for such skill and care in the treatment of disease as are imposed upon him by the rules and regulations governing the practice of Christian Science according to the teachings and method thereof. Second, if the plaintiff knew what the method of treatment by the defendant was and voluntarily submitted herself to such treatment, she cannot complain. The evidence, as we gather from the newspapers, clearly shows that the plaintiff did know of Christian Science methods, as she had been to some extent a student of Science and an attendant at its church services and for several months before placing herself in Mr. Tomlinson's hands, a regular attendant at the Wednesday evening meetings. The Judge's charge is unquestionably sound law, and will stand the test of judicial review anywhere.

Mr. Tomlinson testified that he gave no directions as to exercise or diet in this case.

There is one thing in connection with this case that may be made useful to Christian Science practitioners: that Christian Science practice is prayer, in the highest and best sense of the word, and should be plainly and unequivocally so named both in court and out of court.

Editorial Comment.

The *Boston Globe* of October 16, 1901, contains the following apt and sensible editorial comment upon this case:—

"The jury in the Tomlinson case, involving the legal status of Christian Science, where death or injury is alleged to have resulted from its practice, have disagreed.

"In the charge to the jury the court was very wary of any attempt to discard Christian Science on the alleged ground that it was not a religion, but a superstition.

"It is very easy to throw out 'the other fellow's' belief, as not being a religion, but if not very carefully restricted this privilege would soon result in a chaos of judgments. And if we grant that Christian Science is a religion, have we any right to discredit the claim that cures may be wrought with it?

"In this connection it is to be noticed that in a certificate filed by the Chelsea board of health these words are used: 'Disease, chief cause, typhoid fever; contributing cause, Christian Science.' Now this is, to say the least, decidedly discourteous. Suppose some 'irregular' practitioner had lost a case, and had filed with the board of health, 'Disease, chief cause, typhoid fever; contributing cause, medical science,' would it not have been reprimanded?

"In a court of law many maintain that no man is justified in saying what is not religion for other people, or what is not 'science.' The 'regulars' must not expect to 'down' Christian Science on what are in courts of law ruled to be pure assumptions."

The Concord Evening Monitor of October 17 has the following able editorial:—

"It is to be regretted that the outcome of the Spead-Tomlinson case in the present term of the Superior Court was not in such form as to permit its immediate transfer to the Supreme Court for an adjudication of the fundamentals involved. As it is, the case now stands exactly as if it had never come into court at all. It is the first case of its kind; all the other proceedings against Christian Science practitioners in other states having arisen under the medical registration acts of those states. In New Hampshire, by the terms of its medical registration law, passed in 1897, Christian Science practitioners are expressly exempted from its provisions. But neither in this state nor in any other state, has any court passed upon the fundamental which underlies all cases of this sort, the question being whether a practitioner is justified in relying upon spiritual means alone for the healing of disease. This question will have to be passed upon some time by some competent tribunal; and from no bench in the land can one look for sounder decisions than from our own Supreme Court as at present constituted. A ruling upon this question would establish the rights of all; the rights of the healer under the constitutional guaranties of religious freedom, and the rights of the patient who seeks and receives spiritual assistance for mortal distresses. In seeking such an adjudication abuse will not take the place of argument, rhetoric cannot supplant cold legal syllogisms. It will be based upon the organic law as it sets forth the privileges of each citizen under the law, and it will put an end to a great deal which we now have that is narrow and bigoted and selfish—and therefore powerless except to prolong the unnecessary controversy which such a decision would terminate."

The Concord Daily Patriot of the same date thus tersely comments upon the case:—

"It is greatly to be regretted that, on account of the disagreement of the jury in the case of Spead *vs.* Tomlinson, the real question upon which Mr. Tomlinson based his defence cannot be at once carried to the Supreme Court for final decision.

"The question is of paramount importance and its determination by the highest law court may produce far-reaching results. Mr. Tomlinson states that he and other Christian Scientists in the treatment of sickness and disease rely solely on the power of God sought through prayer to effect relief, in other words, that they rely on spiritual means alone. It is claimed, as we understand, by those differing from him that such relief is so opposed to the general convictions of mankind and so repugnant to reason and the teachings of common sense, that its practice in daily life cannot be justified.

"The question of the efficacy of prayer to God is thus definitely raised and the controversy thereon is transferred from the forum of religion to that of the civil tribunals. The teaching of the Christian church that 'the effectual fervent prayer of a righteous man availeth much,' is questioned in the law courts. Is the doctrine true or false? May it be relied upon by its sincere believers or is it fraught with peril to those who, believing, practise it?

"The consequences flowing from a judicial decision of such a question cannot stop with Christian Scientists, but must be widespread and vitally affect every Christian sect which holds as a principle of religious belief and faith to the proposition that God can and does answer the prayers offered to Him from pious hearts.

"The question is fundamental and the decision will be important."

The Bible Lessons.

So many inquiries are being made in regard to a publication entitled, "A Help to the Sunday Lesson," published by the Maclon Publishing Co., Chicago, that they can no longer be answered by letter. This publication is not recommended by The Christian Science Publishing Society. The Bible Lessons in the *Quarterly* are intended to encourage study of the Bible itself; but if any change in their presentation is found to be advisable, the change will be made at the office of publication of the *Quarterly*, so that all users of it may share alike in the service.

Reading Matter for Soldiers.

We commend the following excerpt taken from *The Congregationalist and Christian World* to the careful consideration of Christian Scientists:—

Good reading is much in demand among our soldiers in the Philippines. Magazines, illustrated periodicals, and papers containing matter of more than ephemeral interest will be welcome there. Any army quartermaster will

Digitized by Google

forward such matter at the expense of the government if addressed to the "Depot Quartermaster at Manila, for distribution among soldiers," or Mr. Z. C. Collins, army secretary of the Y. M. C. A. at Manila, P. I., will distribute reading matter sent to his care.

Among the Churches.

Church Edifice to be Erected at Poughkeepsie, N. Y.

Poughkeepsie is to have another church building.

First Church of Christ, Scientist, of this city, has purchased a portion of the old O. H. Booth property on Market Street, opposite Pine Street, and on it will erect a fine edifice.

The transfer was made through the real estate agency of C. E. Lasher.

The lot to be conveyed is one hundred feet front on Market Street and one hundred and eighty-three feet in depth. The sum of seven thousand dollars was paid for the property.

On this lot will be erected a church 75x120 feet, of the Grecian style of architecture, with a very imposing front. In the roof will be a large dome and a sunburst, the light for both day and night coming from there, electricity being used at night.

Christian Science meetings were first held in Poughkeepsie in the spring of 1897, when a half dozen interested people met at the home of Mr. C. H. Barnes.

In July of this year, Mr. J. Edward Smith came to this city and established the work on a thoroughly scientific basis.

In the fall of 1897 the rooms at 273 Main Street were leased, and the first service was held there on the first Sunday of October, with Mr. Smith as First Reader and Mrs. Ruth Wells Brewster as Second Reader.

On April 8, 1898, the church was incorporated with twenty-one charter members.

In the fall of that year, having outgrown the Assembly Room at 273 Main Street, the Masonic Temple was leased for Sunday and Wednesday evening services, and it has since been used for that purpose.

At present the enrolled membership is seventy-one, and a number will be added to the roll at the next communion service.

From the start the increase in numbers and interest has been of a very substantial character, and almost every day inquirers into this health-giving and sin-destroying religious movement call at the reading rooms.

At Vassar College the number of Christian Scientists has also greatly increased this year, and their presence and testimonies at the testimonial meetings on Wednesday evening, have added much interest to these gatherings.

The site chosen for the new church is in one of the best residence sections of Poughkeepsie. The lot on which the building will stand is wide and deep enough to permit the erection of a substantial edifice and still leave plenty of ground for lawns in the front, sides, and rear. The triangular square in front of the lot enhances its value for church purposes, and no doubt some day the old Booth house will be torn down, which will still further contribute to the picturesqueness of the locality.

The Evening Enterprise.

Christian Science at Minnesota State Fair.

It may be of interest to the Field to learn how First Church of Christ, Scientist, of Minneapolis, Minn., conducted Christian Science work at the Minnesota State Fair.

Only the week before the fair, it occurred to one of our members that Christian Science should be given a place on the grounds for the free distribution of its literature.

The happy thought was submitted to the Board of Trustees and approved by them. Space was gratuitously granted us and a tent sixteen by twenty-four feet secured.

The sign, "Christian Science Headquarters," in large letters was displayed in a conspicuous place.

Several rugs covered the floor, a bookcase, writing desk, two tables, and several rockers and other chairs comprised the furnishings.

A large portrait of our beloved Leader, Mrs. Eddy, in a handsome frame, ornamented the wall, and several other pictures of interest to Scientists were furnished.

It was remarked by many that ours was the most tasteful and attractive tent on the grounds.

It is estimated that over seven hundred people called. Many did not care to register, but among the three hundred and forty who did, was a physician, several ministers, an Indian chief and wife,—all expressing friendly interest and accepting some of the literature.

Twelve states and fifty-seven cities were represented among the visitors.

We gave out thirteen hundred and forty-six Sentinels, one hundred and thirty-nine Journals, and three hundred and ninety-two smaller pieces of literature.

The success of the fair as a whole, was marked, this being the banner year in its history.

It required active, vigorous, and continuous effort all the week to meet the seeming opposition; but we feel that a grand work has been inaugurated, and who can measure the result?—E. A. S.

Christian Science on Cape Cod.

As the result of quite a little healing done in and about the village of South Yarmouth it was thought the right moment to have services during the summer; so a hall was engaged and each week was held a Wednesday evening meeting and the usual Sunday service each Sunday at 3 P.M. It was a beautiful, loving demonstration of God's power and goodness, for the services were well attended and much seed sown in the vineyard of the Lord.

Christian Science literature was distributed and often asked for, and a great desire from all for greater intelligence in regard to Christian Science.

Truly "the harvest hour has come; and songs should ascend from the mount of Revelation, sweeter than the sound of vintage bells" (Miscellaneous Writings by Mary Baker G. Eddy, p. 356).—G. B., Brookline, Mass.

Reading Room at Washington, D. C.

The public reading room of Second Church of Christ, Scientist, at 716 Eleventh Street, northwest, was re-opened last night (Tuesday, September 24), with religious exercises and a reception. The room, situated on the ground floor, has recently been renovated and decorated. The dedicatory exercises were conducted by Miss Helen L. Swasey, C.S.B., First Reader of the church, and consisted of appropriate selections from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures;" silent prayer, followed by the audible repetition of the Lord's Prayer, with its spiritual interpretation as given in the text-book; a few remarks of welcome, and hymns. The remainder of the evening was spent socially.

The Washington Post.

Progress in Hartford, Conn.

First Church of Christ, Scientist, of Hartford, Conn., is grateful in acknowledgment of growth of the cause of Christian Science during the past year, in our fair city.

We moved to new and much more commodious quarters May 1. Our audience room, reading room, and Readers' room occupy the entire upper floor of the Catlin Building, corner Main and Asylum Streets. A nice entrance, elevator service, and commanding outlook are a few of the advan-

Digitized by Google

tages to be enumerated. For situation, there is not a more easily accessible and centrally located one in the city.

This blessing that has come to us, is one out of the innumerable, wherein we find that God does for us "above all that we can ask or think."

MYRON G. MARSH, *Clerk.*

Reading Rooms at Little Rock, Ark.

The Christian Scientists of Little Rock have engaged the suite of rooms opposite the Y. M. C. A. in the Whipple Building, and will immediately proceed to have them made into comfortable and commodious quarters for the distribution of Christian Science literature. All the works of the Rev. Mary Baker G. Eddy will be on hand at all times, and the public are cordially invited to come and investigate the teaching of Christian Science.

The reading rooms will be thrown open to the public about September 1, and there will always be some one in attendance who will be glad to give all the information desired pertaining to Christian Science.

The Arkansas Democrat.

Science and Health in South Africa.

In our *Sentinel* of July 11, there is an article on the polar expeditions, and we thought it might interest Christian Scientists to know that the Sunday School of Third Church of Christ, Scientist, New York City, placed Science and Health, a *Journal,* and a *Quarterly* on the America, the flagship of the Baldwin-Ziegler Expedition. We offered more literature, but they were unable to carry it.

Our Sunday School is doing a good work in the distribution of literature. We devote the children's Sunday collections to this purpose. We have placed Science and Health in three libraries in South Africa lately, at Ladysmith, Cape Town, and Pietermaritzburg, also in several in Australia.—LUCY L. GWALTER, New York, N. Y.

New Church Home at Philadelphia, Pa.

The building at 108 South 40th Street, destroyed by fire last February, has been rebuilt, the entire second floor handsomely furnished as our auditorium and reading room, and September 1, West Philadelphia Church of Christ, Scientist, held its first service in its new home. What seemed a great disaster in the destruction of all our church property, has only proved a chemicalization, and great blessing has resulted in material and, above all, in spiritual, growth, and we can say with the Psalmist, "Surely the wrath of man shall praise thee."

We look forward to a future of earnest work and usefulness, greatly encouraged by the interest manifested by seekers for Truth.—C. H. FAHNESTOCK, *Clerk.*

Scientists' First Meeting.

On Sunday the Christian Scientists held their first service in the Hutchinson Block and a goodly number were in attendance, all the seats being occupied and temporary seats provided. The room is newly and prettily decorated in blue and white and is to be used exclusively by the Scientists.

Mottoes in gold letters, "God is Love," from the Bible, and "Truth is Always the Victor" by Mary Baker G. Eddy, are placed on the walls in front and at the right side, and on the left hangs a beautiful picture of Daniel in the lions' den, presented by one who was healed from serious mental and physical ailments, which is a study for every Christian.

Phoenix (N. Y.) *Register.*

Organization at Riley, Kan.

First Church of Christ, Scientist, of Riley, Kan., has received a charter from the state. It was organized in June with ten charter members.

A building fund was started in April, which has increased each month. We are encouraged to believe we shall in the near future have a building of our own.

Christian Science was first planted in the vicinity of Riley ten years ago. Many have moved away, and many more have not yet loosened their grasp from worldly ways and means. Much seed has been sown, and God is preparing the hearts of men for the kingdom of heaven.

IDA E. NIXON, *Clerk.*

Organization at Victor, Col.

At a meeting held August 22, in the reading room of the Christian Science Society of Victor, Col., First Church of Christ, Scientist, was organized with twelve charter members. This is the outgrowth of four years of faithful work by this little band. There is an increasing interest in the work here for which we are truly grateful, and we know if we are faithful over a few things we shall be made ruler over many.—L. L. T., *Clerk.*

The Wall of Self.

[See *Sentinel,* August 8, 1901, p. 784.]

MAHMOUT, the Persian, in splendor rare
Dwelt in Shiraz, in a palace fair;
In old Shiraz, on limestone ledges
That rim the sharp and curving edges
Of the Persian Gulf—the Gulf of Pearl,
Whose waves like scimitars gleam and whirl.
His halls were crowded with courtiers brave;
His ships sailed over the Caspian wave;
His home was jewelled with love and fame,
And yet Mahmout was in saddened frame;
So sad one day that the Sun stood still
To ask the cause of his seeming ill.
"Oh, Sun!" cried Mahmout, "my heart ebbs low;
One room in my home is dark, I know!"
"Dark? What is dark?" cried the Sun, perplexed.
"I know not the trend of thought so vexed.
No darkness can haunt my path of light.
I bring you the day, but never the night.
I kiss the shadows from prison cell.
I coax the gloom from the grave as well.
I rest in love on the couch of pain,
I caress the flowers, the brooks, the grain
That tosses its tassels in your great fields,
Mahmout; all gloom to my glory yields."
The Sun descended to Mahmout's home,
And the children joyed to see him come.
They trickled his rays between their hands,
And painted shadows upon the sands.
The Sun examined each room, each hall,
Each mystic mosaic upon the wall;
And then the Prince threw open the room
Which he said was ever wrapped in gloom.
"Why, where is the dark, O Prince?" he cried.
"It was dark before you came," replied
Mahmout, astonished, "But now 'tis bright,
With a glorious, all-pervading light."
"There is no darkness, no night, no gloom.
Darkness is absence of light, and gloom
Only your absence from God to-day.
Tear down the dark walls of self, I pray."
The Sun returned to his course on high;
And a meaning new and strange did fly
Like a bird of promise to his sense,
Rebuking hollow, vain pretence.
The windows of self and doors of pride
He had built himself no longer hide
From his happy home the smiling Sun.
The secret of Peace Mahmout had won.

My Song.

BY J. H. J.

When the hidden sun touches the mountains afar,
Ere the stillness of night has gone;
When the silver clouds welcome the morning star,
And the darkness retreats from the dawn;
Then nature awakes refreshed from her sleep;
The coy maiden flowers from their green beds peep;
And the twittering birds, and all creatures below,
And the star, and the clouds above,
Are telling my soul in sweet voices and low,
God is love.

When the summer sun lights up the sky and the earth,
And the dew on the grass and the tree;
When the mountain stream sparkles in joyous mirth,
And the white foam is tossed on the sea;
Then nature is bounding with life and emprise,
And looks into mine with a thousand eyes;
With glances that waken the spirit's power
To emotions resplendently bright,
As she chants to my soul from her rainbow bower,
God is light.

When the shadows of night stalk over the wold,
And the landscape is tinted with grey;
Then onyx, and jasper, and purple, and gold,
Is the wreath of the dying day;
And the listening heart hears the anthem grand:
There is a new-born day in another land;
The love and the light of the soul cannot die,
But survives in immortal youth!
And the chorus resounds from the earth and the sky,
God is truth.

When the keen stars peer through the black veil of night,
When the moon's pale banner's unfurled,
My mind is appalled at the wonderful sight
Of systems of world beyond world.
The night bird's lone cry in the vacant wood
Responds to my soul in its humbled mood:
What am I? A voice in this infinite space!
But the spheres triumphantly call:
O spirit immortal, thy kinship trace,
God is all.

My Library.

BY BERTHA L. RICE.

We as Christian Scientists have such happy surprises along the way that it is well now and then to enumerate them for our own growth and perhaps for the encouragement of others.

In Science, we go to work, as we term it, to right a seeming wrong for ourselves or others, or to bring harmony out of discord. We may and should so give ourselves to the doing of that which is the Christ work that we lose sight of the future results in the consecrated application of that work, until suddenly we awaken to the fact that we are already the happy possessor of the thing desired.

From my earliest recollections, my fancy has pictured a "beautiful home all libraries," where I might revel in the choicest literature, the results of the best minds. This significant fact also comes to me, that my tendency always to have at hand a text-book has led me to many efforts, one of which I will mention.

About ten years ago when coming from Columbus to Boston, I stepped into a bookstore to furnish myself with a book to enjoy on my way home. I asked to be shown "some kind of text-book of general knowledge,"—a sort-of-cream-of-all-the-best-books I think I tried to explain, a "book I could always have at hand to enjoy and gain knowledge from," etc. I only mystified the book-man and did not find my book until some seven years afterwards. As I think of it now, it seems as if I had always been longing for our text-book, "Science and Health with Key to the Scriptures." In my desire to find that *one book,* I have consumed books enough to fill every one of my imaginary libraries.

Upon listening to an interesting discussion on the subject of "secular reading matter for Scientists" the other day, it dawned upon me that I was, right now, the possessor of a rarer library than I had ever hoped to own, even in my brightest dreams.

This library of mine contains but ten or twelve little black, leather-covered books, yet within those covers I find every desire of my heart gratified. After three years of continued study under the light of Science, my Bible is being clearly understood, and is always at my right hand.

Of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, I want to tell a little of what I know about it personally, that others may judge of its worth in a measure. I will not quote from its pages, for it can be found in our stately libraries, on over five hundred pulpits, in as many reading rooms, and thousands of family altars. It often outlines itself in the breast pocket of the down-town business man, is frequently the bethumbed and coverless companion of college students, at the right hand of many Western engineers, and is occasionally found on hospital cots, and often in prison cells. It is the "Home Companion" for mothers, the constant guide in the schoolroom, and on the music rack of all who are following its teachings. It sometimes hangs ready in the "factory coat," and awaits one at many stations and hotels.

Two hundred and twenty thousand copies of this wonderful book are out on their mission of mercy, redeeming the world. The reading of this book heals the sick, raises the dead in trespasses and sin, cleanses the lepers, and casts out evils. It gives to the homeless a home, to the business man success, to the good man "peace that floweth like a river." Homes are beautified, faces enlightened, hearts glow. It educates the unlettered, gives self-poise and mental equilibrium to the reader, replaces self-consciousness with self-forgetfulness, and "gathers unformed thoughts into their proper channels" (Science and Health, p. 500).

From pages 204 and 205 of my second book, "Miscellaneous Writings" by the same author, I want to give two paragraphs, to show with what this book is freighted:

"By purifying human thought, this state of mind permeates with increased harmony all the minutiæ of human affairs. It brings with it wonderful foresight, wisdom, and power; it unselfs the moral purpose, gives steadiness to resolve, and success to endeavor. Through the accession of spirituality, God, the Divine Principle of Christian Science, literally governs the aims, ambitions, and acts of the Scientist. The Divine ruling gives prudence and energy; it banishes forever all envy, rivalry, evil thinking, evil speaking and acting; and mortal mind thus purged, obtains peace and power outside of itself.

"This practical Christian Science is the divine Mind, the incorporeal Truth and Love shining through the mists of materiality, and melting away the shadows called sin, disease, and death."

Three years ago, these words were to me hidden mysteries; to-day they are living realities, every one of which I am able to prove in a greater or less degree. Have we, in any library, books containing such profound and scientific truths, the demonstration of which can bring such harmonious results as the world is beginning to witness? Knowing these truths is making us free, and fills us with happy expectancy.

Digitized by Google

After having reached so long for a "book to have always at hand to enjoy and gain knowledge from," I take up "Unity of Good" by our Leader and read also "Pulpit and Press."

The honest student of these books can and does reflect the truths therein contained. More impersonal healing, as a result of studying these books, is being done by these quiet people than the world dreams of.

These books that constitute my library are written by her who has gone before and radiated love for us, this love that is the "greatest thing in the world"—this Christ-love which is setting the captive free. Can one wonder at my choice and satisfaction? With these books already mentioned, and the minor writings of Rev. Mary B. G. Eddy, together with the *Journal* and *Sentinel,* I have very little time to give to secular reading.

God's Way is Good.

BY HERBERT S. FULLER.

In that remarkable sermon which Jesus delivered from the hill above Gennesaret, and which we all tenderly and reverently refer to as the Sermon on the Mount, our Master laid down for us in language terse and strong, the rules by which we could distinguish right from wrong, the real from the unreal, the good from seeming evil, and thus be equipped to detect error and armed to overcome it.

The numerous lessons taught by him at that time become plain under the illumination of the spiritual understanding shed upon them through a study of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and as their real meaning is apprehended, we find ourselves prepared for the work of demonstrating their truthfulness in the way and manner in which the Master intended that they should be proven, that is, by works rather than by words.

In the light of recent occurrences, one of the statements made by him on that memorable occasion has stood out more clearly to me than ever before. He said: "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit."

Our text-book, Science and Health, elucidates these words of the Master, making it evident that he wanted those to whom he spoke, and all who came after them, to understand that it is impossible for good to come out of evil or for evil to produce good, that good has no more communion with evil than the Christ hath with Belial. The words of our Master, then, give a negative reply to the oft-asked question: "Can evil be derived from Good?" and makes manifest the truthfulness of the answer to this question contained in our text-book, where it is summed up by Mrs. Eddy in the one positive word: "Impossible."

It seems to be the present tendency to attribute to God any momentous happening, concerning which an intelligent explanation cannot be given. In many cases this undoubtedly proceeds from an honest belief, from a mind trained and educated to impute to God anything that cannot be explained on a material basis.

From this condition of mind arises the broadcast statements that such and such a thing was God's will or God's way of working. For lack of a better answer this statement is accepted by mortal mind as correct, and so, while saying that "God is Good," and praying "Thy will be done," mortals are in fact holding the belief that God is responsible for, or at least permits, sin, sickness, and death.

This view of whatever may be attracting the world's thought at the time, spreads the hurtful and untruthful belief until it is in every mouth and we hear it iterated and reiterated by our neighbors and friends. Thus is laid at God's door something that every Christian Scientist knows to be the offspring of error,—nothingness.

It is at such times that the Christian Scientist needs to be alive, to be watchful, to be on guard all the time to mentally, and audibly if necessary, deny the error of belief that would ascribe evil to our God. Unless this is done there is danger of the erroneous thought touching us and perhaps shutting our eyes to the facts before we realize it, thus using us to perpetuate the belief that God knows evil, or that good is in evil.

Are the words of Jesus true: "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit"?

If they are true, and every Christian Scientist *knows* that they are, it follows that evil cannot proceed from good, that good is not and cannot be a channel for evil. God is Good, and evil is the opposite of Good, therefore the opposite of God. God has no opposite, therefore evil is reduced to nothing. Evil tries to boast itself above good; it has done this ever since "the morning stars sang together," but it is to-day what it was then and what it ever will be —nothing.

Let us, then, realize at all times, that "a good tree cannot bring forth evil fruit," that the same fountain cannot bring forth sweet waters and bitter, that men cannot gather grapes from thorns or figs from thistles, that good and evil cannot mingle. All evil doing is of its father, the devil, the one evil, and when it is imputed to God, or said to be God's will, it is simply an attempt to make black appear white, to make us believe that evil can spring forth from God—Good. God's will is good and good only. As Mrs. Eddy says in "Miscellaneous Writings," p. 206: "Good is my God, and my God is Good." It is ignorance of the divine Principle that imputes evil to God.

Error is error at all times. It is ever seeking whom it may devour. Its object is to discredit good and destroy it if it could. It aims to pull down every good cause, and thus aiming, pours its greatest fire where the leaders of a good movement stand. Let us pray for all leaders of good, and realize all the time the impotence of evil, and that it never comes from God—Good.

Consider the Roses.

BY ANNIE MARIE BLISS.

Open your heart, little sister,
To the sunshine and the dew;
Live the life of a rose, dear,
And Life's roses will bloom for you.

Bloom, little sister, and sweeten
The air so heavy with sin;
Let your sunny face brighten
Dark chambers of thought within.

Tell it not in words, dear,
The roses do not preach;
The perfume tells the story,
Our deeds the lessons teach.

Don't fret at your narrow quarters,
And long for another place;
'Tis the blighting frost of discontent
That kills the smile in your face.

Be patient and brave if the tempest
Seems to bring you pain;
For hearts are cleansed of earth-dust,
As roses are washed in rain.

To-day's Work.

To-morrow has a gem of beauteous ray
For you, for me; but somewhere in to-day
Lies precious gold, which we must seek and win,
Dear friend! to set to-morrow's jewel in.

D. E. Jackson.

Religious Items.

"Ye ask and receive not, because ye ask amiss, that ye may consume it upon your lusts." We should always try to realize that everything we undertake should be saturated with Spirit prayer, and thoroughly understand ourselves, to be sure that it is not ourselves, but God, who is the actor, else it cannot come to pass. Isaiah (65 : 24), telling of what shall come to the "blessed of the Lord," says: "And it shall come to pass that before they call, I will answer; and while they are yet speaking, I will hear." When doubt arises or deep sorrow comes, it is then that the true Christian proves his or her loyalty. Turn your thoughts in that trial of yours to the night when our Master bowed in Gethsemane, without sin in himself, bearing all the guilt and shame of lost man, knowing there was but one way. He, the spotless lamb of God, the King of kings, the Lord of lords, must drink the cup of sin, shame, crime, disease, and death, to the last bitter dregs, that the curse of sin should be forever wiped out for the "whosoever." The powers of hell must be conquered, that we might through him be free from that power. With the bloody sweat falling to the ground, he prayed as never man prayed before—not to escape suffering, but that God's will might be done. "I came to do the will of Him that sent me." In that moment, when the voice of the "Overcomer" went up when flesh was triumphed over, angels stopped their songs and swept down to Gethsemane, obedient to the God of glory, to "minister to him." The devil shrank back with his angels affrighted—prayer had triumphed over hell, and death was soon to lose forever its sting.

The Christian Advocate.

The Universalist Leader thus speaks of the methods of some newspapers—only too many, we are sorry to say:—

"Nor must we allow ourselves to be deluded into the notion that only a few journals are sinners in the matter of violent language. The great crowd of political papers run to shelter at such a time, behind the works thrown up against two or three offenders. It would have a very sobering effect on them to appoint a commission of inquiry into the state of their own columns in any heated campaign. Why, even while we write, a paper lies before us in which the editor labors with absurd ingenuity to make out that Mr. Bryan is constructively an anarchist and logically responsible for the assassination of the President! The truth is, irrational, rabid, and foolish talk, with direct charges of the most wicked purposes and any amount of implication of dark and nameless crime, are quite too generally the pastime of our scribes. Let us reform our newspaper and platform manners."

There is a text in the Psalms which uses the strange expression of "the gentleness" of God. We wonder sometimes, when God is so great, so terrible in majesty, that He uses so little violence with us, who are so small. But it is not his way. His way is to be gentle. He seldom drives, but draws. He seldom compels, but leads. He remembers we are dust.

We think it might be quicker work if God threatened and compelled us to do right. But God does not want quick work, but good work. God does not want slave work, but free work. So God is gentle with us all, molding us and winning us many a time with no more than a silent look. Coarse treatment never wins souls. So God does not drive the chariot of His omnipotence up to Peter and command him to repent. God did not threaten him with the thunderbolts of punishment. That one look laid a spell upon his soul which was more than voice or language through all his after life.

HENRY DRUMMOND.

Savonarola's right to figure among "The World's Epoch-Makers" can hardly be disputed. He failed, but his failure was temporary. The results of his career were far-reaching, and if he did not succeed in saving the Renaissance from its pagan and sensuous tendencies, his fiery protests against the splendid corruptions of the age gave a loftier and purer direction to the ideals of many of the great artists who lived after him. His sermons were constantly in the hands of Michael Angelo, Botticelli, Luca della Robbia, and Perugino; and the reverential regard felt by them for their guide and teacher must have touched and stimulated their noblest aspirations. When Florence, a generation after his cruel death, was fated to suffer the terrible calamities foretold by him, the derided Piagnoni, who regulated their lives by his precepts, threw a lustre over her downfall by their heroism.

The Independent.

PRAYER.

Most merciful and gracious Father, I bless and magnify Thy name that Thou hast adopted me into the inheritance of sons, and hast given me a portion of my elder Brother. Thou art the God of patience and consolation, strengthen me that I may bear the yoke and burden of the Lord, without any uneasy and useless murmurs, and ineffective unwillingness. Lord, I am unable to stand under the cross, unable of myself, but be Thou pleased to ease this load by fortifying my spirit, that I may be strongest when I am weakest, and may be able to do and suffer everything that Thou pleasest, through Christ who strengtheneth me. Let me pass through the valley of tears, and the valley of the shadow of death, with safety and peace, with a meek spirit, and a sense of divine mercies, through Jesus Christ.—Amen.—*The Watchman.*

It is sometimes said that doctrinal agitation in churches is to be deplored and always, when possible, avoided. But the *Interior* (Presbyterian) dissents from this view and wisely says: "There is nothing deplorable about agitation in itself. Motion means life, quiescence means death, and that decay. Sunlight is simply etheric agitation, and thought soul agitation. That which is to be deplored is not the propagation of waves of light, electricity, sentiment, or intellectual activity, but selfishness, intellectual pride and dominance, intolerance of the equal rights of others to think; all these are deplorable, but that deplorable element is not agitation, any more than the water in a flowing stream may be called deplorable because at times it is muddy."

The Universalist Leader.

The Pharisees put to him the question: "Why do thy disciples transgress the tradition of the elders?" Jesus' sharp reply was: "Why do ye also transgress the commandments of God?" As to their reproof that he neglected fasting, ceremonial washing, and so forth, he remarked: "New wine in new wine-skins." The cavilers were always dogging him about his Sabbath practice. He justified his course by an appeal to David's necessity, by the dictates of common-sense in saving stock on that day, and by urging that character is more than formal worship. "I desire mercy and not sacrifice." Finally, he laid down the basal truth: "The Sabbath was made for man, and not man for the Sabbath."

The Standard.

We ought not to wonder that many a Jewish and Puritan mother has had so impressed upon her imagination the brightness and charm, the ability and power, the purity and moral strength of the son of Jacob and Rachel that there has been no other name by which she could call her first-born. The character of Joseph stands almost unique in the biographies of the Bible as being without reproach or flaw. It is like a perfect jewel. From whatever angle it is viewed, it reflects light and beauty, and as you peer into its crystal depths it reveals the mysterious charm of grace and strength. There is no human character, of which we have any record, upon which a young man can meditate more profitably.—*The Watchman.*

An editorial upon "The Joy of Contentment," in *The Congregationalist and Christian World* contains this fine bit:—

"It is not quite like any other joy, since it is the result of such perfect confidence and such glad devotion. Wrapped about with the unfailing assurance of love, the Christian heart need never know the dark shadow of gloom. But instead, welling up as sweetly as the spring among the hills, singing its way onward like the brooks in the glens, bearing strength and purity to the wide meadows and the bitter ocean, the life of a Christian ought to be filled with joy that is simple, sweet, and life-giving."

Jesus of Nazareth came to reveal the Father, and the Gospels that record his life, and the book of Acts that continues that life in the lives of his Apostles, and the Epistles that are a commentary upon his blessed life and holy deeds, are all a revelation of God to man. They tell us not only that he once came to earth, but that he still abides with his people, that he will never leave or forsake them, that "behold, he is with them alway, even unto the end."

The Examiner.

I have said a hundred times, and I am willing to say it again, that if anybody will take charge of all the poverty and crime that result from drunkenness, the South Congregational Church, of which I have the honor to be the minister, will alone take charge of all the rest of the poverty which needs relief in the city of Boston.

EDWARD EVERETT HALE, D.D.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory *vs.* Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

The principal object to be subserved by the Pan-American Congress which meets in the City of Mexico, is "the solidarity of the interests of all America," yet the representatives of the United States are specifically instructed on the following points among others:—

First.—Measures that shall tend to promote the prosperity of the several American States.

Second.—The formation of an American Customs Union under which the trade of American nations with one another shall be promoted.

Third.—The establishment of regular and frequent communication between the ports of the several American States.

Fourth.—The establishment of a uniform system of customs regulations to govern importation and exportation of merchandise and port dues and charges, a uniform method of determining the classification and valuation of such merchandise, and a uniform system of invoices.

Fifth.—The adoption of a uniform system of weights and measures, and laws to protect the patent rights, copyrights and trademarks of citizens of either country in the others.

Sixth.—The adoption of a common coin which shall be issued by each government and shall be legal tender in all commercial transactions between the citizens of all the American States.

Seventh.—A definite plan of arbitration of all questions, disputes, and differences.

The last bulletin of the census report shows that there are 39,059,242 males in the several states and territories of the United States, and 37,244,145 females. There has been an increase in total population of 13,233,361 or twenty-one per cent. There are 65,843,300 native persons and 10,460,081 foreign born persons, the latter constituting 13.7 per cent of the population in 1900 against 14.8 per cent ten years ago.

As to color and race, there are 66,990,802 white persons, 8,840,798 negroes, 119,050 Chinese, 85,986 Japanese, and 266,760 Indians. Of the total white population 56,740,739 are natives, constituting 74.4 per cent of the total population, and 10,250,063 foreign whites, or 13.4 per cent of the total population.

It is said that the Isthmian Canal Commission in its report to Congress will recommend the construction of a canal thirty-five feet deep and one hundred and fifty feet wide at the bottom. The estimated cost of the work will be two hundred million dollars. The commission believes that the cutting of a canal across Nicaragua is a comparatively easy matter, and the work could be completed in eight or ten years.

President Roosevelt has named George R. Koesler, a Gold Democrat, as collector of internal revenues for South Carolina. There were many applicants, including several leading Republicans.

Arrangements have been made for the holding of a national reciprocity convention at Washington, D. C., beginning Tuesday, November 19. The convention will probably last three days.

The National Shorthand Reporters' Association will ask Congress to pass a law providing for the official appointment of an official reporter in every Federal court in the country.

Foreign.

M. Santos-Dumont succeeded in sending his balloon from St. Cloud around the Eiffel Tower and return in thirty minutes forty and four-sevenths seconds. The judges decided that he had failed to win the prize of 100,000 francs offered by M. Deutsch for any machine that would make the trip in thirty minutes. The aeronaut really made the trip in twenty-nine minutes and fifteen seconds, but failed to land within the time specified.

Because of an indiscreet speech delivered at a luncheon in London recently, General Sir Redvers Buller has been relieved of the command of the first army corps, and placed on half pay. General French has been appointed to succeed him, the appointment to take effect when General French is no longer needed in South Africa.

The Pan-American conference was formally opened in the City of Mexico, Wednesday afternoon, October 23. Conaro Baigesa, chairman of the Mexican delegation, was elected president of the Congress. The delegates were welcomed by President Diaz.

Information has been received from Havana that a petition asking that Cuba be annexed to the United States is being circulated among the business men of that city.

It is said that Lord Kitchener has made an urgent request to the war office at London for more trained men for immediate service in South Africa.

A memorial service for President McKinley was held by the Americans in the Transvaal at Johannesburg, Sunday, October 20.

Information has been received from South Africa that twelve more Boer leaders have been permanently banished.

Count von Moltke of Germany is coming to the United States to study the transportation system.

Industrial and Commercial.

The total value of property both real and personal owned by the negroes of Georgia is $15,629,811, an increase of more than a million dollars over last year. The negroes own 1,141,135 acres of land, valued at $4,656,042, and business property worth $4,351,935.

Nearly four million dollars is being expended in the construction of new industrial plants in Youngstown, O., many of which will compete with the United States Steel Corporation. It is estimated that about six thousand men will be employed in these works.

The production of anthracite coal in Pennsylvania this year will be the largest in the history of the trade. The shipment of coal during nine months of this year was 40,309,786 tons, about six million tons more than for the corresponding period of last year.

At a cost of upwards of sixty thousand dollars the various labor organizations of Denver, Col., will erect for their use a building to be known as the Denver Labor Temple.

The estimated crop of prunes in the United States this year is sixty million pounds. One thousand carloads of last year's crop is yet on hand.

During the month of September 137,225 tons of pig iron, steel, and cast iron were shipped from Tennessee and Alabama.

General.

Wednesday, October 23, was the closing day of Yale's bicentennial celebration. The special features of the day were Justice Brewer's commemorative address and the conferring of honorary degrees. Chief among those to receive the degree of LL.D. was President Roosevelt. Plans were made to confer this degree upon the President when he was a private citizen.

Among the forty-six others who received the honorary degree of LL.D., were John Hay, United States Secretary of State; Joseph Hodges Choate, ambassador of the United States at the court of St. James; Rear Admiral Sampson, and Marquis Hiroboumi, former prime minister of Japan. Samuel Langhorne Clemens (Mark Twain) received the degree of D.L., Doctor of Letters.

St. Louis will issue World's Fair bonds to the amount of five million dollars. An amendment to the city charter has been adopted, authorizing the city to levy a special tax for meeting obligations incurred in issuing the bonds. The annual expense to the city will be about four hundred thousand dollars, of which one hundred and fifty thousand dollars will be for interest and the remainder for sinking fund. The bonds will run twenty years and are expected to command a premium.

A test of a new system of wireless telegraphy and telephony was recently made in Buckinghamshire, Eng. The new system uses earth currents instead of air currents as in the Marconi system. Operations were successfully conducted over a distance of five hundred yards.

The bridge across the River Forth in Scotland is 8,296 feet long and cost to exceed $8,000,000. On the bridge there are over one hundred and twenty acres of surface to be painted, requiring fifty tons of paint for every coat given it.

The man in Mississippi who does not pay a poll tax cannot vote or serve on juries, and official returns show that 29,371 white citizens have neglected to pay up this year. This neglect disfranchises them for two years.

In fifty-one savings banks in the State of Maine there is $72,502.54 on deposit to the credit of individuals who have done no business with these banks for more than twenty years.

The highest mountain peak in the United States, outside of Alaska, is Mount Whitney, which is 14,886 feet high, and is located in California in the Sierra Nevada Mountains.

The orange came to Europe from Africa about the year 1030. It was not known in England till the sixteenth century, and was first planted in Australia in 1788.

The board of directors of the Pan-American exposition have fixed Saturday, November 2, at midnight, as the time for the final closing of the exposition.

Sir Thomas Lipton sailed for home on the Celtic, October 23. It is said that he has already taken steps toward a third contest for America's cup.

Mrs. E. H. Conger, wife of Minister Conger, sailed from San Francisco, October 23, to join her husband in China.

President Roosevelt celebrated the forty-third anniversary of his birth on Sunday, October 27.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Selected Articles.

Christian Science Reading Rooms.

WITH the establishment of reading rooms, a new department has been instituted in church work. To-day in almost every city, as an annex to the church, free reading rooms are open to the public; many of them are handsomely furnished. Here the weary and heavy laden, who have not found rest through the use of material remedies, may come and investigate Christian Science, having access to the works of its Discoverer and Founder, and the publications of The Christian Science Publishing Society, in Boston, Mass. Here inquiries may be made in regard to this Science and Christian Science literature is always on sale.

The Christian Scientists not only have their Sunday services and mid-week meetings, but the reading rooms afford opportunity of doing God's work every day in the week, healing the sick, comforting the sorrowing, reforming the sinner. To the wanderers athirst for a knowledge of God, these reading rooms are as the shelter of a great rock, and like the refreshing shower. This work is only in its infancy, yet the good already accomplished proves the wisdom of our Leader, who established them as a means of bringing blessings to mankind.

In the larger cities it is a common thing to hear of the successful business man, turning away from the cares of the world, seeking the reading room where he may talk of that which relates to God, and thus be about his Father's business in Christian work. The help received in this retreat, gives him strength and courage to conduct his business on a Christian basis.

The influence of Christian Science on the life of one merchant caused him to make a great change in his business methods: he dispensed with untruthful advertising; he instructed his clerks to sell wool for wool and cotton for cotton, and rather than practise deception, allow the goods to perish. Instead of meeting with failure at this change his business has grown. This is only one of many instances, and is the natural result of Christian Science.

The following interesting experiences have been related at the reading room in this city.

A visiting Scientist told of the demonstration in a business way of a dentist in a neighboring city. The dentist became interested in Christian Science, and decided that he would not pursue the usual course of advertising, yet he has all the work he can do, even the physicians have not forsaken him.

An actor and actress spoke of the reformation Christian Science is accomplishing on the stage; how other members of the company, not Christian Scientists, recognized that those interested in this Science have something they do not possess; what a help this Truth is to them; how beautiful the thought of prayer Christian Science teaches, that enables them to pray without ceasing; how rapidly Christian Science is growing among their profession.

The passenger agent of one of our Western railways made us a pleasant call. It is a source of much joy to see all who gain an inkling of Christian Science, no matter what their station in life may be, at work to bring the world to an understanding of this great Truth, that they likewise may experience the practical benefits they themselves have received. This gentleman told of benefits he had received, and spoke of the great interest his wife takes in the cause. He said that Christian Science is growing rapidly throughout the West.

A traveling man told his experience. He had been interested in Christian Science only a few months. His attention was first directed to this subject at Lancaster, O., when waiting at the depot for a train. Having nothing specially to occupy his time, he noticed a box containing some literature, and therein found a *Christian Science Sentinel*. This he read and enjoyed. Later, in Terre Haute, Ind., at the depot he found a *Christian Science Journal*. This *Journal* contained the article, "From a Lawyer to a Friend," which he read and re-read.

When he reached St. Louis he purchased "Science and Health with Key to the Scriptures." He says that Truth has wrought a wonderful change in his life. When he returned home, his wife invited him to spend the evening with friends. At such social gatherings, drinks were served, but this time he refrained from indulging. Returning home, his wife asked him why he refused to drink, knowing that on previous occasions he always drank. He replied: "You have a new husband." Then he told her of the reformation Christian Science had accomplished. He said that in the short time he has been interested in this Science it has brought more happiness than he ever experienced in his home.

Not long since, in company with another traveling man, the conversation finally drifted to religion. His companion said that he was a Presbyterian, and when he informed him that he was interested in Christian Science, his friend laughed heartily, not that Christian Science was wrong, but on further explanation, stated that Christian Science taught such purity of life that no traveling man could live it. He assured his companion that Christian Science had wrought a reformation in his life, and that he could live it, and it was a pleasure to do so.

A traveling man from California informed us that what attracted him to Christian Science was not the physical healing, but this teaching which showed a man how to reform, and how to live a good life.

A graduate of the Johns Hopkins Medical College, Baltimore, who practised medicine fourteen years, less than two years ago gave up the medical profession, and since has been studying Science and Health, and other works by Mrs. Eddy, preparing herself to enter the work of Christian Science healing. She says The Johns Hopkins University always taught "whatever was worth doing was worth doing right," so a careful preparation should be made before entering this work.

This lady said she had been watching the working of Christian Science, and was much gratified as to results, not only in the physical healing, but the most vital part, the moral and spiritual reformation that follows. She then told of a testimonial given by a prominent railroad official. The remarkable healing of his eyes led him to become much interested in Christian Science. This Truth had proven

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

very helpful to him in business. When in Europe some years ago, he would spend the morning in a business way, and a portion of the afternoon and evening talking Christian Science to inquirers, thus helping to start the work there. Not only was he successful in his business enterprise, but was able to sow seeds of Truth which have resulted in much good.

In a railroad enterprise that took him to the City of Mexico, so ready was he always to speak of Christian Science, that even at a banquet (the last place one would think of talking and demonstrating Christian Science) he mentioned the subject to a prominent Spaniard, who was a great sufferer from neuralgia. When asked if he would be willing to be helped by it, he replied in the affirmative. In five minutes he was free from suffering, and the means of his relief was soon noised about.

A traveling man called to purchase some literature for his wife. He said the first church he attended in years was one of the Christian Science churches in Chicago, and since that time he has become a regular attendant. At the time of building the Second Church in that city, his wife asked him if he would like to contribute something. He replied, yes, and, to her great surprise, said, fifty dollars. She did not think he would give over five dollars. He said if any one had told him some time prior to this that he would give that amount to a church, he would have declared they did not know what they were talking about. Since he has been attending services and reading the Christian Science literature, he does not care to play cards, etc.—*Dayton* (O.) *Herald.*

In Defence of Christian Science.

To the Editor of *The Times.*

In your issue of September 26, you criticise Mrs. Eddy's explanation of why prayer failed to save President McKinley. As one who has made a thorough study and investigation of Christian Science, I ask you kindly to allow me to make some corrections and comments.

You say "the Christian Scientists, Dowieites, and all such charlatans." Christian Science and the teachings of Dowie have absolutely nothing in common, as they are polar extremes both in principle and practice, and therefore they should not be classed together. Neither has Christian Science any connection with any of the various faith-healing sects, nor does it involve occultism of any kind. It is simply the application of the teachings of our Master, Christ Jesus, on a scientific, metaphysical, demonstrable basis as discovered by Mrs. Eddy, and is the foundation of a religious denomination which now has over a million believers.

You call Christian Scientists "charlatans." Because Christian Scientists know the underlying Principle of the work of Christ Jesus and his disciples, by which the sick and sinning were healed and reformed, and thereby heal the sick and reform the sinner to-day, are they "charlatans"? Are persons who heal and save drunkards, opium fiends, and the slaves of myriad forms of sin, leading them into a life of sobriety, purity, love to God and man, properly called "charlatans"?

When Christian Scientists lead agnostics and infidels into an understanding of the Bible and a belief in God and Christ and bring to their heretofore barren hearts the sunshine of divine Truth and Love; and when they restore to happiness, unity, and peace a home that has been wrecked by selfishness, family quarrels, and dissipation, are they then "charlatans"? Or are they "charlatans" when they take the hopeless invalid, who has tried every known medical and surgical treatment, or the unfortunate sufferer from disease who has been pronounced incurable by reputable members of the medical profession, and through their understanding of the underlying Principle of Christian Science, the truth about God, man, and the universe, restore these people to health and happiness?

Such are the well-known works of Christian Scientists, which any one can learn by investigation and which account for the wonderful growth of the denomination. Christian Science numbers among its adherents scores of intelligent, cultured, and prominent people, such as ministers, physicians, lawyers, authors, editors, college professors, engineers, bankers, business men, and men well known in all the professional and commercial walks of life. It is only necessary to enquire into the lives of these people to learn whether Christian Science is good or bad.

Therefore, such expressions in your editorial as, "The capstone upon the mountain of absurdity which makes up the creed of this sect;" "but the whole world is interested in the exposure and squelching of the fraud;" "utter worthlessness of the claim which is the foundation of the entire creed," are manifestly inapplicable in any way to Christian Science, and arise from a misunderstanding of the subject.

Mrs. Eddy gave her explanation at the request of a newspaper man. It is not an apology for the failure of Christian Science, because President McKinley was not under Christian Science treatment. Thought, prayer, fear, and causation all being mental conditions and existing solely in the realm of mind, are metaphysical problems, and require some knowledge of the Science of Mind in order to be understood.

HERMANN S. HERING.

In *The Times*, Washington, D. C.

Not a Christian Scientist.

To the Editor of the *Methodist.*

Sir:—In your issue of 7th instant you published as follows:—

"The following is part of a prayer offered by Mr. Hazzard, president of the New York School of Primitive and Practical Christian Science:—

" 'O, ye dyspeptics, listen and learn what fools you have been all these years in which you have only had imaginary sufferings.

" 'Lord, help us to believe that all evil is utterly unreal; that it is silly to be sick, absurd to be ailing, wicked to be wailing, atheism and denial of God to say, I am sick. Help us to strongly affirm with our hand in Your hand, with our eyes fixed on Thee, that we have no dyspepsia, that we never had dyspepsia, that we will never have dyspepsia, that there is no such thing, that there never was any such thing, that there never will be any such thing. Amen.' "

In the interest of truth I desire, with your permission, to say that Mr. Hazzard is not a Christian Scientist, that his school is not a Christian Science school, and that his prayer is not a Christian Science prayer. Every Christian Scientist is a follower of the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science and author of its text-book, "Science and Health with Key to the Scriptures," and uses no other works than hers and the Bible for the study and practice of Christian Science. There is no other school of Christian Science than that of Mrs. Eddy, and there is no more analogy between the teaching and practice of the school in question and Christian Science, than there is between infidelity and Christianity; between the true and the false.

Sincerely yours, JOHN WHITE.

[The prayer referred to was a clipping taken from one of our leading church papers. We feel it our duty to grant this rejoinder, because were we to be misrepresented, we would desire the opportunity to correct the misstatement by the same means by which it had found currency. We in no way sympathize with Christian Science, so-called, but fair play is our motto.—ED.]

The Lectures.

At Mancelona, Mich.

A large audience responded to the invitation to the lecture given by Edward A. Kimball of Chicago, on Christian Science, last Monday evening (September 30). By request, Mr. H. B. Hudson introduced the speaker in the following well-chosen words:—

Friends and Fellow-Citizens:—In entering upon the very pleasant duty assigned me this evening, for the honor of which I return my thanks, what I may say to you will be said purely as a citizen. I trust I am interested alike with you and with all good men and women everywhere in the administration of good laws and the erection of a standard of morals, which, if lived up to, will make us good citizens—give to us good society.

The announcement in our local paper and the little bills that placarded the windows of our business-houses, and your gathering here to-night, is an object-lesson that challenges our attention and causes a feeling of pride to possess us,—pride that we live in a land under a government where all men and women are free to have their views of and about religious matters, and as a citizen I am glad that the builders of this government put into the very corner-stone of this great republic,—the organic act,—absolute freedom along religious lines, leaving all men absolutely free to erect their altars of home and devotion, gather their loved ones around, and there worship as their own conscience dictates; that there is no dictatorial power in this land that can prescribe rules, plans, and forms of worship. Hence we have in this country the oldest forms and kinds of belief.

We have the followers of the oldest church in the world's history, whose head is at Rome, and among them many grand and noble men and women. We have the followers of that great Reformer of 1509,—John Calvin,—and whether Presbyterians, Baptists, or Congregationalists, they number in their ranks good men and women. We have as part of our citizenship those who pay tributes of respect to him who planted the doctrines of free salvation in this country,—John Wesley of 1703,—and the Methodist Episcopal churches all over this land have done their work.

But a few years ago, within the memory of the older portion of this large audience, a new doctrine was proclaimed, coming from that historic city of the old New England States,—Boston, Mass.,—a doctrine that asked to be heard, asked to take its place in the hearts of the people, and to-day it numbers nearly a million of good men and women. It sought its membership from the intelligent men and women of other beliefs, and to-day is one of the established beliefs of this land. Its membership is among the most intelligent citizens of this country, so no man can criticise them along these lines unless he does so from his own narrow world.

This new doctrine has had its battles to fight and it has now a standing among men. I have watched its growth and development with much interest as a citizen and as a lawyer. We have in our midst an organization of this new belief and its members are made up of our best men and women. Then I say all honor to those men and women, by whatever name this or that organization may be called, whose teachings are the upbuilding of society and the elevation of human character, they have my hearty endorsement.

We have upon the platform to-night a gentleman, from whom you are to hear, one who is authorized to speak for this new doctrine, and who comes to us by authority. His reputation is not confined to Chicago or to the state of Illinois, but reaches from the Rio Grande to the Lakes and from ocean to ocean.

And now, Mr. Kimball it gives me pleasure to introduce you to a Mancelona audience. You have spoken in larger halls and to larger audiences, but, pardon my home pride, never to a more intelligent or more appreciative audience than looks into your face to-night at this time. And now, my friends, it is with great pleasure I introduce to you, Edward A. Kimball of Chicago who will address you.

The address by Mr. Kimball which followed proved him to be perfectly familiar with the principles of the society which he represents, and in a clear and concise manner he endeavored to explain them to his hearers. The audience gave close attention to his remarks and went away feeling that whether or not they were stronger believers in the doctrines of Christian Science, they at least had a clearer idea of the teachings and practices of that society.

The Mancelona Herald.

At Oshkosh, Wis.

Edward A. Kimball, C.S.D., of Chicago, delivered an address on "Cause and Scientific Cure of Disease" at the Grand Opera House last evening (Thursday, October 10). The event was given under the auspices of First Church of Christ, Scientist, of this city. The theatre was filled with the representative people of Oshkosh, and the address was an interesting one, and well worth hearing, even to the uninitiated.

The stage was transformed into a parlor, and was tastefully trimmed with palms, carnations, and other blossoms. In a few well-worded remarks, Rev. F. H. York, pastor of the Universalist Church, introduced to the audience the speaker of the evening. Mr. Kimball is a member of the Christian Science Board of Lectureship, and stands high in the ranks of Christian Scientists. He is a man of pleasing personality, and a good speaker. His address last evening received marked attention throughout. It was interesting, instructive, and to the point.—*Oshkosh Times.*

Rev. Mr. York's introductory remarks were in part as follows:—

It is said that the hardest thing a man ever does is to receive a new idea. However this may be, this splendid audience testifies that there are people in Oshkosh who are willing to undergo this arduous labor. Indeed, there are people here who, by their very presence, testify that they are willing to receive the truth whether it come from Mt. Sinai by way of the Bible, from the stars by way of the telescope, from the myriads in the grass by way of the microscope, from the hard elements by way of the laboratory, or even should it be declared from this platform by a Christian Scientist.

We are here as truth seekers. It is not to be assumed that the gentleman now addressing you is posing as a Christian Scientist, nor yet may it be assumed that any one present is so posing; however, we are one and all posing as individuals open to facts sustained by logical arguments.

We all recognize that the time is now past when it may be candidly maintained that "Whatever is new in theology or science is false." We live in an age of discovery, and the future will look back to this our time and will know it and call it, not the Stone Age, or the Iron Age, but "The Age of Discovery and Readjustment."

Yet the world to-day is rightly conservative. I am conservative, radical as you may think me; you are conservative, however radical you may be; yet you and I, one and all, have advanced to that point where we know that truth, whether blasted from a rock, drawn down from the clouds, or scraped up with the slime from the bottom of the sea, is God's truth, and is not in disjointed fragments. We have come to know positively that truth is one great undivided and indivisible whole. We may be able as finite creatures to perceive but small sections, yet we know that, small as it may be, it can contradict no other truth in the whole universe, and that somehow it must dovetail perfectly into our philosophy and also into our theology.

Digitized by Google

We must make room—large room—for every new truth, though our theories, grown gray and venerable, are buried forever. We have discovered that the truth and the creeds of yesterday are not final. Indeed "final" will never be rightly written beneath our revelation. So, as an audience, we are at the same time open to conviction and correction. I have the honor and the pleasure to introduce Mr. Edward A. Kimball, who will address us on the subject: "The Cause and Scientific Cure of Disease." Ladies and gentlemen, Mr. Edward A. Kimball.

At New London, Wis.

Between three and four hundred people attended Judge William G. Ewing's lecture at the Grand Opera House, New London, Wis., Sunday evening, September 22. The speaker was introduced by Attorney G. H. Putnam, of this city, who spoke as follows:—

Ladies and Gentlemen:—Never, I think, since the world began, is so wide a prospect of lucid perplexity laid open to the speculative and thinking mind. We walk our labyrinth in clear day, but we do not get out of it. Society and religion lie dissected before us. We analyze, detect, repudiate; we rush back and gather up the fragments of what a moment before we had torn to pieces. We embrace again the old forms and the old creeds, in order to satisfy our insatiable thirst for Truth. In the portico of St. Peter's at Rome there is a statue of Truth, a beautiful figure, leaning upon her sword. That truth brings the sword with her will be admitted by all. When will she be really seen on earth leaning on it, her work done?

"Build on! Build always! It is thus only that we can erect and secure the great edifice of faith."

The possibilities of advancement in society and religion have not been exhausted, and I am happy to say that the world no longer recognizes that the truth concerning religion is confined to two or three societies or sects. There can be no conflict between different truths, the trouble arises from the imperfect understanding of them. I am not here as an advocate of Christian Science, but to learn. The honor of being asked to preside at this meeting I accept as a compliment to the legal profession, of which I am a member. The speaker of the evening is a distinguished citizen of our sister state in the south, who, besides having a long and honorable career at the bar, has added to that the weight of both official and judicial position.

It is my pleasure and honor to introduce to this audience the Hon. William G. Ewing of Chicago, who will address you upon the subject of Christian Science.

Correspondence.

At Auburn, Me.

The fourth annual lecture held under the auspices of First Church of Christ, Scientist, of Auburn, Me., was given by Rev. William P. McKenzie, Thursday evening, October 3, 1901, in Auburn Hall. The large audience was a representative gathering and gave close attention throughout the lecture. This was evidence of the increasing interest in Christian Science in Auburn, as elsewhere.

The lecturer was introduced by Mr. R. F. Gordon, First Reader of the local church, in the following brief remarks:

My Friends:—Aside from the pleasure of tendering to you a most cordial welcome, to this, our fourth annual lecture on Christian Science, the duties assigned to me this evening are more a matter of custom than of necessity, because our lecturer and his subject are so widely known that an introduction seems almost superfluous. Still, being not unmindful of the Scriptural admonition, to be always ready to give a reason for our hope, let us for a moment turn our thoughts backward through the mists of nineteen centuries and listen to these words of the great Nazarene prophet, whose authority to speak on this subject the whole Christian world gladly acknowledges: "Ye shall know the truth, and the truth shall make you free."

Surely these words, when spoken by the Master, were not meaningless, especially to the suffering and sorrowing; for when the leper's appeal went out it met with a ready response from the great demonstrator of Truth, in these words: "Be thou clean, and immediately his leprosy was cleansed." This, and a great many other instances of like character, the healing of both sin and sickness and even the annulling of the claim of death, proved that the Truth, when understood, makes free indeed,—morally, physically, and spiritually. And now again, after a long night of materialism, we behold the dawn of a clearer apprehension of man's spiritual origin, and we hear with joy, from one whose unselfish and loving obedience enables her to speak by precept and example, that divine Love is supreme, and, as of old, the lame walk, the deaf hear, the blind see, the sorrowing are comforted, and the sick are healed, through the practice of Christian Science, the Science of Christianity. That we may listen to one who will speak to us with authority and from experience, of "Christian Science: the Gospel of Love," I now have the pleasure of introducing to you the Rev. William P. McKenzie of Cambridge.

Correspondence.

At Winona, Minn.

There was a large attendance at the Winona Opera House on Sunday (October 13), to hear the lecture on Christian Science by Edward A. Kimball of Chicago. The lecture was given under the auspices of the local Christian Scientists. Mr. Kimball is a pleasing speaker, and his hearers were highly entertained with his lecture.

Mr. Kimball gave a clear exploitation of the postulates of the faith in which he is a firm believer. The power of Mind over matter was the keynote of the address. Christian Science, he stated, was an actual, demonstrable Science, and one that had withstood every test during its comparatively brief history.

Mr. Kimball was introduced by Clarence C. Eaton, C.S.B., of Minneapolis.—*The Winona Republican and Herald.*

At Fairmont, Minn.

The Christian Science Church was filled last night (Thursday, October 17) by a very attentive audience to listen to a lecture upon the Christian Science teachings, by Edward A. Kimball, one of the lecturers of the Boston church.

Several doctors of the old school were present, a number of school teachers, representatives from all walks of life and shades of belief, and a number came in after they had been to prayer-meeting at other churches, which shows a spirit of Christian fellowship and a disposition to hunt out the truth regardless of where it may be found.

Mr. Kimball is a pleasant and entertaining speaker and held his audience well for two hours.

The Fairmont Daily Sentinel.

President McKinley's religious views have been concisely and aptly expressed in the few introductory words he wrote for the book, "Tarry Thou Till I Come." The publishers of this work asked President McKinley for a few fitting words to go with General Lew Wallace's introduction, and on September 15, 1900, the President wrote:

"The religion which Christ founded has been a mighty influence in the civilization of the human race. If we of to-day owed to it nothing more than this, our debt of appreciation would be incalculable. The doctrine of love, purity, and right living has step by step won its way into the heart of mankind, has exalted home and family, and has filled the future with hope and promise."—WILLIAM MCKINLEY.

Suspended Railway at Loschwitz, Saxony.

A SUSPENSION railway, the first mountain railway of its kind in the world, for the conveyance of passengers, has recently been opened for traffic. It runs from Loschwitz, a village on the banks of the river Elbe about five miles from Dresden, to the top of the Rochwitz Heights, which command a most beautiful view of the Saxon capital. The railway is two hundred and fifty meters (eight hundred and twenty feet) long, with a gradient of thirty-two per cent and is constructed according to the "Langen" system. Thirty-three iron piers of different heights, weighing about three hundred tons, the highest being fifteen meters (49.2 feet) carry the rails on which the cars are hung. Each car holds fifty passengers, and weighs, when occupied, 12.8 tons. Their shape and construction differ entirely from all other railway cars, and even from those used by the Barmen-Elberfeld suspension railway. A steel cable forty-four millimeters (1.7 inches) in diameter connects the two trains and locks them firmly together. It is operated by two powerful machines of eighty horse-power each, stationed at the top terminus of the road. The cable has a strength of 95,000 kilograms (209,437 pounds).

Particular attention and care has been given to devices to insure the safety of passengers and to regulate the running of the cars. A most ingenious signal system—with visible and audible signals—serves to regulate the arrival and departure of trains, and is operated from both the tower and upper stations. Each car is provided with a danger signal apparatus, consisting of an alarm and a telephone, which enables the conductor to communicate from any point of the road, with the engine house. The car is provided with three brakes—system Bucher-Durer—two of which work automatically at the least slackening of the tension of the cable, and stop the car. The third brake can be operated by hand from the platform of the car. From a hand attached to the disk upon which the cable is rolled, the engineer can always determine the exact position of the cars on the road, and an automatic bell warns him if the train is running too fast.

The greatest safety consists in an automatic brake both at the lower and top station, which is put into action by the arriving car and stops it, no matter how careless the engineer may be. The fare is twenty pfennigs (4.76 cents) up and ten pfennigs (2.38 cents) down; round trip ticket twenty-five pfennigs (5.95 cents). Reduced fares are allowed institutions, societies, schoolchildren, and working people. The journey takes three minutes and 15,500 passengers can be carried each way per day, or a total of 31,000. The iron work and cars were constructed in Nuremberg.

CHARLES S. COLE, U. S. Consul-General, Dresden.

In *Social Service*.

Fearing the Worst.

One of the worst habits, formed early in life, is that of borrowing trouble, of looking on the black side of things. It is much easier to talk down than to talk up. We are, naturally, pessimistic. One of the best of success-helps is to acquire, early in youth, a habit of thinking that the best, not the worst, will happen; that we are not poor, miserable creatures, hounded on every hand by the enemies of our life and happiness, but that we were made to be happy, to be free from harassing cares, anxieties, forebodings; that we were not made to worry or to project black pictures, but to create bright and cheerful ones.

We should no more allow a discordant or a dark picture in the mind, than we would allow a thief in our home. We should remember that such thoughts are worse than thieves, because they steal away our comfort, our happiness, our contentment. These black enemies, these discordant guests, leave their scars and stains and slimes upon the house that is beautiful within. It is almost impossible to exclude them when they once enter, but it is comparatively easy to keep them out when we once learn the secret of excluding them.

We should learn that these enemies have no right to intrude themselves upon our consciousness. Treat them as trespassers, eject them instantly, and do not allow them to paint their black images upon the mind.

Do not allow yourself to read, to hear, or to see anything which will produce discord or disturb your peace of mind and harmony.

A famous Englishman said that a habit of looking on the bright side of life is worth a thousand pounds a year. It is worth infinitely more than can be measured by pounds, dollars, or cents, for it means peace of mind, contentment, happiness, conscious power, and the beauty and sweetness of life. Everything has a bright side if we know how to see it.—*Success*.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, in now ready for distribution. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Dec. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure prompt delivery of the *Quarterly* for January, February, and March.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Prayer.

PRAYER is communion with God. All who believe in prayer at all will assent to this. But what is communion with God? It may be answered that it is unity with God. It may be answered that it is at once *communion* and *unity* with God. Another answer is that it is at-one-ment with God. These different terms are synonymous.

In its best sense prayer is right living. One who lives rightly all the time is praying all the time, because he is in communion, in unity, in at-one-ment with God. This is to "pray without ceasing," the prayer commanded by Jesus.

Let us find another word for prayer. We could find many—scores indeed, but just one more for the present. In Amos, 3 : 1–3, we read:—

"Hear this word that the Lord hath spoken against you, O children of Israel, against the whole family which I brought up from the land of Egypt, saying,

"You only have I known of all the families of the earth: therefore I will punish you for all your iniquities.

"Can two walk together, except they be agreed?"

We emphasize the last verse. It is plain—simple. Two cannot walk together, in the true sense, unless they "be *agreed.*" God and man cannot walk together unless "they be agreed." To walk with God, then, is to be in *agreement* with Him. To be in agreement with Him is to be in communion, in unity, in at-one-ment, with Him.

The Scriptures abound with this admonition repeated in various connections: "If ye obey me, and keep my commandments, then shall none of these evils come upon you." To pray, then, is to be obedient to God's commands—to the demands and dictates of Good. Every good thought is prayer. Every good act resulting from a good thought is prayer.

God is man's Principle. Man is God's idea. So teaches the Christian Science text-book. Hence when man is in his true relationship with his Principle—God—then he is in *communion,* in *unity,* in *at-one-ment,* in *agreement* with God. Then is he obeying God's commands, then is he *praying.* To the extent that he occupies this true relation to his Principle, man is, consciously or unconsciously (to himself), reflecting God's goodness, and as he does this he *prays.* This is the highest and best prayer. When one prays specifically, or at stated times—if he prays aright—he does it only that he may better understand his relation to God, and govern himself accordingly, *in all his thoughts and deeds.*

Praying thus he does not ask God to do what He has already done. He does more than petition, supplicate, or implore God to confer blessings which, by virtue of His Omnipotent and Omnipresent nature, He conferred "in the beginning." He seeks to fit his consciousness for the reception of the blessings—the good—which are his by reason of his sonship with God. In other words, he *receives* of the good things which God has provided for all who will partake. But only the spiritual appetite can be thus fed—the carnal, never. We do not, in the least, disparage specific prayer, or prayer at stated times. If made in the right spirit, and with understanding, such prayer helps the individual and others. The specific prayer, if it be fervent and righteous, will be effectual in healing sickness and destroying sin. We are here contending for the highest and best prayer which *wholly saves* from sickness, sin, and death.

When the world shall learn *how* to *pray,* the world will be *saved.* It will no longer truthfully be said of men: "Ye ask, and receive not, because ye ask amiss, that ye may consume it upon your lusts." When the world shall know how to pray we shall hear of no more lawsuits brought to recover damages (?) because a Christian minister has prayed for the recovery of sick persons. In that glad day the constant, "effectual, fervent prayer" of righteous men will make sickness impossible, because sin, the progenitor of sickness, will have no place in man's consciousness.

The grandest explication of true prayer we have ever read—the grandest in our opinion ever written—is the chapter on "Prayer" in "Science and Health with Key to the Scriptures" beginning on page 307. It is not mere dissertation or philosophical speculation on the part of Mrs. Eddy. It is the word of Life and health, written by her whose "effectual, fervent," and righteous prayers had, long before the time it was written, healed much sickness and destroyed much sin. It constitutes part of the word of Life and health contained in that text-book which has healed thousands of both sickness and sin, because therein these thousands have found the effectual, fervent prayer of righteousness.

May the world speedily awaken to the *understanding* of *Prayer.*

Another Misstatement.

FROM an article recently written by Mr. W. D. McCrackan and published in the *Marlborough* (N. Y.) *Record,* we publish the following extract:—

"New York, October 7, 1901.

"Editor *Record.*

"*Dear Sir:*—The Rev. Charles A. Tibbals takes a curious way of acknowledging his mistakes in statements of matters of fact, when he simply reiterates them. He writes in your issue of October 4, 'If I am in error in my statements of fact I am glad to be corrected,' and yet, referring once more to a work entitled, 'The Spirit of the New Testament, by a Woman,' which was not written by Mrs. Eddy and has no connection whatever with Christian Science, he deliberately repeats this mistaken assertion by writing 'common report makes her its author, and it undoubtedly voices the opinions of the Christian Science cult.'

"Never have I heard any one ascribe the authorship of this work to Mrs. Eddy. I had never even heard of it until Mr. Tibbals mentioned it in his letter. None of the Christian Scientists whom I have asked concerning the book have ever heard of it. I took pains to send an inquiry to a publisher dealing with such works, and he declares that he does not know who the author is. The full list of Mrs. Eddy's works is well known, and is published in the Christian Science periodicals. No such book has ever appeared upon that list. It is difficult to understand by what 'common report' Mr. Tibbals can possibly have been misled. But from whatever quarter this report may have reached him, it is entirely and unqualifiedly false.

"Equally false is the assertion, 'And it undoubtedly voices the opinions of the Christian Science cult.' So far as I could judge from the extracts given by Mr. Tibbals himself, the work deals with so-called theosophy, certainly not with Christian Science. The phrase, 'Concerning the holy incarnation of the angel soul known on earth as Jesus of Nazareth,' is quite enough to stamp the book as having no possible connection with Christian Science.

"Christian Scientists gladly welcome the text: '*By their*

Digitized by Google

fruits ye shall know them.' True Christianity has always borne good fruit, and the proof that Christian Science is truly Christian lies in its benign and beneficent works."

The recklessness with which some members of the modern pulpit assume things to be facts and state them as such is really alarming, and if they persist in this method of attempting to enlighten their congregations, the time will certainly come when the congregations will rightfully demand greater care and pains on the part of the preachers in their ascertainment of what is true and what is false.

Why the Rev. Mr. Tibbals should have jumped to the conclusion that Mrs. Eddy was the author of the book referred to and, without any effort to ascertain the real fact, should have announced it as a fact, is difficult to understand. The people expect truth and nothing but truth from the pulpit, and failing to get it there, is it strange that they should turn more and more away from it to other sources of information? Thousands of people to-day know from their own personal knowledge and experience that repeated statements relative to Christian Science heretofore made from some pulpits were not only inexact but positively untrue. In what position does this place the utterers of such statements in the estimate of people who, through their own experience, have learned of their untruth? How long will members of the clergy continue to place themselves in this unenviable and equivocal position? This is a serious question and one to be seriously considered.

It seems superfluous for us to say that Mrs. Eddy is not the author of the book entitled, "The Spirit of the New Testament, by a Woman." This book is absolutely foreign to Mrs. Eddy's well-known views. Moreover, every one of Mrs. Eddy's books bears her name and is published and catalogued by The Christian Science Publishing Society, 95 Falmouth Street, Boston. A list of all her books is published in each edition of *The Christian Science Journal* and the *Christian Science Sentinel.* This is authentic and official, and the Rev. Mr. Tibbals, and all others who have repeated the falsehood above mentioned, will do justice to themselves and those whom they have attempted to mislead, as well as to Mrs. Eddy, by making announcement according to the fact.

We also positively assert that Mr. Tibbals' charge does not voice "the opinions of the Christian Science cult." The reverse is true.

Will Preach as he Believes.

WHILE condemning John Alexander Dowie and his organization, J. C. Beitel, a licentiate, recently convinced the Chicago Presbytery that belief in prayer as a healing power is not in contravention of the tenets of Presbyterianism.

The young man had been brought to trial on charges preferred in the Arkansas Valley District. He had been ousted by the Missionary Committee and had taken an appeal to the Presbytery.

The committee, in its answer to Mr. Beitel, had assigned as one of the arguments that militated against him the fact that he was in sympathy with the teachings of Dowie and a believer in Christian Science.

When the trial was called the Rev. R. M. Little of the Woodlawn Church moved that the appellant be asked point blank two questions, one as to his belief in Dowieism, and the other as to his belief in Christian Science. The Moderator put the first question.

"I have no sympathy with Dowie or his organization," said the young man; "but I believe, and believed long before I ever heard of Dowie, in some things he teaches."

Relative to Christian Science, Beitel said he could not do otherwise than believe in the efficacy of prayer as taught by the Scriptures. He, however, disavowed any affiliation with the organization of which Mrs. Eddy is the head.

"Do you go so far as to deny to others the right to medical aid?" Beitel was asked.

"No. Neither would I deny to another the right to eat brown bread because I preferred white and believed it the best."

"Would you teach others that such a belief as you hold is to be sought as a necessity for spiritual strength?"

"No; but I should consider them spiritually better and more fortunate."

"There is nothing wrong in the young man's position, as I see it," said the Rev. Ralph Atkinson of the Ravenswood Church. "I move that the matter be dismissed."

"Make him promise that though he may entertain those beliefs he will not teach them," suggested another.

"Never," said Mr. Beitel. "No man can call himself a man and promise he will believe one thing and teach another. When he does that through fear of men he is a coward."

A motion to dismiss the charges was carried.

The above we take from the *Chicago Tribune.* The only comment we wish to make upon it is this: We are astonished that a member of the Chicago Presbytery, or any other presbytery, or minister of the gospel, should undertake to make a candidate for the ministry promise that though he entertained certain beliefs he would not teach them. We are furthermore astonished that such a suggestion should have passed unrebuked by the members of the Presbytery in question or any of them. The only one present who seems to have rebuked it was the candidate himself. He rebuked it bravely and with an apparent righteousness of indignation fully warranted. It will be a sad day indeed when bodies of the kind above referred to shall instruct those whom they authorize to preach the gospel to think one thing and preach another. We can think of no more rapid drift toward spiritual degeneracy.

An Age of Dominant Mind.

UNDER the above heading Mr. Francis. Grierson writes an article in the *Westminster Review* in which he says: "This is pre-eminently the age of mind, as the past century was the age of matter."

He further says: "It is no exaggeration to say that the discoveries and inventions of the past ten years have made child's play of every known system of philosophy. Never again will any man be able to build up a philosophical system which will stand the assaults of the new science for the space of a single year. No one reads philosophy now, because the simple but amazing facts disclosed during the past five years render the dreams, the speculations, and the guesswork of the past absurd. The little that we now know in a practical way is more than all the philosophers of the past knew, from Aristotle to Leibnitz. The absurdity of the old systems may be summed up in the positivism of Auguste Comte, which aimed at hard-and-fast rules of life and conduct, as if such things could ever be in a world in its infancy. Every fresh discovery delivers a blow at the old and fixed formulas; every disclosure of mental power bids defiance to some stereotyped belief. But the most wonderful fact of the present is that we are being ruled by the seeming impossible. Some of the most successful inventors of the present day would have passed for madmen twenty years ago. The so-called dreamers are now the men of action; they are the ones we swear by; they have proved their power and competence, and thinking people turn to them for more miracles of discovery and invention."

There is much truth in these deductions, in their relation to material philosophy. They are based on the

Digitized by Google

dominance of the human mind, or the human intellect, rather than upon the divine Mind.

When human intelligence shall surrender to the divine Intelligence, reflecting honesty, charity, love, virtue, and all the enduring and eternal qualities, then truly will have arrived the "age of dominant Mind." This seeming surrender will prove to be acquisition instead of loss. Inventions of every useful sort will become more frequent, and the march toward improved conditions will go on with more rapid step.

Reading Room at Concord, N. H.

FIRST CHURCH OF CHRIST, SCIENTIST, in Concord, N. H. has closed its Reading Room at Christian Science Hall. This room will hereafter be used for private purposes. The Christian Science literature, however, will be for sale there as formerly. This action upon the part of the church is taken with the approval of Mrs. Eddy.

IRVING C. TOMLINSON, *President.*
MABEL C. GAGE, *Clerk.*

The Bible Lessons.

So many inquiries are being made in regard to a publication entitled, "A Help to the Sunday Lesson," published by the Maclon Publishing Co., Chicago, that they can no longer be answered by letter. This publication is not recommended by The Christian Science Publishing Society. The Bible Lessons in the *Quarterly* are intended to encourage study of the Bible itself; but if any change in their presentation is found to be advisable, the change will be made at the office of publication of the *Quarterly*, so that all users of it may share alike in the service.

Bible Lesson for November 3.

In the Bible Lesson for November 3, the second reference from Science and Health in Section I. should be 58—7 instead of 414—7.

Among the Churches.

Corner-Stone Laid at Minneapolis, Minn.

The corner-stone of Second Church of Christ, Scientist, at Second Avenue S. and Eleventh Street, was laid yesterday at twelve o'clock, noon. The exercises were simple and brief. Miss Abigail D. Thompson, Second Reader, opened the exercises by reading from the Scriptures, and Abbot Edes Smith, First Reader, read from "Miscellaneous Writings" by Mary Baker G. Eddy, Founder of the Christian Science movement. The congregation, led by Miss Thompson and Mr. Smith, then repeated the Lord's Prayer with its spiritual interpretation as given in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Mrs. Emma A. Thompson, president of the society, laid the mortar, and when the stone had been lowered to its place Mr. Smith delivered a brief address, closing with a benediction.

The corner-stone is a block of light gray granite from Concord, N. H. On the polished front the following is engraved:—

"Second Church of Christ, Scientist, Minneapolis, Minn., A. D. 1901."

On the sides are the words "Healing" and "Purity."

This society held its first service, February 7, 1897, in the Swedenborgian Church on Fifth Avenue S. and Ninth Street, later at Second Avenue S. and Fourteenth Street, and during the past year at the Lyceum Theatre.

The above appeared in the *Minneapolis Times* of Sunday, October 13, 1901, and was accompanied with a very good illustration of the projected church building, and an interesting view of the scene at the time of the ceremony. Saturday was one of the northwest's famed autumnal days, and the double row of stately maples surrounding the church site, glowed in red and gold in the fall sunshine.

At one time during the ceremonies the sun was for a few minutes overcast, but just at the words, "Thus founded upon the Rock of Christ" (from Miscellaneous Writings, p. 153), it burst forth in a flood of light which seemed filled with sweet significance to the loving thought of the members of the church.

Among other things the First Reader said:—

On the front of this corner-stone is inscribed the name of the church—"Second Church of Christ, Scientist, Minneapolis, Minn.," and on the sides of the stone are engraved respectively, the words, "Healing" and "Purity."

Purity is closeness to God. It is like Enoch, walking with God. In the words of the Psalmist: "Who shall ascend into the hill of the Lord? or who shall stand in his holy place? He that hath clean hands, and a pure heart." In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 137, we read, "the corner-stone of all spiritual building is purity."

One who reflects this purity of thought and of life, fulfils the injunction of the apostle John, to purify himself. This means obedience to the two great commandments given by our Saviour, Jesus Christ, who said: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it; Thou shalt love thy neighbor as thyself. On these two commandments hang all the law and the prophets." The same thought is expressed by Mrs. Eddy, as the forgetting of self in the remembering God and the human race.

Our Master made healing an essential part of Christianity; and we cannot feel too lovingly grateful to our Leader, who has taught us by precept and by example how to understand his teachings and to follow in his steps. To-day Christian Science is revealing to the world man as made in the image and likeness of God, and as having dominion over all the earth.

In the corner-stone was placed a copper box containing a Bible, "Science and Health with Key to the Scriptures," and each of the other works of the Reverend Mary Baker G. Eddy, *The Christian Science Journal, Sentinel, Quarterly*, and Hymnal, a sketch of the church's history, and various documents.—LOUISE W. CHAPMAN, *Clerk.*

Services at Kings County Almshouse.

During the past fourteen months Christian Science services have been held in the chapel of the King's County (N. Y.) Almshouse, the services being identical with those held at our church. The services have been held regularly every Monday afternoon, and have been well attended from the beginning, close attention being given to the lesson.

It is a pleasure to those having charge of the work to give to the Field some of its results. A degree of cleanliness is now noticeable among the adult inmates, who attend the services, which was lacking at first.

There are several cases of men leaving the Almshouse in answer to the call of Truth, to take their places again in the world. An improvement is noticed in the spiritual as well as the mental and physical condition of some of the inmates. Considerable literature has been distributed among the inmates and has been eagerly read by them. There are also several copies of Science and Health in circulation among them.

The janitor of the chapel was healed of chronic dyspepsia of many years standing. His physical condition, which was never good, has so improved that he is in the enjoyment of better health to-day than ever before. He was

Digitized by Google

recently presented with a copy of Science and Health by those in charge of the work, as an expression of their appreciation of his many acts of kindness in facilitating their work. I enclose a copy of a letter received from him in acknowledgment of the same.

The insane ward for children is visited quite regularly, and hymns from the Christian Science Hymnal sung to them. They seem to grasp these quite readily, especially when the Mother's hymns are used. Following this, individual children are talked with in a fitting manner, with beneficial results.

One child has been rescued from blindness and can now see by reason of having constantly declared that God was her sight, and affirming always that she could see. Another child, confined to bed on account of both mental and physical incapacity, is now able to get around the room unaided, and the leavening power of Love has been shown in the changed attitude of the attendants.

Surely God is being glorified to these who seem so much to need the uplifting realization that God is a very present help in trouble.

JOHN F. PERLBACH, *Secretary Literature Committee.*

The following is a copy of the letter above referred to.

Flatbush, June 4, 1901.

Norman E. John, Esq.

Dear Sir:—Kindly say to the Literature Committee of the Students' Christian Science Association that no words can express the gratitude I feel for the copy of Science and Health received from them to-day. Though all the world should repudiate it I should still value it more than any other book in the world, for without it even the Bible was seemingly of no use to me.

I do not yet know all the Truth, but through the teaching of Science and Health I shall, and then I shall indeed be free from all error. To you personally I am under deep obligation for your kindness.

Respectfully,

A. A. WARD.

A Christian Science Service in Liberty, Me.

From the *Republican Journal* of Belfast, Maine, we extract the following:—

Through the kindness of the Baptist Church in Liberty a Christian Science service was held there on Sunday, September 1. This was the first service of the kind held in Liberty. In order to secure the church each member was consulted individually, and unanimous consent was given. The service was that held in all the Christian Science Churches, being conducted by two Readers, usually a man and a woman. Mr. Henry C. Lawrence of Boston took the place of First Reader and Miss Blanche Moody of Liberty acted as Second Reader.

Volumes of the Sentinel Received.

Kansas City, Mo., August 31, 1901.

Second Church of Christ, Scientist, Kansas City, Mo.

The Kansas City Public Library has received Volumes 1, 2, and 3, complete, of the *Christian Science Sentinel,* for which please accept our sincere thanks.

We are greatly indebted to you for this set, which is a valuable addition to our reference department. It will be bound and preserved for future use.

Very truly yours,

CARRIE WESTLAKE WHITNEY, *Librarian.*

George Washington s Seventeen Rules of Life.

1. ACT at all times as in the presence of God, and make it the great object in all things to please Him. In order to do this,

2. Seek first of all to gain clear views of His will, and with regard to all things to be perfectly conformed to it. In doing this,

3. Cherish no thoughts, indulge no feelings, speak no words, and do no actions, but what you really think, after all the light you can gain, will most honor God, most benefit yourself and others, and give you the greatest joy when they come to be exhibited before the assembled universe at the judgment day.

4. Begin and end each day by a season of communion with God, and by a solemn and hearty commitment of yourself and all your interests, temporal and eternal, to His guidance, care, and disposal.

5. Daily read, with deep attention and fervent prayer, a portion of the word of God, for the purpose of understanding, believing, and obeying it.

6. Never express or indulge the least degree of unkindness towards any human being, and give no needless pain to any one of the human race, or even of the animal creation.

7. Make it your object to promote the greatest happiness, on the whole, of all upon whom you may have influence, both of the present and all future generations.

8. Regard the hand of God in all the dispensations of His providence, and in whatsoever state He places you, therewith be content.

9. Envy none who are above you, and despise none who are below you; but possess and manifest the utmost goodwill towards all men.

10. Never speak of any, or feel towards them in a manner that you ought not to wish them, under similar circumstances, to speak or feel with regard to you.

11. Let all statements and narrations be an exact exhibition of the real truth.

12. Act for God, for the universe, and for eternity; and in such a manner as is adapted to promote the highest good forever. In order to do this,

13. Look habitually to Jesus Christ; let your whole soul be imbued with his spirit, and manifest it in all your actions.

14. Look to the Holy Ghost as the author of all good in man; seek habitually His teaching, His illuminating and purifying influences, that He may dwell in you as His temple, and take full possession of all your powers and talents for Himself.

15. Earnestly desire that He would take of the things of Christ and more and more show them unto you; and carefully avoid everything which tends to hinder you from becoming perfectly like Him.

16. Make it as your meat and drink to do the will of God, and perseveringly have respect to all His commandments.

17. Feel and acknowledge that all the good that you ever have received, that you now receive, or ever will receive is of grace through Jesus Christ; trust in him for all which you need, both for this life and the life to come; rely on his merits, imitate his example, and in view of every blessing give him and the Father and the Holy Ghost all the glory.

Barberries.

In scarlet clusters o'er the gray stone wall
The barberries lean in thin autumnal air;
Just when the fields and garden plots are bare,
And ere the green leaf takes the tint of fall,
They come to make the eye a festival!
Along the road for miles their torches flare.
Ah, if your deep-sea coral were but rare
(The damask rose might envy it withal)
What bards had sung your praises long ago,
Called you fine names in honey-worded books—
The rosy tramps of turnpike and of lane,
September's blushes, Ceres' lips aglow,
Little Red-Ridinghoods, for your sweet looks!
But your plebeian beauty is in vain.

THOMAS BAILEY ALDRICH.

From our Contributors.

Christ's Anointing.

BY B. A. F.

With sin-sick soul and tears of sad repentance
She came with reverence meet,
And in her hands she bore a costly offering,
To lay at his dear feet.

He turned about with words of sweet approval,
And his calm, Christ-like glance
Shed o'er the troubled heart of this poor sister
A heavenly radiance.

Its fragrance sweet still stealing down the ages,
This tale to-day we read;
The stars themselves may fade, but what so deathless
As such a loving deed.

Dear Master, though to-day thine earthly presence
Our eyes may never see,
Yet every deed of love shown some poor brother
Is even unto thee.

Oh, let our feet be swift in thy dear service,
Our hands be ever strong,
And then no more shall sound a note discordant
In life's harmonious song.

Spiritual Understanding Necessary.

BY M. E. H.

In John, eighth chapter, twenty-eighth to the fortieth verse, we see that spiritual understanding is indispensable to spiritual growth. It says, "Then said Jesus unto them, When ye have lifted up the Son of man, then shall ye know that I am he, and that I do nothing of myself; but as my Father hath taught me, I speak these things."

When consciousness is lifted up through spiritual discernment, then shall we understand man's spiritual origin, that he is inseparable from his divine Principle, Father-Mother God, and be spiritually qualified to demonstrate that Principle in works, as Jesus did.

The thirtieth verse says, "Many believed on him." The self-satisfaction of mortal mind argues from its own limited and ignorant views only. Jesus detected this lack and said, practically, believing is not sufficient, "if ye continue ["to be steadfast or constant in any course" Webster] in my word, then ye are my disciples, indeed."

Through the bondage of ignorance and superstition, spirituality has no foothold in thought, and mortal mind, still blinded to its own misconceptions, again argues "we be Abraham's seed, and were never in bondage to any man: how sayest thou, Ye shall be made free?" Here we see clearly depicted the appalling danger of serving wrong in the name of right. Abraham in its spiritual significance means, "Fidelity; faith in the divine Life and eternal Principle of Being" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 570). Yet how far removed was their conception from the true interpretation. Jesus' answer betrayed their incapacity, for it seemed to convey the thought that the ignorant propensity that serves wrong in the name of right subjects itself to the "servant of sin," and is killing the true sense of man's birthright and freedom as the son of God, which must be understood, sooner or later, to restore the soul.

Only the demonstration of Truth makes free, and God must be worshiped spiritually, not materially, and so long as we believe in wrong and call it right, be it in the guise of science, theology, or medicine, in that proportion are we deficient in understanding, and trying to worship God through the medium of matter, which Science and Health says is paganism.

Fruits of righteousness are all that count in Christian Science. "It is the spiritual idea, or Christ, which demonstrates, with Scientific certainty, the rule of healing, upon its divine Principle, underlying, overlying, and encompassing all true Being" (Science and Health, p. 492).

Consecration.

BY F. B. HOMANS.

In our school days we were taught that the degrees of comparison of good, were good, better, best. But in Christian Science we learn that Good is God, and there is no better or best; that God is All, and nothing can be added; that Good is perfect, and therefore there is no room for comparison.

Consecration means consecration to Good, and there is no room for comparison, there can be no half way work about it. Jesus said we must "come out from the world." That we must love God with our whole mind, soul, and strength. We cannot serve God and mammon. If we try to serve God one day and the pleasures of the world the next, we shall find that we have lost our power to enjoy worldly things, and that we do not find peace in heavenly things. We must give up *all* and follow Christ or we shall find our days are wasted. Have we consecrated ourselves to Christian Science, or do we still hold on with one hand to worldly affairs? Of course we must progress. To-morrow we shall know more than we do to-day, but that does not prevent us from giving the whole of our efforts to-day. When I first heard of Christian Science I thought there was a physical class, and a spiritual class, and that some belonged to one and some to the other, and some to both. I said, "I'll look into the physical end of it, but I have no use for the spiritual end and I won't have it." But being here I realize that I must give up all for Christ. What a great big word *all* is, only three letters yet it covers and includes the whole universe. First we must be *willing* to give up all, and then we must grow to the understanding that enables us to give up all.

We ask God for some blessing, but materiality clouds our vision and we do not perceive that we have it, and so think our prayer is not answered. We can receive answers to our prayers just as fast as we grow pure enough to receive them, and no faster. Error could never deceive Jesus because he was consecrated to God. He never asked amiss and never received aught at the hands of error; his perception was too keen to be deceived. He knew error in all its different garbs and simply said, "Get thee behind me, Satan."

Crucifixion.

BY CARRIE E. KRAUSE.

As I thought, What does crucifixion mean to me? it was unfolded this way:—

It is not the crucifixion of the body, but the crucifixion of the mortal, of all things pertaining to the flesh, all evils, such as hatred, envy, pride, jealousy, malice, lust, sensuality, passions, false appetites, untruthfulness, deceit, conceit, etc. When we thus free ourselves from evil, we gain the consciousness of Good.

I saw more than ever the need for each individual to work out his own salvation; and I saw, too, that we ought not to complain because of the trials, for they only compel us to open our eyes to the Good, and take a step higher. My daily prayer is to overcome all that is unlike Christ, to have that Mind which was in Christ Jesus, the Mind that knows good only.

Digitized by Google

I desire to relate my healing, which came two years ago through studying the Bible and "Science and Health with Key to the Scriptures." I had not enough faith in Christian Science to employ a practitioner, but I felt that God was no respecter of persons, and that if there were any truth in Christian Science, I would receive it just the same as any one else. The first week I laid aside a brace which I had been wearing for a spinal trouble that the doctors pronounced incurable. My healing took place within two months, including chronic stomach trouble of twelve years' standing, bronchial trouble, catarrh, cough, sore lungs, expectorating blood, and also weak eyes, for which I had worn glasses six years.

I am more than thankful to Mrs. Eddy, who has revealed the Christ-Truth to this age. I am also thankful for all the Good received through the *Journal* and *Sentinel,* and to the dear Scientists who have helped to lift me up.

Some one asked me the other day how much I would sell my Science and Health for, if I could not get another. I said, "Money could not buy it. I would rather give up all I possess, than to give up Science and Health and drift back to the old way of living."

Words of Thankfulness.

WE have received the following letter of thankfulness and appreciation from a faithful Christian Scientist of Brooklyn, N. Y.:—

Dear Friends in Truth:—Our last *Sentinel* gladdened many hearts I am sure. In thanking God, we naturally thank you. Those articles from *Harper's Weekly* and *The North American Review,* will shed light in many hearts and homes. "Mother Eddy" began to say "unexpected things" many years ago,—things *quite unlike* what other people said, words of living light that turned sickness into health, mourning to rejoicing, for thousands of us.

How our hearts swell with loving pride at reading those beautiful tributes, so well deserved and from sources that will give them weight with weary ones who feared the people.

That "Letter to a Friend" will prove useful too, it is so honest. Christian Science guides us straight to the kingdom of Heaven within us; it has been the light of my life for fourteen years; its first statement I accepted gladly, hopefully. Life became so real so interesting,—a grand anthem full of harmonies, if notes were not displaced by clashing wills. There was much tearing down before I could build aright.

Faithfully in Love and Truth,

MRS. H. E. T. G.

Hope.

BY EMILY TUPPER-BENDIT.

"My times are in Thy hand."
Why should I fear,
Or dread a single step,
Since Thou art near?

Though pressed on every side,
Thou art the power
That surely meets our need
In every hour.

If heavy clouds hang low,
Hope standeth by,
To draw the veil aside,
And point on high

To where the Sun still shines
And lights the way,
Across earth's dreary wastes,
To brightest day.

Testimonies.

Many Reasons for Gratitude.

Six years ago I sought Christian Science for physical healing, in the same manner that I should have consulted a physician. I was healed of a chronic disease in four treatments, and as the Scientist who treated me displayed great wisdom in showing me her faith by her works, instead of attempting to interest me in the cause of my cure before I could see that I was well, I found myself free from the disease, and in a state of wonderment that increased as time went on.

I was a member of the Episcopal Church and considered myself quite zealous. The music always seemed to inspire me, while in the church at least; the ritual appealed to my æsthetic sense, and frequently the sermon caused me to make good resolves. I seldom missed a service and had no desire to change my religious views or habits.

The subject of Christian Science was, I thought, far from being of interest to me, and yet I was surprised to find myself every week at the home of the Scientist through whom I was healed. She very kindly opened her house, on a certain day, to those among her acquaintances who were interested in reading "Science and Health with Key to the Scriptures," as well as other writings of Mrs. Eddy, and who seemed to find help in considering the subjects presented. From her I had borrowed a few Journals and some of the smaller books on the subject of Christian Science, but the text-book, Science and Health, I could not read with any understanding whatever.

At these meetings I met women whom I had known as thoroughly practical, capable women, entirely in possession of their senses, and when their words seemed to have no meaning to me, I reassured myself by thinking that perhaps, some time in the past, they had been just as mystified as I was, and I took hope, meeting with them the next week.

I went once or twice to the Sunday service at the Auditorium, but I missed the ritual of my own church, and caught little inspiration from the hundreds of earnest people whom I always found there.

A year went by and I seemingly made no progress. On Good Friday I found myself in utter despair because of business troubles which unjustly involved my husband in failure after years of faithful work. His financial distress was ignored by those who called themselves his best friends, and who could have helped him and in so doing lost nothing themselves. My heart was very bitter toward man and at last I turned to God. I recalled the solemnity of the day, and with a prayer for help I went to the service which commemorates the Saviour's three hours' agony on the cross. I listened to the prayers designed for that day, to the hymns carefully selected, and to some short addresses by the black-robed priest; but not one thought of peace or comfort came to me.

At last I fairly rushed out of the church, and before I realized where I was going, I was at the home of my friend the Scientist, who always had a word of hope and cheer for all who appealed to her. I stated the case, and she, seeing my distress, talked to me most earnestly, telling me that divine Love was the Principle of the universe, and had always met our every need. This sweet thought became more real to me than the bitterness and hate I had been cherishing, so that I went home with the first hope my heart had known in many days. I was not surprised when on the following day financial help came from a source entirely unexpected.

I gladly recognized Spirit, as revealed in Christian Science, as the only cause, and Easter meant to me a resurrection from the grave of materialism. Notwithstanding this glimpse of the Truth, some time passed before I felt willing to accept the responsibilities of becoming a Christian

Digitized by Google

Scientist through class instruction from this loyal student of Mrs. Eddy.

I can never cease to be grateful to her for all the love and patience she has shown me. In the past few years, I have had many proofs of the efficacy of Christian Science in healing sickness, and in overcoming sin. The true idea of man, as God's reflection, makes the mortal concept seem a poor creature, which we should be glad to lose that we may awake, satisfied, in His likeness.

I am very thankful for the wonderful Key to the Scriptures which really has unlocked the sacred pages and made their daily study a joy and help in all the affairs of life.

In proportion as I grasp the meaning of Science and Health and the other writings of Mary Baker Eddy, do I feel love and gratitude to her as the Revelator of Truth to this age.

I am always helped by the *Journal* and *Sentinel,* and I feel most grateful to all who contribute to these publications and to those who so ably edit them.

M. T. G., Chicago, Ill.

Christian Science brings Health and Understanding.

Through reading "Science and Health with Key to the Scriptures," and the earnest labor of one good and true practitioner, my wife was restored to perfect health in less than one year, and gained forty pounds in weight after a severe and almost a chronic attack of stomach trouble which reduced her to a mere skeleton of her former self. Specialists in *materia medica* were appealed to for months. They failed to alleviate her suffering. West Baden Springs, Ind., were resorted to, but no change. Massage, vapor baths, and all other remedies used, proved of no avail. It was suggested that we give Christian Science a trial. Forty years of study and adherence to orthodox teaching was a mountain between me and Christian Science, having heard that strange things were taught by the Scientists. But love and desire to see my wife enjoy health and happiness decided me to cast away my prejudice and accept anything, even Christian Science, to see her delivered from the pain and torture she was suffering.

And now, after twelve months of reading and studying Science and Health accompanied with the Bible, and attending the First Christian Science Church of Chicago, I am convinced that to acknowledge the goodness and power of God one must put off the old (material) man and put on the new (spiritual), and obey the command of Jesus Christ, "Love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind" and "thy neighbor as thyself."

The study of Science and Health has given me an understanding of the Bible, and enabled me to enjoy the fruits of the Spirit,—Life, Truth, and Love.

JAMES F. EARL, Chicago, Ill.

Restored to Perfect Health.

In December, 1900, our janitor lost his little daughter by diphtheria. His son and the mother also had the disease, and the latter very nearly lost her life. When the mother began to improve it was found that she was paralyzed; even her throat was so affected that she could not talk. Various physicians were employed. Although she rallied somewhat, regaining the power of speech and the use of her hands and arms, there came a time when they could do no more for her. Her lower limbs remained useless, she could not walk a step, and, with a sense of discouragement, all treatment was dropped.

In this extremity a Scientist suggested to the husband that Christian Science be given a trial. He replied that he had no more money to spend for treatment of any kind. The Scientist remarked that many people were healed by simply reading the text-book, "Science and Health with Key to the Scriptures," and that if his wife would promise to read the work carefully, she would gladly loan her a copy.

A day or two later the promise was given and the book sent upon its mission. At the end of a week from that time inquiry was made regarding the woman's condition. "About the same," was the reply. The Scientist then offered to visit the invalid and answer as best she could any questions that might have been suggested by what she had read.

Word was returned that she would be glad to avail herself of the offer, and the next day, Sunday, the Scientist spent upwards of an hour answering questions and trying to break the bread of life to a hungry seeker who, she found, had been reading intelligently and was beginning to get glimpses of Truth.

No treatment was given, unless the talk could be regarded as an audible treatment, poured forth with an earnest effort to realize God as All-in-all and man as His image and likeness, and every whit whole.

On the Wednesday morning following, the husband reported, with a beaming face, that the wife walked into the kitchen, with the aid of canes, the day before, and had made two pies. Before the week was out she was going about without any material support, and in less than two weeks was able to do all her housework. She is now in perfect health and there is great joy in that household. I have asked the husband and wife to corroborate this, and they have done so.—S. E. D., Boston, Mass.

Thanks for the Sentinel.

On New Year's eve my daughter Ethel and I determined that we would watch the old century out and that the new century must find us reading "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. At eleven o'clock I opened the book haphazard and began to read.

I read along steadily until, as the first bell sounded, ushering in the new century, I reached these words, page 300: " 'The night is far spent,' and, with the dawn, Truth will open the spiritual senses to hear and speak the 'new tongue.' "

We felt for a few moments as though our blessed Father were speaking aloud to us, we looked at each other in perfect amazement. I had never noticed those particular lines and did not know they were there.

I want to thank our editors for our *Sentinel.* Oh! how faithfully they have labored that we might each week receive that comforting and helpful little paper. When the postman rings on Monday morning I always say, "You are very welcome, dear little *Sentinel,*" for I know that it is there in the box.

I invariably begin my week by reading every word. It starts me off right, then everything seems to run smoothly.

I did not enter Christian Science through the door of physical healing, having no need, as I have always enjoyed the most perfect health, but it appealed to me from every other standpoint, and has made life well worth the living.

MRS. E. C. GILKEY, Chicago, Ill.

The Real Magnet.

"And I, if I be lifted up, will draw all men unto me." Truth lifted up, is drawing the world. Every Christian Scientist stands to-day on holy ground; with him is the burden of the proof of this ever-present, ever-operative, divine Principle that guards, protects, governs, to-day as in the days of Shadrach, Meshach, and Abednego. It is to us that the sacred duty comes of letting the world see there is no other God that can deliver after this sort; and in order that we do this we have the sacred message twice given to us, "What I say unto you, I say unto all, Watch."

Religious Items

The Literary Digest in an article entitled the Changes in New England Methodism, quotes from several New England Methodist ministers. We quote some of these:—

Rev. Mr. Davis, a Boston minister, sums up his changes of belief in these sentences:

"Jesus Christ came on earth to show us what to do and how to do it. Others may to advantage theorize as to the atonement, etc. I have tried to do so in years gone. Dissatisfaction crowned my efforts. I have one object before me now—to follow Jesus, preach Jesus, lead men to Jesus."

Rev. Charles H. Stackpole, of Melrose, is convicted of "the newer and more rational theory of the inspiration of the Scriptures;" he no longer holds to Paul's dogmatic theology, founded largely on an untenable view of Genesis;" he is open to evolution; no longer holds any theory of the atonement, save that Christ is the supreme expression of God's love; and "all the woeful knowledge of the past . . . misrepresents the character of God and is destined to perish from the mind of man."

Rev. George S. Butters, of Somerville, says: "The theory of the inspiration of the Scriptures which I once steadfastly held I have been obliged to discard holding strongly to the fact of inspiration with a satisfactory theory. Ten years ago I was strictly Wesleyan on the question of entire sanctification. To-day I do not regard that theory either Scriptural or practical."

"The spirit lives only by ceaseless change of expression," declares Rev. L. H. Dorchester, of Boston. "The living organism has glided out of many old phrases, and is finding fresher, more vital, and hence more effective expression in terms of to-day's thought and life." Christ is "the embodiment of divine altruism, the example and the inspiration for all service."

The Strand Magazine (September) takes the view that, in America at least, "the minister of religion is as up-to-date as any other man," and it exhibits, in letter-press and illustration, a dozen startlingly original devices "inaugurated by the ministers to attract and hold congregations." To quote from the article:—

"The minister who announced that he would deliver his sermons in a 'red robe' succeeded in arousing the curiosity of all within his vicinity and in drawing large crowds to his church. Still more daring and original is the man who illustrates his sermons with oil-paintings shown, and even executed, in the pulpit. The clergyman whose church is non-sectarian, and who says that he lays claim to no church or particular congregation, has gained many converts and is doing good work. The Rev. C. H. Tyndall announces that he illustrates Bible truths by electricity, and has proved himself a leader in the ranks on the great march of progress by introducing wireless telegraphy into his church.

"The church with a roof-garden is well attended and has an original man at its head, one who realizes that the hot days of summer frequently destroy the good done during the balmy, soul-inspiring days of spring, and who has braved criticism and established codes by building a cool retreat on the roof of his church where open-air services are held.

"A California church which has its choral services conducted by a Chinese choir, understands that the people of the twentieth century clamor for novelty, something to capture the attention and hold the interest. In this class might also be mentioned a church in the city settled by William Penn, where lady ushers show strangers to a pew."

Letters are occasionally received at this office appealing for funds to carry on independent missions in various foreign countries. Usually they describe pitiful cases of destitution, sometimes spiritual and sometimes material. The managers of these missions present credentials, occasionally from well-known persons. In the opinion of most missionaries the evil of these independent enterprises, even when carried on with honest intention, is greater than the good done. A letter has recently been prepared by the representatives of a number of missions of the Madras Presidency, India, addressed to the Christian churches of Great Britain, Australasia, and America, setting forth facts in connection with these enterprises, most of which are managed by persons once connected with the missionary societies, but now under the oversight of none but themselves. This letter says that "the actual work carried on in most cases bears but a small proportion to that set forth in their appeals as to what they propose to do." The results are demoralizing to the Indian community, and are fraught with grave danger to those who succeed in getting considerable sums of money for which they are obliged to render no account beyond publishing the contributions in a subscription list. It is urged that money ought not to be sent in response to appeals of this sort, unless proper guarantees are furnished and accounts rendered and duly audited, showing what has been received and how it has been spent.

The Congregationalist and Christian World.

The day of sectarian rivalries is past. That is to say, they have become impossible to those who take into their minds the message of the twentieth century. Henceforth no church can claim exclusive rights and privileges as the exponent of the divine Will and Wisdom; and no church can contest the claims of another organization to supremacy on the ground that the other one is the false church, and it is the lawful claimant. That is, again, to say that this is the present situation as it appears to a few hundred thousands, it may be a million or two of men and women scattered over the face of the earth, who believe that the universality of revelation and the freedom of the truth make void all special claims to religious authority on the part of any church or body of churches. And yet, although the tendency is marked and unmistakable, the probability is that the year 2000 will see some of the great religious establishments still stronger than they are to-day, and more aggressive in their efforts to win the allegiance or to compel the submission of mankind. He lives in a fool's paradise who thinks that, because he sees things as they ought to be, he sees things as they will be within any calculable time. It takes about five hundred years for a truth, after it has been openly demonstrated, to sink into the common consciousness and become a basis of action.—*The Christian Register.*

Rev. Dr. Huntington of New York, says that what the nation needs is a revival of genuine religion. The source of this word forbids any misunderstanding of the term "revival." It is not meant that there is need of any such spasmodic occasions of emotional excitement as have been known in the not far distant past, but what is meant, and every thoughtful man will endorse, is a revival of interest in the principles of Christian righteousness, the awakening of thought upon eternal themes. The world needs to have God reintroduced into it, and into the calculations of every life. Trace any of the evils of the present far enough back and you find atheism at the root. Life rises no higher than its source; if it has its source in earthly things it will be earthly; if it came from God it will reach to God.

The Universalist Leader.

Speaking of the late Bishop Whipple of Minnesota, the Philadelphia *Public Ledger* says:—

"His diocese contained twenty thousand Indians, and it was his self-imposed task to keep in frequent communication with all of them. In the earlier days of his ministry there were no railroads, and the journeys from one tribe to another had to be made on horseback. His interest in the welfare of the Indians and his life among them caused the whites to affectionately bestow on him the title of 'St. John-in-the-Wilderness,' while his upright and unselfish character and straightforward dealings won for him among his protégés the fine name of 'Straight Tongue.'

A Baptist minister in Tennessee who wanted to baptize his daughter and sprinkled her because she was too sick to be immersed, has been expelled from the ministry for thus violating a rule of his Church. If it was the rule he has no right to complain, although he had the full right to fight the case, for liberty to change the rule, or to prove that it had been already changed in practice, as it should have been. The reformers have the right to work for reform, but this must always be at the risk of expulsion from the ranks. The presumption is with the conservatives, and it must go hard with the reformers until they win a decisive victory.—*The Independent.*

Throw off the harness of your daily lives, get from beneath the hammer that beats the life from out your souls. Go to the smiles of our great Mother Earth, and up from them look for the smile of our great Father —God—and the dull thud of your sluggish pulse will bound with new life; . . . and you will see, not flower and sky, not beauty and summer, but the great Immanent Spirit of them all—Him in whom you, as they, live, move, and have your being.—J. F. W. WARE.

All who attended the public services last Thursday in any of our cities or towns, and joined in the hymn, "Nearer, my God, to Thee," must have sung it with different feelings from those ever before experienced. This hymn will, for years to come, be associated with our martyred President. The name of McKinley and the hymn will rise together in our minds.

REV. WALTER B. VASSAR.
In *The Examiner.*

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa.*

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2 65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

The William McKinley National Memorial Arch Association has issued a circular letter to the effect that it has been incorporated under the laws of the District of Columbia to erect a national memorial arch by popular subscriptions, in honor of President McKinley in the city of Washington. The arch will be placed at the Washington approach to the memorial bridge across the Potomac, connecting Washington with Arlington. All contributors to the fund will be made members of the association. Hon. Lyman J. Gage, Secretary of the Treasury of the United States at Washington, D. C., will receive contributions and forward certificates to all contributors.

A circular letter, with the bill revising the bankruptcy law which was introduced at the last session of Congress, has been sent to the principal business men throughout the Union with the request that they offer suggestions or modifications. As a result fifteen thousand answers have been received, including many important practical suggestions which will be incorporated in the new bill.

In his annual report General Gillespie, chief of engineers, says that twenty-five of the principal harbors of the United States are sufficiently protected against naval attacks by heavy guns and mortars. He asks an appropriation of four million dollars for new fortifications and three hundred thousand dollars for preservation and repair of the old.

The United States is at the head of the list of the world's exporting nations. For the nine months ending September 30, our exports of domestic products amounted to $1,024,605,181. The United Kingdom is the next largest exporter of domestic products, and during the same period the exports were $1,018,845,766.

Colombia has proposed to the United States that she assume her place in all matters relating to the Panama Canal. On account of the inability of the executive to pledge the government to the adoption of the route in advance of any action of Congress, the proposal cannot be accepted.

The estimates of expenditure in the Interior Department for the fiscal year, beginning next July, aggregate $170,000,000. Of this amount $142,161,200 will be necessary for the payment of pensions.

President Roosevelt has appointed Frank I. Osborne of North Carolina as associate-justice of the United States court of private land claims. Like his predecessor, Mr. Osborne is a Democrat.

Secretary Gage has again ordered the purchase of bonds in order to decrease the surplus in the treasury. The amount purchased on the first day amounted to $1,272,170 par value.

If public business will permit, President Roosevelt will attend the South Carolina Inter-state and West Indian Exposition on Lincoln's birthday, February 12.

At the close of business October 31, 1901, the national debt, less cash in the treasury, amounted to $1,022,032,957, a decrease from last month of $9,563,408.

Military experts say that under the present condition in the Philippines sixty thousand troops are necessary to preserve order.

The pay of the United States army for last year amounted to $53,215,345, an increase over the previous year of $1,301,364.

Foreign.

Wednesday, June 25, 1902, has been fixed for the coronation of King Edward VII. The ceremonies will continue over a period of two days. The foreign royalties will be entertained in London for one week.

The English manufacturers are preparing a letter of protest to the King on account of his having chosen for the coronation robes of the peers, a velvet of peculiar tint, which is made only in Lyons, France.

The American exhibition to be held in Crystal Palace to celebrate the coronation year will extend from May to September. The exhibition will be strictly confined to a display of the wealth, industry, science, and art of the United States.

Information is received from London that all claims of foreign countries for damages during the South African war have been settled diplomatically with the exception of those of the Netherlands and France, and it is expected that these will be settled in the near future. The claims which have been allowed are as follows: The United States, $30,000; Austria, $750,000; Germany, $150,000; Russia, $20,500; Italy, $6,000; Sweden and Norway, $5,000; Belgium, $4,000; Switzerland and Denmark, $1,250 each, and Spain, $750.

President Diaz of Mexico gave a dinner October 28 in honor of the visiting delegates to the Pan-American Congress. In his speech on that occasion he expressed the hope that their future relations with each other might ever be governed by the upright spirit which animated Washington, Hidalgo, Bolivar, and San Martin.

Four hundred and ninety-five claims have been submitted to the Spanish Claims Commission, and their amount reaches $60,329,000. Of this amount $2,400,000 was on account of the Maine disaster.

The best means of suppressing anarchy in the Western Hemisphere will be one of the principal subjects to be discussed by the Pan-American Congress.

It is probable that King Edward will open Parliament on January 23. This will be the first full state ceremony during the King's reign.

Dr. Otto Nordenskjold's ship, the Antarctic, left Falmouth, Eng., October 27, for an eighteen months' voyage to the Antarctic circle.

According to a dispatch from St. Petersburg the Russian General Grodekoff will soon open the Manchurian-Siberian railway.

Industrial and Commercial.

Accredited agents of Sir Thomas Lipton are taking options on farming lands in the southern part of Georgia. It is reported that the Lipton Company will establish truck gardens on these lands to raise vegetables for the Lipton shops in Great Britain. They will be shipped by a special line of steamers, plying between Liverpool and Savannah. Investigation has shown that a more abundant production to the acre is possible in the South Georgia lands at five dollars an acre than in the European lands costing thirty dollars an acre.

It is reported that the Pullman Palace Car Company of Chicago will surrender its charter and incorporate under the laws of New Jersey in order to evade the taxation of capital stock under the new ruling of the Illinois Supreme Court. The capital stock of the Pullman Company is seventy-four million dollars and the market value of the shares is two hundred and twenty dollars, the par value being one hundred dollars. Under the recent decision of the Supreme Court, the assessable property of the company would be $162,800,000.

The beet sugar factory of Loveland, Col., began operations October 26. Beets are being received at the rate of twenty-five hundred tons a day, and enough will be delivered to make fifteen million pounds of sugar. It is estimated that enough beets will be received to keep the factory running until next March. The crop has far exceeded expectations and the farmers receive $4.50 a ton for the roots.

Portsmouth, N. H., will have the largest paper mill in the world. It will be built by the White Mountain Paper Company and will employ between three and four thousand men. The company has been exempted from taxation for ten years.

The Pennsylvania Railroad Company has ordered thirteen thousand pressed steel cars in order to facilitate the moving of coal and to relieve the blockade at the mines.

General.

Mrs. Carrie Chapman Catt, President of the American Woman's Suffrage Association, says that representatives from fourteen nations are expected at the international conference to be held in Washington, D. C., beginning November 12. It is the purpose of the conference to receive and hear reports on the status of women of all the civilized nations. Reports will be compiled, giving the status of the women of the world, socially, legally, industrially, religiously, educationally, and politically.

It is stated that the St. Louis fair buildings will be the largest ever used for that purpose. The largest will cover thirty-two and a half acres, and will be devoted to agricultural and allied industries. Seven other buildings will cover about seventeen acres each, and four others about nine acres each. The total now planned for will amount to about 187 acres, and the estimated cost is seven million dollars.

Adolph Nathan, who recently returned to Chicago from a five months' trip to Europe, says that the United States is a paradise for the workingman. "Nowhere in the world," says Mr. Nathan, "is the workingman paid so much for labor as in this country. The wages here for farmers, and workingmen in all industrial lines are fully one hundred per cent higher than in Europe."

The Supreme Court of Illinois has decided that franchises and capital stock of corporations doing business in the State must be taxed on their market value. It is anticipated that Chicago's income will be increased from $1,500,000 to $2,500,000, and the income for the schools from $2,500,000 to $4,000,000.

Miss Helen Gould has accepted her appointment as member at large on the Woman's Board of the St. Louis Fair. She was unanimously elected and will be made president of the board.

Mme. Wu Ting Fang, wife of the Chinese minister to the United States, arrived at San Francisco October 29. She was accompanied by her daughter, Miss Wu Su Ching.

The officials of the Bank of England have estimated that the amount of gold coin in actual circulation in the world is about 86½ tons.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

President McKinley's Address at the Pan-American Exposition.

PRESIDENT MCKINLEY'S last public address was delivered at the Pan-American Exposition, Thursday, September 5, 1901. The address was as follows:—

President Milburn, Director-General Buchanan, Commissioners, Ladies, and Gentlemen:—I am glad to be again in the city of Buffalo and exchange greetings with her people, to whose generous hospitality I am not a stranger, and with whose good-will I have been repeatedly and signally honored. To-day I have additional satisfaction in meeting and giving welcome to the foreign representatives assembled here, whose presence and participation in this exposition have contributed in so marked a degree to its interest and success. To the commissioners of the Dominion of Canada and the British colonies, the French colonies, the republics of Mexico and of Central and South America, and the commissioners of Cuba and Porto Rico, who share with us in this undertaking, we give the hand of fellowship and felicitate with them upon the triumphs of art, science, education, and manufactures which the old has bequeathed to the new century.

Expositions are the timekeepers of progress. They record the world's advancement. They stimulate the energy, enterprise, and intellect of the people, and quicken human genius. They go into the home. They broaden and brighten the daily life of the people. They open mighty storehouses of information to the student. Every exposition, great or small, has helped to some onward step. Comparison of ideas is always educational, and as such instructs the brain and hand of man. Friendly rivalry follows, which is the spur to industrial improvement, the inspiration to useful invention and to high endeavor in all departments of human activity. It exacts a study of the wants, comforts, and even the whims of the people, and recognizes the efficacy of high quality and new prices to win their favor. The quest for trade is an incentive to men of business to devise, invent, improve, and economize in the cost of production. Business life, whether among ourselves or with other people, is ever a sharp struggle for success. It will be none the less so in the future. Without competition we would be clinging to the clumsy and antiquated processes of farming and manufacture and the methods of business of long ago, and the twentieth would be no further advanced than the eighteenth century. But, though commercial competitors we are, commercial enemies we must not be.

The Pan-American Exposition has done its work thoroughly, presenting in its exhibits evidences of the highest skill, and illustrating the progress of the human family in the Western Hemisphere. This portion of the earth has no cause for humiliation for the part it has performed in the march of civilization. It has not accomplished everything: far from it. It has simply done its best; and without vanity or boastfulness, and recognizing the manifold achievements of others, it invites the friendly rivalry of all the powers in the peaceful pursuits of trade and commerce, and will co-operate with all in advancing the highest and best interests of humanity. The wisdom and energy of all the nations are none too great for the world's work. The success of art, science, industry, and invention is an international asset and a common glory.

After all, how near one to the other is every part of the world. Modern inventors have brought into close relation widely separated peoples and made them better acquainted. Geographic and political divisions will continue to exist, but distances have been effaced. Swift ships and fast trains are becoming cosmopolitan. They invade fields which a few years ago were impenetrable. The world's products are exchanged as never before, and with increasing transportation facilities come increasing knowledge and larger trade. Prices are fixed with mathematical precision by supply and demand. The world's selling prices are regulated by market and crop reports. We travel greater distances in a shorter space of time and with more ease than was ever dreamed of by the fathers. Isolation is no longer possible or desirable. The same important news is read, though in different languages, the same day in all Christendom. The telegraph keeps us advised of what is occurring everywhere, and the press foreshadows, with more or less accuracy, the plans and purposes of the nations. Market prices of products and of securities are hourly known in every commercial mart, and the investments of the people extend beyond their own national boundaries into the remotest parts of the earth. Vast transactions are conducted and international exchanges are made by the tick of the cable. Every event of interest is immediately bulletined. The quick gathering and transmission of news, like rapid transit, are of recent origin, and are only made possible by the genius of the inventor and the courage of the investor. It took a special messenger of the government, with every facility known at the time for rapid travel, nineteen days to go from the city of Washington to New Orleans with a message to General Jackson that the war with England had ceased and a treaty of peace had been signed. How different now! We reached General Miles in Porto Rico by cable, and he was able through the military telegraph to stop his army on the firing line with the message that the United States and Spain had signed a protocol suspending hostilities. We knew almost instantly of the first shot fired at Santiago, and the subsequent surrender of the Spanish forces was known at Washington within less than an hour of its consummation. The first ship of Cervera's fleet had hardly emerged from that historic harbor when the fact was flashed to our capital, and the swift destruction that followed was announced immediately through the wonderful medium of telegraphy. So accustomed are we to safe and easy communication with distant lands, that its temporary interruption, even in ordinary times, results in loss and inconvenience. We shall never forget the days of anxious waiting and awful suspense when no information was permitted to be sent from Pekin, and the diplomatic representatives of the nations in China, cut off from all communication inside and outside of the walled capital, were surrounded by an angry and misguided mob that threatened their lives; nor the joy that thrilled the world when a single message from the government of the United States brought

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

through our Minister the first news of the safety of the besieged diplomats.

At the beginning of the nineteenth century there was not a mile of steam railroad on the globe; now there are enough miles to make its circuit many times. Then there was not a line of electric telegraph; now we have a vast mileage traversing all lands and all seas. God and man have linked the nations together. No nation can longer be indifferent to any other. And as we are brought more and more in touch with each other the less occasion is there for misunderstanding, and the stronger the disposition, when we have differences, to adjust them in the court of arbitration, which is the noblest forum for the settlement of international disputes.

My fellow-citizens, trade statistics indicate that this country is in a state of unexampled prosperity. The figures are almost appalling. They show that we are utilizing our fields and forests and mines, and that we are furnishing profitable employment to the millions of working men throughout the United States, bringing comfort and happiness to their homes and making it possible to lay by savings for old age and disability. That all the people are participating in this great prosperity is seen in every American community and shown by the enormous and unprecedented deposits in our savings banks. Our duty is the care and security of these deposits, and their safe investment demands the highest integrity and the best business capacity of those in charge of these depositories of the people's earnings.

We have a vast and intricate business, built up through years of toil and struggle, in which every part of the country has its stake, which will not permit of either neglect or of undue selfishness. No narrow, sordid policy will subserve it. The greatest skill and wisdom on the part of manufacturers and producers will be required to hold and increase it. Our industrial enterprises, which have grown to such great proportions, affect the homes and occupations of the people and the welfare of the country.

Our capacity to produce has developed so enormously and our products have so multiplied that the problem of more markets requires our urgent and immediate attention. Only a broad and enlightened policy will keep what we have. No other policy will get more. In these times of marvelous business energy and gain we ought to be looking to the future, strengthening the weak places in our industrial and commercial systems, that we may be ready for any storm or strain. By sensible trade arrangements, which will not interrupt our home production, we shall extend the outlets for our increasing surplus. A system which provides a mutual exchange of commodities is manifestly essential to the continued and healthful growth of our export trade. We must not repose in fancied security that we can forever sell everything and buy little or nothing. If such a thing were possible it would not be best for us or for those with whom we deal. We should take from our customers such of their products as we can use without harm to our industries and labor. Reciprocity is the natural outgrowth of our wonderful industrial development under the domestic policy now firmly established. What we produce beyond our domestic consumption must have a vent abroad. The excess must be relieved through a foreign outlet, and we should sell everywhere we can buy and wherever the buying will enlarge our sales and productions, and thereby make a greater demand for home labor.

The period of exclusiveness is past. The expansion of our trade and commerce is the pressing problem. Commercial wars are unprofitable. A policy of good will and friendly trade relations will prevent reprisals. Reciprocity treaties are in harmony with the spirit of the times; measures of retaliation are not. If, perchance, some of our tariffs are no longer needed for revenue or to encourage and protect our industries at home, why should they not be employed to extend and promote our markets abroad? Then, too, we have inadequate steamship service. New lines of steamers have already been put in commission between the Pacific coast ports of the United States and those on the western coasts of Mexico and Central and South America. These should be followed up with direct steamship lines between the eastern coast of the United States and South American ports. One of the needs of the times is direct commercial lines from our vast fields of production to the fields of consumption that we have but barely touched. Next in advantage to having the thing to sell is to have the convenience to carry it to the buyer. We must encourage our merchant marine. We must have more ships. They must be under the American flag, built and manned and owned by Americans. These will not only be profitable in a commercial sense; they will be messengers of peace and amity wherever they go.

We must build the isthmian canal, which will unite the two oceans and give a straight line of water communication with the western coasts of Central and South America and Mexico. The construction of a Pacific cable cannot be longer postponed.

In the furtherance of these objects of national interest and concern you are performing an important part. This exposition would have touched the heart of that American statesman whose mind was ever alert and thought ever constant for a larger commerce and a truer fraternity of the republics of the New World. His broad American spirit is felt and manifested here. He needs no identification to an assemblage of Americans anywhere, for the name of Blaine is inseparably associated with the Pan-American movement which finds this practical and substantial expression, and which we all hope will be firmly advanced by the Pan-American Congress that assembles this autumn in the capital of Mexico. The good work will go on. It cannot be stopped. These buildings will disappear; this creation of art and beauty and industry will perish from sight, but their influence will remain to

> Make it live beyond its too short living
> With praises and thanksgiving.

Who can tell the new thoughts that have been awakened, the ambitions fired, and the high achievements that will be wrought through this exposition?

Gentlemen, let us ever remember that our interest is in concord, not conflict, and that our real eminence rests in the victories of peace, not those of war. We hope that all who are represented here may be moved to higher and nobler effort for their own and the world's good, and that out of this city may come, not only greater commerce and trade for us all, but, more essential than these, relations of mutual respect, confidence, and friendship which will deepen and endure. Our earnest prayer is that God will graciously vouchsafe prosperity, happiness, and peace to all our neighbors, and like blessings to all the peoples and powers of earth.

The American Revision.

At last we have in our hands the much desired American Revision, beautifully printed in long primer type, with an admirably full and finely chosen body of references in the middle column and the variant notes in the two margins. This standard edition is printed and bound in different styles, with or without maps, and at prices varying from $1.50 to $9. It is by far the most exact, and, we will say, beautifully printed Bible that has yet appeared, and being the standard this edition should be much sought for and ought to be in the hands of every student of the Bible.

It is sixteen years since the Revision of the Old Testament appeared, and twenty-one years since the appearance of the New Testament Revision. As might well be supposed, the scholars chosen for the work were mostly of advanced age, and few of them could be expected to survive

Digitized by Google

to carry out the work of incorporating the American corrections in the Revised Version. It must be remembered that the American revisers were under bonds to publish no such version incorporating their corrections for fourteen years. It has now been sixteen years, so they have kept their promise. Of course, the burden of this work, which has been carried on during the last six years, has fallen upon a few survivors; and very fortunately two of them, Professor Thayer, of the New Testament section, and Professor Mead, of the Old Testament section, were able to give nearly their whole time to the work. They are both men capable of the most minute and careful examination of the text, and have given great labor to it. We must not, however, omit to give credit to their associates, such as Professors Riddle, De Witt, and Osgood, to mention only some who are still alive.

The Revision of 1885 was begun by English scholars, and it was only later that the American section was allowed to give their subsidiary labor, but without a final vote. The amendments which they preferred and which were not adopted by the English section, were hastily collected, and were printed with the Revision as an appendix. Corrections which might approve themselves even to a majority of the English revisers were often not made, for the reason that their rules required a two thirds vote for every change from the Common Version. Often the Americans were more ready to depart from the Old Version than were the English, but their vote did not count. By general consent changes which the Americans desired were regarded as generally wise. The present task has been, with the greatest care, to complete the list of passages that come under general changes, such as *Jehovah* for *Lord,* and in a very considerable number of passages to incorporate the American preferences. Many of the changes are minute, such as *a* for *an,* and *my* for *mine* before an aspirated *h; who* for *which* when used of persons; *its* for *his* when used of things; *before* for *afore; astonished* for *astonied; is* for *be* when not subjunctive; *capital* for *chapiter; grain* for *corn; annul* for *disannul; anticipate* for *prevent; winnow* for *fan; far be it* for *God forbid; long live* for *God save; nations* for *heathen; mind* for *heart; food* for *meat; settings* for *ouches; heart* for *reins; boil* for *seethe; will* for *shall* (often); *foreigner* for *stranger; subtle* for *subtile; interest* for *usury; which* for *the which; victuals* for *victual; widow* for *widow woman; once* for *aforetime; try* for *tempt; living* for *quick; show* for *shew; judgment* for *judgement; knew* for *wist; demons* for *devils; make full* for *fulfil.* There is a multitude of such cases, and all of them are in the line of better English as now understood.

There are a number of cases in which the margin of 1885 has been put into the text. Thus Paul tells the Athenians that they were "very religious." It makes clearer sense to be told that David burnt the "yokes" of Araunah's oxen in sacrifice than the "furniture." We notice one somewhat startling translation, which really gives the sense, where in Job, 21 : 24 we have "pails" of milk instead of "breasts" of milk. Another famous passage, Job, 19 : 25, 26, reads differently from either the Old Version or the Revision:—

> But as for me I know that my Redeemer liveth,
> And at last he will stand up upon the earth:
> And after my skin, *even* this *body,* is destroyed,
> Then without my flesh shall I see God.

It is not easy to get good sense out of the difficult passage, Proverbs, 14 : 9, where instead of fools making mock at sin, we have "a trespass-offering mocketh fools." In Proverbs, 26 : 8, when the Revision has "a bag of gems in a heap of stone," the American revisers go back to the old idea, "one that bindeth a stone in a sling." In Isaiah, 53 : 8, the old reading kept by the revisers now becomes, "and, as for his generation, who *among them* considered that he was cut off out of the land of the living for the transgression of my people to whom the stroke *was due?*" There seems to be a bit of theology in this reading which has, however, much support. We are thankful that Jeremiah now says (4 : 19): "My anguish! my anguish!" instead of "My bowels! my bowels!" It is an improvement in Ezekiel, 1 : 4, to have the appearance of living creatures, "as it were glowing metal," instead of "as the color of amber;" and we are glad to see the "rims" of the wheels instead of the "rings." So we are glad to see those shadowy gods "Siccuth" and "Chiun" of Amos, 5 : 25 become "the tabernacle of" and "the shrine of." And similarly we are glad to lose Huzzab, Nahum, 2 : 7, which is now translated, "it is decreed: she."

But we must refer the volume to the careful reader. An infinite amount of minute pains has been put upon it, and it comes before us with better authority than any other translation. We do not mean that it is a final translation, for it is not. The New Testament is nearly final, but the Old Testament requires a revision of the Hebrew text, which these revisers were not allowed to touch. For a translation based upon a corrected text we must go to the incomplete and sometimes rash translations in the polychrome Bible and similar work. Meanwhile, we congratulate the active editors of this edition on the completion of a most painstaking, laborious, and useful work.

The Independent.

Power in a Pound of Coal.

A POUND of coal can produce power sufficient to pull a large express train a distance of one sixth of a mile, going at the rate of fifty miles an hour, writes an expert locomotive engineer, who is quoted in *The Coal Trade Bulletin.* He continues as follows:—

"You would be surprised at the wonderful amount of work which the energy from this small quantity of coal can do. For the purpose of explaining, take, for instance, a pound of what might be called average coal, containing about ten thousand heat units. This would be somewhat smaller in size than a man's fist. If this pound of coal could be burned completely and entirely under water, and all its heat should go into the water, at a temperature of sixty-two degrees, five pounds of water could be raised to the height of one foot. If this pound of coal could be completely burned in water one foot deep, with a temperature of sixty-four degrees, and all the heat from this coal be imparted to the water, this water would become sixteen degrees hotter, thus being suitable for a comfortable bath. If adapted to mechanical work, the ten thousand heat units in the one pound of coal would be equivalent to 236 horsepower. The 236 horse-power of potential energy contained in the pound of coal is enough to haul a train of eight cars for a period of one fifth of a minute, or a distance of one sixth of a mile, going at the rate of fifty miles an hour. It has also been found to be able to draw a cable train, including the grip-car and trailer, for a distance of two miles at the rate of nine miles an hour. It would also be of sufficient power to pull an electric car, well filled with passengers, for two miles and a half, at a rate of ten miles an hour. If the power in this pound of coal is compared with the work of a strong man used to hard labor, it would be found that there is more than sufficient power in the pound of coal to do in one minute the day's work, of eight hours, of five strong men. This is accounted for in this way: The work of a strong man, used to hard work, is estimated as being equal to one tenth of a horse-power. The eight hours he works is equivalent to four hundred and eighty minutes. Naturally, while working, a man makes a number of stops, either to rest or change the monotony of his position. These stops, then, would, without difficulty, take up one tenth of the man's time. Thus, this would reduce the time of actual work down to four hundred and thirty-two minutes. This time, at one tenth of the horse-power, makes the total of his day's labor amount to 4.32

Digitized by Google

horse-power. At this rate it is shown that it would take twenty-six hundred strong men, working constantly, to do jointly the same amount of work in one minute as can be done by the single pound of coal. Another line of work in which the superiority of a pound of coal is shown beside the labor of man is that of sawing wood. A man may consider himself a swift sawyer, by making sixty strokes a minute, each stroke of the blade having progressed five feet a minute; but a circular saw, driven by machinery, may be put through seventy times that distance and saw seventy times as much wood. Still, this little pound of coal has the power to keep in operation one hundred and eighty such saws."

Thanksgiving Proclamation.

THE following Thanksgiving Proclamation was issued by President Roosevelt, November 2, 1901.

The season is nigh when, according to the time-hallowed custom of our people, the President appoints a day as the especial occasion for praise and thanksgiving to God.

This Thanksgiving finds the people still bowed with sorrow for the death of a great and good President. We mourn President McKinley because we so loved and honored him; and the manner of his death should awaken in the breasts of our people a keen anxiety for the country, and at the same time a resolute purpose not to be driven by any calamity from the path of strong, orderly, popular liberty, which as a nation we have thus far safely trod.

Yet, in spite of this great disaster, it is nevertheless true that no people on earth have such abundant cause for thanksgiving as we have. The past year in particular has been one of peace and plenty. We have prospered in things material, and have been able to work for our own uplifting in things intellectual and spiritual. Let us remember that, as much has been given us, much will be expected from us, and that true homage comes from the heart as well as from the lips, and shows itself in deeds. We can best prove our thankfulness to the Almighty by the way in which on this earth and at this time each of us does his duty to his fellow-men.

Now, therefore, I, Theodore Roosevelt, President of the United States, do hereby designate as a day of general thanksgiving, Thursday, the 28th of this present November, and do recommend that throughout the land the people cease from their wonted occupations, and at their several homes and places of worship reverently thank the Giver of all Good for the countless blessings of our national life.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this second day of November, in the year of our Lord one thousand nine hundred and one, and of the independence of the United States the one hundred and twenty-sixth.

(Seal) THEODORE ROOSEVELT.

By the President,

JOHN HAY, *Secretary of State.*

Sincerity.

Sincerity is the highest quality of good manners.

The following recipe is recommended to those who wish to acquire genuine good manners:—

Of Unselfishness, three drachms; of the tincture of Good Cheer, one ounce; of essence of Heart's-Ease, three drachms; of the extract of the Rose of Sharon, four ounces; of the oil of charity, three drachms and no scruples; of the infusion of Common Sense and Tact, one ounce; of the Spirit of Love, two ounces.

The mixture to be taken whenever there is the slightest symptoms of selfishness, exclusiveness, meanness, or I-am-better-than-you-ness.—*Selected.*

The Lectures.

At East St. Louis, Ill.

The City Hall auditorium last night (Monday, October 21) was well and comfortably filled with ladies and gentlemen from East St. Louis and St. Louis, who had come to listen to a lecture on "Christian Science: Physician and Redeemer," delivered by Judge William G. Ewing of Chicago. No admission was charged and no seats reserved. As early as seven o'clock the people began to gather. At eight o'clock every good seat in the auditorium was filled. The majority of the audience from St. Louis, were members of the Christian Science Church, while those from East St. Louis were attracted more by curiosity than anything else.

Mr. Ewing was introduced to the audience by Mayor M. M. Stephens, who stated that he had been selected by the Christian Science Society to introduce a gentleman whom nearly all in the audience had heard before, who would enlighten them on the doctrine of Christian Science, and he considered it an honor to introduce Judge William G. Ewing.

Mr. Ewing was heartily applauded as he stepped forward, acknowledging the reception. He is a scholarly man, of medium height, white hair, and about seventy years of age, yet as straight as an arrow, a living example of the faith upon which he lectured.

The person who did not feel the influence of his clear-cut and logical ideas was certainly prejudiced. The lecture was replete with deep thought and suggestions that will certainly abide with a great many until the end of time. The large audience was well pleased with his graphic pictures and magnificent presentation of his subject, which came from his very heart. The lecture was composed of the grandest thought that has ever been presented in East St. Louis, and many are glad that Judge Ewing came to enlighten them on Christian Science, stirring within them such feelings as he did last evening.

East St. Louis Daily Journal.

At Webster City, Ia.

Edward A. Kimball, Christian Science lecturer, of Chicago, spoke in this city last night (October 21) to a large audience at the Opera House. Mr. Kimball is a pleasant and entertaining speaker with an added earnestness that holds the attention of his audience throughout. As fundamental ideas Mr. Kimball stated that Christian Science is primarily a religion; that Christian Scientists believe in God and are coming to know and to obey His will. The belief, they say, rests upon and is sanctioned by the Bible, and they accept the Scriptures as the inspired word of God.—*Webster City Freeman-Tribune.*

Mr. Kimball was introduced to the audience by James Alvin Clark, Pastor of St. Paul's Universalist Church, Webster City, Iowa, as follows:—

Ladies and Gentlemen:—We are met to hear discussed a very important subject, under the auspices of First Church of Christ, Scientist, of this city; a church whose denominational forces are now numbered by the hundreds of thousands throughout the world, a church whose people, so far as I have been able to discern, are among the best of the community.

I trust that we have all come as students, observers, and thinkers, not afraid of the truth, but anxious to know it more nearly as it is. We may differ in our ideas of what constitutes the truth, but if that which our brother presents to us shall appear as *the* truth, then it is our duty to accept it as that truth which shall make us free. Ladies and gentlemen, I have great pleasure in presenting Mr. Edward A. Kimball of Chicago, who will speak on the subject, "The Cause and Scientific Cure of Disease."—*Correspondence.*

At Detroit, Mich.

Judge William G. Ewing of Chicago, a member of the Board of Lectureship of the Mother Church at Boston, spoke last night (Tuesday, October 15), at First Church of Christ, Scientist, on the subject, "Christian Science: Physician and Redeemer." Every seat in the auditorium was filled when Judge Ewing began to speak, and so attentive was the audience that the speaker was heard with ease in every quarter of the church. Judge Ewing is an elderly gentleman who speaks with calmness and certainty, apparently desiring to rely rather on dispassionate reasoning and invincible logic as a means for securing attention, than on oratorical periods. He himself, as he said last night, is an example of what Christian Science does in restoring health.

His subject was about equally divided between the two heads set forth in the title, but he stated that so far as he was concerned he wished to lay the greatest possible stress on Christian Science as a religion. The church was handsomely decorated with palms and roses, and the reading desk was twined with smilax. H. H. Rackham, treasurer of the church society, made a brief presentation of Judge Ewing to his audience.—*The Detroit Free Press.*

At Bracebridge, Ont.

Sunday last (October 20) was a day long to be remembered by the Christian Scientists of Bracebridge, it being the occasion of the visit and lecture of Carol Norton, C.S.D., of New York. The local Scientists had issued a large number of special invitations besides a public announcement, and at half past two on Sunday afternoon the Town Hall was crowded to its utmost capacity. Mr. O. M. Arnold occupied the chair, and many prominent citizens were in the audience.

Mr. Norton, who is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., is a speaker of great ability, and his gentlemanly appearance assists him in taking a firm hold of his audience from the very start.

The first school of Christian Science was organized by Mrs. Eddy in 1867, with one student. The speaker stated that the parent church now numbered over twenty-one thousand persons, and its growth in every branch has been marvelous. At the conclusion of his lengthy address, Judge Mahaffy moved a vote of thanks to the lecturer, which was seconded by the unanimous vote of the audience.

Free Grant Gazette.

At Philadelphia, Pa.

First Church of Christ, Scientist, Philadelphia, Pa., again availed itself of the privilege accorded branch churches by a By-law of the Mother Church, and gave one of its semi-annual lectures in the church auditorium, on Sunday afternoon, October 20, 1901.

After an appropriate and graceful introduction by the First Reader, Mrs. D. Eloise Brownell, C.S.B., the lecturer, Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y., addressed an audience of nearly one thousand people. His theme was "Christian Science is Scientific Christianity."

From first to last Mr. Vosburgh held the attention of his audience, which was largely composed of those whose faces are unfamiliar ones in Christian Science congregations.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Dec. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

In an ancient cathedral of Lubeck, Germany, may be seen an old slab with the following inscription:—

Thus speaketh Christ our Lord to us:
Ye call me Master, and obey me not;
Ye call me Light, and see me not;
Ye call me Way, and walk me not;
Ye call me Life, and desire me not;
Ye call me Wise, and follow me not;
Ye call me Fair, and love me not;
Ye call me Rich, and ask me not;
Ye call me Eternal, and seek me not;
Ye call me Gracious, and trust me not;
Ye call me Noble, and serve me not;
Ye call me Mighty, and honor me not;
Ye call me Just, and fear me not;
If I condemn you, blame me not.

Christian Advocate.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Church By-law.

FINANCE COMMITTEE.

ART. XVIII., SECT. 4.—There shall be a Committee on Finance which shall consist of three First Members of this Church in good standing therewith. Its members shall be appointed annually by the Christian Science Board of Directors and with the consent of the Pastor Emeritus. They shall hold quarterly meetings, and keep themselves thoroughly informed as to the real estate owned by this Church, and the amount of funds received by the Treasurer of the Mother Church, who is individually responsible for said fund. They shall attend to having the books of the Christian Science Board of Directors, and the books of the Church Treasurer, audited annually by an honest, competent accountant.

Prior to paying all bills against the Church, the Treasurer of this Church shall submit the same to said committee for examination,—and this committee shall decide thereupon by a unanimous vote, and their endorsement of the bills shall render them payable.

The books are to be audited on May first, and shown to the Pastor Emeritus on May fifteenth.

If it be found that the Church funds have not been properly managed, it shall be the duty of the Church, namely, the Board of Directors and the Treasurer, to be individually responsible for the performance of their several offices satisfactorily, and for the proper distribution of the funds of which they are the custodians.

A Remarkable Case.

IN *The Christian Science Journal* for September, 1901, under the head of "Testimonies from the Field," we published, as the first testimony, the case of Mrs. Jay Scott of Fresno, Cal., written by herself. We published this extraordinary case in our usual unsensational and almost prosaic way. So much have remarkable and even startling cases become commonplace to us and our readers who are Christian Scientists, that it would not occur to us to give them a sensational character, even if we were so disposed.

We received a number of letters and inquiries about Mrs. Scott's case which led us to write her for further particulars concerning it, and to our letter she made a prompt and frank reply.

We have concluded, in view of the unusual nature of Mrs. Scott's case, to republish in the *Sentinel* her testimony as published in the *Journal*, and to publish in connection therewith her letter in reply to ours.

Following is her testimony as published in the *Journal*:—

"During the past few years I have been more or less in ill health, my chief trouble being chronic constipation, which finally terminated in a complication of female disorders from which I suffered to such an extent that I was persuaded early in November of last year to enter a sanitarium in Fresno, where, after an examination I was told that an operation was necessary in order to save my life. Consequently I was put under the influence of chloroform for two hours, an incision was made in the abdomen and one of the organs was removed, also a tumor of some kind. I was kept very quietly at the sanitarium for nearly two months when I was allowed to return home. During the next two months I suffered constant pain, some days feeling a trifle better, but most of the time very miserable. The wound in the abdomen refused to heal and would frequently discharge. Then the physician, after another examination, informed me that the operation was not a success and would have to be done over again, otherwise, I would be a cripple the remainder of my life.

"I walked, or rather crept about, doubled up like a feeble old woman. I would never be able to straighten up again, he said, unless I would submit to another operation. I went home completely discouraged. I could not bear the thought of the cruel knife again, especially as the old wound had not yet healed. I said to a friend who was staying with me, 'Now what must I do? If I go on the table again it will kill me.' She replied, 'Why, I would certainly try Christian Science; you have given the doctors a trial and they have failed.' She told me of a practitioner in San Francisco. I had heard of Christian Science before, and always thought it a grand humbug; but it was that or the operating knife, so I went to San Francisco and saw the healer.

"I went prepared to doubt everything, and came away more than half convinced that there might be something in it.

"My sister-in-law, who lives in San Francisco and who is a staunch Christian Scientist, took me in with her family during my stay in the city. My treatment began immediately, and the improvement was rapid for a week or more. then all my old beliefs manifested themselves, my wound discharged more copiously than ever, and one day a stitch came to light, and, later on another, which the surgeons had left to hold one of the organs in position. I continued in this way for nearly a month, sometimes suffering a great deal of pain, then feeling much better, and all the time gaining strength slowly but surely.

"One night I made the startling discovery that the bowels were performing their functions through the aperture in the abdomen. This so frightened me that I alarmed the household, and my brother-in-law, who had retired, arose and went to my healer, who lived two miles distant, to inform him. A surgeon would surely have said, 'Well, that proves that her bowels are perforated, and of course I can do nothing more for her.' My healer said, 'Tell her to fear nothing, there is no condition of mortal belief but can be met and overcome by divine Love.' This state of affairs continued for over two weeks, when one day, after suffering excruciating pain, there passed from me a piece of cloth a yard long and nearly ten inches wide. This cloth is called a surgeon's sponge and is used during an operation to absorb any moisture which may accumulate in the abdominal cavity, and had been overlooked by the surgeons five months previously. Said operation was witnessed by four physicians and three nurses, and yet the incision was sewed up leaving the sponge inside. It had forced itself into the bowels from the abdominal cavity and made its way to the rectal extremity and passed off in that manner.

"After this my improvement was very rapid, my back was straightened up, the old wound has entirely healed. I can 'run and not be weary; . . . walk, and not faint.' I can work in my garden, and could do a week's washing if necessary. More than all this, I fully realize that nothing but the power of the Great Physician, Divine Intelligence, God, could perform such works.

"When I returned to Fresno I called upon my doctors, told them what had happened to me, and showed them the cloth, which I had kept. They were completely astounded. One of them said, 'I would never have believed you had you not brought the sponge, which I recognize.' He said he had heard of a similar case which happened to a woman

Digitized by Google

who died in three days in awful agony. The other said, 'I am very sorry, Mrs. Scott, that it happened so, and the only thing we can do now is to congratulate you that you are alive.'

"When they were told that it was to Christian Science that I owed my deliverance, they were silent. I feel that my pen is inadequate to express my thankfulness to Christian Science for what it has done for me.

"I trust that this may meet the eye of some afflicted fellow-woman and save her from the surgeon's knife.

"MRS. JAY SCOTT, Fresno, Cal."

Mrs. Scott's letter contains the full names of the two physicians referred to in her testimony, but we withhold them, as we do not wish to cast any reflection upon these physicians. They, like all other mortals, are liable to make mistakes, and we are quite disposed to cover the unfortunate oversight with the mantle of broadest charity, the more so that it afforded the Truth, as demonstrated by Christian Science, an opportunity to prove its power and show forth its marvelous efficiency in overcoming physical conditions.

Following is Mrs. Scott's letter:—

Fresno, Cal., October 1, 1901.

Dear Editor:—Your letter asking for further particulars in my case has been received, and I will say that the physicians who attended me were . . . At the time the cloth passed from me I was in San Francisco. There were three ladies present, and their names and addresses are as follows: Mrs. F. H. Wilson, Room 11, Hughes' Block, Fresno; Mrs. F. T. Berry and Mrs. D. Gorman, 209 Valencia Street, San Francisco, where I was stopping at the time.

The cloth passed from me between three and four o'clock Tuesday afternoon, and Wednesday evening at five o'clock I took the train for Fresno, a distance of two hundred miles, and arrived there about eleven without any inconvenience. Thursday morning I sent for the two physicians. The first question I asked them was if they had, during the operation, inserted anything into the rectum, and they said no, they did not touch me there. Up to this time they had no knowledge of what had taken place.

I then told them I had in my possession a cloth that they had left in me, and it had passed from me through the rectum.

They examined it and recognized the cloth (or sponge as they called it) as the one they had laid in me during the operation, to absorb the moisture.

One of them came very near fainting, but turned quickly to the other one with a knowing nod. Then one of them took my hand and said, "Mrs. Scott, this thing has been done and cannot be undone, and I am very sorry for it. All I can do now is to congratulate you that you are alive, for we shall never understand how you lived four days after the operation." They said they never had known of but one case where the sponge was left in, and the poor woman died in dreadful agony three days afterward. My husband and my sister were present during this interview with the doctors.

One of the doctors met my husband on the street about two hours afterward and told him he never came so near fainting in his life as he did when he saw and recognized his own sponge. Mr. Scott then told him that it was through Christian Science that I was healed.

During the interview with the doctors they asked me what physician or physicians had been treating me in San Francisco, and as I had not seen a doctor I told them so.

I do not know what kind of an answer the doctors will give; . . . but I know all the ladies referred to will tell you everything just as it happened.

My husband was sheriff of Fresno County for six years, and his brother, Philip Scott, is at the present time one of the county supervisors. I have received a dozen or more letters from all over the United States asking for further particulars, as they all seem to want more proof of the case, and if you see fit to publish this you may do so.

Yours in Truth,

MRS. JAY SCOTT.

This case is sufficiently important to warrant much comment. It might well be made the text for an extended discourse on the healing power of divine Truth as understood and applied in the early morning of the twentieth century. We might make interesting prognostications as to the condition of the world—as compared with its present condition—at the close of this century, if such marvelous healing continues; and who, having a knowledge of the healing work already accomplished through Christian Science, doubts that it will continue? We might speak at length of the great mission of the woman whose spiritual discernment and whose labors resulting from such discernment have made this healing possible; and we might say much of the book she wrote wherein is set forth the *modus* thereof. We shall, however, at this time, content ourselves with submitting for the serious contemplation of serious people a few plain queries.

1. Did God select for the great work of presenting this wondrous healing power to the world a worthy or an unworthy human instrumentality? What says reason, what says common sense, what says common justice, in reply?

2. Was Mrs. Eddy fitted for the work she has accomplished, or was she not? If not, we wish to know *how* it was that she *accomplished* it? Is an unworthy instrument selected by the All-wise One for the accomplishment of a worthy purpose? Is there anything in the Bible upon which to base such a conclusion?

3. Is it or is it not true, that Mrs. Eddy not only possessed the knowledge of how to heal disease by means above the physical and material, but was able to impart it to others? If not, how could the person in San Francisco who healed Mrs. Scott, have done the healing? This person will say that he learned to do this work through the writings and labors of Mrs. Eddy.

4. Ought not the whole world to be thankful to God that He has sent into it, in this age, His mighty healing power; and ought it not to treat with the highest reverence and deepest love the individual through whom He has seen fit to reveal it? If it is right to be thankful to God for blessings bestowed, is it wrong to thank Him also for the fit instrument thereof? We trust we shall be pardoned if we seem *personal* in these queries; but may we not ask those who are wont to be supersensitive upon the question of personality, whether, in this, we are more personal than if we submitted the same relative queries as to the mission of George Washington, Abraham Lincoln, William McKinley, or any other of the world's great and good people and public benefactors?

5. We ask those who are sceptical of God's healing power, or of the fact that He heals sickness now as well as in the long ago, to pause and soberly ponder the words which came spontaneously from this grateful heart when she said: "After this my improvement was very rapid, my back was straightened up, the old wound has entirely healed. I can 'run, and not be weary; . . . walk, and not faint.' I can work in my garden, and could do a week's washing if necessary. More than all this, I fully realize that nothing but the power of the Great Physician, Divine Intelligence, God, could perform such works." The happy beneficiary of this healing gladly gave the credit to the higher Power. She knew very well that no human power could have wrought such a work. Nevertheless, she is thankful for the human instrumentality through whom this Power was manifested.

6. We beg those who know nothing of Christian Science,

Digitized by Google

but yet thoughtlessly pronounce it a fraud and a humbug, soberly to consider Mrs. Scott's experience. When Christian Science was first suggested to her, knowing nothing of it and being prejudiced against it, she said she had always "thought it a grand humbug." She does not think so now. She knows better. There are many thousands who, a few years or a few months ago, thought Christian Science a "grand humbug," who now know better and are glad to acknowledge how sadly they were mistaken. This number is increasing daily. The glib cries of "humbug," therefore, do not disturb Christian Scientists. They know such cries come from those who have yet to learn what it is they are crying out against.

While the case of Mrs. Scott, in some of its phases, is an extraordinary one, it is not more so in fact than many others. We have published scores in our periodicals, and at the mid-week testimony meetings may be heard the frequent recital of cases quite as marvelous, if not as unique, as the one we are considering. These cases illustrate, in a graphic way, the Divine immanence in human affairs; they teach beyond cavil that God, in these latter days, is truly "made manifest in the flesh."

Spead-Tomlinson Case.

The *Daily Patriot* of Concord, N. H., republishes from the *Manchester Mirror* a communication relative to the subject of prayer as brought out in the recent case of Spead *vs.* Tomlinson. We know not the author of this communication, but whoever he is, he has a correct conception of the true office of prayer and presses home the subject in a convincing manner. If prayer is of God, divine, and therefore effectual, surely the better informed the world is upon that subject, the better for the world. If it is not of God, is not divine, and therefore not effectual, then the sooner the world becomes aware of that fact, the better. As was well said by counsel in the above entitled case, in the latter event, all Christian churches should forthwith close their doors, for the alleged corner-stone of all these churches is prayer. If this be lacking the whole structure falls.

It is indeed high time the world were awakening on the subject of true prayer. If, in the past, people have been too largely praying amiss, and if, in the future, they can pray more nearly aright, then, in the name of the Heavenly Father to whom Jesus prayed, let the people, and especially Christendom, learn how to pray. Let them treat with love and respect, nay, let them co-operate with, that class who are daily proving the efficacy of prayer in the healing of sickness and sin. The Christianly Scientific religion is continually answering, by incontrovertible facts, the inquiry as to whether or not prayer is effectual.

Following is the communication to the *Manchester Mirror*:—

Editor of *The Mirror*.

Would you allow me a little space in your liberal columns to express a few thoughts which have been suggested by the Spead-Tomlinson case so lately before the public? Evidently the question of prayer was on trial rather than Mr. Tomlinson. Is it not well to have this subject of prayer and its efficacy examined pro and con that some definite conclusion may be arrived at by the people? Much time and money have been spent during the past nineteen hundred years for prayers. Thousands upon thousands of people are to-day devoting their lives to this and kindred employments. Now if this is all for naught, let it cease. Why deceive ourselves longer?

One thing is very evident to me: We need more prayers or less: which is it? Surely more, if they are of any avail; less, if they are not. To my sense this trial will be productive of much good. It will set people to thinking more deeply, and either break up a useless ceremony or strengthen their confidence in prayer.

As I understand it the Christian Scientists do not expect their prayers to change God, the changeless, or any of His plans or laws, but believe that prayer changes the one who prays and his mental environments. In the beginning God gave to His children all that they can rightly ask for, all that they can have. His work is done, we read, and if they do not have it, or are not conscious of it, this is their fault and not His.

The sun gives light and heat to all who stay within its rays; but if they let some object come between them and it they lose the light and warmth; but is the sun to blame? Their remedy is to get back into its rays. God is the light and life of the world, blessing all who live near Him; but if men let things come between themselves and Him, such as false theories concerning Him, false beliefs concerning themselves, and fears of things which never existed, their only remedy is to remove these things. This is done by right praying. Cleanse the mental atmosphere and let in the light, life, and love. Jesus said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." This prayer will be answered in the degree that we do believe or understand what it means. Oh, God! Thou hast given us a knowledge of thy words and works and we can be conscious f it. A CITIZEN.

Another Impostor.

A young Jew, giving different Jewish names, has been for some months calling upon Christian Scientists in the northwest, obtaining money under false pretences. He claims to have been healed and taught by some prominent Scientist, to have been cast out of his home because of this, and to be working his way to some distant point where work has been promised him. He uses the names of different teachers and cities, from Minneapolis to California, to suit his convenience. In appearance he is slight, with a slender face, high, narrow nose, curling hair, narrow, slanting eyes, and an insincere voice.

We have recently learned that the club-footed man, whom we have frequently exposed in our periodicals, is still at work. When last heard from he was in Missouri and gave the name of Howard.

Among the Churches.

Organization at Ithaca, N. Y.

First Church of Christ, Scientist, Ithaca, N. Y., was organized September 3, 1901, with nineteen charter members.

In September, 1897, three ladies met in a private parlor in Ithaca to hold services Sunday mornings.

The number increased until in February, 1899, it became necessary to rent a public hall. One dollar per week was paid for use of this hall on Sunday mornings.

In January, 1900, we engaged a small new hall at a rental of ten dollars per month, where services were held Sunday mornings and Wednesday evenings. During the week this hall was used as a reading room.

The loyal pioneers worked faithfully, keeping the little band together, and our numbers and needs steadily increased, until it was made manifest that the field here was ready for the harvest.

On September 3, 1901, we organized as First Church of Christ, Scientist, of Ithaca, N. Y., under the state laws, with nineteen charter members. Our regular attendance is between thirty-five and fifty. We are well organized and every branch of our church work is carried on very systematically. Our Wednesday evening meetings are interesting, and many beautiful testimonies are given.

Digitized by Google

September 15, 1901, we organized our Sunday School with six children, a superintendent, and two teachers. At the time of organization we moved into a large, new hall, three times the size of our old quarters, and especially arranged for our convenience and comfort. We have fitted up this hall as a church, with new reading desks, chairs, etc. The seating capacity is one hundred. Having disposed of the old furniture, everything in the hall is new and paid for, nearly all being the gifts of many loving friends. The hall is artistically furnished and presents a very attractive and inviting appearance as we have it arranged for a reading room during the week. On our reading table we have copies of all Mrs. Eddy's writings, and we have all of them on sale.

The first service in our new hall was held on the first Sunday in September. It did not differ in any way from the regular church services, as we do not feel that this is more than a temporary shelter.

We are deeply grateful to our beloved Leader, Mary Baker Eddy, who has made it possible for us to know the Truth, which is making us free. Our tributes of gratitude and loyal devotion must best be expressed in loyalty and zeal for the Cause she has established, and we are happy that we have added one more to the list of Churches of Christ, Scientist, one more testimony to God's goodness toward men, and the ever-presence of Infinite Wisdom and Love.—IDA MAY RUST, *Clerk*.

Reading Room at Oklahoma City.

We organized a Society in Oklahoma City last April, and the growth has been very satisfactory. July 20, a reading room was opened with appropriate exercises. The president made a few fitting remarks which were in part as follows:—

We are very grateful for the kindly interest so many have shown by their presence here to-day. The opening of this room is the manifestation of the loyalty and love our little society feels for the great cause of Truth. May the spirit of love ever rest upon us, and so fill this room that all who enter may feel a deeper inspiration, a broader and higher sense of life.

We hope that each and every member will be equally interested in the accomplishment of the work we have before us.

All that is required of us is to do the best we can. Where Truth finds us is the place for us to work, knowing that the Father worketh with us. If each does his part well, be it much or little, we are ready for another step which must ever be followed by still another, until our journey is ended.

I cannot close without expressing my heartfelt gratitude to the Rev. Mary Baker Eddy, who, through toil and sacrifice, has given to the world the book, "Science and Health with Key to the Scriptures," which has illumined the pages of the Bible. Words cannot express the gratitude that is felt by all who have demonstrated the Truth as revealed in Christian Science. It is the ever-present Christ that as surely heals the sick and sinful to-day as it did two thousand years ago; binds up the broken-hearted and gives that peace which passeth understanding.

MARY J. MCCARTNEY.

A New Chapel at Jackson, Ky.

We are very comfortably settled in a home of our own. We have a nice little white vine-clad chapel and reading room, which, when thrown together, will seat about two hundred. Flowers and ferns of various kinds in the yard make it very home-like. It is situated quite centrally, on East Broadway.

We started with twelve charter members, and have had many conflicts and battles to fight with error to prove that strength was not in numbers, but in divine Love.

METTA M. POYNTER.

From Our Contributors.

Reflecting the Light.

BY LOUISE E. LITZSINGER.

It was only a song that she cheerily sang,
But a list'ning heart echoed the lay.
It was only a smile that illumined her face,
But another's reflected the ray.

It was only a kind, loving word that she spoke,
But it solaced a heart that was sad.
It was only the love-light that gleamed in her eyes,
But it made the lone wanderer glad.

It was only her purity, meek and unfeigned,
But it scattered sweet fragrance abroad;
And in child-like humility all the day long,
She communed with the angels of God.

So the day was made glad with the sunshine of Love,
As she labored on happy and gay;
And a sweet benediction flowed gently to all
Who but touched her or chanced in her way.

Scientific Christianity.

BY BLISS KNAPP.

THE definition of religion as the "conformity in faith and life to the precepts inculcated in the Bible, respecting the conduct of life and duty toward God and man" (Webster), "is a spiritual process, and its history continuously implies the affections and operations of mind" (Enc. Brit., Vol. 23, p. 274).

According to this definition, religion is a spiritual process attainable only through the operations of *mind*. But the word religion is involved in the definition of theology as, "the science of God or of religion" (Webster). "That theology is the science of religion implies that theology must not only succeed religion, but must evolve out of it a system of truths entitled to be called a science" (Enc. Brit.). Theology, therefore, by claiming to be the Science of religion, is from deduction, the science of a certain spiritual process attainable only through the operation of mind. Now any spiritual process is divine: hence, the phrase becomes divine Mind, or simply Mind; and the definition reads, the Science of Mind. This agrees with the Christian Science definition of God as Mind as well as with the commonly accepted definition of theology as the Science of God, therefore of Mind.

Again, theology is defined as "the science of Christian faith and life" (Webster). Now Christian faith and life is Christianity, which permits the rendering of theology as the Science of Christianity; or what is yet simpler, Christian Science. Therefore we have evolved the following definitions of true theology,—the Science of God or of Mind, and Christian Science.

Why is it that some people, and what is even more surprising some of the educated class, object to the word Science in its relation to Christianity? Theology as the science of mind professes to be the exhibition of religious facts and principles in their most general and precise shape, and that is what Christian Science is. The reason for the lack of this understanding may be that either they have not been shown, or that "eyes have they, but they see not; they have ears, but they hear not."

I find that our standard dictionaries and encyclopædias usually confirm the statements of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, in regard to Christianity as a Science governed by Divine Principle.

Who is there in Christendom that calls himself a Christian and does not believe that God made and governs all?

Digitized by Google

If we pause a moment with this statement, we can begin to see the broadness of the scope of Christian Science (yet some uninformed say it is narrow), for in this way we work from the Cause of all and not from the effects backward. All physicists, even though they may be Christians and hold to the allness of God, believe that everything that has weight is substance. Consequently they combat the Christian Science definition of God as Substance as being too transcendental. Let us look at the etymology of the word substance. It comprises the Latin words *sub,* meaning under, plus *stare,* to stand, hence substance means to stand under or to support.

For an illustration: suppose a vase sits upon the table. You say the vase is substance and that it is supported by the table. The table, too, is supported by the house which, in turn, is supported by the earth. But is not the supporting object more powerful or substantial than that which it supports? This surely is good logic. Therefore, the earth must be more substantial than these other objects: but what supports the stellar universe? Right here is the chasm that Natural Science so-called has never bridged, and it never will until it starts from the Cause of all things; namely, the one God. Hear what Paul had to say about this very subject. "O Timothy, keep that which is committed to thy trust, avoiding profane and vain babblings, and oppositions of *science* falsely so-called: which some professing have erred concerning the faith." Surely God alone governs the movements of the planets,—hence God is more substantial than all else, for God is Substance as expressed in Hebrews, "For ye had compassion of me in my bonds, and took joyfully the spoiling of your goods, knowing in yourselves that ye have in heaven a better and an enduring substance. . . . Now faith is the substance of things hoped for, the evidence of things not seen." What appears to human eyes to be substance is, therefore, but the inverted image of the idea of substance.

This much may illustrate the Science of Christianity at the same time that it indicates that the only true Science is Divine in that it alone is traceable to a source that is understood, that is without theory, and that has no limitations. Withal, this is proven not only by spiritual inspiration, but by solid logic, even from a human standpoint.

Protection.

BY ALICE C. CHURCHILL.

THE good received, while working in shady paths, being called aside from the usual busy hours, urges me to send a word of grateful acknowledgment for the summer's holiday lesson.

These questions have repeatedly come to me. Am I courageously living for the good of the Cause of Christian Science? Do I cheerfully follow in the steps which Christian Science demands at any cost? Do I not at times admit a shade of compromise, thereby losing the clearer, higher step upward?

With a fuller realization of liberty,—that liberty which always means release from self-seeking,—I awakened with an earnest desire to strive more conscientiously for the good of the Cause.

To follow this step does not mean relaxation in any detail of daily living, or talking beyond my understanding as I gained a larger field of action. Far from it.

It is to prove each step in obedience to Divine Principle, to hold to imperative radical right, which invariably brings its own strength, with a gladness for every crucial test, as each advancing step through *unselfishness* draws one nearer in realization of Love, the marvel of Christian Science.

In studying the sweet obedience of Jesus, I am taught how unfalteringly he followed and demonstrated the demands of his Father's business. Only through following his unselfishness and devotion, can we know the demands of Truth, in our work for the cause of Christian Science.

Thus gently guided by the spirit of liberty, I have been led to a clearer appreciation of our Leader's motives and glorious ideal, her unfailing, loving compassion, proving, through sacrifice of self, at every step, the truth of Christian Science, as she stretches forth her hand in tender protection for the whole world, teaching the freedom of self's liberation, overcoming sin, sickness, and death.

The lesson of summer's holy-day, has quickened a hungry desire to live more in accord with the promise of liberation, working for the cause of Christian Science with more consecration of purpose.

What joy! when we learn in Christian Science how to love God—Good—more, and how to love our Leader with deeper comprehension of her life and work, working in more practical faithfulness for the good of the Cause.

In the narrow path, 'mid summer's green pastures, I am thankful for this wayside tarrying, casting the beam out of mine own eye, searchingly asking, "What has not unselfed love achieved for the race?" (Miscellaneous Writings by Mary Baker G. Eddy, p. 238).

Words of Gratitude.

BY ALICE E. GUTHRIE.

SINCE reading the article "God is All-in-all" in the *Journal* for June, 1901, and particularly these lines, "Where I was once absorbent and found my satisfactions in being ministered unto, I have become radiant," I have felt that I, too, must become radiant, and give to our publications a few at least of the beautiful experiences that have come into my life through Christian Science.

When I first heard of Christian Science many years ago in Chicago, I had no kind feelings toward it or its adherents, but used to say they ought to be arrested, for they were dangerous to the community; that it was a menace to health and morals, and if persisted in would lead to insanity. Since I have honestly studied Christian Science I have seen the sick healed, I have seen the sinner reclaimed, I have seen those who were on the verge of insanity restored to a normal mental condition, all through Christian Science treatment.

It is four years since I came to Christian Science for physical help, when everything else had failed. I was suffering night and day from many diseases, but the first treatment was proof positive to me that there was a power of which I knew nothing. This one treatment did more for me than all the so-called "liberal" books I had ever read. It gave me relief and hope, and I have never lost it, but clung to it through many dark days. My healing was slow, and for this I am thankful. It caused me to learn the lesson of obedience. Gradually I grew better, in a few weeks I could go down town in a street car, then up and down stairs alone, and in four months' time we moved from our boarding house into two rooms, where I did light housekeeping, O *so* glad to be able to do something! I practised on the piano five hours a day, did my own housework, ran up stairs, and sewed on my machine.

Atheism soon disappeared with the other dis-eased beliefs, and I kept saying to myself, "Good is my God, and my God is Good. Love is my God, and my God is Love" (Miscellaneous Writings by Mary Baker G. Eddy, p. 206). It became clear that while saying "no God" the atheist was making a god of matter.

For the physical healing I am thankful, also for the spiritual uplifting, for by it I am learning to demonstrate for myself and others that "Good is our life, and doing good sustains it."

Last January a young girl came to be healed of epilepsy. The attacks came on two or three times a week. The doctor had said she would never be better, but with the

Digitized by Google

understanding that man is governed by Mind, not belief, this law was rendered null and void. She never had an attack after coming for treatment, and is to-day in perfect health, having had but a few treatments.

The manager of one of our large drug stores came for help in May, at the solicitation of a friend of his. The trouble was chronic diarrhœa, and it had been running since the first of December. This man is a graduate of pharmacy, and is in a position to, and did, have the best that medical skill could give him, but he was told that all had been done that could be. He was white and thin, and so weak he could hardly stand five minutes at a time, also had a severe cough. The diarrhœa was stopped entirely in four days, and he gained seven pounds the first week of treatment. He is now perfectly well, has no cough, and is thankful to Christian Science for strength and ability to work every day in the week.

These cases and many more have been helped through even a small understanding of the Truth as taught in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, our beloved Leader, whom I love to call "Mother." My husband and I had the privilege of class instruction from one of our Leader's students in the West.

About the Reading Rooms.

BY A. L. K.

LATELY, when reading articles in the *Sentinel* which refer to the wisdom of our Leader in establishing the reading rooms, and the comfort they are to those at *home*, I have felt I should like to tell you something of what they were to a "stranger in a strange land," for that is what I felt like on reaching London. I had for many months been deprived of such privileges as these rooms afford. I can only say that to me they were like an oasis in a desert. Here one found wise and loving hearts and always felt at home, as though one had a *right to be there*, go as often as he would.

Later, in Edinburgh, though I had less time there, I found the same restfulness and help. The rooms in this beautiful city are very attractive, well located, and from the rear windows is a delightful view of a wooded ravine. They are open in the evenings for certain hours, and I was told the privilege was much appreciated by those who could not go in the daytime.

The Twilight Bell.

BY A. T. HOWE.

IT is said, somewhere, at twilight,
A great bell softly swings,
And one may listen and harken,
To the beautiful music that rings,

If he put from his heart's inner chamber
All passion and pain and strife,
Heartache and weary longings
That throb in the pulses of life;

If he thrust from his soul all hatred,
All thoughts of wicked things,
He can hear in the holy twilight,
How the bell of the Angels rings.

Let us look in our hearts and question,
Can pure thoughts enter in,
To a place if it be already
The home of thoughts of sin?

Come, then, let us ponder a little,
Let us look in our hearts and see,
If the twilight bell of the Angels,
Can ring for *You* and *Me*.

Testimonies.

Found Help in Christian Science.

The healing of my baby brought me into Christian Science. For two days he had been unable to keep anything on his stomach—even the water he constantly asked for could not be retained. All this time he was under the doctor's care, but was rapidly growing worse. At four o'clock in the afternoon of the second day my sister and I thought the crisis had come. He lay in my lap in a semi-conscious condition, but not sleeping, in fact he had hardly slept for forty-eight hours. Every few minutes his efforts to vomit would almost strangle him. He would then sink back into my lap weak and helpless.

I begged my sister to go for the doctor. In a few minutes she returned saying no one was there. Then in despair I turned to Christian Science and sent for a practitioner of whom I had heard. She came in like an angel of peace, assuring us there was nothing to fear.

When she asked me to give up medicine and trust God, I demanded furiously, "How do I know you represent God? if it were myself I would try, but I wont practise on my baby." Then she gently told me she could not take the case unless I were willing to do as she said. Just then the baby sat up and threw up what I thought was clotted blood. Since then I found it was the medicine I had been giving him. I burst out into a perfect wail, "Oh, I don't believe in God or anything." My sister turned and said, "How you can sit there and refuse to help——" but she was already treating us.

In ten minutes that baby was peacefully sleeping. After half an hour's rest he sat up and asked for water, which he drank and was able to retain. He then sat in my lap and played with his toys. In an hour, when dinner was served, he begged for a piece of roast beef. We gave him a piece half as large as my hand and he sucked it dry. He went to bed at six o'clock and slept soundly all night, something he had never done before. In fact, I thought it wrong and got up many times to be sure he was sleeping.

In the morning we found we had a well baby. He ate a large dish of breakfast food and played around the same as usual. I was so grateful to God for this healing, especially as his father had been away three months and was just about to return, that I declared I would go to a Christian Science meeting and nothing should keep me from testifying. I did go and began my remarks by saying, "I am not a Christian Scientist, but I want to tell what Christian Science has done for my baby."

I am glad to say I am now a Christian Scientist and have been for two years. My husband and I have recently received class instruction. No Christian Scientist can begin to tell the blessings this beautiful Truth has brought into his life.

I am grateful for the *Sentinel* and *Journal* and for our Leader's wonderful books. I am gradually beginning to understand the Bible through the light thrown on it by Science and Health. Since I lost my childhood's faith in it, over twelve years ago, I never looked in it until I took up Christian Science. Now it is a daily help and comfort.

MRS. J. A. BARRIS, New York, N. Y.

Creeping Paralysis Healed.

I have often thought I would try to express my gratitude for the *Journal* and *Sentinel*, and also for the Bible Lessons. To any one situated as I am, far from Christian Science services, they are indeed full of meat and drink for the hungry, thirsty soul.

Christian Science came to this part of the country about two and a half years ago, or at least that was about the first I had ever heard of it. A neighbor was healed by it, after she had been pronounced incurable. The only ques-

Digitized by Google

tion I asked when I heard of it was, "Do they believe God does the healing?" I of course received an affirmative answer and was fully convinced then and there that it *was* of God.

My husband was in need of physical healing at that time and I insisted on his giving it a trial. He went to Denver to see a practitioner and was healed in three weeks from the time he went. In two weeks' treatment he was healed of creeping paralysis. He brought home "Science and Health with Key to the Scriptures," and I began reading it and was healed of many ills. The worst affliction that I had was chronic constipation, which did not at once disappear altogether, although I was better from the first and never took any medicine after beginning to read Science and Health. Previous to that I had to take medicine constantly. Now after two and a half years I feel that the demonstration is made.

I soon found that I had my salvation to work out and that now was the accepted time for me. I accordingly commenced the study of Christian Science. I study the Lesson-Sermon with my twelve-year-old daughter, who has demonstrated some for herself. It has been the only remedy for myself and six children, and although the way, to mortal sense, is often dark and dreary, I am still pressing onward and upward hoping and praying that God will open the blind eyes and unstop the deaf ears.

MRS. O. R. JONES, Stratton, Neb.

Made Every Whit Whole.

In the year 1897 Christian Science came to our notice. We were told by a neighbor that they were entertaining a Scientist from Detroit, and that we might perhaps receive the help from her which we so much needed.

My husband had been a great sufferer from rheumatism for twenty years, which terminated in a severe case of lumbago and he became entirely helpless. We had exhausted the skill of many physicians. Electricity and every known remedy had been tried, but without avail, and when Christian Science was proposed it was *the last resort*. Here we learned that man's extremity was God's opportunity.

The work was commenced, and in five days' treatment, my husband was able to go about the farm and do some work. At the end of the tenth day he was able to do all kinds of the hard work which farmers have to do, without the slightest inconvenience. Since his treatment, he has never had a return of his former trouble.

This was not the only benefit received. I was suffering from consumption. I had had many hemorrhages, and was living on cod liver oil and powerful stimulants. The sentence of death had been passed, and I was simply waiting the time when I should leave all that was dear to me, and find the rest and peace which had been promised me in the Bible, which I always kept near me.

I have been entirely healed of my ailments, and am a well woman to-day. I commenced to search at once for the Truth in the Bible and Science and Health. I received class instruction from a loyal student, and have been able to make many demonstrations. This is indeed the Truth the Master referred to when he said: "Ye shall know the truth, and the truth shall make you free."

MRS. HENRY KLAISS, Melmore, O.

Grateful for Christian Science.

I desire to give to the readers of the *Sentinel* my experience and healing in Christian Science, which seemed so beautiful and miraculous at the time, but I find it is the work of God's unfailing love, and not a miracle. Through the understanding of Truth this world was changed from sadness to gladness, and a life of suffering to one of health and peace and joy.

I suffered several years with eye trouble. At first I secured glasses, which I wore a few years and then the trouble came back with redoubled force. I then went to the best oculist in western New York and he performed an operation upon them and gave me glasses which I only wore a short time and then had them changed. I continued in this way until he said I need not come any more, as he could not do anything more for me. I had been advised to try Christian Science but I could not understand and was not willing to investigate until all else failed.

That was three years ago, and now I am able to tell others of God's love, and His ready help in time of trouble. I took treatment five weeks, and at the end of that time saw the light sufficiently to be able to help myself and family. The peace Christian Science has brought is beyond expression.

The first day I visited my healer she told me to read a little in Science and Health. I told her I could not, for I had not been able to read for a long time. She said, "Try to read a few lines to-morrow." I thought I knew best, but tried to read without my glasses, and was surprised to find I did not suffer any unpleasantness and have read every day since.—L. G. M., Springfield, Mass.

Epilepsy Healed.

When I was four years old I was frightened by a horse running toward me. I started to run and fell in a fit. My father and mother had passed away and I was living with a man and his wife, who cared for me as they would have cared for their own child. They did all they could for me. Doctors were employed and for a time they were able to relieve me while I was taking their medicine, but finally they failed to do anything for me. I then took patent medicine until it failed to help me.

I continued to grow worse and had as many as fourteen spasms in twenty-four hours. After an attack of this kind I was unable to do anything for a week. Finally I became so bad that I had fifty spasms in one day. Then the man with whom I am living went to Roanoke and had a friend write to a Christian Scientist to treat me.

The Christian Scientist treated me about three weeks and I did not have a single fit after the first treatment until the following harvest, when I had a slight attack. I was working in the harvest field and I had always been affected when I worked very much in hot weather.

The following November I had another attack. I sent a telegram to my healer. I soon received help and I have had no fits since November, 1900.

I am reading "Science and Health with Key to the Scriptures." I cannot express my gratitude to God and our dear Leader for the blessings I have received through Christian Science.—H. S., Ogden, Va.

When I came into Christian Science I was an invalid, taking medicine all the time day and night. My father and husband were physicians. Strange as it seemed then, my father, who had practised medicine over forty years, was the first to tell me of the wonderful cures wrought by Christian Science, and persuaded me to try it, which I was very willing to do. I was healed instantaneously of the seeming trouble I then had.

I have since been an ardent believer, having some good demonstrations in my own case and also with others. One was a sprained ankle, which was cured in one evening. At another time a heavy folding bed fell on my limb. Some said, "you will be laid up with that;" but, thanks to Christian Science, not one moment was lost in consequence, although it was badly discolored for a while.

I could fill pages telling of my demonstrations, but will wait for some other time. I love to study the Bible and Science and Health, our *Quarterly*, and also all our dear Leader's writings. I am a charter member of our little church, also a member of the Mother Church.

MRS. KITTIE CHURCHILL, Marshalltown, Iowa.

Digitized by Google

Religious Items.

W. W. Stevenson, writing in *The Congregationalist and Christian World*, on the subject, "What Help May the Public Schools Expect from the Churches," says:—

"No school is worthy of the name unless the children taught therein come to have a sense of their personal community, and national responsibility. The oral and silent instruction of the teacher should help the child to something better than the mastery of text-books if he is to do the work of life worthily.

"Opportunities, open to the teacher in developing right feeling by stimulating love of poetry in the child, acquainting it with the best literature, and by bringing to its attention the deeds and words of the heroes and the great spiritual leaders of the race, show clearly that any scheme of education for the child includes knowledge of the finest portions of the Bible as surely as of any other great literature. A child has a right to know quite as much of the Christ who was born in a stable, cradled in a manger, lived in a peasant's cottage, worked at a carpenter's bench, was so poor that he had not where to lay his head, and yet was heard gladly by common people because he brought life and light into the world, as to be required to learn of the unsavory details of the gods of the so-called heathen nations."

Every true disciple of the blessed Master desires to know and to do his will, and being in an humble and obedient spirit, he enters the path of duty, it may be with fear and trembling, but with the firm resolve to glorify God in doing whatever sacrifice it may require, knowing that a service that does not require sacrifice amounts to but little. He says, "I will not offer unto the Lord that which costs me nothing," and with the apostle he counts not his life dear unto himself, provided the necessity is upon him to give life itself, if thereby the gospel is served. He delights to do the will of God, and for the reason that his guide is the unerring teacher who proposes to lead him into all truth; having the mind of the Master he readily acquiesces with all that the Holy Spirit presents to his heart, for his is a loving service. He is an accredited workman, a co-laborer in the vineyard of his Lord, operating according to God's plan and not his own, only in so far as his will coalesces and works in harmony with that of his heavenly Father, so that whatsoever he doeth, whether he eats or drinks he doeth it unto the Lord.

The Philadelphia Methodist.

The drink evil which has in Christian lands grown up in spite and defiance of the ministrations of the Gospel and beneath the full light of Scripture truth, and has become the greatest curse of these lands and the greatest hindrance to the work of the church, is found to be as great a curse in heathen lands and the greatest barrier to the success of the Gospel among the heathen, and, strange as it may appear, those nations that seek to Christianize the heathen are largely responsible for the introduction and perpetuation of the drink evil. What are the facts? Strange as it may seem, the Brahminical, Buddhist, and Mohammedan religions, considered as pagan and false religions, absolutely prohibit the manufacture, sale, and use of intoxicating drinks, the curse of nations and religions; while by nations claiming to possess the pure and true religion, this curse is legalized and perpetuated, and in some instances forced upon the native races in heathen lands.

JAMES B. DUNN.

The idea of responsibility to God is not in all our schoolrooms. In our homes family piety has less place than formerly. We do not find fault with a transition state of society; but what is being done by way of substitution? It will not help motherhood and childhood, character and purposing, that we are much nearer a scientific definition of God and a demonstration of immortality, if He is no longer our Lord and our God, to whom we owe our daily lives and our every thought. That love has cast out fear is no gain, if love follows after fear, and leaves only indifference. Clearly, to any careful observer of social and family life, we have a good deal farther to go before we have reached a safe position. We have to reconstruct that which we have been accustomed to pack away in the little word "piety"—a sentiment of nearness to God, a feeling of continuous responsibility, and a desire for unity with Him.

The Christian Register.

The increase in the number of divorces granted in many states is an alarming feature of present-day civilization. The number of divorces granted in Ohio has increased nearly fifty per cent in ten years, or nearly three times as fast as the population; reaching 3,217 in the year 1899, or almost one divorce to every ten marriages. In Indiana there were 4,699 divorces granted in 1900, or more than one divorce to every six marriages. Indiana divorces have more than doubled in number during ten years. The county in which the capital is situated had 629 divorces in 1900, or more than twenty-five per cent of the marriages. Such figures as these show the need of more active effort for the protection of the family by those who see the dangers that threaten family life.—*The Standard.*

The following from *The Congregationalist and Christian World* would seem to indicate that the spirit of doctrinal controversy is not yet quite extinct in the evangelical churches:—

"The *Christian Observer* rejoices in the supremacy of the Presbyterian over the Congregational polity as a means of maintaining hearty concurrence in a creed. Current discussions in Presbyterian bodies do not indicate that concurrence in the Westminster Confession is 'hearty;' but we cheerfully admit that Presbyterianism is more effective than Congregationalism both for those who wish to prescribe a creed for others to believe and for those who are willing to accept the prescription."

Three things are essential for the growth of animals and vegetables—light, air, and exercise—and these are as essential for the development of our spiritual nature. The illumination afforded by the Holy Spirit, who taketh of the things of God and showeth them unto us, gives us proper conceptions of God and the things of God, for we have the mind of God made manifest. We think His thoughts and do His will, and by following on to know Him we are brought into a richer and rarer atmosphere all redolent with the fragrance of heaven, for we have our conversation in heaven. The preparatory stages for its enjoyment are only through the exercise of those gifts graciously given us of God.

The Philadelphia Methodist.

Upon the subject of "The Spiritual Nurture of Children" Rev. Charles A. Richards, D.D., recently said:—

"Our age has awakened to a new realization of the value of the child. Dr. W. T. Harris catalogues a thousand recent publications in child study. Spiritual culture, which we are to discuss, has a narrower field than education in general. It has a single aim, but that aim is momentous and transcendent,—it is character. The nurture needed to secure the character we desire must be religious nurture. Nothing less than Christlike character must be the aim of religious nurture."

"Be ye doers of the word, not hearers only," is the religious and political motto of President Roosevelt, and it is a splendid motto for our new chief magistrate. He is said to be a man of decided character and of positive convictions in favor of the moral and Christian side of all public issues. We are hoping he will make us a good President.—*American Baptist Flag.*

If civilization is not to be a failure, we must learn how in times of peace to produce the admirable traits of character which shine out in time of war and trouble. We must with the increase of wealth and luxury learn how to train men and women without the struggles of poverty and misfortune.

The Christian Register.

It is a striking index of the thorough unity of the whole country that the one city in which the people met together by a common impulse to pray for the life of President McKinley was the former capital of the Southern Confederacy, Richmond, Va.

The Watchman.

What we most need to learn is this: that we may be laying up heavenly treasures of which nothing can deprive us, whilst we are laying up earthly treasure of which we cannot be sure for so much as an hour.

RUFUS ELLIS.

Faith, the foundation of Christian character; works the expression of its possession. Mutually dependent, both necessary to symmetrical and progressive development in the Christian life.—*The Examiner.*

The thing for us to do, if we wish to be perfect is to get as close to Christ as we possibly can, that his teaching and example and personal sympathy may influence us to the full.—REV. DR. SWEETSER.

It is a grand thing to find joy in one's work. If you have found that, you have found the heart of life. Glad service is better than great service, unless that be glad too.—JAMES BUCKHAM.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50. prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

National.

Next December an Alaskan mail route will be established from Skagway to St. Michael. The route will be 1003 miles long. Mail will leave Skagway on the 8th and 22d of each month. The running time is not to exceed sixty days in each direction. Considering that transportation in Alaska, during the winter months, is chiefly by dog team, this will be quick service.

A greater number of postoffices have been established in Alaska within the last six months than in any half year since white men took up a residence in the territory. A steamship mail service was established between Skagway and Seattle November 1.

The Public sessions of the Schley court of inquiry were ended November 7. The court will begin its executive sessions at once, and there is much speculation as to the length of time the court will take in considering the case and reporting its findings. The amount of printed evidence, including the arguments, which the court will have to consider, amounts to about seventeen hundred pages. It is probable, however, that the decision of the court will be based largely upon the testimony which was brought out in answer to the questions which were submitted by the court itself.

Justice Bradley of the United States District Court has signed a decree of condemnation and distribution in connection with the libel in prize, instituted by Admiral Dewey on behalf of himself and crew of the United States naval force taking part in the battle of Manila. When the value of the property condemned as prizes is ascertained, the Secretary of the Navy is instructed to deposit an amount equal thereto with the United States Treasurer subject to the order of the Court.

Lord Pauncefote, the British ambassador to the United States, arrived at New York November 2. He brought with him the draft of a new treaty which abrogates the Clayton-Bulwer treaty, and is in every particular satisfactory to Lord Salisbury's cabinet. At a conference which lasted only twenty minutes on November 4, the official negotiations between Secretary Hay and Lord Pauncefote were begun and concluded.

From the passage of the national banking law of March 14, 1900, to October 1, 1901, the number of national banks increased from 3,617 to 4,254, the capital stock from $616,308,095 to $661,851,655; bonds deposited with the Government from $244,611,570 to $330,721,930, and circulation secured by bonds and lawful money from $254,402,730 to $358,830,547, making a net increase in circulation of $104,427,817.

The army is now in possession of khaki cloth for uniforms which, so far as color is concerned, is proof against sun, washing, and perspiration. Khaki-dyed tents will also be used. Last year $1,475,729 was expended for horses, mules, and wagons, and there were shipped to the Philippines and China 9,470 horses and 4,283 mules.

Nicaragua has given notice of the termination of the treaties of 1867 and 1870, granting the United States authority to build a canal across that country. The termination of the treaties in no wise affects the friendly relations between the two countries and the Nicaraguan Government desires the conclusion of new treaties.

At a meeting of the executive committee of the McKinley National Memorial Arch Association, it was decided on motion of Secretary Gage, the treasurer of the association, to attempt to raise $1,500,000 for constructing the proposed arch.

The President has appointed John W. Riddle of Minnesota to be secretary of the United States embassy at St. Petersburg. Mr. Riddle was formerly secretary of the United States legation at Constantinople.

Foreign.

It is said that the cathedral of Alexander Nevskoi in St. Petersburg, has the finest choir in the world. The choir is composed of about thirty of the best voices in all the Russian monasteries. When a fine singer appears among the novitiates he is sent to the monastery of Alexander Nevskoi, where he is trained as carefully as an opera singer. He remains there doing nothing except assisting at the music at mass in the morning and vespers in the afternoon, until he becomes aged, when he is retired on a pension.

King Edward has signed the proclamation giving him his new title which is as follows: "Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Sea, King, Defender of the Faith, Emperor of India."

Three hundred patent calculators, representing a cost of $95,200, have been purchased by the German Government for use in the national accounting department.

France is considering the plan for the establishment of a French school in the United States which will be devoted to the study of American industrial methods.

It is announced in London that the Duke of Cornwall and York, has received the title of Prince of Wales.

A royal proclamation was issued November 4, which further prorogues Parliament until December 14.

Industrial and Commercial.

The world's production of gold in 1900 was 12,457,287 ounces, of the value of $257,514,700, a loss in value of $49,070,200 from 1899. The loss was mainly in South Africa and due to the war. The principal gains were $8,118,000 in the United States, and $6,606,000 in Canada. The silver output of the world amounted to 178,796,796 fine ounces, the largest ever known. The price ranged from 59.1 cents per ounce in January to 63.3 cents in December.

The dividends of the Standard Oil Company for the past year aggregate forty million dollars, the same as in 1900. The capital stock of the company is one hundred million dollars and no other industrial concern which announces its dividends to the public has a record to compare with it.

The McKinley Mining and Smelting Company has been incorporated in Arizona with a capital stock of one million dollars. The mine is in Nevada and is the property of Mrs. William McKinley and her sister, Mrs. Barber.

The Denver and Rio Grande Railroad has given an order for forty locomotives, twenty passenger cars, and two thousand freight cars. This is the largest order ever given at one time by a western road.

The world raised 277,000,000 tons of coal in 1800, against 4,020,000,000 tons last year.

General.

The October number of the *Monthly Summary of Commerce and Finance* gives some interesting statistics regarding the present condition of the territory included in the Louisiana purchase. The Louisiana purchase contains 864,944 square miles. The total land area of the original thirteen states is 820,944 square miles.

Fourteen states and territories have been created wholly or in part from its area. Their population in 1900 was 14,708,616. At the time of the purchase it was less than 100,000. Their total area is nearly one-third that of the entire Union, and their population about one-fifth of the entire United States. The value of the agricultural products of these states in 1900 was $755,000,000.

In 1899 the number of pupils enrolled in the public schools and various educational institutions was 3,331,051. These were taught by 111,689 teachers. In 1899 the public schools alone cost $37,185,881. In 1900 5,618 newspapers and periodicals were published in this area. There are 16,228 postoffices and 59,324 miles of railroad in operation. This is about 31 per cent of the total railway mileage of the country.

A simple shaft of granite which rises from the roadside near the town of Wilna on the western boundary of Russia, bears two inscriptions in the Russian language. On the side of the shaft which faces the west are these words:—

: Napoleon Bonaparte passed this way :
: in 1812 with 410,000 men. :

On the other side, facing east:—

: Napoleon Bonaparte passed this way :
: in 1812 with 9,000 men. :

The history of the most disastrous military campaign ever undertaken is told in those two sentences.

Voting by machinery was given a practical test at the recent election in Greater New York. In one of the districts in Brooklyn one of the United States Standard Voting Machine Company's automatic machines was used, and was pronounced a success in every respect. Three hundred and ninety-five persons voted, and two minutes after the polls were closed the result was announced.

The total cost of the Siberian railway, which has been constructed by Russians, amounts to $390,000,000. The total length of the railway with the various branches under construction will be 5,542 miles. The rapidity with which the road has been built has never been equaled. Work was commenced in 1891.

Minister Wu Ting Fang delivered an address on the subject of "The Tendencies of the Times" before an audience of three thousand people at Ann Arbor, Mich., November 1. The address was delivered under the auspices of the Students' Lecture Association and Good Government Club.

It has been announced that, commencing November 15, there will be a substantial reduction in cable rates to the Philippines. The rate to Luzon will be $1.66 per word, and to all the other islands $1.76.

The Pan-American Exposition closed at midnight Saturday, November 2. The Exposition company is in arrears upwards of $3,500,000. The total attendance was about 8,350,000.

Hon. Seth Low was elected Mayor of Greater New York by a plurality of about thirty thousand votes.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Selected Articles.

Mr. Hering to Evangelist Morgan.

To the Editor of *The American.*

In your issue of October 15 you publish some utterances made by Evangelist G. Campbell Morgan at the Mount Vernon Place Methodist Episcopal Church on Monday afternoon and evening, in which this gentleman is quoted as calling Christian Science "blasphemy," "astounding nonsense," etc., thus assailing and denouncing the religious belief of a large body of Christians, than whom no other religionists endeavor to follow the teachings of our Master, Christ Jesus, more closely, more faithfully, more devoutly, and more fruitfully. As a representative of this denomination I ask you kindly to allow me to make a few comments in defence. Mr. Morgan said:—

"I have no part in this blasphemy, which dictates terms and says that 'God must cure if I have faith enough'" (referring to Christian Science).

Christian Science does not "dictate terms" to God, but accepts the terms dictated by God himself through His Son, Christ Jesus, as follows:—

"Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father. And whatsoever ye shall ask in my name, that will I do, that the Father may be glorified in the Son. If ye shall ask anything in my name, I will do it" (John, 14 : 12, 13, 14).

"And Jesus answering said unto them, Have faith in God. For verily I say unto you, That whosoever shall say unto this mountain, Be thou removed, and be thou cast into the sea; and shall not doubt in his heart, but shall believe that those things which he saith shall come to pass; he shall have whatsoever he saith. Therefore, I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them" (Mark, 11 : 22, 23, 24).

"And he said unto them, Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover" (Mark, 16 : 15, 17, 18).

Also, as given through the Apostle James:—

"But let him ask in faith, nothing wavering. For he that wavereth is like a wave of the sea, driven with the wind and tossed" (James, 1 : 6).

"And the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him" (James, 5 : 15).

This last reads "shall," not "may," and thus is very positive.

The New Testament is full of records of healing through spiritual means alone, and history records that this healing was a common accompaniment of Christianity during the first three centuries. If healing through Christ was possible then, it must be possible now, for neither God nor Christ has changed; and this is being proved daily by the scores of cures effected by Christian Scientists through their understanding of God as set forth in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Mr. Morgan also said: "Out of this belief in faith-healing has come the astounding nonsense called Christian Science."

Jesus said, "By their fruits ye shall know them" (Matthew, 7 : 20).

Because Christian Science reveals the divine Principle underlying the work of Christ Jesus and his disciples, by which the sick and sinning were healed and reformed, and thus enables its followers to heal the sick and reform the sinner to-day, is it "astounding nonsense"? When it heals and saves drunkards, opium fiends, and slaves of myriad forms of vice and sin, and leads them into a life of sobriety, purity, and love to God and man; when it gives infidels and agnostics an understanding of the Bible and awakens in them a belief in God and Christ, and brings to their heretofore barren hearts the sunshine of Truth and Love, or restores to happiness, unity, and peace a home that has been wrecked by selfishness, family quarrels, and dissipation; when Christian Science has such fruits as these, do they indicate that it is "astounding nonsense" or "blasphemy"? Or is it an "astounding nonsense" that enables Christian Scientists to take the hopeless invalid who has tried every known medical or surgical treatment, or the unfortunate sufferer from disease who has been pronounced "incurable" by reputable members of the medical profession, and through the understanding of the underlying Principle of true Christianity,—the truth about God, man, and the universe,—restore these people to health and happiness in accordance with the oft-repeated command of Christ Jesus?

If these are not the fruits of the Christianity that Jesus came to establish, what are they?

It would not seem strange for an infidel or agnostic to disbelieve in Christian healing, but for a professed believer and follower of Christ to do so and denounce a body of earnest workers in Christ's vineyard, who are striving faithfully to follow his teachings and example, healing and saving the sick and sinning by restoring and utilizing a lost element of Christianity, is, indeed, amazing.

HERMANN S. HERING.

In the *Baltimore American.*

Food for Thought.

Editor *The Times.*

The article in *The Times* of September 25, regarding Christian Science, might have been a good deal stronger than it was.

There are some things connected with Christian Science which I am frank to say I do not as yet understand or comprehend; but that there is a great truth underlying it, I am quite prepared to admit, although I, myself, am not a Christian Scientist. Indeed, there are many things in the natural or material realm that we do not understand or comprehend, and perhaps could not understand or comprehend them were they thoroughly explained to us. Take higher mathematics, for instance. To the vast majority of people that abstruse science is a sealed book. It is said of Macaulay, the great historian, that he was so deficient in

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

that respect he could not comprehend the philosophy of the multiplication table. So we do not need to go to the divine or supernatural realm to indicate how little we know.

There are certain Scriptural truths that have puzzled the profoundest theologians, and doubtless always will continue to puzzle them, unless in the days to come more light shall be shed upon them or fresh revelations are made concerning them. But they do not controvert their truth because they cannot comprehend them. If we are only going to believe in this world what we can comprehend and understand, we shall believe little, and our stock of knowledge will be slim indeed. All divine truth is ascertained through research, when it is not especially revealed to certain highly favored ones by the Creator of truth Himself. One of the very first Biblical injunctions is: "Seek and ye shall find; knock and it shall be opened unto you." The Scriptures forcibly emphasize the fact that there is no royal road to the ascertainment of divine or spiritual truth. It is Seek, seek, seek; Knock, knock, knock—one constant seeking and knocking.

My contention is that it is the part of unwisdom to attempt to destroy Christian Science, or at least to bring it into disrepute, by the methods employed. Calling names and applying harsh epithets is neither argument nor proof, nor does such a course influence thinking people. The time has gone by when a new idea, whether it relates to religion, science, invention, or what not, is to be flippantly set aside and ignored without first commanding a respectful and patient hearing. We have learned that much from experience.

When Paul stood on Mars Hill he must have shocked the intellectual Athenians who composed his audience, for the startling ideas he proclaimed and said he absolutely believed in, were entirely at variance with the ideas they themselves believed in and had been inculcating all their lives. But Paul seems to have been given a thoughtful and tolerant hearing, even in those days, and his ideas, then rejected, are now the basis of our mighty Christian civilization.

The most of us remember the struggles and trials, not to say almost pathetic importunities, of Professor Morse, the inventor of the magnetic telegraph, and likewise that other wonderful man, Cyrus W. Field, who laid the Atlantic cable. In both instances, these great men with ideas that were to revolutionize the world, were regarded as little less than idiotic. It has only been through ridicule, derision, misrepresentation, vindictiveness, hindrance, and very many times through death itself, that progress has been made either in the natural or divine realm.

This has been the history of all the past; but the world is only in swaddling clothes as yet, if it is six thousand years old, and the march of centuries will see such revelations with regard to the natural and supernatural as will make this present age and succeeding ages exceedingly small and insignificant in comparison.

As I have already remarked in a communication in the *Star and Enterprise* of recent date, if Christian Science is a fallacy, it will be short-lived and soon pass away; but if it is based on the truth; if it is a revelation from God, through the medium of a woman selected especially for that purpose to give it to the world, all the human forces that can be brought to bear to destroy it will be of no avail, for that which is of God is eternal, and that which is of man perisheth with himself. J. T. R.

In *The Times,* Newville, Pa.

Preach too much, says Mr. Sheldon.

THE REV. CHARLES M. SHELDON has recently been in Denver, Col., where, among other things, he attended a meeting of the ministers of the city at the First Congregational Church. He talked to the ministers, and according to the *Denver Republican* "answered all the questions they could think of asking him." The following is in part what he said:—

"Well, brothers," he began simply, "I thank you first of all for this coming together"—and every listener felt that the speaker really did feel grateful. "I have always felt it was a great advantage to have meetings of ministers." Later, when the questions had begun to come in, he dwelt on this thought, and said he believed in the breaking down the old lines between the churches. "Let the ministers go among their parishioners two by two. It is not a matter of creed, but a matter of life."

"What would Christ say," some one asked, "if all his children were one in creed?"

"I think he would say that was the millennium," was the answer. He said that there were four things of which he had become convinced during his experiences as a minister, and these he offered for what they might be worth to others. First, was his conviction that there is no need of so much preaching to the people, and that, while no man can speak for another, he could not write two good sermons a week.

"The people are preached to too much, and I think a pastor's strength can best be expended in other ways. Let there be less preaching and more work in other ways in the church." His second thought was to preach more to the young people and less to the old folks. "It would pay you," he declared, "to say this: 'I am going to preach once a week for three months to the Sunday School. We are talking to the top or cream, intellectually, of our people, and forget the children, the young men and girls.' Third, I am convinced of the need of preaching to the congregations the truths of applied doctrine. For instance, the doctrine of ownership by God is not preached. Business men have no conception of the stewardship of life. 'The earth is the Lord's,' they say, 'and the fulness thereof—all but my corner lot, and that is mine.' Fourth, is the necessity of getting together our Christian forces."

Among the first of the questions asked was, "Are we over-organized?" and Dr. Sheldon replied, "Yes. The simpler our organization can be the better." Some one wanted to know if the chief end of the churches were not to give inspiration for better living. Dr. Sheldon thought that if only theories were preached with no practical object-lessons back of them, inconsistency might be charged. "I would not dare," he said, "to let go the grip I have on the physical end of my work. Especially with the negroes in my Tennessee settlement work." Still, in reply to queries, he said he believed in institutional church work in street meetings. "If the people will not come to us, we must go to them," he said. Also that the state and county and city ought to furnish work for the unemployed; that they ought to be making roads all the time where a man out of work could always get a chance to earn food and lodging.

Surrender.

A little child was one day playing with a very valuable vase, when he put his hand into it and could not withdraw it. His father, too, tried his best to get it out, but all in vain. They were talking of breaking the vase, when the father said:—

"Now, my son, make one more try. Open your hand and hold your fingers out straight, as you see me doing, and then pull."

To their astonishment, the little fellow said: "Oh, no, papa; I couldn't put out my fingers like that, for if I did I would drop my penny." How many of us are like him,—held prisoners by our own desires!—*Selected.*

He gives the most who bravely lends a hand
To help his brother in the hour of need;
God keeps the record,—He can understand,
And of our slightest service will take heed.

Anon.

The Lectures.

At Joplin, Mo.

Judge William G. Ewing of Chicago, the able and distinguished lecturer on Christian Science, spoke at the Club Theatre last evening (Tuesday, October 22), under the auspices of the Second Christian Science Church of Joplin. The speaker was introduced in the following words by Mr. R. A. Pearson:—

Ladies and Gentlemen, Friends:—There is no more common, and no more invidious form of injustice than that which hastens to condemn before it hears. There is no greater menace to the cause of right and truth than one who is "most ignorant of what he's most assured." It has always been the spirit of the generations each to exempt itself and to heap reproach upon the past for its vagaries, and for its perversity; until it has required centuries to impress the world with a simple lesson of tolerance. In no other mode of the human idea has this strange inertia more prevailed than in that which has to do with the conscience and the creeds of men, and from this has come all the dogma and the bigotry and the heartless persecution of the ages; and, sad to observe, even yet, in a manner, the same unhappy traits are sometimes seen to persist. All this has been, because it is of a province so peculiarly prolific of the fantasy as well as of the faith of men; for it is always concerned with the great infinitudes of thought, and made serious by the deep, insatiable hunger of the human heart to know at last some safe and sure abiding. The great mystery pervades and bounds our very being, the strange problem of human suffering and of evil; the deep enigma of life and death; the dreams of untried destinies; the haunting spectres of hope and fear; and all that

> shakes our disposition
> With thoughts beyond the reaches of our soul.

How pitiful the arrogance that would compass with finite assurance the immeasurable verities, and then with sword, or fagot, or ecclesiastical censure, seek to compel the conscience and intelligence of men in forms of curious and antiquated convention.

It is said that when the Christian missionaries first set foot upon the shores of Britain, a native council deliberated upon what recognition they should be accorded; and while so engaged a bird flew in out of the darkness, fluttered about the room for a time, and then as suddenly took wing and departed. An old chieftain arose and remarked the incident, and likened to the flight of the bird the course of a human life, that seemed to come from out an infinite void, and presently return. And he declared that if the strangers had anything to give that might lighten that great mystery they should be permitted their office. The sentiment is worthy. And so, if there is a glint or gleam that will yield a brighter hope, an impulse that may inspire a stronger faith, a single word uttered that may serve to supply the growing inadequacy of conventional creed, or suffice for the enlightened longing of the heart of to-day, then let that word be spoken by whomsoever.

I do not pretend to pronounce for the verity of that doctrine entitled Christian Science. It is rather here a matter of the right and reason for its fair investigation. It comes with large profession and gracious office, and the test it sets for itself is crucial. There is to-day a marked turning of the scientific spirit and of reverent inquiry into the domain of faith and what we have styled the spiritual forces, and the character of the intelligence and the accelerated interest this phase of it has engaged in arresting wide attention. And this audience as well for that as the merits of the occasion, will lend interested heed to its exposition this evening.

We have with us to-night a gentleman whose eminent career and large attainments entitle him to our courtesy and a respectful hearing. I take pleasure in presenting to a Joplin audience Judge William G. Ewing of Chicago, who will address you on the theme of Christian Science.

Joplin Daily Globe.

At East Aurora, N. Y.

The first public lecture in the history of the growing work at East Aurora, N. Y., was given at the Opera House, Thursday evening, October 17, by Carol Norton, C.S.D., to an excellent audience of the people of the town. Over one hundred Scientists came from the neighboring city of Buffalo, showing their interest in the work and manifesting appreciation of the efforts of the local workers to present the blessings of Christian Science to the people of the community.

Mr. Norton delivered his lecture entitled, "A Third of a Century of Christian Science." He was introduced by Mr. Charles D. Holcombe, Second Reader of First Church of Christ, Scientist, Buffalo. The work at East Aurora is steadily growing and is conducted by a group of faithful workers loyal to God, to the ideals of Christian Science, and to its beloved Leader. In this town is located the famous Roycroft Shop, for the making of hand-wrought books, and it is largely because of this well-known work that East Aurora, a place of less than three thousand inhabitants, is known virtually throughout America. The Chapel Hall of the Roycroft Shop was generously placed at the disposal of the Scientists, but it was not deemed of sufficient size for practical use. The growing tendency to give Christian Science an impartial hearing, and in some cases even more, a *sympathetic* hearing, is one of the interesting signs of the times. Mr. Holcombe in introducing Mr. Norton said:—

Ladies and Gentlemen:—In meeting together this evening, I am sure there is one proposition upon which we are all agreed: the permanent establishment of honesty, health, and happiness, and the destruction of dishonesty, disease, and unhappiness. Consequently, the privilege of such an hour as this is two-fold, bringing, as it does, a sweet fulfilment of promise, with the privilege of a glorious opportunity,—fulfilment, inasmuch as it heralds a present realization of that angel promise which, nineteen hundred years ago, rang sweet and clear over the fields of Judea,—

> Peace on earth, and good-will,
> Souls that are gentle and still,
> Hear the sweet music of this
> Far-off, infinite bliss.

Fulfilment in a gladful obedience to our Saviour's commands, "Go ye into all the world, and preach the gospel to every creature," "Heal the sick," "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me."

As the glad tidings of Christian Science is told to-night, and you listen to the sweet, true story of loving deeds wrought through its healing hand by the mighty power of God, you are brought face to face with a blessed privilege, a privilege unconfined by time or space, extended by the Master himself, "The works that I do shall ye do also, and greater works than these shall ye do."

My friends, I have found health and strength, rest and peace, in Christian Science, and have for years been living under its beneficent influence. My heart is filled with an earnest, honest desire that you who seek for the good which is of God, and the establishment and continuance of honesty, health, and happiness, will give this subject your kind and thoughtful attention, careful consideration and investigation.

It is now my great pleasure to introduce to you as the lecturer of the evening one who holds the high and holy office of member of the Board of Lectureship of the Mother Church of Christian Science in Boston, Mass., Mr. Carol Norton of New York City.—*Correspondence.*

At Sioux City, Ia.

The much discussed teachings of Christian Science were treated of and explained in a lecture at the Grand Opera House yesterday afternoon (Sunday, October 20), by Edward A. Kimball of Chicago, member of the official lecture board of The First Church of Christ, Scientist, of Boston. Mr. Kimball is an easy and pleasant speaker and his discourse was heard with deep attention and great interest by a large audience.

James Bishop, of First Church of Christ, Scientist, Sioux City, introduced Mr. Kimball as follows:—

Friends:—We are glad to give you again the opportunity to hear something of what Christian Science teaches, from one who is so able to present the subject in a clear and impressive manner. The purpose of this lecture is to give you a higher perception of the principles and practice of Christian Science, and to correct the mistaken sense of it.

The most convincing proof we have of the efficacy of this Science is in the teachings and demonstrations of Jesus. The Discoverer and Founder of Christian Science, the Rev. Mary B. G. Eddy, author of the Christian Science text-book, "Science and Health with Key to the Scriptures," after receiving a severe injury, pronounced incurable by the attending physician, was perfectly restored to health and strength through the power of divine Mind. The healing of Mrs. Eddy resulted in her discovery of the Science of divine metaphysical healing, which she named Christian Science.

Of the lecturer we can say that he speaks with authority on the subject of Christian Science. Ladies and gentlemen, I have the pleasure of now introducing to you Mr. Edward A. Kimball of Chicago, member of the official lecture board of The First Church of Christ, Scientist, in Boston.—*The Sioux City Journal.*

At Toledo, O.

Yesterday (Sunday, November 3) was a red-letter day for the Christian Scientists in Toledo and Northwestern Ohio in general. The sixth lecture in the local Christian Science Church under the direction of the church was given yesterday afternoon by Mrs. Annie M. Knott of Detroit, Mich., who spoke on "Christian Science, The True Idealism."

The church was crowded with members of the church, their friends, and large delegations from Detroit and Monroe. The beauty of the interior of the church was further enchanced by immense ferns and palms, banked behind the speaker.

Mrs. Knott is a most interesting and entertaining speaker, and for an hour yesterday she held her audience spellbound.

In introducing the speaker, Miss Sarah J. Clark, First Reader of the church, said:—

My Friends:—In behalf of this Church of Christ, Scientist, I welcome you this afternoon to listen to the sixth lecture given under the auspices of this church by members of the Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass.

Each lecture bespeaks an increasing interest in this gospel of Love that heals the sick and suffering, reforms the sinner, and uplifts mankind to nobler aims and desires.

Christian Science teaches that the promises in the Bible are being fulfilled to-day, that the divine compassion which heals and saves is here; that God is omnipresent Good. Although impossible to explain fully so infinite a subject in a lecture, yet all may be convinced of the truthfulness and availability of Christian Science.

The subject of the lecture this afternoon is "Christian Science, the True Idealism." I now have the pleasure of introducing the lecturer of the afternoon, Mrs. Annie M. Knott of Detroit.—*The Toledo Times.*

At Ottawa, Ill.

There was a fairly large audience out Thursday evening (October 17) to hear Judge Ewing of Chicago, on Christian Science. The speaker is reputed to be one of the best in the West, and as such may be considered as authority.

The lecturer was introduced by Hon. Henry Mayo of Ottawa, who said:—

"It is my good fortune to introduce to you to-night a gentleman with whom a great many of you are familiar, who will address you upon a subject not entirely new, not novel, but one comparatively new, a subject which the universal mind of the public has not investigated very extensively. There may be differences of opinion among men with regard to the theories that are stated, but, thanks to all of us, we are living in a period when men are able to express their opinions, so long as they do it lawfully, upon almost any subject, when men will listen. We have passed the period in the civilized world, thank God, when men are imprisoned, and confined, and persecuted, because of the expression of opinion differing from that of the common public. We have reached the period in our civilization when men think, and women think, and we investigate for ourselves, and we draw conclusions from the investigation of a particular subject, and we are allowed to do that fairly and conscientiously, with ourselves, without the fear of being oppressed or condemned for the conclusions we come to.

"I have the honor to-night to introduce to you Judge William G. Ewing of Chicago, who will address you upon the subject of Christian Science."

Daily Republican Times.

At Spencer, Ia.

Edward A. Kimball of Chicago, delivered his lecture on Christian Science at The Grand, Friday evening (October 25), and was greeted by a full house of our best people, and had the closest attention throughout. Mr. Kimball began his lecture by giving some of his personal experience, saying that some fifteen years ago he suffered from what was considered an incurable disease; that all that medical skill could do for him had been exhausted. Previous to that, he said, he had been opposed to Christian Science, but as a last resort he consented to try it and was completely healed.

He spoke at considerable length of disease and its relation to the mind, emphasizing the idea that fear is responsible for much bodily illness. The speaker generalized largely, saying he could enter into but little detail in the limited time at his command. He is a man of a large fund of information, and an interesting speaker. He was listened to by people of all shades of opinion, the views of all of whom he treated with the utmost fairness. However much others may differ from him in opinion, all went away feeling that no man could exercise more charity for the views of those from whom he differed, than did the speaker on this occasion.—*The Clay County News.*

At El Dorado, Kan.

T. A. Kramer in a brief address very appropriately introduced Judge William G. Ewing at the Opera House last night (Friday, October 25).

Of Judge Ewing's lecture on Christian Science many people say as did the prominent editor of Atchison after hearing Judge Ewing: "If that is Christian Science we must confess it is not what we thought it was." The lecturer spoke of the growth of individual rights accorded to each individual in every English-speaking country as resulting from man's new idea of God, which has changed to a God of love, impartial, unchanged, infinite presence. He showed that in the essentials of Christianity the old orthodox churches do not differ from Christian Science, and that their faith is not, as many people think, a patent healing method that has

Digitized by Google

never been patented, but is simply and purely a religion of Jesus Christ.—*El Dorado Republican.*

Lectures at Other Places.

Rutland, Vt.—Judge William G. Ewing, October 3.

Thanksgiving Day.

CHESTER B. JORDAN, Governor of New Hampshire, issued the following proclamation, November 5, appointing Thursday, November 28, as the annual day of Thanksgiving and praise.

STATE OF NEW HAMPSHIRE.

By his Excellency,

CHESTER B. JORDAN, *Governor.*

Proclamation for a day of public thanksgiving and praise.

Ever since the golden autumn of 1621 dawned upon our forefathers, at Plymouth, for various reasons and at sundry times, Thanksgiving days have been observed. Fast and Thanksgiving days were from time to time appointed as waves of sorrow or streams of joy broke over our ancestors. The annual harvest festival, so beautifully inaugurated and long kept first by the colonies and afterwards by the state, was most appropriately nationalized by the immortal Lincoln in November, 1863.

This day more than any other takes strong hold upon our hearts, our affections, our souls. Around it cluster tenderest memories of father, mother, brother, sister, and friend, as all were together about the home fireside and set up their household penates. In our visions, dreams, and recollections these home ties, home scenes, some of them too sacred to tell to the world, come thronging in upon us, to make both us and the day better. A day dedicated to so much that is dear, so inshrined in heart and home, should be worthily, tenderly, and patriotically kept.

The God of grace and of plenty has dealt most kindly with all our people in state and nation, the past year. The harvests have been abundant. Pestilence and famine have been unknown. Evidences of unusual thrift, enterprise, prosperity, and of loyalty to the flag are manifest in every section of our great country.

Because of these and other innumerable blessings, abounding from ocean to ocean, I do, with the consent of the council, appoint Thursday, the 28th day of November, current, as a day of Thanksgiving, prayer, and holy home convocation. In the church, by our hearthstones, and wherever lot and duty on that day may place us, let praise, prayer, and thanksgiving go up from honest hearts and sincere souls to Him who holdeth the destinies of all peoples and the wealth of all worlds in His hands, for giving our fathers victory in their bloody struggle to found this government; for being with their sons in the terrific conflict to maintain and perpetuate it; for staying the hands of our rulers amid great perplexities; for the enduring riches unceasingly flowing from church and school; for putting it into the minds of the more fortunate to so spend their means as best to succor, aid, and make better the physical, social, mental, and moral conditions of the less favored ones of earth; for life, health, prosperity, and the virtues of honesty, sobriety, and simplicity.

And when we are about to assemble around the well-supplied family table, and a hush comes over us, as we listen for foot-falls of those who long since passed on to the Thanksgiving eternal, may we have the sublime satisfaction that most surely comes from duty and benevolence to the stranger, sick, and the unfortunate.

Given at the council chamber in Concord, this fifth day of November, in the year of our Lord One Thousand Nine Hundred and One, and of the Independence of the United States of America the One Hundred and Twenty-sixth.

CHESTER B. JORDAN, *Governor.*

By His Excellency, the Governor, with advice of the council.

EDWARD N. PEARSON, *Secretary of State.*

President McKinley to Young Men.

The following is from an address delivered by President McKinley to young men:—

"No man gets on so well in this world as he whose daily walk and conversation are clean and consistent, whose heart is pure and whose life is honorable. A religious spirit helps every man. It is at once a comfort and an inspiration, and makes him stronger, wiser, and better in every relation of life. There is no substitute for it. It may be assailed by its enemies, as it has been, but they offer nothing in its place. It has stood the test of centuries and has never failed to help and bless mankind.

"The world has use for the young man who is well grounded in principle, who has reverence for truth and religion and courageously follows their teachings. Employment awaits his coming and honor crowns his path. More than all this, conscious of rectitude, he meets the cares of life with courage; the duties which confront him he discharges with manly honesty."

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Dec. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mrs. Eddy has not Seen It.

WE clip the following from the *Concord Evening Monitor* of November 6, 1901:—

The Associated Press on Monday asked the Rev. Mary Baker Eddy if she had seen the anonymous book entitled, "The Spirit of the New Testament, by a Woman." Mrs. Eddy's answer was: "I have not seen the book, but I have read some grotesque quotations from it that, to my sense of Truth, partake not at all of the spirit of the New Testament."

The Day of Salvation.

WHAT is salvation? Is it something which man may enjoy to-day, or is it that for which preparation must be made in the present, but whose realization can come only with future years, perhaps beyond the grave? The answer to this question may prove to be the turning-point in a man's career. It determines just how much or how little God will be recognized in the performance of daily duties. If salvation is believed to belong to the future it will be seen that God has very little to do with the things that pertain to the present life, and man is made to feel that in his own strength he must fight the battle of life. If, on the other hand, it is believed that salvation can and should be a present experience, the thought of God will be closely connected with the affairs of life, and the more of salvation that is gained the more will man realize his dependence upon God, until his experience voices itself in Scriptural language: "I can of mine own self do nothing."

As regards the time when salvation may be experienced, the Apostle makes this emphatic declaration: "Behold, now is the accepted time; behold, now is the day of salvation." Notwithstanding this, the world is in doubt as to just how much man may reasonably expect to be saved from to-day. Possibly the great majority are of the opinion that salvation in its true sense, belongs to the future, and will not even then be experienced unless certain doctrines of faith are subscribed to in the present.

The belief that salvation can be experienced only in the future opens the door for an almost endless amount of speculation as to what must or must not be believed in order to gain the desired end. Theories, which it is admitted cannot be proven true by positive demonstration, can be evolved without number. These theories may appear to be logically consistent, and since they promise nothing in the present but everything in the future, they multiply at a rapid rate and each has its adherents, who find the teaching peculiarly adapted to their thought and desire concerning the future.

Beliefs about salvation will continue to multiply until it is learned that now is the time to be saved from evil. When one becomes fully convinced that to-day is indeed the day of salvation, he will know that his theories are at fault when they do not bring the desired result. The one and only thing needful to produce a radical change in theories is the positive conviction that *now* is the time to experience results. When this conviction finds an abiding place in one's thought, theories which are barren of results will be cast aside as useless.

The great demand of science is results. Theories are accepted only because of promised results, and if the results are not forthcoming the theories are rejected. Through failure to fulfil promises they prove themselves false. He who does not believe in present results cannot be a scientist. The doubting Thomases of science have left no record. Those who believed in results and worked for results are the ones who have left a name, and the greatness and familiarity of the name corresponds to the results accomplished.

The marvelous results attained in the last quarter of a century, in the various uses of electricity, were achieved through the understanding and application of laws which were in force thousands of years ago just as they are to-day. It was the believer in present results who diligently sought to understand and apply those laws. It is always the one who believes in present results who seeks and finds a way to produce them. The man who is always saying, "Not to-day, but to-morrow," does not expect results to-day, does not labor for them, and it is not at all strange that he does not experience them. His belief regarding the matter is sufficient to prevent the attainment of a desired end so far as he is concerned, but because his belief limits him it does not follow that the more progressive must be bound with the same chains and confined to the same limits.

While a belief may prevent results, yet a mere belief is insufficient to produce results. Because a man believes he can do a thing it does not necessarily follow that he will at once be able to do it, but he will at least try, and if, perchance, he fails in his first effort he will try again and again until he succeeds. His faith causes him to act, and success finally crowns his efforts, while the one who is without faith makes no effort, hence accomplishes nothing.

If this be true in what are termed the material things of life, who will dare say it is not also true of spiritual affairs? The world's progress Spiritward has been rapid or slow as mortals have believed it to be possible or impossible. If the world's spiritual progress has not been so rapid as its material advancement, it is because the desire for it has not been so great; but this is no evidence that the laws of spiritual growth and progress are any less Scientific or the results any less certain when those laws are understood and applied. There is but one Lawgiver, and the laws of spiritual being are the laws of God, who changes not and who creates nothing unlike Himself.

It requires no argument to convince one that a man will not look to God for the blessing he believes it is not his privilege to enjoy. Thousands of honest and sincere men and women are trusting to material remedies, instead of to God, to heal them, simply because they have been led to believe that the "day of miracles is passed," and that God does not now heal the sick as in the days of old. Such an erroneous belief robs the sick of the priceless blessing of health, and the world of the great good that those sick ones could accomplish if they but had the health and strength to perform it. It is not because God cannot or will not restore them to health, but because the errors they believe to be true have deprived them of God's blessing.

One is not converted so long as he believes that God cannot, or will not, forgive his sins. He may honestly believe God's power or willingness to be limited, but his honesty is no excuse; his belief is sufficient to rob him of the great blessing which thousands know from experience that God is able and willing to bestow. He must forsake this erroneous belief before he can experience the salvation he desires. The Christian will tell you this man is suffering from a delusion. There is no reason why he should suffer as he does. All can be "changed in a moment, in the twinkling of an eye." He has a wrong sense of the nature and character of God. A true sense of God would convince him that God is both able and willing to forgive his sins. When thus convinced, if he honestly desires to turn from his evil

Digitized by Google

ways, he will realize God's help and receive the blessing he desires.

What Christian man or woman will say that mortals are not in bondage to other errors because of a wrong sense of God? The Scriptures declare that to know God is eternal life. If this be true, it is not time or death that makes man immortal, but the understanding of God, even the Truth which Jesus declared would make free indeed. The understanding of God can be gained to-day, and one's present success in overcoming all forms of error is great or little as his concept of God is right or wrong.

If one believes that God cannot, or will not, heal his physical, as well as his moral infirmities, without the aid of material remedies, he cannot experience God's healing power until his belief changes. Regardless of a belief to the contrary, there are laws of divine Mind, which, understood and applied, will result in physical healing just as certainly as obedience to God's requirements will result in moral healing. It is man's blessed privilege to be made every whit whole. The only need is that he be awakened to this eternal fact and govern himself accordingly. "Now is the day of salvation,"—salvation in its fullest and broadest sense.

It is agued that man is not able to understand and obey all God's laws, thereby to merit and experience a complete salvation. While this is true of mortal man, yet it is also true that he can and should accomplish much more than he does. If he does as well as he can to-day he will be able to do better to-morrow. It is not to be expected that either here or hereafter, the mortal sense of limitation will disappear in a moment. Humanity can and will escape the finite only as they know the Infinite. If obedience to the laws of God keeps pace with the understanding of those laws, where shall progress end until it is realized that the real man is perfect even as his Father in Heaven is perfect?

An Explanation.

THE following letter is one of a number I have received within a few days past:—

Provo City, Utah, November 5, 1901.

S. J. Hanna, Editor *Christian Science Journal.*

Dear Brother:—Mr. Constantine, agent of the "World's Great Masterpieces," informs me that Judge Hanna, Judge Ewing, and Mrs. Eddy have asked him to call on me soliciting my subscription to these books. I have only his word, and as we are imposed on often I write for information. Kindly let me hear from you at an early date.

Yours in Truth,

MRS. ANNA K. CRAIG.

In reference to this matter there appeared a card in the *Sentinel* for June 13, 1901, page 652, wherein Mrs. Eddy spoke in a complimentary way of the book, and I, as editor, added a word of commendation, concluding thus: "We know of no reason why Christian Scientists should not encourage this enterprise if they so desire."

There is nothing in what either she or I said to warrant the representation, by agents of the book, reported in the letters received, and it is earnestly hoped that the proprietors will put a stop to the methods pursued.

We are satisfied also that Judge Ewing is misrepresented in this matter. He is a long distance from us at present, but will no doubt speak if necessary.

SEPTIMUS J. HANNA.

Seating of Strangers.

THE Church Manual contains a by-law relating to the seating of strangers which should not be overlooked or forgotten. It is on page 40 of the latest edition, and is as follows:—

"THE LOCAL MEMBERS' WELCOME. Sect. 2. It shall be the duty and privilege of the local members of the Mother Church to give their seats, if necessary, to strangers who may come to attend the morning services."

The spirit of this by-law should be carefully carried out at all Christian Science meetings, including mid-week meetings and lectures. Strangers desiring to hear of Christian Science should have the opportunity to do so, and all Christian Scientists should be on the alert to see that they have seats. The fact that many meetings are crowded should add to the desire to make room for strangers.

Let the Scriptural injunction with reference to seats in the synagogues be borne constantly in mind.

Members Admitted to the Mother Church.

During the past year—November to November—3,029 candidates were admitted to membership in the Mother Church. The present membership is 22,127.

Among the Churches.

Annual Meeting at Dayton, O.

The annual business meeting of First Church of Christ, Scientist, Dayton O., was held Tuesday evening, October 1, 1901. The meeting was opened by singing hymn No. 161, "Shepherd, show me how to go" by Mary Baker G. Eddy. After the reading of a Scriptural selection from 1 Chronicles and correlative passages from "Science and Health with Key to the Scriptures," the First Reader said in part:—

"There is one thought in the Scripture lesson,—the building of the temple,—that is specially impressive to me. 'Then the people rejoiced, for what they offered willingly, because with perfect heart they offered willingly to the Lord; and David, the king, also rejoiced with great joy.' We are building not in brick and stone but we are mentally laying a foundation that will enable us some day to build even a material structure. So now let it also be said of us that we give willingly, not only of our means financially but of our time and talents as well. Let us ask ourselves the question, did we ever give a dollar to this cause of Christ that we have not received much more in return? Are we not bettered morally, spiritually, financially? Are we not more prosperous in every way than ever before? Not only have the blessings we have received come from the hand of God, but the means also which we have contributed. We have only given to God of His own, and for all this we are thankful.

"The hands on the dial of time inform us that another year has passed. We are again called upon at this annual meeting to take such steps as will best promote the growth of our church, at least for the coming year. The past year has been one of prosperity. We have carried many additional burdens and expenses. It has been a year of harmony, a year of demonstration, a year of sifting, a year of building on solid masonry, and for this we are truly grateful."

The following is a synopsis of report of Clerk and Treasurer:—

In April, 1902, we shall reach the eighth milestone. Our church was organized in the spring of 1894, and the following October we held a meeting of the church and have ever since been holding yearly gatherings, this one to-night being the eighth annual meeting.

During the year some of our number moved to other fields of labor. There have been twenty-seven accessions to the church, our present membership numbering one hundred and three. The report of the treasurer shows a healthy growth. The secretary of the Sunday School makes an interesting report. The librarian of reading room reports literature ordered amounting to $495.73, as follows:—

Digitized by Google

Journals	$79.67
Sentinel subscriptions and supplements	20.45
2,625 Sentinels	49.75
43 Science and Health	152.00
15 Miscellaneous Writings	46.00
Quarterlies	59.00
Other smaller publications	88.86
	$495.73

Regularly as issued we are supplying the following public institutions with *The Christian Science Journal* and *Sentinel*, most of them receiving both publications: County jail, county infirmary, Hotel Atlas, Young Women's League, National Military Home, Shaker village, near Lebanon, O., and the Herald Publishing Company. We learn that the literature in the jail has done good work.

We have distributed literature from the reading room to the amount of about fifty dollars, that is, given it away. Including the circulation of newspapers containing Christian Science articles, the amount would reach almost seventy-five dollars.

From time to time we have spoken of the Christian Science department in the *Herald*. In February, 1899, without consulting any other member of the church, the clerk wrote to The Herald Publishing Company of this city in regard to the publication of Christian Science articles in their paper. The suggestion met their approval, and ever since articles have appeared in their columns. Through the kindness of the Herald Publishing Company we are able to present the truth of Christian Science to many people, and this is a fact much to be appreciated by all who are desirous that mankind learn of the Christ-Truth, which to-day is healing the sick and reforming the sinner as in the days of Jesus and the Apostles.—*Dayton Herald.*

New Quarters at Oswego, N. Y.

The Christian Scientists held their first service in their new rooms in the Holbrook Block yesterday morning (October 13). A partition separating two rooms in the northeast corner of the second floor of the block has been removed, throwing the two rooms into one, which has been newly painted, papered, and decorated. Appropriate Scriptural texts have been lettered upon the walls, a new carpet covers the floor, and the rooms are thus made very attractive.

Yesterday bouquets of flowers and potted plants were scattered about. Harmony is one of the principles of the faith, and it is surely revealed in the decoration and arrangement of the rooms. The repairs cost nearly three hundred dollars which has all been voluntarily raised among the members of the church here with no personal solicitation for funds whatever. The church numbers about twenty-five members and is rapidly increasing. Those having the movement in charge are gratified at the interest and loyalty of the members of the denomination.

The services on Sunday are simple, consisting of Scriptural texts and correlative passages from "Science and Health with Key to the Scriptures," with music in which the congregation join with piano accompaniment.

The church is in charge of Mrs. Gertrude Wood, lately of New York and formerly of Nebraska.

On the south wall is a text from Psalms: "He sent His word, and healed them, and delivered them from their destructions." On the east wall are two texts, one from Mary Baker Eddy, which reads: "Divine Love always has met, and always will meet, every human need," and the other is from Exodus: "Thou shalt have no other gods before me."

The pulpit, which is in white, stands on the east side of the room on a raised platform and directly behind it is the inscription from John: "God is Love." The side walls are in three shades of green, the ceiling being of a light, delicate tint, the main wall a few shades darker, and the bottom wall a very dark color.

The Oswego Daily Palladium.

Church at Toronto Redecorated.

The members of First Church of Christ, Scientist, have been holding services for the past few weeks in the vestry of the church, but yesterday (October 20), they were back in the auditorium, where everything had undergone a complete change in the mean time.

A large staff of painters and decorators, under the supervision of the Board of Management, have completely changed the interior from its former tints to those of pale sea green, deep cream, and gold. The general decorative scheme reflects great credit on those under whose charge it was carried out.

The services yesterday were conducted by Mr. and Mrs. Stewart, the Readers of the church, the subject of the Lesson-Sermon being, "Probation after Death."

The church organ has also been enlarged, and it is worthy of note that this handsome instrument is a gift from the children of the Sabbath School, entirely paid for by their own efforts. Mrs. Allan Leadley presided at the organ and rendered the opening and closing voluntaries in a very acceptable manner, the musical parts of the service being much enjoyed by large congregations both morning and evening. Miss Ethel Powell sang with much feeling, "Fear not ye, O Israel," and Mr. Percy E. Pope of Chicago, "Come unto me." Altogether it was a day of much rejoicing and congratulation for the Christian Scientists. Lovely flowers, palms, and plants were much in evidence on the platform and Readers' desks.

The Mail and Empire.

Christian Science Church at New York.

More than seven hundred and fifty thousand dollars has been raised by First Church of Christ, Scientist, to pay for the new edifice now building at Ninety-sixth Street and Central Park West, and of this sum more than half has been subscribed within the last six weeks, the contributions received by the building committee in that length of time reaching four hundred thousand dollars.

As the cost of the land and the structure will be about seven hundred and twenty-five thousand dollars, the church is more than fully paid for, and this despite the fact that final settlement is not due on the contracts until well into 1903. It is expected that by next January the plasterers and decorators will be able to begin their work on the new edifice, which, when completed, will be one of the handsomest and largest houses of worship in the country. Almost twenty-five hundred persons will be able to find seats in the auditorium.—*Boston Herald.*

Services at Home for Aged Women.

It is the custom of First Church of Christ, Scientist, Lynn, Mass., to hold a service at the Lynn Home for Aged Women on the fifth Sunday of any month, and September 29, the usual service was held.

The regular Lesson-Sermon is read and the service is conducted as in the morning at the church, and this is followed by a short testimony meeting.

It is beautiful to see how interested the occupants of the Home are, and how anxious they are to hear and know something about this great Truth. The matron told us that they are so eager for the day to come on which the Scientists will come to them that they keep asking her to look up the date in the almanac to be sure there is no mistake. Surely this Truth blesses old and young.

MRS. LIZZIE F. LEWIS, *Clerk.*

Our Presidents.

THEODORE ROOSEVELT is the youngest man who has ever filled the office of President of the United States; he is the first President whose birthplace was in a large city; he is the first who has achieved distinction in war, statesmanship, and letters previous to taking the chief executive's chair; and, with the exception of Van Buren, he is the first whose paternal ancestors were of other stock than that which comes from the British islands. As if all these unique distinctions were not enough, he will bring to the White House the largest family of small children that ever made its old walls echo with shout and laughter.

The first presidents were all well advanced in years when summoned to that high office. Washington was fifty-seven, John Adams sixty-two, Jefferson, Madison, and John Quincy Adams were each fifty-eight, Jackson sixty-two, Monroe fifty-nine, Van Buren fifty-five, William Henry Harrison sixty-eight, the oldest of all; Tyler fifty-one, Taylor sixty-five, Polk and Fillmore fifty. Pierce was the first president who was under fifty when inaugurated, his age at that time being forty-nine. Buchanan, who succeeded him, was almost as old as Harrison, sixty-six. Since 1860 four men under fifty, including Roosevelt, have reached the presidency. Grant was forty-seven, the youngest man up to the present time. Cleveland was forty-eight when first inaugurated and Garfield was forty-nine. Roosevelt is forty-three, four years younger than Grant. Lincoln was fifty-two when called to the White House, Johnson fifty-seven, Hayes fifty-four, Arthur fifty-one, Benjamin Harrison fifty-five, and McKinley fifty-three.

All the presidents except Roosevelt, who is a native of New York City, were born either in the country or in small towns. Quincy, Mass., the birthplace of both the Adamses, and Raleigh, N. C., the birthplace of Andrew Johnson, have been the largest towns until now that could boast such an honor.

Of the twenty-five presidents, fourteen, over one half, were of English descent on their father's side. These were Washington, the two Adamses, Madison, the two Harrisons, Tyler, Taylor, Fillmore, Pierce, Lincoln, Johnson, Garfield, and Cleveland. Five came of Scotch-Irish stock, namely, Jackson, Polk, Buchanan, Arthur, and McKinley, and three Scotch—Monroe, Grant, and Hayes. Jefferson's paternal ancestors were Welsh, and Van Buren's, like Roosevelt's, were Holland Dutch.

Twenty of the presidents, including Roosevelt, have been lawyers. Two—Washington and Harrison—were farmers, but their elevation was due mainly to their achievements in war. Only two professional soldiers, however, have ever filled the Presidential chair. These were Taylor and Grant. Johnson was a tailor before he became a statesman.

Sixteen of the presidents were college graduates. Washington, Jackson, Van Buren, Taylor, Fillmore, Lincoln, Johnson, Cleveland, and McKinley did not have the advantages of college training, but some of these graduated at law.—*St. Louis Globe-Democrat.*

Fault-finding Helps Nobody.

Contumely helps nobody; least of all the one who administers it. Pessimistic remarks dampen the enthusiasm of others, discourage honest effort, and react on the grumbler. Chronic fault-finders command no favor with employers or fellow-employees, and are not the ones selected for advancement. Talking failure makes failure easy. A gloomy, melancholy disposition is largely a matter of habit and materially retards one's advancement. It does not matter if one is unconscious of these habits, they all figure in the final result of life work, just the same. Watch your chance remarks. Make them count for hope and encouragement.—November *Success.*

From our Contributors.

Only a Leaf.

BY WATSON V. BABBITT.

ONLY a leaf. Its work was done
As it fluttered down in the July sun
To find its rest on the hard-burned ground:
Rest in an early grave.
"Only a leaf," the south wind sighed,
"Dust to dust to be multiplied
With the mortal all."
"With the many leaves on one great tree
Who 'mid that throng will e'er miss me?
I am only a leaf," it sighed.
Poor little leaf! You may never know
How on a June day, from the sun's hot glow,
You sheltered the head of a songster small,
From whose tiny throat went forth to all
Praises to God, and promise of rain
To the great parched Earth.
And so, poor toiler, as you work below
Striving and striving 'neath the sun's hot glow,
'Mid envy, strife, and despair,
All unconscious, somehow, somewhere
You are sheltering God's idea there;
Work on! work on, 'mid the world's hot rays,
Unmoved alike by censure or praise,
Willing to wait 'till the setting sun
To hear from the Master his sweet, "Well done!"

Christian Healing is for us To-day.

BY M. P. MADISON.

WITH the Christians who believe in the Bible and take the Scriptures for their guide, but who do not believe that the power of Christian healing is for us to-day but that it belonged to the immediate disciples of Jesus only, we cannot but "agree to disagree," when such verses of the Bible as are found in sixteenth chapter of Mark, from the fifteenth verse to the end, are closely studied.

We find here the command of Jesus to his disciples to go into "all the world" and preach the gospel to every creature, and we also find here what shall be the signs following, not to the disciples alone but to "them that believe." Note verses 17 and 18: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

When one gets even a limited understanding of what Christian Science is, it seems strange that in the face of such very plain instruction from Jesus himself, Christian healing should have been so soon lost, and for so many centuries after Jesus' advent in the flesh, for the last verse of this chapter states that "they went forth, and preached everywhere, the Lord working with them, and confirming the word with signs following."

If it followed the word then, why should it not follow now? If the believers of the gospel which Jesus commanded his disciples to preach had these signs following then, why should not believers in the same gospel have these signs follow now?

It seems equally strange and even more so, that in this enlightened age men who profess to lead by preaching the gospel, should deny and even oppose the practice of Christian healing, and thus prevent the signs following. After reading the above quoted passages, if we turn to John, 14 : 12, we get an even more specific statement, for here it makes it a condition by which believers are to be known, for Jesus here says: "Verily, verily, I say unto you, He

Digitized by Google

that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." There can be no doubt as to what Jesus' works were, for he plainly answered John the Baptist on that point when he said to his disciples who were sent to enquire: "Go and shew John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them" (Matthew, 11 :4, 5).

Reading such passages and turning to "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, pp. 167 and 168, where we read: "Those who are willing to leave their nets, or to cast them on the right side for Truth, have the opportunity now, as aforetime, to learn and practise Christian healing. The Scriptures contain it. The spiritual import of the Word imparts this power;" one cannot but admit that Mrs. Eddy is right. The Bible does contain it and Christian Science proves this to-day by following the instruction and explanations of Science and Health; for by the application of the Word the sick are healed to-day as well as aforetime, the sinner is reformed, for evil disappears entirely when Christian Science, the Word of God, is applied. There is no room for evil when God, who is too pure to behold iniquity, is all, and is so recognized and scientifically brought to light according to an understood Principle.

According to Jesus' own words as recorded in the fourth chapter of Luke, the eighteenth verse, he was sent "to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." Here we have Jesus' statement as to what true gospel preaching is and what it should bring about. In the forty-third verse of the same chapter we also find that his preaching was the kingdom of God (Harmony), and that it was "to other cities also," and not for one place alone.

Wherever Jesus preached the multitudes were healed of physical ills, evil spirits were rebuked and cast out. Now if, according to Jesus' own words, he was the Way, the Truth, and the Life, it would not seem reasonable that it was only for a short time or for a limited number of followers, for he said that he and the Father were one, that his words were not his own, but His that sent him, and that he was about his Father's business. If God, as the Scripture states, changes not, but is "the same yesterday, and to-day, and forever," His way must also be the same. Before ascending Jesus also said, "Lo, I am with you alway, even unto the end of the world." Now it could not be the man Jesus of whom he spoke, for he vanished before the eyes of the disciples, but it was the Christ, the Truth which he had preached and which healed the sick.

Doing Little Things Well.

BY VIVIENE V. LUNDY.

SOME time ago I heard a little story which I thought contained a good lesson.

Two great Englishmen were discussing the benefits derived from systematic and methodical habits, when in answer to a question one said, "Yes, I divide my day into four parts: six hours for sleep; six hours for study and recreation; six hours for work for my fellow-men, and six hours for God." Then, I think it was Sir John Cook, who replied: "Well, I divide my day into three parts: eight hours for sleep; eight hours for study and recreation; eight for work for my fellow-men, and all twenty-four hours for God." Both were certainly Christian men, and yet I think the latter must have been the more practical, if not the happier.

When I heard the little story I could not help thinking of those lives so lived as to reflect each hour and moment those truly Christ-like qualities. For it is not always the men or women connected with the greatest number of religious organizations, who manifest and demonstrate the greatest love and kindness to their fellow-men.

Last Wednesday evening our First Reader spoke of being faithful in the little things, and I could not help thinking of that great statesman, who, being unkindly reminded in Parliament that he had once been a boot-black, replied: "Yes, but when I *was* a boot-black, did'nt I do it well?"

As Christian Scientists there are many little things which we can do, and if we are careful in the little things, the grand things will take care of themselves; for he who proves himself a good manager in the lesser will be the better prepared to command the greater.

Supported by Principle.

BY M.

WE take great pleasure in the beauties of nature, and gain many useful lessons therefrom. When I had an opportunity to do some gardening, I sometimes cultivated sweet peas. I enjoyed walking in the garden every day and watching the growth of the plants. They were not very large when they were furnished the needed support for climbing. But they often clung to one another instead of to the proper support, and it was necessary to separate them and train them aright. It seemed almost cruel to unwind or tear the delicate tendrils from the adjoining vines; but if this were not done they dragged one another down, and growth and bloom were retarded.

How many times this reminded me of the fact that we sometimes cling to one another, to one or more personalities; that we are too prone to depend upon human plans and material means. When friends fail or are separated from us; when cherished hopes and plans are thwarted, the tearing away of the clinging hearts and thoughts seems a painful process. But Christian Science teaches that the only proper support for God's children is to "cling steadfastly to God and His idea" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 491), and to nothing else. Only by seeking constantly the guidance of Divine Principle, can we obtain the best spiritual growth and bloom, and avoid dragging others down.

Seek and Find.

BY ALICE A. RUSSELL.

"SEARCH ye for God with all your heart,"
And ye shall find His peace.
Seek Him with humble, strong desire,
If to His Love ye would aspire;
And as the prophet-bards of old
Oft hear His message sweet,
So when ye search with all your heart,
And prostrate at His feet,
Looking with silent trusting prayer
To know the upward way,
His Truth shall break in light divine
And on your waiting faces shine.
His voice of Love shall speak the word,
"My peace I give."

The Healing of the Nations.

BY JOHN FRANKLIN CROWELL.

THE healing of the nations
Is not by power of sword,
Nor by the earthly wisdom
In tomes of learning stored;
But by the heart's deep hungering
To lovingly express
In deeds of life undying
The truths of righteousness.

Testimonies.

Love Restores Harmony.

I desire to express my gratitude through the *Sentinel* for what the understanding of Christian Science has done for me, and also our whole family. Although I have only been in the Science three years, yet I have had many demonstrations to make, as almost every statement seems to call for immediate proof.

One day our cat was sitting before the open grate, and a live coal snapped out and lodged in the fur under the breast. I immediately extinguished the flame, and in so doing the coal adhered to the palm of my right hand, burning it quite severely. In my excitement I did not know the coal was in my hand until I saw a blue flame. I instantly shook off the coal and realized what I had to do. Our little five-year-old boy was standing near and witnessed the whole thing; he immediately said, "Mamma, you know God is the only power, and there is no sensation in matter!" and I replied, "Yes; that is true." We worked together for about ten minutes. The burning sensation ceased and I did my usual housework without any inconvenience. There was not a particle of swelling, inflammation, or soreness in the hand, and there is not a scar to be seen. To us all it was a beautiful demonstration of the nothingness of matter and the allness of God.

Perhaps it might be of benefit to some one to hear how this part of the spiritual interpretation of the Lord's Prayer as given in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 322, "Divine Love is reflected in love," helped to strengthen our little boy and also change the attitude of one of our neighbor's workmen.

One day this spring the gardener was working back of our yard, and our little boy climbed upon the fence and began teasing the man, and finally threw one of his blocks at him. This incensed the gardener to the extent of bringing curse upon curse at the boy. I heard the loud talk from where I was engaged in the upper part of the house, and immediately went down to try to help settle the trouble. I asked the child if he thought it was kind and loving to treat the man that way, and he said, "No, mamma." I then asked him to get up on the fence again and ask the man to forgive him and tell him he would not do so any more. He did so, but the man would not listen to a word from either the boy or myself. He swung his spade wildly and used the same language; so all we could do was to walk away.

I then felt we must work in another way; so I said to the child, "Now don't you think the best thing for us to do to help the man, is to take up the thought that 'Divine Love is reflected in love'?" and he said, "Yes, we will." So every time we thought of the circumstance we declared the Truth; and when he said his prayers that night he emphasized those words very strongly.

Two days later the man came to our back window and asked me where the boy was, telling me he wanted to forgive him. I told him he was in the yard, and then I called to him to go to the back fence, as the gardener wanted to see him. The little fellow ran immediately and climbed up on the fence. The first thing that was said was, "Boy, I want to forgive you. I know you wont do that again, will you?" and the child told him he would never do so again. Then the man said, "Give me your hand, and let's shake," and put a five cent piece in his hand, telling him to go and buy sweets. I was in the window enjoying the demonstration of Love when the child came running in showing me his money and saying, "Mamma, wasn't that a beautiful demonstration? and how quickly it was made!" Then he said he thought instead of spending *that* monev for candy he would take it to Sunday School. I told him I thought that the best place to give it, and I gave him two cents for his candy, which was perfectly satisfactory. When he came back with it he went right to the fence and called to the man to come and get some, which seemed to please the man very much.

I cannot begin to express the joy and happiness this blessed understanding of Truth gives me. Four years ago this summer, when we went up to the mountains for two weeks we carried with us a hand satchel filled with bottles, all containing very valuable medicine, we then thought. The next year we took but very few, and this summer it did not enter our consciousness that any were necessary; as we have risen above and beyond the thought of drugs as a remedy, knowing that God is an ever-present help.

If it were not for taking so much valuable space I would tell of many other demonstrations just as beautiful. We have had a great many in our small family in the short time we have been working in the Truth. I might say that diphtheria, small-pox, indigestion, and colds have all been overcome through the understanding in Christian Science and without going to bed a day in either case.

"Science and Health with Key to the Scriptures" has indeed been a blessing to me, as it has unlocked the Scriptures and revealed their spiritual meaning. As a member of the Baptist Church I tried to believe and understand the Bible; but never before did I enjoy such a spiritual uplifting as has been mine since coming into Christian Science. I cannot find words to express my thankfulness to our beloved Mother, the Founder of Christian Science.

MRS. PHEOBE E. TONG, Stapleton, S. I., N. Y.

Lameness Healed by Christian Science.

I have thought for years that I would write something to the *Sentinel*, and as often have deferred it, thinking I had nothing of interest to send. Yet I find something helpful in everything which appears in either the *Sentinel* or *Journal*.

I have been studying Christian Science for about six years, after combating and ridiculing it as only ignorant mortal mind can, even after I knew it was true. I did not come into Science for the healing myself but through the help an only sister had received. Her relief came so slowly that it made very little impression on me for some time, yet the seed must have been sown, for soon after her departure from my house I began to read "Science and Health with Key to the Scriptures," and have continued ever since.

About that time a family came to Santa Cruz who were interested in Christian Science. We met together on Sunday morning to study the lesson, and sometimes two or three more would join us. In the summer we sometimes had eighteen or twenty. Finally one of Mrs. Eddy's loyal students came, and we organized a society, and Christian Science has remained in Santa Cruz ever since.

I desire to mention one demonstration of the power of Truth over error, that of a dear little girl four years of age who the doctors said must always be lame. She was taken with severe pains in the back, and soon was unable to walk. Her parents concluded to take her to San Francisco to consult a children's specialist. They did so and a plaster cast was placed on her from arm-pits to hips. The physician thought she would be all right, but in a few days she began to have pains in one of her legs. Her parents took her to the doctor again and he said she would have to have a plaster cast on her leg, as it was affected in sympathy with the back. He also told them that she would have to remain in this for two years, and at the end of that time she would be unable to walk, as her knee would be stiff.

When she came to my house I saw at once the utter folly of placing God's child in a vice like that, and the first time I had an opportunity I told the parents about Christian

Digitized by Google

Science. They said there were Scientists in the town where they lived, but they did not think much of them. However, I had not talked long before the mother said to me, "Will you treat Julia?" and I said, "Of course I will." I had only given two or three treatments before she wanted to get up from her little wagon on which she was strapped, and kept teasing to walk. Whenever she saw me she would ask me if she could walk. She improved rapidly, and became quite active and well, and her appetite was good. In less than one week her mother came in and said, "If you will help I will take this cast off Julia's leg any way." My daughter helped her take it off. The child was so happy and delighted to find herself able to walk or stand that she would stand up on the floor and throw her hands out and over her head and say, "Look, look; God holds me up." She was soon able to walk two or three blocks, but there was still another obstacle to overcome—the cast on her body—and in a few days more the mother had the courage to remove that. Then indeed there was rejoicing in that family, especially the little one that she was free. She wanted to walk all the time, after she found she could do so. All this was accomplished in less than three weeks, and not the least of the blessings that followed the healing, was that the family was brought into the understanding of God. The God whom they were ignorantly worshiping was declared unto them so plainly that they accepted Him at once.

I have heard from them once, and the little girl was still improving.

I wish to express heartfelt thanks to our Leader and the Publishing Society for the periodicals which are such a help to all on the way to harmony.

OLIVIA WISWELL, Santa Cruz, Cal.

Christian Science awakened a Desire to do Good.

For several years I have been the recipient of many helpful thoughts expressed through the *Journal* and *Sentinel*, by those who have been healed by Christian Science and are now working in the Master's vineyard, and I feel it is my duty, as well as privilege, to tell what the Truth has done for me.

Up to the time that Christian Science was brought to my notice, some five years ago, I was never well. From childhood I had been extremely nervous, and I also inherited weak lungs and was rarely ever free from coughs and colds.

Later on, other diseases developed, among them heart trouble, which caused me a great deal of anxiety. One physician pronounced it a deformity of that organ. I was treated by several skilled physicians, for that and other troubles, the last physician telling me, that unless I could have an operation performed, I could never be cured, and that on account of my heart trouble, it would be impossible for me to take ether. This so discouraged me, that I finally decided to quit the physician's treatment, and began a course of patent medicine at home.

A short time after this, I went to visit relatives at my former home, and while there, the wife of our family physician called to see me. She had become deeply interested in Christian Science, and as she explained to me what it was, I drank in every word and knew it was what I needed. I remember saying to her, "Do you suppose it can cure *me?*" to which she replied, "Yes, it reaches all diseases. There is nothing impossible with God." She repeated the Child's Prayer (Mother's New Year gift to the little children), which I thought so beautiful, and at night, upon retiring, I clung to the thought, "I know that God His child doth keep" (Miscellaneous Writings), and felt secure. From that hour I gave up all material remedies, and, although I was not having treatment, I began at once to improve. My friend gave me some Journals and "No and Yes" to read. Upon my return home, I met two Scientists, who had moved there during my absence, who kindly let me have a copy of Science and Health.

I was so eager for more of the Truth, that it seemed as though I could not read fast enough. As I read it through the second time, more slowly, I found I was gaining still clearer views of the Truth, and my old troubles were leaving me.

Two years later, it was my privilege to take class instruction from one of the Mother's loyal students, and I am deeply grateful for this blessing. Christian Science has not only healed me physically, but has also awakened in me the desire to be and do good, and to strive to overcome all that is unlike Christ. My gratitude to God and our Leader, Mary Baker Eddy, can only be expressed through faithful obedience, and a life consecrated to Good.

MRS. MAY DAVIS, Atlanta, Ga.

Thankful for the Rule of Christian Science.

Often the thought has come to me to send a word of gratitude to the *Journal* or *Sentinel*, and then has come the thought, What shall I write about? for Christian Science has done so much for me that I do not know where to begin or end in the telling. Of all the blessings it has brought to me, I think I am most thankful for the fact that it has given me a definite rule by which to live.

I have had sufficient proof of the practicality of this rule to know that by faithful application thereof, every problem in life can be solved. I am sure that all may know this by earnest, prayerful study of the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

All my life I have wanted to do right, to overcome faults, to destroy selfishness, and Christian Science shows me how these things can be accomplished. Without this help I could not live one day of my busy life successfully. Christian Science teaches me how to be patient when impatient thoughts come, and how to love when thoughts of resentment come. When I am not loving and patient, I know that the fault lies, not in the rule, but in my lack of application of it.

I thank God for this Science, I thank our Leader who so lovingly points the way, I am grateful to those Scientists who so often help with the strong word of Truth, and to those who send us helpful thoughts through our publications.

H. M. C., Newtonville, Mass.

Saved from Chronic Invalidism.

A feeling of deep gratitude toward our beloved Mother, whose teachings have given me a truer realization of my better self, inspires me to add my testimony to the power of God or Good.

It was through the experience of my wife, who had been a chronic invalid for a number of years, and who conquered sickness through the blessed teachings of Christian Science, that I first learned of the omnipotence of God. I had been prejudiced against Christian Science, and it was without my knowledge that my wife first attended Christian Science meetings. The great improvement in her physical condition aroused my curiosity, and ere long I became interested in the faith that had worked such wonders.

I had been an inveterate smoker for thirty-five years, but since I learned the Truth I have abandoned the habit. I formerly could not read without the aid of glasses, but now I can easily discern the finest print.

My wife and I took a course of instruction last spring and reaped much benefit therefrom. We have gained a better realization of the blessed Truth and are grateful to its noble expounder, Mrs. Eddy.

C. H. FISCHER, Sheboygan, Wis.

Religious Items.

The Bible has perhaps been *read* by more persons in proportion to the population of English-speaking countries in other days than now. We believe it is being *studied* more generally and thoroughly to-day than ever before. The numbers of students of Bible courses in colleges and universities, the increase of Bible students and classes, and the preparation being made for Bible study the coming season in communities and in local churches is greater than we have ever known. We have no doubt that were the opportunity given, under competent teaching, many thousands of persons would gladly enter on such study in many sections of our country. The London Sunday School Union recently planned for a correspondence class in the study of Greek with a view to the reading of the New Testament in the original language. It was not expected that the numbers would be large, but the applications from the time of the announcement have averaged one hundred a day from all parts of the United Kingdom. The edition of the text-book chosen was quickly exhausted, and the arrangements were inadequate to register the applications which poured in. We are informed that the American Institute of Sacred Literature has this season enrolled in the United States some ten thousand students, and no doubt the numbers will be much increased. With all the vast outflow of literature, there is still no book which can compare in popularity with the Bible.

The Congregationalist and Christian World.

The Gospels, and for that matter the Scriptures as a whole, are quite as unique in what they suggest as in what they affirm. In an ordinary conversation with a friend he may utter a sentiment that throws a clear and penetrating light into the recesses of his inner life, because you instinctively ask how could he have said that, what was his point of view? And on thinking it over you conclude that he could only have expressed that sentiment because he held certain convictions and looked at a number of questions from a certain angle. He revealed far more of himself than he imagined in that casual observation.

Now the Gospels are full of such illuminating self-disclosures, both on the part of Jesus and on the part of his disciples. Take, for example, our Lord's replies to Pilate. Only a few sentences fell from his lips, but each one of them opens a vista into his own consciousness of his nature and his own view of his mission. They are like the three points for which the mathematician asks to construct a circle. Those brief sentences give us the data for constructing a circle that sweeps through the vast spaces from the Incarnate Life before creation to the consummation of his mission.

The Watchman.

LIFE.

In any of its manifestations life is a wonderful thing, alike in the vegetable and animal kingdoms. The masters in biological science are constantly revealing new facts and marvels in their departments of study. It is seen that the minutest organisms, not less than those of the larger proportions, are skilfully constructed, with organs and functions perfectly adjusted to their environment. Every species seems to know just the right thing to do and just when to do it. The ant, the bee, and the beaver are often quoted as illustrations of animal instinct of the highest character,—indeed quite up to the lower grades of intelligence,—but it is observed that every class among the lower orders of animal life are possessed of similar powers. Wild animals as well as those that are domesticated give many signs that they are endowed with good powers of observation, memory, and affection. Forethought, planning, and execution are frequently exhibited by them. From animalcule and insect to bird and quadruped there are specimens of creative power and ingenuity that excite the deepest interest.—*The Universalist Leader.*

Because the labor movement is a social movement, and because in social movements the moral attitude of man toward earthly goods and fellow-men is decisive, and because this moral attitude is most decisively affected by Christian ethics, we conclude that the Church necessarily has a duty toward the labor movement. She must plant those virtues which will guarantee to that movement a healthy development, heavenly-mindedness, brotherly love, righteousness, industry, contentment, and love of family. It is her duty to proclaim and establish the Christian teaching of man's duty to rule the world, its teaching in regard to labor, marriage, and government. In her preaching she is to enter into all those interests which move the world of workingmen, in order to permeate and transform it by Christian truth. The first important point of contact, then, between the labor movement and the work of the Church is the disposition. A right disposition on the part of employees as well as of employers is what is necessary, and the Church offers to help bring this about.

Public Opinion.

Our contributions of money and of lives to spread the Gospel in heathen lands are usually regarded as wholly for their benefit. We have supposed that we had much to give, nothing to receive in return. That view is shortsighted and incomplete. No one nation or race has all the elements necessary to a complete development of the kingdom of God or even to the perfection of a single character. The Chinaman has something to contribute which the American does not possess, the negro and the Indian have each something to give that is peculiar to themselves; and every nation has its own treasure to add to bring in the time when we shall all come in the unity of the faith and of the knowledge of the Son of God, unto the perfect man, to the measure of the stature of the fulness of Christ.

The Congregationalist and Christian World.

This is the way the *American Baptist Flag* looks at Christian warfare:—

"So far as we are able to tell from this distance there is no apparent cessation of hostilities in the Texas fight. Both sides may be telling the truth about it, and if they are, the leaders on both sides ought to be in the lock-up. Bros. Gambrell and Cranfill think Dr. Hayden and his crowd are unfit for any confidence or respect; and Bro. Hayden and his friends do not hesitate fully to return all compliments of that sort. In the mean time the protracted meetings are going right along and the Lord is giving the churches a great increase. That is the way to do it. Every Baptist ought to fight to the death for what he believes to be right, and while he fights preach the Gospel to sinners and look to the Lord to save them."

Speaking of "The Real Presence," *The Examiner* says:—

"There is a doctrine of the 'Real Presence' which is gloriously true, and which ought to be very precious to every believer. It is the teaching of Christ himself, who revealed the truth for the comfort and support of his grieving disciples on the night when he told them of his approaching departure, and afterward repeated as he was about to ascend to his throne in the heavens. 'At that day,' he said to the sorrowing group, 'ye shall know that I am in my Father, and ye in me, and I in you.' And again he said, 'I will not leave you orphaned; I will come to you.' And as they stood about the risen Lord on the Mount of Ascension, he said to them, 'Lo, I am with you alway, even unto the end of the world.'"

The best name by which we can think of God is Father. It is a loving, deep, sweet, heart-touching name, for the name of father is in its nature full of inborn sweetness and comfort. Therefore, also, we must confess ourselves children of God, for by this name we deeply touch our God, since there is not a sweeter sound to the Father than the voice of the child.—MARTIN LUTHER.

Luther's conception of God's fatherhood was grand; but is it not true also that fatherhood includes motherhood? Was God a *male* creator who evolved out of His *Being* both *male* and *female*? Let us add to Luther's sweet definition that of Mother. Then we have the Father-Mother God of the first chapter of Genesis. Then we have the fulness of the Godhead."

There are no respectable sins, and there are no shady virtues.

In the ministry, as in all other callings, there are old men of thirty and young men of seventy, with all sorts between.

When a sure cure is discovered for cancer or consumption, the world will not have long to wait for certainty in regard to it.

For nearly a hundred years it has been a standing reproach that Unitarianism was so respectable. It is very difficult to please our critics, but they probably would not have liked us any better if Unitarianism had been disreputable.

The Christian Register.

Are not all true men that live, or that ever lived, soldiers of the same army, enlisted under heaven's captaincy, to do battle against the same enemy,—the empire of Darkness and Wrong? Why should we misknow one another, fight not against the enemy, but against ourselves, from mere difference of uniform?—CARLYLE.

Successful is the day whose first victory was won in prayer. Holy is the day whose dawn finds thee on the top of the mount! Health is established in the morning. Wealth is won in the morning. The light is brightest in the morning. "Wake, psaltery and harp; I myself will awake early."

JOSEPH PARKER.

If our circumstances find us in God we shall find God in all our circumstances.

Selected.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa.*

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

The Isthmian Canal Commission, after considering all the information obtained with regard to the Nicaragua and Panama Canal routes, have decided to report in favor of the former. While the Panama Canal would be shorter and would have fewer locks and less curvature, thus saving twenty-one hours in the passage of a ship from the Atlantic to the Pacific Ocean, this advantage is offset by the fact that the Nicaragua route is nearer to the United States, and a ship sailing between New York and San Francisco could save time by using this canal. The report provides for a canal which shall have a depth of thirty-three feet and a width at the bottom of at least one hundred and fifty feet. The estimated cost of this canal is about two hundred million dollars.

In his annual report the Second Assistant Postmaster General urges regular and direct fast mail service between the Pacific coast and the Orient. Also the reëstablishment of pneumatic tube service generally. The report shows that on June 30, last, there were 267,357 miles of star route service, 183,358 of railroad routes, 45,779 of railway post-office car routes, and almost three thousand miles of electric and cable car routes.

The Government has concluded a treaty with the Fort Totten reservation Indians in North Dakota, by which the Indians agree to sell 104,000 acres of land. One hundred and forty-five thousand dollars will be paid after ratification of the treaty, and twenty thousand dollars a year for twenty years.

According to a statement recently made by President Benjamin Ide Wheeler of the California State University, President Roosevelt will make the reclamation of arid lands in California a part of the national policy.

Secretary Gage is of the opinion that, for internal revenue purposes, the Philippines should be regarded as domestic territory, pending the decision of the Supreme Court which will fix the status of the islands.

President Roosevelt has stated that he will exclude political influence of every sort, direct or indirect, in making appointments in the army, the navy, and the colonies.

Foreign.

A number of The Hague bankers and other wealthy men of Holland are making arrangements to establish a colony of Boers and Holland Dutch in Wyoming. A tract of three hundred thousand acres of land has been secured and surveys have been made for a gigantic canal and irrigation system. The soil is especially adapted for sugar-beet cultivation and a large beet-sugar factory will be established in the colony.

One hundred and seventy-five ancient bronze guns which formerly stood on the walls of Pekin have recently been taken to Germany. The inscriptions on the guns show that they were cast more than two hundred years ago in Chinese arsenals under the superintendence of Jesuits. The most ornamental of the guns will be placed in the naval museum of Berlin.

King Edward has refused to distinguish between the title of president, king, and emperor, and holds that the honors to be paid to presidents and crowned heads at the time of his majesty's coronation shall be identical. No distinction will be made except possibly in the case of near relations of the royal family.

Doctor A. Kovalevski, professor of zoology in the Imperial Academy of Science at St. Petersburg, who recently returned from a lecture tour in the United States, has published in one of the local papers a most favorable account of our educational system, especially that of the universities.

A majority of the delegates at the Pan-American Congress in the City of Mexico are in favor of bringing the labors of the conference to an end before Christmas. Steps have been taken for the establishment of a Pan-American bank in New York City.

The Glasgow, Scotland, exhibition closed November 11. The exhibition was open 163 days and was attended by over eleven million visitors. The surplus is expected to reach four hundred thousand dollars.

Queen Alexandra will follow the example of the late Queen Victoria and send Christmas gifts to the troops in South Africa.

Industrial and Commercial.

Twenty-three employees of the Carnegie Company at Braddock, Pa., have been rewarded for their faithful service by substantial gifts of bonds which make them junior partners in the concern. The bonds received by these men are five per cent bonds of the Carnegie Steel Company and the annual interest of the same is equal to the salaries received. The total amount of bonds distributed in this manner is about one million dollars.

A plan has been formulated whereby seven of the western railroads, having 47,372 miles of track and capital stock amounting to $1,042,837,186, will be consolidated. The roads to be brought together in this manner are the Union Pacific; Southern Pacific; Northern Pacific; Great Northern; Chicago, Milwaukee, and St. Paul; Chicago, Burlington and Quincy, and Chicago and Northwestern.

The transportation committee of the city council of Chicago has decided to insist upon the installation of the underground trolley system in the business district as one of the chief conditions of the extension of the street railway franchises which expire in 1903.

The United States has ten thousand more miles of railroad track than all European nations combined.

The Florida orange crop for the current season is estimated at 1,100,000 boxes.

General.

Alabama has adopted a new constitution which practically disfranchises the negro. All applicants for registration, who are not old soldiers or descendants of soldiers, must be able to read and write any article of the Constitution of the United States in the English language, and must show that they have been engaged at a lawful occupation for the greater part of the preceding twelve months. However, if he does not possess this qualification he can, nevertheless, register if he or his wife is the owner of either real estate or personal property taxed at three hundred dollars. The constitution also provides for the voluntary payment of a poll tax by February 1 preceding the election in November. At present there are about seventy-five thousand negro voters in Alabama who can read and write. It is estimated that the disqualifications for crime, failure to pay poll tax, and neglect to register so far in advance of the election will reduce the whole body of negro voters to less than thirty thousand.

There are now seven hundred and fifty school teachers in the Philippines. These are being assisted by about two hundred soldiers. Seventy-five thousand Filipino children are receiving instruction in English. There are upwards of four thousand Filipino teachers in the islands, and the majority of these are receiving English instruction. A normal school has been opened with an attendance of about two hundred and fifty. A trade and agricultural school has also been opened.

The thirty-fifth annual session of the National Grange met at Lewiston, Me., November 13. Delegates and visitors from almost every State and Territory in the country were present. The Dominion of Canada was also well represented. In his address National Master Jones referred to the need of education in agriculture. He spoke of what has been done in this line in Europe and said, "Immediate steps should be taken to secure the teaching of scientific agriculture in every public school in our country."

Andrew Carnegie will establish a polytechnical school in connection with the Carnegie Institute in Pittsburg, Pa. He will thoroughly equip this school and provide an endowment fund of two million dollars. Mr. Carnegie has given about six million dollars to this institution.

The National convention of the Women's Christian Temperance Union met at Fort Worth, Tex., November 14. Representatives from forty-five States were in attendance. Editors of sixteen State publications of the W. C. T. U. participated in the editorial association meetings.

Rev. F. W. O'Brien, pastor of the New People's Church, near the Bath Iron Works, will instal a restaurant in the church where workingmen can get plain, wholesome food at cost. Mr. O'Brien has received liberal donations for his work from many prominent men.

The directors of the St. Louis Exposition Company have decided to rent the one hundred and ten acres, comprising the grounds of the Washington University, and the four magnificent buildings of that institution, now nearing completion, for World's Fair purposes.

The one hundred and twenty-eighth volume compiled from the official records of the War of the Rebellion is soon to be issued. This work has been in preparation for more than thirty years and has cost about three million dollars.

The total amount appropriated for the Louisiana Purchase Exposition to be held in St. Louis in 1903 is $16,540,000. Of this amount the United States Government appropriated five million and the city of St. Louis an equal sum.

The first McKinley monument was unveiled and dedicated at Tower, Minn., November 11. The monument is a simple shaft eighteen feet high, standing on a pedestal of concrete and iron ore, and cost twelve thousand dollars.

The total cost of the Pan-American Exposition was $8,860,757.20. The total receipts from admissions after May 1 were $2,467,066.50 and the receipts from concessions were $3,011,522.79.

It is reported that a speed of one hundred and five miles an hour has been attained on an electric railway in Germany.

By means of artesian wells more than twelve million acres of the Sahara desert have been made productive.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Testimonial Meeting at Cleveland, O.

All the Speakers were Members of the G. A. R.

AT the regular Wednesday evening meeting of First Church of Christ, Scientist, Cleveland, O., September 11, 1901, the following testimonies were given entirely by members of the Grand Army, which was holding its annual national encampment in that city.

The first speaker said: "Friends, brothers and sisters of this church, of which I was recently a member, I bring you greetings from Detroit. I wish to tell you something of my experience since being away. I have been out as the Master sent the seventy. I have seen even devils subject unto the Truth through Christian Science. It is a great privilege to be with you to-night; it is a great privilege to be in Cleveland on this occasion. Here I have met men and women who knew me when I was a wreck physically, knew me when it was said that my time was short. To-day they find me in robust health. The opportunity has come to me to preach Christ, Truth, right here in this crowd. I had the pleasure of conversing with a physician to-day, who was glad to learn of Christian Science. The physicians are becoming friendly to Christian Science. All over the country we hear of their asking questions and being willing to do what they can in favor of Christian Science.

"Since I left here, it has been my privilege to be instrumental in restoring some who have been pronounced incurable. Two ladies in particular,—one has been healed of hereditary consumption. Now prosperity reigns, and she has a happy home and is presiding at her table. Another case was similar. I cannot be too grateful for what Christian Science has done and is doing for me."

A gentleman from Buffalo said: "I am glad to greet you this evening. I am a member of the Third Church in Buffalo; I am also a member of the Mother Church. I might tell many things, but I would like to hear from others. A comrade who had been prostrated for nine years was healed by Christian Science. In three weeks from the time he began treatment I walked with him about a mile to get his pension. This is why I became a Christian Scientist.

"I am glad I am here; I am glad I am in Cleveland to meet my comrades; I am glad to be here with you, and in one accord to worship the Father."

A gentleman from Albany was the third speaker. He said, "Dear friends, I am glad to be with you to-night. I bring you greetings from First Church of Christ in Albany, N. Y. It has been my privilege to march with the Grand Army in this city to-day, as I have marched in other cities for many years at the annual national encampment.

"As I was sitting here to-night, I was thinking of what Christian Science means, particularly to the old soldiers. We in the army learned, perhaps first of all, discipline,—obedience to orders. We learned that we were subject to authority, and that that authority was absolute. Had we refused to yield to that authority, we would have been in a great deal of trouble and discord, but by yielding to it, concord and harmony were brought about. Now in Christian Science, we find that we are freeing ourselves from the bondage of many ills, both physical and mental. When I came into Science something like five years ago, I might say that I was practically without hope and without God in the world. I had but very little faith in any creed, for the reason that I saw but little of the practical demonstration of that which the adherents claimed to believe. I had become almost faithless, except in the fact that I did believe that there was an omnipotent power that created all things; but that there was any particular connection between God and man, I had many doubts. I have found God in Christian Science. I have found God an ever-present help in trouble. I have been healed of many physical ills. I was instantaneously healed of the tobacco habit of thirty-three years' standing. One Sunday afternoon the appetite left me as suddenly as anything could, and I can say to-night that from that day to this, four years ago last June the sixth, I have never had the least desire for tobacco. In fact, it has been disagreeable to me. I was also somewhat addicted to drink. I have never had any desire for whiskey or beer from that day to this.

"I have had demonstrations that have proved to me the absolute power, the omnipotence and omnipresence of Almighty God,—not of a God to fear, in the sense of being afraid, as I used to be sometimes, I think, but to fear, to reverence, and to know Him as ever-present Love.

"I must tell you of one demonstration that I had three years ago in August.

"I was at Asbury Park, in the state of New Jersey. One morning I went in bathing when the surf was high. If any of you have ever been in bathing in salt water when the waves were high, you know that one has to be a little careful, or the waves will throw him in spite of himself. I was caught by a wave and thrown towards the shore, where the water was somewhat shallow, and kicked my foot very hard against something that offered a great deal of resistance.

"I went toward the ropes. A storm was coming up and the waves were getting higher, and, singularly enough, I found myself again thrown near the shore and at the same place. As I picked myself up, I dragged my foot against something very rough. I found that it was a cast iron pipe through which the water was pumped into the pools where those took their baths who did not care to go in the surf. It was very rusty and rough, and the skin was torn from the top of my toe nearly to the bottom. When I came out of the water I gave one look at it. It was very much discolored and swollen. I went from there into the bathroom. The fear came up that I could not possibly get my shoe on. I sat there perhaps fifteen minutes, trying to overcome the fear. By not looking at the foot any more than was necessary, I pulled on the stocking, and put my foot into the shoe.

Some lady friends were waiting for me, and when I came out of the little room it was storming. The wind was blowing, and it was raining very hard, also thundering and lightening, and we had to go up to the pavilion. When I started out, I could not at first avoid limping somewhat. After staying there about an hour, the stage came

Digitized by Google

and took us away. That afternoon I went to New York, and nearly all the way I read and endeavored to realize the Truth. When I got to New York, I took the wrong ferry, and it took me out of my way so I had to walk about two miles. I had to hurry to get the boat for Albany. I got the boat, and went to work again. At that time I had not overcome the sense of smarting. I met a friend in the boat and we sat on deck until eleven o'clock before I went to the stateroom. While I was undressing, this friend came in and saw my foot. He was greatly astonished and he said, 'Have you been sitting on the deck and visiting all the evening with that foot? I should think you would be in such pain you could not speak. Why don't you get a doctor and have it treated?' I said, 'It has been treated. There is nothing but what will readily yield to the understanding of Truth.' He knew but little of Science and thought it rather strange, but he went to his stateroom.

"The next morning he asked how my foot was. I told him it was all right. We walked up town and breakfasted together. I went to my room afterwards, because the shoes that I had on were new and somewhat tight. I did yield enough to the sense of ease to put on an old pair of shoes, but I did not look at the foot that morning. That night when I went home from the office where I worked, there was scarcely any discoloration. There was just a little on the large toe. Otherwise the foot was perfectly normal and it never gave me a particle of pain afterwards.

"To me that was a wonderful demonstration. It is the demonstration that we have personally that is most convincing to us. While I have had many physical demonstrations, yet nothing I have realized in the material way can begin to compare with the understanding that I have of God, and of His relation to man, and of man's relation to his Maker. To me Science is everything, it is my life. And I think, as we come to understand that God is Life, we do know, as we are taught in the Ninety-first Psalm, that no evil can come to us if we are dwelling in the secret place of the Most High, under the shadow of the Almighty.

"I am thankful, friends, for Christian Science, and I cannot miss the opportunity of expressing my appreciation and love of this great Truth, and for our dear Mother, who has brought it to us."

The next speaker spoke as follows: "I am quite young in the study of Christian Science. A year ago last month, for the first time, I consulted a practitioner. I had, at that time, been out of business for about six years on account of my health. I had suffered for nearly thirty-four years, almost constant pain. At the time I took the first treatment, this difficulty had been overcome, but it had left me in a sad condition physically. For twenty-five years I had not known, but on two occasions, what it was to desire a particle of food. Headache was my almost daily companion. I desired to go on a trip to the South, but felt that I was not in fit condition to do so. After three weeks' treatment, the lady practitioner told me to go; that I was all right; but to take Science and Health with me, which I did.

"The first day I visited my healer, she prescribed a copy of Science and Health. I have done what I could toward mastering the Science, but have not made the headway which I hope all of you have made. I came a considerable distance from home, but I want to testify that although I walked from the beginning to the end of the line of march, I did not propose mortal mind should master me and say that I was too tired to attend a meeting of the Scientists. I feel now that, if it were necessary, I could go over the same march again.

"Should I attempt to tell to you the physical benefits which I have received in this year and a half, I would take up every second of this meeting and another meeting besides. A gentleman sitting at the opposite end of the table where I usually sit said to me, 'I never saw such a change in a man in my life, as took place in you from last evening to this morning.' I had every evidence of a severe attack of grip at night. I could not see, my head ached, the water was running from my nose and eyes, my back ached, and it seemed as though I was in for a long siege. I had had it twice before, on one occasion being confined to the house for three weeks. I got up the next morning, and my eyes were as clear as they are to-night. My head was as free from pain, I was in just as good condition that morning as I am now, and you can judge for yourself whether I am not in good condition now. It was a most wonderful demonstration to me.

"I will take up your time for one moment more to relate an incident which occurred in the city of Peoria. I am from the city of Chicago, but I visited Peoria last May, and a comrade told me that a short time before, he was confined to his bed with the rheumatism. He was so bad that he could not get out of bed. He was so blind that he could not see a thing. His doctor told him he had only a few days to live; and as many people, or some people, would do, he wanted to be sure that his wealth, what he had, would go to the persons whom he desired should have it. So he gave away everything he had in this world. He had made up his mind to die. He had no further use for it, so he gave it all away. A friend came and said, 'Why don't you try Christian Science?' 'Christian Science? What is that?' he asked. The friend explained. 'Why,' he says, 'I am gone. I have made all my arrangements for going, and it is only a matter of a day or two when I shall.' The friend, however, urged him to try Christian Science, and he replied, 'Why, certainly, I will try anything. It don't make any difference what it is.'

"He sent for a practitioner, and the night I was there he escorted me from the street car to the church where the meeting was held.

"I find, even though I do not claim to be much of a Scientist myself, I find that there are others wherever I go. In Chicago, we are making rapid strides and I find the same thing in every town I visit; there are Christian Scientists there. They are making headway. Some of us must receive the physical benefits before we receive the spiritual. We are so obtuse, so blind, that we have got to have the arguments which cannot be overruled by mortal mind. Those arguments are coming. They are being demonstrated every day. And I look for the time to come before many years, when the question will never be asked, What is Christian Science? I hope all will know what it is and receive the benefits therefrom."

Millionaires of Cheerfulness.

Many people in ordinary circumstances are millionaires of cheerfulness. They make their neighborhood brighter, happier, and a better place to live in by their presence; they raise the value of every lot for blocks around them.

The world is beginning to see that people who can radiate sunshine and carry gladness and good cheer wherever they go, although they may be poor, are of infinitely greater value to society than the millionaire of money, who pauperizes everything he touches, and everybody who comes in contact with him, by his close, contemptible methods.

Largeness of heart and generosity of soul make millionaires of character who are worth more to the world than mere moneyed millionaires.

The time will come in the progress of the world when we shall not have to depend on rich furnishings, costly tapestries, and gold plate. Character will become so enriched in the upward growth of the world that the surroundings, however costly, will be considered but a cheap setting of a precious life-stone. Cheerfulness is a potent factor of success.—*Success.*

Cartoon and Christian Science.

IN this free thinking and free speaking country it frequently happens that freedom gives place to license, resulting in actions which the public needs to frown down, since they are amenable to no other law. How frequently since the death of the President the evils of "yellow journalism," the habit of holding up the best men of the land for defamation and contempt, have been referred to by the press in righteous indignation.

This evil is not confined to the political world alone, or those who stand highest in the domain of public affairs, it even enters the domain of religion, and there, too, manifests its malign spirit. While there is a wide field for difference of opinion in matters of religion, and the number of sects and denominations is so great as seemingly to afford every man a church suited to his religious beliefs (should he have any), his attitude toward those who differ from him, ought never to descend to the low level of derision and defamation.

No more untimely exhibition of this sort of abuse has come to our notice in a long time than a page of cartoons in the Sunday issue of one of the New Haven dailies, the Sabbath following the death of Mr. McKinley, a tenderly sorrowful day. Untimely at any time, but more particularly when the hearts of all the people were plunged in sorrow, could anything seem in more execrable taste? On any occasion, and in particular on such an occasion, to hold up a well-established and highly respectable body of Christian people as an object for fun and supposed amusement, seems so utterly out of place as to excite only the most painful sensations. These cartoons were leveled at the Christian Scientists, and we can discover no good reason for what was evidently intended as an insult.

While not a Christian Scientist, we know many who are, and know no people more worthy to bear the name of Christian, if pure living, and right doing, and high thinking, be any mark of a Christian, and if these things are virtues they ought not to be the object for derision. Scientists would very likely, according to their usual custom, have ignored the matter. It is not their custom to return "railing for railing," but "when reviled to revile not again."

This sort of defamation, however, is no new thing. The early history of Methodism is full of this spirit of bitter opposition as well from the secular world as from the established church of that day. So was the work of Luther and his confreres in the Reformation period. Even more was the hatred manifested toward the Saviour of the world on the part of those who could not appreciate his character or his mission, and so persecuted him even to his death.

The simple creed of every Christian Scientist is summed up in these words: "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 493). What a creed for the cartoonist!

If some suppose this to be a small, insignificant sect to be easily sneered down or laughed down we will quote a little to prove the error. *The London Daily Mail*, by way of introduction to a series of articles on this subject by the Earl of Dunmore, a distinguished Scotch nobleman, says: "The rapidly extending influence of Christian Science, that extraordinary religious movement that has swept as a mighty wave over the northern continent of America, makes it a subject of pressing interest. Its adherents number more than a million, and in England it is enrolling recruits every day from all classes of society." Says the writer himself in his first article, "Christian Science can count among its adherents in both hemispheres, professional men and women of the highest class, students of both sexes of brilliant university records, officers of high scientific attainments in both services, statesmen, lawyers, philosophers, judges, and doctors."

We might quote much more on this point, but space forbids. We will add, however, that its followers are from all classes, and when men and women are most helpless, and hopeless, and God-forsaken, as in jail, or prisons, or where they are wasting with disease or bound in chains of evil habit, or suffering incurable pain, then it seems is when and where its best work is done and its divine potency most manifest.

Why do so many leave the church of their childhood and sever the most tender and powerful ties unless they find here something the heart craves, something they had not known before? There is here something that seems to afford a fuller satisfaction than is found elsewhere, and once accepted very few retract or return to what seems to them the narrower faith of their early life.

"Prove all things; hold fast that which is good;" but do not hold up any body of reputable Christian people for public ridicule, for obloquy and defamation, for cartoon and caricature, simply because they fail in every way to follow "the traditions of the elders." All really good people are worthy of respectful consideration, and it manifests a woful lack of objects on which to practise the "funny business" that a Sunday paper must resort to such methods. We hope and believe, for the honor of all right thinking people, that very few will find amusement from such sources, and if Sunday papers must make the funny business prominent it seems as though some object might be found aside from any church of any name or belief whatsoever on whom to practise such very questionable wits. The Laborer and his Hire.

IN almost every vocation, from the standpoint of justice and right, it is a recognized fact that "the laborer is worthy of his hire." The manufacturer, the merchant, the farmer do not expect men to come and labor for them for naught, neither do the laboring class of people expect to get their necessary supplies without giving proper recompense in return. This the employer and employe agree is just between man and man.

In case of illness or injury, when it is deemed wise to summon a physician, it is not expected that the doctor shall give his time helping humanity and not receive in return a just remuneration. By nature the physician may be a philanthropist, but this is no reason why he should not receive a recompense for his labor of love. The mass of the people are almost a unit on this point, and right it is.

If a body of people organize themselves into a church society, and call some one to officiate in the capacity of pastor, it is not just that this individual, while attending to pastoral duties, should live as a pauper and beggar, but the congregation whom he serves and to whom he ministers, should realize that he is entitled to a compensation, that he earns it as much as the mechanic or the merchant. Paul wrote to the Corinthians, "Even so hath the Lord ordained that they which preach the gospel should live of the gospel." This recognition is becoming more universal, and well it should be, Jesus establishing such a precedent when he commissioned his disciples.

In Christian Science we find its practitioners are both preaching and healing, as Jesus commanded, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils; freely ye have received, freely give."

That Christian Scientists heal the sick, can no longer be disputed; that they preach the gospel is evidenced by the reformation in the lives of its adherents who testify that this Truth has made them better men and women,

Digitized by Google

has given them a better understanding of God's word, and drawn them nearer to Him.

Notwithstanding the good accomplished, critics aver that Christian Scientists have no right to make charges for their services. This view, rightly interpreted would mean, that they should be paupers, and thus be impeded in their work. The Scriptures exhort us to be "honest" and "owe no man." To-day there are thousands giving their entire time to Christian Science healing, and as the result, multiplied thousands have been freed from pain and from vice.

One of our lecturers stated that in the city of Chicago, five thousand treatments were given daily. The truly grateful know and appreciate that the laborer in this vineyard must live, therefore count it a pleasure to give of this earth's possessions in return for the blessings received. Jesus said: "Your heavenly Father knoweth that ye have need of all these things," and so long as it is necessary for the sick to be healed, so long as it is necessary to be fed, sheltered, and clothed, just so long it is right that a just recompense be made. Only the avaricious would ask another's time without endeavoring to recompense him for it. This class of people would seek the House of God and forget to remember their Creator with their first fruits; they know not the Scripture: "Both riches and honor come of thee, and thou reignest over all; and in thine hand is power and might; and in thine hand it is to make great, and to give strength unto all."

The grateful hearts say: "But who am I, and what is my people, that we should be able to offer so willingly after this sort? for all things come of thee, and of thine own have we given Thee." In proportion as the grateful class of people increase in wealth, they do not forget their God in their service to humanity; they do not rob God by failing to bring their tithes and offerings to Him, but they bring all the tithes into the storehouse, and have the promise, "I will open you the windows of heaven, and pour you out a blessing that there shall not be room enough to receive it." Then it is that the church will "bloom and blossom as the rose," be exceedingly prosperous in good works, for the laborers are not burdened, "the workman is worthy of his meat," and receives it.

The true Christian Science healer is a humanitarian in every sense of the word, but because of this it is not right that people should take advantage of him, and people plead poverty through a sense of greed and selfishness, and thus burden him, robbing him of his time, without an effort put forth to make some compensation. Little does the patient know the labor of love given by the honest practitioner. I have heard practitioners of years' experience say that at least two thirds of their time is given to suffering humanity, for which they receive no compensation. There are but few people, if any, so poor, but if told that some medicine will heal them, they will manage to secure the money and purchase it. As a compensation in Christian Science no one is asked to do what he cannot do, but that which he can do, and that which is in accord with the spirit of the Golden Rule: "Therefore all things whatsoever ye would that men should do to you, do ye even so to them; for this is the law and the prophets." No worthy person is turned away because he has not the means to pay for treatment, if such is actually a true state of affairs. Dishonesty is fatal; the practitioner could not hope to benefit his patient, if not honest and true to God; neither could the patient expect benefits, if he is untruthful. That the patient be benefited only physically or freed from pain, is the smallest part of the work to be done; the great work is that they may know the truth about health and holiness (wholeness). The promise is if we know the Truth, the Truth shall make us free, thus we clearly see that the Christian Scientist preaches when he heals, and heals when he preaches the omnipotence of God in the way Jesus taught and practised.

Generally speaking, the ministry at present does not include all the gospel—"healing the sick"—as Jesus commanded, neither does the medical profession include the "gospel preaching" in its work, yet separately both are remunerated for their services to humanity, and we reiterate that this is just and right.

Having briefly stated the work of Christian Science, is it not unjust for any body of people to endeavor to poison the public thought against compensating Christian Scientists for their work, when it includes both preaching and healing? Our Master said, "There is no man that hath left house, or brethren, or sisters, or father, or mother, or wife, or children, or lands, for my sake and the gospel's, but he shall receive an hundredfold now in this time, houses, and brethren, and sisters, and mothers, and children, and lands, with persecutions; and in the world to come eternal life."

"The wrath of man shall be made to praise God." The many condemnatory remarks made against Christian Science has led individuals to investigate this subject, and in thousands of instances has resulted in their acceptance of the Truth which they have long sought. They learned that the accusations were without foundation; that the true idea of Christian Science had not been presented.

Dayton (O.) *Herald.*

Anent Mrs. Eddy's Explanation.

To the Editor of *The Saratogian.*

I desire to express my appreciation of the careful and correct manner in which Mrs. Eddy's answer to the question: "Why did Christians of every sect in the United States fail in their prayers to save the life of our late lamented President?" appeared in your issue of October 9.

Mrs. Eddy's explanation raised many important spiritual questions, and naturally led to some comments on your part. There is one aspect which needs to be emphasized in connection with Christian Science. This faith is no mere abstract theory or speculation. It is a definite, demonstrable science, built upon spiritual understanding. It proves itself by its works. Its growth, conceded to be marvelous by members of all Christian denominations, is the result of its works. It does reform the sinner and heal the sick. A cloud of witnesses, here and abroad, testify to this fact in the more than six hundred churches and societies of this denomination. No sincere investigator of the results of Christian Science any longer denies the healing, for so much is established; but the question still arises in the public mind: How can these things be?

Christian Science declares that there are no miracles, but that all its works are done in accordance with spiritual law. Now, the Biblical term faith stands for the understanding of this spiritual law, and is therefore defined in Christian Science as spiritual understanding. It is not blind belief nor credulity. Your statement, "But faith is subject to Divine direction" is entirely in accord with the position held by Christian Scientists, so is the further statement that it is subject to "the immutable laws of nature," provided the word "nature" is not intended to imply so-called material laws, which the spiritual law annuls. Jesus fed the five thousand, contrary to the supposed law of material limitation, and he walked the waves in opposition to the so-called law of gravitation. St. Peter raised Tabitha from the dead in violation of the material law of death, and St. Paul shook off the viper from his hand, and suffered no evil effects, although material law called the sting of the viper deadly. The history of the first three centuries after the Crucifixion is full of instances of this kind, of the conquest of faith, interpreted as spiritual understanding, over matter and its supposed laws.

When prayer fails to-day to heal the sick, this failure must be attributed to a lack of sufficient spiritual understanding or of true faith in its highest interpretation. Any-

Digitized by Google

thing which can throw light on this whole question possesses special value at this time, when many well-meaning Christians seem to be puzzled by the failures of their prayers to be answered. God is Love. "It is not the will of your Father which is in heaven, that one of these little ones should perish." The question then resolves itself into this: Do we pray aright?

Yours truly,

W. D. McCRACKAN.

In *The Daily Saratogian.*

A Word of Explanation.

To the Editor of *The Sunday Globe.*

In your issues of September 22 and 29 you make references to Mrs. Mary Baker Eddy, the Discoverer and Founder of Christian Science, concerning which I ask you kindly to allow me to make some comment.

Christian Scientists alone are in a position to know their true attitude towards their Leader, Mrs. Eddy, and they would be glad to have the public understand them on this point. They do not believe or teach that Mrs. Eddy is divine, and Mrs. Eddy herself most emphatically denies and denounces any such foolishness. They do not think or speak of her in any mysterious, far-fetched way, and there is nothing unnatural or strained in their attitude toward her.

The illustrations in the book, "Christ and Christmas," referred to in your last article, are not portraits, and are not intended to represent persons, but are used as types to convey spiritual ideas, as was found necessary even by our great Master, Jesus Christ, who often taught the real, through the figurative, and resorted to parable and symbol to make plain his spiritual teachings.

The world is coming to know the real value of Mrs. Eddy's work as a reformer and leader of spiritual thought, and is beginning to accord it some measure of justice and appreciation. This has come about through the practical workings of Christian Science, which are in full accord with Jesus' commands, and which carry conviction wherever the unbiased mind studies this great subject, as presented in its text-book, "Science and Health with Key to the Scriptures," and observes its moral and physical benefits, as found among its followers. Thanking you for your courtesy in allowing me to make this reply, I am,

Cordially yours,

October 15, 1901. HERMANN S. HERING.

From *The Sunday Globe,* Washington, D. C.

The Mazarin Bible.

The "big gun" of the Ashburnham printed books was the splendid copy, printed upon vellum, of the first edition of the Latin Bible, and the first book executed with metal types, 1450–55. It is generally known by the name of the Mazarin Bible, from the discovery of a copy in the cardinal's library by the bibliographer De Bure; its importance is too well known to be enlarged upon here, although a very little known fact in connection with it may be mentioned.

Trithernius says in his Chronicle that he was told by Peter Schoeffer, the partner and son-in-law of Fust, that the expenses incurred in the printing were so enormous, that four thousand florins were expended before twelve sheets had been printed. Only about four copies on vellum and less than twenty on paper have been recorded. The Ashburnham copy was formerly in the University Library of Mentz, whence it was obtained early in the present century by Nicol, the king's bookseller; at his sale in 1825 it was purchased by Henry Perkins, the book-collecting brewer, for four hundred and eighty guineas; at the Perkins sale in 1873 it was bought for the late earl for £3,400; and at the earl's sale it advanced to £4,000. All the copies sold in recent years have been on paper. In 1884 Sir John Thorold's sold for £3,900; three years later Lord Crawford's brought £2,460; and the Hopetoun, the first leaf of which was injured, brought £2,000.

Apart from the intense interest which must always surround this book, it may be doubted whether, with all the advantages of modern appliances to the art of typography, it has ever been excelled—"magnificent" is the only word that can be properly applied to it. It is adorned with one hundred and twenty-three finely painted and illuminated miniature initials, historiated and ornamental, many with highly finished marginal decorations of ornaments, birds, beasts, flowers, fruits, monkeys, and grotesques, in the best style of Renaissance art. As an instance of its value rather more than a century ago, it may be mentioned that the Grenville copy in the British Museum cost Count MacCarthy 1,200 francs at Gaignat's sale in 1768; at MacCarthy's sale in 1815 it realized 6,260 francs.

Fortnightly Review.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Dec. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Take Notice.

ALL gifts by mail, express, or that are handed to the porter at my door without cards, and have not come from persons with whom I am acquainted,—will be returned to the office whence they came, or rejected at my door. Recent attempts of third parties to scandalize me through the friendly means aforesaid, have occasioned this notice.

MARY BAKER G. EDDY.

The Publishing Society and the Field.

THOSE who are at work in the Field, endeavoring to reveal to the world that "beauty of holiness" which Christian Science establishes, intelligently appreciate the office of the Publishing Society in its service to the Cause. There may be some, however, who have not learned that the business belongs beneficially to the Mother Church, and that it is administered in trust, so that all profits are paid over semi-annually into the Church treasury; and it is unnecessary to say that all Christian Scientists are equally interested in the welfare of the Mother Church. The Society is not conducted for the pecuniary benefit of any individual or individuals. Those responsible for conducting the business of the Society, receive only a modest compensation for their services. In this connection it is but just to say that the business manager, Mr. Joseph Armstrong, is not a member of the Board of Trustees, and does not determine what shall or shall not be published by the Publishing Society.

The main business of the Publishing Society is the issue of periodicals which set forth legitimate Christian Science, —a weekly newspaper, a monthly magazine containing more lengthy articles, and a quarterly series of Bible Lessons. A constant current of clean and satisfying thought upon the highest themes that can interest man, is thus continually flowing forth; and it is quite impossible for any one inexperienced in the task to know at what cost of care and vigilance the purity of this stream is maintained.

Field workers appreciate the value of the periodicals for distribution among inquirers and patients. To the stranger, the regular issue of a periodical has much more meaning than a tract would have. It indicates a continuity of interest, a list of subscribers, the faith of many in the doctrine promulgated. Sometimes, however, a pamphlet may be more desirable, and a few somewhat lengthy dissertations or testimonies have been published in pamphlet form, for use in distribution. As adjuncts of the periodicals, lectures in supplement form, and short Reprints suitable for enclosing in letters, are also issued. The periodicals and these adjuncts are sold to workers at moderate prices and the imprint of the Publishing Society upon them indicates careful selection and editorial supervision, so that they may rightly represent the Cause.

The periodicals issued regularly, weekly, monthly, and quarterly, are all copyrighted in the name of the Pastor Emeritus of the Mother Church, Reverend Mary Baker G. Eddy. This copyright indicates a reserved privilege, not beneficiary ownership; for the periodicals are managed by trustees for the sole benefit of the Mother Church. The Pastor Emeritus has the privilege of withdrawing the periodicals from such management should they fail to be representative of true Christian Science, and of this guardianship the copyright is token. From the publishing of the periodicals sent out by the Publishing Society, Mrs. Eddy has no pecuniary reward whatever; yet for the welfare of the Cause, she not only contributes to their columns, but on occasions exercises an oversight which demands much time and labor. This cheerful giving of time and thought on her part encourages the responsible workers to a devotion far beyond what their moderate remuneration would demand.

It will be seen that The Christian Science Publishing Society cannot be hospitable to publishing of a general kind, but has to maintain its own clearly defined field of operation. This does not include the publishing of works of fiction, story books, volumes of verse, poems, histories, and so on. Contributions to the columns of the periodicals are always considered; but manuscript offered for private publication, as well as calendars, book-covers, wall-maps, books of texts, daily reminders, book-marks, pictures, etc., have to be returned to the senders.

The publication of the Christian Science Bible Lessons began in January, 1890; and the lessons were those of the International Series, but commented on chiefly by parallel references from Scripture and correlative selections from "Science and Health with Key to the Scriptures." When the Bible and Science and Health became Pastor of the denomination in April, 1895, this Bible Lesson was read in the churches by two Readers, in lieu of a sermon. In 1898 the Bible-Lesson Committee was instructed to prepare additional lessons for each Sunday from a series of twenty-six subjects given them by Mrs. Eddy, and from July of that year these "lesson-sermons" were read for the first service; and the lesson of the International Series was read at the second service, if such were held. In April, 1899, the use of the International Series was discontinued; and in cases where two services are now held, the lesson-sermon for the day is repeated. In this way public teaching with regard to Christian Science is given; and the form of the lessons has caused a revival of interest in the study of the Bible; for during the week the student has the opportunity to read the Scripture texts *in situ,* and assimilate their meaning as the context explains it. He thus gains familiarity with that storehouse of spiritual experiences which so many reverence and admire from without; and by study of the correlative passages from the Christian Science text-book, set side by side with the Scripture selections, he finds how truly that text-book is a "Key to the Scriptures" whereby he can reach those treasures of spiritual understanding for which so many prophets and wise men in the past have sought but did not find. When so much is involved in this teaching, and also since the first Teacher of Christian Science is still our wise guide and friend, it is surely sensible for all to accept the presentation of the teaching in the way her wisdom approves; even though "quick and easy" methods may offer attractions. We believe that teachers and practitioners will do well to interest their patients and others in individual study of the Bible Lessons, that they may be in one mind with the tens of thousands in all lands who week by week are occupied with the same subject for study.

A Case Reported.

A CHRISTIAN SCIENCE practitioner of New York City sends us an interesting account of a case of diphtheria which was promptly reported to the Board of Health, with results which were satisfactory all around.

The case was that of a child who is a member of the Sunday School of Third Church of Christ, Scientist, New York City. As soon as the disease presented the appearance of diphtheria the following report was sent in:—

Digitized by Google

To the Board of Health, New York City.

Dear Sirs:—In compliance with the law, requiring all cases of contagious diseases reported, I wish to report a case of diphtheria at ——. At the request of the mother, the child is being treated according to Christian Science. I ordered the child isolated, requested that no one be allowed to enter the apartment, and also ordered disinfectants used in the room and halls. If there is anything further which the law requires done in such cases, we will comply with same.

Yours respectfully,

MRS. MILDRED C. GORDON, C. S.,
228 West 122nd St., New York City.

Our correspondent says that on the same evening a physician called, and after securing a specimen from the child's throat in the usual manner of physicians in such cases, he asked if there was a physician attending the child. He was frankly informed that the case was in the hands of a Christian Scientist. He then asked for the name and address of the Scientist, and in filling out the report attached to the tube, he crossed out "Attending physicians," and wrote "Christian Scientist" instead.

He also asked the mother if any medicine was being given, and was told that no medicine or material remedies of any kind were used in Christian Science. He was most courteous and kind throughout the entire interview. This occurred on Monday, about 6 P.M., and on Wednesday, the practitioner received an official report from the Board of Health, stating that the examination of the culture from the throat showed the presence of diphtheria.

The next day a card notifying the public that diphtheria was within was attached to the door of the apartment where the child was confined, and a notice was sent to the school, and read in each room, stating that the child had diphtheria.

In two weeks the child was completely healed and the Christian Scientist sent a second report to the Board of Health, stating that the child had entirely recovered.

The same day the physician who had taken the first specimen from the child's throat called, and took two more specimens. He said that he should have called before to see how things were going on but had been sick, and turning to the child he said, "Well, little girl, so you have gotten well without a doctor." He again took the name and address of the Scientist, and the next day she received a second report from the Board of Health, stating that an examination of the specimens last taken did "not show the presence of any diphtheria bacilli."

Our correspondent further writes: "Although the symptoms were at times alarming, the child was up every day, had no fever and no suffering except the discomfort due to having so much in her throat that did not belong there. The healing of the disease seemed wonderful, but even more wonderful, to me, was the overcoming of all fear and belief of contagion."

This case is valuable in that it shows that duty well and fearlessly done meets with its due reward.

A Further Explanation.

I PUBLISHED in the last *Sentinel* a letter from Mrs. Craig written from Provo City, Utah, dated November 5, 1901, relative to certain misrepresentations by an agent of "The World's Great Masterpieces," together with some comment of my own. At the time I wrote this I was not aware of certain correspondence had between The Christian Science Publishing Society and the publisher of the work in question. Since the appearance of the article in the *Sentinel* my attention has been called to a letter from Mr. R. S. Peale which I herewith gladly publish.

R. S. Peale, Publisher, 170 Fifth Avenue, New York,
November 6, 1901.

The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

Gentlemen:—Your esteemed favor of October 30th addressed to Mr. Norcross in Boston, has been forwarded to me. I immediately took up the matter with our San Francisco office by wire, instructing them to discontinue agent Constantine, who has been misrepresenting both you and us in this matter. Let me assure you we are fully as anxious as you can possibly be, to avoid all appearance of misrepresentation such as your letter calls attention to, and we will deal summarily with any of our agents whom we discover using any deception in the sale of the "Masterpieces." I will at once see that a letter is sent out to our various offices, instructing our managers to exercise great care in future in sending out only such men as they know will deal honorably and truthfully with the public concerning this matter.

Thanking you for your kindness in bringing the affair to my notice, I beg to remain,

Very sincerely yours,
R. S. PEALE.

This letter fully explains the entire situation, and I am glad that the matter has been thus cleared up to the exoneration of the publisher of "The World's Great Masterpieces."

S. J. HANNA.

Among the Churches.

"Birthplace of Christian Science" Purchased by First Church of Christ, Scientist, Lynn, Mass.

A transaction of much interest to Christian Scientists and religious circles in general has just been consummated in the purchase of the estate at No. 12 Broad Street, by the local Christian Science organization, for the purpose of erecting a church edifice in which the new faith may be inculcated.

The house standing on the property, is the one wherein Mrs. Mary Baker had her residence in Lynn back in the sixties, when she was preparing her famous work on Science and Health, and laying the foundation of the Christian Science faith which has had such a wonderful growth in this country.

A peculiar interest attaches to this house because of this fact. Mrs. Eddy, in the introduction to her book, says: "The first school of Christian Science mind-healing was begun by the author in Lynn, Mass., about 1867, with only one student." To-day there are over four hundred Christian Science organizations with church property representing millions of dollars, and all this had a beginning in the unpretentious old family house on Board Street.

The house and lot has changed hands several times since it was occupied by the Founder of the Christian Science Church, its last owner being Dr. Carolus M. Cobb. The property has been sold by Dr. Cobb to First Church of Christ, Scientist, of Lynn, the purchase price being fifty-six hundred dollars. The necessary papers have been passed and the society is now in possession.

A board of seven trustees, including well-known citizens, acts for the church in the deal, but the property will be held by the First Church as an incorporated body, its charter having been received from the secretary of state three years ago.

It is not the intention, as suggested in a recent article on the subject in a Boston paper, to preserve the old house as a memorial to Mrs. Eddy and a shrine of the faith, but the First Church will proceed immediately to rebuild, and an architect will be commissioned to make plans for a building which will be not only an ornament to the neigh-

Digitized by Google

borhood but will provide the Christian Scientists of the city with a suitable place of worship.

Mrs. Eddy has been aware for some time that a movement was on foot to secure the old home, but she has had nothing to do with the recent purchase, the local members of the society furnishing all the funds required to close the deal.

There are about seventy members in the First Church. Mrs. M. Evelyn Towne is the First Reader. Services are now held every Sunday morning in Wright's Hall, Exchange Street, the Society having shifted from the Christian Church on Silsbee Street, where it has been worshiping. In December comes the annual election, when readers, trustees, and other officers are chosen from the membership in the most democratic manner.—*Lynn Evening News,* November 7.

Christian Science Work in Bedford, N. Y.

On Sunday, June 30, was held the first service in the new and most attractive little building built specially for the Christian Science work in Bedford, N. Y. In addition to the regular lesson, read by Miss Mary Simpson, First Reader, and Mr. Frederick W. Albree, Second Reader, were a few very appropriate remarks by Miss Simpson, and a short address by Mr. John Carroll Lathrop of New York City.

The music was conducted by Mr. Frank A. Hazen, and a solo, "Peace of God," was sung by Mr. H. Vance Swope. The service was well attended, about one hundred and fifty people being present. For the past year the lesson has been read every Sunday afternoon in a private residence, but the steady growth of the work has resulted in securing this delightful place to meet in, and work to obey the one text upon the wall, "Jesus said,—Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself."—J. B. M.

Reading Room at Troy, N. Y.

Transient visitors to the city, as well as residents, agree in admiring the window of plants which attracts every eye at the reading rooms of First Church of Christ, Scientist. No more luxurious display could be imagined. The plants are so very thrifty and beautiful in their shape and coloring, and so exquisitely arranged, that many pedestrians stop daily to look at them. Just inside the window is a fern of mammoth proportions which is quite as beautiful as many palms.

The entire aspect of the rooms is charming in the extreme. The soft, rich carpets, handsome furniture, and the pictures on the walls all contribute to the joy and comfort of those who go in to tarry a while, either for the purpose of reading or to rest. No more restful spot could be imagined, and many ladies who are waiting for trains go in the rooms and are made heartily welcome.

The Northern Budget.

Abide in Me.

When darkness for a season seems
To hide the light whose steady beams
Are shining still, though not a ray
Is seen, and help seems far away,
When loneliness and doubt beset
Our faith, and life becomes regret,
Then, dear friend, know that in this hour
Our God is near, and with His power
His mighty hand with loving sweep
Rolls back the memories that weep
Until the "still, small voice" that said
In olden time, "Be not afraid,"
Is heard again, and speaks to thee,
"Thou art my child, abide in Me."

Anon.

The Lectures.

At Arkansas City, Kan.

Yesterday (Sunday, October 27) was a great day in Christian Science circles in this city, the occasion being the lecture of Judge William G. Ewing of Chicago, on the subject, "Christian Science."

Judge Ewing arrived in our city in the morning and attended the services in the forenoon at First Church of Christ, Scientist. The interior of the little church was tastefully decorated with beautiful flowers and presented a very inviting appearance. A much larger audience than usual was in attendance and after the services many members of the congregation had the pleasure of meeting the distinguished visitor.

The lecture occurred in the afternoon at three o'clock at the Opera House. There was a large audience in attendance who listened attentively to the address. The fact that the lecture was in the interest of Christian Science did not prevent members of other congregations from attending, as it was easy to be seen that a very large portion of the audience was made up of members from other churches. That all were well entertained by the interesting and logical discussion of the Christian Science doctrines is proven by the close attention given the speaker.

It was shortly after three o'clock when the large audience came to order and A. D. Prescott introduced Judge Ewing in a few short but very appropriate remarks.

Judge Ewing is a very pleasant appearing man and when he came forward on the stage and began his address his audience naturally expected to hear a pleasing as well as an interesting talk, and they were not disappointed.

He brought out many points in his lecture, but did not attempt to cover the entire ground, because the time would not permit. He spoke for over an hour and when he had finished, his audience did not appear tired of listening to him.

After the lecture many Scientists and friends repaired to the church and there enjoyed a further talk from Judge Ewing. The Scientists here think that their Cause has been advanced by his visit to our city, and we have but little doubt but that those who heard the address have a different conception of their religion.

Arkansas City Daily Traveler.

Mr. Prescott's introductory remarks were in part as follows:—

Friends:—We have assembled here this afternoon to listen to a lecture on the subject of Christian Science, and I have been honored with the privilege of presenting to you the speaker. While I am not entirely in accord with all the principles of Christian Science, yet it contains many things that I endorse and am endeavoring in my humble way to practise in my life.

Living as we do in the morning of this new century, we look back over the old Jewish religion and it seems to us stern, harsh, and severe, filled, as it was, with forms and ceremonies. And yet, from among the Jewish people came the message of love and peace which has blessed the world and will continue to do so through all the coming ages.

About nineteen centuries ago a young Nazarene passed the last three years of his life on the hillsides and in the valleys of Palestine, teaching the people, not creeds and dogmas, but great living truths. He it was who gave this precept unto the world, "Whatsoever ye would that men should do to you, do ye even so to them." And again he said, "A new commandment I give unto you, That ye love one another." We see him with his great sympathetic heart at the bedside of Jairius' daughter when he restored the little maid to life. To Martha, the sister

Digitized by Google

of Lazarus, whom he loved, he said, "Thy brother shall live again; I am the resurrection and the life."

He died the cruel death of the cross, but the truths that he uttered have lived in the hearts of men, lifting them out of the environments of ignorance and superstition into a purer and better life.

Our conceptions of Christ differ. To me he represents the fatherhood of God and the brotherhood of man; and, believing in him, we go through life, not with doubt and fear, not with hesitation and dread, but with perfect trust, confidence, and love. His followers have organized many churches; many of them have attained wonderful growth, and nearly all of them are stamped with the individuality of their founders. As we study the early history of Protestantism, we read the life-work of Martin Luther. The history of the reformation in Scotland is interwoven with the life of John Knox. The early history of Methodism and the life of the Wesleys are almost synonymous terms.

As we investigate Christian Science we are impressed with the personality and individuality of its Founder, Mary Baker G. Eddy.

Christian Science has also attained a wonderful growth. In 1866, its truths and principles were still being pondered in the heart of its founder. The text-book which is used in connection with the Bible was not published until 1875. The Christian Scientists to-day have five hundred church organizations.

The gentleman who is to address us is the distinguished son of a sister state, and an attorney by profession. He has been honored with many positions of trust and responsibility, among them the judgeship of the Superior Court of Cook County, Illinois. His fealty to his religious faith has induced him to forsake his legal practice and devote his time, energy, and ability to the cause he has so heartily espoused.

I take pleasure in introducing to you the Honorable William G. Ewing, who will now address you.

Correspondence.

At Watertown, So. Dak.

The Grand Opera House was taxed to its fullest capacity Tuesday evening (October 29) by an audience composed for the larger part of business and professional men and their families, to hear Mr. Kimball, the Christian Science lecturer. The audience was attentive throughout, for Mr. Kimball is an earnest and impressive speaker. This is the second Christian Science lecture in this city, the first was by Judge Ewing, who also had a large audience.

The lecturer was introduced by Rev. A. D. Chase, one of the early pastors of the M. E. Church in this city. Mr. Chase said in part:—

First Church of Christ, Scientist, of Watertown, under whose auspices this meeting is held, has procured a member of the Board of Lectureship of The First Church of Christ, Scientist, of Boston, Mass., to address you to-night, and has invited me to make a few remarks and introduce the speaker.

It is said that an American traveler was once descending the foot-hills of the Alps as the evening shades gathered around him, and was trying to return to the village he had left in the morning. Gazing down the mountain he saw what appeared to be a monster in the pathway. If he turned back he would become the prey of wild beasts of the mountain side. If he attempted to go around, leaving the path, he would be dashed on the rocks below. Cautiously he moved downward and came near the supposed hideous monster. He then heard the murmur of a human voice. It is no monster; it is a man. Then he thought of robbers and highwaymen, so numerous in that country, and he was fearful. In a moment there was wafted up the mountain side in subdued tones the beautiful hymn, "Jesus lover of my soul, let me to thy bosom fly." Down the pathway he hastened and grasped the hand of his own brother, from whom he had been separated many years.

My friends, a close and minute acquaintanceship with the various Christian organizations of the world discloses the fact that we are brothers, and one of the objects of the lecture to-night is to acquaint you with the doctrines of the Christian Science Church that unjust and unreasonable criticisms may be avoided in the future. Many elegant and costly temples have been erected within a few years past to accommodate its large and increasing membership. The accumulated debris and error of the ages is being cleared away, and love and truth shine forth as never before. I know you will be pleased to hear the distinguished lecturer already referred to. I now present to you Edward A. Kimball, C.S.D., of Chicago.—*Public Opinion.*

At South Bend, Ind.

Dr. Silas J. Sawyer, C.S.D., of Milwaukee, lectured in the Auditorium Sunday afternoon (November 3), under the auspices of the Christian Science Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, of Boston, Mass. In introducing the lecturer Senator Frederick S. Fish referred to the fact that he was talking from the stage of a theatre, yet all who appeared on this stage were not necessarily actors; and while this was a Christian Science meeting in which he was taking a prominent part, yet he was not a Christian Scientist.

Mr. Fish said he appreciated the compliment of the invitation and felt very happy in accepting it. He spoke briefly of the early history of Christ's followers during the first centuries of the Christian era; saying that Christ came into the world to heal as well as to save, and in the early history of the church healing was very common and this power was delegated by Christ and exercised long after his ascension, but that it gradually fell into disuse; and that inasmuch as it existed once it could exist again. Mr. Fish called attention to the remarkable growth of the Christian Science Church, and showed that in faith, as well as in practice, it was similar to the ordinarily accepted Christian religions; and that any religion which brought hope out of despair, happiness out of sorrow, and health from its practice was entitled to its place in the fellowship of the other Christian churches.

Clinton, Ia.—Edward A. Kimball, November 3.

How things grow in Hawaii.

How great are the possibilities of Hawaii as a fruit and vegetable growing country will be understood when it becomes known that four crops of potatoes have been produced in succession on the same piece of land within twelve months. Radishes become edible in ten days after sowing. Strawberry vines bear fruit all the year. The berries are of the finest flavor.

Cabbage grows all the year, and it apparently makes no difference whether it is planted in the spring, summer, autumn, or winter. Parsley once sown grows forever apparently. Lima beans continue to grow and bear for over a year, and they have to be gathered every week after starting to bear. Cucumbers bear the entire year, and so do tomatoes, which, with proper attention, bear for years. Raspberries bear for six months. Pineapples come into bearing when the plants are four months old and bear in abundance for years. Lettuce can be planted at any time, and it develops quickly. The same is true of celery.

Trust in God.

BY WILLIAM CROFTS.

TRUST in God, and be at rest;
Trust Him, what He wills is best;
Let no fears your peace molest,
Trust in God.

Trust in God, and be at peace;
Trust, and all your struggles cease;
Trust, He will your faith increase;
Trust in God.

Trust in God when fears assail;
Trust Him, though your courage fail;
God is all! you *must* prevail;
Trust in God.

He will keep you all the way;
Give you strength for every day;
Trust, and watch, and ceaseless pray;
Trust in God.

A Letter to a Former Physician.

MY heart goes out in deepest gratitude to Mrs. Eddy for the help I have received physically, mentally, and spiritually, from a close study of her book, "Science and Health with Key to the Scriptures."

I recognize the physical healing as only the "Bugle Call," and that which follows, as every true Christian Scientist knows, fills the heart's needs as nothing else has ever done. Therefore, my earnest desire is expressed in Ephesians, 6 : 19, "And for me, that utterance may be given unto me, that I may open my mouth boldly to make known the *mystery* of the gospel [Good spell]."

Christian Science furnishes the key which unlocks this "mystery," but to many who do not earnestly strive to enter the portals of Truth, these utterances seem sometimes obscure.

I sincerely hope the following letter, written to my former physician, will appeal to some one in need of help. Christian Scientists are sometimes accused of exaggeration, but none will think us so foolish as to exaggerate to a physician, formerly employed for the ailments which have been cured by Christian Science.

The letter but poorly expresses the despair I was in a year and a half ago.

New York, N. Y., October 2, 1901.

X. X——, M. D., Brooklyn, N. Y.

My Dear Doctor:—I know that what I say in this letter will seem strange, when compared to that which you daily practise in your profession. I have no ulterior motive in writing you, but wish to be of help and assistance to you and those of your family who are so sadly afflicted, for I fully realize that the mental anguish you and your good wife are bearing is perhaps greater than the physical suffering of your dear boy.

I was in hopes that he would be better after the cast was removed, but hearing that he is not so well I am prompted to write this letter, hoping it may do some good. When I first went to you for help, I know I had your sincere sympathy and interest, and that you did everything that your skill and intelligence could do to give me relief, and I should be lacking in gratitude both to you and to Christian Science if I longer withheld from you the knowledge and help I have gained from these good people.

There was none harder to convince than myself. For a month prior to being treated, I even expressed my conviction that whatever power they had was purely of the devil. A year and a half has since elapsed, and I have found that the class of people connected with Christian Science are not at all useful to that individual, in fact they and he are mutually antagonistic. I have found Christian Scientists, as a body, to be the most loving, kind, tender, and pure-minded people I have ever had the good fortune to meet, and their intelligence is remarked upon wherever they are found.

Perhaps you would be interested in knowing how I have been benefited physically. For over fifteen years I had been troubled more or less by indigestion and nervous prostration, which gradually grew worse and brought on other complications. Constipation developed ten years ago and kept growing steadily worse; six years ago I ceased to have natural passages, and after being treated by Dr. —— of ——, was told by him that he could do nothing more for me. I then tried everything I heard of, and in most cases I was helped for a time, but the treatment lost its power after a short time and left me worse than ever. When I went to you I had indigestion, nervous prostration, constipation, and trouble with my eyes. For the latter trouble you referred me to a doctor whom you considered the most eminent eye specialist in Brooklyn. This doctor very carefully examined my eyes and pronounced the trouble astigmatism, and prescribed lotions and glasses. He told me I would always have to wear glasses,—not only while reading but on the street. At this time I could not read more than ten or fifteen minutes at a time without pains in my eyes which compelled me to stop.

As you know, I only weighed one hundred and twenty-six pounds when I went to you, and for a time through your earnest efforts was helped and increased in weight to one hundred and thirty-four pounds, but towards the last I got back to one hundred and twenty-eight pounds, and the medicines ceased to have any effect for good, though I still kept using them.

About this time I took lunch with a friend on several occasions. He noticed my diet consisted of hot milk, etc., and on hearing of the cause he told me of his wife who had been cured by Christian Science, and recommended me to try it. At first I paid no attention to his suggestions, but after I had gone four days without a passage and had taken seven doses of medicine, an hour apart, without any effect, and was in great distress, I met him again at his office. He then urged me very strongly to take the treatment, saying it could not possibly do any harm, and as everything else had failed it would not hurt to try it. I was thoroughly discouraged and frightened, and ready to grab at almost anything that offered relief, so agreed to try it. I visited a practitioner that afternoon and was treated, and the next morning I had a perfect and natural passage, and have never had any trouble since, eating everything and gaining steadily in weight till I reached one hundred and sixty pounds a year later.

Two weeks after the treatment I took my glasses off and am reading daily, hours at a time, with perfect ease. The nervous trouble hung on somewhat for three months, but that went too, and I am now enjoying excellent health and have not taken a drop of medicine since my first treatment in Christian Science, a year and a half ago.

My boy William, for the past four years, has been terribly troubled with poison ivy. As soon as hot weather came on, it appeared on his hands and between his fingers, and generally remained two or three months, during which time he had to have his hands done up in bandages. Nothing has reached him until this year. When the trouble made its appearance last June he was treated by Christian Science. In twenty-four hours it entirely disappeared and has never reappeared.

Now, to talk of a case which will interest you more, I wish to tell you of a lady and gentleman whom I met last spring while going through a class. The lady was Mrs.

Digitized by Google

—— whose little boy was afflicted with the same trouble as your son. As proof that the boy was cured he came with her every day and played around the house. He had been months in a plaster cast, but was worse when they took him out. They then put him in an iron frame that stretched him, but he grew worse. Christian Science then took the case, with quick result, as stated. I was speaking to Mrs. —— of your boy last spring, and she then said she wished it were possible that she could meet you and tell you all the facts of the case and let you talk with their former physician, who knew just what was done. If you would meet and talk with Mrs. —— you could not but be impressed by her sincerity and intelligence. The cures in Christian Science are the rule, not the exception, and I know your son can be cured.

Christian Scientists are willing to have any case fully investigated, and I will help you to get at the facts. Several cases of locomotor ataxia have, to my personal knowledge, been cured, and in fact I have personally met and talked with hundreds of people who have been healed of almost every trouble I ever heard of. The proof coming as it does, from such intelligent, sincere people, must be admitted by everybody who is fair-minded and honest.

I can positively assert from close study and knowledge, that there is nothing in Christian Science of the nature of hypnotism or of the human mind. God alone does the healing as was done in Jesus' time, and Jesus said he could do nothing of himself, but of his Father who worked in him.

If you would like to talk with me I shall be very much pleased to call upon you at any time and tell you all I know.

With kindest regards and sympathy to yourself and wife, I am Most sincerely,

CHAS. G. BLISS, New York, N. Y.

A Lesson from the Life of Stephen.

BY LENA M. HALL.

SOME weeks ago I had a simple, yet beautiful experience, which was so helpful to me that I gladly share it with the readers of our publications.

Five years ago it was my privilege to begin the study of "Science and Health with Key to the Scriptures," and as I gained some slight comprehension of its teachings, various physical ailments dropped away from me, and I came into a sense of bodily freedom which had never been mine before. There was one exception, however, to this rule. A physical difficulty, which had been my constant companion from childhood, not only did not yield, but seemed to become aggravated, after my acceptance of Christian Science. Whenever it made its appearance, it was accompanied by a sense of depression, which quickly manifested itself in a mournful cast of countenance. This undesirable manifestation held its ground in spite of the repeated rebukes of friends, and my own somewhat half-hearted efforts to remove it.

In this condition of mind and body, I was calling upon some friends, when the conversation turned to the early Christians. The methods of persecution in use during their lifetime were compared with those so much in vogue at the present time, and many points of similarity between our own experiences and the experiences of those who followed Christ in those early days, were mentioned.

As an illustration, the experience of Stephen was cited, and the remark was made that, although he was not able to make a complete demonstration, although he was delivered into the hands of his enemies, and false witnesses bore testimony against him, yet such was the help which he received from his knowledge of Truth, that those who looked upon him "saw his face as it had been the face of an angel." As I walked home that night, the experience of Stephen seemed to become my own.

I was in the hands of my worst enemies (mortal beliefs), and false witnesses (the personal senses), were testifying against me; but here the similarity ceased, for those who looked upon Stephen "saw his face as it had been the face of an angel."

This made me very thoughtful. Was not the God of Stephen the God of Christian Science? There came to me a great longing to approach sufficiently near to this God who was Stephen's help, to reflect in some measure the joy which found so full an expression in him.

The next morning this thought was still with me, and came to me often during the day. I had no thought of getting rid of my physical trouble. My desire was so to rise above it, that it should not hide from me the eternal harmony, which alone is real.

But God has said, "Before they call, I will answer," and His promise was beautifully fulfilled in this instance, for before night I was rejoicing not only in a clearer sense of the omnipotence of Good, but in freedom from bodily discomfort as well, a freedom which has continued to bless me since that day.

No words can express my gratitude to our Leader, Mary Baker Eddy, for this glorious teaching of Christian Science, so simple, yet so profound, which has created for me a new heaven and a new earth, a new conception of God as both Father and Mother, and a new and glorified sense of His infinite idea, man.

Daily Light.

City of Mexico, October 13, 1901.

Editor of the *Christian Science Sentinel.*

Dear Brother:—In reading "Daily Light" a small book containing Bible texts arranged for morning and evening study, I often find helpful and inspiring lessons. To-night's selections were so appropriately and beautifully corroborative of our text-book, "Science and Health with Key to the Scriptures," that I was impelled to write you.

On page 322 of our text-book we find the spiritual interpretation of the Lord's Prayer, as given by Mrs. Eddy, the fourth section of the prayer and interpretation reading as follows:—

"Thy will be done in earth, as it is in Heaven.
Enable us to know,—as in Heaven, so on earth,—
God is All in all."

To-night's reference in "Daily Light," after quoting that fourth section of the Lord's Prayer, is from Ephesians, 5 : 17: "Understanding what the will of the Lord is."

Of course in our daily reading of the Holy Scriptures we find renewed corroborations of the inspiration and truth of our text-book, but this was so clear and beautiful I thought I would send it to the *Sentinel,* to help others as it has helped me.

Very truly yours,

E. C. BUTLER.

"Hosanna in the Highest."

BY ANNE DODGE.

SHEPHERD, Thou hear'st us when we call to Thee,
Tossed on the billows of an angry sea,
And from the darkness of a hopeless night,
Thou lead'st us gently to Thy glorious Light.

All fears are stilled, when pillowed on Thy breast,
Leaning on Thee, we find in Thee our rest;
No storm is heard, O Father, in Thine arms,
Safely we're borne above all earth's alarms!

Deep from the Fountains of eternal praise,
Voices and hearts in gratitude we raise,
Wells of salvation through our Being spring,
"Hosanna in the Highest" to Thee, our God, we sing!

Testimonies.

Prejudice and Fear Overcome.

It is about six months since I first received Christian Science treatment through the persuasion of a sister who is a Scientist. She had tried in vain to show me the beautiful and good in Christian Science; but I, being a member of the Presbyterian Church, which I dearly loved and love still, was both prejudiced and afraid of a religion which did not, as I thought, believe in Christ. It was always a mystery why poor, suffering humanity could not be healed in the present age as they were eighteen hundred years ago.

I was in very poor health for more than fourteen years. About nine years ago I broke down completely and gradually grew worse. I tried many good doctors with but little benefit. They claimed I had a floating kidney, also eczema, enlargement of the liver, catarrh of the kidneys, liver, stomach, and bowels, and several kinds of female trouble. About a year ago the physician told my husband that there was no help for me; he said I would never be any better. I was advised by another physician to try change of climate, though he could scarcely hope for relief.

Three different physicians told me the only help for one trouble, a floating kidney, was an operation; but they could not advise it, as I was not strong enough to undergo the operation. My stomach was in such a condition that I could not drink cold water, could not drink anything with meals, which consisted of very light food. I finally became badly bloated and heart trouble set in. My friends became very much alarmed concerning me, and my sister came to take care of me.

I then decided to try Christian Science. My sister took me to her home, a distance of forty miles by rail, and sent for a practitioner. In about ten days my husband and son came to see me. He told a friend of how he found me, as follows: "She came downstairs, helped me put up my horse, gathered her arms full of bundles and carried them upstairs; ran all over town with me and ate more for supper than I did. I was so astonished I can't tell it."

I have been improving ever since. I have laid aside glasses which I had worn for more than six years. About six weeks after my first treatment I went coasting with my twelve-year-old son, who had no remembrance of me except as being sick. He said to boy friends, "It is so nice to have a mother like other boys."

I have astonished my friends ever since. For four months I have been doing my own housework, house-cleaning, washing, and running the sewing machine, which I had not done for over nine years. But all this does not compare with the spiritual food which Christian Science gives my hungering, thirsting soul. Work is a delight and life seems strangely beautiful to me.

My gratitude and love to our Leader, Mrs. Eddy, to my loving sister, and my dear patient healer, is unbounded. To God be all glory and praise for making them His instruments to express and demonstrate His wonderful love shown in this religion, which is all Christ (Truth), instead of Christless as I supposed.

MRS. IDA E. CARPENTER, South Haven, Mich.

How I got my Science and Health.

About five years ago I was troubled with dyspepsia, and finally my condition became such that my father advised me to see a doctor. The doctor said my trouble was produced by irregularity with my meals.

I was very much interested in my business, and as I cared little about eating, I would sometimes leave my lunch till three or four o'clock.

The doctor gave me some medicine and put me on a course of dieting. He also told me to eat regularly at twelve o'clock each day. I did this for some time and felt better, but if I were a half hour late with my lunch I suffered on account of it for a day or so.

About this time I heard of Christian Science and became interested. I wanted a copy of "Science and Health with Key to the Scriptures," but did not think I could afford it.

One day I thought, I am not hungry and it is inconvenient for me to leave to get my lunch now. I am going to put aside the money that I use for lunch each day until I can get Science and Health, and I will do without my lunch. From that day to this I have had no trouble from dyspepsia. I purchased a five dollar edition of Science and Health, and after that for about three years I omitted my noon meal and the latter year I was in a position where none of my meals were regular; so that I had a very good test, and proved that the trouble was mental and not material or physical.

Since that time I have had many triumphs over so-called physical ills, for all of which I am truly thankful, but much more than that, is the understanding of God, which I have received from the study of the Bible and Science and Health. I could get nothing practical from the Bible until I read Science and Health. Now I can use it and do use it. It helps me in my business and in every way.

I had the opportunity this spring of class instruction from one of Mrs. Eddy's loyal students, and I esteemed it a great privilege. I am learning more and more the Truth which makes free.—E. M., Mt. Vernon, N. Y.

Christian Science as a Schoolmaster.

My mother was left an orphan when very young and was brought up with no tender regard, and scarcely an opportunity of obtaining an education. About five years ago, when she was then fifty-five years of age, at the time that directions were sent out to use the Scientific Statement of Being at the close of the Sunday services, she expressed the desire to learn it for herself unaided. As she was not familiar with figures, the page in "Science and Health with Key to the Scriptures" on which the Scientific Statement of Being is found, was marked for her. In a very short time she could not only read and understand it, but could read and understand other paragraphs as well. In less than one year she was able to read the *Quarterly*. She now reads and studies all the literature of Christian Science and is able to demonstrate for herself.

All we have, we owe to Christian Science, and have learned that age has no power to hinder a right desire. How can we be otherwise than grateful to God and our beloved Leader for these and other untold benefits.

A. M. J., Los Angeles, Cal.

Message from a Little Child.

At our Wednesday evening meeting recently a sweet message was sent to me from a little five-year-old girl. There were only four present at the meeting, and but two of these were Christian Scientists, but it was a helpful and happy occasion.

A mother, not a Scientist, said that she came to the meeting at the request of her little girl. The child said: "Tell Mrs. H. that I learned the little verse she gave me and have taught it to my brothers and sisters. My cold and cough are well and I am not going to have whooping cough." The verse referred to was the sweet New Year's gift from Mother to the little children.

One of the others present asked for the book with the verse so that she could teach it to her little grandson.

The other testimonies were helpful and very encouraging.

How grateful we are for the dear *Sentinel!* It does a work that nothing else can do.

EDITH M. HUTCHINSON, Phoenix, N. Y.

Religious Items.

ABOVE THE STORM.—To the heart that lives by its higher nature; that finds its inspiration in love, and faith, and hope, and conscience; that works straight on, with or without sight, with or without fruit, praised or blamed—to such a one there is a superiority over all ordinary experiences of life, that can hardly be thought of except by those who have felt it. There is a great difference in a mighty storm, between a ship that sails below the clouds and that air ship, the moon, which sails so placidly far above them. The waves roar upon the ship, and roll it and pitch it shivering and trembling under its thunder-strokes; the clouds darken it; the winds tear at it, and hiss like airy serpents through its whistling rigging. And though it may outride the storm-whirl, it is with groans and strainings; and when the light of calm comes again, it lifts up its crippled spars and goes on its weary way, wrenched, leaking, and with the melancholy sound of the pumps night and day.

The same clouds, the same raging winds, to our eye, seem hurled against the moon; but leagues uncounted of peaceful ether lay between the storm and the bright orb. It rolls in peace. And so do hearts that travel close by the side of God; whose life is hid in Him; whose hopes and treasures are in heaven. Storms are always too low to reach those who are so high as this; while men who live upon the present, and by sin, and under the inspiration of their lower faculties, are storm-ridden.

HENRY WARD BEECHER.

He who holds nearest communion with heaven can best discharge the duties of every-day life.—*Selected.*

Says Alexander McLaren, D.D., in *The Examiner*:—

"How different were the thoughts of Christ and of his disciples, as they sat together in the boat, making their way across the lake! He was pursuing a train of sad reflection, which just before they embarked had forced him to 'sigh deeply in his spirit' over a generation which was blind to him and greedy after 'a sign.' In the boat he had warned the disciples, bidding them beware of the leaven of the Pharisees. While he was thus meditating in the stern, they, sitting forward on the thwarts, were taken up with the omission, very natural in the hurry of pushing off, to lay in a supply of provisions. They were so much occupied with that petty trouble that they twisted Christ's warning into his rebuke for what they were rebuking themselves for. So apt are we to interpret the words of others by the thoughts uppermost in ourselves. Their slowness of apprehension deeply moved Jesus, as is shown by the remarkable and unique hail of questions with which he met it."

Says Rev. C. Day Noble in the *New Church Independent*:—

"Man boasts of his reason, but idly. Reason is good for nothing to discover truth; it only confirms it. The revelation of truth comes first, either by an objective way through the lips of others, or by a subjective one through one's own soul, and afterward we set to work to explain and substantiate it. The great and true theories, or, if you please, principles, which men suppose they have thought out and which govern them in art, science, and life, were not thought out in germ, but only in application. Some sudden flash of perception, some idea, as they call it, some happy suggestion, that is, some revelation, made it known to them. Newton did not reason out the law of gravitation; he suddenly saw it in the falling of an apple. Reason only follows and is subservient to perception; it can never replace it."

An out-and-out Christian is an embodied conscience. He shows it forth by life and testimony. The one endeavor of ungodly men is to drown the voice of conscience. The positive Christian is a righteous man. His righteous life and speech arouse into unwelcome activity in the heart of the unrighteous those convictions of duty which they have done their best to silence. The aggressive Christian testifies against the world that its works are evil, and if there is one thing above another that the world does not want it is to have the light thrown upon their sinful deeds. This and many other reasons there are why a positive Christian must receive persecution. It could not be any other way as long as evil is what it is and righteousness is what it is.—*The Standard.*

A vast amount of time and thought and erudition have been expended in the effort to defend the Word of God against the assaults of its enemies. We do not say that this is effort foolishly expended. Certainly the divine book is worthy of all the labor that has been put forth to maintain its integrity; and doubtless good has come of the endeavors of those who love it to save it from destruction. But, after all, the best witness to the truth of the Bible, the strongest attestation of its superhuman origin, lie between its own lids. The stamp of divinity is on it. No other book bears such witness to its own worth.

The Examiner.

Each one of us lives a many-sided life. Body, mind, heart, suggest some of the varieties of that life. Material food nourishes the body; truth contributes to the intellectual life; love, friends, sympathy are the basis of the heart-life. With a well nourished body, an active mind trained and fed with truth, the love of friends, and sympathy for his fellow-men, a man may live a large, full, rich life.

Jesus Christ came to give a fulness of such life, to be for us an abundant life. He declares that to know him is "eternal life." The life which he gives is "the life indeed."

CHARLES S. BROWN.
In *The Standard.*

When you see a person loving vile company exchanging confidences with such persons, and courting their intimacy, we do not need to have any one prophesy that the results of such "faith" as that will be the certain deterioration and finally the ruin of character. We should be as ready to apply this principle on the side of good as of evil. When a man gives his personal confidence to Jesus Christ; when he trusts him and this close personal tie is formed between his own soul and his Master's, it should not be hard for us to believe that there is a force at work in that man's soul to make him a better man; nay, to make him over.—*The Watchman.*

Among the cries of the present day are two which rise high and clear above the rest,—the cry for social justice and the cry for religious faith. Whatever may be our opinion as to the relation of the Christian Church to social justice, we must all admit that the function of the Christian Church is to preach, teach, illustrate, and make beautiful religious faith. This is what the Christian Church is for. And is it not true that the world is calling on the Church and the institutions it fosters to do their duty?

The Christian Register.

Let the believer always bear in mind that however difficult or perilous the task or duty assigned him, and however seemingly inadequate his own means or resources for its accomplishment, he has yet no occasion on that account for despondency or despair. There is always more in every crisis to sympathize with and help him than he dreams of. If he is right, he should be undaunted, for as was the case of Israel, the very stars in their courses fight for him.

Southern Christian Recorder.

A GOOD RULE.

John Wesley's mother once wrote to him when he was in college: "Would you judge of the lawfulness or the unlawfulness of a pleasure, take this rule: Whatever weakens your reason, impairs the tenderness of your conscience, obscures your sense of God, or takes off the relish of spiritual things; whatever increases the authority of your body over your mind—that thing, to you, is sin."

The Christian Advocate.

A learned man may easily become so interested in his theories that he loses the perspective of common sense. There are some theories of the construction of the Bible painfully elaborated by intelligent men that are more incredible than Joseph Smith's doctrine that the Book of Mormon was written in heaven.—*The Watchman.*

True peace and rest lie not in outward things. There liveth no man on earth who may always have rest and peace without troubles and crosses. Wherefore yield thyself willingly to them, and seek only that true peace of the heart, which none can take away from thee, that thou mayest overcome all assaults.—*Theologia Germanica.*

Crowd not religion into a corner of the day. Would men spend those hours they wear out in plots and devices in communion with God, and leave all on Him by venturesome believing, they would have more peace and comfort.—JOSEPH ELIOT, 1664.

The only real relief is in absolute conquest; and, the earlier the battle begins, the easier and the shorter it will be. If one can keep irritability under, one may escape a struggle to the death with passion.

JULIANA H. EWING.

When we speak of Christ as a friend we do well to remember that he is the friend of our better selves, he is the enemy of our unworthy selves.—*The Watchman.*

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75 one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

SUPPLEMENT

To the CHRISTIAN SCIENCE SENTINEL

Christian Science, The True Idealism.

By ANNIE M. KNOTT.

[*The following is a reprint of the lecture published in* THE CHRISTIAN SCIENCE JOURNAL *of July, 1901, as revised by Mrs. Knott, together with important additions thereto.*]

In standing here to-day to speak to this large assemblage of earnest men and women on the subject of Christian Science, I should be overwhelmed by the greatness of the task assumed, did I not know that the simplest utterances of Truth have behind them such infinite depths of reality that thought needs but be touched and awakened in order to perceive that all Truth, understood, is self-evident; and the task becomes a joy through knowing that at every one of these lectures burdens are lifted from weary hearts, and many are led to accept the healing power of the Christ-Truth.

In one of Mrs. Eddy's books Christian Science is thus defined: "The law of God, the law of Good, interpreting and demonstrating the Principle and rule of universal harmony."

When Christian Science first came to my notice, it was with the startling statement that these people claimed to heal the sick by the same method which Christ and his apostles practised. Although the words were spoken with scorn, they kindled anew my faltering hope and faith with the ardent desire that they might be found true, for who is there that has known sorrow or sickness, but has longed for such ministration as they were wont to bestow? None can deny the world's great need of something more definite than the teachings of either past or present, for human want and woe are but ill-concealed, or, at the best, bravely endured.

If any apology were needed for a woman's speaking of the limitless possibilities of Christianity, we might recall the fact that the religion itself began with the adoring song of a simple Jewish maiden. We should do well to remember, also, how eagerly the women followed the footsteps of the great Master; how they were healed by him and ministered unto him of their substance. We are told in the Gospels that when the tragedy of Jesus' life was approaching, when he was pursued by the hatred and scorn of men; when a traitor amongst his own disciples was watching for the opportunity to give him over to his foes, a woman came and poured upon his head and feet a costly ointment, less precious than her great love for the world's Redeemer, and he accepted at her hands this sacrament, and immortalized it by saying that wherever the Gospel should be preached throughout the world, this that she had done should be told of her. It is well to recall, also, that to woman—last at the cross and first at the sepulchre—was given the commission to announce to the world the triumphant news of the resurrection. We are told, too, that the women were present at the founding of the first Church, praying with the disciples for the coming of the Holy Ghost, and St. Paul speaks of some of them as his co-laborers in the ministry, and says in his epistle to the Galatians, "God sent forth His Son, made of a woman, made under the law." It is very clear, also, that when the world has gone forward with rapid strides, woman has been in some degree conscious of her mission, and man has in a measure accorded to her her divine rights.

In looking over the audiences which assemble at these lectures, one cannot help being impressed by the thought that more than mere curiosity is needed to bring together so many people, representing the widest area of religious belief, to investigate the claims of Christian Science. The Delphic Oracle gave a wise admonition to the seeker after truth when it said, "Know thyself," and it has not been unheeded, for mortals have been looking into every conceivable mirror in order to discover something of their origin and destiny. They have taken the model of clay and subjected it to the severest scrutiny; have worked with scalpel and microscope; but to this hour no trace of the soul has been found therein; and from this we conclude that one must look higher to find immortal being and learn what man is.

Jesus of Nazareth gave the true definition to thought when he declared that to know God aright is life eternal. And so we begin with causes, and bend our energies to know what God is; and while at work in this new sphere a change comes over the spirit of our dream, and we at last begin to awaken in His likeness,—to know something of God and man. Then we learn how to pray, for prayer becomes our vital breath, whereby we draw our conscious life from the Divine Principle of the universe; for aspiration and prayer are inseparable from life. Man may pray well or ill, but pray he must, since life without some conception of God is impossible. So the nations have gone their way from the cruel sacrifices of the earlier days up to a nobler and truer sense of Deity. In the celebrated Westminster Confession of Faith, God is declared to be "Infinite in being and perfection, a most pure spirit, invisible, without body, parts, or passions, most loving, gracious, merciful, and long-suffering," etc. In the same Confession, later on, the doctrine is taught that this same God decrees the eternal misery of millions of His creatures, including infants, many of whom never even heard His name.

The tendency of this teaching has all been toward making man unmerciful and unjust, and it has darkened the human mind in all ages, and will continue to do so until the true idea of God takes the place of the mere belief and opinion about Him.

In all lands and ages there have been earnest seekers after the God of our Lord Jesus Christ, catching glimpses of the eternal sunshine through rifts in the heavy storm clouds, but the best word of promise seemed to be this: "Expect nothing here, for it is vain to do so, but beyond that gloomy portal, awaiting you and all, some at least will find what they have never found here, peace and rest." That this was at best an uncertain sense is most evident from the awful grief which overwhelms those whose friends die, for surely none would indulge in such distress did they believe what they have been taught, that their dear ones had gone to heaven.

To the New England shores came, nearly three hundred years ago, a band of men and women, seeking a place of shelter from the storm and tempest of political and social tyranny—the necessary resultant of religious intolerance—and there they laid the foundations of a faith which had in it life enough to grow, and to prepare human thought for the reception of a final revelation of God and His law, "Built upon the foundation of the apostles and prophets, Jesus Christ himself being the chief corner-stone."

In the midst of such surroundings Mary Baker Eddy, the Discoverer and Founder of Christian Science, was born and reared, her character, even from childhood, being a rare product of all that is best in the moral and intellectual realm of national thought. Keenly alive to the greater problems of life, she was ever seeking their solution,—treading with reverent footsteps the galleries of thought where the sages and philosophers had gone,—seeking as they had sought, but finding not the Truth of Being. At length, when hopelessly ill according to human decree, the light, long sought, burst upon her vision, and the thrill of divine Life told her that she was healed, and by the power of God alone. Without hesitation she rose from her bed, dressed herself, and proclaimed to the first one she met the great truth, which I here to-night urge upon your acceptance, the fact that Christ has never left us.

I should love to linger over the wonderful story of the unfolding of this new idea,—the reappearing of the Christianity which heals the sick as well as reforms the sinner, just as of old; which binds up broken hearts and makes the dreary wastes of mortal existence bloom with newly awakened hope and faith, but time passes, and I can only say this, that Mrs. Eddy learned that Christian Science, as revealed to her, was the Truth taught and practised by Christ and his apostles, because it was characterized by the signs which he said should follow them that believe. She knew that nothing could hinder her mission, because the Science of the Bible had been discovered and the law of healing demonstrated as a law of Mind. She had learned how Christ and his disciples healed the sick,

Digitized by Google

how their work was the necessary outcome of all that the ancient prophets had achieved; and how the religion of the present time must be characterized, as was his and theirs, by victories over sin, sickness, and death, to be consistent with the fundamental idea of the Bible, namely: the omnipotence of God, Good, and the consequent powerlessness of evil.

Of the difficulties which beset her whilst engaged in this work, I need not speak now, though if it were told it would but add to the honor in which she is held by the thousands who are reaping the results of her unparalleled courage and unflinching devotion to a lofty ideal.

To this I would add that I know of no other person who has such marvelous powers as hers to demonstrate and explain the teachings of the Bible and of "Science and Health with Key to the Scriptures;" and I must also say very reverently, as one who has sat at her feet and heard her inspiring words, that no one can listen to her without at least desiring a nobler life and feeling ashamed of all that is unlike Christ. Her power to inspire others with new hope and faith in God, to impart something of her own sublime courage, and to unfold new and unsuspected capabilities in her students, is the secret of her great success.

Now we find ourselves face to face with the question: Wherein does Christian Science healing differ from the accepted methods and beliefs; in what is it so superior to them that its adherents forsake all else and cleave to it?

Materia medica builds its theories upon the mistaken belief that man is material, primarily, and it absolutely ignores the permanent element in life; *i.e.*, the moral and spiritual. But I would go still further, and say that, so far as mortal man is concerned, there is not a single drug known or used, but has a disastrous effect upon the mental and moral constitution, in belief. No intelligent physician would deny this of opiates, and all deplore the seeming necessity for their use, but the various substitutes which have been offered them in recent years are open to the same objection, and wherefore? because they wholly overlook the one all-important fact; *viz.*, that man is primarily and ultimately a moral and spiritual being, and he can never be made whole until this is understood, acknowledged, and demonstrated.

A further objection to the material theories of disease and its cure is their tendency to limit man's possibilities. We are taught in Christian Science that man may expand into self-completeness because he is the image and likeness of God, and is governed by a perfect and divine Principle; but *materia medica* begins to limit even the babe in the cradle with fear of disease of every sort, thus shutting out the unceasing and untiring presence of Divine Love.

Friends, is it not wholly inconsistent with the teachings of the Bible to tell our children of the glorious promises contained in the word of God, and then to tell them that night and day they are surrounded by bacteria, microbes, and all sorts of disease germs? that though man is supposed to be at the head of creation, having dominion over all things, he is in constant danger from cold, fatigue, and accidents? Need any wonder at the scepticism which comes so early, and stays so late, the doubt which so haunts to the very portals of the grave?

Associated with all these is the belief in mind as limited to the brain, or matter, and a veritable slave to the body. If, according to these theories, the stomach or liver is disordered, the man is irritable and cannot help being so; if he is studious and diligent beyond others, he is liable to nervous prostration or loss of his mind,—and such cases are by no means infrequent. So long as mortals believe such error, they are held down by self-made limitations, one generation going no further than its predecessor in the matter of exemption from sin, sickness, and death, for this should be the standard of progress, not the fine houses, the comfort, or the luxury—these are the merest externals—but man's individual growth out of all limitations into health, harmony, and immortality.

I do not for a moment deny the philanthropy and fair motives of a large number of physicians, but this does not alter the fact that their methods are wrong, because they are not based upon divine Principle, and they ignore the fact that man is a spiritual being both primarily and ultimately. The correctness of this statement is fully sustained by the Bible. Jesus said: "Take no thought for your . . . body," and why? Because on the body only effects can be found, in mind the cause, and until this is understood and acknowledged, no system of healing will be either scientific or successful.

If, instead of devoting so much time to the study of bacteriology and pathology, doctors would study man as a moral, spiritual, and intellectual being, not merely "so much lung, liver, integument," they would begin to discover what has been so long hidden from the scientific gaze; namely, God's man, endowed with limitless powers and possibilities, having embodied in his true consciousness all needed remedies, because he is the reflection of God. If they would turn the lens of Truth upon the secret and open sins of their patients, which blight the moral nature and so react upon the body, they would see the need of studying the great therapeutics taught by Jesus. He said: Make clean that which is within, and that which is without will be clean also.

One phase of opposition with which Scientists have to deal is the prejudice against their receiving pay for their services. People very thoughtlessly say, "Why do you not heal as Jesus did without making any charge?" If we are to take as authority the statements given both by Matthew and Luke, we shall see that Jesus told his disciples not to take with them any money when they went out on their mission of healing, but to depend upon the return made for the work. He made for them the application of the principle of justice which governs all human affairs, and said, "The laborer is worthy of his hire."

There are some who would limit the return to what they think they can see in the way of results, but that would not satisfy the demands of justice, for suppose we were to pay schoolteachers only for the bright pupils they turn out of the schools, or the ministers so much apiece for the persons really Christianized as a result of their labors, or the doctors for those whom they bring into permanent health! The probability is that many estimable members of the learned professions would be seeking other callings. The truth is, that all work well done is deserving of due compensation. Some one said to a student of Christian Science, "Why do you not give this healing freely, since God gives you the power?" The student replied, "My friend, the water in the river is free to all to take, but the city is at great expense to bring it to the individuals, and because they cannot go and bring it to their homes, they must needs pay for it." So it is with Truth. You can go and take it if only you know where it is found. Until then you should not hesitate to make the proper return to those who through toil and sacrifice bring to you what is so much needed. The Bible says, "The price of wisdom is above rubies." Who is there willing to pay such a price for the knowledge of God and of his own being? The Christian Scientist is, for each succeeding period of experience shows him more and more clearly the priceless value of this wonderful Truth.

So much has been said about the treatment of so-called contagious diseases by Christian Science methods, that it may be well to view the subject dispassionately in the light of reason and of revelation, and see whether these do not coincide in pointing to the probability of greater success in the treatment of such ailments than has ever been attained through material practice. There are many persons who are willing to admit at this period that Christian Science may be, nay is, successful in overcoming what are popularly called nervous diseases, but why should we limit the Divine power in such a way, when it is declared most emphatically in the 103rd Psalm, 3rd verse, that "God healeth all thy diseases."

The question to be answered at this point is whether disease has any reality in the scientific sense of the word, whether it expresses or possesses entity in any sense. I think that the most highly educated physicians would unhesitatingly give the negative to such a proposition; indeed, many who know nothing at all of Christian Science have done so, and declare that disease is simply the absence of the life principle. No one could claim for a moment that disease is a manifestation of life or intelligence, and we thus have it reduced to a purely negative condition of mortal consciousness, and this statement may be further explained if we use light as an illustration. Now light represents an intelligent principle; but darkness, which is merely the absence, or supposed absence, of light, has no centre from which to radiate, and it would be impossible to bring darkness into a lighted room, but it is easy to show that light, which is positive, can replace darkness instantaneously, and it is equally easy to see that when light takes the place of darkness, the latter does not require any other space in which to manifest itself; in other words, it is not necessary to take the darkness out of the room to make place for the light.

Now disease has no principle any more than darkness, and this statement is susceptible of the same proof as the former proposition; *i.e.*, when the belief in disease

Digitized by Google

is removed from man's consciousness, from mind and body, you have not taken anything from the sum-total of his existence; disease is not needed to bring out the full expression of man's being, but health, rightly understood, is inseparable from the true being. It ought to be very clear that the man who is a sound moralist could not be contaminated by association with those on a lower plane than himself; on the contrary, his influence ought to extend as light does, and affect, favorably at least, the thought and conduct of all those who come within the radius of his thought; and there can be no question that this is the best of all reformatory work; it must come from above, from a higher and purer condition of thought, which is always a divine influence reaching out toward human need.

Christian Science teaches that the one Divine Principle governs the universe alike in the spiritual, moral, and physical realms so-called, and that the same law must of necessity govern on every plane of human consciousness. An illustration of this is to be found in Jesus' treatment of the lepers. In one instance he put his hands upon them, which was contrary to the law relating to the isolation of lepers, and it is really most important that we should know why he did this. Was it merely to show his disregard of all human law? This is not supposable for a moment, but it seems very clear indeed that in this act he illustrated and demonstrated what St. Paul calls, "The law of the Spirit of life in Christ Jesus," which sets free from the law of sin and death.

It would have been impossible for sin to have invaded his pure consciousness, even though he were constantly associated with the impure, and equally impossible for disease to have affected him through contact with those suffering from its most terrible forms, and why? The answer is to be found in the apostle's words: "In Him dwelleth all the fulness of the Godhead bodily." Did this Truth apply to him alone? it is well to ask. The apostle who declared it also prayed on behalf of all Christians, "That ye might be filled with all the fulness of God." If we are filled with the fulness of God may we not resist both moral and physical contagion, and is it not also possible that the light which shines through us may go out with healing power and glorify our Father in Heaven?

In the long and dreary struggles of humanity toward the light, it is not surprising that the deepest thinkers are continually seeking to understand what life is, and many of them are ready to admit that life itself is quite distinct from the phenomena of existence, that there is a wide difference between the things which seem to live and Life itself. It is hardly supposable that life can be that which is manifested by savage beasts and scarcely less savage men, and yet where is life to be found?

The late Professor Drummond wrote: "Nature cannot say what spiritual life is. Indeed, what natural life is remains unknown, and the word life still wanders through Science without a definition." While still wandering through these mazes of thought a remarkable passage from a favorite author was read one day, and it kindled anew the fires of hope upon the hilltops until the day dawned in Christian Science and the shadows began to flee away. It was this: "Shall life itself be less beautiful than one of its days? Do not believe it, young brother. Men call the shadow thrown upon the universe where their own dusky souls come between them and the eternal sun, life, and then mourn that it should be less bright than the hopes of their childhood. Keep thou thy soul translucent that thou mayst never see its shadow; at least, never abuse thyself with the philosophy which calls that shadow life. Or rather I would say, become thou pure in heart and thou shalt see God, whose vision alone is life."

Now let us take the statement made by the great Teacher almost at the beginning of his earthly career: "I am come that they might have life, and that they might have it more abundantly." If we study the gospels closely we shall find that life was the theme upon which Christ dwelt continually, and toward which he directed all thought. He told them of the bread of life, and of the water of life, and he even said: "For as the Father hath life in himself; so hath He given to the Son to have life in himself." In Christian Science we soon learn that these statements are of the most vital importance to every human being, because we discover that it is this divine Life which heals the sick, and at the same time saves from sin; and this scientific understanding becomes such a mighty transforming force that it sweeps away fear and everything which does not represent God.

In the history of the unfoldment of human thought in the past, and no less at the present time, it is simply astonishing to see the scorn and contempt with which idealists have been treated by their realistic contemporaries. Few seem to be aware of the fact that existence itself could scarcely be perpetuated without ideality of some sort; and the question is ever presenting itself, What are our ideals?

In Science and Health this remarkable statement is to be found: "Through trope and metaphor, the Revelator—immortal scribe of Spirit, and of a true idealism—furnishes the mirror in which mortal mind may see its own image." Now suppose we start with the idea Home, and witness its unfoldment in human consciousness. How much does it mean to the average man and woman? It would be difficult, perhaps, to give a satisfactory answer to this question, but there can be little doubt that all would agree that the home should be a place of shelter from the storm and tempest of the world's toil and strife. We must admit on the start that this is a mental or spiritual, and not a material concept, dispute it who will, and it is easy to prove that this concept is inseparably connected with the true idea of life itself.

Now let us return to the average thinker and worker who would build for himself a home. He has his designs prepared and outlined on paper. By some accident the plans are destroyed, but the idea has not been lost thereby, and accordingly new plans are prepared, which, in the process of time, are transferred from paper to brick, mortar, and wood. Assuming that the edifice has been completed and furnished, it may disappear within an hour by a disastrous fire, but has the man therefore lost his home? It is quite likely that many would say that he had, but if we think more deeply we shall see that the true idea can never be separated from its expression; for both represent and embody the necessities of existence. So we find sooner or later, another, and possibly a more spacious and elegant place of abode, occupied by the one who has before seemed to suffer from the destruction of his home, and it is well to enquire again whether the costly and sumptuous mansion is, after all, what the heart craves for and seeks to realize as home. Now the true conception of home should embody, like the old baronial residences, the idea of stronghold and sanctuary; and where these are not realized in a measure at least, you have but an empty shadow where a solid reality ought to exist. If that splendid abode is not lighted by the sacred light of Love, and made pure and healthful by Truth, it can never be a resting-place for the weary heart. If its walls are not strong enough to shut out sickness, sin, and corroding care, you may have nothing better than a prison house where the weary inmates sigh, and sigh in vain, for release, finding little consolation in the thought that their splendid possessions are looked upon with envy by every one who passes by.

Now suppose the owner of the home to have the true understanding of Mind and its transcendent power; and suppose that he also has the right idea of what constitutes true riches, he will build and build securely, and it matters little whether his home be a simple cottage or a princely mansion, he will rest secure both night and day in the realization of the eternal fact, that the Lord God, who made heaven and earth, and all things therein, defends him and his loved ones, not only from danger, but also from the fear of possible harm.

If it is true, as the Bible teaches, that "Righteousness exalteth a nation," it is surely no less true that righteousness, which means right thinking, right speaking, and right acting, will give to every man who understands God, courage, intelligence, and integrity in working out the great problem of life; and his ideals will be continually advancing in the ratio of his understanding of God—the Divine Mind. He will come to know unmistakably that he carries his home with him wherever he goes, and will remember oft the profound saying of the Hebrew bard, "Lord, thou hast been our dwelling-place in all generations." He will not merely believe, but know what absolute security there is in dwelling in "the secret place of the Most High," and "under the shadow of the Almighty." He will learn in the great light of Christian Science, that neither pestilence, nor destruction, nor any other form of evil shall befall the one who makes the Most High his refuge, though thousands and tens of thousands of those who doubt and deny the all-protecting power of omnipotence shall fall at his right hand.

The true Idealism, then, begins and ends with God, and no element is found wanting in it; for those who understand God and keep His commandments, build securely upon everlasting foundations, that neither the vicissitudes of time, nor changing circumstance, can ever wear away. It is true that our human ideals, even at their best, must be enlarged, uplifted, and purified by the transforming power of the spirit of Truth, and when they are so uplifted, there will be no disappointments nor wrecked lives floating down the stream of time, for that which is perishable will be known as unreal, and men will no longer cling blindly to that which can only disappoint them, when they come to know that the real and the perfect is, in the good providence of God, within the reach of all His children.

Christ said nearly two thousand years ago: "Upon this rock I will build my Church." Did his disciples, think you, understand his words? for neither rock nor Church were there in the literal sense, but both were there to his spiritual consciousness, and they have never disappeared from the world, despite all mortal belief to the contrary.

Now Christian Science holds most persistently to this thought: that the right idea springs from an imperishable and intelligent Principle revealed to us as God, Good, and whether it is the idea of health or harmony or of true prosperity, it may be perfectly realized by faithfulness and untiring energy. The world will come to see ere long that all true ideals come down from above, and it is well for us that we are compelled to look up to catch even a glimpse of that which exists in God; but St. John did this, and the humble fisherman who toiled on the sea of Galilee became at length a seer who foretold the coming down to humanity of the City of our God.

Christ told the disciples whom he sent out to heal the sick to declare the presence of this kingdom; but there were few, if any, ready to behold it. In spite, however, of the world's persistent denials of this essential

Digitized by Google

Truth, St. John wrote at the command of the angel what he saw in spiritual vision, a condition of things embodying all the essentials of existence but shutting out therefrom sickness, sin, and death. When and where are such conditions to be found? Christian Science answers now and here, if only we are willing to accept the Truth of our own Being and to give up the belief in that which has not its origin in God.

Throughout the whole of the Scriptures we see that the spiritual idea or idealism, if you choose, is the ruling thought. A most wonderful lesson may be learned if we read the story of Jesus' resurrection as given by St. John. Mary, disconsolate and almost broken-hearted, stood at the entrance of the tomb and looking in saw two angels in white, and what was their greeting, think you? Even this, "Woman, why weepest thou?" What a question to ask a woman who had witnessed only three days before the most awful tragedy that the world has ever known! Mary gave her human reason for the sorrow, but when she turned her about and saw her risen Lord, his words were the same, "Woman, why weepest thou?" This lesson ought to be written deep in the consciousness of every human being, so deep that nothing could ever efface it, for as we are taught in our text-book, "Science and Health with Key to the Scriptures," there is no cause for sorrow or fear when the true idea of life is gained in Science, for this robs the grave of its victory, and reveals Life eternal to the awakened spiritual understanding.

The great poet and prophet, King David, asks in one of his incomparable psalms, "What is man, that thou art mindful of him?" and an English poet and philosopher of modern times thus voices the same query:—

What am I? Whence produced and to what end?
Whence drew I being, to what period tend?
Am I the abandoned orphan of blind chance
Dropped by wild atoms in disordered dance?
Or from an endless chain of causes wrought,
And of unthinking substance born with thought?
Am I but what I seem, mere flesh and blood?
A branching channel with a mazy flood?
The pipes through which the circling juices stray
Are not that thinking I, no more than they;
This frame, compacted with transcendent skill,
Of moving joints obedient to the will,
Nursed from the fruitful glebe like yonder tree,
Waxes and wanes, I call it mine, not me.
New matter still the mouldering mass sustains;
The mansion changed, the tenant still remains,
And from the fleeting stream repaired by food,
Distinct as is the swimmer from the flood.

Can this perpetual questioning of human heart ever be answered, except as Christ taught when he said that to know God is life eternal? Remember that each individual must answer for himself this momentous question: What am I? The Bible declares man to be God's image and likeness, and as God is not subject to sin, disease, and death, man, as His likeness, cannot be.

One of the most glorious promises in the Bible is this: "He that overcometh shall inherit all things." Now what is to be overcome, and how are we to do it?

When all the shadows of error shall have passed away from human consciousness it will be evident to all that nothing real has been lost, but everything gained. Then when God calls to man, "Where art thou?" he will answer through spiritual understanding, "Here am I, redeemed from the bondage of material belief by the Truth which sets man free, resting ever upon that word of promise which says: 'To him that overcometh will I grant to sit with me in my throne, even as I also overcame, and am set down with my Father in his throne.'"

PERIODICALS

PUBLISHED BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY,
95 Falmouth Street, Boston, Mass., U. S. A.

A WEEKLY NEWSPAPER

Christian Science Sentinel

PUBLISHED EVERY THURSDAY

Contains brief summary of the most important news; articles selected from various sources, gives the Voice of the Press and timely editorials in connection with the movement; and presents interesting contributed articles and testimonies.

Subscription Price: One Dollar a Year. Foreign subscriptions, $1.50. On sale at three cents a copy, postpaid.

A MONTHLY MAGAZINE

The Christian Science Journal

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discover and Founder of CHRISTIAN SCIENCE. Is the Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

It contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science, dissertations and lectures.

Subscription Price: Two Dollars per annum; One Dollar for six months; Foreign Subscriptions, $2.40 per annum; $1.20 for six months; Single Copies, Twenty Cents, postpaid.

BIBLE LESSONS

The Christian Science Quarterly

PUBLISHED JANUARY, APRIL, JULY, AND OCTOBER.

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year, in all the Christian Science Churches.

Subscription Price: One copy one year, postpaid, fifty cents.

Foreign subscriptions, one copy, one year, 60 cents

On Sale at 15 cents a copy.

Catalogue of prices for Oxford Bibles, Hymnals, Books, Pamphlets, etc., sent on application.

Direct orders, and make remittances payable to

Works on Christian Science, By Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Price (cloth) each $3.18

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . 4.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid $2.25

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid, $3.00; $30.00 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, prepaid.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; $2.50 per dozen, prepaid.

Direct all orders for above works, and make remittances payable, to

National.

The growth of the rural free delivery service in the United States has been phenomenal. It was started in 1896 with an appropriation of ten thousand dollars. The first route was in the vicinity of Charleston, W. Va. The appropriation for the service during the present year is $3,500,000 and the Postmaster General will ask Congress to appropriate $6,250,000 for next year. It is estimated that when the service has been perfected it will cover one million square miles of territory and have over thirty million patrons. November 1st there were six thousand routes in operation, and by the first of next July the number will be increased to about nine thousand.

There is only about forty-two million dollars worth of silver bullion left in the United States treasury. Under the act of 1890 the treasury purchased 168,674,682 ounces of silver for $155,941,002. This has been constantly depleted by coinage, and at the present rate there will be no silver bullion left in the Treasury in two years. If coinage of silver is continued the Government will again become a purchaser of silver bullion by special act of Congress.

President Roosevelt read his first message to Congress to the members of his cabinet on November 19, and they were much pleased with it. It is said that the message is conservative, contains no surprises, and is very forceful, but quite lengthy. One of the most earnest paragraphs is that in which he urges the national legislature to take vigorous steps for the suppression of anarchy.

President Roosevelt has issued an order restoring to the classified service about sixteen hundred civilian positions of the quartermaster's, medical, ordnance, and engineering departments of the army. The present appointees will be incorporated in the civil service without examination.

W. A. Havemeyer, a Chicago representative of the American Sugar Refining Company, predicts that Congress at its next session will remove the duty on raw sugar, and that within a year the refined product will sell at three cents a pound.

The Secretary of War has ruled that Christmas presents intended for officers and men of the army and navy in the Philippines and Cuba shall be admitted free of duty, but those sent to civilian employees of the civil governments must pay duty.

Fifteen hundred delegates from all parts of the State of California met at San Francisco November 21, and started a movement in favor of the re-enactment by Congress of the present Chinese exclusion law, which will expire next May.

New Mexico is making an energetic effort for admission to the Union. Her population is two hundred and fifty thousand, and she has been a territory for more than half a century, having been one of the fruits of the Mexican war.

The new Isthmian Canal treaty was signed by Secretary Hay and Lord Pauncefote November 18, and is now ready for atification by the Senate.

Foreign.

The Commercial Pacific Cable Company, which was recently organized in New York to lay a cable from San Francisco to the Philippine Islands, has awarded the contract for the manufacture and laying of the first section, from San Francisco to Honolulu, to an English company. The contract price is nearly three million dollars and the company guarantees to complete it within ten months.

Aguinaldo has written to General Chaffee, the military governor of the Philippines, asking his permission to go before Congress and express the desires of the Filipino people. He further requests to be accompanied by eight friends whom he designates. Four of these are prisoners at Guam and the others are prominent in Manila.

The Filipino Central Committee has addressed a lengthy appeal to the President of the United States. In the appeal they have endeavored to present a clear understanding of the real situation. They state that they are fighting in the spirit of the American Colonies and ask for their independence.

The women suffragists of Paris propose to abolish the term "mademoiselle" and to apply "madame" to all women alike, and thus wipe out the nominal distinction between married and unmarried women.

The administrative council of the Court of Arbitration at The Hague has decided that it is incompetent to consider the Boer appeal for intervention in the war in South Africa.

King Edward has issued a decree to the effect that, except in an official capacity, none but British subjects are to be present at the coronation ceremony.

The Empress Dowager of China has issued an edict eulogizing Li Hung Chang, and ordering the erection of a memorial arch near his birthplace.

Information is received from Madrid that the Spanish Senate has passed a bill prohibiting the coinage of silver.

Industrial and Commercial.

A company of capitalists will attempt to reclaim a large area of land in the vicinity of Albuquerque by sinking artesian wells in the more elevated part of the Rio Grande valley in that vicinity. They have obtained sufficient evidence of the existence of a good water supply to encourage them in making the adventure.

The *Sugar Trade Journal* says that the removal of the duty on sugar would make a saving to the consumers of this country of about eighty-five million dollars a year. The consumption of sugar in the United States for the year 1900 was 4,972,457,280 pounds, a per capita consumption of about sixty-five pounds.

A resident of Illinois has purchased 180,000 acres of land in western Kansas which will be converted into the largest wheat field in the world. He will plant wheat with steam drills and use steam binders to harvest it.

A five months' strike of the Union iron moulders of San Francisco was ended November 20. The employees returned to work on a nine hour day with an increase in wages of two and one-half cents per hour.

According to a recent report issued by the industrial commission at Washington, D. C., there are nearly one million railway employees in this country.

Fred Wellhouse, the Kansas apple king, has 1,240 acres of orchards and his apple crop this year will amount to sixty thousand bushels.

General.

Former Queen Lilliuokalani of Hawaii has again visited the United States. It is said that the purpose of her visit is to consult with the federal authorities relative to the crown lands in Hawaii which were sequestered by the revolutionary government at the time the monarchy was overthrown. No attempt has been made to reimburse her for the loss of the revenues resulting from these lands, which amounted to about one hundred thousand dollars yearly. The crown lands are more than a million acres in extent and are valued at about fifteen million dollars.

Last June President Roosevelt delivered an address before the Long Island Bible class, which was subsequently published in a leaflet and had a very large circulation. It has also been translated into several languages and has been circulated in Mexico and the Argentine Republic. Because of his services in making the address, Mr. Roosevelt has been elected first vice-president of the society.

It is reported that Governor Van Sant has decided to invite the governors of all States having laws similar to those in Minnesota, which prohibit the consolidation of parallel and competing lines of railroad, to join in a united effort to defeat the Great Northern Pacific consolidation scheme.

It is estimated that the English language is now spoken by nearly twice as many people as any other European language. English is spoken by 125,000,000; Russian and German, 70,000,000 each; French, 50,000,000; Spanish, 40,000,000; Italian, 30,000,000, and Portuguese, 13,000,000.

The National Women's Christian Temperance Union adopted resolutions approving the army canteen law of the army and calling upon the churches of all denominations "to help actualize in the law, in custom, and in political institutions, the teachings of our Lord and Master, Jesus Christ."

The finance committee of the recent national Grand Army encampment at Cleveland has recommended that a surplus of eight thousand dollars collected for that occasion shall be used to erect a bronze statue of heroic size, to the late President McKinley in the business portion of the city.

A new route for mail from Sydney, Australia, to London, England, has been established via San Francisco and New York. The time consumed in the transmission of mail over this route is about thirty-one days, a saving of four days over the Suez Canal route.

The formal opening of the Charleston, S. C., exposition will take place on Monday, December 2. President Roosevelt and his cabinet have accepted an invitation to visit the exposition on February 12, Lincoln's birthday.

Sunday, November 17, thirty-four members of the Woman's Christian Temperance Union, which was holding its annual convention at Fort Worth, Tex., occupied pulpits in different churches in that city.

The Postal Telegraph Cable Company has announced a reduction of cable rates to all points in British East Africa from $1.33 per word to $1.19, the same to take effect December 1.

A woman's national auxiliary of the Spanish-American War Veteran's Association was organized at Trenton, N. J., November 18.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The Niagara Falls.

A LARGER number of persons have gazed with wonder and delight upon the marvelous beauty of Niagara during the present summer than ever before saw it in a similar length of time. It has been a very potent supplementary attraction to the Pan-American Exposition, and has played a most important part in the bringing together of so many thousands of people at Buffalo. Indeed, but for the presence of Niagara at or so near to Buffalo, the Pan-American Exposition might not have been held in that city, and, perchance, it would not have been held at all, so necessarily does all thought and subsequent action depend upon suggestion.

Considering that this has been the first year in which Niagara has really kept "open house" for the whole world, it is fortunate that its condition and appearance have been better than ever before, or, at least, better than during all those years when all manner of despoilers were permitted to encroach upon, and impair the beauty of, this greatest of our natural wonders. But it was not that Niagara was "expecting company" this year that it put on a comely appearance. It began prinking up fifteen years ago, and the work of adding new beauties to its surroundings and of restoring some of the old-time charms not hopelessly and forever destroyed by the devastating hand of man, is to go on indefinitely.

The latest report of the commissioners of the state reservation at Niagara brings out the fact that the agitation for the sovereign ownership of Niagara, which began in 1877 and ended July 15, 1885, on which date the state of New York entered into possession of the lands on the American side, was not an entirely new conception. Yet the idea, as then suggested, assumed such a tangible and business-like form, and appealed so strongly to all lovers of nature and of its unique and beautiful scenery, that it was at once encouraged by the influence of many prominent men in numerous paths of life throughout the state and nation, and by reason of the world-wide love of Niagara received the indorsement of men of great eminence from across the ocean.

The report to which we have referred tells us that in 1834 the Revs. Andrew Reed and Thomas Mattheson, as a deputation from the Presbyterian churches of Scotland, visited the Presbyterian churches of America, and in their journeyings came to Niagara, and fully appreciated its wonderful beauty. In the history of their travels, in addition to expressing their admiration thereof, they left on record the following statement, which stands as the earliest public suggestion of an international reservation at this place: "Niagara does not belong to Canada nor America. Such spots should be deemed the property of civilized mankind, and nothing should be allowed to weaken their efficacy on the tastes, the morals, and the enjoyment of all men."

Fifty years later their suggestion became a reality, and what in 1834 was the far-sighted opinion of two eminent divines, became in 1885, by the action of the State of New York, supplemented in 1888 by the action of the province of Ontario, an accomplished fact. Sanctioned by the hearty indorsement of leading men everywhere, and enacted by the votes of the elected representatives of the people, its fulfilment has been applauded and valued more and more each year by all the world, but never before to such an extent as during the present season, when tens of thousands of visitors have stood in awe and admiration of the mighty spectacle.

However, in expressing our appreciation of the wonderful beauty of Niagara we are again reminded that opinions differ. Hennepin, the famous Jesuit father, who, in 1697, published the first description and the first picture of Niagara, did not find it beautiful. He says: "The waters which fall from this horrible precipice do foam and boil after the most hideous manner imaginable, making an outrageous noise more terrible than thunder."

To-day a good many persons find fault with Niagara on another account. They do not agree with Hennepin that it is "vast and prodigious." They say they expected something larger. While the seventeenth century hated the large, the wild, and the awesome in nature, the people of this, dare we say "strenuous," age, cannot find anything too great, too wild, too awful, too anything to suit them. Man himself is constructing such marvelous mechanical wonders that he expects nature to outdo anything she has heretofore done.

However, as one writer has well expressed it, "When nature began to build Niagara she planned a display of the grandeurs and the fascinations of falling water. When, by her patient processes, she got it as it stands to-day, she must have felt contented with herself. And modern man, discontenting her in many ways by his treatment of her masterpiece, can hardly offend her more than when his most emphatic cry is, How wonderfully large! This is not the right exclamation, and it does not express the right anticipation. Put magnitude out of your mind when you approach Niagara. Think of beauty instead. Think of the most beautiful things you have ever seen. Expect to see things still more beautiful. Unless your senses are benumbed, you shall not be disappointed."

Whether or not the Niagara River began to cut its way through the higher table-land six thousand years ago or, as some say, thirty thousand years ago, and must in ages to come reach a point where the beauty of the falls may be impaired or quite destroyed, it is reassuring to know that henceforth man will be prevented from doing anything to mar the beauty of Niagara. From now on the purpose will be to add to, rather than to detract from, the charms of free Niagara. The scores of unsightly structures that marred the harmony of the Niagara of old have been removed, and in their stead restored banks, grassy slopes, graceful shrubbery and beautiful natural environments greet the eye. Where formerly a horde of hungry hackmen and others extorted all manner of fees from a none too well-informed public, there are now to be found courteous and intelligent guides employed by the state to point out the beauties and recount the historical incidents of the surroundings of the falls, which have been made free to all comers.—*Boston Herald.*

Actors Attend Church.

No doubt many friends of the Percy Haswell Stock Company, which Baltimore has just received with open arms, will be much pleased to learn something of the religious proclivities of its members.

When it is known that every one of the company is a church member and attends some place of worship in Baltimore every Sunday, they will be more pleased.

A great many persons, through misinformation, have at one time or other in their lives imagined that members of the theatrical profession have little to do with churches, and still less with religion; that they are wrapped up in worldliness and their non-Christian ideas of life. Nothing could be more erroneous. The truth is, there is not a better-hearted and more pious set of people than that with whom we become acquainted across the footlights. Doubtless many will remember the much-needed lesson Mary Anderson once taught a lady who had risen in church to say ugly things about theatrical folk, not dreaming that one of the most honored daughters of the stage was before her. That same lesson could be taught a hundred times a month at present, were it possible that a champion of the stage could always have the opportunity.

The Percy Haswell Stock Company is a family—a home group. It conforms in every way to the Baltimore idea. Mr. George Fawcett, its director and stage manager, has tabooed Sunday rehearsals, a bit of business considered almost imperative by the majority, if not all, of the metropolitan companies of the day. He and Mrs. Fawcett, known to the stage as Miss Percy Haswell, attend the Cathedral on Sunday mornings. Miss Haswell is a devout Catholic.

Mr. Frank Gillmore, the leading man, is a Christian Scientist of the most pronounced type. He attends either the First or the Second Church of Christ, Scientist, every Sunday morning. The Second Church, formerly in the Lyceum Parlors over the theatre, now worships in its new edifice at the corner of Mount Royal Avenue and Cathedral Street, and Mr. Gillmore expects to attend that church in the future.

Miss Laura McGilray, who made such a hit the opening week by her "Freddie, do subside!" speech in "The Liars," is also a Christian Scientist, and will attend Second Church during her stay in Baltimore.

Mr. Percy Winter is a member of the Protestant Episcopal Church, and is a regular attendant at the services of Christ Church—known to the company as "the church with the beautiful chimes."

Mr. Frank Craven is also a member of the Protestant Episcopal Church and attends the services at Grace Church, Park Avenue and Monument Street.

Miss Alice Butler is a Christian Scientist, and worships at First Church, Cathedral and Preston Streets.

Mr. Frederick Lewis is proud to claim allegiance to the Church of England. He attends services at Immanuel Church, Cathedral and Read Streets, of which the venerable Dr. J. Houston Eccleston is rector.

Mr. Regan Hughston is a Catholic, and is punctual at the Sunday morning mass at the Cathedral.

Mr. Austin Webb belongs to the Church of England and worships at Old St. Paul's, Charles and Saratoga Streets.

Mr. Lloyd Carleton is rather conservative in his religious views, much more so than many others of the company. He has arranged to attend Immanuel Protestant Episcopal Church.

Miss Agnes Everett is an Episcopalian and attends the services at Mount Calvary Church, Madison Avenue and Eutaw Street. Miss Everett was for many years the leading singer in the choir of one of the more fashionable New York churches.

Miss Juliette Atkinson, who made a hit in Baltimore on the links and behind the footlights at the same time, is a member of the Protestant Episcopal Church and worships at Christ Church.

Mr. Alfred Hudson is a Catholic and attends St. Ignatius' Church, Loyola College.—*News*, Baltimore, Md.

History of Thanksgiving Day.

THE earliest record which we have of an American Thanksgiving Day is found in the New England annals of 1621. In the autumn of that year Governor Bradford, so saith the chronicler, sent out men to procure some game, in order that New England colonists might properly enjoy a day of thanksgiving in remembrance of the fruits of their labors during the year that had passed. Another day of rejoicing was set apart and "solemnized" as "a day of thanksgiving unto the Lord," after an abundant harvest in 1622. It is stated that, on this occasion, Massasoit and his council of braves were invited to participate in the festivities, and that they did so, spending three days in feasting. Evidently the Indian friends of the colonists found Thanksgiving Day a day to be made the most of.

These thanksgiving days were not, however, of official character. The first official public Thanksgiving Day was not until the year 1631; and even this day was not at first intended to be a day of rejoicing and thanksgiving. It had been set apart as a day of fasting and prayer for relief. The colonists were in great distress; famine was imminent; a vessel laden with provisions and long at sea, had not arrived. But just before the day of fasting came, the ship made port; and the day was then officially changed by the authorities from a day of sorrow to a day of thanksgiving. This was the first real Thanksgiving Day of the American people. Thanksgiving days were occasionally observed also in New Netherland after this date; but it was not until February, 1644, that another official Thanksgiving Day was proclaimed. That year Governor Kieft proclaimed "a day of general thanksgiving," the occasion being a victory of the colonists over the Indians. At the conclusion of peace, in 1645, another Thanksgiving Day was proclaimed. We are not told that the Indians were invited to this ceremony.

Occasional days of fasting, prayer, and thanksgiving were kept by the various colonists, at different times; but no general Thanksgiving Day was set apart until 1775, when the Continental Congress adopted the practice of designating such days. The first was Thursday, July 20, 1775. The following Thanksgiving days were also suggested by the Continental Congress: Friday, May 17, 1776; December 11, 1776; Wednesday, April 22, 1778; Thursday, May 6, 1779; Wednesday, April 4, 1780; Thursday, May 2, 1781; Thursday, April 25, 1782. These days were suggested in the form of recommendations to the states, whose governors were asked to issue proclamations to their peoples for days of thanksgiving. Business, with one exception, was suspended on these occasions. Washington also issued a proclamation to the Colonial army for a general Thanksgiving day on Thursday, December 18, 1777; and again on May 7, 1778.

The first national Thanksgiving Day was, by proclamation of President Washington, set for Thursday, November 26, 1789. The second was set for Thursday, February 19, 1795. The honor of the first suggestion seems to belong to Representative Elias Boudinot, who moved, in the House, that the president be requested to recommend "a day of thanksgiving and prayer, to be observed by the people of the United States." There was some opposition to the motion, the objections advanced being that such a thing might tend to imitation of the frivolities and pomps of kingdoms and other harmful doings; but the motion prevailed, and Thursday, November 26, 1789, became the first national Thanksgiving Day of the American people.

The Lectures.

At Shawnee, Okla.

The announcement having been made that Judge William G. Ewing, the noted Illinois jurist, would lecture on the subject of Christian Science, caused the Shawnee Opera House to be crowded last night (Tuesday, October 29) with an audience of the very best and thinking class of our citizens, composed of about an equal number of ladies and gentlemen.

Judge Ewing's exposition of the principles upon which the faith is founded and also the illustrations of its power coming under his own observation, was so clear and well chosen as deeply to impress his hearers, and many who came with the purpose of receiving a better understanding of the subject, went to their homes acknowledging that Christian Science as expounded by Judge Ewing would bear the closest investigation both from an ethical and practical standpoint.

The lecturer was introduced in a graceful and eloquent manner by Judge W. M. Harrison, who spoke in part as follows:—

Ladies and Gentlemen:—The cause of one of the marked influences upon the minds and consciences of the people of this age is the discovery and practice of a new faith, whose tenets are the basis of a distinct organization, which has become a recognized factor in religious circles. It is called Christian Science. Its mission is to throw around fallen, suffering humanity, arms of love and sympathy; to soften the asperities of life; to reclaim perverted natures; to lift up man and bid him assume the station it was intended he should occupy, from which there is but one step to the God-head; to exemplify a charity which reveals a million virtues; to make man better in thought and feeling and more generous in action; to heal the sick; to bring happiness and joy to the sad, sin and sorrow burdened heart, and to enjoy a closer union with and a higher understanding of God, "whom to know aright is life eternal."

Its literature, like all who are loyal to its teachings, recognizes religious toleration, advocates the Bible, commends the practice and applauds the exemplification of the Golden Rule, thereby engaging in a work of love and the betterment of the condition of mankind.

From what I know of this Society, from observation and from a study of its literature, I am impressed with the belief that it is composed of a reading, a thinking, and a praying people, the richness and sweetness of whose active benevolence ofttimes comes to us as a hallowed benediction, filling our hearts with emotions of tenderness and love. Can any danger, therefore, arise to Church or State? Will the salvation of a soul be jeopardized, or will human liberties be abridged or threatened by the declaration that Christian Science is the truth about God, Man, and the Universe? a truth, as declared, that is infinite, eternal, and omnipresent, and of which the meek and lowly Nazarene said: "Ye shall know the truth, and the truth shall make you free"?

I am not a Christian Scientist, but I believe in a love that "thinketh no evil;" whose badge is universality, whose realm is the universe, and whose subjects are all mankind; a love so tender and so responsive that it creates a well-wishing heart in all; that corrects a fault as well as commends a virtue; that banishes selfish pride; that blesses with mild beneficence and woos with kind and gentle deeds; a love which we teach in our homes, at our firesides, and in our churches, temples, and cathedrals.

Christian Science has prospered, is prospering, because of the truths it teaches and the good it has accomplished, attracting to its membership, all over the land, many good, noble, and intelligent men and women. Although we may not subscribe to some of its beliefs, yet for many reasons, it commands our respect and challenges our admiration.

To-night, it may be said, Christian Science is on trial in Shawnee; but here, as elsewhere, as I have learned, it courts investigation and is willing to abide the judgment of all thoughtful, candid, conservative, Bible-reading and Bible-loving people.

I congratulate the society in our city upon the presence of this large assembly of our citizens, and I congratulate the audience upon the opportunity thus presented to listen to the speaker of the evening as he declares the principles of his faith. If false, his doctrine will soon pass away, but if he teaches the truth it will live forever, and we shall have profited by this experience; and he, in after years, can look back upon monuments he has reared in the hearts he has made happy and in the lives he has made better.

I esteem it an honor, for which I am grateful, to be permitted to take part in these exercises. It therefore gives me pleasure, ladies and gentlemen, to introduce to you Judge William G. Ewing of Chicago, who will lecture upon the subject of Christian Science.

The Shawnee Daily Quill.

At Reading, Mass.

Rev. William P. McKenzie of Cambridge, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, Boston, had an audience in Masonic Hall, Sunday afternoon (October 27), which filled every seat, five hundred by actual count being present. A large number were from out of town, many coming from Boston, and others from Wakefield, Woburn, and Andover. There were a considerable number of representative Reading citizens present not identified with the faith.

Mr. McKenzie was presented by Hon. Charles F. Brown. Prefacing his introduction, Mr. Brown said in effect that he was not well informed regarding Christian Science,—that his limited knowledge was gained through the medium of occasional paragraphs in the newspapers,—but that he believed it should be given a fair hearing and in that spirit he accepted the invitation to introduce the speaker.

Mr. McKenzie talked for about an hour, holding his audience in rapt attention. His subject was "Christian Science, the Gospel of Love."—*The Reading Chronicle.*

Speaking editorially *The Chronicle* said:—

More space than is customarily devoted to lectures or affairs of the kind is given in *The Chronicle* this week to the report of the lecture on Christian Science by Rev. William P. McKenzie. We believe, with the Hon. C. F. Brown, that Christian Science is entitled to a better judgment than can be arrived at through reading the occasional paragraphs in the daily press, which usually emanate from hostile sources. The audience which listened to Mr. McKenzie was intellectual and earnest in character. It was composed of thinking, religious people, of whom it is not difficult to believe that their earnestness in propagating their gospel is due to a desire for the good of mankind. The lecture was a calm, scholarly presentation of Christian Science. It is but justice to state that the local church has volunteered to meet the extra expense of treating the lecture at length in these columns, and that the offer has been accepted.

At Colorado Springs, Col.

The calm serenity born of confidence and faith was the characteristic of Edward A. Kimball's lecture last night (Friday, November 8), at the Opera House, which appealed particularly to his audience. He was so obviously honest, so absolutely sincere, that these qualities alone, apart from the intense interest and logic of his arguments, would have held the rapt attention of his hearers.

The Opera House was filled last night with as cosmopolitan an audience as was ever seen in the city. Ministers were there [illegible] college professors, business and professional

Digitized by Google

men, club women, and society women, and women prominent in political and municipal affairs. They were all there and they listened with closest interest while the gentleman on the stage set forth in simple language and unassuming manner the tenets of the faith that teaches that thought rules the world.

Mr. Kimball is regarded as a most capable exponent of Christian Science. He is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, of Boston, and is now on a lecturing tour of the country.—*Colorado Telegraph.*

Mr. Kimball was introduced by Dr. J. R. Robinson, the mayor of the city, who spoke as follows:—

Ladies and Gentlemen:—I come before you at the kind request of some of our honored citizens, who represent the organization under whose auspices we are met here to-night. I am proud to be mayor of a city so catholic in spirit as to insist upon the right of every person to express his individual views upon all subjects, so long as those views do no violence to orderly, lawful government. We live in a community so intelligent and tolerant that we not only permit but give respectful hearing to the calm discussion of all questions,—social, intellectual, and religious. The time is past when intelligent men fear discussion. Men are no longer imprisoned or burned for holding or expressing views contrary to those held by the majorities in Church or State.

My friends, I believe that truth cannot be destroyed, and that error, no matter how eloquently and plausibly advocated, even if ever so strongly intrenched, cannot permanently triumph.

It may be, sir, that you hold views to which I cannot give intellectual assent, and that you cannot indorse views that I hold; but, sir, we meet here to-night as American citizens, each, I trust, loyal to the highest interests of a common humanity; and, in so far as you may add to human happiness and to the promulgation of truth, I bid you God speed.

Ladies and gentlemen, I have the honor of introducing to you Mr. Edward A. Kimball, a man of commanding ability, and esteemed second to none by the body he represents, and whose doctrines he most eloquently advocates.

Correspondence.

At Jamestown, N. Y.

Sunday afternoon (November 3) in Samuels' Opera House, before an audience which filled nearly the whole of the lower part of the house, many seats in the balcony also being occupied, the Rev. Arthur R. Vosburgh of Rochester, N. Y., an accredited member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., lectured under the auspices of First Church of Christ, Scientist, of Jamestown, on the subject, "Christian Science is Scientific Christianity." The speaker was accompanied to the stage and introduced by Arthur E. Hills, who spoke as follows:—

Friends, Ladies, and Gentlemen:—We are pleased to welcome you here this beautiful Sabbath afternoon. Your presence is a sure indication that you wish a better understanding of this scientific, divine Principle which is interesting the world and is to be brought before you to-day. Christian Science has been in the past greatly misunderstood and therefore misjudged. It is for the purpose of correcting this misunderstanding and establishing the right that these Christian Science lectures are given. We have with us this afternoon an authorized lecturer upon this subject, a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. I now have the pleasure, ladies and gentlemen, of presenting to you the Rev. Arthur R. Vosburgh, C.S.B., who will address you upon the subject, "Christian Science is Scientific Christianity."

The large audience, which included visitors from Buffalo and Bradford, gave rapt attention for an hour to the clear, impressive, and yet kindly words of the lecturer.

Jamestown Evening Journal.

At Cedar Rapids, Ia.

Notwithstanding the counter attractions on Tuesday evening (November 5) the audience that greeted Mr. Edward Kimball of Chicago, was large. The lecturer spoke on the general topic, Christian Science, and he gave a masterly presentation of its principles and its aims. He has spoken in this city before, and the favorable impression he made on his first appearance was strengthened this time. He may always be sure of a welcome from a Cedar Rapids audience. His speech on Tuesday night will undoubtedly have great influence on those who heard it.

Hon. John T. Hamilton, in presenting the speaker, spoke as follows:—

It has been said that eloquence consists of the man, the subject, and the occasion. Christian Science, the subject, like Luther, Calvin, and Knox, has been, and to some extent is still anathematized, ridiculed, and scoffed at by magazine writers, editors, preachers, doctors, and professors. Notwithstanding the prejudice many people have against any new system of healing or worship, Christian Science has, in some thirty years, grown from a mere handful of adherents to more than half a million souls.

The large, intelligent, and representative audience here assembled furnish the occasion, and I doubt not but what the learned and able expounder of this new faith, who is to address you to-night, will eloquently plant the seed of his belief in the hearts of those here present who are willing to prove all things and hold fast that which is good.

It is now my privilege to present to you Mr. Edward A. Kimball of Chicago.—*Cedar Rapids Daily Republican.*

At Davenport, Ia.

The interest shown in Christian Science by people of the city was demonstrated by the large attendance at the lecture delivered by Dr. Silas J. Sawyer, C.S.D., at Science Hall last evening (Tuesday, November 12). The auditorium of the hall was well filled, nearly every seat in the house being taken. A representative audience was present, many of whom were from Rock Island. Many of the believers in the faith were there and many more merely prompted by natural curiosity. All gave an attentive ear to the speaker as he told of the methods of treatment used by the practitioners of this faith and the results which such treatment had accomplished.

The speaker was introduced by J. D. McCormick, who in a few appropriate words, told of the object of the lecture. The speaker of the evening is a distinguished looking man and delivered his arguments in an easy, graceful manner.—*The Davenport Times.*

At Oklahoma City, Okla.

The lecture of Judge Ewing of Chicago at the District Court room last night (Monday, October 28), was given to an audience that completely filled the audience room. The ladies of the congregation here had decorated the room in the afternoon, and it presented a beautiful appearance when the time for the lecture arrived.

The lecturer was introduced by C. Porter Johnson, who, in a few words, paid a deserved tribute to the high standing of Judge Ewing as a jurist and citizen. Judge Ewing spoke in the most flattering terms of the advancement of this city since he was here about a year ago, and of the advancement of the Territory, and prophesied that Oklahoma City would become a city of at least fifty thousand

Digitized by Google

people, and that the Territory would soon be one of the great states of the Union.

After the conclusion of this part of the address the speaker went into the subject of Christian Science as a religion and as a cure for the ills of humanity. He gave a fine exposition of the principles upon which the faith is founded and also a great many illustrations that were within his own knowledge of the efficacy of the treatment of diseased persons by the practice of the Science of healing as taught by the Scientists.

The lecture was one that had a marked effect on all those who were present, and those who came to receive a better understanding of the subject discussed, went to their homes satisfied that it would bear the closest investigation, not only from an ethical, but also from a practical, standpoint.—*The Daily Times Journal.*

Montevideo, Minn.—Edward A. Kimball, October 28.

Lincoln's Logic.

A man who heard Abraham Lincoln speak in Norwich, Conn., some time before he was nominated for President, was greatly impressed by the closely knit logic of the speech. Meeting him next day on a train he asked him how he acquired his wonderful logical powers and such acuteness in analysis.

Lincoln replied: "It was my terrible discouragement which did that for me. When I was a young man, I went into an office to study law. I saw that a lawyer's business is largely to prove things. I said to myself, 'Lincoln, when is a thing proved?' That was a poser. What constitutes proof? Not evidence; that was not the point. There may be evidence enough, but wherein consists the proof? I groaned over the question, and finally said to myself, 'Ah, Lincoln, you can't tell.' Then I thought, what use is it for me to be in a law office if I can't tell when a thing is proved?

"So I gave it up and went back home. Soon after I returned to the old log cabin I fell in with a copy of Euclid. I had not the slightest notion of what Euclid was, and I thought I would find out. I therefore began at the beginning, and before spring I had gone through the old Euclid's geometry and could demonstrate every proposition in the book. Then in the spring, when I had got through with it, I said to myself one day, 'Ah, do you know when a thing is proved?' and I answered, 'Yes, sir; I do. Then you may go back to the law shop;' and I went."

Exchange.

Notices.

Tenets for Branch Churches.

The tenets of The First Church of Christ, Scientist, the Mother Church, printed on folded sheet for the use of branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at one dollar per hundred. Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.B., 30 Norway Street., Boston, Mass.

Ninth Annual Catalogue.

Our ninth annual catalogue, containing a descriptive list of all the writings of the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, also all the publications of The Christian Science Publishing Society, is now ready for distribution and will be sent to any address on request.

The Publishing Society carries a full line of Bibles, a complete list of which is given in this catalogue. Many of them are new additions this year, and two are deserving of special mention. Number 01440x, found on page 20 of the catalogue, is a special binding to match the pocket edition of Science and Health. On page 25 is a reference Bible, number 03267x, which is about the same size. Both these Bibles are printed on the celebrated "Oxford India Paper."

Our friends will doubtless find many things in this catalogue which will make very acceptable gifts for the coming holiday season.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Dec. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Regard yourself as superior to the evils which surround you. Learn to dominate your environment, to rise above depressing influences. Look for the bright side of things, not the dark and gloomy side.

A pebble in a tiny stream will turn the course of a river; so the seemingly unimportant habit of inaccuracy has kept many a man from success by changing the current of his life.—*Success.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

More about the Remarkable Case.

IN *The Christian Science Journal* for September, 1901, we published a testimony from Mrs. Jay Scott, Fresno, Cal. In the *Sentinel* of November 7, 1901, we republished Mrs. Scott's testimony together with a letter from her in corroboration thereof, containing additional data. It seems that further letters of inquiry, and some of incredulity, have been written to Mrs. Scott, and also to some of those who witnessed what transpired in her case. It is not strange that the circumstances of this case should tax the credulity of any who measure things from the standpoint of the material senses or human wisdom. It is only when one rises above these and is led to accept the supremacy and power of Spirit, that one can lay aside doubt and questioning. The case before us is so well authenticated that even the doubting are driven to one of two positions; namely, that the result was accomplished either through human agency or through Divine power. Those who are disposed to attribute it to human agency are not only doubting but denying Divine power or, at least, endeavoring to place limitations on that power; yet those who believe in God at all, admit His power to be supreme and unlimited. Let the incredulous make their own choice. Christian Scientists, meanwhile, abide confidently and securely in the deep conviction, which to them amounts to knowledge, that although the work accomplished in this case seemed to have been wrought through human agency, it nevertheless was God who worked "to will and to do of his good pleasure."

After all, is there anything more mysterious or incomprehensible about this case than there is about myriads of facts coming within the range of human knowledge and experience? The same limited intelligence that would deny the possibility of such an achievement as we are considering might, with as much consistency, deny any other fact in connection with this mortal existence. How many facts pertaining to mortal birth and life can this intelligence explain? It cannot explain its own existence nor account for it. It cannot explain nor account for the existence of a single animate or inanimate thing. It cannot trace a single tree to its primal origin or determine which was first, the tree, or the seed whence sprang the tree; nor can it determine *when* the first tree or the first seed came into existence. It cannot trace the grain of sand to its original source. It cannot truly analyze or account for a single blade of grass. It cannot determine from any method of analysis within its grasp which was first, the apple or the seed within the apple. It can tell us nothing of the origin of the first man or the first woman nor when nor by whom sex was determined. It cannot explain by what mysterious process the same grass growing in the same field will support the life at once of a horse, a cow, a pig, and a goose, producing in the one case one kind of flesh and hair, which we denominate horse-flesh and horse-hair, another kind of flesh which we denominate beef and the hair of the bovine animal, in another the flesh which is called pork, with the peculiar kind of hair manifested by that kind of animal, and in another the flesh which is called goose-flesh, with the feathers peculiar to that fowl. From the limited intelligence of the human mind, these are mysteries, or miracles, if you please, and yet these are the simplest illustrations which we are able now to call to mind.

We might call upon this same intelligence, which arrogates to itself the capacity to judge of Divine power or place limitations upon it, to explain what power it is which holds this earth out in space and causes it to perform its marvelous functions. There is certainly nothing perceptible to the material senses which holds it there. Then we might extend a relative inquiry out into the realm of illimitable space and call for an answer as to the first ten million worlds or planets which are said to make up the stellar universe, and then we might multiply this number ten million times ten million, and continue multiplying in the same ratio until we had passed out of the scope of mathematical calculation, calling upon the intelligence of which we are speaking to tell us what supports these countless worlds, what created them originally, and what determines their characteristics and actions. We might ask numerous questions relative to the mysteries and possibilities of electricity, and whence came the knowledge or intelligence which has brought to view all the wonderful inventions of the past decade, but we have said enough to indicate that it is our view, at least, that all mystery or marvelousness surrounding the case of Mrs. Scott's healing is comparatively small. One who quibbles about the possibility or impossibility of her case may as well extend his quibbling out into the various channels to which we have thus roughly referred. We may add that in view of the inexplicable conditions in which we live, mortally speaking, we are not able to agree with those who maintain that "the days of miracles have passed. If that which we do not understand is miraculous, we are surrounded with mystery.

We publish herewith letters from two of the witnesses to the phenomenon which causes so much incredulity. First a letter from Mrs. Berry followed by one from Mrs. Gorman, which are as follows:—

209 Valencia Street,
San Francisco, Cal., November, 16, 1901.

Editor *Christian Science Sentinel.*

Dear Sir and Brother:—Mrs. Jay Scott of Fresno, Cal., whose testimony is causing so much comment, is my brother's wife. I am the Mrs. F. T. Berry referred to in her last letter, the sister-in-law mentioned in the first. I have already received two letters of inquiry since the *Sentinel* came out, and very likely more will follow, so I would like to add my testimony to hers. There is little I can say that would add conviction to what has already been said, other than that "the half has not been told." When she came to us, she was truly in a pitiable condition. The white of her eyes was fairly green, and the look of death was in her face. She had two treatments that day, and one a day thereafter for just six weeks. Then the cloth spoken of came away in just the manner told by her. I saw it immediately before it was cleansed, as also did Mrs. Gorman, the other lady referred to, in whose house we live.

While the physical healing in this case was indeed remarkable, it was nothing compared to the mental healing, the spiritual uplifting. She had not been on terms of intimacy with her husband's mother and sisters, owing to the fact that they were Christian Scientists, and she considered Christian Science a humbug, and all believers in it cranks. How different it all is now! We are a united, happy family, and my dear brother has a well wife.

We cannot say too much to express our gratitude to God, and to Mrs. Eddy, through whom this blessed Truth has been revealed to us.

Mrs. Gorman gladly adds her testimony.

Yours in Truth,

MRS. HARRIET S. BERRY.

Digitized by Google

San Francisco, Cal., November 16, 1901.

Although I am not a Christian Scientist, I gladly testify that everything in Mrs. Scott's letter, as she has told it, is true. I was present and saw the cloth that passed from her bowels.—MRS. D. GORMAN, 209 Valencia Street.

We publish also a letter and an extract of a letter from Mr. Murray, the healer in this case.

644 Merrimac St., Oakland, September 23, 1901.

Editor of *Christian Science Sentinel.*

Dear Sir:—Enclosed please find copy of letter from a Mrs. —— which was forwarded to me by Mrs. Scott of Fresno. Mrs. Scott has answered it, but desires me to answer it also, and if you consider my answer worthy of a place in the *Sentinel,* it might do more general good. If not worthy a place, you may do as you deem best in the matter.

Sincerely yours,

W. JOHN MURRAY.

P. S.—I have never been called on to do anything of this kind before, so leave it to your judgment.

644 Merrimac St., Oakland, September 23, 1901.

Dear Madam:—Mrs. Scott of Fresno has forwarded your letter to me, in which you say your husband can give no credence to her testimonial contained in the September *Journal.* "Why should it be thought a thing incredible with you, that God should raise the dead?" or remove a sponge that has lain in the abdominal cavity for five months? Why limit "the Holy One of Israel"? "If ye had faith as a grain of mustard seed, ye might say unto this sycamine tree, Be thou plucked up by the root, and be thou planted in the sea; and it should obey you." If your husband will *study* the Principle of Christian Science more earnestly, he will be able to rise above the Nicodemus thought into the realm of spiritual understanding, wherein the question, How can I be born again? is never asked. He will see how necessary it is to be born again, "of the water and of the spirit," in order to be able to give credence to the wonderful workings of Divine intelligence. These workings are wonderful to the carnal mind, only. When man is willing to have that Mind in him which was also in Christ Jesus, he will no longer be appalled at or terrified by appearances, but will rather "judge righteous judgment."

Had Jesus thought it impossible, he would never have attempted to raise Lazarus or the daughter of Jairus, but his understanding of the Principle of Being, was so great that he never doubted his divinely bestowed ability to speak the word of Life. We are told in Scripture, "He sent His word, and healed them;" also "The word of God is quick, and powerful, and sharper than any two-edged sword." When shall we learn that the things which are impossible with men are possible with God; and speaking as the oracles of God, have full confidence that our prayers (our desires to see Truth made manifest) will, *must* be, answered, if we "Pray knowing that we have received." "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Do you believe this? if so, why say you can give no credence to Mrs. Scott's testimonial in the September *Journal,* and "feel that the publishers did themselves an injustice in printing it"? The publishers have from long experience and careful investigation learned not to doubt the power of God, and I might tell you on good authority that the publisher or editor of the *Journal* has refrained from letting testimonials go to press, not because he did not believe that such things were possible with God, but because there are many things which he could tell you but you cannot bear them now. He deems it wise to feed us on the sincere milk of the word. Even those who have tasted the first fruits of Christian Science in the healing of their infirmities, find it difficult at times to believe some of the demonstrations being made by it. This is not to be wondered at, however, for finite sense will always find it impossible to comprehend the Infinite. To say that a thing, or an act, cannot take place because it never has taken place, is to deny the discoveries of all the sciences, physical so-called, as well as spiritual. Before concluding, I would like to state that there are four witnesses to the removal of the sponge through no other means than Christian Science treatment, two of whom are not Christian Scientists. The sponge itself is a silent witness. May your faith and mine, and by this I mean spiritual understanding, so increase as the result of studying the word of God in its scientific sense, as to render it possible for us to say to every mountain of error, sin, and sickness, "Be thou removed, and be thou cast into the sea" of oblivion.

Sincerely yours in the spirit of Love and Truth,

W. JOHN MURRAY.

In corroboration of what Mr. Murray says with reference to the withholding of healing demonstrations because they are deemed too extraordinary for the eye of non-Scientists, we will say we have received many such, and not infrequently receive them among our current contributions. When we do publish such as may well tax the credulity of those outside the ranks, we take every means we can to inform ourselves of their authenticity, so as to bring them within the rules of evidence which would be satisfactory to any sincere or fair-minded person.

We are informed that an attempt has been made to throw discredit upon Mrs. Scott's case by giving out that Mrs. Scott passed out of this phase of existence some years ago, and that if the facts we have published have any truth in them they must have transpired several years since. We mention this simply to show how ready incredulity is to bolster up its own view.

In addition to the letters above published, we have received others to the same effect from persons more or less familiar with the situation, but yet not eye-witnesses to it. For the present, at least, we withhold these letters.

Among the Churches.

Opening Services at Lockport, N. Y.

The blue sky and bright sunlight of yesterday made more attractive the opening service of First Church of Christ, Scientist, in their new rooms, Nos. 8 and 10 Lincoln Square.

The first impression upon entering was one of sunlight, beauty, and harmony, the rooms being decorated with palms and cut flowers, which, with the color scheme—a combination of green, gold, and brown,—was wondrously effective.

Upon the side walls are panels with the following inscriptions in gold letters, the one on the left being a quotation from Science and Health, by Mrs. Mary B. G. Eddy: "Divine Love always has met, and always will meet, every human need."

The corresponding panel bearing the commands of the Great Master: "Go ye into all the world, and preach the gospel to every creature." "Heal the sick."

The walls are hung with suitable pictures, conspicuous among them being a portrait of Mrs. Eddy.

Everything combined to give a feeling of homelikeness and a consciousness of the presence of divine Love, expressed by the inscription above the Readers' desk, "God is Love."

The usual order of service was carried out, with the addition of an address of welcome given by the First Reader, and a vocal solo.

Digitized by Google

The rooms have a seating capacity of about one hundred, and will be used as a reading room as well as for church services. They will be open from two to four o'clock every afternoon. Services will be held Sunday morning at 10.45 and Wednesday evening at 7.45. The public is cordially invited to these services and to visit the rooms through the week, where a Scientist will be in attendance.

The above account of our opening services appeared in the *Lockport Union-Sun*, November 4, 1901. The address of the First Reader was as follows:—

It gives us great pleasure to welcome you to these opening services in our new rooms. We are very joyful to-day, and praise and thanksgiving well from the depths of our being for this manifestation of divine Love.

The call of Christian Science is ever upward and onward, and while we are happy in our new home we do not forget that the material environment is but a symbol of our spiritual growth, and that it is only as we strive for that Mind to be in us "which was also in Christ Jesus," only as consciousness becomes purified and individual character becomes perfected, that the true body can be manifested, the true church be expressed.

Since the organization of this branch of the Mother Church in January, 1893, it has been the aim of each and every member to fulfil the mission of Christian Science, as given by our Leader, Rev. Mary Baker Eddy, "Science and Health with Key to the Scriptures," p. 447: "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness, and the allness of God, or Good." To this end the blessed gospel of Christian Science, the gospel of Love, has been carried into many homes, replacing the false sense of fear, doubt, weakness, and pain with the understanding of God as Love, which always brings health and harmony.

Was not this the mission of our Master, our Way-shower? Did he not say that he came to destroy the devil and all his works, and to fulfil the law of Love? and did he not at all times and under all circumstances destroy sin, disease, and death, and bring to light the harmony of health and life through this oneness with God? Then Christian Scientists are simply accepting the divine commission given by Jesus to all his followers, "Go ye into all the world, and preach the gospel to every creature," "Heal the sick," with the promise that the works he did they should do, if they would believe.

We are not unmindful that our progress as a church has perhaps seemed slow. Indeed, many times the clouds of material sense—of discouragement, loss, and opposition—have hung low, but we knew that behind the clouds the Sun of Righteousness was shining, and that we had but to look above the mist to see that divine Love was watching and guiding every step, that if faithful over the few things we should be ruler over the many.

We know that the gospel of Christian Science is the same our blessed Master preached and practised, and not a new one in any sense. His commands to preach the gospel and to heal the sick were one, and if we would be his true followers we must seek the undivided garment and preach by healing and heal by preaching, as he did.

Our Leader tells us it was Jesus' goodness which healed, and if so, we can neither heal the sick nor preach the gospel except as we reflect this same absolute Good. Only as we overcome all sense of malice, envy, jealousy, revenge, hate, greed, avarice, all sense of evil as a reality, can we either preach the gospel or heal the sick, for it is the Good, the Love, the Truth, the Christ, and the same Christ Principle which governed our Master, which is doing the marvelous works of Christian healing to-day. We have proven over and over the words of Jesus, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you," but we know that it is only this abiding in a sense of the omnipresence and omnipotence of divine Love that brings the answer to prayer and the fulfilment of every promise.

What more comforting, uplifting, life-inspiring message could be given to man than the one which has been given in Christian Science, that God's man is not sick, maimed, halt, blind, helpless, or sorrowing, but is free, fearless, and perfect, the spiritual image and likeness of God, having dominion over all the earth.

I am sure no one here to-day would willingly admit that he was not God's child; then why not put away your false concept and accept the Truth; for Jesus said, "Ye shall know the Truth, and the Truth shall make you free."

It is with a deep sense of love and gratitude that amidst our rejoicing to-day our thoughts turn to her whose patient, persevering, selfless love has given to us, and to the world, this gospel of Love. When nearing the death-valley the Christ-light appeared to her, and she was "not disobedient unto the heavenly vision," but made manifest that spiritual light so clearly in our text-book, "Science and Health with Key to the Scriptures," that thousands to-day are rejoicing in the liberty of the children of God.

May all the members of this church be found wearing the robe of righteousness; may they learn to overcome evil with good, to resist all temptations, to purify consciousness, and be so obedient to the law of Good, that the divine power and presence of infinite Love may so fill these rooms that all the sorrowing, heartsick, and heavy laden may here find rest and peace.—J. L. D.

New Church Edifice to be Erected at Manchester, N. H.

On Monday the contract for the building of the new church edifice of First Church of Christ, Scientist, in Manchester, was signed, and the first sod was turned on the site of the building by Charles D. Reynolds, First Reader of the local Christian Scientist organization. The church will be built at the corner of Harrison and Albert Streets, on a portion of the Straw estate which came into the possession of the Society about two and a half years ago.

It is the purpose of the religious body which is thus preparing to have a home of its own, to erect a building large enough to meet the requirements of the present and the immediate future, and which can be merged into a larger structure when occasion requires. It will, however, be complete in itself, and as it is to be substantially constructed of brick it will be an ornament to the city. It will cost in the vicinity of seven thousand dollars, and will have a seating capacity of two hundred and twenty-five.

The lot of land upon which the structure is to be reared has a frontage of one hundred feet on Albert Street and one hundred and seventy feet on Harrison. It completes the square which is otherwise occupied by the Straw School, and the buildings of the old Straw estate, and which is bounded by Harrison, Chestnut, Brook, and Albert Streets. The Society has contemplated building here for a long time and has waited in order that it might be able to put up a substantial and beautiful church, even if it is not so large as they hope it will be in the future.

The church as it will be built this fall will be forty-seven by thirty-three feet in ground dimensions. It will front on Albert Street where there will be two entrances, one on either side of an ornamented tower which will not be carried to its full height until the entire church is built, and the architectural scheme fully developed. Avoiding temporizing measures, the church has laid foundations for an indefinite future and will build a substantial little structure. Terra cotta brick with New Hampshire blue granite trimmings will be used for the walls, the roof will be slated, and the interior finish will be hard wood. Indeed, the entire building within and without will, it is expected, be not only attractive in appearance, but intrinsically valuable.

The plans for the completed structure call for a building

Digitized by Google

one hundred and five feet in length. The tower will then be carried to a height which would be architecturally impossible at present, and the main body of the building will be large enough to have an impressive appearance. There will then be a main entrance on Harrison Street, so the church as it will now be built will give but an imperfect idea of what is intended.

Work will be carried on upon the new church as late as the winter permits. The contract is in the hands of Harry Piper who expects, if the season is an open one, to have the building roofed in by December. The agreement calls for the completion of the chapel by June 1, 1902.

The Christian Scientists are worshiping at present in their reading rooms in the Merchant's Exchange Building. For a long time they occupied rooms in the Kennard, then the meetings were held at the First Universalist Church, and finally they transferred to the present quarters. None of these places has been satisfactory, and the members of the society have for a long time been planning for the step that has at length been taken. If all goes well they will be housed in a dainty, convenient church of their own next summer.—*The Manchester Union,* October 30, 1901.

Progress in Wausau, Wis.

As announced in our last issue, First Church of Christ, Scientist, of this city, will begin holding services next Sunday, November 3, in the Universalist Church, where until further notice the Sunday morning service and Wednesday evening meeting will be held. To these services the public is cordially invited. The Sunday morning service of Christian Scientists is much the same as that of other denominations, except the sermon, which consists of passages from the Bible and "Science and Health with Key to the Scriptures" which are read by two Readers appointed by the church. A Sunday School for the children is held at 12 M.

At the Wednesday evening meeting testimonials are given by those who have been benefited physically, morally, and spiritually through the teachings of Christian Science.

For the present there will be no change of reading rooms, which are located at 311 Third Street. They will be, as in the past, open to the public daily, except Sunday, from one to four in the afternoon, also Tuesday and Friday evenings from 7.30 to 9. The reading rooms are always in the charge of some member or members of the church, who will gladly give any desired information on the subject of Christian Science. All the works of Mary Baker G. Eddy and the books and publications of The Christian Science Publishing Society in Boston, Mass., are convenient for the perusal of visitors, and for sale, at these rooms.—*Wausau* (Wis.) *Pilot,* October 29, 1901.

A Word from Marion, Ind.

The First Church of Christ, Scientist, of Marion, Ind., is faithful to the trust reposed in it by the Mother Church. Though our roster is small, it includes many earnest Christian men and women, and of one I wish to write, thinking that his example may encourage others.

The brother of whom I write has been in Science for many years, and under circumstances that mortal sense would cause him to cease striving for the attainment of a higher sphere of usefulness. His employment is such that he is unable to attend the Wednesday evening meetings, but when the hour for its convening is noted he retires to a small room with only a barrel and a bench for furniture, and there as he states he is "alone with his God." His thoughts and prayers are with us He yearns for work in the Master's vineyard and he finds it.

But a few days ago a gentleman seventy-seven years of age sought him for advice and counsel while he worked on the night shift in a glass factory. I saw the old gentleman after he had had two weeks' treatment and found that he had discarded his crutch and cane; the paralysis had left his foot and leg.

A young lady employed at the same factory was taken ill and, unable to lose even one day's salary, she related her troubles to our brother. The next day she was working and since then has not lost one day's work. Both she and her mother have become students of Christian Science. Others are seeking him because of his understanding of God's love and truth, and not because of his worldly learning. He toils for those who work in the shop and the factory, and God's smile of approval brightens the life of the poor and lowly.

There is work for us all. Our brother's example, so full of goodness and truth, has been a rebuke to many of us who have allowed so many opportunities to pass by in which to do good and bear witness for the Truth.

W. M. C., Marion, Ind.

Report of the Work at New Bedford, Mass.

September 9, 1900, five months after the organization of Second Church of Christ, Scientist, of New Bedford, a church home was secured in a new hall just completed for that purpose. A large room opening from the auditorium was secured, handsomely furnished, and opened to the public as a reading room October 1, 1900. In April it was decided to secure the whole floor of the building for the exclusive use of the church. A very large room with attractive bay window, adjoining the reading room, was placed at the disposal of the committee. An arch was cut through; a handsome brussels carpet laid, and in one week it was beautifully furnished and all bills paid.

As we glance through this suite of rooms, made beautiful with palms and ferns, into the audience room beyond, with its bright carpet and the glorious words of the Master speaking to us from the mottoes upon the walls, it is not difficult to realize that this church has proven to be a "shelter from the storm," and has given "rest to the weary."

At the close of our first year, in the reading room is found a stock of authorized literature amounting to forty dollars, and a balance of $30.19 in the treasury. The sales for the year amounted to $430.50, and 2,135 calls have been registered.

The work is quietly but surely and steadily increasing.

FANNIE C. LOVELL, *Secretary of Reading Room.*

Report of Literature Committee.

The following is an extract from the report of the Literature Committee of the Commonwealth Institute Association of Christian Scientists, Boston.

While it has been an avowed object of our Association, ever since its inception, to forward the progress of Truth, as revealed through Christian Science, by the careful distribution of Christian Science literature, and while this work to some extent has been continuously carried on, yet, two years ago, it was deemed wise to appoint a special committee to supervise more closely this branch of our labor.

During these two years, forty copies of our text-book and fifteen of "Miscellaneous Writings" have been placed in institutions where they will meet the public demand for correct knowledge of the Principle and practice of Christian Science. Numerous subscriptions to the *Journal* and *Sentinel*, as well as several copies of the June, 1901, Message, have been sent to similar places. The great good these may accomplish only eternity can reveal.

HENRY C. LAWRENCE, *Chairman.*

When you find yourselves overpowered, as it were, by melancholy, the best way is to go out and do something kind to somebody.—KEBLE.

Sweet Sabbath Day.

BY M. E. O.

Soft tints of Light, in purple bars,
Proclaim a new-born day;
Its heralders, the morning stars,
And th' soaring lark's sweet lay
That calls all Nature to arise
This Sabbath morn to greet,
And to the Ruler of the skies,
Give praise and homage meet.

Sweet Sabbath day! It strikes a knell,—
Another week has flown;
Life's harvest-time can only tell,
What kind of seed we've sown.
But loving words, in mercy giv'n,
And nourished by our prayers,
Must bear bright blooms, perchance in heav'n,
To crown the troublous years.

Our hearts yield to the joyful strain
That Nature's voices sing,
And in harmonious refrain,
Chant praises to our King.
Blest Sabbath day! How sweet its rest!
May we its hours employ
In seeking Wisdom's way so blest,
That leads to peace and joy.

Thankfulness for the Three-fold Blessings.

BY J. A. BARHYDT.

I feel it not only a duty but a privilege to testify to the benefits that have come to me and my family, both physically and spiritually, from the teachings of "Science and Health with Key to the Scriptures." For several years I had been subject to chills about every two months, and would be obliged to remain in bed for two or three days and take quinine or some other medicine to produce a perspiration. About two years ago while in Providence, R. I., I met several Scientists, and after having a talk about Science I bought Science and Health, with the agreement that I could return it at any time within a year and the money would be refunded. But I have had it nearly two years, and it is becoming more and more valuable to me each day; I shall never part with it, as I consider it one of the best investments I ever made.

At first I carried the book with me and read it considerably, but did not receive any benefit, as I could not understand it. In October, 1899, I contracted a severe cold and came home expecting to be there for two or three days, but was in bed for two months. After I recovered sufficiently to be around, I did not seem to regain my former health. This condition lasted until July, 1900. I was doctoring all the while, but to no effect.

July 18 a gentleman called to see me on business, and in the course of conversation told me what Christian Science had done for him. The word thus fitly spoken brought forth fruit in three days, as on the 21st I stopped smoking, which habit I had followed faithfully for thirty years, smoking from five to seven cigars daily. On the morning of July 22 I stopped taking medicine (at that time I was taking four different kinds three times a day). I had come to the point where I had lost all faith in drugs, and made up my mind that mine was a hopeless case. This same day I had a chill. I said to my wife, "Now, this would be a good time to try that Christian Science." By the way, she had always opposed it until this day, when she, too, was willing to try anything to better my condition. She telephoned to several Scientists, and at last the Reader in First Church of Christ, Scientist, here, answered the telephone and said that she would come or send some one to treat me. This was about three o'clock in the afternoon. I was determined not to give up and go to bed, and did not until eight o'clock, and as there had come up a very severe rain storm I thought the healer would not come. But she did come about nine o'clock and treated me, and when she left she said she would send some one to see me on the following day, which was Sunday.

But the next morning my wife, daughter, and I went to First Church, and you can imagine how surprised and pleased our practitioner was to see us walking up the aisle. From that day to this I have had no signs of a return of my old malady. Every trouble that I or my family have had since that time, has been met with Christian Science. In regard to smoking, I not only lost the habit, but, thank God, I have entirely lost all desire for smoking.

I am an artist, and I can well remember when a little fellow telling my mother and sister that I was going to be an artist and go to Italy and be a great painter and bring them home nice silk dresses and all kinds of nice presents. But when I grew to manhood my parents wanted me to be a doctor, but I would not, as I was determined to be an artist; and to-day, looking back over my past life and the promises of the future, I am so thankful for that decision in early boyhood, as all through life I have loved the unfolding of the beautiful and artistic in nature. I became a Methodist in early life, but never was satisfied with what it brought to me. Since becoming a Christian Scientist I am conscious of a deep sense of gratitude and love, for its teaching has enabled me to prove through demonstration that the really artistic and beautiful is in Mind, not matter.

I am not only thankful to Christian Science for its physical healing and spiritual uplifting, but also for its inspiration to my artistic nature. It was natural for me to accept the unreality of matter from my own life's work, as natural science teaches that color is not in the blue forget-me-not, the green grass, the bright red rose, or any other object, but that each object absorbs certain prismatic colors and reflects others. The color of an object depends upon how many of the prismatic colors it reflects. As when an object reflects all the prismatic colors, we have the pure white, so it is with us when we reflect all the attributes of God,—justice, mercy, goodness, and so on,—we shine forth in the purity of white garments, clothed as it were in the Love and Truth of Christian Science.

Since being healed, my wife and daughter and I have been through class, and while I have been in Science only a few months, I am very thankful for what it has done and is doing in our home, not only in the physical healing but in its spiritual uplifting and that atmosphere of Truth and Love that is ever-present in the homes of Christian Scientists. Hardly a day passes but we have some evidences of our heavenly Father's love and care. And so I can say, God bless Mary Baker G. Eddy for the Truth that has come to me through Science and Health, and also my teacher, and all who have been instrumental in helping me thus far along in the Christian Science way.

Condemn Not.

BY MARY J. MOORE.

The many demonstrations of the power of Christian Science that we hear from the little children, should be a lesson to their elders, and also to those who make the assertion that Science and Health is too deep for people of ordinary minds to comprehend.

The natural instinct of a child is to put its faith in God. This is the light that is in all men, in every human being; and this light never dies, but as we grow older, it is obscured by false education and by constant contemplation

Digitized by Google

of evil, giving evil more and more power until our true sense of good is buried.

However long one may have been a Christian, when he looks at himself in the light of this Science, he will for the first time see how much of his faith is centred in a false god (power) named devil, and all this faith so bestowed must be subtracted from his belief in the one God. Our greatest enemy is our own belief in other gods (powers) than God.

There is absolutely no other unseen power but God, Good, Love. There is the belief in an evil power, built up from Adam's time to this, that must be overcome,—and he will be surprised to find how firmly this belief is fixed in his thought, when he tries to trust his health to his faith in one God. Our health is very precious, and to trust God for it, we must obey the command to have but one God, one power; and to do this we must give up our faith in the world (its opinion), the flesh (false testimony), and the devil (God's supposed unseen opposite). God is Spirit, and there is but one God.

To believe in Jesus Christ with all your heart, and all your soul, and all your mind, means to disbelieve all that is unlike Him.

Persistent untiring denial of our belief in evil by knowing that God is All, will once more uncover for each of us that childlike intuition, which is in us all, and will help us to feel God's presence.

We, as Scientists, do know that our present faith or belief in evil is a belief in the lie. Our faith in God will be a belief in the Truth which will give us the Christ power to obey God.

We must acknowledge but one God, and one Son, and that Son Christ, not Adam.

The first thing Jesus prescribed was faith in God and His Son, this faith was to show its power in healing the sick. Why not fill this prescription?

No matter how strong one's belief in evil, no matter what form it may have taken, God and Jesus Christ as understood in Christian Science will overcome it.

It is our own belief in an unseen power which can cause us against our wish to commit sin, be sick, and break all the commands of Love. That must be overcome, and nothing but the true knowledge of Christ's teachings can do this, and this knowledge is to be gained through Christian Science.

Let those Christians who would condemn Christian Science to oblivion consider for a moment Matthew, 18 : 5, 6:—

"And whoso shall receive one such little child in my name receiveth me. But whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea."

Every reform has had its childhood, and is it not true that those who received Luther's thought, or any other infant thought of a higher worship of God, really have received more of Christ than they knew before?

How does he know this Christian Science is not another one of those little ones? Why does he turn his back upon it, until he sees nothing but darkness and fear? Why does he refuse to obey that command, try the spirits,—know what it is he is turning from his door, be sure it is the child of evil, and not one of those little ones loved of God which would help him lift those he would minister to, from the depth of despair, or that worse condition, indifference to Christ?

He had better pray as earnestly as he knows how to pray to be delivered from the evil of condemning that which God has blessed, and his God will answer a prayer from the heart and guide him into more holy ways than those he has been following, to overcome wrong if it be wrong, or open his eyes to see the "Me" spoken of in the text above.

Testimonies.

Grateful for Christian Science.

Christian Science was presented to me about four years ago, after I had suffered from fifteen to twenty years, and the result was so glorious that I feel it is my duty to our beloved Mother, the Rev. Mary Baker G. Eddy, and to my healer, to acknowledge the benefit.

My greatest suffering was from indigestion, which at periods would result in diarrhœa in a most acute form, and for weeks following such attacks I would be completely prostrated. During a greater part of the time I was compelled to conform to the most rigid diet, being unable to digest any substantial food. During all this period I was constantly under the care of physicians.

At a time when life was a burden, and all hope of ever being well had been abandoned, Christian Science came to me. I called on my healer, who had only been in Norfolk a short time, and she was so kind and loving as to impress me in a most favorable manner. She told me to take the text-book, "Science and Health with Key to the Scriptures," and read it, and it would be all I would need; but I insisted upon being treated at once. I was determined to get all I could, so treatment was begun that day. In less than two weeks I felt entirely well.

Exactly two weeks after the first treatment I attended a dinner given to a Sunday School teachers' association. I was at that time connected with an Episcopal Sunday School. I ate fruit cake and ice cream, both of which I had not been able to eat for years. I have had no return of the trouble.

I also suffered a great deal with catarrh. I was very susceptible to cold, and could not go out in cold weather without a chest protector in addition to the heaviest flannel, which was considered a necessity. Both of these things have been done away with for several seasons, and I am free. Changes in the weather no longer affect me, and often of late I have been out in the worst kind of weather without experiencing any ill effects.

I rejoice in freedom from these ills but appreciate most the regeneration of thought, whereby we learn to esteem others more than ourselves. The consciousness that through the study of our text-book we are growing nearer to God and more and more like Christ, puts into the shade all remembrance of our struggles in overcoming error.

One of the most satisfactory subjects for consideration is the growth of the work in Norfolk. When I came for treatment there were only a dozen or so interested. My healer, who is now the First Reader of our church, came to Norfolk between four and five years ago, and at that time there was no one here who knew much of Christian Science. Since my healing I have attended the services regularly, and have seen case after case healed. The congregation has so increased that a few Sunday mornings ago our hall was filled and the cloak-room adjoining had to be used to accommodate the overflow. There were one hundred persons present. This number, however, does not begin to represent the number of cases healed. To me the work which has been done here is marvelous. "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men."

MRS. ANNA L. MORRIS, Norfolk, Va.

A Testimony from Ireland.

I did not come to Christian Science for the physical healing, never having had any fear of illness for myself, or much belief in doctors and medicine.

A friend, while staying in our house, brought "Science and Health with Key to the Scriptures" to my notice, also spoke of it to one of my daughters, who had for many years been delicate. I liked the teaching of love and harmony, of peace and trust. I bought the book at once,

Digitized by Google

began to study, and have never for one moment doubted the truth of its Principle, or the grand inspiration of Science and Health.

The first definite idea presenting itself to me as Truth was that "Matter could not feel fatigue," and from that day to this I have had no sense of weariness. I can travel any distance. If necessary, I can do without sleep, suffering no inconvenience whatever, in spite of my having always seemed a frail, though not an unhealthy woman.

Next I took up other more spiritual thoughts, and began to work for others, ceasing to think of my own health at all.

Several times I have thought of writing to the *Sentinel*. Then I came to the conclusion that I would wait a little before telling of the work here, not caring to give testimony of the healing of patients, and holding that, for myself, I never had been really ill, and that though Christian Science had completely changed my life, bringing happiness, harmony, and peace where there had seemed to be neither one nor the other, yet that there was nothing very definite to say. So I put off writing till a more convenient season, all the while not feeling quite satisfied with my lack of obedience.

At last, after about four years of perfect health, I one day, to my astonishment, had an attack of inward inflammation, which was met and conquered at once, but which brought to my memory the forgotten fact that just before coming into Science I had been in a doctor's hands for the same thing, that he had ordered me a drug, begging me to be sure never to be without it.

Next a lady came to spend a day with me, displaying a swelled jaw and enlarged bone, which, she said, were caused by a cyst on her upper gums. For a few minutes I actually puzzled to know where I had seen something of the kind before. Then suddenly bethought me that this also had been a trouble of mine; that I had had one cut and burned three times by two different surgeons, and both said that the wound must be kept open always. There is now no open wound, and no sign even of an old swelling or enlargement of the bone.

A few days ago I was seized with a very distinct attack of lumbago and rheumatism in my back, over which I worked for at least twenty-four hours. I was thereby reminded that this also had been a strong belief before Christian Science had freed me.

For this freedom from material bondage let me give most earnest thanks. St. Paul tells us, "Where the spirit of the Lord is, there is liberty."

We have no longer to inquire of ourselves, "Can I do this or that?" but "Is it God's will that I should do it?"

To me this seems an immense freedom for oneself, to say nothing of the great joy of helping others. I see and realize that when we wake in His likeness we shall be satisfied. We shall have no wish for sin, no fear of sickness and death.

We can never be too grateful to her who has shown us the way.—F. ASHBOURNE, Dublin, Ire.

How I became Interested in Christian Science.

My first interest in Christian Science was aroused in a curious way. I had known of it for some time, and thought I understood some of its doctrines, but was disposed to regard it as theoretical and visionary—beautiful but leading nowhere.

A pamphlet issued by one of the Episcopal churches was brought to me by a member of the family, which reviewed at some length the various charities which the church supported, and was interested in. Among them, I finally came to the photograph of an interior, entitled, "The Home for Incurables." In that moment, the doctrines which I had regarded as impractical, theoretical, and visionary, came to me with such force that I could no longer elude or evade them. I saw the faces of the poor creatures with the expression of stolid despair that the so-called incurables wear, and the priest in his white robes addressing them, doubtless trying to comfort them. I remember writing on the margin of the page, and it came to me with irresistible force: "What a sad commentary on the efficacy of Christ's teachings—a priest of the church, a follower of Christ, preaching to a home for incurables, and having it still remain a home for incurables."

I then saw it all: the religion which Christ taught and suffered for, was, in this material age no longer regarded as practical, or applicable, or efficacious. I saw it all, and I became a Christian Scientist.

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 123, we read, "If God had instituted material laws to govern man, disobedience to which would have made him ill, Jesus would not have disregarded those laws by healing in direct opposition to them, and in defiance of material conditions." He taught "Ye shall know the Truth, and the Truth shall make you free,"—free from the law of sin and death. Then irrespective of creeds and dogmas, we should learn the Truth that is to make us free,—free from the imaginings of the carnal mind, which "is enmity against God: for it is not subject to the law of God, neither indeed can be."

G. K. B., St. Louis, Mo.

Great Fear Overcome.

One of the great benefits received by me through Christian Science has been the destruction of the fears which followed me from childhood. I was afraid of almost everything, especially of people, of the dark, of ghosts. The very air seemed filled with horrors. This condition was intensified by the loss of two children within six months, and my mental condition was deplorable. I was unable to sleep naturally, and was tempted to use opiates. Every noise of the night seemed to mean that the house had been broken into, and that something horrible was about to happen.

One day, while pondering over my condition, it came to me: God is our ever-present help and defender, and having seen much accomplished by the declaration of, and trust in, His promises, I determined to commit myself to His care. That night upon retiring, I mentally wrote over every outer door this verse, "The angel of the Lord encampeth round about them that fear him, and delivereth them." On every window sill I wrote, "God is Love," and "God is omnipresent." I slept like a child and have ever since been free from the "terror by night."

I am truly grateful for the many blessings that have come to me through the understanding of God, made possible by the study of the Bible in the light of Christian Science.

JEANNETTE R. MCLELLAN, Chicago, Ill.

I have been wanting to tell for a long time what the power of Truth has done for me, for it has brought me out of the Slough of Despond, out of invalidism of many years' standing, out of the care of doctors who tried to be kind and helpful, out of the use of drugs and restoratives of all kinds, to a life of health and usefulness, such as I never could have realized as possible. It has brought me to see the Scriptures in a new and loving light. Many passages which seemed dark are now illumined. In fact, it would take many years to tell what Christian Science has done for me, and helped me to do for others. I cannot be grateful enough to dear Mrs. Eddy for bringing the light to my darkened life, darkened by illness, for my family and friends could not be kind enough to me. I have wondered at their patient love. I am thankful for Science and Health that brightens my pathway day by day, with its key to unlock the treasures of that Book of Books.—LULIE DEACON, Cambridge, Mass.

Religious Items.

The Baptist ministry seems to be in a bad way. For a long time the length of pastorates in the Baptist Church has been much below the Unitarian average, which, we believe, is still above that of any other denomination in New England. One thing is certain: any Church which draws a dead line for its ministers and discards them at the age of forty has a dead line of its own and that not very far ahead. Men of ability and foresight will not long enter the service of a Church which can properly be described as in the following clipping from the *Watchman:* "Most of the speakers and writers who discuss the so-called 'dead line' in the ministry observe that there is no such line for men who keep alert and up to date, constantly acquiring and growing. We do not know about that. Most of the pulpit committees that ask us to recommend possible pastors, practically say: 'We do not want a man over forty. There is no use of our presenting the name of a man over forty.' Now that is a condition, and not a theory, no matter what the theorists may say, there is a real and growing discrimination against men on account of their age, irrespective of their ability or effectiveness. The man of fifty does not get a chance. Too many pulpit committees will not even consider him. He is ruled out as soon as his age is mentioned. To cite the call of Dr. Lorimer to New York at the age of sixty-two is not to the point. There are very few Lorimers; and, if the majority of our ministers above fifty have got to be Lorimers in order to get a pastorate, their outlook for a place in which to work is very slim."

The Christian Register.

FOLLOWING THE PREACHER.—A recent editorial in one of the leading daily papers, in referring to certain religious tendencies toward centralization of forces in some of the larger Churches, significantly and suggestively says that "the drift has been toward literary and ethical preaching." This drift in itself may not be deplored, but the eloquence of such preaching has attracted many people from the more obscure Churches lying outside of these great centres, and has virtually led them to look upon the Church as a sort of spiritual hotel for transients, rather than the spiritual home which it should be. The plea of those who drift about after the intellectual preaching which most accords with their religious fancies, is no evidence of any real gain in spiritual knowledge, for in the end, this habit only leads to spiritual loss; their religious convictions, if any, consisting of layer after layer of things having no unity or consistency.

The effect of this itinerant habit is also seen upon the preacher, who to catch and hold this transient element is led by the force of his literary ability "to put a little more dash and flavor into his sermons and, in a measure unconsciously, to trim his sails to catch every little breeze of current religious opinion."

The tone of this editorial is worthy of consideration on the part of those who drift after the popular treatment of religious themes in our times, and is a forceful and unexpected argument in favor of those who stand by their own local Church interests.

The Standard.

There are many occasions when the environment can be changed, improved, made more congenial. It may be in the house and its furnishings or in the location of the home. It may be done at times in the matter of the business or professional field of action, and when a change would plainly be advantageous it can safely be made. More frequently, however, the better thing to do is to place self in juster relations to the conditions already existing. The story is told of a couple, man and wife, who had lived long in the same home and they concluded to sell it and go elsewhere. They put it in the hands of a real estate dealer. Soon they read in print a glowing description of their property. Both said at once that if the place was such as the advertisement pictured it they had better keep it, and keep it they did, for they were led to examine its real value more carefully and to appreciate points that had been overlooked before. It is not so much where we are as what we are that makes life seem attractive and full of good cheer. If the great blessings are noted and rightly estimated, the small annoyances will cease to annoy.—*The Universalist Leader.*

THE CHURCHES AND THE CRIME QUESTION.—The number of arrests for crime in Massachusetts is substantially one for every thirty of the population. More than ten per cent of all the money raised by taxation is expended for the detection, conviction, and punishment of crime. The number of wives, children, and other relatives of prisoners is nearly or quite equal to the number of prisoners, and a vast amount of poverty and suffering come to these innocent ones through crime. If these things were inevitable, if no means could be found to reduce these evils, the Churches might be excused for ignoring the crime question. But there are remedies which, if applied, will lessen the number of criminals, the poverty following on the trail of crime, and the cost of crime. They are to be found in the adoption of Christian methods of dealing with crime. The two central principles underlying such methods are prevention and restoration. They are generally accepted theoretically, but not adopted. Definite, scientific, well-considered efforts for the prevention of crime are not the rule, and the prisons are not yet organized with the distinct purpose of restoring those who have gone astray.

The Congregationalist and Christian World.

"Tell me something that will help me toward a higher Christian life." To this sincere inquirer (and there are many others who have the same desire), I would say, turn to the closing verse of the first chapter of John. In that verse Christ tells Nathanael that he "would see heaven open and the angels of God ascending and descending upon the Son of Man." The allusion here to Jacob's vision at Bethel is very clear. Jesus describes himself as a sort of connecting ladder between heaven and earth. By his divine nature he reaches to the throne of the Godhead; by his human nature he reaches down to our weakness and guilt. His atonement for sin opens a way upward by which we can find pardon, peace, and power—by which we can climb from a lower into a higher and holier life. By Jesus Christ, and by him alone, we can attain fellowship with God; and Jesus may become to us "wisdom, righteousness, sanctification, and redemption."

REV. T. L. CUYLER, D.D.
In *The Standard.*

"THE GOD THAT ANSWERETH BY FIRE."—The religion of the Bible differs from all forms of philosophy, ancient and modern. They make a great show of learning and contain much valuable truth, but lack inspiration. It differs also from all forms of false religion. These make a conspicuous display of ceremonies, but are destitute of that inward force which animates and moves men. The God of the Bible is not like other gods. They are dumb and dead. There is no spirit in them, and they communicate no living energy to their worshipers. Jehovah appeared to his people again and again in a pillar and a flame of fire in order to indicate that His truth and love constitute the chief power in the earth. He still answers by fire. We do not see literal fire falling from heaven in answer to our prayers. We expect no miracles, but an inward inspiration which answers to the outward flame is everywhere manifest.

The Christian Advocate.

The Christian religion is immeasurably broad; the Christian life is infinite in its possibilities of experience, in the complexity of its relations, in the scope of its outreach. The holiest saint who ever lived has never yet realized in thought or life more than a fraction of his spiritual heritage as a Christian. The greatest saint knows the truth of God only "in part," and while here on earth he can only enjoy a part of the fruition of the eternal life which is already his.

The Church Standard.

Truth is indispensable to religion, and without it there cannot be any religion worth the name. We are all children of an Infinite Father, in whose home we dwell and from whose care we cannot escape; and only to the extent that we realize this truth and live in this relationship are we religious ourselves or the teachers of religion to others. The devout spirit which realizes the sacredness of life, must be possessed before it can be communicated.

The Christian Register.

A man may think he is doing God's work when he is not even doing God's will. And a man may be doing God's work and God's will quite as much by hewing stones or sweeping streets as by preaching or praying. So the question means just this: Are we working out our common, every-day life on the great lines of God's will?

HENRY DRUMMOND.

President Roosevelt has this characteristic sentence in his proclamation appointing November 28 as a day of national thanksgiving: "We can best prove our thankfulness to the Almighty by the way in which on this earth and at this time each of us does his duty to his fellow-men."

The Congregationalist and Christian World.

The eagle that soars in the upper air does not worry itself as to how it is to cross rivers.—*Selected.*

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa.*

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

The first session of the Fifty-seventh Congress began Monday, December 2.

Delaware's two seats in the Senate still remain vacant. The third party men have determined to go into one or the other of the old parties. Of the eighty-eight Senators fifty-six are Republicans and thirty-two Democrats.

In the House there will be 197 Republicans, 152 Democrats, and eight independents, who it is thought will vote with the Democrats. Since Congress adjourned nearly two-hundred and fifty thousand dollars has been expended in refurnishing and redecorating the House and its committee rooms and offices.

The report of the third assistant postmaster-general states that for the year ending June 30, 1901, the postal receipts were $111,631,193.39 and the expenditures $115,554,920.87, making an excess of expenditures over receipts of $3,923,727.48. The most important question considered in the report is that of second class mail matter. The publishers' rate of one cent a pound for second-class matter constitutes about two-thirds of the weight of all the United States' mail, but it furnishes only about four per cent of the postal revenue. The net profit to the government from the special delivery business was $167,727.73.

A bill will be submitted to Congress providing for the revival of the grade of vice-admiral, with four numbers in it. The bill provides also that the number of rear-admirals shall be reduced from eighteen to fourteen and that these officers shall have the same rank and pay as major-generals in the army. At present nine of the rear-admirals have the rank and pay of brigadier-generals and others that of major-generals.

General Wood has bought for the Government the principal portion of the San Juan battle-field, including San Juan Hill, the site of the blockhouse. The tract comprises two hundred acres and cost fifteen thousand dollars. It will be considered a United States reservation, and it is stated that the Government intends to lay out a park on the old battle-field.

The examiner of interferences in the Patent Office at Washington has handed down an opinion awarding to Professor Carl Linde of Munich, Germany, the priority of invention for the self-intensifying process of making liquid air. Professor Linde's method was discovered in 1895.

President Roosevelt has issued an order placing the rural free delivery under the classified service. This order affects about sixty-five hundred agents, clerks, and carriers.

The increase in the postal revenues the past year shows that the free delivery service has become self-sustaining. Of the gross postal revenue $74,295,394 came from 866 free delivery cities. The total cost per annum for free delivery service is fifty cents per capita.

According to the annual report of the Secretary of the Interior, the total Indian population of the United States, exclusive of New York and the five civilized tribes, is 178,919. They are located on 156 reservations containing 55,127,000 acres.

Congress will be asked to appropriate ten million dollars for improvements in Hawaii.

Foreign.

It is said that the Australian commonwealth will pattern after the United States in that she will select no metropolitan capital. Her reasons for so doing are much the same that in 1790 caused the Federal Government to locate the capital on the present site of Washington rather than in one of the prominent cities of the country. It is said that the jealousies of the States was the chief reason why the American officials decided upon such a course.

A German manufacturer has invented a new process for the production of steel which promises to produce a revolutionary effect on the world's metal industry. The new process imparts to all grades of iron a percentage of strength and hardness nearly double that imparted by the best processes in present use, while the cost of production is decreased about fifty per cent.

The experiments in wireless telegraphy which were conducted by the Swedish navy during the autumn manœuvres were so successful that the Swedish Government has decided to erect an extensive system of postal signal stations. Swedish engineers are credited with several inventions which have greatly increased the efficiency of wireless communication.

The American residents of Berlin, Germany, will erect a union church in the centre of the American colony in that city. The corner-stone was laid on Thanksgiving Day by United States Ambassador White. In his speech Mr. White emphasized the broad and liberal character of the undertaking, which ignored all denominational bounds.

The Philippine commission in their report to the President state that the island contains seventy-three million acres of arable and timber lands. Less than five million acres of these are held by private ownership.

M. Jules Siegfried, in a recent lecture in Paris, predicted that during the present century the United States would become the greatest and most powerful commercial and industrial nation in the world.

It is stated on reliable authority that Germany and Russia are about to unite in assembling an international congress to devise plans for the suppression of anarchy.

The Ludwig Loewe Company, in Berlin, has the finest machine shop in Germany, and possibly in all Europe. It contains nothing but American machinery.

Industrial and Commercial.

It is reported that a system of exchange mileage between the larger railroads east and west of Chicago will be established to replace the passes that are to be abolished on January 1. The proposition is to supply mileage for representatives of the railroads traveling on other lines. If at the end of the year it is found that one road has used more mileage than the one with which it has an exchange, the excess will be paid for in money. It is estimated that the abolition of exchange passes will do away with not less than sixty thousand annual passes.

Cornelius Vanderbilt has just taken out a patent for an improved locomotive tender. The new tender has many points of excellence which have won the highest praise from competent mechanics and railroad men. Mr. Vanderbilt has practically reconstructed the locomotive, and is without doubt the leading inventor in that line to-day.

The Industrial Art League of Chicago proposes to erect a free workshop to be known as the Chicago Guild of Industrial Arts. It is designed to give the artist the chance of manufacturing his own wares without financial outlay, and selling them with no other expense than the cost of the material and the rent of the tools.

California's oil output for this year will be about eight million barrels. The railroads of California are using upwards of three million barrels of oil a year on their locomotives and in shops. There are eleven refineries in the State which use 1,500,000 barrels a year.

By the consolidation of two lumber companies Chicago now has the largest lumber yard in the world. It has a storage capacity of seventy-five million feet. The amount of capital invested is upwards of $2,000,000.

An agent of the American Federation of Labor has begun the work of uniting the various industrial organizations in Porto Rico, and will ultimately have them join the American Federation of Labor.

The State of Iowa has 14,819 manufacturing and mechanical industries having a capital of $102,733,103. The annual product amounts to $164,617,877.

General.

The Chicago House Wrecking Company has purchased every movable thing on the Buffalo Exposition grounds for $130,000. The same company bought the World's Fair buildings for $80,000; the Omaha group for $50,000, and the greater part of the Paris Exposition buildings for $70,000. It is possible that either the national or state memorial association will endeavor to secure the Music Hall and erect it in some public place, either as a museum, art gallery, or memorial building. It is stated that the material of which it is made will permit of its being taken apart in sections and erected permanently elsewhere.

In reply to numerous inquiries which have been directed to the members of the national commission for the Louisiana Purchase Exposition, as to the probability of the postponement of the opening of the Exposition, the secretary has stated that the law requires that the exposition be formally opened to the public on April 30, 1903, and that no effort has been made nor is any contemplated, looking to the postponement of the opening.

Jacob A. Riis recently delivered a lecture in Carnegie Hall, taking for his subject "Theodore Roosevelt, an Example of Citizenship." The address was delivered under the auspices of the Young Men's Christian Association. Mr. Riis said that President Roosevelt's motto is, "Better faithful than famous."

A resident of Richmond, Ind., has discovered a substance which is abundant and easily produced, which will absorb heat rays and hold them until given out again. The method is similar to the making of ice only the process is reversed.

A satisfactory test of the Holland submarine boat, Fulton, was recently made in New York harbor. The boat, carrying six persons, remained submerged for more than fifteen hours without the slightest discomfort to the men.

Dr. William R. Harper, president of the Chicago University, will be the director of universal educational conferences at the World's Fair in St. Louis.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

At the Cradle of the Monolith.

Granite Quarries of New Hampshire a Titan Industry.

THE white, dream-like beauty of First Church of Christ, Scientist, corner of Ninety-sixth Street and Central Park West [New York City], that day by day grows in its magnificent proportions as the workmen swing the snowy blocks into place, is a part of the epic of granite. It is the culmination of a strenuous beginning in the quarry, channelling where, to the music of the machine and the thunder of the blast, the granite is torn from the earth, and there begins the marvel which develops to perfect beauty. The New Hampshire cradle of the monolith, near Concord, is a place of massive achievements, supplied with all the magic of modern science, all of which the workers take as prosaic matter of fact, but which is an impressive wonderland to the outsider.

The great increase in the granite trade of Concord this year is due to three large contracts, the first of which is for the stone of the New York church; the second is for the Frick Building of Pittsburg, the largest all granite business building in the country; the third is for the Marshall Field Building of Chicago. The last two contracts are keeping eight large and twenty small quarries and sheds in Concord busy; while to the work of supplying the material for the church structure the company having the contract is devoting its entire force of three hundred and twenty-five men, night and day.

The work for the church involves not only the quarrying of some forty-five thousand cubic feet of granite, but a vast amount of artistic work as well. The stone must be of symbolical whiteness, and in this respect it is a significant circumstance that, not only is Concord the home of Christian Science, but in its granite is found the peculiar bluish tint which gives it a lustre and purity possessed by no other granite in the country.

It is sometimes necessary to go far beneath the surface to obtain stones of the required whiteness and size, and much prospecting is done. Two of the huge blocks now ready for placing in the church weigh no less than twenty-two tons.

An order is received for a monolith, its proportions, say, twenty-two feet long, four feet wide, and four feet thick. It must be pure white and flawless. The order is put into the hands of the boss of the quarry, who, full of the pride of responsibility, goes immediately about its execution.

Such a stone as he is ordered to supply must be sought in the ledge far beneath the surface, for the vegetable stain percolates through the granite sometimes to a depth of twenty feet, giving it the "checker board" appearance which the inartistic sometimes affect to admire.

Vegetable matter thus filtering through the stone becomes an active agent in disintegration, and when the stone is exposed renders it much more susceptible to the influences of climate than the absolutely pure stone would be.

Each great stone must be separately sought. It is as impossible to tell what quality of granite lies beyond the vision as it is to foresee the assay of quartz in a gold mine, and the work is said to possess much of the fascination of mining operations. Therefore the foreman may have to do much "grouting" and developing before the stone for which his eager vision longs lies breast-bare to the sun.

And now the ravishment of the rock begins. The channelling machine sings sonorously as it violates its virgin sides; and the relentless tapping of the air drill as it pierces its flinty heart and the ultimate explosion are echoed from wall to wall of the quarry, until the whole geological world takes up the refrain and rejoices that the mountain writhes and a monolith is born.

About a hundred years ago our ancestors, who, not without reason, had much faith in the virtue of good black powder, used when blasting to bore a hole, fill it almost full of powder and savagely ram the charge home. The result was, when it was "touched off" it shattered things in all directions, and more rock was rendered fit for the "grout" heap than for building purposes.

At such times, too, those who were engaged in the blasting, used wisely to seek shelter behind some convenient tree or boulder. To-day the round drill has taken the place of the wedge-shaped tool of seventy-five years ago.

The genius of man has compelled obedience from the very rock. He decides which way it shall break, and it breaks that way. If a large stone is to be blasted out holes are drilled at regular intervals about five-eights of the way down. A reaming tool is then driven into each hole, leaving two opposite V-shaped grooves, which indicate the required direction of cleavage. About a gill of powder is poured in and, say two feet above this, or at a distance proportionate to the depth of the hole, some hemp wadding is rammed and the hole then tamped tightly to the surface.

It will be seen that a large air chamber has been left above, and thus the air acts as a cushion when the powder is converted into gas, the pressure rending the stone apart, rather than shattering it. In regard to this, Mr. Hudson Maxim, the expert on explosives, says:—

"It is well known that if a muzzle loading gun be charged with powder and ball, with the powder rammed well home and the ball only a short way down the barrel, the gun will kick with terrible violence, even if it does not burst on firing. The reason for this action is that the burning powder charge and gases are thrown violently forward upon the projectile, and before the projectile has time to be displaced the pressure mounts very high, and a return wave rebounds from the projectile toward the breech of the gun.

"This is what is known as wave action in guns. In blasting stone, this wave action is produced by leaving a considerable air space or air cushion between the explosive charge and the tamping which stops the mouth of the hole. The effect is to lessen the intensity and shattering effect of the explosive, and to vastly increase its propelling or moving effect, which renders this method of loading of great value in breaking granite from the quarry."

Of course, it is necessary to reduce the stone as much as possible before transporting it to the sheds. When one of the huge blocks is required to be split a very simple process, called "deep holing," is resorted to. Holes are driven two

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

feet deep at regular distances apart, filled with water and plugged. Between these, holes three or four inches in depth are made, into each of which a sort of split, deep steel collar, called a "shim," is placed to protect the granite. Then steel wedges are driven in, and the mighty block gradually yields its integrity under the insidious operation of this slender instrument in the hand of man.

Conquered, but not crushed, the geological giant now lies helpless in the hands of his enemy, and can exert no resisting force save that usually used by the smallest of human beings—dead weight. But as a fifty ton block would not phase one of the great derricks in the quarry this is not so formidable a matter as the case of an obstinate child has sometimes proven.

When an ordinary stone to be used for building purposes is brought to the sheds a cutter takes it in hand, "points" the surface off, cuts in his plumb holes, takes it out of "wind," and then takes a pean hammer and removes point marks.

The bush hammer is next used for producing the surface usually seen on the exterior walls of granite buildings. If it is to be polished the block is squared up and sent to the polishing mill. Here it is made perfectly level, a wooden frame is put around it which projects slightly above its level and the cracks stopped with plaster of paris, thus forming a shallow receptacle for the slush and other materials used in reducing the surface of the block to a condition of smoothness.

Two brawny armed, strenuous faced, very much begrimed and beaproned men direct this process. A cast iron scroll wheel is lowered face down upon the block and with unerring touch searches out the little points and grinds them down. Then chilled iron, finer than bird shot, and made by spraying molten iron into cold water, is sown over the surface of the rock to add zest to the appetite of the scroll wheel.

Next a powdered substance, called carborundum, which is similar to emery, but of smaller grain and having more of a cut to it, is applied, and this brings the stone down to a fine surface, with a dull gloss to it. The block is now thoroughly cleansed and dried, and a felt buffer, which revolves the same as the scroll wheel, is run over the surface, while putty powder is put on and the highest gloss produced.

Now the great steel claws of the derrick reach into the shed, and the huge stone is swung across the yard and put into the charge of other men, who fall upon it with pneumatic tools which resemble miniature steel drills and make a noise louder than that of a sewing machine, yet not up to the pitch of a lawn mower. This tool is one of the most important of modern inventions.

It is perhaps six inches in length, and is operated by compressed air, with which it is supplied through a small rubber tube leading to the main pipe above. The cutter holds it in one hand, and with the other directs the chisel, the end of which is slightly inserted in the tool.

The little plunger within the tool makes twenty-two hundred strokes to the minute, and the cutter may use as much or little of its force as he desires. When the dust has accumulated so as to obscure the work the operator need only turn the little instrument end for end, and with one breath from its iron lungs it blows the place as clean as a whistle.

When the stone is bushed and bedded a V-shaped hole is made in it with the opening smaller than the bottom, and into this a Lewis bolt is placed, which is so constructed in sections that when the lifting strain is felt the mouth of the cavity so presses the wedge-shaped parts together as to cause it to hold fast.

The ingenuity of the New Englander is manifest on every hand in the quarries and cutting sheds, from the minute carving tools to the great travelling cranes that lift fifty ton blocks from one corner of a shop, transport them the length of the building, and deposit them in another corner.

Up and down, east and west, these monsters go, waiting upon the demands of the workmen with silent promptitude. In the yard of one of the great granite works is a derrick, run by electricity, that will left an eighty thousand pound block.

In these works also is a lathe for squaring granite balusters, which does the work of a hundred men. Its neighbor is another lathe, capable of turning a column twenty-two feet long by three feet in diameter. As the weight of Concord granite is one hundred and sixty-five pounds to the cubic foot, the reader can determine the weight of such a column for himself. This giant lathe was made in Scotland.—*New York Herald.*

Characteristic Sayings of Theodore Roosevelt.

FROM *Social Service,* a monthly publication, of New York City, we republish the following collation of sayings of President Roosevelt:—

"President McKinley has had to face the most serious and complicated problems that have been faced by any President since Lincoln, or by any President for more than a generation before Lincoln. I do not see how there could have been any material improvement in the way that he has faced and solved each problem."

"We live in a period of great social discontent and unrest. Every man who, by his actions, fans the flame of that unrest is a traitor to what is best in our national life and deserves ill of the country."

"Peace cannot be had until the civilized nations of the world have expanded in some shape or other over barbarous nations."

"No nation, no matter how glorious its history, can exist unless it practises—practises, mind you, not merely preaches—civic honesty, civic decency, civic righteousness. No nation can permanently prosper unless the decalogue and the golden rule are its guides in public as in private life."

"Money is a good thing. It is a foolish affectation to deny it. But it is not the only good thing, and after a certain amount has been amassed it ceases to be the chief even of material good things. It is far better, for instance, to do well a bit of work which is well worth doing."

"I think one of the greatest dangers is the tendency to deify mere smartness, to deify mere success without reference as to whether it has been honorable or obtained by methods which should scar the soul. We cannot rise to the level of our inherited traditions until public opinion turns so that the man who won wealth or political success by dishonorable means should feel the scorn of every man whose opinion is worth having."

"The successful man, whether in business or politics, who has risen by a conscienceless swindling of his neighbors, by deceit and chicanery, by unscrupulous boldness and unscrupulous cunning, stands toward society as a dangerous wild beast. The mean and cringing admiration which such a career commands among those who think crookedly or not at all, makes this kind of success perhaps the most dangerous of all the influences that threaten our national life. Our standard of public and private conduct will never be raised to the proper level until we make the scoundrel who succeeds feel the weight of a hostile public opinion even more strongly than the scoundrel who fails."

"I wish to preach, not the doctrine of ignoble ease, but the doctrine of the strenuous life; the life of toil and effort, of labor and strife; to preach that highest form of success which comes, not to the man who desires mere easy peace, but to the man who does not shirk from hardship or from bitter toil, and who, out of these, wins the splendid, ultimate triumph."

The Lectures.

At Iola, Kan.

There was a large attendance at the Iola Opera House, Thursday evening, October 24, 1901, to hear a lecture on Christian Science by the Hon. William G. Ewing of Chicago. The audience was very attentive throughout the lecture. The speaker was introduced by Major Forest, a prominent lawyer of Iola, in the following remarks:—

Friends:—From time immemorial, covering all past known ages, among all nations, tribes, and clans—whether in the snow-capped frigid, the mild and genial temperate, or the jungles of the torrid zones of the earth, as far as discovered, from the lowest known intelligence to the highest of intellectual attainments, the great problem, "If a man die, shall he live again?" has been propounded, discussed, and answered, according to the environments and intelligence of the respective localities. We find implanted in every class of human beings a desire to worship something animate or inanimate, real and tangible, or mythical and spiritual, but always as merely typical of something beyond.

In the fulness of time, by direct inspiration from the Creator, the world received the old dispensation through the prophets of ancient times, and later, the new dispensation of the meek and lowly Nazarene, through his disciples, thus giving to the whole human family that book of books, treasure of treasures, the Holy Bible, which from Genesis to Revelation, is accepted by Christian people, the world over, as the divine as well as the revealed law of Almighty God; as the guide of our faith and the rule for its practice; and all Christian people recognize it as their duty to search the Scriptures. This is one of its admonitions; it is the duty, as well as the highest privilege of every one, to search the Scriptures diligently and honestly in order to ascertain the truth.

The members of the profession of law, of which the gentleman who will address you this evening is an honored member, are, at the very threshold of their studies, taught that "Law is a rule of action," and that the whole subject of the law is divided into four general divisions; *i.e.*, 1st. The law of nature, which is defined by all the old and eminent law writers: Littleton, Coke, and later by Blackstone, "as a rule of action prescribed by the Creator, and discoverable by the light of reason." 2nd. The Divine or revealed law imparted by God Himself, as contained in the Holy Bible. Then follow the two other classes, that of "Municipal or Civil Law," and the "Law of Nations." The profession is further taught that no law, however formally passed and approved, can have any force or efficiency if it contravene either the law of nature or the Divine law, before defined. Hence, I say, this the common law of England being of full force and effect in Christian United States of America, except as modified by statute, and in this respect, I assure you, it never has and never will be modified, stamps this as a Christian nation, and its foundation is the Holy Bible. As a nation, it has never sought to evade, but on the contrary has stamped upon its coin, "In God we trust."

These general principles and suggestions are known, and I think recognized, by all; but secondary to these arise other questions among which I would suggest: 1st. That while we, as a Christian people, hold in reverence the Holy Bible, and believe it the result of direct inspiration from God, yet we freely accord to each individual the right, as well as believe it his duty, to study the same, and place such interpretation thereon as his honest, conscientious judgment prompts.. 2nd. That as a result of these premises, we have various denominations and creeds, each taking the Holy Bible as the foundation, and placing their own construction thereon, all doubtless equally honest in their views, and certainly entitled to entertain such belief, arising as it does from an honest, conscientious search of the Scriptures. It is the duty of all Christian people to exercise the broadest charity for the views of others honestly entertained.

We are here this evening upon the invitation of one of the Christian denominations of the world, the Christian Scientists, one that takes as its foundation the Holy Bible. I have been invited by a committee of that denomination to preside at this meeting, and while I am not a Christian Scientist, and have read but little concerning their doctrine and discipline, yet being fully persuaded, and believing that they are a band of Christians, having the Holy Bible as the guide for their faith and rule for its practice, and honestly seeking for the truth, this is sufficient for me, and I have cheerfully accepted such invitation, and deem it an honor to preside at any meeting where the avowed purpose is to seek honestly for the truth.

As we have with us this evening one who is fully informed and advised as to the doctrines of Christian Scientists, one who speaks *ex cathedra,* one who is deeply in love with his church and its doctrines, one deeply in earnest and thoroughly honest in his convictions, one who, for the love of his church, has left a lucrative practise in his profession to further the objects of his church, and realizing that you have come to hear him, I will not further trespass upon your time or his.

Therefore, I take great pleasure in introducing to you my friend, Hon. William G. Ewing of Chicago, Ill., who will now address you.—*Correspondence.*

At Rochester, N. Y.

Carol Norton, C.S.D., of New York City, delivered a lecture on "The Rise and Progress of Christian Science," at the Lyceum Theatre, Rochester, N. Y., Sunday afternoon, November 17. Mr. Norton was introduced by Rev. W. C. Gannett of the Unitarian Church, who spoke in part as follows:—

It seems to me, friends, that it is a part of the higher religion of our new day to be able to recognize the essential religiousness of systems of faith and thought that are not one's own. It would be a very pitiful sort of Judaism that should say to the Christians of Rochester, "You are not fit to worship the Father in heaven with us, because you make a God of one whom we have to call our teacher, or prophet, or Rabbi." It would be an equally pitiful kind of Christianity that should say to the Jew, "Although you gave us our Psalms and our Prophets, you are not fit to worship the Father in heaven with us, because you call your teacher or prophet the one whom we call a God." It would be a very unhappy sort of Rochester, filled, as it is, with our differing kinds of churches, if each church, looking askance at its neighbor across the way, should have a feeling toward it that would be represented by the gesture, "Avaunt!"

Now here is a new candidate coming among the religions for our consideration, our interest, our sympathy. It comes with a good name that combines in itself two things that stand high in our thought,—Christianity and Science. It marries the names, and calls itself "Christian Science." It comes with certain features about it that seem strange to us of the outside. It comes with a strange philosophy, that apparently denies the existence of the ache and the pain and the gloom, and perhaps of the sin, which all seem so tragically real to most of us. It is a new faith, relatively speaking, a young faith, and so it is possibly too early to ask of it those credentials which we do ask of all the older faiths of the world: "How much do you love your fellow-men? what new form of service have you invented, or secured in a larger realization? this culture of the soul, which we recognize as real culture,—how deep down does it go into unselfish living? how much have you, in your new system, of that love of man which gives up everything for him?

Digitized by Google

Perhaps I may hope that Mr. Norton will take up some of these questions and answer them; for these, and other questions like them, we of the outside feel rising in our minds as we think of the words, "Christian Science."

But I repeat, it is a mark of higher religion of our day to be able to recognize the essential religiousness of systems of thought and faith that are not our own. And now, on the other hand, leaving aside all these criticisms or wonderings over Christian Science, here is this fact: that within a generation thousands of people brought up in the churches of the common Christianities have for the first time *realized* the fact of a God living in their midst —living in their own individual being, living in the society around them to which they belong. Thousands of persons baptized in the every-day churches, trained in their Sunday Schools and Bible-classes, received into church membership, have for the first time, I say, realized the fact of a living God,—*thanks to this new faith;* and any faith that can say *that* for itself, and prove it by the devotion of its adherents, is essentially religious,—one with the highest or lowest church of the outside. Of course it is one with them; for that faith in the living God, is it not the essence of all religiousness? Not only that, but this new faith says, "In virtue of this new grip on the hand of God [for it amounts to just that]—in virtue of this new grasp on the Spirit, we claim,—and we offer abounding testimony to make good our claim—that men are healed of all manner of diseases." We may, or may not, believe the whole of these claims, but there is a vast array of them gathering before our eyes and often within our own thresholds.

Now I say, shame on the church, and shame on the minister that does not esteem it a privilege to introduce an apostle of this faith in the living God, this faith by which so many of our friends are getting the hold of God's hand. Shame on the church or the minister that is not glad to stand by the side of one of its apostles and say, "God speed you in your apostleship!" and to give him welcome in the name of the people who are to listen. And therefore it is a very real pleasure that it falls to me (who, let me say, gave fair warning to the inviter that I should have to speak frankly in order to represent myself truly on this platform), it is a very real pleasure that it falls to my lot to introduce to this Rochester audience on this Sunday afternoon, Mr. Carol Norton, one of the official board of lecturers upon Christian Science; one of the official apostolate; one of the men who are going about the country in this Pauline way (Paul took a synagogue, we take a theatre) to announce to the public the principles of their new faith.

I have the pleasure to introduce Mr. Carol Norton.

Correspondence.

At Omaha, Neb.

Edward A. Kimball, C.S.D., of Chicago, delivered a lecture on Christian Science, in the Boyd Theatre, Omaha, Neb., Tuesday evening, November 12. The subject of the lecture was, "The Cause and Scientific Cure of Disease." The theatre was crowded and the large audience listened very attentively.

Mr. Kimball was introduced by Mr. C. W. Chadwick, who spoke as follows:—

Friends, Ladies, and Gentlemen:—In behalf of First Church of Christ, Scientist, of Omaha, I extend to you all a most cordial welcome.

You have been invited here this evening to listen to an official lecture upon the subject of Christian Science by a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, of Boston, Mass.; frequently referred to as the Mother Church of our denomination; and knowing how thoroughly practical this gentleman is in his presentation of the subject, I can assure you that your time will be profitably spent.

Your presence is indicative of a desire to know more of what Christian Science teaches, and if you have come with hearing ears, you will not go away with any sense of disappointment.

Some of you may think you are opposed to its teachings. If such be the case, let me encourage you from the outset to lay aside all prejudices and misconceptions originating from mere hearsay testimony upon the subject, and to listen reverently to the simplicity of its logic as it will be presented to you by the speaker of the evening. Christian Science is more than a theory to be grasped intellectually; it is practical Christianity, and to understand it aright is to love it and to live it; and *all* mankind *would* love it if they only understood it.

The prayer of our church is that this evening's lecture may be the means of quickening many a slumbering thought from its dream of life in matter to the contemplation of the God of Spirit, who, in the language of Scripture, "forgiveth all thine iniquities; who healeth all thy diseases." May it cause us all to think and to think right.

Our first authorized public lecture given under the auspices of our church was from this platform in the spring of 1898, and by the same distinguished lecturer who will address us to-night.

It is again our happy privilege to have him with us to testify of an enlarged faith and understanding, gained from obedience, patience, and experience.

Friends, I now take great pleasure in introducing to you the speaker of the evening, Edward A. Kimball, C.S.D., of Chicago, whose theme will be, "The Cause and Scientific Cure of Disease."—*Correspondence.*

At New York, N. Y.

Rev. Arthur R. Vosburgh, C.S.B., delivered a lecture on "Christian Science is Scientific Christianity," in the Second Church of Christ, Scientist, New York City, Sunday afternoon, November 17. Mr. Vosburgh was introduced by Mrs. Laura Lathrop, C.S.D., First Reader of the church, who spoke as follows:—

My Friends:—No revelation, more pregnant with good to human consciousness can come to it than the possibility of demonstrating, with mathematical certainty, that God is what the Bible represents Him to be.

God has always been omnipotent, omnipresent, almighty, the all-in-all of the universe; but to be in very deed a refuge in every time of trouble, this must be capable of proof.

Christ Jesus, the world's greatest teacher, came to bring *full* salvation; then surely it must be possible to obey all his commands if his teachings are understood. The fact that all these commands have not been obeyed has not been from lack of desire, but from lack of understanding. "Ye shall know the truth, and the truth shall make you free," said Jesus; but how *can* we know the Truth, how can we say what *is* the Truth, unless it be demonstrable.

This is an age of inquiry, an age of scepticism. Christianity must now be something more than sentimentality. The hungry, unsatisfied heart, reaching out for a more intimate acquaintance with its Father-Mother God, can no longer be satisfied with promises of a solution of all problems beyond the grave. The teachings of Jesus must be made applicable here and now, to every need of the human heart. It must be proved that the God of the Christian is more powerful than the god of the materialist, if we would satisfy the awakened thought of the twentieth century.

We believe that Rev. Mary Baker Eddy, in her inspired book, "Science and Health with Key to the Scriptures," teaches how to do this. Our lecturer this afternoon will make clear to us that Christian Science is indeed Scientific, therefore provable, Christianity.

I have the pleasure now of introducing to you Rev. Arthur R. Vosburgh, member of the Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, of Boston, Mass.—*Correspondence.*

At Denver, Col.

Edward A. Kimball, C.S.D., of Chicago, lectured at the Broadway Theatre last Sunday afternoon (November 10). The theatre was filled and many of those who desired to attend were not able to obtain admission.

The speaker was introduced by Mrs. Frances Mack Mann. She said:—

Before time was, there went forth a command from the Eternal, Infinite One, "Let there be light." It was obeyed and "there was light."

Down through the ages as the children of men have risen above earth's discords in thought, they have caught glimpses of this glory celestial, and attempted to express it in poetry, music, and art. Abraham hears its sweet strains as he sits in his tent door at eventide and listens to the angels. Jacob sees its glory at Bethel as fear is transformed into love for his brother. David feels its impulse divine and sings his pæans of praise.

History records that the primitive Christians so reflected this light that the sick were healed and the dead were raised. It was lost. But to-day there has come to those who sat in darkness and the shadow of death, a great light.

There has been written a book which contains the lost chord and has revealed to mankind its Principle.

He who is attuned has caught its pure rhythm, and commences to step to its stately measure of "Peace on earth, good will to man." "Hear, O Israel, the Lord our God is one." We have had given to us heralds of righteousness, messengers of this coming light. We have one with us to-day in the person of Edward A. Kimball of Chicago, a member of the Board of Lectureship of the Mother Church, who will now address you.

The Denver Post.

At Barre, Vt.

A fair-sized audience gathered at the Opera House last evening (Thursday, November 14), to listen to the lecture by Rev. William P. McKenzie, C.S.B., of Cambridge, Mass. The lecturer was introduced by F. A. Walker, president of the local Christian Science Church, in the following words:

Friends:—The lecture this evening is given under the auspices of First Church of Christ, Scientist, of this city, and on behalf of the church I bid you a hearty welcome.

The lecturer is a member of the Board of Lectureship, established by The First Church of Christ, Scientist, in Boston, Mass., for the purpose of correcting wrong ideas of Christian Science held by the general public. People oppose their own misconceptions of Christian Science and not what Christian Science really is; for through the spiritual interpretation of the Scriptures as given by Christian Science, the sick are healed and the sinful reformed and regenerated.

It gives me pleasure to introduce to you Rev. William P. McKenzie, C.S.B., of Cambridge, Mass., who will lecture on "Christian Science, the Gospel of Love."

The thoughtful attention given by the audience indicated the interest taken in the subject.

The Barre Daily Times.

True Living.

Be what thou seemest; live thy creed;
Hold up to earth the torch divine;
Be what thou prayest to be made;
Let the great Master's steps be thine.
Sow love, and taste its fruitage pure;
Sow peace, and reap its harvest bright;
Sow sunbeams on the rock and moor,
And find a harvest-home of light.

BONAR.

Notices.

Ninth Annual Catalogue.

Our ninth annual catalogue, containing a descriptive list of all the writings of the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, also all the publications of The Christian Science Publishing Society, is now ready for distribution and will be sent to any address on request.

The Publishing Society carries a full line of Bibles, a complete list of which is given in this catalogue. Many of them are new additions this year, and two are deserving of special mention. Number 01440x, found on page 20 of the catalogue, is a special binding to match the pocket edition of Science and Health. On page 25 is a reference Bible, number 03267x, which is about the same size. Both these Bibles are printed on the celebrated "Oxford India Paper."

Our friends will doubtless find many things in this catalogue which will make very acceptable gifts for the coming holiday season.

Tenets for Branch Churches.

The tenets of The First Church of Christ, Scientist, the Mother Church, printed on folded sheet for the use of branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at one dollar per hundred. Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.B., 30 Norway Street, Boston, Mass.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4,50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Scientists and Money.

THERE is an impression among some outside the fold of Christian Science that Christian Scientists are a money-making people. This impression arises from the fact that Christian Scientists present the appearance of being prosperous. They are, as a class, fairly well dressed and have about them an air of sprightliness which usually pertains to people who are free from financial stress.

The conclusion is, therefore, that they make money because they are Scientists, and that they make it out of their Science work. This will bear examination.

In the first place many who come into Science are of the well-to-do class. They are not, as a rule, among the very wealthy. They, of course, are not less well off because they have become Christian Scientists. Many, nevertheless, become more liberal contributors to good purposes than formerly because, through Science, they have become awakened to a keener sense of the necessity and blessing of so doing. They lose the desire to hoard for the sake of hoarding. With the change from sense to Science there comes a change of view as to the office of money. There is a greater desire to appropriate surplus means toward helping their fellow-beings. Naturally the Cause nearest their hearts, and which they believe to be the best Cause, comes first. The fact that there is a more liberal giving than of old creates the impression that, somehow, through Science, they make more than before, and the inference is that they make it out of Science or through Science work.

The fact is, that many of those who contribute most liberally to the building of churches and various other purposes in connection with the movement realize not one dollar from Christian Science work, not being practitioners. Nevertheless it is often true—no doubt it is the rule—that the net income of the Scientist is greater than before he became such, because his tastes and habits have become simpler. He has dropped many practices, mayhap, which were a source of no small outlay. Often there is much saved to him in the way of drugs and physicians' bills. This, in not a few instances within our knowledge, has made a vast difference in the net income. But beyond all this there comes with the understanding of Science a new sense of trust in the omnipotent care, a lessening of anxiety in reference to the future, an enlarged point of view, and a new-born zeal, which bring with them, as we have said, an increased desire to render aid where aid is truly needed.

This accounts for the generous contributions to the erection of Christian Science church edifices which so astonish our non-Scientist friends.

As to the classes coming into Science whose earthly means are small, sometimes indeed *nil*, the rule above indicated obtains in relative degree. Many of this class have been held in the bonds of poverty and adversity through sickness, sorrow, and despair. With this class the release from the incubus of drugs and doctors' bills, has been truly a freedom which brought with it a complete change of circumstances for the better. Hundreds and thousands who, because of their invalided condition, were unable to obtain a livelihood, have, through their healing in Science, suddenly become able to earn a fair competence. Naturally they are more prosperous than before; and naturally, too, they show the happy change in improved personal appearance and that peculiar sprightliness which is the legitimate result of such a change. It is an invariable rule also that, as the result of renewed hope and a higher conception of life and its meaning, the convert to Christian Science becomes more careful of his personal appearance than during the days of despondency and hopelessness. Although his wearing apparel may be inexpensive, it is clean and bright, and he looks the well-dressed person.

We may here parenthetically remark that there is not a more cleanly class of people on earth than Christian Scientists, notwithstanding the silly attempts of some critics to make the contrary appear because Mrs. Eddy, in Science and Health, mildly remonstrates against bowing down before bath-tubs, flesh-brushes, etc., and making gods of them as health-giving and health-restoring agencies. For purposes of cleanliness she does not disparage, but advocates, their use, as every fair-minded reader knows. No person will look upon an assemblage of Christian Scientists and sincerely say that they are strangers to the lavatory and bath-tub.

In our own experience we know of persons who have come to Scientists for physical help, so hopeless and careless that they were shabby in dress and uncleanly in person. As the result of a single talk and treatment they became so changed in thought and purpose that upon their second appearance they were scarcely recognizable. Not only in countenance, but in dress and demeanor, they had undergone a wondrous transformation. We have repeatedly seen this, and testimonies to like effect are numerous. We have published not a few.

As to the Christian Science practitioners, it is doubtless true that, as the result of their healing labors, some have improved their material conditions. Yet the charge for their services, or rather for the time devoted to the service—as this is what they charge for—as compared with other professional charges, are modest in the extreme. So much so, indeed, that persons who have been accustomed to paying the bills of the higher-priced physicians, are amazed at the difference.

The habits of the Christian Science practitioner are, of course, simple and inexpensive, and they often present an appearance of prosperity—and in a sense are prosperous—where under old conditions, on a much larger gross income, they might have presented—and correctly too—the opposite appearance.

While it is true that some practitioners and workers in Science realize, perhaps, a larger net income than before they became such, it is also true that many who left their former avocations to devote their lives to Science work, have thereby greatly reduced their financial receipts. They love the work more than they love money. Nay, they are moved to engage in the work by an impulsion above and beyond themselves, an impulsion born of deep religious conviction—a divine impulsion.

A Manly Man.

EVERY one admires manly men. When a man does a thing in a manly, straightforward way, he is always the gainer thereby.

Some time since the Rev. W. A. M'Elphatrick, a Methodist minister of Grand Rapids, Mich., published an article in the *Grand Rapids Herald* against Christian Science. He severely criticised it, expressing his opinion that it was of the devil.

After publishing this article it seems Mr. M'Elphatrick looked more carefully into Christian Science than he had done before, with the result that in the *Herald* of November 22, 1901, he published the following manly apology:—

Digitized by Google

Editor of the *Grand Rapids Herald*.

Some time ago you kindly granted me space for an article on Christian Science. I now ask space to make some modification of statements contained in that article, which was written without very mature deliberation and in a spirit which was not promotive of Christian brotherhood nor of the advancement of truth. In my zeal for what I conceived to be the truth I went beyond what I actually knew to be true. As to the source of Christian Science, which I confidently affirmed to be from the devil, I will say I am willing that the tree shall be judged by its fruit. If Christian Science makes people healthier, happier, and better, as its adherents confidently claim, then the "fruit" is good and the "tree" must be good. Whether such be the real fruit or not, it cannot be questioned that there are a great many people who honestly believe that it is such, and it does not promote the cause of truth violently to attack their opinions, especially without positive proof that these opinions are wrong. It is the same spirit of intolerance which kindled the fires of the Inquisition and which has always hindered the onward march of truth. While I still might differ from the Christian Scientists on many points, yet I am now willing to tolerate their opinions without calling them hard names or affirming that they are deluded by the devil. I make this statement, not at the solicitation of any one, but because I believe that fairness and justice demand it. W. A. M'ELPHATRICK.

Herein Mr. M'Elphatrick shows the true Christian spirit. In doing so he has not only won the respect and friendship of all Christian Scientists, but has raised himself in the estimation of good and fair-minded people wherever his act shall become known.

In addition to publishing his apology, Mr. M'Elphatrick appeared at a Wednesday evening meeting of Christian Scientists in Grand Rapids and made a public apology there, saying that he had made his attack without duly informing himself and upon misapprehension.

This act of fairness and real Christianly meekness is indeed to be commended, and for it, and on behalf of all Christian Scientists, we hereby return to Mr. M'Elphatrick our sincere thanks and extend to him the right hand of Christian fellowship.

We trust Mr. M'Elphatrick's manly example will be followed by others who have quite as mistakenly assailed Christian Science. There is here presented a grand example for some other members of the clerical profession. By following such a precedent, they can add to the weight of their own characters as Christian gentlemen, as well as aid in furthering the cause of Christianity.

If the latter class of clergymen would adopt the judicial attitude of Ex-Judge Bell (now member of Congress) of Colorado, they would do themselves and the cause they represent vastly more credit than they have done by their extreme attacks on Christian Science, which were based on utter misapprehension and misrepresentation. In introducing Judge Ewing, when he lectured at Montrose, Colorado, Judge Bell said:—

"I may say in leading up to this introduction, that the greatest obstruction to human progress is human prejudice, and the greatest security for fundamental error is an unwillingness of some people to hear both sides of a question. A just and conservative man never disputes or plays at another's game until he thoroughly understands it. He never takes the tenets of another's faith from an enemy of the creed. He never decides a question until he has thoroughly considered both sides, and never assumes that any great question is wholly one-sided. He never permits insinuating fancy or prejudices incident to old traditions or sacred forms to usurp the god-like functions of imperious reason, which should always be upon the throne."

These sentiments are so broad and generous, so wise and manly, that they well deserve a place in the history of this age and of the great religious movement with reference to which they were uttered, and we are glad to do our part toward preserving them to history. We commend them to the earnest perusal of all who desire to establish and maintain their character for fairness and Christian tolerance.

An Israelitish View.

THE following editorial in the *American Israelite* of Cincinnati, gives thinking people much food for serious reflection. In a few words the editor sounds the depths of a mighty subject.

The interrogatory is itself a syllogism. The terse propositions following it are worthy the attention of every Christian in the world. No Christian should rest until he has solved them:—

"The Chicago clergyman who is preaching a series of sermons upon 'Colossal Frauds under the Guise of Religion,' and under that head classifies Christian Science, had better study his New Testament. Which of the many Christian denominations has its foundation in the Gospels upon better approved authority? If Christian Science is untrue, then there is no truth in Christianity as it has been taught since Paul took it upon himself to eliminate the Judaism taught by Jesus. Christianity must stand or fall with Christian Science, the two cannot be logically separated. If the one is true, so is the other. The probability of both being false is not under discussion."

Among the Churches.

Circulating Library at Utica, N. Y.

About four years ago a little work was started at Utica, N. Y., under the auspices of the Christian Scientist Association. This work was the establishment of a circulating library for the purpose of loaning Science and Health to strangers. At the suggestion of our teacher, we began with one volume, which was added to as occasion demanded, until now we have eighteen copies of Science and Health, and two of "Miscellaneous Writings" in almost constant circulation. We have used our Association fund to buy books for this library. Each volume is numbered, and has a neat paper cover. A librarian is in charge after service on Wednesday evening, and our text-book is loaned to any stranger for two weeks, with the privilege of one or even two renewals. At the close of the meeting our leader mentions the books and invites strangers who would like to do so, to take one. We keep a record of all books, and so far not one copy has been lost, or even defaced. We are often asked to send Science and Health out of town, sometimes to quite a distance. Frequently we hear the question, "Will you soon have a book for me?"

While we feel that our library work is yet in its infancy, we are very grateful to know that the books have been read by nearly five hundred families, and because of this, Science and Health is a household treasure in many homes to-day. That which was purely experimental in the beginning, is proving a grand success. We thank God for every opportunity to place this message of Truth before the world, and we know that Love giveth the increase,—*always*.

The history of our four years' work is replete with incidents most interesting, often pathetic, always encouraging. To see the tender love shown for our dear Leader's works, is of itself touching, and cause for thanksgiving. To watch the self-sacrificing spirit of many that they may own the book, to learn that earnest seekers for Truth read early and late, to hear the sincere thanks, and occasionally the ready offer even to pay for the use of our books,—all these encour-

Digitized by Google

aging facts impel us to say with David, "Now therefore, our God, we thank Thee, and praise thy glorious name."

It is impossible in one short article to give an adequate idea of the progress of this work. The testimonies of moral and physical healing are many. A gentleman who borrowed Science and Health said, "I *need* physical healing, but I am hungering, and thirsting, and *longing* for something better than I have spiritually, and I am sure Christian Science will meet the need."

A lady asked, "Will Science and Health show me how to govern my children? if so, I want it." Another said it helped her to be more patient and manifest greater love toward every one.

A gentleman who was too ill to work, stated that he was healed of a serious form of catarrh and rheumatism. He regained strength and ability to work through reading Science and Health a short time. A lady laid aside glasses after faithful reading a few weeks, and another was healed of dyspepsia of twelve years' standing.

In July, 1901, a Scientist offered Science and Health to a youth who, according to a doctor's verdict, had consumption. His mother said, "To look at him you would not think he could live two weeks." He reads the book faithfully, has gained appetite, peaceful nights, and strength. He is again able to ride his wheel, is working daily delivering dry-goods, and attends night-school. He hopes soon to have a book of his own. Such is the brief history of one little visit of the Love message.

In closing these testimonies I will quote from a note recently received from a lady who says, "I am much helped by the interpretation of the Lord's Prayer, and use it every day."

If we faithfully and lovingly place our literature before the people, God will take care of the full fruitage of this seed-sowing. The sunshine of His presence is never-ceasing; and in proportion as we reflect it, will poor humanity turn from the shadows of mortal belief, to grasp the Love and Light which will lead it Heavenward. Day by day we thank God for "Science and Health with Key to the Scriptures," which the spiritually illumined consciousness of our dear Mother, Mrs. Eddy, has made it possible for us to have. Love is teaching us *how* to "offer the cup of cold water in Christ's name, and never fear the consequences" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 562). May we be so faithful that we see Love's helping hand, and do not *miss* our opportunities.—MRS. FANNIE S. O'CONNOR.

Progress in Spencer, Ia.

In the winter of 1894 a party of four, who were interested in knowing something of Christian Science, gathered together at the home of one of their number to read the Lesson Sermons as outlined in the *Christian Science Quarterly*.

This move resulted in the organization of the "Christian Science Society of Spencer, Ia.," in 1897. Meetings were held at irregular intervals from that time on; nothing further being accomplished till 1899, when a student from a distant point located here and the work of bringing order out of chaos was begun at once.

In October, 1900, rooms were procured for our own use, and from that time on our work has progressed. The rooms formed at once a church home, reading room, and a centre from which to work. The full order of service was soon carried out, and later, steps were taken to have a notice of our services appear in *The Christian Science Journal*.

This was followed by a lecture, which we feel was one of the greatest of the many blessings that have been bestowed on us. The contributions for the lecture were voluntary, and far exceeded the amount requisite to meet all expenses. The large audience in attendance upon the lecture paid marked attention to the speaker, Mr. E. A. Kimball, C.S.D., of Chicago, and a general rousing and awakening of the thought has resulted.

As a society whose purpose it is to bring out, as we understand it, the truth about God and man, we are full of thanks for this proof. Indeed, if after our struggles in the dark and the way in which Wisdom and Love have lighted our way out, step by step, we were not now ready to give thanks, we would be most ungrateful children.

FRANCES ROGERS, *Secretary*.

Church Site Purchased at Colorado Springs, Col.

Colorado Springs, the city of beautiful homes and fine churches, will soon have another handsome edifice to sustain its reputation as a city of artistic architecture. The Christian Scientists will soon build a church in this city that will be a credit to Colorado Springs and to the cause which they represent. Wherever the Scientists have erected temples of worship, they have crowned their faith with the highest expression of practical belief. Their churches are the most beautiful and the most simple, architecturally; neither cost nor time have been spared in the erection thereof.

The church will be located on the southeast corner of Cascade and Boulder Streets. It embraces five lots, with a frontage of one hundred and twenty-five feet on Cascade and one hundred and ninety feet on Boulder Street. It is one of the most desirable sites in the city, as this part of Colorado Springs will always remain in the heart of the fashionable residence portion. The church will directly face the mountains, and the location is such that nothing can ever be erected to obstruct the view. No definite plans for the church have yet been made, and it is not likely the plans will materialize very soon. Although the cause of the Scientists is growing very rapidly, not alone in Colorado Springs, but all over the west, it is thought to be more fitting to wait before the church is erected. The site for the future church cost fifteen thousand dollars.

The Scientists will continue to hold their place of meeting on Pike's Peak Avenue until the church is erected.

Colorado Springs Gazette.

A Word from Lima, O.

We are always delighted to hear from any point of the vast territory covered by Christian Science. That the Field may know, in part, the progress Christian Science is making here, we desire to contribute our mite to the *Sentinel*.

The directors of our church have made an effort recently to place "Science and Health with Key to the Scriptures," the *Journal*, *Sentinel*, and other Christian Science publications in the Public Library established here not long since. A letter of late date from the library association explains itself and reads as follows:—

"The members of the library association wish to extend their hearty thanks to the members of First Church of Christ, Scientist, of Lima, O., for the literature they have given to the library and for their good wishes for the success of the same."—M. E. BOYSELL, *Clerk*.

Make sure that, however good you may be, you have faults; that however dull you may be, you can find out what they are; and that, however slight they may be, you would better make some patient effort to get quit of them.

RUSKIN.

We talk about the telescope of faith, but I think we want even more the microscope of watchful, grateful love. Apply this to the little bits of our daily lives, in the light of the Spirit, and how wonderfully they come out.

FRANCES R. HAVERGAL.

Weekly Testimonial Meeting at Fourth Church of Christ, Scientist, New York City.

THE regular Wednesday evening testimonial meeting held at Fourth Church of Christ, Scientist, New York City, October 30, was especially interesting, both to Christian Scientists and to inquirers and visitors present. The range of testimony, experience, and remarks was wide, and the different aspects of Christian Science set forth the significance of its universal application in the affairs of life.

After the usual opening exercises the First Reader, Mrs. Caroline W. Frame, C.S.D., opened the meeting by giving two interesting cases of physical healing through the operation of Christian Science. One an instance of an elderly woman, upwards of eighty years of age, who had been blind for about three years and who regained her eyesight through the treatment. The other case was that of a gentleman who in an attempt to adjust an electric revolving fan had a thumb virtually severed from his hand. The bone was cut straight through and the end of the thumb hung by a small portion of the flesh. Two other fingers were badly lacerated. A surgeon was called who expressed great fear of blood poisoning unless the thumb was entirely removed. The gentleman's sister was a Scientist and to her he went for help. Notwithstanding the great fear expressed by the surgeon as to the fatal results of any attempt to put the separated portion of the thumb in position to knit, the gentleman put his case in the hands of the Scientist and had the physician sew the wounded member, with the result that in a few weeks not only the lacerated fingers were healed but the severed member assumed its normal and natural conditions, and to-day, five months after, the thumb is as perfect as the other.

The testimonies given by the First Reader were followed by some remarks on the growth and work of Christian Science in the Field by a member of the Board of Lectureship, who made some significant observations of work as observed during a recent lecture trip. The growth of the work and church at East Aurora, N. Y., was spoken of, and the fact mentioned that the Chapel Hall of the famous Roycroft Book Shop, located in that town, was freely put at the disposal of the Scientists for a recent lecture, though it was not large enough for their use. He also referred to a telling incident connected with a recent lecture given at Bracebridge, Ont., where there is a faithful band of Scientists at work, who now own a church lot and expect in the reasonably near future to commence the erection of a church building thereon. At the close of this public lecture given in the Town Hall and presided over by a Canadian barrister, the judge of that judicial district, a prominent man in that section of the country and sitting in the audience, arose and proposed a general expression of appreciation and thanks to the lecturer and to the Scientists of Bracebridge for the valued efforts made by both to put Christian Science before the people. His Honor spoke with deep appreciation of the generosity of the Scientists expressed toward the people of the community. A leading business man of the city seconded the motion and the entire audience united in unanimous approval of the motion.

The Town Hall was packed and this public manifestation of interest in Christian Science and appreciation of the Scientists' efforts to promulgate their ideas in a dignified way was in striking contrast to the indifference often met with in the early days of the lecture work.

A Christian Science business man testified of the practical value of Christian Science in the details of daily life. He told of the successful healing of a finger wounded by a hammer and a forehead scratched and lacerated by unexpected contact with an electric fixture.

A member of the Third Church of Christ, Scientist, of Chicago, spoke of having the almost age-abiding "chip on the shoulder" attitude of thought cured by Christian Science, and of being cured of lung trouble. He also referred to the practical results that he had seen in denominational church work, and especially the harmonious building of a group of churches through an understanding reliance on metaphysical methods of work.

A former clergyman of the Methodist Episcopal Church told of seeking Christian Science and its text-book in an hour of great need, and of being so stirred by the book that he cast it to one side for the time being and gave up any attempt to investigate the subject further. In the mean time his physical sufferings increased and nothing availed. He broke down in health and was forced to give up his ministerial duties. He traveled and tried the usual methods for cure. All these failed him and he again took up "Science and Health with Key to the Scriptures" and entered into a persistent, prayerful perusal of the same, with the result that he received a great spiritual illumination and experienced the healing of certain troubles which had afflicted him greatly. He spoke of his determination to persist until Truth is demonstrated as victorious. He paid especial tribute to the self-interpreting power of the teaching of Science and Health.

A member of the church spoke, quoting "Miscellaneous Writings," of "true health as synonymous with the true consciousness of life;" and showed in a clear and concise way how a physical change is of necessity a mental change, and that strictly speaking there is no physical realm antagonistic to or apart from the mental, but that all diseases are to be cured by mental processes, and that the body is to the mind what a sensitized photographic plate is to the objects that it receives to be reflected upon it.

A member of the reading room committee spoke of the growth of the reading room work of the church, and expressed the wish that all Christian Scientists would put the interests of the Cause above all personal considerations and personal interests.

The meeting was closed as usual by brief selections from Mrs. Eddy's book, "Miscellaneous Writings," read by the First Reader. In listening to the trend of the remarks and testimonies, it was both happifying and inspiring to hear of the dignified progress of this world-wide scientific sense of Christianity, and a genuine baptism of gratitude and brotherly affection swept over the entire audience as the general indebtedness to the selfless and Christianly persistent work of Mary Baker Eddy was thought of.

May these Wednesday evening object-lessons in Christian Science continue to tell the public that Christian Science stands for Principle, not person; for faith manifest in works rather than faith manifest in opinions, and that Love, the Healer and Transformer, is the governing genius of Christian Science.

Getting Our Dominion.

Man was made to lead, to rule, to dominate. There is nothing cringing, sneaking, or apologizing in the normal being made by God. A weak, discouraged, disheartened, discordant being is no more the man God made than is the harshest jargon sweet music.

Man was made to hold up his head, to assert his God-given birthright,—to be a man. Success is as much his normal element as water is the normal element of a fish. He was not made to live in an atmosphere of doubt, to be haunted and dogged through life by fear and uncertainty.

Let us be masters of circumstances and surroundings, not their slaves. Let us fight poor, weak, sick thoughts as enemies of happiness and success. The thought that one is a victim of circumstances, that his success and happiness depend on chance,—the habit of looking on oneself as a poor, miserable, fallen creature,—is demoralizing to mind and body, and absolutely destructive of all noble character-building.—*Success*, November, 1901.

Shadows.

BY ANNIE MARIE BLISS.

In my path a shadow lay,
Stretched before me long and dark;
And I feared the next step onward,
With a heaviness of heart.

And I tripped and stumbled blindly
Over stones I could not see;
When a voice of silver sweetness
Called from overhead to me:—

"Turn about, O weary traveler,
Face the sunlight of God's day;
'Tis yourself that casts the shadow
That is darkening your way.

"Face the light, so shall the shadow
Lay behind thee,—seen no more;
And the stones o'er which you stumbled
Shall lead up to Heaven's door."

As I turned to hear the message,
Slowly moved the shadow, too.
"Could it be," I thought in wonder,
"That the angel voice spake true?"

Yes, 'twas self that cast the shadow,
I have proved it many a time;
For I'm facing God's bright sunlight,
And the shadow lays behind.

Principle.

BY CHARLES E. ORCUTT.

I APPRECIATE so much the help received from the *Sentinel*, that I desire to express my gratitude, not only to that paper, but also to Christian Science for the blessings which have come to me through the study of the Truth as revealed in "Science and Health with Key to the Scriptures."

It is four years since this book was placed in my hands. At first my comprehension of its passages was obscure, but after a few weeks of reading, I experienced an instantaneous healing of a severe physical trouble of long standing. Before turning to Christian Science, I had not given the attention and time to reading the Bible that all men should give, not only for their own spiritual enlightenment, but also for the good influence that that enlightenment in themselves would have upon all with whom they associate; but reading Science and Health impelled me to read the Bible, and by studying the Bible in the light of Christian Science, I find the Truth that makes me free from sin, disease, and sorrow.

The teachings of Christian Science have placed the standard of morality on a much higher plane in my consciousness. The spiritual uplifting is greater than all else. I now see that in the degree in which I live in harmony with Truth that I not only gain that peace of mind which brings health and happiness, but also those near and dear to me are benefited by the love which is reflected by this harmonious state of consciousness.

I will relate an incident which proves that God is our help on every occasion. A young friend of mine, a boy, appeared to me quite suddenly one day in a much shaken condition. I did not know that he was in the room with me until he spoke, and as I turned to look at him his appearance was quite startling. He was trembling and looking very pale. His face and hands, and his clothes on one side, were covered with mud and dirt from the street. He said, "I have been run over by an express team, two wheels went over my ankle." I immediately but silently denied the accident and treated him. This occurred about noon, and three hours later he went home. I saw him the next morning at eight o'clock and he said, "I did not even limp when I went into my house yesterday, and there is no soreness, pain, or inflammation; what has cured me?" I explained to him that Christian Science treatment healed him. He was very grateful and I heard him remark several times afterward, "Christian Science cured me when I was run over."

I find that the study of Christian Science leads to the source of all science, or the Principle upon which is based all thought, all force, and all action; and that this Principle can be applied to all things and is for our use in all walks of life. The question is asked, Why do you call that which teaches us about Principle and the all-governing power, Christian Science? According to the definitions given in dictionaries, science means an exact knowledge, truth ascertained. Christian means pertaining to Christ (Truth). Our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, says on page 17, "Christian Science is pre-eminently Scientific, being based on Truth, the Principle of all science." We learn by demonstration that there is one law, one power, governing all life and action, and if we conform to this law we shall obtain perfect results.

We learn also by demonstration that this same Principle understood and applied will bring about perfect results in healing sickness. The cause or Principle that always produces perfect results must always be good. Therefore we call this great cause God, which means Good. This same Principle heals men morally, destroying sin in all its forms, including profanity and the use of tobacco and liquors, lying, hatred, envy, revenge, malice, and the whole long list of evil acts, words, and thoughts. This Principle can be carried into all the details of business, hence the value of Christian Science to business men.

Christianity is based on Love. The two greatest commandments are "Thou shalt have no other gods before me," and "Love thy neighbor as thyself." If these two commandments were obeyed by every one all differences and strife between men, families, communities, and nations would be no more, and peace and harmony would be established on earth.

I can only show my gratitude for what Christian Science has done for me, by striving every day to be obedient to our Leader, and to keep the commandments of our Master.

Underneath are the Everlasting Arms.

BY G.

"LEANING on the sustaining Infinite, to-day is big with blessings,"—Mary Baker G. Eddy in the preface to "Science and Health with Key to the Scriptures."

This morning I have filed away in my desk six hundred dollars worth of notes given by myself to personal friends for temporary loans in a business way, which this week's mail has brought me cancelled and paid. Five rather oppressive debts to personal friends, which represented in amount nearly or quite one half of a year's income; debts which had come down to me as heir-looms of the old mortal-mind period of my life; debts which were the sole remains of business transactions undertaken before, through Christian Science, I learned to consult divine Love in *all* my business matters. Five such obligations have been lifted in the past ten days, and I am deeply moved with an awesome sense of the power of God, when I acknowledge here and now that I owe my present freedom from the chains of this old financial claim, to the strength and power and courage that have come to me in the endeavor to *practise* the faith and understanding of the true Scientist, as taught by Mrs. Mary Baker G. Eddy.

Digitized by Google

I am constrained to bear witness to the all-power of God in caring for this sort of human need, because I am convinced that mortal mind obtains its hold on the thought of most people in our day through the failure of our old-time teachers to recognize and teach to others the power of God (Love) in smoothing out the question of how to pay for what we need. If one is frugal, watchful, industrious, and with it all unselfish and Christian, one will not be extravagant, careless, vacillating, mean, or envious. The first state is that of the true Scientist, and is bound by the unchanging law of Good, to produce harmony, peace, tenderness, and joy. It has been tried. The second state is that of mortal mind, and it produces debt, discord, and frantic attempts to recover lost ground by senseless efforts, which only plunge one deeper in the mire of trouble and invites disaster. This also has been tried. Frugality, watchfulness, and industry, *without* unselfishness, will not produce the fruits of which I speak. Our work will fail without that Love which clothes our operations in such a mantle of sweetness, that no suspicion of self-seeking shall be manifest to those with whom we labor. This understanding came to me only through the study of Science and Health, and the attempt to practise what I read. The endeavor to *obey* brought such results as to encourage me to lean more and more upon that Immortal Mind in which men truly live, and move, and have their being. What had been a half-hoped-for good in the old way of thinking, became, through the study of Christian Science, the vitalizing, pulsating energy of every-day life. With no desire to call attention to personality, but that I may voice the impersonal Truth as it has become known to me through experience, I wish to bear grateful testimony to the fact that a family of five persons has for over two years been led through Christian Science, without medicine, into health never before known, into a remarkably improved conception of life and what it really means, and into a wonderful realization of the truth as quoted above, "Leaning on the sustaining Infinite, to-day is big with blessings."

Lessons.

BY ETTA HELENA CHASE.

"How can Christian Science help me when the doctors have failed?" "How does Christian Science cure the sick?" "I have read Science and Health, but I do not understand the book." Such were some of the remarks of a woman who was willing to try Christian Science treatment if she could know in a moment just how she would be helped.

The woman was educated and cultured, and these thoughts came to me: Suppose a pupil should say, "I am willing to study algebra if you will show me now how to solve this quadratic equation. I have looked over the algebra, but I do not understand it." Or, suppose the pupil said, "I will begin the study of Latin if you will show me how to translate this passage in Virgil." The teacher is not at fault if she cannot comply with her pupil's request. If one is willing to begin at the beginning in the study of mathematics or of a language, ought not one to be ready to take the first steps in the study of Christian Science?

"And they sung as it were a new song before the throne: . . . and no man could learn that song but the hundred and forty and four thousand, which were redeemed from the earth." Man must be redeemed before the new song can be learned. He must realize that he is healed, before he can know fully just how the victory was won.

We must take far more time to prayer than we have ever yet taken. I am certain that the secret of much mischief to our own souls and to the souls of others lies in the way we stint and starve and scamp our prayers by hurrying over them.—ALEXANDER WHYTE.

Testimonies.

Healed by Reading Science and Health.

In October, 1895, my husband was urged by our daughter, then living in Owosso, Mich., to try Christian Science for a disease that had troubled him for many years. He suffered greatly at times. The doctors had operated on him and he had used every kind of medicine that was recommended to him, but all did no permanent good. Finally he consented to go to Owosso and see a Christian Scientist, but, as he told her, without any faith whatever in the work. She remarked that he was interested enough to come and express the desire to be healed, that he had taken the right course. She gave him treatment and some reading matter, which he brought home with him. He was healed in a very short time. I at once began to read the Journals and tracts. I soon began to see that a new religion was being revealed to me. I had been a member of the M. E. Church between twenty-five and thirty years, and during those years had been trying to live an honest, consistent, Christian life. Soon after conversion there was a better and brighter side to mortal life, but after long years of Christian labor, I could not realize that any real progress had been made. At times I experienced a clearer view of divine ideas, and there seemed to be a reaching out for something that would give me a better understanding of God. I read my Bible and loved it dearly, but the greater part was difficult to understand.

After I began to study Christian Science there was a great change. The God of the Bible was a God of love, and not a revengeful God. As soon as I could I purchased "Science and Health with Key to the Scriptures." I have never for one moment doubted a statement in that book. I have been healed of many ailments,—sick headache in its worst form, neuralgia, stomach trouble, rheumatism, and corns, by reading Science and Health.

Soon others became interested. Two or three met at my home to read the lesson. We have purchased a number of copies of Science and Health, and all Mrs. Eddy's other works are being carefully and prayerfully studied.

I have seen almost every form of error destroyed by the power of divine Love. I will mention two or three cases. A young man who was cutting logs in the woods, was taken with a terrible pain in one of his feet. It soon became so severe that he could not step on the foot and he crawled on his hands and knees to a house nearly half a mile. Two men brought him to my home in the evening, and his suffering was great. The third day he was walking apparently as well as ever. He said he had the same trouble two years previous. The doctors called it inflammatory rheumatism, and he was laid up with it a number of weeks.

My husband was taken with what the doctors called gravel. He was treated by a physician two weeks. Two years after we came into Christian Science he had another severe attack and was relieved in less than two hours.

A few days ago one Saturday morning I called on a lady who was suffering with pain in her right foot. She had not worn her shoe with any comfort for three years, and most of the time was obliged to go hobbling around with her foot done up in cloths. I talked with her a little while, and mentally denied that error had any power. The following Monday afternoon I met her at a neighbor's house, and she said that morning she put on her shoe without any trouble, and did her washing. She was greatly surprised and did not know what to make of it. I explained to her as well as I could that it was the result of the little talk we had the Saturday morning before, and that it was the still small voice of the ever-present Truth which healeth all our diseases. She is reading Science and Health and attends the services.

I cannot close without saying something in favor of our

Digitized by Google

Journal and *Sentinel*. They are true messengers of Love, and I always find in them many helpful thoughts to encourage me in this beautiful work of Truth. I could not get along without them. May the all-wise Father bless, strengthen, and encourage, our beloved Leader, our Lesson Committee, and our Publishing Society.

MRS. B. INGALLS, Swartz Creek, Mich.

The Bible became a New Book.

I wish to acknowledge, with grateful thanks, the many blessings that have come to us through Christian Science. When we first heard of it my husband was suffering severely from what some doctors called gall-stones, others suggested appendicitis, and gave him no hope of immediate help. The attacks came as frequently as every four weeks, then ten days. He suffered intensely and was confined to the house for days.

At this juncture, at the solicitation of a St. Louis friend, we attended a Wednesday evening testimonial meeting. While everything seemed strange, brought up and accustomed as we were to the Presbyterian Church, yet we were impressed by the genuine ring of the many wonderful testimonies of healing which were given and the bright, hopeful faces all around us.

My husband then determined to give Christian Science a trial. He obtained the name of a practitioner, and in one week he was cured. We then purchased Mrs. Eddy's wonderful book, Science and Health, and commenced studying it, in connection with the Bible. Since then many of my own ailments have disappeared, among them sick headaches, to which I had been a martyr since girlhood. But the greatest blessing of all is, that since we have commenced reading Science and Health, and trying to put its teachings into practice, the Bible has become a new book, and has revealed God as nearer and dearer, a very present help at all times. I am trying to overcome hate, selfishness, pride, and all other errors of mortal mind, which are uncovered to me.

I am thankful to God for giving us this wonderful Truth, which we can prove and make our own, and which is able to solve all the problems and perplexities of life; and to Mrs. Eddy for her unselfish and tireless efforts in behalf of the world. I cannot close without mentioning the pleasure and benefits received from the *Journal* and *Sentinel*, which come with their many helpful articles and words of cheer.

MARY D. MCKAY, Chicago, Ill.

Right Thinking an Effectual Help.

I had been an invalid for over ten years from dyspepsia and liver trouble, and for six years I lived on the simplest diet and drank nothing but hot water. My trouble took a very peculiar form. I consulted many physicians and they all told me a different story and all failed to cure me. They told me that if I was not more particular about my diet I would become paralyzed. I lived in constant terror all the time.

I began to investigate Christian Science in October, 1900. It came about in this way. I had a friend who was a Scientist, but as I never heard her say anything about it, I concluded that there was not very much in it. One evening I was telling her about my liver trouble and she smiled and said, "Perhaps if you did not think in the way you do you would not have any liver trouble." It struck me at once as being a very strange and new idea, and I asked her if she really meant it. She replied that she certainly did. We did not say anything more about it that evening. In the morning I asked her to tell me something about Christian Science. She did so, and I knew at once it was what I wanted. I soon got "Science and Health with Key to the Scriptures" and commenced to study it. In less than two months I was free from stomach and liver trouble. Now, when I am at all out of harmony I ask myself, "What condition of mind produced this?" I know that food has no power to harm one, and when Truth corrects my thought my physical condition is changed. "As a man thinketh in his heart, so is he."

I have been able to help my brother, who believes in Christian Science because he sees what it has done for me. He had an abscess which had caused him a great deal of suffering for more than ten years, and his physicians told him that the next time it gave him any trouble he would have to have an operation performed. We tried Christian Science and there is no more abscess, he is completely healed.—ALICE P. HANSON, Seattle, Wash.

Operation not Needed.

A person who had been told by the physician that there was no possible help for him unless he submitted to an operation for appendicitis, was asked by his employer if he would try Christian Science before giving up hope. With very little faith that he would receive help, he finally consented. Without going into the particulars of the case he was entirely healed in less than a month, and during the time of treatment never lost a day's work. He is a well man and has been ever since. This was three years ago. He can be found any day at his post of duty in Beverly where he and also his employer will verify this statement.

Many years ago a case of consumption was treated by Christian Science. The patient was pronounced by the doctors to be in the last stages. She began to recover at once. In six months she was a well woman and is living to-day.

Last spring the mother of an actress went to a Scientist requesting her to go at once to see her daughter, who lay at the point of death. She had been attended for a week by a physician who had that day said he could do no more. She was suffering from acute pneumonia. The Scientist went at once to the hotel and found the daughter as the mother had said, quite unconscious. After giving treatment, as the Scientist was about to leave, the mother said, "I will see you to-morrow." True to her word she came the next day and joy beamed in her face. She said, "My daughter is up, and singing, and well, and we shall travel this afternoon with the company."

A week later a letter was sent asking treatment for her youngest daughter, whose voice left her suddenly while singing. In one treatment it was restored. Many more recent demonstrations could be given, as evidence of good work which is being done in Salem.

MRS. EMMA J. MARVIN, Salem, Mass.

I had been a faithful worker in the Congregational Church for twelve years. I held the position of deaconess, and in this capacity made many calls on the church members. I was greatly impressed with what an unwell and unhappy set of people they were. Every home seemed to have a tale of woe. In the mean time I had become interested in Mental Science, and for a time that seemed to satisfy; but finally a friend led me to see that Christian Science was the Science of religion.

I have been in Christian Science not quite two years, but the Truth that has been revealed in that time is marvelous, especially the understanding of the Bible. Though I had read the Old Testament through twice, and the New many times, there was much I could not understand, but with "Science and Health with Key to the Scriptures," even the parables were made plain.

As I look back on my search for Truth I see at first it was a drifting from one path to another, but since I came into Science it has been a climbing up out of the material into the spiritual, and the way grows brighter and brighter unto the perfect day.

MRS. SARAH B. KENYON, Hartford, Conn.

Religious Items.

THE FEEDERS OF INIQUITY.—The *New York Tribune* in a late editorial on "Civic Righteousness," in which it treated of the horrors of wickedness to be found in our great cities, brought out the point that the villages of the country and its purely rural communities are the sources from which the cities are fed, and that the terrible forms of wickedness which flourish in our great municipalities are only the full development of what in more moderate form is allowed to begin and maintain itself unrestrained in the smaller places. Only by an aroused sentiment in every town and hamlet can the evil of the cities be effectually cured. It thus sets forth this idea:—

"The same apathy which is responsible for evil government in the large cities is to be found in the village and rural life of the country. Little or nothing is done for the suppression of nuisances that retard the moral and material life of the community, for the removal of untoward conditions that tend to produce the village hoodlum and idler, for the repression of drunkenness or other allied forms of vice, for the securing of better sanitary regulations or for the promotion of civic pride and nobler ideals of citizenship. In the village and rural community, just as in the city, the good people are often unorganized for the promotion of the general welfare, and are sometimes found working at cross-purposes."

But these most true words apply equally to the individual who, while he shrinks in unaffected horror from the awful crimes that find expression in the lives of abandoned men and women, yet practises little forms of selfishness whose logical outcome is in these very iniquities which so shock him. Little transgressions which do not transgress the law, and the little injustices which yet do not bring one into the courts, are the sources from which come, as children from a parent, the vast wrongs of the criminal world. If we would have righteousness on earth we must begin at home; we must begin at the beginning. If we would not have wolves and tigers, we must destroy the cubs of these animals. He who would not have robbery and murder in the world, must put away from his own heart the envies and the hatreds of which these crimes are the ripened fruit.—*New-Church Messenger.*

THE FLOOD OF NEW BOOKS.—A man of much intelligence was asked a few days ago if he was reading any new books. He said that he was not; his mind was entirely exhausted and his eyes blinded by merely reading the names and the summaries of the contents of the multitudinous flow of books that have sailed out into the currents since the first of September. "My son, be admonished: of making many books there is no end; and much study is a weariness to the flesh."

In the midst of the outflow Lord Rosebery, of England, lifts up his voice: "At present the mere fact of holding an open book on which eyes are fixed covers a multitude of sins. Fond parents are proud and satisfied if only they can see their children reading. A reading adult is an object of regard, a middle-aged adult is an object of veneration, but what does it all amount to? In many cases very little."

Robert Southey, poet, historian, literateur, raconteur, explained to a Quakeress how his time was divided up, showing that he was reading twelve or fifteen hours in each twenty-four, and when he finished she said, "But when do you get time to *think?*"

The Christian Advocate.

If the purest form of religion in any of the churches could be united with the perfect freedom which exists in the world outside the churches, and if some religious organization could be made strong enough to become the natural home and working-place of all those devout souls who are hoping and praying and willing to bring religion into its rightful place as the supreme interest in human affairs, a church would arise such as the world has never seen; and religion would come to honor and exert a power which would make all previous epochs of religious progress seem barren and unfruitful. We do not say that our Unitarian church has any divine commission to bring about this happy union of religion and liberty; but we do hold that it ought to have this for its aim, and should be content with no achievement which will fall short of it. No Church has now any excuse for being unless it can do something which no Church has ever done and which no other Church can do so well as itself.

The Christian Register.

As civilization advances, we tend toward what is conventional in conduct and ideas, to what is artificial in manners, and, therefore, to what is insincere in life. In the early times of our country, men were far more generous, spontaneous, and natural than they are at the present; and they were more sincere, more in earnest, and perhaps more honest and just. With increase of wealth, with the enlargement of the means of culture, with progress in refinement, there has come degeneration in moral aims and deterioration in intellectual sincerity. That the pioneers were more generous and brotherly in conduct toward each other than men are now, more willing to share all that they had, no one can doubt who knows a y thing about them. Nor can we doubt that they were more outspoken, less willing to compromise themselves in conduct and character, and more willing to bring profession and deed into harmony with each other.

The Christian Register.

The *Boston Herald* says that Professor Adolph Harnack, one of the foremost theologians of Germany, in an article entitled "What is Christianity?" "insists that religion is an individual, and not a corporate, characteristic, and that thus it is easier to say what a Christian is than what Christianity is. To him Christianity is the kind of religion Jesus lived, and a Christian is one who believes that God is his father and he himself God's child, and, with this, that religion consists in love, forgiveness, a id brotherliness—a state of heart and a deed as well. The presence of such people in the world is the presence of Christianity in it."

The Christian Advocate editorially says: "The worst forms of self-indulgence show themselves frequently in the pulpit. There may be precomposed rant as well as extemporaneous, and there are preachers whose moods enthral them. In the morning they are 'sweetness and light,' in the evening lurid flames; or, again, in the morning they reveal an unction of damnation, followed in the evening by an attempted reparation and an excess of pathetic persuasion. 'The spirits of the prophets are subject to the prophets,' and men should constantly endeavor to save and not to destroy."

We cannot too firmly resolve nor too steadily enforce upon ourselves the resolution to give due honor to all offices, whether in State or Church, which represent righteous authority and public service. It is for the interest of all the people that their ideals have worthy representation, and that, without reference to the persons who fill them, offices that ought to be revered should be held in reverence.—*The Christian Register.*

We must learn to take our faults humbly as proofs of our weakness, and use them to increase our trust in God and our mistrust of self. Neither must we be discouraged at our own wretchedness or give way to the thought that we cannot do or bear any special thing. Our duty is, while confessing that of ourselves it is impossible, to remember that God is all-powerful.

JEAN NICHOLAS GROU.

We speak of the ministry of suffering, of disappointment, of sorrow, and speak truly; but none of these minister, not one, until they have been mastered. First our mastery, then their ministry. We say, "The Lord hath chastened us,"—yes, but by summoning us to a wrestle in which it is our part never to let go. . . . It is not the mere difficulty that exalts. It only gives the opportunity.—W. C. GANNETT.

Men need religion now as never in the world before,—need it as the premises of logic the conclusion they involve. The religious attitude is the supreme necessity to which all knowledge, science, and experience run as rivers to the sea.

JOHN W. CHADWICK.

It is a great thing to speak the truth always to other people; it is also a great thing to speak the truth always to yourself. It is easier to deceive yourself than to deceive any one else, for you have no one watching you.—*The Watchman.*

The Young Men's Christian Association was organized fifty years ago. There are to-day 1,476 associations in North America; 161 railroad associations, 577 student associations—a membership of 208,477, and 391 buildings.

Love has not only a beauty of its own, but a power of beautifying other objects, of refreshing unrefreshing things.

REV. GEORGE MATHESON, D.D.

Character must stand behind and back up everything—the sermon, the poem, the picture, the play. None of them is worth a straw without it.—J. G. HOLLAND.

To love truth for truth's sake is the principal part of human perfection and the seed-plot of all other virtues.—JOHN LOCKE.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science, The True Idealism. By Annie M. Knott of Detroit, Mich.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25 one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

Two very important decisions were rendered by the United States Supreme Court on December 2. The first was regarding the right of the United States Government to collect customs duties on articles brought here from the Philippines. The Court held that the islands have been domestic territory since 1898, and under the existing tariff laws, duties cannot be collected. The second decision was regarding Porto Rico. In this case the Court held that Congress has a right to erect a tariff barrier between the United States and possessions thereof. It will thus be seen it is possible for Congress to pass laws in regard to the Philippines similar to those enacted for Porto Rico, under which duties can be imposed on goods coming from the Philippines, and upon American goods going into the islands.

President Roosevelt's message was read in Congress on Tuesday, December 3, and was received with unusual interest. Having received through the message the official announcement of President McKinley's death both houses adjourned out of respect to his memory. In the House a committee consisting of one member from each State, and in the Senate a committee of eleven were appointed to act jointly in arranging for memorial exercises in Congress at some later date. Secretary Blaine delivered the funeral oration on President Garfield at a joint meeting of the two houses. A similar commemoration of President McKinley, with an oration by some national character, will doubtless be arranged by the special committee.

On December 4 the Senate received the new Hay-Pauncefote Isthmian Canal treaty. The report of the Canal Commission in favor of the Nicaragua route and the introduction of Nicaragua Canal bills have brought the matter directly before Congress in advance of action on the treaty. As was anticipated, the commission favors the Nicaragua route and makes an estimate of $189,864,062 as the total cost of the construction of the Canal. It is estimated that the work can be completed within eight years. The total length of the Nicaragua route is 183.66 miles and the Panama route 49.09. The cost of operation and maintaining the Nicaragua Canal will be $1,350,000 per year greater than the Panama Canal.

The annual report of the Hon. Lyman J. Gage, Secretary of the Treasury, shows that the total receipts of the Government from all sources for the fiscal year ending June 30, 1901, were $699,316,530.92, and the expenditures for the same period were $621,598,546.54 leaving a surplus of $77,717,984.38. Compared with the previous year, there was an increase of $29,721,099.74 in receipts and $22,253,561.44 in expenditures.

A bill has been introduced in the Senate providing for the construction of an executive building on the land south of the Treasury Department. On the first floor will be a dining room and reception rooms, and on the second floor offices for the use of the President and the executive clerks. The bill provides for an appropriation of one million dollars for the erection of the structure.

The estimate of appropriations required for the Government service for the fiscal year ending June 30, 1903, as furnished by Secretary Gage, amounts to $610,827,988, which is sixteen million dollars less than the estimate for 1902, and four million dollars more than the appropriations for that year.

It is thought that the verdict of the Schley court of inquiry will be submitted to the Secretary of the Navy before Congress adjourns for the Christmas recess.

More than three thousand bills were introduced in the House before noon of the first day of this session of Congress.

Foreign.

Special Commissioner Charles A. Conant, who was sent to the Philippines to investigate the currency situation, says in his report to Secretary Root, that there should be a distinctive Philippine coin of silver which shall be legal tender for fifty cents in gold, to be called the peso and to contain twenty-five grammes of silver. He also recommends that the Mexican silver dollar and other coins cease to be legal tender after a certain date.

Sousa's band had the honor of performing before King Edward and Queen Alexandra on December 1. The occasion was that of the Queen's birthday, and the programme included classical and sacred music. It is worthy of notice that the King chose Americans as the second company of artists to appear before him since he ascended the throne.

Mr. Hutin, president of the Panama Canal Company, has presented to President Roosevelt the formal offer of that company for the sale of their property and franchises to the United States. Accompanying the offer was a statement setting forth the advantages to be secured by the selection of the Panama route.

A special cable to the *New York Journal and American* from Managua, says that Nicaragua has cleared a way for the United States to dig the Isthmian Canal. It has removed all concessions that could in any way conflict with the interest of the United States.

A royal decree has been issued ordering the establishment of an American library in Rome. The library will contain all the publications relating to the new world since its discovery.

It has been decided that members of the United States army and navy will not be permitted to vote at the forthcoming municipal elections in the Philippines.

Industrial and Commercial.

Deposits of iron ore nearly inexhaustible in supply have been discovered in Lower California near the Mexican Territory. A company having a capital of $5,000,000 has been organized to develop the industry. As it requires an expenditure of from twelve to fourteen dollars a ton to ship iron to the West, it is concluded that the new company will be able to take complete possession of the iron ore and pig iron markets from Utah to the Pacific coast.

The annual report of the American Iron and Steel Association shows that the production of iron ore in the United States last year was 27,533,161 tons, an increase of nearly three million tons over the year before. The imports of iron ore during the year amounted to 397,831 tons, which was 51,400 tons more than the year previous.

Mr. Francis Chandler, the great English labor leader, in a recent address before the Chicago Federation of Labor, proposed an international federation of labor organizations of Europe and America for offensive and defensive purposes.

Valuable oil discoveries have recently been made in southern Alaska. Most of the oil is around Innerskin Bay and Coal Oil Bay. During the summer over fifty thousand acres were set aside as oil lands.

The output of the mines of the upper lake region for the present year will amount to over twenty million tons. This is more than double the output for any year up to 1895.

It has been officially announced that no non-union laborer will be employed on the works of the World's Fair at St. Louis.

The output of the Cripple Creek gold mines for 1901 will exceed $27,000,000.

General.

According to the *Monthly Summary of Commerce and Finance of the United States*, the amount of gold in the world October 1, 1901, was $4,394,000,000. The amount of gold coin and bullion in the treasury at Washington, on that date, was $1,160,353,790 and the amount in general circulation $631,201,267.

At a recent meeting of the National Live-stock Association at Chicago, it was voted that if the German Government would send inspectors of meat to this country the association would pay their salaries, provided that meats bearing the stamp of the inspectors should be received into Germany without protest.

The Municipal Art League of Chicago has undertaken to increase its membership to five hundred thousand. When this is accomplished it will attempt to raise a million dollars, which will be expended in beautifying the city with statuary, with mural paintings in public buildings, artistic drinking fountains, improvements in parks, etc.

Governor Dockery of Missouri has issued a proclamation calling on the citizens of that State to observe December 20 as Louisiana Purchase Flag Day. The Governors of several other States will issue similar proclamations. On that date ground will be broken at the World's Fair site in St. Louis.

October 31, 1901, there were 4,279 national banking associations, having an authorized capital stock of $663,224,195. There are in the United States, 12,972 banks of all kinds, having an aggregate capital of $1,138,042,134 and deposits amounting to $8,619,285,110.

General Harry Bingham of Pennsylvania is the "Father of the House," having entered that body in 1879. His immediate predecessor was Mr. A. C. Harner of Philadelphia, and for many years William D. Kelley before him enjoyed the distinction.

The Italian residents of Chicago have subscribed for a bronze tablet which they will present to the American people in memory of President McKinley, and it is their hope that it will find a resting place in the Capitol in Washington.

A linotype machine operator in Des Moines, Ia., recently broke the world's record for speed. He set three thousand three hundred and forty-four lines of nonpareil in eight hours. This is equal to 86,944 ems.

The South Carolina and West Indian Exposition at Charleston, S. C., was formally opened Monday, December 2. Chauncey M. Depew, Senator from New York, was orator of the day.

Wheat shipments from Kansas, Nebraska, Minnesota, Texas, and California are pouring into Mexico at the rate of more than two hundred thousand bushels a day.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Mr. Farlow Replies.

THE *Fort Worth Register*, Fort Worth, Tex., of November 17, 1901, contains the following from Mr. Alfred Farlow.

Boston, October 23.

Editor of the *Register.*

The Rev. Mr. Armstrong begins his rejoinder to my reply by saying: "The case must be desperate when a defender so remote must be called upon." I venture the assertion that I have not gone so far out of my way as Mr. Armstrong has, and that, though residing in Boston, I am nearer to the subject in question than my self-appointed guardian. Is it not a little strange that some clergymen should be so much troubled about a matter which they claim is senseless and impractical? If they really believe what they say about Christian Science, why do they not leave it to die a natural death? For surely a thing that is altogether unprofitable will soon fade out without any help from its critics. If this Science is so out of harmony with the Scriptures, why does it meet with the approbation of hundreds of thousands of devout Bible students and believers? Does Mr. Armstrong assume that the people are not intelligent enough to read and choose for themselves? If Christian Scientists are not healing the sick according to the method of the Master's appointing, will our critic please give us the proper way? Our Lord said: "He that believeth on me, the works that I do shall he do also;" "These signs shall follow them that believe." We will grant that those who accept Jesus' words, and by the application thereof are improved even in the least, are believers and followers to that extent. Nevertheless, according to the teaching of the Master, our ability to do the works which he did, registers the degree of our understanding, and tells to the world as well as to ourselves whether or not we are believers in a sufficient sense. Here is one who claims to be a minister of the gospel, and a teacher of the word of God, condemning one of the most worthy Christian denominations of this country, a sect which is healing the sick according to the command of our Lord, and yet he himself cannot heal with his interpretation of the teachings of Christ. Does he propose to destroy the little faith there is in the world? Talk about pantheism. Who is nearest pantheism, the Christian Scientist who believes that omnipotent God rules and governs His creatures, or the one who believes that the universe and man are governed and controlled by material laws and conditions? Has God created man, placed him upon the earth, and then taken His departure, leaving His creature to care for himself? From what source does Mr. Armstrong get his authority for preaching the Gospel? From the Scriptures? If so, by what authority does he reject the command to heal the sick which is given in connection with the admonition to preach the gospel?

He reaffirms that Christian Science is not a science because it is a discovery. Will he declare that a truth is not true or scientific because it is not yet found out?

Mrs. Eddy searched the Scriptures for a correct understanding of God's word and discovered therein an interpretation which is new to this age. This she has formulated and given to the world in the Christian Science text-book, "Science and Health with Key to the Scriptures."

What right has Mr. Armstrong or any one else to declare any teaching to be unscientific because, being in harmony with spiritual understanding, it is opposed to human sense? It has never been claimed that this Science is in accord with the more materialistic philosophies or the testimony of the five personal senses. It is scientific only from a Scriptural and spiritual standpoint. It is the Science of God and His Christ.

Jesus taught the first lesson of divine Science when he said, "God is a Spirit." Will our critic deny this statement of the Master? The physical senses declare: "I do not believe there is any Spirit. I cannot see any Spirit." Material sense would deny the very foundation of the teachings of the Master, but Christians accept his words as true, contrary to the claim of the personal senses, and the results that we gain by their application prove to us the truth of his proposition. He declared, "It is the spirit that quickeneth, the flesh profiteth nothing." Will our critic kindly give the meaning of the word nothing? How much is nothing? Is not this saying of Jesus a plain declaration that Spirit is the only life, the only animating power of the universe, and that flesh, or matter, is altogether unprofitable? Whence comes this unprofitable thing? Did God create it? Has He been guilty of such a misdemeanor, and thereby brought into existence an element opposed to Himself to war against His will? We grant that God created all things, but how? is the question. What is the constituency of His creation? Darkness is the opposite of light. It is not an entity. It is not something, but the want of something—the want of light, and disappears as the light appears. So God's opposite must be regarded as a nonentity, for the evils which are mountains to mortals weigh nothing in the sight of Omnipotence.

I will admit that a "science is not proven until it works out results," but it must be a science before it is demonstrated, though it may not be so understood. Otherwise it would not be demonstrable. In other words, the embodied idea of truth is eternal and was in existence even before it was known to mortals. The science of which God is the Principle was, and is, formulated by Him, and was in existence before any mortal knew of it. We call mathematics a science. Was it a science before Mr. Armstrong knew aught of it? Were five times five twenty-five before he knew it? Was not this idea true before any mortal knew it? Our critic would leave God out of account and make man, instead of God, the creator and formulator of science. Is not the infinite Intelligence the first to know any and all truth? What God knows is supremely scientific.

If mathematics, or any other system of knowledge, is a science while a single individual is in a state of ignorance, it is scientific in the face of the universal ignorance of mortals, and why? Because all science, all things, are formulated and created by God, the eternal Mind, and are co-existent and co-eternal with that Mind, Mr. Armstrong does not recognize God in his science, but makes mortal man the originator of all truth, when mortals at best can only be discoverers.

Our critic's theory implies that God has created another god, called nature, and left this pantheistic god to re-create

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

the world materially, operate and govern it by laws over which God has no control, feed or starve it, make it sick or well, and finally destroy it because this imperfect creation of an imperfect god has become unfit to exist.

Does Mr. Armstrong believe he can demolish Christian Science by quibbling over technicalities? I dare say that he has never healed a single patient through his understanding of this science, to prove, even to himself that he understands it, and if he does not understand it, what right has he to pose as capable of giving his readers an intelligent opinion of it? What would be thought of one who attempted to teach mathematics without having demonstrated a single proposition to prove his understanding, and who has only this one qualification, namely, he does not believe in it?

We insist that this is a science and must be so treated. No one is capable of giving an intelligent idea of it who is not a practical Christian Scientist and able to heal the sinner and the sick man through his knowledge of it. This science is demonstrable to mortals in its destruction of disease and discord. The influx of spiritual understanding dispels the illusion of the senses, even as the light dispels the darkness.

Our critic declares, "I submit that the Bible as a whole, containing the teaching of Christ, is not a science but a revelation. It is not antagonistic to true science, but it is not a science." This is strange logic. True science and revelation are always identical. Eternal truth is not man's science, but is formulated and systematized by divine Intelligence—is God's science and is scientific in His sight, though unknown to mortals.

In his strained effort to disprove our logic, our critic loses sight of the point in question. We have never claimed this to be a science in the human sense but in the light of spiritual understanding. It is God's science—the Science of God discovered and taught by that one whose goodness, spirituality, and experience had been of such a character as to prepare her to perceive it. It is not claimed that Christian Science adds anything to the Bible, but that it correctly interprets God's word, thereby rendering it more practical to mankind in working out their salvation.

I am inclined to believe that Mr. Armstrong can teach his own religion better than he can teach Christian Science, and would advise him to make his own a specialty and leave the teaching of this faith to Christian Scientists, just as he would leave the teaching of mathematics to mathematicians, and the teaching of music to musicians.

He declares that in my explanation of Paul's statement, "But the natural man receiveth not the things of the spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned," I have "violated the rule of hermeneutical interpretation." It may be that my interpretation of the Scriptures differs somewhat from his, and it is very apparent that my interpretation of the Christian Science text-book is at direct variance with his. But does he prove that his interpretation is correct? Jesus declared, "He that believeth on me, the works that I do shall he do also," which is equivalent to saying, He who understands as I understand, and deports himself accordingly, will be followed by the same results. He also said, "These signs shall follow them that believe." The ability to overcome sin and disease must follow those who believe, if our Lord spoke the truth. There is no other test named by the Master.

Paul truly said, "There is a natural body and a spiritual body." He did not wish his hearers to become confused in respect to his sayings. He wanted them to compare "spiritual things with spiritual," and to understand that the body which he expected to be raised up to eternal life was not this corporeal earthly house, since "flesh and blood cannot inherit the kingdom of God," but the spiritual man; while the false man, "the old man with his deeds," is "put off."

A careful study of his first letter to the Corinthians will convince your readers that Paul, in his discussion of the gospel, was seeking to make clear that what he taught was not in harmony with the perception of the material man, but foolishness thereto. He declared, "God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to nought things that are: that no flesh should glory in his presence." Then follows the chapter which includes my former quotation, "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them because they are spiritually discerned." What is the natural man, if it is not the five personal senses? Do we understand spiritual things through the material senses? Was Paul right when he said, "The flesh lusteth against the Spirit, and the Spirit against the flesh: for these are contrary, the one to the other."

Mr. Armstrong makes the statement, "There is no natural man, if we take Mrs. Eddy's gospel. I deny the right to any defender of Mrs. Eddy to use this Scripture." A false claim brought into court is not a claim in reality, but as it so appears it must have a hearing before the judge, and when the testimony is in, the judge declares there is no claim. But first this fact must be proven. So mortality and materiality have claims upon us which must be recognized and dealt with according to spiritual understanding. Meanwhile many material customs and usages are suffered to be so now, and must be continued until we have grown to a sufficient degree of spirituality to live absolute Christian Science.

My critic dwells at length upon what he chooses to claim a glaring contradiction in Mrs. Eddy's teachings in that she claims this science to be a revelation, and yet holds that she obtained it by searching the Scripture.

If Mrs. Eddy gained a true interpretation of the Bible, that interpretation must have come from God. It could not have come from any other source, for the divine Mind is the only Intelligence. The fact that she searched the Scriptures did not lessen the divine influence upon her, for surely one would expect to be guided more by divine Providence in meditating upon His word than in any other attitude of mind.

Mr. Armstrong suggests a "dilemma," and kindly offers two horns. He is writing from the wrong standpoint and I decline to accept either his "dilemma" or his "horns." Indeed, I have long ago ceased to believe in that personality who comes with horns, hoofs, and dilemmas.

He quotes from the last chapter of Revelation: "If any man shall add unto these things, God shall add unto him the plagues that are written in this book." I herein challenge our critic to produce a statement in the Christian Science text-book that is not a consistent deduction from its fundamental lesson, "God is Spirit," and would respectfully call his attention to the fact that this fundamental statement of science is Spiritual, the words of him who "spake as never man spake."

Mrs. Eddy does not claim to have added anything to the Scriptures. She claims simply to have learned what there is in the Bible, and Christian Scientists stand ready to defend their doctrine from a Scriptural standpoint.

Our critic reiterates his argument "Christian Science is pantheism," and quotes again from the Standard dictionary. Suppose we stop our discussion of the technical meaning of words for a moment and consider what Christian Science really teaches. His contention is, without doubt, that Christian Scientists believe man is a part of God, that he has no individuality, and that, in accordance with the Hindoo philosophy, he will eventually become merged into God and lose his identity.

Now if this is what he means by declaring Christian

Digitized by Google

Science to be pantheism, I declare emphatically he is wrong, for we do not believe any such thing nor teach it. Furthermore, our experience convinces us that as we progress spiritually we improve and strengthen our individuality, and this indicates that such progress will continue even unto infinitude. But man is nothing of himself and can do nothing of himself. Even our Master declared, "I can of mine own self do nothing." "The Father that dwelleth in me, he doeth the works." Man is the image and likeness of God. He is inseparable from God and yet is not God nor any part of Him. In "Science and Health with Key to the Scriptures," p. 472, we read: "In Divine Science, God and the real man are inseparable, as Principle and its idea."

Pantheism in its literal meaning, all-godism, is equivalent to the Greek cosmos-theism, world-godism, teaching that God is constituted by the sum-total of the world. This is as far from Christian Science as anything can be. Webster defines pantheism as "the doctrine that the universe, taken or conceived of as a whole, constitutes God; the doctrine that there is no God but the combined forces and laws which are manifested in the existing universe." Now the additional definition which my critic has quoted from the Standard dictionary, does not in any way affect the essence of the explanation that the sum-total of the universe constitutes God. In other words, there are not two kinds of pantheism taught, one which is the exact opposite of Christian Science and another which is exactly like it, as Mr. Armstrong would have it appear. The Hindoo belief represented as translating the material universe into a mental one, does not in any way affect the proposition that pantheism means all-godism, but still retains that notion. The so-called idealistic pantheism, or Hegel system, "maintaining that the entire phenomenal universe is the ever-changing existence—form of the one single universal substance, which is God," is the direct opposite of Christian Science, and in its essence is identical with the more material teaching in respect to pantheism, and is but a shift from material evil to "spiritual" wickedness in high places. Christian Science teaches that God is infinite, unchanging, and eternal, and His creation is His infinite manifestation, co-existent and co-eternal with Himself, maintaining forever its myriad individuality, reflecting the Intelligence, Life, and Substance of the Creator, retaining forever this relation to the Creator and never becoming absorbed into Deity. By seeking to draw out pantheism in the direction of Christian Science and Christian Science in the direction of pantheism, Mr. Armstrong has striven to make them meet, but has utterly failed. His charge that Christian Science is atheism, I have already answered in the foregoing explanation of this Science.

As authoritative Christian Science theism I quote briefly from Mrs. Eddy's latest message to the Mother Church delivered in June, 1901. "We hear it said the Christian Scientists have no God because their God is not a person. Let us examine this. The loyal Christian Scientists absolutely adopt Webster's definition of God, 'A Supreme Being,' and the Standard dictionary's definition of God, 'The one supreme being, self-existent and external.' Also we accept God, emphatically, in the higher definition derived from the Bible, and this accords with the literal sense of the lexicons: 'God is spirit,' 'God is love.' Then, to define Love in Divine Science we use this phrase for God—Divine Principle. By this we mean Mind, a permanent, fundamental, intelligent, divine Being, called in Scripture, Spirit, Love;" "God is person in the infinite Scientific sense of Him, but He can neither be one nor infinite in the corporeal or anthropomorphic sense."

In his communication published in your issue of October 20, Rev. Mr. Armstrong endeavors to maintain his position that women have no God-given right to teach theology, quoting again, "Let the women learn in silence with all subjection. But I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence, for Adam was first formed, then Eve."

Doubtless our critic has introduced this argument for the special purpose of denouncing a good woman in Concord, N. H., who has for years been a most faithful and conscientious religious teacher, but in so doing he has made assertions which are non-acceptable to millions besides the Christian Scientists, including people of his own denomination. All our Sunday Schools and many of our pulpits are filled with teachers from the fairer sex.

If our critic maintains that woman in the pulpit is out of place, he must include in his condemnation the one who stands before a Sunday School class, for she, too, is expounding the word of God. One of the best Methodist preachers I ever knew was a woman. According to Mr. Armstrong she was an impostor, though she made many converts. Most Biblical writers as well as most modern thinkers disagree with our friend on this point.

We will again consider 1 Corinthians, 14 : 33, reading in connection therewith the verse preceding and the one following: "For God is not the author of confusion, but of peace, as in all churches of the saints. Let your women keep silence in the churches: for it is not permitted unto them to speak; but they are commanded to be under obedience, as also saith the law. And if they will learn anything, let them ask their husbands at home: for it is a shame for women to speak in the church." It should be noted that in those days the discussions held in the synagogues were oftentimes full of disputations and heated controversies. Some authors believe Paul's admonition was applied specifically to those public debates. Adam Clark, LL.D., who is regarded by most Methodist clergymen as one of the best authorities on Biblical exegesis, quotes from Dr. Kling on p. 154, vol. 6, of his commentaries: "It was permitted to any man to ask questions, to object, altercate, attempt to refute, etc., in the synagogue, but this liberty was not allowed to any woman, . . . because it was deemed indecorous for women to be contending with men in public assemblies on points of doctrines, cases of conscience," etc. Dr. Clark adds: "From this it is evident that it was the disorderly and disobedient that the apostle had in view, and not any of those on whom he poured out his spirit. . . . The Jews would not suffer a woman to read in the synagogue, though a servant or even a child had this permission. This was their condition till the time of the Gospel, when, according to the prediction of Joel, the spirit of God was to be poured out on the woman as well as the man, that they might prophesy—that is, teach—and that they did prophesy or teach is evident from what the apostle says, where he lays down rules to regulate this part of their conduct while ministering in the church." I make this quotation simply to show that great men as well as women have differed from Mr. Armstrong.

Now let us consider other statements of Paul in order that we may understand his meaning here, for it is better that we allow him to interpret for himself. "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit. For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death. For what the law could not do, in that it was weak through the flesh, God, sending his own Son in the likeness of sinful flesh, and for sin, condemned sin in the flesh: that the righteousness of the law might be fulfilled in us, who walk not after the flesh, but after the Spirit. For they that are after the flesh do mind the things of the flesh; but they that are after the Spirit the things of the Spirit." Paul declares in Galatians; "Knowing that a man is not justified by the works of the law, but by the faith of Jesus Christ." This law was an effort to specify what men should and should not do without any scientific principle or definite standard. The gospel of Jesus Christ giving the spirit of truth in contradistinction to the letter thereof, making clear to hu-

Digitized by Google

man consciousness the ideal manhood, affords a guide and admonisher at all times and under all circumstances, doing away with the literal law, though not its spirit and purpose, nor the observance of its real essence. When the circumstances and conditions cease, under which Paul commanded silence in the churches on the part of women, the law no longer holds good. While he recognized that the law of Moses was superseded by the higher law of Christ, he nevertheless advised them to be governed by the Mosaic law, because the world in general had not grown sufficiently above that law to permit its being disregarded without confusion and the appearance of unwarranted disobedience in the eyes of the general public. The essence of Paul's admonition is embodied in Jesus' words: "Cast not your pearls before swine;" also in his own writings wherein he advised against contentions and strivings about the law. Nearly two thousand years have passed since Paul made this statement, and things have changed very much. Woman has in a large degree taken her rightful place. The law of this age permits her to speak, and in so doing she is not violating Paul's admonition, since the "thus saith the law" of this period is not of such a character as to demand her continued silence in the church.

Mr. Armstrong writes: "Mrs. Eddy declares that man is not fallen, that there is no sin, no soul is ever punished, no hell, no vicarious death of Christ." It should be noted here that in the world of material sense, Christian Scientists recognize the evils and errors that are to be conquered and overcome, and though they may seem to differ from others in their understanding of the nature of evil, they nevertheless note that sin exists in human experience and will so continue until it is repented of and forsaken. On this subject Mrs. Eddy writes in her June message to the Mother Church: "In Christian Science it is plain that God removes the punishment for sin only as the sin is removed—never punishes it, only as it is destroyed, and never afterwards, hence the hope of universal salvation. It is a sense of sin, and not a sinful soul, that is lost. Soul is immortal, but sin is mortal. To lose the sense of sin we must first detect the claim of sin; hold it invalid, give it the lie, and then we get the victory, sin disappears, and its unreality is proven. So long as we indulge the presence or believe in the power of sin, it sticks to us and has power over us. Again: To assume there is no reality in sin, and yet commit sin, is sin itself, that clings fast to iniquity. The Publican's wail won his humble desire, while the Pharisee's self-righteousness crucified Jesus."

Christian Science teaches that whatever may be the constituency of matter and its supposed evils, we must attain to spirituality and outgrow the flesh, and thus reach a condition wherein we are immune from hell and punishment. The vicarious death of Jesus Christ might be explained as his self-sacrifice, passing through an experience for the purpose of demonstrating to mortals that God was his life when he might have escaped this experience so far as his own necessities were concerned. This he indicated when he said: "Thinkest thou that I cannot now pray to my Father, and he shall presently give me more than twelve legions of angels?" His vicarious death was prompted by pure love and the necessity of giving mortals the key to the kingdom of God by demonstrating to them the true science of being—what God really is, and the relationship between God and man.

ALFRED FARLOW.

"I can forgive, but I cannot forget," is only another way of saying, "I will not forgive." A forgiveness ought to be like a canceled note, torn in two and burned up, so that it never can be shown against the man. There is an ugly kind of forgiveness in this world—a kind of hedgehog forgiveness, shot out like quills.—BEECHER'S "Life Thoughts."

The Pitcairn Islanders.

THE English Colonial Office has recently received a report from one of its naval commanders of a visit paid to Pitcairn Island, where the descendants of the mutineers of the government ship Bounty are still residing. These people are entirely isolated from the world, with the exception that they live sufficiently near one of the great ocean routes to induce the captains of vessels wishing fresh meat or fruit to make a slight deflection from their course, sight the island, land on it with one of the ship's boats, and get their needed supplies. The island has no good harbor or roadstead, hence in stormy weather it is practically unapproachable.

According to the official report, the islanders are under the government of one of their number, who appears to be a man of ability and determination, and are in a contented, though hardly a progressive, state. The entire community numbers about one hundred and fifty members, with a somewhat disproportionate number of females.

There are no diseases on the island, and absolutely no medical means of treating them if there were. The local authorities when offered medical supplies said that they neither needed nor cared for them. There appears to be an abundance of fruit and vegetables, and a sufficient supply of goats to furnish the comparatively little animal food required in a tropical region.

The system of control is evidently largely socialistic. From 8 A.M. until 2 P.M. all the male grown population are engaged in public works of various kinds. After 2 P.M. they are at liberty to do what they care to for themselves, or to enjoy their leisure. They are all devout members of the Seventh Day Adventist faith, and the American missionaries of this religious organization are endeavoring to do what they can to build up some slight commerce between Pitcairn Island and Tahiti, believing that it would be of advantage to the people of the former island. These latter appear to be, in certain ways, undergoing a species of degeneration, in consequence, presumably, of too close intermarrying.

One evidence of this is the very early loss of their upper front teeth, although, on the other hand, it may be said that when they are engaged in public work they appear to have the strength and endurance needed to do more than most workingmen would in this country or in Europe. Another defect, due to extreme isolation, is the corruption of language. There has been a tendency among them to adopt what may be termed a language of their own, made up by the careless and clipping use of English words, so that at the present time it is somewhat difficult for the younger members of the community to understand English quickly when they are addressed in that tongue.

Boston Herald.

Famous Tides of Fundy.

BRIEF reference is made in nearly all schoolbooks to the Bay of Fundy and its remarkable tides, but in none is justice done to the most remarkable manifestation of its kind in the world. Most notable of all its features is the reversible falls of the St. John River, near St. John, N. B. Imagine a perfectly placid surface of water, so placid that it mirrors all the surrounding shores, suddenly converted into a raging current and tumbling waterfall. Go to St. John, N. B., cross to the Carleton shore, walk a short distance along the latter and you need not imagine this phenomenon. You can see it with your own eyes if you reach the spot just before the change of the tide, says an eastern exchange.

The St. John River, or, rather, the harbor, contracts here to a beautiful rocky gorge, spanned by two handsome suspension bridges. Above this gorge the river broadens out again. But during the twenty-four hours there are only

Digitized by Google

four intervals of twenty minutes each when shipping can pass through the gorge. On each change of the tide there is at slack water a period of twenty minutes during which the water in the gorge is on a level with that of the harbor and the river. and perfectly placid. During those twenty minutes the shipping hurries through.

Suddenly, without the slightest warning, without so much as a tremble or quiver of the surface, a streak of white flashes across it and a second later a roaring waterfall and cataract is pitching headlong into the harbor from under the bridges if the tide be running out, and into the river above if the tide be on the flood. Such are the reversing falls of St. John River. It is doubtful if a more dramatic change occurs with such unvarying regularity anywhere else in nature. It is made all the more impressive by the beauty of the landscape. The suddenness with which this landscape, as reflected in the placid water, disappears, is like the ruthless smashing of a mirror.

The reversing falls are caused by the difference in level between the harbor and the river above the gorge, the natural level of the river being some twelve feet lower than that of the harbor. The incoming tide rushes through the gorge until it has filled up the river to a level with the harbor, the flood then heaping itself up upon the river. Then when the tide has emptied itself out of the harbor sufficiently the heaped up waters of the river come dashing through the gorge. So great is the tidal rise and fall in the Bay of Fundy, and so swift the tidal currents in places, that in deep water the buoys swing to from sixty to one hundred fathoms of cable, and as buoys swinging to such long cables are apt to shift position, the length of the cables is specified in the notices to mariners.

The tidal phenomena of the Bay of Fundy are explained by the peculiar troughlike shape of the bay. As it narrows from the broad reach between Cape Sable, Nova Scotia, and the coast of Maine, the waters heap up upon themselves. This simple theory seems to be borne out by the increasing rise and fall of the tide toward the various heads of the bay, which are even more narrow and troughlike, and thus repeat the tidal phenomena on a steadily growing scale until we reach the sixty miles of mud flats at low water at the head of Minas basin, the reversing falls of the St. John River, and the inrushing tidal "bore" at Moncton.

Selected.

The Drinking Orchid.

WHAT is probably the most extraordinary plant ever discovered has now been found by E. A. Suverkrop of Philadelphia, who, during trips to South America, has for some years been contributing to the collection of his friend, Professor N. E. Brown of the Herbarium, Kew Gardens, London. The amazing plant which Mr. Suverkrop has now found is an orchid that takes a drink whenever it feels thirsty by letting down a tube into the water, the tube, when not in use, being coiled up on top of the plant.

"One hot afternoon," says Mr. Suverkrop, "I sat down under some brushwood at the side of a lagoon on the Rio de la Plata. Near at hand was a forest of dead, shorn trees, which had actually been choked to death by orchids and climbing cacti. In front of me, and stretching over the water of the lagoon and about a foot above it, was a branch of one of these dead trees. Here and there clusters of common *planta del ayre* grew on it, and a network of green cacti twined round it.

"Among the orchids I noted one different from the rest, the leaves, sharp, lancehead shaped, growing all around the root and radiating from it. From the centre or axis of the plant hung a long, slender stem about one eighth of an inch thick by one fourth inch wide, the lower end of which was in the water to a depth of about four inches.

"I at once went over to examine my discovery. Imagine my surprise, when I touched the plant, to see this centre stem gradually contract and convulsively roll itself up in a spiral-like roll of tape.

"But more surprising yet was the object and construction of this stem. I found on close examination and dissection that it was a long, slender, flat tube, the walls about one thirty-second of an inch thick, cellular in construction, open at the outer end, and connected at the inner end to the roots of a series of hairlike tubes.

"By subsequent observation I found that when the plant was in water this tube would gradually unwind till it dipped into the water. Then it would slowly coil round and wind up, carrying with it the amount of water that that part of the tube which had been immersed contained, until when the final coil was taken the water was dumped, as it were, direct into the roots of the plant. The coil remained in this position until the plant required more water. Should the plant, however, be touched while the tube is extended the orchid acts like the sensitive plant (mimosa), and the coiling is more rapid.

"I found many of these plants, all directly over the water or over where the water had been. In the latter case it was almost pitiful to see how this tube would work its way over the ground in search of the water that was not."

Chicago Inter-Ocean.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Errors, like straws, upon the surface flow;
He who would search for pearls must dive below.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Christian Science Lectures.

In view of the increased prosperity which has come to communities where the lectures provided for by the By-laws in our Church Manual have been made available, it seems advisable again to call attention to the great importance of this branch of Christian Science work. The Board of Lectureship was established by our Leader as an additional means of presenting the truths of Christian Science to the public, to assist in disabusing the public mind of the false impressions induced by those who look upon Christian Science in a mistaken or unfriendly light, to emphasize the blessings it brings to humanity, and to show how the Discoverer and Founder, Mrs. Eddy, has faithfully labored to bring these blessings to her students.

The lectures are not controversial, but are effective in reaching many people who have not access to our publications, and are not reached by other methods.

In this connection we quote from an editorial in the *Sentinel* of March 2, 1899, Vol. I., No. 27, page 5, the following:—

"When we think of the great effort that is being made through the press and platform and through the publication of pamphlets, to mis-state Christian Science, it seems very clear that all the loyal Christian Scientists should be intensely in earnest at this time, in using all the means which our Leader has furnished them for letting the light of Truth shine.

"Any one who has read the published lectures will notice that the life and work of the Discoverer and Founder of Christian Science, the Rev. Mary Baker Eddy, have been accorded their true place in history, and will also notice how inquirers are directed to the study of the text-book of Christian Science, 'Science and Health with Key to the Scriptures.' In view of the unjust attacks which are being made upon the Leader of this great movement, any one can see the importance, not of answering these attacks in the spirit in which they are made, but of stating clearly, earnestly, and lovingly the Truth, so that the earnest seeker and the innocent may not be misled. Also, in view of the misrepresentations regarding Christian Science on the part of those who do not understand it, it is important that all honest seekers should be directed to the text-book from whose pages they not only may learn what the Truth is, but how to demonstrate it and make it a practical force in their lives."

What was then said is to some extent yet true. While many misrepresentations have been effectually met and destroyed, there are yet afloat more than there should be. The necessity for such work as the Board of Lectureship is doing has therefore not gone by, and the Field should be alert to that fact. There appears to be an especial apathy in some sections of the country. Unless this wise provision is availed of, in connection with the other propaganda, there is a serious lack. Do not Christian Scientists understand what it is that seeks to prevent the onward march of Truth, and should they not govern themselves accordingly? Wakefulness and watchfulness are the great need of the hour. There cannot be individual progress unless the Cause as a whole progresses. Individual work is essential to the success of our great healing and regenerating movement. Let us not drift off into somnambulism in this respect any more than in other respects. A lesson can be learned by taking note of the activity prevailing in the West. Even the smaller churches and societies there have frequent lectures.

It would be well for those who have not yet seen the wisdom and necessity of taking advantage of this helpful department of service to re-read carefully and prayerfully the article of our Leader published in the *Sentinel* of March 15, 1900, page 452. Therein, in strong and graphic terms, she approves of the work of the Board of Lectureship, and emphasizes the necessity for further work of the same kind. We sincerely hope that this reminder will be heeded in the right spirit, and that the necessity for further reminders will not arise.

An editorial in the *Franklin* (Pa.) *Daily Leader,* an extract from which we take pleasure in republishing, is strongly indicative of the good work the lectures are doing:

Judge Ewing's Lecture.

When four o'clock arrived yesterday, the hour announced by the local Christian Science Society, for a lecture by Judge William G. Ewing of Chicago, the Opera House was thronged to the doors, to hear this masterly and eloquent speaker.

The majority of the audience were mostly strangers to the subject, being chiefly wonder seekers, but before the speaker had concluded his address there were a large number of converts, and those who were not went away thinking seriously.

The Judge traced the history of the society to its origin and explained the reasons which sustain the belief in the minds of the Christian Scientists. He stated that a false idea of its doctrine was prevalent in the minds of most people who were non-believers. He endeavored to show that the disbelief was based upon ignorance of the subject. He also paid a splendid tribute to Rev. Mary Baker G. Eddy, the Mother of the Society, to whose efforts is due the present effectual work of the Society.

The entire lecture of the Judge did more for the advancement of Christian Science in this city than all their efforts previously put forth. It is a good argument and worthy of the thoughtful consideration of all.

Thankfulness.

People should be more thankful than they are, Christians and non-Christians alike. There is nothing so satisfying as a thankful heart. There is nothing which brings so much joy, so much peace, so much comfort, so much health. A person with a truly thankful heart is a *well* person. We are speaking of thankfulness to God, the Giver of all good. The only absolutely real thankfulness one can have is thankfulness to Him. All other thankfulness is relative, comparatively nothing.

How shall thankfulness to God be shown? It is well to express thanks in words. Words sincerely spoken from a thankful heart help the speaker and others. Words of thankfulness returned to God in sweet communion with Him, are helpful to the communicants; they bring us consciously nearer to Him; they uplift and strengthen; they aid in enlarging our spiritual nature and in clarifying our spiritual perception. But the highest and most effectual form of thankfulness is in right thinking and living. We show our true appreciation of anything in deeds better than in words. We are thankful to God when we are doing His will. We give thanks in the measure of our active obedience to His commandments, in being about the Father's business. We are thankful in the degree of our overcoming selfishness, with its train of evils. We are thankful in proportion as we love our neighbor and do unto him as we would have him do unto us. We are thankful as we reflect the good

Digitized by Google

that is ours by virtue of our real relationship to the infinite and supreme Good. Such thankfulness leads us to express it in both deed and word. We cannot help expressing it. If we have received Light we must reflect it in proportion. We could not, if we would, hide it under a bushel. We reflect it unconsciously, because it is the light Divine shining through the open window of our being.

How sweetly the Light thus unconsciously reflected often returns to us, not void, but filled with joy, the joy which comes from "Love reflected in love." We have just had a sweet taste of this joy. It came in a letter from which we extract. We distinctly remember the person and the occasion referred to, but we cannot recall a single word of what we said.

We quote:—

Dear Friend in Truth:—Last night at our Wednesday evening meeting we seemed to have a regular Thanksgiving meeting. While every minute of the time was being taken and I was trying to see what I had to be grateful for, I went back to the time when I was so starved and you came and fed me by telling me what God was. I remember I became so filled, so rested, so lifted, that I wondered if any one ever talked so beautifully before. Afterward I realized I had been healed of several diseases of years' standing, and I knew that God had talked through you. So I send to you, on paper, my heartfelt thanksgiving.

To-night I am thankful it has been proven to me that "God is our Father and our Mother, our Minister, and the great Physician: He is man's only real relative on earth and in heaven" (Miscellaneous Writings, p. 151). If I have drawn a well or a happy breath since 1892, I owe it all to Christian Science. To be sure, during that time, I have had many struggles, but with every struggle for right there has been a victory, a cause for rejoicing such as the world cannot give or take away.

I am thankful for our consecrated Leader and Teacher, the Rev. Mary Baker G. Eddy, who is so lovingly laboring to prove to us that there is no power to separate us from God, and to lead us on to our God-given birthright,—health, harmony, and holiness. I am thankful for our faithful workers at headquarters who labor so unselfishly. I am thankful for our editors and publishers, our Bible Committee who break the bread of life that we may realize our pastor is always at hand.

I am thankful for all workers at the Publishing House. I am thankful for my patient, loyal teacher here in S——, who tenderly guards and guides my steps.

And when I think of all these and many more blessings, my heart fills full, for I see the half can never be told in words. Truly "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 490).

When we called to see the author of this glad pæan, we found a pale-faced invalid for whom the physicians said there was no hope. To human sense their verdict was well founded. But the suffering one found that indeed God was her Minister, her Relative on earth and in Heaven, her Physician.

No wonder, then, that this heart overflows with thankfulness to God, and to the Christian woman who had so long walked with God that she had learned He was her Minister, her Relative, her Physician; and who thereby became able to tell others that He would become their Minister, their Relative, and their Physician, if they would but admit Him into the household of their consciousness. And we here add our meed of thankfulness that God, through this faithful servant, so awakened our consciousness to His all-ness that we were enabled to reflect a measure thereof, such, as in one short talk, was sufficient to awaken to life and health and joy, the suffering one whose tender words of thankfulness have touched so deep a chord in our heart.

Well do we remember the circumstances under which the message above quoted from first came to our knowledge. It was sent by our beloved Leader and Teacher to be read at the opening service in a new hall which, through the generosity of one of the little flock at Scranton, had been provided for a place of worship and a headquarters for Christian Science in that city. It was our great privilege to read it on that occasion, and it fell as a sweet and glorious benediction upon the ears of all the dear "children" there.

We have just re-read it with much benefit to ourselves. The words are helpful—infinitely helpful—and the tender associations surrounding this early experience in our career in Science, give them an especially deep and precious significance.

A Correction.

A letter from Grand Rapids, Mich., contains the following:—

I ought to let you know that the statement in regard to Mr. M'Elphatrick's being a resident of Grand Rapids was not correct. That mistake was probably due to the fact that in reporting the case we did not make that matter clear. He is a resident of Detroit, in which city the paper with which he is connected is published.

He was in Grand Rapids temporarily at the time the incident occurred.

The Lectures.

At Fargo, N. D.

A large crowd gathered at the Opera House yesterday afternoon (Sunday, November 17) to hear Judge Ewing discourse on the tenets of Christian Science. The address was of an academic order, treating the subject from a didactic standpoint and dwelling at length upon the dominant keynote of all religious progression.

Judge Ewing is a speaker of the old school of orators. His theme is his all and other considerations are lost in the intense advocacy of the thesis. His presence is easy, his elocution natural, and enunciation clear. No time is wasted on immaterial technicalities, but he reaches forth after the prejudices he wishes to combat with a frankness and perfect familiarity that win the good will of disinterested hearers.

Fargo Forum.

Previous to the lecture the following appeared in the editorial columns of the *Forum*:—

The citizens of Fargo will welcome the distinguished parliamentarian, Judge Ewing, who is to lecture at the local Opera House next Sunday. Mr. Ewing has for a long time been associated with Adlai E. Stevenson in law partnership in Illinois. Subsequently he was instrumental in bringing about many salutary reforms in his state and otherwise serving the best interests of the people. He has at all times been a friend and active supporter of organized systems of charity assisting the same by material contributions as well as the power of his oratory. Since his acquaintance with the doctrines of Christian Science, he has been its foremost propagator, giving masterly discourses on its tenets and otherwise elucidating its truths to the public. Judge Ewing is a forcible speaker and his appearance before the people of this city will be a rare intellectual feast.

Judge Ewing was introduced by Miss Adelaide M. Kinnear, who spoke as follows:—

Ladies and Gentlemen:—Jesus of Nazareth, just before his crucifixion, was asked the question, "What is Truth?"

Digitized by Google

The early morn of the twentieth century finds the question still of paramount interest.

We have with us, this afternoon, one who has traveled many miles to tell you of the Truth, as revealed to the world through the teachings of Christian Science. Years ago, after all material methods had failed, he found health, strength, and peace in the Truth which came to him through the channel of Christian Science. He is now returning thanks by his daily work of revealing to the public the remedy for sickness and sin. So grateful was he for this pearl of great price that he left a lucrative law practice and refused a renomination to the office of judge of the Superior Court of Cook County, Ill., sitting in Chicago, to enter upon this higher and holier work of proclaiming to the world the practical reality of the teachings of our great Master as applied to every human need, physical, moral, and spiritual.

Because of the popular misconceptions of Christian Science, the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., organized a Board of Lectureship that the truth about this new religion might be made known, and the false impressions corrected. Our lecturer is a member of this Board and comes to you to-day as an authorized speaker upon the subject.

In behalf of First Christian Science Society of Fargo, under whose auspices this lecture is given, I take great pleasure in introducing to you the speaker of the hour, Judge William G. Ewing of Chicago, who will now address you.—*Correspondence.*

At Cripple Creek, Col.

At Odd Fellows Hall, November 9, Mr. Edward A. Kimball of Chicago, addressed a large sized audience on the subject of Christian Science. He is a most pleasing speaker and held his crowd, which had assembled at eight o'clock, until he had spoken his last word. His address was interesting in the extreme, and it is safe to say that those who had gathered there and were theretofore uninformed as to the real teachings of Christian Science, were given a clearer conception of its meaning.

Judge Seeds, in his usual happy manner, introduced Mr. Kimball.—*The Morning Times-Citizen.*

Wednesday Evening Meeting at Los Angeles, Cal.

There was a well-attended meeting of the Second Church of Christ, Scientist, held at the Woman's clubhouse last night (October 16). The regular Wednesday evening experience or testimonial meeting is usually presided over by Mrs. Blanche K. Corby, but as she was absent last night, the Second Reader conducted the meeting.

After the reading and prayer the leader announced that the meeting was open for any testimonials that were desired to be given.

One young lady told how she had always been diffident and did not care to mix with people, even with her friends. Since she has taken up Christian Science she said she had been filled with a great love for every creature, and the lowliest one of God's creatures filled its place in the harmonious love.

An old gentleman, tall, gray, and stately, told of his cure and of his conversion to Science. He was troubled with a form of consumption and some heart trouble with it. His wife had been cured of rheumatism by Science, but he had paid no attention to it until one day he fell with a stroke or something—he did not know what.

He called in doctors who told him he was in a very precarious condition. Then he had his wife send for a Christian Scientist, and he was so benefited that he was able to come to this city in less than two weeks from the time he was stricken.

Later the consumption went away, and the wonder of it all is that there stood the man, past sixty, telling of his life and tribulations, and affirming that he had been cured of what is supposed to be an incurable disease by the simple prayers of himself and a disciple of Christian Science.

He claimed that he was less than a month being cured of the lung trouble, and his ruddy face and sturdy figure belied the thought that he had ever had any serious disease.

He went on to say that he had for years worshiped a god. He carried it with him in his pocket, and worshiped it in the morning, at noon, in the evening; every spare moment he could get he gave over to this false god. While he was devoted to it he never had any peace of mind. "I went," said he, "to a healer and asked for help, but she told me to work out my own salvation. I began to work on the little god with Science, and finally Science drove it away, where I don't know, but it was gone; and that little god was no more than an old pipe."

The congregation could not resist the temptation to laugh at the old Swedish gentleman, and he sat down and laughed with the rest. The sight of his kindly face, full of the heart at peace with itself and the world, was like "apples of gold in pictures of silver."

A woman got up and told how a man who had led what she called "an irregular life," had been cured of his appetites. He was fast going to the dogs, and finally he was taken with consumption. After trying everything he came to Christian Science. In two months he was healed of the craving for liquor and tobacco, and later the lung trouble left him.

One poor woman, who is forced to work out to support herself and four little ones, arose and testified to the efficacy of Christian Science as a spiritual aid. She goes out every morning to work in families more fortunate than her own, and toils all day for the little ones at home. At night she returns to her own little home, where her children have taken care of themselves during her absence. Weary with toil, she must satisfy herself that her babies are all right in every way before she gets to rest. One little boy she found one evening had a sore throat.

It was when the dread diphtheria was raging, and there was "lamentation and weeping" in the land for the children that were not. Visions of the health officers and the quarantine, with days and days of forced idleness, drove the poor mother nearly frantic, and she did what she could for the poor child until nearly midnight.

She began to be crazed with the grief of it, and ran to a neighbor, who was a Scientist. The neighbor took hold of her and prayed with her, and sent her back home, where, wonder of wonders! her boy was sound asleep.

She threw herself on a couch, fell asleep and did not wake up until morning. The boy asked to be allowed to light the fire as usual, and was perfectly well.

In twelve years, said the mother last night, that is the only time any outside aid has ever been required in her little family on account of sickness.

Another spoke of a little boy cured of spinal meningitis, and a case was cited where absent treatment was given to a lady, and the lady cured of extreme nervousness; in fact, made well enough to go through an ordeal she had been dreading for months.—*The Los Angeles Record.*

What University Extension has Achieved.

In a remarkably candid article in the *Atlantic,* Lyman P. Powell sums up the gains of the university extension movement since its inception ten years ago. He concludes as follows:—

In the last decade of the nineteenth century almost two thousand courses of six lectures each, and sometimes twelve, aggregating about 125,000 lectures in literature, history,

Digitized by Google

civics, economics, finance, science, sociology, philosophy, ethics, religion, music, and art were given in three hundred and ninety-eight centres, with a total attendance on courses of almost or quite three hundred thousand, with an aggregate attendance on lectures of about two million five hundred thousand, at a cost to the two head centres of $480,000, of which amount $326,000, or sixty-eight per cent, has been paid by the audiences hearing the lectures. If statistics were offered about other societies and institutions that have carried on the work with more or less success, the figures would be larger still.

Keeping in mind the important circumstance that the last two years have been, for both the American Society and the University of Chicago, the most successful in their history in all the more important aspects of the work, and that in both Philadelphia and Chicago larger plans for the future are now being made, with more confidence than ever in the past, is it not time for all the fair-minded to assume that university extension is no longer an experiment, but a permanent fact in our educational life, a permanent factor in our educational progress?

This new movement . . . has stimulated the new interest apparent in every sort of education. Our universities owe it a great debt; it has helped them, Dr. Albert Shaw and other keen observers think, "to get rid of a part of their superfluous pedantry and a little bit of their Pharisaism." Public school teachers, broken on the wheel of drudgery, have by thousands been uplifted and sent back to duty with morning faces and with morning hearts.

Cultured people in small villages, cut off—to use an electric term—from the re-enforce of intellectual centres, have been directed, encouraged, inspired. Libraries have been loaned from the head centres, or established permanently, or re-established in many a town and village. Literary clubs are multiplying on all hands. World gossip is taking the place of village gossip. Dante and Milton and the Lake Poets are kept in stock in many a store which had a trade before for none but Marie Corelli, the *Smart Set,* and the *Black Cat.*

"Roz-e-velt."

It is an anomalous condition of affairs that nineteen out of twenty of the population of this great republic do not know how to pronounce the name of its President. Even some of the members of his Cabinet are ignorant of the proper pronunciation of that now famous name, and some of the high officers in the army habitually pronounce it improperly. We therefore republish the correspondence between the Editor of *The Christian Advocate* and Theodore Roosevelt while he was governor of the State of New York, which appeared in *The Christian Advocate* of January 5, 1899:—

November 28, 1898.

To the Hon. Theodore Roosevelt, Oyster Bay, N. Y.

My Dear Sir:—Millions are pronouncing your name, and about half of them say "*Rose*-velt," and the other half are divided into parties, some of whom pronounce "Roose" to rhyme with "Rooz," and some divide it into two syllables, "Roo-se." I observe that some of your personal friends belong to all these parties. Would you kindly inform me how your family pronounce it?

Sincerely yours,
J. M. Buckley.

Oyster Bay, L. I., December 2, 1898.

My Dear Sir:—My name is pronounced in three syllables. The first syllable being pronounced like "Rose," the flower.

Very sincerely,
T. Roosevelt.

From the foregoing it appears that the name is pronounced "Roz-e-velt," with the accent on the first syllable; and that we had never heard it pronounced correctly.

The Christian Advocate.

From our Contributors.

Listen Well.

BY EVELYN NOBLE SCHROEDER.

Be still, and know that I am God.—*Psalm* 46: 10.

In myriad ways God sends His word,
And if we but listen well
We learn how leaf, and wave, and sun,
The wondrous story tell.

The wave by its resistless sweep,
Its constant wash and roar,
Says plainly to the restless heart,
"God is ever-present Power."

The sunlight glints on wave and sand,
And with its searching might
Through deepest shadow finds its way
And says, "Lo, God is Light."

The sun-flecked, wind-touched leaves
Spread their shelter out above,
And with protecting, tender care
They whisper, "God is Love."

In the Land of the Midnight Sun.

BY M. H. L.

In the harbor at Tromsöe, Norway, lay the America, a vessel fitted for an expedition to the North Pole, with a crew of wide-awake, earnest young men aboard. The day before sailing, a large excursion steamer, laden with American and German tourists, dropped anchor in the same port. With characteristic hospitality the American college men invited the adventurers to a farewell dinner, which was accepted by them with joy.

On the deck, in the bright evening sunlight of that region, sat a Christian Scientist, who thought, "Will Love open a way to place our Leader's book with these seekers?" An earnest prayer arose that Love would open the way.

Soon they came on deck and laughter and gaiety prevailed. A young artist came from the crowd towards the Scientist, and asked, "May I make a sketch for you? If we find the North Pole it will be a pleasant souvenir." Underneath the animated conversation which followed, flowed the silent current of thought, "Are you to be Love's messenger?" Another joins the couple, another, a small group gathers. In the course of conversation the subject of freedom is introduced. A young Hollander spoke with much sympathy of the deplorable condition of the Boers, and an earnest, impulsive voice cried out, "I wrote a poem on the subject the other day; shall I give it?" On receiving unanimous assent, he recited from memory.

To Be Free.

Oh, to be free, to be free,
To sing as the bird on the tree.
To tell of the thoughts the flowers bring
And the hidden fount from which thoughts spring.
Oh, to be free! to be free!

The mountains girdling around
Bring a sense of restriction profound,
And to gain the peak by climbing steep,
Is to learn the lesson hard and deep
That others beyond abound.

And if not the mountains, the land
Fails to answer the soul's demand,
The continuing band of billows grand,
The heaps beyond, heaps of level yellow sand
Palsy the heart and hand.

Digitized by Google

The bird in the tree still sings;
Hear you the message it brings?
Out of its sad, mad, glad turmoil
A message that cleanses the tired soul's soil,
"Freedom is won through toil."

So there is the way to be free.
Is it the way to be free,
To hold to your task like the little busy bee?
It may be, it may be, but O weary me,
If that is the way to be free.

Here surely was the time. The poem was written in the sketch-book of the writer, who with eager haste excused herself for a few moments, and went to her stateroom, where she securely did up a copy of "Science and Health with Key to the Scriptures," the wonderful book we all know so well, written by our beloved Mother, Mary Baker G. Eddy, which tells us so clearly how to be free, and carried it back on deck. She said, "You have given me a gift, may I give you one? Promise me to open it when everything looks dark and hope seems to fail. Of one thing you may feel sure "thoughts like these never freeze." The prayer was answered. "As the Psalmist saith, 'Beautiful for situation, the joy of the whole earth is Mount Zion, on the sides of the north, the city of the great King.' It is indeed a city of the Spirit, fair, royal, and square. Northward, its gates open to the North Star" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 567). Love claims the Universe.

Proofs of God's Power.

BY PERLITA WOLFF.

NATURALLY the advanced Christian Scientist knows that the healing of disease is incidental, but the hungering hordes of suffering humanity are still seeking a sign, some *reason* for a hope beginning to dawn anew for them. So while it may be sweeter to forget our own and others' past sufferings in a present freedom, it is also necessary to tell of cases of healing; and even though those who mistake one's motives, may accuse one of self aggrandizement, one must not thereby be turned from the discharge of so sacred a duty.

Remembering this, I am led to overcome a foolish sense of diffidence with the thought that God alone does the healing (we are but the humble channel), and offer the following fruits which have blessed my efforts in the past two years.

A victim of the morphine habit of fifteen years' standing, was not only healed, but spiritually uplifted as these extracts from letters will show: "I am happy to say that I feel like a new man. My heart is full of gratitude to God for this deliverance. No one except those who have been afflicted as I was, can explain the terrible feeling of a person in such bondage. I suffered extreme weakness and many other unpleasant symptoms according to mortal sense, but now I can see the nothingness of it all. I feel greatly strengthened spiritually also, and I intend to live a better life. I think now I can stand alone by reading Science and Health. . . .

"Oh, what a change this is! My appetite for drugs is gone. I love the Bible and Science and Health more than I ever did before, and I seem to understand them better. I know now truly, that God is Love, Spirit, and Truth. . . . I enclose herewith a money order, and let me assure you that if I could I would gladly double it. I send it with many thanks and a heart full of gratitude to God. May God bless you and make you an instrument of great good to suffering humanity."

Two men who for forty years used tobacco were healed of all desire for it.

A gentleman brought his wife, a pale, timid little woman, "to see if anything could be done for her." She was suffering with a cancer in the breast. I told him Truth was mighty in such a case as in all others. He said they were in a somewhat tight place pecuniarily and could not afford to pay for a long course of treatment. I told him it did not at all follow that a long course of treatment would be necessary, and I advised them to purchase Science and Health. This they did, paying fifty cents on the same, promising to pay fifty cents each week until paid for. He also gave me one dollar for a treatment.

In two days he came back with a radiant face, and paid the balance on the book, saying his business had taken a turn for the better. His wife was feeling better and was encouraged. She was reading Science and Health and was very hopeful. These people were not residents in the town, and I saw nothing more of them for some time. One day I met him on the street and asked how his wife was getting along. He said she was perfectly well, and that her trouble had so entirely disappeared that he had almost forgotten it.

A man with a bandaged hand came for treatment. He said that his thumb was cut through the leader. He did not lose a day's work, and in about a week, the hand was completely healed.

A case of stones in the bladder, which caused the patient to scream with pain, was healed in a short time after the doctors could do no more.

A case of extreme melancholia yielded to the joyous influence of Truth. A case of aggravated dysentery or bloody flux, several cases of typhoid fever, a sprained ankle, grip, and many other ills which may be considered of minor importance also yielded.

A lady wishing to visit the Exposition at Buffalo, and to take a trip at sea, feared to do so on account of car and sea sickness, as she had never been able to ride even a short distance in the cars without much distress. "Would a week's treatment do for the homeward as well as the outward journey?" she asked. I answered, "When Truth destroys a claim of error it is destroyed once for all." After a most enjoyable trip of five months, she came back resplendent, never having suffered a moment's uneasiness, and convinced that Christian Science is the Truth.

A man, looking old and unkempt, leaning heavily on a stout stick, dragging one leg along, and looking utterly forlorn and miserable with, as he said, Bright's disease and a wrenched hip, came for treatment. He lived out of town and wanted treatment then and also to be treated absently for a week or two or until he should write me to cease. After the first treatment he walked out to his carriage with very little help from his cane. As I heard nothing from him, I continued treatment for two weeks, then stopped.

Some months later there came a smart rap at the door, and upon the threshold stood a nice looking gentleman, in the prime of life, who entered so joyfully and so familiarly as to astonish me. Observing this, he said, "Why, don't you know me? Well, no wonder, for I hardly know myself. I am indeed a new man." Yes, it was my visitor of some time back, "transformed by the renewing of his mind." He said he had been quickly healed, but had been so busy making up for lost time in his business, as to have been unable sooner to write or come and tell me.

A case which has caused me more happiness than any other, perhaps, was one of moral depravity; wilful sin, avowedly and determinedly pursued, the details of which I do not feel at liberty to touch upon, not having obtained permission of the now reformed man. The mercy and goodness of God overwhelmed him at last, and he burst into a flood of repentant tears, declaring that from that time on he intended to lead a different life, and try to be the man that Christian Science taught him he could be in spite of past errors.

Testimonies.

Testimony of a Druggist.

"And wherefore do ye spend your money for that which is not bread? and your labor for that which satisfieth not?"

I have been thinking lately how applicable to my case were these words of the Prophet Isaiah. For fifteen years, as a druggist, I had been spending my money for that which was not bread and my labor for that which satisfied not.

For five years previous to the time of having my attention called to Christian Science, I was a prescriptionist in one of the largest retail drug stores in New York City. My wife, who had become a semi-invalid, had gradually during this time sunk into such a condition that all hope of her regaining even a fair state of health was relinquished. Never for a moment was she free from pain, and at times the pain became so excruciating as to require abnormal doses of morphine to give a modicum of relief. Every material means was resorted to by her physicians, but all their efforts were futile.

Two operations were performed, one at home and one at the hospital. After each operation she seemed to improve for a while, only to return, in a short time, to a worse condition, until at last all hope was abandoned and the family physician as a last resort decided on a heroic method of treatment, which included another operation, from which she might or might not be benefited, provided she had sufficient strength to stand the shock of the operation.

It is needless to say that she was furnished with the choicest, the purest, and the freshest drugs, compounded with all the skill and accuracy that loving hands could command.

A few days after another operation had been decided on, our elder child contracted scarlet fever in its severest form, which, from constant watchfulness, dread uncertainty, and anxiety on his mother's part left her in a state of almost utter collapse. Then we cried in our distress unto the Lord and He sent His word and healed us.

A few days after our child began to recover, a customer came in the store where I was employed and told me his wife had been healed of a similar disease by Christian Science. In the evening I communicated the facts as told me to my wife and she instantly decided to try Christian Science, not that she had any faith in its efficacy, but with a faint hope that she might receive some benefit, even if it were only temporary. Accordingly she sought a practitioner and received her first treatment Monday morning. In the evening when I returned from work I saw such a look of happiness, confidence, and peace that I seemed to understand, to recognize intuitively, that there was still left a balm in Gilead. By the second evening she had made such rapid progress that I was confident of her ultimate recovery, so much so that we emptied the contents of every bottle, box, and jar of medicine in the sink and destroyed every material appliance. In less than two weeks she was restored to perfect health and has never had any return of the trouble, although four years have passed.

My library of medical and pharmaceutical books, of about fifty volumes, was burned, and we began the study of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Within a month after beginning such study I was enabled to lay aside glasses, which I had worn for six years. The smoking habit was destroyed and many minor ailments disappeared.

Such a glorious light had dawned on my consciousness that the dispensing of drugs became distasteful, and I started, with what little knowledge I possessed, to look to God in prayer for deliverance. Patiently, confidently, faithfully, never doubting, day after day for two years I worked and prayed, trying to realize my position in Mind.

To-day I rejoice in a position with no element of error, with shorter working hours, larger salary, and greater opportunity than ever before. My heart is filled with love and gratitude to God through whom all these things have been made possible, and to our beloved Leader who, as His servant, has brought these things to present-day understanding.—G. S. T., New York, N. Y.

Gratitude for Slow Healing.

I wish to express my heartfelt gratitude for the slow healing of Christian Science in my own experience. I am confident that if my healing had been speedy, and entirely the work of another, I should have been satisfied with the loaves and fishes, the material sense of relief. Through "waiting for the redemption of the body" I grasped the understanding of the true idea of God, as universal Love and harmony, and I found, as Mrs. Eddy says in "Miscellaneous Writings," p. 169, that "With the understanding of Scripture-meanings, had come physical rejuvenation. The uplifting of spirit was the upbuilding of the body."

I was not willing to be patient. I resisted and rebelled, but through the struggle, I found that I must work and watch and pray. I gained sufficient understanding to watch and pray aright, working out my own salvation with fear and trembling, knowing that it was God (Good) working with me "to will and to do of His good pleasure." I was always a praying Christian, having joined the church when but ten years of age.

I have previously written about my twenty years of seemingly incurable invalidism, which resulted from a runaway accident, and baffled surgeons and physicians. About five years ago, shortly after hearing of Christian Science, our daughter was quickly healed of asthma after ten long years of suffering, and later my husband was healed, in four days, of a throat trouble, for which he had been under almost constant treatment in *materia medica*, for over thirty years. Consequently when I applied for treatment I anticipated an immediate recovery for myself, but it was not so to be.

The tenacious mental picture of error expressed a great fear; sensitiveness, impatience, the selfishness of long invalidism, and a dominating personality, were absolute facts to my consciousness, and only as the Truth dawned upon my consciousness was the body transformed by the renewing of the spirit.

It seemed impossible for me "to learn the art of letting go," but when, after years of struggling, I realized that underneath were the everlasting arms, ever-present, all powerful, and always willing, and that there was in reality nothing to fear, I was reminded of the story of the man who fell from a height on a very dark night. When falling he grasped a support, to which he clung in distress and anguish, fearing the result if his hold relaxed. At the dawning of day, he found that for hours he had been in agony, within six inches of the ground.

I am deeply grateful to the loving, loyal Scientists who so patiently and kindly helped me in my long struggle. Also to Mrs. Eddy, whose pure life and courageous convictions have made it possible for her to give to us a practical and demonstrable religion, which makes the Bible our guide to life eternal.—ANNAH BROOKS, Chicago, Ill.

Recovered from Effects of a Serious Injury.

On May 1, 1901, a foreman of the telephone line and his men were unloading a car of very large telephone poles. The foreman was cutting the last stake on the end of the car, and when it cracked, he started to run but was not quick enough; three large poles came down together, and broke the skid. The end of the three poles struck the foreman in the side, and crushed him between the end of the railroad ties, and the three large poles. The men

Digitized by Google

removed the poles, and asked, "Shall we take you to a hospital?" He said, "No, take me home," and soon became unconscious.

Some one summoned a doctor and he called another. The doctors examined him and found no bones broken, but the flesh was greatly bruised. A message was sent to his wife, who was away from home, and it took her two days to get home. During these two days the doctor kept him under the influence of chloroform most of the time.

When his wife arrived, she dismissed the doctor and nurse, and asked me to take the case. I took the case that afternoon at 4.15. At that time the man could not move a foot or toe. He could only move the arms and head, and was throwing the arms and rolling the head from one side to the other. I called again about 7 P.M. and he could draw both feet up, and looked bright and more cheerful. He continued to gain steadily. The doctor remarked to a man who rode up town with him, that the body was mashed to a jelly and that he would not get out inside of three months. But inside of ten days the doctor called to get the instruments he had left, and I was there and saw the patient walk to the dresser and get them for the doctor. I heard the doctor say, "I am surprised to see you up." In two weeks from the time I took the case he was out attending to his business.

I forgot to mention that he had a pair of cutting pliers in his hip pocket between the hip and the railroad tie. The force of the poles that fell on his body was so great as to cut those pliers through his thick clothing, and also cut the other way into the hip. The wound was soon healed.

I am very thankful for "Science and Health with Key to the Scriptures," whereby we may gain the understanding of Truth that will destroy error. I am trying to show my thankfulness by working for Truth.

C. N. BENNETT, Walla Walla, Wash.

Healed of Epilepsy.

It is with much joy and gratitude that I give my testimony of the good that I have received through Christian Science. For six years I suffered with the most terrible spells any one could imagine. I do not know whether to call them epileptic fits or not, as the doctors never told me what was the matter, only that it was very much like epilepsy. The last spell I had while under medical treatment, my mother sent for our family physician, and he said it was just as impossible for me to live without medicine as it was for him to live without food; that I would have to take medicine always to keep these spells off. I had given up all hope of ever being well again, as the spells were growing worse all the time.

While in this condition I came to Mobile and told a friend of my suffering. She said if I would try Christian Science treatment she thought I would be benefited. The next week I began to take treatment, and at once commenced to improve. I felt that I was to be healed; but after taking treatment two weeks I had two of the most severe spells I had ever experienced. Those present thought I would never regain consciousness and wanted to send for a physician, but my husband came in about that time and told them it was not necessary, he would telephone for my healer. He could not get a message to my healer that night, but we sent for him the next day to come to see me.

These spells coming on two weeks after I began treatment did not discourage me in the least, nor did it discourage my husband, for he said if there was a cure for me I must have it. We were both convinced there was no cure unless God did it. Now I am well and doing my own housework and cooking, something I had not done since I was married. Because of my ill health we have boarded until since I have my health, and I know that God was my physician.

I wish to advise those who are not healed instantaneously, not to become discouraged if they do not seem to improve at the beginning, for God is our strength and salvation, and will save us from our sufferings if we only will trust Him. To-day I am in perfect health.

MRS. J. C. CUTTS, Mobile, Ala.

Grateful for Christian Science.

Through the understanding of Truth my life was changed from one of suffering to one of health and peace and joy. It is about ten years since I first heard of Christian Science, but I did not give it any attention until four years ago. At that time I was suffering with one of my limbs, which had troubled me for fifteen years, ever since the birth of our first child. It seems that I had had about all the aches and pains that one could have during that period of time. I was treated by several physicians, went through many operations, and suffered intense agony with different diseases. The doctors had about all given up my case, and as for myself, I, too, had nearly given up all hope of being free from pain, and all seemed dark.

I had asked God many times to make me well, and often wondered why He did not answer my prayer. I would say many times, What have I ever done, that I should suffer so much pain? I was brought up by Methodist parents and taught to love God, but I could not understand why a true father should have His children suffer as I did. But the light came at last, and all is made plain. It came through my brother, who is a Christian Scientist, and I thank him for this blessed Truth. I am thankful to our beloved Leader, and also to the many others who have helped me to know the goodness of God. My heart is full of love and pity for suffering humanity.

In reading "Science and Health with Key to the Scriptures," I feel I understand God as I never did before. I have taken the *Sentinel* since March last and like to read it, it is all so good. I have taken the *Journal* for a year.

I have two children and I am glad to say that they are trying to live the way that Christian Science teaches them. There has been no sickness in our family since we have known the Truth.—MRS. E. E. MURPHY, Philadelphia, N. Y.

In talking with a friend on the subject of Christian Science, a subject that we had often discussed before, my friend remarked, "I would give a great deal to possess a religion that I was so perfectly satisfied with and sure of, as you are with Christian Science." This thought made me realize more than ever how much this fact of assurance is to be thankful for. Even in the beginning of my understanding of Christian Science, when I could demonstrate but little, and knew almost nothing of how to live it, still I had the positive assurance that it was Truth.

I have had many demonstrations, but I am not one who has entirely overcome physical beliefs, yet I know that by being faithful over the few things I shall some day be ruler over many things.

I greatly appreciate the *Journal* and *Sentinel*. I am very thankful to Mrs. Eddy and all who have helped me to know this blessed Truth.—E. H. P., Abingdon, Ill.

I was suffering from inflammatory rheumatism, and in great pain. My right hand was badly swollen, and I had not had the use of it for seven weeks. After trying medicine and finding no help, I was brought into the Light by a dear friend who sent for a Christian Science healer. After the first treatment I was relieved. I have been healed of many of my other complaints.

I am very thankful for what Truth has done for me.

AMANDA BEADLES, Lebanon, Ind.

Religious Items.

Rev. Dr. Worcester writing upon Isaiah, 10:21, "The remnant shall return, even the remnant of Jacob, unto the mighty God," says in the *Church Standard*:—

"The saddest fate that can overtake any people is to have no Remnant, no steadfast hearts set upon righteousness, no strong minds that refuse to be carried away by the idle affirmations, the foolish beliefs, the fanaticism of the multitude. A nation that is in such a case is dead already. When the blind lead the blind both fall into the ditch. . . . Thank God, we are not without our Remnant. The bitterest censor of this country's manners and morals can hardly pretend that the vice, dishonesty, and incompetence exhibited in the administration of our great cities are a fair index of the intelligence and character of the people who live in those cities. In no city of the world, I firmly believe, is there more private virtue than in Philadelphia. Scarcely anywhere is there more public depravity. In very few cities in the world are there more numerous or more admirable institutions of learning than we possess. What is the reason that these institutions exercise such a pitifully slight influence on the moral and intellectual life of the community? Is it not because our Remnant has taken the view of its duties and responsibilities advocated by Plato, and not the view of Isaiah and of Jesus Christ,—that the Remnant to be of any value must be a saving Remnant, a holy seed? Ye are the light of the world. Ye are the salt of the earth. A city that is set on a hill cannot be hid. Neither do men light a candle and place it under a bushel, but on a candlestick that it may give light to them that are within the house. Or let us ask: 'Can a man be said really to love wisdom or to love righteousness who is not consumed with desire to communicate his truth to others, and to make others good?' A physician who thus concealed an important discovery would be regarded almost as a criminal. So long as the Remnant of which I have been speaking is content to hide behind its wall, to discuss saving truth within closed doors, to regard its fellow-men as wild beasts who may well be left in iniquity provided t be left in peace—it remains an impotent Remnant. Its truths are academical (a word derived from Plato). Its very virtue is Pharisaic. It is only when truth is working among the people, when it is springing like leaven from mind to mind, that it becomes great."

Horatio Stebbins, in the *Christian Register*, thus speaks of the Fatherhood of God:—

"A writer in the *Register* of the 7th of November over the signature of 'Orthodox Minister,' after paying cordial and appreciative respect to Dr. Ecob's 'brave and comforting words' about 'the Fatherhood of God,' is perplexed with the idea of making our conception of human fatherhood an illustration of the divine Fatherhood. The difficulty in the mind of 'Orthodox Minister' raises a very important question, which is really at the foundation of human progress: Is there any relation of kindred, likeness, or heredity between man and God? Is man's nature the key to God's nature? How does it happen that we cannot think of God or speak of Him except under some human similitude? And how is it that, when we speak of justice, truth, and love, we know what we mean, and refer them to that infinite perfection and moral beauty that admit us to the perfect Mind?

"The world is just beginning to feel and take to heart this principle of the unity and universality of human nature as the bond of union and the pledge of the progress of mankind. This permanent and everlasting quality is the condition of growth, life, and immortality. God's nature is eternally the same, and man's nature is like. The great action of history is to unfold this idea and express it to the mind and heart of man. If God is the fountain of all goodness, the inspirer of true and pure affections, the source of all intelligence, there is nothing of so great moment to the race as the conception of His being and character. And, without exaggeration, it may be said that a true apprehension of the relation of man and God is the turning-point in the history of the world; and this knowledge of God comes through man, and the ancient prophet pays divine honor to our nature when he asks and answers the question, 'What is man that thou art mindful of him? and the son of man that thou visitest him? Thou hast made him but little lower than God, and crownest him with glory and honor.' The recognition of this is the dawn of a new dayspring."

That the Christian Church is commanding the attention and service of the men of affairs, is a most encouraging sign. Men of great wealth and vast cares are more and more giving time to real Church work. Various motives are assigned for this interest in religion, but the real motive is often overlooked. There is "nothing in it" for these men, in a worldly sense, in running the petty details of a Sunday School, or in looking after the trifling expenses of the church building. The average man would think, under the same circumstances, he would spend his time differently. But those in business to-day recognize the need of the vital element of character; they see that there are schools enough to train the mind and the hand, but back of the trained mind and hand must be a trained moral nature if the best results would be secured, and business men are recognizing the value of the church, not as a future insurance office, but as the one institution devoted to the development of Christian character, and they are saying that the welfare of the present demands that we equip this institution with means and workers so it can do efficient service. The Church, the product of the ages, is the most vital element in the life of to-day.—*The Universalist Leader.*

Power is unseen. The blacksmith wields the heavy hammer—with his brawny arm? Yes, but the power of the arm is unseen. We only see the result of power. Yonder railroad engine may emit smoke and make much noise, and those great wheels will soon be running sixty miles an hour. But the power is unseen. Surely the power of steam is not the escaping smoke.

The trolley wire is a useless thing, unless the unseen power runs through it. Spiritual life cannot be handled, seen, and understood; but neither can the life hidden in the wire.

Why do men demand more in spiritual things than in natural things?

"Show me God," cries the sceptic. "Show me eternal life," says the doubter. "I cannot believe what I cannot understand."

Imagine either about to enter a trolley car, and suddenly saying: "I will not accept what I cannot understand. Show me the power; let me take it in my hands and examine it!" But power is hidden, and the higher up the scale we go, the more completely hidden we find it, until we trace it to God, and then we find that "it is the glory of God to conceal a thing."

The Examiner.

No Sense in It.—In one family where Phillips Brooks sometimes visited, the four children loved to gather around him, the younger two on his knees, and the older two leaning one on each shoulder. He would enter into all their childish affairs apparently with no less interest than was shown by the children. On one occasion a little girl, perhaps twelve years old, was telling him of some childish grievance, and concluded her story with the words, "It made me real cross."

"Cross!" exclaimed the bishop; "why, Carrie! I didn't suppose you were ever cross."

"Wouldn't you be cross," replied the child, "if anybody had treated you so?"

"I don't know whether I would or not," said the bishop; "perhaps I should if it would do any good. Did it make you feel any better?"

"No," said the girl.

"Did it make you feel any better?"

"No," came the answer again, hesitatingly.

"Then," answered the bishop, "I don't see any sense in being cross, and wouldn't be again, if I were you."

The Christian Advocate.

We all know that one of the conditions of growth is activity. Tie your arm to your side so that you can no longer exercise it, and it will not be long before it will be paralyzed and useless. Use it, and the muscle is developed and strengthened. The perfect standard is held up before us in the life and character of Jesus Christ. We are commanded to put on the Lord Jesus. Our desire and aim should not be so much to imitate him as to appropriate him. Let his purpose be our purpose; let his mission be our mission; let his disposition be our disposition; let his mind be in us and his spirit permeate our being and control all our actions. Then we shall not be so much troubled about imitating him, for the transformation will be wrought within us, and the glorious end of redemption will be realized, complete conformity to the image of His dear Son. "It doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is." This is all we want to know now.—*The Standard.*

All that God desires is to give you His great love, so that it may dwell in you, and be the principle of your life and service; and all that withstands God's desire and His gift is the want of room for it, and for its free movement, when that room is taken up with yourselves and your little personal interest.—William Bernard Ullathorne.

Let this be thy whole endeavor, this thy prayer, this thy desire,—that thou mayest be stripped of all selfishness, and with entire simplicity follow Jesus only.

Thomas a Kempis.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half do. en; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9 00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Rex vs. Lewis.

We publish in this number of the *Sentinel* the very interesting case of Rex *vs.* Lewis, tried in the High Court of Justice, etc., at Toronto, Canada. The case is of such general interest to Christian Scientists, as well as others, that we feel warranted in giving a somewhat full account of it, even at the expense of giving over to it almost this entire issue.

It is important:—

1. In that it involves the interesting question as to whether medicine and medical attendance in cases of children and other irresponsible persons is, in legal contemplation, a "necessary."

2. In that many remarkable cases of healing through Christian Science Prayer, without medicines, were testified to in Court under the solemnity of an oath.

3. In that Christian Scientists effectually proved that, to them, medicine was not a "necessary."

4. In that Christian Science had a hearing, upon the question of healing, before a court and jury, such as it has not heretofore had in any court in Canada.

The case attracted much attention in Canada, and we are told that it did the Cause great good.

National.

The report of the Schley Court of Inquiry was made public December 13. There are practically two reports. On many points the Court were agreed, while on others Admiral Dewey stands alone. On these points Admiral Dewey submitted a supplementary report.

The Court held that Schley did not go with all haste to Santiago and that his conduct prior to June 1, was characterized by vacillation, dilatoriness, and lack of enterprise. His coal reports were misleading and the famous loop should not have been made.

In regard to personal bravery, the Court held that during the battle of July 3, Schley was self-possessed, and encouraged the officers and men to fight courageously.

Rear Admirals Benham and Ramsay agree that Schley did not proceed with all possible speed to Cienfuegos from Key West, and that he did not proceed to Santiago as rapidly as possible.

On these points Admiral Dewey holds that the passage from Key West to Cienfuegos was made with all possible dispatch, in view of the importance of saving coal. The passage from Cienfuegos to Santiago was made as quickly as possible, while keeping the squadron as a unit. Admiral Dewey also holds that the blockade of Santiago was effective and that Schley is entitled to all the credit of the battle of July 3, as he was the senior officer in command.

The only comment Rear Admiral Schley would make after hearing a synopsis of the two reports was: "My honor has been vindicated and I am satisfied with the decision of the Court."

The director of the United States mint reports that during the year ending June 30, 1901, there were coined 176,999,132 pieces, the value of which was $134,340,781. Of this amount upwards of $99,00,000 was in gold and the rest in silver dollars and fractional silver. There were also coined at the Philadelphia mint 225,000 gold pieces valued at $349,014 for the government of Costa Rica. The amount of subsidiary coin in the country is limited by law to $100,000,000. This amount is deemed insufficient for the needs of business, and the report suggests that the limit be raised to at least $120,000,000.

It is reported in Washington that Secretary Hay will send a communication to Congress asking authority for the employment of ten students of American birth and education for instruction at the Pekin legation. These students will be paid a salary of one thousand dollars a year while being trained in the Chinese language, and after becoming proficient will be assigned to duty as interpreters in place of the Chinese who have been serving in this capacity.

A bill has been introduced in the House which provides for "the McKinley National Park and Forest Reserve," to consist of four million acres of timber land in Tennessee, West Virginia, Virginia, North Carolina, South Carolina, Georgia, and Alabama. The cost of creating the park is estimated at ten million dollars.

The movement in favor of changing the date for inaugurating the President seems to be steadily gaining in favor. Senator Burrows of Michigan has introduced a bill substituting the last Thursday in April as inauguration day.

December 10 Senator Morgan introduced a bill providing for the construction of the Nicaragua Canal. The bill provides an extra appropriation of one hundred and eighty million dollars, of which five million dollars is made immediately available.

The Government has received thirty thousand dollars from Great Britain in full payment of the claims of certain American citizens who claim to have been improperly expelled from South Africa during the Boer war.

The United States public debt, as represented by interest bearing bonds, has decreased about $39,000,000 since July 1, the beginning of the fiscal year.

Foreign.

Dr. Fernando Sanchez, Nicaraguan, Minister of Foreign Affairs, and William L. Merry, United States Minister to Nicaragua, Salvador, and Costa Rica, signed a treaty on November 9, by which Nicaragua agrees to lease to the United States perpetually a section of territory six miles wide which includes the route of the Nicaraguan Canal.

New South Wales has passed a law which compels the reference of all disputes between employers and employees to a competent court which has power to enforce its orders. The court will be presided over by a judge of the Supreme Court and will have most extensive powers. From the decision of this court there is no appeal.

A woman's Peace League has been organized at Manila under the leadership of a Filipino. With the permission of General Chaffee, the League has sent letters urging peace to the prominent Filipino chiefs.

Lord Kitchener has personally taken the field and is directing the movements of the British troops in South Africa. It is stated that he is badly in need of twenty-five thousand additional men.

The second annual report of the Commissioner of the Interior for Porto Rico shows that good progress is being made in the public works, agriculture, and mining.

Two German newspapers, the *National Zeitung* and the *Cologne Gazette*, have been barred from South Africa by the British censor.

Paul Kruger has taken possession of his new residence at Utrecht, Holland.

King Edward has definitely fixed June 26, 1902, as the date for his coronation.

Industrial and Commercial.

The Pennsylvania Railroad will construct a tunnel under the East River, Manhattan Island, and the North River. By means of this underground connection trains can be run from Jersey City to the Long Island Railroad station in Long Island City. The Pennsylvania and Long Island Railroads are expecting to build a great underground station in New York City. It is estimated that the necessary land will cost upwards of eight million dollars. The tunnel line will be operated by electricity and through trains will be run to the east end of Long Island to connect with a line of steamers starting from that point. In this way the ocean voyage to Europe will be shortened nearly a day.

The annual meeting of the American Association of Beet-Sugar Manufacturers was held in Washington last week. The Association is strongly opposed to any reduction of the tariff on sugar imported from Cuba.

The Lake Shore Electric Railway was opened December 9. It is the longest electric railway in the world. It extends from Painesville, O., via Cleveland, Toledo, and Detroit, to Port Huron, Mich.

John I. Sabin, president of the Chicago Telephone Company, predicts that within the next two years one hundred thousand telephones will be in use in the city of Chicago.

The Indian Territory Illuminating Oil Company has been incorporated at Trenton, N. J., with a capital of three million dollars.

General.

The William McKinley National Memorial Arch Association has given up its contemplated appeal to the country for popular contributions for the memorial arch in Washington, and will endeavor to secure from Congress an appropriation sufficient to erect in Washington a memorial which shall represent the nation's appreciation of the character and services of the late President. The special reason for taking this step was to avoid any conflict with the Canton McKinley Monument movement, which is endeavoring by popular subscriptions to raise a fund sufficient to erect a suitable monument in Canton, O. It is stated that both associations will unite in the effort to secure the appropriation from Congress.

Andrew Carnegie has offered to give to the United States ten million dollars in trust, for the establishment in Washington of a national university for research and post-graduate study. Congress will be expected to provide for its maintenance, as in the case of the Smithsonian Institution. Mr. Carnegie's object is to carry out the idea of George Washington that there should be a national university located in Washington. Mr. Carnegie also asks that the Government collections of scientific material shall be made available for the purposes of this university.

Cornelius Vanderbilt recently delivered a lecture in Boston on "The Development of Locomotive Boilers." The lecture was about an hour in length and was illustrated by stereopticon views. Mr. Vanderbilt is a practical machinist and is thoroughly acquainted with the locomotive. He has many inventions to his credit which have greatly improved the locomotive.

The Red Cross Society held its annual meeting at Washington, D. C., on December 11. Miss Clara Barton, who for thirty years has been president of the society, was unanimously re-elected. The treasurer's report showed that the receipts for the year amounted to $5,210, and expenditures to $3,699. Plans were discussed for the extension of the society by means of State auxiliaries.

The annual meeting of the American Friends' Peace Conference was held last week in Philadelphia. The purpose of the conference was mainly to protest against war and to foster plans tending to a realization of universal peace.

Mrs. Jane L. Stanford has transferred to Leland Stanford, Jr. University property worth about thirty million dollars. The gift includes eighteen million dollars in stocks and bonds and about one million acres of real estate valued at twelve million dollars.

The guests who were entertained last summer by Sir Thomas Lipton on the yacht Erin have sent him a silver punch bowl and tray as a Christmas present.

The William McKinley Memorial chapel, the first in the country named in honor of the late President, was opened at Wilkesbarre, Pa., on December 8.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Rex vs. Lewis.

THE above is the title of a case recently tried at Toronto, Canada, in the High Court of Justice at the Sittings of Oyer and Terminer and General Gaol Delivery for the County of York.

It seems the defendant, James H. Lewis, was indicted for manslaughter in this court, hence this trial. In order to give a fair idea of the case and the question involved we quote Section 210 of the Criminal Code, under which Mr. Lewis was indicted:—

"Every one who as parent, guardian or head of a family is under a legal duty to provide necessaries for any child under the age of sixteen years is criminally responsible for omitting, without lawful excuse, to do so while such child remains a member of his or her household, whether such child is helpless or not, if the death of such child is caused, or if his life is endangered or his health is or is likely to be permanently injured, by such omission."

We also quote the body of the indictment against Mr. Lewis:—

"The Jurors for our Lord the King present that James Henry Lewis at the City of Toronto in the County of York in the month of August, in the year of our Lord One thousand nine hundred and one being the parent of a certain child named Roy Lewis and being as such parent, under a legal duty to provide necessaries for the said Roy Lewis his child, then under the age of sixteen years and a member of the household of him the said James Henry Lewis did then and there unlawfully and without lawful excuse omit to provide necessary medical treatment, medicines, and assistance and other necessaries for the said Roy Lewis, his child, Whereby the death of said Roy Lewis his child was caused at the said City of Toronto on the thirteenth day of August in the year aforesaid.

"And so the Jurors aforesaid do say that the said James Henry Lewis at the City of Toronto aforesaid on the day and year last aforesaid in manner aforesaid, did unlawfully commit the indictable offence of Manslaughter contrary to the Criminal Code."

It is not our purpose to publish a full history of the case, but the following extracts from the daily papers of Toronto furnish, as we believe, a fairly correct account of the trial. From the Toronto *Daily Star* of November 2 we quote the following:—

Crown Attorney Guthrie clearly reviewed the case, and in brief said: "The prisoner stands charged with manslaughter, under circumstances which are pathetic. He is the father of a child who died on the 13th of August. The Crown asks but a nominal punishment, as there was no charge against the prisoner morally. But the law must be enforced. In manslaughter, Mr. Guthrie explained, his Lordship has power to impose a light fine or slight imprisonment. The Crown's contention is that it is the duty of the father to provide medical treatment for the child, as he was able to do so financially. The fact that he was a Christian Scientist need not enter into the case. A man's religion in this country is his own, and he can believe what he likes or believe nothing. It's no man's business, and it's no crime, but when he steps over the line and the law is broken, religion or no religion, you are liable."

Mr. Guthrie drew attention to the three heads upon which the case was to be tried: Did the prisoner provide proper treatment; was he able to; was death caused by neglect?

Mrs. Lewis was the first witness called. Mr. Vickers objected to the calling of Mrs. Lewis, and argued that a wife is not a compellable witness. The objection was overruled, but the Chief Justice stated that Mrs. Lewis need not repeat anything told her by her husband.

Mrs. Lewis told the story of the lad's sickness, and said he was six years and seven months old. He made no complaint about his throat during the first stage of the illness. Her husband, she said, earned about nine dollars a week. He did not summon any doctor during the child's illness, nor did he give him any medical treatment or medicine of any kind.

"Did any one give him any medical treatment?" asked Mr. Guthrie.

"The Christian Science treatment."

"Well, I am not going into that. I mean medical treatment," replied the Crown prosecutor.

"Have you ever had deaths in your family before?"

"Yes."

"Did you have medical treatment?"

"Yes."

"Was the position such that if you had been of any other faith than Christian Science you would have called a doctor?"

"Yes."

"Then you thought him sick all right?"

"Yes."

Mr. Guthrie questioned Mrs. Lewis as to the condition of the boy's throat, when Mr. Vickers objected. "This is a trial for manslaughter, my Lord, and the question of what Mrs. Lewis saw in the boy's throat has nothing to do with it."

The objection was overruled.

Mrs. Lewis stated that the authorities were not notified that the child was ill, and that persons went in and out from the bedside freely.

In cross-examination Mrs. Lewis stated that she did not report the disease as a contagious one, but thought it was mumps. Had she known it was diphtheria she would have notified the authorities, consented to isolation, and obeyed the law in every respect. There was nothing lacking in the ordinary meaning of necessaries. She did not know that the law required medicine and medical attendance. She had a number of children, and the swelling in the child's throat, to her mind, did not indicate at first anything worse than a severe cold.

When her two other children died she had a doctor in attendance.

"Did their medicine do any good?" asked the counsel for defence.

"No."

"Do you believe in prayer?" asked Mr. Vickers.

"Yes."

"Do you believe that it will heal the sick?"

"Yes."

"I think, your Lordship, that it would be well to leave matters of Christian Science out," said Mr. Guthrie.

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

His Lordship said that he did not see how Christian Science could throw much light on it.

Two questions more were allowed, however.

"What do you understand by prayer? How do you pray?"

"You commune silently with God, with full faith and understanding of His willingness and ability to heal sickness of every kind."

Dr. Carveth, Dr. Johnson, Dr. Sheard, and Dr. Cotton were also introduced and examined as witnesses on behalf of the Crown.

One of the physicians being asked, "Do you not think that prayer could effect a cure in the case of illness?" replied, "I would not take chances on it." The question being pressed, the witness appealed to the Chief Justice, who said, "I will not compel the physician to answer questions about the soul; it is not within his domain at all."

At the conclusion of the evidence for the Crown, Mr. W. W. Vickers, counsel for the defendant, moved for the withdrawal of the case from the jury. From the *Daily Star* of November 4, we quote the following:—

Chief Justice Falconbridge refused the request of Mr. Vickers, and would not withdraw the case from the jury. Mr. Vickers argued that "medicine" was not included in the section compelling parents to procure necessaries for their children. The Chief Justice stated it was quite clear from an English court tribunal ruling, in which Chief Justice Russell was among the judges presiding, that it does not make any difference whether medicines or medical aid is stated in the statutes or not; as interpreted by them medicine was a necessity.

The case was then adjourned until the following Monday. On the following Monday, November 4, 1901, the trial was resumed.

Mr. Vickers then renewed the motion that the case be withdrawn. He said: "I have evidence that Christian Science healing is going on every day, and that prayer, as understood in Christian Science, heals the sick, and therefore I say that medicine is not necessary. There are so many well-founded cases on record that the jury should know of it."

By permission of the Chief Justice, Mr. Vickers then outlined his defence to the jury. He said in part:—

"In this case you have a system of religion, which includes a system of healing. This system of religion or healing, whichever you call it, is called Christian Science. Christian Science was founded by Mrs. Mary Baker Eddy in 1866, who was at that time healed of an incurable disease, and was then said to be on her deathbed. Mrs. Eddy discovered this healing through pondering on the Bible, and she tells us through her book, Science and Health, that every one is a creature of a perfect God, and if God is perfect He can create no imperfect work, and if God created man He created man perfect, and not subject to sin, sickness, or death.

"These are the leading features of Christian Science, and it is to-day a body with over one million adherents, with over five hundred churches. There are over one million well-attested cases of healing through the application of prayer, for we say that God is all-powerful. Our prayer to that God is that He will heal the sick, and He has healed over one million persons through Christian Science. There is nothing in Christian Science that is contrary to law and good order. The church in its tenets points man to God alone, who is the ruler of all.

"Christian Science has come through its first stage and has been persecuted from post to pillar, as is true of every sect or system which has healing for a foundation stone.

"The tenets of the Church are that the Scriptures are taken as the guide."

Mr. Vickers then read the Church Tenets of the Mother Church, and continued:—

"These are the tenets of the church which has startled the world by the rapidity of its growth. There are now three churches in Toronto, two in Montreal, two in Winnipeg, and one in Kingston; also churches in Hamilton, Berlin, Guelph, Peterboro', Port Hope.

"If we are God's creatures, God can heal the sick, and the line of my defence is that God is a present and ready help, and we prove our case by the works of Christian Science. If you jurors find that the defendant was guilty in neglecting to bring in medical aid, you put God out of His place. God is Love, and heals the sick.

"If it is admitted that prayer in the Church will not heal the sick, as well as the sinful, the clergymen had better go out of business. We claim that men, women, and children have been healed by Christian Science, and that Christian Science is different from any other religion since the time of Jesus, in so far that sickness and sin are traced to a common mental origin."

Mr. Vickers was permitted by the Court to introduce witnesses who were Christian Scientists to testify as to the healing of disease through prayer. Mr. Lewis, the defendant, was the first witness introduced.

"What did you do for this child when you discovered he was sick?"

"I sent for a Christian Scientist."

"What had you done yourself to take care of the child?"

"We had taken all the precautions possible, such as food, clothes, warmth, or anything that would be done if medical attendance were called in, for we had had experience with doctors twice previous to this."

"Was it a happy experience?"

"No."

"They did not heal the children?"

"They failed in each case."

"You did not know that this child was in a serious condition?"

"No."

"If you had known it was a contagious disease would you have called a doctor?"

"Yes."

"To obey the law?"

"Yes."

"Have you any objection to reporting a case of contagious disease?"

"No, sir."

"You desire to keep the law in every respect?"

"Yes."

"Have you ever been healed by Christian Science?"

"I object to that question, your Lordship," said Crown Prosecutor Guthrie.

"The question cannot be well excluded," replied the court.

"I repeat," said Mr. Vickers, "have you ever been healed by Christian Science?"

"Yes, I was healed of catarrh."

"No medicine used?"

"No."

"Have you ever been healed of anything else?"

"Yes."

"What?"

"Grip."

"No medicine used?"

"No."

"When have you used medicine last?"

"Not in over seven years."

"In seven years no medicine of any description?"

"None."

"Any member of your family ever been healed?"

"Yes, the child who recently passed out was healed by Christian Science treatment."

"Do you know what the disease was?"

"No; I could not be certain about the disease, but for several days he lay in a kind of stupor and could hardly breathe."

Digitized by Google

"He recovered?"

"Yes, and never had medicine again up till the time of his death."

"Any other cases?"

"Yes, the child we have was doctoring almost all the time, and he has never used medicine since the Christian Science treatment was adopted."

"Are you healthy?"

"Yes."

"Is your wife healthy?"

"Yes."

"Have you any other children?"

"Yes."

"Healthy?"

"Yes."

"Never had medicine?"

"No."

"You are a member of the Christian Science Church. Now what is the order of service?"

"Reading the Bible."

"Any other book?"

"Science and Health."

"Are there any other selections?"

"No."

"Are there any preachers?"

"No."

"What are they called?"

"Readers."

"Do they expound any doctrine?"

"No."

"Have you known people to be healed at the service?"

"No; I have heard of it."

"You have seen people who have been healed by Christian Science?"

"Yes."

"Now, in this case did you think that medical aid was necessary?"

"No; he had often been sicker looking."

"Had the swelling gone down?"

"Yes, and I felt thankful to see the child so much better looking."

"Do you know what the child died of?"

"I cannot tell whether it was mumps, or measles, or what it was."

The cross-examination was conducted by Crown Prosecutor Guthrie.

"You felt a good deal of alarm about the child on Thursday?"

"No."

"Didn't you on Thursday?"

"Well, I always felt a good deal of alarm if the child was sick at any time."

"Now, on Thursday, would you not have called in a doctor if you had not been a Christian Scientist?"

"Well, I don't know."

"If you had not been a Christian Scientist would you not have called in a doctor earlier in the disease?"

"No."

"Well, why did you call in a Christian Scientist on Thursday, for don't you remember your evidence before the coroner that you were uneasy on Thursday about the child?"

"Well, I would not have called a doctor in any way until Thursday."

"Would you have gone for a doctor if you had been of any other faith?"

"I don't know that I would."

"Do you believe the child understood Christian Science?"

"Well, he knew enough to ask me to read to him."

The next witness was Mr. James Paul of 124 Palmerston Avenue, a builder. He had been a Christian Scientist for twelve years, and both he and his wife, as well as their children, have been cured by prayer.

"Did you ever have a case of diphtheria in your family cured by Christian Science?"

"Yes. One night about twelve years ago my little girl became delirious during the night, and I saw that she had diphtheria, for I had been four weeks in attendance upon them and the children who had diphtheria. A demonstrator was called in, and after she had prayed I lay all night and watched the child. In the morning she awoke perfectly well. I am sure it was diphtheria. I know it because I had it myself. I was cured by medicine. This was before my child had been cured by Christian Science."

"Do you use medicine yourself?" asked Mr. Vickers.

"I have not used medicine for twelve years. I was cured of sciatica by Christian Science, and my wife, who was a helpless invalid and had been given up by all the eminent doctors of the city, was also entirely cured by Christian Science."

"What was she suffering from?"

"Well, every doctor told me a different complaint."

Under cross-examination, Mr. Paul stuck to his belief that the child was suffering from diphtheria.

"Did you examine the child's throat for microbes, as Dr. Moorehouse did when he attended your three children?"

"I don't know anything about microbes," replied Paul. "I think that is some new arrangement they have got up lately."

The following is reported by the *Daily Star*:—

During an intermission before the next witness, Miss King, was called, Mr. Vickers said he wanted to thank the press for the fair way in which the case had been reported.

"I am not trying to cover up the issues in this case in technicalities," he said. "If this is the law we want to know it. Christian Scientists will abide by the law in every detail, for they are law-abiding citizens. Prayer is the sum-total of Christian Science, and we want this spread abroad. This case will do much to dissipate erroneous views of the teachings of Christian Science."

Miss King, a slender, dark-eyed young woman in a veiled hat, was not allowed to testify regarding her cure of diphtheria.

Mr. Guthrie objected to Miss King's testimony unless it could be proven that the circumstances of her recovery were known to the prisoner. His Lordship upheld the Crown prosecutor, and as Lewis acknowledged that he had not heard of Miss King's case, she had to retire.

"I am allowing you all the latitude possible in this regard," said his Lordship.

Mrs. McHenry, of 200 Gladstone Avenue, the next witness, said that three years ago her grandchild, who was suffering from acute consumption, had been cured by Christian Science after Drs. Bowie and Ferguson had given him up.

"They said he had only a few hours to live," said Mrs. McHenry, "and we were advised to call in Mr. Perry, a demonstrator. We did so, and the child recovered entirely and is now healthy. He has never taken a bit of medicine. I do not consider medicine a necessity, though I am not a Christian Scientist. I have been cured myself, and so were my son-in-law and his wife."

"By Christian Science without medicine?"

"Yes."

After Mrs. McHenry had retired, Mr. Guthrie asked that her evidence be stricken out, on the ground that Mr. Lewis did not know of it before his child died.

Mr. Lewis said that he did know of the case before his child died, and he was placed in the box to be cross-examined regarding the list of cures Mr. Vickers had. He remembered most of the names, but could not in every case give the details of the complaint. He, however, recalled Miss King's case.

Digitized by Google

"Is there any prohibition by the doctrines of your faith of the employment of doctors or the use of drugs?"

"There is none."

Miss King was then recalled. She is a daughter of Mr. J. D. King of J. D. King & Co. She said that while she was at college in Elmira, N. Y., she had been entirely cured of diphtheria by absent treatment. She had also been cured of tonsilitis twice, gathering in her head twice, and also twice of grip.

"Since I have known about it, Christian Science has met all and every illness," said Miss King. "Before I entered Science I had a weak throat, but my throat is now strong. I was also subject to bilious attacks, but all these have disappeared."

Miss Norah K. Jackson was the first witness at Monday afternoon's session of the trial of Mr. James H. Lewis for manslaughter in the Christian Science case. There was the same large attendance of ladies and the same keen interest shown. The evidence in part was:—

"Miss Jackson, you are a daughter of Mr. M. B. Jackson, registrar at Osgoode Hall?"

"Yes."

"How long have you been interested in Christian Science?"

"I was healed nine years ago this month."

"Of what were you healed?"

"I was healed from paralysis that comes from excessive piano playing."

Chief Justice Falconbridge—"Something like writer's cramp?"

"Yes."

"You were studying in Germany and had to stop your work?"

"I was seven months in Germany without being able to play the piano at all."

"You went to Germany to study?"

"Yes."

"Did you try medical aid?"

"Yes, I tried Dr. Carl Pearce of Leipsic, a famous specialist."

"What did he tell you?"

"He told me he did not think that I would be able to play again."

"Did you then return home?"

"I waited seven months."

"Were you then under treatment?"

"No, I was not under treatment, as he said there was nothing to benefit me."

"You returned home seven months after interviewing Dr. Pearce?"

"Yes, I came home and tried Dr. A. J. Johnson and Dr. Oliphant."

"What did they say?"

"Dr Johnson said rest, Dr. Oliphant gave me homœpathic treatment."

"When did you try Christian Science treatment?"

"I came home in March, and heard of Christian Science in November."

"Well, what happened?"

"I recovered the use of the arm, and before that I may say that I could not even hold anything in my hand."

"Yes, and you were fully recovered? Did you take medicine, or was there any rubbing or handling of the parts?"

"No."

"And have you been well?"

"Yes, and I have recovered from a throat trouble."

Miss Jackson then told the court of a throat trouble for which she consulted German specialists. She tried Christian Science, and recovered the use of her throat at the same time that the trouble was overcome in her hand.

"Do you consider medicine necessary?"

"No; I believe prayer is much more efficacious, and I believe that medicine is injurious."

Cross-examined by Crown Prosecutor Guthrie, Miss Jackson admitted that she did not take Dr. Johnson's advice and rest, but went to Dr. Oliphant.

Robert Ruckbie followed Miss Jackson.

"What is your occupation?"

"Clerk."

"How long have you been interested in Christian Science?"

"About nine years."

"How long have you lived without doctors or medicine?"

"That entire time."

"How has been your health since you took the Christian Science treatment?"

"Well."

"Have you ever felt the necessity of taking medicine?"

"No, not for medicine since I took the treatment."

"Have you ever been healed with Christian Science?"

"Yes, I was healed of quinsy."

"Anything else?"

"Colds and such like that would occur in a family."

"Do you use medicine in your family for your wife and children?"

"No, sir."

"Have they been healed by Christian Science treatment?"

"Yes."

"Of what?"

"The usual family complaints."

"What is the Christian Science treatment?"

"Prayer."

"To whom do you pray?"

"To the Supreme Being, to the Great Architect of the Universe."

"You pray to God?"

"To God, yes."

"Do you consider medicine necessary in your family experience?"

"About eight years' experience has proven to me that it is not a necessity."

"Have you had to treat any fevers, typhoid, or diphtheria by Christian Science?"

"Yes, I had a case of scarlet fever about seven years ago."

"What treatment did you use?"

"I used Christian Science treatment."

"Did you use any medicine?"

"No."

"On whom did you rely?"

"On God."

"You fully believe that God has all power to heal all sickness as well as sin?"

"Yes."

"When your boy was sick did you have a doctor?"

"We were forced to have a doctor."

"Then you had medical attendance as well as Science?"

"Yes, the law stepped in, for some one informed, and the Children's Aid Society sent an inspector, and we showed him the house and the child, and two doctors came afterwards."

"Did the child receive medical treatment?"

"No, none other than the visit of the medical men."

"Did you report the case?"

"No."

"And the boy was being treated by a Christian Science demonstrator?"

"Yes."

"How did he know it was scarlet fever?"

"Oh, he knew."

Cross-examined by Mr. Guthrie:—

"Does the party sick require to be a believer before he can be cured?"

"Believer in what?"

"Believer in God."

Digitized by Google

"Not necessarily."

"Then it is not necessary that the patient should believe in Christian Science at all?"

"No."

"Have you any experience where non-believers have been cured?"

"Yes."

"Are they all believers in your family?"

"Yes."

Re-examined by Mr. Vickers.

"Does Christian Science do harm?"

"No."

"Do drugs?"

"Yes."

Cross-examined by Mr. Guthrie.

"You say there is no disease?"

"In mortal man there is."

"From which man will die?"

"Yes, if that disease is not checked he will die."

By Mr. Vickers.

"How is disease checked?"

"By means of a true realization of God."

"Is it necessary for the patient to realize himself?"

"No."

"Does Christian Science make an examination in a medical sense?"

"No, sir."

"It does not diagnose for microbes, nor place a swab in the throat?"

"No, sir."

Charles R. S. Dinnick, a contractor of Avenue Road, followed.

"How long have you lived here?"

"About thirty years."

"Your occupation?"

"A builder."

"When were you brought into touch with Christian Science?"

"About seven years ago."

"What were you healed of?"

"Dyspepsia and stomach trouble. I suffered badly, and could not keep anything on my stomach. I tried doctors and took a trip to the old country and called on the Queen's physician."

"How were you healed?"

"I was healed by Christian Science treatment, and when I suffered I used to lie down as dead, like a man seasick, and since I came into Christian Science I can run, walk, jump, or do anything like that."

"And this was by prayer?"

"Yes, sir, and I have never had any medicine in seven years, less three months."

"Have you had any treatment from any doctor?"

"No."

"Have you used Christian Science in your family?"

"Yes, the children have been sick, and when I could not demonstrate I sent for Mrs. Stewart."

"Have you ever had any experience with diphtheria?"

"Yes, we lost two children."

"Have you had any experience with it since you became a Christian Scientist?"

"No."

"Of what have your family been healed by Christian Science?"

"Just the ordinary ailments that have cropped up."

"Do you consider medicine necessary?"

"No."

"How are your children?"

"Well."

Cross-examined by Mr. Guthrie.

"If a bone is broken, do you call in a surgeon?"

"Yes, we usually do, although I have known of a case where a broken finger was cured by Christian Science."

"Well, is there any limit as to which bones Christian Science will cure?"

"No."

"If a man had a thigh-bone broken would you call in a doctor?"

"I would ask him to put it in a splint; that would be about all."

"Well, that is nearly enough, isn't it?"

Frank J. Brown, 13 Baldwin Street, a printer, followed.

"How long have you known of Christian Science?"

"About twelve years."

"How long have you lived without a doctor?"

"About eleven years."

"You have had no medical attendance from doctors for eleven years?"

"No."

"Were you healed by the Christian Science treatment?"

"Yes."

"Of what?"

"I was healed of a complication of diseases—bilious attacks, sick headache—and since the time I embraced Christian Science treatment I have never been troubled with it at all."

"You have never lost a day's work by sickness since that time?"

"No, sir."

"Of what else were you healed?"

"Well, it is something that I can hardly give a name, but before I became a Christian Scientist I used so much medicine that at last it did not have the proper effect, although I carried it around in my pocket with me; but since coming to Christian Science I have not used it once."

By Mr. Guthrie:—

"How is your health to-day?"

"As far as I know it is all right."

"Well, you should know. Are you married?"

"No, sir."

"Have you any one depending on you?"

"No, sir."

"You believe that praying to God will heal?"

"Yes, sir."

"Do you consider medicine necessary?"

"I do not."

"You were troubled with biliousness?"

"Yes."

"Well, then, if you were to eat rich, greasy food, you would be bilious to-morrow?"

"No."

"Then there is absolutely no limit to your diet? You do as you like?"

"I eat what I care for, and what I don't care for I don't eat. Most people do that."

"Well, if you ate this rich, greasy food, it would bring on biliousness?"

"No, sir."

"If you took poison, it would bring on death?"

"No, I won't say that."

"If you took half a teaspoonful of prussic acid, would it bring on death?"

"I don't understand."

"If you were to take strychnine, would it bring on death?"

"I would not want to take that."

"You say you, with a predisposition to biliousness, can eat rich, greasy food without making you ill. Now, why can't you take poison and not have it kill you?"

"I don't know."

"Well, could you?"

"I could if I wanted to, but I won't say what would result."

"Have you any life insurance?"

"Yes."

"Did you have any before you took Christian Science?"

"No."

Digitized by Google

"Did you try?"
"Yes."
"Were you successful?"
"No."
H. H. Quance, of 174 Euclid Avenue.
"How long have you lived in Toronto?"
"Fourteen years."
"What is your business?"
"Cabinet maker."
"How long have you understood Christian Science?"
"About seven years, although I was healed about twelve years ago."
"Of what were you healed?"
"As given to me by the medical profession?"
"Well, what did the doctors tell you you were suffering from?"
"I underwent medical treatment for five years for dyspepsia, and I suffered extreme pains in the back."
"Did they call it lumbago?"
"No."
"Were you benefited by medicine?"
"According to my own judgment, I think I was getting worse."
"When were you treated by Christian Science?"
"Twelve years ago."
"Were you healed of this disease at this time?"
"Yes, as I have told you. I have not used any medicine since, and I have not missed any time since."
"To what do you attribute your good health?"
"To Christian Science, although I did not look into it for four years afterwards."
"You have since looked into it?"
"Yes."
"Do you use it in your house?"
"Yes, with one exception."
"When?"
"About four years ago my little boy got his arm broken and I took him to a doctor, when the physician wanted to give him an opiate, and I told him it was not necessary, and this was the only time that the little fellow even winced, and then the doctor afterwards said that he was a remarkable boy."
"Is this the only case when you have had medical attendance since?"
"Yes."
"Did you ever have diphtheria in the family?"
"Yes, sir, about seven years ago we had diphtheritic croup."
"The child was brought out by Christian Science treatment?"
"Yes."
"Do you believe in Christian Science?"
"Yes."
"Do you think medicine necessary?"
"I have not found it so."
"Do you think medical attendance necessary?"
"Well, I don't think so, and I have paid over $150 to the doctors."
Cross-examined, by Mr. Guthrie:—
"You had dyspepsia?"
"Yes."
"Cured?"
"Yes."
"Does it depend on what you eat?"
"Well, I admire the equable way."
"Never mind equity. Answer me."
"Well, I will tell you what the doctor said——"
"Never mind that. Can you eat rich, greasy food without any bad consequences?"
"I am doing that constantly."
"And it does not hurt you?"
"No."
"Well, have you got the same faith for poison?"
"I am not going into poison."
"Well, that is the question of poison?"
"Drs. Wright, Wood, and Armstrong told me that this rich food was pernicious, and I have been eating it for twelve years since."
"Well, what about poison?"
"I have not been called upon to take it yet."
"Do you believe by Christian Science that you could take poison into your system?"
"I don't want to equivocate."
"Do you believe that you could take arsenic or strychnine without result?"
"Well, if I took it by accident I would rather trust myself to Christian Science than medical treatment."
"Is your Christian Science proof over poison in your system?"
"I have not tried it."
"Do you believe it?"
"I believe in it in preference to medical treatment."
Chief Justice Falconbridge:—
"Do you believe you could take a recognized poison into your system without baneful result?"
"Well, I might say I don't know."
"Well, do you believe you could?"
"Well, I refuse to answer."
To Mr. Vickers.
"Christian Science, as I understand it, recognizes one Supreme Power, and if we keep ourselves honestly before Him, it will bring about good results, just the same as when man persists in a line of action in anything, there must be a marked result."

Leonard P. Alcombrack, of 14 Irwin Avenue was the next witness. He told the story of great illness and said he had spent thousands of dollars on physicians, and that he came home to Canada to die, and that he had failed in health till his weight dropped from one hundred and ninety to one hundred and ten pounds. He went down South for his health. His stomach was out of order, and he could not eat. He was operated on two or three times. He came across Christian Science treatment and was fully recovered.
"Are you well now?" asked Mr. Vickers.
"Never better in my life."
"To what do you attribute your health?"
"To Christian Science."
"Do you consider medicine necessary?"
"I spent thousands of dollars on medicine and do not think that it is necessary."
"Do you believe that God is the only healer?"
"Yes."
Cross-examined.
"Do you know of any members of the Christian Science Church who use alcohol?"
"Alcohol?"
"Yes, alcohol—whiskey?"
"No."
"Well, I know those that do. You had a bad time of it?"
"Yes."
"Came to Canada from the South?"
"Yes."
"The result was that in this healthy, bracing atmosphere you got better?"
"Well, I intended to bring you some photos to show——"
"Never mind about the photos. We know you are a better-looking man now than then. The result is that when you came here you got better?"
"Yes, I was better in three months' time."

Then Mr. Guthrie read to Mr. Alcombrack several passages from Mrs. Eddy's book, which he seemed to think proved that Christian Scientists denied all hygienic laws. The witness said he believed the passages read, but did not think smallpox was contagious, and thought a Christian Scientist, if he had faith, would not be inoculated though confined with a smallpox patient.

Digitized by Google

"Is it necessary for a patient who is operated upon to be a Christian Scientist?"

"No."

"Then why would a man not a Scientist take smallpox?"

"Because he did not know how to protect himself."

"Then, if we were all Christian Scientists there would be no contagion from smallpox?"

"It would be impossible."

Mr. T. C. Dawson of Toronto, a solicitor, who described Christian Science as "communion with God," said that he had been cured of eczema of thirty-five years' standing, rheumatic gout, and the desire for tobacco and alcoholic liquors. He had been a Christian Scientist for four years.

"I was treated for the eczema by two of the foremost dermatologists in England, Dr. Staunton and Dr. Shortt. When I was in England the only feature of my face distinguishable was the tip of my nose."

"Do you believe that Christian Science will cure all ills?" asked Mr. Vickers.

"All sin and disease, absolutely."

"What is Christian Science?"

"An understanding that God is Love, and realization of this brings out the demonstrations. God is the healer. So-called healers, Christian Scientists, do not heal; God heals, and He only."

"Have you had any experience with medicine and doctors?"

"Yes. I had three children. One was treated by a homœopath and passed on [died]. One was treated by an allopath, and passed on. The other never took any medicine, and was treated by Christian Scientists, and is still living."

"Christian Science is not only curative but preventive," said Mr. Dawson.

"Then Christian Scientists don't suffer from ailments that others do?"

"No."

"Then there is a lower rate of mortality among Christian Scientists?"

"Yes."

Mr. Dawson said that Christian Scientists were not at enmity with doctors.

Miss Shanklin, who had been taken from an invalid's bed twelve years ago by Christian Science, next entered the box. She had been given up by five doctors, and Science had healed her in three weeks. She had not been ill in eleven years, and had for nine years been a demonstrator. She was unable to tell how many patients she had attended. She did not know in how many cases she had failed.

"Do you mean by failure death?" asked Mr. Guthrie.

"No, I do not."

"Passed on?"

"No."

"Passed out?"

"No. I mean that some of the patients did not derive the benefit they expected."

"There is a college for the instruction of demonstrators in Toronto, is there not?"

"Yes."

"Did you take a course?"

"Yes."

"How long did you attend college? Eight days?"

"No; two weeks."

"And you got a certificate of proficiency?"

"Yes."

During Miss Shanklin's examination she quoted part of the 91st Psalm which is an integral part of the doctrine of Christian Science.

Upon the conclusion of Miss Shanklin's evidence, Mr. Vickers read the psalm.

The next one to enter the box was Mr Andrew Noden of 90 Hazelton Avenue, a traveler for the Fensom Elevator Company, who had become converted to Christian Science through being cured of neuralgia.

"I was a wreck; doctors had done all they could do for me, and gave me to understand that they could do no more. Then I called in Christian Science and was cured in a short time," said Mr. Noden. "I have been perfectly healthy since. That was about eleven years ago."

Mrs. Noden, too, had been cured by Christian Science. She had been for twenty years treating for an hereditary disease, which doctors said was incurable. Science cured her in half an hour.

"What do people die from?" asked Mr. Guthrie.

"People die from lack of understanding of the power of God to heal."

"You believe God can heal all diseases?"

"Yes."

"But He doesn't, for people die?"

"That is their lack of understanding," replied Mrs. Noden.

Mrs. Isabella Lloyd, the next witness, had also been cured of neuralgia, also nervous prostration, and other diseases. She had been treated by seven or eight physicians, and at the end of her experience with *materia medica* had been worse than when she started. She had with the aid of God cured three cases which had been pronounced diphtheria by doctors, and had also been the agency by which insanity of eleven months' standing had been cured by a half hour's treatment.

James Bremner of 156 Macpherson Avenue testified that he had been cured of typhoid fever and poison ivy by Christian Science.

Mrs. Isabella Stewart said she had had experience of cases where diphtheria and typhoid fever had been cured by Christian Science. In the case of typhoid fever the doctor called in had recommended that owing to the patient's belief in Christian Science a demonstrator be called. The fever, which the doctor had said would run the full period, had been broken in eleven days. She herself had been cured of blood poisoning succeeding childbirth, when a doctor had almost given up hope. The demonstration was made one evening, and the next evening she was about the house helping in the preparation of the evening meal.

"Why don't you heal mankind?" asked Mr. Guthrie, after he had questioned Mrs. Stewart upon universal healing. "Why don't you heal the children up in the Sick Children's Hospital, then?"

"So we would, if their parents or guardians requested it."

She said that in four years' practice—and her practice was larger than that of the majority of physicians—there had been only three deaths. She had treated several cases of diphtheria successfully.

"What is your idea of contagion?" asked Mr. Guthrie.

"It is only a condition of human belief," replied Mrs. Stewart.

She maintained that a doctor's diagnosis was only guesswork, and that medical aid was neither necessary, remedial, nor beneficial.

Mr. Guthrie attempted to go further, but Mrs. Stewart puzzled him with her answers and sat down.

"I cannot follow you; I don't understand," he said.

Mrs. Mary Morrison, who had been healed of what the doctors called Bright's disease, said that she did not believe in doctors or medicines, and had lived thirteen years without drugs or medicine. She knew of one case where a family of children were stricken with diphtheria. A physician was called in, and one died. Then a Christian Science demonstrator had been called in, and the rest of the children had recovered speedily through the efficacy of prayer.

Mr. W. W. Vickers, attorney for the defendant, who is a Christian Scientist, made an able and eloquent argument in behalf of the defendant, from which we briefly extract:—

Digitized by Google

Gentlemen of the Jury:—His Lordship in his direction showing the questions which he will leave to you, has narrowed the matter at issue to the question, practically speaking, "Did the omission to supply medicines in the sense of the statute cause the death of this child?" Now, at the outset of my address I must say on behalf of this great movement which is now startling the world with cures, without the aid of medicine or medical aid, that his Lordship on the Bench, the Crown Attorney at his place, and the press of the city of Toronto have accorded us a hearing, which, in the history of Christian Science in this country, has never been accorded before. You, gentlemen of the jury, have heard marvelous tales from the witness box, tales of healing which, without the sworn testimony of the witnesses would be beyond comprehension. Now those cases of healing are attested, are sworn, but better still they have stood the brunt of my learned friend's cross-examination. There has been no malice shown toward Christian Science or towards Christian Scientists in this Court. For this we thank his Lordship on the Bench and the Crown Attorney. And you, gentlemen, we as Christian Scientists thank you for the kindly and patient hearing which you have given this case. This, I may say, is not the treatment which has always been accorded to Christian Science in the City of Toronto. No later than the month of September, when we were in the inferior Court, the Police Court, the Crown Attorney for the City of Toronto denominated Christian Science as a fad, fraud, and humbug, and Christian Scientists as charlatans, and the Magistrate sitting on the Bench, without one atom of evidence as to what Christian Science was, agreed with the Crown Attorney that it was a fad, a humbug, and all such opprobrious epithets.

Now, gentlemen of the jury, it has been your privilege to hear something of Christian Science, not so much the theory as the works done in the name of God—Good—Love. I hold no brief against any denomination as we recognize them in Canada. There is no church,—in the sense that there is an established Church in England,—in Canada, and every religionist, as the Crown Attorney opened to you, has the right of believing what he thinks is right so far as matters of religion are concerned. I have no quarrel on behalf of Christian Science with the doctors. . . . We had the Coroner in this case, Dr. Cotton, a man whom I have known perhaps for twenty-five years, saying that he would hate to trust himself to prayer. In other words, when he goes from his house to heal a patient of any disease or any complaint, he leaves God at home. That, to me, marks a lack of progress in that man's mind. He is not awake to the influences that are working through the world to-day and have brought to light the great teaching of this beautiful, devoted woman, Mary Baker Eddy, the Founder and Discoverer of Christian Science. Now, if a doctor is restricted to his knowledge of the body, by what appears through the dissection of the body, he makes absolutely no progress. Christian Science comes to you and says, "Prayer, prayer to God, the omniscient, omnipotent, and omnipresent God, with full faith and understanding of His willingness and ability to heal, does heal the sick." God is everywhere. God is here in this room as well as outside, as well as in your home. He is not put on the shelf when you go to work. He is with you always. My learned friend will admit that He is omnipresent, that He knows all. Of course He knows all, and if He knows all can a doctor tell Him what medicine to prescribe, what to do to heal a case? Why, gentlemen of the jury, it is a position from which no man can deviate. God is All, and only through our knowledge of our Sonship in that God we have the ability to aid in casting out sin and sickness. I say to you, gentlemen of the jury, again, no man of himself has any power. God, prayer to God, is the only power which exists in the world to-day. It is permanent, and no matter how our opinions may change there is no change in God's law. God's law never changes, and all we have to do to live at peace and unity is to discover God's law, and in the discovery of that law healing results.

Now, gentlemen of the jury, the prisoner at the bar is a father. He is a parent; he is, like ourselves, a man. You may not believe as he believes in matters of religion, but he is still a man and he would be the last one to profess that he was not human like yourselves. But he says this: "Through my experience in matters of religion I have learned that God heals the sick." In cases of trouble and distress to whom do you suppose that man turns? He turns to God. He has had experience with *materia medica*, with the doctors, they did all they could for his two children who died in infancy. Did they heal those children? Was medicine, material medicine, efficacious to heal or save or prolong life? No, gentlemen of the jury. The doctors were unable to do anything for those children. And so, touching almost every testimony which you heard from the witness box yesterday, the doctors could do nothing. As a last resort the people turned to God. What was the result? In a day and a half the weariness and sickness and debility of eleven years was thrown aside, passed by God's law—God's law. Now if that statement were not sworn to, and there had been no cross-examination upon it, you might have wondered, What is this? Is it true? But you have heard it. You know it and must feel that it is an instance of God-healing. It was stated in the witness box yesterday that the 91st Psalm is an integral part of Christian Science and contains the protection of the prisoner at the bar to-day: "Because thou hast made the Lord which is my refuge, even the most High thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

That to-day is the attitude of every Christian Scientist, and the prisoner at the bar relies on that God, as you gentlemen do, to protect him from evil that may come to his dwelling. Now, gentlemen, his Lordship will charge you that you must find on the facts that the omission to supply medicine in the legal sense, has either caused or accelerated the death of Roy Lewis. To criticise the evidence of the Crown, what do you find? First, the evidence of Mrs. Lewis, the mother of the child. What is her statement? The boy was taken sick on Thursday; he was put to bed and kept there until he died. The boy was given food, clothing, and kept warm, and all that a devoted father and mother could do to preserve life, short of medicine, was done for that boy. The boy himself did not complain. The evidence of Mrs. Carter, which is not contradicted and which must stand for the highest class of evidence is that the swelling from which that child suffered, and which was supposed to be an accompaniment of diphtheria had gone and the boy was actually improving at the time he died. What does the doctor say? When he went to examine the child shortly after death, within a few hours, he found no swelling. Had or had not that swelling been reduced by the power of prayer? Did not God answer his prayer to that extent? Did not God alleviate the trouble of these devoted parents? But something, gentlemen of the jury, I cannot tell you what it was, I do not know myself, something caused the death of that child. It was some condition that was beyond the power of the parents or their friends. Now if Mr. Lewis, the prisoner here, had omitted to supply that child with food, I would not stand here to-day before you and ask for his acquittal. If he had omitted to keep that child warm, or had exposed the child, or neglected the child, or ill-treated the child, I would say to you, "Do your work. I have no brief for such a case as that." But the father supplied all these things. He stayed at home from his ordinary duties. He is not a rich man and every day's work that he loses means loss of money. He stayed away from his work to do what little he could to help his child. His

Digitized by Google

child was a care above money and above price. He did what he could, but the child, from some reason not known to us, or to you, I think, died. . . . As his Lordship says, it is left to you to decide whether in this individual case medicine was a necessary of life in the purview of Section 210 of the Criminal Code.

If medicine was a necessary, medicine must have saved the life of that child. There is no escape from that position, there are no chances. You cannot except anything. If medicine be a necessary, that medicine must be the absolute definite truth, and that cannot be said of any medicine which is known to humanity to-day, unless we take it back to the Great Physician who heals, through prayer, all sickness and sin. There is only one law, and you must go to God who is the ruler of our destiny and who is our Father. The Crown must go the length of proving that medicine would have prolonged the life.

I have the medical testimony, I have had it transcribed, and I purpose shortly to read it to you, and I think you will see that medicine could not save, it would not likely prolong life, and unless the Crown witnesses can go the length of absolutely saying, without contradiction, that medicine would prolong life, definitely and absolutely, there is no case for the Crown. The Crown cannot substantiate their first proposition, and I say to you that that is a fact which must come out when I criticise the medical testimony. All doctors, if they are conscientious and honest, say there are great differences of opinion in all matters relating to medical science. They will say to you, as Doctor Carveth, who was the examining physician after death and who is the Crown witness and main witness, says, that medicine is largely experimental. If I understand the meaning of the term experimental, it means there is an uncertain element. There is no definite rule, and it may or may not be that results beneficial will follow the use of medicine.

. . . . . .

Now I hardly know what to say about the mass of testimony which was brought before you yesterday, showing Christian Science by its works. Like any other science, we must learn the rudiments before we can expect to understand the principle. We tell now what our works are through Christian Science and we say to you, "Judge us by the sworn testimony given from that witness-box." Can the power of God heal? Is God here now? Is God the ruling power in Ontario, and in this fair Canada of ours, to-day? Is God real? Is God in the public school? Is God in the educational institutions of this country? Is God everywhere? Christian Science says that God is omnipresent, He is all powerful, and He knows all.

Christian Science is yours if you ask for it. It is as open as the sun, as the doctor put it, if you desire it. There is the text-book which tells us how to attain that knowledge. There is the text-book which is open to all, which shows the understanding of God, as Good, in Christian Science. I recall to you the evidence of Miss Jackson who started out on a career as a musician; her father had gone to great expense to keep her in Leipsic, she got there and was through nearly three years of her five years' course. Suddenly her arm gives out. She was stricken with piano paralysis. As his Lordship then suggested, it is like writers' cramp. It completely paralyzed that arm, and in her evidence she told us that she could not hold anything in her hand. To whom did she go? Two of the most distinguished specialists in Leipsic. Was she healed? She came back to Toronto after a considerable stay, some seven months after this calamity happened to her. She went to our friend Doctor Johnson amongst other doctors, both homœopathic and allopathic, but they held out no hope for her. Not one atom of hope. Then she happened to hear of Christian Science. You have heard of her remarkable healing. It is startling, and if we did not know that healing was as old as the days of Christ, we might be surprised. We have before us a Mennonite, a member of the Mennonite Church. When the Mennonites came out of the Roman Catholic Church in 1536 the tenet of that religion was what? "Peace, my brother. I will not take up arms." What was the result? Religion was then fought with a sword. Mennonites were persecuted until they came to America in the time of Penn and there in Pennsylvania they are found, a thrifty body of Dunkers, as they are now called. And what do they practise and believe? They are a body of healers, they have their own doctors, and they have their old women who are supposed to have a gift of healing. Now, is healing anything new when we can go back to the mediæval times in 1536? I say, is it extraordinary that they have come through all these ages and continue solid in their ranks? I say to you that persecution and prosecution can have no effect upon any honest, law-abiding people. It is true that the cause of Christian Science has not always been well understood. It is true that Christian Science has been misinterpreted outside its ranks. It is true that Christian Science has been misinterpreted in its ranks; but to-day, through the beneficent wisdom of Mary Baker Eddy, there are publications, text-books, and other things which show a oneness of Mind which does heal wherever it has a fair chance. Now I addressed you in opening of what Christian Science is. I do not wish to speak very much more of this great truth; that it is a live and palpitating truth you know, that its works are marvelous you know, and that Christian Scientists are not shams, not humbugs, not charlatans, not frauds, nothing of that kind. They are simply humble men like you and myself. To what end are they striving? They are striving to bring out the God-likeness in every man, and in bringing that God-likeness out the sick are healed, the sinful are saved, and we are united not only in healing sin but in the healing of the body, and we say to you through the cloud of witnesses in the box that sin and sickness have the same mental origin. They do not belong to God, they are not of God, and because they are not of God, the knowledge of God destroys the false appearance of these conditions.

At the conclusion of the arguments of counsel his Lordship, Chief Justice Falconbridge, delivered a somewhat lengthy charge to the jury, in the course of which he said:—

"I have no doubt that the jurymen were somewhat relieved by the announcement of the Crown counsel that only a nominal conviction was desired, but you must be careful in your judgment, nevertheless. The case is not so important to the prisoner at the bar as to the community as a whole. No man has a right to inquire into a man's religion, but the principles of that religion must not be set against the law of the land. I must say that all the evidence of yesterday relating to cures effected by this faith has no bearing on this case. I allowed it to be presented only with a view of establishing the good faith in the prisoner. The question of his religious belief is not on trial here, and his motive in disobeying the law had nothing to do with the inquiry. . . . The question before you is whether the prisoner, by providing medical necessaries for his boy, could have saved or prolonged his life. It is clear to me that the necessaries mentioned in the statute include medical treatment. Now I think there should be no doubt in your minds as to the cause of the child's death, although the prisoner states he was not sure whether it was mumps or diphtheria. Medical science is somewhat experimental, but the symptoms of diphtheria are easily diagnosed and a medical man could easily have discerned the child's disease."

Passing on to the second question, his Lordship asked, "Was the death of Roy Lewis caused or accelerated by that neglect, if there were such neglect? This depends largely upon your acceptation of the medical evidence. The professors or demonstrators of Christian Science do not seem to be in accord on the question whether a different

Digitized by Google

treatment is accorded for different forms of disease. At any rate, there is no diagnosis."

In conclusion, his Lordship said it was the privilege of every man and woman of mature years and discretion to employ such healing treatment as he desires, but in the case of a child the law steps in and compels the application of medical treatment.

The jury, under these instructions, returned a verdict of manslaughter. The Chief Justice released Mr. Lewis on his own recognizance, and suspended sentence or punishment until the case is decided by the higher court.

We feel warranted in making the following general comment upon this interesting and important case:—

This case presents some new and interesting aspects. It also, in our opinion, raises an entirely original question of law.

One of its novel features is the fact that although Mr. Lewis was charged with the serious offence of manslaughter, it was announced at the outset of the trial that, if found guilty, he was to receive only a nominal punishment, just sufficient to satisfy the technical requirements of the law. We assume that in this the Crown Prosecutor acted in entire good faith, notwithstanding the prevalent suspicion that the medical association which set the machinery of the Court in motion, feared an adverse verdict in the event that such a concession were not made.

It seems also that the presiding Chief Justice, at one stage of the case, announced his intention of withdrawing the case from the jury, providing the Crown Prosecutor was willing. The prosecutor indicated his willingness, but thought he should obtain the consent of the Attorney-General. The announcement was made after a lengthy argument in which His Lordship said, "It is of the utmost importance not only to the public at large, but to the people who profess the Christian Science belief, that the highest courts in the land should settle the vital question as to what constitutes necessaries of life under the Criminal Code."

His Lordship finally concluded to let the case proceed and have the jury find upon the facts, saying, "A case could then be stated, and the matter taken to the Court of Appeal, by the defence."

It would seem, therefore, that the finding of the jury, as well as the ruling and instructions of the Court, were largely *pro forma*.

The case as it stands, then, involves the single question as to whether, under the section of the Criminal Code upon which the indictment was based, medicine and medical attendance, in case of sickness, is a "necessary."

An English Court held that it was. Chief Justice Falconbridge followed the English decision. We have read the English decision and find that there are material variances between the English case and the Lewis case. We shall only mention one of these, however, but it seems to us to be a vital one.

In the English case the defendant was a member of a religious sect known as the "Peculiar People." This sect did not believe in the use of drugs or in physicians, but its members believed in prayer and anointing with oil as taught by the Apostle James. There was no evidence before the Court that this sect cured sickness. That phase of the case was not touched upon. Hence the court evidently proceeded on the theory that medicine was necessary to the healing of the sick, therefore, a "necessary" in the eyes of the law, and the failure to provide it was such negligence as, in the opinion of the learned English court, under the circumstances of the case, warranted a finding to that effect by the jury.

In the Lewis case there was evidence by physicians that in their *opinion* medicine and medical attendance was "a necessary." Their evidence, as it related to the Lewis case, was in the nature of expert medical testimony rather than evidence based upon facts within their own knowledge. It was hypothetical or theoretical rather than positive.

On the other hand, many witnesses were introduced by the defence who testified from their own knowledge and experience that, to them, medicine and medical attendance was *not* a necessary. Their evidence was positive and well fortified by indisputable facts. They were healed of serious diseases—some of them of diseases pronounced incurable by the medical profession—through prayer as understood and exercised in Christian Science, and without medicine or medical attendance. Some of the witnesses had used no medicine for ten or twelve years, but had been cured of various sicknesses through Christian Science. This evidence was credible and undisputed. It was, at the close of the trial, excluded from the jury. They were instructed that it had no bearing on the case; that it was allowed only with a view of establishing the good faith of the defendant.

This ruling of the Court presents, as we have said, a vital question. Had the jury been permitted to consider the evidence of the Christian Scientists who testified to *facts* in connection with that of the physicians who gave their professional *opinion*, who can say that the jury would not have rendered a different verdict?

There was no such element as this in the English case, nor any other which has ever come before a court in England or any other country.

To exclude the testimony introduced by the defence, was tantamount to saying that because an English court had decided medicine to be a necessary in a case where there was no evidence to the contrary, that must forever remain the law, regardless of new facts and circumstances.

In material and secular affairs the courts have, per necessity, kept pace with changing conditions. They have applied the general principles of law to meet the requirements of the time, even to the extent of departing from precedents which were based upon outgrown circumstances. They have done this in ecclesiastical affairs. Why not in spiritual and metaphysical affairs, in cases where it becomes necessary to the due administration of justice?

To urge the contrary would be to hold courts of justice in a vise of established precedent which would prevent all progress. It would circumscribe the scope of judicial action to the narrow limits of old methods which have no vitality now. Such a view might work an incalculable hardship upon the medical profession. What, in the *opinion* of medical men, would be a necessary this year might not be so a year hence. Fifty years ago cupping and bleeding, together with the giving of many nostrums then in vogue, would have been considered a "necessary." Not so now. The medical testimony in this case is directly in point. These witnesses said medicine was making progress, and what would have been good treatment a few years since would not be so now. Some were of the *opinion* that anti-toxine was a "necessary." Others that it was not. Where shall the line be drawn? If there is progress in curing sickness *within* the medical profession, may it not be that there is progress *without* the medical profession?

When indubitable evidence is introduced that there is such progress, can that evidence properly be ignored by our courts? If so, where is legal and judicial progress?

The only consistent ground for a court to stand on, under such circumstances, would be that the medical profession, as a system, embraces the only class of persons who have a right to heal disease, even though it be known that any number of other persons can and have healed diseases of all kinds, even of a kind pronounced unhealable by that same profession. We might dwell at great length upon this important theme, but shall desist. No doubt the great question at issue will be wisely settled in accordance with the spirit of progress and justice.

It would indeed be a sad day if our courts of justice were to hold that medicine, in case of sickness, is a "necessary," but prayer is not. In other words, that praying is an idle

Digitized by Google

and useless ceremony in all cases of sickness. If this should be the view of the courts, what has become of the Bible and the Omnipotent God? Are they to be forever excluded from human courts of justice? Who is ready to take this position? Yet, if what we have supposed were to be the attitude of the courts, we see no logical escape from the dilemma suggested.

In view of this whole situation, then, we are glad that the learned judge before whom the case was tried, while feeling himself bound by the English precedent, so shaped the case in this Court, that he could state a case for the Court of Appeal, that the vital question involved could be considered and decided by the higher Court. In the view he took of the English decision he could consistently have refused to allow the defence to introduce evidence relating to the healing method of Christian Science. The fact that he allowed it for the purpose of showing the defendant's good faith, is evidence of his judicial fairness and liberality.

We are pleased that Mr. Vickers so frankly expressed his high appreciation of the Court's fairness and liberality, as well as the kindly attitude of the Crown Prosecutor and the press of Toronto.

The following terse editorial in the Toronto *Daily Star* of November 7, 1901, indicates public sentiment upon the case in hand:—

"If this Mr. Lewis, the Christian Scientist, was guilty of manslaughter, why did the Crown ask for only a nominal sentence?

"Manslaughter is not an offence to be lightly punished. In no ordinary case of manslaughter would the Crown invite the jury to bring in a conviction by intimating that only nominal punishment would follow. The case therefore is a special one, the offence is recognized as being less serious than the name put upon it, and it is shown that public opinion tempers the enforcement of law. The simple fact is, this man cannot be given the punishment that is ordinarily meted out to the one convicted of manslaughter without making of him a martyr and stirring up a rumpus that would deprive the medical profession of much of its authority in law.

"Christian Science may be all wrong, and its contention that the human body and the ills that infest this life are unreal may stun us and offend our intelligence, but the recent trial can in no sense be regarded as a triumph for the incorporated medical profession. Outside and beyond the doctors and the Christian Scientists is the great body of the public, listening, observing, and doing considerably more thinking than formerly.

"The Lewis trial has given the average man something to think about. Although he reject Christian Science altogether, the evidence given by credible witnesses was of such a nature that it cannot be lightly brushed aside. It is necessary to accept divine healing as the explanation, or find some other. A young lady lost the power of one hand,—an intelligent young woman studying music in Germany. Her hand is now well. The doctors did not cure it, and it will be in order for them to explain the cure. Men stood up and swore that for periods of seven, ten, or twelve years they had used no medicine of any kind, although formerly addicted to its use. Parents swore that their children have had no medicine of any kind, yet pass through the ordinary illnesses of childhood as well as those who are treated by the most skilful doctors. Such evidence is not scarce but abundant.

"What does it mean?

"The average man begins to see in it this: That if Christian Scientists are deluded, then also those who employ doctors are subject to delusion. If nature is the restorer who keeps Christian Scientists well without drugs, no doubt Nature deserves much of the credit that others give to the doctors, and, therefore, medicines are used that are of no significance at all.

"Somebody has compared a doctor to a man with a gun standing outside a thicket and shooting in at a bird which he cannot see, but whose song he hears. It is a random sort of performance. The doctors who stand at the head of their profession are least pretentious in their claims, and more candid than any others in dealing with their patients. They are superior to the charlatanism that too many of their brethren resort to, and year by year they use fewer drugs. Such a doctor will often tell you that he will give you no medicine, but that you must eat sparingly and go to bed for a good sleep. A leading doctor called as a witness in the Lewis case testified that his own children had never tasted medicine of any kind. There are many such doctors in town, who teach in their own homes that health depends on the sane use of food, rest, and pure air. And they use their theory not only in preventing but in curing illnesses in their own homes.

"Medicine, like theology, has those among its teachers who know the truth but begrudge it to the masses, considering it dangerous to abolish the mummery by which the ignorant have hitherto been kept in hand. But among doctors, as among theologians, are some who feel that there is nothing so dangerous as to preach error for alleged good, as the truth will out in time and ruin faith in those who teach. The medical men have a close corporation and there are those among them who seem to think that if they are severe enough in repressive measures they can dominate the whole field and enjoy a monopoly, whether they discard charlatanism or continue it. The undoubted result of professing too much in this age of reading, and in being too aggressive in asserting rights accorded them when conditions were different, will be the challenging of their whole position.

"The story goes that a doctor in China who lost a patient was seized by the family of the deceased and tied to a tree, but during the night he got free, swam a river, and reached home. He found his son studying medicine from books. 'My boy,' he said, 'the main thing in the practice of medicine is to know how to swim.' At all events, a doctor should be a man of resources, and he loses ground when he doles out drugs for all kinds of ailments, real and imagined. If Christian Science is nothing else, it is a manifestation of discontent with the pretentiousness of doctors, and if the profession is guided by wisdom it will abandon the mystery and mummery with which it seeks to invest itself, and deal more candidly with reasoning human beings."

"On Time."

A manufacturer was about to establish an agency in London. He had in his employ two young men whom he regarded highly, and both of whom he would like to advance to the coveted position. As it could go to only one, he watched the men closely for some time, while trying to decide which he should send to represent his interests in the English capital. One of the young men was an industrious plodder, always on time to the minute. The other was a much more brilliant fellow, who did his work well and easily, made friends readily, and was universally popular; but he had the serious defects of making promises carelessly, forgetting them almost as soon as they were made, and of rarely keeping appointments promptly.

Finally the employer invited both of these young men to dine with him on a certain evening at exactly seven o'clock. The plodder presented himself to his host as the clock was striking, and they two immediately sat down to dinner. Five minutes later the other guest appeared, with a laughing apology for being late, which, he said, was entirely the fault of his watch. On the following day the London appointment, with a large increase of salary, was given to him who had learned the business value of promptness.—*Success.*

Testimonies.

Healed by Christian Science after Operation had Failed.

In September, 1898, my physician said I must have an operation performed to relieve a trouble from which I was suffering, and the sooner the better. Thinking that possibly he might be mistaken as to his opinion of the case, I consulted most of the prominent physicians here, but they all, with one exception, pronounced it a cancer, and advised an operation at once. As this one visited the prominent hospitals in Europe every two years, I concluded to try some new French remedy which he said would help me if anything could be done without a knife.

He treated me until the following July, when he and several other physicians decided that an operation was the only thing that would save my life. This was very discouraging to me after doctoring so long. I had the operation the seventh of July. For four weeks I was very sick at the hospital, and for several days it was thought I could not live. However, at the end of four weeks I was well enough to be moved to my home. For several months I suffered a great deal.

In about three months after the operation I felt the same trouble coming on in another place. This time I felt obliged to go to a lady physician who is considered one of the best in the city and was recommended to me by a leading physician here, in fact, her name is well known throughout the country. She examined me and treated me for about three months. At times I was a little better and then again I was worse. I finally said to her that she must tell me what the trouble was, and she informed me that I would have to have another operation in order to be relieved, and that it was the same trouble I had before. This information almost drove me insane, as I had such a horror of the operation and felt that I would die if I had one; besides, I did not have the means.

While in this state of mind I thought of Christian Science for my trouble, but did not take much stock in it. I was wishing I could see my friend, Mr. R——, knowing that he had been a great sufferer and was restored to health by that method of treatment. I had not seen him for several years, but remembered his healer's name, so went in search of her at the dispensary, but was informed that she now resided in California. I was wishing I could find Mr. R——, and to my surprise, as I came out of the Christian Science Dispensary, there he was. I told him surely God had sent him, as I had been wanting to see him for several days. I then stated my case, and asked if he thought I could be relieved. He said, "Certainly, you can be cured." I agreed to meet him that evening at a healer's home.

All that afternoon I was doubting about being benefited. I was completely disheartened, and at times felt that I would take my life in some way so as to be out of the world. In the evening I started for the healer's home, as agreed, but very much discouraged. When I got off the car I thought I would turn back, and in fact did so, but the thought came to me that this was not the way I did business; that when I think it is right to do a thing I do it, even though it should prove a failure. Upon this thought I went to the house and stated my case to the healer. I told her I did not take any stock in Christian Science for my trouble, and asked what she thought about it. She told me that I could be helped. I took a treatment and was asked to come the next evening. She told me that I would sleep some that night, which I doubted, not having slept for several nights on account of the pain. I promised faithfully not to take any medicine, and to my surprise I slept very well.

After I had taken three treatments the pain had entirely left me and I was beginning to feel like another person. The growth, however, did not disappear for a month, when it was all gone. I went to see my regular physician and told her what a wonderful cure I had had. She would not at first believe it, and made me promise to visit her for some time after that, as she wanted to keep track of my case. When she was convinced that I was entirely cured she told me to stick to Christian Science, and I told her I certainly would. Language cannot express how grateful I was for this wonderful cure. I wanted to tell everybody.

I am perfectly well and have never had the slightest return of the trouble. I was also subject to severe sick-headaches, which have left me entirely from merely reading Science and Health.—Miss B. Grabbe, Chicago, Ill.

Grateful for Physical and Spiritual Benefits.

When Christian Science found me, I had been a sufferer for fifteen years from many diseases. I had doctored with eleven different doctors. I had been operated upon once, and then told that another operation was the only thing that would restore my health. I had not been able to eat potatoes or drink tea or coffee for ten years, and sometimes for weeks lived on dry bread, and a very little butter. I had worn glasses for seven years.

I took my first treatment in Christian Science, August 19, 1899, after having lost all faith in other remedies. I felt at once that I was free. My healer told me to eat what I chose, and I did, and felt none of the usual bad effects. I improved rapidly, gaining five pounds in one week. The spiritual healing was more to me than anything else, as it gave me such a sense of love and trust in God. I felt as if the gates of heaven opened wide and I was just entering in. I could truly say "old things are passed away; behold, all things are become new." My Bible did not seem like the same book. As the light of Truth was turned upon it, I saw such wonders as I never saw before, and I felt I must go at once and tell my minister (I had been a member of the Presbyterian Church for a number of years). He did not wish to give me my letter from the church, saying, I would soon see it was not the Christ-Truth that had healed me.

I laid off my glasses after the fifth treatment and have never felt the need of them since. Many nights I have read my Bible and Science and Health until midnight. On the 19th of August, 1900, our baby boy was born, weighing twelve pounds, and Truth carried me through at this time. It had been eleven years since our last child was born. In less than a week I was up about the house. Baby is now sixteen months old and a sturdy, healthy boy, walking everywhere. He has never had a drop of medicine. I had been told by my physician, at the birth of our last child, that I never could live through such an ordeal again, so I was happy to see what Christian Science could do for me.

Diphtheria, grip, colds, severe burns, and many other ills have been healed in our family. I desire more of this Truth which makes men free. I thank God for our dear Leader who has shown us the Way.

Mrs. Lutie Barnes Adams, Bay City, Mich.

Chronic Diseases Healed.

About a year ago I was healed of a complication of diseases, some of many years standing and pronounced by physicians to be chronic. I had been in this city about fifteen months, during which time I was a helpless invalid, being confined to my bed most of the time. My husband sent me to one of the best hospitals in the city that I might receive medical attention. The physician attending me said my case was hopeless without an operation. That I had ovarian trouble in its worst form.

As neither my husband nor I would consent to an operation, the physician declared he could do nothing for my case, so I returned home worse than when I left.

I was afterwards under two other physicians, one of whom conscientiously did everything in his power to help

Digitized by Google

me, but I failed to improve. The third who attended me also recommended an operation as the only hope, and declined to assume charge of my case.

At that time I was said to have an abscess, appendicitis, and inflammation of the ovaries. For eight weeks I was not allowed to take solid food. I lay a helpless sufferer, given up by husband and friends, and at last I was compelled to turn to Christian Science as my only hope. After two treatments I got out of bed, dressed myself, and walked through the house. After the third treatment I went down stairs and out on the sidewalk.

For eight years I was a public school teacher in the city of New Orleans, and though I earned a good salary, I spent the most of it to have my work done, and in search of health. I am now doing things that I could never do before. I can do all my housework, and can walk as far as I please without feeling the least tired.

Aside from being healed of the diseases mentioned above, I have been healed of chronic constipation, piles in their worst form, and gastritis. Thank God for this wonderful Truth which enables me to know where and who is my health and strength.

Remembering the words of the Master, "Ye shall know the truth, and the truth shall make you free," I have endeavored the best I knew how to tell this wonderful Truth to any who may be bound as I was.

MRS. H. M. LEE, Chicago, Ill.

Christian Science brought Many Blessings.

The blessings that Christian Science has brought to our home are innumerable. The first was my own healing fifteen years ago. For three years I had been a great sufferer from organic trouble for which surgery, electricity, and everything that medical skill could suggest had been tried. The best physicians finally agreed upon one point, that my trouble was beyond the reach of surgery, and nothing more could be done.

Ten years before this my sister had passed away with a somewhat similar trouble. We were raised strict Presbyterians, and often she would say, "Oh, why cannot prayer heal the sick now as it did when Christ was on earth?" We had not then learned that the dear Christ is never absent, and that already the clear light of this understanding was dawning upon human consciousness.

In the year 1886, when in the depth of misery and despair, this light came to me. I was healed through the treatment of a loyal student of our beloved Leader, and the study of "Science and Health with Key to the Scriptures." My healing was not rapid. It was about three months before I could say I was entirely well. A new world opened up to me, as the fetters which had bound my sense of God were loosened, and I could say "Thy will be done," without the terrible fear that it might be His will to take me from my husband and child.

That God is Life; that God is Love; that God is All—the living, loving Presence that enfolds and blesses us and is our very being—so illumined my thought that some wonderful demonstrations began to take place in our household and neighborhood. These, and my own healing, both physical and spiritual, so filled me with awe, that I seemed to be upon the mount of transfiguration. I have since been many times through the valley, and in the wilderness, but Love's presence, though sometimes seemingly hidden, has never forsaken us, and our gratitude is unbounded for the health and harmony which Christian Science has brought to our home.

MARTHA E. KILLIE, Denver, Col.

Physical and Spiritual Help Received.

One evening I took up "Miscellaneous Writings" by Mary Baker G. Eddy, and I opened to the letter "To Correspondents" on page 155. In it our Mother speaks of the students as "fulfilling their moral obligation to furnish some reading matter for our denominational organ." It came to me that I had been content to receive all the blessings of this great Truth and had never been willing to give my experience to others.

I wish to say that through this beautiful healing Truth, I have been able to lay aside my glasses which had been in constant use for about ten years, and have also been freed from a disease I was supposed to have inherited; but this physical healing is nothing compared to the holy, uplifting, spiritual help it has been to me. I had been trying for many years to lift myself out of the gloom caused by the death of my little daughter, and at last the Scriptures have been fulfilled—and "The people that walked in darkness have seen a great light: they that dwell in the land of the shadow of death, upon them hath the light shined."

A. C. Y., Boston, Mass.

Notices.

New Edition of the Manual.

The twenty-fourth edition of the Church Manual, containing the names of all the members of the Mother Church, including those admitted November 5, 1901, is now on sale.

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half do. en; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

OUR LEADER'S MESSAGE. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

National.

By an order of the Postmaster General, Kaskaskia, the first capital of Illinois, will be wiped out of the official list on January first next. Only five families now live in what was once a flourishing town. For this reason the Post Office Department has decided to abolish the office at that place and accommodate the residents through the extension of a rural free delivery route.

Experiments in wireless telegraphy will shortly begin under the auspices of the Navy Department. One station will be established at Washington Navy Yard and the other at Annapolis, Md. Several systems, including the Marconi, will be tried, and it is expected that the experiments will result in the adoption of a system for the United States Navy.

A bill has been introduced in Congress which provides for an increase in the pay of letter carriers. According to the provisions of the bill those who have been employed three years or over shall receive a salary of $1,200 per year, those two years one thousand dollars, those one year eight hundred dollars, and when first appointed six hundred dollars.

Postmaster General Charles Emory Smith will retire from the Cabinet in the near future. He will be succeeded by Henry C. Payne of Milwaukee, Wis. Mr. Smith states that he retires solely because of the demands of his newspaper work. He will occupy the editorial chair of the *Philadelphia Press*.

Admiral Schley has filed a protest against the findings of the Court of Inquiry and requests that the case be referred back to the Court in order to procure a review, and if possible a reversal. The bill covers every feature of the case and contains thirty-one objections.

After almost five hours' discussion behind closed doors, the Senate ratified the Hay-Pauncefote Isthmian Canal Treaty on December 16 by the decisive vote of seventy-two to six.

On December 19 Senator Hanna introduced a bill granting an annual pension of five thousand dollars to Mrs. McKinley.

Congress adjourned December 19 for the holiday recess and will be convened again Monday, January 6.

Foreign.

Paris believes that it has discovered an ideal street pavement in the form of "devitrified glass blocks." The pavement has been given a trial in other parts of France and has proven very satisfactory. In the manufacture of the blocks the glass is first ground to a fine powder, heated until it becomes a paste, and then moulded into rectangular blocks. It is stated that it is far cheaper than cedar blocks, requires less repairs, and is more easily kept clean.

At a recent meeting of educational authorities, held in London, it was decided, at the suggestion of Alfred Moseley, C.M.G., to send out a commission in 1902 to investigate educational methods in the United States and on the Continent with especial regard to their bearing on commerce and industry. Mr. Moseley offered to defray the expenses of the commission.

Only three women have taken degrees at the University of Berlin in Germany. Two are Americans and one a Jewess. The latter was one of the first women to enter the University and the first to win a degree. Out of a total of 6,673 students at the University last year, 439 were women, and forty of these were Americans.

Instructions have been given to every school throughout the Philippines to celebrate annually the birthday of Jose Rizal, the Filipino patriot who was executed by the Spaniards. The pupils, their parents, and their teachers have been asked to contribute to a fund which shall be used to erect a monument to the patriot's memory.

Frank M. Kiggins, a member of the Philippine Civil Service Board, who has recently returned to Washington, says that the merit system has been well established in the islands. Both whites and natives have been admitted to public employ through the competitive examinations.

According to carefully compiled statistics of the population of the British Empire, less than one-eighth are of British birth or descent. The total population is nearly four hundred million. This includes nearly four million non-British white men, and the colored races number 343,000,000.

The Austrian ministry of commerce has purchased a number of the latest American shoe-making machines and purposes to give a series of lectures and demonstrations for the benefit of the Austrian shoe manufacturers.

Industrial and Commercial.

By a new process, alcohol is now manufactured from fruit, grain, beets, and even wood at fifteen cents per gallon, the heating power of which is equal to two gallons of petroleum. At Paris there was recently given an exhibition of the industrial application of alcohol. There were sixty patterns of illuminating appliances which it is said easily rivalled electricity. There were models for stationary engines from one to twenty-five horse-power. Nine manufacturers of automobiles claimed that alcohol is cheaper than petroleum, and is undoubtedly the fuel of the future.

At a meeting which was held in New York last week under the auspices of the National Civic Federation for the purpose of devising means to solve the problems arising between capital and labor, thirty-six representative men were appointed members of the court of labor or board of arbitration. It is the mission of the board to settle all questions of national importance which may arise between employers and wage earners.

The crop of peanuts in Oklahoma the past season amounted to about forty million bushels, and it is believed that they will soon become one of the staple crops of the territory. Practical experiment in feeding hogs show that an acre of peanuts is equal to 85 bushels of corn. Peanut threshing machines now go about in the peanut district as do the wheat threshing machines in the wheat growing sections.

Dr. Sylvestre, formerly an American, but now a resident of Brussels, has invented a spectrograph which enables users of the telephone to see each other.

General.

Dr. William Duane of Boulder, Col., has invented a multiplex telegraph that is attracting considerable attention throughout the State. Dr. Duane is professor of physics at the state university and has just been granted a patent upon his invention. The invention makes it possible to send a large number of telegraphic messages over one wire at the same time. In his experiments the professor has had as many as eighteen circuits working on one wire at the same time.

Texas oil will be used exclusively in the official power plant of the World's Fair at St. Louis. Besides a desire to patronize one of the great products of the Louisiana Purchase, the managers say that the smoke nuisance has been done away with so far as the Fair is concerned. The oil will be piped into the grounds from a main tank situated outside the park and piped underground into the furnace rooms of the power houses.

The Boston Christian Endeavor Union proposes to use street car advertising space for mottoes and quotations. The effort will be to place before the eyes of the public a Scriptural quotation, a trite proverb, or some wholesome sentiment which may prove helpful in every-day life. A trial will first be made in the street cars, and later the system will be extended if it is deemed advisable.

In order that the immense amount of macaroni which is consumed in this country may be manufactured at home, the Government is endeavoring to introduce certain Russian wheats which are especially adapted for this purpose. The great demand for macaroni may be judged from the fact that France alone exports about one hundred and fifty million pounds annually.

It is stated that Andrew Carnegie will present a new offer, making his donation for the establishment of an institution of research and graduate study in Washington, in cash or bonds of the United States instead of steel corporation bonds. He will double the amount he first offered, and if it is necessary he is willing to make it twenty-five million dollars.

The Great Bell, or Monarch of Moscow, is the largest bell in the world. It was cast in 1734, is over twenty-one feet in height and diameter, and weighs one hundred and ninety-three tons. It fell during the fire in 1737 and remained in the earth one hundred years when it was raised, and is now seen above the chapel which was erected where it fell.

A Negro World's Fair Company has been organized for the purpose of holding a fair some time in 1904. The purpose of the fair is the amusement and enlightenment of the colored race. Cities throughout the country will be asked to bid for it. Rev. H. N. Newsome of Opelika, Ala., is president of the organization.

John D. Rockefeller has tendered a provisional gift of $150,000 to Wellesley College. This sum is given on condition that an equal amount shall be raised by the College before commencement day next year.

A Christmas gift of ten dollars to each of the ten thousand employees of the American Express Company has been announced. Last year the company gave each of its employees five dollars.

The largest pane of glass in the world was recently made at the Kokomo, Ind., plate glass factory. It is 150½ by 221½ inches and weighs 1,450 pounds.

The next annual encampment of the G. A. R. will be held in Washington, D. C., some time next fall. The exact date has not been decided upon.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Selected Articles.

Christian Science versus the Devil.

To the Editor of the *Macon Evening News.*

In your Monday's paper you published in part a sermon by the Rev. S. R. Maxwell, the pastor of the Christian Church, on "Does the Devil Exist?" In your report of this sermon there are a number of references to Christian Science and its teachings as to the existence and character of the devil. As Mr. Maxwell and all other lovers of truth would be glad to know how Christian Scientists interpret their own position, I desire space in your paper to state what I understand to be the teachings of Christian Science in so far as they relate to your published account of his sermon.

Christian Science teaches that as the devil is the adversary, the enemy, or the opposite of God and His Christ, that we can only know what the devil claims to be as we know what God is.

As God is Light and this Light is the Light of the World, His opposite is darkness, and "the prince of darkness." As God is Good, or the absolutely good One, His opposite is evil, or the evil one. As God is Truth or the absolutely truthful One; His opposite is a "liar and the father of lies." As God is Love and the father of all manifestations of Love, His enemy is the father of all hatred, malice, jealousy, resentment, revenge, and everything that opposes the activity and manifestations of Love. As God is Life and the Author of all the harmonious activities of Being, His enemy is the author of everything that opposes life and the harmony of life. As God is infinite and beneficent Spirit which worketh in the spiritually-minded, His enemy is the evil spirit which worketh in the carnally-minded. As God is Immortal Mind which is made manifest through the type of mind and life which was in Christ Jesus, His opposite is mortal mind and all the manifestations of evil mentality.

According to Christian Science, God is the Mind, the Creator, the Father of everything that is, like Himself, good, spiritual, perfect, harmonious, and eternal; and the devil is the mind, source, or father of everything that is, like himself, sinful, sickly, deadly, material, and mortal; and the mission of Christ is to destroy the works of the devil that God and His perfect spiritual creation may be to us what they are to Him, "All-in-all."

The devil, therefore, in the light of Christian Science, is nothing more and nothing less than a liar and the father of lies, a deceiver, and the father of all deception; the adversary and the father of everything that is adverse or opposed to God; or mortal mind and all its material, carnal, sensuous, sinful, sickly, and deadly beliefs. In fact, Christian Scientists understand that the Bible teaches that the devil is much more than a fancy of the human imagination, and much less than the Infinite Person or Principle.

The Bible says that Jesus cast out devils, and that he cast out seven devils from one person. As persons could not be cast out of a person, the devils in this sense must be the evils that Jesus cast out. In the passage, "Have I not chosen you twelve, and one of you is a devil?" Jesus seems to indicate that any person full of the mind and spirit of evil is a devil. In the keen rebuke to Peter, "Get thee behind me, Satan," Jesus speaks of Satan as a particular manifestation of evil through a human personality. But as Mrs. Eddy says: "He to whom our Lord gave the keys of the Kingdom could not have been wholly evil, and therefore was not a devil after the accepted definition" (No and Yes, p. 32). According to St. Paul, evil is especially identified with the works of the flesh and with the lusts and temptations of the carnal mind which war against the mind of the Spirit.

Christian Science, while it uncovers the mystery of iniquity to be mortal or carnal mind and its beliefs,—matter, sin, disease, and death,—insists that it is much more important to overcome the devil than it is to define him; and that this is done only as we have the Mind, Spirit, Life, Truth, and Love, which was in Christ Jesus.

The teachings of the New Thought School and of Christian Science, which Mr. Maxwell grouped together in his sermon, are in no sense the same. Their teachings as to the nature and character of evil are fundamentally different. If I understand the teachings of the New Thought, evil in all its forms is undeveloped or unrecognized good; and what we ordinarily characterize as evil is not evil at all, but simply good in the making. Christian Science, on the other hand, makes a clear distinction between God and the devil, good and evil, right and wrong, perfection and imperfection, and the things that are spiritual and Christly and the things that are carnal and un-Christly. Christian Science denies evil only in the sense that Christ Jesus denied it, by casting it out, refusing to accept its claims or yield to its temptations. In fact, according to Christian Science, evil instead of being undeveloped good is an awful and tragic deception, lie, or illusion, which is only understood, overcome and destroyed through the Mind of Christ, which demands that mortals repent and forsake all evil and overcome in the Christ-way everything that is unlike God and His perfect, spiritual creation. In other words, the great liar and all his lies can only be cast out through the knowledge and demonstration of that Truth which makes free from all illusion or from the deceptions of all falsehood; and the prince of darkness disappears and becomes unreal in and "through the brightness of Christ's coming."

Christian Science in no sense discredits the plain teachings of the Bible, and it clearly recognizes that the Christ-way of dealing with the devil and all his works—sin, disease, and death—is the only way. It only discredits the theories and opinions of men which have departed from the whole salvation which it promises and which is realized through a right understanding and a right relationship to Christ, who is "the same yesterday, and to-day, and forever." The Bible to the Christian Scientists is not only the good Book, but also the health Book and the life Book; and Christ is not only the Saviour of men, but also their ever-present physician, helper, and friend.

Christian Scientists, while acknowledging the deepest debt of gratitude and love to the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science and the Leader of the Christian Science movement, to the degree that they are loyal and faithful to her teachings and her example, are just what their name indicates, Christians who understand that their Christianity is practical, definite,

Copyright, 1901, by Mary Baker G. Eddy.

Digitized by Google

knowable, and demonstrable Truth or Science. It is therefore as inappropriate to call Christian Scientists "Eddyites," and Christian Science "Eddyism," as it is to call the members of the Christian church "Campbellites" or their religion "Campbellism." Christian Science being universal and demonstrable Truth is in no sense a "cult" or an "ism." In fact, Christian Science is not even a sect in the ordinary sense of the term, but a spiritual movement, or a church based upon the Christ understanding which heals the sick and reforms the sinner, thus bringing to light the one universal, triumphant Church, or the Kingdom of God.—J. R. MOSELEY.

In the *Macon* (Ga.) *News*.

Testimonies for Truth.

FROM the days of the Patriarchs to the present, the people who taught the omnipotence, omnipresence, and omniscience of God—God as all-power, everywhere present, and all-intelligence—have met with ridicule and opposition, and yet this stone which has been rejected by the carnally-minded has become the head of the corner in the foundation of the governments of the civilized nations of the world. It was this idea of Truth that led the Pilgrim Fathers to seek refuge in this country, and to establish a nation recognizing that "God has endowed man with certain inalienable rights, among which are life, liberty, and the pursuit of happiness," and which in 1866 protected one lone brave woman in promulgating and establishing primitive Christianity accompanied with Christian healing. This has met with opposition, but the Christ-healing taught and practised by Jesus of Nazareth will become the head of the corner—will be the universal panacea for sin, sorrow, and all the ills of the flesh.

The same glad song of rejoicing that ascended unto God in the days of Jesus and the apostles for the Christian healing experienced, is to-day ascending unto the Father from thousands of happy homes for the blessings received in Christian Science.

At a recent Wednesday evening meeting of First Church of Christ, Scientist, Dayton, Ohio, a lady said it was impossible for her to tell how grateful she was for Christian Science. Then she told how this Truth enabled her to overcome suffering for her child. The little one had a high fever on the previous day and was very cross, but that day she was a very sweet child.

A gentleman said he had received a letter from a friend who had recently received great benefits from Christian Science, in which he placed a high estimate upon the worth of "Science and Health with Key to the Scriptures."

Another gentleman said a lady wrote him that she was now well and happy and thankful for this Truth. She said, "If you only knew how long I suffered and how earnestly I prayed to die that I might be rid of my suffering, you could appreciate my joy."

A third gentleman told of a case of healing which enabled a young lady to lay off her glasses. Following the advice of an oculist she had been wearing glasses for the past few years, and without them could not see to distinguish an object, and even with the glasses her eyes constantly watered. After the first treatment in Christian Science the last complaint disappeared, and in a few days she was able to lay the glasses aside, suffering no inconvenience.

This same gentleman also spoke of the great blessing Christian Science had brought to one home. A little boy, perhaps eight years old, was born with an imperfect palate which caused defective speech. When the parents became aware of it, it was a terrible shock. Since he has been taking Christian Science treatment his improvement has been wonderful, and while the demonstration is not as complete as we expect to see, it has brought much joy to that home. He can now speak several words distinctly and is learning very rapidly.

A young lady said she awakened one night with pain in her eye. It felt as though there was something in it. She declared the Truth as best she understood, and soon fell asleep. In the morning the eye was inflamed and swollen. She continued to declare the Truth and went to work. The eye watered so much that she soon returned from the office and solicited help from a practitioner, and the difficulty soon disappeared. She was very grateful for the benefits received.

A traveling man from New York City spoke of the growth of Christian Science. He said that he travels over a large portion of the United States and meets with a different society every Wednesday evening and Sunday, and that the growth and interest in Christian Science is something wonderful. In the ranks of Christian Science are found men from all vocations, and some at the head of large business interests. He had known of Christian Science about seven years, but not until one year ago had he taken any interest. At this time he had great trouble with his eyes. He consulted a specialist, who advised wearing glasses. A little later he met a friend interested in Christian Science and accepted treatment. In a few days the trouble entirely disappeared. He laid the glasses aside, and he has not been bothered with his eyes since. His mother and sister are also interested in this Truth. His mother, almost eighty years of age, has found Christian Science a wonderful help to her. She seems twenty years younger. He said that he had found Science a great help in business. He always studied a lesson in the *Christian Science Quarterly* before attending to business duties. He added, "We can do without gold but we cannot do without the Science."

A lady stated that for the past year they had a colored woman employed as cook in their family. On different occasions when not feeling well she would have some member of the household treat her, and the suffering was soon overcome. A short time ago she had a severe spell of suffering, and was relieved by Christian Science. She became interested and wanted to know if she could buy Science and Health. When assured that she could, she laid the money on the mantel, stating that she wanted a book of her own. In a few days after getting the book, she had an attack of sick headache, which was an old trouble of hers. She took Science and Health and retired to her room, and after reading half an hour she fell asleep and slept soundly until morning. When she came down stairs, she declared that she had not made a mistake in buying that book, for by reading it she overcame the sick headache in half an hour, whereas before, it was always two or three days before she got over a similar attack.

Continuing, the speaker said, "I have never been so impressed with the dignity of Christian Science as of late. Perhaps this week, more than any time before, I have noticed the *Christian Science Sentinel*. On the first page we find a brief summary of important events, and on the last page extracts from leading religious periodicals, such as would be helpful to us, and not one uncharitable word said in reply in all the corrections made by Publication Committees to articles appearing in both the secular and religious press against our Cause. No doubt the recent dedication of the large churches in Christian Science has caused much comment to be made, and where wrong statements have been published against Christian Science, they have been answered in a manly spirit. Those in charge of our periodicals, the *Journal* and *Sentinel*, show much wisdom in what appears therein, and for this dignity and manliness we cannot be too thankful."

A gentleman said that he desired to speak of the great value of circulating Christian Science literature. He then told of what one *Christian Science Journal* accomplished. He mailed a *Journal* to a friend in another city, where Christian Science seemed fairly well established. In due time, it fell into the hands of an educated man. His busi-

Digitized by Google

ness was such that he is required to work each day in the week. By the reading of this *Journal* he became deeply interested and soon secured the text-book, Science and Health, and other literature. In a few weeks he attended his first public service of the Wednesday evening meeting. The one conducting this service said she never heard a better talk than this man made, showing clearly how readily he had imbibed the Truth.

Another gentleman told of the work of a *Journal.* A member of the household was in very poor health. One day in a Methodist Church, a friend remarked to the mother that he had an advertisement which he desired her to read. It proved to be a *Christian Science Journal.* She became deeply interested in it, and asked for more such advertisements. Finally, when the doctors said her husband could not get well, she asked him to try Christian Science, and with his consent, at once telegraphed for a Scientist to give him absent treatment. Suffice it to say that in due time he was healed, and a number of persons in the village have learned of this Truth.

A lady testified that she had practised medicine fourteen years, but two years ago her health failed. Medical aid did not reach her case, and she sought help in Christian Science for nervous prostration. Not only has she received great benefits physically, but this Truth has brought many other blessings, overcoming an irritable temper, restoring affection in the family, and giving a better insight into the Scriptures. Her gratitude is very great for all the blessings Christian Science has brought.—*Dayton* (O.) *Herald.*

What the President's Private Secretary has to do.

The position of secretary to the President of the United States is an arduous one. In the rendering of its multitudinous services, it calls for the business qualifications of a methodical and systematic clerk in the performance of the daily routine of official work, and the finesse of a practiced diplomat in meeting and satisfactorily adjusting situations which naturally come before him as an intermediary between the President and an assorted public, each individual of which believes himself entitled to a portion of the time and interest of the Chief Executive.

The task of handling and answering the White House mail is in itself no small one, the President receiving from two hundred to twelve hundred letters a day. Important or not, each of these communications receives due attention, the secretary carefully sorting and classifying them; presenting some to the personal attention of the President, referring others to the department or person to which each properly belongs, while all receive courteous acknowledgment from the President's representative.

The secretary is also required to meet and dispose of the numerous visitors who call on the President at times not set aside for his public receptions, and whose business ranges all the way from that relative to the appointment of a supreme court judge or the governor of a turbulent territory, to the obtaining of the presidential autograph for a schoolgirl's album.

To deal with this heterogeneous mass in such a way as best to serve the ends of both business and courtesy, while economizing his own time and easing the strain on the President's personal attention by selecting the really important from the trivial request,—sorting the grain from the chaff,—giving offence to none, and sending all away with pleasant words and smiling faces, requires endless resources of tact and good judgment.

The secretary is also expected to keep at his fingers' ends the details of all the official business of the executive office, and the President is likely to send for him frequently each day to consult him regarding official engagements which have been made by him, to seek information and advise with him upon some matter under consideration, or, at a moment's notice, to bring papers and data in some case demanding immediate attention.—November *Success.*

The Lectures.

At Providence, R. I.

Filled to its utmost capacity, the Providence Opera House presented an interesting sight Sunday afternoon (December 8) at the lecture on Christian Science delivered by Judge William G. Ewing formerly of the Illinois Superior Court bench. Every seat in the house was filled, on the floor, in the boxes, in the balcony, and in the gallery, and standing room was at a premium. Throughout the house several hundred people stood up in order to gain a point of vantage where they could see the judge and hear him speak on the topic which is at the present time interesting so many people in Providence, and in fact in the entire state. The audience was not limited alone to people from this city, but was composed as well of persons who had journeyed miles to hear the eloquent speaker, whose reputation always insures a large number of auditors wherever he speaks.

Far and wide, the lecture on the principles and teachings of Christian Science had been advertised, and long before the time set for Judge Ewing to speak the Opera House began to be filled by a throng eager to get in at the door. As the time approached it was seen that the house would not be large enough to accommodate the immense gathering, and all the portable seats were called into play. Even after this was done the result was not satisfactory, as large numbers were compelled to stand in the rear of the house. Public interest seemed to be intense on the subject and great enthusiasm was manifested by the audience. Expectancy was written on every face, and after the Opera House had filled considerable impatience was noticeable for the appearance of the speaker. A wave of satisfaction swept over the audience as just after four o'clock Rev. Willard C. Selleck, pastor of the Church of the Mediator, who presided, arose to introduce Judge Ewing. This formality over, the learned judge entered into his subject with the intensity born of thorough belief, and held his hearers spellbound throughout his wonderful oration.

Judge Ewing's is no new face to Providence people, and many who were in attendance yesterday had heard him speak before. About two years ago the judge delivered a lecture on Christian Science in this city, which created wide comment, and which was in part responsible for the large attendance yesterday. His speech was one of great power and carried conviction in every word. The mind of the speaker and his beliefs were reflected in every sentence, and with the eloquent delivery of Judge Ewing behind the words of the speech, it is no small wonder that the audience was stirred to enthusiasm. His words were logical and consistent, and their force awakened long-sleeping trains of thought in the minds of his hearers.

Evening Telegram.

Rev. Mr. Selleck's introductory remarks were as follows:

This meeting is held under the auspices of First Church of Christ, Scientist, of this city, and we are to have the pleasure of listening to a lecture by one of the most representative members of the Board of Lectureship of The First Church of Christ, Scientist, of Boston.

The object of this meeting, as I understand, is not proselytism, but explanation. The speaker who comes to us, comes for the purpose of instructing and informing the people of this community, to the end that they may the better understand the teachings of Christian Science and the significance of this remarkable movement.

If I may be permitted to say a word before introducing the speaker, that word will be simply a plea for a fair-minded, open-minded attitude with reference to the subject which is to engage our attention. Every man wants to be understood, and the more sincere and earnest he is, the deeper and stronger is the desire to be justly understood.

Digitized by Google

Perhaps no man has a right to ask,—certainly no man has a right to demand, that other men shall agree with him in all his thoughts and opinions; but every man has a right to ask, and under certain circumstances he has a right to demand, that his fellow-men shall justly understand him before utterly condemning and denouncing him. We want to be understood; every thoughtful and sincere man has this natural desire.

We are told that the great musician, Franz Liszt, when writing to his friend and devoted fellow-laborer, Richard Wagner, in appreciation of some words of encouragement which the latter had said, expressed himself thus: "To be thus completely understood was my only ambition, and to be so understood is the most ravishing gratification of my life."

This expresses what I said before. We have an honest, and earnest man, who desires to be understood, and it is our moral duty to be willing to understand, to try to understand, there is need that men be in an open-minded attitude; willing to be informed, that they may come to understand what is the truth.

We are here to-day for the purpose of being instructed. The distinguished jurist who is to address us is here for the purpose of trying to help us understand the Truth as he comprehends it. We are all trying to understand a little more largely the significance of this universe in which we live, and move, and have our being, and we ought to welcome any ray of light that may be thrown upon our pathway and learn that we are all brothers; that one infinite Life, the Life of Love, pulsates through all hearts, through all nations, through all worlds.

It gives me great pleasure to present one of the prominent jurists of Illinois; a man who has nobly served in secular life in his profession, winning the honor, respect, and love of those who have known him. I welcome him to the city of Providence, and with great pleasure present him to you this evening.—*Correspondence.*

At McPherson, Kan.

First Church of Christ, Scientist, of McPherson, Kan., is glad to report to the Field their pleasure in giving to the people of their vicinity an opportunity to hear a lecture on Christian Science.

We quote from the *McPherson Daily Republican,* of November 13:—

"Hon. William G. Ewing, in his lecture on Christian Science last night at the Opera House, was met by an unusually large audience.

"The lower house was full and many were seated in the balcony and eagerly listened with marked attention.

"There were many from out of town, and the presence of so many visiting members, did much to encourage the spirit of the occasion."

Judge Ewing was introduced to the audience by Mr. C. W. Dum, First Reader of the church, in the following words:—

It has been said by a noted writer that "when Rome had gathered all the religions of the world into her Pantheon, more striking than all their contrasts was their agreement in this one point, that all express the contempt of man for man." It was not until the advent of Jesus of Nazareth that the world was awakened to the teaching of one, who proved his love for God by manifesting his love for man in healing the sick and sinful and feeding the hungry.

It is a thing of record and generally accepted by Christendom, that Christ's disciples and followers continued to overcome through the power of Truth all error, sin, sickness, and death, for more than two centuries after the Master's ascension. Then why should it be thought a thing remarkable in this enlightened and progressive age, again to see a people having faith in the omnipotence of God's power to control all human conditions; a people made happy, contented, and healthy, through an enlarged apprehension of man's relation to the Father as revealed in Christian Science; a people who are confident that Christ meant what he said, when he uttered these words, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father"?

Toleration is an outgrowth of the present-day civilization, and by virtue of the desire of all to know the Truth, I feel that you are ready to welcome any one who has aught to offer that will strengthen, elevate, or purify. Therefore I take pleasure in introducing to you Judge Ewing, a man of high social standing, a scholar, and an orator, who resigned a lucrative position in order to proclaim this healing gospel,—this new-old Truth.

It is now my privilege to present the Hon. William G. Ewing, who will speak on Christian Science.

Correspondence.

At Franklin, Pa.

One of the largest and most representative audiences that ever assembled in the Franklin Opera House was there at four o'clock on Sunday afternoon (December 1) to listen to the lecture on Christian Science by Judge William G. Ewing, late of the Superior Court of Illinois. When we say representative audience, we speak in a religious sense, as among the crowd were noticed staid members of the Methodist congregation, the stiffest kind of Presbyterians, confirmed Episcopalians, Baptists of the first water, and members of the other various denominations, while the Christian Scientists were out in force, backed by a large number of those in sympathy with the movement inaugurated by Mrs. Mary Baker Eddy, one of the most notable women of modern times and the Discoverer and Founder of Christian Science, which is so rapidly gaining ground, not only in the United States, but throughout the world.

Judge Ewing handled his subject in an able manner. He is a most convincing speaker, and while he makes no flights in oratory, he impresses his hearers with his earnestness, and it is easily discernible that he is wrapped up in his subject. Christian Science has many drawing features, and one would not have to listen to many such lectures as that delivered on Sunday soon to become a firm believer in the doctrine. It is an inspiring subject, and handled as it was, the Judge soon won his hearers through the sympathetic features he brought out. While there are many who believe in the work of Christian Science and many more who do not, there is no doubt but that it is one of the most attractive and logical beliefs presented to the public to-day. The Christian Scientists believe in the Lord Jesus Christ and try to do his will according to their belief, and what more can be asked of any Christian?

There is no doubt of the fact that many were impressed by the talk on Sunday afternoon, and it will have an effect that will be felt in days to come. It will create an interest that will materially increase the attendance at the Christian Scientist meetings and in other ways will help the cause, which has gained a good start in Franklin.

Franklin Evening News.

At Utica, N. Y.

At the Auditorium last evening (Monday, December 9) a large audience assembled to hear the lecture of Rev. Arthur R. Vosburgh, C.S.B., of Rochester, on the subject "Christian Science is Scientific Christianity." The unfavorable weather conditions did not prevent the greater part of the membership of First Church of Christ, Scientist, from coming out, and there was a large number of outsiders who came to hear the words of the eminent divine on a subject which has been the source of no small amount

Digitized by Google

of controversy. Mr. Vosburgh was introduced by Frederick Hackett, who said:—

Ladies and Gentlemen:—No subject is receiving more widespread and thoughtful attention than Christian Science. Almost every person has some knowledge of it. This knowledge has been gained from miscellaneous sources and is oftentimes misleading. As is but natural, much that has been said and written about it is false. The casual critic, the superficial or prejudiced investigator, cannot comprehend it and must not be accepted as authority.

Untrue statements and mistaken notions do a two-fold harm; they are unjust to Christian Science and prevent one from receiving the blessings of health and happiness which might flow therefrom. The subject is so vast, so far-reaching and universal in its social, moral, and physical aspects, that it cannot be lightly treated but demands earnest and thoughtful consideration. This lecture is the fifth given by First Church of Christ, Scientist, of this city during the past three years. Its purpose is to present, so, far as this is possible in so brief a time, the fundamentals of Christian Science, and to furnish the public with reliable information regarding this world-wide movement. The gentleman who will now address us is well qualified to speak with authority. He has had wide experience as a lecturer and is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. I have the honor of introducing Rev. Arthur R. Vosburgh, C.S.B., of Rochester, whose subject for this evening is, "Christian Science is Scientific Christianity."—*Utica Daily Press.*

At New York, N. Y.

Notwithstanding the inclemency of the weather, the attractive hall at No. 82 West 126th Street, was filled with an attentive and interested audience Friday evening, December 13, the occasion being a lecture on "Christian Science, Physician and Redeemer," by Hon. William G. Ewing of Chicago, member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass.

The lecture was given under the auspices of Third Church of Christ, Scientist, of New York City, which holds its regular services in this hall.

Judge Ewing was introduced by Dr. George D. Cochran. It is a significant fact that Dr. Cochran, who is an M.D., having studied in both schools of medicine, allopathy and homœopathy, is now a firm believer in the healing power of Christian Science. His introductory remarks were as follows:—

Friends:—I realize fully your great desire to listen to the speaker of the evening, and I will therefore detain you but a moment.

We are living in a stirring period. Things considered improbable, if not impossible, are being frequently accomplished. Nothing has perhaps aroused more thorough and widespread controversy than the announcement of the discovery of Christian Science, and the subsequent application of its rules for the destruction of sin and relief of suffering.

So much has been said and written by unauthorized persons, and there has been so much consequent misunderstanding in regard to it, that The First Church of Christ, Scientist, in Boston, Mass., considered it wise to establish a Board of Lectureship, in order that misapprehensions may be corrected, and Christian Science be presented in its true light.

We have with us this evening a member of this Board, a man eminently equipped for his office, and of such conservative temperament that you can listen to his statements with the utmost confidence. I have therefore the great pleasure of introducing to you the Hon. William G. Ewing, who will now address you.

A full synopsis of Judge Ewing's lecture was published in *The Harlem Reporter*, of December 14.—*Correspondence.*

Lectures at Other Places.

Supreme Aid.

O for the spirit which is content with nothing less nor lower than the highest help. To turn in temptation directly to the power of God; to cry out in sorrow for God's company; to be satisfied in doubt with nothing short of the assurance that God gives; to know that there is no real escape from sin except in being made holy by God's holiness—these are what make a man's complete salvation. It is your privilege and mine, as children of God, to be satisfied with no help but the help of the highest.—PHILLIPS BROOKS.

Notices.

New Edition of the Manual.

The twenty-fourth edition of the Church Manual, containing the names of all the members of the Mother Church, including those admitted November 5, 1901, is now on sale.

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

The Revelation of Christianus

And twenty other Poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials.

One copy prepaid	$1.25
Six copies to one address . . .	6.50
Twelve copies to one address . .	12.00

Send all orders to The Christian Science Publishing Society, 95 Falmouth Street.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christmastide.

IN the religious world the birth of the Nazarene is observed according to the various ceremonial methods prevailing in the respective denominations. In some of these the observance consists of elaborate ritualistic services. In others, simpler methods obtain.

The primary purpose of all these observances is, no doubt, to keep in remembrance the significance of Jesus' birth in its relation to mankind.

In the secular and social world the observance of Christmas is little more than materially festal. There is practically nothing of solemnity or religious soberness associated with it. Too much, indeed, is it given over to the merely sensual kinds of pleasure, and by far too much of this supposititious enjoyment is of the grosser sort. All this is as far removed from the true spirit and intent of the occasion as mankind could well have it.

Only as the world awakens to the real import of the birth and life of Jesus can it enter into the true celebration of his advent in the flesh. Nor can this be correctly estimated until his character is rightly apprehended. It was an apparently dual character, an admixture or commingling of the Divine and human. The attempt to comprehend this duality has been, and is, one of the perplexing and difficult problems of theology. To distinguish clearly and understandingly between the human Jesus—the man Jesus—and the Christ, has been the troublesome question. His divinity and his humanity seem so closely connected that to separate them has been impossible. Yet many have endeavored to make such a separation, more especially those theologians who are accounted liberal and progressive. This endeavor, more than any other, has led to the establishment of new Christian denominations or sects, and to the drawing of a doctrinal line between so-called evangelical and non-evangelical organizations. The evangelical maintain that Jesus Christ, or Christ Jesus, is both God and man, both Father and Son, both Divine and human. The familiar declaration of Jesus, wherein he defines his own character, "Before Abraham was, I am," is one of the Scriptural bases of this evangelical contention. Jesus here certainly drew a distinction between the human Jesus and the Divine Christ. In his human form, or personality, he did not exist before Abraham existed. He manifestly referred to an existence or a condition of existence above the human. It is vitally important that this distinction be understood. Until it is, there can be no true conception of the nature and character of *Jesus the Christ*. The few and apparently simple words thus uttered by Jesus embrace an eternally vital meaning, for they relate not only to the nature and character of Jesus, but to the nature and character of God Himself, as well as to every individual creation of God. So little did his hearers comprehend Jesus' definition of himself that, according to the record, they took up stones to cast at him. There are yet those who take up stones to cast at any who endeavor to show that Jesus did not regard himself as God, but as the Son of God.

It will be helpful to consider the connection in which Jesus uttered the weighty words we are discussing. He had declared that he was the light of the world, and that those who followed him should not walk in darkness, but should have the light of life. The Pharisees, objecting, accused him of bearing an untrue record of himself. Jesus answered them that his record was true. He said: "Ye judge after the flesh; I judge no man. And yet if I judge, my judgment is true: for I am not alone, but I and the Father that sent me." We further read: "Then said they unto him, Where is thy Father? Jesus answered, Ye neither know me, nor my Father: if ye had known me, ye should have known my Father also." This we read in John, 8. In the same chapter we are also told that Jesus said unto his hearers who had just claimed that God was their Father: "If God were your Father, ye would love me: for I proceeded forth and came from God; neither came I myself, but he sent me." Here is a clear recognition by Jesus of God's fatherhood and his own sonship. No fair construction of this language will warrant the conclusion that Jesus taught that he was both Father and Son. In further corroboration of his own teaching we may profitably consider this additional definition: "If I honor myself, my honor is nothing: it is my Father that honoreth me."

This teaching is in strict consonance with all Jesus' teaching in reference to his own nature and character. From it we plainly deduce his own conception of himself to have been that of a Son. He carefully and explicitly acknowledged God's Fatherhood and his own sonship in all his teaching. When speaking of his departure from the earthly phase of existence it was his wont to say: "I go to the Father." He is not recorded as ever having said: "I go to Myself." It is true he repeatedly declared that he and the Father were one. This oneness is easily explainable as a oneness of character and purpose rather than a oneness of personality or of individuality. He was one with the Father in that he was about his Father's business. He was one with the Father in that he had no ambitions, desires, hopes, expectations, life, or existence apart from the Father. He was one with the Father in that he reflected the Father's nature and character throughout his earthly ministry. This earthly oneness was clearly but a type of the heavenly or spiritual oneness. The latter is the eternal oneness to which he referred when he used the words we are here considering. The Christ—the Christ-Idea—for which his earthly career and personality stood, is the identity which *was* before Abraham was.

When this conception of Jesus the Christ is grasped, when his nature and character is thus understood, there will be a grander knowledge of the meaning of his advent in the flesh, and the true Christmas will find perpetual place in the human heart.

The Scripture above referred to is a fair index to the entirety of its teachings concerning Jesus the Christ, as spiritually interpreted, and of itself furnishes a solid foundation for the Christianly Scientific definition of Jesus the Christ contained in the Christian Science text-book, "Science and Health with Key to the Scriptures," wherein the distinction between Jesus, as the fleshly representative of God, and the eternal Christ as His spiritual idea, is most clearly and logically made by the author, Mary Baker G. Eddy. This distinction has brought joy, and health, and peace to myriads of human hearts. Oh, that the myriads yet seeking, but not finding, would read and grasp this Heavenly Evangel!

Let hungry and inquiring minds find joy and satisfaction in the following which we take the liberty of quoting from our beloved text-book:—

"Jesus was born of Mary, Christ was born of God. Jesus was a mediator between humanity and Spirit. He voiced Truth. He spoke to the human sense through the divine. As Paul says: 'There is one God, and one mediator between God and men, the man Christ Jesus.' He was the rebuke of Spirit, dispelling the illusions of the senses. With the Divine Mind he healed the sick and cast out evils, such as sin, disease, and death" (p. 227).

Digitized by Google

Again: "Jesus was the Virgin's son. In the flesh he was appointed to speak God's word to human flesh, and appear to mortals in such a form of humanity as they could understand as well as perceive. Mary's conception of him was spiritual; for only purity could reflect Truth and Love, which were to be incarnate in the good and pure Christ Jesus. He expressed the highest type in that age which a fleshly form could express of manhood. Into the real and ideal man the sensual element cannot enter. Thus it was that Christ born of the Father illustrated the coincidence, or spiritual agreement, between God and man.

"The word *Christ* is not properly a synonym for Jesus, though it is commonly so used. Jesus was a human name, which belonged to him in common with other Hebrew boys and men—for it is identical with the name of Joshua, the renowned Hebrew leader. On the other hand, Christ is not a name so much as a title, and belongs to our Master exclusively. Christ expresses God's spiritual, eternal idea. The name is synonymous with Messiah, and alludes to the spirituality which was taught, illustrated and demonstrated in the Life whereof Christ Jesus was the embodiment. The proper name of our Master, in the Greek, was Jesus the Christ; but Christ Jesus better signifies the God-like.

"The advent of Jesus of Nazareth marked the first century of the Christian era, but th Christ was without beginning of years or end of days. Throughout all generations, both before and after the Christian era, the Christ, as the spiritual idea,—as the Holy Ghost, or Comforter,—has come, with some measure of power and grace, to all those prepared to receive Christ, Truth. Abraham, Jacob, Moses, and the Prophets caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the spiritual idea, the divine nature, the essence of Love. The divine idea, or Christ, was, is, and ever will be inseparable from its Divine Principle, God. Jesus referred to this unity, saying: 'Before Abraham was, I am;' 'I and my Father are one;' 'My Father is greater than I'" (pp. 228, 229).

It will be noticed that Mrs. Eddy says the name Christ belongs to our Master *exclusively*. This has always and everywhere been her teaching. She has repeatedly published in newspapers and in the Christian Science periodicals statements in denial of the accusation which some have made against her, that she claims to be a Messiah. This erroneous accusation being thus permanently refuted in the standard text-book as well as specifically in current publications, if any shall hereafter essay to repeat it they will do so at the risk of their own reputation for care and accuracy, or else for truth and veracity.

The Christ spirit is taking such hold on the world's best consciousness that calumniation of Christ's servants must cease, and brotherly love more and more take its place. May each recurring Christmas emphasize anew the Christ-love, and all the world respond Amen!

Among the Churches.

Union at Philadelphia, Pa.

Believing with Paul, that "none liveth to himself," we desire to share with our brothers and sisters in the Field the great blessing that has lately come to us.

On Sunday, December 1, Second Church in Philadelphia returned to its former home, First Church, with great rejoicing, and with hearts full of love and gratitude to the "Giver of all good." The dear brothers and sisters in First Church received our little band with open arms and loving hearts, and "we know that we have passed from death unto life, because we love the brethren."

The following letter was sent by the members of the Second Church to First Church:—

To First Church of Christ, Scientist, Chestnut Street above 18th Street, Philadelphia, Pa.

November 23, 1901.

Dear Brethren:—After deep, prayerful contemplation of the life of the Master and of our Mother in Israel, with an earnest desire to best serve the Cause of Christian Science and thereby do the will of God in our beloved city, we desire in the future to make our church home with you, well knowing that the lie of separation has too long held our hearts and minds in its deadly grasp.

Having made our demonstration, we are willing to return in any way that is acceptable unto our God and our brethren, trusting that our desire will be received in the loving spirit in which it is sent, and believing that the Sun of Righteousness only awaiteth an opening in the clouds to shine forth and cover with living glory our dear city and the inhabitants thereof.

Yours in Love and Truth,

TRUSTEES OF SECOND CHURCH.

To the above letter the First Church replied as follows:—

November 26, 1901.

Dear Brethren:—With gratitude to God and tenderest love to you, we bid you a joyful welcome to our church, assuring you that your desire finds the heartiest response in our hearts.

The individual experiences we have all had since last we worshiped as one church, have but served to chasten and purify us, making us more ready for a higher union in selfless love.

Upon signing our church rolls you will be received into full membership; and that you may find peace, strength, and love in the church which we now gladly call yours and ours, is the earnest wish of

Yours, in the bond of brotherly love,

EXECUTIVE BOARD OF FIRST CHURCH OF CHRIST, SCIENTIST, Philadelphia, Pa.

The service in the re-united church was very beautiful and touching, for we were both conscious that much pride had been overcome; and we had, as well, to crown our love-feast, the blessed privilege of listening to the following words from our beloved Mother in Israel:—

"Will the dear church accept my tender congratulations on the union of the brethren. 'How good and pleasant a thing it is to dwell in unity.' I rejoice with the angels over it. M. B. EDDY."

We know that the Field will rejoice with us and "the angels" and our loving Mother, in Love's own works; and will join with us in prayer to God for more grace, obedience, and love, that we may all learn to follow more closely our Leader, in the path which leads "to the house not made with hands, eternal in the Heavens."

BESSIE WHITE, *Clerk of Second Church.*

Corner-Stone Laid at Manchester, N. H.

With a setting of bare trees and of high-heaped piles of snow, and air that was far from balmy and summer-like, Manchester's Christian Scientists to-day (Saturday, December 7) laid the corner-stone of their new house of worship on Harrison Street, corner of Alfred Street, the site being a part of the Straw estate.

But while it was cold and wintry in the open air, these who were participating in the interesting exercises were warm in their enthusiasm for their religious tenets and full, too, of warm hopes for the future of their faith in Manchester. The winter's cold in no way held them in check; indeed, they seemed not to notice it at all, but to be all wrapped up in the exercises of the occasion.

Christian Science has not made much noise in Manchester, but slowly and surely it has been gaining ground,

Digitized by Google

and the numbers of First Church of Christ, Scientist, as the organization is called, have been increasing right along. The time has come when the members feel that a hired hall should no longer be their only place of meeting, and they are preparing an attractive home of their own which they expect to have ready for occupancy by next summer. It is not to be a large affair, but it will be of comfortable size and convenient arrangement. It will be built of brick and stone, of churchly design, and with the idea of adding to its size and capacity as the needs of the congregation demand. The tower is not for the present to be extended to its full height.

Mr. Charles D. Reynolds, First Reader of the local congregation, presided at the exercises, which were of a very simple nature. The programme was as follows:—

Scripture reading (2 Samuel, 7 : 1–6; 8 : 11–18, 23–29); silent prayer, followed by the audible repetition of the Lord's Prayer with its Spiritual interpretation, according to the Christian Science practice; laying of the corner-stone; reading of sermon—passages arranged from the Bible and Science and Health, Mrs. Mary Baker G. Eddy's work, which is the text-book of the Scientists; repetition of the "Scientific Statement of Being," in unison.

The Scripture passages read by Mr. Reynolds were the instructions to the ancient Hebrew people as to the building of their temple.

Mrs. Mary F. Berry placed in position in the cavity of the stone the copper box filled with the books and papers designated to be a permanent record of the organization, and Mr. Reynolds put on the cover.

No formalities followed. Three workmen set the stone in cement, and when this had been done Mr. Reynolds proceeded with his sermon-reading of parallel passages from the Bible and Science and Health. The passages selected referred to the spiritual temple and the corner-stone of life character. The reading finished, the people separated and went to their homes.

The stone, a simple block of dressed granite, bore no inscription other than the date, 1901, in large figures on its outer face, standing out against a polished background.

The following were the articles placed in the corner-stone, enclosed in a carefully sealed box:—

A Bible and all the works of the Rev. Mary Baker Eddy, as follows: "Science and Health with Key to the Scriptures," "Miscellaneous Writings," "Unity of Good," "Retrospection and Introspection," "No and Yes," "Christian Healing," "People's Idea of God," "Message to the Mother Church" for 1900 and 1901, a copy of "The Christian Science Manual," and a copy of the periodicals—the *Journal, Sentinel,* and *Quarterly,* a history of the Christian Science movement in Manchester up to the present date, a list of the charter members, officers, and present members; also a list of the contributors to the church building fund.

First Church of Christ, Scientist, was organized in Manchester in 1894. Its rooms are in the Barton Block (a part of the old Merchants' Exchange), at the corner of Elm and Manchester Streets. Miss Annie F. Baker is the Secretary, Miss Grace R. Darling the Treasurer, Mr. Charles D. Reynolds the First Reader, and Mrs. Harriet P. Libby the Second Reader.

Daily Mirror and American.

Progress in Fairbury, Ill.

First Church of Christ, Scientist, of Fairbury, Ill., has purchased a lot and house located at the corner of Walnut and Fifth Streets. The house has been remodeled and neatly furnished for use. The following Bible texts are printed in gold letters on the walls: "And ye shall know the Truth, and the Truth shall make you free." "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Also the following from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 490, "Divine Love always has met, and always will meet, every human need." Two beautiful Bible pictures are placed in conspicuous positions.

The opening service was held November 10, 1901, at 10.30 A.M., and was well attended. We are truly grateful for the interest which is being shown in Christian Science in our city. The address of Miss Jeannette Moore, First Reader, was as follows:—

Webster defines Church as a "formally organized body of Christian believers worshiping together. The collective body of Christians or of those who acknowledge Christ as the Saviour of mankind." David speaks of it as "the assembly of the upright." Paul declares it to be the body of Christ, "the fulness of him that filleth all in all."

Mrs. Eddy in "Science and Health with Key to the Scriptures," p. 574, defines church as "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle."

Jesus came to establish the true church. To Peter he said, "Flesh and blood hath not revealed it unto thee, but my Father [Divine Principle, Love]. . . . And upon this rock I will build my church."

"Our church is built on the divine Principle of Christian Science" (Science and Health, p. 340) In Science the church is not material but spiritual. "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him."

Our work as a church is to verify Jesus' promise, "The works that I do shall he do also;" to demonstrate that Life, Truth, and Love are omnipotent, omniscient, and omnipresent; to prove that Truth does cast out error of every type; that Love does vanquish malice, hatred, and all kindred thoughts and feelings; and that Life overcomes the illusion of death. "Verily, verily, I say unto you, He that heareth my word, and believeth on him that sent me, hath everlasting life, and shall not come into condemnation; but is passed from death unto life."

Each member has an individual work to do. In the Christian Science church there is no room for idlers, it was said of the barren fig-tree, "Cut it down." The work of self-purification is an individual work and must be thoroughly accomplished before we can be pure as a body or church. As the material body cannot be considered a sound body while its members are diseased, so the church cannot be the body of Truth while error exists in its midst.

It is the work of the church, therefore, individually and collectively, to demonstrate harmony, to prove the kingdom of heaven at hand, to let the light of our understanding shine forth in good works that the unbelieving, who sit in darkness, may see the Light and be drawn unto it.

We must lift up the fallen; we must heal the sick and carry to the sin-sick the balm of Gilead; we must point out to the poverty-stricken the way to the great storehouse of Love where there is enough and to spare; with Love we must cast out the fear that now holds the world in bondage, that all may come to the understanding that divine Principle, the eternal Good, is God, and that His reign is supreme, omnipotent, and forever harmonious.

E. M. KESSLER, *Clerk.*

Church Organized at Council Bluffs, Ia.

On the Wednesday evening before Communion Sunday of June, 1899, our church was organized, with a charter membership of fifty. We are still occupying the hall which we rented at that time, but our attendance has grown so rapidly that we shall soon have to seek larger accommodations.

In June of 1900 a large and appreciative audience listened to a lecture from Judge Ewing of Chicago.

Much interest was aroused by the lecture, in which the

Digitized by Google

speaker dwelt with particular emphasis on the mutual interests of the church and Christian Science; the points upon which they meet on common ground; the fundamental principles in the demonstration of which Christian Science clasps hands with the church, and the unity of all good working to the same end. We feel that great good was accomplished by the lecture, and much unreasonable prejudice dissipated from the minds of many who were ignorant of the tenets of Christian Science. The impulse thus given to the cause has been manifested by the growth in our attendance.

We have now established reading rooms, and much interest is displayed in our Sunday School organization. The children recently presented the city jail with the Christian Science text-book, "Science and Health with Key to the Scriptures." Much good is being done in a quiet way, and we have had many gratifying demonstrations. We work happily, hopefully, and harmoniously, and with faith that the band which is following the standard that has been raised in Council Bluffs will make good progress onward and upward.—VIOLA B. BURGESS, *Clerk.*

An Explanation of Creation.

REV. CHARLES G. AMES, D.D., of the Church of the Disciples, conducted the noon service Wednesday (December 18) at Kings Chapel. In a brief address he gave an explanation of the creation and drew from his remarks a lesson pertinent to the Christmas season.

"I wish," he said, "that we might have such a view of the world around and within us that we might believe that it is very good. In our struggles and trials it is a great help to look beyond ourselves and see the large outer world and be glad that we are here and that others are here to share the infinite goodness. I grow larger and gladder when I am in sympathy with all the inhabitants of the universe.

"Why should there be any creation at all? There is only one rational explanation of which I know. All these creatures are the offspring of Almighty goodness, and life is a bond of relationship with all the lives of the universe. Beasts do not know this; unspiritual men do not acknowledge it, yet this religious explanation of life adds a thousandfold to it. As life is a gift of love to us, it must be a gift of love to each other. I do not know why this scheme of being which runs down to the insect may not also run up to the infinite, uniting all forms of life with the common bond of love."—*Boston Transcript.*

Plus and Minus People.

We all know people who never add anything to our fun, our information, our happiness, or our comfort. They are always trying to get something from us without giving anything in return. They are sponges that absorb, but give nothing back. When they leave us, we have a minus feeling, a consciousness of having lost something. On the other hand, we know people who always give more than they take from us; they are resourceful, suggestive, helpful; everything increases under their touch, for they are not trying to see how much they can get, but, instead, to give us something. They are optimists; they turn the best side of themselves to us, say pleasant things, and are helpful in their intercourse. They do not try to drain us dry; we have a plus feeling when they depart, a consciousness of having found something; they seem to leave a part of themselves with us. Like the rose, they bestow their fragrance and their beauty for us to think about after they are gone. Everybody loves the man or woman who leaves something behind,—a pleasant memory, a helpful suggestion, or kind word. Nobody cares for the absorbent people who get everything they can and give nothing.

Success, November, 1901.

From Our Contributors.

Christ's Advent.

BY CLARENCE A. BUSKIRK.

FORETOLD by prophet, seer, and bard,
By signs and portents heralded,
The true Messiah lived and bled,
Yet few there were who knew their Lord.

The true Messiah came to earth,
Not as a kingly conqueror comes
With jeweled pomp and noise of drums,
But a lone manger gave him birth.

Poor fishermen composed the band
With which he moved in humblest guise;
Nor wealth nor greatness reached his eyes,
Nor sword nor sceptre stained his hand.

He saw the strutting Cæsars pass,
He saw the parasites of power,
All as the insects of an hour,
Or passing shadows on the grass.

Unlike all other princes born,
He valued not what men most prized;
So Gentiles doubted and despised,
And Jews and Romans laughed in scorn.

Not less the radiance of the flame
Because too pure for mortal eyes;
Not less a radiance from the skies
Because men saw through pride and shame.

Whatever really comes to man
Of blessings that beget no curse,
And makes all better, nothing worse,
From inmost unto utmost span,

Must come as comes the gentle shower,
The modest breeze, the midnight dew,
As comes the morning to the blue,
Or blushing crimson to the flower.

The light of the Messiah's birth,—
A quiet daybreak in the sky,—
Still, as the centuries go by,
Broadens its radiance round the earth.

No threat'ning swords of Moslem hosts,
No frightful gifts on pagan shrines,
No awful menaces and signs,
The true Messiah's kingdom boasts.

Its laws, pacific and benign,
Indeed, are messengers of Love;
Its steadfast Word comes from above,
And rightly heard brings joys divine.

Christ's kingdom hath not passed away,
And shall not with the floods of time;
All are its citizens sublime
Who rightly seek and work and pray.

Are Christian Scientists too Narrow?

BY CALVIN C. HILL.

THE following statement has often been made in my hearing: "If you are not careful you will become too narrow." As I lived on a farm in my youth, the above state-

Digitized by Google

ment brought this picture to my mind: Geese were raised by many of the farmers, and to keep them from running over the farm and destroying the products, they were put into a large pen built of wooden rails such as are used on a farm, and the gates, so-called, were made of three upright posts driven into the ground, permitting a person to get through sideways with ease. The geese were yoked with a forked stick, which made it impossible for them to get through the openings or the gate.

In Matthew's Gospel, it is written: "Enter ye in at the strait gate: for wide is the gate, and broad is the way, which leadeth to destruction, and many there be which go in thereat: because strait is the gate. and narrow is the way, which leadeth unto life, and few there be that find it." Now what are the yokes which make you and me so broad that we are not able to get through this strait gate which leads to eternal life? Should we not constantly pray to be unyoked and liberated from the gods of this world—whatever is opposite to this Scripture: "Thou shalt have no other gods before me"? Our Leader says: "This *Me* is Spirit." And should we not become so narrow—and just broad enough—that we may walk with ease in the narrow way of which it is said, "And few there be that find it"? Or shall we continue to be yoked as were those who were bidden to the supper spoken of in Luke, 14 : 18–20, and be deprived of the blessings which come from seeking "first the kingdom of God, and His righteousness"?

What is broader than Principle? "This Principle is Mind, Substance, Life, Truth, Love. When understood, Principle is found to be the only term that fully conveys the ideas of God,—one Mind, a perfect man, and Divine Science. As the divine Principle is comprehended, God's omnipotence will dawn on mortals, and the notion of an everywhere present body—or of an Infinite Mind starting from a finite body, and returning to it—will disappear" (No and Yes by Mary Baker G. Eddy, p. 29). Can we, then, as professed followers of Christ—Christian Scientists—become too narrow by spending our spare time in the study of the Scriptures and our beloved Leader's writings, which explain this divine Principle and the life of the great demonstrator thereof, who said: "Ye shall know the Truth, and the Truth shall make you free"? Free from what? From all that is opposed to God, Good. And what is so narrow as a broad knowledge of the things of this world? As some one has said, "What is the use of knowing so much if what you know is not true"—is not the Truth?

On page 491 of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, this question is asked: "How can I progress most rapidly in the *understanding* of Christian Science?" Answer: "Study thoroughly the letter, and imbibe the Spirit." To become a good mathematician or musician, one must be so familiar with the rules as to be able to detect instantly an error, and understand what is right. The word "thoroughly" in the answer means to me, to become so familiar with the teachings of Christian Science that we do understand and do right at *all times* and under *all circumstances*. Again, on page 309 of "Miscellaneous Writings" by Mary Baker G. Eddy, it is written, "He advances most in Divine Science who meditates most on infinite spiritual substance and Intelligence." Therefore let us no longer be like yoked geese, penned in by the gods of this world, but let us "imbibe the Spirit" by studying "thoroughly the letter," and thereby have our God-given freedom and dominion.

Success.

BY J. MUNROE HEILBRUN.

We hear much about the humble origin and scant opportunities of men whose lives and attainments are measured by the ambiguous word—*Success*. We are constantly reminded that the fruits of such lives were not produced by the hand of plenty, but by the diligent fostering of all the reserve forces of the character, unremitting toil, and close application to their sole aim and purpose of making something of their lives. Their frugal means are dwelt upon by commentators, at great length, and the review is usually summarized by an attributable zeal, pluck, and ambition, inherent in such natures, which crown their lives with fame.

Rarely, if ever, is heard the true fundamental principle underlying and governing the efforts of nearly all notably prominent men; viz., a God-trusting nature, and observance of Christ's command to "love thy neighbor as thyself," daily striving to externalize the divine qualifications in every act and deed, thus manifesting the true incarnation of the Christ nature.

Instead of directing our gaze toward the man-made policy or the men who have made the pages of history luminous and real, why not concentrate our attention solely upon the greatest of all exemplars of a fruitful and abundant life—Jesus Christ? Why not accept as our pattern the life of him who was the incentive for those whose lives but radiate his sublimity, whose humble bearing and meekness won for him the world's scorn and crown of thorns; whose patient, kind, and loving forbearance are the attributes of a life overflowing with blessings and benedictions to all mankind.

The term Success, measured by the world's standard, has only for its expression the more vulgar meaning of man's pecuniary gain. For what man "Who changed the truth of God into a lie, and worshiped and served the creature more than the Creator," ever wooed and won real success. Jesus' life from the world's point of view, was not a success materially, for he was treated with ignominy and death, yet his life was the very embodiment of success, in its fullest and truest sense, and acceptation of the term.

If failure is the product of misdirected thought, which in the laboratory of mortal mind wrongly fosters a belief in the ultimate issue of an object aimed at, then success is the product of divinely directed thought, having for its origin Christ, as our pattern, and the realization of the assurance of "Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many."

Success is for all to woo and win, and if in our persistent pursuit of it we have reaped what the world deems its opposite—Failure—we need not be disheartened or discouraged, but push onward and ever upward, keeping before us the Christ-spirit so that we might all sing with Kipling:—

> And only the Master shall praise us,
> And only the Master shall blame,
> And no one shall work for money
> And no one shall work for fame,
> But each for the joy of the working,
> And each in a separate star,
> Shall draw the Thing as he sees it,
> For the God of Things as they are.

A New Use for the Sentinel.

In one of our suburban cities, the High School scholars are required to create a scrap-book, composed of newspaper clippings relative to current events. One of the students had been in the habit of cutting from the first page of her mother's *Sentinel*, items of interest for this purpose. She entered the house one day exclaiming, "I have the best scrap-book in the school! All the girls say my articles are the cutest and the most concentrated of any, and they wanted to know where I found them; I told them in the *Christian Science Sentinel*, and they want to get it."

E. F. P., Haverhill, Mass.

Testimonies.

What Christian Science has done for Me.

I came into Christian Science seven or eight years ago. About two or three years previous to that time, I had a very severe spell of sickness which confined me to my bed for three months, and from which I never fully recovered until I was healed by Christian Science. During that three months time, I had two operations performed. These did more harm than good, and left me in a very nervous condition. I was always afraid something was going to happen. I was afraid of storms, thieves, tramps, and everything else. I got so I could not sleep at night. I went to three different physicians of this city for medicine to produce sleep, but none of them did me any good.

Months passed, and I felt sure I would lose my mind. I could not bear to hear a person tell or read of any one who had become insane, thinking I would be the next. Finally I went to an eminent physician, who said an operation was necessary in order to produce proper results, and that if I did not have the operation performed I would never be perfectly well again.

The next day I went to still another physician, who told me the same thing. I knew I could never stand this. That night I talked the matter over with my folks, and said I believed I would try Christian Science. They did not believe in it, neither did I, but I had hopes, as we had a friend on the next street who had been healed of consumption without medicine. I also had a cousin in Illinois who had been healed by Christian Science.

The next day I went to a student of Mrs. Eddy. I found her a very pleasant lady, and I was helped after the first treatment. All the way home I kept saying, "God is my life, in Him I live, move, and have my being." The healer told me this, and many other helpful things. I slept that night for the first time in weeks. I took twelve or thirteen treatments and was completely healed. During this time I read "Science and Health with Key to the Scriptures" a great deal of the time. I would go in a room by myself, and study each sentence.

This was seven or eight years ago, and during that time I have not taken one drop of medicine. Before this I never passed a day without using material remedies of some kind; but I threw them all away after taking a couple of treatments.

When I saw what Christian Science had done for me, I persuaded my mother to try it for a chronic sore throat she had been troubled with for a long time, the after effects of a severe attack of the grip. She was also subject to heart trouble. Both of these were healed in a short time. This was seven years ago, and she has never had treatment but once in all that time, and that was not for either of the old troubles. She has been able to treat herself and help others many times.

Two or three months ago she fell down a flight of stairs. She was on her way to my house with some Christian Science literature, and realized as she fell that no one need suffer for doing good, and that there are no accidents in Mind. She overcame the pain in about twenty minutes, although the right eye and cheek were badly hurt and swollen. This was at eleven o'clock, and at twelve o'clock she prepared her dinner. She did not lie down once. The next day she noticed her arm, side, and leg were black and blue. They also bothered her some. She treated herself at once, and very soon destroyed all pain. From that time on she had no trouble whatever.

My little girl, aged four, had a severe attack of pneumonia two and a half years ago. I worked on the case myself for a day or two, but had so much fear, I did not help her a great deal. Before calling in a practitioner my little girl did not seem to recognize any one, and had a high fever. The healer treated her that day, and came again in the evening and stayed till the little one was in a peaceful sleep. She slept all night, and woke about six o'clock next morning, peeked through her little white iron bed and said, "I see you, mamma." She ate quite a hearty breakfast, played most of the day, and was perfectly well.

This same little girl, about six months ago, wanted to watch me prepare a new dessert for tea. I was making it on a gas stove, and right next to it was a wood heating stove which was very hot at that time. She asked a little girl who had come in to play with her to hold her up, so she could watch me. The girl did so, and not being strong enough, let my little girl fall on the hot wood stove. Her face struck first. She gave a terrible scream and rolled on the floor with pain. I took her up instantly, held her in my lap, and treated her. I did not send for any one, as it came to me very forcibly it was *my* work, and there was no time to lose.

After treating her for fifteen or twenty minutes, she said, "It does not pain now, but I can't turn my head." I then looked at her face for the first time, and saw that the burn extended from the middle of the cheek and under the ear, back to the roots of her hair. I told her to say her little Science prayer, and that she was God's child, and He would not let His children suffer.

That was Wednesday evening about five o'clock. I went to the experience meeting, and left her playing with her father. When I returned, about half past nine, she was sleeping soundly on the cheek that had been burned. She slept well all night. I did not even tie a cloth around it.

A lady who happened to come in a little while after she was burned said, "Put oil on it and tie it up quickly, so she won't take cold in it." She also said it would surely leave a scar for life. In one week it was perfectly healed, and in three weeks not a sign of a scar was there.

For months I was troubled with sore fingers. As soon as one would get well the nail would come off of another. They caused me a great deal of trouble, but now, through Science, they are well.

Each time the *Sentinel* and *Journal* come they contain something that is just what I need at that particular time, and I greatly enjoy reading them.

MAMIE E. BRACKETT, Kansas City, Mo.

How I was Led to Christian Science.

In taking a retrospective glance along the pathway that led me to Christian Science, there are many little beacon-lights clearly showing Love's leading. For all this I feel so truly grateful that I hope, through this same guidance, to say something that may shed one gleam of light along some dear one's path in his journey to harmony.

I was taught from early childhood to worship and fear a corporeal God. I can remember, when a very small child, asking questions, and my mother has told me that many times she pretended not to hear because she could not give a satisfactory answer. I doubted the possibility of God being able to hear our prayers at the same time He was listening to the prayers of the people in China. I was never satisfied with the version given me of the story of the forbidden fruit, for even though it were an act of disobedience, it did not seem just that the world throughout all ages should suffer for an offence which any human parent would have overlooked. Thus I reasoned, and was told that after death all the mysteries would be explained.

At the age of twelve, through a desire to obey and follow Jesus, whom I had learned to love, I became a member of the Christian Church, hoping this would bring peace to my troubled thought. But in vain. The old questions kept repeating themselves, until finally, when I had apparently given up almost all thought of God, Bible, or Church, I was asked by my little boy why we had no church as the others had. I could not tell why, but I felt a sense of rebuke. I took immediate steps to unite with a church,

Digitized by Google

simply for a church home for my boy. I felt that if, after all, there should be something in it, I must not be responsible for another having failed to find it. I united with the Congregational Church. Denomination meant nothing to me at that time, for it seemed as if they all had the same purpose in view; namely, seeking to placate God, whose ways were truly unsearchable and past finding out.

With such a distorted sense of God, and a mountain of fear resulting from it, it appears to me now but a natural sequence, that my boy seemed to be a delicate child, and was supposed to have inherited a bronchial affection, with tendency to asthma, for which there seemed to be no relief. Thus the suffering of my child again aroused the old demon of doubt and scepticism, and I questioned the nature of a creator who could thus permit the affliction of little children, for I believed that he was omnipotent.

Punishment for sin seemed just when inflicted on the sinner, but for little innocent babes and children to suffer for the mistakes and sins of others seemed so barbarous and inhuman, that I felt it was impossible to conceive of any goodness in a God who would decree and permit such things to be.

A dear friend came to me while in this state of mental darkness, and told me of Christian Science, and of "Science and Health with Key to the Scriptures." I purchased the book and began the search for Light. This friend had turned my thought to God as Mind, and Good, but I was still far from Truth, for I seemed only to get *my* sense of Good, my sense of Christian Science, and even of Science and Health. I speak of this because it seems to be one of the rocks where so many barques are knocked about for a time. I kept reading and seeking, never doubting that Science and Health contained the Truth and Light if I might only be able to perceive it.

At last the search was rewarded, and during the year 1896 I had the privilege of class instruction, and oh, the joy unspeakable when I found God to be, not my sense of what is good, but unalterable, unchangeable Good, that "is no respecter of persons;" "the same yesterday, and to-day, and forever;" the one and only Mind, Life, Love.

What I think, as a mortal, has nothing to do with the eternal facts of existence, for only God's thoughts, or the thoughts of Good, have any relation to the real. Only as we silence human will and opinions, do we reflect Life, Truth, Love, the Mind which was also in Christ Jesus. The Bible says, "Be still, and know that I am God," and "there is none beside me." How many burdens are dropped in so doing. While rejoicing for all the physical benefits that have come to me and others through Christian Science, I am most deeply grateful for the spiritual uplifting, and for the rest and peace that have come to me since I no longer have to seek in vain for a remedy for the ills and misfortunes that seem to be.—F. M., Chicago, Ill.

Words of Appreciation.

When a new *Sentinel* is put into my hands, I am reminded of a very hungry schoolboy, when he sits down at noon to a well-filled lunch-basket.

As usual, when the meeting was over this evening (Wednesday) I got my new *Sentinel*, and when I reached home, I ran over it to see first if there were a word from Mother. My eye then fell on the article entitled, "Appreciation." Even before I read it, I thought, each *Sentinel* seems to rebuke me for ingratitude. How have I shown my appreciation of all the good I have received? I determined that not another day should pass without a just acknowledgment at least of the untold help and comfort Christian Science has been to me.

I heard of Christian Science about five years ago, but I thought it was only for good people, and if so, it certainly was not for me. My interest in it began, however, when my sister, who had been healed, had an attack of typhoid fever, and at what is termed the most critical period in *materia medica*, ate cabbage, cucumbers, potatoes, —in fact anything she relished,—and nothing seemed to hurt her. So I began to try to find out some of the whys and wherefores of this new faith. I received the most patient help from this sister and her healer, and as I had been a great sufferer for years, I decided after a while to take treatment. I shall never cease to feel grateful for the loving help I received, but I was so material that I did not quickly grasp the spiritual truths. My healer did her work faithfully, and I was healed of eczema of twenty-five years standing, that had baffled the skill of many physicians.

About two years ago, we removed to this city. When I came here I had never attended a Christian Science service and understood very little about Christian Science, but through the study of "Science and Health with Key to the Scriptures," and the help of our Readers here, I have been enabled to make many demonstrations both for myself and children. I am learning that "*Perfect* Love casteth out fear."

The most remarkable demonstration that has been made in our family, was when our youngest daughter was born a year ago last August. The birth took place at half past ten Saturday evening, and both the baby and myself spent a very comfortable night. I sat up Sunday afternoon, and Monday morning I arose, dressed myself, and went to the dining-room for my breakfast, feeling perfectly well. I continued to feel so. I used no material remedies, had no physician, nothing but Christian Science treatment.

When my nurse came in that morning to dress the baby, she was astonished to see me attending to her. Baby is now fourteen months old, is walking, talking, and has nearly all her teeth. She was treated when she first began teething, and has had little or no trouble in that direction.

I cannot close without a word of love and gratitude to our dear Mother for the great work she has done and is still doing for suffering humanity, in presenting to the world this Christ Science, which is indeed "that bread which cometh down from heaven." While the physical help has been a great comfort and convenience, still that is small compared with the spiritual light I have received, for Christian Science has given me a God at hand,—not afar-off personality; a God of Love,—not of wrath,—and I shall be satisfied, when I awake, in His likeness.

MRS. JANETTE BRIGHT, Norfolk, Va.

Extract from a Letter.

I came to my office this morning with a friend who suffered for several years from locomotor ataxia. It was only a few weeks ago that he came into my office with uncertain step, supported by a walking-stick. This morning he walked up and down stairs with me to the train, and from the train to our offices, with the same freedom and certainty that guided my steps. His joy and thankfulness to God and to Christian Science brought back to me the passage of Scripture wherein when Jesus healed them of their infirmities, they rejoiced and "thanked God who had given such power [understanding of Truth] unto men."

I. C. H., Chicago, Ill.

I am a little boy nine years old. I have been in Christian Science for two years and a half, and would like to tell what it has done for me. I was cured of catarrh of the stomach in a very few treatments, also cured of whooping cough in less than three weeks. I have taken no medicine since I came into Christian Science, and fight nearly all my own battles. It helps me at my school work and at my play. I attend the Christian Science Sunday School regularly, where I am taught the power of Truth.

HERBERT F. ZIEGLER, Baltimore, Md.

Religious Items.

We do not come to God by sacrifices, by proxy, by mechanical force, or by philosophy, but by the same method we come to any human person, by approaching Him in our own presence. Prayer is the deepest personal quest, because it opens the heart and inner life to Another, and seeks the same from Him. It is person touching Person, person seeking Person. Men are not a mass like the substance of the earth, or the stars in heaven, to be lifted or cast down, to be set in orbits and started g ing, to be weighed in balances, or to be expanded by heat or contracted by cold. We are not pebbles on the sea in an endless swash of the tides of Divine forces or stars' dust in the oceans of space to fall on the passing planet, or swim about, lost, in the vast tides of time. Oh, the din of this mechanical idea of life and God, which men have conceived! The rattle and clank of its infernal working almost deafens one's soul.

No! we are men, persons, whom the Divine Person seeks, whom our souls make quest for that we may have converse with Him, that He may help us, that He may make us noble, holy, like Himself. Our communion, our relation with Him, is not to be in terms of space and time, of pounds pressure or horse-power, in impacts of propulsive force, or measures of friction and inertia. We are not things, neither is He a Thing.

We are to talk to Him, He is to hear us. He is to speak to us, we are to hear Him. He loves us, we are to receive love. We are to love Him, His heart will be glad in our love. He is to work with and for us, we are to work with and for Him. Friends we may be, He the Mighty and Able, we the needy; He the Merciful and Helpful, we the petitioners of His grace. We may walk with God, work with God, talk with God, trust God, live with God, labor for God. And prayer, prayer as we used to offer it,—asking His help and comfort, deliverance from trouble, salvation of our friends, the sparing of our sick, and the daily guidance,—we may make with reason and justification, and will make, as soon as we break from the new scepticism that, under guise of wisdom, made us prisoners, and come back into the freedom of the old faith of Christ, that God is Father and Lord of the Universe.

SPENCER B. MESSER, D.D.,
In *The Watchman.*

It is positively taught that the apostles were promised a special enduement with the descent of the Holy Spirit. The experience and power of Pentecost were new to them. It is also taught that this experience was not continuous, but that a similar experience was given on special occasions for special purposes. It is also evident that to other believers a new experience came with the giving of the Holy Spirit in larger measure. But in all of these theories there is need of guarding against making the end sought a personal matter—the centring of all thoughts and efforts in ourselves. In seeking this experience, it is not an easy matter to subjugate and crucify self. Every one of these views is liable to abuse, so that they might become a hindrance rather than a help to the development of the spiritual life. Take the advocates of the higher life, may there not be a persuasion that they have reached such a state in their experience as to render further growth unnecessary, if not impossible? A favorite term with some is the rest of faith. All cares, all anxieties, all troubles, all burdens are thrown upon God. It matters not what may happen, it does not in the least disturb the inward peace. While this side of the Christian life may seem exceedingly beautiful, yet unless it is carefully guarded, it may lead to inactivity, into a sort of religious indifference, and it may rob us of one of the elements that enter into the building of character—namely, the disciplinary.

The Standard.

The American Anti-Cigarette League is untiring in its efforts to secure pledges from every boy and girl in the country against the use of tobacco, particularly cigarettes, before the age of twenty-one. It is reported that the League has already 300,000 members. Pittsburg had a crusade recently and secured 15,000 pledges. Columbus, Ohio, secured 10,000 in two weeks; Louisville, Ky., 12,000; Toronto, 10,000, and Buffalo, 10,000. Now the leaders of the movement and the officers of state and provincial Sunday-school associations of the United States and Canada have endorsed a pledge-signing day, Sunday, November 24. In many Sunday Schools a short talk will be given on the evil effects of cigarette smoking and facts connected with their use. It is expected that many signers will be secured, and that the agitation will greatly assist in the general movement to abolish the cigarette. Statistics show a great falling off in the manufacture and sale of cigarettes. The last internal revenue reports show a decrease in the item of tobacco of $215,137, and in the number of cigarettes of 1,467,436,000. This is due largely to the agitation of the League, in the wide announcement of the action of large business houses against the employment of cigarette smokers, and the stringent laws that have been passed as a consequence of this agitation.—*The Standard.*

Much has been said about suffering in a Christian life as if it were intended by God that we should suffer. God does not delight in suffering, for from Him flows delight, and this because He is love. All men suffer more or less; the evil because their evils are punished, the truly good because the evil antagonize them from hatred. So we suffer because of our own evils and the evils of others. The evil act and the good react. This means a constant combat between the two, and causes suffering on two sides. If, however, we were strong on the side of the right, we would overcome the attacks of evil with little or no pain, for the least good has more power than all the evil together. So it is not the fault of the good that we suffer, nor God's fault, but our weakness in the good which causes it.

The New Church Independent.

All classes have reason for thanksgiving to the Author of all good. Children should be thankful for the things which amuse them, that have been provided through the kindness of their parents and teachers. The orphan who learns the meaning of "father" and "mother," only by what he sees of others, still has reason to be thankful; for God has declared that He will take care of the fatherless; and remarkably is that word fulfilled—so uniformly that there are those who say with much show of reason, that fatherless and ven motherless children often prosper in the world to a degree not seen among those who have excess of kindness and are brought up in luxury. It is sad to be deprived of one's parents. It is not sad to think that the Father in heaven makes special provision for those thus bereaved.—*The Christian Advocate.*

MR. MOODY'S SHORT SENTENCES.—Many a backslider never slid very far forward.

Everything in the world but the human heart obeys God.

A man can do more business if his head is cleared by prayer every morning.

Many think it is the Bible that says: "Do as the Romans do."

A purpose in the head and not in the heart does not last long.

"Policy" was not in the dictionary that Daniel studied.

A man cannot live for God in any age or country without enemies.

Many people seek an experience instead of Christ.

Satan gets people into the cradle of an excuse and rocks them to sleep.

The Standard.

Multitudes of the favored people of this world do not even give thanks for the pleasant things of life. They receive them as a matter of course, never taking pains to consider whether they have been placed under the slightest obligations in respect to them. They are thoughtless and thankless. But most men will confess that they should be thankful at least for what they deem the good things which come to them. They may not really be grateful, but they will not deny the obligation. Christians especially, feel a sense of duty in this respect. If they have ever recognized any obligation it is this. But too many go no further than to give thanks for the good things.

The Christian Advocate.

Every professed disciple of Jesus should seek to become a centre of spiritual influence and power. This may be accomplished through absolute surrender and obedience to the divine will, and through a constant and loving effort to reproduce the spirit of the blessed Lord in one's own life, and a willingness to undergo whatever of individual sacrifice may be necessary for the redemption of men and the exaltation of Christ. The world is being brought to its Redeemer through love, the love of God for man as revealed in the gift of His Son, and in the voluntary sacrifice made by him for the benefit of man, and the grateful and appreciative love of man for God which impels him to strive for the redemption of his fellows.—*The Christian Advocate.*

The all-important thing is not to live apart from God, but as far as possible to be consciously with Him. It must needs be that those who look much into His face will become like Him.—CHARLES H. BRENT.
