SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

At the recent session of the National Negro Business Men's League at Nashville, Booker T. Washington said: "We shall succeed in winning our way into the confidence and esteem of the American people just in proportion as we show ourselves valuable to the community in which we live, in all the common industries, in commerce, in the welfare of the State, and in the manifestation of the highest character. The community does not fear, as a rule, the vote of the man, no matter what his color, who is a large tax-payer."

The expenditures of the Government on account of pensions during the fiscal year ended June 30 last, amounted to $139,092,125. The figures include not only the actual pensions paid, but the expenditures for salaries, clerk hire, rents, medical examination, and contingent expenses at the several pension agencies. The expenditures in the fiscal year 1900 were about $138,485,000. The actual payments of pensions to army and navy pensioners during the last fiscal year amounted to $127,646,141.

The resignation of Elihu Root, Secretary of War, to take effect upon the appointment and qualification of his successor, has been placed in the hands of the President. Secretary Root is now in England attending the sessions of the Alaskan boundary tribunal. It is understood that Governor-General William H. Taft of the Philippines will succeed Secretary Root on January 1. Luke Wright, a Democrat and ex-Confederate, will succeed Mr. Taft.

After more than three years of preparation and effort, and the expenditure of more than six thousand dollars, the plan for the excavation of Ur of the Chaldees and other places in Babylonia by American explorers has been abandoned because the Turkish Government will not grant permission to American citizens to do this work.

The business agent of the Housesmiths' and Bridgemen's Unions, New York, has been sentenced to prison on a charge of extortion for not less than two years and six months nor more than three years.

A granite monument marking the site of the birthplace of the late President Chester A. Arthur has been dedicated at Fairfield, Vermont.

The total registration in the National Educational Association, which held its annual meeting in Boston this year, was 32,757.

The first meeting of the Alaskan Boundary Commission was set for September 3 at London.

Foreign.

The revolt of the Christians of Macedonia, which is a journalistic rather than a geographical name for the vilayets of Monastir, Salonica, and Ushkub, against the Mohammedan misrule of the Turkish Government, seems to be making considerable headway. The Powers months ago demanded that Turkey make reforms in her government of the country and suppress revolution. The reforms are promised, but are carried out in a weak manner, and the country is at the mercy of a brutal soldiery which at heart religiously believes that the killing of Christians is a meritorious act, insuring them a blissful heaven. United States Minister Leishman cables that the Sultan's own immediate possessions show great unrest and the whole situation is critical.

The Czar of Russia has appointed M. Mouriavieff, the Russian Minister of Justice; Dr. Lardy, the Swiss minister at Paris, and Professor Matzen of the University of Copenhagen, all members of the International Court of Arbitration, to be arbitrators in the case between Venezuela and Great Britain, Germany, and Italy in their claims for preferential treatment growing out of the Venezuela imbroglio. The last two, on the ground that their states are interested parties, have declined the appointment.

M. Combes, Premier of France, has sent a circular to the prefects throughout France instructing them to disregard the mayoral regulations limiting the speed of automobiles unless they also enforce them in regard to every other form of vehicle.

General Joubert, the Boer warrior, will experiment on the raising of ostriches in Mexico on the lands recently purchased for the colonization of his countrymen.

The shareholders of the Cunard Steamship Company have ratified the agreement arrived at between the company and the British Government.

It is stated that the visit of the Czar of Russia to Rome has been definitely fixed for four days between October 16 and 25.

The sale by auction of the birthplace of Charles Dickens on Commercial Road, Portsmouth, is announced.

Industrial and Commercial.

The Department of Commerce and Labor, through its Bureau of Statistics, in a table just completed, shows that the total value of manufacturers' materials imported in the fiscal year 1903 was $489,471,667, and that this formed 47.73 per cent of the total imports. In the preceding year the total value of the manufacturers' materials imported was $415,000,000, and formed 46.14 per cent of the total. In 1898 the total importation of manufacturers' materials was $247,000,000, and formed 42.07 per cent of the total.

The United States sends abroad more merchandise than any other nation, and yet it has, exclusive of coastwise vessels, a deep-sea fleet of only 873,000 tons against 1,600,000 tons for Norway, 2,960,000 tons for Germany and 14,800,000 tons for Great Britain. The New York Board of Trade and Transportation has undertaken to find out why this is so, and why the deep-sea tonnage is not as great as in 1810, when the population of the United States was only seven millions.

The success of the attempt to grow cotton in the German African colonies seems almost assured. Cotton plantations are already flourishing in Togo, Kamerun, German Southwest Africa, and German East Africa. A German syndicate also contemplates the culture of the plant in Asia Minor. The Togo cotton is pronounced by German cotton cloth manufacturers to be of excellent quality.

The Board of Arbitration appointed to adjust matters in controversy between coal operators and miners in the Birmingham district has made its award through its chairman, Judge Gray of Delaware. The award increases miners' wages 2½ cents, grants semi-monthly payments, compromises the eight-hour day question, and forbids boys under fourteen years entering the mines.

The Texas wheat crop is estimated between twenty and twenty-five million bushels. Of this amount Texas mills will consume about ten million bushels and the balance will be exported. Over one hundred and fifty cars are arriving at Galveston daily with export grain, and the indications are that this will be the banner year in grain exporting business.

Dr. Heinrich Reis, professor of economic geology in Cornell University, who is in Texas to examine the kaolin and clay deposits of the State for the World's Fair Commission, says that his investigations have already shown that Texas is probably richer in these deposits than any State in the Union.

In 1900 the State of Minnesota used 102,921,426 bushels of wheat and produced 22,705,165 barrels of flour; Ohio, standing second in the list, used 35,033,213 and produced 7,366,474 barrels of flour; Illinois, standing third, used 27,566,674 and produced 6,078,423 barrels of flour.

The bulletin on "Street and Electric Railways" just issued by the Census Office shows that during the twelve years between 1890 and 1902 the number of passengers carried by street railways more than doubled, the mileage nearly trebled, and capitalization increased fivefold.

One in every thirty-six of the males over fifteen years of age in the United Kingdom is said to be a seaman in the mercantile marine or a fisherman. Including the 127,000 men and officers who form the royal navy, the rating is about one in twenty.

The steamer Korea, just arrived at San Francisco from the Orient, had in her cargo of less than three thousand tons, thirteen hundred bales of raw silk valued at over one million dollars, and 18,998 chests of tea.

The Krupps of Germany have sent experts to the United States to compete with the American Steel Trust on bridge building contracts.

Rubber to the amount of 28,110 tons was shipped from the Amazon valley from July 1, 1902, to May 31, 1903, and 3,953 tons of nuts.

Germany imports yearly for tanning purposes more than 110,000 tons of bark.

General.

Four pouches of important mail matter belonging to residents of Havana, Cuba; and Progresso, Mexico, have just been forwarded by Postmaster General Payne. This mail was seized during the Spanish-American War, five years ago, by an American patrol, off the coast of Mexico, bound to its destination. These pouches have since been in the possession of the judicial authorities of the United States. It was only recently that the mail was forwarded to the officials of the post office.

At the Readville, Mass., racing track Lou Dillon trotted a mile in two minutes flat, thus beating her own previous record of 2.02¾ and the world's record of 2.02¾ held by Cresceus. Two running horses, however, were used to pace.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

New Sight in Science.

LOUISE DELILSE RADZINSKI.

DURING my childhood my sight offered such phenomena that one of the leading oculists of Europe was consulted on the subject. He studied the case with great interest. He found that the houses across the street were to me mountains as real as those that bounded the horizon, of which people told me, since I could not see them clearly, yet I could see and separate the fine rosy down on the under side of begonia leaves, or separate and count the pearly cells between the ribs of a liquorice leaf, and point out parts of insects that usually require a magnifying glass. So the famous oculist said, "The child will do well if let alone; nature will take care of the case if she is not pressed to look beyond the range of her sight; as she grows older the eye-ball will flatten and her sight lengthen in proportion; so never make her wear glasses!"

The wise man's words proved true; not only did my range of vision increase with the years, but the sight itself proved exceptionally good till there came a season of stress from claims of sickness in my family, during which books were set aside and the duties of nurse devolved upon me. This continued for several months. When harmony and order once more ruled the home it was decided that I deserved a holiday, and I sped to the mountains where I usually spent my vacations, and where every feature was dear and familiar.

There a strange experience awaited me, for every object was changed; not so much in size as in distance and value; and I found I must reorganize the whole scheme of visible creation before I could find myself at home again in my former haunts. In the city objects always crowded upon me, and I had been too busy to notice any change; but upon the unbroken hillsides, looking off over wide spaces of country, I learned the delight of seeing, clearly, villages with their tall steeples and groups of white dwellings, where formerly I could only distinguish a break in the woodland. The white bridges spanning the streams in the plain below, gave a sense of human companionship and interest the land had never had before; and to be able to look into the far distance, and tell where sky and sea met, was joy unspeakable!

When I came to Christian Science years later, the same experience of expansion and of readjustment was mine again. Limitations that had made life poor and hard melted away, showing wide spaces of life filled with divine Love, and made beautiful by habitations of worship and affection; apparently impassable torrents of prejudice and opposition were found to be bridged, whenever needed, by divine wisdom, whose paths ever led in the right direction. And where, in former years, human sense had groped in the mists of human science for the bond between God and man, between heaven and earth, and had found nothing but misshapen images of human conception that repelled and discouraged, the new mental vision brought plainly into view the spiritual life and Principle hitherto vainly sought, but now leading one into the "Kingdom of God," truly found to be "at hand."

In gratitude for renewed and strengthened mortal sight I had thanked my heavenly Father, who had given me increase from His treasury when human love had feared loss for me from devotion to human duty; and the determination had been formed to use that renewed power in His service, to see naught but the true and the good as real, to discern evil and error only to remove and destroy them, so that my life might be the nobler and the world the purer for this great gift.

With the advent of Christian Science into my understanding, came the same gratitude, but how much greater and more intelligent! The same determination and devotion, but with how much more wisdom granted for their application! How much greater the expected result,—sin destroyed, sickness and sorrow dispelled. A new light was cast upon all the manifestations of God as Principle, as He is understood in Christian Science. The most abiding joy in all this new and higher phase of understanding springs from the fact that all who turn for light to God, the "Great Physician," "receive it in abundant measure, as they feel their need to be."

In material life the suppliant is usually fearful of making his need known in its fulness, lest those helping him be discouraged by the magnitude of the demand; but in Science we are taught that we receive according to our need, and to our realization of the supply for our needs, in accord with the truth that "divine Love always has met, and always will meet, every human need" (Science and Health, p. 494); and in the measure of our expectation, our loving dependence upon Love, are we fed with the bread of life and refreshed with the living waters. We cannot ask for too much of this divine refreshment, since as we feed upon it we are enabled to strengthen others who have not yet learned where to turn for their help and strength.

Some time since I had an illustration of the power of one ray of light, when crossing Chesapeake Bay on a very dark, foggy night. As we neared the western shore, which we could not distinguish through the velvety fog, a long ray of dazzling light swung out of dense darkness to our decks, bringing out with startling distinctness human faces, some revealing fear, others eagerly looking out for whatever the search-light from the revenue cutter might reveal. We were in the midst of other steamers whose lights, ineffectual as ours in the black fog, gleamed like pale stars as we drew near them, casting no light upon decks nor neighboring craft, but as the search-light was turned from side to side huge craft slowly moving, glimpses of wooded shores, the long, low walls of the fort, came startlingly to our view as the electric ray touched them, and as we slowly drew near to port the kindly ray showed us our dock and berth.

This lesson has remained with me; no matter how faint and feeble the human reflection of Life may be, if this concept be used as a channel of help and love to others, Love will use it and make it a blessing to all who strive to see their way to the mansions of the Father, which He has prepared for those who seek Him in spirit and in truth.

In Science and Health, page 586, Mrs. Eddy has given

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

us the spiritual meaning of eyes: "Spiritual discernment,—not material but mental." In other passages of the same valued book, sight is defined as "Spiritual perception:" also, that the spiritual senses are proven perfect, never injured, never lost. Do we realize what this means to us as Scientists? It means that not only the source, the cause of all light is perfect, inexhaustible, but that the senses, the true spiritual senses, are perfect, eternal channels through which Truth is pouring its life-giving rays to renew and heal mankind, and guide them into all truth.

In Christian Science we know that all forms of darkness, error, are to be dispelled by the pure unflickering light of Truth. Fogs of indifference may be less penetrable than are the fogs of ignorance, but none can impede the piercing rays of the Sun of Righteousness.

How to Read Understandingly.

E. ROSE COCHRANE.

Read not to contradict nor confute, nor to believe and take for granted, nor to find talk and discourse, but to weigh and consider.—BACON.

WHEN about fifteen years of age I was astonished when one of my teachers told me that I had not the least idea how to study or read. I had been attending school for six or seven years and had passed my examinations in a fairly creditable manner, so I confess I doubted this statement at the time, but I could not forget the remark. It was, however, not very long before I found it to be only too true. I had for years thought I was gaining knowledge, when in reality I had not yet learned how to look for it; I was being satisfied with chaff, not knowing how to find the wheat. How thankful I was for this awakening when, a few years later, I took up Christian Science, for I had acquired at least a slight idea how to study and read.

Every man and woman wants to be happy and healthy, and many are rushing from place to place trying to find the secret of real happiness. All this searching would be unnecessary if they first learned where and how to search. Rev. James Stalker referring to these vain and weary searchings, says, "They are driven forth by turbulent passions in search of excitement and novelty; they fight with one another, because every one, dissatisfied himself, believes that his brother is making away with his share. But all the time they are stumbling over their happiness, which lies among their feet; they fly to the ends of the earth in search of it, and lo! it is at home."

But how are we to find this happiness in the home where we have lived all our lives without any knowledge of it, even though it is "among our feet"? For thousands of years Christians have been believing the statement that the kingdom of God was within them, but how to make this accepted fact practical has been the problem.

In order to tell of this "happiness" and of the understanding of God revealed to her, so that others might find it, Mary Baker G. Eddy, gave to the world a little book called "Science and Health with Key to the Scriptures."

This book has already helped thousands of men and women to find that happiness and health which is "at home," since God is ever present.

Through understanding and putting into practice the teachings contained in Science and Health, we may gain a fuller knowledge of God and of His written word, the Bible. The teachings of Jesus the Christ become more practical to us, with signs following. It is not what we read that helps us, it is what we understand and prove for ourselves that makes life beautiful. Many have read the words written in Science and Health and have turned aside, feeling and saying, "There is nothing in it," for they have not yet learned to read understandingly.

How clearly and with what beautiful language does Ruskin tell us in "Sesame and Lilies" how to get into the heart of books which are but the best part of their authors. He says, "The author has something to say which he perceives to be true and useful or helpfully beautiful. So far as he knows, no one has yet said it; so far as he knows, no one else can say it. He is bound to say it clearly and melodiously if he may; clearly, at all events."

We should study books:—

"First, with a true desire to be taught by them, and to enter into their thoughts. To enter into theirs, observe; not to find your own expressed by them. If the person who wrote the book is not wiser than you, you need not read it; if he be, he will think differently from you in many respects.

"Very ready we are to say of a book, 'How good this is!' 'That's exactly what I think!' But the right feeling is, 'How strange that is! I never thought of that before, and yet I see it is true; or if I do not now, I hope I shall, some day.' But whether thus submissively or not, at least be sure that you go to the author to get at his meaning, not to find yours. Judge it afterwards, if you think yourself qualified to do so; but ascertain it first. And be sure also, if the author is worth anything, that you will not get at his meaning all at once; nay, that at his whole meaning you will not for a long time arrive in any wise. Not that he does not say what he means, and in strong words too; but he cannot say it all; and what is more strange, will not, but in a hidden way and in parables, in order that he may be sure you want it. I cannot quite see the reason of this, nor analyze that cruel reticence in the breasts of wise men which makes them always hide their deeper thought. They do not give it to you by way of help, but of reward; and will make themselves sure that you deserve it before they allow you to reach it. . . . The metal you are in search of being the author's mind or meaning, his words are as the rock which you have to crush and smelt in order to get at it. And your pickaxes are your own care, wit, and learning; your smelting-furnace is your own thoughtful soul. Do not hope to get at any good author's meaning without those tools and that fire; often you will need sharpest, finest chiselling, and patientest fusing, before you can gather one grain of the metal."

This, then, is how to study, how to get at the wheat instead of being blinded by the chaff which the winds drive whither they will. Does it seem too hard and require too much effort, even though the rewards are all they are claimed to be? Look at the energy that has been wasted in our search for the happy land; and where are the rewards that the world gives? Do they give us one moment's true peace and rob the grave of its victory? The preacher had all the riches and wisdom of this world, but he proved them "vanity of vanities." The wise man said, "Wisdom is better than rubies; and all the things that may be desired are not to be compared to it," also, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding." Which shall we strive for, vanity or wisdom? I feel sure there would be many more students of Christian Science if all started to read in keeping with Ruskin's and Bacon's advice; and if those who at present feel it necessary to criticise the writings of Mrs. Eddy first qualified themselves as Ruskin suggests (and what wise man would speak of that which he does not understand, and how can he understand unless he reads correctly?), there would be no critics who could honestly write or speak adversely of Christian Science.

Let us become truly wise, learning how to study and live the truth, so that the happiness that we find each day may radiate and bless all mankind.—this not of ourselves, it is the gift of God to all His children.

Legislation in So. Dakota.

THE following is taken from a correspondent's report of the endeavor to pass a bill at the last session of the legislature. The bill had been read once and was the second

Digitized by Google

order of business on the reassembling of the legislature after a few days' recess.—ED.

The part of Section 21, to which we took exceptions, read as follows:—

"When a person shall . . . recommend, prescribe, or direct for the use of any person, any drug, medicine, apparatus, or other agency for the cure, relief, or palliation of any ailment or disease of the mind or body, or for the cure or relief of any wound, fracture, or bodily injury or deformity, after having received, or with intent of receiving therefor, either directly or indirectly, any bonus, gift, or compensation, he shall be regarded as practising within the meaning of this act."

Section 23 provided for the exemptions to the bill, and for our benefit the following paragraph was added:—

"This act shall not apply . . . to Christian Scientists as such, who do not practise medicine, surgery, or obstetrics by the use of any material agency."

The effort put forth was so small compared with our return that it seems almost incredible. But we are trying to prove our worthiness by more Christlike daily living and by using this wonderful gift of Christian Science.

The following is an excerpt from an article on the subject from the *Sioux Falls* (S. D.) *Leader*.

"The Christian Scientists wanted recognition in the medical examiners' bill along with Osteopaths and others, and while the bill was not formed with a view to discrimination against the Christian Scientists, there was no disposition on the part of the formulators of the bill to deny to the latter any measure of satisfaction which would accrue from inclusion in the list of professionals embraced by the protecting arm of the measure. The advocates and formulators of the bill have consented to the addition of the name, and there is now supposed to be absolute harmony among all professional people in the state who would be in any way affected by the provisions or restrictions of the bill."

Formulas.

ALICE THRALL.

PROGRESSION is the law of being, and its action, constant, undefined, sometimes imperceptible in its stages, is reflected in human experience. Nature presents to us her grand panorama with diversity in unity. The eternal hills may "change not," but no two mornings break over them with exactly the same balance of light and shadow, tone and color. The landscape varies not only from spring to summer, and summer to winter; but day by day and hour by hour a subtle influence modifies the external expression of its beauty, the phrasing of nature's thought.

In the human consciousness, to-day is not yesterday, nor like it. No two days ever found and left us exactly the same. This fact needs no elaboration save in the reader's thought. Mrs. Eddy says, "That to-morrow starts from to-day and is one day beyond it, robes the future with hope's rainbow hues" (Miscellaneous Writings, p. 339). This tersely, but perfectly, expresses the whole matter.

On the other hand, as in nature, so in man, we find, underlying development, a basis of unity. "The child is father of the man;" the crimson glow of autumn links itself to spring's first maple hue; the sea resting in perfect peace or tossed by the storm's fury is still the sea. The unity is in substance, the variety in expression.

In our text-book, Science and Health, the eternal, unvarying Principle of the Christ-healing is recognized, the order of its manifestations disclosed. The possible applications of the healing and saving Truth are there seen to anticipate and cover every human need.

If human needs could be tabulated, if to-day could be yesterday, or my need thine, then formulated combinations of thought or statement deduced from Principle might be applied beneficially. But who has found the needs of two identical? Just so far, then, as individuals differ, must the application of Truth, the remedy drawn from the divine pharmacopœia of mind, be varied.

The true Christian Scientist has ever in consciousness the great truths of being, knows the all-presence and all-power of good, and calculates the impress of this consciousness upon the thought of the world. He will, therefore, utilize the forms of thought that meet the need of the individual to-day. These forms may not be suited to his need of to-morrow, or to the need of any other. The Christian Science worker will not suffer his thought to stagnate in any formula or stereotyped statement, but will be ever ready with a cup of sparkling freshness from that well of water which has sprung up into everlasting life. He will analyze human conditions and needs, and, understanding their complexity, will scientifically apply the one perfect remedy which through Christ is made available in every case of human need.

Our Literature in Foreign Countries.

C.

THE captain of the three-masted schooner, Carrie A. Norton, reported to the owners the following distribution of Christian Science literature:—

In the town of Horta, on the island of Fayal, one of the Azores, Science and Health was presented to the public library. It was received gladly and expressions of gratitude and thanks were returned to the vessel in whose name it was presented.

Science and Health with other literature was presented to the American Consula Agent at Fayal, who also seemed pleased to receive the books. A well-known business man of influence on the island returned an expression of love and thanks to the vessel for the gift of Science and Health.

The next stop for the vessel was at Barbadoes, West Indies. Here a prominent business man was interested in the subject, and Science and Health given to him. During the stay of the vessel in port, he read it almost continually, seeming hungry for it. He told the captain that there was nothing but God's power in the book. His wife asked him why he was reading the book so continually. He replied that it was because it was the book to read, as there was nothing but the Bible in it.

At Buenos Ayres, the next stop, the American consul was found to be interested in the subject and greatly pleased to be presented with Science and Health.

During our stay at Brunswick, Georgia, many people came on board and literature was freely given. Science and Health was offered to the pastor of St. Paul's A. M. E. Church, which he seemed most ready to accept. The *Journals* and *Sentinels*, of which we had a large number, were distributed freely at the different ports among the visitors, townspeople, and the sailors on board the whaling and other vessels.

Christian Science services are now being held on board the vessel, and it is hoped that wherever she has touched, the seed of Truth which she has sown may be productive of an abundant harvest.

An Omission.

Through error the name of First Church of Christ, Scientist, Kewanee, Ill., was omitted from the published list of churches which sent reports to the Annual Meeting.

Contributors to our publications are requested to write legibly, with ink, and on one side of the paper only, leaving a margin on the left side of the page, and not crowding lines too closely together.

Selected Articles.

"God's Arm is not Shortened."

If, from the limitations of a creed, or from any other cause, a persuasive pulpit orator expressly limits the power and lovingkindness of God in His dealings with man, every thinking person is at once confronted with the very vital question, Is the preacher's limitation sanctioned by logic and Scripture? If it be not so sanctioned a great harm has been done to the cause of religion, and the sooner the error is pointed out the better.

Let us see if a certain critic's own thought is consistent with the limitations he preaches. In a most beautiful passage he illustrates the truth that God is a sure refuge for the sorrowing, and that faith in God is the only wisdom in sorrow, as follows:—

"The healer of the torn plant or drooping flower is not the cellar, but the open sunshine. You may carry the plant down into the cellar and treat it very elaborately and use long names while you prop the poor branch, but all the while in its torture every wilting leaf cries out, 'Let us out where the sun shines. The sun is our medical healer; the warm air is our natural nurse, let us rest out there, and feel once more the strange thrill of health.' In a similar manner the natural restorer of all moral health is the God of life. Faith is normal; unfaith is abnormal. Our elementary life is dependence on God."

This critic fails to show—does not even follow with any attempt to show—any reason why we should not apply all that he says to the sick as well as to the sorrowing and sinning. He was engaged in inculcating a great truth as to the sorrowing and sinning, and in opening a shining road to their vision. He was not then thinking of the limitation he had put upon God's dealings with the sick in the first part of his sermon. Now, let us take what he says as to the sorrowing, and see if there be any reason why it does not apply to the sick in body. Is God less kind to His own children than to "the torn plant or drooping flower"? Is man, who is in the spiritual image and likeness of God, who is God's child, so inferior to the plant, or so less under God's care, that he, in his sickness, unlike the sick plant, shall be told that he must depend upon the "medical healer," who is human and makes mistakes, and not put his dependence upon the all-wise, ever-present, omnipotent, and loving God, who makes no mistakes? Is the love of God towards us to be limited so that it reaches us only when our "moral life" is affected; that is to say, when we sin; but does not reach us when we are suffering with sickness? No; for then we are in worse plight when we get sick than we are when we sin, and are farther off from God if we have a pulmonary trouble than if we steal or murder.

"Faith is normal; unfaith is abnormal." True; but where does the preacher get his authority for admonishing us to have faith in God if we sin or sorrow, and for condemning us if we have faith in God when we suffer from physical ills? Does he get it from his Bible? "Thy faith hath made thee whole!" said Jesus to the sick woman. Whole of what? Of sin? Of sorrow? Or of physical sickness? The Scripture tells us it was physical sickness. "Have faith in God," was the command of Jesus. Did he limit his command, as the preacher would limit it? No. On the contrary, he told us, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." And he told us, "Ye shall know the truth, and the truth shall make you free." Does Jesus limit that which truth shall free us from, as the preacher seeks to do? No. Truth makes us free from everything that error brings upon us. And Jesus commanded his followers, not limiting the command to any country or generation, to "Heal the sick," as well as "Preach the Gospel." Heal the sick of what? Of moral sickness merely? His own practice in healing the physically sick as "He went about doing good" shows what he meant. Healing them with drugs? No. He healed them through spiritual means.

It is weak to say that he depended on clay-and-spittle because he used it on a blind man. He said, "He that believeth on me, the works that I do shall he do also." What works? He made use of the works of healing the physically sick to prove the truth of his teachings, and he expected his followers to do the same when he enjoined upon them in the same command to heal the sick as well as preach the gospel (good news). James tells us, "The prayer of faith shall save the sick," but the critic says that it cannot do it, derides those who believe James's statements, which were based on what he had repeatedly seen.

This critic becomes eloquent in behalf of the right of the "torn plant or drooping flower" to have faith in God's beneficent care rather than the "medical healer," but when it comes to opposing the materialistic profession of drug medication he finds it needful to advise us from his pulpit to limit our faith in God's love to those cases where we sorrow or are morally sick. History is against any limitation upon God's loving care of His children, and modern experience is against it. The Bible promises physical health as the result of trust in God, and it gives us many instances which prove the truth of its promises. In Exodus the Lord promises to take sickness from His people. He healed Hezekiah of sickness in direct answer to prayer. The Psalmist praised God, "who forgiveth all thine iniquities; who healeth all thy diseases." And he says rejoicingly, "O Lord, my God, I cried unto thee, and thou hast healed me." The Bible tells us that it is in God that "we live, and move, and have our being." From Genesis to Revelation the Bible abounds with similar passages.

Throughout the United States, in the Canadas, in Europe, in Asia, in Africa, in many of the islands, multitudes are turning to God to deliver them, after medical aid has proved ineffectual; turning from "tortures" greater than those from which the "wilted leaf" cried out, and God is answering their prayers, and history is repeating itself in this, as in many other things, and showing that James was right about the prayer of faith. Men turn to God just as naturally when they are sick as when they are sinning or sorrowing, and in this their "faith is normal."

Bodily Healing through Spiritual Regeneration.

Some seem to have the impression that Christian Science is simply a metaphysical method of healing the sick in contradistinction to the use of material remedies, when, in fact, it is a religion, and heals the sick by changing their spiritual condition. It is the teaching of this Science that all bodily disorders are the result of sin. We use the word sin in its broad sense, covering not only the wilful wrongs, but all the errors of mortals, even their smallest mistakes.

It is the teaching of this Science that in proportion as one approaches the highest standard of manhood, he becomes less liable to disease, and that the uplifting of the human race will eventually make sickness a thing of the past, although such an exalted state may not be reached for centuries to come. Each successive generation will improve, and perfection will finally be attained.

Christian Scientists are thankful indeed to be relieved of bodily suffering, but they are well aware that such relief cannot come except through the regenerating influence of

Digitized by Google

Spirit. Failures to heal in Christian Science are sometimes due to an inability to improve the patient morally. The Scriptures contain the following statement: "Ephraim is joined to idols: let him alone." Sometimes the evil-doer is unwilling to part with his sins, and for this reason fails to obtain the good there is for him in Christian Science.

It is quite generally believed and readily understood that right living is conducive to good health, while dissipation, intemperance, and the various forms of evil are followed sooner or later by disease and suffering.

Christian Science leads mortals into correct living by presenting to them a perfect model and inspiring them with the determination to imitate it. It pictures to its students the ideal man, the image and likeness of God, and impresses them with the importance of making their lives conform thereto if they would have health and happiness.

ALFRED FARLOW.

A Reply to Professional Criticism.

PROFESSOR HALLBERG'S strictures upon Christian Science are no doubt justified by his lack of information on this subject, and his misconception as to its principle and practice. "The *materia medica* of Christian Science" is a self-contradictory heading, since Christian Science relates in no way to *materia medica,* does not believe in it, teach it, or practise it in any form, but heals entirely through spiritual means. His interpretation of the lifting up of the serpent in the wilderness, and the attempt to justify the use of material remedies by this interpretation, is not supported either by the Mosaic decalogue nor by any of the teachings of Moses, who constantly urged the Israelites to rely utterly upon God and lamented and suffered discouragement at their repeated failures to do so.

The statement that Jesus and his disciples taught the use of drugs cannot be verified by anything in the New Testament. On the contrary, the greater part of the four gospels is taken up with the accounts of the healing by Jesus and his apostles without any material remedies whatever, and the words of Jesus himself, as given in one of these narratives, are: "And these signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." Paul healed through faith in God and the understanding of the gospel of Jesus Christ. The one instance when he recommended a material remedy to Timothy is set off against the many accounts of his healing of disease without any material remedies whatever. As for his being accompanied by Luke, whom he called the beloved physician, there is no evidence in any of the writings of the New Testament that Paul ever required Luke's assistance as a physician, or that Luke ever practised as a physician after he became a disciple of Jesus. And further, has the professor lost sight of the fact that the experimental science known under the name of *materia medica* has changed, even in one hundred years, so much that many of the remedies and methods employed a hundred years ago would be considered little less than murderous by members of the medical profession to-day?

What, then, does he think of the method that probably was in vogue in the time of Paul and Luke? Would he like to trust his life or that of his friends to such a method, or even to a method that was used a century ago? What is this assumption of superiority on the part of these learned gentlemen? Is the term *materia medica* so sacred in their opinion that mistakes may be going on under its name for four thousand years, and its changing, shifting theories always held up to view as infallible? Have its votaries been granted some sacred privilege and eternal right that they may assume to criticise all other forms of healing, and even to misquote Scripture in support of their criticisms? Not only this, but must every one be called weak-minded and unscientific who refuses to accept the experiments of *materia medica* as science, and prefers to trust his life and health and welfare to God rather than to such uncertain hypotheses and conclusions?

Professor Hallberg does not give evidence of knowing anything of Christian Science. Since he has never healed a case in Christian Science, he is incapable of saying what it is or is not. Among other things, he asks what Christian Science could accomplish toward preventing the ravages of certain diseases. Christian Scientists answer with evidence. The history of Christian Science shows that it has healed a greater proportion of its cases than any other healing agency known, and that it constantly prevents the development and spread of disease. BICKNELL YOUNG.
In *Chicago Inter-Ocean.*

No one who has sat beside those whose cases have been abandoned as hopeless by material means, and has seen the fever fade from the face, the breathing become regular, and the suffering vanish under the benign influence of the Christian Science prayer; no one who has witnessed the frequently instantaneous resuscitations of such patients by their deliverance from the curse of fear, and has been privileged to receive their deep-felt gratitude, could ever again be induced to speak slightingly of the "denial of evil." Nor could any one who has heard the story of moral regeneration by means of Christian Science from the very lips of those who were formerly debauched and depraved, ever express anything but respect for the teachings which produce such results. W. D. MCCRACKAN.
In *New York Sun.*

After all is said, are not results the best proof of any system? Christian Science owes its existence, its marvelous growth, its present prosperity, to results, the constant and ever-increasing demonstrations of its healing efficacy. Its adherents are people very many of whom had been given up as incurable by "regular" physicians. That they are alive and well to-day speaks volumes for Christian Science.

This is a practical age, consequently a practical, health-giving, and health-preserving religion meets with ready acceptance. And neither misunderstanding, prejudice, nor intolerance can stay its progress. It has to-day encircled the globe and is fulfilling the Scriptural injunction, "Go ye into all the world" and preach the gospel, "Heal the sick." JOHN L. RENDALL.
In *Fairfield* (Ia.) *Ledger.*

In life—not death—
Hearts need fond words to help them on their way;
Need tender thoughts and gentle sympathy,
Caresses, pleasant looks, to cheer each passing day.
Then hoard them not until they useless be.
In life—not death—
Speak kindly. Living hearts need sympathy.

Anon.

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Card.

THE Executive Members of the Mother Church will please accept my heartfelt acknowledgment of their beautiful gift to me,—a LOVING CUP,—presented July 16, 1903. The exquisite design of boughs encircling this cup, illustrated by Keats' touching couplet, would almost suggest that Nature had reproduced her primal presence, bough, bird, and song to salute me. The twelve beautiful pearls that crown this cup, call to mind the number of our great Master's first disciples, and the parable of the priceless pearl which purchases our field of labor in exchange for all else.

While I treasure my LOVING CUP, with all its sweet associations, who shall say that Mrs. Eddy is fond of her cups!

MARY BAKER G. EDDY.

Preserving our Integrity.

ANXIETY to win the approval of the world may tempt us, perhaps unconsciously, to color our statements to suit our auditors and to make concessions from the absolute line of Science. Our Leader vanquished this temptation in the early days of her work, and her declaration, "The author has not compromised conscience to suit the general drift of thought, but bluntly and honestly given the text of Truth" (Science and Health, Pref. x.), is an encouragement to her followers to be equally steadfast in this regard.

We must withstand the temptation to make our presentation of Christian Science so much in line with our friends' preconceived views of God, man, and the universe as not to antagonize them, and we shall be encouraged in this endeavor if we reflect that the views we hesitate to disturb have prevailed for ages, and that the solution of the problems to which they apply has engaged the thought of mankind for centuries, without any appreciable diminution of the horrors of sin, sickness, and death.

To be immune to this temptation we must realize that Christian Science is an exact Science, and that it cannot be stated except in terms of exactness; also that every compromise is a departure from Principle. We may become more popular by such methods, but popularity gained in this manner is at the expense of a true sense of Christian Science and must inevitably lead to uncertainty as to its teachings.

If humanity's concept of God and man's relation to him, during the ages preceding the advent of Jesus, had been correct, and his teachings had been in accord therewith, he would not have met with opposition, nor would he have been persecuted. The criticism of Jesus' doctrine and the opposition which culminated in the crucifixion would not have been manifested had he trimmed his sails to meet the theological breezes of the day. He would have been saved the hardship of persecution, but the world would have been without Christianity.

Without doubt there are many who would call themselves Christian Scientists if permitted to alter the platform of Christian Science to conform to their opinion; but to give way to their desires would not make Christian Scientists of them, nor would it bring the world nearer to salvation. If the world's opinion is that Christian Scientists are narrow because they conform strictly to the rules of what they have proved to be an exact Science, they will bear this opinion rather than adulterate Christian Science. M.

Spiritual Discernment.

WHEN the great Teacher prepared the students whom he first called, for their work of healing, he gave them certain definite instructions which would be of great value to Christian Scientists, if understood and obeyed.

Among other things he said, "Behold I send you forth as sheep in the midst of wolves;" and later he warned them against wolves in sheep's clothing. Jesus recognized the danger awaiting his disciples in their early efforts to heal the sick, and cast out evils, but he also knew the protection available for them, else had it been useless to send them on a mission of such deep import to the world.

It is hardly necessary to say that the sheep are wholly unable to protect themselves from the wolves, but if we take the definition of sheep as given in our text-book (p. 594), a new light is thrown upon the subject. It is the following of the Leader's thought or direction which insures the safety of the sheep and also of the lambs. The Christ says, "My sheep hear my voice," they learn to distinguish between the call of Truth and the demand of error, and therein lies their safety.

It has seemed necessary on one or two occasions to warn the Field against dishonest attempts to secure help and sympathy from Christian Scientists. The plea sometimes offered was that the applicant for charity had been reduced to dire necessity through persecution on account of Christian Science, and this seldom has failed to elicit a ready and generous response. In view of further reports received, it is evident that there is need of constant alertness in this respect as in every other.

John says, "Believe not every spirit, but try the spirits whether they are of God," and Paul speaks of the "discerning of spirits" as a Christian attainment. This will be better understood if we refer to Jesus' words to his apostles, "Ye know not what manner of spirit ye are of," and it will be still clearer when we learn that "Spiritual sight is the discerment of spiritual good" (Science and Health, p. 505). When we are keenly alive to the demands of Principle, there is little danger of our ever becoming the victims of dishonest men. On attending a Christian Science service for the first time a gentleman said that the teaching recalled an experience of earlier years when he was a young employe in a bank. As many counterfeit bills were being passed at the time, he was greatly harassed by the fear lest he might mistake some of them for genuine, and thereby lose his position. On seeking advice from one of his superiors he was told that he would never learn to detect counterfeits by looking for them, but that if he became thoroughly acquainted with genuine bills, and the process of their production, he would be able to detect at a glance the most skilfully executed counterfeit.

It is well known that the dealer in gems pursues this course, and the finer the stones examined by him, the keener the judgment acquired, and this is also obviously true of the mathematician and the musician; but when we come, however, to the study of the vast problem of human existence, the necessity for always keeping the attention fixed on the best and highest is seldom recognized.

The teachings of Christian Science are, however, bringing great changes in this respect, and as they are better understood and applied we shall discern the more surely and quickly the quality of every thought which seeks admission to our consciousness, and we shall allow nothing to enter

Digitized by Google

which would rob us of our sense of any manifestation of good.

The following wise admonition from our Leader will enlighten us all: "We should become more familiar with good than with evil, and guard against false beliefs as watchfully as we bar our doors against the approach of thieves and murderers. We should love our enemies and help them to receive its fruits on the basis of the Golden Rule; but we should avoid giving them help if they pervert its uses with abuses" (Science and Health, p. 234).

K.

The True Ground of Faith.

"Our faith can never stand in a fact of history alone. The believer has access to the living Christ to-day. . . . The Gospels do not so much verify his experience as his experience verifies the Gospels."

These recently published words by a prominent Baptist clergyman are indicative of one of the most manifest and important trends of modern religious thought. The cry "back to Christ" cannot become more significant than when it expresses dissatisfaction with historic statement as a basis of faith, and a desire to return to Jesus' simple and scientific method of demonstrating truth. To those who demanded convincing evidence of the divine authority of his teaching, he pointed to the numerous and unquestioned healings of the day, and in giving his disciples directions for determining spiritual values, he said, "by their fruits ye shall know them." Authority, traditions, doctrines, time-honored rubrics,—all were quietly ignored by this greatest and wisest of teachers in his verification of Truth, and they are certainly quite as inadequate in the twentieth century as they were in the first. The children of this world have been wiser, and the eventful progress of applied Science in the so-called physical realm evidences the advantage of that present and continuous demonstration of Truth which worldly wisdom has exacted.

In declaring that spiritual truth is competent to establish its goings, by giving immediate and unequivocal proofs of its healing power, Christian Science has taken a position which gives practical value to religious faith, which honors the teaching of Jesus, which is endorsed by both logic and common sense, and the necessity of which is being more and more generally seen.

W.

The Folly of Unjust Judgment.

The advance of the cause of Christian Science has disclosed a human capacity for hasty judgment and unintelligent criticism upon the part of many men of place and distinction, which is equally surprising and unfortunate, and a collection of the distorted and untrue statements which have been made respecting this Cause and its Leader in religious periodicals and other publications of conventional good standing, would surely bring a sense of humiliation to every noble-minded man.

A fair sample of this unworthy criticism, appears in the columns of an evangelical paper before us, in which a gentleman whose "Ph.D." ought to stand for scholarship and fair-mindedness, asserts that,—

"Christian Science declares that the whole objective world is a subjective product and nothing more, and that the mind can change its feelings and its sensations, and consequently the whole objective world, by changing its thoughts about them."

The article in which this appears contains numerous other statements which are quite the opposite of the teachings of Christian Science, and they indicate that no careful effort was made by the writer to acquaint himself with the facts, either by inquiry of well-informed representative Scientists, or by a careful reading of that authorized exposition of the teaching of Christian Science which is contained in Science and Health and the other writings of our Leader.

The fact is, that, in direct opposition to this critic's statement, Christian Science teaches very definitely and specifically the reality of the objective universe, but that as the manifestation of Spirit it is spiritual and not material.

The truth about the teaching of Christian Science will surely be learned, in the course of time, by all inquiring people, and it can but result to the disadvantage of the reputation and consequent good influence of all those who, through inexcusable ignorance or prejudice, have indulged in such misrepresentations. Not least among the reasons which ought to lead all Christian teachers to be carefully considerate for facts, is this, of the inevitable loss in public confidence which attaches to the discovery that their statements regarding the faiths of others must be taken with a great deal of allowance.

W.

Letter to our Leader.

1465 Michigan Avenue, Chicago.

Rev. Mary Baker G. Eddy.

Dear Madam:—I take the liberty of writing you. It was my desire to do so while I was yet in Jerusalem, my native city, when I heard about you and your great work in establishing the kingdom of God here on earth.

The writer is a converted Hebrew, who came to this country a few months ago on business, selling flowers and bulbs from the land of our Saviour, which I am glad to see are so much appreciated by Christian people everywhere, and samples of which it gives me great pleasure to send you, asking you to be so kind as to accept them. I feel sure that you will like the flowers that grew in the earthly home of our Lord.

May the God of love crown your efforts with success, and may He open the eyes of my nation that they may see him whom their fathers have pierced.

Yours in His service.

S. P. Forest.

The Concordance.

I can find no words adequate to express my gratitude for the new Concordance, which seems like a personal gift to each of us from our dear Leader in Israel. How can we thank her? By using it faithfully as we would grasp a strong, firm hand, by which to climb higher.

In looking up a reference one may receive a distinct blessing, through the helpful suggestions which enrich almost every line.

When the Index was omitted from Science and Health, there was a momentary sense of loss, eliminated the next instant by the thought "our Leader knows," and a reminder that "nothing good can be lost." Now it has come back so enhanced in value that we are made to realize "the affluence of Love which is continually giving, beyond what we can ask or think."

I am strengthened with a sense of gratitude and gladness for our glorious birthright and for the wise and tender nurture which is given us through the years of minority.

Gertrude M. Singleton, Evanston, Ill.

If the world's good men and women are ever to get together for the advancement of the highest ends both human and spiritual, it must be through the growth of tolerance and the mutual recognition of that which is really divine in purpose and character. That can never be accomplished by a persistent perversion of the motives of those who differ from us.—*The Boston Transcript.*

The Mother Church Building Fund.

Impersonal Testimonies from the Churches.

A special business meeting was called to take action on a further contribution to the Mother Church Building Fund. The message "Now and Then" from our Leader came in the *Sentinel* on the day of the meeting, and it was an inspiration, awakening all to see that this "now" was their opportunity. "No risk is so stupendous as to neglect opportunities which God giveth" (Miscellaneous Writings, p. 213).

The object of our coming together having been stated, a member immediately proposed that this church now pledge to the Building Fund such an amount as will make the total subscription $10,000 or more, and that it be paid in on or before June 1, 1904. This motion was quickly seconded. Then came the reading of the article "Now and Then," followed by a lively testimonial meeting. Member after member spoke of the grand and good benefits received from Christian Science, and that the giving of this amount was a small thing compared with the prosperity of our church which would surely follow the prosperity of the Cause, due to the divine impulse given it by the building of such a proposed addition to the Mother Church. More than half of the forty members present spoke. Many asked for the privilege of speaking a second, a third, and a fourth time. This meeting was a regular Pentecostal feast, it was such an expression of praise and gratitude to God for His message of peace and health to the world which has come through Christian Science.

The class of oldest girls in our Sunday School send the amount of thirty dollars for the Mother Church Building Fund.

The experiences incident to the demonstration have been helpful, and it is with joy and gratitude that we offer this gift.

This Church, which has 93 members, 52 of whom are members of the Mother Church, held a meeting in July of last year, as soon as practicable after the Annual Meeting of the Mother Church, and unanimously endorsed the action of the Annual Meeting in voting "any portion of $2,000,000" needed to build a suitable Auditorium in Boston for the present requirements of the Cause, and pledged its hearty support thereof.

The first step in witness of this support was a check for $688 sent to the Treasurer of the Building Fund, November, 1902.

The second step was another check for $700 sent as an Easter Offering, April, 1903. The Sunday School sent on this occasion their Easter Offering of $27.70, having previously sent $12.65.

The need for more definite action becoming apparent, as shown in articles appearing in the May *Sentinels,* in order that those having this matter in charge in Boston could know more intelligently what sums could be counted on, our Church deemed it advisable to issue subscription cards; this was done, and within two weeks the sum of $3,315 was subscribed.

This result was obtained by our whole Church knowing that subtle suggestions of evil must not be listened to if the cause of Christian Science is to be a demonstrably prosperous one to the world. That selfishness can find no place in our Cause, has been the watchword of our members.

When first the subject of contributing to the Building Fund came up, the question was voiced, How much ought our local Church to contribute? It was mathematically figured in a moment that a certain sum for every member of the Mother Church would realize the necessary $2,000,000 pledged, then it was not a difficult matter to find out that our local Church should give not less than a certain amount.

We all feel that without the vine flourishing the branches cannot. This is so palpably true that all who run may both read and understand. We know our own local Church Building Fund will now go ahead with renewed vigor and success.

Testimonies of Healing.

I was afflicted with an inherited disease,—cancer,—my grandmother and an aunt had passed away with it. I took care of my aunt during the last two months of her illness. She was sent away from the hospital as a hopeless case, and we were unable to get a nurse to take care of her at any price. I was a great sufferer for years, and several of the best physicians who treated me said they could do very little more for me, as I had tuberculosis of the stomach and lungs, as well as cancer of the throat and head. The cancer came to the surface through my cheek under the right eye.

My suffering was very great when I began Christian Science treatment. The pain was almost immediately stopped, and while it returned at times, the treatment would always bring relief. As nearly as I can remember that was a little over two years ago.

During this time I was not confined to the house but attended to all my duties, going to and from the city when necessary and attending church regularly, though obliged to wear a heavy veil most of the time.

My eye was threatened, but all is perfect now, and my sight is better than before, even the scar is disappearing. Both diseases are perfectly healed, and I have this summer lost the great fear I had of taking cold and am able to enjoy the light summer clothing which I had not worn for nearly ten years. Instead of ninety pounds I now weigh one hundred and fifteen.

I can but express loving gratitude to God, the Giver of all good, and to our dear Leader, Mrs. Eddy, and her faithful students. Through the ministry of Christian Science I have been brought out of the valley of the shadow of death to give this testimony, and I send it, hoping it may reach some one who is in the same need which I once felt.—N. G. H., River Forest, Ill.

I have often thought that I ought to make some return for the many helpful testimonies I have read in the *Journal* and *Sentinel.*

Two and a half years ago I am sure there was not a more miserable person on this globe,—it seemed that I was without hope and without God in the world, having suffered from early childhood with almost every disease that flesh is heir to. I cannot remember the time when I was not taking medicine and suffering pain. I was never free from neuralgia, and for more than forty years prior to 1901 I was a constant sufferer from a complication of diseases. Liver, stomach, and kidney trouble made life such a burden that I would gladly have escaped through death. I was always a delicate child; I never could run and play like other children. I was subject to fainting spells, and the thought was that any unusual exertion brought them on. This error seemed to grow with my years. Rheumatism with its companion, sleeplessness, kept me in bondage for years, scarcely allowing the closing of my eyes in sleep for weeks at a time.

In the summer of 1900 I was stricken with paralysis; then all former troubles seemed to me as nothing in the face of this almost helplessness. I had not been under a physician's care for more than thirty years. I feared doctors, as some of the best had said that I could never be well without at least two operations, as there was a growth on my liver, and my kidneys were badly deranged, and something must be done for my stomach. There were also many other chronic troubles, so I gave up doctors and

Digitized by Google

took my own case. I certainly took medicine by the pound and quart.

With this new trouble, however, I employed the best medical aid that I could obtain, and followed my doctor's directions to the letter, took all medicines prescribed, used many applications, and had many kinds of treatment for months. Then one morning I learned that there was no earthly help for me. I am sure my kind doctor and my faithful nurse did all in their power to cure me, for which I truly thank them.

Up to this time I had asked God to bless the means used for my recovery. Now I threw away all medicine and remedies, and prayed and read my Bible as never before. I felt that there was help if I could only find it. I believed God was able to heal me, but could not understand why He did not. I thought I was humble and obedient; had always from early youth been a member of an orthodox church and thought I was a Christian; but my prayers seemed unanswered, and I earnestly asked God to guide me and show me the right way if I was not in it. Christian Science came to my mind. I was prejudiced and I said, "Oh, not that! anything but that!" but still the same answer would come, until I almost thought I was losing my mind. At last the stubborn will was broken and I was ready to try Christian Science. I had been struggling with my stubborn will for two weeks. I now sought and obtained the address of a practitioner and made my way to his office as soon as possible. Error tried to keep me from going, telling me it would only be one more failure, but I closed my ears. My mind was made up and I promised that if I received help I would look into this and would follow the leading of Truth.

I had been so helpless that I had not dared to go alone on the streets for months, but I went alone to the Christian Scientist (no, ever-present good was with me). It took me an hour to get to the street car, but I persisted. I had started towards peace and perfect harmony. I had to wait some little time when I got to the practitioner's office, as I had no appointment and others had. While I waited I read the first Christian Science literature I had ever read, and began to *think*. I told the practitioner that I had no faith in Christian Science, that I had only come through desperation as a last resort. He said, "You don't need much faith now; just follow the rules of Christian Science; read prayerfully the Bible and the Christian Science text-book, and the faith will come with your healing." I remember thinking, "You seem very sure of my healing, but I'm not."

However, during that first silent treatment I was healed of every ailment except paralysis, and that was so much better that I no longer felt helpless. I could walk perfectly. But while the physical healing was great and wonderful, the spiritual uplifting so far outweighed the physical that I seemed to forget self and to be walking on air, and for the first time I understood the meaning of the peace of God which passeth all (human) understanding, and, like Thomas, I exclaimed, "My Lord and my God." I had found the living Christ, Truth, and my heart was too full to express my thankfulness to my practitioner for so kindly leading me into the light.

My belief in the paralysis soon dropped away like a worn-out garment. The understanding that God is all leaves no room for paralysis. Some ills have come to me since my first healing, but they have been quickly met through Christian Science.

Through my small understanding of Christian Science I have been enabled to prove the statement of our Leader, when she says, "Whatever it is your duty to do, can be done without harm to yourself" (Science and Health, p. 385). Early this summer it seemed necessary for me to move. I did all the packing and cleaned the entire house myself, and proved that I could "run, and not be weary; . . . walk, and not faint," for I never felt better in my life than during and since this usually fatiguing work.

I love our dear text-book; it makes the Bible a new book. If any disharmony seems to come, Truth straightens it all out. I have the greater part of Mrs. Eddy's works, have the *Journal, Sentinel,* and *Quarterly,* and enjoy them. I improved the first opportunity of identifying myself with the church here, and with the Mother Church last year. I love the church and everything pertaining to Christian Science, for I owe everything to it. I am striving to let my daily life evidence my faith by forsaking all that is unlike God. By so doing I think I can best show my love to our dear Leader.—Mrs. C. A. H., Omaha, Neb.

I want to be among those who return to give God praise. I took up the study of "Science and Health with Key to the Scriptures" about three months ago, at the urgent solicitation of an old acquaintance, having lost, as the result of experience, all faith in any material power to reach my case.

My case was diagnosed fifteen years ago by a very reputable physician as hay fever, asthma. He said, "If you have an inherited tendency toward consumption your asthmatic condition will eventually carry you into a consumptive's grave," and when I talked to theologians upon the subject of present and future existence, they would in turn suggest that it was God's will for me to have these bodily infirmities. All the time I was fighting the idea of its being God's law, and I began with a willingness to try to find a better way. While realizing the many beautiful assurances given by our dear Leader, I kept my Bible near at hand to prove their correctness, and then my sad heart took courage.

I wrote to a dear friend of mine, having seen his name among the Christian Science practitioners in the *Journal.* He at once responded in a manly and noble way, and gave me the facts of his wonderful healing through the agency of Christian Science. His letter came as a revelation to me, conveying as it did the information that his daughter, seeing his improvement, had given up the study of medicine and entered upon the higher study of Mind. I was assured by him that my hay fever would be a thing of the past, providing I continued my earnest study of Divine Science. I want to testify in all earnestness that I found Science and Health to be indeed the Key to the Scriptures.

After this I threw away all the material remedies which at one time were considered so necessary, not reserving even the camphor bottle, which reminded me of my childhood's home with its dear associations.

After this I gained rapidly in understanding, and was healed. Joy took the place of sorrow as the new birth dawned on me, and the resurrection came as a present experience.

The kingdom is established within us when we are healed and can heal others. There is great and grand work before us, of showing to the world that through our efforts the Fatherhood of God and the brotherhood of man can be established by Love.

I admit I was once a "Saul of Tarsus" and persecuted Christian Scientists, but I am happy when I read how Paul became the great apostle after being so bitter in his persecution. I can truly say, "He brought me up also out of an horrible pit, out of the miry clay, and set my feet upon a rock, and established my goings."

My love and gratitude go out to our dear Leader for her untiring efforts in our behalf.

MRS. MARY M. CHAPMAN, Argos, Ind.

Two and a half years ago, Christian Science found me in a discordant condition of mind and body. I commenced reading Science and Health, and it slowly dawned upon me that nobody, and no circumstance was to blame for

Digitized by Google

those conditions which seemed so painful to me. I realized that there was some stiff work before me, that there must be a great overcoming in order to gain my true inheritance, the heavenly kingdom; also I heeded the warning of our Leader not to murmur at the demands of Truth.

At times the way seemed rugged, clouds would seem to obscure the light, and my feet would well-nigh slip, but every temptation to discouragement would be dispelled by some message from our text-book or other Christian Science literature. Also I remembered how great a cloud of witnesses we have, and so with renewed courage the battle against self was and will be continued until that day when "there will be no more going out."

I cannot attempt to tell what Christian Science has done for me, I can only say it has healed me mentally, morally, and physically, and my gratitude to Mrs. Eddy can best be expressed by a life of obedience to Him whom to know is life eternal. "We shall obey and adore, in proportion as we apprehend the divine nature, and love Him understandingly" (Science and Health, p. 140).

For class instruction and subsequent help from my dear teacher, I feel very grateful; also to those dear ones, who, seeing a sister's need, came to her aid. With Paul, I can truly say, "Eye hath not seen, nor ear heard, . . . the things which God hath prepared for them that love Him."

The seed of Truth is germinating in this part of Germany (my adopted home), and many proofs of the healing and saving power of Truth and Love have been given.

M. V., Wiesbaden, Ger.

In Christian Science I have found the truth. For two years previous to investigating this subject, I had become cold in the church of which I was a member, but felt that the fault was with myself. I went to the meeting hungering for more spirituality, but came away unfed. I prayed fervently that I might receive the truth, for I knew it was somewhere, and I should seek and find it. Just at this time another religion was presented to me, the followers of which seemed very happy and harmonious, but I could not quite accept it. I was hungering and thirsting after righteousness.

All this time I kept up my work as teacher in the Sunday School, seldom missed morning service or young people's meeting, also met once a week with a society of the King's Daughters, and quarterly with teachers at Social Union. Besides this, other meetings and socials kept me with the church people all my spare moments after business hours. My prayer was surely answered in Christian Science, but it seems that I was forced to accept it.

I had been doctoring and taking medicine continually. Finally I was taken suddenly ill and could not leave my room for about two months, then I went away for three months, thinking that I should come back and be able to continue my work. I improved very much, but the fear of quick consumption was with my doctor and my family and friends, and I was warned about the coming winter. Only too soon the fear manifested itself. I had worked just three weeks when all the pains and aches returned, and I had to go to bed as soon as I got home, so there was no pleasure in living. My employer advised me to see my physician, and said perhaps I should not work that winter. I then and there turned to Christian Science. I could not afford to give up work and live away from home, neither did I want to depend on doctors and medicine any longer. I was in despair.

With all my desire for the truth, my eyes filled and I was nearly choking at the thought of giving up my old faith. I had a pride in what I had been working for in my church, and it was hard to give up the old for the new-old thought which had been adopted by some of my family, but I finally asked for Science and Health.

I took the book and read it on my way to work, and at noon I lay down on a couch instead of going out for luncheon and fell asleep. When I awoke I was a different person, all pains and aches had gone, and I was free. I was so happy I could hardly contain myself; to material sense it was wonderful. As I walked I kept saying, "Wonderful, wonderful," and tried to understand "the scientific statement of being" by repeating portions at a time, then pondering over them. I read the book four times in succession, and every time I found more and more to aid me in the understanding.

This healing was in October, 1901, with no other help than Science and Health, and soon I was relieved of other chronic ailments. In February I was able to put away eyeglasses, which I had worn ten years and a half for astigmatism. Oculists told me I would always have to wear them.

A month later my father asked me to help him, as he was suffering so much from constipation, dyspepsia, and neuralgia. He had been subsisting on bran, nearly starving himself until he was most miserable, and his limbs seemed so cold that they were kept wrapped in blankets. I felt very humble as he asked me, and told him I would have a practitioner help him, as I had never treated any one; but he would not consent to have any one but myself, and I finally told him I would try, but that he must not hold Science responsible if he were not benefited, for my lack of understanding, and not Science, would be at fault. At my request he read Science and Health, ate whatever he wanted, and used no medicine in any form. After two treatments I received word from him that he was healed of that bondage of thirty years' standing.

In view of all these signs which followed my acceptance of Christian Science, I knew it must be true, and I finally decided to sever my connection with my former church, and was glad to be called a Christian Scientist, and I now seek daily to become worthy of the name.

I can only show my appreciation by my daily work rebuking and destroying error, and affirming all the truth, praising God,—omnipresent, omniscient power.

I thank Mrs. Eddy for her unceasing work for mankind. Lovingly and modestly she has given us the pure thought of Christian Science. Passages of Scripture which I have known for years, come to me with a broader, fuller meaning, therefore I love the Bible as never before.

I have been blessed with class instruction which has greatly benefited me. The thoughts given me have helped me to grow step by step, and are appreciated more and more as time goes on.—RETA L. AYERS, Chicago, Ill.

The following testimonial was sent by Mr. H. to an old friend, now living in Hoopeston, Ill., and with his consent it was originally published in the *Hoopeston Herald*.

ED.

I first heard of Christian Science about eleven years ago. At that time our little girl, six months old then, was healed of a trouble of the nature of asthma in two treatments, after two physicians had failed, but notwithstanding the benefit so quickly received, we paid no further attention to the Science, and several years later we lost a boy eleven years of age. After his loss my wife took treatment for nervous prostration and heart trouble, and was quickly healed. For some time after Mrs. H. took treatment I paid no particular attention to the Science, but finally began to read Science and Health. After reading about thirty-five pages I put the book down, as I did not seem to understand it. After a while I started again to read; this was after I had attended some of the meetings, and then I seemed to grasp a little understanding of it. I was unconsciously healed of dyspepsia, and of course gained in every other way.

I am very grateful for my better understanding of what God is. The longer I study, and try to live the life of a Christian Scientist, the more I seem to realize the fact that in truth there is no other consciousness but that of God.

Digitized by Google

and there cannot "enter into it anything that defileth, neither whatsoever worketh abomination, or maketh a lie."

I have had many beautiful demonstrations both for myself and the children. I feel grateful for having been able to overcome sin as well as sickness. I overcame the habit of smoking six years ago. I also find the Science of great benefit in business. If I were to attempt telling of all the blessings received it would require a long letter; but suffice it to say that since getting the understanding of Christian Science, I devote about all my spare time to its study, and am still expecting greater blessings.

We are helped in many ways other than the physical healing. The peace of mind which comes to one when he learns only in a small degree what God is, is inexpressible. Nevertheless we cannot remain on the mountain-top, and we have many hard battles in overcoming error. Yet if we trust truth it is always the victor. It is difficult to put into words our experiences in Christian Science. We joined First Church of Christ, Scientist, here in Milwaukee a little over a year ago.—F. E. H., Milwaukee, Wis.

In looking back over some of my past experiences in Christian Science, one demonstration in particular stands out with extreme vividness.

Through Christian Science treatment I had been wonderfully healed, and through this restoration of health I was enabled to enter again the arena of life, not as of old, with the carnal weapons of warfare, but with the sword of the Spirit. Through the study of Science and Health I discerned that dishonesty, injustice, and limitation were just as unreal as sickness, sin, and death; and that divine Principle heals all. I wished to save others from the agony and suffering which I had endured in the days in which I thought them real, and in order to do this I must be right myself.

I began with the determination first, to owe no man anything; second, never to hold back the laborers' wages over night; third, to give full compensation, pressed down and running over. I had just started out in the Field as a practitioner, and my efforts in this direction were indeed crowned with success. The work increased to such an extent that I thought it necessary to come out from my occupation. To this my mother objected. She said it was giving up a certainty for an uncertainty; but I took the step and have never regretted it.

I had much to learn, having often more zeal than wisdom. I thought if a patient was healed of some dread disease, or had some lost sense restored, that it was not necessary to speak of remuneration, that his gratitude would know no bounds, but from this dream I was rudely awakened. I found that it was the nature of mortal mind to take rather than give, to want something for nothing. I ran at everybody's call, and gave my time, devotion, and car fare. The work was done, but there was little return. Could they have lifted the veil of my home life they would have had a juster idea of the suffering that was caused me by this withholding of the laborer's wage. It must have been to such as these that Jesus referred when he said, "Having eyes, see ye not? and having ears, hear ye not?"

But "progress is born of experience." We rise by the things that we put under our feet, and through this very suffering I learned to look to God alone "with whom is no variableness, neither shadow of turning." It came about in this way. It was the first of the month, and the amount needed seemed to be large. I had been declaring steadily that Mind was the infinite supply, and I proved it to a certainty. Every dollar was met and there was just fifty cents over. I gave my niece thirty-five cents for the dinner and with the remaining fifteen cents went down to my office. Mortal mind kept suggesting to me, "Is it not hard, after all your work, to have only fifteen cents?" nevertheless it was surplus and I was not in debt. "But suppose you were called out to-night?" "Well, ten cents will take me to any point in Brooklyn." "But what are you going to do for to-morrow?" "I haven't a thing to do with to-morrow, the same Love that provided to-day will provide for to-morrow." I took up Science and Health and read for some time, and as I looked up from the book my eye wandered to the piano. Like an inspiration the thought came to me, Why not praise God? Give voice to your gratitude in song. I went to the instrument and sang hymns 135 and 155 from our Hymnal. While I was singing the door-bell rang. On opening the door, there stood a lady whom I had treated a long time ago. I had forgotten all about her, as she had left the city shortly after taking treatment. I invited her into the parlor, and, when she was seated, she said, "I suppose you think I treated you very shabbily." "Well," I replied, "it would have made it much easier for me if you had been more considerate." Then opening her purse she laid fifteen dollars in my lap. The tears came to my eyes (from fifteen cents to fifteen dollars!). Only one who had passed through just such an ordeal could understand how I felt. In order that she might better understand I gave her my experience. Oh! how plainly I could see that all the trouble came about through lack of love, and that, until the Golden Rule is fulfilled, the sad refrain of Bobbie Burns, "Man's inhumanity to man makes countless thousands mourn," will re-echo in many a heart.

While we were talking, the door-bell rang violently. Thinking it a telegram, I went to the door. A young girl stood there crying. "Oh, come quickly!" she said, "mother is dying. There is not a minute to lose." I told her to go home and I would follow her at once. Excusing myself to my friend, I left the house. The girl had referred to the symptoms of the case lest I might delay in coming, but no sense of fear disturbed me. The experience I had passed through that day and the work done in myself in overcoming, enabled me to meet this higher call.

As I entered the sick-room one glance at the pallid face and rigid form showed me that the young girl had not exaggerated the condition. Error whispered, "Too late!" I mentally declared, "No evidence before the material senses can close my eyes to the Scientific proof that God, good is supreme" (Miscellaneous Writings, p. 277). I knew that "the living, palpitating presence of Christ" (Science and Health, p. 351) was there. Jesus said, "I am the resurrection, and the Life: he that believeth in me, though he were dead, yet shall he live." Beyond this I cannot remember anything but singing over and over again to myself the words of the hymn I had sung that morning in praising God for my deliverance out of Egypt.

At eleven o'clock that night it was quite evident to the whole family that the wife and mother was fully restored to their hearts and home. Could there be any joy on earth greater than this!

When I returned in the morning I found her well and happy. She took my hand in hers and said so earnestly, "Will you tell me how the demonstration was made so quickly last night? I knew they were sending for you, but I felt it was too late and I would be gone before you could reach me." I answered, "Jesus said, 'the works that I do shall he do also;' that this statement is true I believe with all my soul." I could have added that when we go to a patient with the joy that filled my heart that morning, then is the Christ-truth visibly manifested to us.

Take then the charmed rod;
Thou art not error's thrall!
Thou hast the gift from God,—
Dominion over all.

MISS JESSIE WOOD, Brooklyn, N. Y.

FOR myself, I trust in the mercy of the All-Merciful. What is best for us we shall have, and Life and Love are best.—*Whittier.*

From our Exchanges.

The conviction has spread widely, through all the Churches, that it was an error to describe heaven and hell as localities, especially as compensative rewards for deeds done in the present life. The reply to this logic is a good deal older than our modern liberalism. . . . Heaven is the state of the soul, hell is the same. They may exist side by side in two persons who are thrown together in life's economy. Heaven is not a fixed state. It may become a thousand times more heavenly by noble purposing. The only locality of Paradise is a man's own soul and its surroundings. The power of the mind to widen out its heaven and enlarge its compass of joy is inestimable. Another person in the same environment may see neither the beautiful, the good, nor the true. The true soul, loving truth, sees the charm of virtue, grows more honorable, more just, and so is heaven-widened, taking in his social and his political environment as well as his religious. The completed heaven is to do the will of the divine Father. This does not construct a golden city, neither does it point to a life of ease and peace, except that peace which springs from right doing.—*The Christian Register.*

"Man never believed he made himself, nor took himself as the product of blind and unintelligent force," declared the Rev. D. P. Denman of the First Baptist Church of Milwaukee to the members of the Hemenway Methodist Episcopal Church at Evanston. "Science has not disturbed the relationship between man and his Creator. It has dealt with the process and not with the origin. By creation man is God's debtor, and love alone can repay that obligation. This love is the supreme obligation. Man should not stand apart, but should be bound to his Creator by the most vital of all unions. Love is the highest thing of which man is capable, and therefore it is the essence of supreme commandment. The moral nature of God would not suffer Him to ask less of His creatures."

Chicago Inter-Ocean.

There is a power in the soul quite separate from the intellect, which sweeps away or reorganizes the marvelous, by which God is felt. Faith stands securely far above the reach of the atheism of science. It does not rest on the wonderful, but on the eternal wisdom and goodness of God. The revelation of the Son was to proclaim a Father, not a mystery. No science can sweep away the everlasting love which the heart feels and which the intellect does not even pretend to judge or recognize.—F. W. ROBERTSON.

Rev. Reginald J. Campbell says: "The pulpit of the future, if it is to gain a hold over classes and masses alike, can never afford to be unintellectual, but even less will it be able to afford to be unspiritual. Spirituality, deep and fervent, will be the note of this century's religion and it will be all the more lasting. On the whole, I am often cheered when I regard the attitude of the world generally toward religion. I consider it is full of hope."

The more we look at the world with intelligent and loving eyes, the more the world means to us. The more we look at each others' faces with intelligence and love, the more human beings mean to us. The more we think of the fathomless depths and the lofty heights of being, and of the Being that fills being and is the source of it, the more it will mean to us.—CHARLES G. AMES.

There is a great deal too much in the world of heavenly-mindedness which expends itself in the contemplation of the joys of Paradise, which performs no duty which it can shirk, and whose constant prayer is to be lifted in some overwhelming flood of Divine grace and be carried, amidst the adoration of men and the jubilance of angels, to the very throne of God.—H. CLAY TRUMBULL.

"I read God by the best that humanity produces," says Rev. Reginald J. Campbell, "not by the worst; and the Divine Compassion is of such a kind we can safely trust it for eternity."

If it is true that knowledge is power, it is doubly true that knowledge of God is spiritual power.

REV. J. HUDSON TAYLOR.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

Published by The Christian Science Publishing Society

95 FALMOUTH STREET, BOSTON, MASS.

The Christian Science Journal.

Founded April, 1883.

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-eight pages of reading-matter.

Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

Supplements to the Sentinel.

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health, in lots of twelve or more to one address may include any or all of the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . 5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid. 4 00

Twelve or more to one address, each, prepaid 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containining the By-Laws of the Mother Church. Price, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Alaskan Boundary Commission began its sessions at London last week. Lord Chief Justice Alverstone was chosen chairman. The tribunal will sit five days a week from 11 A.M. to 4 P.M. Three of the counsel for each Government will make arguments, the British opening, and being followed alternately by Americans and British. This will give the advantage of the closing argument to the British. October 9 was decided upon as the date for finishing the oral arguments.

The cup defender Reliance outsailed the challenger, Shamrock III., in three successive races, and the "America's Cup" is still safe. Not a single race has been won by any one of the three challengers, Shamrock I., II., III. The expense in connection with the three challengers of Sir Thomas Lipton has been estimated at $2,100,000. The cost to the two countries since 1886 is estimated at $6,000,000.

The Peruvian Government has granted to Alfred MacCune, an American, a concession to build a railroad from a port in the Province of Chancay to points on the line between Orroyo and Cerropasco, and to Herbert Selleck, another American, for a concession for a railway from Port Huacho to Picuncha, where there is coal.

Miss Annie S. Peck of Boston, the well-known mountain climber, accompanied by Dr. W. G. Tight, president of the University of New Mexico, and two Swiss guides, has successfully ascended Mt. Sorata in Bolivia, the highest peak in the Andes. This is the first time the summit has been scaled.

Foreign.

The old British receiving ship Urgent, which has been used at Port Royal, Jamaica, for a number of years by the English navy as a guard ship, and which recently arrived at Boston, was at one time one of the best ships of the British navy and was one of those used by King George against the United States in the War of 1812. The old vessel has been purchased by a shipping firm in Boston and will be converted into a barge. Her timbers, made of wood raised in England, are almost as good to-day as they were the day she was launched.

The Chinese Imperial University at Peking has been closed from the lack of students. In the reconstruction of the university work more Chinese classics were substituted for foreign learning, and the qualifications for office were based on the old style of scholarship.

The Government at Sydney, N. S. W., according to reports, has decided to call for tenders from manufacturers at home and abroad for the manufacture of sixty to one hundred railroad locomotives, estimated to cost $41,250,000. Four or five years will be allowed for the completion of the work.

Commissioner General Alexandrovsky has applied for five thousand square feet of space in the World's Fair Agricultural Building for the Russian Government, which desires to make exhibits in Russian-grown cotton and tea, several varieties of the forage grasses, and Russia's staple cereals.

Aguinaldo, now a pronounced supporter of the American policy, has addressed a letter of advice to his countrymen, urging them to forsake their besetting sin,—gambling, to improve their methods of agriculture, and to attend the public schools.

Professor Lammasch of Austria has been appointed by the Czar as one of the arbitrators in the claims of the allied Powers for preferential treatment in their settlement with Venezuela.

Recent returns show that out of the eighteen and one-half million inhabitants of Spain, nearly twelve millions cannot read.

Industrial and Commercial.

The American syndicate which has just closed negotiations for the purchase of Mount Popocatapetl, is planning the construction of a cogwheel railroad from the base to the mouth of the crater of the volcano, a hotel at its summit at an altitude of 18,000 feet, and for the establishment of an electric power plant on Mount Ixtaccihuatl. The syndicate has acquired valuable water rights on the latter and the power will be transmitted to Mount Popocatapetl and used to operate the cogwheel road and the hoisting machinery to get the sulphur out of the crater. It is also proposed to run electric elevators into the crater.

The power houses for the New York Rapid Transit Subway will cover a space 200x700. When the station is working to its fullest capacity the combined power of the generators will be 130,000 horse-power. The coal bunkers, with a capacity of 25,000 tons of coal—a month's supply—will be constructed immediately beneath the roof and run the whole length of the boiler room. Chutes will convey this by gravity to the hoppers at the furnace doors and mechanical stokers will feed it to the fires. There will be five iron smoke-stacks 265 feet in height. The building is to be of iron and masonry of pleasing and appropriate design.

No little interest attaches to the entrance into the freight carrying fleet of the Great Lakes of a new gasolene freight steamer.

Careful estimates place the number of shoes made at Lynn, Mass., last year at twenty million pairs.

General.

There has recently been exploited a new substance designated by the name of "kapok" which is much lighter than cork, is not subject to decay, and is capable of sustaining thirty times its own weight, while cork is only capable of sustaining five times its weight. Recently Captain Truffert mentioned a tree which he observed in the Tchad region called Marea by the natives, the properties of which are very similar to those of "kapok." The tree only grows in damp places and has a density much less than that of cork. Every native soldier carries a piece about six feet in length with him when on the march. The weight of the wood is insignificant, and it is only necessary to cast the piece of board into the water in order to have a safe means of crossing in the form of a raft.

A most important discovery was made recently during excavations in the Roman Forum. It consisted of the base of the celebrated equestrian statue of the Roman Emperor Domitian, which is of the greatest interest in determining the topography of the Forum in the first century of the empire. The base stands five feet below the present level of the Forum. It is forty feet long, twenty feet wide, and over ten feet high. On the top are three blocks of travertine stone, showing where the feet of the horse stood. The fourth block is lacking, indicating that the right forefoot of the horse was raised. The distance between the blocks is so great that it is calculated that the statue was six times life size.

Prairie farm machinery has reached such development, and diversification of crops, tending to distribute the farm work evenly through the seasons has arrived at just such a stage, says a writer in the *Boston Transcript*, that two men can successfully operate a standard farm from the close of one harvest season to the opening of the next. The gang plow and disk harrow, the four-horse grain drill and wide-reaching drag, together with weeks of time in which to do the work, enable one man to seed seasonably from one to several hundred acres of grain.

The *Daily London News* is demonstrating that a clean, moral, daily newspaper can be made to pay. Some time ago all racing and betting news was excluded from its columns; now all advertisments of alcoholic liquors are likewise banished. The high moral purpose which dictated this policy has had its reward. Instead of suffering financial loss the *Daily News* has reaped unexpectedly rapid benefit. The circulation of the paper is increasing at the rate of 1,000 a day, and a heavy loss has been converted into an actual profit.

The protection of birds has become a settled custom in most civilized countries. Australia is now making great efforts to save its native birds and for the prevention of the trade in so-called osprey plumes. The colonies of egrets in Victoria are being rigorously protected, and the government of Queensland will soon have certain islands reserved for the Torres Strait or nutmeg pigeons peculiar to that region. Action has also been taken to reserve chains of lakes in Victoria as breeding places for wild fowl.

Recent phenomena hitherto unobserved in Mars and Saturn indicate that these planets have an appreciable atmosphere. The phenomenon on Mars was apparently a dust cloud that rose and floated many miles, and on Saturn two white spots that "shone with a bright, pearl-like aspect" which appeared to have a motion much swifter than the axial rotation of the planet.

A little Japanese village, some thirty miles from the town of Kumamoto, is situated in the crater of a volcano. The village, lying nine hundred feet below the top of the volcano, the walls of which are very steep, is quite hidden from sight. Its two thousand inhabitants seldom leave this place.

The State of Yucatan produces annually 500,000 bales (100,000 tons) of henequen, or sisal, hemp, valued at $12,500,000. And this is possible in a district with labor almost unobtainable. In twenty years Yucatan has exported over 1,000,000 tons of this fibre worth approximately $100,000,000.

The greatest depth thus far found in the Atlantic Ocean, 4,662 fathoms, is at a point sixty miles north of the western end of Porto Rico; and the greatest depth in the Pacific, 5,269 fathoms, lies a little to the south and east of Guam.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Mother Church Manual.

EDWARD A. KIMBALL.

THE influence of Christian Science on the world, and particularly on Christian Scientists, is in the highest sense educational. It induces them to think, act, and live according to higher moral standards. It guides them in the establishment and maintenance of simpler and better forms of ministry, of religious services and methods, and of individual and denominational progress and procedure.

Revealing, as it does, the science of spiritual law, it emphasizes the paramount need of obedience to that law and discloses the unfailing blessings which are the sequence and reward of such obedience. This miracle of obedience has always seemed hard of attainment by the people of God. Of old, the Children of Israel murmured constantly because of divinely imparted ordinances for their welfare, and were impatient with the prophets and messengers of God whose spiritual vision was in advance of their own. Christian Scientists who are learning that God's ways are higher than our ways, look forward with calm and assured expectancy to the appearing of every mandate, knowing that it means an advance on the broad scene of eternal prosperity.

We are a people who in time past were in allegiance to the unnumbered beliefs of men concerning religion, philosophy, and conflicting worldly wisdom. Coming together as we do, to range ourselves under the common denominator which designates us, it is perhaps little wonder that we need the salutary rules which define for us a safe course of action calculated to unify and glorify the present, and by sure means to safeguard the future.

Compared with the ornate and ponderous character of denominational laws and canons in general, we have an unusually simple manual of rules, and especially when we consider the fact that they must needs be adequate to the guidance of the Mother Church, the branch churches and their members, the lecture and missionary work, the educational system, publishing and editorial departments, finance and publication committees, etc.

Christian Scientists for years have gratefully acknowledged the wise leadership of Mrs. Eddy as manifested in the By-laws, which have been adequate to every demand and need, constructive or administrative, in the way of routine or emergency.

Now that these laws have been revised and amplified, we instantly discover that they are specially calculated to conserve the welfare of our Cause throughout future generations, to facilitate the spiritual growth of our people, to develop the moral and spiritual integrity of the individual, and to encourage a continual warfare against sin and disease until these works of evil shall have perished, and the peoples of the earth shall have been redeemed through Christ.

Obey the Statutes.

SEPTIMUS J. HANNA.

IF the Bible makes anything within its lids emphatic it is obedience to the statutes and the commandments of God. Out from amidst the thunderings and lightnings of Sinai came the first and supreme commandment: "Thou shalt have no other gods before me." This commandment is emphatic, majestic, all-comprehensive. Its mood is at once indicative, potential, imperative; its tense, both present and future. Yet it was as true when uttered as it is to-day or ever will be. Nay, it was true before Moses was, and before the "morning stars sang together." The Bible says it, because it is true, but it would be true if the Bible had not said it. It embraces all the elements of authoritative and imperative command and infinitely more, for it is absolute truth.

This truth is declared throughout the Scriptures. In Deuteronomy, 6 : 17, we find it re-affirmed thus: "Ye shall diligently keep the commandments of the Lord your God, and his testimonies, and his statutes."

Note the words "shall" and "diligently." No room for saying, "I *may* keep the commandments when I feel like it, or when it is convenient." No room for slothful or sleepy or indifferent keeping. No room for half-doing, to say nothing of no doing; but *diligently shall* the law of God be kept. Only thus can the practical and beneficial results follow. There is no compromise, no easy middle-ground; there are no pleasant by-ways. The law is immutable, inflexible, inexorable. Why? Because it is founded in absolute justice. No other law would suffice the ends of absolute justice. This mighty universe could be conducted on no other basis. It could be controlled by no other form of government. Absolute justice is an attribute of infinite Love. That which is based in eternal good will work out the ends of universal right. This Love is tender, compassionate, kind, notwithstanding all human evidence to the contrary. But the requirements of that Love which is ever just must be met. Not otherwise can we become its beneficiaries. Herein divine Love differs from that human sentiment which is accounted human love.

Another re-affirmation of the great commandment is in Deuteronomy, 6 : 5, "And thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might." Imperative, uncompromising, rigid, yet the outflow of infinite Love. Jesus, the greatest demonstrator of Love, the best expression of Love ever appearing in human form, was wont to repeat these exact words throughout his ministry. They formed the basis of all his healing of sickness and sin. They entered into the warp and woof of the Sermon on the Mount. They constituted his chart and compass in all his acts.

Another re-affirmation is in Leviticus, 26 : 3, 4, 6, 7, 12: "If ye walk in my statutes, and keep my commandments, and do them; then I will give you rain in due season, and the land shall yield her increase, and the trees of the field shall yield their fruit." These very practical results will follow; but more: "And I will give peace in the land, and ye shall lie down, and none shall make you afraid. . . .

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

And ye shall chase your enemies, and they shall fall before you by the sword. . . . And I will walk among you, and will be your God, and ye shall be my people." These are among the infinitely glorious results of obedience. What of the results of disobedience? Here are some of them: "But if ye will not hearken unto me, and will not do all these commandments; and if ye shall despise my statutes, or if your soul abhor my judgments, so that ye will not do all my commandments, but that ye break my covenant: I also will do this unto you; I will even appoint over you terror, consumption, and the burning ague, that shall consume the eyes, and cause sorrow of heart: and ye shall sow your seed in vain, for your enemies shall eat it." Here are the two ways distinctly marked. Here the assured rewards of obedience, and the no less certain results of disobedience. Well may we say, Walk ye in the straight way and reap the sweet results thereof; or walk in the crooked way and suffer the direful consequences.

Has the history of the world proved the truth of this Scripture, or has it not? We need only glance at its annals to find our answer. Literally, exactly, undeviatingly, have these Scriptures been verified down through the ages; and they are being daily verified in this age. They will so continue until the "statutes and the commandments" have been fully obeyed. Let us glance at Nature's law, so-called. How strictly must it be obeyed in order to obtain good results. How exactly obedient must the agriculturist be if he is to meet with success. He must literally obey the statutes and keep the commandments. He must carefully prepare his ground, fertilizing it, cultivating it, keeping out weeds and all deleterious elements. He must be in season, watchful, diligent, looking ahead and anticipating his enemies,—the insects, the destructive animals, —and thwarting their purposes. He must move in advance of all destructive things or suffer the consequences of failure of crop, disaster, poverty. He may sleep during necessary hours, but the remainder of the time he must be wide awake.

And the successful mechanic, how diligently must he obey the statutes and the commandments of mechanics. Slothfulness or indifference are to him impossible. So all along the line of human activities. Vigilance, obedience, unceasing care, are the essentials of success. The law governing here must be inexorable, or failure, disaster, ruin follow.

Shall God's law be less exact, less imperative? Shall spiritual demands be less rigid, less methodical, less *scientific?* May the professor of spiritual truth shamble along in any sort of fashion, obeying its statutes and its commandments when it suits his purposes, otherwise not? If he does observe only this kind of obedience has he any right to expect the results of rightful obedience? Does he hope, through partial, spasmodic, and convenient obedience, or even through no obedience, to reap the reward due only to the truly obedient? If so, he deludes himself, and the sooner he awakens from his false dream, the sooner will he see the utter folly of this course, the failure of his hopes.

Fellow Scientists, are we sufficiently awake to the absolute necessity of obeying the statutes and the commandments? Do we exercise the same relative watchfulness and vigilance as do the good farmer and the good mechanic? Are we sufficiently anticipating the modes and methods of deleterious and hurtful things and defeating them? Are we sufficiently preparing and cultivating our spiritual soil? Is it true obedience to wait until sickness and disaster come, and then undertake to cope with the results? Have we not helps enough to enable us to obey the statutes and the commandments? We have distinct, explicit, and abundant helps. We have, moreover, constantly before us the bright and shining example of our Leader, who for more than thirty years has been faithfully and untiringly pointing the way and beckoning us on to that full obedience which would bring blessings and benefits. Will we avail ourselves of the helps? will we follow the light and the example set us? or will we sleep on until calamity, disaster, and disease come, and then murmur because we are afflicted and wonder why Truth is not kinder to us?

God sends upon us no calamity. It comes through slothfulness, disobedience, and sin; in short, through failure and neglect to obey the statutes and the commandments.

In simple and almost pathetic tones, Israel (and Israel is but a term for all mankind) is exhorted to obedience, in Deuteronomy, 10 : 12: "And now, Israel, what doth the Lord thy God require of thee, but to fear the Lord thy God, to walk in all his ways, and to love him, and to serve the Lord thy God with all thy heart and with all thy soul, to keep the commandments of the Lord, and his statutes, which I command thee this day for thy good?"

And what does our text-book require of us but obedience to God in all His ways? And what do our Church Tenets require of us but earnestly to "strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure"? (Science and Health, p. 497).

What more could they require, on earth or in heaven, for our good? And yet they require exactly what is implied in the reiterated Biblical injunction to obey the statutes and the commandments; nothing more, nothing less.

Giving to the Church

IDA G. STEWART.

In his letter to the Ephesians Paul refers to the church as "the body of Christ." Science and Health, page 583, defines Church thus:—

"The structure of Truth and Love; whatever rests upon and proceeds from divine Principle.

"The church is that institution which affords proof of its utility, and is found elevating the race, rousing the dormant understanding from material beliefs, to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick."

From these profound definitions we learn that divine ideas *in action* constitute the church, and we are members of the church to the extent that divine ideas are operative with and in us, in the demolition of evil belief and suggestion.

Giving to the church is a question of the hour which lies very near the heart of every Christian Scientist. On every hand we come in contact with the query, "How can I best give to the building of the Mother Church?" Advancing steps toward the accomplishment of true giving, and the ultimate answer to this question, lie first, in gaining a clear sense of what the church means to us as individuals. How and why it is *our* church, how and why we, as individuals, are one with it.

True knowledge is operative by virtue of its immortal nature, producing its effect upon thought in progressive unfoldment of ideas relating to specific subjects; therefore the naturally scientific result of direct effort to gain an exalted sense of church, confers an appreciation of the fact that the church universal is made manifest through overcoming, and the completeness and perfection of the externalization evidences the degree in which we, as individuals, recognize our indissoluble unity therewith.

Such recognition begets within the awakening consciousness a love which bears the impress of Deity, and which is the coin current of the Christian Scientist. It matters not how great the demand made upon the treasury, one is never turned away, for in the realm of infinite Mind there is a reversal of the commonly accepted theories of men

Digitized by Google

on this subject, in that the supply always *precedes* the demand.

The circulation of this wonderful currency is never obstructed or congested by fear, but is forever and everywhere operative, destroying error and establishing a certain sense of God as the omnipresent and unfailing source of every good and perfect thing.

In the ratio that the right idea of Love is confirmed in thought, it gives to and builds the church. Love overcoming fear, envy, hatred, jealousy,—self,—is a gift to the church. Candor taking the place of dissimulation is a gift to the church. Just and tender consideration for the rights and privileges of others, displacing unjust judgment, criticism, and false estimate, is giving to the church. The mental action that wipes away tears, comforts sorrowing hearts, brings strength to the weary and heavy laden, sets free the sin-bound and sick, has its part in giving to the church.

As the building of the church-triumphant thus goes on without the sound of "hammer nor ax nor any tool of iron heard in the house" while it is in building, the way naturally opens for the individual to contribute to the funds for the erection of the material structure,—type and symbol of the church founded on the rock, Christ.

The writer's personal experience at the time of building our home church edifice, gave substantial proof that the church is literally "the structure of Truth and Love" (Science and Health, p. 583). With every overcoming the Christ-truth was bodied forth in actual demonstration of the living presence of a health-giving, joy-bestowing God, who forgives all iniquity and heals all diseases; "that giveth to all men liberally, and upbraideth not."

The understanding of both practitioner and patients was awakened, as never before, to a keener recognition of man's unity with God, and the consequent naturalness of health, harmony, joy, and peace,—the manifestation of substance.

The gratitude of those who had been liberated from sorrow, disease, or sin took expression in money, which was subscribed to the building fund as it came to hand.

The unfolding and development of the spiritual idea of Church which took place in our Sunday School at this time, was most interesting and instructive.

After our building project was fairly launched the children were advised that a church edifice was to be built, and that they were expected to have a part in the work. This was the only time during the progress of the building that the subject of money was mentioned to them.

We required them to commit to memory the definition of Church, from the Glossary in Science and Health, knowing as we did this, that God supplies understanding and interpretation of the inspired word. Even though the definition is long, and contains large words for little people to express, there was no hesitancy in learning it, the "baby class" being as efficient in the recitation as the older pupils.

The recitation of the definition, by the school in concert, was included in the opening exercises, with the result that the children gained an exalted sense of Church. They displayed a lively interest in the building, which took expression in money sufficient to purchase the furniture and draperies for our church platform.

At present our Sunday School is at work in the interest of the Mother Church building. We are using the Science and Health definition of Church as our basis, and as an additional stimulus to thought we have our Leader's prophecy for the children, made on the occasion of the dedication of the Mother Church, and recorded in "Pulpit and Press," page 14.

When those words of divine promise were read to the school, radiant faces and glowing eyes bore evidence to the touch of inspiration, and the loving resolve and selfless purpose then and there born, remains with them an active factor for good.

"Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal it shall be measured to you again."

Improved Moments.

M. ETHEL WHITCOMB.

I HAVE often pondered these words written by Mrs. Eddy: "Success in life depends upon persistent effort, upon the improvement of moments more than upon any other one thing" (Miscellaneous Writings, p. 230). Most of us are longing for success in life, for spiritual progression, but are we taking into consideration that it depends upon the "improvement of moments more than upon any other one thing"?

Many persons have no realizing sense of the value of time, and as the result hundreds of unimproved moments are wasted,—moments which might be spent in the service of humanity, or in gaining a higher sense of health and harmony for oneself. But, one asks, "How do I throw away moments when I am busy all day at the office or in the home?" and the answer is, In thinking on those things which should not be thought of, or in not striving to dwell in thought upon the beautiful and the true.

Looking out of my window one day I saw a man who was employed in painting a house; the foreman was not present, and, taking advantage of this, the man had left his work and was loitering his time away. I could but think how much dishonesty we see expressed in these little things. Here is a man wasting time which belongs to another. Then came also the thought, What blindness, here am I standing in judgment of another, and yet doing precisely the same thing myself. I had left the right thinking which I should have been employed in, as a child of God, and was throwing away moments in useless criticism,—moments which my Father had intrusted to me to improve.

We are all employed in Life's vineyard, and he is surely dishonest who is not improving in holy thinking his every moment. In Jesus' life we see the highest example of improved moments. Years spent in watching, praying, and practising, brought him where he could say to the lame, "Arise, and walk," and they did; to the dead, "Come forth," "And he that was dead came forth." In one moment of holy, uplifted thought the sick were healed and the dead raised. But this sublime summit could never have been reached had he not improved each passing moment.

We live but one moment at a time, and the present moment is the one to be considered.

We grow into the likeness of that which we comtemplate, and it is therefore helpful to ask oneself, "Do I desire to become like that which I am contemplating at this moment?" If not, we should turn immediately from the mental object.

He who is truly improving his moments is always found with his face toward spiritual realities,—the glories of the light. While others may waste their moments dwelling on disease, he, knowing that in divine Mind is no sickness, seeks ever the consciousness of health. While others are dwelling on thoughts of sin, he keeps his gaze fixed on Him who is "of purer eyes than to behold evil." While others are spending their time dwelling on death, he makes no compromise, but with unflinching faith holds to Life eternal, knowing that "In Him was life; and the life was the light of men."

The man who realizes the imperative demand of God for right thinking keeps his mental home a sacred place. Of every thought he asks, "Whence comest thou, from Truth or error?" Right thought always obeys St. Paul's injunction, "Whatsoever things are pure, whatsoever things are lovely; . . . if there be any virtue, and if there be any praise, think on these things." We may stumble, but

Digitized by Google

if we do let us look at the "stone of stumbling," just long enough to see where it lies, and thereafter avoid it.

Self-condemnation, discouragement, criticism, pride, and self-love all consume time to no profit, and he who is indulging them is dimming his vision of heaven, and robbing himself of joy, freedom, health, and harmony. Mere motion does not improve time; it is the thought which accompanies the act that alone aids us in working out our salvation.

Each time flesh would speak but is stilled, each time criticism is overcome by compassion, each time a noble deed is done for another, each time that longing goes forth for unselfed love and deeper consecration to God, a golden moment, has been improved and its record is being borne heavenward.

Each moment thus improved is a step toward the summit of spiritualization, and the hardships along the path are transformed from stumbling-blocks into stepping-stones on which we rise into a more glorified understanding of Life and Love.

It has been said, "Make this forenoon sublime, this afternoon a prayer, this night a psalm, and time is conquered and thy crown is won."

Helping our Brethren.

W. F. BECKERT.

Now that Christian Scientists from over the world have again had the great pleasure and privilege of attending the services and meetings in Boston during the Communion season, what have they gathered from them? To me, the lesson that stands out pre-eminent is the need and assurence of even greater unity among the brethren. The whole trend of thought pointed in one direction, greater love for one another,—and success in this makes unity possible.

What, then, must we do? It is an easy matter to enjoin upon our fellow-men to be good, just, honest, upright, and pure. But of what value are these injunctions unless we give them some rule by which they can carry them out?

John says: "He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" This implies that love for our fellow-men must precede our love for God; and right here is a strong point in Christian Science which inculcates the necessity on our part of seeing our brother in God's image and likeness.

How can this be attained? We may begin by telling the truth about our brother, and we shall find that as we increase our efforts in this direction, we shall be able to see more good qualities than ever before. Is he honest? Is he upright? Is he kind? Is he unselfish? Does he ever make a sacrifice for the good of others?

There are men addicted to the liquor habit who have so many excellent characteristics that, but for their one weakness, they could be considered all right. Then why not dwell upon their strong points instead of the weak one? Why not love their good qualities and be patient until the wicked motives which are at the bottom of the wrong-doing are destroyed? We do not have to love our false concept of another, for this must be changed for the true likeness. If we dwelt less upon the vices of others,—their evil or negative qualities,—and emphasized their virtues,—their good or positive qualities,—we should find it easier to "Love one another."

We can go more than half way in loving our brother. He has his part to do; he has his own responsibility and we cannot do his work. But we can lighten his load if we will "wait patiently on the Lord," and let Him transform the heart and destroy the evil tendencies. Fault-finding with the shortcomings of those about us does not help them to be better, nor does it increase our spirituality, —our ability to help them. Commendation for work well done, rather than condemnation for work poorly done or left undone, strengthens one's desire to do better. We should recognize that every one is imbued in a greater or less degree with a desire to do right.

Let us strive more and more to live in harmony with the suggestions here outlined; let us assume that the motives governing the acts of our brethren are good and unselfish, not sinister and unworthy, and we shall have a wonderful increase in the unity in our homes and in our churches.

Then will come to earth what every Christian Scientist should pray for daily, a repetition of the Day of Pentecost, when, according to the Biblical record, the disciples "were all with one accord in one place."

Giving Thanks.

W. D. STRONG.

More and more it comes to me that, "The song of Christian Science is 'work—work—work—watch and pray'" (Message, 1900, p. 4), and not alone is this true, but, rightly understood and applied, it is one eternal psalm of joy, gratitude, and thanksgiving to our Father-Mother God.

Let us see for a moment what it is to be "grateful." The Century Dictionary defines it as "feeling kindly or tenderly on account of a favor or favors bestowed: disposed to acknowledge and repay benefits." It is very easy for us to be grateful for that which pleases us; yet often that which benefits us most may seem a "hard lesson," but if we are truly grateful for every experience, we shall look beyond the mere circumstance, and humbly pray that divine Principle may enable us to see the angel visitant, no matter what the outward seeming may be. Only in this way can we make each passing hour count for God.

Thus faithful and determined, constantly seeking God's help and acknowledging our oneness with Him, we cannot be led into the false arguments that "Of course as yet such a thing is necessary," or "You know we need it," or "We have not yet demonstrated out of this or that." It is written that with many of the Children of Israel, "God was not well-pleased for they were overthrown in the wilderness" (Science and Health, p. 597).

We read how Jesus was led into the wilderness to be tempted, and when we see how he withstood every false argument we ask ourselves, was it not because he rendered thanks, was grateful to God for His protection in every statement? Some of the Israelites remembered not God, neither were they thankful for His guidance under every condition, but rebelled and murmured at their hard lot; consequently, they were overthrown by error, having forfeited divine help.

Paul tells us "these things were our examples," hence the lesson of this hour. Are we, as Christian Scientists, thankful enough to God for our beloved Leader? do we emulate her example, gratefully, lovingly? Let us earnestly and prayerfully read the third stanza of "The Mother's Evening Prayer (Miscellaneous Writings, p. 389), and ask divine Love, with all meekness, to make us glad, and enable us to love more for every hate. Do we, as she enjoins, wait, knowing that God is good, and (material) loss is (spiritual) gain? The deeper we go into the valley of humility, the higher shall we rise in divine Love,—become as little children and enter the kingdom of Truth on earth. Then, turning our thought Godward, let us remember that all this is possible here and now, because of one disciple, who, following her Master's example, "took the cup, and gave thanks" in the right way, through Christly deeds of humility, fragrant with the inspiration of divine Love.

Notice.

All those wishing the *Sentinel* index for Vol. V. (September, 1902—August, 1903), can have it on application.

Selected Articles.

A Letter of Explanation.

To the Editor.

An article in your issue of August 29 in relation to the Christian Science Church Manual includes, in two paragraphs, the mention of my name and my utterances. I do not know that your correspondent intended it should be inferred that all the conclusions and deductions contained in the article are sanctioned or authorized by me, but such seems to be the impression on the part of many who have read it.

For this reason I request permission to say that very much of the article, which is by way of speculative interpretation of the import of the provisions of said Manual, is entirely contrary to my understanding of the matter and to the knowledge and intent of the officials of our church.

I am sure that the article is a misapprehension in some important particulars, and inasmuch as I am connected with the educational system of our denomination, I would like to state the case so as to correct any wrong impression which may prevail.

In connection with what is termed class teaching, it has been customary for many years to have rules regulating the number of classes and the number of pulpils in each class. These rules have been changed from time to time, and now there is another change. This present revision will not, as suggested, occasion any consternation or excitement among Christian Scientists. The supposition that they are in a state of remonstrance because of diminished incomes is a mistake. The average income from this source is very moderate and will scarcely be changed by the new rule.

Moreover, they do this work from a profound sense of duty, and would, as a class, be relieved if they might legitimately be entirely excused from such work; indeed, there was a time a few years ago when class teaching was entirely suspended. At that time all teachers gladly welcomed the change and the incidental release from an onerous requirement.

Your correspondent infers that there is, or will be, antagonism of interests between the College, Board of Education, and the other teachers. This surmise is wholly groundless.

For many years the College received primary students, and its successor, the Board of Education, will doubtless hold some primary classes in the future, but instead of entering into competition with other teachers, it is probable that only a very limited amount of such teaching will transpire.

The educational system of this denomination is co-operative, and not competitive. There is no friction nor discordant condition among its various branches, and certainly no disposition to supplant in any way or change the personnel of the corps of teachers who have so admirably done their work in the past, and who may safely be relied on to do it in the future.

They do not interfere with each other or with the Board of Education, and the fact that their services are appreciated and are in demand does not in any way overshadow any other institutional features of the work. The by-law is not adopted because of disapproval of their honorable careers and conduct; on the contrary, they and their work are held in high esteem by Mrs. Eddy and all other Christian Scientists.

It has always been a part of our religious endeavor to make the healing work of first importance, because Christian Science is a gospel of healing, and because the healing furnishes evidence of its utility and verity. The new Manual simply emphasizes this paramount feature of the work; it is nothing new.

It is by way of misapprehension to assume that the present effort is to build up an entirely new body of practitioners who will supplant the older ones. On the contrary, the older ones are becoming more proficient through experience, and will add constantly to the vast service which they have already accomplished for sick humanity. It would most assuredly be supreme folly to attempt to suppress or supplant the people who have healed a million instances of disease.

EDWARD A. KIMBALL.
In *Chicago Record-Herald.*

In Christian Science, the nothingness of matter is a logical conclusion, deduced from the Scriptural premise that God, Spirit, is all. This teaching is not so radical as it may seem at first, for only recently such eminent natural scientists as Lord Kelvin and Sir William Crookes have publicly modified the expression of their views on this question. According to newspaper reports, they have concluded that atoms, in their last analysis, are forces, a conclusion which shows a tendency toward mental, rather than material, causation.

When Christian Science is really understood, in its simple purity, it will be found to deviate in no way from the Scriptures, from Jesus' teachings and practice.

WILLARD S. MATTOX.
In *Waterbury* (Conn.) *American.*

The life of our Lord proves that Christianity involves practice as well as preaching. If, then, Christian Science destroys sin and sickness, reforms the drunkard, overcomes fear and worry, brightens the lives of its adherents, thus bringing about the same results which followed the practice of the Master, it is doing much in the great work of uplifting the race. Jesus said: "By their fruits ye shall know them." If Christian Scientists are proving in their respective communities that they are Christian men and women, that they are better morally, thus helping to remove the cause of disease, then it will be admitted that they are in harmony with the laws of God and their country.

ARTHUR E. JENNINGS.
In *Toledo* (O.) *Times.*

I pray you with all earnestness to prove, and know within your hearts, that all things lovely and righteous are possible for those who believe in their possibility, and who determine that for their part they will make every day's work contribute to them. Let every dawn of morning be to you as its close. Let every one of these brief days leave its record of some kindly things done for others, some goodly strength or knowledge gained for yourselves.

JOHN RUSKIN.

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to JOSEPH ARMSTRONG, 95 Falmouth Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mental Digestion.

WILL those beloved students whose growth is taking in the Ten Commandments and scaling the steep ascent of Christ's Sermon in the Mount, accept profound thanks for their swift messages of rejoicing over the Twentieth Century Church Manual? Heaps upon heaps of praise confront me, and for what? That of which I said in my heart, it will never be needed; namely, laws of limitation for a Christian Scientist. "Thy ways are not as ours." Thou knowest best what we need most, hence my disappointed hope and grateful joy. The redeemed should be happier than the elect. Truth is strong with destiny, it takes life profoundly, it measures the infinite against the finite. Notwithstanding the sacrilegious moth of time, eternity awaits our Church Manual, which will maintain its rank as in the past, midst ministries aggressive and active, and will stand when those have passed to rest.

Scientific pathology illustrates the digestion of spiritual nutriment as both sweet and bitter. Sweet in expectancy and bitter in experience, or the senses' assimilation thereof, and digested only when Soul silences the dyspepsia of sense. This Church is impartial, its rules apply not to one member only, but to one and all equally. Of this I am sure, that each Rule and By-law in this Manual will increase the spirituality of him who obeys it, invigorate his capacity to heal the sick, to comfort such as mourn, and to awaken the sinner.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., September 7, 1903.

Unfounded Criticism.

WITHIN the past few weeks some daily newspapers have had considerable to say about the new edition of the Church Manual, and through them an effort has been made to convey the impression that radical changes have taken place in the internal economy of the Christian Science denomination.

To those who may have been misled by such efforts to create the impression that Christian Science is on a mercenary basis, we can say that the cost of Christian Science Church edifices standing to-day, the money necessarily expended for the conduct of services in these churches, and the general expenses incident to the maintenance of a denominational organization, far exceeds the aggregate amount received by Christian Scientists for teaching and healing, and it is a well-known fact that Christian Scientists have not applied to those outside of their own ranks for financial help in the erection of their churches nor to pay the other expenses incident to the spread of a great religious movement.

When these periodic attacks are made upon Christian Scientists they are usually accompanied by the assertion that our people bear the outward marks of a well-to-do class, and the intimation is conveyed that their prosperity is secured at the expense of those who are not Christian Scientists. The explanation of this favorable showing is found, however, in the fact that Christian Scientists have required simpler habits of living, that their exemption from sickness and its attendant loss of time and effectiveness has materially increased their savings, and that in many and most significant ways Christian Science conduces to the realization of man's lawful dominion over his environment, enhancing his endurance and mental power, enlarging his perception of character, giving acuteness and comprehensiveness, and an ability to exceed his ordinary business capacity. (Science and Health, p. 128.)

When it is understood that these adverse comments and the inferences drawn therefrom have been based upon hearsay, and that the writers did not have access to a copy of the Manual, it is not at all surprising that they should be found so wide of the mark. The utter lack of foundation for these sensational conclusions will be apparent to every person at all familiar with the administrative and educational details of our work, and we may safely assume that the better class of newspaper men will feel chagrined for their hasty, and in some instances unfriendly, pronouncements. . M.

The Young Bird's Flight.

IT was one of the rarest of June days and the old apple-tree in the garden was the scene of an unusual stir in the affairs of its feathered family. A robin's nest in one of the upper branches was empty for the first time in weeks, and its late uncouth and hungry denizens were being encouraged to their first trial-flights, amid the shadows where none but parental eyes might see.

Over and over again the trick was shown them, and as the awakening impulses of a new life stirred to greater deeds, their ventures became more daring than wise, and thus it happened that one brave little fellow, whose course was laid for the pathless air and whose wings were planned for the sky's far freedom, missed his aim for once, and found himself brought to earth, where, fluttering, and crying with terror, he became the easy prey of a crouching enemy; and but for a friend's swift forbidding word and strong protecting hand, a tragedy would have been added to the otherwise happy chronicles of the day.

As the rescuer tried to soothe and quiet the frightened little thing, he could but think of the kindred danger besetting the first enthusiasms of an awakening spiritual life.

No thought of the nestling's folly had come to lessen the appeal of its helplessness and peril, but at sight, this little brother's distress had prompted to unhesitant and effective sympathy; and why should the recognition of faults, the presumptuous mistakes of our brother men, ever give pause to our compassion, or lead us to offer condemnation instead of wise and forgiving helpfulness in their hour of need?

The young and inexperienced in Christian Science are sometimes found, like lambs astray, caught and bleeding in the brambles of subtle, unrecognized errors of belief, and with the wolves of malicious criticism and contempt howling hard by. For such the Master went out quickly into the wilderness, seeking, not to punish, but to save; and are we impelled by a kindred love and kindliness, and do we follow him,—taking the innocent wanderers to our bosom, and bearing them to the fold of safety?

To deal gently with the young is very Christlike, and our hearts will surely be deeply moved, as we think of all the dangers in human experience which surround the unthoughtful and the immature, who, under the impulsion of a very noble purpose, perchance, are attempting great things, but whose spiritual apprehension is not yet clear enough to annul the gravitation of material sense.

It is never to be forgotten that mistakes and misdoings are best healed when they are as yet only possibilities. Many a pitiful failure and fall might have been prevented, had the premature venture or the thoughtless hazard of the inexperienced been tactfully forestalled. When this has not been done, however, and some bidding is brought

Digitized by Google

to extremity, let us be mindful ever of his birthright and native air, and be ready to bring comfort and healing for the failures which may attend an early and impulsive attempt to use the wings that some day will enable him to rise above every earthly fetter, and be free. W.

Being Original.

WHAT is originality? Is it something to be avoided as undesirable, something which separates its possessor from well-balanced and orderly thought, or is it a quality of mind to be coveted by all who strive for the attainment of whatever may increase their serviceableness to mankind?

The best answer to these questions is found in the lives of all truly great men and women whose achievements prove that Mind is ever unfolding new and higher expressions of character.

The following definitions of the word are taken from the Standard Dictionary: "Immediately produced by one's own thought;" "not copied nor produced by imitation or compilation;" "having the power to obtain new ideas of truth."

These definitions show that originality is not mental angularity nor grotesqueness, but something essential and positive, and if it belongs primarily to the divine Mind we shall embody it as we prove our likeness to God by the reflection of His character.

A proper sense of originality shows that through the vast region of unexplored possibilities there is offered a way of escape from the jostling of the world's market-place where lack of room and selfish competition well-nigh stifle freedom and enterprise at their birth.

On the plane of human existence there are many whose opportunities seem hopelessly circumscribed, but with keen perception they discern some common need, and at the same time see an undeveloped idea which would supply that need. In giving their inventions to the world they generally have severe struggles and the constant menace of failure, but if they possess sufficient endurance they become in time masters of the situation, and find a return of riches and power; and it is encouraging to know that in the mental as well as the physical realm there is room for every valuable idea which can find a channel for its expression.

If all could but see that originality involves simple honesty, the desire to appropriate what belongs to another would no longer exist, for each would seek his own heritage and find it through his own individual unfoldment.

Science and Health speaks of the "orginal man, Jesus" (page 286), and this phrase is worthy of our earnest consideration, since it points to the fact that his character was formed after the divine model which is recognized by spiritual sense alone, which is unlimited in its range of expression, and which is made manifest in the overcoming of all error.

In Christian Science we learn how we too may reach his height and freedom. Mrs. Eddy says, "Human reason is inaccurate; and the scope of the senses is inadequate to grasp the word of Truth, and teach the eternal," but she immediately adds, "Science speaks when the senses are silent, and then the evermore of Truth is triumphant" (Miscellaneous Writings, p. 100). As Christian Scientists we should give much to the world, and our Leader's example shows us how we may be thus privileged; but let us be sure that we offer what is honestly ours, what we have won from the depths of unexplored thought or brought down from the heights of our own spiritual experiences, even as she has done.

In striving to be original we should never forget that those who love God are to be "conformed to the image of His son," and as we rise above the low levels of material sense and expression, and find our true selves, our joy will be enhanced when we see the awakening of others to the recognition of their true original being with all its limitless possibilities.

Our text-book says, "God has countless ideas, as sons and daughters; and they all have one Principle and parentage" (Science and Health, p. 517).

We need to know that indolence is not a quality of Mind, hence it can never hinder us from recognizing and obeying the demand to be, to say, and to do whatever may most truly express the divine purpose.

It is indeed most true that,—

Each faculty tasked
To perceive Him, has gained an abyss, where a dewdrop was asked.

K.

Letters to Mrs. Eddy.

19 Norway Street, Boston, Mass., August 5, 1903.

Dear Leader and Guide:—I have often had a desire to tell you of some thoughts that once came to me in the night when mortal sense seemed to be asleep. There was something in the conversation we had a few weeks ago that awakened them afresh and enabled me to see more truth and beauty in them.

I thought I was in a large, beautiful building, a place that reminded me of a part of the Crystal Palace in London. Everything seemed very pleasant until some one told me that I was doomed to stay there all my life without any hope of change or escape. Shortly, however, another told me that there was one way out, but it was so dangerous that no one would think of trying it. On asking where it was, I was shown a narrow door. I went to it and was able to open it, but when I passed out all I found was a flight of slippery-looking steps leading to the edge of a large marsh or bog, filled with loathsome reptiles; on the other side was a hill over which ran a path. To reach that hill meant deliverance, but how to reach it was the question. As I looked a little longer and closer, I was able to discern a line of footprints; following them with my eyes I soon espied a female figure, about two thirds of the way across, stepping in the footprints as they had been left by one other, but he had gone up the hill and around a turn out of my range of sight. It is unnecessary to say who I thought those two were. Now if only I could put my feet exactly in these steps, I too could gain my freedom and help to show others the way. I determined to do so to the best of my ability, and have been striving so to do for the last twelve years. I have gained a few steps and would not, could not, go back, and "beyond the hill-crest" is *home*.

The inspiration of your talk and benediction have awakened within me new courage, new hope, and an intense longing for a more spiritual attitude of thought and life. As I think of you away in advance, I pray that divine Love may lighten, illumine with heavenly joy, your lone but not lonesome footsteps.

Here is a little poem I wrote a few years ago that seems to be in such close harmony with my present thought that I would like to give it.

Give me, O Lord, an understanding heart,
That I may learn to know myself, and see
Where I should spurn the wrong and choose the better part,
And thus from sinful bondage be set free.

Give me, O Lord, a meek and contrite heart,
That I may learn to quell all selfish pride,
Bowing before Thee, see Thee as Thou art,
And 'neath Thy sheltering feathers safely hide.

Give me, O Lord, a gentle, loving heart,
That I may learn to be more tender, kind,
And with the healing touch, each bleeding smart
With Christly hands of Love and Truth to bind.

And grant, dear Lord, that I may ever be,
With every closing eve or morn begun,
Steadfast and true, my heart at one with Thee,
And this my earnest prayer, "Thy will be done."

Sincerely and obediently yours,
JAMES J. ROME.

Fort Wayne, Ind., September 1, 1903.

Rev. Mary Baker Eddy,
Concord, New Hampshire.

Beloved Leader, Teacher, Guide, Friend:—We who have watched you guide the Science Ship of State so safely and surely throughout the storm-filled years, past rocks and shoals and across hidden currents, have learned by happy experiences a divine confidence in the wisdom of your rulings.

Times and times during the past decade I have seen direfully threatening evil foreseen, forestalled, and foreended, by your sapient laws and decisive moves, and the good ship Science brought safely into the haven of the Infinite.

And I say this because of my gratitude for the helpful rulings in the new Manual,—rulings so helpful to the Cause and the individual.

May divine Love keep your hand long on the helm is the grateful wish of your

Loving disciple,
WILLIAM BRADFORD DICKSON.

Mrs. Eddy and the Children.

THE results of Mrs. Eddy's munificence in caring for the needy children of Concord and vicinity by the gift of shoes through W. A. Thompson, are in the form of blessings in many homes.

Yesterday, Mr. Thompson and his assistants were busy for hours at the fair grounds taking the names of applicants and ascertaining who were entitled to share in the gift.

Until a late hour last evening and all during the forenoon of to-day Mr. Thompson's store was literally packed with the little ones and their parents.

In conversation with Mr. Thompson he said,—

"The demand this year is greater than ever before. The people are beginning to realize what Mrs. Eddy's generosity means. They have come to know that in this way, at this time, she wishes to contribute to the happiness of all who are willing to be helped by her, and who need the help.

"Yesterday a man from just outside the town came to me on the grounds, he had two of his children with him and one was practically without shoes. I asked him the usual questions,—where he lived, what was his business, his earnings, his condition.

"He replied that he had a little farm, that it was the only means he had, that he had no money.

"I told him I knew Mrs. Eddy would be very pleased if he would let me present a pair of shoes to each of the boys with him and allow me to send a pair to each of the little ones at home, and you do not know how pleased he was, and what happiness it gave him.

"I assured him the gift did not in any way tend to humiliate him nor make him less of a man in all that makes for manhood, and in this spirit he gladly accepted, and herein lies much of the merit of Mrs. Eddy's generosity.

"There is no smack of superiority in it, there is absolute avoidance of charity in the sense in which charity is dispensed to-day; it partakes more of the nature of a gift from an equal to an equal; a friend to a friend; a present from one who loves to the objects of that love, and the value of this thought is emphasized when we know that her practice and her life is love, and that to her all is love."

Concluding, Mr. Thompson said,—

"It is great pleasure to me to be the medium through which this work is done. I feel that I am engaged in a service of good, and in the years to come I shall always look back with a feeling of gratitude.

"In our busy, hustling little world of trade, in our sales and barters, in spite of ourselves, we grow calloused and eliminate from our lives the soft touches of humanity, the thoughtful regard for the wants, and wishes, and happiness of those about us, the small acts of goodness that constitute, or at least should constitute, our real joy."

Concord (N. H.) *Patriot.*

Association of Teachers.

The first Annual Meeting of the Association of Teachers organized under Article XXXIII. of the Church By-Laws (29th edition of the CHURCH MANUAL), will convene in the Mother Church in Boston, Mass., Monday, October 26, 1903, at nine o'clock in the forenoon.

"Loyal Christian Scientists who have certificates of the C.S.B. or C.S.D. degree, or both, from the faculty of the Massachusetts Metaphysical College or Board of Education" are qualified for membership in this association, and those thus qualified will be admitted to the first meeting by card. Cards may be obtained from William B. Johnson, Clerk of the Church, 30 Norway Street, Boston, Mass. Application for these cards must be made by letter at a date sufficiently early to secure them in advance of the meeting. Applicants will please send name and address in full.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

The notice regarding the Manual which appeared on page 828 of the Sentinel of August 29 was wrong in one particular. It should have read Article XXII. instead of Article XXXII.

Testimonies of Healing.

If I were to tell you all that has come to me through Christian Science it would take many pages, but I would like to relate one experience which shows conclusively the working of Truth and Love in an impersonal way. A hold-up occurred on one of our electric cars, in which the robbers secured money, watches, and other valuables. One of the passengers was a friend of mine and the watch taken from him was a very valuable one, which had been given him by some Eastern people to whom he had shown kindness in time of trouble. Upon meeting this friend the following morning, he related his experience, expressing much regret at the loss of his watch. I declared the truth that nothing could be lost in the divine Mind, and after leaving him, realized this statement to the best of my understanding. In a few days two men were arrested on suspicion of being concerned in the robbery, and at the preliminary hearing were assigned counsel. This attorney was also a friend of mine, but neither he nor the gentleman who lost the watch were Scientists.

I had a talk with the attorney and requested that he would do all he could consistently toward locating the watch of my friend. Some days later the thought came that I had been asking a favor without giving anything, and I determined to send some token of Love, and stepping into the reading room secured two *Sentinels* without noticing what they contained; and not remembering even the names of the prisoners, I asked the attorney to hand one to each of the men. The wife of the gentleman who lost the watch is a Scientist, and one morning during the trial she called my attention to the morning paper which stated that one of the prisoners had confessed, and that the District Attorney had pressed him quite hard to know why a man capable of committing such a crime should now confess and seek to shield his companion. After hesitating for a moment, he replied, "It was Principle." I then called on the counsel and asked him to look over the *Sentinel* sent to the prisoner, and see if there were an article in it on Principle. He did so, and later told me there was, and also that the prisoner said he had read the paper from cover

Digitized by Google

to cover. He had also revealed the place where the watch was hidden, going with his counsel and digging it up, wishing to have it returned to its rightful owner. The other prisoner was convicted, and both were sent to prison for life. I have since received letters from the one who acknowledged his crime, and he has expressed gratitude for the interest taken in him and hopes he may yet be of some use to his fellow-mortals. He says that in reviewing his past life he finds it has not been a grand success, and that he cannot recall a single instance where he has derived any real pleasure from wrong doing. This comfirms to him the teaching that "The way of transgressors is hard." He writes that he is much interested in Mrs. Eddy's book Science and Health, which is found in the prison library, and says he feels sure he shall never regret heeding my advice. He then relates how the desire came to him to reveal where the watch lay hidden: "My counsel and fellow-prisoner urged me to do so, but I was not ready to give up, and sent my counsel to the wrong place. I looked over the *Sentinel* you sent, carelessly at first, when my eye fell on a line which said, 'And I put the watch to my ear and it ticked.' At once I began to wonder if Mr. G.'s watch ticked, or if the works had rusted. After this I read the article on 'Principle' and fully decided on what course to take, and the next time I saw my counsel I volunteered to go with him and dig up the watch." The watch and chain were restored to my friend in as good shape as when they left him on that night of the robbery. May Principle guide us all into the right path!

JOHN F. SPRING, Los Angeles, Cal.

I always had poor health, and as a child could never play as other children did without a sick spell. After I married, my health was worse. I spent months at a sanitarium with little benefit. The doctors said it would take a year to cure me and that I never would be strong.

I heard of Christian Science and took absent treatment for five or six weeks, and I am cured of constipation, hard headaches, catarrh, and an inflamed eye. I have other demonstrations yet to be completed, but I never touch drugs any more, having lost all faith in them. I often overcome colds and headaches. I read the Bible and Science and Health every day.—W. P. W., Sheridan, Mont.

Four years ago, I had nervous prostration, and then the grip; this left me with chronic nasal catarrh, which went to my stomach and caused nervous ulceration and severe constipation. I could eat very little that agreed with me, and after each meal had hot packs put around me, and each night I took a salt rub.

I tried everything to gain health,—travel, and an operation, different doctors and specialists, all to no avail; they could give only temporary relief, but the doctors said that with good care I might live a few years longer. In this state, I was induced by a friend to try Christian Science, I took treatment for a week and am well. I can now eat anything. For all this I am truly thankful.

MRS. A. A. ZION, Indianpolis, Ind.

Having just had such a clear demonstration of the power of Truth over error, I wish to tell of it, hoping it may prove helpful to some one else. I had a gold crown put on a tooth a few days ago, and thinking the nerve had been killed some years ago, I told the dentist that it had been done. Yesterday afternoon the nerve began to manifest life and sensation. The pain increased, and soon I saw manifestations of an ulcerated nerve. The first thought was to go to the dentist, have the crown removed and the nerve treated. Then I thought, Now is the time to prove that nerves cannot have life or intelligence. I sat down in prayerful thought and read for an hour, when I came to this sentence in Science and Health, "The Science of Mind disposes of all evil" (p. 473). Then the realization came so clearly that no dentistry was needed in this case, and gradually all pain left and all signs of discord.

This morning I went to the dentist to have some polishing done, and although he looked my teeth over thoroughly, he could see no signs of inflammation. I feel so thankful to Mrs. Eddy and to the friends who compile our helpful, lessons for each Sunday.

MRS. JESSIE BROCK-MORGAN, Norristown, Pa.

So many blessings have come to me, during the late Communion season, that in return I send a few testimonies of what Truth can do in the way of healing sickness and sin.

A few months since a practitioner was called to treat the wife of a prosperous and successful physician. She had been ill for some weeks, and two methods of *materia medica* treatment had failed to cure. She was a very sick woman but was quickly restored through Christian Science, and afterward said to her practitioner, "You did not realize, that first night you came to me, how far gone I was." The reply was, "No; I realized that you must quit your dying and go to living."

A young man in one of the state institutions asked for Christian Science treatment. He was obliged to take medicine, or be punished, and the word had gone out that he would live but a short time.

His healing was quickly noted by all those with whom he came in contact, and he is now an earnest student of the Bible and of our beloved Leader's works.

A woman asked for Christian Science help for a member of her family, and by the sunlight of Truth thus entering her home, was herself healed of uncleanly habits. From a slovenly, begrimed hovel, she was lifted into a tidy, well-kept house. Mrs. Eddy tells us, that "the purification of sense and self is a proof of progress" (Science and Health, p. 324).

My little boy, six years old, overturned a pan of scalding water on his body. He was badly scalded, but he repeated from Science and Health the definitions of God, Christ, and man, as given in the Glossary, and was at once freed from all pain, and in an hour was dressed and at his play.

These few testimonies, are offered as evidence of what great good is being accomplished daily, by the application of Christian Science to the various needs of a sick-bound, sick-burdened world. Christian Science, as revealed through our Leader, is the voice of Truth to this age. "Hear ye, Israel!"—FRANCES M. NAGLE, Des Moines, Ia

---

If any one has reason to be grateful for Christian Science, it is I. Christian Science found me in a pitiful condition. I had been ill for twenty-five years and every medical aid had been employed to bring relief. Notwithstanding this, my condition grew worse, so that I was confined to my bed for four months. That I accepted Christian Science as a drowning man catches at a straw, will easily be seen.

A friend called my attention to Christian Science while I was in bed crying bitterly over my most lamentable condition. A practitioner was immediately sent for, and I shall never forget the day when this faithful servant of Truth revealed to me that there is nothing impossible with God. My hope began to rise, and after three months I was healed.

I had a rupture and also an internal trouble; I had a wooden board wrapped in wadding tied to my left side to keep me up, and I was lame. How great was my joy and how grateful I felt to God and Christian Science, when I could leave my bed for the first time after four months, and walk about like a little child. The Scientist took

Digitized by Google

me by the hand and led me down stairs that I might enjoy God's beautiful world.

When my practitioner inquired after a Bible I was frightened, for I, a German woman, who had been raised by Christian parents, had none in the house. But the Scientist with loving words said that she would get me one, and so the Bible and the Christian Science literature have become dear friends to me. *Der Christian Science Herold* is a dear guest of mine, and through reading this periodical I am greatly helped by the way.

When I went to pay the physician who was the last to attend to my case, he said that he could hardly believe that it was I standing before him, and he inquired what had healed me. I told him frankly that it was Christian Science; and that I had been entirely healed not only of the rupture, but also of my spinal weakness.

I am sixty-eight years old, and have now been well for four years. It is my ardent desire that this testimony may help some one else, who is in a similar condition, and I am ready to give any information regarding my healing.

AGNES SCHMIDT, Milwaukee, Wis.

I was a physical wreck, had taken medicine until it had but little effect on me, yet I thought I could not live without it, since I had no other God to which I could go as a "very present help" in sickness. I was religious, and could easily believe God would comfort me when in sorrow, but never dreamed that His power could reach physical conditions.

At last my brother, who was a physician, wrote me saying, "I have found what you have always been seeking, and been healed of my heart trouble, and will have you treated if you wish it." I made up my mind that I would go to him and see the practitioner. She was a lady whom I had known when we were girls, but we had not met for a few years. I thought, however, that I could not just then afford to take up the proposition of being helped, as I had an ailment that demanded present help, and possibly surgical treatment, and I was limited for money. I did not then see that we are free to come and drink "without money and without price." I therefore answered him that I was short of money, but would consider his kindness later, and so dismissed it from my thought for the time, though fully decided that I would go later and learn all I could about healing in this way, for I so longed to be able to help others. I had always believed Jesus taught this healing, but had long since given up searching the Scriptures and praying for the gift.

I became very sick, and had the services of a doctor until he told me, when I was almost beyond the horizon of hope, that "all material remedies were now being tried, and that it would just have to wear itself out." You can imagine my dismay, for I was suffering from an illness that would soon destroy its victim.

As soon as the kind old doctor left me, I wrote an earnest appeal, telling the worst and asking for help.

How glad I am to say that my healing was instantaneous. It was absent treatment, and I knew it was God who did the work, and the practitioner simply understood the law by which the healing was done. I have worked hard and patiently for the Christ-mind which heals the sick, and have proved in both small and great experiences that God is sufficient when we obey the demands of Science as taught in Science and Health, of which I am now a grateful student.

I would like to tell of a demonstration of the law of Life over death, which I saw verified lately. I have a neighbor who has suffered much for a year now, and I have often talked to her about Christian Science, but she always met my advances with such sarcasm that I waited.

About four weeks ago I was awakened at four o'clock one morning, and asked to go and treat her little babe; the doctor had given it up to die. I knew that God is all Life, and I worked faithfully. The little one had seemed very ill, and at last it could not swallow the medicine nor anything else, and finally seemed beyond help, but in thirty minutes it struggled back, breathing unevenly. After many severe struggles some of the watchers said they would try Christian Science. The father said, "If this baby ever lives it will be a miracle." He was told that it would be no miracle, that it was "divinely natural."

The baby got better immediately, and the doctor said that he was astonished to see it alive; they did not tell him it was Christian Science that saved it. Later the babe had another convulsion, but they said it was not nearly so bad, and when I returned I took it in my arms. It manifested a sense of hunger, and as it could not yet take nourishment in a natural way, they gave it some milk in a spoon, which it seemed to relish very much, but soon it had a hard convulsion, the first I had seen. I was calm, however, and prayed for man's at-one-ment with Life, Truth, and Love, until the error suddenly disappeared, and the child was quite well, and has remained so. This case is calling more attention to Christian Science than anything that has taken place here yet.

A boy in this same block was healed of tetter in his feet, which had caused them to be cracked and sore all his life. He was fourteen years of age, and his mother said his feet had always been sore. They were healed more than a year ago. He now goes barefoot and his feet stay well, although they have deep marks of the disease that once held him in bondage.

I have studied very earnestly the Bible and the writings of our Leader for almost six years, and I am thankful to the Father, and to Mrs. Eddy, through whom Christian Science flows to a waiting and needy world.

E. R. HOWELL, Shawnee, Okla.

I know that I am standing on the solid rock of Truth from which nothing can ever move me. I have felt for a long time that I would like to express through the *Sentinel* my gratitude for what Christian Science has done for me and mine. Now the time seems ripe to tell of a beautiful proof of the allness of God, which my two children have had.

On a very warm day they asked permission to go down to the shore of the bay, and I finally gave my consent thereto, telling them to trust and know God at all times. It seems that my daughter, who is ten years of age, stepped on a log to wash her feet; as she sat there with arms folded, the log rolled, throwing her into the water. Her brother, seventeen months younger, seeing her disappear, jumped in to rescue her. Knowing the water to be deep he caught hold of a log, declaring that error could not say his sister would drown, that God is all. He finally saw her hand rise above the water, and caught it and pulled her over the log; the log rolled but Truth prevailed. They came home dripping wet. Her first words as she came into the house were, "Mamma, if it wasn't for God, I would not be here." "I don't know," she said, "how long I was under water, when God spoke to me and said 'Thy Kingdom,' and that strengthened me, and I could throw apart my arms, and with the strength of God, brother pulled me out." They both gave the praise to God, unto whom all honor and glory is due.

I turned to the little boy who stood like a little hero with brave and shining countenance, and asked, "Ernest, what would you have done if you had not seen sister come up?" "Oh, I was just going to dive down after her," he replied.

"But were you not afraid?" said I. "Afraid? no," said he. "I could not drown in God, and I just knew error couldn't take sister away."

Digitized by Google

These children with their fearless trust, have given proof to me of the omnipresence of God; and their experience has verified these words on page 393 of Science and Health, "Rise, in the strength of Spirit, to resist all that is unlike God. He has made man capable of this, and nothing can vitiate the ability and power divinely bestowed."

When I look back and see how Christian Science has lifted me out of the valley of darkness, my heart overflows with gratitude for this blessed revelation of everlasting Love.

I was healed five years ago, and am constantly having proofs in my own family and for others, that His word does not fail. My thanks to God and to Mrs. Eddy, who is working so constantly for the world's benefit, guarding and guiding our Cause with such loving tender care.

I also want to add my thanks for *Der Christian Science Herold*, written in my native language. Its love will hold high the banner of Truth and go from valley to hillside, over mountain and plain, echoing sweet freedom's hymn.

MRS. M. SCHEIDECKER, West Superior, Wis.

I was led to Christian Science by one who, on three occasions, in reply to my expressed wishes to be rid of my physical ailments, suggested that I try Christian Science.

After having Christian Science called to my attention the third time, I awakened sufficiently to go to a Scientist to make inquiry, and afterwards decided to take treatment, although the religious part of Science did not appeal to me. I was not looking for religion, I wanted to get rid of my physical troubles, and get rid of them quickly, but I didn't get rid of them quickly, and am thankful for my seemingly slow healing. Had my healing been instantaneous I do not believe this testimony would ever have been written.

Some of my former ailments have passed away almost imperceptibly, and mortal mind has more than once offered the suggestion that I would have gotten well anyhow, but I know what healed me.

Several years ago I was healed, in two days, of an attack of grip, by reading the chapter on "Christian Science Practice" in Science and Health. I did not know anything about treating at that time, but seemed to feel that I would come out all right, and I did. Had this attack occurred prior to my having had Christian Science treatment, I feel sure that I should have been confined to the house for some time, to say the least, as I used to have considerable trouble with my lungs. These ailments are things of the past.

I wish to express my gratitude to Mrs. Eddy for her self-sacrificing efforts to make Christian Science known to the world.—WILLIAM BRANDT, Baltimore, Md.

I wish to express the gratitude that I feel for Christian Science. It is over seven years since I first heard of it, and words can never express how thankful I am that I was led to this saving truth. It is an inexpressible blessing to me daily in overcoming the fear to which I was in bondage.

Before coming to Science, I never could sit in a draught without taking cold, and never could do any hard work, as I was brought up in the belief that I was not strong, and was forever taking medicine for some ailment or other. I was never free as I am now. I had a growth called a cold abscess of five years' standing that broke in one week's treatment, and without any pain. I can never tell of the peace that came to me at that time.

I was healed of one very severe trouble and of many other ailments. I never would have an operation, as my father had passed on under one, and it filled me with such fear that I was forever fretting about something.

I have three children who do not know what medicine is, and I have fine demonstrations. They have been healed of many of the ills that come up to be destroyed.

I used to be very impatient and easily provoked, never was happy, and I can say that since I have studied Christian Science I have found that harmony is what we all must reflect. I am grateful to Mrs. Eddy and to the practitioner for her patience with me, also for the *Journal* and the other publications. I receive much good daily, and hope to be more worthy.—MRS. AMELIA MEYER, Congress Park, Ill.

It is now about six years since I came to Christian Science. I had lived in the city of New York for thirty years without ever hearing of it, and it was in Denver that I was led into this wonderful teaching.

While looking for a home, I became acquainted with a family whose members were adherents of Christian Science, and at my request they willingly gave me the desired information. The literature, especially the text-book, Science and Health, became a dear and interesting study, and I soon recognized in it the true Christian religion, free from creeds of men, a religion which admits of no hypocrisy. It was this latter point which especially attracted my attention, because in my younger days, I had seen so much of this sin that it almost made me an atheist.

As I was often in a troubled frame of mind, Science was a precious comforter to me and has helped me to overcome many a threatening obstacle. It has been the most effective medicine in destroying my physical troubles. Rheumatism, catarrh, etc., and the desire for tobacco and liquor, have entirely left me.

My heart is filled with gratitude to our Creator, that I have been given an opportunity to learn of Him and my relation to Him. I am also grateful to our dear Teacher, Mrs. Eddy, who, through her self-sacrificing love and her faithfulness, has made known to the world His teachings. I feel also grateful to all those who with unselfish Christian love have helped me into this understanding.

R. C. STAHL, Denver, Col.

It is to "Science and Health with Key to the Scriptures" that I owe all the peace, happiness, and harmony realized by me during the past five years, and in that interval, I have also learned to love and study the Bible as never before.

Mental unrest made me a willing seeker for the Truth, that Truth whose law is liberty, emancipating from material thraldom all who in humility and meekness turn to its ever-open portals, destroying resentment and all uncharitableness, and bringing to our view the perfect man, God's creation.

I owe a debt of gratitude to the good friends who were instrumental in turning my gaze from the material to the spiritual, and I assented readily to their recommendations of Christian Science.

The first year I was healed of a physical trouble of years' standing through the reading of Science and Health, and in the subsequent years I have relied upon God only, and found Him an ever-present help in every need.

In July, 1902, I was healed of a severe illness after one week's treatment in Christian Science, and am grateful indeed to the one who realized for me that God is indeed the "Great Physician."

I am deeply thankful also for the spiritual awakening, and wish to express at the same time my great appreciation of our periodicals, those ever-welcome messengers of "good tidings."

My prayer is to live more and more in obedience to this great revelation, and thereby express my gratitude for the unselfish love which has led us out of the wilderness of human beliefs into the light everlasting.

SALLIE L. BINLEY, Brookline, Mass.

From Our Exchanges.

Stevenson has said—we quote from memory and not with exactitude, "There is one person whom it is my duty to make good, that is myself. My duty toward others is better expressed by saying, Make them happy. You go to church, not to look rebuke at others because they did not go, but with a sunny face, happy yourself and better fitted to make them happy. Live your own life so joyously that your friend will envy you, but do not live it for the purpose of making him envy you. The fruit of the Spirit, is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance,—all men like these fruits. If your orchard is full of these, your friend will wish that he had an orchard like it. Do not preach; simply practise. And always remember that God has seen fit to make him the master of his own life, and any wish on your part to become master of his life and bend it into conformity with your liking and your conscience would be a wish to violate the divine order."—*The Outlook.*

The dark shadows of evil consciousness and of foreboding are thick across men's paths. And in their deepest hearts their longings are for some message that will show that they are not alone, that God holds a relation of helpfulness to them, that there is an escape from sin and a possibility of realizing in themselves the best ideals. There is no occasion for wonder that certain styles of preaching fail to interest and hold men. They become utterly weary of fine-spun philosophies, of analytical accounts of mental and spiritual phenomena. They ask, not always audibly, but actually, for something outside themselves that will be a real help to them in their trials and struggles and overthrows. And one of the questions that should be put to every candidate for the ministry of the evangelical churches is: What is the Gospel? Is it so conceived as to make it an evangel, a message of actual objective helpfulness to weary and sinful men?—*The Watchman.*

No man is base who does a true work, for true action is the highest being. No man is miserable that does a true work, for right action is the highest happiness. No man is isolated that does a true work, for useful action is the highest harmony. It is the harmony with nature and with souls, it is living association with men, and it is practical fellowship with God.—HENRY GILES.

The *Catholic Citizen,* the Roman Catholic paper of Milwaukee, in an editorial on the commemoration of the 200th anniversary of the birth of John Wesley, says: "Wesley was a good man. The movement which he organized was a most wholesome one in effects, not only on the people who affiliated with Methodism, but on the Protestant churches outside."

Bishop Vincent says, "The best proof of the divinity of the Christian religion is the daily life of the Christian himself; not his words and professions, but his conduct and spirit; not his Sunday garb and service, but his every-day; tone; not his church ways, but his home walk."

In trying to get to heaven with a very little religion, it is possible to miss it altogether. The minimum Christian dishonors God more than even the sinner does, for he knows so much better. He is a hindrance to the progress of the Gospel, a drag on the wheels of Christian progress.

Selected.

Rev. R. J. Campbell says: "The more direct and simple the style, and the more rich and real the spiritual experience of the preacher, the more the people welcome the message. They crave the note of certainty."

An educated non-Christian Hindu, writing in a Hindu magazine, advocates the introduction of he Bible as a class-book in all primary and high schools.

Some men think they love the Bible above others when what they really love is their own opinions about it.

The Universalist Leader.

John Wesley once said, "Many indeed think of being happy with God in heaven, but the being happy in God on earth never enters into their thought."

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Recent amendments to the United States civil service rules are very comprehensive. Regarding the extent of classification the rules say: "The classified service shall include all officers and employees in the executive civil service of the United States, heretofore or hereafter appointed or employed, in positions now existing or hereafter to be created, of whatever function or designation, whether compensated by a fixed salary or otherwise, except persons employed merely as laborers, and persons whose appointments are subject to confirmation by the Senate."

In order to remove the laborers as much as possible from the influence of politics it has been proposed to register them and by ascertaining the moral and physical status of the applicants and the nature of their previous experience secure an increase in the efficiency of the working forces by appointing those best qualified.

The Britannic of the White Star line is to be broken up. She was launched in 1874 and was the first to cross the Atlantic in less than eight days. She still has her original engines and boilers, has made the passage more than five hundred times without missing a day from either accident or breakdown, has traveled over 1,800,000 miles, enough to encircle the globe over seventy times, has carried without accident over two hundred thousand passengers, and has remained continuously at work except for two or three weeks for annual repairs.

Carroll D. Wright, in a document of six thousand words, has rendered his decision as umpire on five questions submitted to him for consideration by the Conciliation Board representing the anthracite miners and operators. In four of the awards the contentions of the operators are upheld.

It is probable that Captain Wringe, who sailed Shamrock III. for Sir Thomas Lipton, will stay in this country and become an American citizen, as did Captain Barr.

Secretary Shaw has designated Charles A. Bonaparte of Baltimore to investigate the charges affecting the administration of Indian Territory.

Reliance is already dismantled at City Island, and stocks are being built at Erie Basin for Shamrock III. where she will remain.

Foreign.

Admiral Cotton, who on account of the reported attempt upon the life of the Vice Consul, was ordered by the State Department to proceed with his three ships from Genoa, Italy, to Beirut, Turkey, telegraphs from Beirut, September 10, that the governor general of Damascus has been appointed acting governor general at Beirut, and has expressed a desire to settle the case of the American Vice Consul satisfactorily to the United States Government. Owing to the inefficiency of the vali of Beirut in handling the disturbances there the Powers made demands for a change with the above result on the part of Turkey.

Great Britain and Japan, as a result of an exchange of views, will probably present to Russia individual protests against her latest proposed delays in the evacuation of Manchuria. An agreement signed some time ago designated October 8 as the day of evacuation. The new proposals extend the evacuation to various dates for different sections covering about a year. These delays are regarded as only means for securing more time to strengthen her hold upon the province.

The loan commission to visit the United States and Europe and investigate the placing of the Cuban loan of $35,000,000 has sailed for New York. It has no powers to place a loan, but will try to attract attention to the fact that Cuba wishes to borrow money on very advantageous terms.

The Pan-American Railway Company has completed eighty miles of track in Southeastern Mexico, beginning at the Isthmus of Tehuantepec, and has just obtained a concession from the Gautemalean Government to extend its road through that country.

President Castro of Venezuela is reported to be making preparations to invade Colombia. Already within five years he has invaded that country four times.

Nearly four and a quarter million of people attended the Fifth Industrial Exposition of Japan which has just closed.

It is now reported that the Czar will visit Paris as well as Rome this fall.

Industrial and Commercial.

Figures compiled by the Department of Commerce and Labor through the Bureau of Statistics show that the imports of the United States in the past ten years have increased from $866,000,000 to $1,025,000,000 and exports from $847,000,000 to $1,420,000,000. They show that $92,000,000 of the increase in imports comes from Europe, $55,000,000 from Asia, and about $5,000,000 each from North America, South America, and Africa.

German workmen take well to American machine-made shoes. In April, 1901, an American firm opened a retail store in Berlin to sell shoes in all sizes and all leathers at a uniform price of 18 marks ($4.28). In nine months 26,600 pairs were sold. Branches were opened at Frankfort and Hamburg. In the three stores during the first six months of the present year 54,400 pairs were sold.

Contracts have been signed merging the Monongahela River Consolidated Coal and Coke Company into the Pittsburg Coal Company, involving interests valued at $132,000,000. The former company was valued at $40,000,000 and its output last year was about eight million tons. The output of the combination will approximate twenty-five million tons.

An American railroad engineer has constructed for a mining firm in Peru a railroad seventy-five miles in length, leading eastward from Lima. The railroad begins at an elevation of twelve thousand feet and is carried to an elevation of seventeen thousand feet. The mines that the road taps are said to yield as high as forty per cent of copper. It took twelve months to complete the line.

Owing to the lateness of the season and scarcity of help some apprehension exists in the South that the cotton crop can not be properly handled should the harvest prove large. The better wages and more constant employment given by the building industries tend to draw away the field laborers.

Owing to the "dock strike" at New Orleans three steamship companies have decided not to call there until the strike is settled. Much traffic in consequence is being diverted to Mobile and Galveston.

An offer of over $60,000,000 by an American syndicate for the pottery clay mines of Dorsetshire and Devonshire has been refused, it is said, by the owners.

The Cunard Steamship Company is considering the advisability of using turbine engines in two of their proposed new steamships.

The Florida orange yield is estimated to be over 1,600,000 boxes.

General.

The Hamburg-American line steamship Deutschland recently made the trip to New York in five days eleven hours and fifty-four minutes, beating her own best previous westward record by twenty-nine minutes, and also wresting from the Kronprinz Wilhelm of the North German Lloyd Company the record for the best westward passage, which was five days eleven hours and fifty-seven minutes. The Deutschland's average speed on the voyage just completed was 23.15 knots per hour. Her best day's run was 583 miles.

The Young Men's Christian Associations are preparing for the opening this year of their educational classes, which last year enrolled 30,600 students. Until a few years ago these classes were designed especially for young men in commercial occupations, but attention is now given as well to men in industrial pursuits. The work undertaken leads up to examinations for patrolmen, policemen, service in the fire departments, railway mail service, and mechanical, electrical, and textile engineering.

An extract from a letter published in the *Boston Transcript* describing a night-blooming cereus display in Honolulu, says, "There were two solid banks of blossoms, each six feet deep and two hundred feet long, in which the flowers generally touched each other. They were like huge snowdrifts, only with a greenish tinge. It was a lavish display of great white chalices. Probably over 15,000 blossoms in this one night."

Dr. Nicholas Leon, archæologist and ethnologist of the National Museum of Mexico, says concerning the recent finds of cities and animals of antediluvian times in the State of Coahuila: "The discoveries made at Paradon are the most extraordinary that have ever been made in Mexico and possibly in the world."

Two Englishwomen, twin sisters, Mrs. Agnes Smith Lewis and Mrs. Margaret Dunlop Gibson, for their discovery of the Sinaitic palimpsest and for other services to Biblical scholarship, are now honorary doctors in theology of Heidelberg University.

A letter received at Tulare, Cal., from Chicago states that a Carnegie observatory will be built on top of Mount Whitney, the highest point in the United States. The building will be 103x30 feet, of granite and natural wood.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Though One Rose from the Dead.

WILLIAM P. MC KENZIE.

It happened that I met one Sabbath day after the morning service a young man whom I did not recognize at first, though I was attracted to him in a strange way when I grasped his proffered hand. There was something new and beautiful in his thought, like the freshness of a fragrant flower just blossoming. The world without was in bloom. The orchards were white in their bridal array, and the trees along the road were veiled in "a mist of green." Violets from the woods were in the hands of the children. Daffodils peeped gaily from windows, tulips stood stiffly and orderly in the flower-beds, and hyacinths white and purple and pink mingled their odors. The doves were crooning from the eaves and fluttering to the street, and a few songsters uttered undemonstrative twitters prophetic of "the time of the singing of birds." It was the first movement and joy of Spring whose urging was felt throughout all nature. Yet that was not enough to explain what seemed so fresh and new and beautiful in the young man's thought.

There was a story to be told, and it is worth hearing. Not many days before, he had been brought to his mother's home when friends thought life was fading out in a relapse following partial recovery from pneumonia. Faithful attention produced no change for the better, and at last the dying man sent for his brother and friends to say good-bye to them. One brother was with him after the farewells were taken, and said, "He soon will be gone." All gave up but one, a woman whose love for God and humanity aspired at this crisis till the human fear of the mother-heart was conquered, and confidence in the power of Love uplifted her. She commanded those who believed in death to leave her alone with her son, and began to call him by his name; but his ears seemed deaf to that familiar word, and there was no response. Then turning away from the evidences of the senses, she began to declare to him the word of life from the standpoint of Spirit, asseverating the ever-presence of God the only Life, and maintaining that God and His child, man, are inseparable. Moments passed and there was no change, yet no fear came to the praying mother. She knew that her prayer was true, and in her praying believed that she had received. And so it was. After a quarter of an hour of inaction, there came first, a faint breath, then another; and then a deep sigh, and before long the endeavor to speak these words, "I was gone, but the truth——" here speech failed, though not until recognition had been spoken of the divine power or truth, the Christ by which men have true life. The regaining of strength was steady; before long the recovering patient wished for something to eat. Later he wished to get up; but with wise consideration of the attitude of others in the house, the mother advised her son to remain quiet and gain a stronger hold on that Truth of being which would give him steadfast strength. With the simplicity of a child newly learning, the man took in gratefully what his mother could tell him of the revelation of truth in Christian Science. As when on a balmy sun-thrilled day in spring the opening of the buds becomes well-nigh visible, so could the opening out of a hitherto undiscerned sense of life be observed in him. It was little wonder, then, that when he worshiped with a company of those who through Christian Science have come up "out of great tribulation," he should have suggested to the observer some newly opened woodland flower, fragrant and dewy, instinct with the fresh life of spring.

How changed that household, you will say. Yet it was not so. Eyes that are holden do not see. And the meaning of Jesus' words become plain, "If they hear not Moses and the prophets, neither will they be persuaded, though one rose from the dead." Proof is in the man as well as in the event. Perception seemingly must go through stages; the highest truth known must be perceived and received ere there can be further revelation. The five brethren of Dives in the allegory might easily laugh away all proof given by the reappearance of Lazarus, could their brother's request have been granted. "Why he could never have died," they would say; and his warnings they would have laughed to scorn, while they used the wealth of their departed brother to indulge their lusts as he had done when he was "clothed in purple and fine linen, and fared sumptuously every day." Could they hear Moses and the prophets when their hearts were gross and their ears dull? They needed first to be able to hear the message plain, and literal, and accepted as true by their nation, and to equip themselves thereby with new ideals of life and happiness, before they could begin to understand the message of truth in another form. But those who love the Mind all-governing, which is God, can rejoice in the opening life of the glad spring-time, and find their faith in good sufficient to accept the further proof of life should one rise from the dead.

The Value of Unity.

WILLARD S. MATTOX.

From the initial fact of creation, as chronicled in the divinely simple statement, "In the beginning God created the heaven and the earth," to the consummation of all revelation, "I am Alpha and Omega, the first and the last." the Bible is filled with references to the unity of good,—the oneness of Deity and His universe. A careful study of Science and Health, the Christian Science text-book, reveals a kindred emphasis on this scientific proposition. Long before Jesus declared that he and the Father were inseparable, the word that heals had been preached by the prophets: "Hear, oh Israel: the Lord our God is one Lord."

Evidence is not lacking that a recognition of the unity of Principle and idea heals the disordered dream of material living. The very basis of all evil is discovered to be the original lie which translated Mind into minds many, and body into bodies many. Division is the mathematics of mortal mind. Jesus gave us the redeeming truth. "I and my Father are one." When man knows that he is one with Spirit and not one with matter, he is healed of the lie of division. Then he understands that Mind is one, and body is one, for "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468).

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

The early Christians were enjoined to have the Mind of Christ. If it is good to have the Christ-mind, if it is desirable to pray that we may all have the same mind, is it not also good to have the body of Christ? May we not all have the same Mind and the same body, if that Mind and that body are infinite and one? "The allness of Deity is His oneness" (Science and Health, p. 267), and the Christian Scientist of to-day is beginning to appreciate the value of unity, for to have one Mind, and that Mind infinite, is to have a sufficiency of right thought about everything; it means no lack of mental power; it means intelligence enough to appreciate fully all the grace and beauty of God's exquisite universe; it means enough wisdom from God Himself to make unnecessary another mind to interpret Him for us, or transmit to us His lovingkindness. Health is gained by knowing that nothing comes between the Son and the Father. It is not gained by believing that there exists any divinely ordained series, by means of which life and good are imparted by the Creator to His creation. The only series of which we have any account in the Bible is the one recognized by Jesus, when he said "I and my Father are one." The same unity is preserved in the statement on page 276 of our text-book, Science and Health, "Man and his Maker are correlated in divine Science."

To have the same body that Christ had, is to have one body, a whole body, a well body; it means a body which is not weary; a body which does not suffer; a body in which organs and functions are harmonious; a body in which everything is in its right place, in which nothing is out of place, in which action is forever normal, regular, painless. Thus to heal or to be healed, we need to know the unity of all good, and our unity with all good, for this truth is irresistible in its attack upon the lie of division.

The power which accompanies a conscious unity with one infinite Mind and its infinite expression, results in great deeds. The energy of the one Mind manifesting itself through idea, is a benediction of ever-present good. We find a notable example of this, in the account of the dedication of Solomon's Temple. In 2 Chronicles, fifth chapter, it is related "As the trumpeters and singers were as one, to make one sound to be heard in praising and thanking the Lord; . . . then the house was filled with a cloud; . . . for the glory of the Lord had filled the house of God." It is possible to repeat this experience to-day. Upon that consciousness which is one with Life, the glory of the Lord descends, filling thought with the radiance of peace and bliss, crowning even human endeavor with triumph. The familiar and often quoted incident of the siege of Jericho supplies a striking instance of the value of unity. Not military strategy, not physical prowess or material methods, but a unity of purpose and desire, won the day. Error or material seeming necessarily becomes nothing, when we are convinced of the oneness and allness of good, and then we begin to apprehend something of the absolute declaration, "nothing needs to be doctored" (Science and Health, p. 347).

I do not believe history records a more wonderful healing than that accomplished by the apostles on the Day of Pentecost, except, of course, the works done by Jesus. It is certain that on no single occasion have so many persons changed their religious opinions simultaneously. As a result of the preaching of the apostles, we are told that "the same day there were added unto them about three thousand souls." This remarkable exhibition of healing energy had its beginning that day, in the unity of thought, in which Jesus' disciples dwelt, for "they were all with one accord in one place." This much unity has done for mankind. Much more unity is able to do, and will do, for the saving of the race. On this point, Mrs. Eddy's words to "The March Primary Class," have direct application: "We, to-day, in this class room, are enough to convert the world if we are of one Mind; for then the whole world will feel the influence of this Mind; as when the earth was without form, and Mind spake and form appeared" (Miscellaneous Writings, p. 279). Thought thrills with the infinite possibilities suggested by such confident understanding of the power of unity.

Not only does Christianity emphasize man's unity with God, but it also insists upon man's unity with man. This necessarily follows the right apprehension of one body. We cannot consistently claim relationship with the Father, while repudiating anything that He has made. The members of the body do not quarrel. They have no differences. They are not cut off from the parent Mind, nor from one another. The true son is working with others and for others, not against others and for himself. This is the difference between the children of the promise, and the offspring of the flesh. Knowing that the health of the whole body is his health, and that he has health only because he is a constituent part of the body, the Christian Scientist seeks to prove not only his oneness with infinite Mind, but also with infinite manifestation.

If you tie a cord tightly around one of your fingers, that member is partially dissociated from the body. The circulation is retarded, and though the life of the body remains untouched, the finger suffers because its association with the whole body, or well body, is severed. The member that is cut off is the chief sufferer. To be healed, that member needs only to have the cord removed, in order to establish at once its normal unity with the life, the vigor, the circulation of the body.

Paul's definition of Church is the Christianly Scientific definition. He spoke of Christ as "the head of the body, the Church." To be one with the body, is to be one with the Church, with infinite manifestation. The Christian Scientist, if he is working scientifically, is revealing one Church, and is more or less consciously one with that Church. But before he fully sees and is satisfied with the divine likeness, he finds that he must follow in the footsteps of truth, leading up from the human organization called Church, to the revelation of the one spiritual body. The generally accepted definition of Church, is a religious assembly, meeting for the worship of God and the betterment of mankind. As such, the Church of Christ, Scientist, has long since taken its place, among Christian organizations.

To be an integral part of this Church means much, as those have found who have associated themselves with it. The health of the Church is the health of its every member, of its every branch. The success of the individual member and of the group of individual members called branch Churches, depends solely and absolutely on unity with the central idea, with Church. There are many cords that may be bound about a member, to separate it from the vitality of the whole. Egotism, vanity, self-seeking, love of gain, love of place, pride, ambition, greed, a desire to be greatest, these are some of the strong cords which the Prince of this world supplies as very effective means by which the member may be tied up, paralyzed, and made useless.

A recognition of the value of unity brings with it an earnest desire to build up the whole, for it has already been admitted that no part has strength or life, of itself, but only as it is one with the body. No Christian Scientist can disparage the Church, the parent Church, or any branch Church and expect to partake of the activities which belong to the one body. No member can build up itself, become self-centered, and seek its own good, utterly forgetful of the body of which it claims to be a part, and expect to share in the health of the body to which it belongs only in name. The finger tied around with a string, is still called a finger and is still called a member of the body, but its connection is only nominal. It is useless alike to itself and to the body.

The lessons of unity are obvious. We seek the good of

Digitized by Google

the body from no inferior motive, but because it is the very fundamental law of our being to be one with the Father and with His creation. Utilitarianism does not unite us to a healthy body, but rather severs us from the universal good which is selfless. The true members will continue to labor for all, "till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Christian Science for all Mankind.

JACOB S. SHIELDS.

AMONG the very few errors editorially expressed during the recent gathering of Christian Scientists in Boston was one which attracted my special attention. It said in part, "The esoteric dogmas of Christian Science are too subtle for materialists to understand." Similar expressions may be heard every day, such as, "I am not spiritual enough to comprehend it." "It is too deep for me," etc.

It should be understood, first of all, that Christian Science is the Science of Life,—Science of being. No one can invent a science. By this we mean that Principle exists, always has existed, and always will exist; and the utmost we can do is to discover its law of manifestation. The science of mathematics always existed, but we have not always known it. Just so has the Science of Life,—of being,—always existed, but it was not apprehended in our times until Mrs. Eddy discovered it. Jesus knew all about it, but his knowledge and teachings were rejected of men, hence the need of its re-assertion. The simple fact is, that being an earnest student of the Bible, and living a life which "approached the supreme good," Mrs. Eddy became the means by which the Science of being was revealed to this age, and she has brought a light and understanding into the world which has made tens of thousands of sufferers well and happy, and by these she is naturally honored, respected, and loved. She has brought an understanding of Life which enables sufferers to be well, and she has given that rightful and true definition of the Scriptures which enables men to understand God and man's relation to Him. She brings to light the logical possibility of the present attainment of eternal life, in which sin, sickness, and death shall be entirely eliminated. Through her teaching as contained in "Science and Health with Key to the Scriptures," the laws and requirements which enable all mankind to understand and practically apply spiritual truth, are disclosed. Its philosophy is so simple that all humble and sincere persons may understand it.

The true man has a Principle of absolute perfection. Water in its natural state is absolutely pure, mix earth with it and you have mud, a changed condition, but the water itself has not been changed, it has only been brought into apparent combination with an impurity, and when this is filtered away, the water is found unchanged. Just so with God's man. His Principle, God, is unvarying good and he therefore must ever remain perfect and harmonious. But in human consciousnes evil seems to have beclouded the infinite good, and it will continue to hide it to mortal sense until the error is filtered away. This error consists of hate, envy, dishonesty, bigotry, idolatry, covetousness, dissimulation, sensualism, selfishness, and all else that is contrary to good. This seeming mixture is the product and content of mortal or carnal mind, and in it mortals have tried to discover infinite good—God. It requires scientific means to separate impurities from pure water, and it requires a scientific method to separate the evil from the good in human consciousness.

He who acknowledges God as divine Principle and that purity is man's normal condition, substantiates the verities of Christian Science. Standing upon this recognition of Truth, spiritual freedom may be realized. Freedom from what? "From the law of sin and death," and this declaration coincides with the spiritual statement, "And the Lord God commanded the man, saying, Of every tree of the garden thou mayest freely eat: but of the tree of the knowledge of good and evil, thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die."

Here it is made plain that the knowing of good and evil together leads to death. Evil is sin, and the wages of sin is death. Annul the error and have good only in consciousness, and we obtain health, harmony, and everlasting life. Who will deny the reason and logic of this proposition? Thus Christian Science teaches that man must be wholly pure in thought and deed; that love must govern his every action and motive, and that evil must be eliminated from consciousness. This makes us like good,—God. It brings the realization of Immanuel,—God with us. There are many evils which are called pleasures, many appetites which crave satisfaction, and all of them originate in material sense, all are more or less evil. To understand their origin and how to overcome them, to understand the body and its control, and to know the spiritual self as the image and likeness of God, is the Science Mrs. Eddy has unveiled. It is not magic, not a secret, and some time it will be known to all.

There is nothing in any true scientific proposition that is designed to operate more for one than another, therefore no personal discriminations will be found in Christian Science; and Jews and Gentiles join hands in one loving brotherhood, where God is the Father of all, and where His kingdom is established in earth as it is in heaven. To the afflicted it is the nectar of hope; to the agnostic it is the sunshine dispelling darkness; to the philosopher it is reason, logic, and science; to the poet it is true idealism; to the socialist and politician it is the solution of all economic questions; to the jurist it is the ethics of all fundamental law and government. It satisfies the monarch and elevates the menial. It is the universal guide to health happiness, harmony, and success,—in short, it brings the solution of all the problems of life. Is this worth knowing? Is it worth an hour or two of our time each day? Then, "Seek, and ye shall find; knock, and it shall be opened unto you," and "Let him that is athirst come. And whosoever will, let him take the water of life freely."

Fundamentals of Science.

F. H. LEONARD.

ANYTHING, to be scientific, must have a basic law and be demonstrably true. The term "Science," when applied to Christianity, must mean that the Principle which governs and controls the Christ-like life is so understood, that its right application brings out the perfectness of life in each individual consciousness, and reveals man in harmonious accord with his Father, God. Our text-book, Science and Health, makes this understanding possible; hence Mrs. Eddy rightly named her discovery "Christian Science."

God is the great prima Creator, and is immutable Life. It is impossible to believe that when he could give man peace, happiness, and eternal life, God would give him sorrow, suffering, and death. It is said he does this for the good of man; but man is already good, having been created in the image and likeness of omnific good, God. This is a logical statement: cause and effect must agree and, therefore, a good creator cannot create anything that is not good.

Jesus said, speaking to the one who had been brought to him to be healed of the palsy, "Man, thy sins are forgiven thee," characterizing sickness as sin. When the Pharisees reasoned among themselves he turned to them and said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk?" In view of this,

Digitized by Google

can we any longer refute the possibility of the forgiveness and destruction of sin and sickness, by insisting that they are creations of God; thus declaring them real and eternal?

Jesus said, "The word which ye hear is not mine, but the Father's which sent me." Do we believe the Master was an impostor? Emphatically no! It must be truth, then, that is taught in Christian Science, wherein evil is designated as unreal, and no more existent than the forms and fancies which people our sleeping dreams. Recognition of this teaching as true, opens wide the floodgates of divine Love until, bathed in its blessed reality, we turn to God, with terror destroyed, knowing that he is the only help in time of trouble.

The Bible is the record of man's struggle to free himself from the baneful effects of believing that there is such a thing as a power apart from God. Out of Egypt, gross materialism, through the wilderness of doubts and fears, which seemed only a little less real than those that had gone before, Moses led the children of Israel, until they saw the promised land of freedom. Then through succeeding stages of betrayal and ingratitude, but still reaching out for more light, they struggled on, until Jesus, the Christ, came amongst men.

Theologically, and in theoretical statement, Jesus the Christ, has been recognized as man's spiritual guide for centuries; not, however, until, in answer to an earnest desire for more understanding of God and His relation to man, was Christian Science given to the world, and Jesus' works spiritually discerned, his life accepted as the standard of daily living, for all mankind. We no longer believe the things we see around us to be real, but know that "the substance of things hoped for, the evidence of things not seen" lies in the spiritual actuality, wherein we find no doubt, nor fear, nor unbelief, but only eternal Life, Truth, and Love.

Christian Science is the greatest thing in the world. The truth of its statements have been proved by thousands and its effectiveness in healing disease has been personally experienced. It is the realization of the Master's admonition, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." To live in accord with its teachings, reveals the kingdom of heaven and makes possible ultimate obedience to the divine command, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

The Rest of God.

ADA BLERS FOSTER.

O'ER the bright waves of distant Galilee
Soft falls the sunset light, with tender afterglow;
And o'er the sacred haunts of him
Who once oft lingered there,
A golden splendor softly falls;
And o'er this sea of gold there comes once more
The heavenly echo of that voice divine:
"Come unto me, all ye that labor
And are heavy laden,
And I will give you rest."
The rest of God! O toiling sons of men,
Know ye the height, the depth,
Of this most gracious gift,—
The rest of God?
Rest from thyself, O man, and all the darksome fears,
Which throng thy earthly path;
Rest from thy doubts, thy longings and thy tears,
Forevermore.

Rev. Reginald J. Campbell of the London City Temple is certain that "no sin has ever been dreadful enough to incur an eternal punishment."

Selected Articles.

Christian Science and Cheerfulness.

The theory elaborated in a recent issue of the *Examiner* to explain how Christian Science cures disease was quite ingenious, but to attribute the cures to "cheerfulness" alone is very much like saying that one would be healed if he took a certain kind of medicine, but not showing him where he could get the medicine. When a person is sick he is not usually very cheerful; and to tell him to be cheerful and he will get well, without giving him any basis for his cheerfulness, is useless.

While Christian Scientists are a cheerful and happy people, they were not so before they knew of Christian Science. Most of them were sick and miserable; but the understanding of God, as revealed in Christian Science, healed them and made them happy. Then, very naturally, they would be cheerful and keep well, because they had gained a knowledge of the truth, which our Master said "shall make you free."

Christian Scientists recognize the effects of fear upon the body, and understand the need of preventing it; but this is done, not by forcing one to laugh and be cheerful, but by removing the cause of fear through their knowledge of God and man's true relation to Him. As Christian Science is a demonstrable science, Christian Scientists do know how its cures are performed. They have no need to resort to "artificial vibration" for the healing of acute or chronic disease, for the understanding of the spiritual law of God is sufficient.

"Science and Religion."

A reprint from the London *Times* in one of your late issues, entitled, "Science and Religion," contains some exceedingly surprising statements with reference to these two terms. We are told by the writer, E. Ray Lankester, that, in his opinion, "there is no relation, in the sense of a connection or influence, between science and religion." He also gives it as his opinion "that religion has not, in its essential qualities, anything to hope for or to fear from science."

Reading further in his communication, one recognizes that his concept of science is of something purely materialistic and physical. He speaks of the order of nature as "a network of mechanism," but implies that science can have no connection with the beyond-physics or metaphysics.

Christian Science, by its very name, protests against such an assumption. Science is classified knowledge, and deals, primarily, with causation. Since God is the First Cause, Creator, and Principle of the universe, including man, it is evident that science must ultimately deal with God, hence with the ultra-physical; *i.e.*, with Spirit or Mind. In its last analysis, therefore, science must concern itself with spiritual and mental phenomena, and must recognize the "network of mechanism," of which Mr. Lankester writes, as effect, not cause, hence of secondary, and not of primary, importance.

In truth, every sincere and fearless student of the natural sciences sooner or later reaches the point beyond which his physical senses will not carry him, and at which all his laboriously acquired knowledge concerning material phenomena leaves him powerless to proceed. His journey must lead into the realm of metaphysics, into the beyond-physics, and he needs some sure indication of the true goal.

Instead of the terms science and religion excluding each other, or being mutually incompatible, it is beginning to be acknowledged that all true science is religious, and all re-

Digitized by Google

igion worth having must also be scientific. Thus we see a growing demand being made upon Christians to prove the scientific nature of their religion by "signs following," by actual demonstrations in healing the sick by spiritual means, as well as reforming the sinner and comforting the sorrowing. Christian Science meets this demand honestly and fearlessly, and Christian Scientists are striving, up to their highest understanding, to prove that Christianity is scientific and that science is Christian. Every real step in science and in religion alike is bringing these two closer together, until their union in the realm of metaphysics shall be clearly discerned by all. W. D. McCRACKAN.

In *New York Commercial Advertiser.*

Healing.

The error which causes sickness is always Truth's opposite, a lie; hence it is the understanding of the truth concerning God, and man in his relations to God, which heals.

Science and Health says, page 391, "Sin is the foundation of sickness, and you can master sin through divine Mind; hence it is through divine Mind that you overcome disease."

Since "sin is the foundation of sickness," true healing must result from the destruction of the sin, because when the foundations are destroyed the most gigantic error will disappear. How shall we proceed to do this? Ask God for wisdom to reveal all that is hiding Truth from us; then know the falsity of every claim of power to harm or molest God's child. Know that there is no pleasure in sin, that it is the very obstacle to health and peace. Be so conscious of the omnipresence of good, that the seeming hindrances have no place,—thus we may make it easier to realize that there is nothing so much to be desired as to forsake all that is unlike good. The body will improve when the thoughts turn resolutely away from all error and we learn to love that which is pure and true. Truth is the beginning and end of true healing, which enables you to "put off the old man," by being "renewed in the spirit of your mind." Righteousness is not sick, or diseased. It is always a mistaken sense of what is good, or an ignorant, careless, material sense which leads into suffering. This sense must be instructed out of its mistake, and led to seek good where alone it can be found, in the spiritual understanding of what man is, the image and likeness of God, absolutely free from all that is unlike good.

This Day.

THIS day, and this only,
Is ours to command.
Will we use it aright,
Or abuse in its flight
The blessings that come to our hand—
This day, and this only?

This day, and this only,
As onward we move,
With its gains, and its losses,
Its joys, and its crosses,
Is ours to improve;
This day, and this only.

This day, and this only,
Belongs to us here!
Let us live at our best;
Trust in God for the rest;
Nor harbor a fear—
This day, and this only.

Progress in Fond du Lac, Wis.

The Christian Scientists who have been holding their meetings in the Boyle Flats for the past year and a half have outgrown their present quarters and have fitted up an attractive hall in the Cole Savings Bank Building.

Fond du Lac (Wis.) *Commonwealth.*

New Church Building in Leavenworth, Kan.

First Church of Christ, Scientist, of Leavenworth, has purchased the Evangelical Lutheran church, for its own use. Christian Scientists began holding meetings in Leavenworth in 1894. Since that time they have met at various places until now they have funds and a sufficient membership to possess a building of their own. There are about fifty members.

Church Dedication in Colfax, Wash.

Sunday, August 9, First Church of Christ, Scientist, of Colfax, Wash., was dedicated with appropriate and interesting services.

Work was begun at this point twelve years ago, when four students met together for the study of the Bible as illumined by Christian Science.

In 1897 the number had so increased that a hall was secured for the services, and since that time hope and earnest endeavor have pointed to this happy consummation of a church home.—*Correspondence.*

A Growing Church in Grand Forks, N. Dak.

The corner-stone of First Church of Christ, Scientist, in Grand Forks was laid in June last with simple and appropriate ceremonies, no public notice of the event having been given. The corner-stone bears upon its face in relief the single word PURITY, and within it were placed a copy of the Bible, Science and Health and all the other published works of our Leader, copies of our periodicals, and a list of the charter members and the present officers of the church. The seating capacity of the church will be above three hundred, and the back wall is constructed so that the auditorium may be enlarged when it becomes necessary.—*Correspondence.*

The Work in Hastings, Mich.

Services have been held in a private house, for over two years, and we felt quite sure that more would attend if we were in a public place. We did not start out to look for a hall with the feeling we had much to meet, for if Love supplies every need we only had to know that all had been provided and we had but to ask. When we inquired if we could get the G. A. R. Hall, they were pleased to let us have it, and at much less expense than we expected. They also gave us more privileges than we asked for. At our first Sunday services there were several strangers present.—ALICE ROCK, Hastings, Mich.

The diapason of human thought was never struck until Christian culture summoned woman into the republic of letters.—*Wendell Phillips.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Unauthorized Literature.

SINCE the publication of the article, "The Integrity of Christian Science Literature," in our issue of August 15, we have been given an opportunity to inspect three papers of the kind referred to. One purports to be notes taken in a class, another is said to be a copy of a letter to a student, and the third is a formula. The alleged notes are utterly repudiated by the teacher, the letter was found to be equally spurious, and the formula is, of course, in direct violation of the By-laws of the Mother Church. All three of the papers are faulty and misleading, and, if considered as attempts to elucidate Christian Science, must prove harmful to young students and inquirers who give heed to them, and yet we regret to say that inquiries which have been received since the publication of the article referred to indicate that in some instances there is a desire to cling to these papers which are "doubtful as to authorship or clearness of statement."

We feel under the necessity of again warning our readers against this class of unauthorized and faulty literature and against the subtle and specious manner in which it is circulated, for it is usually put forth as the production of some well-known Christian Scientist, and in some instances the papers even purport to be copies of letters written by Mrs. Eddy.

That these papers are passed from hand to hand without sufficient inquiry as to whether their reputed authors stand sponsor for them is an evidence of carelessness, but an even greater danger would seem to be that more or less change is inevitably made every time the papers are copied, and what may have been a correct presentation of Christian Science in the original is likely to become a doubtful or absolutely incorrect statement in the copy.

When it is clearly understood that Christian Science is an exact Science, and that any deviation from the true line of its expression must necessarily obscure its teaching, it will be seen why these efforts to adulterate our denominational literature should be frustrated. It is of the utmost importance that no literature should be circulated as Christian Science which has not passed the scrutiny of those capable of pronouncing upon its correctness and authenticity, and it is for this reason that great care is taken to preserve the purity of the authorized publications. M.

Evil not Necessary to Good.

IT is rather astonishing, as one comes to think of it, that we should find those who, for years, perchance, have been praying and laboring for the overcoming of evil, but who nevertheless cling persistently to the assertion of its necessity in the formation of character and the education of the race.

Every necessary thing in the providential ordering and government of men must be a good thing by virtue of its necessity, and quite regardless of its possible discomfort.

From beginning to end, however, the Scriptures denounce evil as an abomination, and Jesus not only expressed himself very definitely both as to its non-desirability and non-necessity, but he devoted his entire ministry to its overthrow and annihilation, thus indicating in both word and deed that evil has no legitimate place, function, or right to be; and it is the more surprising, therefore, that any of his would-be followers should put forth painstaking effort to prove that the will of God; viz., our sanctification, the realization of spiritual oneness with Him, has involved the necessity of the resistance of evil from the beginning; hence its existence, and persistence.

A very striking exhibition of this disposition to cling steadfastly to the asserted need of that which is condemned by God and the moral sense of the race, is found in a late article entitled, "Theodicy," in the *Bibliotheca Sacra,* in which the reverend author takes for his initial proposition the statement that, "If there be a creation, the thing made must be inferior to the Maker," and that if the created thing be constituted in such perfection that he is unable to do wrong, "his acts have for him no quality."

It is apparent that this point of view could be entertained only in connection with a materialistic conception of creation, and it must be conceded that if God has made a material universe and a material man, they are assuredly inferior to Him; and, being something less than perfection, weakness and breakdown must naturally inhere in them. Waiving the question as to how a perfect creator could conceive and so institute an imperfect creation, we may be reminded that Jesus commands us to be perfect, even as our Father in heaven is perfect, and in the light of this command the materialistic concept of the creation of man would have to be defined as the making of a creature who is subject to evil, but who is impelled and commanded to reach a condition in which he is not subject to evil. In other words, he is required to do more for himself than God has seen fit to do for him. It is clear, moreover, that the perfect man, incapable of sin, is, after all, the end of creation and the realization of this end would therefore deny the original proposition that the thing created must be "inferior" to the creator in quality and kind! It would further appear that, having attained to perfection, man would, from that moment, lose the character which it is asserted is acquired and maintained only by the struggle with evil.

Such confusions are the logical and inevitable outcome of the material sense of creation and the declaration of the reality of evil; and they cannot be made to disappear so long as we are in bondage to these false concepts. When, however, we realize in Christian Science that since God is omnipresent Life, Truth, and Love, the universe is, and can only be, spiritual,—the constant going forth of infinite Spirit,—all occasion and possibility of an "inferior" material-stuff world is removed, and the unimpaired perfectness of the spiritual universe, including man, is seen to be but an incident of the unchanging right consciousness of God.

Yet another occasion of stumbling in connection with this material concept, is found in the idea that salvation consists in a making over of that which is evil and defective, into that which is good and perfect. The fallacy of this thought appears when we recognize that truth and error, —good and evil,—like light and darkness, are opposites, and opposites never have had, or can they have a common factor. The appearing of Truth means the disappearing of error. There is no hold-over involved, or in any sense possible, and the nothingness of error,—evil,—is seen in the fact that, Truth being present, there is no error; good being present, there is no evil. This understanding of the allness of spiritual being makes it clear that salvation is not a making of good out of or through evil, but that it is an awakening to the nothingness of evil," the consciousness of good alone. In her "Miscellaneous Writings" (p. 13), our Leader has said:—

"Scholastic theology elaborates the proposition that evil

Digitized by Google

is a factor of good, and that to believe in the reality of evil is essential to a rounded sense of the existence of good. . . . The Science of Soul reverses this proposition, overturns the testimony of the five erring senses, and reveals in clearer divinity the existence of good only; that is, of God and His idea." W.

The Problem of Service.

LABOR DAY has come and gone, and whose heart has not been touched by its appeal? "In the sweat of thy face shalt thou eat bread till thou return to the dust from whence thou wast taken," such was the curse pronounced upon mortal man, the representative of life in matter.

Labor in the material sense has ever seemed a heavy burden, but as the supremacy of Mind is recognized, its curse disappears. All should serve gladly, for the choice is between service and slavery. It is noble to serve, but ignoble to be a slave, and the spirit in which all work is done determines for each individual which of the two it shall be. The hands may be moulding common clay, while the thought is fashioning some rare thing of art fit for a king's palace, the artificer meantime beholding something of "the pattern shown in the mount."

The nobility of his calling should lift every man above all baseness, for work well done glorifies the lowliest station, while work poorly done degrades the loftiest. According to this it matters little where the service is performed, the statesman and the artisan stand in precisely the same relation to divine Principle which knows no favoritism. If the dignity of labor were only seen aright, every man would be proud to emblazon upon his escutcheon the prince's motto, *Ich dien*, "I serve."

When true religion comes to be the law of the head and of the heart, men will know that industry, intelligence, and integrity, need no clans nor orders for the support of right, for it will be universally acknowledged that this alone is might. Even now this is partially seen and acknowledged. The workman who possesses a high degree of intelligence can set the price upon his services. The one who has ability, courage, and adaptability is ever in demand.

The history of this country, nay all history, proves beyond question that the true idea of Mind finds its own level, and if a man seems to be placed above his fellows without having taken the proper means to rise, he is out of his orbit, and must in some way pay dearly for the mistake which put him there.

If, however, all that is here claimed were generally conceded, it would yet be necessary to point the way to the realization of universal harmony which can only be reached through love for God and our fellow-men.

This was exemplified by the great Nazarene, who took his place in the carpenter's craft, but who soon rose to his rightful rank as teacher of mankind because of his understanding of Truth. According to his teaching the unerring law of right gave to the faithful servant the ten talents which he had gained, while it exposed and punished the indolence and dishonest thought of him that was unfaithful.

Christian Science will, when rightly understood, enable faith to rest securely in the absolute justice of divine Principle. It will also teach the beauty of humility which will fit men for higher levels by making them faithful where they now serve.

We should rejoice that we no longer need to think of heaven as a place where activity ceases, for reason and revelation teach the opposite of this, and St. John's vision of the new heaven and the new earth tells us that there "His servants shall serve him." The conditions described are very human, but there is no sorrow nor pain, no sin, and no death. Service can never be hard where perfect intelligence governs, and strength is ever renewed. To serve God is to serve Life,—to live in the fullest sense; it is to serve Truth,—be true in thought, word, and deed, and it is to serve Love till this "glorious crown name" is written "in their foreheads." Then cometh the reward, "well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy Lord." K.

A Just Judgment.

WITHOUT meaning the slightest disrespect to any of the other bodies of Christian worshipers by the assertion, we confess we do not think that there is a denomination that can truthfully boast of having a more intelligent, industrious, honest, moral, God-fearing membership than the Christian Scientists.

The Christian Scientist seems to have taken hold of the right end of the movement for the reformation of the world. He appears to have grasped the idea that failure awaits him who goes about promiscuously reforming the world. His idea is to reform himself. He reasons, and reasons correctly too, that when each individual in a community reforms himself, that community will be a reformed community. And when all the communities of the world are reformed in this way, the world will be reformed.

Like the blind person whom Christ restored to sight, the Christian Scientist knows he was once blind, but now he sees; he once suffered tortures, now he does not fear even death.

A few years ago the Christian Scientists were few in numbers. They were a never-ending source of witty inspiration for the newspaper paragraphers, whose patient chopping block they have been for a quarter of a century. On June 30 last, they did what no other organization, religious or political, had ever before succeeded in doing: they completely filled Mechanics Hall, Boston, Mass., three times during the day, with a strictly religious audience, who had assembled to enjoy a strictly religious service. The immense audience was composed of believers in the truth of Christian Science who had come from every section of the Union. A Boston paper, the *Boston News*, editorially referring to that great meeting, says, speaking of the visitors, "They know how to conduct themselves like ladies and gentlemen, and that of itself is a bit of a virtue."

Editorial in the *Texarkana* (Tex.) *Courier.*

The Indiana Medical Board will, it is said, take up the question of Christian Scientists and practitioners of the faith school this week, in order to ascertain their standing under the state medical laws. There is scarcely a school of medicine that does not suffer from "quacks" and pretenders, and it is well and good to expose them and weed them out, but our advice to the State Board is to let Christian Science alone. It may not heal all the ills that flesh is heir to, but it will average up with the best schools of medicine, and it improves with investigation.

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00 Twelve or more to one address, $4.50 each.

Address all orders to JOSEPH ARMSTRONG, 95 Falmouth Street, Boston, Mass.

Testimonies of Healing.

I wish to acknowledge the benefits I have received from Christian Science. Before hearing of this teaching I was troubled with boils and took medicine continually for my blood, which the doctor said was out of order. I took everything he recommended, and then, finding myself no better but seemingly worse, I told him that I did not know what to do and he assured me that he could do no more. Shortly after this Christian Science was recommended, and I went to a practitioner, and in four treatments I was healed and advised to buy Science and Health and study it, which I did.

It did not take me long to find out that the trouble was not with my blood, but with my disposition. My mother said I was quite a different boy after being treated. Previously I was very quarrelsome and could not get on harmoniously with any one, but when I found that God is Love and that He does not afflict any one, my thought was changed and I manifested love instead of hatred and discontent.

Words cannot tell how happy I became, for everything and everybody seemed different. One of my brothers remarked to an inquirer a short time afterward, that I could not get along with any one before I knew of Christian Science, and that now, I "could get along with anybody." I found in Christian Science that it is Love that we need and not medicine, if anything seems to be wrong with us.

The *Journal* and *Sentinel* are God's silent messengers that carry to us thoughts of Love and Truth, and when we live the good which we learn in Science we are blessed continually. I desire to live closer to Truth and show my appreciation for Science that has done so much for me.

R. V. TURNER, Victoria, B. C.

When I heard that I was to have a vacation for a couple of days, the thought came to me to make use of this opportunity to inform the dear readers of our periodicals of what Christian Science has done for me.

It is now almost five years since this glad message reached me. Before that time, my body had expressed all forms of sickness. I was in such a state that I took medicine almost every day of my life. From childhood I was afflicted with constipation and stomach complaint, and in consequence of this long suffering I became almost insane, could not endure the slightest noise, and for that reason had to leave the city.

I was so tired of the world, since no physician could help me, that I determined to take no more medicine. When I told this to a neighbor, who at that time had a friend visiting her, this lady remarked that I would make a good Christian Scientist. She then told me what she knew of Christian Science, and said that Scientists do not need any medicine.

On returning to my room I felt so refreshed by this conversation that I determined to try Christian Science. I began to watch my thoughts and improve my actions. I felt much better and laid aside my glasses. When I returned to the city I was not well, but a little stronger. I then found out that my neighbor was a student of Christian Science. She told me to buy the text-book, which I did immediately and began to come out of the darkness. The Bible became a new book to me, and on the sixth day after reading Science and Health, I was free from my trouble. Since then I have taken no medicine.

Divine Love has led me on, and I am now able to overcome every seeming discord with the understanding of Truth. My husband believed that he enjoyed the use of tobacco, and said that he would never give it up. A few months ago he became suddenly ill, and during those days did not smoke. In four days of Christian Science treatment he declared himself healed, and has since then had no desire for tobacco.

Since this beautiful demonstration we have both become stronger in the truth, and we hope that the seed may find good soil in us, and grow to the glory of God.

God bless Mrs. Eddy, who has revealed to us infinite Love and Truth.—CHARLOTTE PETERMAN, Buffalo, N. Y.

With a deep sense of love and gratitude to God, to Mrs. Eddy, and to the kind practitioners who have helped us, I shall try to tell what Christian Science has done for us. To enumerate all the manifold blessings we have received through Truth, would be impossible.

I became interested in the study of Christian Science through my mother's healing about fifteen months ago. She had been a sufferer for nearly five years with kidney trouble, nervous spasms of the stomach, sciatica, indigestion, and at last partial paralysis. She carried morphine with her continually toward the last, fearing a spasm of the stomach, which meant great suffering; but even this failed to help at times. She had been under the care of a number of physicians, but none seemed to know exactly what was the real trouble.

In a deplorable condition, with one foot in the grave as we might term it, Christian Science was presented to her by a kind Scientist. She at once grasped it as a life-line; Science and Health was loaned to us the same day, and I immediately read to her. In less than twenty minutes her nervousness was all gone, and she felt much stronger. She then took treatment, and to-day is a well, strong woman. Her entire healing was a little slow, but she is more than grateful for this, as it has brought a wonderful spiritual uplifting.

As for myself, words are inadequate to express my gratitude for personal blessings received since I have been studying this great and glorious subject. Several physical ailments which had troubled me for years have entirely disappeared. I am more than grateful for having been privileged to go through class instruction, as it has enabled me to help myself and others who come to me for help. The Bible studied in the light of Christian Science is indeed a new book. That valued book, Science and Health, certainly does give to us the right understanding of our heavenly Father.

A little over a month ago a young girl was entirely healed of an eye trouble in three treatments, after having had several operations performed for the same at a hospital.

Last summer my brother had a fine case of healing with an eye trouble. His physician advised him to go to the hospital and see what could be done. There were several ulcers on the sight of his eye. It was very much inflamed, to sense, and caused him great suffering. Instead of heeding the advice of the physician he went to a Christian Science practitioner, and in ten days the ulcers had disappeared and there has been no return since, for error has no power to return.

Shall we not then "Praise God from whom all blessings flow" for having sent to us one so meek, so loving, so pure in heart, as our revered Leader, through whom this wonderful discovery of Christian Mind-Healing has come? It is indeed the Truth which Jesus taught and demonstrated for it has had the signs following.

KATHERINE SCHLIPPER, Baltimore, Md.

I did not take up the study of Christian Science for healing, but to learn more of the spiritual side of life. Its text-book seemed so difficult that I could not understand it, so I put it aside and never looked at it again for over twelve months.

One evening some friends were conversing about Christian Science with my husband in our drawing-room, and a gentleman said that these people gave testimonies at the Wednesday evening meetings of the demonstrations they had made. I was paying very little attention to the

Digitized by Google

conversation but the word demonstrate seemed to fasten in my thought, and I looked at it in a new light. It seemed to me that home was a very good place for me to try to demonstrate in. At the same time the *Quarterly* had been brought to my notice. I always loved my Bible and it interested me very much to look up the Scripture texts in connection with the Lesson-Sermon. Still I could not understand Science and Health, but the passage on page 492, which refers to a great General's saying, "I propose to fight it out on this line if it takes all summer," encouraged me, and I concluded it would be well to follow this General's example and read Science and Health till I did understand it.

Sitting like Mary of old at the feet of the great teacher, Jesus, asking for obedience, light, wisdom, and understanding, error seemed to rise up on every side to confront me, but I persevered and now I will tell you of the result. I had suffered from a trouble in my back all my life. Sometimes for days at a time I would be unable to move in consequence of the severe pain and weakness I experienced. I had the advice of the best physicians, who said it was gout and that I had inherited it. Some of their prescriptions gave me temporary relief but they all failed to remove the disease, and it became so much a part of my life that I expected to have it to the end of my course.

One day some two years ago I awoke in the morning and, as it was my custom, I attempted to rise very cautiously, but found that the pain and weakness had left me and I was perfectly healed. Seasickness has also been demonstrated over. I have traveled much by sea and was always prostrated by this malady. A few months ago I crossed the blue Pacific from Sydney to San Francisco. It was very rough weather indeed, but I was quite well all the time and fully realized what a difference it made in the pleasure of sea traveling.

Space will not permit me to tell of the many benefits we have all received both in physical healing and spiritual uplifting. We rejoice that the joy bell of Christian Science has sounded in Australia, "the Land of the Golden Fleece." A little band of three class students, along with another young man, a true and loyal follower, first held up the torch of Truth in Sydney to light the way; now there is an organized church and numerous followers.

It has been a great privilege to me to visit this wonderful American country, and to converse with many dear Scientists; also to see the sweet face and the home of our Leader, Mrs. Eddy. For all these many blessings I am truly grateful to God. I also wish to express my love, gratitude, and reverence to our beloved Leader for all she has done for the world through her life of self-sacrifice and love.

ALEXANDRA CAROLINE GIBBS, Sydney, Australia.

Five years ago this summer, when lying at the point of death expecting every day would be the last, I was healed through Christian Science treatment. I gladly give this recital of my condition and healing with the hope that it will benefit others who may be needing help, and encourage some one to turn, as I did, to Christian Science for healing, after all material remedies have failed.

Twenty years ago I was overtaken by a very heavy snowstorm which I had to face for ten miles. As a result of this exposure and the cold which followed, I had asthma and bronchial trouble for years, suffering great agony at times. Finally the malady reached my lungs and a hard cough set in. This was often accompanied with the spitting of blood, and as a consequence I got very little good sleep or rest for years.

One doctor after another had me for a patient, but instead of receiving help I continued to grow gradually worse. The last doctor but one who had my case was taken sick while waiting on me, and another was called. The last doctor made twenty-two visits, then told my wife that I had consumption and that it was useless for him to come any more, as he could do nothing for me. In leaving me he said, "All you need is good care and plenty of fresh air." This was not very encouraging to a man flat on his back, racked with pain, coughing and expectorating day and night, too weak to stand alone. In this condition I was left to face death as inevitable.

A near neighbor had been, as I knew, in a condition similar to mine only a few years before, and I thought I would inquire what he did to get rid of his trouble, for he was now the picture of health, active as a boy, though he was nearly eighty years of age. So I told my wife to ask him to call the next time he passed. In a few hours he was sitting by me, telling me of his healing through Christian Science. To my numerous questions as to how he was cured, what the patient had to do, etc., he said they gave no medicine; that the healing was done through prayer. This all sounded very strange, but I was so struck by his statements that I decided to try Christian Science, and asked him to tell the practitioner to call.

In about an hour and a half the practitioner was with me. She told me to lay aside my medicine and, when I felt able, to read Science and Health, a copy of which she left with me. She talked a little, gave me a silent treatment, and left with the remark that she would call again the next day. This was on Friday. On Sunday following I coughed and raised a great deal more than ever before in one day, and my feet and limbs were greatly swollen. This settled it for me. I was familiar with the symptoms and thought I knew the end was very near. On Monday when the practitioner called again I told her how badly my feet were swollen and asked her to look at them; she did not act as though this was a matter of much importance, and said, "I do not need to see your feet." It was all very strange. She had not touched me, looked at my tongue or felt my pulse, but from this on I began to gain rapidly. Sunday was the turning-point. Every day I coughed less and inside of a week could lie down, and my sleep was good and refreshing. I was soon walking about the yard with the help of crutches, my strength fast returning. My appetite was wonderful. I could eat anything I wanted, and for weeks I was weighed regularly, showing a gain of three pounds and over per week, until I regained my usual weight.

In a few weeks I was walking half a mile at a time without crutches, feeling well, eating and sleeping as well as any one could, showing a steady gain from the Sunday after I began taking treatment. I was up and out long before the doctor referred to, and talked with him about my healing.

I was treated ten weeks, but during the last five weeks I felt like a new man, and in three months from the time I began taking treatments I was at work nights in a canning factory, doing as hard work as any man, often with wet feet, but I kept well and have been well and hard at work ever since. Science and Health seemed too deep for me to understand at first, but this one point on page 122 caught my attention and turned my thought in a new direction: "Temporal life is a false sense of existence."

I have great cause for gratitude for the help I have received from Christian Science, and while this testimony gives but a faint idea of the condition I was in when I turned to it, I gladly give it for the benefit of others.

W. C. B. ADAMS, Independence, Ia.

I wish to tell of what Christian Science did for me before I was a member of a Christian Science church, although I was a believer in its teachings.

I had a son working in a mill, and one night, after midnight, I was awakened and told to come to the mill at once, as my son was hurt. I went and found him lying in the office with the American flag wrapped about him. He

Digitized by Google

had been carried round the shaft and through a space of about seven inches. The flesh had been torn from his back, arms, and thighs, as my wife and I found when we examined him, and the blood flowed profusely from a cut in his head.

Four physicians were standing by him and waiting for him to die. I then spoke in the name of the Lord and said, "God is here, we need have no fear." One physician said, "The Lord helps those who help themselves." My reply was, "Man's extremity is God's opportunity." I continued to declare the truth, and my son spoke and said, "Papa, put my clothes on; I am going home." The doctor told him he had sent for a carriage, but my son said he would walk. I put his clothes on and he walked home with me, three squares. The physicians followed and sewed up the wound in his head, a cut three inches long.

I took the Bible and Science and Health, and sat by his bed for three days. On the fourth day he got up and the doctor who came to see him told me to get him some warm water and he would dress the wound. When he took off the bandages he stepped back amazed and said, "I don't understand this case at all, there is nothing to dress, there is no wound." He then asked my son if he suffered pain, and he said, "No; not since my father spoke to me in the mill." He has suffered no more since that time from his injuries.

I have had many remarkable demonstrations since that time, and my heart goes out in gratitude to God and to Mrs. Eddy for the understanding which enables us to obey Jesus' teachings.

I now belong to First Church of Christ, Scientist, of Allegheny City, Pa. We have a goodly number at our meetings and many good demonstrations are related.

M. P. JONES, Sharpsburg, Pa.

I would like to add my testimony to the list of those who have been healed through Christian Science. Words cannot express my gratitude to God, to our Leader, and to the one who first voiced the truth to me, for it indeed made me free. I have been healed of heart trouble, rheumatism, asthma, constipation, and other troubles.

I had been treated by several different doctors without receiving any permanent relief. The heart trouble, and asthma kept growing worse, and I began to despair. I had heard of Christian Science, but being a member of an orthodox church, I feared the commotion it might make if I accepted it. For two years my husband urged me to try Christian Science, but I thought I was doing God service by clinging to my creed, although I was not quite satisfied. There was a longing for something, I did not know what, and I failed to find the "peace of God which passeth all understanding." I did not realize I was forfeiting that peace by rejecting the undivided garment.

One evening a neighbor and his wife, who had been healed through Christian Science, called, and on their departure, left some Christian Science literature. One day while reading it I was instantaneously healed of a very lame back. This was proof to me that there was something in Christian Science, but not sufficient proof for me to leave my creed for Christ, so I clung to it, and to my aches and pains a few months longer.

The time came to me at last as it comes to thousands of others, when man's extremity is God's opportunity, and one day I had a severe attack of heart trouble, with a complication of several other troubles. I sent to my physician for heart tablets and headache powders, and took them according to directions the remainder of that day, all night, and until about five o'clock the next day, when I realized I was receiving no benefit, and decided to try Christian Science. A practitioner was sent for, and he said if I would give up my pagan gods (medicines), he would help me. I was a little inclined to be offended at this, for I did not realize I had been worshiping any but the one true God. I had, however, asked him to help me, and was determined to follow his directions, so I threw my medicine in the stove, purchased Science and Health, and began my search for hidden treasures.

It was Truth I needed, and as I studied my Bible with the aid of Science and Health, Truth was revealed to me through many beautiful demonstrations. I had been a Bible student for more than twenty-five years, but in all that time I did not receive the good I have received in the two years that I have studied it in connection with the text-book of Christian Science.

I would like to relate one of the many demonstrations we have had. My little grandson, a child two years old, had been playing with a little boy who had the whooping-cough. His mother was filled with fear when she learned of the whooping-cough, and of course kept track of the time to see the result. She was at our house with the child when the time came. The little one had been fretful all day and manifested signs of the dreaded disease. The mother was again filled with fear, but I told her to quiet her fears, the little one would not have whooping-cough. I took him in my arms and declared the truth the best I knew. He was easy in a few minutes, and wanted to go to sleep. His mother took him home and put him to bed. He slept well all night and woke up in the morning feeling all right.

This was nearly two years ago. I was very young in Science then, but this demonstration was a proof to me of the omnipotence and omnipresence of divine Love, "who forgiveth all thine iniquities; who healeth all thy diseases." Heretofore, I had asked and received not, because I asked amiss. Not knowing the Scriptures, I did err.

Divine Love certainly is very merciful. The physical healing is grand, but the spiritual understanding received by studying the Bible in connection with "Science and Health with Key to the Scriptures" is the most beautiful part to me.

The peace I was once longing for is now mine. The cross that seemed to bow me down to earth is greatly lightened. I do not know how to express my gratitude to the Discoverer of Christian Science in a better way than by taking up my cross and following closely after the dear Master.—MRS. SARAH PEYER, Eden, N. Y.

On coming to Christian Science I found that I had some boon companions to part company with. One of these was the smoking habit. I had contracted this at the beginning of my newspaper career, and as years went by I became an incessant smoker. I thought I could not work well unless I sat in a halo of blue smoke. As I became more and more interested in the reading of Science and Health my friends used to taunt me about my shortcomings, and I remember well on one occasion the surprise of a Christian Scientist who called at my home to find me buried in Science literature but complacently puffing at my favorite pipe.

I kept up my reading trying to imbibe more and more each day its spiritual meaning, then I began to notice that my relish for the weed was diminishing and I was very much ashamed to be caught smoking on the street. My favorite brands did not give the same satisfaction and I laid the fact largely to poor grades of tobacco. Finally I awoke to the fact that I was actually getting over the smoking habit and then mortal mind rebelled. I recall now how determined I was to smoke any way, but I kept up my study of the truth likewise. I tried to imagine how good the old pipe tasted, but way down deep in my heart I knew it was all an imagination and falsehood. Then came the desire to give it up and, "the desire," Mrs. Eddy says, "which goes forth hungering after righteousness is blessed of our Father, and it does not return unto us void"

Digitized by Google

(Science and Health, p. 2). The victory was on the side of Truth, and while that is now five years ago I may truthfully say that I have never had a desire to touch tobacco in any form since that time.

ALLEN L. CLARK, Omaha, Neb.

The following is from a letter written by a gentleman fifteen years ago, and to-day he is able to work steadily at hard labor. Previous to coming to Christian Science he had not been able to work for two years. He says,—

"I was afflicted with neuralgia, dyspepsia in a very bad form, and heart disease before my treatment in Christian Science. I had doctored with five different physicians and continued to grow worse all the time until I was advised to come to Christian Science for treatment. After one treatment I felt like a new person and all signs of dyspepsia have entirely disappeared. Now I can eat any kind of food.

"Knowing that this treatment cannot fail to make a person better both physically and spiritually, I would recommend it to all who are sufferers."

JAMES E. BRIERLY, New Bedford, Mass.

"The people that walked in darkness, have seen a great light." This text means much to me. For many years I was in darkness because I knew not how to open my windows towards Jerusalem and let in this light that would cause "thy darkness to be as the noonday."

There came to me a great desire for a better understanding of life and its demands, a willingness to do God's will if only it could be made plain to me, and I now see that my desire was a prayer which was answered almost immediately, for I was led to Christian Science and healed at once of the severe headaches from which I had suffered many years. After such healing how could I help wanting to know something of the wondrous power that had wrought this change from sickness to health.

I commenced the study of Science and Health with the thought that its truth had been proved and that I could understand it, and how can I express in words the revelation it was to me. The Bible, which had previously been a sealed book, was now illumined. I knew I was a disciple of Christ, and I began to study and ponder his teachings, knowing if I were faithful the Christ-truth would lead me to "rivers of living water."

I have passed through great sorrow, but can truthfully say, God has never forsaken me, that underneath have been the "everlasting arms." How grateful we are that one disciple was pure and good enough to perceive this great truth, revealed to her through spiritual sense, and was enabled to make it plain to all receptive hearts, and that some time all will know that God reigns supreme now, that we need not to look to some future state to have all sin and sickness cease, and all tears wiped away. If we will only cling to God, never doubting, we shall know that nothing but good, nothing but love can come from Him. In proportion as we turn away from the material sense of things, and our consciousness is filled with the spiritual sense, we shall begin to realize that God is the only power, and all will be made plain here and now.

R. C. B., Providence, R. I.

It is better to look upward to the heavens than to look downward upon the earth. Some fix their eyes on gold, some on pleasure, some on fame and the resources which the earth furnishes. But the Psalmist says, "Unto Thee lift I up mine eyes, O Thou who dwellest in the heavens." The apostle says, "Set not your affections on things on the earth, but set your affections on things in heaven." "We look not at the things which are seen, but at the things which are not seen."

From our Exchanges.

Any one who observes closely the words and phrases in current use for teaching religious truth is impressed by the fact that a new phraseology is establishing itself wherever earnest men with a real message try by tongue or pen to gain the attention and the assent of their fellow-men. . . .

We believe that this disposition is for the betterment and enrichment of religion. Some persons, it is true, affirm that the new phraseology means a casting aside of the old truths, and that the men who employ it have ceased to hold the beliefs which their fathers did about God, Christ, sin, and the moral struggle; but it by no means follows that, because a man strives to make himself understood by the people to whom he speaks, he has completely modified his theological standard. To be sure, fresh visions of truth can hardly help giving rise to new forms of statement; but perhaps, after all, it is not so much a question of conservatism *versus* liberalism, as of a preacher's profound yearning to voice his message most effectively. As *The London Examiner* says, people are not nearly so interested in the average pulpit themes as the average minister is apt to think. We would go further, and declare that a good deal of the language used in the pulpit and on the religious platforms fails to carry any distinct meaning to the modern man. He has heard from childhood the familiar phrases so constantly that their bloom and beauty have entirely disappeared, or, lacking such a background for his life, he hears, when he occasionally does go to church, phrases so totally unlike anything he hears in the shop, the market-place, and on the street, that he is bewildered and mystified.

The Congregationalist and Christian World.

I want to see decent men strong and strong men decent. There is always a tendency among very young men, and boys not yet young men, to think that to be wicked is to be smart, and to show that one is a man. I ask that every man here constitute himself his brother's keeper to that younger brother, that this false estimate of life may be prevented. If any of you misbehave in the presence of younger boys he can thank himself that they will follow his example and not his precept. The most effective way to preach is by practice. Young boys don't admire anæmic virtue. They believe in courage and manliness. They admire those who have the quality of being brave to face any danger. I want to see you give the young a trend in the right direction. Your example counts in other things as well as goodness. I want to see every man able to hold his own with the strong and ashamed to oppress the weak. I want to see the young men able to face the world and not submit to imposition. I want to see each man able to hold his own in the rough work outside, but a good man at home, tender to his wife and mother and children. There is no use preaching to boys to be brave if you run away. There is no use preaching to them to tell the truth if you don't tell it. There is no use telling them to be unselfish if they see that you are selfish. Prove by your deeds that yours is not merely a lip loyalty.—PRESIDENT ROOSEVELT.

"It is wonderful how much of our goodness is due to the lack of temptation," said a wise woman, recently. "We plant our little virtues in some warm, soft soil, some atmosphere of comfort where they are sheltered from storm and stress, and they grow into hothouse luxuriance and beauty. We never doubt their vigor or genuineness until something deprives them of their shelter and leaves them where the blasts of trial beat upon them.

"I thought myself a strong, reasonble, self-controlled woman, just and tolerant toward others, sweet-tempered and unselfish. Oh, no, I never said so, of course, but that was the estimate of my friends, and I secretly accepted it.

Digitized by Google

There was little trouble in living up to it in the dear home atmosphere of love and appreciation.

"But when a sudden change came to my life, when I was where half-veiled distrust took the place of the old, tender loyalty, where petty jealousies and clashing interests made themselves felt, and many things that had long been considered mine of right were called in question, then—ah, well! I discovered that there was a deal of bitterness, morbid weakness, anger, and selfishness left in my composition. I was weak in ways I had not deemed possible, and scarcely less bitter than the change in outward circumstances was the revelation of myself."—*Wellspring.*

Not one of the twelve apostles would have left a trace in history if it had not been for the companionship of Christ, the training he gave them, his Spirit who was in them. Paul might have been merely a name, as pupil of Gamaliel and rabbi, in the wilderness of Jewish tradition, if Christ had not claimed him for his own. Peter calls himself a messenger, Paul and James call themselves bond servants, so wholly do they feel that their claim upon the attention of the world is that they represent their master. These were all ordinary lives, and all but that of Paul unmarked by genius or opportunity until they received the mark and became the instruments of the extraordinary, the ideal, the central man, Jesus Christ.

The Congregationalist and Christian World.

The root of faith is putting the revealed will of God above our own perceptions of pleasure or advantage. At bottom, faith is fidelity to our moral convictions. Saul showed that he wanted faith by trusting to his own sagacity as the guide of his action. We show our want of faith when we vary from purity or honesty or from thorough loyalty to our best ideals, because of the apparent loss or disadvantage fidelity to them would involve. In making faith the root of character the Scriptures are in the profoundest accord with the facts of human life. All good men have faith; they could not be good without it, or fail to be good with it. There is no arbitrariness in making faith essential to righteousness and salvation. Good deeds are not really good unless they spring out of faith. That is the supreme test of their moral quality. And if the man of faith is not saved, no one is saved.—*The Watchman.*

What we want, above all things, in this age is heartiness and holy simplicity; men who justify the holy impulse of grace in their hearts and do not keep it back by artificial clogs of prudence and false fear, or the sham pretences of fastidiousness and artificial delicacy. These are they whom God will make his witnesses in all ages. They dare to be holy, dare just as readily to be singular. What God puts in them, that they accept; and when He puts a song, they sing it. They know Christ inwardly, and therefore stand for him outwardly. They endure hardships. They fight a fight. And these are the souls, my brethren, who shall stand before God accepted.—BUSHNELL.

When men do anything for God, the very least thing, they never know where it will end, nor what amount of work it will do for him. Love's secret, therefore, is to be always doing things for God, and not to mind because they are very little ones.—F. W. FABER.

If you live up to your Christian profession you may be hated; but if you fall below your profession the world can only regard you with contempt. That is to be "trampled under foot of men."

ALBERT J. STEELMAN in *The Standard.*

The *Pacific* says, "We are passing from one theological era to another, from materialism to meditation, and from controversy to consecration. The criticism of the letter is surrendering to the realization of the spirit."

To get good is animal, to do good is human, to be good is divine. The true use of a man's possessions is to help his work; and the best end of all his work is to show us what he is.—JAMES MARTINEAU.

Be what you wish others to become. Let yourself, and not your words, preach for you.—AMIEL.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The eleventh session of the National Irrigation Congress was held at Ogden, Utah, last week. Delegates were present from eleven States west of the Mississippi River, representing the State and municipal governments and many commercial organizations. Among the speakers were United States Senators and the governors of half a dozen western States. Secretary Wilson said in his address:—

"It is estimated that about six hundred thousand acres of land at present under irrigation in the western United States are lying idle solely because they contain too much alkali to permit paying crops being produced. Whenever practicable, it is advisable to reclaim land of this character by washing and drainage. Nevertheless, in much of this land and that which may be irrigated in the future, the establishment of a proper drainage system could not be profitably undertaken under existing conditions. The question is, Can anything else be done with such land? To answer this query, the Bureau of Plant Industry is endeavoring to secure crops suitable for cultivation in alkali soils. Other parts of the world, where the alkali problem is a serious one, are being explored with a view to importing such of their useful plants as endure a large amount of these harmful salts. As a result, seed of resistant alfalfa has been obtained from Algeria and Turkestan, cotton from Egypt for trial in the warmer parts of the Southwest, and promising varieties of wheat and barley from various countries of the Old World. Resistant fruit-trees, such as the date palm and the pistache, have also been imported."

At the fourteenth annual session of the Transmississippi Congress the question of good roads was discussed. There was absolute unanimity as to the necessity of good roads and the necessity of general co-operation between the United States and the States. The point was made that, as many of the interior States and Territories do not profit from the river and harbor improvements, the Government might equably assist in the construction and maintenance of certain public highways in and through such sections. A resolution was adopted urgently recommending that the States adopt a system of highway improvement under competent engineering supervision embodying the general principles now successfully practised in many of the older States.

The final report of Fourth Assistant Postmaster General Bristow has been completed. The conclusion is reached that the interests of the Government require that a radical change should be made in the system of purchasing and issuing supplies. The recommendation is made that the purchase of all supplies, both of the first and second assistants' offices, and also of the other branches of the service, be concentrated under the fourth assistant, with an entire reorganization of the supply division, under a new chief at an advanced compensation, by reason of the increased responsibilities and duties of the new division chief.

The oral arguments began last week before the Alaskan Boundary Commission at the Foreign Office, London. The important question is in regard to the location of the line inland "thirty miles from the general trend of the coast." Does the "coast line" follow the windings of long, narrow bays or cut across from promontory to promontory at the mouth of such bays? In the latter case Canada would control the head waters of such bays and thus have deep water access to the sea. The contention of the United States is for the former interpretation, which would bring such bays wholly within American control.

Preparations are already well advanced for the memorial exhibition of James Abbott McNeill Whistler's works at Copley Hall, Boston, beginning the last week of February. The interest and co-operation of the executrix of the estate has been promised, as well as that of individual owners of his works. The success of this representative exhibition seems assured.

Foreign.

The Right Honorable Joseph Chamberlain, Secretary for the Colonies, finding his views on the question of preferential tariffs for the colonies too radical for present acceptance, and thinking time will be necessary for the success of his propaganda, has resigned from the British Cabinet. With him also resigned Right Honorable C. T. Ritchie, Chancellor of the Exchequer, and Lord George Hamilton, Secretary for India. These two resigned because they could not depart from their strict adherence to free trade principles, from which Premier Balfour departs somewhat. It is expected that Premier Balfour will fill the vacancies and that no general election will take place before next year.

President Palma of Cuba has been making a tour of eastern Cuba. He was received everywhere with great enthusiasm. Squadrons of mounted police greeted him at all the towns, addresses were presented by officials and party leaders. "It is the result," he said, "of the people's joy over the success of the republic and the tribute is extended to me as its chief executive."

France is reported to be making extensive preparations to annex Morocco to her empire. Morocco is regarded as a possible strategic point of great strength in the French possessions. Great Britain, it is said, gave her consent to the movement at the time of the visit of the French President in July last.

Industrial and Commercial.

The collector of customs at San Francisco is in receipt of information from the Treasury Department that the exhibit on the part of the Government of the Philippine Islands of its products, manufactures, arts, ethnology, and education at the Louisiana Purchase Exposition at St. Louis will necessitate the bringing to the United States of upward of twelve hundred residents of the islands and approximately ten thousand tons of freight of miscellaneous character. The great bulk of this freight and all the passengers will come by army transports.

The Board of Trade of Bath, Maine, has appointed a committee to join with the two New York associations interested in shipping, in seeking a remedy for the decadence of the American merchant marine engaged in the foreign carrying trade. All three associations will co-operate in an investigation of the subject, with the intention of finally bringing the matter before Congress.

Goatskins to the value of $25,000,000 are imported yearly into the United States, mostly from India, China, Arabia, and southeastern Arabia. In 1885 the importation amounted in value to only $4,000,000. The increased demand is chiefly due to the popularity of certain kinds of kid leather for footwear and gloves.

King Edward was received last week at Vienna by Emperor Francis Joseph and was accorded an enthusiastic reception.

Southern California expects to market this year between five and six hundred carloads of English walnuts.

General.

The collapse of the famous ruin of the castle of Rheinfels at St. Goar on the Rhine is reported. This castle, rising 375 feet above the Rhine at the back of the little town of St. Goar, was regarded as one of the most imposing ruins on the river. The castle was built by Count Diether III., who died in 1276, and a new Rhine toll was established there. In 1692 it was bravely and successfully defended by the Hessian general, Von Goerz, against the French general, Count Tullard, with an army of twenty-four thousand men. In 1758 the castle was surprised and taken by the French, who kept a garrison in it till 1763. In 1797 it was blown up, and in 1812 the ruin was sold for $500. The ruin was bought in 1843 by Prince William of Prussia, afterward German Emperor.

An innovation in suburban passenger cars has been inaugurated by the Illinois Central Railroad. It is a steel car with side doors. The entire suburban system will be equipped with the new carriages as soon as possible to bring a gain in time and greater conveniences for the commuter. Instead of having doors on each end, the car has twelve exits on each side. These doors do not swing, but slide, and all can be controlled at the same time by a trainman at the end of the car. Each door opens into a section in which are eight seats. These sections, unlike the English cars, are connected by an aisle extending along the side of the car.

Some American railroad lines earn twice or thrice the dividends they pay, but put the surplus earnings into "betterment," while in England extravagant dividends are paid and improvements made by new capital until it is difficult to pay dividends at all. The total capital of British railways is $283,000 per mile; of American roads $60,000 per mile. Since 1896 the dividends of the principal British roads have decreased; on American roads they have increased. Our engines, 41,228 in number, haul in a year 649,878,505 passengers and 111,089,347 tons of freight. For every passenger car there are forty frieght cars.

The following amounts are spent yearly by representative American cities for the maintenance and operation of their public schools: New York, in a single year, $19,731,629; Chicago, $8,203,493; Philadelphia, $3,319,604; Boston, $3,043,640; Baltimore, $1,417,391; Cleveland, $1,257,345; and Washington, $1,182,916. New Orleans is at the end of the list, with an expense of only $478,025. St. Louis pays more for its police department than for its schools; $1,602,182 for the former as against $1,526,140 for the latter—a ratio of one dollar for the police to 95 cents for the schools.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Effort to Love.

SAMUEL GREENWOOD.

Love is the "tireless topic" of the world, the theme of song and story; but that is not always love which takes its name. Mortals, in their belief, have invested it with a material nature, and confined its realization to a personal, corporeal sense. It has thus become to them a possible blessing or curse, a heaven or a hell. This false conception of the real essence and operation of love, this submergence of the God-like in animality, has wrought fearful havoc upon the peace and happiness of mankind. A higher standard and a truer estimate of love as a spiritual quality and procurement, would go far towards redeeming the race from its morbid tastes and low moral tone.

The alienation of humankind from this spiritual sense of love with its unselfish and unrestricted activities, has marked the degree of mortal's debasement into the unlikeness of all that man was made to represent. With this departure from the God-like intercourse of brotherly sympathy and love, the need began for a religion that would lead men back to that divine, spiritual state wherein Love is supreme, and all men are brethren. This need has found expression in a multiplicity of religious beliefs, but that one is always nearest right which has most of good in it and which inspires its believers with the greatest love and good-will. The fierce activity of wicked passions in human nature is lamentable evidence either of the imperfect nature of past religions, or of mortals' neglect to climb by the ladders let down to them.

When Jesus was teaching, and so founding Christianity, he laid especial emphasis upon the need of loving; even to the extent that without it, it is impossible to be an acceptable Christian; and St. John makes brotherly love a criterion by which Christians might be known. The importance of Christian loving cannot be over-estimated, for it is the vitality of all religion and ethics.

Christianity would have made greater progress, and have had more power of godliness, if this command of Jesus had not been forgotten or neglected. The spirit which led the differing divisions of the Christian world into mutual hatred and persecution, and which to-day divides church folds, is not the spirit of Christ, but of Beelzebub. The bright gleam of hope in this opening century is the growing tendency among Christian denominations to bury the hatchet of doctrinal warfare, and unite in a common love for God and mankind.

We all desire to become more lovable to our friends and less offensive to our enemies. What can accomplish this unless we ourselves give what we hope to get? It is our own loving that will make us lovable and disarm hostility. A longing for love expresses the universal need of man: for who can live without love? Nothing can compensate us for its loss or lack. The human heart bereft of love would wither like an uprooted plant. Then why should mankind lack that which exists in such abundance, unless the poverty is in seeking to possess without giving? Many of us are living in the underground cellars of self-interest when nothing but our own apathy prevents our ascent into the sweet sunshine of selfless loving. The man who positively hates his brother is not in greater need of loving than we, who may be so self-absorbed as to forget the needs and rights of others. The hateful and revengeful man may be as near an awakening into the desire for a kindlier and more loving heart, as is his lukewarm brother, imprisoned in his own selfish dreams.

Though love in its divine, spiritual action is spontaneous, and glows without effort, mortals who dwell in a sense of estrangement from God, who believe man to be material rather than spiritual, cannot attain that heavenly consciousness without an effort. The desire to love comes without labor or sacrifice, but the fulfilment of that desire implies the conquest of passions and selfish impulses. Jesus' love for others led him to the cross, and by some his priceless gift was despised. To love as Jesus loved will cost mankind many struggles and much watchfulness and prayer; but his command is, "Love one another; *as I have loved you.*" To love thus should be the goal of daily effort and desire. It may seem to be a rugged road, and prove to be the way of the cross to a self-filled sense, but no other way leads to heaven.

It is easy to love our friends, for the heart responds without effort to their amiable qualities, and for mankind in general we may feel a sort of negative affection; but neither of these represent the state of loving to which we must attain, and to which St. John referred when he wrote, "He that dwelleth in love dwelleth in God." Personal loving rests too much upon material evidences to constitute that divine indwelling. Personal loving and hating are alike the product of human belief, and represent the mutable and capricious nature of all sensuous ideals. Hence our efforts to love should not be directed towards the cultivation or broadening of mere personal affection, but towards the possession of that spirituality in which our love, the image of the divine, shall be diffused, like the fragrance of flowers, to all who will receive.

Our endeavor to reach this ideal state is opposed by a belief in unlovable or fallen manhood, which is not the product of God, divine Love. The abandonment of this belief is the door to our loving divinely. To reflect love as our Master did, we must see man as he saw him, not as a sinning mortal but as the son of God, beautiful and lovely. Personal conditions, however disagreeable, did not repulse Jesus, for to him they were the lie about the man which Truth and Love would remove. The attempt to reconcile a human sense of affection with the personal conditions which may surround us, is not the fulfilment of the Christ ideal of universal loving. Whatever impedes in us the impartial action of spiritual love, we must remove. Thoughts of unkindness, retaliation, anger, pride, greed, offence at personal sayings and doings, suspicion, hatred, etc., if indulged, will work out in us an image of evil which can reflect no love. Whatever is not making us more loving and lovable is hiding in ourselves and others the Christman we should labor to unfold.

Love is not a corporeal sense, neither is it regulated by

Digitized by Google

the beautiful or repellent phases seen in a material conception of persons and things. Love is Spirit (Science and Health, p. 96), and loving is spiritual living. The effort to love aright involves the giving up of the belief that aught hateful or unlovely can come from God.

We are not required to love repulsive, mean, or wicked persons, but to let that love be reflected in us which sees no evil to repel. We cannot entertain feelings of tenderness for men while we see them to be disagreeable or bad, for this is the recognition of an evil power; whereas the Christ-love removes whatever presents man as other than the son of God.

Love exists in and of itself, and like the sun radiates universally when its rays are not obstructed. Our task is the removal of whatever prevents the manifestation in us of the divine ideal whose only life and mind and action is God, divine Love. As this is done, our hearts will glow with an impartial, spiritual affection which will embrace all humanity in its healing influence. This is not too transcendental for daily living, for loving is always more practical than hating, and every man may give love. This God-like giving will lead him above the lust of gain and the misery of selfishness, and give him the true understanding of God, "for love alone . . . comprehendeth Love."

The successful achievement of spiritual loving is a Christian privilege which the world can never take away. The standard of life is Love, and the understanding of this fact means the extinction of all fear, and deliverance from all evil. Our ascension into this heavenly realism is through the daily growth of thought from the plane of merely loving those who love us, or from the impulse of personal happiness, up to that broader concept of being wherein Love loves from its very nature, because it knows no other action.

This I understand to be Christian Science as taught and demonstrated by Mrs. Eddy.

Why I Strive to Follow the Teachings of Mrs. Eddy.

IRA C. HUBBELL.

By education and practice I am an engineer; what might perhaps be called a "self-made" one, in that I have not had the advantages of certain training which has been the privilege of others; and much that has been learned has been acquired when others were asleep, although at the time, I was doing a full day's work. I wish I might earlier in life have had the help received during the past eight years from the study of Christian Science.

In my study of engineering, preference was given those writers whose teachings were most lucid and explicit, and in the effort to gain a practical application of the subject I associated with those who possessed the clearest understanding of the principles of engineering, and who could, therefore, best enable me to apply what I had learned.

Throughout my life I have respected the teachings of the Bible and have taken rather an active part in Church and Sunday-School work, improving each opportunity to hear the famous ministers of the gospel, and have had intimate association with some of them; have heard and read their sermons in order to understand the Bible, and thank them one and all for the great good received from them; but under their teaching I did not get what was needed, for it all seemed to point to a God who was afar off, and it was a big question whether I was ever going to get where He had His abiding place.

I continued to drift until led to read "Science and Health with Key to the Scriptures," which I did in order to determine whether it was a fit book for my daughter, and for nearly eight years I have been a constant student of Mrs. Eddy's teachings, simply because I have found what I was seeking,—the truth, the simple, every-day, easily understood truth of which Jesus spoke when he said, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." The same truth expressed in Joshua, first chapter: "Have not I commanded thee? Be strong and of a good courage; be not afraid, neither be thou dismayed: for the Lord thy God is with thee whithersoever thou goest."

This truth has made me free, free from things none others know, save the great Liberator, and in a measure the new heaven and the new earth are mine. Furthermore this truth has saved the life of the dearest person on earth to me,—my wife,—having healed her of consumption; and in addition to all this it has brought into our home life a condition of peace and joy possible only under Christian Science.

The Bible is, unquestionably, the greatest book ever written and the great need of man is to be able to read it understandingly so that he may use it as his constant guide in all his affairs. Everywhere it teaches the inseparable union of God, and man made in God's image and likeness, and the sole mission of the Church is to make this plain; but how few of us believe that its teachings are practical and applicable to all our needs. That if we lack wisdom, we may ask of God that giveth to all men liberally.

Take the 23rd Psalm, "The Lord is my shepherd; I shall not want." Do we believe this, and do we understand that it is as true as that twice two are four? that it means we shall not lack intelligence, wisdom, the power to do right?

"Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."—is literally and absolutely true when we make God our habitation; and Christian Science makes this plain.

In Mrs. Eddy's writings I have learned how to get close to God and how to avail myself in an increasing degree of these glorious promises which reveal the great truth uttered by Jesus when he said, "The kingdom of God is at hand;" "The kingdom of God is within you." This teaching has made it possible for me to make the Bible my guide in business and social life, and has brought out results not possible under other conditions. It brings the results to-day as well as in all time, and makes it possible to "pray without ceasing" and to "do all to the glory of God."

I study Mrs. Eddy's writings to-day for just the same reason that I study the writings of certain well-known engineers in preference to others; viz., because of the practical help received therefrom.

When as children we took up the study of arithmetic we did not quarrel with the author because we could not do a sum in compound fractions, but we began with the simple lessons, learned the rules, practised what we learned, progressed, and understood what we should demonstrate. We should take Science and Health the same way, not trying to make its author say what we would like to find there, but trying to bring our thought to understand what she says, and to practise what we have learned. Doing this, we grow, and bless the day we began the study, and we find in Christian Science a high concept of God and man, an ideal devotion, a loving humility, and a lucid explanation of the life and mission of Jesus the Christ which enables us to follow close to him. It enables us to arise like the Prodigal and go to our Father that we may enjoy the sunshine of his love and enter into the fulness of our inheritance as his children.

I gratefully acknowledge the great good that has come to me and mine through Mrs. Eddy. She has made the world better, and is blessed of God and her life work verifies the fact that for every great event there is always one of remarkable receptivity to Truth, who meets the needs of the occasion.

It is small wonder that a church possessing the power to banish sickness should get on well.—*Boston Herald.*

Christian Science is the New Commandment.

EMMA S. MILLER.

WE are surprised to hear persons ignorant of Christian Science ask if we believe in the Christ. Of course we do, and would have no right to use the name Christian if we did not. More than this, we believe our religion is the same understanding of God that was applied by Christ Jesus in his work among men. Jesus said, "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." All of these signs follow the work of those who understand and practise the rules of Christian Science, which proves our claim to be true.

Christian Science is the new commandment Jesus gave, —"That ye love one another,"—because all our work is done through love; and we are not true followers of the Christ if we bear resentment and malice. Our Science teaches us how to regard discord and see the true harmony that comes from God.

If you had a friend who had been a daily companion for three years and the time came when you were surrounded by enemies clamoring for your death, if in that hour of peril this friend should swear he had never known you, could you ever forgive his cowardice? Jesus did, and so can you when you come to an understanding of the nature of evil as revealed in the Christ Science, and there is none other religion, science, or name under heaven given among men whereby you can forgive and love your enemies.

Let us consider two methods of handling the case of a man who is unjustly and cruelly treated by another. Guided by human impulse the ill-treated one will judge the other to be tyrannical and arbitrary, and if a law can be found to fit the case he will have his persecutor punished. Perhaps some think that is the right thing to do. If it is right only good will result; but two conditions may follow that are far from good. In one case, the abused man may have made an enemy who will probably harm him at the first opportunity, and in the other case he himself may be in a degree more sinful, because instead of destroying resentment he has simply gratified his revenge, leaving hate and many other wicked thoughts, still strong within him.

Let us now see how Christian Science would handle the same case. Mrs. Eddy says, "Love is the liberator." "Let human justice wait on the divine" (Science and Health, pp. 225, 542). St. Paul, who understood Christian Science, said, "Whatsoever a man soweth, that shall he also reap;" so if a man deserves punishment his own conduct will bring it to him without any help from us, and we must be watchful of our own thoughts lest in condemning him we are incurring a punishment for ourselves. Jesus, our great example, who lived through all these trying ordeals for our guidance, said "resist not evil;" "do good to them that hate you." He surely had every human reason for resisting the cruel injustice inflicted upon him, but he was living the "new commandment;" so, "When he was reviled, reviled not again; when he suffered, he threatened not; but committed himself to him that judgeth righteously." When his enemies were plotting against him, eager for his death, he prayed, "not my will, but thine, be done." As it is God's will to love and human will to hate, Jesus' prayer was, "Let not hate but love be done;" and because he loved he made even the awful crucifixion an occasion for the grandest, most glorious victory the world has ever known, showing us plainly that whatever comes to us can be turned to good if we do our part faithfully. In the words of St. Paul, "We know that all things work together for good to them that love God." That is the point,—to love God; then we will be doing our part faithfully; for in loving God we shall also be loving our fellow-man, and the harder we must work to do it the greater will be our reward. If we never have trials we can never have triumphs. Therefore the better law by which to adjust all difficulties is the law of love, or the new commandment. We have proof of this always before us in the life of Christ, and we now have with us the Science of the Christ to teach us how it can be done.

Getting and Giving.

EDWARD EVERETT NORWOOD.

THERE is one thing in the world which, in order to have, we must continually give, that is love. We must indeed make broad, clear channels for its streams,—

> And if at any time we cease
> Such channels to provide,
> The very founts of love for us
> Will soon be parched and dried.

So intimate is our association with our neighbor we cannot think a thought but it affects him; and all are our neighbors. In this way we can be foreign missionaries, while still in our homes. And while we know the work in Christian Science is severely individual, no one being able to do another's work for him, yet in the fullest and largest sense of the word we are our brother's keeper.

As we grow in the understanding of good and learn the demands made by divine Mind upon man, we recognize the true value and utilization of money. It is not alone a convenient medium of exchange, but an expression or manifestation of love or substance. Rightly used, a blessing; wrongly used, a curse.

It is said that John Wesley's plan through life in relation to money was, to get all he could, save all he could, and give all he could. Rightly understood it is a sensible and Christianly scientific programme. Some one has said that true wealth is not found in increasing our income, but in moderating our desires. As Christian Scientists, we know that "the earth is the Lord's, and the fullness thereof" and because it is His, it is ours also,—so much as we need of it. When He needs it for His cause we should be glad to give with a free hand, knowing that "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79).

In "Pilgrim's Progress," a riddle is propounded:—

> I knew a man, and some did call him mad,
> The more he cast away, the more he had.

And the answer was,—

> He that giveth to the poor
> Hath all he had, and ten times more.

The Gospel of giving, of true charity, is being preached and lived to-day more than ever before. People are feeling the need of the wise, careful giving that really does good, the supporting influence of good thoughts by those who, having nothing yet possessing all things, are glad to share with all. The one source is divine Love, and the supply is infinite. No sense of limitation can enter the mind of one who really demonstrates from day to day his needs. His understanding of the Principle of goodness is so clear that he is able practically to utilize this understanding, and so prove the allness and might of infinite good. Our Leader tells us in "No and Yes" (pp. 42, 16), that "Self-sacrifice is the highway to heaven," and "Every loving sacrifice for the good of others is known to God, and the wrath of man cannot hide it from Him." As Christian Scientists, we cannot encourage or resort to begging. A need is seen, and it will be met without struggle and without a sense of sacrifice.

Selected Articles.

Some Corrections.

Spinoza used the term God throughout his philosophy as equivalent to "nature." It was his belief, so far as can be judged from his writings, that God was in the material universe. Christian Science, on the contrary, teaches that God is Spirit, as Jesus said to the Samaritan woman, and that God's universe and God's man, which reflect Him, are spiritual, eternal, and indestructible. Christian Science teaches that matter is one of the many concepts of the human or carnal mind, and that these concepts must one and all first be recognized as false, and then be overcome through the knowledge, or Science, of God the One Mind, Spirit, or Soul. This knowledge is neither pagan nor idolatrous. It is in line with Jesus' promise: "And this is life eternal, that they might know thee the only true God, and Jesus Christ whom Thou has sent," and it fulfils the first commandment: "Thou shalt have no other gods before me."

When the term personality is applied to God, great care must be taken not to imagine God to be a magnified man, limited and finite. Christian Science protests against the term personality as applied to God in such a sense. In her Message to the Mother Church in Boston in June, 1901, Mrs. Eddy stated,—

"Our departure from theological personality is, that God's personality must be as infinite as Mind is. We believe in God as the infinite Person; but lose all conceivable idea of Him as a finite Person with an infinite Mind. That God is either inconceivable, or is manlike, is not my sense of Him. In Divine Science He is altogether lovely, and consistently conceivable as the personality of infinite Love, infinite Spirit, than whom there is none other."

It is true that Mrs. Eddy's understanding of the term "the Christ" satisfies, and has satisfied a great many earnest and intelligent students of the Bible as being the only logical and consistent interpretation, but what is of far greater importance, as proof of its correctness, is the fact that with this understanding multitudes have been reformed from wayward lives, all manner of physical ailments have been corrected, and many agnostics and infidels have been brought to the study of the Scriptures and have become practical Christians.

As for the question of the existence of sin, it should be understood that Christian Science does not deny such existence, as far as the human or carnal mind is concerned. It would be sacrilege, however, to impute the existence of sin to the divine Mind or its creation to God, and make Him responsible for all the misery and infamy incident to evil.

Christian Scientists recognize that if God is omnipotent, and beside that is infinitely good,—which no Christian will question,—then it follows that, if evil were ever real for an instant, that same instant it would also cease to be real, for omnipotent good (God) must instantly dispel evil at every instant. Thus if God be conceded to be omnipotent, infinite, and good, sin and sickness can have no real existence, but must belong to the realm of illusion and delusion. An omnipotent, infinite, and good God cannot be conceived of as co-existing with real sin and sickness. Two opposite realities are incompatible in the same universe, and Christian Science recognizes and teaches this incompatibility. There is no more room in God's universe for real sin and sickness than there is place for real errors in the science of mathematics. Any supposed errors in mathematics are always unreal in the science of mathematics, and neither belong to that science nor affect it in the least.

It should be noted in this connection that the term "real" is used by me in its metaphysical sense as applicable only to the eternal and indestructible facts of existence.

Mrs. Eddy has stated in her "Miscellaneous Writings," p. 367,—

"To good, evil is never present; for evil is a different state of consciousness. It was not against evil, but against *knowing* evil, that God forewarned. He dwelleth in light; and in the light He sees light, and cannot see darkness. The opposite conclusion, that darkness dwelleth in light, has neither precedent nor foundation in nature, in logic, or in the character of Christ."

Modern men and women are weary of religions which promise salvation after death, and they long to hear the good-news that physical, mental, and moral regeneration may be had here and now, if we will obey Christ's injunctions.

The Tares and the Wheat.

God's messages to mankind in all ages of the world, when correctly discerned, were designed to unfold the reality of being, a state of bliss often spoken of as heaven or harmony. As the true idea of God dawns upon human consciousness it enables us to discern between good and evil.

The Science of Christianity, or Christian Science, as given to the world through the writings of Mrs. Eddy, enables mankind the better to comprehend Jesus' teachings which separate the tares from the wheat. All that Jesus destroyed in his earth-mission were tares. Let us consider for one moment what he destroyed. All manner of evil and sin, sickness and disease, blindness, deafness, dumbness, sorrow, poverty, and death. The tares were to be gathered together in bundles and burned. The tares and wheat were to grow together until the harvest, which Jesus declared was ripe in his day.

The question naturally presents itself, how did Jesus destroy the tares and garner the wheat? Knowing that his Father did not send sin, sickness, and death, and conscious of his omnipotence and omnipresence, conscious that man, made in the likeness and image of God, Spirit, was spiritual and not material, realizing that the true senses of man are spiritual, he could bring even to the human sense of things a higher degree of perfection. Knowing that health is the normal state of man in God's likeness, and sickness and disease the unnatural, he destroyed the sense of disease and suffering (the tares), and garnered the wheat, awakening man to his God-given heritage of health and righteousness. The understanding of the true relation that man holds to God destroys any pleasure in sin, thus the desire to indulge in sin in its various forms is destroyed by the omnipresence of good. The Apostle Paul, speaking of the fiery purification, wrote: "If any man's work shall be burned, he shall suffer loss; but he himself shall be saved; yet so as by fire."

Jesus said, "The Son of man shall send forth His angels, and they shall gather out of His kingdom all things that offend, and them which do iniquity." When our thoughts are filled with Life, Truth, and Love, and we are conscious only of goodness and health, the tares (the opposite conditions) will be destroyed. Every individual must pass through this ordeal, this purifying process, and while doing so Jesus said, "There shall be wailing and gnashing of teeth," but when all the tares (material, sinful, sickly, and diseased thoughts) are rooted out of consciousness, this Scripture shall be fulfilled in our experience: "Then shall the righteous shine forth as the sun in the kingdom of their Father."

We all recognize the good effects of right living,—the healthful results of doing good and being good, and that freedom from sin is a good preventive of disease. We should likewise understand that the destruction of sin in the individual means eventually the disappearance of its effects. In other words, that goodness in the individual is a remedy for ills as well as a preventive.

Perfect control over bodily conditions cannot be gained in a day. We must be gradually developed spiritually. I agree with our critic that a brakeman who claimed he could stop a car with his mind, would not be safe unless perchance he has proved his ability to utilize the power of omnipotence sufficiently to produce such a result. Wise Christian Scientists throughout the entire round of their practice are governed by this rule: not to attempt that which is beyond their present ability to demonstrate with a reasonable degree of success. Hence they are not guilty of the things which are sometimes attributed to them.

Appreciation of the Manual.

Rev. Mary Baker G. Eddy.

Beloved Leader:—Owing to the great demand for the new Manual, our order of many months' standing was much delayed, so we have had the precious book but a few days.

But I have fairly pored over the wonderful volume and am trying to mentally digest its contents.

I thank you more than words can tell, for the divinely wise provisions therein contained.

It points our fledgling students from person to Principle. It gives us who are teachers an opportunity to come into unity of thought and uniformity of action in our work; and underneath it all is the deep-toned call to better healing,—more and quicker and fuller proof that God *does* heal through Christian Science.

And though we may no longer use the dear term "Mother" as applied to you, I am sure this latest gift has brought me a truer concept of what that name really means. I cannot voice my thanks—I will aim to live them in obedience.

Your loving and grateful student.

MARY BROOKINS

925 N. Y. Life Building, Minneapolis, Minn.
September 17, 1903.

231 McLeod Street, Ottawa, Ont.
September 14, 1903.

Beloved Leader and Teacher:—I cannot accept your latest gift, the revised Manual of the Mother Church, without expressing profound thanks for this highest implement of church government, this spiritual enunciation of law and order in the church, this guide in the uniform unfolding of the ultimate harmony—God's law.

Because of the sacredness of our work in Christian Science, where human life and its dearest ties are daily and hourly in the balance, your loving wisdom has seen the necessity for safeguarding it with proper and effective regulations.

The By-law having reference to uniformity in teaching and practice must of necessity elevate the standard of Christian Science healing and ministry.

With the revised "Science and Health with Key to the Scriptures," the Concordance, and the Christian Scientist Law Book with its loving demand for the unity of teachers and students, we may now look with certainty for the unity of churches in our denomination.

My daily prayer shall continue to be, that I may be a help, not a hindrance to you in your great work for humanity.

Mr. Higman joins in sincerest love and thanks.

Your grateful and obedient student,

ELIZABETH W. HIGMAN.

Letters to our Leader.

May 25, 1903.

Rev. Mary Baker G. Eddy.

Dear Leader:—Under separate cover I am mailing to you a programme of the Emerson Centenary services which I attended last evening, and the hymn which all united in singing.

President Eliot's scholarly address dealt with Emerson "as a prophet"—especially with his prophecies regarding education, social conditions, and religion, and the extent to which his views have been adopted.

He spoke also of the reluctance with which any age receives a prophet, because to accept him acknowledges a dissatisfaction with the present.

I felt that the anniversary and reminiscence of this lesser prophet, might hold a moment's interest for you as prophet and seer, whose life and work are so potently touching and leavening these three great aspects and activities of humanity (education, social condition, and religion) and forcing it through and out of all the phases of human idealism to this—"The Christianization of mortals whereby the mortal concept and all it includes is obliterated, lets in the divine sense of being, fulfils the law in righteousness, and consummates the First Commandment, 'Thou shalt have no other gods before me' "(your Message of 1902) —in fact, to accept "Divine Metaphysics."

The hymn speaks to me of your "lonely vigils," your "obedience to the vision" and the present faint, and future fuller enshrining,—in the hearts of men,—your "life-purpose," your revelation of God and man.

And I find a prayer in my heart, that I may walk in the same path, though rough and steep, pure enough to see the vision—faithful and obedient enough to follow.

With reverent love, your student,

MARY STEWART.

18 St. Stephen St., Boston.

372 Boylston Street, Boston, Mass.

Dear Leader:—As reciprocal for the love you are constantly exercising for the children I feel your heart will be made glad by the positive, impromptu answers given by boys belonging to the Sunday School of the Mother Church. One little fellow was asked, "Why do you believe Mrs. Eddy knows more about God than any one else on earth to-day?" With scarcely a second's interval he earnestly replied, "If you really want to know—it's because no one else is the author of Science and Health, which is full of God."

To another it was said, "It is easy enough for Mrs. Eddy to be a Christian Scientist for she has everything her own way." Quick as a flash came the answer, "No, she doesn't either, it's only when her way is God's way that she has it; if it isn't she just waits until she knows His way."

I confess that I held a partial belief in the statement made to the second boy, until through personal conversation with you my mind was entirely disabused of that impression.

Lovingly and obediently,

MARTHA FRANCES ALLEN.

September 7, 1903.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Healing Gospel.

We frequently hear the statement, "I do not see why Christian Scientists talk so much about the healing of disease, and lay such great stress upon it." The answer should not be far from the thought of any student or even casual reader of the New Testament.

When Jesus "had called unto him his twelve disciples, he gave them power against unclean spirits, to cast them out, and to heal all manner of sickness and all manner of disease," and when John's disciples asked, "Art thou he that should come, or do we look for another?" our Master's answer was, "Go and shew John again those things which ye do hear and see: the blind receive their sight, the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." The healing of the sick was so essentially a part of Jesus' ministry as to forever identify the correct understanding of God which he preached with the healing and saving power demonstrated through his works.

The healing of one case of sickness is no less certain evidence of the Christian Scientist's understanding of Jesus' teachings than is the solution of a problem in algebra the one satisfactory proof of the student's understanding of its rule.

Christian Science has been subjected to many criticisms, its theology has been discussed from an academic standpoint, the shortcomings of its followers have been commented upon, and even their good works have been evil spoken of, but we imagine that nothing can be said from a theoretical standpoint which will shatter the faith or annul the gratitude of the writer of the testimony in the June, 1903, *Journal*, from which the following is taken: "It is through the understanding of Christian Science as taught by Mrs. Eddy that I am living to-day. I had reached that stage where the physician said I was dying and would probably be gone in an hour's time. . . . The physician said, 'Nothing in this world can save her, she is beyond all human aid.'" M.

Paying our Debts.

None will deny that all men should pay their debts, but someone may deny the application of this moral requirement on the ground that he does not owe any one.

Let us analyze this thought that we may see how nearly true it may be. There are undoubtedly many who wisely avoid the burden of financial obligation to others, but if compliance with the demands of justice in this single particular beget a sense of self-righteousness, he is surely accumulating debts which will some day have to be met.

The child's first obligation is to his parents; and it is surely a heavy one. Then comes the indebtedness to teachers and religious guides, to the friends of youth and of riper years, and to those who bear the burdens and responsibilities of public affairs, as some must,—a fact too often forgotten. In addition to these personal obligations we should constantly remember how much we owe to the cause of Truth, and prove our sincerity of purpose by speaking fearlessly for it when occasion offers, and living its teachings so consistently as to convince the world that it is Truth which inspires and governs us. In noble natures the sense of indebtedness to others ever increases with the unfolding perception of what has been undertaken and accomplished for them by those who have toiled to lift human thought above the clod. Few there are who see this subject in its true aspect until they themselves have suffered from the remissness of others; then with chastened hearts they ask themselves where they stand, and like Paul are ready to say "I am debtor both to the Greeks, and to the Barbarians; both to the wise, and to the unwise."

We Christian Scientists should ponder often this great apostle's words: "Render therefore to all their dues; tribute to whom tribute is due, . . . honor to whom honor. Owe no debt to any man, save the debt of love alone" (Conybeare and Howson's translation). This debt of love to the many is so great that we shall have to go on making payment forever, but like a national debt it involves no disgrace, and our creditors should never have cause to regret our relations to them.

Our debt to divine Love is boundless, and our obligation to our fellow-men is seldom cancelled until we lovingly acknowledge our indebtedness to God. Christian Science has taught us how to more truly estimate what is due our Elder Brother who taught the glorious possibilities of man's true being as a child of God. As we read the Bible in the light of Christian Science we are thrilled with love and devotion to Christ Jesus and our best return to him can be made by carrying on to its completion the work he began, till every sick and sinning child of the human race is redeemed though Truth.

In trying to pay this debt we cannot forget our lasting obligation to our revered Leader whose teachings have come to many of us like an angel of light, when we were faint and weary in the wilderness of sin and suffering, "harassed by the fiends of doubt and dismay;" knowing not God, nor where to find Him as a present help in our deep trouble.

In 2 Kings a beautiful story is told of a poor widow who had no means of meeting the pressing demands of her creditors. She sought counsel of Elisha, and told him that she had nothing in her house, "Save a pot of oil." The prophet bade her borrow all the empty vessels she could find, and pour oil into them till all were filled, then sell the oil, pay her debt, and still have all she needed to provide for her children and herself, and this was done even as the man of God told her. In order to profit by this lesson we should read the definition of oil as given in our text-book, "Consecration; charity; gentleness; prayer; heavenly inspiration" (Science and Health, p. 592). These are the expressions of love which we should pour out continually in payment of our obligations to God and humanity. The source of supply is infinite Love hence no one ever need feel too poor to pay all his debts, and the way is so clearly pointed out in Christian Science that none should falter or fail. Our text-book says, "Honesty is spiritual power. Dishonesty is human weakness, which forfeits Divine help" (Science and Health, p. 453). K.

Giving and Gain.

Much is said nowadays by religious writers respecting an alleged decline of spiritual earnestness and activity, and not a few facts, such as the passing of revival movements, the indifference to Sabbath observance, the falling off in church attendance, the free and frequent criticism of creeds and dogmas, etc., may be cited in support of the contention: but in one respect the religious world is certainly establishing a record; namely, in its giving.

The raising of enormous twentieth century funds by various denominations has drawn special attention to the subject, and a religious weekly before us gives figures

Digitized by Google

which have authorized the conclusion that about three hundred million dollars is annually contributed i the United States for the support of religious services and institutions, while not less than a billion dollars per annum are expended in the support and propagation of Christianity throughout the world. If, therefore, the amount devoted to Christian enterprise were a true measure of the presence and activity of the Christ-life, these figures might well awaken the greatest enthusiasm.

The doubter may have some reason to aver that men often give money to the church to atone for the fact that they are not willing to give their hearts to God, and that it is far easier for men to be generous subscribers to religious endowments than to manifest the spirit of Christ in the conduct of their business, and in their attitude toward their fellow-men; but in very large part it is certainly true that this giving does represent a genuine Christian impulse of love and self-sacrifice for others,—a heroism of earnest and conscientious endeavor which is equally splendid and pathetic, for it represents a faith that has been bravely indifferent to disappointment in results.

The early disciples of Jesus entered upon their work in the face of tremendous odds. The governing powers of the world were all against them, and the most dreadful sin and moral debasement characterized the general condition of the people. Moreover, they were simple, common folk, without organization, distinction, wealth, influence, or worldly power of any kind, and yet in the face of the bitterest opposition, the most cruel and destructive persecution, how steadily and irresistibly they advanced and won. The contrast is very marked and its explanation surely lies in their clearer and more practical apprehension of God-with-us, their consciousness of the omnipresence and availability of Truth. The demonstrations of the healing of sickness and sin constantly attended their ministry, and apart from this consciousness and their daily demonstrations of the power of Spirit, we can see how certain and complete would have been their failure.

Who can question the victorious outcome long ere this, of the movement which Jesus inaugurated, had his followers and representatives always retained and wholly relied on this divine factor in the undertaking.

Christian Science has come to re-enthrone the saving Christ-idea in human consciousness and thus effect anew the demonstration over sin, sickness, and death which rendered the ministry of our Lord and his disciples so adequate; and when this essential of Christianity shall have found recognition and been given its true place by Christian believers everywhere, the prospect of the world's redemption will be vastly more encouraging. W.

PRESIDENT ROOSEVELT will always be remembered for his frank forcefulness of character and expression. His appeal to the manliness of men is constant, and his oft-repeated statement that the true test of our advance, and of the promise of the future is not the volume of our trade, the size of our crops or the extent of our sovereignty, but the quality of the average citizen will always be associated with the world's remembrance of him.

A most baneful tendency, peculiarly incident to the times when the national feeling is strong, is that of the submergence of the individual—the forgetfulness that things depend for each and all upon the answer to the question: "Am I living a wholesome, unselfish, and manly life."—and the President's very frequent direction of thought to the pre-eminence of the individual gives great significance to his influence as a moral educator from the vantage-ground of an exalted position.

It is a very splendid and fortunate thing that the first and most influential man of the country should thus emphasize that "courage, honesty, and common sense, for lack of which no genius can atone." W.

Association of Teachers.

The first Annual Meeting of the Association of Teachers in the United States organized under Article XXXIII. of the Church By-Laws (29th edition of the CHURCH MANUAL), will convene in the Mother Church in Boston, Mass., Monday, October 26, 1903, at nine o'clock in the forenoon.

"Loyal Christian Scientists who have certificates of the C.S.B. or C.S.D. degree, or both, from the faculty of the Massachusetts Metaphysical College or Board of Education" are qualified for membership in this association, and those thus qualified will be admitted to the first meeting by card. Cards may be obtained from William B. Johnson, Clerk of the Church, 30 Norway Street, Boston, Mass. Application for these cards must be made by letter at a date sufficiently early to secure them in advance of the meeting. Applicants will please send name and address in full.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

The Concordance.

THE Concordance comes to me, as a mine of unfathomed treasures. I rejoice in it, and am thankful, but gratitude is the deep soul-sense of the power of Truth to overcome all error, and this I must demonstrate. So I work, watch, and wait, as our wise Leader has done in working out her ideal, after the pattern shown us in the mount.

M. E. E.

THE thanks of every earnest student of Science and Health, is due to our wise Leader for that anticipation of the wants of the Field which has provided us this "great gain." There is a sense of deep gratification in view of the thoroughness of the work. Surely, it is "*complete.*"

Our Leader's latest gift to her grateful students, is loaded with spiritual benefits to every seeker after righteousness. It is itself a Key to great riches, in Wisdom.

ELLIOT HOWARD GILKEY.

I DESIRE to express my appreciation of the Concordance to Science and Health. It certainly represents a vast amount of labor, and I think must be a revelation to most Scientists of how much there is to be found in our text-book. I do not believe that there has ever been published a book which in proportion to its size requires so large a Concordance to express adequately its contents. I have found it very helpful and a great labor-saving device in the preparation of selections for our Wednesday evening meeting.

M. P. RICHARDSON.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting to be held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Those who approve applicants will greatly assist the Clerk if they will send their applications as early as possible.

Truth built into life's lowest outer plane
Of simple deeds leads to the higher way
That on and upward tends with endless gain
Of light and love, till lost in perfect day.

And truth must enter into smallest things
Of word and act that constitute the whole
Of life in ultimates, and thus it brings
To us the love which is of life the soul.

T. M. T.

The Lectures.

At Canyon City, Tex.

At the Court House in Canyon City, Texas, September 1, Judge Septimus J. Hanna, C.S.D., lectured on Christian Science. Many were turned away at the door being unable to procure seats; many stood and listened to it all.

George A. Brandon, proprietor of *The Canyon City News*, introduced the speaker in a few well-chosen words.

Correspondence.

At Menominee, Mich.

Judge William G. Ewing delivered a lecture last evening [August 24] in the new Menominee Opera House, under the auspices of the local Christian Science Church. The audience was a representative one, there being present the most prominent members of churches of all denominations. Nearly every chair on the lower floor was occupied, and the convincing remarks of the eminent jurist received most respectful attention.—*The Daily Leader.*

At Toronto, Ont.

The lecture upon Christian Science delivered at the Grand Opera House on Sunday afternoon, September 6, by the Hon. William G. Ewing of Chicago, under the auspices of First Church of Christ, Scientist, was an interesting event. The Opera House was filled with a large and attentive audience, who were in their turn rewarded by a most thoughtful and logical address. Judge Ewing addressed his remarks rather to those who were not in accord with Christian Science than to the great number of Scientists who were present. Mr. John O'Connor presided, and Mr. J. H. Stewart introduced the lecturer in a brief address.—*The News.*

At Canton, Ill.

A great audience greeted Judge William G. Ewing at the Opera House Tuesday evening [September 1].

The speaker was introduced by the Hon. B. M. Chiperfield, who said,—

Ladies and Gentlemen:—The presence of this splendid audience this evening demonstrates conclusively the profound interest that is felt in this very vital question, and it is a matter of great congratulation to us all, many of us who know so little concerning it, that to-night it is no mere idle theorist who gives us instruction along these lines.

The theory of Christian Science and those who represent it command respect, if not full acceptance. I recall that during the last session of the legislature of the State of Illinois there was present before one of the committees of the lower house a representation of Scientists from the City of Chicago and from the State of Illinois, and it can safely be said that no more profound impression was made upon this body than by the class of men who came there representing their views and asking for fair treatment from the legislature of the State of Illinois.

So this evening, from one who has been an honor to the State of Illinois, one to whom we shall be pleased to listen, we shall be instructed in the subject that has so persistently gained public attention, and it is with very great pleasure that I have the honor of presenting to this audience Judge William G. Ewing, who will address you.

Canton Daily Register.

Lectures at Other Places.

Genoa, Neb.—Dr. Silas J. Sawyer, C.S.D., June 7.

Testimonies of Healing.

Knowing how it helps and encourages a beginner in Christian Science to read the many demonstrations published in the *Sentinel*, I feel it a duty to relate a demonstration made in our home, which to my mind has settled all existing doubt as to the efficacy of Christian Science. On the night of August 14 we had a little gathering at our home, and my wife made lemonade in a large zinc water bucket, and as same was not all used on that occasion she left what remained in the bucket over night. The next day she became thirsty, and not wishing to go out to the cistern for water she drank a glass of the lemonade which had been left over night in the zinc bucket.

After the lapse of a few minutes she began to feel ill, and later became deathly sick and according to human belief every symptom of poisoning was manifested. However, she immediately began to realize the ever-presence of God, knowing that no harm could befall her, encircled as she was by the arms of divine Love. In a short while she commenced to vomit, after which she felt very much better, and in the course of a few moments the demonstration was complete in every respect. While my wife has been in Science for several years, I am a young recruit in this great army of Christian workers, striving daily to follow more closely in the footsteps of Jesus, and this demonstration has added strength and courage to my efforts. This is only one of the many demonstrations made, and we are indeed thankful for this knowledge of the Christ-love.

J. S. F., Houston, Tex.

I have written two or three testimonies to the benefit I have received from Christian Science treatment, but did not send them, as I thought my demonstration was not complete, and that I should wait until it was. Of late, however, I have realized how helpful it has been to me to read the testimonies of just such cases as mine.

I had been an invalid for two years, with so many discordant conditions, stomach, liver, and bowel troubles, also displaced organs which a severe surgical operation had failed to replace. Besides these I had an abscess in the inner ear, supposed to be inherited, and a great deal of pain if I went without cotton in both ears, and I was compelled to wear a truss for floating kidney.

For nine months I was unable to lie down to sleep but was compelled to sit upright on account of nervous sensations in my spine and head. If I fell asleep and slipped off the pillow, I would be immediately awakened by terrible sensations that ran up my spine. I dieted very rigidly for twenty-two months, and lost over sixty pounds in weight in less than a year. I had the attention of four very good physicians during that time, but derived very little benefit therefrom.

Finally, when material means seemed exhausted, my prayers for help were answered, and divine Love led me to Christian Science. Although I went at my husband's solicitation it was with reluctance, being opposed to Christian Science through ignorance. I was healed at the first treatment of the persistent bowel trouble from which I suffered. I soon discarded my truss, took the cotton out of my ears, and ate what I wished. I was treated for two weeks, and then purchased Science and Health, studied it, and in two months had gained thirty pounds and could walk two or three miles daily. Best of all, I could sleep.

While some of the ailments were slow in yielding and error still tries to assert itself at times, I realize I have been wonderfully benefited.

I now weigh one hundred and forty-three pounds, am the picture of health, and can stand a great deal of exertion, where less than four years ago I weighed less than ninety pounds and in the eyes of many of my friends was doomed to death.

Digitized by Google

I believe I can truthfully say I do not regret the painful and weary path that led me to this haven of rest, Christian Science. There are no problems in my life to which I do not apply its teachings. Worry, impatience, control of temper, and business interests, as well as disease, have all yielded to the power of Truth.

I have even been able through my slight understanding to heal our animals. Our pet horse was healed of an ugly growth on his neck, and one of our fine Durham cows of an illness which our man said would result in death.

If I should attempt to tell of all the blessings which Christian Science has brought to me, I would take up more space than I could expect to be given, but I wish to add my tribute of gratitude to the Giver of all good, who through Mrs. Eddy has revealed to us the truth of Christian Science. I also wish to thank the contributors to our periodicals for their helpful words and articles.

FRANC G. PERRIN, Chicago, Ill.

I was healed of many complaints, including heart failure, lung trouble, and other ills too numerous to mention. I was sick more or less all my life, always taking medicine, till Christian Science found me in despair. I was healed in less than twenty-four hours of the lung trouble and heart failure.

I have studied Christian Science now more than six years. I could never do without the *Journal* and *Sentinel*, they are such a help and encouragement to me. I have made many demonstrations over such ailments as headache, toothache, cholera morbus, and lockjaw. The best demonstration I made alone was over a burned hand. Late one evening I scalded my hand very badly and it was very red on the back. My first thought was to put it in coal oil quickly; the next moment I said, "No, if the Almighty does not help I will have a terrible hand and be scarred for life." So I got my *Journal* and read and treated the best that I knew. It pained very much at first. It seemed an hour, but it was not more than half that time till all pain was gone and I went to bed without even bandaging my hand. It was a little stiff the next day, but was never a bit sore, and no scar at all, and it was well the following day. I was happy over this proof of the allness of God, good, and how thankful I feel to read Mrs. Eddy's book. The Bible is a new book to read now, for I know that God will help those who trust Him faithfully.

SOPHRONIA A. ENGELS, Calloway, Neb.

"Had Jesus believed that Lazarus had lived or died in his body, he would have stood on the same plane of belief with those who buried the body, and he could not therefore have resuscitated it" (Science and Health, p. 75). This passage came to me recently at the right moment, and I saw clearly the great distance between the seeming and the true man made in the image and likeness of God.

Years had passed during which I had been striving to gain this realization, and when the crucial test came divine Love upheld and sustained me beyond the most sanguine expectation. The shadow was erased and nothing left to cause fear or sorrow.

For sixteen years I had used no material remedies in any manner, but there came a time when a divided thought crept in and *materia medica* was accepted by a member of our family. Scientists only can understand the natural conflict in thought of opposing methods, although little of Christian Science was voiced on our part, and every aid was given to doctors and nurses, thus winning them over to a friendly attitude toward our Cause. We honored these friends who were using their highest knowledge to alleviate the suffering of our loved one; and in return they expressed regret at invading our home, and gave full recognition of our helpfulness and efforts to carry out their instructions.

"The sting of death is sin." If we have fulfilled, according to our highest light, our obligations of love and duty to those who have passed from mortal sight, and are persuaded, yea *know*, that they are advancing in truth, what cause remains for sorrow? I say "know," for as Scientists have proven even in a small degree the power of the Principle of Science over the lesser problems, does that not presage the certainty of its power over the greater?

In the old thought, where feelings of personal loss and self-pity would arise unbidden, we now find gratitude for Love that meets every human need, and added obligations of profound love and loyalty to our dear Leader who has made it possible by her teaching to triumph over the "sorrow of death."

That "there is no death" (Science and Health, p. 428), was never so clearly realized as in this late experience. I saw that the form of clay was not the child of God, who always was and is in the bosom of his Father.

A momentary stumble caused the dear one to resort to matter, but that was proven inadequate and error destroyed itself. From this false consciousness he has awakened to know that his Life was never lost, and now "eyes clearer grown the truth may see." This vision has opened for him the way for a greater progress toward Spirit. In this knowledge sorrow is assuaged, and there remains only the chastened heart, gratitude for divine Love, and a renewed vow to higher consecration to Truth and Love.

J. M., San Jose, Cal.

Up to the month of December last I was using hot baths, hot fomentations, and other remedies. On receiving the *Sentinels* and *Journals* in the month of January, I ceased using them all. I received Science and Health on the 18th of February last and took up study there and then. God bless the dear brother who sent it to me, for it has done wonders for me. It has done for me more than I am capable of telling. An organ which has been out of its place for years through an accident, has been made right. Nervousness and many other troubles are gone, thanks be to God. Two weeks ago I had a severe attack of dyspepsia for two days and two nights. I went about my duty as usual, without telling any one my sufferings, although they were severe.

I was often tempted even in my slumbers to use a material remedy, but I held to Truth. In that struggle I held on to these words, "In the beginning was the Word, and the Word was with God, and the Word was God. . . . All things were made by Him; and without Him was not anything made that was made." I held to Truth as recommended in Science and Health, understanding through its teachings that sickness is only a belief of mortal mind which is to be dismissed "with sudden dismissal" (Science and Health, p. 218). Finding that I was sore tempted with this belief, I said, The Lord will not suffer me to be tempted above that I am able to bear. At those words the error fled.

MARGARETTE M. H. RHULE, San Jose, Costa Rica, C. A.

I have been deeply impressed by the loving appeal of our Leader to those who will unite with her in the "pure purpose of demonstrating love even to loving their enemies" (Pulpit and Press, p. 29).

Although I cannot express in words my appreciation of her beautiful life and service to humanity, I can say in simple phrase, and with a heart that is striving to follow her counsel, that I am seeking to fulfil this loving request in my own life; and will, through God's dear grace, faithfully struggle till it be accomplished.

ELIZABETH KEEN, Plainfield, Ill.

Digitized by Google

The pages of our periodicals have been filled with words of life and liberty to me, and in loving gratitude I desire to give to others a few helpful words.

About two years and a half ago my little girl, one year old, fell forward out of the baby carriage, striking her face against the hot grate, in which burned a coal fire. The screams of the nurse and children brought me from the other room; I told them to retire quickly and leave me alone. I took the child tenderly in my arms, and God's presence and allness were so fully realized that the sense of material fire simply faded into nothingness, and I saw that it had no power. When I bathed the little one's face there was only a tiny red mark left, which faded away in a day.

Another case of healing was that of a young woman who was suffering severely with neuralgia in the teeth and face. My consciousness seemed quickened so that with great clearness I realized God's spiritual creation and again material things faded into nothingness. Instantly she arose from her chair and said, "Why, I am well, I have no more pain." Knowing, is so much better than mere thinking.

I returned from church one Sunday to find one of the little fellows hurt, and he was screaming and angry. I realized the truth as Mrs. Eddy gives it in Science and Health, page 340: "Divine Love is infinite, therefore all that really exists is in and of God, and manifests His love." I did not go near or touch him, but he was instantly healed of both pain and anger. It rejoices my heart to write of the peace and happiness, the joy, light, and love, the many beautiful experiences, the spiritual growth and harmony, that Christian Science has brought into my life. All that I am, and all that I have I owe to Christian Science.

A. C. B., Durham, N. C.

Truth is indeed ever ready to banish the false sense of discord. As we apprehend the light, even in a small degree, fear, hate, and anger all disappear.

This I have had occasion to prove for myself. As a college student, I was recently brought face to face with a very harassing sense of inharmony in one of my classes. Extreme irritability and expression of bitter sarcasm on the part of the professor in charge tended to arouse a strong sense of fear and ill-will among his students. The studies being quite difficult, it made matters seemingly worse.

From the first I strove to see the reality of harmony, the falsity of discord, and the perfect man, reflecting only God, Love. Each time that I entered the class I clung steadfastly to these thoughts, and each time there came instead of jarring discord a most satisfactory condition of peace. The recitations passed with far less friction than formerly, and to me there came still more clearly the "sweet and certain sense that God is Love" (Science and Health, p. 569).—Philip S. Barto, Urbana, Ill.

Having suffered from chronic dyspepsia for over twenty-six years, and having taken, I think, every drug and herb used in such cases with no good results, I tried patent medicines, but received no benefit.

I then abandoned them all and tried various home remedies, but for all I grew so weak and lethargic that it was with the greatest difficulty I could walk any distance. At this time a friend left me some *Sentinels* with other Christian Science literature, which I gladly read and approved.

This was a little over four years since, and soon after my daughter came to see me, and asked me if I would like her to treat me, to which I readily assented, though not expecting to receive much benefit from the same, as she had only been in Science a few months herself. To my agreeable surprise, however, I began to gain strength at once and soon had a good appetite for food, and could eat almost anything without discomfort. I am to-day, and have been for the last four years, in good health and am happy in the understanding of Truth.

Two years ago last February I met with a serious accident in removing a cap from a high pressure hydrant. I lost control of it, when the spring, which is a powerful one, lifted it off with such force that it struck me under the left eye, laid the flesh open an inch long, and knocked me almost unconscious. After washing the wound and refusing all other material aid, I walked home, a distance of a mile, and taking the Bible and Science and Health, I commenced treatment at once. I soon fell into a peaceful sleep, and on waking in the morning found the wound perfectly closed and the skin united. Strange to say, it never discharged or formed a sore, yet not strange when we realize that God is All-in-all and cares for His children and heals them of their sicknesses.

Edward W. Webster, West Brighton, N. Y.

Several cases of small-pox broke out in The Young Woman's Friendly Club in Denver, Col., where I was boarding last May. Although the place was not quarantined, every one was required to be vaccinated or leave, and all the cases were removed to the pest-house.

I had been feeling badly for three or four weeks, and had tried to meet the disturbing condition through my understanding of Science, but gradually growing worse, I was finally compelled to ask my teacher for help.

After telling her how I felt, I ended by saying, "I don't want to go to the pest-house," and she replied that it was not necessary for me to have small-pox.

Having given me a treatment, she advised me to be vaccinated, not because it was a necessity in Science, but because they required it where I was boarding.

There was already a slight breaking out on the body, but she assured me it would go no farther. That evening I called upon the physician to whom she recommended me, was vaccinated, and in a short time was feeling as well as ever, for the vaccination did not work, and every symptom of the disease disappeared.

Some of the worst cases were taken to the pest-house after I commenced treatment, and although the physician who vaccinated me strongly advised my moving at once, I remained at the Club for more than a month, until it was convenient for me to move to my present boarding-place.

God is indeed our refuge and strength, and though "a thousand shall fall at thy side, and ten thousand at thy right hand," "it shall not come nigh thee."

With the help of Truth I am striving to demonstrate the "stationary power, stillness, and strength," commended by Mrs. Eddy in "Retrospection and Introspection" (p. 117), and as I realize more and more my place in the infinite Mind, unhindered by the limitations of either time or space, the more I am able to manifest those qualities.

Mrs. Isabelle Morrison, Denver, Col.

For seven years I had been an invalid, and for two and a half I was forbidden by the doctors to stand or walk. One day a neighbor told me she wished me to try Christian Science treatment, and after thinking about it, I consented to have a practitioner come. When I saw her bright face aglow with interest in my case, I felt I would trust her method of healing.

In a day I was up, and in a week I dismissed the servant and was able to do all the housework. I still feared, however, that I might have a relapse, so I continued to call for treatment occasionally for four weeks.

Twelve years have passed since then and there has been no return of any disease. I can truly say that I was

Digitized by Google

strengthened, made happy and free, and enabled to "Rise, in the conscious strength of the spirit of Truth, to overthrow the plea of matter, or mortal mind, arrayed against the supremacy of Spirit" (Science and Health, p. 390).

One of the first paragraphs that I saw in the Christian Science text-book (p. 342), contains such glorious promises that after a few weeks' study I applied for class instruction, and began at once to devote my time to helping others to know of this freedom that the word of God brings to suffering humanity through the study of Science and Health.

I feel very grateful for the privilege of seeing Mrs. Eddy face to face and hearing her loving counsel to us: "Trust in the Lord."—MRS. ANNA ROBINSON, Little Rock, Ark.

The healing of many physical and mental diseases in my own case, among which were nervous neuralgia, weak eyes, and two tumors,—one on the breast and one on the back of the neck,—convinced me that Christian Science is the knowledge of God. The privilege of living in the home of a practitioner where I have witnessed many cases of healing that would make those outside the understanding of the healing power of Truth marvel, proved to me beyond a doubt that Christian Science is the truth that makes us free.

It is now four years since I first learned about Christian Science. It appealed to me at once as the balm I had searched for all my life. I wish to express my gratitude and love for all the Christian Science publications, and to Mrs. Eddy for her fidelity in leading us up higher.

FRANCES ELIZABETH WILLEY, Cedar Rapids, Ia.

In 1895 I was healed of a severe fistula which in the old way of doctoring required an operation in order to obtain relief. Some of my relatives even went so far as to have a physician try to persuade me to undergo an operation, but I knew there was a much better method of healing. Having been greatly benefited by Christian Science a few months previous, I would not consent to the use of the knife, and I was entirely cured of this ailment as well as dyspepsia and many others through Christian Science.

I feel very grateful to our dear Leader and to my helper who has striven with me patiently and earnestly. I am thankful for the spiritual understanding, and though I have not had the benefit of class instruction, I am enabled through this truth to make many demonstrations.

Had it not been for the benefits received through Christian Science, I would not be here to tell the "glad tidings of great joy."

MRS. IDA E. LEITHAUSER, Cedar Rapids, Ia.

I cannot let this opportunity pass without telling about the shower of blessing I received at the Communion services held in this city July 12, 1903.

I have been a student of Christian Science since March, and like many others have been slow to grasp its full significance of good. Although I studied and tried to learn, yet there was something that seemed to keep me from seeing the light. I prayed earnestly that I might be led from darkness into light, and as I began to realize that God's ways are higher than ours, I saw how I had been listening to error and planning my own work and way instead of depending on divine Love.

But on that blessed morning when we communed with divine Love, the burden of my heart rolled away and all was peace and harmony.

My heart overflows with gratitude to our dear Leader, and for all that Christian Science has done for me. I hope the light will shine as brightly for others, and it will, as they learn that God is Love.—L. B., Chicago, Ill.

Some years ago I had a very severe case of Roman fever and nervous prostration, and during three years tried both schools of medicine, as well as electric baths, having in all fifteen physicians.

Each spring I was sent to the seashore to escape the home climate and spent one entire summer on the island of Heligoland, Germany, as a consultation of physicians had made the family feel that it was necessary to find a place devoid of vegetation. During three years I scarcely slept at all, and was seldom without a severe headache, which the doctors called "rheumatism of the brain."

Finally one of our friends recommended yet another remedy, which at first gave me relief, but after two or three years the old troubles came back in a worse form and I found myself in great mental and physical distress.

In this condition, I turned to Christian Science, and after many months of patient work, I was finally healed.

I now realize that Divine Science is the way of escape from all ills, that Jesus Christ came to show this way, and that the Discoverer of Christian Science has revealed it anew.—MARY L. HUSE, Annapolis, Md.

While on a business trip recently, I met a lady whom I had not seen for about two years. When I last saw her she expressed great fear in regard to her daughter, who is a musician and travels a great deal. She feared that accident would befall her, and was constantly worried by this sense.

Trying to preach faithfully the Gospel of Christ-truth as found in Science and Health, I explained that God, intelligence, cared for all His children, and that she had no reason to fear for her daughter, as God is everywhere, and not a sparrow falls without our Father's notice. This conversation was held on a railway platform while waiting for the train to take us to our respective homes. At this recent meeting the lady informed me that from the time of our conversation she was entirely healed of all fear for her daughter's safety, and added, "She travels all over the United States, and I have not one thought of fear for her." During the same time the lady has also been healed of a serious disease. She is working her way out of other troubles; and we know that she will conquer in the name of Truth. She is an earnest student of Science and Health.

We feel very small and humble when we contemplate the fact that it is through our Leader's comprehension and explanation of Truth that such work is done. Every one may know the truth if his thought is receptive, for the same intelligence or good is with us all.

We praise God daily, and know that He has blessed, and will bless our Leader and all who teach faithfully the Christ-truth as has been revealed through her clear understanding.—HARRIET N. CORDWELL, Berlin, N. H.

About two years ago I was afflicted with a lame arm. For days and weeks I denied the error and tried to realize the allness of good, but the error was stubborn and it seemed impossible at times for me to do a day's work, nor could I if it had not been for Christian Science.

After reading of so many demonstrations given by those who had been healed by studying Science and Health, I knew that through the study of the book I could be healed, for God is no respecter of persons; so I went to work in earnest and by the time I had carefully read my book through twice I was healed.

In this demonstration I found that we should never be impatient if we are not healed by reading a few pages in Science and Health, for "when we realize that Life is Spirit, and never in nor of matter, this understanding will expand into self-completeness,—finding all in good, and needing no other consciousness" (Science and Health, p. 264).

MARY E. WATKINS, Lincoln, Neb.

From Our Exchanges.

In our orthodox exchanges we find evidences of an uneasy feeling concerning revivals. Judging by the past a revival of religion is now due. It ought to come, just as a revival of business follows a period of stagnation. The revival of religion is due. The churches need it, business needs it, in social affairs it is needed, in the life of the republic it is demanded. There is a sore need felt everywhere of an increase of the impulses which may properly be described as religious. But the old-fashioned revival has suddenly become antiquated and impossible to intelligent men. A revival of religion is needed: it must come, and it will come, just as soon as the object of it is the increase of religion pure and undefiled as a motive in the common life of the people. It must be unsectarian, not dogmatic; and above all things it must be unselfish.

The Christian Register.

Man cannot remain forever satisfied with material progress, however great it may be, which, from its very nature, does not make him all he should be and knows he ought to be. Forces lie within the personality which wait to be touched into action by motives and purposes which are above all temporal and material incentives. Within this field God waits for the opportune season to make His most effective appeals. The twentieth century is waiting for miracles of power in the spiritual to equal those in the material realm. There are large areas of undeveloped territory in the Christian man of to-day, and there are indications that Christian manhood will move out of the field of present struggle into the new domain of worthy endeavor, where it will awaken to a new conception of the undeveloped power resident in Christendom.

The Standard.

We estimate a man by what he is, or by what he has done. God estimates a man by what he desires to be and is striving to become. If one, in his heart of hearts, longs to be one with God, to honor God in his doing or not doing, and to serve God faithfully in serving others, even though that one be hindered or kept back and kept down by obstacles or opposers, God sees the mark at which he aims and the ideal to which he aspires, even though one's fellows note only that which has been already realized. We have indeed reason to be grateful that our judgment is with our ever-loving and our all-seeing Father, and not with our imperfect and short-sighted human fellows.

Sunday School Times.

There has been a great deal of effort in many places to swell the church roll, but little to purge it. Quality is of more account in God's sight than quantity. He calls for vine-pruning. Useless branches must be "lopped off." Discipline may be a "lost art" in our day, but many a church suffers greatly because it no longer exists. There is a growing need for its rediscovery.—*Presbyterian.*

Not in a single experience only, but daily, hourly, through life, is it true of every one of us that he is with the wild beasts and that the angels minister unto him. The beasts are our inherited or acquired animal appetites and impulses, which are seeking to drag us down to their baser level; and the angels are our higher spiritual aspirations and resolves, which call to us to rise.—Rev. Richard W. Boynton.

Daily living of the Christ-life is the best testimony we can give of the reality of our faith. We are not exempt from serving God on six days of the week because we are exempt from labor on the seventh. "Always abounding in the work of the Lord," is the apostolic rule of life.

The Examiner.

What simplifies life is to say something like this: "I do not pretend to know all about religion, or duty, or Christ; but I do propose to live along the line of life which I will call toward Christ. I propose to think less of what I may live by, and more of what I may live toward."

Francis G. Peabody.

"The atheism of to-day is not a denial of the existence of God, but indifference to the divine requirements," says *The Religious Telescope.*

Church Tenets.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.B., 30 Norway Street, Boston, Mass.

Building Fund of the Mother Church.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Clerk of the Mother Church.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Notice.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Sir Robert Finlay closed the argument for the Canadian case in the Alaskan Boundary question last week. Sir Robert said that Canada desired above all else access to the sea and control of the head of the Lynn Canal. He contended that the narrow channel of the Pearse Inlet should form the southern boundary, and that Wales, Pearse, and other small islands commanding Port Simpson should be given to Canada. The general trend of the coast should be taken as the boundary only when the mountains retreated inland beyond ten marine leagues. He quoted diplomatic reports to show that British acquiescence in American occupation had never been given, and asserted that without such acquiescence occupation was valueless. He was congratulated by Lord Alverstone, chairman of the commission, and by the American arbitrators. The case of the United States was then taken up by David T. Watson of Pittsburg.

The German third-class cruiser Gazelle, which has been visiting the Charlestown Navy Yard, has proceeded to Key West. This ends the visit of the first of that nation's warships which has been in Boston for many years, and the call has been a success in every way. The cruiser was sent here by the Kaiser in order to allow some of her officers an opportunity to look over the Charlestown Navy Yard's plant, and also as a show of international courtesy in return for some of the visits our ships have recently made to German ports. The Navy Yard officials have shown the visitors every honor, and the compliment has been most cordially returned by the foreigners. The Gazelle will visit several other of the navy yards and stations along the Atlantic coast before rejoining the squadron to which she is attached.

Professor Jenks of Cornell University, who has been in Europe serving on the American Monetary Commission, has been appointed by President Roosevelt to go to China to further the work of that body there and consult with representatives of the Imperial Government for a new monetary system for the empire. At present great confusion prevails in China owing to the lack of a uniform system. He will also stop in the Philippines to assist the Administration in its currency problem. The results attained by the commission in Europe are considered very gratifying.

The Government at Manila has decided to build a canal from Lake Taal to the sea at the expense of $200,000 out of the Congressional relief fund. This will give Batangas province an outlet for its products. Governor Taft has just received additional reports of distress among the natives of Batangas, Negros, Tayabas, and Cebu, the result of failure of the crops, owing to the ravages of locusts. The Government is now distributing $350,000 worth of rice among the afflicted districts, which is to be paid for in work.

The Honourable Artillery Company of London, which is expected to arrive in Boston this week under the Earl of Denbigh commanding, will visit Boston, New York, West Point, Washington and near-by points of historic interest, Buffalo and Niagara Falls, Toronto, Montreal, and the White Mountain region. The Company will be royally entertained at all points.

Foreign.

Affairs between Turkey and Macedonia still remain in an unsettled condition. Turkey is reported to have posted her troops along the Bulgarian borders to intercept Bulgarian bands attempting to cross the frontier to assist their co-patriots in Macedonia. Bulgaria threatens to mobilize her whole army unless the Turkish forces are withdrawn from the frontier. The Powers still insist in requiring Turkey to carry out the promised reforms in Macedonia, and Turkey promises to carry them into execution, but meanwhile her forces are cruelly repressing Macedonian bands that are almost equally ruthless. The Powers inform Bulgaria that she will not be supported by them in any purpose beyond her support of the needed reforms in Macedonia. The United States cruisers under Admiral Cotton still remain at Beirut.

According to reports an international arrangement is likely to be reached whereby France will support the Sultan of Morocco in suppressing the troubles within his dominions and will assume a protectorate over the country; Italy will give up any claims she may have in Morocco in return for a free hand in Tripoli; Great Britain's possession of Egypt will be recognized; Germany will receive satisfaction in the shape of the open door in these territories, while Spain will be compensated for exclusion from future expansion in Morocco by France. Previous reports were to the effect that France would annex Morocco by conquest.

A new North Pole expedition is being fitted out by Captain Drake, an experienced navigator, to start next year. The vessel will be brigantine rigged, with auxiliary steam, and will be provisioned for a six years' cruise. She will proceed from London to Vladivostock, and thence to Point Barrow and Prince Patrick's Land, whence she hopes to reach latitude 86 degrees. From that point a dash for the pole will be attempted.

There may not be any active interference in the management of the Congo Free State affairs, which have been administered by King Leopold of Belgium, but as a result, however, of the note of inquiry by Great Britain there will doubtless be increased stringency in repressing cruelty to the natives and greater care in the selection of officers.

Senator Obaldia, who was favorable to the Hay-Herran Canal Treaty, has been appointed governor of Panama and has taken over the functions of his position. This appointment is considered politic and will tend to check the secession sentiment in the Isthmus resulting from the disappointment at the failure to ratify the treaty.

Industrial and Commercial.

It has been decided at a meeting of passenger traffic officials at Chicago that the new two thousand mile interchangeable mileage book will go into effect November 1. The new book will be good on all trains and no question will be raised as to whether the person presenting it is the purchaser or not. It was announced officially that the following lines had entered the new bureau and would accept the book on their trains: Chicago and Alton; Chicago and Northwestern; Chicago, Burlington, and Quincy; Burlington lines in Missouri; Chicago Great Western; Chicago, Milwaukee, and St. Paul; Chicago, St. Paul, Minneapolis, and Omaha; part of the Great Northern; part of the Northern Pacific; Quincy, Omaha, and Kansas City; and Wisconsin Central. Officials of the roads represented in the new mileage bureau say that all Western lines, with the possible exception of the Rock Island, will join the bureau as soon as it is in operation.

A movement is being engineered by the Interstate Builders, Contractors, and Dealers' Association of Connecticut to merge into a single organization all the associations of masters of the various branches of the building trade. The promoters of the merger insist that the proposed consolidation is not intended to be hostile to the workingman and to labor unions, but that its purpose is defensive rather than aggressive, and that it seeks permanently to terminate the perturbing controversy between masters and journeymen in the building trades.

Agricultural implements exported from the United States last year amounted to $21,000,000 in value; in 1893 they amounted to only $4,500,000 in value; in 1883, to less than $4,000,000; in 1873, to $2,500,000, and in 1863 to less than $500,000.

Of this total of $21,000,000 worth nearly $3,000,000 went to France and about an equal sum to Argentina; $1,500,000 to the United Kingdom, and about an equal sum to Germany; $1,250,000 to Australia, and over $1,000,000 to Africa.

General.

Great things are expected of the different varieties of the eucalyptus trees in the matter of supplying the world in the future with a wood of quick growth and wide range of general and commercial use. American consuls say that eucalypts seem destined to revolutionize sylviculture in France, Algeria, Italy, Spain, Corsica, Portugal, Cape Colony, and the Transvaal. In Australia and the neighboring islands eucalypts are one of the important sources of the general timber supply and are the chief source of the hardwood timbers used here. They enter into the construction of buildings, ships, bridges, railroads, piers, telegraph lines, fences, paving, vehicles, agricultural implements, furniture, barrels, and a great variety of minor articles. They are held by foresters to be unequaled as a forest cover, as wind breaks, as shade trees, as a source of timber, fuel, oil, and honey, and improvers of climate. There are about 150 species, some adapted to tropical swamps, some to desert sands, and still others to lofty altitudes.

A member of the Paris fire brigade has invented a new mask, which is said to be a great improvement over all previous ones. It can be fixed to an ordinary helmet and around the neck by straps. The visor is of mica, protected by wire. In front of the mouth two pipes open, one furnishing fresh air and the other carrying off what has been breathed. A reservoir worn on the back as a knapsack contains two compartments, one holding two steel jars filled with compressed air; the other bag, which is called the lung, and which is connected by copper tubing with steel jars and special mechanism admits compressed air only at normal pressure to the lung, whence it is conveyed to the mouth. The mask leaves the ears uncovered. An electric bell gives warning when the supply of air is running out. The apparatus weighs only twelve kilograms, and will be put into immediate use in the Paris fire brigade.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Significance of the True Denial.

KATE SWOPE.

THERE is much general misunderstanding regarding the use of the term "deny" in Christian Science. This word is often misconstrued as meaning a general non-recognition of evil, a sort of nonchalant waving aside of all that is not pleasant and pleasing, a complete overlooking of things that should be remedied and eradicated; but it is a mistaken idea that Christian Scientists deal with evil as imaginary. They know that evil is real to mortal mind, very real indeed. They recognize that evil thought precedes evil action, therefore they strike at the root of evil rather than at its branches, and this process must of necessity give their efforts a superior power of destruction. They recognize that wicked thoughts are "the tares, . . . the children of the wicked one; the enemy that sowed them is the devil." Their destructive process is mental and spiritual, and it is aimed at sin, evil, or devil.

Christian Science offers a most practical, scientific, process for the destruction of evil because it works at the cause of evil, rather than the effect. Christian Science stands for the highest civilization of our times, for the greatest mental and spiritual culture of the day. It is attractive to, and draws within its ranks, a body of people largely characterized by progressiveness, intelligence, and such rugged mental courage as is necessary to the pioneer in every form of advancement. Christian Scientists, more than others, desire to root out all evil, to advance civilization and progress, and to lift men above a low physical, mental, and moral plane of living. Christian Science does not mean apathetic non-recognition of suffering,—a refusal to consider a remedy for evil,—far from it; its denials are fraught with sympathetic power. It is because of our great love for humanity, because of our sympathy for those who suffer as we once suffered, that we wish to employ the most enlightened means in their behalf.

We know divine Mind to be all power, and we try to reflect that power in behalf of others. Our means are remedial, because Mind is operative. The world is full of human helpfulness, but the age of spiritual helpfulness has come with Christian Science. We silently give the cup of cold water in Christ's name, in the name of, or the authority of, the spiritual declarations of the Christ-truth.

Jesus taught us practical prayer; he taught us how to find an answer to prayer, how to manifest good. He said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." As Christian Scientists, we try to express good according to this teaching. We believe that we have ever-present good,—God. We seek first the spiritual sense of possession, so that all things may be added unto us. As this was Jesus' method of manifesting good, it may be safely inferred that his way of obliterating evil must have been by the same process, and he might have said, when ye pray, whatsoever evil ye desire *not* to have, deny it, or *un*believe it in Christ's name, or the authority of Truth, and it shall be taken away from you. That is the kind of "denying" Christian Scientists do. We engage in an active *un*believing in the reality of all evil that is to be obliterated, so that the kingdom of heaven on earth may appear. We deny sin, sickness, and death, but when we use the term "deny," we do not mean that we dream away in an indifference to the proximity of the world's sin, sickness, and death. Our denials are prayers,—an active, purposeful, unbelieving in the power, activity, or presence of evil, so that we may more nearly approach obedience to the first commandment, "Thou shalt have [or believe in] no other gods before me." We need to remember that "the letter killeth, but the spirit giveth life." Our denials serve to make error unreal, by the affirmation of truth, they represent a spiritual process, not a letterly one. Unless our denials are spiritual, are an active unbelieving in error, they are not demonstrable Truth, therefore not practical. "Believe that ye receive them, and ye shall have" whatsoever ye believe in, of good or evil. Believing in sickness tends to subject us to it. If we believe we are in bondage, we help to bind ourselves, and the way to escape the shackles of slavery is to unbelieve that one is bound, to know that he is free.

"Where the Spirit of the Lord is, there is liberty." Herein lies the way of escape from all mortal trials. If we are in the bondage of enslaving environment, there is no escape so long as we dwell in that sense of bondage. The shackles of slavery fall asunder only as the sense of slavery breaks. When the Word of the Lord appears, when the spirit of the Master, or the mastering truth, appears, then there is liberty, then the stone rolls from the door of darkened lives and man walks forth free, demonstrating liberty. While we are believing that God is All and in all, we are certainly unbelieving all that is not good. This is our way of "denying" evil.

Christian Scientists have many temptations to believe in obstacles, to believe in minds many,—minds that resist progress and demonstration. The words of the Master should never leave us: Believing that ye have, ye shall receive. We need to watch while we pray, watch and see that we are not believing that we have obstacles, lest we maintain them. What we believe in, that we are likely to sustain. What power has a man over an obstacle, so long as he believes it to be an obstacle? The way to remove an error believed in, is to unbelieve it and know the truth. The way to remove obstacles is to know that the divine Mind is fixed, stable, unchangeable, "the same yesterday, and today, and forever." Obstinacy is but a counterfeit stability, an unreality. We need to know that in spiritual perception is all power, and that our spiritual thought alone is unchanging. "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, good" (Science and Health, p. 450). He spends his time trying to surrender human will power, so as to reflect the divine will or purpose alone. The Christian Scientist is the master in so far as he keeps his spiritual dominion,—the mastery of Spirit. The absence of mortal mind, and mortal force, bespeak a transparency for Truth, wherein power is reflected in power; wherein the Master is revealed,—the Master who said, "I am with you alway [within], even unto the end."

The Joy of my Life.

ELLA S. SARGENT.

"Be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."

Two strong points in this appeal of St. Paul urge themselves upon my thought: "The *renewing* of your mind," and "the *acceptable* will of God."

The acceptable will of God! That man should suffer, be punished? Sin, repent, and make weary atonement? That was never, to me, the acceptable will of God. I would not accept it. Christian Science has, however, shown me an acceptable will.

I have, somewhere in Boston, a little friend, a boy associated in my memory with the North Station. I never pass through that station without looking for him, hoping to see him that he may help me again as he helped me before.

I had to wait an hour for my train, and near me sat a little Jacob who told me that he was eight years old and that he sang in the Jewish Synagogue on the Sabbath. Jacob and I fell a-talking, and I asked him many questions about his church and about his God. Suddenly he turned his clear eyes upon me, lifted himself reverently and said severely, "You must stop this fool-ish-ness about God. God isn't a person; God is fire. He burns up all that is bad. He makes all pure." Ah, little boy! If this be true we need to lose the sense of God's personality; we must see Him as the Principle of being.

If we recall Mrs. Eddy's interpretation of the Twenty-third Psalm: "[Divine Love] is my shepherd," we shall no longer see God as a person, a literal shepherd, a god made in *our* image, a dispenser of good and evil; but see Him as infinite Love, leading and feeding the sheep with watchful and tender care.

It is the mistake we have made, you and I, and all the longsuffering, sinning, dying human race. We have made God in the image of mortals; a god punishing as we would punish in our wrath; a god making man to suffer as we make him suffer in our unforgiveness; a false god, a Lord God, a Jehovah. Not the great Elohim, the tender El Shaddai of the first chapter of Genesis who made only what was good, and who saw that it was good.

God is Love. What would our love do, our best nature do, our true self do? Why, we would save the objects of our love. We would rule out death, disease, sin. Even *we* would do this. Behold the Principle of the love that actuates us in its entirety, the infinite Principle, divine Love, which casts out fear, which feeds the heart, and abolishes death.

And what is His will? Why, simply that we keep His commandment, the new law, more compelling than the Ten Commandments, "This is my commandment, That ye love one another, as I have loved you."

Surely we can accept this will. Then, let us re-new our mind. Let us know this acceptable will, that all is Love and Love's behests.

Love transforms. Its every thought renews. No will of death, disease, or sin, for God is Love.

Love is a consuming fire. Little Jacob was right, God is fire. The fire which burns out fear and hate. "It makes all pure."

What is it to heal the sick? Why, it is to bring to human consciousness the simple truth that man is the image and likeness of Elohim the God who is Love. This is the Master's simple teaching: "Be ye therefore perfect, even as your Father which is in heaven is perfect," and Christian Science teaches that God is perfect and man is His image and likeness.

Be not conformed to this world, with its material laws, its pitiless limitations, its flickering loves. The body obeys the mind. Transform the mind till it has no fears; the heart, till it has no hates, and this human body will make sweet accord, purified by Truth and governed by Love.

This teaching that I have received, this little understanding that I have attained, makes me glad to say, at all times and in all places, that Christian Science is the joy of my life.

A Business Man's Point of View.

J. E. FELLERS.

"Why do your congregations contain so many business men?" is a question often asked Christian Scientists. The answer is not difficult. In this busy age, when the lines of competition are so closely drawn, men of affairs are compelled to seek and hold fast to practical things. They are not looking for theories; they want facts. When they find a fact which pays a dividend either in money, health, or happiness, they are slow to give it up. The writing machine, the incandescent lamp, the cash register, the telephone, the elevator, and the telegraph are all practical things in the business world. Their value is measured by results, or "by their fruits." There is no other reasonable test. The business man who is wise could not be induced to discard these convenient labor-saving and time-saving articles, unless his reason was convinced that their place could be filled by something more practical.

In most instances, the business men who are found in Christian Science congregations, are those who have known suffering while trying to conduct business enterprises and at the same time combating physical ills with material remedies, experiencing the slow but steady approach of ill health, shattered nerves, and a faltering faith in God. In Christian Science they have found a religion that has given them health for disease, peace and satisfaction for nervousness, and a deep-toned understanding of God's presence and power. They have been convinced by actual experience and severe tests that Christian Science gives fact for theory, and they refuse to believe, very naturally, that a half-sick man is as competent in the management of business as one who is healthy and happy. They are so thoroughly satisfied with the results obtained from Christian Science that they have discarded old theories which have proven impractical for the up-to-date facts of this great religion. Having tested the efficacy of this wonderful truth, which in every-day life means so much to them, it is not strange that they should find among others who have had similar experiences a congenial and helpful atmosphere. They are drawn to the Christian Science service, therefore, as naturally as thirsty travelers to a fountain in a desert.

Large corporations recognize the fact that the man who is watchful and constant in whatever capacity employed, is preferable to one who is ill, indifferent, and vacillating. Managers of many large firms say that great loss is sustained each year by the sickness of employes. A young man who is expected to be at his post of duty promptly on a given morning, telephones the manager of his department that he is ill and is advised by his physician to remain at home that day. His place remains vacant, or, if filled, the substitute, not being acquainted with the position, fails to present articles in such manner as to effect satisfactory sales. The firm not only loses the profit on that particular salesman for the day, but in most cases it pays him for the time lost. For several days following, this salesman does his work poorly, and on account of this fact another loss creeps into the firm s business. Loss is also occasioned by many employes becoming disqualified for several days at a time in consequence of dissipation and imprudent practices.

There are also many instances in which families of business men have not only been cured of various diseases, but habits of extravagance in every-day life have given place to frugality and economy. Better working capacity, better

Digitized by Google

morals, better service, better employes, better employers, these represent some of the "hundred-fold more in this time" which Christian Science has brought to its faithful followers. What wonder, then, that the practical business man is found in the church which teaches a religion that glorifies God, that brings peace of heart and triumph over sickness and sin, and which thus tends to drive hunger and dissatisfaction from the home of labor, and fear from the home of wealth?

A Visit to the White Mountain Church.

VIRGINIA A. HUBBELL.

On a fair Sunday morning we drove over beautiful mountain roads to the little White Mountain church nestled in the valley. It is a pretty structure of birch logs and boulders, surrounded by green fields with rugged mountains for a background from any point of view. It was the first service of the season, and the usual number of mountain visitors had not yet arrived; but there were about twenty present. The service was simple, a characteristic which marks all Christian Science services, but this one seemed unusually sweet, in the quiet of the mountains, and there seemed to be less of mortal thought to interfere with the peace which prevailed.

This little church is one of our missionaries in which all Christian Scientists are interested. It certainly means much to the Cause for those people who flee from heated cities in the summer to be able, Sunday after Sunday, to attend our service in so attractive a spot. If the church had a visitors' book, it would contain the names of many from distant cities and countries.

While in the mountains, a lady who is not a Scientist said, "I have watched the Christian Science people a long time, and when severely criticised they have manifested much love and gentleness. They bear no malice to any one, and when judged or condemned say nothing, but keep on living their same beautiful lives. I am going to study Science for myself now." How much missionary work Christian Scientists can do if they all thus live up to their knowledge of Christian Science! How much more that will accomplish than years of preaching and talking. The quiet and faithful living of the truth as taught in Science and Health is the deed which speaks louder than words. Truly "the best sermon ever preached is Truth practised, and the demonstration thereof,—the destruction of sin, sickness, and death" (Science and Health, p. 201).

Speaking for Others.

WALDO P. WARREN.

In our desire to emphasize our remarks we are sometimes tempted to state that Christian Scientists as a class do this or that, forgetting that except on well-known points it is presumption to speak for others. The feeling that we are privileged to do this may arise from the thought that where all are working from the same basis they must reach the same conclusion. But it should be remembered that while Christian Science is always the same, our application of its truths varies according to the degree of individual understanding and individual demonstration. With our problems at such different stages of solution, our conclusions as to application must necessarily be in a state of growth, as we advance in the understanding of Science. These conclusions may therefore differ, and yet each be true from the standpoint of the individual. How necessary then to avoid making generalized statements of attitudes towards a given phase of the life problem, when really we have only our own experiences from which to judge. It may not be necessary to point out that such statements are prolific sources of misunderstandings which injure the cause.

Selected Articles.

Surface Criticism.

Will you kindly give me space to reply to Dr. Kilmer's criticism of Judge Hanna's recent lecture on Christian Science in your city?

Dr. Kilmer first argues against Judge Hanna's statement that sickness is the result of sin; and the doctor seeks to make his objections more acceptable by applying them to the case of "children too young to know right from wrong." It is clear that the critic has wholly misunderstood Judge Hanna's meaning. He has forgotten the necessity for always keeping to clear and strict definitions in all abstract reasoning, and has wholly misunderstood the true definition of sin and sickness as stated by Judge Hanna from the Christian Science standpoint. He has, instead, suffered himself to fall into a want of clear thinking, and has been led by his outraged sense of justice to devote to Christian Science some pretty harsh language, whereas what he is berating is not Christian Science at all, but an odious theological dogma which has somehow got mixed up in his beliefs. As briefly as I can, I shall try to make these distinctions clear.

The theological dogma teaches that God created sin and sickness. Christian Science denies this; recognizes God as the supreme source of all good, and that it is unthinkable that God's omnipotent rule of law and order is broken by His own creations of discords such as sin and sickness. Christian Science teaches that atheism is the only logical outcome unless we accept the scriptural statement, "And God saw everything that He had made, and, behold, it was very good."

The theological dogma teaches that sin and sickness are realities of man's life on earth, sent upon him "by some mysterious act of Providence." Christian Science teaches that nothing exists as a reality except what is good, using the word "reality" in its true philosophical sense. One might write down on paper, and might believe, that three times eight is twenty; but that would not make it a reality. There are many false appearances, and many false beliefs, but nothing exists as a reality except what is in perfect harmony with God's will and purpose. Christian Science teaches that all reason is put to fault unless it be true. As written by James: "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." Christian Science teaches that it would be contrary to all reason to affirm the existence of God and then deny the truth of John's words: "All things were made by him; and without him was not anything made that was made." Reason and Scripture unite in teaching us that "God is Spirit," and "God is Love." Therefore, the old theological dogma that God sent sickness as one of His creations upon children, or men, or women, is illogical as well as unscriptural.

Now let us apply the above, according to Judge Hanna's lecture. He said, "Christian Science teaches that sickness is the result of sin, in its broad definition as human error." "When we speak of sickness we do not mean merely physical sickness, but every kind of discord, sorrow, and disease." Those are the words to which Dr. Kilmer makes his objections. Does Dr. Kilmer still affirm the old theological dogma to be true, and that God is the author of the sickness of children? If so, let him vent his sense of outraged justice upon the unjust deity of his own false beliefs, not upon the eternal and infinite Love who is God. Or, does Dr. Kilmer now agree that sickness is man-made and not of divine origin; or, in Judge Hanna's words, "the result of sin, in its broad definition as human error"?

Let us reason together a little further. "All things were

Digitized by Google

made by him; and without him was not anything made that was made." What, then, is sickness? Using the word according to its strict definition in logic, is sickness a reality or a phenomenon? When analyzed, the question as thus worded is this, Is sickness God-made or is it man-made? Shall we say that God makes the transgressions of His own laws? That would be absurd. Who makes sickness, then, man or God? Man makes it. And when man makes it, is it not a departure from God's law, and is it not, therefore, outside of the realities of being as known to God's law which is without variableness or shadow of turning? And here we come to the fundamental of Christian Science teaching as to sickness, that, being man-made and not God-made, its causative origin is to be found necessarily in erring human mentality. And hence follows the essential difference in practice: the drug physician doctors the effects, while Christian Science deals with the cause, and lays its axe to the root of the tree. The logic of Christian Science is irrefragable; and the experience of the last third of a century in healing sickness and sin demonstrates and confirms it. It is the same blessed truth taught by Jesus, and is being proven in the same blessed way. Christian Science disowns and repudiates the adulteration of dogma as no part of Christianity. It says to the sick, "Sin no more," when healed of their sickness, just as Jesus did, affirming, just as Jesus did, that sin and sickness belong to the same category. When Jesus said, "Ye shall know the truth, and the truth shall make you free," he declared the ability of truth to deliver us from the errors of sin and sickness. When James declared, "The prayer of faith shall save the sick," he so declared upon the strength of what he had been repeatedly witnessing. When those who are the beneficiaries of Christian Science say to you in the words of Jesus, "Have faith in God," and, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you," they also say those things to you upon the strength of what they have repeatedly witnessed.

All that Dr. Kilmer threateningly says about prohibiting people from attending the sick unless they are educated as drug physicians, would be applicable to Jesus and the early Christians if they were now on earth. He must remember that we live in a free country where no form of a medical trust, however disguised, will be permitted to interfere with the personal and religious freedom of any citizen. As well take us back into the darker ages when ecclesiastical tyranny sought to stifle the freedom of religious conscience, as to force us to swallow the prescriptions of drug physicians, and to employ them, whether we believe or disbelieve in them. Wherein would the odiousness of a medical tyranny be any less than that of a sectarian tyranny? Our fathers fled to the wilderness to escape the torch and scaffold of a hostile religious sect. Surely, Dr. Kilmer never weighed the force of his words on the subject of prohibitive legislation against Christian Science, or else there was much need, very much need, for him to have hesitated before he said, "Let it be distinctly understood that I am not bigoted in this matter."

I have made no reference to the abundance of harsh language with which Dr. Kilmer has treated the sincere convictions of those who venture to entertain notions differing from his own. Harsh words prove nothing. If we differ, let us do so kindly and reasonably.

CLARENCE A. BUSKIRK.

The Atonement.

THE atonement of our Lord may properly be called vicarious, since it was a pure sacrifice for mankind manifesting his infinite love. He said that he could have called more than twelve legions of angels, intimating that he could have prevented his death if he had used the power at his command.

His death and resurrection illustrated the ideal manhood, proving that it was deathless, that his life was not in matter, that he could not be confined within the tomb, realizing, as he did, that God was his life. Jesus proved the truth of his teaching, "It is the spirit that quickeneth [giveth life]; the flesh [matter] profiteth nothing."

His death and resurrection were needed to illustrate certain facts concerning the Science of being which were necessary to be understood and practised by mortals in the fulfilment of the Scriptural command, "Work out your own salvation with fear and trembling."

The observance of the paschal ordinance is a celebration of the event wherein God rescued the children of Israel from Egyptian bondage. In other words, it is calling to mind the fact of divine deliverance. The children of Israel were commanded to observe this forever; that is they were commanded to bear always in mind the power of God to save. Jesus, fulfilling the demands of the law, observed the customary ceremony of the Jews, and said to his disciples,—

"This do ye, as oft as ye drink it, in remembrance of me. For as often as ye eat this bread, and drink this cup, ye do show the Lord's death till he come."

His second coming was to be "without sin," that is to say, the flesh—a spiritual coming. The first coming was the advent of the personal Jesus which Mrs. Eddy defines in "Science and Health with Key to the Scriptures," p. 589, as "the highest human corporeal concept of the divine idea, rebuking and destroying error, and bringing to light man's immortality." Jesus was the person who understood the truth in its perfection and who demonstrated it perfectly in overcoming sickness, sin, and death. The "second coming" is the advent in the individual consciousness of the Christ mentality,—the spiritual understanding which Jesus had, and by which he did the "mighty works." The first coming proves what the understanding of Truth will enable men to do; the second coming shows how they are to do it. When the spiritual coming of Christ is accomplished and the meaning of Jesus' words, "It is the spirit that quickeneth; the flesh profiteth nothing," is made plain, all necessity for the material form of the ordinance is done away and the celebration of the passover, losing its material accompaniments, consists in remembrance of the divine power to deliver.

It is the mission of Christian Science to render Christianity more practical by revealing its spiritual *modus operandi,* above and beyond any material ordinance. So long as religionists have faith in materiality and labor from a material standpoint, the material sense of the ordinance is essential; that is, one must observe the commands of God in a material way if he does not understand the spiritual. Knowing no way beyond the material he can do no more nor less than worship materially, but Jesus taught that God is Spirit, and that the true worshipers shall worship spiritually. Christian Science leads its adherents into a spiritual understanding of God and therefore a spiritual worship. It leads above and beyond all material forms.

It was the purpose of the priesthood to provide a mediator between God and man. Jesus was the "high priest," because he led his followers into the highest possible conception of the Father, into the very presence of God. Jesus said, "When he, the spirit of truth, is come, he will guide you into all truth." Evidently he meant that the spiritual understanding concerning truth, in contradistinction to a materialistic sense of it, would lead into a full and perfect knowledge.

We can understand something of the divine power from a human or material standpoint, but to be guided into the full realization of truth we must draw our conclusions from a spiritual standpoint.

ALFRED FARLOW.

Intelligent Activity.

It will not do to assume that Christian Scientists do a great deal of good to themselves and to others "without knowing how they do it." It is the very knowing which entitles them to the name of Scientists, for Science is knowledge. First of all, they know that it is not they who heal the sick, but that the spiritual understanding of God performs this beneficent task. Not "emotion," nor the resulting "vibration," nor mere "cheerfulness" are sufficient to heal the patient who is lying unconscious, beyond all physical help. But Christian Science, the Science or knowledge of God's omnipotence over evil of every sort, does restore such a one to health and usefulness. It is not a question of the mere prevention of disease, although that is one of the greatest services which Christian Science is performing in our day and generation, but the question is one of the cure of so-called hopeless cases, of confirmed invalids, of acute and organic diseases.

If mere "cheerfulness" could cure diseases, there would still be left the possibility of cheerfulness to be explained under circumstances which make for despair and desolation. The cheerfulness of Christian Scientists is based upon the understanding that God is Love, and that to rely on Him is to enter into paths of peace and comfort, physically as well as mentally and morally. W. D. McCRACKAN.

In *New York Journal.*

Christian Science is based on the Bible entirely and follows Jesus' practice and teachings in healing diseases as well as sin. Those who study Christian Science as set forth by Mrs. Eddy unite in one verdict, that it has made them happier, more wholesome, healthier, more charitable and loving, and has given them better and clearer ideas of God and man's relation to Him. Surely these things are the fruit of the Spirit which the Apostle Paul so eloquently portrayed. EZRA W. PALMER.

In *Trinidad* (Col.) *Church-News.*

We are taught and we believe as Christian Scientists that cleanliness is next to godliness, and a faith without works is dead, but we must insist that it is in the fullest sense as consistent to expect God to heal the sick without material remedies to-day as it was in the time of Jesus, who did not administer them, and that the great number constantly being healed by reliance upon God alone fully warrants our position.

Only those who seek our services are brought under our administration, and the measure of our success is so great that the number coming to Christian Science for healing steadily increases. GEORGE H. KINTER.

In *Buffalo News.*

The Concordance.

The new Concordance to Science and Health has been a true love-gift to us. By its help a clearer light is shed on the correlative passages to the Scriptural selection at our Wednesday evening meetings, and we can readily refer one another to some helpful passage in Science and Health when in need of enlightenment.

We cannot with words thank our Leader, who through her untiring labors and clear foresight of our spiritual needs has given us this valuable addition to our book-treasures.

May we, through a more consecrated study of the Bible and Science and Health and a correspondingly purer life, show her our true gratefulness.

MORRIS WEBER, Roseburg, Ore.

Letters to Mrs. Eddy.

12 Merrion Square, Dublin, Ireland.

Dearly Loved Leader:—May a young student this side of the water send a little tribute of gratitude for the love which prompted the gift of the new Concordance? Already it has led me to deeper study of the Bible and Science and Health, and has opened out new vistas on some subjects which I had not been able to study so profitably before.

As I try to be faithful each day to the teachings of Christian Science I appreciate more and more what your life and work have been. This "Knowledge of Christ" which you have revealed means so much to me now, and I just pray from hour to hour that I may become more like a little child and live as Jesus lived—so simply, sweetly, and tenderly reflecting Love that the sick will be healed, the sorrowing comforted, and the sinful uplifted through the gentle radiance of the Light, and through faithful work "in rebuking sin, in true brotherliness, charitableness, and forgiveness" (Church Manual).

With loving gratitude from a great grandchild.

CONSTANCE GIBSON.

September 10.

Beloved Leader:—At the first Wednesday evening meeting in our new church home, the one thought was that of loving gratitude to you for your inspired guidance, consecrated example, your steadfast courage, constant patience, and loving self-sacrifice, leading onward and upward to the joy of achievement.

The opening speaker voiced this thought, and the congregation of a thousand people unanimously responded by rising and singing the doxology.

It is a pleasure to convey to you this expression of love in behalf of Second Church of Christ, Scientist, Minneapolis, Minn. Faithfully your student,

EMMA A. THOMPSON.

September 24, 1903.

The New Manual.

No doubt every member of the Mother Church felt deeply gratified with the contents of the recent edition of the Manual, and silently recognizes the value of every new measure therein given.

If, as our Leader says, "this Manual will increase the spirituality of him who obeys it" (*Sentinel,* p. 24, Vol. VI.), the importance of the gift will not be overlooked by him who is earnestly seeking the Way of Life.

I have been greatly quickened and strengthened by the perusal of this book. I have learned in Christian Science to love obedience, because this Science has taught me that obedience means willingness to love, and that in the proportion that I am willing to love, do I find obedience a joyful action, laden with blessing.

Words do not in any way tell my appreciation for the labor of our beloved Leader; this is a sweet secret hidden in my heart but known to divine Love. But because of it, I feel impelled to make this acknowledgment.

SAPPHO E. PRENTISS, Chicago, Ill.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting to be held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Those who approve applicants will greatly assist the Clerk if they will send their applications as early as possible.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Question Answered.

I REPLY to the following question from unknown questioners: "Are the students whom we have taught obliged to take both Primary and Normal class instruction at the Board of Education in order to become teachers of Primary classes?" No; not if you and they are loyal Christian Scientists, and after examination by the Board of Education your students are found eligible to enter the Normal class —which at present is taught by the Board of Education only.

There is evidently some misapprehension of my meaning as to the mode of instruction by the Board of Education. A Primary student of mine can teach pupils the practice of Christian Science, and after three years of good practice he himself can be examined by this Board, and if found eligible receive a certificate of the degree C.S.D.

MARY BAKER G. EDDY.

Pleasant View, September 29, 1903.

The True Preaching.

SOME one wisely said, "Let yourself, and not your words, preach for you," and this is good counsel for Christian Scientists as well as for others. Some of us have found by bitter experience that persistent endeavor, through words only, to convert our friends to our views has resulted disastrously, and that by our mistaken efforts we have but succeeded in erecting additional barriers in the pathway of those whom we have sincerely desired to lead to Truth.

A fundamental proposition of Christian Science is that it heals the sick, but the simple declaration of this fact is not enough to convince the world that it is true. In this, as in every other line of human endeavor, the world asks for proofs, and we are placed at a disadvantage if the evidence be not forthcoming.

Convincing proof of the efficacy of Christian Science in humanity's behalf must come through the healing of the sick and the regeneration of the sinner, and no mere preaching, in the commonly accepted meaning of that word, can take the place of active works which speak for themselves.

The call to every Christian Scientist is to heal the sick, and unless this call finds response in our hearts and through our deeds, our preaching is vain. We have in mind the case of a woman who was healed of cancer while visiting a relative at some distance from her own home. When she returned to her home she did not need to tell her friends that she had been healed, they could see for themselves. Within a few months after this woman was healed, two Christian Scientists settled in the town wherein she resided and were pleased to find that the prejudice against Christian Science which formerly characterized the neighborhood had given place to a lively interest, and upon the first Sunday after it became known that those who wished to join in the reading of the Lesson-Sermon were welcome to their home, over twenty assembled for that purpose.

The fact that some person has been healed by the practice of Christian Science, or that another is living a consistent Christian life in accord with its teachings, is the evidence called for, and by none other will the world be convinced that Christian Science is the religion of Jesus. M.

A Message for the Hour.

A CLEAR conviction of truth is sure to beget entire independence of human opinion, however time-honored, and it does not need the support either of tradition or present authorities. In contradistinction to this, much of the religious thought of the world has been dependent upon the traditions and opinions which have gained acceptance with the lapse of time.

This has been unfortunate in many ways, and no less unfair to the great thinkers of the past, who would have rejoiced in the broadening application to human conditions of the truth which they perceived.

New ideas are constantly appearing, and their recognition and acceptance opens the way for progress. Such being the case, men very properly inquire why they should be asked to adopt the views of their forefathers on the all-important questions of government and religion, when in respect to so many other interests the ideas and methods of the past no longer serve as models for the present.

Every great thinker has had a new message for the world, or at least a re-statement of truth which was adapted to the needs of his time, but he has invariably had difficulty in bringing others to a recognition of the truth perceived by him. This was Jesus' experience, and while no one in the world appreciated as did he, the incalculable value of the Mosaic law, he was continually assailed by those who made comparisons between Moses and himself, which were always intended to place him at a disadvantage. His compatriots and co-religionists were sticklers for the traditions of the past, and they failed to see that the teachings of Moses and the prophets should ever be in the van of progress.

There is no doubt that Jesus' disciples were influenced by this national tendency until their illumination after his resurrection. At the time of the transfiguration a wonderful lesson was given them. They then had a vision of the immortality of law and prophecy, with which Moses and Elias were identified as their true representatives. Peter's shortsightedness in his manifest desire to secure and retain the co-operation of these great leaders received a rebuke which concerns us all very deeply, for a voice out of the bright cloud said, "This is my beloved Son, in whom I am well pleased; hear ye him." What most concerned them,—that which they most needed,—was the message of truth which he had brought them; and there was danger that while they were building tabernacles to conserve the outward form of an idea, the message of the hour might be in large measure overlooked. In the presence of the Christ-truth they could lose nothing, for had not their great teacher said, "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil." The truth which appears in any age offers for the need of that period all that the past holds, and gives it new vitality,—it fulfils the promise of the past.

To this age has come, through Christian Science, a message from on high which needs not to appeal to the traditions of the past, however sacred. This rising sun sheds its beams across the ages and illumines both law and prophecy, while it shows the eternal glory of the gospel of Christ. At a time when doubt seemed to be deepening, and physical science had declared that material law offered no evidence of spiritual existence, but rather disproved it, Christian Science came announcing as the one undeniable fact,—an absolute certainty,—the all-presence, all-power, all-goodness of God.

As Moses said of the teaching which he had given to Israel, so Christian Science announces to the world to-day,

Digitized by Google

"For this commandment which I command thee this day, it is not hidden from thee, neither is it far off. . . . I have set before thee this day life and good, and death and evil; . . . therefore choose life, that both thou and thy seed may live."

Our Leader says, "Divine metaphysics is now reduced to a system, in a form comprehensible by and adapted to the thought of the age in which we live" (Science and Health, p. 140). We have surely deep cause for gratitude that this message has come to our age and that it was brought us by one who has so understood the Law and the Gospel as to be able to link to them this teaching which is healing and uplifting the world. K.

Ascending Step by Step.

JACOB'S dream gave the world an abiding and suggestive symbol of the means by which it may attain to spiritual heights.

There is no doubt about the fact that to reach heaven we must do some serious climbing, and that each round of the ladder must, in turn, serve our ascent and then be left behind as we advance to a higher and nobler sense of Truth. Each round, in its order, is the best and only one available for us at the given stage of our progress. We may think we would like to step from the first to the fifth, and try to do so, but the attempt is hazardous and will certainly result in disappointment and delay, for the higher levels are reached only as we have taken all the steps leading up to them, and our next step is always just above our present footing.

As we get on we perceive that those things which seemed important, even vital, to us at one time, are no longer necessary or of service. In passing beyond them we have verified for ourselves the poet's assurance that

> men may rise on stepping-stones
> Of their dead selves to higher things.

Better beliefs thus follow one another, each serving us in its place, and there only.

Our neighbor a little way behind us may be taking a step which would be down to us, but it is up to him, and seeing this we no longer judge the quality of his acts solely upon the basis of our apprehension of Truth. Upon the plane of human progress very many determinations and courses of conduct have relative values which are to be estimated, not only with respect to the ideal standard, but also with respect to individual consciousness and educational and corrective need. We therefore do well to counsel a belated brother, simply to take his next forward step, which he can certainly do. Our next step is so far beyond him, perchance, as to render even a reference to it unwise.

This right sense of relations relieves us of any feeling of envy or discouragement should we discover that some other brother is done with problems which remain for us to solve, for we know that we shall find our way to his triumph in the persistent doing of our next plain and simple duty. We learn, too, after a while, that if we are unduly interested in the climbing of others, we are much less likely to go on steadily ourselves, and that there are quite a number of reasons why we should devote the great bulk of our time to the more profitable task of minding our own business.

Experience will also teach us that it is better to look up as we climb, and employ both our hands and our feet in the undertaking. We can carry a good load with ease, so long as we maintain our freedom by unswerving faithfulness to our highest ideal, but we can neither help others nor get ahead ourselves if we have allowed a fair and seductive compromise to tie either our hands or our feet.

Another thing we are sure to discover; viz., that it is not wise to turn round and try to climb backward, while looking at the things that are beneath, and that should have been kept behind. So abnormal a position is sure to beget that fear which anticipates a fall, and one who was scaling the heights shouted back this word of wisdom long ago, "Forgetting those things that are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

One of the most inspiring things about the way which was shown to Jacob is the fact that its every step has been hallowed by the feet of angels. In all our efforts to reach a higher and yet higher apprehension of Truth, how encouraging and helpful it is to know that these heavenly messengers are constantly coming to our aid, and that the feet of all the good and great who have gone before have pressed the rounds by which we rise. W.

In Recognition of Faithful Service.

Boston, Mass., September 11, 1903.

Mr. Calvin A. Frye, C.S.D.,
Pleasant View, Concord, N. H.

Dear Brother:—Your fellow Executive Members of the Mother Church in presenting the gift which accompanies this letter, have in mind your twenty-one years of faithful and loving service to their beloved Leader and Teacher, and the Cause for which she has so successfully labored.

They hope to express through this gift some measure of the love and esteem in which you are held by all Christian Scientists, and especially to recognize the value of your work for God and man which has been beyond price. While it is true that you have had an inestimable privilege in standing by the side of our Leader for these many years, yet we cannot but marvel at the unselfed love which enabled you to sever all other ties and so consecrate yourself to the service of your fellow-men.

May God, infinite Mind, still guide and guard you in your work, is the prayer of your brethren.

Fraternally yours,
THE EXECUTIVE MEMBERS OF THE MOTHER CHURCH.
By WILLIAM B. JOHNSON, *Clerk*.

Pleasant View, Concord, N. H.,
September 17, 1903.

To the Executive Members of the Mother Church, Boston, Mass.

My dear Brothers and Sisters:—I was greatly surprised and made happy upon receiving your beautiful gift of a large mahogany roll-top desk and chair. That you all should have so kindly co-operated in this unique manner to commemorate the completion of my twenty-one consecutive years of service as Rev. Mary Baker G. Eddy's private secretary, touched me deeply with its fraternal chord of brotherly love, and from the depth of my heart I thank you each and all.

I assure you that in comparison with the infinite blessings received while in this blessed service I have sacrificed nothing in leaving my former associations to serve God and our Leader, and I shall continue to strive by faithfulness to be worthy of the confidence and esteem of our beloved Teacher and Leader, and of the rapidly increasing army of Christian Scientists.

Yours in the bonds of Christian brotherhood.
CALVIN A. FRYE.

Let us aspire towards this living confidence, that it is the will of God to unfold and exalt without end the spirit that entrusts itself to Him in well-doing as to a faithful Creator.—CHANNING.

Among the Churches.

Building Begun in Washington, Ia.

The corner-stone of the new church edifice of First Church of Christ, Scientist, of this place, was laid with quiet and fitting ceremony on September 17.—*Correspondence.*

Church Opening in Marshalltown Ia.

The nucleus of the present First Church of Christ, Scientist, which was formally installed in its permanent church home Sunday, August 30, had its beginning sixteen years ago when two women of the city, one of whom had been healed by Christian Science of a malady pronounced by the medical world to be incurable, met for the study of the teachings of Rev. Mary Baker G. Eddy. From this first step the membership grew until a church building became possible, and during the past year the erection of the church was commenced, its completion being made last week. The windows were the gift of O. H. Hole, and as a testimonial of gratitude for complete restoration to health through Christian Science.

The service Sunday morning was most impressive and carefully followed by the large audience present. A party of nineteen from Cedar Rapids came to the city for the evening service.—*The Marshalltown Herald.*

Improvement in Syracuse, N. Y.

Extensive improvements and enlargements, amounting practically to the erection of a new church building, are to be made this fall at the edifice of First Church of Christ, Scientist, East Fayette Street. The architects have prepared plans for the changes and will receive bids this week for the contract to build the new structure. The membership of the church and the attendance at its services have grown to such an extent that its present home has become entirely inadequate. The changes now about to be made are only for the temporary relief of the crowded condition, as it is planned to build an entirely new church edifice in a few years.

At recent Sunday services the congregation has numbered more than one hundred and fifty persons, it being necessary to place chairs in the aisles to accommodate the attendants. The new church will be paid for when built, as it is contrary to the practice of the Christian Scientist to go in debt for a place of worship.—*Syracuse Herald.*

Organization at Hanford, Cal.

About five years ago a few believers in Christian Science met at the home of one of their number for the purpose of reading the Lesson-Sermons given in the *Christian Science Quarterly.* Later on, as the number increased, the meetings were held in an office owned by one of the members. Last year it seemed to us right that we should have a still more commodious place of meeting, so we hired the Masonic Hall, which is nicely furnished and well suited to our wants.

February 1, 1903, the organization of First Church of Christ, Scientist, of Hanford, was duly effected, twelve members signing the roll. Since then the membership has steadily grown till now we have twenty-six. We have a reading room where we hold our Wednesday evening meetings.

We are a small band, but are united in Love and ever striving to demonstrate Truth. We gratefully acknowledge God's loving care and guidance; also that of our dear Leader, who so faithfully made known to us the way of Life.—FRANK MCCLELLAN, *Clerk.*

Testimonies of Healing.

Last fall, two of our best physicians decided I had a tumor, and I was also suffering from bronchial consumption. A room was engaged for me at a hospital in Chicago, but my physician decided I was not equal to the operation, and that I should wait until I got a little more strength, as I coughed until I actually thought I should strangle.

I dreaded the use of opiates, as I felt that when consciousness was gone I should never awaken again this side of the grave. My mother had passed on after an operation for tumor, and I grew up with the thought that I would inherit it and an operation would be the end of it all. I was resigned in a way. I did not understand God then, but I had a sense that God was all, and I never feared Him. I had as many friends who had gone before as I had here, and to leave my husband was my only regret. We were talking over our trouble, and he could not give me up. I said, "Why not try Christian Science? The practitioner here is one of my particular friends, and I esteem her very highly." He went to the telephone and she came and took the case. She had not gotten out of the building, I think, before a seeming load was lifted from my weary brain. Words cannot express my sensation. Needless to say, I investigated, have had the privilege of class instruction, and am now able to laugh at the fears I used to hold to, and at all error. My heart goes out in gratitude to Mrs. Eddy for the wonderful enlightenment she has given to us.—ANNA B. PFEIFFER, Rantoul, Ill.

My consciousness is so filled with love and gratitude to God for the many blessings Christian Science is giving me daily, that I am glad to avail myself of the privilege of sending to our Publishing Society a testimony of benefits received, knowing it will help some searcher for Truth.

For about eight years I suffered greatly with my eyes, and went to several of the best oculists in a number of cities. They never seemed to agree as to the nature of the disease. Tumors formed on the lids, inside and out, which necessitated several operations.

I was in constant pain, and finally the time came when I could only use my eyes a few moments at a time, with specially ground glasses for reading and sewing, and others for the street; but these afforded no relief.

The last oculist to whom I went suggested another operation, but said it offered no hope of healing, only relief, and it might result in leaving me "cross-eyed."

Beside the eye trouble I was a chronic invalid, not being able to sit up very long at a time and I could do no walking. The mental condition was also very pitiful, and it was at this time I began Christian Science treatment, knowing little about it and having no special faith.

For the benefit of those to whom temptation has come to be discouraged, I desire to say my healing was very slow. I simply came for "ease in matter" and had I received this, would have been satisfied, hence I am very grateful for the slow healing, as I was thus awakened to the truth that "Except a man be born again, he cannot see the kingdom of God." Science and Health states on page 296 that "Progress is born of experience. . . . The old man, with his deeds, must be put off. Nothing sensual or sinful is immortal."

I have had so many demonstrations for myself and others, of the truth contained in the above statement, I can never express in words my gratitude, and my hourly prayer is that my life shall testify for me.

For Mrs. Eddy, the Discoverer and Founder of Christian Science, I have a deep sense of gratitude and love. For our helpful periodicals I thank our Publishing Society many, many times. When the pathway has seemed very dark and dreary, they have arrived and pointed out that

Digitized by Google

"the sunlight of Truth" (Science and Health, p. 162) was still shining, and I need only turn to it to see my way clearly.

The revised Science and Health is simply a revelation to me, and I find the Concordance fills all requirements when I have turned to it to assist me in my work.

LOUISE N. PIERCE, St. Louis, Mo.

In proof of the effectiveness of the truth of Christian Science, I would like to tell about some accidents that have come under my observation.

A few years ago a lady, in descending some stone steps very hastily, caught her dress in the screen door, which caused her to be thrown violently to the pavement. In some way one ankle was twisted and turned under her so that her entire weight fell upon it. With assistance she arose, and the sense of pain was so acute that it was thought at first some bones were broken. A Christian Scientist was quickly summoned and treatment given. For some time the pain was most intense, but an hour later the pain ceased: all the laws of mortal mind, including inflammation, discoloration, etc., were so completely destroyed that the patient went to her work in the store and stood on her feet until 9 P.M. and walked eight blocks to her home. Next day she did not notice the slightest evidence of an accident, and that ankle is to-day as strong as ever it was.

About a year ago I was called to the telephone and received this message: "Treat me at once, I've sawed off the end of my thumb." I immediately began to realize the Truth of being, and continued treatment for about thirty minutes. Two hours later, I saw the patient at his home and he told me that all the time he lost from his work was just while he was tying up the wound; that he had not had a single pain and did not think he would have. Treatment was continued about a week, and afterward he testified at a Wednesday evening meeting, saying that during the healing there had been no pain, swelling, or inflammation at any time and in five weeks his thumb was as perfect in shape and size as the other, new flesh and nail having grown out complete. It was cut off straight through the nail a nd flesh, about half the nail being lost.

One evening about dusk my mother stepped on a board which had a large rusty nail in it. She had on overshoes, it being cold weather, and the nail penetrated through both shoes and into the ball of the foot about three quarters of an inch, and was with difficulty extracted. Much pain and fear had come up ere she reached the house, and dismal pictures of blood-poison, lock-jaw, etc., were already in her thought. Sympathy came up so strongly that mortal mind tried to make me believe I could not successfully treat the case, and for a moment I did wish I could reach another Christian Scientist; but none were available at that time, and I thought, God does the work, it is Truth that heals, and I can deliver the message just as well as any one, and I realized the power of good to be omnipresent. Treatment was continued until about nine o'clock when she became free from pain and went to sleep; about eleven o'clock, however, she awoke in great distress, and was shaking with a hard chill. A great fear of lock-jaw had seized her and she thought death would be inevitable. The struggle seemed long and severe between Truth and error, but in a little less than two hours the fear subsided, the pain ceased, and we knew that the ill was destroyed. She then fell into a peaceful slumber and did not waken till morning. We had company the next day who were opposed to Christian Science and she was afraid she would limp: but she was on her feet most of the day without the sign of a limp. In a few days the wound looked inflamed and a little sensitive. We probed it with a needle, and out came a piece of rubber which had been forced into the foot with the nail. After that it healed quickly and gave her no more trouble.

MARY E. COX, St. Joseph, Mo.

Less than one year ago I believed myself a well-nigh hopeless invalid. I say well-nigh, for I had a hope that in some way I should find release, though I could not see how it was to be accomplished. My faith in God's word encouraged me to hope, and that hope has been realized.

Through reading Science and Health and the practice of its teachings, my health has been restored, and after more than twenty years of suffering I have found relief. I know that this is the Truth that makes us free; yes, free from "the law of sin and death."

"Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men! For he satisfieth the longing soul, and filleth the hungry soul with goodness." In Science we can say with Andrew, "We have found the Messias, . . . the Christ."

How can I ever thank the friends who so kindly and patiently helped me? Only by a life of love and prayer, can I reward those who loaned the precious book to me. Thanks to our dear Leader, who so bravely upheld the standard of Truth in the face of a frowning world. If any doubt the truth of Christian Science, I would say as Philip said to Nathanael, "Come and see."

K. E. R., Muskegon, Mich.

It has been my desire for some time to tell what Christian Science has done for me, and it is with a heart full of gratitude that I write these words. Although I had known Christian Science for some time, possibly five years, I thought that I had no particular use for it myself, for my physical condition was all that could be desired. Finally the time came when I did need it; but, instead of trying it at first, I had medical attendance which proved so unsatisfactory that I was given up to die by three physicians of this city.

There was nothing left for me but Christian Science, so a practitioner was sent for, and in two weeks I was out, and as well as I ever was. I cannot fully express my gratitude for this wonderful Truth.—G. H. N., Lowell, Mass.

Christian Science first came to me some years ago as a seemingly sudden illumination, but really as the outcome of experiences which discredited all except a simple trust in God, but I was then without real understanding or assurance, and at times most doubtful and fearing. The prospect held out to me with my first glimpse of Truth, was bright indeed, but I doubt if any except one's own self ever really can know what such an unfoldment means to them.

Now, after the lapse of some years, filled, I hope, with honest endeavor, something of the volume, the beauty, graciousness, and efficiency of what has come to me is seen, and I know that I have been lifted from the depths of discouragement, an exhaustion of the mortal sense working from its position of error, into an assurance that every thought and act in "rightness," brings progress.

I think it a matter of course, that greatly improved physical health and energy has come with a clearing out of the many cobwebs and useless stores in the mental granary.

For all this I can find no cause other than what I have learned in Christian Science, whose text-book is "Science and Health with Key to the Scriptures," and it is quite impossible that I should be less than deeply grateful to its author, Rev. Mary Baker G. Eddy.

There are friends who, in the days of my awakening and all along through the successive days and months to the present time, have come into my life with their loving help, to whom I should like here to express my enduring gratitude. These are Christian Scientists, and the words bring to me memories only of unselfish, loving helpfulness.

JOSEPH F. COX, Atlanta, Ga.

Digitized by Google

Christian Science found me at a time of great need, for health and hope were leaving me, and three physicians, each unknown to the other, had said I could never be well. To all appearance I was as well as the average person, but I was tired most of the time and less and less able to do my work. I would go home at night too exhausted to eat my supper and my one resource then was sleep.

I knew that I was fast approaching invalidism, and thus I should become a burden to others. Before this fear was realized a blessed message came to me, through an acquaintance, to go to a Christian Science practitioner. This was a chance and I decided to try it.

I knew nothing of Christian Science when I went, save that the healing was done through prayer. From the first treatment I received to this day, I have never had a return of the disease which the doctors pronounced incurable. I was also healed of a throat trouble of seven years' standing.

The great joy and mental uplifting surpassed any previous experience of my life, and I was eager to study Christian Science at once, for I knew it was the truth I had long sought but never found.

I would like to tell how I was led into Christian Science, for back of all the above-mentioned facts, and previous to the experience I had with the physicians, I was led one night to decide that I would no longer pray at random asking for things I did not really expect to receive. Instead of this, I decided to ask each night, in a few simple words such as I would speak to an earthly parent, for what I most needed. I asked that I might know God, and I made this request quite regularly until six months later came the chance to study Christian Science. Since I have studied Christian Science the falsity of the remaining ills has been made manifest, for which I am thankful, as it means that some wrong thoughts have been corrected and each demonstration helps us on our way "Up to Thee" (Miscellaneous Writings, p. 400).

E. KELLOGG, Atchison, Kan.

While crossing the Atlantic some months ago, I had an experience with sea-sickness, which I will relate. The second day out, while passing through the English Channel, the sea became rough. I saw many of my fellow-voyagers succumb to sea-sickness, but as I had never suffered much from the malady myself I gave it no particular thought. However, on the afternoon of the day referred to I became sick and was obliged to go to my stateroom. Thus began a severe struggle which lasted four hours. I was most miserably sick. The thought came to me if this agony should continue through the rest of the voyage, I never could endure it, and if there had been another Christian Scientist aboard, I certainly would have appealed for help, but as I was alone I knew I had the work to do myself.

I did work as best I could, denying that this universal belief in sea-sickness had any intelligence to govern me, and affirming that I had God-given authority to annul the action of this false, so-called law. In this way I resisted the evil mentally, while the testimony of the senses was that I was so ill I could scarcely raise my head, but at last God's word proved efficacious, and at the end of four hours I felt I was healed. My courage and strength returned, the feeling of nausea was gone, and I was able to stand on my feet. I was still a little weak, but I went to the upper deck, and there I enjoyed a promenade around the deserted decks. The waves had not in the least subsided and the boat was pitching and rolling as much as ever, but my belief in the law that this motion upsets the stomach was thoroughly destroyed, and I was free. I shall never forget the feeling of joy and gratitude I experienced for the relief from that suffering. The pleasure of the rest of the voyage was enhanced by this experience. It was to me a most positive proof of the efficacy of Christian Science treatment. I was glad that I had gone through the suffering, for thus was I enabled to see the glory of God made manifest.—M. P., Oak Park, Ill.

As a slight expression of gratitude for many blessings received through Christian Science in the past year and a half, I offer this testimony for the *Sentinel* columns.

About a year ago, one Saturday afternoon I had a garment to finish for some one who was to leave on the evening train. I really had plenty of time, but I listened to error, and allowed a sense of hurry to creep in, and in feeding the machine while stitching rapidly, my finger got in the way and the needle went through the end of it, breaking with such a loud report that my mother, who was down stairs, came up to see what was the matter. I was so frightened I trembled all over as I looked down at my finger, which was white and numb. The first thing I thought of to declare was, There is no matter. Then began denying laws of belief, such as pain, soreness, discoloration, swelling, inflammation, etc.; realizing the one Law of God,—harmony. A few drops of blood came, but it never hurt, was never sore, inflamed, swollen, or discolored.

Thanks for Christian Science, which is a balm for every wound, whether mental or physical. Peace and joy to the dear woman who has borne so much that all mankind might have this blessing. Divine "Love never faileth," and will be with her always.

M. DELLA MEEK, Eureka, Ill.

I would like to give my testimony in return for the many which have been helpful to me. I was healed in 1898 of tumor and of spasms, the latter supposed to be brought on by the pressure of the tumor against the spinal cord. I had as many as five and six spasms daily, and if I walked across the floor and jarred myself in the least, I fell screaming in a spasm, suffering untold agony.

I had about lost all hope when Christian Science found me, as the doctor had told me that there was no help for me. I had also some kind of stomach trouble, so that swallowing any solid food would cause acute suffering. My mother heard of Christian Science and begged me to try it, saying that it would do me no harm any way. Although I was prejudiced against any religion but my own orthodox belief, I at last consented, to please my mother, although I made light of it, and told the practitioner that I thought it absurd to suppose that she could help me. She told me that God could heal me, and this I believed, though I then thought He *would* not.

I was healed in just three treatments of the tumor, spasms, and the stomach trouble. All my other ailments disappeared after a time.

I went to work as soon as I was healed and with the first money I earned I bought a copy of Science and Health which with the Bible has been my constant companion ever since.

I have had many good demonstrations in overcoming error in myself and others. I will only give a few of them. My mother was bitten on her neck by a black spider. In a moment there was a hard lump with just a tiny speck of red in the center of it where the spider had bitten, and it was becoming very painful. My father was very much frightened and wished to apply turpentine, but my mother said, "No, I have a better remedy," and called me outside with her. I repeated the promises from the sixteenth chapter of Mark, eighteenth verse, and treated her a few moments when she smilingly assured me that she felt all right. I have overcome sick headache, colds, and many other ills, but best of all is the spiritual uplifting and peace

Digitized by Google

that come with Science. The overcoming of sin is more to me than the physical healing. Through Christian Science I have been enabled to overcome hatred and selfishness, and I find it an ever-present help indeed. I could not get along without the help of Science in my household duties, or in any line of work, and it will be a glad day for me when I can say I am a member of the Church of Christ, Scientist.—MRS. FLORA PAYNE, Confidence, Cal.

On May 23 I experienced a grand demonstration of the power of Truth. I am a railroad switchman by occupation, and while engaged at my work I was caught by the engine foot board which ran upon my leg and threw me to the ground, and at the same time passed over my foot doubling it up in a space of about four inches, causing the foot to bend at the instep. My foot was pressed solidly against a tie, so that I could not move. The engine was stopped and the two switchmen who were assisting me with the work were standing on this foot board at the time of the accident. One of them said, "Let's lay Jim's leg over off the other one. His leg is broken." This man did not know my understanding of God, did not know that I was a Christian Scientist, but the other man did, though neither of them was a Scientist. My reply was, "Do not touch me, I am all right. I am a Christian Scientist." So I lay there about a minute realizing that God is an ever-present help, and that He always looks well after His own. When I got up I went on about my work as if nothing had happened. I became somewhat lame later in the evening so I had help from a friend near by, who, with his good wife, is a Christian Scientist. Next morning I put my shoe on and went to work, and had no lameness, no soreness. This friend saw the accident at a half block's distance, and came to me just as I was getting up. He said not a word to me nor I to him, but thank God the thought he was holding for me and my own realization that no evil should befall me, made the demonstration.

I am indeed very thankful to Mrs. Eddy for showing us how we can go to God and get these good gifts.

We have no church here; we are only a very small society, though we meet every Sunday and Wednesday and go over the helpful lessons, and the testimonial meetings are held at my house. I do not forget to thank God for even the small understanding I have, but I pray for more, and I know that my prayer will be answered. God will bless Mrs. Eddy and her true followers.

JAMES KELLY, Gainesville, Tex.

I feel I ought to express my gratitude for the help and good received through the truth as revealed in Science and Health. Three years ago I was very sick in San Diego with a nervous trouble for which I had been trying to get help through other sources, but kept getting worse. I was in despair, for I had already lost faith in *materia medica;* but remembering a conversation with a friend who told me of her healing in Science I concluded to send for a Christian Science practitioner.

I will never forget that day. The practitioner spent about two hours in conversation on this subject, and in treating me. When she left she assured me I would be all right, and that the next morning, being Sunday, she would call for me to go to church. I remember thinking that such a thing would be impossible. After a little my mother had occasion to go down town and when she returned she found me starting supper. I ate a hearty meal and was up all the evening.

That night, for the first time in a week or more, I allowed my mother to sleep in her own room, saying I was not afraid to be alone. Next morning I got breakfast and when church time came was ready. The error presented itself several times in the next few days, but I had felt "the power of the Word" (Miscellaneous Writings, p. 398), and I knew Christian Science was truth, that it could and does heal, and what it had done once it could do again.

A year ago I had a severe attack which was met through this truth. My growth in Science has seemed slow, but I am grateful that I have been led to it, for the understanding gained gives us such a sense of confidence, because we know in whom we trust, and that we are subject only to the perfect law which means freedom.

I am very thankful for the Science literature from which I receive many helpful thoughts, and above all for the knowledge of the one God, one law, one Christ as given in Science and Health by Mrs. Eddy.

GEORGIE G. WATKINS, Los Angeles, Cal.

Christian Science was presented to me when I needed it most. I was a physical wreck, not knowing where to turn for help, doctors and medicines having failed.

Among my many ills were rheumatism, dyspepsia, heart trouble, and nervous prostration. For thirteen years I was compelled to bandage up in flannel, and last winter is the first for thirteen years that I could dispense with it and go out in all kinds of weather with no trouble following. I have learned that divine Love is omnipresent and omnipotent.

Before taking treatment I was afraid to eat, as it seemed to cause untold suffering. I was almost starved. After my first treatment I ate of everything I desired, and have been able to do so ever since July, 1902. My heart trouble, which seemed to be an aggravated case, also disappeared. My entire healing was almost instantaneous. For that priceless book, Science and Health, I feel greatly indebted to Mrs. Eddy, as it has brought a marvelous spiritual uplifting to me. It has illumined the Bible and taught me to love the study of the same. Words fail to express my gratitude to God, to Mrs. Eddy, and to the practitioner and friends who have helped me.

MRS. D. DIEHLMAN, Baltimore, Md.

It is a little over four years since I commenced the study of Christian Science. Three years previous to this I had been healed of a severe ailment which three doctors failed to help at all, the last one saying that nothing but an operation would help me. But thanks to God and Christian Science the operation was not necessary, although I did not at that time take up the study of Christian Science in earnest; but the seed had been sown, and I was led back to divine Love to learn of this wonderful truth.

I have been healed of stomach trouble which was very bad. I had to be careful of my diet, and was so nervous and run down that the least exertion caused me great trouble, the fear of the heart trouble being great. Now I can eat anything, and I was also healed of another trouble from which I had suffered from childhood, a period of over twenty-five years.

There have been many other discordant conditions overcome, much sickness and sin has been destroyed by this understanding of God as taught in Christian Science, and I have always found when I have relied wholly upon God, He has never failed, and I know He never will. I feel very thankful to all who have helped me in this search for Truth, and cannot close without a word of love and gratitude to Mrs. Eddy, who has shown us this way of life.—M. H., Philadelphia, Pa.

My father was like God in this, that he always forgave anything the moment there was anything to forgive; for when could there be so good a time?—although the person forgiven could not know it till he asked for forgiveness.

GEORGE MACDONALD.

From our Exchanges.

Not one of the twelve apostles would have left a trace in history if it had not been for the companionship of Christ, the training he gave them, his spirit that was in them. Paul might have been merely a name, as pupil of Gamaliel and rabbi, in the wilderness of Jewish tradition, if Christ had not claimed him for his own. Peter calls himself a messenger, Paul and James call themselves bond servants, so wholly do they feel that their claim upon the attention of the world is that they represent their master. These were all ordinary lives, and all but that of Paul unmarked by genius or opportunity until they received the mark and became the instruments of the extraordinary, the ideal, the central man, Jesus Christ.

The Congregationalist and Christian World.

Much is said to-day about a coming revival of religion. For ourselves we thoroughly believe that it will come. But to our way of thinking, a revival of religion is unthinkable if it is not based on some sort of appeal to the human conscience. That has been the invariable concomitant of any revival the world has ever known that has done any good. The time cannot be far distant when the public conscience will be aroused to a fresh and vital response to the dictates of righteousness, to the judgment of men according to the laws of righteousness.—*The Watchman.*

A soul at peace with itself, with God, and with men will pass through the world with a song, serene and triumphant. Hate will not embitter nor opposition discourage it; poverty cast it down, nor wealth puff it up; flattery seduce it, nor frowns dismay it; adversity chill its love, nor prosperity inflame its pride; sorrow destroy its faith, nor joy lift it above the need of it; indigence cause it to hate God, nor affluence lead it to despise others; solitude cast it down, nor society corrupt it.

S. M. VERNON, D.D., in *The Christian Advocate.*

The God who calls His prophet gives also the power to speak. The divine hand touched the mouth of Jeremiah and gave him the prophetic words he was to utter. He was the God of Pentecost, who gave the power of convicting speech unto Peter and his fellow-disciples. There is no measuring the power which accompanies the words that fall from God-touched lips.—*Christian Advocate.*

Paul learned that God's grace was sufficient for any trial that came to him, and so may we. He found that it was not the character of the obstacle but of the man which was all important, and that if divine strength could come to the man it did not make any difference about what the difficulties were. We may and ought to have the same experience.—*The Standard.*

You find the secret of the great achievement wrought by many men of no unusual endowment, in the love that refreshes and strengthens them. And the secret of the failure of many a gifted man is explained when you know how bare his inner life was of the love that nourishes and sustains.—*The Watchman.*

Watch, lest God's perpetually fresh revelations find your eyes closed and your soul shut; lest a spirit that might have opened to you a store of new and rich life, have roused in you possibilities of growth that may henceforward never wake again, should pass by you unnoticed.

J. EDWIN ODGERS.

The world expects, and rightly, that the Christian should be more gentle, and patient, and generous, than he who does not profess to be a disciple of the Lord Jesus. For the sake of those who take their notion of religion from our lives, we need to put up this prayer earnestly, "Cleanse thou me from secret faults."—MARK GUY PEARSE.

The *Independent* believes that "for the Church as a leader there is more demand than ever; for the Church as a follower there is no vacancy. As a duplicator, as a drag, the Church looks sadly out of place; but a Church with imagination, with ideals, will make its own place."

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

A law recently enacted by the Philippine Government provides that one hundred native young men shall be sent to the States every year to be educated and fitted for positions in the insular civil service. By competitive examination one hundred are to be chosen, and from these the Governor may select those who are best qualified. He is also authorized to select and appoint twenty-five without subjecting them to competitive examination, but the whole number sent to the States in the first year must not exceed one hundred. For the support of each student the Government will pay $500 a year, and those who go to the States under these conditions must sign an agreement binding them to return after the completion of their education and to take an examination for appointment in the civil service. It is expected that while they are in the States these young men will live with American families.

It is reported from Manila that leaders of the Federal party are preparing a petition to the United States Congress asking that the Philippine Commission be reorganized. A Manila Cablegram to the Chicago *Tribune* says: "They will ask that the membership be increased by the addition of two Filipinos and one American, and also that the salary of the Filipino members be increased because the auditor, the collector of customs, the attorney general, solicitor, and treasurer receive salaries of $5,000 in excess of those paid to the present native commissioners. The petition also will set forth the desire that the secretary of finance, secretary of justice, secretary of commerce, and secretary of police be so appointed that two natives may hold office as secretaries. It is believed that this is the motive for a concerted demand for the appointment of more native office holders at higher salaries."

General Ola, leader of a band of insurrectos, which has been creating considerable trouble in the province of Albay, Luzon, has surrendered to the American troops with twenty-eight officers and men of his command. This practically ends all armed resistance in that portion of the island, the rest of the forces of the reconcentrados having been already dispersed. The hemp industry, of which Albay is the main center has been seriously affected by the insurrection of which Ola has been the chief support.

Sir Michael Herbert, the British Ambassador to the United States, passed away on the 30th ult. at Davos-Platz, Switzerland. Mr. Herbert acted as the British agent before the Court of Arbitration which settled the Anglo-Venezuelan boundary dispute. He has represented Great Britain at The Hague, Constantinople, Rome, and Paris, and succeeded Lord Pauncefote at Washington.

November 10 has been set as the day for the formal opening of the Harvard Germanic Museum. On that day Baron von Sternberg, the German ambassador at Washington, will make the formal presentation of the splendid gift of Emperor William to Harvard University, and President Eliot will receive it on behalf of the University.

The Honourable Artillery Company of London were royally entertained at Boston this week as guests of the Ancient and Honorable Artillery Company of Boston.

Sir Thomas Lipton sails for home this week. It is said that he may build another challenger if he can find a designer. He is still desirous of lifting the America cup.

Last week Chicago celebrated the one hundredth anniversary of the building of Fort Dearborn, which was erected in 1803, on the site of the present Chicago.

Foreign.

One effect of the new Irish land law already noticeable is a pronounced check upon Irish emigration. An anti-emigration society has been formed in Ireland whose purpose it is to restrain emigration and to keep the people in their own country. A writer in the St. Louis *Post-Dispatch*, referring to Irish emigration, says: "The volume of emigration has been enormous. During the last decade of the nineteenth century France lost by emigration one inhabitant out of 6,975 of its population, Germany one in 2,574, Belgium one in 267, England one in 292, Italy one in 212, Scotland one in 214, Spain one in 261, Portugal one in 241, Sweden one in 427, Austria-Hungary one in 480, Denmark one in 686, Switzerland one in 1,256, Holland one in 2,772, and Ireland one in 114. Of course the cause of this movement, which has threatened Ireland with depopulation, was the misery of the people. Ireland is one of the most fertile countries in the world. The blight of landlordism being removed, there is every reason to believe that she offers all that her sons can ask, for several generations at least."

The State Department has received a despatch from Minister Beaupré under recent date, discussing the new bill which passed the Colombian Senate authorizing President Marroquin to negotiate a treaty along the lines laid down by the Colombian Congress which requires the payment of ten million dollars to Colombia by the Panama Canal Company. The plan of those favorable to the treaty is to amend the bill so as to authorize President Marroquin to negotiate a treaty with the United States on the most favorable terms obtainable. Should the amendment prevail President Marroquin would immediately reopen negotiations with this country, and he would then be in a position to approve of a treaty identical with that already ratified by the United States Senate.

The official candidates for president and vice-president in Colombia are said to be Reyes and Marroquin, the latter being the son of the present president. Both of these men are favorable to the Canal Treaty.

The first session of the tribunal appointed to consider the question of preferential payment on the part of Germany and Great Britain arising out of the Venezuelan affair, met at The Hague last week and considered a few details of procedure. At the opening M. Muravieff, president of the tribunal, pointed out the significance of the proceedings in which most of the nations of Europe for the first time are participating, the avoidance of the calamities of war, and the victory of arbitration over the argument of force.

The matter of the Russian evacuation of Manchuria seems not to have changed. The Russian demands upon China for an extension of the time for evacuation beyond October 8 have not yet been acceded to by China. Japan protests against the extension; she has even sent troops into Korea ostensibly to guard her telegraph lines and other interests there, but perhaps more as a counter-move against the presence of Russian troops in Manchuria, posted there for similar purposes.

It is reported that Russia now has in or near Manchuria 250,000 armed men. There are forty warships at Talienwan and forty at Port Arthur.

The situation in Macedonia remains about the same. It is reported that Turkey has withdrawn her troops from the Macedonian frontier and that the outposts have been occupied by the Macedonian insurgents. The Christian population is being slaughtered by the Mussulman soldiery, and villages sacked and burned, but the reforms in the government are not being inaugurated as promised.

The unveiling of Eberlein's colossal memorial to Wagner, who is represented as sitting in an armchair, the base showing sculptured incidents in the Wagnerian operas, took place last week in an amphitheatre in the woods of the Thiergarten at Berlin.

Industrial and Commercial.

A federation of manufacturers' and employers' associations, employing tens of thousands of skilled workmen, and with a combined capital of about a billion dollars, has been formed at Chicago. Plans were made for a general meeting in Chicago of representatives of employers' associations and citizens' alliances the first week in November, when a national employers' association will be formed. The object of this federation, as announced, will be to protect and promote interests of the employers and independent workmen of the country by all legitimate means.

The number of cotton spindles in the South has increased from 2,000,000 in 1891 to 8,250,000 at the present time; the pig-iron output has increased from 397,000 tons in 1880 to over 3,000,000 tons; its coal yield has increased during the same period from 6,000,000 tons to ten times that amount, and its lumber values between 1880 and 1900 from $40,000,000 worth to nearly five times that amount.

General.

The Dominion Government some time ago detailed the chief astronomer of the Dominion to arrange details for ascertaining the exact longitude between Vancouver and Brisbane, Australia, in order that the numerous small oceanic South Sea islands between America and Australia might be accurately charted instead of approximately as at present. The longitude of the two places has been accurately determined and they will now be made the centers for fixing the longitude of the "floating islands" occupying the intervening space.

Tintoretto's celebrated painting of "Paradise," which has so long hung over the throne in the chamber of the Grand Council in the Ducal Palace at Venice, has been taken from the wall and is now undergoing a cleaning, under the supervision of a national commission on paintings. This is the largest oil painting in the world, measuring 72 feet by 23 feet. A series of frescoes by Guariento was discovered on the wall behind the picture; this series was painted two centuries earlier than the Tintoretto.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Honesty in Individual Work.

HON. CONSTANCE GIBSON.

MRS. EDDY says, "There is but one way of doing good, and that is to do it! There is but one way of being good, and that is to be good" (Retrospection and Introspection, p. 107). We must be true to ourselves. We must be willing to let the light shine in on every thought, and then watch closely to see the influence that thought has on our lives, whether it is making us more pure, more honest, more unselfish, more loving. If we find ourselves excusing our thoughts and trying to justify our actions, we should allow the light to shine in more fully and ask ourselves why all this explanation is necessary?

The greatest sins usually begin with hypocrisy,—deceiving ourselves into thinking wrong is right, and so serving evil in the name of good. It is the little thoughts we must watch and uproot before they have time to develop. Error's first argument was, "ye shall be as gods,"—do wrong and you will find it is right,—and the fruit of serving sin was fear and shame. "Perfect love casteth out fear," and when we are governed by this Love we shall need to be careful that we do not cast our pearls before swine, but we shall not be afraid of having every thought known to the whole world. The danger is when we begin to try to hide things,—when we argue to ourselves that our thoughts are right but we must not let them be known, as the world would not understand. Let us rather ask ourselves if these little thoughts are of God; if so they must be eternal, and they will still be there when the day comes in which "there is nothing covered, that shall not be revealed."

Truth is never ashamed,—it never hides. If we are honestly doing our best we shall not be afraid of facing every thought. If we do wrong we shall frankly acknowledge that it is wrong, and do right for the future. We do not need to decide how others should think and act, but we must decide for ourselves and act according to our highest sense of right.

Mrs. Eddy says, "Whatever blesses one blesses all" (Science and Health, p. 206). If our thoughts are from God they must flow out and bless all around us. The purity, the honesty, the sweetness, will be felt, and will do their own work in helping to destroy evil for the whole world. It is only doing our own work which really enables us to help others. Jesus did not do our work for us. He did his own; and because he did so his life remains the greatest influence for good the world has ever known. He did not look round to see if others considered he was doing right. He acted as he was taught by the Father; and even on the cross, when it seemed as though the world misunderstood the aim of his whole life, he clung to his ideal and came out victorious. It was not possible for Jesus to remain on earth to help us. Progress compelled him to rise in demonstration, and as his thought became more spiritual it was inevitable that he should ascend above the scope of mortal vision, but it was impossible that those who had not done their work should ascend with him.

It was because Mrs. Eddy purified her own thought that she was enabled to perceive the truth contained in Christian Science. Science and Health is the outcome of her individual work and purity, even as each patient healed, each sinner reformed, each church established is the manifestation of the individual work of Christian Scientists. We each receive now according to our deserving, but every thought unlike God will have to be overcome before the perfect reign of Love is established in our consciousness, when "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

The Safety of Christian Science Treatment.

SAMUEL GREENWOOD.

SUCCESSFUL treatment for the cure of the sick has been earnestly sought through many centuries. The increase of diseases and the intense desire of mortals to escape from pain, have produced many differing schools of medicine which have pushed their investigations along every avenue which has held a glimmer of hope. The results have not been encouraging, for the secret of restoring health and soundness has not been discovered along any line of material research. It has not apparently occurred to these physicists that the secret of disease causation may not be in matter after all, but in the human mind; and that the restorative and curative power is to be found on the higher plane of spiritual being. In view of their long and fruitless quest they could well afford to be liberal in conceding this possibility, even if they have not yet reached that divine dissatisfaction with matter which would welcome its probability.

Christian Science has taken issue with all material theories as to the cause and cure of disease, and has presented to the world a purely Christian and spiritual system of treatment, based on the operation and availability of divine law as illustrated in the healing work of Jesus.

Among those unfamiliar with the results of this treatment the impression largely prevails that it is not a safe or proper method for healing the sick. There are many who, by reason of past thought and training, look upon any radical departure from visible agencies in the treatment of the sick as a hazardous neglect of the patient, since they cannot understand how any real help can be given which is intangible to material sense. This attitude is commonly due to a misapprehension of the nature of the so-called miraculous healing recorded in Scripture. A liberal investigation of the power of Christian faith over disease would remove this misapprehension. The assumption that Christian Science treatment is dangerous because no material means are employed is not sustained by fact, since its success in healing diseases that have baffled medical skill is widely admitted even by its opponents. The increasing growth of Christian Science is the assured evidence of its success.

When Naaman the Syrian went to Elisha for the treat-

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

ment of his leprosy, he at first resented the impersonal method of the prophet. Elisha's treatment, though not wholly separated from material symbolism, would hardly be called scientific by the medical men of that day or this. They would probably "pooh, pooh" the whole thing as Naaman was inclined to do; for who ever heard of leprosy, that dreaded disease, being cured by simply dipping seven times in water, any more than of blind-born eyes being opened by the rubbing on and washing off of mud? So Naaman scorned the idea as an insult to his dignity; but his need was extreme, and he finally obeyed. He was then able to perceive the cleansing that had been wrought through Elisha's spiritual work, and he realized that the greatest possible good had been done for him. Was the healing of this case an accident? or was the prophet's treatment, after all, a scientific one? If the latter, it was the result of an intelligent application of Principle, and therefore an indication that divine power is safer and more reliable than human.

The question is, Do Christian Scientists ask or expect too much of God when praying for the recovery of the sick? Have they a Scriptural precedent in this course, or are they wrongfully relying upon the sweet promises of Holy Writ that God will succor the distressed as long as hearts are troubled or His children are in need? Do they exceed the authority of Christian teaching, or exaggerate God's love for man, when believing that their heavenly Father will remember them in their affliction, and in response to faithful prayer will remove the destroyer of their peace? Does not the Bible sanction their belief that God Himself is the healer of disease, and a constant safeguard from evil?

Christian Scientists are desirous of living up to their highest sense of Scriptural truth, and to that end they accept the Bible precepts, commandments, and promises as of equal value to them now as to any people in time past. Human experience is essentially the same to-day as in any previous age. The same foes to peace and progress, purity and righteousness, have menaced mortals through all time. The dire results of moral disobedience, the penalties of wicked thoughts and acts, the pain and death comprised in a material sense of man, afflict humanity much the same to-day as in past times. Since this is so, Christian Scientists are convinced that the spiritual remedy successfully used by prophet and Messiah, apostles and early Christians, would be equally effective to-day if applied with the same reliant faith and understanding.

If the promises of help from God, so frequent in the Scriptures, were ever true and reliable they are true and reliable now, for the divine Father has not ceased to be pitiful and loving any more than the sun has ceased to shine. Christian Scientists see no reason why they should not have such unreserved confidence in God's integrity as they have in that of their fellow-men. Confidence and obedience are the simplest of filial duties and the least that man can render unto God. What other way is a safer one for mortals to tread? Has mortal man, a sinner, so improved upon God's mode of salvation that the divine way is no longer desirable or safe?

A man's religion should be more than sentiment or ceremonial; it should reach to the utmost of his need. If Christians are not finding in God a refuge from evil, including disease, they are not availing themselves of the full privileges of Christianity. In that sublime prayer of our Master, recorded in the seventeenth chapter of John, he asked that his disciples be kept from the evil that was in the world, and included in his prayer all who should believe on him "through their word." He did not postpone the divine deliverance until after death, nor prescribe a material avenue through which God must reach and succor man. Are Christian Scientists outside the zone of safety when trusting God to keep them from the evil of disease, as well as from sin, even as their Master prayed that they might be kept? Does an injection of morphine, an acknowledged poison, aid the divine power, or render God more willing to answer the prayer of His child in pain? Or do our Christian opponents venture the subterfuge that the morphine is the legitimate answer to that prayer, and indicates the extent to which it can safely be relied upon?

When arguments fail experience must decide. All the theories ever advanced regarding the passing out of divine healing are utterly worthless when proof is given to the contrary. The prophet Malachi represents God as saying, "Prove me now herewith, saith the Lord of hosts." Until we have done this we are not qualified to pass judgment upon the availability of divine help, nor the measure of protection afforded by God to His people.

To the best of their ability Christian Scientists are endeavoring to prove the power of God according to the Scriptures. They consider this a Christian duty and privilege. If God can and will deliver men out of trouble and temptation, out of poverty and sin; if He will save them from the terror and the anguish of disease, they want to know it; the world wants to know it; for no lesser way could equal the safety and success of the divine way. But if He cannot be relied upon to do this; if earnest faith and prayer will not bring men into touch with the divine Spirit, and reveal the strong arm of His salvation; if there is no road to that refuge from woe so sweetly promised in the Scriptures, no safety for men from mortal ills and fears, from the pain and passion of sinful thoughts, then what is the whole fabric of the Christian religion but a house built upon the sand, and what is the Bible but a piece of clever fiction?

If it is a sin to look to God alone for the healing of disease it is indeed a dangerous practice, since sin is the only danger which can beset mankind. If it is unwise to pass by human means that have already failed, and seek divine assistance in physical extremity, then the hopelessness of the unhealed is as the gloom of the bottomless pit; for of what avail is man's pity if God have none?

The best of doctors, with the best of intentions, and with the best resources of *materia medica* at their hand, helplessly see their patients die. This occurs not seldom, but every day and in every city. Then as medical methods are proven to be not safe and it is "dangerous" to trust in God, what is man to do? What higher hope or stronger help is offered him? But can human authority countermand the divine behests of Scripture and say that mankind must now seek relief for bodily distress from lifeless matter rather than from the living God?

Those who have declared that there is risk in Christian Science practice should state wherein is the greater danger, in trusting God too little or too much. Is the risk with God that He will not hear, or with man that his faith is too small? In what way are material or humanly mental methods superior to the method of Jesus who healed all manner of diseases by spiritual means alone, and yet did not claim for himself any special gift or power which all Christians may not possess when they reach the same purity of heart? In what way or by what authority is a drug safer in time of need than the Christian's God, whom our Master proved to be the Saviour of man even from the extremity of death?

For many centuries physical science has been experimenting and investigating in every possible material way in the search for a knowledge of the science of life, but it is still confessedly in the dark as to the real origin and life of man. It has not understood the substance or the formation of a single cell, much less the structure and action of the human organism. It has been a long, pitiable failure, this exploration into matter in quest of the life Principle and for the unseen source of thought and will. The closest scrutiny of brain and nerve has revealed nothing but

Digitized by Google

matter,—unthinking, unknowing matter,—the sphinx whose ears have never heard the weary questioning of man. Truly the wisdom of the (material) world is foolishness with God (Spirit).

The wisest of matter-wise men, though a master of all knowledge accumulated through the ages and initiated into all the mystery and magic of chemical action and production, cannot add one cubit to his stature, nor make one hair white or black. With all the elements of matter in his laboratory he cannot produce in them sensation or life; he cannot construct a muscle or compound a drop of blood. No microscopic or surgical examination has discovered to him the secret of human life and death, or marked the course of love and hate. His material knowledge has not solved for him or for us the mystery of being, and he stands before the common problem of the race as ignorant of the Principle of man, of life and health, as the untutored savage who has never heard of molecules and atoms.

And this is the being in whose wisdom and knowledge we are called upon to trust in preference to that divine intelligence whose creative mandate brought man and the universe into being. The accepted theory is that God originally formed the human body, the heart, muscles, nerves, brain, etc., and gave them life and action; and yet if these become deranged we are told that the Creator of man is less safe to rely upon to restore the disordered sense than some finite mortal, whose knowledge of man is as small as his knowledge of God; and that some nauseous, or poisonous drug is more potent to save than almighty Spirit. The fallacious assumption that God co-operates with the compounds and concoctions of a chemical laboratory in His government of man is the plea of the fearful who have little faith in God.

After all, the question is one of results. Facts are the supreme court of human decision; for men will resort to that system which, under equal tests, has the largest measure of success. Those who are relying upon Christian Science treatment have had prior experience with approved material methods, and their satisfaction with this Christian system is because of its beneficent influence in removing their physical as well as moral ills.

Christian Scientists have the same instinct of self-preservation which leads their brethren of other faiths to whatever inspires in them the strongest hope. They have as hearty appreciation of health as other mortals, and in the presence of physical distress they seek the surest help available. That help, to their understanding, is God, referred to in Scripture as "a very present help in trouble." What help could be more available and trustworthy for a troubled sense than ever-present divine Love? What do mortals need more than God, and who knows better how to set the erring belief right, and heal the aching heart?

God who with infinite wisdom and might said, Let there be, and there was; who maintains the universe and guides in safety the millions of stars in their courses, should be capable of preserving man in health or of restoring a lost sense of it. All Christians should rejoice that Christian Scientists are proving God's goodness and power in the healing of disease as well as sin. The religious world should give them encouragement in this work, since faith in God is admitted to be the Christian's duty. The relation of God and man is essentially the same throughout time and eternity, and it is surely safe to believe that He will be as good to a Christian to-day as in earlier times, when healing the sick was a sign of Christian belief. To seek the kingdom of God *first* is the only sure escape for mortals from the ills and pains of the flesh.

Because they have gone again and again directly to God, without any material intervention or obstruction, and have received from Him the healing of their diseases, even when mortal man in his wisdom had declared there was no hope; because of their positive evidence of God's presence with men as their Saviour and Physician even to the direst extremity of their woe, Christian Scientists have risen to the sublime conviction and assurance that intelligent Christian reliance upon God is the safest and wisest way open to man.

Selected Articles.

Consecrating our Lives to God.

To consecrate is to set apart as sacred. Jesus said, "Where your treasure is, there will your heart be also." The Apostle Paul said, "Present your bodies a living sacrifice."

To consecrate our lives to God includes our means and our business, whatever our vocation may be. It is conducting business on the basis of the Golden Rule, a strictly honest and just standard, no false measures or misrepresentations. A practical consecration of our lives to God in the business world is illustrated in the method adopted by a business man who became a Christian Scientist and instructed his clerks to sell goods just as they are, "cotton for cotton, and wool for wool, else let them perish on the shelves." Since adopting this fundamental basis for his business his sales have increased.

Another business man, whose wife was healed in Christian Science of a very serious illness, informed me that he began to investigate the subject and commenced to conduct his business on its basis, pursuing a higher course of honesty, and as a result his business has increased and never was as satisfactory as at present.

While there is a longing to see all classes of people come into Christian Science, we are always pleased to hear of the business man becoming interested in this subject and conducting his business on its basis, because it restores confidence. Christian Science destroys all desire to misrepresent and deceive through the medium of advertisement.

The effect of Christian Science on the lives of traveling men is beautiful to behold. What a reformation it has wrought with many of them!

This is not only true of the traveling men, it is the effect of Christian Science on the lives of individuals in every vocation,—the housewife, the farmer, the clerk, and the mechanic,—it better enables all to love and honor God.

L. B. C.

In *Dayton* (O.) *Herald*.

Known by its Fruits.

Superstition and delusion appeal to the ignorant and illiterate. They are fostered by and grow through fear of the unknown. Christian Science appeals to all classes and is not mystical. It presents itself to the thought in such clear, logical sequence that it satisfies the understanding. Its fruits are to make better men and better women, which superstition and delusion never do. Christian Scientists do not advertise either their cures or their failures. The business of the Christian Scientist is to do the will of God and love his fellow-men, not to seek notoriety. Christian Scientists, however, do protest, and justly so, against sensational and oftentimes unjust publication of all cases of apparent failure with no credit whatever given the much more numerous cases of unqualified success. All they ask is that they be given a fair and impartial hearing, and they are quite willing to let the verdict of the public rest on this basis.

The work of Christian Science has taken such a firm hold in every part of the United States, and the happiness, health, and cheeriness of its followers are so apparent that

Digitized by Google

one cannot fail to learn of its workings even with the slightest effort. The churches are open to every one who cares to attend. However, Christian Scientists do not make public exhibitions or tests. They follow the Scriptural injunction not to tempt the Lord thy God to satisfy mere curiosity and are warned not to cast pearls before swine.

Christian Scientists do not deny the existence of disease to human sense. To them disease is as real as the material mortal thought declares it to be, and no more. When the thought of disease vanishes, the disease vanishes. Disease to Christian Scientists is a negative condition, a lack of understanding of God, as darkness is the negation of light. We do not study darkness in physics, because it is a nonentity. So Christian Scientists study to know God who healeth all our diseases.

Christian Scientists do not ask for any special or class legislation. They protest, however, against being judged by a standard which compels them to use means or methods contrary to the teachings of the Bible or Christ's commands. They ask only to be protected in those rights guaranteed them under the constitution of the United States and of the various states of the Union. Praying for the sick is the Christ method of healing and is the only method used by Christian Scientists. That Christian Scientists are only insisting on their rights as citizens in this respect is proven by the significant fact that the many attempts to legislate against them in the various states have failed. To take away this right from them is to strike at the chief cornerstone of American liberty. EZRA W. PALMER.

In *The Critique.*

A Choice of Means.

Christian Science is a religion, not a method of practising medicine. True, the healing of sickness follows as an incident to the religious work, a "sign following" to prove the truth of its doctrine. In this it follows the "works" of Jesus and the early Christians, who depended upon the "works" of healing the sick, etc., to prove the verities of Christianity and to spread the gospel. Jesus and the early Christians found that all forms of sickness, as well as sin, were curable through the ministry of their religion, and Christian Scientists are rejoicing over similar experiences all over the world. They are seeking to obey their consciences in obeying the commands of Jesus, which they understand was directed to his followers of all times: "Preach the gospel;" "heal the sick." It is an integral part of their religion that Jesus did not promise falsely when he said, "He that believeth on me, the works that I do shall he do also."

No Christian Scientist claims that he heals sickness. God is the "great Physician." It is in God that we live, and move, and have our being. They claim the indefeasible right of conscience to pray for the sick, just as clergymen and friends do. But they seek to pray aright and not to "ask amiss," and they are rewarded already all over this and other countries in thousands upon thousands of instances by unquestionable demonstrations that it is true, as the Scripture declares, that "the prayer of faith shall save the sick." They rely upon the guarantee in our Indiana Constitution: "No law shall, in any case whatever, control the free exercise and enjoyment of religious opinions or interfere with the rights of conscience." Let those take drugs who wish to. But no humanitarian physician can do otherwise than rejoice when suffering is relieved by prayer. I do not believe that, upon more serious consideration, the Medical Board of Indiana will wish to interfere with the great mission of Christian Science any more than it would with the mission of Jesus and the early apostles and Christians if now on earth. Yet the law would apply to them as well as to us.

Our position as Christian Scientists is this, and it is based on the fundamentals of civil and religious liberty: We obey the laws respecting contagious and infectious diseases out of respect to the rights of the majority, but in those cases which concern the individual, and not the public, our position is that they who prefer drugs should be permitted to have them, and those who prefer prayer and the seeking of God's help should also be permitted to exercise their choice. CLARENCE A. BUSKIRK.

In *Indianapolis* (Ind.) *Journal.*

Transformation through Mind.

If Christian Science were what many think it is,—a form of hypnotism clad in religious phraseology,—it ought to be condemned by all right thinking people. If, on the other hand, it is what its followers claim it to be,—beneficial morally, physically, and socially,—the public ought to know it, lest they be found "fighting against God" in defaming and ridiculing such a factor for the uplifting of mankind.

St. Paul was stating a metaphysical and healing thought when telling the Romans to be renewed or transformed by the renewing of the mind. His words to the Philippians, "Let this mind be in you, which was also in Christ Jesus," is intended for all professed followers of Christ. This cleansing power of God's word has never been abrogated. That is the only metaphysical side there is in Christian Science practice and living.

The transforming, regenerative power of spiritual thought (or silent prayer) wielded by the true Christian Scientist is not a metaphysical formula, incantation, nor any laying on of hands. Neither does the mere abstinence from drugs constitute Christian Science practice. The study of Science and Health, the text-book of the denomination, does not heal the diseased body while permitting the possessor of that body to retain his corrupt thoughts, and indulge his sinful inclinations.

Guess-work or blind faith have no place in Christian Science, which is simply the application of spiritual law to the physical world, whereby moral and physical disorders are expelled from the human consciousness either instantaneously or gradually according to the receptivity and temperament of the one seeking help. Failure is generally the result of the disobedience, of patient or healer, to one or more of the rules of its governing Principle. As Mrs. Eddy says in "Miscellaneous Writings," page 295, "My teachings are uniform. Those who abide by them do well. If others, who receive the same instruction do ill, the fault is not in the culture but in the soil." C. DREYER.

In *De Funiak Springs* (Fla.) *Breeze.*

The reformatory work of Christian Science must be emphasized. One cannot theorize his way into the kingdom of God. One cannot work out his own salvation by simply learning what he ought to do. One reaches heaven by actually taking the steps which Truth points out, and it is certainly well that we should take time to consider how much of right enters into our conduct as well as to seek new ideas. We should grieve more when we are not using the understanding we already have than because of a lack of it. A daily study of our text-book, Science and Health by Mrs. Eddy, will furnish most students with enough understanding for daily use. ALFRED FARLOW.

In *Boston Times.*

Mrs. Eddy has never assailed any of the world's benefactors and has always commended every honest effort to uplift the race physically and morally, whether she agreed with the systems or not. She has always recognized toleration as a mark of Christianity. The founder of Christianity said: "Judge not, that ye be not judged."

Letters to our Leader.

Boston, Mass, October 1, 1903.

Reverend Mary Baker G. Eddy.
Pleasant View, Concord, N. H.

Beloved Leader:—It is with a feeling of deep gratitude, and with wonder at your forethought and spiritual guidance, that I acknowledge the worth of your Church Manual. My feeling of gratitude comes to me stronger day by day as I answer letters of inquiry from many parts of the world and see how each need is met by your valuable and efficacious By-laws. My heart goes out to you as I realize somewhat of your tireless and prayerful labor in giving to us this volume of guidance.

I believe that those who best realize the splendid sweep of your spiritual vision are most loth to write to you, for they feel that you see far beyond their horizon, know all that they know of good, and whatever they have to tell is an ancient chronicle to you. But I feel most strongly that it is an encouragement to a Leader to find that his pupil is following him, and believes as he believes.

What would be the fate of a general if, when he saw his advantage from some knoll that gave him an extended view of the field of action, he were to find that his captains—because they stood on lower ground and could not see the field—refused to follow him? He needs not only a feeling of confidence in his men, confidence of their response to his word of command, but also the ringing hurrahs from enthusiastic throats and unfaltering hearts. He may have heard the same shouts of victory in former battles, but the cheer of enthusiasm and faith is encouragement to the tireless general who has worked through the watches of the night to perfect his plans.

And so should we cheer you, we who are in the fire zone and see how well you meet each error and pacify the warring elements with Truth. May God bless you.

I seriously doubt if you will have the time to read the enclosed Ode, but I send it to you, for I feel that it is product of Christian Science thought. The title "Out of the Depths" will explain itself, and against each stanza I have placed the name of the subject-matter. During the last two years this Ode has been read to many, and has been strongly praised by artists, musicians, and literary people. At present I do not feel that the time is ripe for a Christian Scientist to strike too hard at strong and anciently rooted beliefs, for I feel that our duty in the advancement of the Cause impels us to be thoughtful, careful, politic, and free from rash zeal. I have never believed in acting upon first impulses or emotions. I much prefer to let the blood cool, then think and act, and God will nurse our beloved Cause to greater strength before we attack a too powerful foe. Therefore my judgment tells me to keep two stanzas from print at present, and perhaps for some time to come.

Thanking you again for your labor and love, I am most gratefully and lovingly yours.

WILLIAM LYMAN JOHNSON.

Lewiston, Me., October 1, 1903.

Dear Mrs. Eddy:—I wish to express to you in words, what I have mentally expressed many times, my thankfulness for the discovery of Christian Science as given to us in Science and Health.

I was healed, by reading the book, of a severe case of lung trouble of five years' standing. My first wish after being healed, was to express my gratitude personally, but I learned through older students that your life was so very busy that you did not have time to see all who might wish to see you.

I have thought lately that it might bring you a measure of joy if I sent you a message of love telling you how much I honor and try to appreciate your unselfish, consecrated life.

Yours in Truth and Love,

MISS HARRIET B. CLARK.

Boston, September 29, 1903.

Dear Leader:—I have been much interested in reading the new Manual. I think one of the most satisfying By-laws (to me) is the one which provides for the retaining of the Mother Church intact. Very few realize the struggle it took to erect this dear edifice, and perhaps fewer realize that it was your demonstration against and over all the supposed powers of darkness. To me this building stands as a monument of victory over evil. If left to me, I would never take a brick from it.

Then again we shall need the room for so many purposes. I was simply delighted when I saw the Manual. All work demonstrated by the Founder of Christian Science *stands!*

I have wanted to write you of an incident which occurred on our visit to your home last June. I stood a little to the east of the elm-tree which is perhaps a hundred feet or more from your house, while you addressed us. I heard perfectly every syllable uttered by you. As you began to speak a little bird flew into the tree and set to music the gospel which you uttered. His voice was strong, and loud as a canary, but with his loud song he did not seem to take at all from the distinctness of your utterance or from our hearing you plainly. Some birds would have been frightened at so large a gathering, but he sang as though he were a part of us.

A young miss of fifteen who came to Boston to attend the Mother Church for the first time, was there. For three days afterward she requested her room-mate and friends not to speak to her. She simply desired to meditate. She said she had received a new gospel, an inspiration, by coming into your presence, and she wished to assimilate it.

There were so many pleasant things that occurred at our Annual Meeting that if I should write them all you would not have time to read them. One student from the West said, "There are no *big Scientists* at this meeting." This was true. We were more nearly on the same level than ever before.

Your affectionate student,

EDWARD P. BATES.

Philadelphia, September, 27, 1903.

Our dear Leader and Teacher:—As the days and weeks of mortal time fleetly pass and we recognize the ever-increasing help accorded to us through the tireless effort of her whom God has called to lead us in our warfare against the seeming powers of darkness, we feel it a sacred duty as well as a joyous privilege to express, feebly though it may be, in words, our loving appreciation of her great labor of love.

This year of 1903 is, through you, replete with blessings, for two of which we are specially grateful.

Most of us longed for a complete and concise index to Science and Health, and lo! at our June Communion gathering, the Concordance appears with all its inestimable helpfulness and perfection, a glad surprise.

What a simplifier and comfort in our study, directing us quickly to just the reference needful to guide our thought, at any point of the battle, grateful possessors are we.

Now within a few weeks arrives another visitant,—our new twentieth century Manual,—a message of earnest warning, of loving counsel and admonition, of deepest longing that we may step up higher through demonstration.

Mere words seem very cold in the endeavor to convey the heart's impulse, and we feel that we can express to you our heartfelt gratitude and love in no better way than to assure you of our earnest desire and purpose to strive loyally to adhere to every precept as it may be unfolded by divine Love through you to us.

Very sincerely and gratefully your willing followers,

CHARLES H. FAHNESTOCK,
VIRGINIA PECK FAHNESTOCK.

To Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Amendments to By-laws.

THE following sections of the Church By-laws have been amended to read as follows:—

ARTICLE XXXI.

APPLICANTS AND GRADUATES.

NORMAL TEACHERS.—SECTION 1. Loyal students who have been taught in a Primary class by Mrs. Eddy, and have practised Christian Science healing acceptably three years, and who present such credentials as are required to verify this fact, are eligible to receive the degree of C.S.D.

QUALIFICATIONS.—SECT. 2. Loyal Christian Scientists' pupils who so desire can apply to this Board for instruction in one class, and if they have practised Christian Science healing successfully three years and will furnish evidence of their eligibility therefor they can enter the Normal class. All members of this class must be thorough English scholars.

ARTICLE XLII.

THIRTY-THIRD EDITION THE AUTHORITY.—SECTION 2. The Board of Directors, the Committee on Bible Lessons, and the Board of Trustees of this Church shall each keep a copy of the thirty-third edition and subsequent editions of the Church Manual; and if a discrepancy has appeared in any revised edition, these editions shall be cited as authority.

Section 4, Article XXXIII., has been amended by adding the following paragraph:—

The session of the General Association of Teachers may be held two days, closing daily not later than 6 P.M. The main topics for discussion are, *unity of action*, strict conformity to the Mother Church By-laws and to the contents of the chapter on "Teaching Christian Science" contained in Science and Health.

A Bad Practice.

WE think our readers will heartily endorse the following, which appeared in a recent issue of *The Christian Register*:—

"Is anything gained by giving to the world daily bulletins concerning great men who are dying? Details which would not be mentioned even among friends are now published and sent by telegraph throughout the world. Certainly the general health is not improved by these grewsome details, and the effect upon the mind is not wholesome."

The extent to which the details of the sick-room and the sufferings of the patient are chronicled in such cases is beyond the bounds of good taste, and there seems to be no excuse for thus invading the privacy of the home.

That the sufferer is a man of prominence does not present justification for this practice, nor does the plea that the public is vitally interested in the welfare of the patient seem sufficient. The exploitation of detail to which our contemporary refers can appeal only to a morbid sense, and it helps neither patient nor public to have the hopes and fears of the entire world centered upon the case. The *Register* truly says that "certainly the general health is not improved by these grewsome details, and the effect upon the mind is not wholesome."

The ethics of professional life impose certain restraints upon those called in a professional way to the assistance of their fellows, and the obligation of the physician, the lawyer, and the clergyman to preserve inviolate the confidences reposed in them is too well known to need comment, and it will do no harm to say in passing that the same and even a greater obligation not to betray the confidence of his patient is binding upon the Christian Science practitioner, who stands in the relation of both physician and clergyman to those who appeal to him for help.

M.

Answers to Prayer.

WE often hear it said that Christian people, and even those who make no profession of religion, have remarkable answers to prayer, and students of Christian Science are sometimes asked to explain such occurrences in the light of their understanding of Truth. As such experiences are related, one is impressed by a fact common to most of them; viz., that these unquestioned answers to prayer usually came when the divine aid was invoked in a time of dire extremity; not that the petitioners were otherwise prayerless, but that education and the weight of opinion alike, were on the side of material means either in case of illness or in great trials.

To the student of human nature it is surely worthy of the deepest consideration, that when all else fails, when the door of hope is closed, so far as materiality is concerned, there is something in man which springs up from the very ashes of despair, and cries out for God.

Jesus said of the Father, "He maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust." So no prayer is unanswered and the gift of divine Love is never withheld. The pity is that men call so seldom, and so late.

In spite of this, however, countless blessings have been recorded in human experience. It is no less strange than true, however, that those who have had remarkable answers to prayer usually turn to materiality when other trials come, and thus the experience which meant so much at the time becomes an exception in their lives.

Now it is hardly fair to charge this conduct either to ingratitude or to perversity; indeed, it sometimes seems to arise from an ill-defined fear of troubling the Almighty with matters too trivial for His notice. However explained, the fact is that generally when all else fails and shipwreck threatens, then mortals are prompted to turn from the means that no longer promise help, and cry out, "Lord, save; or I perish." None are more ready than Christian Scientists to admit that the divine aid comes in some measure to all who earnestly seek it, and Christian Science explains these special demonstrations and shows that when faith in materiality is shaken, man from sheer necessity turns to God, since reliance upon something outside of himself is inseparable from his very existence.

Like all others, the Christian Scientist comes as a mendicant at first, asking only for the crumbs which fall from the Master's table, but he soon learns through the healing what it is to be a child of God. The tender rebuke of divine Love strikes at the very root of the false sense which murmurs at supposed trials. It says, "Son, thou art ever with me, and all that I have is thine." "All that I have," —all life, all truth, all intelligence, all substance, but no pain, sorrow, war, sin; for these belong not to God,—they are not to be found in the realm of spirit, and that realm is everywhere.

Some may say, "And are we then to cease asking?" Christian Science answers, On the contrary we are to ask with fuller assurance, as children ask at their father's bounteous table, knowing that the parental love and wisdom are far greater than their need. Paul expresses this both

Digitized by Google

clearly and strongly when he says, "Because ye are sons, God hath sent forth the spirit of his son into your hearts."

What more can ever be needed than this, "The spirit of his son;" and how can we ever forget the daring of our brave Leader, who in the name of the Christ laid claim to this, and nothing less, for herself and for all humanity,—for "whosoever will,"—the right to know and possess our birthright with all it includes? One to whom this rich blessing had come, said to a friend some time after being healed, "I have never been sick since I found out what I really am." Dr. Ellingwood Abbott says,—

Art Thou the good?
To Thee then with a bursting heart I turn
And at Thy fountain stand and hold my urn,
As aye I stood.

Forgive the call,
I cannot shut Thee from my sense or soul,
I cannot lose Thee in the boundless whole,
For Thou art all.

K.

The Passing Leaf.

THE splendor of New England's wooded hills, these autumn days, leads one to wonder if the Aurora of the north-land has not escaped the meshes of the night and drifted into milder climes, that our summer might vanish in a dream of color; and in its profusion, its variety, and its delicacy of tints, the fleeting vision has surely brought to all who, having eyes, see, suggestions of that unfading beauty which pertains to the manifestations of Spirit.

Material sense may seem to veil and obscure the glory of these manifestations, but it cannot mar or restrain them, for the clouds of this mortality are being shot through and through by that revealed and revealing word which will ultimately dispel them all and usher in the perfect day.

There are those to whom the varied aspects of nature make strong and immediate appeal, who are gladdened and helped in some degree by companionship with the fields and the flowers, the wild birds and the sky,—and yet who see in all but the expressions of an unthinking, unfeeling force. In all their getting, these "nature-lovers" have not found the true riches. They have ascended Nebo, but they have not seen "the Promised Land."

In contrast with their limited sense of being and beauty, the thought that has been awakened to spiritual truths has acquired an unmeasured gain. To look steadily away from appearances to reality, is to realize a quickening and expanding sense of Love's omnipresence, and in that measure we become sensitive to the spiritual disclosures of all that is good and beautiful in human experience. "When every form and mode of evil disappears to human thought, and mollusk and radiate are spiritual concepts testifying to one Creator,—then, earth is full of His glory, and Christian Science has overshadowed all human philosophy" (Miscellaneous Writings, p. 361).

This nobler sense becomes both the inspiration and the interpretation of life, and it enables us to see that "all things beautiful and harmless are the ideas of Mind." We now understand how "Christians rejoice in secret beauty and bounty hidden from the world, but known to God" (Science and Health, pp. 280, 15).

The falling leaves have finished their course, and in passing they are made radiant with imprisoned hues by that which is not of them but above them. They tell us not only of the "light from heaven above the brightness of the sun," but they suggest how this light, as it dawns in human consciousness, illumines, with a glory not its own, every normal human experience and relation,—every improved and improving belief,—in their passing until, like the leaves, they have all disappeared, in light.

It is the province and privilege of the Christian Scientist—the true idealist—to know and declare that the lingering shades of material sense cannot and shall not interdict an ever-increasing apprehension of spiritual reality. It is his to find in every gladsome incident, every beauteous vision, every uplifting and progressive experience of this human life, those spiritual intimations by which we may all be taught of God; and it is his to be so enriched thereby "in all wisdom" that his daily ministry to the famished, the perplexed, and the suffering of earth shall indeed prove an avenue for the divine visitation. W.

General Association of Teachers.

The following arrangements for reduced railroad rates are announced, in the interest of those planning to attend the Association.

The New England Passenger Association, Trunk Line Association, Central Passenger Association, and Southeastern Passenger Association have granted reduction in round-trip rates to Boston of fare and one third on certificate plan.

From California, Nevada, Washington, and Oregon, members may avail themselves of the regular nine months' rate to Omaha, Council Bluffs, Kansas City, Chicago, St. Paul, St. Louis, or New Orleans and rebuy at one of the above points. If the nine months' rate is not in effect from the member's home station or starting-point, the agent at such station will cheerfully ascertain and advise the nearest point from which such rate does apply, as well as the eastern point to which it will be most advantageous to purchase nine months' ticket.

While the Western Passenger Association has not given notice of its action, it is confidently expected that it will concur in the fare and one third plan.

Those who wish to avail themselves of the reduced rates are advised to consult their local ticket agents for full information.

Appreciation of the Concordance.

When the announcement of the new Concordance to Science and Health was first received, I rejoiced in anticipation and supposed I had measured, in a degree, its scope and possibilities. When the volume was placed in my hands, the first glimpse filled me with satisfaction and gratitude. Since then, I have searched its pages "as for hid treasures," and its daily revelation is indeed marvelous. Surely none can use this gift from our dear Leader, without turning again to Science and Health with an awakened assurance that it is indeed a boundless storehouse of blessings. Words may suggest my feeling of gratitude, but they cannot express my sense of the value of this work to students.—C. LULU BLACKMAN, Fremont, Neb.

Having lately obtained a copy of the Concordance to "Science and Health with Key to the Scriptures" I am pleased to state that during my first years of the study of Christian Science, I found that the book Science and Health was truly a Key to the Scriptures and it revealed the Truth; and when reading Mrs. Eddy's various books collectively, each book (by the inspiration of the author) sustained the others, and the others sustained the one. Now, to my discernment, the Concordance seems to serve as a Key to Science and Health and as we are taught in Science and Health, (p. 495), to "study thoroughly the letter, and imbibe the Spirit" the Concordance does enforce the Spirit.—EDWIN I. FREEMAN, Cleveland, O.

God does not give us ready money. He issues promissory notes, and then pays them when faith presents them at the throne. Each one of us has a check-book.—T. L. CUYLER.

The Lectures.

At Rockland, Me.

That the subject of Christian Science is attracting the attention of many of our people was evidenced by the large number present Thursday evening, September 10, in Farwell Opera House to listen to an address by Judge William G. Ewing of Chicago, Ill. Frank B. Miller, Esq., introduced the speaker in a few appropriate words.

The Rockland Courier Gazette.

At Oconomowoc, Wis.

The auditorium in this city was well filled with an appreciative and representative audience on Thursday evening, August 20, when Judge William G. Ewing of Chicago, addressed them on the subject of Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist, and was the first one given in this city. A special train brought one hundred and eighty Scientists from the Milwaukee churches. The speaker was introduced by Rev. George H. Spencer of the Baptist Church.

Correspondence.

At St. Johnsbury, Vt.

Carol Norton, C.S.D., of New York, gave an address in Music Hall, Sunday afternoon, September 13, which was well attended. The speaker was introduced by Rev. A. F. Walch, who spoke as follows:—

Friends and Fellow Christians:—I find myself most agreeably placed this afternoon. I am glad to stand in this presence and extend a hearty welcome to the distinguished speaker who is to address you, and to express my hearty good wishes to this organization. However we may differ in our individual opinions upon the great matters of faith and life, we are yet all hoping from the bottom of our hearts that our Christian Science friends may be right in their claim that they have discovered the way that shall lead to bodily as well as spiritual well-being. It is always well to be able to see the good in others, and to recognize that it is a God-given right to follow the dictates of reason and conscience. It is no longer considered a crime to think and to give honest expression to honest thought. I assume that you are honest in your thought and in your expression, and so I extend my congratulations upon the success of your great movement.

The Christian church has long been a factor in the civilization of the world; it is still a factor in the development of human character, through the establishment of the kingdom of God in the earth. However, the church is not always alert to its largest use of opportunity.

It is always necessary that the church shall keep itself free from all hindrances and go forward to do a spiritual work for men and women. The Christian Science movement comes in the name of Christ and his Gospel to reveal that power which confessedly it now lacks, of reaching out the hand with Peter and bidding the sick to rise up and walk in the Master's name. It is therefore with pleasure that I present the speaker of the afternoon, Mr. Carol Norton of New York, who will address you upon the comprehensive topic: "Christian Science, the Gospel of Righteousness and of Health."—*St. Johnsbury Caledonian.*

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting to be held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Those who approve applicants will greatly assist the Clerk if they will send their applications as early as possible.

Testimonies of Healing.

To the many testimonials of truly marvelous healing published in the Christian Science periodicals, I desire to add mine, with the hope that it may be read by some who need the help of Truth as I did before Christian Science lifted me out of my misery, and gave to me perfect health and happiness.

In my testimony which appeared in the Los Angeles Case and was published in the *Journal,* I gave a brief statement of my healing, but there were many witnesses to be heard, and since it was my first appearance before a jury my statement was not as full and comprehensive as I would like to make it.

Christian Science came to me in the spring of 1901 when everything that could offer any hope of relief in a material way had been exhausted. When it was first mentioned to me I was opposed to trying it, but no other hope appearing, I grasped at it as the last straw. From childhood I had never been strong and always had more or less trouble with my stomach. In early womanhood other troubles appeared, and as I grew in years these became more serious. For over fifteen years before I was healed by Christian Science I was afflicted with a complication of diseases that baffled the efforts of competent physicians.

I had gastric trouble, besides other severe stomach and nervous troubles. Since early womanhood I was treated for ovarian trouble, which grew more serious as I advanced in years, and from which I was told I could only be cured by having one or more surgical operations performed. During the winter of 1895 I was very ill of gastric trouble and at the same time was having severe and frequent hemorrhages. After making a physical examination, the two leading physicians of our town informed my husband that they diagnosed the case as ulceration of the stomach or the intestines, or both; that he—my husband—knew what the result of such a disease would be, and they thought it their duty to inform him of their conclusions so that he might be prepared for the worst, as it might come at any time. We were, however, unwilling to give up, so my husband managed to get me to San Francisco where another examination was made by three able physicians who said that there was no ulceration of either the stomach or intestines, but that the cause of extreme debility was due to a lack of proper nourishment, and that the hemorrhages were caused from internal hemorrhoids, from which my only hope of relief was by a surgical operation. My debilitated condition prevented me from ever having these operations performed. I was never free from pain and much of the time was so badly crippled I could scarcely get about.

In 1896 we came to Los Angeles to reside, and for the first six or eight months my condition was much improved, but after that the old conditions reappeared as bad as ever. About eight months previous to my turning to Christian Science, nervous prostration, disorder of the bowels, and insomnia set in, and from that time until the date of the first treatment I received, every six or seven days I would have sinking attacks that would last from two to four days, and from which it sometimes seemed I could not rally. The nights were passed in sleeplessness and pain. My stomach trouble became much worse so I could partake of scarcely any nourishment, and even the various invalid foods on which I had formerly lived for weeks and sometimes months, were one after another rejected. Upon the advice of the physician under whose treatment I was, I would try different kinds of light nourishing domestic food with the result that it would cause me such suffering that in a short time the stomach siphon tube had to be used, the food removed, and the stomach washed. The above-mentioned tube I used the last six months of my illness, at first every day then two, three, or four times a week. The physician told me that my trouble was both

Digitized by Google

organic and constitutional; he said all that could be done was to find something to allay the pain and suffering, relying for recovery on my strength to outlive the diseases. In my condition we understood what that meant so far as material help was concerned, and it was then I turned to Christian Science.

The first treatment I received in Christian Science healed me of the stomach trouble, bowel trouble, nervous prostration, and insomnia. It seemed scarcely possible for one who had suffered from such long and hopeless invalidism to be thus suddenly released, or that the dark cloud could have been permanently lifted from our lives and our home; but I seemed to know that it had, and that I had not only found physical healing, but something that meant infinitely more. I can never forget the feeling of peace, freedom, and joy, which I experienced the first few months following that first treatment; from that time I have eaten all I desired and of whatever kind I wished without experiencing any pain at all or any inconvenience. I gained rapidly in strength, and within a few months I was perfectly healed by Christian Science of the ovarian trouble and the internal hemorrhoids. One of the accompanying aspects of the stomach trouble from which I had so long suffered was a great deal of headache and a confused, distressed feeling in my head so that my memory and mental faculties were seemingly much impaired. I was also subject to attacks of despondency which caused me much mental distress and unhappiness. All these conditions have been overcome by Christian Science.

As soon as I turned to Christian Science for help a copy of Science and Health was purchased and eagerly read; since then I have been an earnest student of the book. I desire to express my thankfulness for the light that has been shed upon the Bible by "Science and Health with Key to the Scriptures," and for the spiritual regeneration I have received thereby.

Words fail me to express the gratitude I feel to our heavenly Father for leading me to Christian Science, and I feel a deep sense of gratitude and loving appreciation for Mrs. Eddy, and to those who have helped me to gain a little understanding of this wonderful Truth.

MRS. F. F. MULLER, Los Angeles, Cal.

On the morning of the 4th of July, 1903, I left my home for the office feeling in perfect health. I had proceeded but a short distance when I was suddenly attacked by very acute pains running through the lungs, and these were so violent as to impede respiration. The teaching of Christian Science came at once to my thought with distinctness, that "This is Life eternal," and whatever mortal thought may present to the contrary, is false; for man exists as God's idea, and to be always conscious of this, is life and harmony. Having made a study of Christian Science I was enabled to realize, to a certain extent, that matter was not sentient nor intelligent, and therefore could not talk to me, that all real existence was harmonious.

I had not walked two blocks before all the darting pains ceased, but this was superseded by a sense of congestion where the pains had been, and unless I held my shoulders back, there was a sense of pain as though the swollen parts pressed together. This feeling, however, began to abate at once, and by noon of the next day all manifestation had disappeared.

I have no idea what this attack would have been called; this, however, I do know, that Christian Science destroyed all fear at the moment of attack, the pain ceased very quickly, the congestion subsided in a short time, and I also know that without Christian Science to sustain me I would have been very fearful of results. I feel sure that my readers will agree with me that if in this instance Christian Science only served to destroy fear, it was a great blessing.

Christian Scientists should be very thankful for the remedy that they have always at hand to help them out of their difficulties, and should rejoice in having for their Leader that noble woman, Mrs. Eddy, whose fidelity to God is known over all the earth, and is bringing to mortals a higher sense of life and harmony.

W. I. SLOWEN, Billings, Mont.

Step by step I tread the pathway that leads me out of darkness into the marvelous light and liberty which Truth reveals to me. I was induced to investigate the doctrine of Christian Science through the healing power which was made manifest to me by a dear sister in Christ who is a practitioner. She made it clear to my mortal sense that the blessing of health was for me as well as for others. My friends and intimate acquaintances who knew of my chronic diseases were amazed at my speedy recovery and declared it surely could not be a permanent cure.

This was four months ago, and since that time I have taken great comfort in studying Science and Health, in reading the *Sentinel*, and singing from the Christian Science Hymnal. While I am debarred from services in the Church of Christ, Scientist, I go to those of other denominations, for I can worship with them, having been a Methodist from childhood, hoping to do more good than I could by staying at home selfishly exclusive, yet I hunger for companionship with those who are in sympathy with me. Thanks to our Leader and to the contributors of the daily food which I receive.—E. H. WYLAND, Lynn, Okla.

I have made several attempts to give to the *Sentinel* a statement of the benefits I have received through Christian Science, but did not feel satisfied with what I wrote. It seemed so small compared to what had been done for me, but I feel I must send my testimony to show my gratitude, and with the hope that some dear one hesitating to take his stand may be benefited by my experience.

I had suffered for about nine years with what the doctor called lumbago; many tried to help me, but I grew no better. Then I became interested in Christian Science through the wonderful healing of my sister in this way after one week's treatment. She had received medical treatment for two years before coming to Christian Science. I was a little doubtful about my sister's healing being permanent, but I decided to try it for one week.

I was helped at the first treatment but not cured when the end of the week came. I then decided to give it all up, but the practitioner advised me to persevere a little longer. Through his kind instructions and my reading, I was gaining each day more strength than I ever would have gained had I been healed in my own set time. I realized that I had found the truth, and I could no longer assent to the beliefs of my old church, yet I was in no hurry to join the Christian Science Church, thinking some future day would do just as well, but here was my mistake. It was made clear to me in reading Exodus that I must stand on the side of this truth which had healed me, if I expected to receive all its benefits, just as the children of Israel were blessed by going on as one with Moses.

I decided to join the church as soon as I could, and without knowing just when, the remaining physical trouble disappeared. It was four years ago that I took my stand and I have never had any trouble with the ailment since that time. Through Christian Science my sister and I have been able to overcome many forms of sickness, and for this our hearts go out in gratitude to dear Mrs. Eddy and to the Scientists who have worked so faithfully with us.—S. M. F., Buena Vista, Va.

My sister, in a distant city, wrote me that she had for some time suffered from lameness and stiffness of the joints,

Digitized by Google

accompanied by great weakness, which made it difficult for her to rise from a chair, go up and down stairs, and in many other ways caused great inconvenience.

She had been reading Science and Health, and other Christian Science literature which I had sent her, and was much interested.

One day, while writing to my sister, I felt most strongly the needlessness and nothingness of the lameness and weakness, with which she was afflicted, and expressed it in my letter. At the same time I had the realization that in Truth all things good were possible. I knew a child of God should not be bearing this burden, when divine Love could and would make her "every whit whole."

Soon came the reply to my letter, in which she wrote, "As soon as I realized the truth contained in your dear letter, the lameness and weakness were gone. I rose from my chair without effort. I walked across the room without any lameness or feeling of discomfort at all. I am free. I hardly dare say it, but it is true. This morning is quite damp, but I went out and feel no ill effects. It is wonderful. The demonstration was instantaneous, while I was reading your letter. I do not have the faith I ought to have all the time, but I am learning. The Comforter is teaching me."

My sister also expressed the most heartfelt gratitude for this knowledge of Principle which subdues disease,—this understanding of being that will "supplant error with Truth, . . . and silence discord with harmony" (Science and Health, p. 495). She is also thankful to Mrs. Eddy, for making known this truth to the world in practical form.

I, too, render thanks to our loving and tender heavenly Father, and to our Leader in Israel, and the dear faithful ones in Christian Science for all they have contributed to my health, happiness, and peace.

ELIZABETH E. BASS, Boston, Mass.

Fifteen years ago I accepted Christian Science, and I would like to tell how I came to do so.

My brother, after traveling to the Pacific Coast and trying many physicians, was healed by Christian Science. When he left for the coast, his friends bade him good-bye, and said they never expected to see him again, as they thought he had consumption. I was very curious to know what had healed him. I also wanted to know what had changed him so, and made him look at life so differently.

In the Bible we read, "Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." My brother purchased Science and Health and gave it to me to read. I took the book and would not leave it until I finished it. I knew it was what I needed as soon as I had read a few pages. After reading I went to him and told him it was just what I had wanted all my life. If I had had it in my youth it would have saved me from much. How many problems I could have worked out correctly, and how greatly I could have helped others over rough places.

Although we have met many antagonisms in our early pioneer days, yet we have achieved great victories, and glorious has been our harvest. I feel I would not be here to-day if it had not been for this truth. Before this book came to me I read my Bible and tried very hard to be good, but the more I tried, it seemed the more sorrow I had. I went to church but did not get the help I needed. I was on the brink of despair; now, however, the Bible and Science and Health are my constant companions.

When we are honest and earnest, and desire truth more than anything else, we find it, and the blessings with it. "But if from thence thou shalt seek the Lord thy God, thou shalt find him, if thou seek him with all thy heart and with all thy soul. When thou art in tribulation, and all these things are come upon thee, even in the latter days, if thou turn to the Lord thy God, and shalt be obedient unto his voice; . . . he will not forsake thee." God's promises never fail if we are obedient, but I found I must know what it is to be obedient.

How much the word obedience means to a Christian Scientist. It means watching every thought, not even thinking evil, but listening to the voice of Truth, and being ready to go where Truth leads.

Thank God for this revelation of truth and the patience and watchfulness of our Leader. What a transformation there would be if we all watched and worked as she has done. My prayer is that we may resemble her more and more each day as she points to our Master, and to God as All-in-all. May I always listen to the one Voice for guidance knowing that there is no other power or presence but God, good.

I have proven that Christian Science brings peace, health, and happiness, but sweeter far than the physical healing is the spiritual uplifting, the assurance that God is here, and that we are His children. Often in my daily walks I see people who seem worn and weary, longing for something better than material beliefs and human aid to help them out of the seemingly drowning errors. My heart goes out to them, wishing that they too would accept this great truth and be at peace with God and man.

Only those of us who have been helped out of deep waters can fully understand the gratitude we have to express, for the strength to do, and to bear, the knowledge that nothing can touch God's child.

We cannot expect to see or realize the beauty of Christian Science unless we understand it. When we are willing to give up the material means and ways, and work with God, and our desire is great enough, then is this glorious Truth understood and demonstrated.

Have we all shown our gratitude by embracing every opportunity to give our testimony to the truth? I regret that I have not improved every one, but even if I had, I would still have much more to tell of God's love and mercy.

If people would only accept the truth through the love of the good and not wait to be forced into it under the rod, they would escape much sorrow and pain. I came under the rod, but I can now see how many forms of bondage I might have escaped if I had only accepted the truth which makes free.

If we keep close to God in thought we will reflect love and bless all who are in need. I have had persons who do not understand the Science say: "I feel so different when I am in the presence of Christian Scientists, such a sense of peacefulness comes over me." We know that Scientists impart of their peace and love to those in need, and their influence for good is felt far and wide. They in return are blessed and go higher.

If there is any one who reads this, and who has not proved the efficacy of Christian Science I would advise him to read the Bible and Science and Health, and realize for himself that he has found a fountain of living water.

I am very thankful for *Der Christian Science Herold* as it came in time to supply a need, and I am very grateful for the Concordance to Science and Health; it came just when I needed it the most. I hope the fruitage will be so glorious that it will prove beyond a doubt my gratitude to God and our Leader.—LOUISE RAYMOND, Toledo, O.

This is my anniversary month, and I think I cannot celebrate it better than by giving my testimony in grateful acknowledgment to the truth and what it has done for me.

I was in the Union army during the Civil War, and in that service I contracted several ailments which caused me to resign my commission. These troubles were on me ever since 1862, but I managed to attend to business, and

Digitized by Google

for this I was very thankful. I was, however, most of the time in the hands of different physicians, and no one could give me but temporary relief. I used patent medicines of all sorts—baths, electricity, all were of no avail. The more I took the worse I got.

At last I found that "Man's extremity is God's opportunity," and I accepted Christian Science as my only physician. It did not take very long until these troubles disappeared under the touch of truth. I need hardly say that doctors and drugs are now things of the past.

Ever since 1889, Truth,—the strong deliverer,—is the power that has kept me. It looked sometimes as though He would not keep me, for my fights with the devil (mortal mind) were very severe at times, but Truth was always the conqueror. The sins which so easily beset me, false appetites, fell before the sword of Spirit.

I have two living witnesses in my family to the power of Truth which "healeth all our diseases." Now I wish that I could find words to express my thanks to our heavenly Father and to our Leader, Mrs. Eddy, through whom He has given to this age a revelation of His holy name. I am also grateful to my teacher and fellow students who have so kindly assisted me when I called on them for help; especially to one, an old-time agnostic who stood faithfully by me. His prayer in truth, that God would destroy the worst enemy I had at that time, was answered. "O taste and see that the Lord is good." Our daily demonstrations glorify His name.

ERNEST J. MATZKA, Detroit, Mich.

I desire to express my gratitude for what Christian Science has done for us as a family. We have been interested about five years, and during that time my husband and I have received class instruction, and we have found it of great benefit in every time of need.

We have had a number of physical ills to overcome and in every instance have been able to meet them, with one exception, when fear seemed very great, and we called in a Christian Science practitioner who speedily helped us.

One Fourth of July our eldest boy lit a giant fire-cracker, and before he could get away it exploded and he was badly burned on face and hands. In three days the sores had disappeared from his face leaving no scar. The hand that held the fire-cracker was torn a good deal, so I bandaged the fingers as well as I could, and left him in the practitioner's care. After one week's treatment the soreness was gone, and he was healed. We depended wholly on Christian Science in this case.

Another of our children had inflammatory rheumatism, and was almost helpless; he had to be carried from one room to another. He was healed in three days through Christian Science treatment. This was over two years ago, and he has never had a return of it.

A few months ago another child had a sudden appearance of croup, and we were awakened by his hoarse breathing. To mortal sense he was passing away. My husband and I worked faithfully for him with our highest understanding of Truth, and in fifteen minutes he was much relieved. In an hour the hoarseness was removed and he had no further trouble.

At present we are on the Colorado desert without church privileges or even friends in this thought, but we have our Lesson-Sermons from the *Quarterly*, the Bible, and Science and Health, and we realize that God is an ever-present help in time of trouble. The physical healing is only a small part of what Christian Science does, for it gives that peace "which passeth all understanding."

MRS. W. G. RECORD, Imperial, Cal.

I feel that I have waited too long to express my gratitude for all the good that has come to me through Christian Science, and would like to tell how I reached a knowledge of this glorious truth.

I was a teacher in a German religious school. My church had been very dear to me in my earlier years, but in later years I felt that it did not give me the spiritual food I needed; I hungered for something better. One day in a social gathering the conversation turned to religious subjects. To my astonishment I heard that there were some people in Sheboygan who could heal the sick as Jesus and his disciples had done. This was eight years ago.

I had a sister who at that time was suffering, and I went to visit her. She was at the depot to meet me and looked well and happy. My first question was, "How are you?" She answered, "I am well." "What have you done?" I said. "I will tell you that later," she replied. I felt a sense of fear come over me and said, "You have turned to Christian Science?" She answered me simply, "Yes." Joy and fear struggled in me, for I had been told that this was the work of the devil.

That same evening we visited her practitioner, where we spent four hours. I was fully convinced that he had something better than I had. A struggle began within me, doubt tried to creep in, but I would always find my answer in quotations from the Bible. I could not conceal my joy over my new-found treasure and soon lost my position; but God was with me and protected me through serious storms.

Lately I have enjoyed the benefit of class instruction, and great blessings have come to me and my family through Christian Science. Often the thought comes to me, how can we best show our gratitude to God and our Leader; and I always receive the answer: by being obedient and faithful!

I also wish to express my gratitude to all who work so faithfully in giving us our weekly and monthly periodicals. They instruct us and constantly lead us higher. It is my endeavor to live so that I may become more worthy of all that God has done for me.

MRS. JENNIE WILSON, Plymouth, Wis.

The time has come when I feel I can no longer delay my testimony for the truth as revealed in Christian Science.

It is four years since I took up the study of Christian Science, and during that time I have seen many proofs that it is the truth our Master taught and practised.

On page 370 of Science and Health we read, "The moral and spiritual facts of health, whispered into thought, produce very direct and marked effects on the body."

The demonstration of this truth in divine Science, is enabling me to change my thoughts from the false material belief of life and intelligence in matter, to the spiritual facts of being as co-existent and eternal with God, and inasmuch as this is demonstrated it does bring me health.

Among the physical benefits received, was the healing of diphtheria in one treatment. I received the treatment about ten o'clock in the evening and by the following morning all fever, pain, and soreness had disappeared; the manifestation of ulcers also left in a few hours. A trouble with my eyes has also been healed, and other conditions, from which I suffered intense pain, have been restored to perfect harmony.

I am very grateful to Mrs. Eddy for her labor of love, in giving to humanity this beautiful revelation through Science and Health, and to the loving student who has labored so faithfully to bring me into the truth.

MRS. J. A. FAIRFIELD, Kansas City, Mo.

As Columbus could, when necessity demanded, lock up his charts and sail by the stars, so there are times when logic can be dispensed with, and the soul find its way by some heavenly guide.—REED STUART.

From our Exchanges.

Association makes character. To be with God is to become godly. The effect is primarily a moral upward movement in ourselves. The effort to know the good gives power to be good. The moral effect of divine communings opens a whole inner world to us, so that it seems to be but a poor life that deals only with material facts. The voluntary personal relation thus established with the divine power opens a channel into our souls, through which God can radiate His love and His strength.

The simple fact is that we have been learning to give up the idea of going into another world to find God. The realm in which to find Him is the inner realm of to-day. His home, His kingdom, His presence, is within us. There is no mystery or artificial supernaturalism about it. Nothing is more plain than the road of good wishing and holy seeking. The sublimest fact made known by the most profound investigations of Nature is this, that the soul of the universe is open to the simplest desire of the simplest good wisher. We have never got beyond, nor shall we ever get away from, the simple aspiration, Our Father who art in the heavens.—*The Christian Register.*

Large knowledge or mental insight may separate a man from the masses, and make him feel alone in the world. But spiritual greatness, based upon sympathy and Christian love, is easy to understand. It was because the character of Jesus was so sincere and transparent, that he attracted the poor, ignorant, and sinful. He was tempted as we are, he sounded the heights and depths of human experience, he came to give spiritual truth and life to all men. "Follow me" is the command given to his disciples in all ages, and because of the limitless possibilities of the human spirit we can ever grow more Christlike.

REV. E. W. WHITNEY.
In The *Universalist Leader.*

Perfect love does, indeed, cast out fear; for if we loved God perfectly, we should love Him always, and sin would never tempt us. And therefore it is in the love of God that the formula of harmony must be sought. Even when conscious of our own sin, conscious of our self-alienation from God, and the discord that it has worked in our being, we must seek to feel the harmony above and below; that the sense of opportunity, of privilege, of glory, of God, may still rise above the sense of failure, of exclusion, of shame, of self.—P. H. WICKSTEED.

That man grows most himself who thinks most of others. He is not content with mere theological dogma, but he has in the broadest sense applied the Word to the needs of life, and henceforth it can have no narrow content for him. He also learns the lesson that the lines of our influence extend farther than we suppose, and that a little deed used of God can have a mighty effect. Thus in the proper way does his conception of the purpose of Christ's work broaden.

R. W. HOOKS.
In *The Standard.*

Grace has no greater victory than when it floods a human heart with that love which "thinketh no evil." The minister of Jesus Christ who rises above petty jealousies, who never shows hospitality to suspicion, who believes evil of his brother only upon unquestionable proof, and then with sorrow, has not only come to the heights of worthy character, but is equipped with that which will give power to his message of love as he declares it to the people.

The Standard.

No man has ever yet exhausted a single promise of God. Those who go to the greatest length in trustful obedience to the Word of God, find great blessings as they go, and realize that there are riches untold yet to be had. No one has yet found out all that Christ is to those who are in him.

Pacific Baptist.

Systems of philosophy and theology may vanish, but the primitive emotions of the humble of mind and pure of heart are the eternal feeders of religion.

The Christian Register.

Religion soon becomes a superstition when it ceases to be a practice.—*The Watchman.*

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Price, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

THE THIRTEENTH INTERNATIONAL PEACE CONGRESS.

The thirteenth International Peace Congress convened in Boston last week. Mr. Edwin D. Mead, who was chairman of the opening meeting, presented Secretary Hay, who welcomed the delegates in the name of the United States Government, with a quotation from the Secretary's own words at the recent meeting of the International Press Association at St. Louis. Said he:—

"The highest victory of great power is that of self-restraint, and it would be a beneficent result of this memorable meeting, this ecumenical council, if it taught us all that mutual knowledge of each other, which should modify prejudices, restrain acerbity of thought and expression, and tend in some degree to bring in that blessed time

'When light shall spread, and man be liker man,
Through all the season of the Golden Year.'"

Secretary Hay said, "If our example is worth anything to the world, we have given it in the vital matter of disarmament. We have reduced our army to its minimum of 60,000 men; in fact, we may say we have no army, but in place of one a nucleus for drill and discipline. We have three-fourths of one soldier for every thousand of the population—a proportion which if adopted by other Powers would at once eliminate wars and rumors of wars from the daily thoughts of the chanceries of the world."

At the Consecration Meeting, held in Tremont Temple, Dr. Reuen Thomas said that the fact that there should be need of a Peace Society in the twentieth century is enough to produce a feeling of humiliation in every Christian clergyman. Our hope for everything that is high and noble is in the Churches, yet how often we are informed that the Church has lost its leadership. The fact of the matter is, that our Churches are not Christian. Christianize the Churches and you will stop war. Rev. Charles G. Ames said he was glad people were getting to be uncomfortable; it showed that they were conscious they were wrong.

Elie Ducomun, presenting the report of the "Peace Bureau," permanently established at Berne, Switzerland, said, "Would the Powers, if an offer of mediation by them should be rejected, find themselves necessitated thereby to have recourse to the use of military force to impose peace? Such is not our opinion. For, before having recourse to such extreme measures, the Powers would still have at their disposal other means of coercion. The most efficacious of these might possibly be that of rigorously closing their exchequers to the further appeals of Russia and Japan for new war loans. It is well known that the treasuries of the two belligerents are exhausted at the end of every month, that their war expenses reach enormous figures, and that, left to their own financial resources, they would be absolutely incapable of continuing the struggle under present conditions.

"Under these circumstances Russia and Japan are at the mercy of those who make loans to them, and they could not keep up the campaign for two months if they were not sustained by the hope that their foreign creditors would make still further advances to them in order to save what they have already loaned."

Edwin D. Mead of the American Committee, welcoming the Congress, said,—

"We do not forget, be sure that none remember so constantly, that our own republic, from which it was indeed your right not to expect it, has yielded in these days to the temptations to make herself also a great naval Power and indulge the hoary old ambitions of commanding respect by force instead of by ideas and the neighborly hand. We acknowledge the justice of your warnings and reproaches. We do not resent them; we thank you for them. We thank you for reminding us, as you have done with such eloquence and feeling in the last two days, of the principle of the founders of our republic, and the high duties of leadership in the path of peace and order which the republic by its history and position owes the world. If in the great temptations of our opulence and power some of us are in danger of forgetfulness and faithlessness, may the presence of so many of you here from nations whose burdens and dangers are so much greater than ours, and who need the support of every influence of ours upon the right side and not the wrong side, help to call us back to our great national ideals and our better selves. Of this be sure—that the American people are waking up. They will declare to-morrow that all playing with fire of militarism in this republic must forever cease.

"Men tell us war will cease in this world and our dreams come true only when the millennium comes. I pity men who have such poor notions of the millennium. The evils which we fight are among the grossest and most barbarous. They befit only the early and low stages of civilization. Our effort is but to clean the Augean stables. Horrors and wickedness such as those going on at this hour in Asia ought to be so far behind as not even to be mentioned among civilized men. Toleration of war in this twentieth century after Christ is like setting up the Ten Commandments on the walls of Christian churches, warning presumably decent Christians not to steal or kill or commit adultery. Put the beatitudes on the walls of your churches. It is only when we have done forever with such savage and gross forms of wrong as war that we shall be in a position to make a first fair and decent start for the millennium."

M. Houzeau de Lehaie, Senator of Belgium, and President of the Sixth International Peace Congress held at Antwerp in 1894, was the first of the foreign delegates to respond to the American welcome. Closing in English, M. Lehaie said that those who know war are not those who make war. They sit quietly at home who send others to be crushed or maimed on the battlefield, and who spend the money which they themselves do not pay. They know nothing of the miseries they entail on others. Here in America forty-five States exist in unity. How long will it be before the states of Europe may do the same? How long before the people shall say to their rulers "stop your wars and your armaments; we want men to walk in peace together"? The last century saw the rise of the United States of America; he predicted that this century shall see the United States of Europe, and the next the United States of the World, existing in justice, amity, and peace.

For Germany Dr. Adolph Richter, President of the German Peace Society and President of the Eighth Peace Congress at Hamburg in 1897, responded,—

"If we feel that the peace movement goes on slowly," said he, "if there are still places where the gun and the sword rule, we ought not to lose courage. We are fighting against an evil entrenched behind the centuries. War has long been looked on as a measure to gain people their rights; we peace people hope for the time when war will be looked on as a great wrong and even as a sin."

Hon. Thomas Snape, Alderman of Liverpool and long President of the Liverpool Peace Society, responded for Great Britain in America. "Universal peace," he said, "is as sure as the triumph of civilization over barbarism."

John Olseen spoke for Norway. He said, in part, "I have seen your great cornfields, your great prairies, and your Rocky Mountains, all so different from the old country, from Europe. We have not seen here your streets filled with soldiers and millions spent for fortresses. We know that great armies are a foe to peace, for great armies must have something to do. It has been said that great armies prepare the way for peace, but that is one of the lies that has blinded the Old World. They are obstacles to peace. You have proved that it is not the greatest nation that gains the victory."

Memorials to the Emperors of Russia and Japan, urging them, either by direct negotiation or by recourse to mediation of friendly Powers, to bring about an end of hostilities, and to the other signatory Powers to The Hague Convention, reminding them of their duty to impress upon the belligerents the desirability of making peace, were ordered by the Peace Congress at Wednesday's session in Tremont Temple.

The chairman, in announcing that Julia Ward Howe would speak, said, "I wish absolute quiet. Her voice is sweet, but not strong." "But it carries far," interposed Mrs. Howe, and the applause was deafening. "There is one word I have not heard as often here as I should have liked," she said, "and that is a word as holy as peace—the word justice. We should be able to assure the combatants that that will be considered. We want more than The Hague Tribunal as it is at present. We want the best tribunal in the world, which should be employed to give that justice. It is an ignoble peace," she said with strong emphasis, "that is not based on justice. The tribunal should be able to appeal to high heaven and say that each decision is one of which heaven itself will approve."

President Gompers of the American Federation of Labor, said at the workingmen's meeting that the men and women of labor bear the burden of war.

Pete Curran, representing one million five hundred thousand British workmen, said,—

"If all these congresses are to do is to meet annually and pass abstract resolutions, they may as well not meet at all. What is needed is continual pressure on Governments."

"The settlement of international controversies by war involves the destruction of hundreds of thousands of young men. Could any rule, code, or method be more void of reason and justice? What would have been the condition of the human family to-day if the bravest and best, the noblest and the most unselfish, could have lived rather than have been sacrificed upon the red fields of war of every country and every age? . . . The intelligent world will not long endure the burden of great standing armies and enormously expensive navies, and there never has been a more favorable time for a candid, fair, and impartial discussion of this subject."

The Hon. Carl Schurz in a recent letter says: "It is useless to say that 'if you would have peace, prepare for war,' when at an enormous cost you prepare for war while there is not the slightest danger for your peace."

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Minister's Experience.

L.

A LITTLE more than three years ago, I caught a glimpse of Christian Science through the sore necessity of one to whom I owe more, in a human sense, than to any other. In its application to this dear one, I saw a little of its power to heal. I then bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and have been studying it regularly with increasing interest, satisfaction, and benefit ever since. In this pursuit I have been much helped by other and more experienced students, through whom I first learned of Science; by my faithful teacher, and by the publications of The Christian Science Publishing Society.

In the autumn of 1890, after the second session of my university course had been interrupted by illness, I was appointed a "student missionary" of an orthodox church in Canada to a "mission field" near our old home. Here I found my health equal to the task of preaching and visiting, though I was afraid of the strain of college studies. After a year, I returned to Queen's University (Kingston, Canada), but with a run-down feeling. Before the year ended, our home circle was broken by the sudden death of a very bright and affectionate sister. Owing to ill-health, I did not return to college after the Christmas holidays, but was given charge of a vacant pastorate in the country, where I remained for a year. I then returned to Queen's, pursuing my studies during the session and preaching during the summer. Thus I completed a course in arts.

The college work, especially in philosophy, English literature, and political science, upset and transformed very completely the religious traditions of Calvinism and the literal belief in the Scriptures in which I had been reared. Hence, though I loved the preaching of the gospel as I understood it, and found much spiritual encouragement in the college Y. M. C. A., I found the Westminster Confession of Faith so distasteful that my entrance to the Divinity Hall was postponed and postponed. However, more than a year after being graduated in arts, I passed the matriculation into theology, and began the study of divinity under Principal Grant.

It is very generally conceded that of Canadians there hath not arisen a greater prophet than George Munro Grant. He was a liberal theologian, regarding the higher criticism or literary criticism as the special "Charism," or gift of the Holy Ghost to this age; an inspiring teacher, unfolding his views with wonderful clearness, vigor, and leavening influence from day to day and from year to year in the class room. Loyalty to one's highest conception of truth, to Queen and country: freedom of thought, tolerance, unity, mental activity, and a broad outlook, these were some of the qualities inculcated and nobly lived by one whom many loved to call "Principal." Admirable courage, simplicity of habit, work and a constant aim at a spiritual interpretation of life, the Bible, and everything, characterized him, therefore his teaching in theology was not dogmatic but vitally suggestive. He would say, "The old theology is inadequate, and the new theology has not come." "No satisfactory doctrine of the atonement (at-one-ment) has been formulated." "Sin is not a final reality." "God is best conceived as Love, manifested in sympathy, righteousness, and self-sacrifice." Also he taught us to distinguish between "the historical Christ" and "the essential Christ," between Jesus and the eternal Spirit, the Comforter. I mention him and his teaching in this connection, because he seems to me to have pointed to the Promised Land of Christian Science, though not entering it here himself.

After three years under his teaching, I found myself unable to subscribe to the "Confession of Faith" for license to preach. The Principal recommended that this might be done "in the spirit," though quite impossible "in the letter." After spending a year at that problem I thought that I saw my way, and subscribed accordingly. After licensure, still much unsettled in thought, I went to supply temporarily a Manitoba mission field, but was not ordained.

During my last session at college, my attention had been drawn somewhat to Christian Science. In fulfilment of a promise, I attended a Sunday service, a Wednesday evening meeting, and a lecture, and borrowed a copy of Science and Health from a Scientist who, with characteristic wisdom, was not going to lend it until I quoted Jesus' saying, "Give to every man that asketh of thee." I read it through, mostly, was impressed, but thought that Christian Science taught that all is Mind, to the exclusion of all concrete reality. I reasoned that to say, "All is Mind" was the same as to say, all is blank, without identity; and that, while it might be soothing to the nerves, it was one-sided, and therefore untrue. Yet, that there was good in Christian Science, I could not deny, and part of the philosophy at Queen's was to find a "soul of goodness in things evil." I was much impressed with the thought of one Mind, intelligence, Spirit. My preaching was along the line of "As many as are led by the Spirit of God, they are the sons of God." Of course I thought all the while that Christian Science was disposed of, so far as I was concerned, though I was wishing it were true, being much perplexed for years about the place of miracles in the gospel narratives, as well as with the whole problem of God, freedom, and immortality. I longed for a system of truth and a right understanding of it. I had almost entirely ceased to believe in or preach miracles, as I could not understand them. I preached ethics, the Golden Rule in so far as I understood it. But when I was brought to where I saw a sign of the healing in Christian Science, I got a glimpse of the truth. I then saw that it taught, not that all is blank, but that "all is Mind and Mind's idea" (Science and Health, p. 492), that Mind is expressed in the real, spiritual nature of everything. My eyes were opened. I saw the clew to the healing and teaching of Jesus. I saw the Comforter, Divine Science.

My way out of the old theological position and the old philosophy of matter manifesting spirit was not easy, but Christian Science had hold of me, I could not do without

it, and it has been and is a blessed and brightening path upon which to enter and travel. As we go on, and find that by study, by the use of the privileges provided for instruction, and by practice, we not only get help and healing, but we learn how to help and to heal others, then we learn to love Science, and to love and revere the noble, gentle woman who so faithfully leads us on out of darkness into God's light.

Grateful Recognition.

WILLARD S. MATTOX.

On page 58 of the Manual of The Mother Church, we are told that "it shall be the duty of every member to daily defend himself against aggressive mental suggestion, and not be made to forget, nor to neglect his duty to God, to his Leader, and to mankind." Our duty to God is manifestly to be obedient, to acknowledge His will as our only law, to be constantly grateful to Him for continuous life, for a perfect body, and for perfect health; to be grateful to Him for an infinity of good things, for a limitless universe filled with countless spiritual ideas, each in its own degree perfect, and among which we live and move and have our being.

Our duty to our Leader is to be properly thankful for her heroism, for her self-abnegation and splendid achievements. It includes constant watchfulness, lest by thought or word we add to the cares of the noble woman who so patiently and uncomplainingly bears universal burdens in order that we may make our demonstrations. Our duty to mankind is to so express Truth in our thoughts, acts, and speech that we may stimulate men to make an endeavor away from sin and disease; to so present the Science of living in all its winsomeness that it will attract all who are weary of egotism and tired of pain; to so voice divine Love that the suffering human sense may take courage and begin to lay hold on hope and good cheer.

In performing our duty to God, to our Leader, and to mankind, we shall have much to do and something to say, and we may meet those who do not agree with all that we do or say. There are some, for example, who find fault with us because we love our Leader and say so. In our Wednesday night meetings many a man partially discharges his debt to her by publicly acknowledging some benefit, derived from the truth she was good enough to see, and brave and loving enough to utter. It is not surprising that men and women reclaimed from misery and degradation, who have been lifted from the very depths should overflow with gratitude for the one who, though knowing them not, has labored with unselfish devotion, to make their individual redemption sure. And it is not strange if the world now and then hears a part of the glad song of thanksgiving, nor is it very strange if the world, knowing not the cause of rejoicing, knowing nothing of the contrast between the hell of mortal belief and the heaven of peaceful understanding, should complain that all these people should express their gratitude and affection as they do. The chorus of thanksgiving cannot be repressed. It has its beginning deep down in human hearts regenerated, it comes from those who are well and sane and clean and valuable to themselves and others to-day because one has lived near enough to God, good, to catch a glimpse of the radiant beauty of holiness, and has reflected enough of what she saw and heard to inspire in others an earnest desire for better living. As a matter of fact, our critics would have something to talk about, if we were not thankful. They would have a case against us if we held our peace.

An illustration nearer home will accentuate the argument. Suppose that a man finds himself face to face with financial ruin. Forces over which he has seemingly had no control, bring about a series of reverses, and he is confronted with failure, a wrecking of all his hopes and ambitions. His resources are exhausted, his energies paralyzed, his situation is desperate. A friend comes to his aid, saves him from disgrace and poverty, establishes his business, encourages the drooping thought, and restores hope and manly endeavor. Would it be counted singular, if that man and his family sang the praises of their benefactor? Would they not rather incur the severest condemnation if they forgot what they owed their friend? Though they never ceased to recount the generosity which was their salvation, they would awaken no complaint, no criticism. If we multiplied such an obligation an hundredfold, we could not measure the debt of those who "love to tell the story" of their redemption from nameless suffering, and who turn their gaze lovingly toward her who has labored unceasingly for them, without hope of reward or recompense other than the consciousness of a God-given mission faithfully performed. Neither wealth, nor earthly fame, nor the applause of multitudes, could compensate a tender woman for the buffetings and cruel misrepresentation which have been heaped upon our Leader. Not for gain, nor for personal following, could she be induced to endure the indignities put upon her by the world's hatred of every reformer. Remembering her toil and sacrifices, and knowing that she has endured all this, and more than we will ever know, is it a wonderful thing that Christian Scientists are grateful to Mrs. Eddy?

All this finds a parallel in the incident recorded in the 19th chapter of Luke. Jesus was meekly making his triumphal entry into Jerusalem. On the way, "the whole multitude of the disciples began to rejoice and praise God with a loud voice for all the mighty works that they had seen." And why not? Their joy and gratitude were natural and spontaneous. It was not prearranged nor spectacular. But the critics were there. And as they kept pace with Jesus in the throng which surged around the humble beast he rode, they called out to him to rebuke his disciples. It is not improbable that those who were loudest in their demands upon him were safely inconspicuous in the background of the crowd. They asked Jesus to rebuke his followers because they were grateful to God for His messenger, and he said, "I tell you that, if these should hold their peace, the stones would immediately cry out." And so to-day, "the Pharisees from among the multitude," complain of our gratitude and say, "Rebuke thy disciples," and the answer to-day is as it was then. It is impossible to check the impulse to be grateful, because it comes straight from God, and brings with it health. "A just acknowledgment of Truth, and what it has done for us, is an effectual help. If pride, superstition, or any error, prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student" (Science and Health, p. 372).

Jesus once cured ten men of leprosy. They were all healed at the same time and told to go to the priest and meet the requirements of the Mosaic law. They went, and one of the ten came back to Jesus to thank him. Note the impersonal tone of Jesus' comment, "There are not found that returned to give glory to God, save this stranger." He conveyed the idea that gratitude to the healing Truth must be expressed, and that it would take the form of thanking God's chosen one, the avenue for good through whom good can best work. The metaphysics of this position is further explained in Science and Health, page 94, "Of the ten lepers whom Jesus healed, but one returned to give God thanks,—that is, to acknowledge the divine Principle which healed him." To-day, when thousands acknowledge their healing through Christian Science, and thank God for it, they naturally include in their gratitude, the one through whom God has manifested His love.

It has been the misfortune of clear-sighted, keen-visioned reformers, to be misunderstood or undervalued by their own generation. So true has this been, for so many thousand years, that it was crystallized into a readily understood

Digitized by Google

saying, in the words of Jesus, "A prophet is not without honor, save in his own country." Moses was not popular with the mass of the people he strove so faithfully to save. They murmured often, because they did not understand him. They were too close to his greatness. But the descendants of the very people who rebelled against him, held him up as an ideal. Ezekiel was warned by Wisdom that the message of Truth he carried would be rejected, and he was prepared to meet opposition and criticism. Comparatively few people in any stage of the world's development have been able to get a large view of affairs and estimate with any degree of fairness or correctness the value of the various influences at work in society. Happy the man who is so wise that he can do no injustice to present accomplishments, who sees virtue and good where they exist and is glad for all the virtue and goodness he sees, in whatever human form it may be presented. Those who owe life itself to Christian Science would be recreant indeed if they failed to recognize their obligation to their benefactor, not only because she has done something, but also because of what she *is*. Extravagant praise and hysterical exhibitions of emotionalism will not be confused with that joyous, yet withal dignified, expression of a laudable and praiseworthy sentiment which the world cannot understand, chiefly because it has never possessed it.

Divine Guidance.

BEULAH G. HINES.

In dwelling on the thought of divine Principle as Love, we can readily see the innumerable ways in which Principle enters the smallest affairs of our lives if we only think quickly enough to avail ourselves of Divine guidance. Have we ever thought of what it means to be unprincipled? Even in a mortal sense, if we were accused of being unprincipled how quickly would we resent the accusation, or seek to remedy the evil, whatever it might be. In my own experience, I have many times rejected an error quickly and decidedly, because it appeared an unprincipled thing to think, say, or do.

Our text-book teaches us that Principle means God, Life, Love; and the command to obey God is imperative. In proportion to our obedience we are protected by Principle in every way, and we feel in such accord with good that our sense of power over evil will grow in strength until we absolutely know that God's commandment uttered through His ideas, cannot be broken.

I love that saying of the Master, "I can of mine own self do nothing." "The Father that dwelleth in me, he doeth the works." It gives us rest to know that every good motive and action comes direct from our Father, and that all the good in the world is our inheritance from Him, and that it remains indestructibly in Him, even as we remain indestructibly in Him.

We sometimes hear good people say that their motives and intentions are good, and yet that good results do not follow. Both of our best authorities, the Bible and Science and Health, emphasize the necessity for action. Our text-book says that "there is more Life and immortality in one good motive and act, than in all the blood which ever flowed through mortal veins" (Science and Health, p. 376). We also hear Jesus saying, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." We cannot sit still and say, "Principle governs, and my motive is right;" we must prove that Principle (not self) is governing, and we must act in accordance therewith.

In our work, and particularly in our relations with our fellow-man, we need to bring more of Principle into thought and action. We need to watch our thought of our fellow-mortals lest it be an *un*principled thing of which we would be ashamed if it were openly known.

By guarding the inward thought, the outward act will be guarded also,—guarded, guided, and made manifest by and through divine Principle, Love. This is God with us, telling us just what, when, and how to think, speak, and act at every moment for our brother as well as for ourselves, until our lives are beautifully rounded out on the lines formed by Principle.

"All that I have is thine."

CATHERINE MAY.

The elder son was in the field; he had been working throughout the heat of the day. No doubt he was weary, hungry, thirsty, and needed rest. As the night drew near, he sought his home for the needed refreshment. Hearing music and dancing, he called one of the servants and asked what these things meant. He was told that his brother was come, that his father had "killed the fatted calf," and that his friends were making merry.

A sense of error entered his thought and he was angry and impatient. He had been working for his father many years, and no evidence of appreciation had been bestowed upon him. He would not go into the house, but chose to stay outside, and put on the garment of self-righteousness. His "incorrect reasoning" led to practical error. "The wrong thought should be arrested, before it has a chance to manifest itself" (Science and Health, p. 452).

Did the father leave him in his error, in this story? No. He came out to meet him, and "intreated him." Then error called louder than ever. "Lo, these many years do I serve thee, . . . and yet thou never gavest me a kid, that I might make merry with my friends."

Now note the father's kind reply, "Son, thou art ever with me, and all that I have is thine." What do these words mean in the light of Christian Science? All life, all truth, all love. The idea is almost too great to comprehend! Of whom is it said, "Thou art ever with me"? Those "who walk not after the flesh, but after the Spirit." "For as many as are led by the Spirit of God, they are the sons of God. . . . The Spirit itself beareth witness with our spirit, that we are the children of God: and if children, then heirs; heirs of God, and joint-heirs with Christ."

"God combines all-power, or potency, all-science, or true knowledge, all-presence" (Science and Health, p. 466). Son, daughter, "All that I have is thine."

[Written for the *Sentinel*.]

My Ambition.

E. B. M.

O, were it mine to sing a song
Whose sweetness, at my feet should hold
The spell-bound thousands, all untold,—
I'd rather far it were my part
With comfort e'en one life to fold,—
Bind up one broken heart.

O, were the power mine to paint
The fairest picture, to amaze
A wond'ring world that there should gaze,—
Oh, Father, I would ask instead
Thy healing truth to bear and raise
My brother from his bed.

O, were it mine to have my fame
Emblazoned high on yonder star,—
Dear Father, I would rather far—
I humbly pray in earnest tone—
One life be cleansed which sin doth mar,
And that, oh Lord, my own!

Christian Science Indorsed.

If the Supreme Court of New Hampshire had planned any public testimonial to Mrs. Eddy at her home city of Concord, it could not have done better than it has in deciding that the practice of Christian Science is and of right ought to be legal. With the Supreme Court's seal stamped upon her doctrines, Mrs. Eddy has reason to grant general amnesty to enemies and to the faint-hearted within her own ranks.—*Boston Record.*

The Spead-Tomlinson Case.

The decision announced by our Supreme Court Tuesday in the Spead-Tomlinson case is undoubtedly the most important legal victory yet achieved by the followers of Christian Science. The right to practise Christian Science in the healing of disease was practically involved in the suit; for if the contentions of Mrs. Spead's attorneys had been sustained by the court, no Christian Science practitioner could have undertaken the treatment of a patient or expressed to a patient his belief in the efficacy of his system without rendering himself liable to an action for damages in case of failure to effect a complete cure. These contentions are effectually disposed of by the opinion rendered Tuesday, and the right of the Christian Scientist to treat in accordance with his system persons who desire that method of treatment, as well as his right to express his honest belief in the merits of the treatment, is established.

While the question whether a Christian Science practitioner is required to take out a license like an ordinary physician, and the question of the liability of such a practitioner to criminal prosecution under special circumstances, has been passed upon by several courts with results almost uniformly favorable to the Scientists, the fundamental question of the Scientist's common-law right to practise his system of healing as ordinary physicians are permitted to practise theirs, has never before been authoritatively determined. The clear and forceful reasoning of the court's opinion must carry conviction to the minds of the legal profession and the general public alike, and it may be predicted with considerable confidence that Tuesday's decision will be generally followed in other states where the same questions may arise.—*The Daily Patriot*, Concord, N. H.

Its Tenets all for Peace.

Apropos of the Peace Congress now being held in Boston, the Wednesday services at the Christian Science Church last evening dealt with the subject of peace, and the First Reader of the church read selections from the Bible and from the Christian Science text-book bearing on that subject. The hymns selected for the occasion were in the same line of thought. Among the selections from Science and Health, the Christian Science text-book, the most appropriate, perhaps, was the following:—

"One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself.'"

After the opening exercises the meeting was given into the hands of the congregation, who occupied the time in short talks, many of them indicating how Christian Science had helped them to adjust their differences with their fellow-men through brotherly love and without strife and contention, pointing to the fact that the differences of nations could be settled by the exercise of the same principles. If all men were Christian Scientists, it was contended, war would end at once, because the practice based upon the principles of Christian Science would not permit of any conflict whatever.

One of the speakers said in closing, "Following the Master in demonstration, Mrs. Eddy, the Leader of the Christian Science movement, has shown men how to understand and in what manner to obey the divine Principle which subdues hate with love and ends wars. In proportion as her life-work is known, it will be seen that as a true peacemaker she stands among the blessed ones of all ages, and if Christian Scientists but do their work aright, they will aid in bringing public opinion under the government of the Prince of Peace, and so make theories of war obsolete."—*Boston Herald.*

Considerate Attention.

Perhaps the public may have noted that the opposition to Christian Science, which was very much in evidence a few years ago, is dying out.

Worldly as a majority of our people may be, they have been quick to recognize the goodness which is in the new cult.

There is nothing in Christian Science which would suggest imposition. Faith is the foundation of the belief which has Mrs. Eddy as its chief exponent. Those who accept this good woman's teachings live pure and upright lives. As pious as the Pilgrim Fathers, the Christian Scientists are more liberal than those pioneers of religion in the New World.

Since the immortal Declaration of Independence was given to freemen, our people have held that all men are "endowed by their Creator with certain unalienable rights," among which are "life, liberty, and the pursuit of happiness." As men and women are happy in their religion, any belief which contributes toward the happiness of the world must at least receive the considerate attention of the American public.—*Albany* (N. Y.) *Press-Knickerbocker.*

The Scriptures tell us that "God saw every thing that he had made, and behold, it was very good." Paul says, "The things which are seen are temporal; but the things which are not seen are eternal." Many similar Scriptural classifications could be quoted, if space permitted. The late Professor Huxley wrote, "I repudiate as philosophical error, the doctrine of materialism." "What is this terrible thing called matter, after all, except the unknown, hypothetical cause of states of our own consciousness?" Professor Allen Gray, writing of the eminent natural scientist, Professor Tyndall, says, "The charge of materialism could only be brought against such a man by those abject materialists who have never had a glimpse of the profounder fact that the universe as known to us consists wholly of mind, and that matter is a doubtful and uncertain inference of the human intelligence." To say that matter is "reality," as Rev. Randle is reported to have said, is to espouse the side of those characterized by Professor Allen Gray as "abject materialists." It is unfortunate that those who claim to be champions of religion, should be found using the notions of the rankest materialism in their arguments against Christian Science. CLARENCE A. BUSKIRK.

The Lectures.

Cedar Rapids, Ia.

Bicknell Young lectured last night [September 17] at Greene's Opera House, under the auspices of First Church of Christ, Scientist, on the subject of Christian Science. The lecturer was introduced by John M. Grimm, who said in part,—

Most of us have been taught to believe that everything on earth, including health, should be held subservient to a proper consideration for the future; then how intensely interesting and supremely important is the discussion of that subject which deals not alone with health and happiness, but with our future state as well.

Less than forty years ago the Rev. Mary Baker G. Eddy first proclaimed that interpretation of the Scriptures which applies Scriptural law not alone to the saving of souls but to the eradication of disease and the saving and restoring of the peace and harmony of human life. To-day her church has nearly one thousand congregations and over thirty thousand members. This wonderful growth has been obtained during a time when all creeds and religions have been under the lime light of skeptical and scientific criticism. Volumes of testimonials have been written by God-fearing men and women of high standing and intelligence, proclaiming what has been done by this religion to relieve suffering and brighten life. Such a record of growth and achievement surely challenges the respect and careful consideration of the most thoughtful and critical of the age.

Cedar Rapids Republican.

Osborn, Mo.

The lecture delivered by Judge William G. Ewing of Chicago at the Osborn Opera House, September 10, was listened to by an attentive audience of about three hundred people out of a population of only about four hundred. He was introduced by P. M. Hatch, editor of the *Osborn Enterprise*, who spoke in part as follows:—

It is not my place to-night to speak either for or against Christian Science; the argument if any will be made by the lecturer, but I may say this of the members of that body, in so far as I have observed them: they are earnest, honest, and in my judgment come close to living up to their convictions, and of all people I know they least find fault with or antagonize other people.

The student of history finds that during all the time covered by written history the man or woman who teaches an advanced thought in the moral domain meets with not only prejudiced, but usually active opposition, and often real persecution from the rest of the world who always imagine, and usually with good cause, that their own theories are endangered.

He who comes bringing a new message for the uplifting and betterment of humanity is an evangelist. If this man has a message of moral truth new to you and me, he is a direct messenger to you and me from the fountainhead of all truth. If his words are false they can do little harm, if they are true, while we may forget the speaker, may forget his words, still the truth that is in them will outlast the ages. I think it is one of the beliefs of the Christian Scientists that only those things that are true are real, all error is a shadow. I do not know if this is so, but I think I know that nothing that is good and pure and true can pass away, or ultimately fail. Truth will triumph over time and the wreck of worlds.

Gentlemen and ladies, I introduce to you Hon. William G. Ewing of Chicago, who cannot fail to entertain you, and who, I am sure, will speak to you words upon which you will do well to reflect.—*Correspondence.*

Montreal, Can.

The Kings Hall was crowded Thursday [September 22] with an attentive audience, to listen to the lecture on Christian Science, delivered by Judge Septimus J. Hanna, under the auspices of First Church of Christ, Scientist, Montreal. Mr. F. W. Sim of Troy, N. Y., introduced the lecturer in the following words:—

It was my good fortune about fifteen years ago to attend a meeting of the National Christian Scientist Association in New York City, and to listen to an address by Judge Hanna. His presentation and illustration of Christian Science have, through all these years, remained in my thought a help and stimulus. Those were pioneer days in Christian Science organization, and among the many activities put in operation since that time by our Leader, Mary Baker G. Eddy, none have produced greater results than the Board of Lectureship, of which Judge Hanna is a member. Through it the truths of Christian Science are presented in an official and authoritative manner, following the commands of our Master, "Go ye into all the world, and preach the gospel to every creature," and "As ye go, preach, saying, The kingdom of heaven is at hand," with the results that the sick are healed, the sinful reformed.

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, we read, "The time for thinkers has come" (Pref. p. 7). This time has come to you to-night, and we ask you to consider thoughtfully and ponder deeply the Christianly scientific statements presented to you, and with Paul, "Prove all things, hold fast that which is good." Christian Science brings to you nothing that you have not always possessed; it takes from you nothing you really have; it is the Gospel of Restoration, it restores to you health, harmony, success, peace; and restores you to right relations with God,—divine Principle,—whereby man has dominion over all the earth. Thousands of men and women in this and other lands are blessing God for Christian Science, that has brought to them freedom and the restoration of their divine rights.—*Correspondence.*

Galena, Kan.

Judge William G. Ewing lectured on Christian Science for First Society of Christ, Scientist, Galena, Kan., at Sapp's Theatre Thursday evening, September 15, to a large and intelligent audience. The lecturer was introduced by Judge E. E. Sapp, who spoke in part as follows:—

I have been told that this is a new religion. This cannot be; religion cannot be new, it must be old, if it be religion, for religion is only right actions. In the fullest sense and meaning, there are no new right actions. I am told that this religion takes the wrinkles out of one's face and the scars from one's heart. If this be true, then it must be good. If in the hurry and rush of the busy world one can be taught to stop and think of the duty he owes each to the other, then it ought to be done, and this is what I understand the speaker will address you upon to-night, and I know that he will receive not only a respectful but intelligent hearing, and that each of you will take and hold that which is good.

I have the pleasure of introducing to you Hon. William G. Ewing of the city of Chicago.—*Galena Times.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Mother Church Building Fund.

[We are very glad to give a prominent place to the following letter.—EDS.]

To the Editors.

Our beloved Leader directs that in her behalf you notify, through the Christian Science periodicals, the dear friends, students, patients, churches, and all who have contributions for the Building Fund of the new Mother Church kindly to send their money direct to the Treasurer, instead of sending it to Concord. The clerical force at Pleasant View is not adequate to give the voluminous correspondence thus entailed the attention it deserves. The Pastor Emeritus is glad to note the growing interest in the new building project and bids God-speed to the enterprise. She knows of the ingathering of the funds by the reports that "the walls are rising into view," and thanking one and all for the generosity, self-sacrifice, and benevolence manifested to build the house, she will greatly appreciate the relief which will result from an obedient regard for this simple request.

The extra contributions for the Concord church were sent to our Leader, and with one mind, but the reasons therefor do not exist in the present case. Mrs. Eddy was building that church and did build it literally, because the money contributed by others was sent to her and she in turn paid it over to the trustees of the Concord church building fund to be applied as needed.

Fraternally,
GEORGE H. KINTER.

Pleasant View, Concord, N. H., October 10, 1904.

Changing Opinions.

THE following article is copied from the *Boston Transcript*:—

"Now comes a Paris physician who says that it is all wrong to boil drinking water, as the municipal doctors direct when there is danger of a typhoid fever epidemic. Professor Charrin of the College of France is the learned authority who is quoted as denouncing the popular theory that the fever germs being destroyed by cooking them well, the danger of sickness is avoided. Professor Charrin's doctrine is that in boiled water not only is the deadly microbe destroyed, but also the microbe which even more than the dog or horse deserves to be called the friend of man. The beneficent microbe is that which assists at the digestion of such substances as cellulose and albumen. If he is boiled out, these intractable substances set up irritations which end in enteritis and other maladies. Another eminent French authority, M. Pages, agrees with M. Charrin in saying that boiled water seriously impedes digestion and attacks the assimilative organs. 'It may,' he says, 'save you from typhoid, but the risk of typhoid is in any case very small, while if it does save you, it exposes you to a host of other ailments no less mischievous.' 'If you do boil drinking water,' says M. Pages, 'expose it before you drink it for some hours to the open air, and agitate it.'"

Our purpose in copying this article is not to enter into a discussion of the comparative merits of the different theories regarding the proper sanitation of drinking water, but rather to call attention to the fact that medical theories seem to offer no permanent settlement of questions of this kind. What was considered almost a specific yesterday is discredited to-day and will be discarded to-morrow.

It has always been the plea of those who have endeavored to secure the enactment of legislation having for its object the compulsory employment of physicians of the so-called regular schools, that there is a science of medicine, but if this be true it remains to be demonstrated, for it is a well-known fact that the medical practice of to-day not only differs very much from the practice of a few years ago, but in many instances it is absolutely the reverse of it. The conclusion to be drawn from these frequent changes of opinion is that such legislation, if enacted, would result in compelling the sick man of to-day to submit to treatment which the physicians of a generation hence will undoubtedly pronounce harmful, and possibly a menace to human life. M.

The Peace of God.

IF we base our judgment upon the history of the church militant, we can but conclude that one of the last things which the followers of Christ Jesus are willing to learn is that the weapons of their warfare are *not* carnal. Apart from Peter's impulsive exhibition of the fighting instinct, the early disciples seem to have entirely discredited the use of the sword, but their successors soon accepted the world's way, and from that time the history of Christianity has been written in blood. Jesus' coming was announced with the promise of "Peace on earth," and among his last words he said, "My peace I leave with you," but this concept of his rule has been little more than a tradition or a hope in all the succeeding years.

At the opening of the twentieth century the contrast between the spirit Jesus inculcated, and the spirit exhibited by Christian sects and nations is still saddening indeed. And yet there are encouraging indications of a great awakening. The earnest faces and more earnest words of those gathered from many countries at the thirteenth annual meeting of the Peace Congress, recently held in Boston, gave tokens of a nobler sense—the promise of a nobler day. No one could question the genuineness of their patriotism, the unselfishness of their zeal, the purity of their love for mankind. They are companioning with a great idea, they are committed to a great enterprise, and in the providence of God their cause will win. Christian Scientists are deeply interested in this, as in every other humanitarian movement, and they are peculiarly fitted to contribute to its success.

A fighting Christian is the ally of a fighting God. The Christ concept of the divine nature and method of government, may not be a stranger to his thought, but it certainly does not dominate his habits. The gospel was committed to a fighting people, and its seeds were first sown in the soil of The Dispersion. The Christ-truth was thus but imperfectly reflected by the human media which for centuries had been dominated by the thought that God was a king of irresistible might and authority, who in unnumbered instances in their racial history had encouraged a vigorous militarism, and who in the person of his chosen representatives, a Joshua or a Gideon, had led his people to the slaughter of their enemies. Though the concept has varied, this sense of a God of battles has obtained in all the years, and in so far as it remains to shape conscious or unconscious determination, Christian men and nations are disposed to recognize a necessity for the arbitrament of arms in the settlement of their differences. Though

Digitized by Google

honored in many a resonant line; though sung by the worthies of many a heroic struggle, and though made serviceable, perhaps, in many an instance, to racial advance, nevertheless this concept of the fighting virtue has no place in a Christian life or a Christian civilization. In the feudal ages it was saved from something of its animalism if not its cruelty by the spirit of chivalry, but in modern times its gross selfishness is unredeemed, and the horrors it is precipitating to-day in the far East bring a shudder to every Christian sense.

It has been well said that "war is human nature at its uttermost," and it is manifest that if human strife is to cease it must be through the enthronement of the Christ-concept of God as infinite Love, and the manifestation or reflection of this Love in human lives. This is the work of Christian Science, and this it is accomplishing. Wherever it is permitted to govern, there the reign of selfishness has ceased,—the cause and occasion of all conflict has passed away. Christian Scientists know something of the unlimited possibilities of the radiation which attends this lifting up in thought of the Christ-idea. They know that it goes forth in all the earth to conquest, and to conquer through Love alone, and their sense of life's ministry thus expands to the measure of the world's need. In quietness is their strength, they have put up the material sword.

Blessed with the possession of this higher ideal, and called to the fulfilment of the glorious purpose of God in Christ Jesus, Christian Scientists may not forget the legitimate expectations which their profession awakens. It is for them to prove that the peace of God, the peace that "remaineth," is realized not through the cultivation of sentiment, but through the recognition and demonstration of divine Principle; and it is for them to exhibit in their personal and social relations, in the home life and in the church, that constant unselfishness and abundant love which will give them recognition before all the world as the sons and daughters of peace. W.

Count the Blessings.

Let us gather up the sunbeams
Lying all around our path.

THE subject of our experience meetings is of so much interest to the Field that a few additional thoughts respecting them cannot be amiss. The Christianizing influence of these meetings and of the testimonies given in our periodicals is becoming more and more evident; it is reaching many who are out in the darkness of sin and suffering, who have missed their way to the healing Christ, known of old and revealed anew in Christian Science. In this teaching we are constantly reminded that the demand of vital Christianity is the attainment of perfection in thought, word, and deed, and in striving for it we are assured in our text-book that "progress finally destroys all error" (Science and Health, p. 492). It is in this glorious hope that we toil on, even when progress seems very slow, for it gives assurance of final perfection in individual experience as well as in our churches, including, of course, our Wednesday meetings. As we gain a clearer sense of that which is most conducive to our advancement, we become conscious of better health, our thoughts are expressed with greater freedom, power, and grace, and if this be true of our daily experience our services will be correspondingly enriched.

While Christian Scientists are deeply grateful for their deliverance from pain and discord, they soon find that something far higher than these earlier experiences comes with spiritual growth, when the affluence of good unfolds to them. The Psalmist declares that God's "wonderful works" to usward are more than can be reckoned or numbered, and in a burst of thankfulness he says, "Blessed be the Lord, who daily loadeth us with benefits." If one in the olden time could thus discern his blessings, and speak of them in words that glow, what should be expected of those who walk in the clear light of Christian Science and who know how the gifts of divine Love come into our hearts and homes? If we cannot "reckon" all our blessings, we may at least jot down a few of them on memory's tablet, and tell of them with fervor that throbs with gratitude to God, and to His messenger, to whose faithfulness we owe so much. Words which come from grateful hearts never fail to find their way to other hearts with the healing power of the Christ-message. St. Paul tells of the convincing power of truth upon those who attended the experience meetings in his day, and says of the stranger who might listen, "falling down on his face he will worship God, and report that God is in you of a truth." He did not think it either impossible or wrong to "speak with the tongues of men and of angels," he only insisted that Love be understood and obeyed, as the true inspiration to eloquence.

We need never hesitate to speak of past blessings, for the Israelites were commanded to tell their children's children of their deliverance from bondage, and of the signs and wonders which were vouchsafed to them on their way. Our Leader going before us has blazed a way through the thorny wilderness of sense; let us cheer her by bringing to our services the fruits of the Spirit,—the products of our Promised Land,—which are more precious than the grapes of Eschol brought back by the explorers to cheer the doubting and faltering hosts of Israel. K.

General Association of Teachers.

Members desiring rooms with or without board in private houses, will receive attention at the hands of a committee for that purpose, if they will make known, in season, their requests, by letters addressed to First Church of Christ, Scientist, 4017 Drexel Boulevard, Chicago.

A committee will be in waiting at the Church on Saturday, October 22, to direct any who have not previously secured assignments, to suitable places. It is desirable, however, to have all arrangements settled by correspondence before arrival in the city.

Letters to our Leader.

[Telegram.]

New York, October 5, 1904.

Rev. Mary Baker Eddy,
Pleasant View, Concord, N. H.

It is fitting that the banner state in legalizing Christian Science practice should be the native state and home of our beloved Leader and Teacher. May New York soon fall in line.

JOHN L. ROBERTS.
ROSALIND ROBERTS.

Woodville, Maine, July 30, 1904.

Rev. Mary Baker G. Eddy.

My Dear Mrs. Eddy:—Love urges me to take up a few moments of your precious time, to tell you we are just three years old in Science. We desire to express our love to God for His many blessings to us, love to you for giving us "Science and Health with Key to the Scriptures" and other words of counsel and comfort which bring us nearer God and make us want so to live that our light may not be hid, but shine out and show others the way. We also desire to express our love to the practitioner who so patiently led us out of the darkness of disease and sin, into the light of health and contentment, and thus planted our feet upon the solid rock.

Although I had heard of Christian Science before, and knew there were Scientists in the city where we lived (Waterville, Maine), there seemed to be no way for me to find out anything about the teaching. At last, however, we were led to Christian Science through suffering. My husband had suffered many things of many physicians for a year or more, and they all agreed in pro-

Digitized by Google

nouncing the disease locomotor ataxia, from which he would in a very short time become perfectly helpless.

At this time a friend who was not a Scientist told us she knew Christian Science treatment would help him. We gladly accepted it when we saw the beauty of its teaching and recognized the Principle of its demonstration. When he commenced taking treatment he could not walk if any one was looking at him. Now he is well and working on a farm.

Love was the subject of the first Lesson Sermon I heard, and I have since been trying to learn how to reflect Love so as to lead others to the Truth that makes free. We are living now where there are no Scientists near, but we have the Bible, with Science and Health and many of your other writings to guide us on our way; also the works from the Publishing Society. We are now members of The Mother Church.

We pray for God's blessing on you who are working for us all. May we ever live the gratitude we feel.

Yours in love,

MARY H. S. LANDER.

Beloved Leader and Teacher:—I send the enclosed copy from the sermon of John Robinson, the original of which is in the Museum at Plymouth, Mass., thinking it will be of interest to you. I was impressed with its broad outlook and the recognition of a fuller understanding of God to come. Christian Science has brought to humanity this understanding and to you, through whom it has come, the love and gratitude of the world is due.

As one among the thousands who love and revere you,

Lovingly, your student,

ALICE S. BROWN, C. S. B., Boston, Mass.

August 6, 1904.

Extracts from the farewell sermon of John Robinson to the Pilgrim Fathers on their embarkation at Delft-haven, A. D. 1620. The original of this is in the Museum at Plymouth, Mass.

"Brethren, we are now quickly to part from one another and whether I may ever live to see your face on earth any more, the God of heaven only knows; but whether the Lord hath appointed that or not, I charge you before God and His blessed angels, that you follow me no further than you have seen me follow the Lord Jesus Christ.

"If God reveal anything to you, by any other instrument of his, be as ready to receive it as ever you were to receive any truth by my ministry, for I am verily persuaded—I am very confident—that the Lord has more truth yet to break forth out of his Holy Word. For my part, I cannot sufficiently bewail the condition of the reformed churches who are come to a period in religion, and will go at present no further than the instruments of their reformation.

"The Lutherans cannot be drawn to go beyond what Luther said; whatever part of his will our good God has revealed to Calvin, they will rather die than embrace it; and the Calvinists, you see, stick fast where they were left by that great man of God, who yet saw not all things.

"This is a misery much to be lamented: for though they were burning and shining lights in their times, yet they penetrated not into the whole counsel of God: but were they now living, would be as willing to embrace further light, as that which they first received.

"I beseech you remember it is an article of your church covenant. 'That you be ready to receive whatever truth shall be made known to you from the written word of God.' Remember that and every other article of your sacred covenant with God. But I must here withal exhort you to take heed what you receive as truth. Examine it, consider it and compare with other Scriptures of truth, before you receive it, for it is not possible that the Christian world should come so lately out of such thick anti-Christian darkness, and that perfection of knowledge should break forth at once."

Testimonies of Healing.

Often one hears the expression, Is life worth living? To me, it certainly was not, only three months ago, for I was then a physical wreck, suffering agony from a terrible disease which the medical men failed to cure.

Every joint and sinew in my whole body was enlarged to twice its proper size, and caused me intense pain. My tongue was also swollen too large for my mouth. Over six years I had been suffering like this and was unable to work for long periods,—the last time for seventeen months. All the doctors I consulted gave the same opinion,—that my disease was incurable.

My eyesight was also affected, the eyelids not allowing me to see, and there was continuous pain at the back of my head as well as in the eyes. When the sun was shining I had to stay indoors, being unable to bear the light even when my eyes were shaded with special dark glasses which I always had to wear. I had tried several doctors and specialists, but to no avail.

A friend sent me a letter advising me to try Christian Science. She had heard that I was very much worse, and bedfast. Christian Science was at that time unknown to me, but after considering it for two days, I replied that I should like to try it, as it seemed to be my only hope, for I was then waiting for death to relieve me from my terrible pain and agony. A Christian Scientist came to see me and lent me a copy of Science and Health, and in three hours after the lady left me I got up and dressed myself. All the pain had gone from my head and body, and I felt a new man. My wife read to me, as I could not see to read for myself, and when she read these words from Science and Health, *"God is Mind, and God is All; hence all is Mind"* (p. 492), I began to realize that I should have to deny mortal mind and gain the understanding of Truth. In four days I was able to walk a distance of two miles, and that without wearing any glasses at all, much to the astonishment of my doctor and friends.

In a month after, my strength came so rapidly that I was able to take a situation as horsekeeper in a livery stable, where I am still working. The physical help has been nothing compared with the spiritual. My wife and I are far happier and more peaceful now, for we know that God is all Love, Life, and Truth.

Words cannot express the gratitude I feel to our Leader for bringing the truth of God to me through Christian Science. I am also most grateful to the lady who so kindly helped me. I hope this testimony may be the means of bringing some other poor sufferer to health, happiness, and to God.

JAMES WILLIAM SPENCER, Rochdale, Lancashire, Eng.

I spent one Saturday evening with friends who had classes in two different orthodox Sunday Schools. During tea-time one of the girls was stricken with a headache. As we finished tea my friend sighed languidly, "O that Sunday School lesson! I cannot study it to-night, my head aches so badly." I replied, "How strange! Christian Scientists study their Sunday lesson to be healed and find it effectual in proportion to their understanding of its meaning."

I then remembered with gratitude how I had been healed of the grip by the study of the lesson. As I sat down to study one Sunday afternoon, every part of my body ached, but more especially my head, which seemed to throb with each heart beat. I was cold and hot in a moment. When I had finished two citations the symptoms were so augmented that it seemed impossible to sit up any longer. Closing the books, the thought came to me that the healing of that disease was in that lesson, and fear could not keep me from being healed. In one of the remaining citations I found a passage so strong and pure in its diction that it dispelled the diseased belief with a thought of health which became a song of peace,—"Every law of matter or the body.

Digitized by Google

supposed to govern man, is rendered null and void by the law of God. In ignorance of our God-given rights, we submit to unjust decrees, and the bias of education enforces this slavery. Be no more willing to suffer the illusion that you are sick, or that some disease is developing in the system, than you are to yield to a sinful temptation, on the ground that sin has its necessities" (Science and Health, p. 380). Needless to say, I was healed in a very few minutes and joined in a much relished luncheon, whereas the same symptoms had, in the past, developed into an illness of many days' duration, in spite of prophylactic drugs.

This is but one of the many immediate healings which I have felt since studying Christian Science, and it serves to illustrate the vast difference between a religion with a creed whose adherents leave their lesson until Saturday night, and then prepare it as a task, and a religion with a Principle, whose believers study daily and eagerly the lesson for each successive Sunday.

This is written with due respect to other Christian believers, and any one has the privilege of proving for himself the correctness of my deduction from the instances above,—that Christian Science is true,—after he has studied its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.—L. M., So. Omaha, Neb.

With loving gratitude, I acknowledge a great debt to God, and to our beloved Leader, for the many blessings received through Christian Science. I desire to join the "great cloud of witnesses," hoping some one may be helped and encouraged by my experience. Leaving home when a very young man, I carried with me a protection against the temptation of a great city,—a mother's prayers and a small Bible. For a time I read the Bible and prayed, but without understanding. This did not suffice, and evil seemed to gain the victory. I soon omitted to read my Bible; forgot to go to God in prayer for guidance and help, and looked to the world for that which it never has and never can give,—health, peace, and joy.

Thus, years later, when Christian Science came into my home, it found me prayerless, churchless, godless; a home discordant, and with no thought or knowledge of spiritual things. Up to this time, my wife had for years been seeking health through the physicians, but without success, and as a last resort had been sent to Christian Science. The help received was wonderful, and so impressive that I commenced the study of Science and Health. The first effect which I realized from the reading of our text-book, was a great love for the Bible and a desire to read it, something which I had not done for years. I went in silent prayer to God, that I might see the light and truth which would enable me to become a better man. "Ye must be born again." Thus again, and as a child, was I taught to pray "the effectual fervent prayer" which "availeth much." In a few weeks' study of Science and Health together with the Bible, and without other help, I was healed of a desire for liquor, of years' standing, and of the use of tobacco. Ten years have passed and these appetites have never returned. I have never used either liquor or tobacco in any form from that time to the present. Surely this Scripture is fulfilled in our home: "Old things are passed away; behold, all things are become new." How can we estimate the value of a book, the study of which brings such transformation and regeneration! Only as we endeavor to live, and strive to practise what it teaches, can we begin to pay our debt to God, and to her whom He has sent to make plain to human understanding the life and teaching of Christ Jesus.—W. H. P., Boston, Mass.

At the age of three months a fall caused the cartilage of the nose to be pushed across so that it entirely closed one nostril. When it formed into bone, the flow of mucous was obstructed until there was developed a most malignant type of dry catarrh, for which the best specialists in *materia medica* could afford only temporary relief. They said that the poison was searching its way through the whole system, until every organ was in some degree affected by it. Six years ago the light of Christian Science brought health and strength through the efforts of a practitioner, who has ever since been my helpful friend. Each condition was uncovered and conquered. Glasses which I had worn for seventeen years, for inherited myopia, were discarded, teeth were extracted painlessly; in fact, the truth has met every need as it appeared.

I had cared nothing for religion, and even the name of Christian Science had never come to me until it was mentioned by the one to whom I afterward went for help. Clouds of sorrow, despondency, and pain have been gradually dispelled, until now I stand a living witness to the power of Truth as revealed through our beloved Leader, Mrs. Eddy, in what is to me, the most wonderful book of this age, "Science and Health with Key to the Scriptures."

Although the physical healing has given me great cause for rejoicing, it is the spiritual gain for myself and others, the daily unfolding of an understanding of the Christ Principle, which brings a joy words can never express. I would also speak a word of thanks for the class instruction, so lovingly given me, and which enabled me to start with courage upon the strait and narrow way.

EMMA M. CLARK, Washington, D. C.

I was a sufferer for years from nervous prostration. I will not attempt a description of my sufferings, for they can never be known or understood, except by those who have had a like experience. I will only say that the physical suffering, which was great, was nothing compared with the mental. Christian Science was presented to me several years ago, but I was not then ready for it, I held strongly to the old thought and felt it would be very wrong to turn away from what I believed to be the truth, even if it would heal me, which I doubted. I felt that I would rather die than be healed by something which I thought required me to give up the atonement. I dared not let go of it while believing that my future salvation depended upon it. I now know that both my present and future salvation depend upon it.

I did not die, but suffered on, and finally got into such a mental condition that I could not trust, reason, or pray. I shudder now to recall the agony of those months and years. I found I did not, and could not, love a God who, I believed, had power, but who, in spite of all my cries to Him, would not send me relief. Thus I drifted for a time, when one day in passing the office of a Christian Scientist it occurred to me to go in, but I passed by, then stopped, hesitated, turned back, and in my desperation went in, I hardly knew why, as I did not think I should take treatments. The practitioner received me kindly, and before I left it was arranged that I should take treatments. These were continued for about nine months. My recovery was slow, but I never wanted to give up or let go, though I had many dark hours of doubt, discouragement, and fear.

I want to say to those whose recovery seems slow, Do not be discouraged, the time will come when you will feel as I do now, that not one hour of that time was lost, for my experience would not now be what it is, if that time had been shortened by one day. I needed it all, and again I say do not be discouraged.

Through all this time my practitioner patiently and lovingly led me on. As time goes by I realize more and more her faithful work and patient love. I afterward had the privilege of class instruction with her, and what I owe her as my teacher and friend, I can never express in words; but I hope by a life of earnest, steadfast devotion to Truth and Love to show my appreciation of her work and that of our dear Leader. I am also grateful for all our helps in the way of Christian Science literature.

Digitized by Google

I have occasion to say many times to myself, "Abundance to my need will flow, if I but feel, through mists of sense, the plenty of Omnipotence." My needs are many and varied, but no matter how many or how great, the supply is sure and unfailing. Love has brought me many miles from the scene of my healing, but is still with me. It is so good to know that God does not so much send us out, as lead us out, always going before us, opening the way and providing for us. I am proving daily that He is a God whose promises fail not.—M. I. W., Fort Fairfield, Me.

A number of years ago I applied to a Christian Science practitioner for help, and with the gratifying result that I was healed of a disease known to doctors as "incurable," and I have remained well ever since. I am grateful for this, also for many other physical helps; but far outweighing these is the spiritual uplifting, and the understanding of the Scriptures which comes with the study of Science and Health.

For many years prior to being healed I was a member in good standing of an orthodox church, and pursued a faithful study of the Bible. Although I took great comfort in the Psalms and some of the New Testament writings, I had to admit that there was much which seemed dark and contradictory. After reading "Science and Health with Key to the Scriptures" for a season, the Bible took on a new meaning to me, and to-day, viewed in this new light, it stands out in wondrous beauty and sublimity, bearing a message which is fraught with healing and blessings for mankind.

For the assurance of prayer answered, also this new understanding of the Scriptures, I am doubly thankful. I am filled with gratitude for the revised Manual and all the other helps that are given us, as we have need, by our dear Leader.—MARY C. QUINN, Castle Rock, Wash.

I have received so much benefit from the testimonies in the *Sentinel* and *Journal* that I send mine, hoping it may cheer some struggling heart. I was reared by kind and loving Christian parents and was a member of an orthodox church for over twenty years, but I was never satisfied. I was filled with fear and bound down by the false gods of this world,—sin, disease, and poverty; consequently every way I turned, and in everything I attempted to do, I was met with disappointment and failure; but God was leading me into a different life. My interest was first awakened to Christian Science about thirteen years ago, and I have been a willing disciple ever since. Through the reading of Science and Health I was healed of chronic catarrh, laryngitis, and constipation, and it also enabled me to lay off my glasses. Christian Science has not only helped me mentally, morally, and physically, but the greatest blessing of all is the spiritual uplifting which enabled me to know that God is both able and willing to care for His children, if we are but willing to do our part and bear the cross which, though it seems heavy at times, always brings a sure reward. Christian Science has not only helped me, but it has enabled me to help others.

The Bible is a new book to me. I now see what Jesus meant when he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

My heart goes out in gratitude to Mrs. Eddy for the work she has done and is still doing for the world, and to God I am most grateful that He has guided me into the truth, that I may have life, and have it more abundantly.

I had the pleasure of attending the Communion in Boston, of seeing our dear Leader, and of hearing the loving words she spoke.—MRS. MAGGIE MARTIN, Chicago, Ill.

Christian Science found me, now some five years and a half ago, a physical wreck. I had been ill for several years, suffering from severe nervous depression, the result, so the doctors told me, of repeated attacks of influenza. I had tried the various schools of *materia medica*, including allopathy, homœopathy, electropathy, osteopathy, besides mesmerism, sea voyages, etc., but all with unsatisfactory results. I was without hope, and my life was indeed a most miserable one.

One Sunday morning in July, 1898, I was induced to go to a service at First Church of Christ, Scientist, in this city. The service in no way interested me until the reading of the scientific statement of being (Science and Health, p. 468), when, with the reading of the words, "hence, man is spiritual and not material," I had an experience impossible for me to describe. It seemed as though the clouds were rolled back, and I saw heaven; not only did I see it, but I felt that heaven was all around me. The happy thoughts which instantly flooded my mind and remained with me for some ten days would require too much space to relate, even if I were able to find language equal to the occasion. I may say that both physically and mentally I felt I was a new man. I experienced such happiness as I never thought possible on this plane of existence.

To fully express my gratitude for the joys and blessings which Christian Science has brought into my life is beyond my power, and my constant prayer is, "May Thy Word enrich the affections of all mankind, and govern them!" (Church Manual, p. 57).

EDWIN WAREHAM, London, Eng.

When Christian Science was first presented to me, it came through the healing of a dear friend, and although I was not really antagonistic to it, I was not interested in it until some months later. My lungs, which had not been strong for some time, became troublesome, and I consulted our family physician who, I feel sure, did the best he could for me, but I grew worse as time went on. One day the subject of changing physicians came up and I was urged to try Christian Science. I hesitated for some time, then assented, and through the years that have passed since, I have not regretted the choice for one moment. There have been many battles fought and victories won for Truth, and through my practitioner's understanding of Christian Science I grew well and strong. I began to study the Bible and "Science and Health with Key to the Scriptures," and gained a new and better understanding of God. Later came class instruction with a dear teacher to whom I ever feel grateful for her watchfulness and guidance.

Before I became interested in Christian Science I was a member of an orthodox church and attended the services regularly, but the thought often came to me, "How do I know that I am right, I have no real proof?" It seemed to me there must be some way whereby we could *know*,—feel sure,—that we were in the right way. I do not suppose my experience is different from that of others who have found in Christian Science that which abundantly satisfies. I know that its Principle is divine, that it heals and saves. For all the good that has come to me through Christian Science my thought goes out to our dear Leader, Mrs. Eddy, with love and reverence; for it is through her faithfulness that I have been enabled to bring to others this Truth which destroys all error. I wish to thank all those who labor for the good of the Field; for the *Sentinel*, *Journal*, and the Lesson-Sermon. Each is doing its own work, and is full of loving thoughts which meet each reader's need.

A. H. B., Pierrepont Manor, N. Y.

A testimony from London, Eng., given in the *Sentinel*, of protection from hurt in the overturning of a motor cycle, leads me to send this testimony of God's loving care for His children. Shortly after coming into Christian Science five years ago, I was prompted to read the 91st Psalm every

Digitized by Google

morning, and this practice has been faithfully adhered to from that time to this. As my understanding of the teachings of Christian Science has grown, the beauty and truth of the statements of this Psalm have become clearer to me, to such an extent that I have been able to realize God's loving protection on several needed occasions.

One morning about a year ago I was riding my bicycle on my way from home to the office. I was on the left side of the street, riding rapidly, and before the wind, which was blowing strongly, and this of course greatly accelerated my speed. As I approached a cross street I noticed a wagon coming towards me, and as I expected that the driver would either keep on his way or turn up the cross street, I made no effort to slacken my speed, but intended to pass to his right at the cross street; but just as I turned out to the right he did the same thing to the left, as it was his purpose to go down the cross street, and as I had not calculated on this move, it threw me directly in front of the horse's head, and for a moment it looked to me as if I would run right into one of the shafts. I bore hard on my right handle bar, which carried me at an oblique angle over the car track right under the horse's head, and at this moment the driver pulled up. Notwithstanding I had to take such a sharp turn, and this, too, over a car track, which most bicyclists know is very apt to cause the bicycle to "side slip," as our friend expressed it, and throw the rider, I did not fall, and regained balance instantly.

I thanked God then and do now for my escape from accident. It has enabled me to find a new and richer meaning in the familiar words, "There shall no evil befall thee. . . . For he shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone."

W. S. MORRIS, JR., Norfolk, Va.

In Science and Health, page 427, Mrs. Eddy says, "The great difficulty lies in our ignorance of what sin is." Only since coming into Christian Science have I learned that sin is in the thought. I feel that I would give worlds had I only known this before, but—

No star is ever lost we once have seen,
We always may be what we might have been.

And now I find that in proportion as I overcome the thoughts of hate, pride, envy, jealousy, malice, revenge, anger, just in that proportion is harmony produced and the fruits of the Spirit made manifest in me. I am indeed grateful for the many blessings which have come to me and mine through Christian Science,—grateful to God, and grateful to our Leader.—M. C. W., Chicago, Ill.

I would like to tell of a demonstration we had a few weeks ago. My mamma and papa were attending a church business meeting, and my little Christian Science friend was to stay with me. We were having a happy time and had been reading in Science and Health, when, about nine o'clock, I was taken very suddenly with sore throat. I knew what that meant, for I used to have tonsilitis very often before I became a Christian Scientist. We went to bed and both of us worked hard to overcome the trouble, but I seemed to be burning up with fever. Papa and mamma came home late, and all I asked for was a drink of water, I did not voice the error. About two o'clock mamma heard me make a choking sound, and came to my room and stayed with me the rest of the night. By morning the fever was gone. This was Friday morning, and on Saturday I was out and went to the reading room. I am thirteen and attend the church and Sunday School. I want to do all the good I can. I feel very grateful to God, and to our Leader, Mrs. Eddy.

MARGUERITE WELPER, Owosso, Mich.

My path has been by no means one of flowers since coming to Christian Science, but the way grows brighter. All that I have that is worth having, and all I am, I owe to the understanding which has come to me through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible. Before coming to Christian Science I had been an invalid for a great many years. I had not only one ailment, but several, one of which was of twenty-six years' standing, but it responded quickly to the truth while other ills yielded more slowly. My love for our dear Leader, and the Cause of Truth has prompted this testimony.—E. B. N., Cleveland, O.

Not long since I was attacked with what might be called neuralgia of the heart. The trouble appeared very malignant, until one night it seemed I might pass from this plane of existence, when these words came to me from Science and Health, page 243, "The divine Love which made harmless the poisonous viper, which delivered men from the boiling oil, from the fiery furnace, from the jaws of the lion, can heal the sick in every age, and triumph over sin and death." I repeated these words prayerfully with the sweet consciousness of their reality, and was healed. This demonstration of the power of the spoken word, brought a new light to me. Jesus spoke the word of God and the sick and sinful were healed. He taught by healing, and he preached by healing. He is our great Exemplar, and he said, "No man cometh unto the Father, but by me."

My heart overflows with gratitude and love to God for His rich gifts to us through our beloved Leader; for Science and Health, the pearl of great price; the Manual, which reveals to us the law of Love, together with all her other works; the *Sentinel, Journal, Quarterly;* also for the wise and safe government of this great movement of Christian Science Mind-healing.

MRS. EMILE ROUNSEVEL, Littleton, N. H.

Christian Science has been my Saviour. It healed me when all material remedies were of no avail. I had been under numerous physicians for several years, and it was while in the deepest despondency that, as a last resort, I began Christian Science treatment. The disease from which I was suffering was nervous prostration, with constant fear of everything, although most of the time I could not have told what I was afraid of. I had been at three different sanitariums under all sorts of treatment,—massage, electricity, dieting, rest cure, and a number of other ineffectual things,—until there was nothing else to try, so I went to the Great Physician last, when I should have gone to God first, and have been perfectly healed through the understanding of His eternal and unchanging love and power. Nearly five years have elapsed and I cannot sufficiently express my deep gratitude to our beloved Leader who, through suffering and severe trials, has stood the test of serving God and the Wayshower.

SARA B. POLLACK, Chicago, Ill.

Notice.

The Clerk of The Mother Church requests that those who have made application for membership during the past two years and have not received notice of their election, will notify him at once.

Applications for membership in The Mother Church to be acted upon November 1, 1904, must be in the hands of the clerk on or before October 17. It is desired that those who purpose to unite at that time send their applications as soon as possible, as this will facilitate the work of the Clerk.

From our Exchanges.

If the press of the world would adopt and persist in the high resolve that war should be no more, the clangor of arms would cease from the rising of the sun to its going down, and we could fancy that at last our ears, no longer stunned by the din of armies, might hear the morning stars singing together and all the sons of God shouting for joy.

JOHN HAY, *at the Press Congress at St. Louis.*

There is no dishonor in failure, but there is always folly in shutting one's eyes to facts; and every man who fails owes it to himself to charge the responsibility straight home to his own lack of capacity, of force, of steadiness, of energy. It may be that he is the victim of conditions; it is probable that he is failing to reap because he failed to sow.

The Outlook.

That evil should be opposed is also made clear by the teaching of Jesus. He was no exponent of the *laissez faire* theory of life, but an iconoclast, turning and overturning, tearing down and setting up. He brought a sword in that he demanded strong and constant opposition to every form of evil. He did not know how to compromise with wrong, and the bargaining and traffic with sin which is such a marked feature of our modern life finds no warrant in his example.—*The Standard.*

Rt. Rev. John Percival, Bishop of Hereford, Eng., preaching at the Emmanuel Church on the "Gospel of Peace," is reported by the *Boston Transcript* as saying, "We are looking to-day for a new gospel—one of peace and good-will to men. But before we shall attain our heart's desire the spirit of peace must dominate our individual as well as our national life. Christian nations are spending untold wealth for barbaric implements of war. The time has not yet arrived, say the educated men, when war can be permanently abandoned; war, that weapon of barbarism, inflicting misery upon its countless victims. In England they have two gospels, one of peace and love, and the other of greed, pride, and power. When we learn to love our enemies we shall have none, but not till then."

In Tremont Temple the Rev. P. S. Henson, D.D., is thus reported in the *Boston Transcript*, "Christ came to put an end to war on the basis of righteousness, justice, judgment. Nothing is ever settled until it is settled right. It is no use to cry peace when there is no peace. There can be no permanent peace until it is established in righteousness. We are to have our peace congress, and we will thunder our declarations and fulminate all sorts of resolutions, but we will have no permanent, universal peace until the Prince of Righteousness shall reign, and we shall be ready—by compromise, by diplomacy, by arbitration, by consultation, by yielding our prejudices—to recognize, in righteousness, the desires and the rights of others."

A literalism in the interpretation of Scripture that makes no allowance for the drapery, so to speak, of the representation, that places symbolic imagery and plain narrative on the same level, must inevitably lead to distorted views of truth. Our Lord often used the customs of the time and country to illustrate and enforce a general principle. When, for example, he said, "If any man will sue thee at the law, and take away thy coat, let him have thy cloak also," he was not commanding a specific act, but inculcating a broad principle of action. Do more than the law requires, show no resentment even at injustice, but manifest a generous spirit, returning good for evil. The same rule of interpretation must be applied to other and larger things. It does not honor God's Word to read it without discrimination.

The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum, One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 89 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

ANNIE M. KNOTT, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

National.

The Alaska Boundary Commission reached an agreement on October 17 whereby all the American contentions are sustained, with the exception of those in relation to the Portland Canal, which Canada wins. On the map which will accompany their decision will be marked the boundary line definitely fixing the division of American and British territory. The United States will get all the waterways to the rich Alaskan territory, with the exception of the Portland Canal, which gives Canada the one outlet she so much needed. Lord Alverstone, though openly inclined to believe in the justice of the American argument that the United States was entitled to the heads of the inlets, as contained in question 5, held out that Canada had established her case in questions 2 and 3, dealing with the Portland Canal. Senator Lodge, Secretary Root, and ex-Senator Turner, the American Commissioners, agreed to cede those points and to start the American boundary line from the head of the Portland Canal, thus giving the Canadians that channel and some small islands. This accomplished, the majority of the tribunal agreed to fix, with this exception, the entire boundary as outlined in the American contention. By the terms of the agreement to appoint a joint commission this decision is final and settles a long-standing contention.

On the occasion of the farewell banquet in Boston to the Honourable Artillery Company of London the Victorian Club of Boston announced its intention to erect in Boston a statue to the late Queen Victoria, and forwarded to King Edward VII. a cablegram to that effect. The following cablegram was received in reply:—

To F. de Sumichrast, Esq.,
President Victorian Club, Boston, U.S.A.:
The King thanks you and the members of the Victorian Club for your kind telegram, and is much gratified to learn of the proposed monument in memory of the late Queen. Equerry.
October 14, 1903.

Secretary Hitchcock has issued an order authorizing the commencement of work on the Tonta Basin Irrigation dam on Salt River, Arizona, at its junction with the Tonta Creek. The cost of constructing the reservoir is estimated at two million dollars and it may require two or three years to complete it. The reservoir will be about eighteen miles long and from a half a mile to a mile and three-quarters wide. It will furnish water for two hundred thousand acres of land. Under an agreement with the Government, the users of the water will pay back to the Government during ten years the cost of the dam.

According to the annual report of the director of the Census for the fiscal year ending June 30, 1903, the twelfth census of the United States cost $13,115,439.27. The total amount of disbursements for the permanent census office during the year was $1,282,996.28. To this sum should be added the accounts chargeable against the fiscal year ending June 30, 1903, which have been presented for payment, amounting to $60,485.65, making the total cost for that year $1,343,481,93.

The Honourable Artillery Company of London left Boston on the 15th after a visit to the United States lasting nearly two weeks. Their appearance everywhere evoked great enthusiasm. The Earl of Denbigh in one of his many happy speeches said concerning his impressions, "It's the man in the street that tells the story, and it is from him that we have received the greeting which has impressed us most."

At last, after much waiting, the long-desired firman has been granted by the Turkish Government for another American expedition to excavate one of the mounds of Babylonia at Bismya. Dr. Robert F. Harper, Professor of Semitic Languages at Chicago University will be in charge, with Dr. Banks as field director.

The Collector of Customs at Manila has unearthed a conspiracy to procure the admission of Chinese coolies by means of forged or otherwise fraudulent certificates, many of which, it is said, have been issued and used. Warrants have been issued for the arrest of two men implicated in the affair.

On the 9th inst. ninety-eight Filipino students, whose expenses will be paid by the Government, sailed from the Philippines for the United States. They will pass the winter in the schools of Southern California, visit the St. Louis Exposition, and afterward be placed in our colleges.

The last of the indictments which have resulted from the investigation into the affairs of the Post Office Department have probably been presented. The entire list calls for the trial of thirty persons.

Foreign.

An arbitration treaty between Great Britain and France has been signed by Foreign Secretary Lansdowne and the French ambassador, M. Cambon. The arrangement is for a period of five years. Article I. reads as follows:—

"Differences of a judicial order, or such as relate to the interpretation of treaties existing between the two contracting parties, which may arise between them and which it may not be possible to settle by means of diplomacy, shall be submitted to the permanent Court of Arbitration established at The Hague by the convention of July 20, 1899, on condition, however, that they do not involve either vital interests or the independence or honor of the two contracting states, and that they do not affect the interests of a third Power."

According to the new *Universitatskalender* the total number of regular or matriculated students in all the twenty-two universities of Germany during the semester just closed was 37,813, as compared with 36,652 of the preceding half year. In point of attendance three universities, that of Berlin, with 5,781; Munich, with 4,692; and Leipzig, with 3,605, lead. The foreign contingent at the universities is 2,731, or 7.2 per cent. Berlin, Leipzig, and Heidelberg are the favorites of the foreigners, with 876, 406, and 197 respectively. America furnishes 276 students.

The Duke of Devonshire has resigned from Premier Balfour's Cabinet. This is regarded as a distinct loss and a great weakening in the authority and prestige of the ministry and the Unionist policy. The new Colonial Secretary is Alfred Lyttleton. He has pronounced himself in defending Chamberlain's action in launching the discussion of preferential tariff and in contending that the poor man's budget should not be weighted nor the food bill increased. He anticipates readjustment rather than additional taxation.

King Victor Emmanuel and Queen Helena of Italy arrived at Paris last week to pay a visit to the French Republic. Their Majesties were received with great enthusiasm by the dense crowds at the station and in the open squares.

Industrial and Commercial.

The Baldwin Locomotive Works has turned out during nine months 1,469 locomotives. The total output last year was 1,533 and in 1899 only 901. At present about six completed engines on an average are turned out daily. At an average cost of $15,000 each the output thus far this year represents over $22,000,000. The works in Philadelphia employ about fifteen thousand men and those in Burnham about two thousand more. The weekly pay-roll amounts to about $225,000.

Construction work has been started on the Alaska Central Railroad to extend from Seward on Resurrection Bay, west of Copper River, to Atwood on the Tanana River. The main line will be four hundred and twenty miles long, with branch lines of one hundred miles. Under the terms of the contract with the Tanana Construction Company, at least one hundred and twenty-five miles of road must be completed each year after May 4 next.

After a lapse of nearly forty years in any extensive cultivation of cotton in Porto Rico that industry is now being revived. Cotton has already been shipped north this year and several thousand bales are to be shipped later. Cotton gins are in operation at several points on the island and several companies are interested in ginning the product.

A new fast passenger and mail line between Montreal and England, with turbine engines fed with oil fuel, is a probability of the early future, if the plans to be proposed within the next few days to the Canadian Government meet with favor.

General.

As a means of adding variety and interest to ocean trips, wireless telegraphy is a great success. This was illustrated in the case of a recent trip of the ocean liner Ivernia from Liverpool to Boston. During her passage she was in communication with the Aurania, Campania, Saxonia, Augusta-Victoria, La Bretagne, Umbria, Minneapolis, Kroonland, and Kronprinz Wilhelm.

The longest automobile ride on record, covering 6,670 miles in distance and 54 days in time, has just been completed without an accident by Charles J. Glidden, of Boston. The machine was driven through Norway, across the Arctic Circle, through Sweden, Germany, Switzerland, and France. In Norway and Sweden the machine was viewed with great curiosity.

The old Chimney Butte Ranch, made famous as the ranch established by Theodore Roosevelt when he was a Bad Lands cattleman, has been sold. It was at this ranch that President Roosevelt wrote some of his entertaining western sketches. Subsequently he located another ranch known as the Elkhorn, forty miles south of Medora.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Extracts from a Christian Scientist's Letter to a Friend.

THROUGH the kindly ministrations of Christian Science, my wife has been brought back to health and strength and a peace of thought that "surpasseth understanding," thanks not to the suggestion of any personality, but to the fact that all other means had been tried in vain and found wanting.

You say, "I think it entirely wrong." Now, my friend, has it ever occurred to you that we all think that many things are wrong which are in fact right, and that our thinking does not change the truth in the least? For many centuries people thought the earth flat. Such mistaken thinking, however, did not change the spherical form of the earth in the least.

Again, you say, "Science claims there is no sin in the world, and that we are good and pure." If you had *read* Science and Health instead of merely scanning it, you would have discovered that it taught, not that there is no sin in the world, but that sin is wholly and entirely of the world and does not partake of any spirituality whatever, but that the true man, as distinguished from the human-sense man, is pure.

The same old Bible from which you quote lays down the proposition that God created all and "without Him was not anything made that was made," and in Genesis we find it written that, "God saw everything that He had made, and, behold, it was very good." Now, if sin is a reality, a fact, an entity, and God made everything that was made, who made sin, all that is not good? Can the answer be other than that sin is unreal, because, if the Bible is true, whatsoever is made, God made, and whatsoever God made, He pronounced good, and His pronouncements are true, else He is no God.

Science and Health does not teach that the "we" of the personal or corporeal senses is without sin. It does teach, if I read it correctly, that sin partakes of the very nature and essence of the bodily senses, and hence, when the dominion of these senses disappears from our consciousness, sin, disease, and all the divers forms of evil, will likewise disappear.

No student of Christian Science who really understands what it is to be a student, ever says that his personality is free from sin, or has not sinned, but as spiritual sense is attained, the fact that "God hath made man upright" is discerned.

In Science the Saviour becomes the risen Christ in the thought of every faithful student. Instead of being denied, he is affirmed in language and demonstrated in deeds that surpass by far any utterance ever found in creed or doctrine. And we find a present God instead of one that we must die to meet.

You readily admit that God is Love, and this is the foundation-stone of Christian Science. Because God is Love He is of "purer eyes than to behold evil." If God were conscious of evil, then He would be chargeable with its being. Further a god conscious of sin, would not be a God of love; nor would He be a God of truth, for sin is falsehood, a false sense of things.

The judgment-day of God of which you speak, is not postponed until some future time, but according to Christian Science "the judgment-day of wisdom comes hourly and continually, even the judgment by which mortal man is divested of all material error. As for spiritual error there is none" (Science and Health, p. 291).

Now, my friend, if God is everywhere, can we think of a place or time when we can approach Him more nearly than right here and now? If He is a God of love, why not bask in the sunshine of His love here, instead of holding the thought of fear that a God of love must be propitiated lest we incur the endless penalties of a future hell?

And furthermore, did it ever occur to you that if God is omnipresent; that is, if He is present in all places, that He is just as much in hell (if hell is a place) as anywhere else. I do not speak the words irreverently when I say that I am not afraid to go to any place where God is, and since He is everywhere, there is no place to which I can go where He is not. When we reach heaven, harmony, we shall all have learned that man is perfect, because man is simply the reflection of his divine Creator, and a perfect Creator signifies a like creation. Thus when the material senses, the gods which we have worshiped, and which are no gods, have disappeared, we shall see the truth face to face and not "through a glass darkly."

The Bible is not a little book to be used as a sentence of death upon any of God's creatures, but a great book disclosing spiritual truth, which the senses cannot discern, and of this book Science and Health is truly the key, for works of healing have followed its teachings in thousands of cases which no well-informed person now questions.

Sincerely yours,

J. A. PLUMMER.

The Error of Judging.

WILLIS F. GROSS.

ONE of the most subtle errors with which mortals have to deal is the habit of judging. This error is doing much to retard the world's progress spiritward, for it prevents the honest and legitimate use of what has been gained and makes it exceedingly difficult, if not impossible, to gain more.

"Judge not according to the appearance, but judge righteous judgment" was the wise counsel of the world's greatest teacher.

By no means the least of the Master's precepts is the simple rule of conduct, "Judge not, that ye be not judged." On one occasion, when speaking of himself, he said, "I judge no man." He who was best qualified to judge saw most clearly that man's mission is not to judge, but to teach and demonstrate the truth. Truth is always a just judge, an unerring guide, and an effectual help.

The tendency to judge is supplemented by the endeavor to set up a standard for others. Nowhere is this so manifest as in religious affairs. A man is generally willing for his neighbor to conduct his business in his own way,

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

but he is not always willing for that neighbor to worship God as he sees fit. In that which is of most vital importance and in which man should have the greatest freedom, he apparently has the least.

It is too often the case that those who have gained greater freedom for themselves, are among the first to mark out a path for others, and are most severe in their criticism of him who refuses, or fails, to do as they think he should. They would substitute personal opinion for divine guidance, and declare that he whose doing is not according to their sense of right is influenced by error.

The practice of judging, wrongs the man who is judged because it takes away his God-given right,—the right to prove for himself the truth or falsity of his convictions. The conflicting views of others as to what he should or should not do, has a tendency to darken thought and obscure his vision. If he endeavors to do as he is directed by others, he frequently learns from experience that personal opinions are not always to be relied upon. Perhaps after repeated failures he is almost ready to give up in despair. Then if he turns to God for help he finds the right way. If in the first place he had been guided by his own sense of right he would have escaped much. Even though he failed in his first efforts he would have learned how to profit by experience. When influenced by personal opinion, he gained nothing unless he learned the folly of trying to work from another's standpoint.

It requires moral courage to do what one honestly believes to be wise and expedient. Because he fears the criticism of others, mortal man often goes contrary to his own sense of right, and fails. He cannot make others responsible for his failure, for he should have the courage of his convictions and dare always to do what he believes to be right. Nevertheless, those who marked out the path for him are not altogether guiltless. If they had refrained from judging, there would have been at least so much less to influence him contrary to his convictions. Relieved of the burden of what others said and thought he would have been free to work in his own way. If he found he was right, well and good, but if he found he had made a mistake, he could profit by the experience and value the lesson he had learned. He would gain greater freedom by reason of the fact that he was putting his own convictions into practice instead of trying to work from another's point of view.

Man must not only believe he is right, he must demonstrate that he is right before he is able to say what another should or should not do. When he has demonstrated that he is right he will have little, if any, inclination to judge others. Human opinions are far from being demonstrably right. The person who to-day is so firmly convinced that he is right, may see to-morrow that he was altogether wrong.

It is asked, "Cannot one demonstrate he is right?" We answer, It is possible to demonstrate the truth, but it is not possible to demonstrate that a particular course would be the right one for others to follow. That all make mistakes is an evident fact, and if a man make mistakes in solving his own problem, how unwise it is for him to say what another should or should not do.

How little one knows what another's motive is, or what has caused him to take a certain step or to pursue the course he has followed. Who is wise enough to say another has not done what was best under his circumstances? Who *knows* that a different course would have been better? Who is sure that if he were placed in the same position and under the same conditions he would have done better, or even so well?

If we only knew the earnest desire of another's heart; if we only knew how heavy is the burden he carries and how great are the odds against which he is struggling, the inclination to judge, perhaps to censure and condemn, would give place to sympathy and love. If we only knew many things, how much more loving and charitable we would be. How gladly would we help to bear another's burden and so fulfil the law of divine Love.

Who has not felt the sting of unmerited censure and unrighteous judgment? who has not realized the need of a helping hand and longed to hear an encouraging word? Who is there that does not desire to do better, who has not an ideal higher than he has attained? Who has not said with Paul, "the good that I would I do not: but the evil which I would not, that I do"?

Others have aspirations that reach as high as ours; others are striving as hard as we; others are making sacrifices as great and carrying burdens as heavy; others as earnestly desire to be guided by Divine wisdom, and are as earnestly striving to gain the truth, then why should we judge, censure, or condemn?

The only effectual remedy for this error is divine Love. Human love will not suffice, for it is a respecter of persons, excusing one and severely criticising another who does the same thing. The love that is born of God is faithful and just. It is wise in its ministrations and is no respecter of persons. It does not judge. When occasion requires and there is reason to believe that the one in error will give ear to what is said, love speaks a word of counsel and admonition and then leaves him free to work out his salvation in his own way.

Let it be granted that one is in error, that he is doing that which is positively wrong; which will help him more, loving, or judging? It is true that man must reap as he sows, but no mortal should, even in thought, presume to pass judgment upon his fellows. All things are in God's hands and "shall not the Judge of all the earth do right?"

Love the Victor.

M. A. H.

One afternoon some time ago a very heart-broken little girl came home and said between her sobs, "Mamma, the children have sent me home, they say they wont play with me, and Margaret says she hates me." Mamma looked up and said, "What did God's little girl say?" She replied, "Oh, I thought love, but it did not do a bit of good." "Well, come and sit near me, dear, and we shall see if we cannot realize the presence of divine Love enough to chase the cloud away." She obeyed and the crying ceased.

"First of all," said mamma, "can you tell me what God is?" The reply came clearly, "God is Truth." "And what else?" said mamma." "God is Love." "There, dear, I think we need go no further this time. Love is the word we are looking for. God is Love, and what are you?" "I am God's child." "Yes; and as God is Love we'll use that altogether. So you are Love's child; then what do you reflect?" "Love, mamma." "And what is Margaret?" "Why she's Love's child, too, mamma." "Then if you are both Love's children and reflect only Love, where is there room for error?" "There isn't any room. Error is nothing but a lie." "Now, dear, we will just think of that for a few minutes." We did so, and after a while she looked up smiling and said, "And now, if I may, I shall go out and play with them." "Yes, dear; and what are you going to take with you?" Looking up in a roguish manner she said, "My handkerchief." Mamma said, "That is good; but what are you going to take to share with the little ones?" "I am going to take Love with me," and mamma knew the victory was won.

Some three or four days after she said, "Mamma, you remember the day you and I talked about Love? Well, when I went out the children saw me coming and I did not have to ask them could I play with them. They said, 'Here comes Dorothy. Don't you want to play with us?'" And mamma's heart went out in love to God and to our dear Leader that we have a rule given us to work by, and can prove right here and now that Love is the master of hate.

The Lectures.

At Geneva, Ill.

Judge William G. Ewing delivered a lecture on Christian Science at the Unitarian Church, Thursday evening, August 27, under the auspices of First Church of Christ, Scientist. The audience listened with profound interest from the beginning to the end. Judge Ewing was introduced by Mr. J. D. Harvey of the city.—*Correspondence.*

At Chicago, Ill.

Mr. Edward A. Kimball delivered a very interesting lecture on Christian Science September 29, at Second Church of Christ, Scientist, Chicago.

Notwithstanding all the excitement of centennial week celebration, and its particular parade for that evening, the house was filled with attentive and interested listeners.

The lecturer was introduced by his co-laborer in the lecture field, Mr. Bicknell Young.—*Correspondence.*

At Durango, Col.

A large and intelligent audience listened to the lecture by Judge Hanna at the Opera House last evening [September 7]. His subject, Christian Science, is one which attracts the attention of all thinking people of to-day, and was presented in such a logical and forceful manner as to convince his hearers of the truth of his arguments. The Judge was introduced by Dr. McEwen, the mayor of the city and a practising physician.—*The Durango Herald.*

At Brockton, Mass.

A lecture on "Christian Science, a Religion of Works," was delivered by Judge William G. Ewing of Chicago, at the City Theatre, Sunday afternoon, September 20.

The theatre was filled with an intelligent and appreciative audience, who listened throughout with a marked attention which showed conclusively that the speaker had touched a responsive chord.

Mr. L. M. Bates presided: and the speaker was introduced by Rev. Allan Hudson, pastor of the First Congregational Church.—*Correspondence.*

At Lawrence, Mass.

An audience that nearly filled the body of the City Hall assembled yesterday afternoon [September 27] to listen to a lecture delivered by Judge William G. Ewing of Chicago.

Judge Ewing spoke in an interesting manner and held the closest attention of his audience. Many friends were present from neighboring cities. The lecturer was introduced by Miss Susie M. Lang, First Reader of the local church.—*Lawrence Telegram.*

At Elkhart, Ind.

Carol Norton, C.S.D., of New York City, addressed a large and fairly representative audience of Elkhart people Sunday afternoon, September 27, at the Bucklen Opera House on the subject, "Christian Science, the Gospel of Righteousness and Health." Mr. Norton was introduced by Cyrus D. Roys, who said in part:—

"Dogmatic theology has never moved the higher aspirations of the heart nor performed all the promises it made to us; and the world is waiting and praying for some religion whose beneficent sway will establish and preserve a Christian civilization through the peaceful teachings of the Redeemer, not through the cruel method of war and conquest; a religion that will satisfy the yearnings of the heart and command the intelligent judgment of men; a religion that will 'fulfil all the promises it makes to us.'

"Is Christian Science the reality? Is Christian Science the truth? I do not know. I hope—I will not say 'I believe'—I hope that the renaissance of religious belief is here; and wait to learn from one who has given conscientious study to a question that haunts every page of human history. It is a pleasure that I am permitted to introduce Mr. Norton."—*The Elkhart Truth.*

At Minneapolis, Minn.

Sunday evening, September 20, Carol Norton of New York City lectured in the newly dedicated Second Church of Christ, Scientist, on Christian Science. He was introduced by A. C. Hickman, of the University of Minnesota Law Faculty, who said in part:—

Religious belief is man's birthright; his most sacred possession; the one heritage for which he has ever been ready to meet persecution, endure torture, and if need be, seal his faith with his life-blood. Hence, any sect or organized body, presenting a religious creed at variance with established beliefs, necessarily challenges the criticism and oftentimes the open opposition of the religious world. To this common experience Christian Science has not been an exception. The purpose of the address this evening is that we may have a more perfect understanding of what Christian Science is, as claimed by its adherents. In the world are sickness, suffering, and death; medical science has labored and is laboring, nobly and faithfully, to give relief from the ills of life. If Christian Science can aid in the humane work, we need it—the world needs it. In the message to us this evening we may find—presented possibly in a new light—the "Old, old Story," always forever new, respecting the manger and the cross; respecting the spiritual, the resurrection, and the life.

The Minneapolis Journal.

At Racine, Wis.

Christian Science, during the past several years, has been making rapid progress. At present the doctrines attract the attention of many classes. Especially is this true in Racine. Not so many years ago there was hardly a handful of Christian Scientists here. To-day there are several hundred, and they own a handsome little church.

Interest in the movement was clearly demonstrated last evening [September 29], when one of the largest and most representative audiences ever seen at the Belle City Opera House gathered to hear Carol Norton, C.S.D., of New York City, deliver a lecture on the subject. The speaker was introduced by the Hon. David H. Flett in the following words:—

Ladies and Gentlemen:—As I look over this large and intelligent audience I see many who, like myself, are outside of the pale of the church under whose auspices the lecture of the evening is to be given. The fact, however, that one is not a member of a particular church should not prevent him from seeking to find what there is of good in its tenets and in the practices of its adherents.

All denominations and beliefs have in them much of good, much to commend, comparatively little to condemn. All teach their followers to lead pure, upright lives; all inculcate the doctrines of honesty and integrity; all profess belief in the fatherhood of God and the brotherhood of man.

And just to the extent that these principles are exemplified in the daily practices and lives of its members, shall every church be judged. But in order to be an impartial judge, and to reach correct conclusions, the seeker after truth must be willing to listen, to investigate, to consider, to weigh, to accept that which appeals to his reason as true, to reject what appears as untrue.

On behalf of this audience, I bespeak for the distinguished gentleman who is about to address you, a careful candid consideration of the doctrines of Christian Science as he shall expound them to you.—*The Racine Journal.*

Among the Churches.

Church Dedication in Minneapolis, Minn.

The new building of Second Church of Christ, Scientist, at Eleventh Street and Second Avenue S., was dedicated yesterday [September 20]. Services were held in the morning and afternoon, and in the evening Carol Norton, member of the Board of Lectureship in Boston, gave an address. The auditorium and gallery were crowded at each service, and in the evening many were turned away.

The church was dedicated without debt.

The Minneapolis Journal.

A telegram from Mrs. Eddy was read by Mr. Carol Norton during the dedicatory service.

Mr. Norton said,—

Friends:—In the unity of Spirit we have come together to-day, and have joy and satisfaction in participating in the dedicatory services of this Christian Science Church. The dedication of a Christian Science Church in a given community means much,—more perhaps than we think.

Christian Science stands for the restoration and re-establishment of primitive Christianity aglow with works of regeneration, works of spiritual transformation, and signs of physical healing in organic and functional disease; therefore this church stands for the gospel of healing through the merits and through the power and grace of the perpetual gospel of our Lord and Saviour. It stands for the highest interests of the race, and while it is but a symbol of the Spiritual Church of Christ triumphant,—the church without bounds or bonds,—yet in the beauty of its outward form is visible the lesson which Christian Science bears to the world,—the lesson of sublime *faith,* the lesson of dominion over sin, sickness, and death here; and as we think of these things our hearts go out in gratitude to the individuality, character, and life-work of a Christian disciple, a Christian woman ever about her Father's business, following in the footsteps of the Master, as one who especially rejoices with those who do rejoice; and I therefore esteem it a privilege as it is a pleasure to read to you a communication from the Discoverer and Founder of Christian Science.

TELEGRAM FROM MRS. EDDY.

Beloved:—The spiritual dominates the temporal. Love gives nothing to take away. Nothing dethrones His house. You are dedicating yours to Him. Protesting against error, you unite with all who believe in Truth. God guard and guide you.

Lovingly,

MARY BAKER EDDY.

Mr. Norton's lecture in the evening is referred to elsewhere and a fuller report of the Dedicatory Service will appear in the November *Journal.*

Corner-stone laid at Laurel, Miss.

The corner-stone of First Church of Christ, Scientist, Laurel, was laid with quiet and appropriate ceremony, Monday, August 10. There were placed in the corner-stone the Bible, Science and Health and other works of Mary Baker G. Eddy, our Church Manual, copies of our denominational periodicals, and a history of the Church in Laurel.

In a brief address the Second Reader said in part: "We have learned that when implicit trust is placed in God there are no failures. And in our efforts to be 'absent from the body and present with the Lord,' we have been led up to the present event with rejoicing. The Lesson-Sermons have met every problem that was presented to us as a church. In recognition of the truth that brought to our apprehension the realities of existence, we to-day lay this corner-stone which is typical of the chief Corner-stone, 'Christ,' our spiritual foundation. The Rev. Mary Baker G. Eddy, our faithful Leader in Israel, has labored wisely and patiently that men might reclaim their true birthright. And in acknowledgment of her labor of love we place in the recess of this stone the Bible and her works."

Correspondence.

New Reading Rooms in Washington, D. C.

Second Church of Christ, Scientist, of Washington, D. C., moved into larger and more centrally located reading rooms corner of Pennsylvania Avenue and Tenth Streets, N. W., on October 1.

All feel this to be a distinct upward step, marking the growth of our dear church, which is prospering in every way. It was necessary last winter to secure a large hall for church services, and the congregation therein is steadily increasing. God is blessing us in many ways, and because of this, the cause of Christian Science is steadily advancing.

We are very grateful for our dear Leader's wisdom as shown in many ways so recently, especially in providing the Concordance and the new Manual; also the Association of Teachers, which all realize will mean so much to the whole Field. God bless our dear Leader. She is leading wisely, and we are glad to follow her guidance, knowing we shall be led aright.—*Correspondence.*

Progress in Omaha, Neb.

First Church of Christ, Scientist, Omaha, Neb., during the past summer has purchased and paid for a building lot located on the northeast corner of St. Mary's Avenue and 24th Street. The amount paid for the property was $6,000.—*Correspondence.*

Says the *Sunday School Times:* "To wear a cheerful face when the heart is aching is not deceit. When a good housekeeper cleans the front steps and porch before she sets the house to rights, she does not mean to deceive passers by; she merely shows some pride in her house and some consideration for her neighbors. We conquer our heartaches more quickly when we begin by considering the friends who are near us."

If I can Live.

If I can live
To make some pale face brighter, and to give
A second lustre to some tear-dimmed eye,
Or e'en impart
One throb of comfort to an aching heart,
Or cheer some wayworn soul in passing by;

If I can lend
A strong hand to the fallen, or defend
The right against a single envious strain,
My life, though bare,
Perhaps, of much that seemeth dear and fair
To us of earth, will not have been in vain.

The purest joy,
Most near to heaven, far from earth's alloy,
Is bidding cloud give way to sun and shine;
And 'twill be well,
If on that day of days the angels tell
Of me, "She did her best for one of Thine."

Letters to our Leader.

Clifton, Cincinnati, O., September 27, 1903.

Dearest Mrs. Eddy and Beloved Leader:—Thy golden words are graven sacredly on my heart, and I shall work on and on to prove thy God-given words in Science and Health, until I can do instantaneous healing.

This will rejoice your heart. A lady from Covington, Ky., an invalid, serious organic, for over twenty years, constantly under the physicians' care and for the last ten years under the noted specialist, Dr. Eichberg, heard of Christian Science. During Dr. E's absence abroad she appealed for help, declaring if she could be but half cured she would give up *materia medica* entirely. I spoke words of hope to her, gave her the "little book" and a present treatment, and felt she was healed. In a few days she came to my office happy and well. I wish you could have seen her, as she reverently opened Science and Health, and heard her say, "I am so thankful! How can any one who loves the Bible doubt this to be the Truth?"

Last week Dr. Eichberg returned from Europe and found his patient restored to health. He wonders what has wrought the cure. When further along "the way" she will inform him. Through her healing many are coming to our next lecture, October 4, by Carol Norton, C.S.D.

Lovingly and obediently,
RACHEL F. MARSHALL.

Dayton, O., October 12, 1903.

Rev. Mary Baker G. Eddy,
Concord, N. H.

Beloved Leader:—Believing that you will be interested in the following incident, I submit same.

After my healing in Christian Science it seems that my aunt became prejudiced against this Science. She has all her life been a good Christian woman of the Quaker faith. After the physicians had given her up, and believing that Christian Science could help her, my father and mother endeavored to get her to accept treatment, but she did not seem ready and passed away.

Her experience while in the vestibule clearly illustrates what you teach. She said she saw her father and mother who passed on some years ago, also her daughter who had gone about four years ago. She said her daughter would meet her and had a beautiful robe for her. Asking for a drink of water it was put to her lips, and she said, "This is good, but nothing to compare with the crystal water."

Then addressing me by name, she said, "Tell Lloyd and Uncle James [my father] that Christian Science is all right. God bless that good woman. [Her family thinks she referred to you.] Because of my prejudice I had to be brought this low before I could see that it was right." During this time the friends who stood by her bedside said it was wonderful the radiance manifest on her countenance.

This surely is a testimony from God to-day in behalf of His anointed one and His message,—Christian Science.

Lovingly yours,
LLOYD B. COATE.

Boston, Mass., October 15, 1903.

The Reverend Mary Baker G. Eddy,
Concord, N. H.

My dear Leader:—Not quite two years ago, when talking with a Jewish rabbi in Alabama, I was asked by him, "How do you Christian Scientists regard Mrs. Eddy?" With a swift desire that I might give him a correct idea, I said slowly, "I think it is as your people look upon Moses—as our Leader out of bondage, the bondage of material sense."

And now, under the light drawn from the revised Manual during the past month, I again see just ground for the comparison. The nation of Israel had the unique function of being prophet to the world, proclaimer of a new and higher conception of Deity. Its growth and establishment was guarded by Moses with regulations made with the view of preserving this infant idea, or nation, and training it to the best performance of that function. "History repeats itself." You are guarding with wise regulations the growth and establishment of Christian Science, which is the nation of Israel in a metaphysical sense. Its function is that of prophet to the world; proclaimer of Truth; revealer of what Life, Love, and substance are.

In making a partial study of the prophets of Israel this summer, I have seen how each prophet was the heir of the revelation made through his predecessors, that only the hearing ear and the understanding heart *in the individual* could build securely on the preceding revelation, and carry on the prophetic function of proclaiming Truth to the nation of Israel, and through Israel to the whole world. I have recognized with reverence and thanksgiving that as Christ Jesus was the heir and the legitimate fruit of "the law and the prophets," so Christian Science is the legitimate fruit, the necessary sequence, of the revelation made through the deeds and words of him who was "truly the Son of God," who "spake as never man spake." No one can take His place. No one can take your place, which is that of Discoverer and Founder of Christian Science, the author of "Science and Health with Key to the Scriptures."

I thank you sincerely for the rich literature you have given forth, and for all the safeguards you are wisely and courageously placing around the revelation of Christian Science. With love, I am

Very truly your follower,
IDA TIGNER HODNETT.

The Mother-Love.

As to the downy nest the spent bird flies
At sunset time; as to the waters gray
Moves glad the trusting ship whose purpose dies
Without its strong upholding; as the day
Goes joyfully to night's embrace at last,
And as the star, aweary far above
With its night-watching, hails the dawning vast—
So rests, so hides the world in mother-love!

As hovers o'er the soul the sense of deep,
Sweet mysteries here, afar revealed to be;
As the white wings of angels while we sleep
Enfold us warm; as round the naked tree
Its springtime mantle winds like green fire gleams;
As the seas' arms enclasp the shore impearled,
And 'round the earth the air, life-giving, streams,—
So mother-love encircles all the world!

BARNET TOLDRIDGE.

Washington, D. C., April 25, 1901.

"A Kiss for a Blow."

A. A. W.

WHAT makes little children quite happy and good,
And banishes tempers both naughty and rude?
It is the sweet maxim, we very well know,
Of giving each other "A Kiss for a Blow."

Should a quarrel arise, whate'er be the cause,
What is better by far than a whole code of laws?
It is the sweet practice we very well know,
Of always returning "A Kiss for a Blow."

. . . . . .

Should any assail us in deed or in word,
Oh then let us act like our meek, patient Lord,
Who, e'en in the depths of the bitterest woe,
Returned in his anguish "A Kiss for a Blow."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Memorable Coincidence.

WE are glad to publish the following interesting letter and enclosures received from our Leader. That legislatures and courts are thus declaring the liberties of Christian Scientists is most gratifying to our people; not because a favor has been extended, but because their inherent rights are recognized in an official and authoritative manner. It is especially gratifying to them that the declaration of this recognition should be coincident in the southern and northern states in which Mrs. Eddy has made her home.

Pleasant View, Concord, N. H.,
October 16, 1903.

Dear Editor:—I send for publication in our periodicals the following deeply interesting letter from Elizabeth Earl Jones of Asheville, N. C.,—the state where my husband, Col. George W. Glover, passed on and up,—the state that so signally honored his memory, where with wet eyes the Free Masons laid on his bier the emblems of a Master Mason, and in long procession with tender dirge bore his remains to their last resting-place. Deeply grateful I recognize the Divine hand in turning the hearts of the noble southrons of North Carolina legally to protect the practice of Christian Science in that state.

Is it not a memorable coincidence, that, in the Court of New Hampshire, my native state, and in the legislature of North Carolina, they have the same year, in 1903, made it legal to practise Christian Science in these states?

MARY B. G. EDDY.

105 Bailey St., Asheville, N. C., October 11.

Beloved Leader:—I know the inclosed article will make your heart glad, as it has made glad the hearts of all the Christian Scientists in North Carolina. This is the result of the work done at last winter's term of our legislature, when a medical bill was proposed calculated to limit or stop the practice of Christian Science in our state. An amendment was obtained by Miss Mary Hatch Harrison and a few other Scientists who stayed on the field until the last. After the amendment had been passed, an old law, or rather a section of an act in the legislature regulating taxes, was changed as follows, because the representative men of our dear state did not wish to be "discourteous to the Christian Scientists." The section formerly read, "pretended healers," but was changed to read as follows: "All other professionals who practise the art of healing," etc.

We thank our heavenly Father for this dignified legal protection and recognition, and look forward to the day, not far distant, when the laws of every state will dignify the ministry of Christ as taught and practised in Christian Science, and as lived by our dear, dear Leader, even as God has dignified, blessed, and prospered it, and her.

With devoted love,

ELIZABETH EARL JONES.

The following article, copied from the *Raleigh* (N. C.) *News and Observer*, is the one referred to in Miss Jones's letter.

The Christian Science people, greatly pleased at the law affecting them passed by the last legislature, are apt also to be pleased with the fact that the law recognizes them as healers, and that it gives them a license to heal.

This license of five dollars annually, required of physicians, has been required of them, and how this came about in Kinston is told in the Kinston *Free Press* as follows:—

Sheriff Wooten issued licenses yesterday to two Christian Science healers in this city. This is probably the first to be issued to the healers of this sect in the state.

Upon the request of a prominent healer of the church, the section of the machinery act of the legislature covering it was shown, whereupon application for license was made and obtained.

The section, after enumerating the different professions, for which a license must be obtained to carry them on in this state, further says, "and all other professionals who practise the art of healing for pay, shall pay a license fee of five dollars."

This was construed to include the healers of the Christian Science Church, and license was accordingly taken out.

The idea prevails that the last General Assembly of North Carolina relieved the healers of this sect from paying this fee, but this is not so. The board only excused them from a medical examination before a board of medical examiners.

Back to Christ.

IN these days of much theorizing and much preaching we hear a good deal about a growing tendency toward agnosticism and infidelity, and although many reasons have been advanced for this phenomenon of modern civilization, none seem to afford a sufficient basis upon which to suggest a remedy. If such a tendency does in fact exist, it would seem that there is need of a more active and efficient preaching of the gospel upon practical lines which meet the present needs of humanity, rather than of the cultivation of a far-away idealism which seems to the average man impracticable.

Those who have been most exercised about this tendency toward agnosticism have made much use of the phrase "Back to Christ" as a watchword indicative of the necessity of a more insistent preaching of the simple yet comprehensive teachings of Jesus, if mankind is to be saved from the threatened peril of unbelief.

In this premise they are undoubtedly correct, and it therefore becomes necessary for those who are undertaking to stem this tide of infidelity to ascertain precisely what these teachings were, and carefully to inquire regarding our Master's works as well as his words, so that his teachings may have the proper atmosphere and perspective.

In no respect were Jesus' teaching and practice more closely interwoven than in the healing of the sick, and for this reason this cry "Back to Christ," so much used by our contemporaries, must, if they be consistent, include the desire for a return to the healing of physical disease by divine power; but notwithstanding the fact that so large a portion of the four gospels is devoted to accounts of the healing works of our Master, this call "Back to Christ" has not been considered by those who use it to be a plea for reinstatement of the "mighty works" which Jesus evidently regarded of such importance to his ministry. Truly "The schools have rendered faith in drugs the fashion, rather than faith in Deity" (Science and Health, p. 146).

In the early days of the work of Mrs. Eddy,—of the Discoverer and Founder of Christian Science,—a well-known minister who dearly loved an epigram passed judgment upon his own concept of Christian Science in the words, "Christian Science is neither Christian nor scientific," and from time to time this saying has been repeated by others. With all due respect to those who have made use of this ministerial *obiter dictum* we point to the works, as well as the words of Jesus for justification of our right to be called Christians, and find in the indissoluble association he gave

Digitized by Google

them the certain solution of the problem which must be worked out in Jesus' way. The healing of disease is as essential to the practice of Christianity to-day as it was in the time of the Nazarene and his immediate followers.

M.

The Ministry of Childhood.

It is recorded that on one occasion Jesus taught his disciples a vital lesson through a little child. They had asked him, "Who is the greatest in the kingdom of heaven?" and his answer was given when he called to him a little one and set him in the midst of them and said, "Whosoever therefore shall humble himself as this little child, the same is greatest in the kingdom of heaven."

We are all familiar with the saying that "children should be seen and not heard," and however this may be misinterpreted or misapplied, it is worthy of our consideration. When the Master made a little child the object of a wonderful lesson, it was not what the child said that enlightened the disciples, but rather what the child was,—what he reflected of Truth and Love,—and this was clearly the lesson intended,—the lesson for us to-day. The beauty of childhood is something before which we may well stand in awe, ere the shadows of false material sense fall upon it, and shut out, for a time at least, that which makes it so fair. The purity, the simple trust, the giving of love without a sense of barter,—these might well lead the poet to say,—

> Mighty Prophet! Seer blest!
> On whom those truths do rest
> Which we are toiling all our lives to find;
> . . . Thou little child, yet glorious in the might
> Of heaven-born freedom on thy being's height.

Thus do we find the child Samuel in the Temple, alert to the call of Truth, when his nation was fast losing the right idea of divine service,—a call which it seemed none other was ready to hear. So also we find the child Jesus in the Temple, where he delighted to be, and where his questions and answers surprised all who heard him, and of whom it was said that he was "in favor with God and man." How applicable here are Jesus' own words, "Whosoever shall not receive the kingdom of God as a little child, shall in no wise enter therein."

Perhaps the most important lesson for older people, is to be found in the solemn warning of the Master, "But whoso shall offend [ensnare, or cause to stumble—*Greek*] one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck and that he were drowned in the depths of the sea." Surely no Christian Scientist would ever knowingly cause "one of these little ones" to stumble or fall, and there is the greater need that we guard against such error in view of the fact that legal attempts are being made to keep from the children the benefit of the Christ healing which was demonstrated for all time when Jairus' daughter was awakened from the dream of death by the world's great Physician.

Our Leader says that the children "are the bulwarks of freedom, the cement of society, the hope of our race" (Pulpit and Press, p. 14), and in our text-book are many statements relating to the welfare and the training of children, a few of which may here be quoted. "The offspring of heavenly-minded parents inherit more intellect, better balanced minds, and sounder constitutions. . . . The entire education of children should be such as will form habits of obedience to moral and spiritual law. . . . The divine Mind, which forms the bud and blossom, will care for the human body, even as it clothes the lily. . . . Children should be allowed to remain children in knowledge; and should become men and women only through growth in the understanding of man's higher nature" (Science and Health, pp. 61, 62).

If our aim is to be great in the kingdom of heaven, we have the assurance that we must become as little children. The Christ-truth will show us the way. When "a master of Israel" sought counsel of one whom he recognized as "a Teacher sent from God," he was told that he "must be born again." To human sense this was impossible, but Nicodemus learned what we have all been taught in Christian Science, that in order to enter the kingdom of God we must be born of Spirit. Then shall we be prepared to fulfil the ministry of childhood, and young and old alike will know how "Blessed are the pure in heart." They shall see good, always and everywhere, and only good.

K.

The Opened Book.

In commenting upon the effort of an educational center to awaken interest in a course of Bible reading, a leading daily paper has recently said that "if the universities can revive the study of the Bible, they will establish a new claim to our respect." This intimation by a great commercial journal of the significance of the Bible, and of the lamentable disuse into which it has fallen, is especially marked, when we remember the amount of attention the subject has received during the last quarter of a century, and the number and value of the aids which have been supplied in furtherance of this interest. The wonderful achievements of exploration in Bible lands, the preparation of the revised text, the issue of many helpful translations into the modern idiom, the development of the International Sunday School Lesson system, the organization of the Chautauqua study courses, and the publication of innumerable expository works, and teachers' and students' "helps,"—all these surely constitute the phenomena of an era of remarkable interest and activity upon the part of religious leaders who, through such varied means, have sought to stimulate Christian thought; nevertheless, the general unfamiliarity with the Bible, and the indifference of the great body of the people to its study, is constantly being referred to by Christian workers and is fairly indicated, perhaps, by the editorial comment which we have quoted.

These facts ought to enable thoughtful people to see that knowledge about the Bible does not and cannot awaken a permanent and impelling interest in the Bible, or lead to its sympathetic and habitual study. Let men be convinced, however, that Scripture truth has a vital and corrective relation to the disease and disharmony of human life, or in other words, that it is practically demonstrable, and that moment they begin to be attracted to it.

It is here that the explanation of the devotion of Christian Scientists to the book may be found. The many human aids to which we have referred are not to be undervalued, but the demonstration of the present healing power of the word of God, through Christian Science is doing far more than all else to turn men again to the sacred page, and beget a lasting enthusiasm in its study.

When suffering men and women are assured by the experience of others or by personal demonstration that the spiritual apprehension of Jesus' words does bring freedom from fear and pain and heartache, then it is easy to explain the fact that after carefully studying a Scripture lesson every day of the week, they can listen to its reading on Sunday with the greatest interest, and feel at its close that they are then only ready to begin its consideration.

Truth never grows old, never becomes insipid or tiresome. Its vitality and freshness are perennial, and the moment we begin to understand and practically apply it, as did the Master and his disciples, that moment it becomes for us a well-spring of water and we need no urging to go to it daily for refreshment and healing.

The extent and beneficence of our Leader's ministry to the world is the more clearly seen when we realize that through her demonstration of the practical healing significance of its teaching, the Bible is becoming man's inspired and inspiring companion.

Selected Articles.

The Attitude of Christian Scientists toward Physicians.

A great multitude of earnest and intelligent people here and abroad already know that Christian Science has meant "life and health" to them in times of crisis when other means have failed. Christian Scientists respect the altruistic motives of the medical fraternity, and wish well to all those engaged in every effort to cope with pain, disease, and sorrow. They do not force or obtrude their services upon those who desire medical attendance. This striving on the part of Christian Scientists to maintain a kindly and correct attitude should not fail of recognition.

The assumption underlying the various futile attempts made in the past to regulate or prohibit the practice of Christian Science by legal enactment, is that a knowledge of material medicine is essential to heal the sick. It follows very properly from this assumption that all who attempt to heal the sick should be able to pass an examination in the use of material means. But Christian Scientists, following the teachings of the founder of Christianity, have proved that the assumption in question is false, and that a knowledge of material medicine is not necessary to heal the sick. Hence they justly claim that an education in the use of material means is superfluous for any one who chooses to learn how to heal spiritually. They concede that an examination in the science of material medicine may justly be required of those who wish to practise materially, and that this examination should act in such a way as to protect the public against persons pretending to practise material medicine without a knowledge of that science.

Christian Scientists make no claim to practising material medicine. They state frankly that they have not studied it, and are not qualified to administer it. Hence they refer all those who may desire medical practice to physicians, who have spent years in the acquisition of the necessary knowledge.

Christian Science is not merely "a theological doctrine." As defined by Mrs. Eddy, it is "the law of God, the law of Good, interpreting and demonstrating the Principle and rule of universal harmony" (Rudimental Divine Science, p. 7). On page 9 of the same work she states:—

"Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin; and this task is a million times harder than the cure of disease; because, while mortals love to sin, they do not love to be sick." The object of medical practice is to heal the sick, and if there is a better way of doing this than by medication and manipulation, the physicians should be the first to learn this way. Christian Scientists, with best wishes for all in their hearts, are content to wait until the spiritual healing taught and practised by Jesus, his disciples and apostles, and by the early Christians, shall once more commend itself to all Christians as the best, the safest, and the only enduring method.

W. D. McCRACKAN.

In *American Life and Health.*

Mrs. Eddy and all her followers must enjoy their religious liberty and be permitted to live, practise, and teach the truth as taught and demonstrated by Jesus Christ. If any system of healing is not of truth, and hence not carried on according to the Principle of all science, God, no one ought to find fault if the healing of Truth and Love supersedes it and draws men into it. No one ought to be more ready to concede this point than a minister of Jesus Christ.

REV. S. F. SIMONSEN.

In *New Haven* (Ct.) *Courier.*

Testimonies of Healing.

In grateful acknowledgment to God, who was my physician and helper, I desire to testify to "what great things the Lord hath done for me."

Years ago, I had a severe attack of scarlet fever, which was followed by the worst results of this malignant disease, so that I remained an invalid for years.

I suffered unspeakably, not only physically, but mentally, for I was confronted by the necessity of giving up my profession, which had become very dear to me. It was very hard for me to perform my duties. About a year ago, disease gained control of my entire system, and I broke down, becoming so melancholy that I turned from every one and everything, because I considered myself no longer of any use in the world. Just then, dear friends gave me some Christian Science literature to read and thus brought a ray of light to my consciousness, and I looked for refuge in this truth. How I reached the Scientist that day, is still a wonder to me, yet hope rose immediately as I recognized in one of the practitioners a dear old friend of mine, who undertook my case.

From that very hour I awoke to the new life, and never did my practitioner tire of comforting me and giving me the hope of regaining my health. Patiently and lovingly she bore all my shortcomings. I gained strength, and the disease was overcome. I owe my health to Christian Science.

Perhaps the greatest good that came to me with my physical healing was faith,—faith in the power of prayer, faith in immortality, faith in the one Mind, God, faith in the all-power of divine Love. When I now go to the bedside of patients and the outlook seems dark and doubtful, I know that with God all things are possible.

I thank God, who has so wisely led me into the right path which I have looked and longed for so many years. I now go my way joyfully with confidence, and all my thoughts and actions are controlled by Him in whom is my safety.—M. Z., Berlin, Germany.

I feel I must express my gratitude for all the good that has come to me in every direction through Christian Science, and first, for my physical healing. From childhood I suffered from nervous diseases, which attacked me at different intervals, and some years ago they had gained such control over me that I felt discouraged and despondent, and was often tired of life.

I then heard of Christian Science and determined to try it, since no other means could relieve my suffering. I took treatments, although I had at first but very little hope, because my trouble did not get better but seemed to grow rather worse. The error had gained such control over me that it rebelled with all its might against the truth that would expel it. If my practitioner had not expressed so much patience and love, I should have turned back to the physician, but I began to read the book Science and Health by Mrs. Eddy, and gradually the joyful assurance came that the teachings of this book must be true, and with this recognition I began to hope that I also might find help in this way.

As the first signs of improvement were manifested, I could not possibly let go of Christian Science, the understanding of which destroyed one error after another. With deep gratitude I noticed that my old faults and sins gradually lost their reality in my consciousness, and hence their power over me was gone. Formerly I had been a plague to all about me on account of my irritability, impatience, unfriendliness, and pessimistic conception of life. Now I see in the light of Truth that only love, harmony, and perfection should be expressed in my life, and that I therefore have every reason to be a happy child of my

Digitized by Google

heavenly Father, who gives me all good, far more than I can appropriate, and that all fear, sorrow, and discord disappear in nothingness before the all-power of Love.

Our revered Leader, Mrs. Eddy, has, through her untiring and faithful endeavor, shown us the true source of salvation, and we can express our gratitude no better than by working and praying daily that we may imbibe more of the spirit and understanding of Christian Science, and thereby become lights in the world, helping to dispel the darkness of error.—B. S., Dresden, Germany.

For the last four years I have received help from Christian Science, for which words cannot express my gratitude. It has been proven to me that its application heals the sick, and its perfect rule, when understood, rules out all the difficulties that the belief in evil can bring to humanity. It has led me safely through the experiences of fire and fever, and always with a lesson learned and the added assurance that God is All, and there is none beside Him."

HELEN O. ROESING, Evanston, Ill.

Gratitude impels me to write this testimony of healing through Christian Science.

Five years ago I was healed of rheumatism in one week by a Christian Science practitioner. By studying Science and Health I found that I could demonstrate over all kinds of error for myself. Several years ago I was instantly healed of the grip, when I was not able to sit up. The change from intense suffering to perfect health was instantaneous. Divine Love did the work.

I am quite sure that I owe my life to Christian Science, and that I am now living on God's time.

MARTIN R. MAGNUSON, North Platte, Neb.

I feel that I would like to add to that of others my testimony of the great power of healing through Christian Science. I have received very many blessings and will speak of two or three of them.

Last winter I was afflicted with cancerous growths. One was removed after weeks of material treatment but soon reappeared. Then I saw how uncertain material remedies were, and I tried Christian Science treatment. The treatment was given at eight o'clock in the evening and the following morning the manifestation had all disappeared as though it had never been there, and I have never felt anything of it since. It is now August, and I have not had any symptoms of it. I feel most surely that God can do great and wonderful things for His children that trust in His word.

On another occasion I had been prostrated for a long time, doctors did me no good and I was growing weaker when my husband read to me an account of the healing of a dear friend who had been an invalid for twenty years. Having been aware of her illness I thought that I also should trust in God who had promised to heal all our diseases. God did heal me. I was conscious when the work was done, and the next morning I got up and ate breakfast with the family. I had not even been able to raise my head for many months before this time.

I knew it was a wonderful demonstration of the power of God, for doctors had failed to help me. I have great reason to love and praise His great and holy name, for His mercies shown to me.

MRS. C. A. CORTHELL, Ischua, N. Y.

I wish to return thanks for the great blessing which we have experienced in our family through Christian Science. Seven years ago last April I was healed of many ailments, and the rest of the family have also been helped. Two children were born in this thought, and are very healthy. The two oldest were very delicate children, but they have grown strong and have never used a drop of medicine since we got Science and Health. It has surely done for us all that it claims. Our oldest daughter was a very sickly child, but she has grown strong and works every day, has a position in a large dry goods house. The two oldest children are members of First Church in Kansas City, and my husband and I are members of the same church. The two little ones also love Christian Science. It was from a near neighbor that I received the blessed book Science and Health.

I am glad to acknowledge the help we have had, with many thanks to the dear Leader of this great and good work.—MRS. EMMA P. LIGHTNER, Argentine, Kan.

Desiring to give all the glory to God, who is Love, I would like to relate the benefits which I have received through Christian Science.

Five years ago I had rheumatism in my hip, which at times pained me very much. From this I suffered for five months, when my trouble increased, and I had a carbuncle on my neck, which was so painful that I could not sleep.

I then sent for a Christian Scientist, and asked her if she could relieve my suffering, for I knew very little about Science. She said that she of herself could do nothing, but that she had no doubt that I would be healed. God had created man in His image and likeness, and that the real man could therefore not be afflicted with rheumatism or any other disease, for man is spiritual and Spirit is not sick, it is but the carnal or fleshly mind that suffers.

This conversation took place about nine o'clock in the evening, and an hour later all pain had left me. I slept all night and when I awoke in the morning, there was no rheumatism or any other ailment. This was five years ago, the trouble has never returned, nor have I any fear that it can.

I began to study Science and Health in connection with the Bible, and to my surprise I found that there was much in the Bible which I had entirely misunderstood. Jesus himself spoke and taught by parables. He healed all forms of disease and said, "He that believeth on me, the works that I do shall he do also," and "The words that I speak unto you, they are spirit, and they are life."

Paul says, "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

Christian Science elucidates the Scriptures, it gives us a better understanding of God, it brings us into oneness with Him, into spiritual life. It teaches love for God and all mankind.

Through this interpretation of the spiritual sense of the Word of God, the Bible has become a new book to me. It teaches me to understand what we formerly called miracles; it teaches me to lead a truly Christian life, to obey the Commandments, and to reap the benefit of this obedience. This life knows no hatred, no malice, but expresses truth and love.—J. S. SHANTZ, Berlin, Ont.

With deep gratitude to our Leader, who has given us the key to the Scriptures in our text-book, Science and Health, I want to send my testimony to the *Sentinel*, hoping it may help some one.

When in 1899 I first heard of Christian Science, I was a member of an orthodox church, but not satisfied with my religion, for I did not know or understand my Bible, my prayers were never answered, and God seemed afar off.

At that time I had been wearing glasses for five years, but was soon able to put them away, being healed of this

Digitized by Google

ill while being treated for something else, and to-day my sight is perfect.

I was healed in three treatments of a severe case of diphtheria, and have not been troubled with my throat since, which is a great demonstration to me, as I had always had a weak throat and was constantly having material treatment for it. Many other ailments, such as nervous headaches that I had suffered with for years, have also been overcome.

The healing as taught in Christian Science is truly beautiful and words cannot express my gratitude for all the help I have received. The Bible, which was read heretofore only from a sense of duty, is now, with our text-book, Science and Health, my daily companion, and I can say that it is to me the book of books.

My prayer is that I may be able to let my light so shine, that others may see the truth expressed by me and want it for themselves, that I may be ever faithful to the promise which I with other Christian Scientists have made, "to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure" (Science and Health, p. 497).

C. MAE DOOLEY, Philadelphia, Pa.

I want to give my testimony, and tell what Christian Science has done for me, how I was healed of heart trouble more than two years ago, after the doctor had given me up. We then sent for a practitioner who came at once; she was a stranger to me, but spoke such kind words of the healing power of God, that I responded at once and never had another attack of the trouble. The Bible and Science and Health are my constant companions. I feel very grateful to God, and to our Leader, Mrs. Eddy, for what Christian Science has done for me, and my prayer is for more light, more understanding of the truth that makes us free.—E. V. EATON, Denver, Col.

I feel very grateful for the many blessings which have come to me through my desire to know all possible regarding this great truth.

It seems strange, but true, that if we are only willing to investigate the merits of Christian Science, it will certainly appeal to our reason; and after we have succeeded in getting our own personality out of the way, we wonder why we have been so blind before. The only requisites are willingness, receptivity, and a desire to know the truth.

I deserve no credit for coming into some understanding of Christian Science. It required constant work and effort on the part of others to induce me to be willing; but after they had made the demonstration, the truth appealed to my reason, and the logic became so clear that it left no doubt in my mind of the absolute accuracy of this divine Principle.

We are only in the kindergarten of this Science, but the Principle is perfect. To argue, debate, and differ in opinion because every experience is not seemingly crowned with success, does not promote the good of any cause. The system is of Truth, and as we advance in understanding, as in working mathematical problems carefully, we shall obtain perfect results. I realize that mere words signify nothing unless supported by works. The works of Christian Science are revolutionizing the thought of this world, and we shall soon realize the fitness of an expression used by a prominent Scientist, who said that a man could hardly be considered well educated to-day, who still believes in matter, any more than the people who believe that the earth is flat and that the sun revolves around it.

Christian Scientists are trying to make life better, and working with patience, they know it will ultimately come to pass that the truth regarding matter will be universally recognized. When the world realizes that Christian Science admits of no beliefs but relies upon understanding, then will it be more readily understood how these good results are obtained.

If we have found something tangible to cling to that gives us better health and better morals, eliminates the fear of death, and makes us strive for the good and true, can any wonder that we are grateful; or wonder that we are solicitous for the welfare and happiness of our friends?

HOWARD C. OGDEN, Chicago, Ill.

For eight years I had worn glasses for farsightedness, and two years ago I took them off. I was then receiving treatments in Christian Science for other troubles, and I complained to my practitioner, telling her that I suffered from pain in my eyes. I thought that my glasses no longer fitted me, and that I must try to get others. I understood but very little about Christian Science, and yet I did know that it was not necessary to wear glasses, and that it is error to believe that sight must be clouded as we grow older, for this would be incompatible with the goodness of God.

My practitioner advised me to lay my glasses aside. This at first seemed almost impossible, for I could not read a line nor do any fancy work without them, but gradually I grew better, and now I can read in the evening, do all kinds of fancy work, and never even think of glasses.

Sometimes a sense of pain tries to assert itself, but I know that if I remain faithful it must disappear, and God will enable me to know the truth which sets free.

FRAU M. VON BERINGE, Plauen bei Dresden, Germany.

Through mental over-exertion in my profession and excessive use of cold baths, I became subject to a nervous disease. This was in the autumn of 1902, and all work soon became a burden to me, and insomnia and a feeling of anxiety had gained control over me to such an extent that I believed I would soon have to die.

My work, which had formerly been a source of joy to me, I could only perform with the greatest exertion. I had suffered for years from congestion and indigestion, and my condition was such that I did not know where to look for help. I went to a sanitarium but could not sleep, and noticed but very little improvement.

I then thought of a cousin who is a Christian Scientist and spoke to her. She had been afflicted with a similar ailment, and Christian Science had healed her. She took my case gladly and kindly, and I soon began to improve. I could sleep, my thoughts became clearer, the indigestion seemed to leave me, and to-day I am well and happy. I love to work, and I find great pleasure in working, and I enjoy everything.

For all this I thank God and Christian Science. I gladly testify, for I have regained my perfect health.

A. T., Gablonz a.N., Germany.

As young Christian Scientists we are apt to be impatient to see the result of our work in truth, and perhaps we become discouraged because the demonstration, for lack of understanding, is not quickly made.

During my first eighteen months in Christian Science I was in such a condition, when a circumstance occurred which helped me considerably. I had been trying to treat an ailment with but little apparent success, and one morning while struggling with it, I began to be faint. At this extremity error clamored for supremacy, but I realized that God is ever conscious, that I, as His image, could not lose my consciousness, and though mortal mind should do its worst, I was safe in His keeping. I came round at once, the error began to disappear from that moment, and by midday, was almost gone.

This lesson I learned, and it has helped me many times

Digitized by Google

since, that if we trust God unto the end when we see no way, He then opens up to us the path through the sea, for we are walking by faith.

From that time I began to stand firmer in Truth; that Truth, revealed through our text-book, Science and Health, has been my preserver in all such slippery paths, and has helped me over the quicksands of doubt and uncertainty.

R. G., London, Eng.

I gratefully acknowledge all that Christian Science has done for me. Being sickly from a child I did not know what it was to have good health until I came into the glorious light of the Science. I am perfectly well now.

I have recently had class instruction and it has made the way very much clearer for me. I wish all might take up the study of this Science and find "how great a God is our God for it not only helps us physically, but morally and spiritually as well.—LAURA L. MILLSPAUGH, Gunnison, Col.

About one year ago, through Christian Science, a friend of mine was completely cured of a complication of mental and physical ailments. Being interested in his case, and the benefits experienced by other acquaintances, I concluded to investigate and inform myself, as I do not wish to remain ignorant of the modern ideas, which are generally discussed.

I have been studying "Science and Health with Key to the Scriptures," and recently I enjoyed a very interesting lecture given upon the subject.

I am convinced that the benefits arising from Christian Science result from an understanding of the truths taught by Christ Jesus and practised by the patient and believer. The Christian Science religion is a religion of understanding and deeds, rather than a religion of beliefs and creeds. A simple faith, without the understanding which gives encouragement and strength, cannot accomplish the good which is daily demonstrated by the tens of thousands of Christian Scientists.—R. E. LIDGERWOOD, Chicago, Ill.

Several years ago my attention was called to Science and Health. At first I was not especially interested, and being a member of an orthodox church I opposed it somewhat, fearing it would lead me into something wrong. The next summer, while attending the Chautauqua Assembly in New York, I heard a lecture on Christian Science, and afterwards a parlor talk. I was led to take treatment for weak eyes, and after a few treatments I bought a copy of Science and Health, and by reading the book I gradually received benefit.

I had been a member of an orthodox church from the time I was sixteen, but as the years went by and I began to think for myself, some things I had been taught did not seem consistent with the idea of a loving God, and the belief in a personal devil was always repugnant to me. These things made me feel that there was something lacking, and I longed for a more spiritual religion. As I became familiar with the teachings of Science and Health and had the benefit of class teaching, I found that which satisfied. The more I learned of Christian Science the more I realized that it presented the true plan of salvation, made the Bible plain, and reconciled what had been seeming contradictions. In many ways it brought to me a higher idea of God and man, rebuked error, and showed me how to work out my own salvation, teaching me how God works with us, so that Christian Science became to me a practical Christianity.

For all this I am very grateful and wish to express my heartfelt thanks for our periodicals, which are lights in my pathway, but most of all I am truly grateful for the pure, unselfish life of our beloved Leader. The great love which she has for all mankind is a constant rebuke to all selfishness, and my constant prayer is for more love in my own life.—MRS. E. E. E., Washington, Ia.

WHEN I took up the study of Christian Science nearly three years ago, I was suffering from lung trouble of eight years' standing. I had tried many remedies, but all had failed to give permanent relief.

A Scientist in our town loaned my sister some *Sentinels* and *Journals* which was the first we had ever heard of Christian Science. I immediately declared that it was only a fraud, and told my sister that I would have to see a proof of healing before I could believe in it, but I could not wait, for I thought that if there really was any good in it, I wanted it.

One evening after I came home from work, having considerable pain, I took up Science and Health, which had also been loaned us, and began to read what seeemd like Greek to me, but after reading half an hour all pain ceased and I was entirely free.

I laid the book aside and thought no more about it until the next day when my suffering returned. I then took up the book again, and after reading a short time I was relieved from all suffering. Then I realized that it was the truth contained in this most wonderful book that was making me free, and with the help of a practitioner the trouble was entirely overcome in a short time, for which I am truly grateful. I am, however, more grateful that this blessed truth is helping me to overcome hatred, envy, jealousy, malice, and revenge, and is enabling me to love my neighbor as myself. I realize that this truth is worth striving for; it certainly is the pearl of great price.

W. S. M., Portsmouth, O.

For many years I had been a great sufferer from dyspepsia, liver trouble, and all the ills that go with those diseases. One physician after another had been tried, but no treatment seemed to help me.

I had always read my Bible and attended church, and I was told that I ought to love God, although it was His will that we suffer, and that it was right to employ a physician. I never could see why, if sickness was sent by God for our good, we should dare to send for man to undo what He had done.

I was a student of the Bible, but did not understand its teachings. In the year 1887, I first heard of Christian Science, and after reading Science and Health for a week I was entirely healed without a treatment. I took class instruction and began the practice of Christian Science soon after. I have had many cases of instantaneous healing, and know that nearly every disease known to *materia medica* has been healed through Christian Science. In Science and Health, p. 243, Mrs. Eddy says, "Truth, Life, and Love are a law of annihilation to everything unlike themselves, because they declare nothing except God."

I have always found that in every hour of need, Truth has met the demand, and that the spiritual uplifting far excels the physical help.

Words fail to express my gratitude to our Leader, Mrs. Eddy, for this great truth that helps us to understand the works of our Master.—M. W., Cleveland, O.

Could I with ink the ocean fill,
  Were all the world of parchment made,
Were every reed on earth a quill
  And every man a scribe by trade,
To write the love of God alone
  Would drain that ocean dry;
Nor could the scroll contain the whole,
  Though stretched from sky to sky.

Anon.

From our Exchanges.

We gradually come to understand, as life advances, that happiness and misery—all the phases of existence, in fact—are states, conditions, attributes of mind; and from this point of view a "better world" is of less importance. . . . Jesus preached the immediate coming of the kingdom, and it is not surprising that he was misunderstood. The people stood gazing up into heaven for a portent, while the earth lay fallow all about them. It seems bold and rash, perhaps, to declare that, if we live rightly for this world, lead the divine life here, the other, where it lies open to speculation, is of little consequence to us. The religious sphere is present, not absent; here, not there; now, and not in the future.—*The Christian Register.*

Rev. Edwin J. Chaffee says in *The Universalist Leader,* "Religion is, then, spiritual daring to live on and to believe on in the line of the highest revealed to us, and to let this master affection, will, imagination, till it bodies forth to us the things eye hath not yet seen, nor ear heard, neither the mind conceived. Not to be capable, therefore, of making the abiding sense of these highest experiences of the spirit the dominant key-note of at least a part of our lives, and the ground of passionate trust in a transcendent higher yet, means a doom, strong as fate, of absolute exclusion from free and full communion with the loftiest spirituality of the ages."

True religion is not what men think of God and truth, but what God has revealed of Himself to men. The fatal fallacy of the evolutionary theory as applied to the development of the knowledge of God among the Hebrews, is that it ascribes to an earthly origin what, in the nature of things, could have come only from heaven. That there was a gradual unfolding of the truth by successive revelations is apparent to the most casual reader of the Old Testament. But this was not evolution.—*The Examiner.*

What is needed now is not more learning, but more of Christ in the daily lives of those who profess his name. This need is world-wide. A learned Hindu gentleman said in a conversation recently, "Believe me, India doesn't need to be instructed in the philosophy of the Christian religion; what India wants is to see a Christian life." The same is true for every city, village, and township in our land. Will you be one who will let the world see what a real Christian life is?—*Pacific Baptist.*

When the moral and religious elements in man wane, the race perishes. Moral indifference, religious neglect are the only "race suicide" that imperils our people. Moral and religious truths distinctly and dogmatically impressed upon the child are the only means of finally preserving the child, the home, the nation, the race. Find the truth and dogmatize.—*The Universalist Leader.*

Sad will be the day for any man when he becomes absolutely contented with the life he is living, with the thoughts he is thinking, and the deeds that he is doing; when there is not forever beating at the doors of his soul some great desire to do something larger which he knows that he was meant and made to do because he is a child of God.—*The Standard.*

Rev. F. C. Southworth says in *The Christian Register,* "Religion has come to be recognized not primarily as a phenomenon to be explained or even as an end to be attained, but as a power which men may use."

The *Japan Mail* reports that the intellectual life of Japan is growing more and more intense and the growth is slowly killing the old superstitions and their attendant train of prejudices.

"What helped you over the great obstacles of life?" was asked a successful man. "The other obstacles," he replied.—*The Christian Life.*

The Universalist Leader says, "Statistics show that more money is spent in the United States for chewing gum than for missions."

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1,00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.30 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.20. Single copies, 20 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Avenue, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

ANNIE M. KNOTT, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

President Roosevelt has issued a proclamation calling the Fifty-Eighth Congress in extraordinary session, November 9, at noon. The proclamation states that the purpose of the session is to consider the commercial convention between the United States and Cuba, which requires the approval of Congress. It seems reasonably certain now that the Senate, at least, will have the Isthmian Canal question brought directly to its attention by Senator Morgan of Alabama who will endeavor to show that the Panama route now is beyond consideration, and will urge that it is the duty of the President, under the Spooner law, to construct the canal immediately by the Nicaraguan route.

Colombia has sent to the United States a special bearer of dispatches, Senor Arbiniegas, containing some minor instructions to Dr. Tomas Herran, the Colombian minister, concerning the Panama Canal. He is reported to be on his way to Europe to complete arrangements with interested Europeans for furnishing money to finish the canal. These reports, however, are thought to be intended to influence the action of the United States, and are not to be taken seriously.

If rumors are true there is likelihood of another attempt next year by an Englishman to win the America Cup. The new aspirant is said to be Mr. John Lever, a wealthy manufacturer of Birkenhead, England. It is said he wished to offer a challenge this year but deferred in favor of Sir Thomas Lipton. The Royal Clyde Yacht Club is mentioned as the club through which the challenge will come.

In the first trial of persons indicted in connection with the postal service frauds, the jury disagreed. This is the case in which the head of a turf investment company testified that he had paid $4,500 to buy a favorable decision as to his use of the mails. The trial took place in Cincinnati. It was considered one of the weakest cases.

The Navy Department will ask for an appropriation of $106,000,000 from the next Congress. One million three hundred and sixty-six thousand dollars is asked for ammunition alone for target practice. The Interior Department asks for $156,000,000.

It is said to be the intention of President Roosevelt to issue a statement concerning the investigation into the postal frauds, and that he will declare that a congressional investigation is unnecessary.

The Interior Department is investigating alleged fraudulent purchases of forest lands in some of the Pacific coast States.

Foreign.

The scheme of the Powers for the amelioration of affairs in Macedonia has been submitted to the Porte. It proposes the control of and surveillance over all branches of the administration of the disturbed provinces by Austria and Russia for a period of two years. The proposals include the appointment of one Austrian and one Russian assessor, to be attached to the staff of Hilmi Pacha, the inspector-general, with a corps of assistants, secretaries, and interpreters, whose duties will be to exercise control over all the acts of the provincial authorities. A European general in the Turkish service is to be appointed to command the gendarmerie, and he will be assisted by Russian and Austrian officers acquainted with the languages of the country, and, if necessary, by Austrian and Russian non-commissioned officers.

A further important proposal provides for the establishment of communal autonomy and the rectification of the present communal boundaries.

Other points of the scheme deal with the relief of refugees, the rebuilding of villages, schools, and churches, the disbandment of the irregular troops, and the prohibition of the employment of Bashi-Bazouks. The Austrian and Russian ambassadors demand the adoption of the plan with the least possible delay.

Diplomatic relations between Spain and Venezuela are reported temporarily broken, owing to the interference of President Castro with the work of the Commissioners adjudicating the Mexican claims against Venezuela. The Spanish minister was acting in the capacity of umpire, and claims to have been insulted.

It is also reported that President Castro is not abiding by the agreement to set aside thirty per cent of the customs dues of Puerto Cabello and La Guayra each month for the payment of the claims of the Powers, and that the work of all the commissioners adjudicating claims is being made as difficult as possible.

The mixed commission which is hearing the Spanish claims against Venezuela has closed its session. Of the total amount of claims presented before the commission $394,964 were awarded, $205,385 were withdrawn, and $31,004 were refused. Considering that the Spanish population of Venezuela numbers forty thousand persons, the total of claims presented to this commission is considered to have been small.

Through the influence of Wu Ting Fang, former Chinese minister to the United States and now a member of the newly organized Chinese Board of Commerce, the throne has directed that greater consideration be given to the merchants, who have always been considered as belonging to the lower classes.

Japanese and Russian officials deprecate the alarmist reports sent out concerning the trouble in Manchuria, and claim that every effort is being made to secure a peaceful settlement and avoid giving any provocation for war.

The appointment is announced of Sir Henry Mortimer Durand, the British ambassador at Madrid, as British ambassador to the United States to succeed the late Sir Michael Herbert.

Industrial and Commercial.

More than 50,000,000 pounds of India rubber, valued at more than $30,000,000, was imported into the United States last year. In 1890 the quantity was only 33,000,000 pounds, in 1880 16,000,000, in 1870 9,000,000, and in 1862 only 2,125,561 pounds. Over $100,000,000 worth of manufactures from India rubber are now turned out from the factories of the country every year, and about half of this total is in the form of boots and shoes. Figures just compiled by the Department of Commerce and Labor, through its bureau of statistics, show that during the past few years the importations of crude rubber have ranged from 50,000,000 to 55,000,000 pounds; of gutta-joolatong from 5,000,000 to 15,000,000 pounds, and of "old and scrap rubber, fit only for remanufacture," from 10,000,000 to 20,000,000 pounds per annum, and of gutta-percha 500,000.

A very large proportion of the India rubber imported into the United States is produced in Brazil. Over one-half of the total is imported direct from Brazil. Recent reports received by the Division of Consular Reports of the Bureau of Statistics show that experiments in the East Indies have shown the entire practicability of producing the best Para rubber in territory immediately adjacent to the Philippines from trees transplanted from South America, and suggesting the possibility that the Philippine Islands may in time supply at least a part of the growing rubber consumption of this country.

The Hawaiian sugar crop for the year is approximately four hundred and twenty thousand tons, the largest in the history of the islands, although the profit is said to be smaller than in 1901. The average price has been seventy-five dollars a ton and the planters have received about thirty million dollars. The output this year is double that produced in 1900. The crop is brought to United States markets by freight steamers and sailing vessels. Next year's crop is expected to be carried around the Horn by sailing vessels only, as it is claimed that the uncertainty of the date of arrival of sailing vessels, as well as their smaller cargoes, will prevent the manipulation of the market price. The approximate date of arrival of freighters being known, advantage is said to be taken of it to force down the price and so the planters net a less profit.

The *Scientific American* says the Allan Steamship Company have decided to build a ship equipped with the turbine for traffic between the Clyde and Canada. This liner when completed will be the largest and heaviest, as well as the fastest vessel in the Allan fleet. The vessel will be 500 feet in length over all, with a gross tonnage of 12,000 tons; a horse-power of 10,000 indicated, and a contract speed of 17 knots.

An electric car, in the high speed experiments, on the Marienfelde-Zossen line, attained the speed of 130.4 miles per hour on October 23.

General.

The half-million acres cultivated in tea in India produce one hundred and ninety million pounds, the investment being about one hundred dollars an acre. The labor required is thirteen persons to the acre. One pound of India tea will produce seven and a half gallons of tea of a given strength, while the tea of China will produce but five gallons.

But 8.3 per cent of the 1,330,697 German-born males in the United States have failed to become naturalized, while thirteen per cent of the English, thirty-five per cent of the Russians, fifty-three per cent of the Italians, and eighty per cent of the Japanese are still aliens.

For the first time in the history of Columbia University a woman has been directly appointed to a professorship by the board of trustees. She is Miss Margaret E. Maltby, Ph.D. She will be installed as adjunct professor of physics.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Ideal Teacher.

FANNIE BALL PERRIN.

For nineteen hundred years the world has known of a plan for the uplifting of mankind so comprehensive, and yet so profoundly simple, that it has literally stood like a rock amidst the seething maelstrom of mortal opinions. But until the advent of Christian Science the world, in large part, has been endeavoring to use every other plan under the sun except this one,—the one set forth by Jesus.

We have called ourselves Christians, and have admitted that Jesus was the Great Physician. Yet, when we desired to alleviate pain and suffering, we have ignored his spiritual method of healing and turned to the material.

If we consider the plans for the government and operation of all these undertakings for the betterment of man,—for that is their avowed purpose, and many a noble life is offered on its altar,—in how many do we find, as a basis for work, the thought and method of the Great Physician, the Great Lawgiver, the Great Teacher?

Examining the list of the authorities of the medical schools we find the names of Hahnemann, Mackenzie, Agnew, Pasteur, and a host of others, but not the name of him who taught, "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on." Where is the surgeon who touched the ear of the high priest's servant and healed him? Where is the consulting physician who said, "This kind [of mania] goeth not out but by prayer and fasting"?

So in the catalogues of the great law schools. We note the names of Blackstone, Coke, Cooley, Kent, etc., but we fail to find the name of him who handed down that greatest of decisions, "Render therefore unto Cæsar the things which are Cæsar's; and unto God the things that are God's;" and who said, "Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled."

So also our halls of learning bear the names of many a noted educator, but seldom that of him who said, "Suffer the little children to come unto me."

What could be a more striking comment than to picture the amazement which would be evoked by the announcement that one of these ins itutions had included in its curriculum the teachings of him whom we have always called the greatest the world has ever known.

As Christian Scientists we are taught to make his plan our plan in every particular. No one would attempt to say that no truth has ever been uttered or sought for, except through Christian Science. History, literature, religion, all present some truth. Fervent prayers and honest hearts the world has even known; nevertheless, many of those who have preached that God is Love have participated in struggles which have bathed the land in the blood of their brothers. They who have taught that God is Life, and that "in Him we live, and move, and have our being," have spent their days in preparing to die. Now through Christian Science has come the call to present the indivisible garment,—the wholeness of Truth.

Why was Jesus the Great Teacher? What was the secret of his success? What was his method? It is a most interesting thing to study the New Testament for the answers to these questions.

In the first place, we discover that he was sure of his mission. He did not adopt it as a profession, nor go into it as a business enterprise. There was a message he had to bring. "The word which ye hear is not mine, but the Father's which sent me." "For all things that I have heard of my Father I have made known unto you." "Now they have known that all things whatsoever thou hast given me are of thee. For I have given unto them the words which thou gavest me." "For I have not spoken of myself; but the Father which sent me, he gave me a commandment, what I should say, and what I should speak."

Knowing just where his teaching came from, and with what authority it was supported, he was troubled with no doubt, no uncertainty, no question as to what he should do or how he should do it. He knew whom he had believed. "O righteous Father, the world hath not known thee: but I have known thee." "Thy word is Truth." "All things that the Father hath are mine." "My Father is greater than I."

As to his method in teaching: In spite of the greatness of what he had to teach he never once lost sight of the one to be taught. He might have taught the truth he came to teach, and left us only a body of abstractions or a number of historical incidents. But he proved the universality of his teaching and interest, as well as the practicability of the things he taught. He took the world where he found it, and tried to make it better, to save it from itself.

We all remember how after the crucifixion the valiant, the never-to-fail Peter, who had been called from his fishing to be a fisher of men, said to his brother disciples, "I go a fishing," and they answered, "We also go with thee." We remember how they toiled all the night, those old experienced fishermen, and caught nothing; and how, when the morning was come, a voice from the shore called, "Children, have ye any meat?" and to their discouraged answer the speaker said, "Cast the net on the right side of the ship, and ye shall find." We remember what they then caught, and how the Master showed them that there was even a better way yet, for when they reached the shore they found "a fire of coals there, and fish laid thereon." Could any lesson have meant so much to them as did this?

To the lawyer who asked him what he should do to inherit eternal life, he said, "What is written in the law? how readest thou?" and when the lawyer made answer as constrained by his profession to do, Jesus, knowing as he looked at him that he had been a hearer and not a doer of the law, said, "This do, and thou shalt live."

When Nicodemus came to him,—"a ruler of the Jews," who had such a sense of his importance in the community that he chose the night in which to be taught secretly,—he showed him how ill-fitted he was to think so well of himself and of his adequacy for his office. "Art thou a master of Israel, and knowest not these things?"

And to Pilate who hearkened unto the voice of the people, he said, "Sayest thou this thing of thyself, or did

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

others tell it thee of me?" Right at the heart of weakness did he strike, and with unerring aim.

The Sermon on the Mount is the great text-book on method. Every part of it was a home truth to his listening students. Every part contained the broad truth that shall save the world from its sins. Every part performed its twofold mission. If we study it we shall see why Jesus was so great a teacher. We may sometimes lose sight of an important sentence in his teachings. We are so amazed that he should say "and greater works than these shall ye do" that we miss for practice the other part, "the works that I do shall ye do also." If we but studied more his method of doing, we should be more blessed with "signs following."

Then his works—most potent factor in his teaching. He did the things he advised others to do. As our Leader has said, "our Master taught no mere theory, doctrine, or belief. It was the divine Principle of all real being which he taught and practised" (Science and Health, p. 26). He was a living example of the eternal Principle which governed him. He was the ideal teacher because he made it plain that "they shall be all taught of God."

A Traveler's Opportunity.

R. J. MC LAUGHLIN.

As I was returning from the center of the city to-day, my thought drifted to the evidences I saw everywhere of the labor troubles, and it recalled to my mind a conversation I had several weeks ago, while on a return trip from California.

I was sitting in a Pullman car waiting for my berth to be made up, and had encroached somewhat upon the generosity of a fellow-passenger by occupying another's seat, and thereby became a listener to a very interesting conversation between two gentlemen occupying the section upon which I had temporarily intruded. They were speculating as to the best and quickest means of preventing these labor conflicts, and I was the more interested in their views when I learned that they were men of considerable prominence in the government of our country at the present time, and were in a position to give an unbiased opinion from a knowledge of conditions.

They noticed that I was interested in their conversation and invited me to join in the discussion. I told them that I could not enter into the argument, for the reason that I could not accept their premises, and instead of viewing these disturbed conditions as unnatural, I looked upon them as most natural, considered in connection with prevailing beliefs as to the Creator and His creations; that strikes, famines, panics, and other violent disturbances emanated from the same source and were just as natural as sin, disease, and death, and that either the testimony of the physical senses or the existence of an infinitely good God is an illusion. A little explanation of this statement served to make my friends think that I was more rational than they had at first supposed.

I suggested that so long as business is conducted on the theory of the survival of the fittest, on the basis of brute force, and so long as greed and avarice are our motives and the almighty dollar our goal, there is no reason why people should be surprised if the results are discordant, and mankind is led to impute to God the consent to, or the toleration of, all the evils that flesh is heir to; and that we should certainly be presumptuous should we attempt to thwart the wishes and plans of the Creator. We have heard, in explanation of these seeming inconsistencies, that an infinitely good Father ordained all these miseries and sufferings as a test of our fealty, and yet an earthly father who perpetrated such things to test the fidelity of his children, would be honored by none. I said further that the world is full of honest, conscientious people who believe that in their religion they are more nearly following God than are their fellow-men of some other belief, and like them if I had known that Christian Science claimed to be anything more than a healing agency I would not have sought it when I did, but in seeking the physical relief I reached such a realization of its truth, that I could no more turn from it than I could forget and deny the multiplication table.

One of the gentlemen said that, while he did not pretend to know anything about Christian Science, he had a relative who had tried it, and realized no benefit. I replied that he no doubt had relatives who had also failed at times to work out problems in mathematics, but they attributed this to a lack of understanding and not to a fault of mathematics. The suggestion which is brought to us in the Bible story of the sowing of seed on unfruitful soil, is intended to cover these exceptions, and it has been clearly proved that while Christian Scientists are sometimes not able to discern the thought of those not ready for healing, Jesus Christ was always able to do so, hence his admonition, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." This may be interpreted: Until you realize that God is all and that you are of yourself nothing, you cannot enjoy the fruits of Christian Science healing. All men may enjoy the benefits of this truth, but some are more receptive than others in proportion to their earnestness of desire to be led aright, and their humility, and every one will at some time or other, either by suffering or otherwise, reach the point where he is willing to concede egotistical and obstinate opinions.

Having capitulated in a measure, my friends acknowledged that if any one would bring to their notice any other information or knowledge that was productive of one half the benefits that have been realized through Mrs. Eddy's discovery, they would be demented if they did not acknowledge such a person to be not only a wise leader but the object of all the gratitude the beneficiary could muster. I then assured them that if it were possible for them to imbibe a sufficient knowledge of Christian Science and forget all else, they could still find salvation and freedom from the bondage of material slavery, and that the fundamental teaching of Christian Science, as outlined by Mrs. Eddy in her book, Science and Health, meant the elimination of the false sense of personality, and in the measure that we effect this, are we able to demonstrate its truths.

I am happy to say that at the conclusion of our conversation my new friends expressed their satisfaction, and said that the pagan idea of having separate gods, such as a god of love and a god of hate, a god of peace and a god of war, etc., is as consistent as is that which enthrones one God whose nature is self-contradictory.

"Feed my Lambs."

KATE SWOPE.

"JESUS saith unto them, Come and dine. . . . So when they had dined, Jesus saith to Simon Peter, . . . Lovest thou me more than these? He saith unto him, Yea, Lord; thou knowest that I love thee. He saith unto him, Feed my lambs. He saith to him again the second time, Simon, son of Jonas, lovest thou me? He saith unto him, Yea, Lord; thou knowest that I love thee. He saith unto him, Feed my sheep. He saith unto him the third time, Simon, son of Jonas, lovest thou me? . . . And he said unto him, Lord, thou knowest all things; thou knowest that I love thee. Jesus saith unto him, Feed my sheep."

"Feed my lambs." There is such a plaintive strain of patient love and beauty in these words of Jesus. His test of love was its inspirational power to feed. "Lovest thou me more than these?"—lovest thou the giver more

Digitized by Google

than the gift?—this is ever testing us in pleading tones within. With tender minor chords stirring across the heart it is ever calling us to a higher usefulness. We hear its beseeching within, it grieves us even as it did Peter. Eternally the Christ seems to beckon, to plead with a plaintive patience, "Lovest thou me more than these?" Lovest thou the Christ-life? if so, express it, prove it, feed humanity, whether it be with "song, sermon, or Science" (Science and Health, p. 234).

I said, "I will walk in the fields." God said,
"Nay, walk in the town."
I said, "There are no flowers there." He said,
"No flowers, but a crown."

I said, "But the fogs are thick and clouds are veiling the sun."
He answered, "But hearts are sick, and men
In the dark undone."

I said, "I shall miss the light, and friends will miss me they say."
He answered, "Choose ye to-night if I must miss you or they."

Always this choice between the Giver and the gift. "Lovest thou me (Life)?"—"Lovest thou me (Truth)?"—"Lovest thou me (Love)?"—three times this potent touch upon the tender human heartstrings. Three times the rebuke—"prove it"—"feed my lambs." His lambs! Not ours, but his.

Love took up the harp of Life, and smote on all the chords with might;
Smote the chord of Self, that, trembling, passed in music out of sight.

Jesus smote upon the chord of self; he appealed to love, the love for humanity. His test of love was, "feed my lambs,"—love humanity, exhale the perfume of Soul, live and help others to live. "I am come that they might have life, and that they might have it more abundantly."

We sometimes forget that Life alone feeds humanity. All life springs from Life. We have for so long associated preaching with speech, executive ability with deeds, that with difficulty we learn that to be is to give life and to give it abundantly, feeding more than can either speech or action. Be, live, love, and so enrich thy neighbor as thyself. To such as cannot yet accept the bread of life in the spoken Word, to such we can at least offer the wine of inspiration, the love that inspires, that encourages and renews the weary hope and faith.

There are other means than words for feeding. Words, at the best, feed only in so far as they are inspiring, pulsating, warm with life and demonstration. Only Life feeds and sustains. The proof of Life is in its inspirational quality, in its transforming power. Love gives life, and Life inspires love, thereby the lambs are fed. Inspiration interprets truth, "the letter killeth, but the spirit giveth life."

The nature of the mortal self is to absorb others, to think only of being loved. The nature of the true self is to give love, wherein it is found to be "more blessed to give than to receive." Its gain is in giving, in feeding others,—inspiring others; wherein it also is inspired as a reward. The noblest foundation upon which we can build our purpose, endeavor, and result, is on these words: "I am come that they might have life, and that they might have it more abundantly." What a purpose in life is that! What a greeting to a starving world! What a test of love! What a passport to the hearts of men: I come to give life! And what a negative good, what a limp, lifeless offering, without any sustaining inspirational power, is that good which is done in formality, because, forsooth, it is one's duty to do good. What a lifeless gratitude is that which declares itself because it is one's duty to be grateful. What a hollow word is that which ambles aimlessly through vaulted space, because it is one's duty to preach the gospel. "Feed my lambs"—just *feed* them, be a channel for more abundant life. Live, act, speak inspirationally, nothing else inspires others, nothing else gives life, nothing else feeds. How can we inspire others and lift them above themselves, until we are ourselves first lifted up? We cannot lead others unto Truth until self is "passed in music out of sight." Self-less-ness and inspirational life are one. Only the inspired word can rise into the air, freighted with love, life, and truth to feed the hearts of men.

Wherever the Christ-truth is spoken there is life, it is the sustaining word that feeds the lambs. "Come unto me, . . . and I will give you rest,"—come unto the Christ-consciousness, come unto the rest of selflessness, and the spoken word will awaken life and live in the hearts of men, to be expressed in a gratitude which returns full measure, pressed down and running over.

Oh, the vapid, inane, insipidity of the speech, the gratitude expressed merely as duty! Oh, the sustaining, comforting, feeding power of the speech, the gratitude, the deed that is done, through the life-giving Christ-love. "Feed my lambs," and, feeding them, stern duty becomes inspired and inspiring work. No duty is instinct with Truth that does not give life and inspiration. "Feed my lambs," just *feed* them. Feed them with the bread of Truth, the wine of inspiration. "Feed my lambs," his lambs, not ours.

A Timely Lesson.

F. M.

HENRY WARD BEECHER used to give the following incident of how his teacher in mathematics taught him to depend on himself.

All unconscious of the life within, Beecher was a timid fellow at the age of twelve, doubtless the result, in part, of a strict New England training, added to the severity of school discipline, which was then supposed to be a necessity in developing the future man. Some hard problems were required on this occasion, and Henry was sent to the blackboard where, trembling and uncertain, he failed.

"That lesson must be learned," said his teacher quietly, but with great intensity. "I don't want any reason for failure; I simply want the lesson." All excuses and explanations were disallowed.

"I did study it two hours," said the boy.

"You may study it two, or ten hours, just suit yourself; I want the lesson," was the reply. Henry gave himself to the work, and his determined efforts were entirely successful, and he returned to school with a clear sense of intellectual reliance and courage to defend his recitation.

In the midst of a careful demonstration, the cold, calm voice of the teacher said, "No!" Beecher, surprised, went over the entire problem from the beginning, and on reaching the same point, again the stern, "No!" uttered in a tone of conviction, effectually barred his progress, and he sat down, his face flushed with confusion. "The next," said the teacher. The next boy, too, was interrupted by a thundering "No!" but went straight forward and finished the sum, and was rewarded with, "Well done." "Why," faltered Henry, "I worked it just as he did, and you said, 'No.'"

The rebuke was immediate: "Why did not you say *yes*, and stick to it? It is not enough to know your lesson; you should *know* that you know it. You have learned nothing until you are sure of it. If all the world says no, your business is to say *yes*, and prove it."

Mr. Beecher declared that he learned a life-long lesson therefrom, which in after years served him well.

The most difficult problems of life are to be wrought out, not by flourish of trumpets and noise, and a mouth full of argument, but by work accomplished in the realm of silence—in the realm of thought. We are to know the Truth that brings absolute freedom, and *know* that we know it, and if mortal mind whispers its falsities, to hinder our efforts or to defeat and confuse us, if the cry of error is no, we are to say *yes*, and hold to the affirmative with God, in the face of the whole world.

Choosing the Better Part.

B. I. B.

"HERE is my new Science and Health." That is a pleasant greeting from a boy friend, is it not? Several boys have at various times met me with words like these. Perhaps some other boys and girls would like to know one or two instances of how the book was gotten for "my very own."

One boy earned money for a pocket edition by helping the janitor at his school to sweep and dust after school hours. Another boy is "saving up." His work this summer is helping to clean harvesting machines which have been under muddy water. Some of his earnings he uses for clothing, but he is keeping in view the getting of his own book. There is no Science and Health in his home, so he will be glad when he gets one. His parents will also be glad, for they are all grateful for the truth. When telling of his work, this boy was asked how a Christian Scientist should do work. His reply was, "Right, every bit of it. You can't do it any other way. You have to take every bit of the machine to pieces and clean inside and every little place."

There is in this city an organization whose object is to help the town in many ways. One way is to help to beautify it by encouraging and helping schoolchildren to make back yards and vacant lots attractive with flowers. Prizes are given for the best ones. Last year one of the best vacant lots was decided to be one cared for by a little boy Scientist. Six dollars was the prize. What do you suppose he did with it? He bought a five-dollar copy of Science and Health and added the other dollar to the Sunday School Fund for the building of the Mother Church.

Other boys have used candy money, carfare, sold papers, etc.; but, whatever has been the way, the book has been purchased with the boy's own money. Then it is indeed a friend, and is used daily. Many of these boys of whom I tell have also earned Bibles, as has already been stated in the *Sentinel*.

In closing, here is a little thought for all of us: One day these boys were asked: "Is Christian Science something to use in sickness, or what is it?" The answer came promptly: "It is to *live*."

One Reality.

MARIAN W. HERING.

THE lingering belief in two realities, one power called God, and another power called evil, must finally give way to the scientific conviction of the oneness of reality, the oneness of power, as brought to consciousness through the demonstration of Christian Science. We learn by precept upon precept, line upon line, that there is not an evil power to be destroyed, but only a wrong belief in evil power to be corrected by the knowledge that good is all power; that there is not a material universe to be destroyed, but only the belief in materiality to be done away with through knowledge of the spirituality of all things real; not a mortal man who must die in order to become immortal, but only a mortal sense of man to be put off through the revelation of man, the only man, as already spiritual and immortal. Divine Love destroys nothing, because nothing has existence or reality except His own manifestation.

In "Miscellaneous Writings" by our Leader, on page 259, we read, "It is this infinitude and oneness of good that silences the supposition that evil is a claimant or a claim. The consciousness of good has no consciousness or knowledge of evil; and evil is not a quality to be known or eliminated by good." This understanding removes the thought of any necessity for destruction or death, which can have no possible place in the infinite plan of infinite intelligence. Divine Mind has made all and manifests Himself in every idea, and not one must die or be made over in order to be perfect and immortal.

The Lectures.

At West Pullman, Ill.

Mr. Bicknell Young delivered a lecture in West Pullman, Tuesday evening, October 6, in Marquette Hall, under the auspices of the Christian Science Society of West Pullman. A large audience was in attendance, many standing. The lecturer was introduced by Mrs. Carrie L. Martin, a member of the society.—*Correspondence.*

At St. John, N. B.

There were fully six hundred people at the Opera House last evening [September 14] when Hon. William G. Ewing of Chicago delivered a very interesting lecture on Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist, of St. John.

The audience was made up almost entirely of St. John's leading citizens and their ladies; clergymen, priests, and lawyers being prominent.

Hon. C. N. Skinner presided and introduced the speaker of the evening in a few complimentary remarks, giving the learned jurist a cordial welcome to St. John.—*Daily Sun.*

At Hartford, Conn.

Christian Science followers and those who wish to investigate the subject made up a large audience at Parsons' Theatre yesterday afternoon [October 11], when Edward A. Kimball, C.S.D., of Chicago, discoursed in a practical and entertaining manner on Christian Science from a believer's standpoint.

The lecture was under the auspices of First Church of Christ, Scientist, of this city. The entire lower floor, as well as the boxes, were filled with people. The balcony was also well filled. W. D. McCrackan, Publication Committee of the State of New York, introduced the speaker.

Hartford Telegram.

At Cincinnati, O.

An audience that tested the capacity of the Grand Opera House, and which represented the culture and intellect of the Queen City, was on hand yesterday afternoon [October 4] to greet Mr. Carol Norton of New York, member of the Christian Science Board of Lectureship.

Among those who followed the speaker with the greatest interest and attention were many prominent ministers and physicians. After a brief introduction by Colonel James L. Foley, Mr. Norton took up, in simple but forceful eloquence, the exposition of the basic principles of his church. His subject was "Christian Science: the Reign of Righteousness and Health."—*The Commercial Tribune.*

At Buffalo, N. Y.

Rev. William P. McKenzie of Boston, delivered a lecture in the Teck Theatre yesterday afternoon [October 11] on "Christian Science and the Emancipation of Man." The meeting was largely attended. It was in charge of First Church of Christ, Scientist. Mr. McKenzie was introduced by Charles D. Holcombe, who said in part.—

Animated by a mutual longing for the betterment of the world's welfare, uniting in a common desire for a redemptive influence which will vouchsafe to us better health and better men, may we not gladly welcome one who comes bearing a message fraught with the blessed assurance that to-day the realization of health and holiness is a present possibility, and in sweet anticipation assure him of our thoughtful attention and kindliest consideration.

The Buffalo Commercial.

Digitized by Google

At Utica, N. Y.

Two thousand people assembled at the Majestic yesterday afternoon [October 4] to hear the address of Edward A. Kimball, C.S.D., of Chicago, upon the subject, "The Beneficial Results of Christian Science." The audience was one of the largest that ever assembled in the theatre. Not only were all the sittings occupied, but a number of people stood during the lecture, which lasted something over an hour. The lecture was arranged by First Church of Christ, Scientist, of this city. The lecturer was introduced by C. Fred Hackett, First Reader of the Church in this city.

The Utica Observer.

At Chicago, Ill.

Mr. Edward A. Kimball, C.S.D., delivered a lecture on Christian Science before a large and appreciative audience at the Universalist Church, Englewood, Monday evening, September 28. The lecture was given under the auspices of Fourth Church of Christ, Scientist, of Chicago. Mr. Le Noir White, First Reader, introduced Mr. Kimball, and said in part,—

John heard the teaching of Jesus and witnessed the works which accompanied it, and was filled with the desire to bring others into the same fellowship with God and his Christ to which he had attained. Christian Scientists feel as John did. Through the teachings of Christian Science, they know that they have found the life which Jesus came to reveal to humanity. Christian Science teaches that God is Life, and this understanding brings to pass the "signs following,"—the sick are healed, sin is destroyed, fear allayed, and the desire of men to find God meets fruition. Because Christian Science does bring to man the knowledge of God; because it makes for a whole man,—for righteousness and health; because it is found to be a sovereign remedy for every evil under which humanity suffers,—this is the reason why, like John, we desire to declare it unto you.

Correspondence.

At Las Vegas, N. M.

A fair-sized and deeply interested audience listened to the eloquent address on Christian Science, delivered by Judge Septimus J. Hanna of Colorado Springs, September 4. The gentleman was introduced in an appropriate speech by Hon. George P. Money.—*The Las Vegas Optic.*

We extract the following paragraph from the introduction:—

Were I to be guided by my general reading in the newspapers and elsewhere, I should say that Christian Science has sprung into public teaching and dissemination for the purpose of antagonizing various other fixed creeds and doctrines, and especially in those who know nothing of it, but from reading the official organ of the sect itself, and the expressions, thoughts, principles, and teachings therein, and from conversations with Christian Scientists themselves, all of which have been casual and desultory enough, I am frank to say, I am of the opinion that their aim is to investigate and understand the Scriptures and follow the teachings of the lowly Nazarene, not in theory or in a few things, but in practice and in all things. As far as I am able to judge from my imperfect understanding, I believe they are what they call themselves,—Christian Scientists, taking the name according to its original derivation,—Christian, of Christ or pertaining to Christ; Scientist, from the Latin *scire* to know, knowledge,—therefore, Christ-knowledge, not an imagined, conjured, guessed, nor conjectured Christ, but a known Christ.

At Ottawa, Ill.

Never in the history of the world has more attention been given to religious matters and to the study of spiritual truth than at the present time. Beginning with the Congress of Religions at the World's Fair in 1893, the closing years of the nineteenth century were notable for the thought that has been given to the study of the moral and spiritual nature of man.

No branch of religious thought in all that time has made more appreciable progress than have the doctrines of Christian Science. Its propaganda is widespread and vigorous. It has drawn to its standard many men and women representing the highest types of both mentality and morality.

This was illustrated by the audience that assembled at Farrell's Theatre last Thursday night [October 1] to listen to the lecture by Carol Norton. It represented much of the very best in the thought and living of this community.

The Ottawa Free Trader.

At Roxbury, Mass.

Mrs. Sue Harper Mims, C.S.D., of Atlanta, Ga., delivered a lecture on "The Spiritual Dominion of Man through Scientific Christianity, the Religion of the Future," in Fauntleroy Hall, Tuesday evening, October 6, under the auspices of First Church of Christ, Scientist, to an audience which taxed the seating capacity of the hall to the utmost. It was estimated that there were upwards of eight hundred people, and that at least two thirds of these were representative citizens, who are not as yet identified with Christian Science. The lecture was listened to with marked attention and interest throughout. The speaker was introduced by Willis F. Gross, First Reader of the Roxbury Church, who spoke in part as follows:—

As Christian Scientists we have a reason for our faith; a reason which is not founded on the sand of human speculation but on the enduring rock of practical results, and it is the privilege of every man to know for himself whether Christian Science is of God.

Christian Science has healed the sick after all material remedies had failed and the physician said there was no hope. It has broken the shackles of sin and made man free. It has given joy for sorrow, hope for despair; lifted heavy burdens and dispelled the gloom of the darkest night. What Christian Science has done for the many thousands of its loyal and loving adherents it can do for all mankind; yea, even greater blessings are in store, for God's goodness is infinite and His love universal.—*Correspondence.*

At Toledo, O.

About eleven hundred people greeted Judge William G. Ewing at the Valentine yesterday afternoon [October 4]. His lecture, "Christian Science: a Religion of Works," was handled in a way that must have appealed to every one present, and the simple yet kind way of showing that Christian Scientists believe in and worship the same God and the same Saviour as other Christian denominations was most impressive. He was introduced by Clarence B. Hadden, attorney-at-law, who said in part,—

But few words are needed these days to introduce a lecturer on the subject of Christian Science. It is now widely known of men, and wherever understood it leads to life and happiness.

The Science of God goes forward with marvelous rapidity, healing the sick, purifying the sinful, and blessing mankind through the power of divine Love and Truth, as exemplified in the teachings of our Saviour.

Hundreds of thousands of people have been benefited and are testifying daily of the change wrought in their lives by a knowledge and application of this wonderful, yet simple religion to their daily problems.—*The Toledo Times.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Our Leader's Letter to the Teachers.

General Association of Teachers.

My Beloved Students:—I call you mine, for all is Thine and mine. What God gives, elucidates, armors, and tests in His service, is ours—and we are His. You have convened only to convince yourselves of this grand verity; namely, the unity in Christian Science; cherish steadfastly this fact. Adhere to the teachings of the Bible, Science and Health, and our Manual,—and you will obey the law and gospel. Have one God and you will have no devil. Keep yourselves busy with divine Love, then you will be toilers, always distributing sweet things, which, if bitter to sense, will be salutary as Soul, and like the bee, but not the spider that weaves webs which ensnare.

Rest assured that the good you do unto others you do to yourselves as well, and the wrong you may commit must, will, rebound upon you. The entire purpose of true education is to make one not only know the truth but live it—enjoy doing rightly—and not work in the sunshine and run away in the storm—but work midst clouds of wrong, injustice, envy, hate; and wait on God, the strong deliverer, who will reward righteousness and punish iniquity. "As thy days, so shall thy strength be."

With love,

MARY B. G. EDDY.

Pleasant View, Concord, N. H., October 27, 1903.

[REPUBLISHED BY REQUEST.]

A Memorable Coincidence.

WE are glad to publish the following interesting letter and enclosures received from our Leader. That legislatures and courts are thus declaring the liberties of Christian Scientists is most gratifying to our people; not because a favor has been extended, but because their inherent rights are recognized in an official and authoritative manner. It is especially gratifying to them that the declaration of this recognition should be coincident in the southern and northern states in which Mrs. Eddy has made her home.

Pleasant View, Concord, N. H.
October, 16, 1903.

Dear Editor:—I send for publication in our periodicals the following deeply interesting letter from Elizabeth Earl Jones of Asheville, N. C.,—the state where my husband, Col. George W. Glover, passed on and up,—the state that so signally honored his memory, where with wet eyes the Free Masons laid on his bier the emblems of a Master Mason, and in long procession with tender dirge bore his remains to their last resting-place. Deeply grateful I recognize the Divine hand in turning the hearts of the noble southrons of North Carolina legally to protect the practice of Christian Science in that state.

Is it not a memorable coincidence, that, in the Court of New Hampshire, my native state, and in the legislature of North Carolina, they have the same year, in 1903, made it legal to practise Christian Science in these states?

MARY B. G. EDDY.

105 Bailey St., Asheville, N. C., October 11.

Beloved Leader:—I know the inclosed article will make your heart glad, as it has made glad the hearts of all the Christian Scientists in North Carolina. This is the result of the work done at last winter's term of our legislature, when a medical bill was proposed calculated to limit or stop the practice of Christian Science in our state. An amendment was obtained by Miss Mary Hatch Harrison and a few other Scientists who stayed on the field until the last. After the amendment had been passed, an old law, or rather a section of an act in the legislature regulating taxes, was changed as follows, because the representative men of our dear state did not wish to be "discourteous to the Christian Scientists." The section formerly read, "pretended healers," but was changed to read as follows: "All other professionals who practise the art of healing," etc.

We thank our heavenly Father for this dignified legal protection and recognition, and look forward to the day, not far distant, when the laws of every state will dignify the ministry of Christ as taught and practised in Christian Science, and as lived by our dear, dear Leader, even as God has dignified, blessed, and prospered it, and her.

With devoted love,

ELIZABETH EARL JONES.

The following article, copied from the *Raleigh* (N. C.) *News and Observer,* is the one referred to in Miss Jones's letter.

The Christian Science people, greatly pleased at the law affecting them passed by the last legislature, are apt also to be pleased with the fact that the law recognizes them as healers, and that it gives them a license to heal.

This license of five dollars annually, required of physicians, has been required of them, and how this came about in Kinston is told in the Kinston *Free Press* as follows:—

Sheriff Wooten issued licenses yesterday to two Christian Science healers in this city. This is probably the first to be issued to the healers of this sect in the state.

Upon the request of a prominent healer of the church, the section of the machinery act of the legislature covering it was shown, whereupon application for license was made and obtained.

The section, after enumerating the different professions, for which a license must be obtained to carry them on in this state, further says, "and all other professionals who practise the art of healing for pay, shall pay a license fee of five dollars."

This was construed to include the healers of the Christian Science Church, and license was accordingly taken out.

The idea prevails that the last General Assembly of North Carolina relieved the healers of this sect from paying this fee, but this is not so. The board only excused them from a medical examination before a board of medical examiners.

The Higher Purpose.

THE popular belief about Christian Science is, to a large extent at least, that it is simply a cure for physical ills, a universal panacea for sickness, and therefore not rightfully called scientific Christianity. If this false concept is due, as it probably is, to our lack of clearness in presenting the subject to the world, it behooves us to give more care and attention to our choice of words and to the impressions they convey.

If the entire mission of Christian Science were but the healing of the sick, its Discoverer and Founder would still be entitled to the gratitude of a disease-burdened race, but its mission is infinitely higher and holier, and we must not lose sight of the fact that the healing of sickness is but the "signs following" the correct and normal understanding of God, whom to know aright is life eternal; and that this

Digitized by Google

healing is not the all and ultimate of Christian Science. The coming of the Christ to human experience results in the destruction of all sin, sickness, and death, because the Christ is God's perfect idea, "the Lamb of God, which taketh away the sin of the world."

The healing of sickness is just as much an essential proof of Christianity as is the healing of sin, and this true and perfect healing was the seal and sign of Jesus' teaching, and we have an unworthy concept of Mrs. Eddy's work if the healing of mankind's aches and pains is all we can offer to the world as justification for Christian Science.

The uplifting of humanity, the salvation of the race, is the fruition of Christian Science and the goal of our Leader's endeavor. The purity of Mrs. Eddy's life and the high purpose of her ministry is manifest in her message to the General Association of Teachers, which appears in another column. As we give heed to these words of admonition and encouragement, and earnestly strive for the fulfilment of what she recognizes as Christian impulse, we shall find that the sick are healed more readily, and our work will rest upon an everlasting foundation. M.

Choose Life and Live.

In a current issue of a religious contemporary is an article entitled, "The Cheerfulness of Death," which is made prominent by the endorsement given it in the editorial columns. In reading it one cannot help being touched by the evident desire of the writer to offer comfort to the many who, to use his own words, "shrink from death." He says, "For the Christian at least, this is all wrong. Death should be in reality his best friend; welcomed rather than feared. . . . See what it does for the Christian. It frees him from accident, sickness, and suffering, to which his body has been liable all his life. . . . It frees him from all sorrow. . . . It opens the gates of heaven to him. . . . If death, then, is not a painful, unpleasant process, and if it does for us so much, it should be, not the last enemy, but our best friend."

On the editorial page the article is mentioned as "one to be cut out, kept, recurred to," and reference is made to a remarkable passage in Hebrews which speaks of those "who through fear of death were all their lifetime subject to bondage."

As we turn to the sacred page and read those words in their noble setting, it seems passing strange that any one should ever dream of giving them an interpretation which tends to strengthen the belief in the necessity for death. We are quite sure, however, that no amount of such reasoning, though ever so well meant, can change the world's thought on this subject; indeed, were this all that could be said to dispel the terrors of death, we should agree with the poet, that,—

> Not all the preaching since Adam
> Has made Death other than Death.

Thanks to Truth, it is not all, and since suffering human hearts do most sorely need and covet a remedy for their dread, let it be the very best that can be found.

Long ago the great Hebrew lawgiver said, "See, I have set before thee this day, life and good, and death and evil; . . . therefore choose life."

To the Christian Scientist this Scripture tells of a daily, an hourly choice between the beliefs which lead down to death, and the understanding which points to the final overcoming of all human ills, and the death which is their outcome. In this mighty endeavor they find authority and support from the passage in the second chapter of Hebrews quoted above, which says, "Forasmuch then as the children are partakers of flesh and blood, he also himself likewise, took part of the same; that through death he might destroy him that had the power of death, that is, the devil: and deliver them who through fear of death were all their lifetime subject to bondage." If, therefore, the mission of the Christ was to destroy the devil and all his works, it surely follows that death would also disappear, and mortality "be swallowed up of life."

We agree with our brother that Christians should not spend their years in the fear of death; but we do not believe that such fear can be quenched in a Lethean draught of belief either in its inevitableness or its advantage; on the contrary, we should know that death can never be an object of knowledge. The dead cannot know anything, hence the belief in death disproves itself. Life only is knowing, and it cannot know death, for then it would cease to be life.

If we admit that death can do more for mortals than can life, we employ the suicide's argument, and to be consistent we should never attempt to prolong life, nor waste our energies in the further moral reformation of those who, through death, may find immediate escape from both sin and suffering. Christian Science teaches that the belief in death, so long as it is held, prevents one from realizing the true consciousness of Life, and it shows that for this reason the thought of death is a procurer of disease.

The great Teacher said, "If a man keep my saying he shall never see death." Life was the theme on which he dwelt continually and towards which he directed all thought. He told them of "the bread of life," of "the water of life," of life more abundant; and he emphasized the significance of this constant reference to life, by his works. Human belief tells us of the dark river of death, the Bible speaks only of the "river of the water of life," proceeding out of the throne of God.

Our text-book says, "The relinquishment of all faith in death, and also of the fear of its sting, would raise the standard of health and morals far beyond its present elevation, and would enable us to hold the banner of Christianity aloft with unflinching faith in life eternal" (Science and Health, p. 426). K.

"Blessed are the Merciful."

The harmony of these beautiful autumn days is marred by one discordant note to which Christian sentiment has ever been sadly indifferent. It would seem that no one could enter nature's grand cathedral, the forest, and tread the cloistered paths of the passing year, without being so uplifted as to have that more kindly and sympathetic feeling toward every creature, which would stay the impulse to do them harm; and yet in these grand aisles of a temple not made with hands, is being enacted to-day an unspeakable tragedy, involving the cruel suffering and death of unnumbered beautiful and inoffensive animals.

We may concede that the demand for food and clothing, the exigency of passing human conditions, may involve the present necessity of taking animal life, but this fact surely offers no palliation or excuse for a wanton destruction of harmless creatures for the mere pleasure of killing them.

That animal life should have acquired the utmost fear of man, and that our hillsides should have become silent where they were once songful, is a sad and suggestive commentary, and if we will but listen we cannot fail to hear the appeal of common humanity and Christian kindness, that we live and let live, that we respect the right of every creature to life and freedom and happiness, at least so far as never to subject them to unnecessary pain or sacrifice.

Furthermore, no thoughtful person can fail to recognize the demoralizing effect of a continued stifling of the nobler promptings of the heart. That men, through occupation or habit, may lose their sense of the sacredness of life was indicated by the English law which, until recent years, did not permit butchers to serve as jurors in criminal cases, and

Digitized by Google

it could hardly be questioned that the habitual killing of animals for sport must conduce in greater or less degree to such a loss. Moreover, the love of adventure and the false heroism of the average boy, nourished and excited as they are by hunters' tales, soon prompt him to think of every moving thing as a legitimate object of prey. The air gun and more destructive weapons are called for, and the wrong of the deer forest is re-enacted in thickets and woodlands far and near by those who are dominated by an ever-growing impulse to kill. The abomination known as side-hunting,—competition between organized parties of boys and men who contend for the honor of killing the largest number of creatures in a given time,—is one of the expressions of this unhappy instinct which has been tolerated and unwittingly cultivated even in Christian homes and communities, until it has sadly obliterated the sense of creature right and kindly feeling.

The great French writer Lamartine in voicing the experiences of a hunter who had been watching the playful pranks of a deer, has fittingly described that suppression of the nobler thought and impulse which was involved in taking the animal's life, and the revulsion of feeling and self-condemnation which every cruel act must ultimately entail.

He says,—

"I had never thought about this instinct that leads man to find amusement in destroying without necessity, justice, pity, or right, animals who might equally claim to hunt and slay him if they were as well armed and savage in their pleasures as is he. My dog was on the alert, my gun pointed, the deer right ahead. I did feel a certain hesitation and remorse at cutting short such a life—*such joy and innocence in a creature that had never harmed me,* and that delighted in the same sunshine, the same dew, the same morning freshness, that I did; created by the same Providence, perhaps endowed in a different degree with the same thought and sensibility, perhaps bound in the same ties of affection and relationship—looking for his brother, waiting for his mother, his mate, his little one. But nature's recoil was overborne by the mechanical instinct of habit. I fired. The roebuck fell, his shoulder broken by the shot, and his blood reddening the turf on which he vainly struggled in his agony.

"When the smoke dispersed I approached, pale and shuddering at my deed. The lovely creature was not dead. It looked at me, its head sank on the grass, its eyes swimming in tears. . . . I would have given anything to undo what I had done. Alas! the most merciful close to my pitiless work was to shoot my poor victim once more, and so put it out of its misery. Then I flung the gun away, and in truth shedding tears of which I am not ashamed, I swore to myself never again to cut short in my caprice an hour of sunshine enjoyed by these denizens of the woods and by the birds of heaven, who taste, like us, the transient ecstasy of light and the more or less vague consciousness of existence under the same sky as ourselves."

That any father or brother could steal upon and ruthlessly strike down any gentle life-loving thing for the mere sport of it, without a kindred sense of sorrow and regret, would seem incredible were it not such a frequent phenomenon of human history. In many states the moral sense has been somewhat awakened to this subject, and especially in connection with the slaughter of birds to satisfy the craving for personal adornment, and something has been done toward the enactment of protective laws; but the inadequacy of such endeavors is no less apparent, than is the great need that all Christian people, and especially those who declare that love alone should prompt to every determination and deed, who have solemnly promised to be merciful, and who stand for the possible demonstration of Love's controlling presence in every event and every relation,—that we should all make manifest the unfailing justice, gentleness, and compassion of Love, so that silently as well as in the ear of those who will listen, we may express our earnest plea in behalf of these our little brothers, whose mute appeal goes out, so often, with the ebbing of their life.

W.

A Letter to our Leader.

Elgin, Ill., October 18, 1903.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—When the Mother Church in Boston was built and your room was so lovingly furnished by the children, the thought would often come, What a sweet memory for them in after years!

Through our *Sentinel* we learned that our dear Leader is to have a room in the Concord Church, and that one little Sunday School had already sent a "love offering."

"Now" was the time for our little Sunday School, and most lovingly and heartily did the children, thirteen in number, respond to the thought, asking that they might have one month in which to earn their contribution, as the Sunday collections are set aside for the Mother Church and our own church building fund.

The result is this little reflection of love, which they send to you to use as pleases you best in your room at Concord.

Dear Leader, will you accept this offering from the children as an expression of a loving desire to give loving service to you, in return for your many years of service for them,—and all.

Gratefully and lovingly yours,

MRS. EMMA LAWRENCE,

Superintendent of Sunday School.

General Association of Teachers.

THE first annual meeting of the General Association of Teachers was held in the Mother Church, October 26 and 27. The attendance was large, and the utmost harmony prevailed. A dispatch expressive of deep love and reverence was sent to our Leader at Pleasant View, and the hearts of all who were present were cheered by a loving and inspiring letter from her, which appears on the editorial page.

The Standard of Love.

EDNA WADSWORTH HUDSON.

LET us lift up our hearts with a joy untold
For this truth that has come to the lives of men,
A standard that Love has for us unrolled
And raised at the break of the day, again.

Let us shout with one voice on this morning bright,
And follow the colors with hearts that are true!
Let us carry them into the midst of the fight
And hold and protect them,—a faithful few.

Though strife be great and we seem to fall
From the shot of that enemy men call Fear,
Let us rise and go forward, forgetting all
But the fact that our Leader is calling, "Here!"

When the smoke of the battle shall seem to cloud
The light of the sun and our colors dim,
No less fair is our banner—we cheer it, proud
To follow it e'en at this hour, for Him.

"Go on through the gates of the city of God;
Prepare ye the way!" is the Master's command.
Let us raise for the people the standard of Love
And obey when the voice of our Leader cries "Stand."

Testimonies of Healing.

I wish to testify of the value Christian Science has been to me in my work as an editorial writer on a daily newspaper. Before I was called to the position I now occupy, my experience had been largely as a special writer. While that work was satisfactory enough, I was not getting the recompense for it I thought was due me. After coming into Science, I worked over the question of supply in what I honestly thought was the right way, but I did not get the results. Nor did I even begin to solve the problem until the exigencies of the case finally forced me to give up my own will in the matter and place myself unreservedly in God's hands. From that time until now the demonstration has been quite a remarkable one.

The first step was a complete change in the management of the paper by which I was employed. On account of this many of the old force lost their positions. I learned some time afterward that I was slated to go with the rest. But my work proved satisfactory to the new management, and I was given a small raise in salary instead. Next there occurred a vacancy in the staff of editorial writers. Writing leaders and paragraphing, as it is called, was something I had never thought of doing, had never trained myself to do, nor was it work for which I had ever regarded myself as especially adapted. Consequently, the offer of the place came to me entirely as a surprise. Knowing that if it was really my place I should be able to fill it, I accepted it. This meant a substantial increase of salary.

I began my editorial work by realizing that divine Mind was the source of my supply and that this supply was infinite, that it was my business as God's perfect child to express Divine intelligence, to express it all the time, and that nothing could keep me from expressing it. Then I quit realizing, took up a pen, and went to work. I did not have to wait for something to write. On the contrary, the something to write was always waiting for me. In a few months conditions again changed, and a new paper was started on which I was given entire charge of the editorial page. This paper made an unexpected success, and a short time ago I had the satisfaction of being told by the management that this success was largely due to my work.

The man who said that did not know why that paper had been successful, but I did. Truth had animated and illuminated that editorial page. What was written there, being to a degree the expression of truth, had gone straight home to the people. The people did not know either exactly why they liked it, but again it was the truth which attracted them. I have found this out in my work: The words "Christian Science" may frighten and antagonize some people on account of their wrong conception of Christian Science, but the truth which is embodied in Christian Science impresses and wins every man and woman who receives it under conditions that do not arouse prejudice. Whatever success I have had has been due entirely to the application, to the best of my understanding, of the Principle which I have learned through studying Science and Health, to every question which I have treated editorially.

The more I have done this and thereby seen the seemingly complexed sociological and economic problems of daily experience become instantly reduced to the familiar idiosyncrasies of mortal mind,—the three fundamental falsities, self-will, self-love, and self-justification, which are the fountain-head of our discontent,—the clearer has been my comprehension and the stronger my conviction that Christian Science is indeed the one and the only panacea for all the grave ills which unhappy and desperate mankind is facing. Wise men perceive plainly enough the wretched conditions, but not even the wisest of men can offer an adequate remedy. Their suggestions are pathetically pitiful when confronted squarely with the facts. There is no remedy except the Golden Rule individually practised, and there is no way to make the Golden Rule practical aside from that taught and proved by Christian Science.—S.

I have often had it said to me, "Why are there not more English testimonies?" Much work is being done with little mention of it, and it seems that now is the time for me, in loving gratitude, to tell others a little of the good that has come to me through Christian Science.

Some years ago, when first I heard of it, I seemed to be in the depths of sorrow and loneliness, walking in the shadow of death, without hope, and almost without God. Shutting myself in behind a wall of rebellious pride, trying to endure until death should bring the rest I so earnestly desired; full of fear and pain, after years of what seemed useless prayer.

To-day, through the teachings of "Science and Health with Key to the Scriptures," I have learned to pray. I know that God is ever-present Love, omnipotent good; that He is no respecter of persons, but gives to all His children alike, ever more ready to give than we to ask,—a God of justice. All His ideas are in their right places, all are sustained, upheld by infinite Love, and if our thoughts "in confidence and quietness are stayed on Him," then, indeed, do the former things (of material sense) pass away, and we realize the promise that "God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain," for He is "Alpha and Omega, the beginning and the end."

Words fail to express my love and gratitude to Mrs. Eddy, our dear Leader for one above all other blessings that she has taught me, the knowledge of Love, and how to love. As the shadows flee away and the light grows clearer unto the "perfect day," shall we be silent, keeping the wondrous blessings to ourselves? No; gratitude and love bid us be up and doing, giving our brother the "cup of cold water," patiently striving and earnestly working for others, seeking our own in another's good, truly testifying to the good which has come into our lives.

Among many ailments which have been met, I may mention angina of many years' standing, supposed to be hereditary; instantaneous healing of a broken knee (unable for twenty years even to lie in bed without its being tightly bandaged); double pneumonia; rheumatic fever with severe heart symptoms healed within the week so that I was out during very severe and wintry weather, and many other healings.

I am sending this expression of my gratitude in the hope that it will reach and help some of those who have wished for more testimonies from England.

L. WHITAKER, London, Eng.

Out of a heart filled with gratitude to God, to Mrs. Eddy the Discoverer of this great truth, and to the one who advised me to try Christian Science, I wish to express my thankfulness for what it has done for me.

About sixteen years ago I had spinal meningitis, which left my nervous system in such a wrecked condition, that I was only able to be about a part of the time and could eat only the lightest of food, and very little of that. In February, 1902, I was compelled to go to bed and remain there about four months. Three of our best physicians pronounced my disease cancer of the bowels, in its worst form, and of a very rapid growth.

A very dear friend came to me in September of the same year and asked me to try Christian Science. I felt I was grasping at a straw in taking it up, but my physicians and friends were satisfied for me to try anything if it would prolong my life.

On the 16th of September, 1902, I took my first treatment. When the practitioner came to see me the doctor

Digitized by Google

was in the house and I was under the influence of chloroform, but he was willing to turn my case over to Christian Science. As I was unconscious, I did not see the practitioner that day, and my friends thought I would not live to see her the next day; but she gave me absent treatment, and I was relieved of the awful pain in about two hours. Up to this time I had been taking one of the most powerful opiates, three times a day, the pain being so severe. After the third treatment I had no more severe pain, and on September 20, five days after I first took treatment, I walked ten squares and did not feel any bad effects from it.

On the eighth day the cancer came away perceptibly. After this I gained very rapidly, and could eat anything I wished. I am in perfect health now, which I had not been for twenty years. On November 18 I went back to my position as clerk in a store, and during the holiday trade I can safely say I worked about sixteen hours a day, most of the time on my feet, and have lost only one day since, which was from the grip, and this was overcome in twenty-four hours.

I cannot say too much for Christian Science and am trying to do what good I can and tell others about what the Great Physician has done and is willing to do for all who will accept the truth.—E. P., Pittsburg, Pa.

In my early youth I had a good religious training, but as I became old enough to think and reason for myself I gradually dropped what I had been taught, until I had no religious belief left.

This was about my condition when, at the age of twenty-five, I was married. My wife was an orthodox church member, and she tried hard to induce me to accept her views and become a member of her church. I obtained a commentary on the New Testament and studied the Bible a great deal, but the more I studied it the more antagonistic I became to orthodox theology, until I threw the whole matter aside and declared I did not know what truth was and I did not believe that any one else did. So I settled down as an agnostic, and for about thirty years I was seldom inside a church, and if I did go it was from no proper motive.

At the end of that time I was a very discordant mortal, I was burdened with a fear of poverty, having lost about all the property I had acquired, and was held in bondage by many chronic ailments, some of which ran back beyond my remembrance. Among other things I had the tobacco habit. I had chewed and smoked tobacco nearly forty years, and there never was a greater slave to it. The first thing I did when I got up in the morning was to reach for my tobacco and knife and put a piece in my mouth, and probably there was not an hour during the day that I was not either chewing or smoking tobacco. I had tried several times to break the habit through will-power, but always failed, and I remained a slave to tobacco until Christian Science came to the rescue. I have now been free from that habit about four years.

For a number of years I had been acquiring an appetite for strong drink, and was fast becoming a slave to that appetite also. I knew very well that if I kept on I should become a common drunkard, but I did not make any effort to reform.

The Bible says, "And when Abram was ninety years old and nine, the Lord appeared to Abram, and said unto him, I am the Almighty God; walk before me, and be thou perfect." In times past I have wondered greatly how God appeared to Abram and others. Thanks to Christian Science, about four years ago God appeared to me as Life, Truth, and Love, and said, "Walk before me, and be thou perfect." Then I knew how God appeared to Abram and others, for Christian Science answered that question, as it does all others.

Four years ago I had about decided to take more medical treatment for a severe ear trouble caused by scarlet fever when I was an infant, when another member of my family who had come into Christian Science through its healing, induced me to try it instead, reminding me that I had already spent a great deal of money for medical treatment without any benefit. I had no knowledge of Christian Science at that time, and no faith in it, but was willing it should heal me if it could, so a practitioner was brought to the house and the work begun. I was induced to read Science and Health, but the understanding of it came very slowly, for I was trying to take Christian Science as I would a drug, merely for the physical healing. I remember when I had been treated a short time, I was thinking of my troubles, and being afraid I might forget some of them I made a list and put down eighteen old chronic ailments and threw in one or two minor ones for good measure. Perhaps it is needless to say, that list did not last long. It was destroyed with many things it included, not by remembering them, but by knowing their nothingness, and forgetting them.

Soon after commencing treatment the practitioner requested me to commit to memory the scientific statement of being. I told her I could not, for I had lost my memory to such an extent that I could not do it; besides, what good would it do? The idea that learning this would have any effect on my troubles seemed to be foolishness, it had not the least meaning to me. However, in about six months I was able to repeat it. When the darkness did begin to break away and I got a faint glimmer of light, I took up the study in earnest, and have kept it up ever since. I have torn down many of my material barns, and am building greater, even spiritual storehouses in which to bestow all my goods, for I have heard the Father say, "Son, thou art ever with me, and all that I have is thine." One of our lecturers said to his audience, "Standing here to-night, I represent just the difference between a dead man and a live one;" so I can say that to-day I represent just the difference between a dead man and a live one, for if Truth had not prevented, I should have been in a suicide's grave several years ago. I was leading such a miserable existence that annihilation would have seemed a blessing. I was loaded down with discords from which I thought only death could relieve me. I hated almost every one, and very many disliked me, if they did not hate me, then why should I live if death would end it all? I resolved I would not, and planned to take my life one Sunday when the other members of the family were at church; but that Sunday, and on several others, an absent member of the family, the one who had already come into Science, returned home, and so upset my plans. God was leading me into a different path, even the way of life, for soon after, Christian Science was presented to me, and this sin was destroyed. Now I no more think of committing suicide, than I think of committing murder. Surely Truth has done some wonderful work for me.

I will give one demonstration in connection with the ear trouble of which I have already spoken. Scarlet fever left me with a discharge from the ears when I was an infant, and in spite of all that was done, it continued until Christian Science healed me. Was this one of the imaginary troubles that the critics of Christian Science tell us about? To material sense it was a terrible reality, and it seemed so to the many physicians who were consulted, one of whom told me it would ultimately prove fatal, as it would eat its way to a vital part. To sense it had destroyed about all the inner ear on one side, and was nearly as bad on the other. Another old ailment that has passed away was corns. I had several of the kind called callous corns on the soles of my feet. I think they are considered very real and very painful by those who are troubled with them. They troubled me more at night, after standing all day, than at any other time. I would come out of the

Digitized by Google

shop at night on to a rough stone pavement and those corns would make a great protest. Then I would stamp them down hard upon the pavement and declare the truth, and I kept that up until I silenced them. I might tell of several more demonstrations of the power of Truth to destroy error, but I think I have said enough to show that "He that is mighty hath done to me great things."

I have been a member of the Mother Church about three years, and I surely feel grateful that my first church membership is founded on Truth. I have had a great deal of help, and I wish to express my deep sense of gratitude to the practitioner who so lovingly and patiently helped me to the light. It is right and proper for those testifying to the benefits received from Christian Science to express gratitude to its Discoverer and Founder, but when I approach this part of my task, I feel utterly unable to express in words my gratitude to our beloved Leader and Teacher, who has so lovingly and patiently explored the way, and I know that no one on this plane of existence will better appreciate the effort to express gratitude by the daily life than will Mrs. Eddy, God's herald of Christian Science.

J. H. J., Boston, Mass.

I want to tell of some helpful demonstrations for the little ones.

When my oldest child was about three years old she was playing with the sewing machine. I was out of the room, and heard her cry. On going to her I found that her middle finger was fast, the needle having passed straight through at the base of the nail. I had to turn the wheel quite hard to get it out. I took the little one in my arms, and after a few thoughtful moments I said, "Baby, say your little prayer." She repeated it and soon stopped crying, saying, "My finger does not hurt now," and within five minutes she was drumming on the organ with the same hand. It never troubled her after, there was just the mark on either side where the needle had gone through.

One night a case of croup seemed very severe and I trembled with fear. I began reading aloud from Science and Health to the child, and in two hours she was perfectly free from the ailment, was wide awake, and wanted me to play marbles with her. I amused her for a time. We went to bed with a calm and blessed peace that the world cannot know. The old hymn we used to sing has so much meaning now, "O what needless pain we bear, all because we do not carry everything to God in prayer." May God bless our Leader and help us to do our part, and to follow on as faithfully as she does.

Lottie E. Paton, Redwood Falls, Minn.

A little over two years ago one of my daughters suffered from an injury of the spine which gave her severe pain, so that she was unable to stand upright, and this continued for several months. Our physician said it would take a very long time to cure her, in fact he was not sure she could be cured at all. She was not able to attend to her business, and went from home for a few weeks.

While away she met with a lady who told her of Christian Science; she, however, would not have anything to do with it until she had first consulted her parents. On going to see her the following Saturday I was shown the book, Science and Health, but could not then decide whether or not it was a proper book for her to read, so took it home with me and read a little. I returned the book, telling her to read and study it well for herself. In the mean time the lady had given her the address of a Scientist in Manchester, and my wife went at once to see her. Our daughter received treatment, and was able in about two months' time to return to business quite well and happy. Our experience in Christian Science did not, however, end here; my wife and I began to study the book, and as a consequence the whole family have been greatly benefited. One was cured of ulcerated stomach, and another has left off glasses which she had worn for some years. My wife was, before this, a physical wreck, but she never enjoyed better health than at the present time. I believed I could scarcely exist without medicine for indigestion, but, thanks to a little knowledge of Christian Science, the medicine and the indigestion disappeared about two years ago.

These are, of course, only a few of the blessings which are visible to all around us, but if this testimony ended here the half would not be told. The spiritual uplifting is past description. We are daily experiencing the ever-presence of Love, who healeth all our diseases, and we are now enabled to see God, good,—reflected everywhere,—a real presence, a truly helpful friend.

Many of our friends are being benefited through the book Science and Health, also the *Sentinel* and *Journal*, which we send on after reading them ourselves. These are passed on from home to home in country villages where there are no Christian Science meetings held, and the amount of good these silent messengers are doing may never be known in this world.

Words fail to express the love and gratitude we feel to our dear Leader, Mrs. Eddy, for this revelation of love.

F. Mason, Manchester, Eng.

As one who has been greatly helped by Christian Science treatment, I contribute this testimony in the hope that it may be of some use to others, so that they may be lifted out of their miseries, as I was lifted out of mine.

When Christian Science found me I was absolutely hopeless of ever being well again. I had what the physicians called melancholia. After being under medical treatment for eight months, I lost my position because of my inability to properly perform the necessary duties. I was afterward an inmate of an asylum, adjacent to this city, for eight months, and left there not in the least benefited, mentally or physically, but considerably worse financially.

Under Christian Science treatment there was a slight improvement from the beginning, but after the seventh treatment I had a seeming relapse, and told my sister that I did not see the use of taking up the Scientist's time any longer, as I was no better. The idea of getting well again was almost too much for me. My sister, however, knew that I was better, and persuaded me to continue treatment. That evening I went and told the Scientist my experience of the day, and also added what I had said to my sister. After talking for a while, the Scientist read a particularly helpful testimony from the *Christian Science Sentinel*, and then said: "Mr. Wheeler, if you wish to continue having the treatment we will keep on, otherwise we will stop. Christian Scientists do not attempt to persuade people to take the treament if they do not wish it." Fortunately I decided to continue, was given a treatment, went home and to bed and slept all night, something I had not done for twelve months. I was amazed to think such a thing could occur. My condition continued to improve, and, after about four months' treatment, I was advised by the Scientist to apply for reinstatement in my former position. I went to the physician who is employed by the company, told him how I was feeling, and also told him I wanted to get back to work. His reply was: "Your improvement has been so rapid, I think you had better wait a while." This, of course, was rather discouraging to me. The following month I again made application, was put back in my old position, am doing better work than I ever did before, and gladly give the credit for all this to Christian Science.

George E. Wheeler, Baltimore, Md.

From our Exchanges.

We have come to see that the only sufficient test of the reality of one's Christian life is what he does, his moral character. As a matter of fact, men are not built in water-tight compartments, though apparently that ingenious theory is somewhat generally held. It is impossible for people to be religious on Sunday and unscrupulous on Monday. The conduct on Monday vitiates the professions of the day before. "He that doeth righteousness is righteous. . . . He that committeth sin is of the Evil One." A belief that does not register itself in conduct is hardly worth talking about, no matter how much the possessor of it feels or rejoices.

The difficulty in applying this standard results from the difficulty of determining whether a man as the result of his belief is improving in righteousness. We can decide easily enough whether he conforms to a certain conventional standard of right doing set by the community and the churches. But that is not the point. The point is: is his Christian faith making him a better man than he was? The comparison must always be between the man himself at different stages of his spiritual career, and not between the man and other men who may have had less or more to contend with.—*The Watchman.*

We use this instance simply as "a case" by which we may point out the great truth which so many men lose sight of, that it lies within the measure of no man's life, experience, or thought, to draw a line around a single or a million human beings, around a white man or a black race, and say, "thus far and no farther shalt thou go forever." To-morrow, like yesterday, is a long day. God is there with His infinite patience. Over all the arching skies of coming centuries, as over the timeless hereafter, is written in letters big with the wisdom and the love of God, "Let not him who enters here abandon hope." And, whatever else the man may be who obliterates from the human or race soul of the world this hope, he has lost his grip on that promise which is as old as Eden and as fresh as the voice of the spirit which calls us to battle with ignorance and lust and despair, and fills us with the unconquerable conviction that we shall win.—*The Universalist Leader.*

O. F. Stafford, D.D., in *The Universalist Leader* says, "It is unfortunate for English-speaking Christians that by a confessedly inaccurate translation, we habitually speak of the Old and the New Testament; whereas we should say Old Covenant and New Covenant. Under both dispensations God is seeking to covenant with men. In the English revision of the Scriptures 'covenant' is everywhere given in the text, with 'testament' in the margin; in the American version the word is 'covenant,' with no alternative. It is a profound truth that the Parent Spirit is pledged to save and bless, on the condition that we believe, love, and obey."

After all that we have learned, be it little or much, we must come back to the spirit of a little child if we would have the highest of all knowledge, the knowledge of God. The things of Christ are hid from the wise and discerning, and revealed to babes. That is to say, man, by searching, has never been able to find out God; but to the trustful, teachable spirit God graciously reveals himself. This is hard to understand; but a great truth, a universal law, lies hidden in the saying of our Lord.—*The Examiner.*

Philip brought Nathanael to Jesus under the sweet compulsion of friendship. Nathanael was ready to answer the argument of Philip the theologian, but he could not resist the persuasion of Philip the friend. Men may be loved into doing things they could never be driven or argued into doing.—*The Christian Life.*

It may be that some day we shall see our little deeds of love, our half-forgotten words of kindness, which at the time seemed almost too small to be worth while, gathered by the great Master into a whole of such wonderful beauty that we shall stand amazed before it.

Young People's Monthly.

The greatest need of the present day is applied Christianity. Christianity held in theory will not save and bless mankind, but Christianity applied in practice will.

The Standard.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.30 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.20. Single copies, 20 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health, in lots of twelve or more to one address may include any or all of the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . 5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid. 4 00

Twelve or more to one address, each, prepaid 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The bureau of insular affairs has just completed the compilation of a statement showing the seigniorage on Philippine coinage. Up to and including September 30, there had been coined pesos and subsidiary silver coins to the value of 15,060,300 pesos, the bullion for which cost $6,309,675. During the same period there has been coined and shipped minor coinage to the face value of 496,250 pesos, the nickel and bronze metal for which cost $86,042. The charges of the San Francisco and Philadelphia mints for this coinage, its packing and express and steamship charges to Manila, including insurance, to protect the insular Government against loss, aggregated $206,224. The net credit to the seigniorage account to September 30 is $1,176,332.

The Mosely commission, now visiting in the United States, is representative of English educational institutions from top to bottom. It was selected by Sir Alfred Mosely for the purpose of proving or disproving his theory that the great industrial and commercial advancement of the United States is due to general education, and of giving England the result of its investigation. The originator of the commission is a retired business man of wealth, who feels that England is losing ground industrially, and desires to find the remedy. He is paying the expenses of this commission. The full commission has a membership of thirty-one.

Carrying out instructions received from Washington, Ambassador Porter has begun negotiations for an additional clause in the extradition treaty between the United States and France, to cover bribery. The informal conferences indicate the willingness of the French officials to make the desired extension. It is doubtful, however, whether they will be willing to make the clause retroactive.

Foreign.

It is said that France, recognizing the paramount importance of the interests of Russia and Austria in the Balkans, waives her objections to the reforms there being carried out by those two nations in accordance with the terms of an identical note sent a few weeks ago to the Turkish Government. It is said that Turkey, not liking the Austro-Russian scheme, is delaying the demobilization of her troops to create the impression that she will oppose to the utmost some of the conditions of the reforms; but under constraint from the Powers she is expected to acquiesce quickly.

The mixed Swedish commission to determine the validity of claims against Venezuela has rendered decisions on seven claims submitted to it, six of which were recognized and the other refused. The total of the claims presented amounted to $72,885; the awards made amounted to $34,850.

The conferences of the delegates of the five Central American republics (Salvador, Honduras, Nicaragua, Guatemala, and Costa Rica) for the purpose of arranging the basis of permanent peace in Central America, are in session at Acajutla, Salvador.

Sir Thomas Lipton has definitely withdrawn his offer to present a cup for a transatlantic yacht race in 1904, and has made way for Emperor William, who will present a cup through the New York Yacht Club or the Atlantic Yacht Club.

Industrial and Commercial.

Enough orders for new engines have been placed with the American Locomotive Company, and also with the Baldwin Works, to keep the plants of these two concerns running all winter.

The largest and most powerful locomotive yet constructed is now building at the Schenectady Works of the American Locomotive Company for the Baltimore and Ohio Railroad. This will be a special exhibit at the St. Louis Exposition before it is put into actual service. It will be of the Malett type and will have twelve driving wheels arranged on the articulated plan. The gross weight on the driving wheels will be about 270,000 pounds.

An important railroad event in Porto Rico was the opening recently of the new line of the American railroad. This improvement has cost over one million dollars. The new line runs through a very fertile section of the country, where for four centuries the only means of transportation has been by ox carts and pack horses. The entire distance between Ponce and San Juan, except for a short distance soon to be under construction, is covered by rail. The road will be a great convenience for shippers and growers, and lead to extensions of their operations. The scenery along the route is said to be very attractive.

The annual report of the Bureau of Mines for Ontario for 1903 shows that the total value of mineral production in the province for the year was $6,257,000. Five years ago the corresponding total was only $1,689,000. Chief among the mineral products of the province is nickel, copper following. Of the former last year's product was $2,210,000 and of the latter $680,000. Metallic mineral products of the province include nickel, copper, gold, silver, zinc, and molybdite.

Portland, Me., is to have five lines of ocean steamships this winter, according to an announcement recently made. The five regular lines will be the Dominion to Liverpool, four passenger ships; the Thompson to London, weekly; the Dominion to Bristol, the Leyland to Antwerp, and the Allan to Glasgow, semi-monthly. Under the new plan it is the intention to make Portland a large passenger port with a weekly service.

The cut-off across Great Salt Lake, which presented numerous difficulties in construction and cost $6,000,000, is reported to be completed, and will be used for traffic December 1.

General.

The French minister of public works has approved a project for an electric railway ascending Mount Blanc. The railroad is to be identical with that which is at present in operation on Mount Rigi in Switzerland and similar to the road that will soon be in operation on the Jungfrau. The motive force will be electricity obtained from the Arve River. The line will be twelve kilometers in length and will commence in the Les Houches Commune. The price of the trip will be $4 to the first stop, the cost gradually increasing up to $20 for the complete ascent. Each train is limited to a maximum of twenty passengers. The line will have two tracks, five trains carrying the passengers to the top of the Colossus and allowing a long period for rest on the ice and snow fields.

Care has been taken to avoid dangerous points, especially those subject to avalanches, to cataracts of stones, and those exposed to precipices. The first station is placed at Gros Beehar, at an altitude of 2,500 meters, the second at the Dome at an altitude of 4,300 meters. From the Dome station to that of the Bosses the road is placed in a tunnel which is to be seventy meters from the surface of the rock, which in turn is covered with a stratum of ice fifty meters in thickness. At no other point is the line buried so deep in the mountain. The last station is the Petits Rochers Rouges, this station being an interior one which obtains light from holes cut in the rocky walls at the north. The Petits Rochers Rouges are at a height of 4,550 meters (14,927 feet), and the top is 250 meters higher.

On September 3 *The* (New York) *Sun* celebrated its seventieth anniversary. There were seven daily morning papers in existence when it began. *The Journal of Commerce* is the only one which survives. *The Sun* has had a diversified political career, but at all times for more than fifty years has been edited with ability, variety, and pungency. It was founded by a job printer from Springfield, Mass., named Benjamin H. Day. With his own hand he worked off several hundred impressions of his seven-by-ten inch newspaper. At that time there were only one hundred and eighty-three miles of railroad in operation in the whole United States; one clerk in the New York post office distributed the northern mail and the Eastern mail as fast as it came in, and also "the great Northern mail." The price of *The Sun* was one penny. The other seven newspapers were sold at six cents a copy. Their entire edition amounted to about eighteen thousand papers a day. The advertisements in the first copy were all bogus; that is to say, Day copied them from other newspapers, to impart a businesslike look to his own little sheet.

"It seems almost incredible that in the neighborhood of forty thousand dollars in actual cash should have been confided to letters during the last year, and harder still to credit that the most exhaustive efforts failed to find the owners of one fourth of that amount," says a writer in *The Ladies' Home Journal*. "The envelopes which are addressed are kept on file for four years, blank ones not so long, but in either case a liberal margin of time is allowed for claimants to appear before the money is finally turned into the Treasury to the credit of the Post Office Department."

Charles M. Schwab, who has established an industrial school at Homestead, Penn., is planning to increase these schools in different cities, somewhat after the plan followed by Carnegie in his library donations. Any city raising a specified amount will be endowed with a sum, depending on its population, sufficient to erect proper buildings and give the institution a prosperous start.

It is stated that nine of the most successful of modern novels aggregate a sale of over sixteen hundred thousand copies. The paper on which these books were printed was made of wood fibre—cellulose—and the *Pawtucket Gazette* figures out that it required about four thousand trees to furnish this paper.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Selected Articles.

Christian Scientists Deny Certain Reports.

CHARGES MADE TWO YEARS AGO ARE DECLARED UNFOUNDED AND ARGUMENT IS MADE TO SUSTAIN THE GROUNDS.

To the Editor.

At no better time than now, when the whole country is recognizing the steady progress of Christian Science and admitting its interest in the movement as shown by the fair attitude of the press everywhere, could we ask you to give your readers the following communication. It will put before them some interesting facts concerning Mrs. Mary Baker G. Eddy and some incidents of her life in North and South Carolina, which might not have been known but for a criticism derogatory to the character of this good woman, which was published in your paper in August, 1901.

I presume we should not be surprised that a noteworthy follower of our Lord should be maligned, since the great Master himself was scandalized, and he prophesied that his followers would be so treated. The calumniator who informed you in this instance locates Mrs. Eddy in Wilmington in 1843, thus contradicting his own statement, since Mrs. Eddy was not then a resident of Wilmington. A local Christian Scientist of your city, whose womanhood and Christianity are appreciated by all, assisted by a Mason of good standing there and a Christian Scientist of Charleston, S. C., carefully investigated the points concerning Major Glover's history which are questioned by this critic, and has found Mrs. Eddy's statements relating to her husband (whom she states was of Charleston, S. C., not of Wilmington, but who died there while on business in 1844, not 1843, as claimed in your issue) are sustained by Masonic records in each place as well as by Wilmington newspapers of that year. In "Retrospection and Introspection" Mrs. Eddy says of this circumstance,—

"My husband was a Fre mason, being a member of St. Andrew's Lodge, No. 10. He was highly esteemed and sincerely lamented by a large circle of friends and acquaintances, whose kindness and sympathy helped to support me in this terrible bereavement. A month later I returned to New Hampshire, when, at the end of four months, my babe was born. Colonel Glover's tender devotion to his young wife was remarked by all observers. With his parting breath he gave particular directions to his brother Masons about accompanying her on her sad journey to the North. Here it is but justice to record they performed their obligations faithfully."

Such watchful solicitude as Mrs. Eddy received at the hands of Wilmington's best citizens, among whom she remembers the Rev. Mr. Reperton, a Baptist clergyman, and the governor of the state, who accompanied her to the train on her departure, indicates her irreproachable standing in the city at that time.

The following letter of thanks from one of your papers of 1844 testifies to the love and respect entertained for Mrs. Eddy by Wilmington's best men, whose Southern chivalry would have scorned to extend such unrestrained hospitality to an unworthy woman as quickly as it would have published the assailant of a good woman:—

Wilmington Chronicle, August 21st, 1844.

A CARD.

Through the columns of your paper, will you permit me, in behalf of the relatives and friends of the late Major George W. Glover of Wilmington and his bereaved lady, to return our thanks and express the feeling of gratitude we owe and cherish toward those friends of the deceased who so kindly attended him during his last sickness, and who still extended their care and sympathy to the lone, feeble, and bereaved widow after his decease. Much has often been said of the high feeling of honor and the noble generosity of heart which characterized the people of the South, yet when we listen to Mrs. Glover (my sister) whilst recounting the kind attention paid to the deceased during his late illness, the sympathy extended to her after his death, and the assistance volunteered to restore her to her friends at a distance of more than a thousand miles, the power of language would be but beggared by an attempt at expressing the feelings of a swelling bosom. The silent gush of grateful tears alone can tell the emotions of the thankful heart,—words are indeed but a meagre tribute for so noble an effort in behalf of the unfortunate, yet it is all we can award, will our friends at Wilmington accept it as a tribute of grateful hearts? Many thanks are due Mr. Cooke, who engaged to accompany her only to New York, but did not desert her or remit his kind attention until he saw her in the fond embrace of her friends.

Your friend and obedient servant,

(Signed) GEORGE S. BAKER.

Sanbornton Bridge, N. H., August 12, 1844.

The paper containing this card is now in the Young Men's Christian Association at Wilmington.

The facts regarding his membership in St. Andrew's Lodge, No. 10, were brought to light in a most interesting way. A Christian Scientist in Charleston was requested to look up the records of this lodge, as we had full confidence that it would corroborate Mrs. Eddy's claims. After frequent searchings and much interviewing with Masonic authorities, it was learned that the lodge was no longer in existence, and that during the Civil War many Masonic records were transferred to Columbia, where they were burned, but on repeated search a roll of papers recording the death of George Washington Glover in 1844 and giving best praises to his honorable record and Christian character was found; and said record, with the Seal of the Grand Secretary, is now in the possession of the Chairman of the Christian Science Publication Committee.

In the records of St. John's Lodge, Wilmington, as found by one of your own citizens, a Mason, it is shown that on the 28th day of June, 1844, a special meeting was convened for the purpose of paying the last tribute of respect to Brother George W. Glover, who died on the night of the 27th. The minutes record this further proceeding:—

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

"A procession was formed, which moved to the residence of the deceased, and from thence to the Episcopal burying ground, where the body was interred with the usual ceremonies. The procession then returned to the Lodge, which was closed in due form."

It has never been claimed by Mrs. Eddy nor by any Christian Scientists that Major Glover's remains were carried North.

The *Wilmington Chronicle* of July 3, 1844, records that this good man, then known as Major George W. Glover, died on Thursday night, the 27th of June. The *Chronicle* states: "His end was calm and peaceful, and to those friends who attended him during his illness he gave the repeated assurance of his willingness to die, and of his full reliance for salvation on the merits of a crucified Redeemer. His remains were interred with Masonic honors. He has left an amiable wife, to whom he had been united but the brief space of six months, to lament this irreparable loss."

From the *Chronicle,* dated September 25, 1844, we copy the following: "We are assured that reports of unusual sickness in Wilmington are in circulation." This periodical then forthwith strives to give the impression that the rumor is not true. It is reasonable to infer from newspaper reports of that date, that some insidious disease was raging at that time.

The allegation that copies of Mrs. Eddy's book, "Retrospection and Introspection," are few, and that efforts are being made to buy them up because she has contradicted herself, is without foundation. They are advertised in every weekly issue of the *Christian Science Sentinel*, and still contain the original account of her husband's demise at Wilmington.

May it not be, since this critic places certain circumstances in 1843, which records show really existed in 1844, that the woman whom he had in mind is some other one?

We can state Mrs. Eddy's teaching on the unreality of evil in no better terms than to quote her own words. Nothing could be further from her meaning than that evil could be indulged in while being called unreal. She declares in her Message to the Mother Church, "To assume there is no reality in sin, and yet commit sin, is sin itself, that clings fast to iniquity. The Publican's wail won his humble desire, while the Pharisee's self-righteousness crucified Jesus."

MARY HATCH HARRISON.

Newbern, N. C.

Wilmington (N. C.) *Dispatch.*

Health and Disease.

HEALTH is contagious, much more potently so, too, than is disease. I've about come to the conclusion that we physicians study disease too much and health too little to be of best use to humanity. If we would study health, talk health, act health, I believe disease would take care of itself. It is not only intemperate, it is un-Christian, to have dyspepsia. It is a disgrace to have any ailment that common sense will obviate. And it shows a lack of intellectuality to make each other's ailments and diseases the chief topic of conversation. I hope to live to see the day when it will be considered as ill-bred to ask after last week's influenza or last month's rheumatism as it now is to remark on the patch on one's shoe or the mole on one's face. I tell you, when we learn to think health and poise and wholesomeness, temperance and economic and physical happiness will not be long in taking up their abode with us.

A PHYSICIAN.

In *Watertown* (N. Y.) *Re-Union.*

Dr. John Watson says, "A sermon on the hell beyond the grave would be heard with indifference; a sermon on the hell in the east end of cities will lay hold on every man's mind.

From our Contributors.

"Thy Will Be Done."

J. R. MOSLEY.

THE prayer of Jesus in Gethsemane, "Thy will be done," is in harmony with all his other prayers and with his whole life-work and purpose. He not only came down from heaven to do his Father's will, but, under the most trying human conditions, he delighted to do His will. His meat was to do the will of Him who sent him and to "finish his work." He explained his ability to heal the sick, to raise the dead, and to judge righteous judgment, because he sought not his own will, but the will of Him who sent him. He made willingness to do "His will" the basis for knowing "the doctrine." He taught that his brothers and sisters were those who did the will of God. He made doing the will of God the condition for entering into the kingdom of heaven. "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven."

To the degree that the Christ-light has lit up any life coming into the world, it has brought the spirit of joyful and willing obedience to the will of God. All who have had this light have not only prayed, "Teach me to do Thy will;" but they have delighted to do that will. From the days of Enoch until now they have sought to do "God's work in God's way," and to please God rather than themselves. This has been especially true of the worthies of the Old Testament, the Apostles of the New, and the saints and reformers of the Christian Church. And the one through whom the Science of Christianity, the understanding of God that heals the sick and the sinner, has come to this age, the Rev. Mary Baker G. Eddy, has been and is "a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Preface to Science and Health, p. ix). Through willing discipleship and joyous obedience to the will of God, Mrs. Eddy has been enabled to do what she has for the health, morals, and spiritual elevation of the race.

What is the will of God concerning us, and why have all men and women, to the degree that they have attained unto peace, joy, moral grandeur, and spiritual illumination so earnestly longed and prayed for it to be universally done on earth as in heaven?

God's dealings with Israel reveal that He wills both the temporal and eternal good of His children. Whenever the children of Israel were "willing and obedient," they ate "the good of the land;" "The evil diseases of Egypt" and "the surrounding nations" were not put upon them; they obtained "joy and gladness" and "sorrow and sighing" flew "away." "He brought them forth also [possibly three millions in number] with silver and gold: and there was not one feeble person among their tribes." "And He brought forth His people with joy, and His chosen with gladness." And the promise to them was, only be faithful to me and you shall not be sick in the least, "for I am the Lord that healeth thee;" and God willed to withhold no good thing from them. Their "iniquities," not God, "turned away these things," and their "sins withheld good things from them." But, however far their own sins separated them from God, and the health, prosperity, joy —the salvation,—He willed for them to realize; whenever "they cried unto the Lord in their trouble," "He delivered them out of their distresses." In fact, the whole story of God's dealing with the disobedient children of Israel is the story of the good Father and the prodigal son written large. And all that the Father had was for the more faithful ones who sought to be ever near Him, even though they never understood the fulness of His love for them, any more than they were reconciled to His loving and forgiving spirit toward His prodigal children.

Digitized by Google

The obedience of Moses to the will and purpose of God enabled him, after he was eighty years of age, to take up and carry forward for forty years a work that would have worn out a score of unfaithful leaders; and at the age of one hundred and twenty, "his eye was not dim, nor his natural force abated." Joshua, the companion and successor of Moses and one of the two faithful spies, lived through forty years of wandering in the wilderness, led the people through Jordan, conquered much of the land, and lived until he was one hundred and ten; and before he departed he reminded the children of Israel that God had been faithful to all His promises. Caleb, the other faithful spy, on his eighty-fifth birthday was found asking for and receiving his share of the inheritance of Israel, and bearing testimony to this fact: "I am as strong this day as I was in the day that Moses sent me: as my strength was then, even so is my strength now."

"The time would fail me to tell" of the heroes of faith who "subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valient in fight, turned to flight the armies of the aliens" and "received their dead raised to life again." And those who only had occasional and partial glimpses of God's will concerning them, found in these moments of true insight and obedience that God willed their prosperity and not their poverty; their health and not their sickness; their joy and not their sorrow; their holiness and not their unholiness; their salvation and not their damnation; their good and never their ill.

The whole career of Jesus, from his conception to his ascension, revealed and demonstrated that God wills the coming of His kingdom through the destruction of the devil and all his works,—sin, disease, and death. He recognized that God willed to supply the lowest as well as the highest needs of man. "Seek ye first the kingdom of God, and his righteousness; and all these things [that ye have need of] shall be added unto you."

He was always "willing" to heal the sick, and he never questioned but that God was equally willing. In fact, a conspicuous part of his ministry was given to healing the sick; those whom he commissioned to preach the Good News were also commissioned to heal, and his final commission: "Go ye into all the world, and preach the Gospel to every creature," contained the assurance that healing the sick would be one of the "signs" that "shall follow them that believe."

He awoke others, as well as himself, from the dream of death, thus proving that the last enemy (death) as well as the first enemy (sin) is contrary to the will of God. He also revealed that God wills our joy and peace as well as our holiness and perfection, and that all His children should be saved. "This is the Father's will, . . . that of all which he hath given me I should lose nothing, but should raise it up again at the last day." "Even so it is not the will of your Father which is in heaven, that one of these little ones should perish."

The personal apostles and students of Jesus became better healers, helpers, and preachers, after his ascension than while he was physically present with them, because until that time they had not fully comprehended his teachings. They rose to such understanding of God and confidence in Him that whatever they asked, "according to His will," was granted them: and there is no record that they ever refused to heal the sick or to meet any human need on the ground that it was not according to the Divine will. Paul, who was not a personal disciple of Jesus but was afterwards called "to be an apostle of Jesus Christ through the will of God," had a clear sense of the power and willingness of God to heal the body through the spiritualization of the mind. His missionary journeys, as well as every new epoch of missionary progress on the part of the other apostles, were introduced by a special manifestation of healing power. He felt no harm from the sting of the venomous viper, and those who came to him for healing were healed. He taught that the "Spirit of life in Christ Jesus" sets "free from the law of sin and death." He saw that the will of God was for us to give thanks in everything, to rejoice always, and to bear all the fruits of the Spirit. He also discerned that God wills not only our sanctification, but also universal redemption through Christ; "That in the dispensation of the fulness of times He might gather together in one all things in Christ, both which are in heaven, and which are on earth."

According to the testimony of the Church Fathers, many of whom were men of great learning as well as piety, the "signs" and blessings that Jesus promised "shall follow them that believe" continued for a considerable time after the days of the apostles. Such a critical and skeptical historian as Gibbon, speaking of the causes which led to the rapid spread of Christianity during the first centuries of missionary activity, says, "The Christian Church, from the time of the apostles and their first disciples, has claimed an uninterrupted succession of miraculous powers, the gift of tongues, of visions, and of prophecy, the power of expelling demons, of healing the sick and raising from the dead. . . . In the days of Irenæus, about the end of the second century, the resurrection from the dead was very far from being esteemed an uncommon event" (Decline and Fall of the Roman Empire, Vol. I., pp. 539, 541).

As the church became worldly and political and departed from the pure and simple faith of the primitive Christian Fathers, these special manifestations of God's healing and resurrecting power became less pronounced and less frequent; but healing through direct spiritual means has been believed in, and to a certain extent practised, in every age of the Christian Church. The healing will of God has been re-emphasized and re-demonstrated in every spiritual movement and religious reform that sought to bring man in closer unity with the Mind and nature of Christ. In their days of greatest spirituality and consecration, special signs of healing followed the work of the Waldenses, Moravians, Huguenots, Covenanters, Friends, Baptists, and Methodists. Some healing followed the work of Luther, and Wesley was a firm believer in the power and willingness of God to heal the sick. His journal contains many reports of healing through direct spiritual means. He even prayed for his horse, and claimed remarkable answers to prayer over the elements.

But the most marvelous revelation of "the kindness and love of God, our Saviour, towards man,"—His willingness and ability to meet every human need,—that has appeared since the coming and the establishment of Christianity, has come to this age through the discovery and practice of Christian Science. Through the healing of unnumbered cases of sickness and of sin; through the joy, peace, wholeness, and holiness which this faith imparts, Christian Scientists are demonstrating anew the signs and blessings that always have followed and always will follow "them that believe," them that know and love God, and wholly rely upon Him.

In the light of Christian Science, God is good and made everything like Himself, good and very good, and He can will nothing unlike Himself. Because He is Love, He wills for us to be loving. Because He is Spirit, He wills for us to be spiritual. Because He is harmonious, eternal Life, He wills our life, health, and immortality. Because He is perfect, He wills that we be perfect. He also wills that everything unlike Himself, everything that is hurtful, be destroyed. He wills that "every plant" which He has not planted "be rooted up;" that the world, the flesh, and the devil be overcome; and that all the works of the devil be destroyed. And because God wills our freedom from sin and the consequences of sin that we may be like

Digitized by Google

Him in all things, every step in our redemption is the expression of His love. He wills "that all should come to repentance," because He is unwilling "that any should perish." He so loves us that He is in Christ divorcing us from "the evil one," as well as reconciling us unto Himself.

God demands perfection, and the atonement of Christ reconciles man to the perfect will of God, and not God to the imperfect will of man. "The atonement is a hard problem in theology; but its scientific explanation is, that suffering is an error of sinful sense which Truth destroys, and that eventually both sin and suffering will fall at the feet of everlasting Love" (Science and Health, p. 23). The sacrifices that the just make for the unjust, lead to the end that even the unjust may become just, and are designed to destroy the wrath of evil and not to appease divine Love. And while God works everything together for good to them who love Him, and to the end that all may love Him, even making the wrath of man to praise Him; while Jesus turned the crucifixion into an everlasting defeat of Satan, sin, death, hell, and the grave, and a victory for Life, Truth, and Love, "the enemy," not God, willed the evils that Christ came to destroy.

Therefore, when we pray "Thy will be done," we pray for God's will to "be done in earth, as it is in heaven;" and in heaven, we know there is no sin, sickness, or death. We do not pray for the suffering nor for the death of our dear ones, but we pray that they may be brought into harmony with God, in whom there is no pain nor death. We pray for good to triumph over evil; for Spirit to be victorious over the flesh; for Truth to destroy all error; for Life to overcome death; for divine harmony to displace human discord; for Love to cast out fear and hate; for God to be with us, and for all evil to "flee away." We pray for the full, and the earliest possible, realization of the vision and prophecy of St. John: "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain." We pray for the consummation of Christ's healing, comforting, and redemptive ministry.

Perfection.

A. C. G.

A SHORT time ago I was called upon to do some work on the typewriter which was important and demanded absolute perfection. At a first glance one would have thought it simple and easy of accomplishment, but I found that the work had to be written over time after time before perfection was reached. At one time, when there was no error in the work, a flaw in the paper was discovered and all had to be done over.

Finally, by patient watching and effort, perfection was attained, and the lesson learned was an important one. It brought out the thought of the patience and perseverance necessary in Christian Science when we are working out the demands of Life and Love. It showed me, more clearly than ever, how we must work slowly and carefully, keeping perfection always in our thought, and never permitting any imperfection to pass. When a flaw appears, no matter how slight, instead of overlooking it, a Christian Scientist should immediately recognize it as a flaw, and, by patient and prayerful work, cause it to disappear.

Those who do not waver and who constantly hold the perfect model before their gaze will not become weary in well doing when error appears, but will manifest greater care and patience as they progress. When at last absolute perfection of thought has been gained, the reward in harmony will be great.

A Christian Scientist, in his daily work, whatever it may be, should not be satisfied with the merely "well done" but only with the "perfectly done." This can be accomplished only when right thought precedes every act.

Among the Churches.

An Advance in Rochester, N. Y.

On Sunday, August 16, opening services were held by Second Church of Christ, Scientist, Rochester, N. Y. The occasion was not in any sense a dedication, but simply marked the transition from a hall to what is to be the permanent church home. At the morning and afternoon services, the usual order was supplemented by suitable addresses. In the evening the service was a series of interesting addresses by local and visiting Scientists.

The opportunity to secure the property which has come into the possession of this church was an obvious demonstration of the provision and direction of divine Love. About a year before the purchase of the property, it became evident that our church would in a few months be compelled to find larger quarters. We did not contemplate purchasing, and the finding of a suitable hall seemed to present a very difficult problem. In this apparent dilemma, there was earnest and persistent work in seeking the realization that Truth would bring us into our true place, and that this place was all ready for us. Just at the time when the necessity of making some change was becoming immediate, without any seeking on our part, this property, which had not before been in the market, and was not placed on sale, was brought to our attention in a most unexpected and unusual way. The location is exactly what we had had in view, central and convenient, and on a street that is quiet, clean, and retired; and what is a more favoring feature, upon the lot, which is large enough for the erection in the future of a large church, there is now a stately building which has always been used as a private school, and which contains a large hall suitable for an auditorium, with rooms adapted for reading room, etc. Thus, in a way that no human wisdom could have planned, the church's need was supplied, and the demonstration was given anew that when the need appears, to those who are trusting unswervingly that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494), this promise is fulfilled.—*Correspondence.*

Christian Science at the Minnesota State Fair.

Our third year's successful work at the State Fair has been completed. Two years ago, when we took up this idea, we had only a tent, but the results warranted the building of a permanent structure. The Sunday School pledged itself to raise the funds, and they completed their demonstration on Easter last, having been about a year in raising the four hundred dollars needed. The building was put up, and the wisdom of our course has been abundantly demonstrated. The inside of the building was nicely decorated, and we had a large portrait of our Leader, Mrs. Eddy, upon the wall. One of the signs on the roof read, "Erected by the Sunday School children of First Church of Christ, Scientist, Minneapolis, 1902.

It was very noticeable that the callers this year did not evince any idle curiosity, but appeared to come for the purpose of learning of Christian Science and getting some literature. In fact, many asked for literature before it was offered. The "Headquarters" furnished a meeting-place for friends who previously arranged to wait there, so that the place was crowded much of the time.

The realization of the presence of Truth resulted in several cases of impersonal healing, and beneficial effects were seen in a case when treatment was asked for and given. The far-reaching extent of this is indicated by the following data:—

The number of visitors during the six days was 2,812, of

Digitized by Google

whom 1,315 registered their names and addresses. These represented one hundred and eighty towns and came from nineteen states and Canada.

The number of pieces of literature distributed was 4,507, this included *Journals, Sentinels, Herolds,* Lectures, Pamphlets, Reprints, etc.—JOHN E. PLAYTER.

The Lectures.

At Minneapolis, Minn.

On Sunday afternoon, October 4, Judge Hanna delivered his first lecture in Minneapolis at the Metropolitan Opera House, under the auspices of First Church of Christ, Scientist. The Opera House was packed, over two thousand people being present, and many standing even in the upper gallery. The Mayor of Minneapolis, Hon. J. C. Haynes, very fittingly introduced Judge Hanna, referring to him as belonging to the same profession as himself. In part he said,—

I esteem it a privilege and an honor to have been invited to introduce the lecturer of the day to this audience. The subject with which he must deal is of vital interest to us all.

Nearly two thousand years have elapsed since that marvelous personality whom men call Christ first declared those simple but sublime truths upon which our modern Christian civilization is based, and first proved to the world by his own life that brotherly love is of the very essence of the God-like spirit.

Since his time, many sects and denominations of various names, all claiming to be based upon his teachings and calling themselves Christians, have arisen and attained more or less power and prominence; this has been especially true here in America where, by the fundamental law of the land, religious liberty is absolutely guaranteed to every citizen.

One of the most recent, and in some respects one of the most remarkable, of these, is that known as Christian Science or the Church of Christ, Scientist, and we have assembled here to-day to hear the tenets and doctrines of this organization stated by one who speaks with authority; and hence what he has to offer will command our respectful attention. I was glad to extend to him the greetings of our city, and I take great pleasure in presenting to you the speaker of the day, Judge Septimus J. Hanna of Colorado Springs, Col.—*Correspondence.*

At Fairbury, Ill.

Carol Norton, C.S.D., lectured at the Fairbury Opera House, Tuesday evening, October 6, under the auspices of First Church of Christ, Scientist. Mayor E. A. Agard in introducing the speaker said, "I am certain that I voice the sentiment of this audience, when I assure the distinguished speaker who is about to claim our attention, that his presence is a source of great pleasure to us, and more than this, we expect, and are sure, that much material and spiritual benefit will accrue to those whose good fortune it is to hear his lecture this evening. Christian Science is being more extensively read and more widely discussed with each succeeding day. There are some who read and discuss this great subject but to condemn, yet many new recuits are being added to the ranks daily, for be it said to the credit of the Christian Scientists that they never quarrel or bluster, but modestly, calmly, quietly, and convincingly present their truths and leave them for you to apply the test of Christian reasoning and either accept or reject what they have offered. The Science of Christian living is as exact as the science of mathematics, and a wider knowledge and a truer practice of the teachings of these fundamental and essential principles of right living, must necessarily make for the good of the individual and the community. It is, therefore, with great pleasure that I introduce to you Mr. Carol Norton, who will lecture upon "The Teaching of Christian Science."

The Local Record.

At Port Huron, Mich.

The Christian Scientists held a largely attended meeting at Masonic Temple on Monday evening [October 5].

By request Judge Law acted as chairman and spoke in part as follows:—

An apostle records the Master's saying, "And ye shall know the truth, and the truth shall make you free." The noblest occupation of mankind is the search for truth. The free expression of honest thought creates an atmosphere for the development of truth.

I know but little in detail of the theories of Christian Science, but I understand that it aims to restore pure Christianity as taught by the Master and his early followers; to heal the sick; to bring from the dim and distant future, where mistaken theology has placed it, the kingdom of heaven, and to re-establish it in the hearts of men. To any who make these principles their creed, we can well afford to listen.

Ladies and gentlemen, I have the pleasure of introducing to you the Honorable William G. Ewing of Chicago, who will speak to you with authority upon the subject of Christian Science.—*Port Huron Daily Times.*

At Wausau, Wis.

One of the finest audiences which has ever been seen in this city, assembled on Thursday evening last [October 8], at the Opera House to listen to the lecture of Carol Norton, C.S.D., of New York, whose subject was "The Gospel of Christian Science." He was introduced by M. B. Rosenberry, whose introductory remarks were in part as follows:—

If we are to know the truth, how are we to know it? We can only know it by searching and diligently seeking for it, by putting our minds in an attitude to receive it; and therefore I hold it to be the duty of every person to seek the truth. We are to listen this evening to what our distinguished friend may have to say to us, and in doing so we should receive his words in an open-minded way, weigh them fairly and justly, whether or not we may agree with all that he may have to say. Of the church which he represents, if I were to say anything it would be this, that if the test of a religion is the sincerity of purpose, unselfish devotion, upright, earnest Christian lives of those who profess it, then Christian Science must stand very high among the world's religions.—*The Central Wisconsin.*

Christian Science frequently refers to the "errors of belief," and to illustrate what is meant we may say that if a person were to claim that twice two is five, we should all agree that it was a mere belief, that it is not true, and by applying science, or the truth of the principle of mathematics, to this conclusion (false belief) we destroy, or correct it, with the truth that twice two is four. Hence we see that it is not a mere exchange of beliefs, but the revelation of the truth destroying a false sense. Christian Science claims, and proves, that this same logic is applicable to all our human affairs, including all forms of sickness and sin, in keeping with the saying of the Master, "Ye shall know the truth, and the truth shall make you free."

The Missouri Freemason.

The Christian Register says, "The great world puts all churches on trial just now. What are they worth in terms of human welfare and betterment?"

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Card.

My beloved Students:—If your right hand is not to know what your left hand doeth, may I ask you to change hands, and allow me to thank you deep down in my heart for the gift of $1,632.46 from the Christian Scientists who were present at the General Association of Teachers, which convened October 26, *Anno Domini* 1903. This generous sum is to be applied to the building of First Church of Christ, Scientist, edifice in Concord, N. H.

MARY BAKER G. EDDY.

Pleasant View, November 1.

Major Glover's Record as a Mason.

WE are very glad of the opportunity to republish in this issue of the *Sentinel* a letter by Miss Mary Hatch Harrison of Newbern, N. C., which appeared in the *Wilmington* (N. C.) *Dispatch,* October 24, 1903.

Mrs. Eddy has in her possession photographed copies of the notice of her husband's death and of her brother's letter, taken from the *Wilmington* (N. C.) *Chronicle* as they appear in that paper in the issues of July 3, and August 21, 1844, respectively. These photographs are verified by the certificate of a notary public and were presented to Mrs. Eddy by Miss Harrison.

Of further interest in this matter is the following extract from an editorial obituary which appeared in 1845 in *The Freemason's Monthly Magazine* published by the late Charles W. Moore, Grand Secretary of the Grand Lodge of Massachusetts.

Died at Wilmington, N. C., on the 27th June last, Major George W. Glover, formerly of Concord, N. H.

Brother Glover resided in Charleston, S. C., and was made a Mason in "St. Andrew's Lodge, No. 10." He was soon exalted to the degree of a Royal Arch Mason in "Union Chapter, No. 3," and retained his membership in both till his decease. He was devotedly attached to Masonry, faithful as a member and officer of the Lodge and Chapter, and beloved by his Brothers and Companions, who mourn his early death.

These letters and extracts are of absorbing interest to Christian Scientists as amplification of the facts given by Mrs. Eddy in "Retrospection and Introspection," and without doubt they will be of almost equal interest to our Masonic friends, but the most important point subserved by the collection of such historical data is that they completely overthrow the attempts that have been made to disparage Mrs. Eddy and to affect her work injuriously. M.

An Optimistic View.

IN a late address before the national conference of Unitarian churches, a well-known publicist has cited many encouraging intimations of the growth of religious sentiment, and among other things he notes the public conscience, which he regards as "more acute to-day than at any time in the history of mankind;" the place of temperance in general thought; the recognition of the right of agreement; the increase of the spirit of reconciliation; the more dominant religious spirit in the adjustment of international affairs, and the universal exaltation of character over creeds.

These phenomena certainly support the speaker's contention, but we are quite sure that there are yet other evidences of a dawning day which are deeper, more prophetic of the advance of a truly religious sentiment. Among these may be mentioned the very manifest tendency of thought and conviction toward idealism—the spiritual statement and explanation of things—and the increasing demand for a demonstrable creed.

The past has given large place to a dual concept of reality,—that of Spirit and that of matter,—which has imposed itself, in some degree, upon every form of religious faith, and it is still found entrenched in many generally accepted beliefs; but its every aspect and position is vulnerable, and revolutionary changes are silently being effected by the coming of that true idealism which recognizes God —Spirit—and His spiritual manifestation as including all reality and being.

The other most hopeful indication of advance is seen in the growing indifference toward undemonstrable religious theories, however hoary, dignified, and plausible they may be. The test to which religious profession is being more and more generally subjected, is not that of conformity to a so-called orthodox teaching, but that of ability to do the works of the Master. Men are noting the rapid advance, the splendid conquests of physical science as compared with religious Science, and they cannot escape seeing that the amazing contrast is explained by the fact that the test of demonstration has been constantly imposed in the one case, and ignored in the other.

It scarcely need be added that the world-wide dissemination of the clear and emphatic teaching of Christian Science upon both these points, together with its practical demonstrations of the present ability of spiritual truth to establish its goings, and meet every need of the aspiring soul, explains in large degree these more progressive, more promising attitudes of public thought.

Learning from Christ.

IN the development of every human being, living comes first, then learning. These processes are at first unconscious, simple, natural, but there soon comes what is regarded as the inevitable struggle to live and learn.

It cannot be denied that the chief end of general education is to provide means whereby the body may be fed, clothed, housed, and adorned. As this endeavor involves ceaseless toil and much disappointment, it has also seemed necessary to educate thought in such ways as might serve to entertain and enliven the human mind, so as to make the long, hard struggle more endurable.

To the unthinking this may seem an unnecessarily dark picture, but others have seen these conditions, and Longfellow says,—

> Let our unceasing, earnest prayer
> Be, too, for light, for strength to bear
> Our portion of the load of care
> That crushes into dumb despair
> One half the human race.
>
> *The Goblet of Life.*

In institutions of learning the greater number are concerned with the burdens which they expect to carry when their studies are completed, and many leave their *Alma Mater* almost worn out with their effort to gain knowledge. When the school days are over this educational work still goes on in the effort to carry out on broader lines that which was begun in youth, but how few there are who would be able to tell what is the goal of all this learning, striving, and getting.

Digitized by Google

A great thinker has said that "life is the finest of the Fine Arts; that it has to be learned with lifelong patience." The world's great Teacher said when on trial before Pilate, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth," and his entire life as recorded in the gospels, especially his mighty deeds in the overcoming of sin, disease, and death, proved the truth of his statement.

And what a teacher was this, who thus proved the verity of his doctrine "not with enticing words of man's wisdom, but in demonstration of the Spirit and of power." At the tomb of Lazarus it would have been vain to call upon the Roman legions who had slain their thousands, as vain to appeal to the high priest in his robes, or to Cæsar in his purple, for none of these had the knowledge that was needed to save from death, but he who could and who did "save unto the uttermost," he who had been taught of God, said, "Learn of me, for I am meek and lowly in heart," and again he said, "Every man therefore that hath heard, and hath learned of the Father, cometh unto me."

Our revered Leader heard the call of Life at the very portal of death, and as Jesus declared, she came to the Christ, and learned how the sick and sinful were restored in the olden time, and how we too may be taught of Christ, not through material means, but through Science which is revealing to-day the power and glory of infinite Love. Unless we are learning of Christ, of Truth, we have started with a false premise, and the result of this fundamental error will soon be apparent in that mental and physical exhaustion which is the bane of so many students and thinkers.

He to whom the truth of being is known, is daily learning more of Life, of Mind, of the power of divine Love which alone makes life truly worth living. Our text-book says, "Any student who adheres to the divine rules of Christian Science, and imbibes the spirit of Christ, can demonstrate Christian Science, cast out error, heal the sick, and add continually to his store of spiritual understanding, potency, enlightenment, and success" (Science and Health, p. 462).

In learning truth we must unlearn error,—the beliefs which were so assiduously pursued in the days of our ignorance of God. The Christ says evermore, "My reward is with me." We find this reward in new strength which enables us to go out into hitherto unknown paths and to find therein healing, moral purification, and mental unfoldment. At every stage burdens are dropped and spiritual gains registered as we press toward the final goal,—the understanding of the Mind which knows all reality,—which is All,—the Mind "which was also in Christ Jesus. K.

A VERY prominent minister has recently said, "To be a Christian is: first, to accept Christ as a personal Saviour; second, to imitate him as a personal example; third, to assimilate his spirit into one's own life."

In reading this statement, one is impressed first of all with its indefiniteness. The pronouns him and his, as here used, refer to Christ, while the sense of the passage demands that they refer to Christ Jesus, and in this respect the statement well illustrates the current and abounding confusion in the use of these sacred names.

Christian Scientists accept the meaning of the word Christian which was evidently intended to be conveyed by this definition. They declare with all believers, that to be Christlike one must imitate the conduct or daily doing, of Christ Jesus, and that not in part, but fully. Remembering that his daily doing included the overcoming of sickness and sin, and that he repeatedly enjoined his disciples that they were to continue his healing works, Christian Scientists feel warranted in claiming that those who are endeavoring to fulfil this command, together with all others of the Master, have a peculiar and most legitimate right to the assumption of this name. It seems to them further that for one who is professedly following Christ Jesus, to question the present practicability of the effort to fulfil any one of his specific commands, is to indulge an inconsistency which is unfortunate and which must ultimately appear to all. W.

The Ladies' Home Journal.

THE following extracts from an illustrated article entitled "Mrs. Eddy as She Really Is," occupying over two pages of the November issue of *The Ladies' Home Journal*, are indicative of its appreciative and friendly tone:—

"Dwelling in the quiet seclusion of an estate on the outskirts of Concord, New Hampshire, is a woman whose name is known to thousands all over the civilized world, yet who devotes herself so constantly to the cause in which she is interested that even of the thousands who sympathize with her and revere her as a leader, only a comparatively limited number, besides those of her own household, ever see and know her in her home. This widespread fame came to the Reverend Mary Baker G. Eddy through the writing of her book, which has come to be the text-book for the Christian Scientists.

. . . . . .

"In her devotion to the one chief concern in her life Mrs. Eddy denies herself to an extent that few reformers have ever equaled, and she puts into her labors a living enthusiasm. She is, however, by no means a woman of one idea. Her interests are varied and she is in close touch with the current progress of events. Her chief interests do not take her from active participation in the affairs of her home city and the personal oversight of her estate and household. She is a generous contributor to local enterprises and home philanthropies."

The article is written by Oscar L. Stevens, and is illustrated from photographs by T. E. Marr.

A Letter to our Leader.

Washington, D. C., October 10, 1903.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—We desire to tell you of the growth, prosperity, and harmony of our dear church, Second Church of Christ, Scientist, of Washington, D. C., for we feel you have an especial interest in the advancement of our Cause in the nation's capital.

We rejoice to say our church is in an exceedingly prosperous condition in every way. During the past year our membership and attendance have nearly doubled, and we were compelled last winter to secure a larger hall, which is rapidly being filled, and it is a desirable one,—large, well lighted, and centrally located. Last week we moved our reading room to Traders National Bank Building on Pennsylvania Avenue, one of the very best locations in the city, half way between the Capitol and White House; and a large sign, CHRISTIAN SCIENCE READING ROOM, can be read for blocks.

A great deal of literature has been distributed, the press work looked after closely, and the mental activity of our members increasing, so the fruits are being manifested in many ways. Also a great increase of fraternal feeling between the two churches is evident, and for this and all other blessings we thank God.

We wish to add, dear Leader, our gratitude to you for your wise, loving leadership of our Cause, shown in so many ways, even lately,—in the new Manual with its timely revisions; the helpful Concordance; and also the Association of Teachers, which all feel means so much to the Cause. We all hope to do better healing to meet the demand of the hour; feeling that in this the true teaching is done.

Digitized by Google

We desire to express our full confidence in you as our Leader and Guide, and in the wisdom which you express in your great ability in directing our sacred Cause, and approve to the utmost the methods you use. We have a fervent desire so to understand and utilize the Divine energies which you exemplify that we may be humble, but useful and obedient servants to you and with you of our heavenly Father in advancing His kingdom on earth.

And to this end we, the Board of Trustees (speaking for the Church) renewedly consecrate ourselves to His service, looking lovingly and obediently to you for further directions from time to time as may seem necessary for the present needs.

In loving gratitude,

TRUSTEES.

We are holding a number of testimonies and articles because these data have not been supplied.

To the influence ot Goethe we may ascribe the constant disposition to crush the human being by contrasting and comparing him with the Infinite, as if the true greatness of man did not consist precisely in the consciousness of the Infinite which surrounds him without impeding his action; as if the eternity which is before and behind us were not also within us; as if from high above the earth we tread a voice did not reach us from time to time, bidding us onward, in action, in faith, and in the consciousness of our dignity. MAZZINI.

To a Waterfowl.

WHITHER, midst falling dew,
While glow the heavens with the last steps of day,
Far, through their rosy depths, dost thou pursue
Thy solitary way?

Vainly the fowler's eye
Might mark thy distant flight to do thee wrong,
As, darkly painted on the crimson sky,
Thy figure floats along.

There is a Power whose care
Teaches thy way along that pathless coast,
The desert and illimitable air—
Lone wandering, but not lost.

He who, from zone to zone,
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone
Will lead my steps aright.

W. C. BRYANT.

Testimonies of Healing.

I came to Christian Science because it appealed to me as being what we had been seeking for so long a time, yet could not find.

It was as far back as 1887 that I was told by our family physician that it was extremely necessary for an operation to be performed upon my wife, who was becoming more and more frail day by day. It was very evident that something would have to be done. At this time, we knew nothing about Christian Science, and had not even heard it mentioned. Four doctors were called in, two of them being skilful surgeons, and the operation was performed successfully, but still my wife's health did not seem to improve, and powerful medicines were taken continually. It seemed to me that always after taking a dose she seemed to feel less like herself than before she had taken it. One day she said to me, "I feel so badly all the time that I would not care to live, if it were not for you and our little daughter; I will not take any more medicine, for it does me no good, but always seems to make me feel worse." I had not told her that the doctor had said that she might live a year, but not longer.

Just as she expressed this resolve, we heard, through a relative, about Christian Science; and thinking that perhaps this would benefit her, she sought information in regard to it, and was so much interested as to become the possessor of a copy of Science and Health. She began to read it, and in a very short time commenced to improve in health and strength, and one day actually found herself running after a car.

The teachings contained in this wonderful book seemed to appeal to her mind, and brought to her the revelation that she need not be ill one day, hour, or minute; that God does not recognize sin and sickness, or any other form of error; that we may fulfil our mission by reflecting the God-life, and by endeavoring to show by our nobleness of character and meekness of heart that we are "children of God."

There was a decided improvement from the time she recognized these facts, and this caused me to wonder what there was in the thought that could be the means of doing so much good. I had been brought up in an orthodox church, and it was pretty hard to get rid of some of the doctrines that had been instilled into me from childhood. I was inclined to doubt, although I could plainly see the help that my wife had received; pretty soon, however, I was to be put to the test.

I was working for a short time in the shipping business, and being at the extreme end of a four hundred foot dock, one day was suddenly called by the superintendent. I started on a quick run and had gone but half the distance, when I caught my foot in a large iron ring, and was brought at once on a level with the flooring with tremendous force. Instinctively I threw out my hands to protect my face, and my whole weight (impelled by the impetus with which I was thrown), came upon my left hand, which struck, palm first, on the solid hickory timbers.

The involuntary exclamation came to my lips, "My God, help me." My hand was bent back until the backs of my fingers touched my arm; but when I rose to my feet and found that no bones were broken, I knew that my prayer had been answered. My wrist bones and the tendons of my arm and hand were intact, but the entire under surface was black and blue. The pain seemed so intense that I did not for the time being think of receiving help through Christian Science.

As soon as I got home that evening, my wife gave me a treatment, reminding me that there were no accidents in divine Mind. At the start my hand and wrist were swollen like a cushion in size; the morning afterward, this had mostly disappeared, and the following day, the swelling

Digitized by Google

was gone entirely, and only a little of the discoloration was left. On the fourth day, no signs of the accident were visible, no pain was felt, and it has never troubled me since. I felt confident while receiving the treatments that my hand would be healed, and I think this was "half the battle won."

This demonstration proved to me that there was something in this beautiful thought for me, as well as for others; besides, our daughter (now a young woman) was shortly afterward cured of what had been once declared incurable by *materia medica,* so-called chronic tonsilitis. She has never had a return of it.

We have all been helped in many other ways. Sometimes it has seemed as though we were completely encompassed by trials and difficulties, but in each and every case, as we have complied with the teachings of Christian Science, we have found that every cloud had a silver lining.

I have been helped in business, and would commend the study of Science and Health to all who would like to have their business governed by Love and Truth.

We are now living in a beautiful place on Long Island, and have consecrated our rooms to Christian Science. For the last two years we have held meetings every Sunday, and trust that we may be the means of bringing to many others the good news of Christian Science.

C. D. MUNSON, Floral Park, N. Y.

I have just been reading a testimony in the *Sentinel* of one who had tired of the pleasures of sense, had not read his Bible for twenty years, and who, in the bitterness of his heart, cried out to know God.

The contrast in our experiences impressed me, for I had been an active church worker and yet I cried out in the same bitter anguish for a God to save me from sin. So it is the world over, the hungry heart of humanity is crying for something to satisfy.

I had looked into infidel literature, and many isms, and had finally settled down to the positive conviction that the religion of Jesus Christ was the truth. I joined an orthodox church, but after several years of vain endeavor to lay hold of Christ's religion, I became desperate.

Seekers, hungry as myself, were coming to me to help them to a better way. I felt it best not to tell them of my own failure to find the rest and peace I sought, lest I discourage them, and I tried as best I knew to "point to heaven," though I knew I was not able to lead the way. With tears and bitter heartaches I studied my Bible for light and prayed earnestly that I might be delivered from evil. The sins of malicious thought, jealousy, envy, vanity, etc., seemed to cling fast in spite of all I could do to resist them, until I cried with Paul, "Who shall deliver me?" and not until there came the understanding of God as revealed to us in "Science and Health with Key to the Scriptures," could I intelligently add, "I thank God through Jesus Christ our Lord."

Only those who have experienced the rest, the joy, the satisfaction which this truth brings, can know what it meant to me. My prayer was answered; I had found a God who could indeed save from sin.

Nor was this all. I had given much care and attention to hygienic living in my family, but in spite of all I could do (more properly speaking, perhaps, *because* of it), we were a sickly family, requiring almost constant attention from the family physician, and much of the time of two specialists. Here again I was learning to feel my helplessness.

I did not come to Christian Science for physical healing, but I knew if it were truth the physical healing would come, and it did. For more than seven years we have used no medicines of any kind. The Christ has been our only healer. Deafness, dyspepsia, grip, flux, and many other ills have been met and mastered by the understanding of God and man's relation to him.

With the coming of Christian Science into my life came also the necessity of proving that God is the source of supply, as home and all income were entirely swept away.

As I look back over the experiences of the last seven years I do thank the Father for this opportunity to prove that He will indeed provide a table in the wilderness.

When the way has seemed dark I have clung to that promise with its condition: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added," and it does seem wonderful how the needs have been met. Divine Love has given me more than I have thought or asked, for I knew not "what to pray for as I ought," not knowing that Love had such good things to give.

Especially am I grateful for the educational opportunities afforded my two daughters for receiving not only unusual training in the regular school branches, but in music and art as well. This is one of the many blessings that have come to me through Christian Science. I now know that "Soul hath infinite resources wherewith to bless mankind" (Science and Health, p. 60).

How our love for the dear Leader grows as we strive to follow her, and see, in a measure, what it has meant to live near enough to God to be able to bring to the world this great salvation.

MRS. GRACE SCRAFFORD VOORHEES, St. Louis, Mo.

Thirteen years last April I first heard of Christian Science, and like a great many others I turned to it as a last resort, having exhausted the skill of three of the best physicians in northeastern Iowa. For six years I followed faithfully their instructions in order to get relief from a disease which they pronounced cancerous bunches on the lymphatic glands. These bunches extended from the back of my ears to below the armpits, my left armpit being so filled with them that all circulation was stopped, causing me to have no use of my arm, and at times my finger-nails were black.

The suffering I endured cannot be described. The first two physicians I treated with advised an operation, but the third one would not agree with them. His own words were, "I would not advise an operation. The glands would have to be removed and that would necessitate cutting under the shoulder blade; we know where we would begin, but not where we would stop. All I can offer you is my sympathy."

With these words ringing in my ears, I went to the home of a cousin whose wife was at this time in Minneapolis taking treatment. Her husband wrote her what the doctors said about my case, and she came home at once and advised me to try Christian Science. Seeing her improved condition, my husband advised me to go, but I hesitated, fearing it would interfere with my religion, but the thought of getting well and being able to raise my two children prevailed, so I went. I asked the practitioner if he thought I could be cured. He encouraged me, and after the third treatment I felt no more pain or soreness, and in three months the bunches were all gone. I was also healed of neuralgia and constipation. From that time to this I have been well and strong, and have been enabled through the understanding of this blessed truth to help others out of the darkness which I once thought was light.

Christian Science has done so much for me and mine, that I cannot find words to express my thankfulness. I have had the privilege of class instruction, and my one desire is that I may live the life that is worthy the name I bear. I am deeply grateful to God for this loving-kindness, and to our beloved Leader, Mrs. Eddy, who has toiled so incessantly to give this truth to the world,—the truth that makes free indeed.—MRS. ELLA SMITH, Calmar, Ia.

Digitized by Google

Christian Science was brought to my notice about six years ago, and I was healed of many diseases which medicine failed to help. I had tried all medical aid, but I was a total wreck, a victim for the grave, when Christian Science came to my rescue. As man's extremity is God's opportunity, so it was in my case. I was willing to try or sacrifice anything, so great was my suffering, and with one treatment I was healed.

I had been a member of an orthodox church nearly forty years, and I must confess I never understood God till I came to Christian Science. I never was satisfied, I was always thirsting after the truth, there seemed to be something that I needed, but now I have found the truth, the truth which has made me free.

When I was healed I wanted to know the Principle of it, and now I have this blessing which the world can neither give nor take away. I am daily striving, watching, and praying that I may have the Mind which was in Christ Jesus, that I may know that there is no other Life, Truth, and Love but God, and that I may overcome evil with good. Christian Science could get along without me, but I never could get along without Science, for it heals me every day.

Words cannot express the love and gratitude I owe to our dear Leader, Mrs. Eddy, for what Christian Science has done for me and the benefit I have received through her teachings and her labor. The Bible is no longer a sealed book to me, and through the spiritual uplifting and the power of Truth over error, I have had many demonstrations. I have been very successful in healing others, and the sincere and habitual desire of my heart is that I may know more of this truth that I may always be ready to take up my cross and follow my blessed Master. I am very grateful for this discovery which has come through Mrs. Eddy, and hope she realizes how much we appreciate her faithful work.—MARY MCCAFFERTY, Topeka, Kan.

It is about eight years since I took up the study of Christian Science. I had been suffering with a trouble in my head for nearly thirty years. I had tried many physicians, some of whom I know had made a study of my case with a sincere desire to find something to bring me relief. They had tried all the remedies they knew of that had been said to cure the different forms of head trouble, but none seemed to reach my case, which physicians called congestion of the nerves of the brain, and the last one I called, said the only thing that could be done was to use morphine when I felt an attack coming on to tide me over the worst agony of pain, for it would last three days and nights at one time. Then I resorted to steam baths, electricity, and every material treatment that was offered to me, but could find no relief in anything.

At last I heard of Christian Science, and was advised to get the book Science and Health, by Mrs. Eddy, and study it. I did so and began very cautiously to look into it, for I was taught to believe very rigidly in the orthodox faith, and I said that if this in any way conflicted with the Bible, I should have nothing to do with it. I very soon took up the study in earnest, and oh, the joy that came to me in the new unfolding of the truth contained in the Bible, when unlocked with the key of Divine Science!

I had been quite a student of the Bible in former years, committing a great many passages of Scripture to memory, and they came rushing into my mind so flooded with a new light that I would sit in astonishment, drinking in the spiritual meaning of the word until I was "lost in wonder, love, and praise."

My healing was slow and I was so absorbed in the study of the "little book" that I hardly realized when the healing came, but I was healed, not only of the head trouble, but of other diseases,—dyspepsia and indigestion.

In the year 1898 it was my great privilege to receive class instruction, and I can never express my gratitude to God and to our Leader, Mrs. Eddy, who, by her willingness to endure all things, has given to us the wonderful truth contained in "Science and Health with Key to the Scriptures."

MRS. ADELIA S. CUTLER, Osage, Ia.

Believing that our experience and healing in Christian Science will be of interest to other business men, I shall speak of some of the blessings we have received. With my two brothers we are engaged in business in this city and have in our employ about sixty men. Christian Science was first brought to our attention by my own healing. I had been in very poor health for several years, and had been under the care of some of the best physicians in our city and elsewhere, but was unable to obtain relief. Some physicians claimed that one lung was gone. I was also a great sufferer from stomach and kidney trouble, and was told that I could not live much longer. For three years I lived on the most rigid diet. After all the material means tried had failed, Christian Science was sought, and brought restoration to health. As superintendent my work requires close attention, and oftentimes I assist with the heaviest work. Before hearing of the Science I was obliged to give up my duties in our foundry, and I bought a small place in the country, hoping that lighter work and the country air would restore me to health, but this also failed.

After my healing, my mother tried Science treatment, and was made to walk after twenty-eight years of invalidism. My brother had two daughters sick with typhoid fever and given up by the physicians, and they were healed in Christian Science. I am confident this brother's eye was also saved by Christian Science. One day when pouring the molten iron a small amount about the size of a shot splashed in his eye and fastened on the eyeball. I picked it therefrom with a penknife, and nothing but Christian Science was applied to overcome the injury. A third brother was healed of severe stomach trouble through Christian Science. Many of the men in the foundry come to me for help for burns from the molten iron, and injured fingers and feet resulting from heavy castings falling on them.

One of the men in the foundry was taken quite ill at his home. He was not expected to live and threatened suicide. I was asked to call and see him, and in three days he was healed. I could tell of many more who have been made happy by this blessed truth. A number of our employees have purchased Science and Health.

The demonstrations in business have been remarkable. By depending upon Truth and endeavoring to conduct our business upon a strictly honest basis, it has steadily increased.—BERNARD HENRY KRAMER, JR., Dayton, O.

My healing from indigestion was slow, for it required more than a year. I suffered intense pain almost all the time, and I resolved that when I was healed I would write my experience. As it may be helpful to some to know that my ailment was overcome, I would say that when I went to my meals and saw something I wished to eat, fear would come up. Then I strove to realize that man has dominion over all the earth, and that I should not give a little fruit dominion over me, since it has neither intelligence nor power, for man has dominion (through God) over everything. This destroyed the fear, and when the fear was gone all suffering was also gone.

I write this in the hope that it will help some one else who may have slow healing and a consequent sense of discouragement. It is about four years since I was healed, and there has never been the slightest return of indigestion.

There is one thing more I wish to speak of. I had the pleasure and grand privilege of attending the Communion service at Boston in June, 1903, and I wish to thank the

Digitized by Google

Scientists of Boston, for their kindness shown to those who came from a distance. I found everything prepared for my comfort when I arrived, and how complete the arrangements were for our accommodation when we went to Pleasant View to see our beloved Leader. God does bless her for giving to the world this truth which heals from sin, sickness, and sorrow.

I feel that the Concordance is something for which we should be very thankful, as it is another proof of her untiring efforts to help mortals work out of sin, sickness, and death.—S. E. H., Park City, Utah.

It is over three years since I first heard of Christian Science. I was then treated for malaria of three years' standing, and was cured in less than two weeks, when I was able to go to work and I have been working ever since. I have taken no medicine since then, and before that I had to take medicine nearly every day. I was also cured at the same time of several other ailments.

My little boy was very sick last winter with the mumps. He could not keep anything on his stomach and was delirious. He wanted me to write to my practitioner, and seemed confident that if I did he would get better, and it seemed the very evening the practitioner got the letter he began to improve and slept well until morning. I have had other demonstrations in the family.

More than all this I have been greatly helped mentally and spiritually. I thank God that the light of Christian Science was ever brought to me. I feel grateful to Mrs. Eddy who has worked so hard to help us in this Christian way, and who is teaching us to know Truth.

MRS. ROBINA HARRIS, Marlette, Mich.

Wishing to acknowledge some of the benefits I have received in Christian Science, I send the following statement regarding the instantaneous healing of broken bones, which proves that truth, scientifically applied, is the greatest of all surgeons.

On Friday morning, July 24, 1903, while taking my usual morning exercise in my room before going down to breakfast, I attempted to turn on one foot, and, losing my balance, fell heavily, striking my lower ribs on the side rail of the bed. Something cracked like the snapping of a dry stick, the sound being heard distinctly by myself and a friend who was present and who tried to catch me but failed. My friend asked if I were hurt, and I replied, "Not much." He then helped me on the bed and, on examination, it was found that three of my lower ribs were broken close to the spine. The pain in my back and side was intense, and the thought came to me that I should be laid up for a long time and be compelled to endure great physical suffering.

Knowing what Christian Science had done for me in the past, and the many wonderful cures of other cases, I asked my friend to telephone for a practitioner to come at once. She came very soon after receiving the message, and when she came into the room I said, "I have broken my ribs." She replied, "It makes no difference to divine Mind whether you think you have broken them or not."

Within fifteen minutes after her arrival the demonstration was made. I was relieved instantly of all pain and immediately arose to a sitting posture. In a short time I was moving about just as usual and have felt no symptoms of the break since. I only missed one meal, and that was the morning I fell, and I was not confined to my bed or room at all. I feel truly grateful to Mrs. Eddy, and to the practitioner for the instantaneous healing.

All things are possible with God. "Under divine Providence there can be no accident, since there is no room for imperfection in perfection" (Science and Health, p. 424).

C. F. S., Los Angeles, Cal.

My husband and I came into Christian Science eight years ago through the wonderful healing of a dear sister. This was followed by the still more wonderful healing of another sister, in about a year.

In all this time we have not used any medicines, and have been spiritually and physically sustained.

My husband was healed with absent treatment, the second year after we came into Science, of a severe attack of inflammatory rheumatism. I cannot express in words my gratitude to our Leader, Mrs. Eddy, or to those other dear Scientists who have helped us during these years to grow into the understanding of Science which heals and blesses all who turn to its ministrations.

The *Sentinel* and the *Journal* are sources of the deepest pleasure and profit to each member of our family.

SARA D. PRICE, Durango, Col.

The fall of 1833 found me with my mother's family and others, camped within the borders of Texas, of which we had just become citizens. Texas was then a wilderness, inhabited by roaming, hostile Indians.

I was a refugee in 1836, fleeing from home before the army of Santa Anna. Of the pioneers who enlisted under the flag of the Lone Star to battle for freedom, I am one of the few now living to testify to former conditions. After seventy years sojourn in my adopted state, I became again a refugee, fleeing from a merciless foe—ill health—to the standard of Christian Science to battle for right against wrong, for truth against error, for God and His demonstrated power.

Only a few years since, Mrs. Eddy startled the world with this new philosophy, this new Science of God, infinite Mind, an ever-present help to those who seek aright, and I am proud to say that I am again a pioneer and have demonstrated this fact of God's healing presence to my entire satisfaction.

My husband being a physician, I naturally had all confidence in medicine. It gradually failed me, however, and I became a physical wreck. I suffered intensely for a year with muscular rheumatism and other ills. Life was a burden and I was hopeless.

Meantime this new star of Christian Science had appeared, leading all who were willing to a haven of rest. I was healed through the ministry of a Christian Science practitioner, and my heart is filled with gratitude to her and to our beloved Leader, Mrs. Eddy, and most of all to the ever-present God, who "healeth our diseases" and reveals to us the Christ-truth.

I am a member of Second Church of Christ, Scientist, of Houston, Tex., the only church with which I have affiliated in fifty years.

I write this testimony hoping that some forlorn and shipwrecked brother, seeing it, may take heart again.

MRS. ANSON JONES, Houston, Tex.

The Dewdrop.

What is that chaste, that sparkling thing,
Which to the rose at dawn doth cling,
And nestled near its throbbing breast
Plays ardent lover while a guest?

'Tis but a tear of weeping night—
The weeping of a glad delight—
Till startled by obtruding day
Night, fearing capture, steals away.

JOHN W. FLAGG.

They are never alone that are accompanied with noble thoughts.—SIR PHILIP SIDNEY.

Digitized by Google

From our Exchanges.

"Ah," says one, "but this special outpouring of the Spirit upon the early Christians at their baptism was for the purpose of empowering them to work miracles, and the age of miracles is past. When those twelve poorly instructed men in Ephesus received the Spirit after they were baptized into the name of the Lord Jesus, they spake with tongues and prophesied. And we read of gifts of healings, working of miracles, discerning of spirits, divers kinds of tongues and interpretations of tongues, as being granted the Corinthian Christians. These gifts are unknown and not needed in the modern church."

Well, friend, if they are unknown, it is certainly not because they are not needed; but some of these special gifts of the Spirit bestowed upon the early Christians at their baptism are greatly needed in our churches to-day. . . . We may well believe that such useful gifts as these were designed to remain in the Christian church to the end of the age, that they are found in the church to-day, and that, if they are looked for and prayed for in faith, they may be received in baptism to-day as fully as they were granted in baptism to the early Christians.

REV. A. S. COATS, D.D., in *The Watchman.*

"He that covereth his sins shall not prosper." Most men try to cover their sins. They shall not prosper in the effort to hide them. They shall not prosper in their prayers. The man with a secret sin, coming to the mercy-seat, comes in vain. Men may find no traces of his sin. He may persuade himself that it was not sin. But the power of prayer is gone. He shall not prosper in his attempts to serve God. He may hope to make amends by diligence in the vineyard of the Lord, but his service is not acceptable. There is a secret evil that neutralizes all his good deeds. He shall not prosper in his own soul. His effort to find happiness is vain. A drop of bitterness mingles with every draught. He does not grow in grace. His hope is vain. He is a stranger to peace. The hideous thing which he has hidden haunts him.—*The Christian Life.*

Men become like that which they love. Almost insensibly, but with absolute certainty, the process goes on until by degeneration the man is brought down to low and mean depths, or else by transformation he has been raised from glory unto glory. As illustrating the one, there are those of whom the Scriptures say, "But they came to Baal-peor and consecrated themselves unto the shameful thing and became abominable like that which they loved." As illustrating the other class there are those of whom the Scriptures say that they "with unveiled face reflecting as a mirror the glory of the Lord are transformed into the same image from glory to glory even as from the Lord the Spirit."

Pacific Baptist.

To-day men care nothing for the theological aspect of morals; they are concerned about the moral aspect of theology. The present demand upon religion is not what rewards will she bestow on us in some distant future state, but what means of present growth and happiness does she offer man. Man's soul is descried through the medium of his ordinary habits and conduct; and whatever salvation it is to win must be through the avenues of sense and natural desire, purged of selfish animalism and bent to spirit uses. The whole man must be uplifted and purified. "If religion cannot cure your temper, it cannot save your soul."

CELIA PARKER WOOLEY in *The Christian Register.*

We should not wonder if the friendly visits of the Ancient and Honorable Artillery Companies of England and America should do more to promote peace on earth than all the enormous sums our administration is proposing to spend on the new war vessels.

We would propose that the cost of *one battleship* be voted by Congress to invite and entertain *two hundred prominent citizens* of every civilized nation in the world.

GEO. T. ANGELL, in *Our Dumb Animals.*

It should never be forgotten that the Christian spirit may exist where the knowledge of Christian truth is quite defective. Hence a man's creed is not an infallible indication of his Christian character.—*The Watchman.*

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ. Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health, in lots of twelve or more to one address may include any or all of the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . 5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid. 4 00

Twelve or more to one address, each, prepaid 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Postmaster General Payne, in his estimates for appropriations for the fiscal year ending June 30, 1905, calls for an aggregate of $168,085,770 for the postal service and $1,511,050 for the Post Office Department proper at Washington. The appropriation for the year ending June 30, 1904, was $153,511,550, and the estimated revenues for that year $146,304,643. The estimated revenue for 1905 is $159,472,061, and the deficit $8,613,709.

The total increase on account of city delivery service is $1,671,750 and rural free delivery increase is $3,163,700. No estimate is made for the special fast mail facilities, for which the last appropriation was $167,726. An estimate of $800,000 is made for pneumatic tube service. The heaviest items are of $39,698,000 to railroads for transportation of mails; $13,506,000 for salaries, etc., in the railway mail service, and $5,736,000 for railway post office car rentals. Other important items include: Star route service, $8,100,000; compensation of post masters, $24,000,000, increase, $2,250,000; compensation of assistant post masters, at first and second-class post offices, $2,000,000, increase, $105,900; assistant postmasters at third-class offices, $1,700,000, increase, $400,000; clerk hire, etc., $20,000,000; pay letter carriers, $20,731,250; letter carriers and clerks in charge of rural stations, $15,000,000, increase, $3,000,000; rental cancelling machines, $250,000.

According to the admissions of officials of the Department of the Interior, the investigation of the public land scandal now going on in the States of the Pacific coast, bids fair to uncover more dishonesty than that of the Postal Department. The present investigation has been going on more than four months, is entirely independent of the Indian land scandal and involves money-making transactions to the extent of between $15,000,000 and $20,000,000, and collusion, it is said, between organized plunderers and State and Federal authorities in the matter of land allotments in some fifty-four forest reserves, which cover altogether 60,175,765 acres of land. Already a number of indictments have been issued.

After showing great leniency in Porto Rico toward the anarchists and Federation of Labor men so-called, who used the liberty as license for acts of lawlessness toward the United States Government and flag, Governor Hunt has issued strict orders to suppress such demonstrations. These outbreaks occurred especially in San Juan. The *San Juan News*, which has been particularly libellous, is for the present subdued by being taken into the possession of a local bank on a claim of $6,100.

The President's message to the extra session of the Fifty-Eighth Congress which commenced on Monday, the 9th, related to the question of Cuban reciprocity, and was brief and earnest.

The American Federation of Labor held its Twenty-Third Annual Convention in Boston this week.

Foreign.

The rumors that have been current for some time to the effect that a revolutionary feeling prevailed on the Isthmus of Panama because of the rejection of the Hay-Herran Canal Treaty by the United States of Colombia were confirmed on the 3d by the issuance of the proclamation of the independence of the Isthmus. By the terms of the treaty between the United States and Colombia, the safety of the Panama Railroad and its freedom from revolutionary interference is guaranteed. The United States has accordingly dispatched gunboats to the scene, some marines have been landed, and the government forces have been induced to withdraw because of their admitted inability to deal with the situation. By this means the revolutionary and government forces will not meet in the disturbed district, and it is hoped the situation will be settled without bloodshed. The United States is moving cautiously and thus far has the endorsement of foreign Powers. Meanwhile the United States recognizes the de facto government and will receive the new minister plenipotentiary, M. Banau-Varilla.

Russia has taken into her custody the Tartar General of Moukden, one of the ports now opened by the treaty between China and the United States. The United States gunboat Helena, it is said, will pass the winter at New Chwang, the open port at the mouth of the river upon which lies Moukden. The reoccupation of Moukden by Russia evidently disturbs China, and she has called a conference of high officials.

It is believed that Japan, lacking the assurance of the moral support of either Great Britain or the United States in contesting the encroachments of Russia, has through diplomacy effected an amicable settlement of her difficulties by which Russia becomes supreme in Manchuria and Japan in Korea. This, if true, is the beginning, perhaps, of the partition of China.

The Czar of Russia last week paid a visit to his cousin the German Kaiser in Prussia. He was received with the fullest military honors and with great enthusiasm by the public.

Industrial and Commercial.

The formation of the Citizens' Industrial Association of America was completed last week in Chicago. The organization is national in scope and includes representative manufacturers, tradesmen, other employers, official, labor, local, general organizations, and citizens' alliance, having among other things as its object, the dealing with the labor problem in all its phases. Delegates from fifty-seven cities of the United States and Canada were present at the convention, and at the concluding session all details of the plan of carrying on and extending the work of the organization were completed. Resolutions were adopted referring to strained relations between employer and employees and their bad effect on business conditions, part of which read,—

"In carrying on a firm and uncompromising contest with the abuses of unions as now constituted and conducted, at the same time acknowledging the free right of workmen to combine, and believing that the combination when rightly constituted and conducted may prove highly useful, we earnestly desire to act, and believe we are acting in the true interests of the workingmen themselves."

The dimensions of the two new Atlantic liners to be built by the Cunard line under a subsidy from the British Government are practically determined. Their length over all will be about 800 feet, beam not less than 80, minimum draft 34. They excel the Deutschland and Kaiser Wilhelm II. by 100 feet in length, eight or more feet in beam, and at least five in draft. They will have the enormous displacement of 40,000 tons and about 75,000 indicated horse power. There is every probability that they will be equipped with turbine steam engines, by the use of which there will be a saving of considerable space and 3,000 tons in weight of machinery. A sustained speed of 25 knots is called for, and 26 in trial speed. Such a ship leaving New York on Wednesday at noon should reach Liverpool the following Monday afternoon.

The American Consul General at Vienna reports the opening of a large shoe store in the center of the shopping district for the exclusive sale of American made shoes. The increasing demand for American shoes, which cost more than the Austrian made shoes, shows that they are making their way into the public favor on their merits. Shoe making is a considerable industry in Austria, and although American shoe machinery has been introduced, the finished product does not compare with the American.

Statistics for the port of Montreal for the year which soon closes show increases in number of ships and tonnage, in exports of corn, flour, and apples, and in passenger trade from Europe. The record excels that of all previous years.

General.

Sun spots as big as the earth are believed to have been the cause of the magnetic disturbance which prevailed recently on the Continent and left the telegraph companies with arrears of work and delayed messages. The running of tramcars was stopped in Geneva, where the street railways are operated by electricity, and traffic was not resumed until the phenomenon passed off. There are very large sun spots now, and surrounding each there are indications that masses of gas, calcium and hydrogen and other vapors have been thrown up and have spread over an area several thousand times the size of the spots, although each spot is as big as the earth. One effect is the emission of electrified particles such as are known in the laboratory as cathode rays.

France has completed the purchase of the famous and historic Farnese palace, which will be used as an embassy. The sum of six hundred thousand dollars was paid for it to the heirs of the Two Sicilies branch of the House of Bourbon. The Farnese palace was begun by Pope Paul III. from designs by Sangallo, and its construction was continued under the direction of Michael Angelo. It has been in French occupation under lease for a number of years and has been the Ambassador's residence. The architecture is regarded as the finest in Rome. The blocks of travertine of which the palace is constructed were taken from the theatre of Marcellus and the Colosseum.

With the new airships, numbers 9 and 10, Santos-Dumont has kept himself pretty much in the public eye, says the *Scientific American*, by various theatrical exploits. He sails into town for breakfast in an airship; he picks up children in some public park, takes them for a sail, and brings them back safe and sound; more recently the United States minister to Portugal had the doubtful pleasure of accompanying him upon an airship jaunt.

In the process of constructing a traveled road at West Point a mass of rock twenty feet high, twenty feet wide, and three hundred feet long was detached from the face of the cliff overlooking the Hudson at one discharge of about half a ton of dynamite.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Thanksgiving Day.

The President's Proclamation.

THE following is President Roosevelt's proclamation appointing Thursday, November 26, as the annual day of thanksgiving and prayer,—

The season is at hand when, according to the custom of our people, it falls upon the President to appoint a day of praise and thanksgiving to God.

During the last year the Lord has dealt bountifully with us, giving us peace at home and abroad, and the chance for our citizens to work for their welfare unhindered by war, famine, or plague. It behooves us not only to rejoice greatly because of what has been given us, but to accept it with a solemn sense of responsibility, realizing that under heaven it rests with us ourselves to show that we are worthy to use aright what has thus been entrusted to our care. In no other place and at no other time has the experiment of government of the people, by the people, for the people, been tried on so vast a scale as here in our own country in the opening years of the twentieth century. Failure would not only be a dreadful thing for us, but a dreadful thing for all mankind, because it would mean loss of hope for all who believe in the power and the righteousness of liberty.

Therefore, in thanking God for the mercies extended to us in the past, we beseech Him that He may not withhold them in the future, and that our hearts may be roused to war steadfastly for good and against all the forces of evil, public and private. We pray for strength and light, so that in the coming years we may with cleanliness, fearlessness, and wisdom do our allotted work on the earth in such manner as to show that we are not altogether unworthy of the blessings we have received.

Now, therefore, I, Theodore Roosevelt, Pr sident of the United States, do hereby designate as a day of general thanksgiving Thursday, the 26th of the coming November, and do recommend that throughout the land people cease from their wonted occupations, and in their several homes and places of worship render thanks unto Almighty God for His manifold mercies.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 31st day of October, in the year of our Lord one thousand nine hundred and three, and of the independence of the United States the one hundred and twenty-eighth. THEODORE ROOSEVELT.

By the President.

JOHN HAY, *Secretary of State.*

In keeping with the above proclamation of the Chief Executive of the United States, the usual Thanksgiving Day service will be held in the Mother Church, Boston, Mass., and in the Branch Churches throughout the country. As a church and people we have unnumbered and especial occasions for joining "with the spirit . . . and with the understanding," in a devout and sincere commemoration of a service whose suggestive memories are sacred to every patriot and every Christian citizen. The "Thanksgiving Lesson" will be found on page 41 of the current issue of the *Christian Science Quarterly.*

From our Contributors.

From a Lecturer's Note-book.

SEPTIMUS J. HANNA.

THE members of the Board of Lectureship have opportunities for witnessing and experiencing many interesting things. Among many others I recall with especial interest the occasions hereafter mentioned, which I trust may be of interest to the readers of our beloved *Sentinel.*

Shortly after my appointment I received a letter from a village of about two hundred inhabitants, situated in one of the beautiful valleys of Colorado, saying that there was a little band of four Scientists there and they had concluded to have a lecture; would I lecture for them? I assured them that I would. I was the more willing to do so because the letter stated that two of them were former acquaintances of mine, of whose coming to Science I was not previously aware. I gave them a Sunday, notwithstanding the scarcity of Sundays with the lecturers. I arrived in time to attend their Sunday service and found twelve persons assembled, including one of the two physicians of the place and his wife. The latter were not only apparently interested listeners, but the husband played the organ for them, as he was in the habit of doing at their services.

There were present at the lecture, I was told, one hundred and twelve persons,—more than half the entire population, and, relatively, the largest audience I have addressed.

At Willmar, Minnesota, I was introduced to the audience by the rector of the Episcopal Church, in a pleasant and kindly three-minute talk, in the course of which he said,—

"The nineteenth century goes on record as a unique age. It was a century of philosophical, mental, and spiritual investigation,—a time of searching for truth. It was also an age in which creeds were assailed. Such a time produces agitation. Out of agitation comes life."

Science was introduced here by the healing of a leading merchant who had been given up by all his physicians and friends. He was looked upon, after his healing, as one who had been raised almost from the dead. His case was the means of bringing several of his business friends into Science, and, strange as it may seem, for about two years, only men became interested. The services were conducted by two men readers, and during that time the congregation consisted wholly of men. When I was there only three women had become sufficiently interested to be accounted Scientists.

At Texarkana a lecture was brought about by one man, the only Scientist there. It was held in the Opera House of the two cities and was largely attended, the house being well filled by a representative and most attentive audience, notwithstanding the fact, as the local papers said, that there were several other attractions. The local press treated the occasion in a kindly and generous spirit, commending the zeal and courage of the man who, singlehanded, had been the instrument of its accomplishment.

A pleasant incident here was the holding, at our friend's residence, of the first Christian Science service ever held in the town. Including several Christian Scientists who had

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

come from Fort Worth, Dallas, and other places to attend the lecture, there were eighteen present. A complete service was held excepting only the collection. In the absence of hymnals the three hymns of our Leader were sung, while one of the ladies sang a solo with fine effect, a piano accompaniment being played by her daughter. The circumstances here were unique in other respects. Texarkana is two cities under one name. The state lines of Texas and Arkansas divide the cities,—hence the name. The post-office building sits astride the state line, so that it does not matter whether a letter is addressed to Texarkana, Texas, or Texarkana, Arkansas. I slept, while there, in Arkansas and lectured in Texas, crossing the state line between my hotel and the Opera House. This lecture, of course, was given under the special provision of the by-laws permitting each lecturer to give three lectures a year on his own responsibility.

At South Bend, Indiana, occurred the incident already mentioned in the *Sentinel*, of the two Grand Army Posts of the city attending the lecture in a body, carrying at their head the stars and stripes. No incident of my experience impressed me more deeply than this.

A Grateful Heart.

CHARLES J. WOODALL.

THE following testimony was given in connection with the introduction of Mr. Kimball, upon the occasion of his lecture in Flint, Mich., October 1.—EDS.

I appreciate the privilege of introducing to you our speaker this evening, although, when I received the invitation yesterday, I was much disposed to decline, for I felt that I had neither wit, nor word, nor worth, nor power of speech to do the cause justice; but these reassuring words of our Leader, Mrs. Eddy, came to me: "When the heart speaks, however simple the words, its language is always acceptable to those who have hearts" (Miscellaneous Writings, p. 262). I decided to let the grateful heart speak, for I owe my life to Christian Science; yes, life itself and all that is dear thereto,—health, hope, peace, joy, happiness, prosperity, liberty. I think the most appropriate thing I can do is to give my testimony as a proof of the beneficence of Christian Science.

It is just four years since I was introduced to Christian Science, but I find that only a little comparison of these years with those previous is necessary to show my cause for unbounded gratitude. Noonday and midnight are not more opposite than the contrast before me,—the contrast between the material thought of the past and the spiritual understanding of the present. Four years ago I had about concluded that man was created without a purpose and obliterated without regret. That there was a God who cared for man, I did not believe. To-night, I am gratified that I have satisfying proof, through demonstration upon demonstration of man's relationship to, and unity with, God. My physical condition was at as low an ebb as the spiritual; life had become a burden to me, a sorrow and disgrace to my family and friends; conscious of the blight upon my life; conscious of my incapability of self-help, I felt my weakness most keenly, so keenly that I have envied even the meanest beggar on the street who could keep sober, and as a consequence of years of intemperance I had contracted Bright's disease.

Having exhausted all the known material means of relief, there was apparently no hope, the shadow of death was upon me; all was dead but the poor suffering heart, which still reached out in longing for some knowledge of the truth of man's existence, when the Christ-truth appeared to me in the form of Christian Science. Gently it lifted the veil of tears, the false appetite was immediately destroyed, and in two weeks I was thoroughly healed physically. The shadow of death was turned into a bow of promise; again I felt the sunshine of an unclouded soul and even recovered the spontaneous gaiety of youth. This was convincing truth that Christian Science had blown these false beliefs entirely away. I think any one who knows, will admit that this condition is not attained by the reformed toper when the reformation has been brought about by will power, or similar means.

As I have grown more and more into the understanding of divine Truth, as the essential self and true life has appeared, the accidents and vicissitudes of the human personality have gradually diminished, and as I have grown to understand Love, I have been able to help others. I have had men come to me in the same deplorable condition that was mine, come with faces that bespoke unutterable sadness. I have had them come again with countenances that beamed with joy and liberty. So transcendent have these moments been to me, that I might say at these times I have felt that I have seen God face to face.

My friends, I give this testimony because I would like to assure you that Christian Science will do as much for you, for any one that needs it in any way, as it has done for me. The same voice of Truth speaks out to-day that spoke twenty hundred years ago; the voice which said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Is Our Door Open?

ZEBULINE H. BECK.

IN the Science of Mind our thought should be to make our demands equal the supply. Jesus said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." The supply is constantly pouring forth, and our duty is to put forth our energies to seize all that is included in our birthright. "Seek ye first the kingdom of God, and his righteousness [rightness]; and all these things shall be added unto you." Delays are not necessarily denials, but tests of our patience and steadfastness, through which we may be ushered into a larger sense of love.

By recognizing the fact that man is sustained and governed by the immutable laws of divine Love, we open the door of our consciousness for its blessings. Turning from the sense of supply in materiality to the glorious thought of the all-inclusiveness of divine Mind, our door is opened wide to the reception of the entirety of our birthright as children of God. We should ask ourselves, "Is my door open?" If we are placing our confidence solely or partially upon personality or circumstance, we are transgressing the First Commandment, we are withholding from divine Mind the allegiance which is His due. When doubt or fear attempt to becloud our trust in our ability to reflect sufficiently the dominion of Mind, we should turn to the benign thought expressed in Jesus' beautiful words, "Consider the lilies," and know that God does govern.

The promise is "before they call, I will answer; and while they are yet speaking, I will hear." This should show us plainly that out from the inexhaustible source of Love, good is constantly pouring forth, and all we have to do is to keep our door open. All the sense of lack that is in the world sprang from the belief of the creation of a material man who originated in dust. Therefore to lay the axe at the root of poverty, each must be persistent in the declaration of his immortal sonship, his oneness with God, in whom all things consist, and they cannot be material, but spiritual from the very nature of their true origin, Spirit.

We should see that whatever sprang from nothing is nothing, not something for a single instant. This will resolve error into its native nothingness.

The human concept must be exchanged for the divine,

Digitized by Google

the only perfect concept, and then our God-given dominion will come to light, and as we recognize it, we will become conscious that all things are ours.

The source of supply is found in the thought of God as Love, for it is Love alone which pours forth blessings for each and all. In Love's house, Harmony, each idea has its individual place, supported and sustained by immortal Principle. In the seeming presence of the lack of love, or supply, a right thought of Love will clear away the mist of mortal sense, and we behold the abundance of Spirit which is ever ours.

The Master said ask, knock, seek, obey,—and obedience is the gateway to the Promised Land of plenty, for obedience to divine demands brings the perception of the omnipresence of Mind—good. "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Jesus gave us an example of the application of this precept when he multiplied the loaves and fishes; also at the grave of Lazarus, where he gave thanks that he was always heard. Thanks do not usually precede the reception of a gift according to the mortal sense of things, but come afterwards, so these instances should be great lessons to us.

Loving One Another.

ELLA S. SARGENT.

In studying the Lesson on Love, for Communion Sunday in the Mother Church, I could but feel that a pulsation from the great heart of Love had reached us in our Wednesday evening meeting of June tenth, before it took form through font and press in the Lesson-Sermon.

A devoted Scientist to whom we love to listen was telling of the illumination of the Bible which Christian Science had brought him. As he closed, a second man said in substance, "While our brother was speaking, it became clear, to my understanding, who 'my neighbor' is. I have studied over this a long time, but within five minutes I have seen it clear. I had been able before to bring him quite close to me, as my very next-door neighbor; but now I see him nearer and clearer. My neighbor is the reflection of God. He is therefore a factor of my own consciousness. I must love my neighbor as myself. While I love 'self,' while I even see 'self,' I can neither see nor love my neighbor, but when I cast out self, then I see and know and love the reflection of Spirit,—my neighbor,—my brother. Then my neighbor, my brother, and myself become one, we are the reflection of God,—I love him as I love myself,—as I love God." He sat down with the humble, half apology, "Perhaps I have not made this clear; or perhaps it was already clearer to some than it was to me." It was clear, simple, and effective.

In "Love Thine Enemy," our Leader has said, "Who is thine enemy that thou shouldst love him? . . . Can you see an enemy, except you first formulate this enemy and then look upon the object of your own conception?" (Miscellaneous Writings, p. 8). How, then, could I have a neighbor unless I first formulate him? How could I see the smiling summer sea, the winter's snow, unless I look upon them through the medium of my own concept?

In that dear hymn, "If God is all in all," one line holds a great lesson for me,—"subtle error creeps." Every one hears the ramping, roaring lion; every one sees him stalking about, seeking whom he may devour, but "subtle error creeps" noiselessly, stealthily, hidden in the grass, between our feet when our eyes are turned skyward and our thoughts are above; then the subtle, sinuous serpent sometimes creeps into the chambers of consciousness.

In "Miscellaneous Writings," p. 306, we read of thoughts (angels) sent from God to man, "When angels visit us, we do not hear the rustle of wings, nor feel the feathery touch of the breast of a dove; but we know their presence by the love they create in our hearts."

In the still watches of the night, God speaks to us through His angels, "then he openeth the ears of men, and sealeth their instruction, that he may withdraw man from his purpose, and hide pride from man."

Every advance step has brought me some higher concept of my neighbor and my love for him; and a keener detection of the subtle creeping error, till I see that "envy, hatred, malice, and all uncharitableness," are concealed beneath the black veil of criticism. I see that criticism is self-righteousness, a higher conception of self than of one's neighbor; then "in lowliness of mind let each esteem other better than themselves," for we cannot condemn another without justifying self.

Do we need severer words of counsel than St. Paul gave in his epistle to the Romans? "Therefore thou art inexcusable, O man, whosoever thou art that judgest: for wherein thou judgest another, thou condemnest thyself; . . . and thinkest thou this, O man, . . . that thou shalt escape the judgment of God?"

My neighbor and I had a "difference" in a business matter. I had fully and freely forgiven the offence, but in the night watches I was asked if I loved my neighbor *as* myself. Would I, next day, if the matter came up, guard my neighbor's reputation as carefully as I would my own? To human sense I was, and still am, right, and the other is wrong, and there is the test. I am not working for the praise nor the blame of man, but to be right with God. In that consciousness of right, shall I not spread the soft folds of charity about her and save my neighbor from the blame of man? If I wrap that white robe about myself and leave another to the condemnation of men, shall I not find myself lost in the darkness of criticism, far from God, with only that vague, distant concept of my neighbor, who is thereby placed far down the path, and therefore catch no reflection of Spirit from my neighbor, and find none in myself?

Because the clear concept of his neighbor as "a state of his own consciousness" came to my brother that night, and through him to me; and because this glorious communion lesson had been brought from heaven to earth, I was prompted to draw my sister to my heart and there, face to face, I saw her and myself as we are seen and known of God.

"Then the devil leaveth him, and, behold, angels came and ministered unto him." "Envy, hatred, malice, and all the uncharitableness," which sought to creep stealthily within under the guise of criticism, or condemnation, or self-justification was turned away, and my angels sang

> Oh kinfolks, hand in hand, let's grope along,
> Helping and being helped.
> February, 1903, *Journal*.

Hungering after Righteousness.

MRS. R. S. SHELHAMER.

Jesus said, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled." In these words I find a fitting description of my growth in Christian Science, and the thought has come to me, How can we hunger after righteousness, unless we feel a sense of lack,—lack of goodness? If we are filled with self-righteousness, and if we compare our lives with the lives of other people, we are apt to think we are quite good enough; but in the study of Christian Science we naturally begin to compare our lives with the Christ-life, and then we behold the lack, so that a sense of unworthiness and humility comes to us. We recognize that as mortals we are nothing, but finally comes the glorious thought of our true life hid with Christ in God. Then it is that we hunger and thirst for this life, this righteousness, which hitherto we did not know, and we press on, certain that we shall be satisfied, when we awake, in His likeness.

Among the Churches.

Building Site Secured in Milford, N. H.

First Church of Christ, Scientist, Milford, N. H., has purchased a desirable building lot, on a good street, centrally located. There is now standing on the lot a building which will be remodeled into a comfortable chapel sufficiently large for present needs.

The work of remodeling has been begun and the members hope it may be ready for occupancy by the last of December.

MRS. CHARLOTTE E. FOSTER, *Clerk.*

Union in Fort Dodge, Ia.

First Church of Christ, Scientist, of Fort Dodge, Ia., and the Christian Science Society of this place have united and will hereafter work together as one church, under the name of First Church of Christ, Scientist. Love and harmony prevail among the members.

Judge Hanna's lecture, September 20, was well received by a very attentive audience. I know that all will rejoice at the harmony and growth of this branch church.

MRS. ANNA M. BROWN, *Clerk.*

Dedication of Church at Englewood, N. J.

"On Sunday afternoon," October 18, says the *Englewood Press,* "the labors of the members of First Church of Christ, Scientist, were consummated in the dedication of their commodious and artistic house of worship, to the service of God. There was a large attendance of members of Christian Science churches from New York, Brooklyn, and the vicinity, and a numerous representation of residents of Englewood who are regular worshipers at other churches, but who were present in response to a cordial invitation, and also from kindly interest.

"The little church is charming in its construction and cheerfulness. One enters it with a feeling of home and rest. Its doors are never closed. At all hours of the day there is some one to answer questions, or to help or comfort. As it gives out its own life to enrich others, may it prosper in giving as receiving."

The history of this little church is embraced in a brief period of about seven years and, like nearly all churches of its denomination, it had its start in the healing of one individual. This person, a resident of Englewood, had suffered from dyspepsia and many resultant evils for a quarter of a century, and, ten years ago, with nervous prostration added, he broke down completely and was sent from home by his physicians to search for health elsewhere. But in a few months he returned wonderfully changed for the better, not alone in body but also in mind.

Soon neighbors and friends were inquiring of him curiously concerning this, to them, strange doctrine, and they were invited to read its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and to attend the simple Sunday afternoon services which he had started at his house.

For two and a half years these inquirers did occasionally attend these services, and a few of them from time to time tried, with marked and unmistakable benefit, the efficacy of Christian Science treatment.

As a consequence, a regular attendance began about six and a half years ago, and increased so rapidly that a year later a small room was leased and furnished as a chapel and reading room, and here, in March, 1898, public services were opened.

Six months later the society regularly organized as a church, and at this time a radiant faith in the goodness and allness of God, and a firm belief that He did not make and does not permit evil in any form, pervaded the members and there was noticeable among them a very general and decided improvement in health.

In the spring of 1900, the need of larger and better quarters beginning to be felt, at the close of a Wednesday evening meeting each person present was asked to indicate on a slip of paper the sum he or she would contribute to a building fund, and when the slips were gathered their aggregate was found to be $3,700.

Thus encouraged, the corner-stone of this building was laid in January, 1901, with simple ceremony, at sunrise of a beautiful day.

In July following the building was finished, and to-day, the society being wholly free from debt, its church is now dedicated to the service of God.

Interesting congratulatory letters were read from many prominent Christian Scientists who were unable to be present, and addresses were delivered by Rev. William P. McKenzie of Cambridge, and W. D. McCrackan of New York.

Correspondence.

The Lectures.

At Joliet, Ill.

There was a fair-sized audience at the Auditorium last evening [October 22] to hear a lecture on Christian Science by Bicknell Young of Chicago. The speaker handled his subject in a candid, pleasing manner and his words held the audience intently to the close. Mr. Young was introduced by Charles B. Jamieson in a few timely remarks.

The Joliet News.

At New London, Conn.

So large was the audience at the lecture on Christian Science delivered at the Lyceum Theatre by Edward A. Kimball, C.S.D., under the direction of First Church of Christ, Scientist, yesterday afternoon [October 18], that nearly all the seats on the first floor and balcony were occupied. Mr. Kimball comes from Chicago. He was introduced by Rev. Mr. Simonsen of New Haven.—*New London Globe.*

At Flint, Mich.

Edward A. Kimball of Chicago delivered a lecture on Christian Science at Stone's Theatre last evening [October 1]. The lecture was educational as to the teachings and practices of the Christian Scientists and attracted a good-sized audience in spite of the threatening aspect of the weather, which undoubtedly kept away many who would otherwise have been present.—*The Flint Daily Journal.*

At Watertown, So. Dak.

There was a large audience at the Grand Opera House, Tuesday evening, October 6, to greet Judge Septimus J. Hanna, who appeared for the purpose of delivering a lecture on Christian Science. In the audience were many from surrounding towns and villages. The lecturer was introduced by Attorney I. H. Myers, who said in part,—

Christian Science has assumed such proportions that it can no longer be called a fad or a fraud. Among the ardent followers of Christian Science we find educated and intelligent men and women of every calling and profession in life. Its growth has been perfectly natural, and during recent years the rate of increase has been something astounding. It is a substantial thing. No matter what the final outcome may be, whether it be accepted or rejected, of one thing we may be sure, and that is, that in the history of a hundred years from now, the advent and progress of this movement will be looked upon as one of the remarkable events of the nineteenth century.

Digitized by Google

It concerns itself with a subject which is of vital interest and importance to us all,—our health,—and for that reason alone it is worthy of our careful, honest consideration, and it is to our interest to give it the same. This, no doubt, is the purpose of our presence here this evening.

Watertown Public Opinion.

At Peterborough, Ont.

First Church of Christ, Scientist, was well filled yesterday afternoon [October 18] when a lecture on the subject, "Is Christian Science Scientific Christianity?" was delivered by Rev. A. R. Vosburgh of Rochester, N. Y. The lecture was attentively listened to, and was an eloquent exposition of the principles underlying the beliefs of the Church of Christ, Scientist.

Mr. R. J. Todd opened the meeting with a short address; and the Hon. J. R. Stratton, Provincial Secretary, presided.

The Examiner.

At Sioux City, Ia.

Judge William G. Ewing of Chicago gave a lecture on Christian Science in the Grand Opera House, Sunday afternoon, October 18, under the auspices of First Church of Christ, Scientist. The hall was filled with an intelligent and representative audience, whose close attention throughout the lecture bespoke the interest and appreciation of all. Nearly one thousand copies of the *Sentinel* were distributed.

Mr. Frank Van Gorder of the local church, introduced the lecturer.—*Correspondence.*

At Cedar Rapids, Ia.

Carol Norton, C.S.D., of New York City lectured yesterday afternoon [October 11] in Greene's Opera House. His subject was "The Meaning of Christian Science," and to hear him, there were assembled the lame, the halt, the maimed, and the blind. The rich and the poor, the sick and the well also formed a part of the audience which filled every chair on the first floor. In addition, it was a notably intelligent audience, including many of our brightest minds. The trend of the whole lecture was to explain how Christian Science is neither new nor strange, but a revival of primitive Christianity.

Mr. Norton was introduced by Judge J. H. Preston, whose thoughtful remarks were in support of religious liberty. He gave a rapid review of the great struggles to establish it, and declared plainly its constitutionality.

The Cedar Rapids Gazette.

At Poughkeepsie, N. Y.

It was an enthusiastic religious audience which listened to Mrs. Livingston Mims of Atlanta, Ga., last night [October 12]. Her subject was "The Spiritual Supremacy of Man through Scientific Christianity, the Religion of the Future." Mrs. Mims was introduced by J. Edward Smith, C.S.B., formerly of this city. In introducing Mrs. Mims Mr. Smith said in part:—

Mortals have acquired the habit of calling that new, which is unfamiliar to them, or foreign to their preconceived ideas and practices. The Bible says that there is nothing new under the sun, and modern research and invention has so broadened man's thought, that he no longer looks narrowly on that which is beyond his range of vision. We are to-day ready to grapple with a new idea, be it even seemingly transcendental, if it be susceptible of demonstration. Only yesterday this was not so, whether the new subject embraced progress along a material or a spiritual line. The world is waking to the fact that undeveloped possibilities are infinite, and that the unseen is greater than the seen; that metaphysics embraces more of importance to man's spiritual and temporal welfare, than does physics; and again, that whatever is true is not new. Ever since the morning of the world, man has been and still is the Son of God, made in His image and likeness. The prophets saw this, David sang it, Jesus taught it, and John reiterated it. Yet we are just beginning to understand how true is this great fundamental fact. Humanity is slow to apprehend the truth, but the fact just stated is the most momentous that can be brought to the attention of the race.

Poughkeepsie News-Press.

At Glens Falls, N. Y.

Every seat in the Empire was occupied yesterday afternoon [October 18] by people who had come from many quarters to listen to Mrs. Sue Harper Mims, C.S.D., of Atlanta, Ga. From as far south as Troy, chartered cars brought persons who were anxious to hear this lecturer. The address was given under the auspices of the local First Church of Christ, Scientist, the subject being, "Man's Spiritual Supremacy, through Scientific Research, the Religion of the Future."

Colonel John L. Cunningham, who is well acquainted with Mrs. Mims' husband, Major Mims, introduced the speaker. He said in part,—

Ladies and Gentlemen:—Among the things which give me some little pride in my Presbyterianism is the fact, as I understand it, that it stands for a tolerant regard for the right of individual belief and the full liberty of individual conscience. To respect the faith of others as we would have others respect ours is certainly becoming more and more included in the Golden Rule; but, strange to say, it does not obtain so generally or generously in matters of religion as in political, social, and other phases of life. I rejoice in the improvement already manifest over former times.—*Glens Falls Times.*

Lectures at Other Places.

Albion, Mich.—Bicknell Young, September 18.
Redfield, S. D.—Judge Septimus J. Hanna, October 9.
Fairmont, Minn.—Judge Septimus J. Hanna, October 11.
Lexington, Mo.—Judge William G. Ewing, October 13.
Norfolk, Neb.—Judge William G. Ewing, October 16.
Port Hope, Ont.—Rev. Arthur R. Vosburgh, October 20.

Windows.

WILLIAM B. TURNER.

WINDOWS each, if our hearts be true,
Are we to the hearts about us;
Lighting the shades of their cold, gray world
Which were dreary and dark without us.

Windows are we, if each doth live
The life which God ordains us;
His imaged likeness, shining forth,
Is the light which alone sustains us.

Windows are we, if we but love,
Like the Christ who goes before us:
Kind, compassionate, strong and pure
Is the love that he implores us.

Windows, if Truth and Life and Love
Ever are shining through us;
Lighted of good, our lives glow bright,
And the darkened of earth come to us.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Freely ye have received, freely give."

THE large and steady increase in the ranks of Christian Scientists has been for years a subject of comment, and there is always more or less question on the part of the general public as to why this gain in numbers should continue. The testimony offered by Christian Scientists, by those who have identified themselves with the movement, is the best evidence upon which a correct judgment can be based. The testimony of these people is that, through the writings and teachings of Mrs. Eddy, they have found an understanding of God which heals and satisfies, an understanding which accords with the gospel of Jesus and the early Christians.

The following extract from a testimony published in a recent issue of the *Sentinel* is a sufficient answer to this general inquiry:—

"Christian Science was brought to my notice about six years ago, and I was healed of many diseases which medicine failed to help. I had tried all medical aid, but I was a total wreck, a victim for the grave, when Christian Science came to my rescue. As man's extremity is God's opportunity, so it was in my case. I was willing to try or sacrifice anything, so great was my suffering, and with one treatment I was healed.

. . . . . .

"When I was healed I wanted to know the Principle of it, and now I have this blessing which the world can neither give nor take away. I am daily striving, watching, and praying that I may have the Mind which was in Christ Jesus, that I may know that there is no other Life, Truth, and Love but God, and that I may overcome evil with good. Christian Science could get along without me, but I never could get along without Science, for it heals me every day.

"Words cannot express the love and gratitude I owe to our dear Leader, Mrs. Eddy, for what Christian Science has done for me and the benefit I have received through her teachings and her labor. The Bible is no longer a sealed book to me."

The great need for this healing work is apparent upon every side, and there is no higher ministry upon which the great body of Christian Scientists can enter. Jesus said, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

M.

The Gospel and the Humanly Condemned.

WHEN we realize with what momentum the twentieth century has vaulted into history, we can but expect that it will bring us many and great surprises, and yet it is quite natural that we should be somewhat startled on reading that a Christian minister, a representative of him who said, "He that believeth on me, the works that I do shall he do also," has publicly advocated before a late meeting of the New York State Medical Association, that in the case of suffering incurables the civilized and Christian thing to do, in this enlightened age, is to grant them the privilege of a painless death!

According to the news report the reverend speaker said, in part, that "where the prolongation of life is simply the prolongation of hopeless agony, it seems to me that it would be proper that such a patient should quietly, decently, modestly, be allowed to end his sufferings. It seems to me that such a course would be a step forward in civilization, and a step farther away from barbarism."

It is stated that this was the expression of a serious conviction, and that it elicited a "burst of applause" from many of those who heard it, though it was severely criticised by other speakers.

Such a declaration coming from such a source is certainly no less suggestive than striking, and as one comes to think of the logical relation of the proposition to the religious faith of a great body of the people, including, as we presume, the speaker referred to, his interest in the subject is increased.

Very many, if not the great majority of the diseases generally regarded as incurable, such as cancer, consumption, leprosy, etc., are transmitted, according to human sense, from parent to child, and they therefore result not from the sin of the sufferer but from the all-embracing law of heredity, which we have been taught, and many still believe to be of divine provision, so that the death of the unhappy victims of these diseases must be regarded as not only lawful but Providential. It is therefore unavoidable, and for man to delay its course and consummation would seem to be altogether presumptuous. If we assume that God has so ordered things that it is lawful for a man to be sick and die, without regard to the question of his personal responsibility, it must then be right, and we may well inquire on what ground it could be deemed an un-Christian or improper thing to contribute to the speedy fulfilment of this divine ordering, by permitting suffering incurables quickly to end their misery.

It may be urged by the hesitant that we are denied this privilege by the unequivocal dictum of the sixth commandment, but this simply raises the question of the authority of a law which has come to us through history and revelation, as compared with that of an asserted law which has come from the same source and which seems to be yet more clearly expressed and enforced in the facts of human experience. If a law of the decalogue be found in conflict with the law of heredity, we think that in so far as both are considered to be imposed by the same tribunal, general consent would give precedence to the last-named, in consideration of the fact that it is the more undeniably operative.

But some may say that we have no right to rob our fellow-men of the experience of suffering, since it is designed to be corrective and has an essential educational relation to life. This might have weight with those who believe that pain is necessary to the acquirement of character, provided the affliction has come as the sequence of personal transgression, but it certainly could not apply to the many who suffer wholly as the result of the hereditary transmission of appetite, impulse, and disease.

Furthermore, those who look upon death as meaning an immediate release for the good from all earthly ills, who think, as a prominent minister has recently said, that it ushers every Christian believer at once into a state of "pure delight, where there is no sorrow nor sickness,"—they, surely, could not deny a fellow-creature who is now tormented the liberty of hastening the longed-for and assured relief which attends the completion of a divine plan?

In view of these considerations is it not apparent that apart from the gospel of healing, our friend has a pretty strong case? Just here, however, the question arises, What would Jesus do with these so-called incurables? Would he counsel their death as a means of escape from present wretchedness, or commend the patient endurance of

Digitized by Google

pain as an expression of the Father's will? Let us again read the gospel narrative for our answer. What *did* he do? It is written that such hopeless sufferers continually thronged his pathway in the later years of his ministry, and that *"he healed them all."* Moreover it is written that he specifically instructed his followers to continue these healing works which he ever recognized as consequent to the preaching of the Word, and which the suffering world still needs and earnestly longs for. Can any one question what he would do to-day with "incurables," or what he would say to those ministers of his who not only concede but insist that there *are* incurables, and who meet the suggestion of the promise and possibility of spiritual healing through the ever-present Christ, with a shrug,—those who neither heal the sick themselves, nor approve the effort of others to do so, as the Master commanded?

Christian Scientists have been severely criticised for declaring that there are no "incurable" diseases, and for trying to fulfil their Lord's command that his believers give proof of their faith by their works. They count not that they have as yet fully apprehended all available spiritual truth, but they do rejoice in being permitted to know that the Christ can and does heal "hopeless incurables" to-day as of yore, and they can but lovingly commend to all ministers of the gospel the recognition of this larger and abiding significance to afflicted humanity of Christ's saving word. They would also commend the practical, patient, and sincere endeavor, upon the part of each, to prove for himself that our God is He who healeth our diseases; who redeemeth our life from destruction,—a truth which is but reiterated in the declarations of Christian Science that "when man is governed by God, the ever-present Mind who understands all things, man knows that to God all things are possible. The only way to this living Truth, which heals the sick, is found in the Science of divine Mind as taught and demonstrated by Christ Jesus." . . . "God will heal the sick through man, whenever man is governed by God" (Science and Health, pp. 180, 495). W.

Principle Greater than Numbers.

As we scan the daily papers or read the magazine articles which deal with topics that concern all, we cannot help being saddened by the seeming hopelessness of many of the problems of human existence, and the utter inadequacy of ordinary means for the amelioration of prevailing sin and misery.

When a city or a nation is threatened with disaster, thought turns irresistibly to some man whose character and deeds warrant the hope that he may be found equal to the occasion, and by the force of his genius draw to him such numbers of his fellow-men as may be needed to strike and stand for Right, till it prevail over the menacing evil.

And yet how slender does this hope seem, when we realize how few there are that can really be counted on, that are not only honest and faithful, but intelligent enough to be more than a match for the entrenched wrong. It requires so much less effort to drift with the current than to face it and turn the tide of public sentiment by the power of an appeal to Principle, hence we often find the masses enslaved by indolence, ignorance, and fear, and actuated chiefly by self-interest; yet in spite of all this, wrongs are righted and the world moves toward the inevitable triumph of Right. Were this not true, the race would long since have been annihilated. Even in an hour of seeming chaos, the thinker knows that the power which governs the world is neither represented nor affected by numbers, though when the demands of Principle are strongly felt, multitudes are roused from the lethargy which submission to wrong always induces, and are led to accept and to follow a higher ideal.

That the world's help in time of great need has ever come from the faithfulness of the few rather than from the influence of the many, is proved by religious and secular history alike. The possibility of overthrowing any great wrong has usually inspired with true courage some one man or woman, whose earnestness and enthusiasm has called to their support large numbers, but in every such case, a sifting out of the unworthy has been necessary before lasting results were attained.

In the book of Judges we read that the Hebrews, who had fallen into idolatry, were in dire affliction for seven years. They had been driven to the mountain fastnesses for shelter, their flocks and their herds, as well as their harvests, were despoiled by cruel oppressors, and in the depths of their ignominy they were even compelled to bow before the altars of Baal. Then in their despair they cried unto God, and when Gideon was called to deliver them he said, "Wherewith shall I save Israel? my family is poor in Manasseh, and I am the least in my father's house," but God said, "Surely I will be with thee, and thou shalt smite the Midianites as one man." He was, however, warned not to take with him a large number to fight against the enemy's legions, lest Israel should say that their deliverance had come through human power. All who were fearful were told to return to their homes, and at this, more than two thirds left the ranks. There were, however, still ten thousand and these were reduced by tests till there remained but three hundred men to put to flight the alien armies. But Gideon had heard and obeyed the divine command, and fearing neither false god nor man, he broke down the altar of Baal and led Israel to a mighty victory. In apostrophizing the glories of ancient Greece, a modern poet has said,—

> Of the three hundred grant but three
> To make a new Thermopylæ.

To-day, as of old, it is not numbers that can save a city, a nation, or a Cause, no, nor the human intellect which is often sold in the basest traffic for place and power, but now, as of yore God calls upon those who are ready to stand for justice, mercy, goodness, and purity, and His word is ever the same, "not by might, nor by power, but by my Spirit, saith the Lord of Hosts," and thus alone shall all true victories be gained.

We have heard it said, "Not men, but principles," and Christian Science emphasizes quality rather than quantity. It "reveals harmony as proportionately increasing, as the line of creation rises towards spiritual man,—toward enlarged understanding and intelligence" (Science and Health, p. 557). It points to one divine intelligent Principle that heals, regenerates, uplifts, and actuates all men for the accomplishment of every good. K.

The New Manual.

Each morning of late I have spent a little time studying our new Mother-Church Manual. I never knew before that so much could be learned from rules and by-laws. There seems to be a universal awakening concerning the importance to the individual of a faithful, prayerful study of this little book. Our appreciation and gratitude are in proportion to our obedience and understanding.

E. KENNEDY, Superior, Wis.

"Out of the abundance of the heart the mouth speaketh." Recently blessing has followed closely upon blessing, and the appearance of the latest one, the new Manual of the Mother Church, has filled my heart with gratitude which prompts me to make this acknowledgment.

Christian Scientists cannot be too grateful for the wise guidance and watchful care of their Leader, nor too thank-

Digitized by Google

ful to God for the revelation of Christian Science to this age.

My prayer is simply this,—that I may learn thoroughly the lesson of loving obedience, and so be worthy to "help my helper" (Mrs. Eddy, *Sentinel*, May 2, 1903).

MABEL L. SINCLAIR, Chicago, Ill.

My heart is full of gratitude to our dear Leader for the new edition of the Manual. Every change and addition has been made with such evident wisdom and love that we may stand as God's free born children, and help to lift the veil from blind humanity.

In possessing all of Mrs. Eddy's writings I feel rich in blessings, and I wish that all the world had these and loved them, for then there would be joy where sadness now seems to reign, and health in place of sickness.

LOUISE RAYMOND, Toledo, O.

The Concordance.

This letter is impelled by a desire to express to our beloved Leader, Mrs. Eddy, my thanks and hearty appreciation of the new Concordance.

There is no stronger rebuke to slothfulness and selfishness than are these constantly recurring labors of love on the part of Mrs. Eddy to meet every need of the Field. The completeness and comprehensiveness of this work make me marvel.—ELIZABETH EARL JONES, Asheville, N. C.

Life Quatrains.

SEEING.

Because God seeth with sense of Love, God's man
With love must see, nor semblance hold of hate.
One Mind, Life infinite, His own doth scan;
Beholding this, we enter heaven's gate.

THINKING.

With Spirit as the only consciousness,—
Since matter cannot mar nor stay His sense,
Nor touch His thought with cloud or mortal stress,—
No ill is essence, cause, nor true sequence.

KNOWING.

God made what is—the good and true,
Thus He and His are All I know;
Effulgence increate His view,
Where Love gives wings, but gives no foe.

SPEAKING.

Let me express the faith-lit words which help and heal,
And every utterance speed with thoughts that bless;
Let selfish silences that others' joy and weal
Neglect, displaced be with spoken tenderness.

ALICE JENNINGS.

In an article in our issue of September 19, 1903, copied from a newspaper in Leavenworth, Kan., regarding the building purchased by First Church of Christ, Scientist, in that city, the statement was made that "Christian Scientists began holding meetings in Leavenworth in 1894." This is incorrect. Meetings were commenced in that city in 1887. We believe that it was intended to say that the present church organization was formed in 1894.

Mrs. Rose Kent, C.S.D., of Jamestown, N. Y., student of the Rev. Mary Baker G. Eddy, was in Concord yesterday, and presented to the new church a set of chimes for the tower.—*Concord* (N. H.) *Patriot.*

Testimonies of Healing.

The Master said, "Whosoever therefore shall confess me before men, him will I confess also before my Father which is in heaven."

When I look back to the time four years ago when I found Christian Science, and make a comparison of the woman I was then with what I am to-day, I cannot doubt the power of Truth, if a sound body and a sound mind are signs.

I had been a physical wreck for several years, helpless part of the time, and the frequency of hysterical attacks kept me in dread of the insane asylum. One day when things seemed darkest, and I was on the verge of nervous prostration from anxiety over my own condition and a dear friend lying at the point of death, it was as though a voice had said to me, even as to Paul, "Go into a certain city, street, and house, and you will there find one who will tell you what to do," and so I did, and behold my body was transformed. In less than a week from that day I was running a sewing machine and doing other things I had not been able to do for years, and not only so, but life had become worth living. Instead of dragging out a miserable existence from day to day I knew that God does indeed dwell among men, and my joy and gladness were unbounded. The healing of catarrh, that I had had for fifteen years, followed, and from that time on Christian Science has been my panacea for every ill.

Doctors, medicine, hygiene, baths, dieting, tonics, change of climate, all had been faithfully tried, and if there is a "catarrh remedy" I didn't try, it was because it wasn't advertised.

This is what Christian Science has done for me, and I am like many others who have voiced their gratitude through our publications. The dear Leader who was brave enough and unselfish enough to direct us to the Sun of righteousness with healing in His wings, has my deepest gratitude and love, for I have not yet heard of anything the world has to offer that I would take in exchange for what Christian Science has brought me.

MRS. CLARA WOLLEY, Salina, Kan.

Whenever I read the testimonies given in our periodicals, I feel a sense of shame that I have permitted so many years to pass, while I have remained silent as to the great good that came into my experience at the time Christian Science was brought to my notice.

Twelve years of invalidism, found me helpless, with the death sentence pronounced by eminent surgeons and physicians. During this time I had been upon the operating table to no effect, on account of what proved to be a false diagnosis of my disease. I recovered only to endure greater suffering from most excruciating pain which was relieved partially at times, through opiates—morphine and atropine—administered sometimes every twenty minutes. I was operated on for a spatulated fibroid tumor, when it was revealed that the disease was cancer of the uterus, and not removable.

In this condition I was in the care of physicians and nurses for two years, and at last realized that death was the ultimate. At this point, a Christian Science friend called to see me, but was told that no one was admitted, as I was dying. This lady had frequently, for two years, urged Christian Science treatment to no avail, but in this extremity she pressed its claims more strongly, saying, "Since there is no further hope or help in *materia medica*, why not give Christian Science a trial?" Gaining consent, she went away without seeing me and procured help.

I was then suffering great agony, and all opiates failed to relieve me, although a nurse and physician were in constant attendance. My body was swollen to an enormous

Digitized by Google

size, until further expansion seemed impossible, and septicæmia had set in.

In about three hours I fell asleep, sleeping so quietly as to alarm my daughter and attendants, who would try to arouse me, and then place a mirror over my mouth and nostrils to see if I still lived. I wakened, and for two days suffered scarcely any pain and noticed that my fever was lessened. This condition was regarded as the approaching end. The third day there seemed no change until late in the afternoon, when I was seized with a most terrific pain and sensation of something ripping and tearing itself loose, when with one jerk, as it were, I realized that I was freed of the incubus that was dragging me down to the grave. I called to my attendant and daughter, declaring to them, that whether cancer or tumor it had passed from me. They thought I was suffering hallucinations and tried to quiet me, but I insisted that they remove it and send for my physician to come at once. When he arrived with another they were dumbfounded and said there was no account in *materia medica* of any similar experience, and attributed it to a freak of nature. The growth was pronounced a cancer, leaving behind no trace, for every fibre, and the throat, or main attachment, was complete. They carried it away with them and it was the subject of much discussion at the health office.

They now held out no hope, for the verdict was death from hemorrhages. To me a miracle had been wrought, and I knew it was of God, yet I did not know I was being treated in Christian Science. In one week I was about the house and continued to improve. In three months I started on a trip across the continent alone, and was well in mind and body, even though the physical condition was not perfect to material sense. When told by my daughter that I had been treated in Christian Science, I accepted the statement and was satisfied.

I did not take up the reading of Science and Health until six months later. My environment and religious belief seemed to stand in the way. I had been a victim of neuralgic sick headaches from early childhood. This had not been met, and they now seemed more frequent and violent. With my mental disturbances I felt as though I were living in another very bad dream.

At this juncture a copy of Science and Health was loaned me, and I was told that if I would read and study it thoroughly, I would soon be able to overcome all my discordant conditions. I began a systematic reading of this wonderful book. The headaches disappeared, and I soon began to meet many obstacles quickly through my understanding of Truth as presented by Mrs. Eddy, our beloved Leader. My study had to be carried on surreptitiously for a long time, on account of the home antagonism. I was much alone, however, and thus was free to work out my salvation along these lines.

As the light broke clearer and clearer, and my understanding of God and my relation to Him became sure, I soon found myself called upon to help others. The first case that came to me was that of a lady suffering from paralysis of the face and of the right arm. The healing was accomplished in one treatment. This brought a girl of twelve years with St. Vitus's dance, who had worn a plaster cast from shoulder to hip for several years, for curvature of the spine with enlargement of the heart and spleen. The muscular twitching of the face, especially of the eyes, in connection with the facial contortions, were painful to witness. She was in such an emaciated condition that her mother helped her up the stairs to my room for treatment, and left her with me. In an hour the mother returned to find her freed from all nervous appearances, and able to walk down the stairs alone. In two weeks she was riding a bicycle, strong and well.

Demonstrating the Principle of Life, Truth, and Love, I have been able to see the nothingness of all manner of diseases; viz., tuberculosis in its various forms, paralysis, locomotor ataxia, tumors, cancers; and this understanding was gained through the study alone of the Bible and of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Three years ago I went from the Pacific Coast to Boston, Mass., and received class instruction.

I cannot find words to express my gratitude to Mrs. Eddy for this God-inspired teaching that brings to so many the blessings of health, peace, and love. I shall strive to show my appreciation, by proving in my daily life, that Christian Science is practical; realizing that "To those leaning on the sustaining infinite, to-day is big with blessings" (Science and Health, Pref., p. vii).

Mrs. Josephine Hunt Goodwin, Sacramento, Cal.

I would like to tell of a little demonstration with our three-year-old child. It seems so small, indeed, that mortal mind would fain hold me back from this good work, but I know if we are faithful, the lesser demonstration will fit us for the greater.

A case of cold, followed by various complications and attended by much fever, seemed to make him quite a sick little boy. I had rocked him into a light slumber, all the while trying to realize God's presence and power. He had taken very little nourishment for some hours, and awoke in a short time, asking me to lie down with him. Presently he stopped crying and the fever seemed suddenly to leave him. He drank the milk which was standing by his side and requested me to dress him that he might visit his uncle, who lives a few doors above. He walked out of the door laughing happily, and the ailment of two weeks' standing disappeared.

I felt so truly grateful to God, that I promised myself I would not postpone any longer this duty. My sister had been helping the child, and we rejoiced together.

We are the only Scientists in our town of four thousand, and we appreciate to the full the blessings that come to us through the *Sentinel* and *Journal*. It is not always convenient for us to get to church, so we meet on Sunday morning and go over the Lesson-Sermon together.

Like thousands of others, our love goes out to our Leader for the manifold blessings which have been unfolded to us through Science and Health, to a dear friend who first brought this light to us, and to all who are working in His name for the redemption of mankind.

Mrs. E. M. Ross, Moorestown, N. J.

When I first became interested in Christian Science, an incident happened which has continued its good work ever since.

My little son was about four years old. He was complaining, I think with an earache. I took him on my lap, and opening Science and Health at page 14, I read "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints." Quickly he exclaimed, "That's it, mamma; make it *all one moments* and I'll be all right." I read the passage over and over, until he said, "There now, I am all right." So, after that, let there be any discordant thought, and he would run to me saying, "Read 'Become conscious for a . . . moment,'" and the reading with the realization of its meaning was satisfying, for away he would bound, saying, "It's all gone now."

I taught him his letters, and after that he would get Science and Health, find the page, and spell it all out for himself, with the result that perfect harmony was manifested. This was some time ago, and still that same passage appeals to him, when seeking for the realization that *all* the moments belong to God.

Digitized by Google

How beautiful is the child thought when brought up under Christian Science teaching, having no fear, no distrust of the Father's omnipotent care. Receiving no corporal punishment, but being taught that they must obey because it is right to do so, and that they surely desire to do right, they learn that this is the only way to express love.

To our dear Leader, who has made this work of love possible for us, our gratitude cannot be fully expressed, but we are striving to manifest it in deeds.

V. D. GANO, New York, N. Y.

Ten years ago Christian Science found me at the point of despair, due to the constant pain and intense stubbornness of what doctors called inflammatory rheumatism, and many other ailments.

I was advised to try the *new* way of treating disease, and I began at once to be interested in Christian Science because I was told that I need not take any material medicine, which pleased me very much, as I had used a great deal of it without ever receiving any benefit, and had grown disgusted with every so-called remedy of *materia medica*.

Science and Health was placed in my hands and I began its study at once. With great joy do I remember how the blessed truth came to me, the healing power of divine Love given to us all on every page of this noble volume.

I was healed entirely, not only from the physical ailments, but from the many producers of suffering, such as hatred, revenge, malice, sensuality, self-love, etc. I consider the freedom from these tormentors far more precious than even the cure of sickness, but I wish to state that I am deeply thankful to God for my healing from all these ills. The warfare is joyous "all the way *to* heaven *is* heaven" (harmony). To the readers of these few lines I heartily recommend Christian Science; for ten years it has been to me a source of joy, happiness, and "a very present help in trouble."

Words can never repay our beloved Leader for her unselfed thought through which God could voice Himself, and show us our true relationship to Him and to each other.

CHARLES JOSEPH STROBEL, New York, N. Y.

My testimony is not a story of physical healing. I have found infinitely more than that. I bring a joyous greeting to all dear sufferers who are seeking for the right way out of darkness, sorrow, and pain. It is a joyous greeting, for I know that the grand message of eternal Love is for every heart, and to those weary of struggle and suffering there is a deep peace to be found and a joy so bright as to dispel all mortal discord and mourning.

I came to Science not for healing but in pursuit of the truth, for which I had longed from childhood. I searched for it in the creeds of my church, but found it not. I searched for it in the writings of worldly thinkers, I studied mental philosophy, until I was tired of it all, and though young I did not enjoy my life. It seemed as though a shadow were cast upon everything. Then all kinds of trouble came to me till at last life seemed to be a dreary wilderness, full of questions to which there were no answers.

In a time of great distress, Christian Science was brought to me through the healing of my mother. I read the textbook with a sort of greed, hoping to grasp the whole of it in one mighty effort, but I had to learn the way of patience. At last the impetuous longing was satisfied, and now, amidst my daily work, I can truly repeat the words of our dear Leader: "Over and above it all are eternal sunshine and joy unspeakable" (Miscellaneous Writings, p. 279).

I wish to express my gratitude to God, a gratitude which fills my heart as I think of my blessings. My gratitude goes out also to our dear Leader and to those who, by thought, word, and example, have helped me on. I wish further to give expression to my happiness in that God has led me to demonstrate for others the nothingness of sickness, so that the manifestation of divine Love has been seen and acknowledged. My heart goes out in love to those who are tired of sin, sickness, and human misery in every land, and may these lines be a glad message to them in their search for the way to Life.

M. P., Warsaw, Russia.

It was in the year 1885 that Christian Science came to my notice. I purchased the twelfth edition of Science and Health, and through the study of the scientific statement of being I was completely healed of deafness of long standing, which was so severe that I could not hear through a telephone. I was also healed of chronic neuralgia of the stomach and head, which at times nearly drove me wild, and so filled me with fear that when I went away from home I did not know that I would ever return.

Oh how precious were the Bible and my copy of Science and Health in the pioneer work of Christian Science. Words are inadequate, and God only knows of the many struggles, but they were always followed by victories.

It was my blessed privilege to visit Boston and Concord this year, and to look upon our dear Leader's face. A deep sense of gratitude has gone out from my heart, that we have such a Leader and Teacher, and if we follow faithfully the path she has marked out we can *never* go astray.—HELEN M. FRITTON, Jackson, Mich.

I have always thought that when I was entirely healed I would send in my testimony but I think now I ought not to wait, as I have been benefited in so many ways since coming to Christian Science. When I began to take treatment I was suffering from nervousness and fear of seeing people, which was so great that I could not even ride up town after dark, and could not go to any place or see any one except my immediate family. Now I go to our church services and to town, and see all my friends.

Two months ago I was able to take class instruction, which was a great benefit. Although not entirely healed I am so much better that I feel I must express my gratitude. Harmony has been restored between a very near and dear relative and myself through divine Love. Many ailments among my little brothers and sisters have been overcome with Christian Science, and at all times we find it a very present help.

I am very grateful to Mrs. Eddy for giving us Science and Health.—OLIVE SCHOFIELD, Fowler, Col.

I first heard of Christian Science three years ago, and I became convinced at once that it was the truth through the healing of my dear mother. She and I purchased a copy of Science and Health together, as we were both interested and read a great deal during the winter; and in the spring, when I left her, she paid me for my half interest in the book, and I sold chickens to get enough to purchase a copy for myself.

Since I have learned that God is the source of our supply, that He "always has met, and always will meet, every human need" (Science and Health, p. 494), the sense of limitation is yielding fast. We now have property rented and are getting along well.

I am writing this and hoping it will be of great benefit to every one who seems to be bound by the sense of need. We must not build walls around ourselves. If it is right that we should have certain things we shall receive them in due time, if we are wise and patient. There is work for us all, and we should put all our trust in the one loving Father, who heals all our diseases, and will cleanse us from all unrighteousness. I have the latest edition of Science and Health now, and take the *Sentinel*, which is my dearest weekly visitor. I also take the *Quarterly*, and study the

Digitized by Google

Lesson-Sermon, and on Sunday read it with my mother or sister, as we have no church near us. My great desire is to get where I can attend the Science church. It would be of much benefit to me, for I hope to raise my children in the understanding of Christian Science. I could write pages regarding the benefit that Christian Science has brought to me and my family. There is nothing that seems to me as it did before. I see a new world, and the former things have passed away. I have had several good demonstrations, but when fear seems to be manifest I call on my loving helper, who is always willing and ready to do God's work, and the fear and its manifestation vanish at once. I put all my trust in Truth "and have no other trusts" (Address of Mrs. Eddy).

MRS. VADA L. WEBB, Blue Creek, O.

I wish to make public acknowledgment of the help I have received from our periodicals. During the past year I have seemed to be called upon to pass through unusual trials, and at times, when the test has been most severe, the tempter has tried to suggest discouragement, but each number of the *Sentinel* and *Journal* has brought to me such sweet messages of hope and love, giving fresh inspiration and renewed strength, that I have been able to press forward with renewed courage. I have been led to wonder many times what I should do if I were to be separated from these dear messengers of Truth. So many articles have seemed to be written especially for me, that I have been made to exclaim: Truly "Divine Love" does "meet every human need" (Science and Health, p. 494).

My heart overflows with thankfulness to all those whose contributions have brought loving rebuke and instruction, thus aiding us in the journey, which at times may seem a long and toilsome one, from matter to Spirit. I am also thankful to the faithful workers at headquarters, who are giving to the Field such pure and wholesome literature. When I remember that this has been made possible through the wisdom and toil of our loving Leader, and count the manifold blessings that have come, and are still coming to us through the ceaseless devotion of this inspired and inspiring woman, I can but voice the deepest desire of my heart, that I may be a faithful follower of Truth.

AVA H. GLISSON, West Point, Miss.

I should like to give a proof of our Father's loving care for His children which came to me recently, with the hope that it may help some other mother who, like myself, is obliged to fill the place of both father and mother, and may at times find the problems of this life perplexing and discouraging.

Circumstances arose which seemingly made it impossible for me to meet an obligation which it was both right and necessary that I should meet, and I became very anxious about it, for error said, "You cannot do it. What are you going to do?" The tears came to my eyes, but just at that moment the substance of the words of a kind Science friend came to my mind, "God does not make His sun to shine upon others and not on you." Immediately I brushed away the tears and realized the truth that I was God's child, and His children could meet all their honest obligations, for He has provided an abundance for all. If to mortal sense the way did not seem clear, it *was* clear, and I would trust Him. Before I retired that night a way was provided which made it possible for me to realize a part of the necessary amount, and within three days the entire sum, and even more, was provided in ways wholly unexpected by me.

Surely "divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). As our dear Leader tells us, let us not give way to discouragement, but trust in God, without whose knowledge not even a sparrow falls to the ground. It is only a short time since Love guided me to seek the truth in Christian Science, and since then life has assumed an entirely different aspect, and I know that it will continue to grow brighter as I come into a better understanding of this blessed truth and my heart is filled with gratitude to God and to our dear Leader, —His messenger to us.—G., Hartford, Conn.

From the age of five years I was subject to nervous attacks which later were pronounced by the medical fraternity epilepsy. These attacks increased in frequency until they became periodical, disabling me for two or more days at a time. My parents meanwhile were striving to get relief from the trouble which hung over my young life, interfering with my education and handicapping me in everything I tried to do.

While some of the remedies used seemed to produce temporary help, no permanent cure came until two years ago I was induced by a friend to try Christian Science. So my mother and I took two weeks' treatment, as it was thought that my mother needed help as much as I did, on account of the fear she continually held over me. As a result of this treatment she left me in the city to go to work, and returned to her home some ninety miles away, meanwhile suffering no anxiety or apprehension on my account.

I never have had an attack of the trouble since taking the treatments, though the last attack I suffered previous to taking treatment seemed the most severe one of my life.

It will take a lifetime to express my gratitude for my deliverance.—FRANCES DRURY, Omaha, Neb.

Many are the blessings which Christian Science has brought to me, and I feel I have been very ungrateful and unappreciative not to have spoken of them before this to seekers after Truth. I did not come to Christian Science through physical healing, but through the understanding of Scriptural truth given to us in Science and Health by Mrs. Eddy, an understanding that I had longed and prayed for since a child, and which has enabled me to make many demonstrations over sickness and sin. God bless our dear Leader, who has been enabled through her pure, Christlike life to voice to us this wondrous truth. May we, through obedience to its teachings, be permitted to say with St. Paul, "I have fought a good fight, I have kept the faith." I feel deeply grateful for all the help we receive each week and month from our publications,—

> My prayer, some daily good to do
> To Thine, for Thee;
> An offering pure of Love, whereto
> God leadeth me.
> Miscellaneous Writings, p. 397.

VIRGINIA CARRINGTON, Seven Oaks, Tex.

Little Words.

"Yes, you did, too!"
"I did not!"
Thus the little quarrel started,
Thus, by unkind little words,
Two fond friends were parted.
"I am sorry."
"So am I."
Thus the little quarrel ended,
Thus, by loving little words,
Two fond hearts were mended.

H. B. KEECH, in *Youth's Companion*.

From our Exchanges.

Rev. John White Chadwick says in *The Christian Register,* "It is the sensitive conscience of the man who is a bungling new-beginner in the art of wickedness that is a whip of scorpions. Could there be a more instructive paradox? Is it not convincing that we are not to look for the punishment of sin exclusively, or mainly, to the outward or the inward misery that it entails? Is it not convincing that the deadening down of conscience is so far from being escape from punishment that it is the worst punishment that can come upon a man,—to be dead in trespasses and sins. But this is slow to come, especially for those whose fall is from some conspicuous height of excellence; and, till it comes, through infinite degrees of moral lapse, what accusation and what punishment there is prepared for the men and women who do wrong! Surely, here is no 'survival' of hell, no sham, no painted flame, but the very thing itself, the persistent reality of hell. I see not what need there is for 'future punishment' for deeds done in the body, as if within the limits of this present life the resources of man's moral nature were not sufficient for the reward of every man according to his works. The punishment is oftentimes so great, so terrible, that it would seem out of all proportion to the wrong done, did we not know that by such punishment the erring soul is made to see 'how awful goodness is, and virtue in her shape how lovely, see and pine its loss.'

"To what do these considerations tend, if not to the persuasion that the most dreadful punishment of sin is not anything that comes upon us from without, but to fall short of the high calling of our possibility, to be so little when we might be so much?"

But, when we have put our belief into our character, into our deed of kindness, into our hero-sacrifice, there is no room for arguing; and what of our creed cannot be expressed in these ways, what of it remains as mere words, untranslatable into things, may well be left out.

The Church of the future will, there is little doubt, organize itself upon these lines. The coming creed will be a program: it will be a statement of the laws of the spiritual forces and of their application to the regeneration of men. And the business of the Church will lie in that application. Its life will be found, not so much in its verbal affirmations, as in the institutions it develops, the character it creates.—J. Brierly in *The Christian World.*

Rev. Charles M. Sheldon, D.D., says in *The Congregationalist and Christian World,* "If there is any meaning whatever to the incarnation, it is this, that Jesus embodied the nature of humanity; 'that he was tempted in all points like as we are;' not different in any way, but just the same; and he did not take advantage of the weakest human being by calling to his assistance what we cannot summon to our aid. But the teaching of the gospels plainly is that we have within our reach the same divine power to help us overcome our temptations as he had to overcome his."

The Rev. H. A. Bridgman says in *The Congregationalist and Christian World,* "Are there too many divisions and too little fellowship in the church of Christ to-day? Broadly speaking, Yes. The movements now under way for consolidation grow out of a conviction that Christians ought to be closer together; perhaps in name, certainly in spirit. Denominational aggressiveness, a good thing in itself, must be made to square with the demands of Christian fellowship and co-operation."

The nearer we come to seeing ourselves and God and the world as Jesus saw himself in relation to God and mankind, the fuller and richer becomes our experience and the more earnest and fruitful are our endeavors to aid the masses of men to look upon themselves, upon others, upon God and the future, from the Christian standpoint.

The Universalist Leader.

An educated Hindu, in an article in a Hindu magazine, advocates the use of the Bible as a text-book in all primary and high schools. He says, "I am not a Christian, but I think the more Christlike we become, the better for us and our land."

Church Tenets.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Building Fund of the Mother Church.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Clerk of the Mother Church.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.D., Clerk., 239 Huntington Avenue, Room 8, Boston, Mass.

Church Treasurer.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Notice.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

THE TRUE LAW.
SERVICE AND STIPEND.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

National.

Advices reaching the War Department from Manila indicate that Governor Taft will have succeeded in settling the claims of the friars for their extensive property holdings in the islands before he sails for the United States on December 23. Negotiations have been in progress at Manila between Governor Taft and Monsignor Guidi, the papal delegate, ever since the Governor's return to the islands from Rome. The negotiations have been delayed because of the desire of the Friars to receive all the money paid by the Government for the realty not needed for church, charity, or educational purposes. According to the present settlement, $6,000,000 will be paid, part going to the Friars, part to the Vatican.

The annual report of the superintendent of foreign mails shows that 10,994,044 pounds of mail were despatched by sea to foreign countries, of which 7,456,343 pounds was for transatlantic destinations. The money paid on account of the transportation of the mails despatched to and received from foreign countries by sea during the fiscal year aggregated $2,309,027. It is estimated that $6,240,696 was received by this Government as postage on articles exchanged with all foreign countries, of which the postage collected on the articles exchanged with foreign countries other than Canada and Mexico, amounted to $4,991,975, or $2,608,386 more than the net cost of the service.

A measure is in course of preparation for presentation to the President by which a man outside of the civil service may be appointed to take full charge of all supplies needed in the postal service. It is believed that a man with the requisite technical knowledge and business ability would receive a fuller support from the employees if taken from outside their ranks. A salary of more than $2,500 is proposed. The Civil Service Commission it is believed will oppose this course, and urge that the recent experience with such outsiders does not justify too hopeful a view of the proposal.

Recent advices indicate that nearly all the international claims commissions have finished their work at Caracas. When these commissions conclude their work the awards declared will await the decision of The Hague tribunal as to the order in which they are to be paid. All the Powers party to the proceedings at The Hague already have submitted their arguments through counsel and their cases are now ready for consideration by the tribunal.

The number of laborers who are returning to Europe this fall, compared with a corresponding period of last year shows an increase of more than one hundred per cent. From all parts of the United States thirteen thousand steerage passengers were carried from October 1 to November 10 a year ago; more than twenty-seven thousand have left the shores of America this year during the corresponding period.

The House Committee on Ways and Means has authorized a favorable report on the bill making effective the Cuban reciprocity treaty by a vote of 14 to 2, ten Republicans and four Democrats voting for a favorable report and one Democrat and one Republican against it. The bill was to be reported to the House Monday and debate to continue until Thursday noon. The committee expected a substantial victory for the measure.

The recognition of the independence of the Republic of Panama was acknowledged on the 13th inst., when M. Bunau-Varilla, duly accredited envoy extraordinary and minister plenipotentiary of Panama, called upon the President at the White House in company with Secretary Hay and presented his credentials.

The American charge d'affaires at Seoul, the capital of Korea, has made the preliminary overtures for the opening of Wiju to world commerce.

Foreign.

It is reported that the latest Austro-Russian note to the Sultan was in the nature of an ultimatum and contained a specific implication that further refusal to accept the reform scheme would seriously prejudice the position of Turkey. The note insists that the proposals of the two powers must be accepted at once and in their entirety. It is the general opinion in Europe that the scheme for reforms will result, if carried out vigorously, in materially bettering the condition of the Sultan's European subjects. The chief objection to the plan is that the two foreign agents or "assessors" attached to Hilmi Pasha, the inspector-general, will have no authority of their own further than to make representations to the Sultan. In case these are ineffective, appeals can be made to the ambassadors at Constantinople. By this procedure European control in Macedonia could only be enforced by diplomatic interventions.

The mixed commission at Caracas inquiring into the Swedish claims against Venezuela has closed its sessions. The total amount of the claims presented was $72,885. The gross amounts of the awards made by the commission is $34,850.

The Czar of Russia is reported to have said to Emperor William, at their recent meeting at Wiesbaden, Prussia, that under no conditions would he declare war against Japan.

Sir Henry Mortimer Durand, the newly-appointed British ambassador at Washington, has presented his letters of recall to King Alfonso and left for London.

Industrial and Commercial.

A tract of land containing one thousand acres has been purchased, and an option on four hundred more has been secured by the agents of a proposed Japanese colony at Webster in Texas. The land will be fenced in at once, ploughed, and made ready for putting in a crop of rice next year. The members of the colony will soon be joined by their families from Japan, together with some thirty others.

The volume of business on Lake Superior for October was unusually large, 4,476,000 tons, making a total for the ten months of the year of 31,370,000 tons. Of this total, iron ore made up 20,538,000 tons, flour 6,252,000 barrels, lumber 857,325,000 feet, grain of all kinds 61,680,000 bushels, and coal 6,331,446 tons.

The beet-sugar industry in Nebraska this year has netted to the growers, according to reports, about $150,000 a month during each of the four months' season. The output of the factories is about twenty-four million pounds of granulated sugar. The income per acre is estimated at $55.

It is announced that the Mexican Central Railroad intends at once to change its road to standard gauge, and that the running time between the heart of Mexico and New York will in consequence be shortened about twenty-four hours.

The excavating for the New York subway from City Hall to 190th Street is now completed and twenty-four miles of the route finished. The engineer states that traffic will begin regularly by April.

According to reports the cotton weevil has reduced the cotton crop of Texas from a possible 4,000,000 bales to probably 2,500,000, representing a money loss to the planters of $60,000,000.

The estimated log-cut in the State of Maine the ensuing winter is for 750,000,000 feet.

Florida expects to produce 1,600,000 boxes of oranges this season.

General.

The *Scientific American* in a recent issue describes the latest and largest locomotive ever built, and says its weight when in working order is not far from 150 tons. The new locomotive was built at the Baldwin Locomotive Works as the first of an order for seventy locomotives for the Atchison, Topeka and Santa Fe Railway. These engines are of the tandem compound type, in which the high-pressure and low-pressure pistons are carried on a common piston rod. The former are 19 inches in diameter, the low-pressure 32 inches in diameter, and the common stroke is 32 inches. There are 391 tubes, 2¼ inches in diameter by 20 feet long, in the boiler, which alone give a heating surface of 4,586 square feet, and 210 square feet more in the fire-box, a total of 4,796 square feet for the whole boiler.

The working pressure is 225 pounds to the square inch; there are five pairs of 57-inch drivers; the tractive effort is 58,645 pounds. The total wheel base of the engine is 35 feet 11 inches, the rigid wheel base 19 feet 9 inches, and for the whole engine and tender 66 feet. The tank has a capacity of 8,500 gallons, and the total weight of this huge engine, with its tender, is 225 tons.

There is a moss in Jamaica, Barbados, and other islands of the West Indies, to which the name of "life plant" has been given, because its vitality is proof against every known treatment except immersion in boiling water, or being brought in contact with a red-hot iron. It may be cut and divided in any manner, and the smallest shreds will throw out roots, grow, and form buds. Leaves of it have been placed in an air-tight, dark box, without moisture, and yet they grow.

A remarkable newspaper feat has just been performed in London, where Mr. Chamberlain's speech at Birmingham, through the medium of the telephone, was taken in shorthand by reporters sitting in the London office, 113 miles away. The speech was printed verbatim, and the paper was selling on the streets twenty-seven minutes after the speech was concluded. The telephone beat the telegraph one hour and twenty-seven minutes.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

A Memorable Coincidence and Historical Facts.

WE are glad to publish the following interesting letter and enclosures received from our Leader. That legislatures and courts are thus declaring the liberties of Christian Scientists is most gratifying to our people; not because a favor has been extended, but because their inherent rights are recognized in an official and authoritative manner. It is especially gratifying to them that the declaration of this recognition should be coincident in the southern and northern states in which Mrs. Eddy has made her home.

Pleasant View, Concord, N. H.
October 16, 1903.

Dear Editor:—I send for publication in our periodicals the following deeply interesting letter from Elizabeth Earl Jones of Asheville, N. C.,—the state where my husband, Major George W. Glover, passed on and up,—the state that so signally honored his memory, where with wet eyes the Free Masons laid on his bier the emblems of a Master Mason, and in long procession with tender dirge bore his remains to their last resting-place. Deeply grateful I recognize the Divine hand in turning the hearts of the noble southrons of North Carolina legally to protect the practice of Christian Science in that state.

Is it not a memorable coincidence, that, in the Court of New Hampshire, my native state, and in the legislature of North Carolina, they have the same year, in 1903, made it legal to practise Christian Science in these states?

MARY B. G. EDDY.

105 Bailey St., Asheville, N. C., October 11.

Beloved Leader:—I know the inclosed article will make your heart glad, as it has made glad the hearts of all the Christian Scientists in North Carolina. This is the result of the work done at last winter's term of our legislature, when a medical bill was proposed calculated to limit or stop the practice of Christian Science in our state. An amendment was obtained by Miss Mary Hatch Harrison and a few other Scientists who stayed on the field until the last. After the amendment had been passed, an old law, or rather a section of an act in the legislature regulating taxes, was changed as follows, because the representative men of our dear state did not wish to be "discourteous to the Christian Scientists." The section formerly read, "pretended healers," but was changed to read as follows: "All other professionals who practise the art of healing," etc.

We thank our heavenly Father for this dignified legal protection and recognition, and look forward to the day, not far distant, when the laws of every state will dignify the ministry of Christ as taught and practised in Christian Science, and as lived by our dear, dear Leader, even as God has dignified, blessed, and prospered it, and her.

With devoted love,

ELIZABETH EARL JONES.

The following article, copied from the *Raleigh* (N. C.) *News and Observer*, is the one referred to in Miss Jones's letter.

The Christian Science people, greatly pleased at the law affecting them passed by the last legislature, are apt also to be pleased with the fact that the law recognizes them as healers, and that it gives them a license to heal.

This license of five dollars annually, required of physicians, has been required of them, and how this came about in Kinston is told in the Kinston *Free Press* as follows:—

Sheriff Wooten issued licenses yesterday to two Christian Science healers in this city. This is probably the first to be issued to the healers of this sect in the state.

Upon the request of a prominent healer of the church, the section of the machinery act of the legislature covering it was shown, whereupon application for license was made and obtained.

The section, after enumerating the different professions, for which a license must be obtained to carry them on in this state, further says, "and all other professionals who practise the art of healing for pay, shall pay a license fee of five dollars."

This was construed to include the healers of the Christian Science Church, and license was accordingly taken out.

The idea prevails that the last General Assembly of North Carolina relieved the healers of this sect from paying this fee, but this is not so. The board only excused them from a medical examination before a board of medical examiners.

Mrs. Eddy's reference to the death of her husband, Major George W. Glover, gives especial interest to the following letter from Newbern (N. C.), which appeared in the *Wilmington* (N. C.) *Dispatch*, October 24, 1903.

Mrs. Eddy has in her possession photographed copies of the notice of her husband's death and of her brother's letter, taken from the *Wilmington* (N. C.) *Chronicle* as they appear in that paper in the issues of July 3, and August 21, 1844, respectively. The photographs are verified by the certificate of a notary public and were presented to Mrs. Eddy by Miss Harrison.

MISS MARY HATCH HARRISON'S INTERESTING LETTER.

To the Editor.

At no better time than now, when the whole country is recognizing the steady progress of Christian Science and admitting its interest in the movement as shown by the fair attitude of the press everywhere, could we ask you to give your readers the following communication. It will put before them some interesting facts concerning Mrs. Mary Baker G. Eddy and some incidents of her life in North and South Carolina, which might not have been known but for a criticism of this good woman, which was published in your paper in August, 1901.

I presume we should not be surprised that a noteworthy follower of our Lord should be maligned, since the great Master himself was scandalized, and he prophesied that his followers would be so treated. The calumniator who informed you in this instance locates Mrs. Eddy in Wilmington in 1843, thus contradicting his own statement, since Mrs. Eddy was not then a resident of Wilmington. A local Christian Scientist of your city, whose womanhood and Christianity are appreciated by all, assisted by a Mason of good standing there and a

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

Christian Scientist of Charleston, S. C., carefully investigated the points concerning Major Glover's history which are questioned by this critic, and has found Mrs. Eddy's statements relating to her husband (whom she states was of Charleston, S. C., not of Wilmington, but who died there while on business in 1844, not 1843, as claimed in your issue) are sustained by Masonic records in each place as well as by Wilmington newspapers of that year. In "Retrospection and Introspection" Mrs. Eddy says of this circumstance,—

"My husband was a Freemason, being a member of St. Andrew's Lodge, No. 10, and Union Chapter, No. 3, of Royal Arch Masons. He was highly esteemed and sincerely lamented by a large circle of friends and acquaintances, whose kindness and sympathy helped to support me in this terrible bereavement. A month later I returned to New Hampshire, when, at the end of four months, my babe was born. Colonel Glover's tender devotion to his young bride was remarked by all observers. With his parting breath he gave particular directions to his brother Masons about accompanying her on her sad journey to the North. Here it is but justice to record they performed their obligations faithfully."

Such watchful solicitude as Mrs. Eddy received at the hands of Wilmington's best citizens, among whom she remembers the Rev. Mr. Reperton, a Baptist clergyman, and the governor of the state, who accompanied her to the train on her departure, indicates her irreproachable standing in your city at that time.

The following letter of thanks from one of your papers of 1844 testifies to the love and respect entertained for Mrs. Eddy by Wilmington's best men, whose Southern chivalry would have scorned to extend such unrestrained hospitality to an unworthy woman as quickly as it would have published the assailant of a good woman:—

Wilmington Chronicle, August 21st, 1844.

A CARD.

Through the columns of your paper, will you permit me, in behalf of the relatives and friends of the late Major George W. Glover of Wilmington and his bereaved lady, to return our thanks and express the feeling of gratitude we owe and cherish toward those friends of the deceased who so kindly attended him during his last sickness, and who still extended their care and sympathy to the lone, feeble, and bereaved widow after his decease. Much has often been said of the high feeling of honor and the noble generosity of heart which characterized the people of the South, yet when we listen to Mrs. Glover (my sister) whilst recounting the kind attention paid to the deceased during his late illness, the sympathy extended to her after his death, and the assistance volunteered to restore her to her friends at a distance of more than a thousand miles, the power of language would be but beggared by an attempt at expressing the feelings of a swelling bosom. The silent gush of grateful tears alone can tell the emotions of the thankful heart,—words are indeed but a meagre tribute for so noble an effort in behalf of the unfortunate, yet it is all we can award, will our friends at Wilmington accept it as a tribute of grateful hearts? Many thanks are due Mr. Cooke, who engaged to accompany her only to New York, but did not desert her or remit his kind attention until he saw her in the fond embrace of her friends.

Your friend and obedient servant,

(Signed) GEORGE S. BAKER.

Sanbornton Bridge, N. H., August 12, 1844.

The paper containing this card is now in the Young Men's Christian Association at Wilmington.

The facts regarding his membership in St. Andrew's Lodge, No. 10, were brought to light in a most interesting way. A Christian Scientist in Charleston was requested to look up the records of this lodge, as we had full confidence that it would corroborate Mrs. Eddy's claims. After frequent searchings and much interviewing with Masonic authorities, it was learned that the lodge was no longer in existence, and that during the Civil War many Masonic records were transferred to Columbia, where they were burned, but on repeated search a roll of papers recording the death of George Washington Glover in 1844 and giving best praises to his honorable record and Christian character was found; and said record, with the Seal of the Grand Secretary, is now in the possession of the Chairman of the Christian Science Publication Committee.

In the records of St. John's Lodge, Wilmington, as found by one of your own citizens, a Mason, it is shown that on the 28th day of June, 1844, a special meeting was convened for the purpose of paying the last tribute of respect to Brother George W. Glover, who died on the night of the 27th. The minutes record this further proceeding:—

"A procession was formed, which moved to the residence of the deceased, and from thence to the Episcopal burying ground, where the body was interred with the usual ceremonies. The procession then returned to the Lodge, which was closed in due form."

It has never been claimed by Mrs. Eddy nor by any Christian Scientists that Major Glover's remains were carried North.

The *Wilmington Chronicle* of July 3, 1844, records that this good man, then known as Major George W. Glover, died on Thursday night, the 27th of June. The *Chronicle* states: "His end was calm and peaceful, and to those friends who attended him during his illness he gave the repeated assurance of his willingness to die, and of his full reliance for salvation on the merits of a crucified Redeemer. His remains were interred with Masonic honors. He has left an amiable wife, to whom he had been united but the brief space of six months, to lament this irreparable loss."

From the *Chronicle*, dated September 25, 1844, we copy the following: "We are assured that reports of unusual sickness in Wilmington are in circulation." This periodical then forthwith strives to give the impression that the rumor is not true. It is reasonable to infer from newspaper reports of that date, that some insidious disease was raging at that time.

The allegation that copies of Mrs. Eddy's book, "Retrospection and Introspection," are few, and that efforts are being made to buy them up because she has contradicted herself, is without foundation. They are advertised in every weekly issue of the *Christian Science Sentinel*, and still contain the original account of her husband's demise at Wilmington.

May it not be, since this critic places certain circumstances in 1843, which records show really existed in 1844, that the woman whom he had in mind is some other one?

We can state Mrs. Eddy's teaching on the unreality of evil in no better terms than to quote her own words. Nothing could be further from her meaning than that evil could be indulged in while being called unreal. She declares in her Message to the Mother Church, "To assume there is no reality in sin, and yet commit sin, is sin itself, that clings fast to iniquity. The Publican's wail won his humble desire, while the Pharisee's self-righteousness crucified Jesus."

MARY HATCH HARRISON.

Newbern, N. C.

Wilmington (N. C.) *Dispatch.*

MAJOR GLOVER'S RECORD AS A MASON.

Of further interest in this matter is the following extract from an editorial obituary which appeared in 1845 in *The Freemason's Monthly Magazine* published by the late Charles W. Moore, Grand Secretary of the Grand Lodge of Massachusetts.

Digitized by Google

Died at Wilmington, N. C., on the 27th June last, Major George W. Glover, formerly of Concord, N. H.

Brother Glover resided in Charleston, S. C., and was made a Mason in "St. Andrew's Lodge, No. 10." He was soon exalted to the degree of a Royal Arch Mason in "Union Chapter, No. 3," and retained his membership in both till his decease. He was devotedly attached to Masonry, faithful as a member and officer of the Lodge and Chapter, and beloved by his Brothers and Companions, who mourn his early death.

Additional facts regarding Major Glover, his illness and death, are that he was for a number of years a resident of Charleston, S. C., where he erected a fine dwelling-house, the drawings and specifications of which were kept by his widow for many years after his death. While at Wilmington, N. C., in June, 1844, Mr. Glover was attacked with yellow fever of the worst type, and at the end of nine days he passed away. This was the second case of the dread disease in that city, and in the hope of allaying the excitement which was fast arising, the authorities gave the cause of death as bilious fever, but they refused permission to take the remains to Charleston.

On the third day of her husband's illness, Mrs. Glover (now Mrs. Eddy) sent for the distinguished physician who attended cases of this terrible disease as an expert (Dr. McRee we think it was), and was told by him that he could not conceal the fact that the case was one of yellow fever in its worst form, and nothing could save the life of her husband. In these nine days and nights of agony the young wife prayed incessantly for her husband's recovery, and was told by the expert physician that but for her prayers the patient would have died on the seventh day.

The disease spread so rapidly that Mrs. Glover (Mrs. Eddy) was afraid to have her brother, George S. Baker, come to her after her husband's death, to take her back to the North. Although he desired to go to her assistance, she declined on this ground, and entrusted herself to the care of her husband's Masonic brethren who faithfully performed their obligation to her. She makes grateful acknowledgment of this in her book, "Retrospection and Introspection." In this book she also states, "After returning to the paternal roof I lost all my husband's property, except what money I had brought with me; and remained with my parents until after my mother's decease." Mr. Glover had made no will previous to his last illness, and then the seizure of disease was so sudden and so violent that he was unable to make a will.

These letters and extracts are of absorbing interest to Christian Scientists as amplification of the facts given by Mrs. Eddy in "Retrospection and Introspection."

"Inasmuch as ye have done it unto me."

EUGENIA BEATRICE MABURY.

O God, behold my open hands:
Place Thou my work within;
They emptied are of earthly gain
And pleasurings of sin.

For all was dross; it could not fill
My hungry, longing heart.
And now, O Love that satisfies,
I humbly beg my part

In Life's great work, the Truth to prove
To all humanity,—
Those weary ones who starve for bread
That now is feeding me,—

O Father mine, guide Thou me on,
And let me strive for Thee.
The answer comes: "Work thou for these,
My little ones,—for Me."

Gratitude Expressed.

MARY ALICE DAYTON.

Last Thanksgiving Day the Christian Science Churches for the first time held public services. This brought out fresh acknowledgment of our many occasions for gratitude. In "Miscellaneous Writings," Mrs. Eddy says, "We may well unite in thanksgiving for the continued progress and unprecedented prosperity of our Cause" (p. 110). Could there be a more unselfish and impersonal thought than this?

We cannot make an estimate of our indebtedness to Christian Science. We only know that by its ministry we have been rescued from dangers seen and unseen; that by a "power not our own which makes for righteousness," our thought has been lifted to a nearer sense of God; and that health and happiness in larger measure have come to our experience. Yet, while we are rightly grateful for physical and spiritual benefits which accompany God's gift to this age, is there not infinitely greater reason for thankfulness? We should rejoice that God has revealed Himself; that His Cause is being established on earth; that it prospers; and above all that we can share the exalted privilege of bearing this message to others.

Just now the opportunity happily comes to us of giving practical evidence of our loving gratitude by contributing to the enlargement of the Mother Church, so that greater numbers may share the unspeakable blessing of our services. Each individual has an equal responsibility in this effort and an equal opportunity to partake of and dispense the spiritual bounty it unfolds.

A great Cause should have a corresponding representation. A vast amount of spiritual work has been done in the last ten years in translating erroneous human belief back to spiritual facts, and how shall this enlarged spiritual concept be manifested to the world? Can the structure of Truth and Love be, too beautiful or complete? The Psalmist says, "Out of Zion, the perfection of beauty, God hath shined." The Church must be above mortal thought of values, and express the superiority of the spiritual over material ideals.

Students of Christian Science are not working for themselves alone, but to bring to all a better sense of the affluence of Truth and Love. Our purpose is to honor God with our substance, and to illustrate the unselfishness and unity of spirit which exists among all those who have found the teaching of the Comforter in Christian Science. It is to express the upspringing gratitude towards her who has so gently led us into the kingdom of peace and good-will; to cheer her heart and enrich our own affections; and to increase our capacity to receive more of good.

The experiences in connection with building the present Mother Church remain fresh in memory to prove man's God-bestowed agency in establishing truth. One may be mentioned. A young student on reading in *The Christian Science Journal* of 1892, an appeal for the Building Fund, felt a strong desire to respond, but found not the means in her very slender resources. Through tears of sorrow, she lifted her thought to God, and immediately there came the thought "I can give love, and Love is substance." This comforted and satisfied her. Not long after, money came in most unexpectedly and it was at once recognized as the demonstration of Love's supply, and so applied.

Those who have seen that sacrifices would be demanded in this work, have laid by a store as God has prospered them. Others, even at the eleventh hour, have found that they likewise received every man his portion to consecrate to Truth's service. Our demonstration will be made, not while we look at what others do or do not, but only as we follow our Leader's example, and unite in hope, faith, and love, looking unto God, "In whom all the building, fitly framed together groweth unto an holy temple in the Lord."

Phenomenal Upspringing of Christian Science.

That the Biblical religion, known as Christian Science, whose Discoverer, Founder, and Leader is the Reverend Mary Baker G. Eddy, has successfully met materialism and answered the heart-hunger for a healing Gospel, is quite evident from its phenomenal growth.

The text-book of the denomination, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, was first published twenty-eight years ago. At the end of ten years this remarkable book had passed through fifteen editions of one thousand copies each. During the succeeding decade about seventy-five thousand volumes found eager readers. In the past eight years the demand has so increased that 285,000 have now gone forth on their reformative mission.

The growth of the denomination in New England and throughout the world has been in like geometric ratio.

Its first church organization was formed in 1879 by Mrs. Eddy. In 1894 there was erected in Boston The First Church of Christ, Scientist, at a cost of $220,000. The land for this beautiful edifice, located in the Back Bay district then valued at $20,000, was given by Mrs. Eddy, and the church was dedicated free from debt, as is the rule of the denomination.

At the time of its dedication in the year 1894, 3,881 members had been received into the Mother Church in Boston. In June, 1903, its membership had become 27,796, of which number 3,696 united during the previous year. Thus it will be seen that nearly as many people joined the Boston Church in 1903 as had united with it in the first fifteen years of its existence. To accommodate the ever-increasing numbers a new edifice, capable of seating five thousand people, is now being built.

As has been said, the first church organization was formed less than a quarter of a century ago. In June, 1903, there were reported seven hundred and sixty-nine branch churches and societies, seventy-four of these having been formed the previous year. To quote Mrs. Eddy:—

"Christian Science already has a hearing and following in the five grand divisions of the globe: In Australia, the Philippine Islands, Hawaiian Islands, and in most of the principal cities, such as Boston, New York, Philadelphia, Washington, Baltimore, Charleston, S. C.; Atlanta, New Orleans, Chicago, St. Louis, Denver, Salt Lake City, San Francisco, Montreal, London, Edinburgh, Dublin, Paris, Berlin, Rome, Pekin. Judging from the number of the readers of my books and those interested in them, over one million people are already interested in Christian Science; and this interest increases. Churches of this denomination are springing up in the above-named cities, and, thanks to God, the people most interested in this old-new theme of redeeming Love are among the best people on earth and in heaven" (Message to the Mother Church, 1900).

This practical, Biblical theology appeals to all classes and peoples. It has among its vast cohorts Earl and Countess, Lord and Lady, clergymen, physicians, lawyers, editors, learned judges, and college professors, while the children rejoice in its simplicity of Love, and the untutored are healed by its Christly ministries. IRVING C. TOMLINSON.

In *Boston Globe.*

The right practice of any system of thought is inseparable from the system itself. Whenever practice departs from the precise and accurately stated theorems of science, it ceases to be any part of that science, ceases at once to reflect or manifest the universal truths maintained by that science. For this reason it must be plain that Christian Science is to be judged by its fruits. If these are in accord with its fundamental philosophy, and its general influence is good, then certainly its practice cannot be called unscientific, and no charge of charlatanism will stand. What, then, are the fruits of Christian Science? This is the only sure test of its claims. A careful examination reveals the fact that the practice of Christian Science heals disease; removes physical, mental, moral, and financial discord; reforms, or transforms the individual; heals sin as surely as it cures sickness, and brings peace to the troubled and deranged human experience. There are too many men and women who have been healed through Christian Science to discredit it at this late date. Those who have come up out of great tribulation to the possession of a whole body and a healthy mind will never believe that Christian Science is mingled with charlatanism, or that its practice is unscientific. If our critic has ever come across charlatanism, he may be sure it is always charlatanism and never Christian Science. The two are elementary opposites. Christian Science, in other words, is not to be judged by what it is not, but by what it is, and what it is, is determined by the practical good it confers upon its adherents. WILLARD S. MATTOX.

In *Meriden* (Conn.) *Journal.*

Christian Scientists in their practice, take for their standard the same rule of conduct as other Christians; *i.e.*, the teachings of Jesus Christ. If, through constant application to the study of these teachings and persistent effort to put them into practice, they seem to receive a larger share of health and happiness than their neighbors, should not the effort be made to find out the secret of their success rather than to subject them to criticism? The Christian Scientist is only too glad to share the good he is daily receiving, and heartily wishes that all the world might learn the value of seeking God aright. ALBERT E. MILLER.

In *The* (Pa.) *Scrantonian.*

To one who ignores the command of Jesus, "Heal the sick," no doubt the physical healing in Christian Science seems specially emphasized, but if we read the Gospel with an unprejudiced mind, we find that the command to "preach" was always accompanied with the command to "heal," and Jesus said, "If ye love me, keep my commandments." That Christian Science heals sin as well as sickness is proven by the thousands of those who through it have been freed from many forms of vice. ARCHIE E. VAN OSTRAND.

In *Brooklyn Eagle.*

The one duty that is clear for us is the obligation of finding out how to make our gospel a power unto all souls. The effort to do this is enough to occupy a strong heart's entire time; and, on the whole, experience shows that the men who for a lifetime devote themselves to doing this one thing make a broader and a deeper mark for good upon the spiritual life of their time than any who strive for humanity under merely temporary ideals.

CHARLES E. ST. JOHN.

In *The Christian Register.*

Christian Scientists do not consult spirits. They regard the action of God's law in human behalf as divinely natural, and not supernatural. Their understanding of the omnipotence of infinite Mind enables them to heal the sick and destroy sin, an action in which there is no mystery. I therefore make the assertion that no one is a Christian Scientist who relies upon clairvoyance.

The Lectures.

At Plymouth, Wis.

A large and intelligent audience from this city and vicinity and from Sheboygan turned out Tuesday evening, October 13, to hear an exposition of Christian Science at Turner Hall by Carol Norton, C.S.D., of New York City. For nearly an hour and a half he engaged the strictest attention of his hearers, nor did the interest flag for an instant.

Mr. Norton was introduced by Mrs. Katherine Bangs of Sheboygan.—*The Plymouth Reporter.*

At Gloucester, Mass.

The local Christian Scientists have just cause to feel a pride in the success of the lecture delivered yesterday afternoon [October 25] in G. A. R. Hall, by Edward A. Kimball, C.S.D., of Chicago. It was certainly a remarkable and notable occasion. The hall and landings were entirely too small to hold the people who came, scores being obliged to depart owing to the inadequateness of the accommodations. It was a remarkable address to those unacquainted with Christian Science, and for an hour and a half the remarks of the speaker were closely followed. Nearly two hundred ladies and gentlemen came down on the early afternoon train from Boston. Rev. William H. Perkins, Second Reader of Second Church of Christ, Scientist, introduced Mr. Kimball.—*Cape Ann News.*

At Grand Rapids, Mich.

A large audience greeted Judge William G. Ewing of Chicago, last evening [October 22] at the Opera House. District Attorney Theo. W. Brazeau, who introduced Judge Ewing, said in part,—

No branch of philosophy and theology has received more attention from writers and speakers the past ten years than Christian Science. We are told by its followers and friends that no subject has been so little understood and so ignorantly or wilfully misrepresented. It ought, therefore, to be with a sense of great satisfaction that the people of Grand Rapids are permitted to listen to an address upon that subject by Judge Ewing, a distinguished lawyer and jurist of the state of Illinois, a clear and strong thinker, and one who comes to us with a reputation as an entertaining and convincing speaker.—*Wood County Reporter.*

At Osage, Ia.

Last Friday evening [October 16] Carol Norton of New York delivered a lecture on Christian Science at the Opera House. The introductory remarks of Judge Clifford P. Smith of Mason City were in part as follows:—

You know the great Teacher gave us one universal rule by which to test the teachers and systems of religion. "By their fruits ye shall know them." He also indicated quite plainly the particular fruits which should distinguish his followers. The Scripture shows that he taught and practised a religion which overcame sickness and death as well as sin. And he said, "He that believeth on me, the works that I do shall he do also."

Judged by its fruits, Christian Science is good. In scope, it is the same as primitive Christianity, and the results which follow its practice are the signs and works which the Master specified, differing only in degree. A religion for which this can be said, must, sooner or later, engage the attention of every person whose ears are open for the reception of truth.—*Mitchell County Press and Osage Journal.*

At Oshkosh, Wis.

Bicknell Young, C.S.B., of Chicago, delivered a lecture on Christian Science, October 20, at the Grand Opera House, under the auspices of First Church of Christ, Scientist, of Oshkosh, Wis. There was a large audience and deep interest was manifested by all. The speaker was introduced by city attorney, Frank C. Stewart, who spoke in part as follows:—

Ladies and Gentlemen:—Truth is the harmony of the world and man's search for truth is a search for harmony, peace, and rest. The test of truth is human experience. Theoretical truth is what men, in their thought, conceive the truth to be. Practical truth is that which, when applied, is found to permanently advance the happiness and welfare of mankind.

Throughout all the world men have the moral right and, particularly in this country, they have the legal right to promulgate, expound, and teach what they conceive to be the truth. It is a corresponding right and privilege on the part of the people, as opportunity is offered, to lend an attentive ear to those who have taken the pains and expended the time and labor to think out religious and moral problems.—*Correspondence.*

At Helena, Mont.

Judge S. J. Hanna of Colorado Springs, last night [October 18] addressed an audience filling the Helena Theatre to its utmost capacity. Judge Hanna was introduced by Attorney E. D. Weed of Helena, who said in part,—

While not a member of the Christian Science association, yet I deem it an honor, as it is a pleasure, to be permitted to introduce the distinguished speaker of the evening.

The time has come when men of every creed, and of no creed, should welcome truth, come in whatever garb it may. This is an age of results, and I am one of those who believe that anything that brings about good results is entitled to the respect of all fair-minded men. Christian Science, so-called, needs no apology from any one.

Whatever tends to combat the spirit of evil in human nature, whatever drives out baseness and unworthiness and treachery and cruelty from the minds and hearts of men, ought to have our support. That which seeks to displace darkness with light, and to heal mental and moral and physical disease and deformity, is worthy of every commendation.

The torrent of the passions often overwhelms the call of conscience; and any moral force that helps to stay that flood and permit the voice of the spirit to be heard above the tumult, is a worthy fa tor in the world's civilization. That which drives evil from the heart, which brightens life and uplifts humanity, should have generous welcome as one of the great moral forces of the world.

When we look about and see numbers of the most intelligent and progressive men and women of the community,—not only here but everywhere throughout the country,—who have been lifted by the teachings of this Science from conditions of suffering and physical disease to happiness and health, is it not the part of ignorance and folly to affect to be flippant in the discussion of such a beneficent force in human affairs?

I am in favor of anything that brings healing to sorrow, that uplifts the fallen, that binds up the wounds of mankind; and that religion is best which shows the noblest results and does the most good.—*The Helena Independent.*

If one has eyes to see and ears to hear, then let him be of good cheer, for the kingdom of God has come.

JOHN WATSON.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Thanksgiving.

UNTIL recent years the custom of annually setting apart a day of public and national Thanksgiving, established by the sturdy New England pioneers, was confined to the United States, and it is not many decades since it was looked upon as a purely New England institution; but the devout and reverential observance of this custom has steadily increased throughout the world, and its influence must now be counted an important factor in the world's progress.

With the drawing nigh of the day upon which the people of a great nation will respond to the proclamation of their Chief Magistrate recommending that they "cease from their wonted occupations and in their several homes and places of worship render thanks unto Almighty God for His manifold mercies," it is especially fitting that we as Christian Scientists recognize and give thanks for the "manifold mercies" that have come to us.

We have seen our Cause grow with marvelous rapidity; our churches have largely increased in number and membership; opposition and prejudice have, in many quarters, given place to appreciation and justice; the sick have been healed, the sorrowing have been comforted, and sinners have been reformed. This is certainly cause for thanksgiving and praise, for it proves that God's kingdom is, with increasing force, holding sway in the hearts of men, and that the pessimistic and unnatural views of life which have fettered humanity for ages are becoming less dominant in mortal thought. We give thanks that the "manifold mercies" of infinite Love are for all mankind and that all are sharing the blessings of peace, health, and holiness which are the fruits of Christianity.

From day to day, there is greater recognition of Mrs. Eddy's rightful place in the world's history, recognition of the great value of her ministry, recognition of her unselfish and Christian labors for the uplifting of the race. For this also Christian Scientists give thanks, because they know that with the extension of this just recognition of the Discoverer and Founder of Christian Science, it is easier for the world to accept and believe the healing gospel of Christ Jesus which she reiterates and which she has made practical to this age.

M.

A Worthier Gratitude.

ONE of the most regrettable aspects of much of our thanksgiving is its attachment to a material sense and estimate of good. When the lap is piled high with creature comforts and all occasions of anxiety for the morrow are removed, a sincere and abundant expression of thankfulness is certainly most fitting, but if these passing benefits have failed to bring to the embrace of grateful thought those richer gifts with which our years are crowned, then surely we have not heard their nobler appeal, the choicest of the wine has been wasted, and the heart's response is likely to have been more selfish far than saintly.

To cherish earthly possessions in forgetfulness of the heavenly is to sacrifice substance for an imperfect symbol. Health and home, friends and fireside, peace and plenty, these all mean much of good, and are to be appreciated; but so long as they are linked in thought to the material, they are transient,—they may not even fringe the garments of God's munificence; and can we be content to hold our gaze thus low when the full splendor of His appearing awaits an uplifted vision? No, our repose must find its firmer base, our joy its better prompting in that spiritual gain which knows no loss,—the awakening call and consciousness of Truth,—the opened door to man's true inheritance, a perfect selfhood, the sonship of God.

Our worthier gratitude is therefore but the fragrance of our worthier sense, the sign of that true healing which Christian Science—the Knowledge of God—brings to all mankind. The spiritual concept of life and interpretation of experience raises humanity to the vantage-point of Jesus, where the acquirement of an earthly good normally attends the possession of the heavenly. This means vastly more than to-day's relief from disquieting solicitude, it means that a transformation within has brought transformation without, and our deepest gratitude is now felt for "the things that are not seen."

When we no longer distort our sense of God's world through materiality, then we enter into its harmony and peace, and a grateful joy is our abiding guest. In a passage whose great thought struggles against the limitations of language, Paul sought to reveal to the Ephesians and to us the "breadth and length and depth and height" of the spiritual endowment to which men may attain through Christ Jesus, until they are "filled with all the fulness of God," and all those who through Christian Science have awakened, even in some degree, to this richer apprehension of spiritual privilege, will not fail to give devout and continuous thanks to God therefor, and to remember with tender love and appreciation her whose hand has gently guided them into the possession of that higher, more inspiring sense of God, of nature, and of life foreshadowed by Browning when he wrote,—

> How soon all worldly wrong would be repaired!
> I think how I should view the earth and skies
> And sea, when once again my brow was bared
> After thy healing, with such different eyes.
> O world, as God has made it! All is beauty:
> And knowing this, is love, and love is duty.
> What further may be sought for or declared.

W.

The Greater Blessedness.

ALL who come into Christian Science must learn sooner or later that spiritual understanding reverses human beliefs and opinions, a statement which is warranted both by the teaching and the practice of the Master, else would it not have been said of him, "Never man spake like this man." We read that his declarations of truth were often so startling as to rouse the antagonism of those who accepted the testimony of the physical senses rather than the spiritual facts of being, but his words were verifiable then and are now, and Christian Science shows us how we may prove their verity beyond all question.

Our text-book says that Jesus "plunged beneath the material surface of things, and found their spiritual cause" (Science and Health, p. 313). Contrary to all human opinion, he said, "It is more blessed to give than to receive." The human tendency is to get, and no one would deny that legitimate getting is praiseworthy; but there is something better, and that, according to the great Teacher, is giving. From youth to age, we see men seeking love with a never-satisfied longing, and yet, did they but know it, the only true joy is to be found in *giving* love. So also we shall not find content in gaining truth, unless we are ever ready to impart it. We should never forget, however, that this spiritual development comes by orderly processes. We do not reach heaven, or harmony at a single bound, and there is the

Digitized by Google

greater need that we apply our understanding of Truth, and see to it that we are daily growing richer toward God.

Self-denial on our human side, is a wonderful discipline, and prepares the way for expansion on the spiritual side. This may be illustrated by the experience of a young man who resolved early in life to consecrate a tenth of his income to God and humanity. In order to do this, he found it necessary to practise the strictest economy, but at the end of the first year he saw that he was better off than he would have been, had he not had the benefit of this discipline each day. He was greatly prospered, and as his income was doubled, again and again, tempting suggestions came to him, of his necessarily increased expenditure, and that he was probably giving more than others, but he had made a covenant with God and himself and he would not break it.

At this time the light of Christian Science came to him through its healing ministry, and he began to see, as never before, the reason for giving. Paul says, "though I bestow all my goods to feed the poor, . . . and have not charity [love], it availeth me nothing." In Christian Science we learn that Love gives us all the good we possess and more than we appropriate, and because of this every offering should be made to Love. Thought which communes constantly with God, grows big with understanding, and all sense of limitation vanishes as we "think God's thoughts after Him." In consecrating time, means, and energy to divine service, we may indeed become "ambassadors for Christ," and "workers together with him," as the Bible teaches.

We begin to be Christian Scientists by receiving what all are agreed is the greatest blessing known to mortals, viz., health. In this we rejoice, but in order to rise to the full expression of our new-born experience, we must apply the law of giving, and at this season give heartfelt thanks that we are the recipients of richer blessings than were ever before realized by humanity. We may well give thanks that we are healed by no lesser power than the power of divine Love; that we have in our text-book, Science and Health, such a revelation of Truth, as will heal and save all mankind; and that we have a Leader who is worthy to bring this message of healing to the suffering human race.

Shall we not join with that mighty host who eternally praise God, and say, "We give thee thanks O Lord God Almighty, . . . because thou hast taken to thee thy great power, and hast reigned."

God is known as the bountiful giver of all good, and Christ Jesus as His representative gave healing, hope, joy, and gladness. He gave himself most unreservedly to the service of Truth and of humanity, and this is surely a most vital lesson for all who profess to be his followers.

A brief extract from the annual report of one of our branch churches is given on another page, and while for obvious reasons it cannot be published in full, a few lines from it may encourage others, as they did those who were privileged to read it. This report comes from a relatively small church, but it tells of love, harmony, and prosperity in every part of the work. It tells of liberal support given to the authorized activities of our Cause, and above all of an offering to the Mother Church Building Fund, which must have been as much again as was required for their own needs, and yet their surplus was greater than ever before. Truly, "It is more blessed to give than to receive."

Notice.

Contributors to our periodicals are informed that it is a rule of the Editorial Department that all contributions must be accompanied by the full name and address of the writer. This will not be published if the writer requests that initials only be used.

We are holding a number of testimonies and articles because these data have not been supplied.

A Song of Thanksgiving.

GEORGE AMBROSE DENNISON.

NEW-WINGED with truth, as never winged before—
The Master's truth, reborn these latter days—
Thanksgiving anthems ring from shore to shore
Around the pendant world, with joy and praise.
For lo! the truth sheds healing from its wings;
To wakened ears it sings
As once it sang in Galilee;
And now, as then, it sets the captive free.

Long have we dwelt as in a sunless room,
Our vision bounded by its narrow walls,
Save for a chink that dimly lit the gloom,
As now and then we peered where splendor falls,
A something far and high,
A vast beyond, an unattained sky.

The chink has widened till the walls are gone,
The little rift become a universe.
We face the light of everlasting dawn,
We rise triumphant o'er the primal curse,—
That ancient Dragon,—sense dominion,—
Which through all time has held the aspiring pinion.
Chained to the sordid, earthly sod,
And raised the walls that hid the smile of God.

O brothers louder, louder chant your praise,
That weary men may know
Heaven's perfect days
Come not with searching to and fro;
But here and now we walk the ways of God's estate.
Nor high, nor low, nor soon, nor late,
But everywhere, and in th' eternal now,
Springs being, never unto death to bow.

What joy to know that Spirit's perfect life
Waits not the dreary sanction of the grave,
Nor looks above, beyond a world of strife
For full unfolding! He that walked the wave
Hath said, "the kingdom is within;"
And she, our Leader, blest with quickened sight,
Hath dared to know that what hath been
Is now, and that the far, supernal light
As seen by mortal vision,
Bright over fields Elysian,
Enfolds us close as ambient air
Both here and now, if we but open wide
The windows of the soul, and bravely dare
To stand, God's children, cleansed and glorified.

It is an infamous thing in our American life, and fundamentally treacherous to our institutions, to apply to any man any test save that of his personal worth, or to draw between two sets of men any distinction save the distinction of conduct, the distinction that marks off those who do well and wisely from those who do ill and foolishly. There are good citizens and bad citizens in every class as in every locality, and the attitude of decent people toward great public and social questions should be determined, not by the accidental questions of employment or locality, but by those deep-set principles which represent the innermost souls of men.

A healthy republican government must rest upon individuals, not upon classes or sections. As soon as it becomes government by a class or by a section, it departs from the old American ideal.—PRESIDENT ROOSEVELT.

Among the Churches.

Work begun in Dowagiac, Mich.

The local organization of Christian Scientists, about ten, have leased the large room in the rear of the auditorium of the Universalist Church where they will in the future conduct Christian Science meetings every Sunday morning at the regular church hour.

The society was organized in February last and the interest is deepening.—*Exchange.*

Church Organization in West Cleveland, O.

At its annual meeting, October 12, 1903, First Church of Christ, Scientist, Cleveland, gave a loving Godspeed to a small band of its members who felt the necessity of forming Third Church of Christ, Scientist, Cleveland, in the western portion of the city.

This move is in no sense one of separation, but a loving recognition of the needs of the Field, and is a distinct step of progress in the work in Cleveland.

E. B. TENNY, *Clerk.*

Activity in the Northwest.

First Church of Christ, Scientist, of Puyallup, Wash., assisted by the churches in Seattle and Tacoma, kept open a Christian Science headquarters on the grounds at the Puyallup Valley Fair this fall, which lasted six days.

This being the first work of the kind ever done here, much curiosity was manifested, but before closing day it was quite generally expressed that it was one of the good features of the fair. A large quantity of literature was carefully distributed, and we feel sure that good results will follow.—MRS. CLARA SHOWERS, Puyallup, Wash.

Encouraging Report from San Jose, Cal.

We publish the following interesting extracts from the president's annual report.—EDS.

This evening marks the seventh annual meeting of the Christian Scientists of San Jose, since organized into a church, October 6, 1896. These seven years have been prolific with countless blessings, not only to the church as a body but to each individual member thereof.

It has been the policy of this church, and doubtless will ever continue to be so, not to desire to increase its membership in numbers so much as in spirituality, hence the slow growth of our membership, but the great love and unity that exists with all its members.

The financial showing of our church during the past year has been most excellent. Since our last annual meeting this church together with its Sunday School has subscribed almost four thousand seven hundred and fifty dollars to the Building Fund of the Mother Church. Our own church building fund, and our general fund for church expenses show a large net gain, and this, too, in spite of the fact that our monthly expenses for the year have exceeded considerably those of any previous year.

Our reading room has grown steadily in usefulness, the attendance increasing very satisfactorily. During the past twelve months 1,408 Scientists have visited the reading room and four hundred and eighty-four strangers, making a total of one thousand eight hundred and ninety-two. The circulating library, an adjunct of the reading room, is an excellent institution, and fills an important place in the progress of the work in San Jose.

Our Sunday School is in a flourishing condition, showing a healthy growth in membership and attendance.

Testimonies of Healing.

"How beautiful are the feet of them that preach the gospel of peace, and bring glad tidings of good things!" and how grateful are we who have been the recipients of this "gospel of peace" and are reaping, each day, so great a harvest of good things through its knowledge and demonstration.

Through a lecture delivered in this city in January of this year, there came to my hungry heart the first glimpse of the "beauty of holiness." I had been wandering in a maze of outgrown beliefs and unsatisfied longings, seeking I knew not what, but now I know that it was the hungering and thirsting after righteousness spoken of by the Master in that grandest sermon that ever fell on human ears, designated by our beloved Leader as the essence of Christian Science,—the Sermon on the Mount. (Science and Health, p. 271.)

One by one, the material joys which had promised me happiness turned to ashes in my grasp. I was tossed on a tempestuous sea of doubt, sickness, discontent, fear; and life stretched out before me one weary monotone of endurance. To my cry of hopelessness came back from the theology of my fathers only the doleful word, "resignation." To my inquiry: "Is there no balm in Gilead?" there seemed to come only the hollowness of mockery.

I was raised in an orthodox church, and had early been versed in the letter of the Scriptures. Both father and mother were consecrated adherents to the light they had, my father having been a minister for more than forty years, but the "perfect love" that "casteth out fear" was unknown to me. So when womanhood, wifehood, motherhood came, bringing their attendent cares and trials; when sickness came and held me for many long months and even years a victim, then I looked in vain for the God who is a "very present help in trouble." *Materia medica,* the best that could be secured, exhausted its skill in trying to heal me, but without avail, and finally all my faith in its efficiency was gone. However, I knew naught of a better way, and was inwardly rebellious against the conditions and circumstances. It seemed there was no justice, and that if there were a God of mercy, His mercy was not for me. For in all the years of my accountability, my standard had been the right, my one constant effort to know and do the right. Why, then, when I asked bread, was I given a stone?

Curiosity, or the wish to pass the time away, took me to the lecture on Christian Science. That is as it seemed, but in reality, Truth was leading me to the message of peace,—God's voice was calling to me out of the darkness.

The speaker handled his subject in the quiet, dignified, sincere way of a man who is heart and soul in his work, and great was my surprise at hearing Christian Science explained in a way so different from what it had always been represented. He took the dear old truth that had seemed to fail me in my material sense of it,—presented it in its spiritual dress, until it gleamed and glowed with life. He brought to us the thought of God to whom I had seemed to cry in vain, and showed Him to be All-in-all, —ever-present Love, and His law the power that governs the universe. He showed the utter nothingness of human sickness, want, or woe, and, withal, brought to my waiting heart such a message of peace as the angels carried to the vigilant shepherds on Judæa's hills.

Though by no means then grasping the truth, there began to stir throughout my being the promise of a resurrected hope, and I welcomed its faint glimmering of light, as does the pilgrim stumbling in the dark over unknown paths, where shines for him the first star in heaven's distant dome.

The speaker then announced that he would read the tenets of the Christian Science Church, and like a bene-

Digitized by Google

diction they fell on the ear,—they were so simple and so true.

That lecture roused an echo throughout my being that would not be stilled, and there kept singing over and over in my heart the sweetness of the message. Like the starving man to whom only one taste of food has been given, and who is more hungry than before, I longed to know more of this good news.

So two days after having listened to the lecture, I made inquiry and learned of one of the leading practitioners of this city. Though an utter stranger to him, he received me with much kindness, and it encouraged me to talk freely to him. To my many questions his answers were all clear and conclusive. They appealed to both heart and reason, and his face was full of spiritual light. He broke for me the bread, and held to my lips the cup of cold water, and taught me for the first time the full meaning of these beautiful words of the Master, "Whosoever shall do the will of my Father which is in Heaven, the same is my brother, and sister, and mother."

On my departure, he told me of the free reading room, maintained by First Church of Christ, Scientist, of this city, and that I would find there a librarian who would show me the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. He also invited me to attend the Wednesday evening meeting the following evening. I was very cordially received at the reading room, and felt at home immediately. After some conversation with the librarian, she loaned me the text-book above referred to. I took it home and began to read. Its introductory sentence in the preface seemed to open up to me a mine of riches, and even yet, though I have read it many times since, those beautiful words thrill me through and through: "To those leaning on the sustaining infinite, to-day is big with blessings" (Science and Health, Preface, p. vii). What sentence could be more all-embracing or more full? It promises rest to the weary; it takes away the load of human responsibility that has weighed on us like a pall, and lights again for us the long extinguished torch of hope.

Day and night I pored over that little volume, going through it three times without cessation,—the first time almost devouring it, the second a little more seriously, and the third with great care. It filled me with joy unspeakable, uplifting the mind, healing the body, and furnishing the solution to all my unrest. From the opening to the close, there was not one doubt in my mind to dim the clear understanding that was taking the place of the old-time blind belief. The, to me, wonderful Truth of being, told over and over again as our Leader has told it in Science and Health, in language of inspiration, resounded through my soul, waking all its sleeping echoes, rousing all its dormant energies, and dispelling with its sunshine of Life and Truth and Love, all its clouds and mists.

And, as I read the dear old Bible, lessons came thronging into my memory, so beautiful in their true significance that I was almost dazzled. It seemed as if a great and illuminating light had been turned on them, and then came the full realization of why Science and Health is so truly called the "Key to the Scriptures."

It is with the greatest joy that I take this opportunity of confessing the Christ before men, of adding my testimony to the thousands of others; for my heart is full of gratitude to God, to our Leader Mrs. Eddy, and to the kind teacher and many friends here who have helped me in so many ways.

I know that I have found the pearl of greatest price, and am now striving to "press toward the mark for the prize of the high calling of God in Christ Jesus."

Physical ailments, both chronic and acute, have all vanished like the ghosts that they are, nothing they are, and to nothing they return.

Neither my little daughter nor I have had one dose of medicine since I attended the lecture, and we formerly took it almost constantly. Our health is better than it has ever been, and every adverse condition of our lives is silenced by the gentle, "Peace, be still!" of the Master. For the Christ is come,—He reigns supreme!

O. J. M., Houston, Tex.

[Translation.]

I am very grateful to God that we now have a Christian Science periodical in the German language, because I cannot read English. I would like to help our German brethren and therefore will testify here to what Christian Science has done for me, and how I was led to accept the truth.

For several years I suffered with headaches. Sometimes the pain was so severe that it seemed as if I could not endure it; I felt dizzy and could hardly walk without being supported. At night I could not sleep longer than perhaps half an hour, afterwards I lay awake and the night seemed endless. As soon as I rose, my mouth filled with blood. No physician or medicine could cure me, and I grew worse continually.

Often I was unable to work and had to stay at home. Many times I fell upon my knees and called aloud to God to have mercy upon me. Then some one spoke to me of Christian Science and advised me to try it, but I would not. For half a year I not only waited, but I opposed it, and kept growing worse.

I could no longer take medicine, and in my distress I heard of a Christian Science practitioner, who had been instrumental in effecting many healings. I went to her on Thanksgiving evening, 1896, and was instantaneously healed. I slept all night, and not only was my body healed, I was healed. She read the sixth chapter of second Corinthians to me, and this opened my eyes. I saw what I had never before seen,—that I must strive to overcome all my faults. I have very often gone to my practitioner and she has patiently and lovingly directed me to the narrow path, for which I feel very grateful. I thank our heavenly Father for giving us our Leader and Teacher, Mrs. Eddy, through whom we have received the true light.

Last summer I had my greatest demonstrations. On May 1, I was working for a farmer, when a horse kicked one of my legs. I suffered terribly at first, and had the wound examined by a surgeon who said that the bone was broken into splinters. I rested for a few days. On May 12, I fell and it broke anew, but my practitioner worked faithfully and with the love of God the trouble was soon overcome.

Later on another trial confronted me. On July 4, I was on a load of hay when one of the hind wheels broke, the wagon was upset, and I was thrown off. My collar-bone was not only broken but was put out of joint. Before going to a physician, I went to my practitioner and asked for help. She told me very lovingly that it would be better for me to overcome this alone with God. This at first almost frightened me, but it proved a blessing to me, for I learned that all our help comes from God alone. I applied my understanding of Christian Science for a week, then went to a physician to find out the condition of things. He at first thought I was but slightly injured, but when he examined me he wondered how it had been possible for me to work. He called to another physician, and they examined me a second time. They requested me to raise my arm. I did so, and they were astonished and said that they had never had such an experience, no one had ever been able to raise his arm in such a condition. They said that my collar-bone was broken in the worst possible way, that I must go to a hospital and undergo an operation.

I did not go, but sought refuge in God through the understanding of Christian Science, and He healed me. Ten

Digitized by Google

days later I went back to the physician and asked him whether he did not think that I might now go back to work. He examined me and was astonished that I was healed in so short a time. He said that I was all right. Then I sat down and told him of my healing; I told him that God had healed me of all my trouble through Christian Science.

I wish that all the dear readers of this testimony might come to God through the study of Christian Science. "God is love; and he that dwelleth in love dwelleth in God, and God in him."—J. FRIEDRICH WEMMIE, Burlington, Ia.

After so long a time, I desire to make public through our periodicals a little of what Christian Science has done for me.

At, or about the age of four years, I had scarlet fever, which left me with what the doctor called spasmodic asthma. As the years passed I grew steadily worse, until I had given up all hope of ever being well. I had tried a number of very able doctors, and nearly every known patent remedy, with never more than temporary relief. The last doctor seemed to help me for a while, but finally his treatment failed also.

About February of 1900 an uncle came to visit me, and he gave me his copy of Science and Health to read. I am glad to state that I at once caught a glimpse of the truth therein contained. Enough of the light immediately made its way into my consciousness to relieve me at once of many errors, such s stomach trouble, the tobacco habit, and the use of profane language.

Before I had read Science and Health through once I had no more use for drugs, but asthma still stayed with me, so to speak. I had received so much good that I thought I ought to make my own demonstration in this particular also, but later on I was compelled to ask for absent treatment. A faithful worker in Chicago gave me three weeks' treatment, and I am truly happy to say that I know I have been completely healed of asthma, for whatever it is my duty to do I can do without any trouble whatever,—even working in dense dust, a thing I never could do before.

I am indeed thankful for the physical healing, but the spiritual uplift seems the most wonderful to me. In fact, I can find no words to express the great happiness I feel. I am really very thankful to Mrs. Eddy and to all others who have helped me to see this great light, which indeed reveals the ever-present God, who healeth all our infirmities.

CHARLES E. ADAMS, Peru, Ind.

For the benefit of suffering humanity, I wish to give my testimony of healing.

In the latter part of April, 1893, I became afflicted with cancer. The disease progressed rapidly and became very painful. A friend had previously called my attention to Christian Science and gave me the text-book to read, but I could not catch the idea and so could not understand it, and although not unfriendly, I allowed the reading of it to drop. After a short time my complaint got so bad that I was compelled to take up Science and Health again. I say compelled, for I was impelled in some manner to do this; it seemed to be my only salvation, and I finally applied for treatment. The good, reassuring letters I received seemed to lift me up from the start. I procured a copy of Science and Health and studied faithfully. My healing was very slow but I clung to my only hope; however, from the first treatment the character of the disease seemed to change and it developed much more slowly.

In the earlier part of October a violent upheaval set in, it was both mental and physical. In my distress I wrote to the practitioner, saying I would go to him. He answered, saying I could do so if I chose, but that there was no necessity for it, and explained what the trouble was. This reassured me, and that night I woke up to find myself healed. The growth was cold as ice, and it immediately turned black and soon dropped off.

I will now state for the benefit of other sufferers how this trouble fastened itself upon me. When I was eight years old, one afternoon I was playing on the floor of our sitting-room, and an aunt came in to visit my mother. The conversation drifted to the case of a woman who had passed on from cancer. All the details of her condition and suffering were given, and I drank in every word. A nameless terror now took possession of me; I feared this dreadful thing continually, and when I used to say my childish prayers at night I always asked God to save me from cancer. When I reached middle age it appeared, and was violent from the start. How true the saying of Job, "The thing which I greatly feared is come upon me." Let us always remember to guard faithfully the portal of our thought, as our Leader so lovingly tells us in our text-book.

This wonderful healing constantly comes to my thought, and as I contemplate it the apostle's words come to me with deep significance. "Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God." We should hold to this thought, love our neighbors as ourselves, and strive to follow in the footsteps of our dear Leader, who so lovingly points the way. Let us one and all gladly obey her loving counsels, profit by her faithful rebukes, and uphold her hands in every way.

F. D. KENDALL, Ewing, Neb.

I wish to tell how I came to Christian Science. I was a member of the Evangelical Church, which I attended very regularly, not only because it was customary or because our parents and grandparents had done so, but because I really felt edified and often took the words of the sermon home with me; my heart was touched and religion seemed very dear to me.

About five years ago, I ceased to find this edification in listening to sermons, I noticed contradictions, our denominational religion could no longer satisfy me and I longed for something better. I heard of Christian Science, went to the meetings, and the oftener I went the more I realized that this was the truth for which I had unconsciously longed. I found myself satisfied with the religion of Christian Science; it brought to me a happiness which I had never known before. People are usually led to Christian Science by the desire for physical healing. This was not the case with me, for I had enjoyed quite good health, and if something seemed to be wrong, I had paid little attention to it. I had never believed much in doctors and medicine, therefore I was very glad that Christian Science proved that these are unnecessary. During the last five years I have enjoyed better physical health than ever before. If headache or rheumatism made its appearance, I turned to Truth and it disappeared.

Last spring, however, I was taken down with a severe illness, and I suffered intensely with pain in my chest and back. It seemed as if the upper part of my body was wedged in so that I could hardly breathe. I did not seem to be able to meet it, and therefore asked for treatment. My practitioner worked for me almost four weeks until the trouble was so far overcome that I could go to her. It seemed to be stubborn and had gained a strong hold upon me, but with the love of God and the faithful work of the Scientist, it was finally destroyed. I thank God, who led me into Christian Science, for this positive proof of the power of Truth over error which was revealed to me.

A new life began for me with Christian Science. The consciousness of our oneness with God, the assurance of His ever-presence and help in every detail of life, gives me a feeling of safety and calm, a comfort and confidence which

Digitized by Google

I had never known in my old faith. I can no longer think of life without Christian Science, and I therefore express my profound gratitude to our beloved Leader, Mrs. Eddy, who has brought this great truth to the world. Through her faithfulness, wisdom, and unselfishness, she has shown us how we may come closer to our Father, God.

ALINE VON DITTMAR, Dresden, Germany.

On October 5, 1901, I became blind quite suddenly, at the noon hour, just as my daughter and myself were going into our dining room. I was carrying something in my hands and before I reached the table, I said to my daughter, "There is something black before my eyes, please take it away." She declared that there was nothing before my face. Everything seemed to be black before my left eye, but with my right eye, I could still see the objects as if in a dense fog. I was greatly distressed, but trusted that light would come back to me as quickly as the darkness had come.

The next day we drove to an oculist, who examined my eyes thoroughly, and when I asked him if I would regain my sight, he said, "Let us hope so." I was under this professor's medical treatment for three weeks without success, then I told my daughter that I would not go back to him, because the pain which his experiments caused my eyes and temples had become unendurable. My daughter was frightened, for she believed that now all hope of recovery was abandoned. In her anxiety, she went to a friend of ours and told her of our trouble. This lady advised us to take Christian Science treatments, which she said would help me.

My daughter brought me this glad news, and I must say that I went to the practitioner with perfect faith and confidence. I felt sure I would be directed to God to be healed by Him.

A strong wind was blowing that day. I had a bandage over my eyes and could hardly endure the pain. We reached the practitioner's house, and while I was being treated, an indescribable calm came over me. I felt as if I were being lifted up, and the pain abated.

When the practitioner called my daughter into the room, she wanted to replace the bandage before my eyes, but the Scientist said, "Please do not put that bandage on." My daughter replied, "My mother cannot be without it in this strong wind." The practitioner repeated, "I do not wish her to have that bandage on." I became frightened with the thought that I should have to go without it, and, turning in the direction of the practitioner's voice, I said, "The ban——" but no more, for I could distinguish the form of the Scientist.

Words fail to describe the joy of that moment. After having been in that darkness, I could again see a form quite distinctly before me. I felt as if I must fall on my knees and thank her, but she hindered it and said, "Not I, but God alone." My sight improved hourly, and the next day I could go to the Scientist alone.

This is my healing through Christian Science for which I thank God every day with my whole heart, and I also thank the Christian Scientist.

FRAU DORN, Berlin, Germany.

This, my testimony, given in gratitude for the good derived from Christian Science, is not written for Scientists who already know the truth, but for the poor man who has not opened, or the foolish man who will not open, his heart and receive the peace which none but God can give.

I had been addicted to the liquor habit to such an extent that from a traveling salesman of no mean ability or salary I was reduced to a menial position. Five times had good resolutions been broken, each time reducing me in position, income, and respectability, until, three days before accepting Christian Science, I had resolved to kill myself. After being drunk for three weeks I found myself in a hotel in a western city without money, without position, with everything gone from me but remorse, and of that I had it all. I had been a druggist for nine years, knew all about poisons, and had concluded that if by Tuesday something did not transpire to better my condition I would take prussic acid. Something, however, did transpire that same day. The best friend I have on earth found me, brought me home, and induced me to try Christian Science. I was ready, I was willing to try anything or everything to stop that terrible mental anguish. My pride, my self-will, all was dead, and in humility I went alone to a Christian Science practitioner and told her all—everything. My voice trembled, my eyes were full of tears while I did it, but there was so much kindness and such a sense of security in her presence that I asked for help at once. Did I get it? At the first treatment, the desire to drink was killed, and within three days not only had a very lucrative position on the road returned to me, but my heart was moved with the desire to live a nobler life.

Can any man situated as I then was, ask me now, did I accept this truth? Could all the criticisms in the world against Christian Science change my opinion of it? Never. I, too, hope to become worthy to call the one who gave this blessed Science to the world, my Leader."

My head is bowed in fervent prayer that all who helped me into an understanding of God and His ways may be further "Glorified with His own glory."

W. C. O., Kansas City, Mo.

I wish to express my gratitude for the blessings of Christian Science. In 1894 I was told by a prominent physician that I could live only two years and must go to a hospital so that he could see me each day; but I could not do this, as I always had a dread of such a place.

I knew of Christian Science, so I went to a practitioner, and was relieved at once of the mental strain and discord in my home.

The following are a few of the many diseases from which I have been healed through Christian Science,—indigestion, constipation, cough, neuralgia, gastritis, and sore throat which I had from a child. The least dampness would cause my throat to swell and canker, and I had my tonsils removed but no relief came to me until I was healed through Christian Science. Words cannot express my gratitude to our dear Leader, Mrs. Eddy, and the practitioner who was so kind and patient in helping me to overcome all these ills.

I am especially grateful for the light I have gained through our text-book, Science and Health, and the publications. I hope and pray that I may prove my love by my works.—F. W., Cripple Creek, Col.

Let the watchwords of all our people be the old familiar watchwords of honesty, decency, fair-dealing, and common sense. The qualities denoted by these words are essential to all of us, as we deal with the complex industrial problems of to-day, the problems affecting not merely the accumulation but even more the wise distribution of wealth. Least of all can the man of great wealth afford to break the law, even for his own financial advantage; for the law is his prop and support, and it is both foolish and profoundly unpatriotic for him to fail in giving hearty support to those who show that there is in very fact one law, and one law only, alike for the rich and the poor, for the great and the small.—PRESIDENT ROOSEVELT.

If a man is so ill as to think himself ill, when he is not ill, he is very ill indeed.—A NOTED PHYSICIAN.

From our Exchanges.

Rev. John White Chadwick says in *The Christian Register*, "We read of Jesus, in the New Testament, that, as he prayed, the fashion of his countenance was altered. The story is a brief epitome of a universal law. Every man's face is being daily, hourly, altered by his prayers, by the desire which he allows himself, by the thoughts which he permits himself to cherish, by the dominant passions of his life. There is many a face that is now hateful and repellent which might have been beautiful and attractive but for some secret shame, some tolerated fault, some fatal tendency of thought or will, some fond adultery of the heart. And it is not only the sensuous and sensual vices that insure such penalties. Greed and vanity and pride all twitch the mask aside and show the actual man; or, to use a juster figure, all etch and mould in the man's plastic countenance, stamping their image and their superscription upon that with infallible accuracy."

The great facts of the New Testament do not change, but the philosophies that co-ordinate and interpret them shift from period to period. Above all the outlook of normal human minds upon the universe, the *weltanschauung*, with which ultimately religion must reckon, varies with the advance of human knowledge. Edwards understood perfectly the outlook of his own age, what is more, he sympathized with it and appealed to it as a ground of reasoning. A preacher who to-day should seek to present many of the Christian doctrines in the forms Edwards adopted, instead of arousing men to a religious life would puzzle them where he did not repel them. They would utterly fail to understand his point of view. They would be unresponsive to him, not simply because their hearts would be wicked, but because their minds would be confused.—*Watchman.*

In Mr. Lane's interesting account of the new pastor of the City Temple, London, in last week's *Examiner*, he speaks of Mr. Campbell's frequent use of the phrase, "Let us get back to first principles." If all denominations of Christians would act in accordance with that rule, what a transformation in certain present-day practices there would be! But would it not be a happy thing if we could all shake off the accretions of the centuries, and "get back to the first principles" of church order as set forth in the New Testament? It would be difficult, no doubt, to drop traditional theories and interpretations; but would it not be well to do so?

Worry is a foe to the heart, to the digestion, the circulation, to every nerve, vesicle, and brain cell, and will leave on them all its evil mark. The science of life is realizing ever more clearly the exact co-ordination between the spiritual and the physical states. Our bodily weather originates, all of it, in the uppermost spheres. To the extent in which the soul is wrong, every part of us, from top to toe, is out of gear. We see, then, that while the inevitable years produce their results, the inner spiritual conditions are at every point profoundly modifying them.

J. Brierly.

In *The Christian World.*

The stumbling-blocks that come from the thoughtless inconsistencies of Christian men and women have caused falls that have meant ruin and death to countless weaker souls. Christ's law is our law, not custom or what the world may say. Christ must be first, his love must fill the heart, and all the commandments of the law and the prophets and the gospels are summed up in that love. The law of the Christian life is love, and that law lived, in consistent striving to apply it everywhere, must make the stumbling-block impossible.—*The Lutheran Observer.*

Make our congregation of fifty, or even twenty, really Christ-like, and they will produce a social revolution. If they are Christ-like and not make-believes, nothing can stop them. The ministers of all churches must begin with themselves, they must be converted from secularism, they must realize anew in their own hearts the religion they teach, and then bring the souls of men one by one into righteousness. The greatest thing in life is religion; its new awakening is at hand.—*The Universalist Leader.*

Church Tenets.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Building Fund of the Mother Church.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Clerk of the Mother Church.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

Church Treasurer.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Notice.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Reprints from the Journal and Sentinel

THE TRUE LAW.
SERVICE AND STIPEND.
THE BROTHERHOOD OF MAN.
RESIGNED TO THE WILL OF GOD.

THE TRUE ORTHODOXY.
LESSONS FROM A WORKSHOP.
THE LESSON SERMONS.
HEALING THE SICK.
HOW SHOULD THE SICK BE HEALED?
THE REAL AND THE UNREAL.
THERE IS REST AND PEACE ON EARTH.

Price. Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Pamphlets

SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. Reprinted from the *Journal*. Revised by the writer, JOHN GILLESPIE. 63 pages.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. A compilation of Court Decisions, Opinions of Lawyers, etc. 72 pages.

MR. KIMBALL'S LECTURE. Christian Science: Its Promises and their Fulfilment. 33 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By SEPTIMUS J. HANNA. 36 pages.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonies given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 23 pages.

Price. One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

MISCELLANEOUS PUBLICATIONS

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

COMMUNION HYMN. "Saw ye my Saviour?" Words by Rev. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health, in lots of twelve or more to one address may include any or all of the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . 5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid. 4 00

Twelve or more to one address, each, prepaid 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Canal Treaty between the United States and the Republic of Panama has been drawn and was signed by Secretary Hay for the United States and M. Bunau-Varilla for the new Republic, November 18. The Republic declared its independence November 3. The treaty contains twenty-six articles. The first five deal with the question of sovereignty, and the remaining twenty-one with administration. Article I. says in substance that the United States guarantees and agrees to maintain the independence of the Republic of Panama; Article II. The Republic of Panama cedes to the United States five miles on each side of the canal, and three marine miles at each terminal, and also any other lands necessary to the construction or maintenance of the canal and its auxiliaries; Article V. The Republic of Panama grants to the United States in perpetuity a monopoly of any system of communication across its territory by canal or railroad.

Dr. Thomas Herran, the Colombian chargé at Washington, and Señor Brigard, the Colombian consul-general at New York, are putting in shape the affairs of the Colombian legation preparatory to its closure. The supposition is, either Dr. Herran has been ignored by his government, which has refused to answer his cablegram or advise him at all regarding the Isthmian situation, or his cablegrams have been held up.

The United States of Colombia has lodged a complaint against the United States because of the latter's recognition of the new Isthmian Republic. It will be referred to the Senate.

The Senate Committee on Foreign Relations has authorized a favorable report on the Cuban Reciprocity Treaty. The proposal has been made by Mr. Bailey of Texas to set the date for a vote on the measure early in December in the regular session. This would result in the present special session adjourning without coming to a vote on the special business for which it was convened. Speaker Cannon of the House does not favor the plan, but it seems likely to carry.

The president of the State College of Agriculture and Mechanic Arts of Georgia has received a letter from the British Cotton Growing Association, Liverpool, requesting him to recommend to that association several young men who understand cotton raising and other farm duties, who are willing to go to South Africa to teach the natives of the British colonies to cultivate cotton and other crops that the country will produce.

M. Jusserand, the French ambassador at Washington, has called at the State Department and notified Secretary Hay that the French Government has fully and formally recognized the new Republic of Panama. Italy and China have also recognized its independence. Germany and Brazil are ready to do so. News has been received from Minister Beaupre at Bogota that the excitement there is abating.

The chairman of the International Monetary Commission, with a view to enlarging the scope of the commission, is in Washington in consultation with authorities there. One member is already in China to urge its system of exchange for that country. The commission hopes to extend its work to the South American countries.

Governor Dole of the Hawaiian Islands has received his commission to the office of United States District Judge and will take his oath at once. Secretary Carter, who is to succeed as Governor, not having yet received his commission, will for the present act as Governor.

Samuel Gompers was last week re-elected president of the American Federation of Labor at its twenty-third annual meeting. He received 12,524 votes. The only other candidate received 1,134.

Foreign.

Rapid transit has been inaugurated in Cuba by through trains from Havana to Santiago covering a distance of 542 miles in a scheduled time of twenty-five hours. The time heretofore has been about three days including the necessary stopovers. The route is over the Havana United, the Cardenas and Jucaro, and the Cuban Central Railways to Santa Clara, and thence over the Cuba Railroad. The road is of the American standard gauge, equipped with sixty-pound rails, and partly rock ballasted.

An unconfirmed rumor says the Sultan has accepted the Russo-Austrian reform scheme. Another despatch says that the grand vizier has resigned on account of the efforts of the palace clique to prevent the acceptance of the reform scheme. This would confirm the report that the Austro-Hungarian and the Russian ambassadors, if the scheme was not accepted by the 20th inst., would present copies of the scheme of reform to the Sultan and hold him responsible for carrying it out.

King Victor Emmanuel and Queen Helena of Italy, who are visiting King Edward, reached London on the 19th inst. and were very cordially received as the guests of the Lord Mayor and the Corporation.

It is rumored that Wu Ting Fang, late minister to the United States and now a member of the Chinese Board of Commerce, will resign because his influence and judgment in the present crisis are not considered.

It is said that Emperor William himself is designing the trophy to be raced for in the transatlantic races which he proposed.

A despatch from Brussels says it is definitely settled that King Leopold will visit the United States in the spring.

Industrial and Commercial.

The Williamsburg Bridge, which spans the East River at New York which will be formally opened December 19, is the largest of its kind in the world. The total cost is about $11,000,000. Its length between terminals is 7,200 feet, the main span 1,600 feet, extreme width 118 feet, minimum height of the main span at mean high tide 122 feet, the height of the cable towers above water 333 feet. It carries two carriage drives, four trolley tracks, two foot-walks, and two bicycle tracks. The diameter of the suspension cables, containing 7,696 wires three-sixteenths inch is 18¾ inches. The steel used amounted to 40,000 tons. The first wire was run April 11, 1901.

It is announced that the Pennsylvania Steel Company receives the contract for twenty-thousand tons of steel rails for the Mecca railway in competition with the Krupps and several other German and Belgian firms. The price is $22.88 per ton delivered at Beirut.

The value of American cotton exported during October was $60,283,412, the largest October showing since 1901, when it amounted to $60,474,837. The amount was 594,540,872 pounds, which shows an average price of 10.1 cents per pound.

The exports of domestic products of the United States for October amounted to over $5,000,000 daily; the imports amounted to about half that amount.

France has harvested the largest crop of wheat, 365,600,514 bushels, from the smallest acreage in years, 16,151,967 acres.

General.

Much interest attaches to the papyri found by Drs. Hunt and Grenfel, agents of the Egypt Exploration Fund, in a rich Ptolemaic necropolis of El Khibeh. The bulk of the documents from one mound contained a collection of sayings of Jesus. They are all introduced by the words "Jesus saith," and for the most part are new. Some of them contain very interesting variations of accepted texts: *e.g.*, Luke. 11 : 52, "Ye have hidden the key of knowledge; ye entered not yourselves, and to them that were entering in ye did not open." Another fragment contained a discourse of Jesus closely related to passages of the Sermon on the Mount, and a conversation between Jesus and his disciples in which he answers a question as to when his kingdom will be realized, saying, "When ye return to the state of innocence which existed before the fall."

In London the county council has within a recent period taken hold of the housing problem with a firm and comprehensive grasp. One plan will furnish cottages for eight thousand people, another will care for six thousand, and a site has been bought where forty-two thousand are to be accommodated in pretty little cottages with gardens.

There was an interesting gathering in Vienna recently at the old home of Beethoven, which is soon to be demolished. A number of his compositions were performed. Doors, windows, and other relics will be presented to the municipality as a nucleus for a Beethoven museum.

A successful ice plant has been established at Jerusalem. About seven hundred pounds are sold daily and the demand is increasing. The capacity of the plant is about fourteen hundred pounds per day.

The annual report of the acting superintendent of the Yosemite Valley National Park shows that 9,500 people visited there during the season of 1903.

A report says that Professor Hussey of the Lick Observatory, camping at Canoblas, New South Wales, has discovered ten new double stars.

Naulahka, the Brattleboro, Vt., home of Rudyard Kipling, where he wrote several of his successful stories, has been sold to an old Brattleboro family.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Semi-annual Lecture of the Mother Church.

THE semi-annual lecture on Christian Science, under the auspices of the Mother Church, will be delivered by Edward A. Kimball, C.S.D., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., in Symphony Hall, corner Massachusetts and Huntington Avenues, Tuesday evening, December 8, 1903, at eight o'clock. The lecture is free and the public will be cordially welcomed.

From our Contributors.

Sowing Beside all Waters.

EUNICE P. ATHEY.

SOME time ago an article appeared in a prominent journal which I greatly enjoyed. The title, "A Sower of Beauty," was very appropriate. It told the story of the experience of a gentleman while riding by rail through a southern state. The landscape was dreary and monotonous, and he fell to watching his fellow-passengers. The action of a sweet-faced woman excited his curiosity. She seemed to have a small salt sifter containing something which she, as unobtrusively as possible, shook out of the window now and then while the train sped on. From time to time she refilled it from a shopping-bag she carried and proceeded to use it as before.

Several months after, this gentleman while out walking with a friend in Atlanta passed his mysterious fellow-passenger, and after telling his story, asked who she was. He learned that she was the wife of a prominent physician and that she believed in the power of beauty to make life brighter and better. She therefore sowed the highways with flower seeds, and, said his friend, when you go over that route again see if the landscape has not been improved.

Later on, when our traveler started on his return trip, he had forgotten his friend's words, and not until he heard delighted exclamations, did he notice the transformation in the outlook from his car window. The small bagful of seeds sown by the wayside and wafted far and wide by the wind had sprung up into a radiant display of scarlet poppies, thousands upon thousands of them, to rejoice and revive drooping spirits. The heart and eye were alike gladdened by the sight of myriads of floral apostles that with mute lips proclaimed the helpfulness of beauty. To sow the seed was a simple act, yet how immeasurable was the harvest of comfort and cheer it yielded.

Most of us are willing to beautify the spots which we ourselves can enjoy, but few of us think of brightening the places which we may never see again, yet which a handful of seed would transform into scenes of beauty and joy for others. The lesson taught by the wayside poppies was one which might well lead all who saw them to become sowers of good seed.

Meditating upon the loving work of this sweet Southern woman, my thought turned toward our Leader, who has sown the seed of truth, which is springing up into such blossoms of beauty and blessedness. In well-nigh every city and hamlet of our country, and in foreign lands as well, may be found many who gladly testify to the happifying and redemptive outcome of the seed-sowing of Christian Science. Lives have been beautified, hopes uplifted, and the whole character changed thereby. When we look into the bright and happy faces of those present at our Wednesday evening meetings and hear the demonstrations given, when we read the testimonies which appear in the *Sentinel* and *Journal*, we learn something of what these blossomings of truth bring to poor, tired humanity. Very many of the thousands who to-day are rejoicing in the glorious possibilities attainable through living Christian Science, were once sick, and sorrowful, but the seeds of truth have brought forth in their lives healing and happiness.

Every loving heart scatters good seed, but how noble the purpose of the gentle sower, who gathered the words of the Master and so interpreted their meaning that they could be dropped into the soil of human thought, where they spring up in beauty, are understood, and lived.

Guarding the Rear.

WILLIAM P. MC KENZIE.

PEOPLE are to-day becoming more and more interested in "the kindred of the wild," and books written by observers of the action of the creatures that live at large in wood and field, are widely read. Once I visited such an observer who for eighteen years had lived as a hermit in his cabin in the woods. The birds knew him as a friend, and many a visitor to his retreat had seen numbers of them perch upon his hand fearlessly, as if they understood the kindliness of his speech to them. His story about some squirrels he knew was interesting. I had known that larger beasts of the wild would maintain a division of territory, even as Indian hunters and trappers in the north were accustomed to do; but I did not know that the common red squirrel kept an allotted range, and maintained therein rights of sole dominion. This observer has become satisfied that even the squirrel has his "place," and does not trespass upon the domain of others nor permit them to trespass upon his. Thus he may garner his food supply without fear of finding his toil utilized by some non-strenuous relative; and that others allocated each in his own district must there either labor or starve.

One particular red squirrel had in his demesne the dooryard of Mr. Walton's cabin. His fighting spirit and astuteness gained for him the name Bismarck, and often his human friend and admirer left for him part of a loaf of bread that he might share with the birds. This abundant provender drew the attention of some crows who discussed the situation in solemn conclave, and then in a group flew down to share in the benefit. They listened, in a circle, to the violent objections and objurgations made by the squirrel; then one ruffled its feathers, half spread its wings, and made as if to attack him. He swiftly charged, but

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

the crow leaped up, using both wings and feet, and his enemy sped beneath him, while the other crows pounced on the bread, and though unable to carry it off, had broken large pieces from it before the red fury could turn himself about and come at them. This trick served the wise crows on several occasions, and Bismarck never seemed to discover how to get the better of them. Two sons came to his charge that year, when the mother's care was finished. One was well-grown and lusty, and him he assigned to a certain part of the wood. The other was small, and soon was named Tiny by the owner of the cabin. It seemed that to him had been assigned the territory including the dooryard, perhaps in order that he might gain strength and growth from the food supply so often found there. The crows noticed the new tenant, and, it may be, despised him for his size; but they did not measure his spirit. When they saw him one day enjoying the bread put out for his use, they came down and made their circle on the ground about him. Then the appointed one came forward with half-spread wings as if to make the attack; but more swiftly than thought the squirrel himself attacked the crows behind him, who were minded to seize upon the bread so soon as he would charge the one in front. Taken so unexpectedly they were "sore discomfited," and all retired to the trees to discuss the matter in parliamentary form. They made a second campaign, but by this time the tiny squirrel had discovered his ability, and so swift was his attack that the crows made haste to escape in order to save feathers enough to fly with. That was the final victory. Tiny was not interfered with further, and, as his father had no doubt calculated, he became lusty and strong like his brother, for he fed without vexation on the bread the friendly man supplied.

It hardly seems fair to attach a moral to this quaint story; yet if a moral suggests how we can re-mind ourselves and do better on occasions, it may be legitimate. When we are, so to speak, surrounded by conditions, all of which claim to be able to deprive us of the health, or happiness, or the supply of good to which we have a right, do we always discern how to scatter the whole brood? Are we not impelled sometimes to direct our efforts against what is really innocuous, and then find that we have been invaded by what we should have first resisted? Sometimes a personality will parade before us insultingly, and lead us to a blind attack; and then we find that anger, wrath, malice, evil-speaking, and revenge have entered like foes in the rear and stolen from us our good, deprived us of the daily bread of love on which we might have fed, could we have seen where was the real danger. So I do not know that it is at all out of place for us to consider the ways of this tiny one of the creatures, behold how he exercised wisdom, and be wise in similar conditions, which may occur for us in the unseen. It is certainly important to discern the point of real danger, and that for the Scientist is not where is made the clamor of threatened attack, or where is seen the obtrusive and insolent personality, but where may enter from the *rear*, or seem to arise within the heart such evil thoughts and motives as may defile the man, and make of the sweetly cleansed mentality a later condition worse than that from which he was healed when first he felt the beneficent action of Truth and Love.

Self-abnegation vs. Self-gratification.

GEORGE S. HOLLOWAY.

THE work to be accomplished is within our own consciousness, for therein lies the danger, whether it be to the organization or the individual. The overcoming of our personality, or mortal self, and the recognition of our individuality, or spiritual self, demands our constant and earnest efforts.

Every suggestion to sin has underlying it, in some form or degree, the subtle desire for personal self-gratification. It is the foundation-stone upon which error seeks to rear its structure,—without it there would not be even a seeming pathway toward its deceptive goal. Consider the commandments; would any one be tempted to cease to honor father or mother if there were no consideration of selfish motives? What possible incentive could prompt one to commit adultery, steal, kill, bear false witness, or be covetous, without the suggestion of ultimate self-gratification, through some of the myriad forms of erroneous belief? It is a relentless task-master, and the effort to satisfy the material sense is fruitless. There is always an unsatisfied hungering and reaching beyond for that which is never realized.

Paul said, "Forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." This prize he recognized as self-abnegation, for again he said, "I keep under my body, and bring it into subjection: lest that by any means, when I have preached to others, I myself should be a castaway." "Self-abnegation—by which we lay down all for Truth, or Christ, in our warfare against error—is a rule in Christian Science" (Science and Health, p. 568).

However, we should not falter or be discouraged if the way seems long and the progress slow, for we must "emerge gently from matter into Spirit" (Science and Health, p. 485). To attempt the premature opening of the chrysalis, is to destroy the manifestation of both life and beauty.

Being led into the wilderness, "the vestibule wherein a material sense of things disappears, and spiritual sense unfolds the great facts of existence" (Science and Health, p. 597), Jesus met and destroyed the suggestions of error in behalf of self-gratification at every point, for he "was in all points tempted like as we are, yet without sin." He was proving that "entirely separate from the belief and dream of material living, is the Life divine" (p. 14), for he was living in a concept which was high above that of those with whom he was associated. Very few, if any, understood him, and in this isolation came the temptations. The first, that life was dependent upon matter, was met with the scientific declaration, that man does not really live on the material concepts, but on the spiritual understanding of divine Principle; and the second, that he should cast himself down from his high concept, was also overcome by the realization that temptation does not come from divine Love, and in consequence is unreal and without power.

Still more subtle and seductive was the third suggestion, for within its scope was the possibility of satisfying every phase of the desire for self-gratification. From this high view-point, worldly ambition marshalled before him visions of earthly power and grandeur, even extending to all the kingdoms of the world. He knew that he possessed wondrous power, for could he not call down twelve legions of angels? He was giving his life to the world through marvelous works and sacrifices, and still he was practically unrecognized. By the sacrifice of his life-long self-abnegation upon the altar of self-gratification, he could bring the world to his feet and satisfy every personal ambition. But he whose only care was to be about his Father's business; he who said, "Greater love hath no man than this, that a man lay down his life [service] for his friends," faltered not. Instantly the commanding thought was, "Get thee behind me, Satan," and to the closer sense, "Thou shalt worship the Lord thy God, and him only shalt thou serve." The victory was his,—the example ours. "He did Life's work aright, not only in justice to himself, but in mercy to mortals,—to show them how to do theirs, but not to do it for them or relieve them of a single responsibility" (Science and Health, p. 18).

Proof, not Profession.

CLIFTON H. HILDUM.

"It is impossible to be a Christian Scientist without apprehending the moral law so clearly, that, for conscience sake, one will either abandon his claim to even a knowledge of this Science, or else make the claim valid" (Miscellaneous Writings by Mary Baker G. Eddy, p. 261).

In every walk of life we are called upon to give proof in substantiation of all claims to the possession of property or of ability and, in many instances, of knowledge. When a man applies for a position in which a certain line of work is to be performed, he must "make the claim valid" by exhibiting indubitable proof of his possession of the requisite ability. If he would assume to do stenographic work his prospective employer rarely if ever considers it essential that he be a graduate of a particular school or of any school. All that is required is that he shall be able to prove his right to the title of stenographer, and until he can demonstrate that right, he is not, and certainly has no right to style himself, a stenographer.

Again, it matters not how long a man may study Blackstone, Kent, or Bouvier, he is not, and dare not call himself an attorney at law until he has proven to the satisfaction of an examining board that he has gained the requisite knowledge to enable him to perform the duties required at the hands of a legal counselor. And it matters not how much ability may be possessed at the time of the examination, unless practice and study are kept up, the man will speedily lose his place in the march of progress.

The list of examples might be indefinitely extended, but enough has been brought forward to establish the contention that even in the so-called material world, it is proof that is required, not profession. Then of how much greater importance is it that we, as professing Christian Scientists, furnish the proof that we have "professed a good profession," since the work which we have taken up, the study we have begun, is not for time only, but for all eternity.

Our Leader says in "Miscellaneous Writings," page 114, "Christian Scientists cannot watch too sedulously, or bar their doors too closely, or pray to God too fervently, for deliverance from the claims of evil," and not the least of these is the subtle error that would lull us to rest in the thought that we are Christian Scientists, even though we do not bring out the proofs. "But," says one, "I have furnished the proof." Then, when that proof was shown, you were a Christian Scientist to that point of demonstration, but "progress is the law of God," so that if we would fulfil the law we cannot lie dormant at any stage of the journey, but must press forward in the right if we would "win and wear the crown" (Science and Health, p. 254).

Cheer Up.

Cheer up! The sky is bluer
Than it was a year ago;
The very smiles are gladder
And have a richer glow;
The raining and the sunshine
Are helping you and me—
The world is growing better
Than it ever used to be.

Cheer up! The rose is sweeter,
The birds have newer songs;
We find more things to please us,
And dream of fewer wrongs.
There's always lots of honey,
So let's be like the bee—
The world is growing better
For folks like you and me.

Anon.

Lecture at Nashua, N. H.

THE City Hall was filled Thursday evening, October 29, by a large and attentive audience made up of the members of First Church of Christ, Scientist, of Nashua, and their friends, who listened to a fine lecture by Edward H. Hammond, C.S.D., of Baltimore, Md., on Christian Science. The local branch of the Christian Science faith, under whose auspices the lecture was given, meets in Phillips Block, and since its organization here has grown steadily in members. He was introduced by the Rev. Irving C. Tomlinson of Concord.—*Nashua Daily Telegraph.*

The introductory words of the Rev. Irving C. Tomlinson were as follows:—

Ladies and Gentlemen:—With fitting ceremony, there was dedicated in your thriving city not long since, an important memorial tablet on the site of the former home of John Lovewell, one of the founders of this city. A brave woman, Hannah Dustin, as you will remember, in the early colonial days was captured by the Indians and taken into the wilderness in the neighborhood of Concord, N. H. Through her own valor she escaped from captivity and made her way into civilization. The first home that welcomed her after her escape from the dusky savages was that of the hardy pioneer, John Lovewell.

There is a close connection between this John Lovewell and the event which brings us together to-night; for this pioneer settler was none other than the earliest ancestor in New Hampshire of the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science.

His son, Captain John Lovewell, is renowned in the early history of this Commonwealth as a man of intrepid valor, whose bravery overcame the power of the savages and made possible the settlement of northern New England.

The fair daughter of this illustrious patriot, Hannah Lovewell, married Captain Joseph Baker, who settled in Pembroke, N. H., which town was bestowed upon Captain Lovewell and his faithful soldiers by a grateful Commonwealth. Captain Joseph Baker was the great-grandfather of Mary Baker Eddy. He was a man who stood high in the community, being a deacon of the church and a member of the Provincial Congress which voted to make New Hampshire one of the thirteen original states.

It is a source of gratification to the citizens of New Hampshire that one of their own number, a descendant of one of their most famous families, is the Discoverer and Founder of a religion which is world-wide. The first church of this denomination was founded in Boston in 1879. In 1894, there was dedicated the beautiful edifice of the Mother Church, at a cost of $220,000. Its membership at that time numbered about thirty-eight hundred. To-day it has a membership of more than twenty-seven thousand, and of these thirty-six hundred were received the past year. It will therefore be seen that there were nearly as many people received into this church the last year as were welcomed the first fifteen years of its history.

Concerning this important religious movement, which is so attracting the attention of thoughtful people the world over, we are assembled here to-night.

We have with us an accredited lecturer of the denomination, Mr. Edward H. Hammond, who comes to us as a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., who will now address us.—*Correspondence.*

Selected Articles.

The Brotherhood of Man.

MUCH has been said and written on the subject of universal brotherhood. Political movements have been organized, various fraternities have been instituted, and, while these have, doubtless, accomplished much toward brotherly interest by reason of compacts and agreements on the part of those who enter into such societies, the general result is not entirely satisfactory.

Loyalty to a "brotherhood" is more or less selfish, unless that brotherhood includes all mankind. When it is known and acknowledged that all men have one Father, and that is God, then it will also be recognized that all men are brethren. Such a brotherhood as this understanding establishes is broad enough to exclude cliques and clans and to set aside the strenuous effort to benefit "my society," "my lodge," "my church."

When human conduct is based upon universal brotherhood, the effort to be true to one's brotherhood will not include any trampling upon another fraternity; strife and contention will cease, and the interests of all men will be identical, and they will move in perfect accord. It should be understood that every creature in the divine economy, from the least to the greatest, serves its purpose in the infinite harmony of the universe, each contributing its share toward the blessings of all the rest.

To know and to be one's true self and to become conscious of what every other individual in the universe is to one's self, is the requisite to genuine happiness; for possessions are of no real benefit to him who does not understand what they are and what they are worth. This leads us to recognize that the original spiritual nature of the real man, who is the product of spirit, should be perceived by each individual and his conduct dominated thereby, in order that he may attain true and God-given happiness.

God's infinite creation, including all men, expresses the perfect harmony of infinite intelligence, and not even the smallest creature could be spared from the universe without marring the completeness of the infinite whole. For this reason no individual can afford to despise any one of God's creatures, nor set it aside as unnecessary to his needs, though one might recognize that the evil and error which actuate the wicked are not essential, but are unworthy and useless, and obscure the true individual, not only to himself, but to others as well.

Christian Science is an essential in the establishment of universal brotherhood, because it reveals the very nature of God as infinite Spirit and His creation as the infinite manifestation of spirit, and sets mortals to work in a manner to develop rapidly the universal, spiritual brotherhood governed by divine intelligence. ALFRED FARLOW.

Boston Times.

Christian Scientists understand this Science to be the new-old religion which was taught by Jesus, and that its works in healing the sick, like its works in reforming the sinning, are in obedience to Christ Jesus' injunction to his followers of all times: "Preach the gospel;" "heal the sick." Christian Science seeks to elevate men morally and benefit them physically, and teaches, as does the Scripture, that "the prayer of faith shall save the sick." It reverences and does not ridicule "calloused knees." It teaches that the mother's prayer over the child's cradle is blessed. It teaches that every man, when sorely pressed by adverse fortune, if never before, as naturally seeks help by prayer as the plant in a darkened cellar seeks the sunlight. It teaches that if we do not "ask amiss," but ask with faith and understanding, our praying may help the world as well as ourselves, and that Christ's promise was not false. "Have faith in God." The facts show that the mission of Christian Science has been a beneficent one. Its followers may make mistakes, but so does the mathematician without any impeachment of the science of mathematics. Christian Scientists are seeking to stem the growing materialism of the age. They trust God and fear no evil. C. A. BUSKIRK.

Fort Wayne (Ind.) *Journal.*

Christian Scientists believe that each person should choose that system of healing which appeals to him as best to bring out peace and happiness. Christian Scientists do not declaim against physicians, nor do they claim that pureness of heart condones ignorance. Pureness of heart to a Christian Scientist means also alertness, capacity to grasp, and clearness of thought, which are the exact opposites of ignorance and sloth. Nor do they cultivate self-contentment and self-esteem. They follow strictly the teachings of Christ Jesus, which, as all know, do not teach the cultivation of material self-contentment or egotistical self-esteem. They understand disease to be unreal in the sense that it has no inherent eternal existence and will pass from mortal experience when man sufficiently understands and reflects the goodness of God "Who healeth all thy diseases."

EZRA W. PALMER.

Pueblo (Col.) *Star Journal.*

The Twentieth Century Manual by our beloved Leader calls for higher and purer living, and better healing by all Christian Scientists. It also makes it imperative for the First Reader to enforce the discipline of the Church. Our text-book, Science and Health by Mary Baker G. Eddy (p. 241), teaches that "The substance of all devotion is the reflection and demonstration of divine Love, healing sickness and destroying sin." Hence this pertinent question: Is there one person enrolled as a member of this church who does not; who cannot or will not live in Christian fellowship with all its members? We are also admonished that the spirit of truthfulness and honesty—paying all just obligations—must prevail among all our members that we may be a church without reproach.

From Clerk's report at annual meeting of First Church, Dayton, O.

Dayton Herald.

Christian Scientists believe that it is not Jesus' death, but Jesus' triumph over death that saves,—they do not look for life in death, nor for immortality in the grave. Neither do they understand that the inspired writers in referring to the incarnation, or the coming of Christ in the flesh, intended to raise questions of chemical elements or ratios. The meaning of the Greek word which is translated flesh in the New Testament is fully satisfied, especially as used in the writings of Paul and John, if we understand it to refer to that which served to identify Christ with material or human existence,—which made him one with the race of mankind,—as opposed to the spiritual life which he had with the Father. L. H. JONES.

Lexington (Ky.) *Herald.*

No one disputes the right of Wagner to his style of music; no one accuses Martin Luther or John Wesley of "lifting ideas" from the Bible or from other teachers of Christianity; no one worries over the fact that the Druids, five hundred years before Christ, stated that God was Love; and yet because Mrs. Eddy has revived the old Christian methods of healing which were practised up to the third century, and considered a necessary qualification for a priest before he was allowed to take office, abuse unlimited has been hurled at her. But, as a contrast, perhaps there is no woman so loved by her followers and those who know her—and their name is legion. ELWAY ELKINGTON.

Liverpool (Eng.) *Courier.*

Among the Churches.

Church Dedication at Laurel, Miss.

The dedicatory services of First Church of Christ, Scientist, were held Sunday, September 27. A large congregation was present at the exercises, which were highly interesting. Many of those present were members of the denomination from Hattiesburg, New Orleans, and other cities. The dedication of the Laurel Church was of considerable moment from the fact that this is the first Christian Science Church erected in the state of Mississippi.

The members of the Laurel Church may well take a pride in the temple which they have erected, as it is a handsome edifice in every particular.—*The Laurel Chronicle.*

United Work in New York City.

The Central Christian Science Reading Room Association of New York City was organized November 10, 1903, under the auspices of committees from Second, Third, Fourth, and Fifth Churches. Rooms have been leased at 23 West 23rd St., and the committees are working in unity to complete the details of organization. Notices of the formation of the Association were read from the platforms of the above-named churches at Wednesday evening meetings.

The cause of unity and publicity of Christian Science in this city was the motive which prompted this work. The work will soon be in active operation.

R. E. CAREY, *Secretary.*

Church Union in Lexington, Ky.

First and Second Churches of Christ, Scientist, of Lexington, Kentucky, have united under the title of First Church of Christ, Scientist, and the services are now held at 88 N. Broadway.

We feel that this uniting of the two churches has been quite a demonstration, and there is much rejoicing over what has been accomplished.

A few Sundays ago our room was filled to overflowing, and we hope the present quarters will soon be too small to hold all who are interested in this great truth.

We are now preparing for a lecture, which we hope to have in the near future, and which we know will be the means of awakening many more from the dream of sense to the reality of being.—JEANNETTE CHARLES.

New Church Home in Detroit, Mich.

Sunday, October 4, Second Church of Christ, Scientist, celebrated the opening of the new church home on Hendrie Avenue, corner Woodward Avenue.

The auditorium was filled with a people whose happy faces testified to the joy within their hearts over the acquisition of this beautiful new home.

The church, which has been rented with the privilege of purchase, is modern in every respect, and the location is one of the finest in the city.

Second Church of Christ, Scientist, was organized June, 1902. Services were held in a hall for several months, and afterwards at Miles Business College until the present change was deemed necessary.

May we so live the Truth, so follow the precepts of our beloved Leader, Mrs. Eddy, that all those who come to us may realize that we have walked before God in truth and with a perfect heart, and have done that which is good in His sight.—MARION G. TYRON, *Clerk.*

Prospective Building in Cedar Rapids, Ia.

First Church of Christ, Scientist, in this city has purchased a beautiful lot between Thirteenth and Fourteenth Streets on First Avenue, and expects to erect there in the near future a handsome structure in which Christian Scientists will worship. The lot is most beautifully situated, one hundred feet frontage facing south, and the building which is to be erected will be in keeping with its surroundings.

During the past few years there has been a great growth in the membership of the Christian Scientists in this city, and for some time there has been a sentiment that the society should take steps toward the erection of its own house of worship. The purchase of the lot is the first step towards that end. It is expected that the Scientists will receive much encouragement, and that it will be but a short time until the new church is erected and dedicated.

Cedar Rapids Times.

Growth in Belfast, Ireland.

It is now something over a year since we began regular services in Belfast; there were then about twelve people who were students of Christian Science. We met together in a private house every Sunday and held our service. There were several cases of healing, and our numbers increased steadily until we found it necessary to rent a hall on Sundays and Wednesday evenings.

From the first we agreed to hold testimony meetings every Wednesday, knowing that if we were only sufficiently grateful for all the proofs of God's love which we were receiving, we would never lack testimonies, and so far we have never had to read from the periodicals at these meetings. Last May, hearing that Judge Ewing was lecturing in Dublin we asked him to give us a lecture here, which he most kindly consented to do. The lecture was a great success, over eight hundred people being present and much general interest being thereby aroused on the subject of Christian Science. We have encountered the usual difficulties of a young society, but these have been bravely met by our members, who have shown the greatest desire to establish the work on a sound financial basis. At a business meeting held recently they decided that the Sunday collections should meet all expenses without the necessity for any further subscriptions. It was plainly seen that if we all systematically and honestly put a tenth of all we earned into the offertory it would exactly cover every need. This was an additional proof to us that the divine laws which were applicable in the time of the Children of Israel are equally practicable now, and thus "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

One of the most encouraging branches of our work is our Sunday School. We have between twenty and thirty children attending regularly, divided into two classes, and all, even the smallest, are daily proving the power of God to heal. They take much interest in what they are taught, and whenever possible attend both services on Sunday and the Wednesday meeting.

Just now we are full of gratitude as we are moving into new premises, having secured a meeting room and a reading room of our own. In times of discouragement nothing has helped us so much as the remembrance of Mrs. Eddy's patience and faithfulness, which enabled her to overcome all difficulties and so lead us in the way the Master trod.

THE HON. FRANCES GIBSON.

All religions that call forth the consciousness of an inner rapture and disharmony are an evil for mankind, unless they also know how to heal and to help.

DR. HARNACK, Berlin.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Take Notice.

I HEREBY notify the public that scurrilous letters purporting to bear my signature—letters of evil intent—that I never wrote, never caused to be written, and never saw until they were given to me by the individuals to whom they were superscribed, are constantly being circulated. But those who know me, know that I never wrote them.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., Nov. 13, 1903.

Recommended by our Leader.

November 17, 1903.

Messrs. J. Q. Adams & Co.,
120 Boylston Street, Boston, Mass.

Dear Sirs:—You will accept my profound thanks for your illustrated, beautiful Bible, in four volumes. What you have done, others may not have been far from doing; but it remains that you did it first and it is, indeed, a happy hit. I answer the inquiry: What does Mrs. Eddy think of your Bible? She prizes it above rubies and recommends it to all who love truth, who would have truth illustrated, and would demonstrate truth.

Sincerely yours,
MARY BAKER G. EDDY.

"A Broad-minded Man."

RECENTLY *The Pittsburg Dispatch* devoted considerable space to a discussion, pro and con, of the merits of Christian Science, and while the discussion was interesting as revealing the various opinions of the clergymen, physicians, and lawyers who were interviewed by the reporters, it failed to present anything new in the way of argument against the practice of Christian Science in the healing of sickness and sin.

In such discussions there will always be found some person whose expressions are but the index to a spirit of intolerance of all views not in line with his own, and this symposium did not, in that regard, depart from the general rule. On the other hand, there is usually some one who rises above all selfish considerations, and who takes his stand for personal rights, one who hews to the line of individual liberty, no matter where the chips may fall. To this latter class must be assigned Rev. S. Edward Young, a Presbyterian clergyman who contributed to this symposium. *The Dispatch* introduced Mr. Young to its readers as "a broad-minded man," and this estimate seems fully justified by his words which were in part as follows:—

"That multitudes of intelligent, conscientious people, willing to suffer for their convictions, have adopted Christian Science, is beyond dispute. I personally know a number of such. Does not the history of religion suggest that there is something of real value in a movement that has gathered a following so large and so respectable?

"Nothing will disseminate more rapidly any errors therein than will persecution, or what savors of persecution. For myself and my little ones I send for a physician the moment sickness threatens, yet I am not unaware that the doctor does in most cases the reverse of what the doctor did one hundred years ago, when lance and blood-letting, and a pharmacopœia of ignorance were his stock in trade, nor do I doubt that the doctor a century from now will differ as much from the doctor of to-day. The simple reason is, none of us know it all yet.

"Were I in a state where Christian Scientists had laws forbidding me to send for a doctor, I would resist until I got my rights in the matter. Being n a community where the rest of us make the laws, I demand the application of the Golden Rule in behalf of my Christian Science brother."

Ability to "put yourself in his place" is a necessary qualification for the discussion of any question involving the civil and religious liberties of the people, and if this qualification were more generally possessed to that degree indicated by Mr. Young's statement, there would be fewer cases of invasion of individual rights. M.

A Profound and Delicate Question.

THE question of the extent and constitutional limits of the judicial authority has received an unusual amount of attention in late years, and in a recent editorial a leading American journal has referred to some aspects of the subject which are of especial interest to Christian Scientists.

In commenting upon the matter of state supervision of parental conduct in caring for children when sick, the editor reminds us that the question raised is of profound import, and intimates that it should be handled with a care and breadth of vision which, as it seems to us, he does not display in a part of his own discussion of the subject.

He assures us that medical science has made great "progress in the mastery of bodily afflictions," and that the state must recognize this fact; and he adds, "Having assumed a protection over the child against the parent in cases, for example, of cruel and abusive treatment, . . . how can the state well fail to interfere where neglect is suffering the child to go to its death for want of treatment which science has demonstrated to be possibly or certainly effective?"

This query is suggestive of many points which are of very great significance to all.

The accredited standing of Christian Scientists everywhere as wholesome, intelligent, law-abiding citizens, removes them entirely from any possible classification by the fair-minded, with those who would "neglect" their offspring. The meaning of this term is indissolubly linked to the idea of a lack of average intelligence or natural affection. It cannot be applied to sane people who, while governed by the strongest and most sacred motives,—parental love and the highest sense of right and duty,—are led to adopt hydropathic, allopathic, homœopathic, or electric treatment in preference to others, or Christian Science treatment in preference to all. Those who venture the far-reaching suggestion that the state is authorized to exercise jurisdiction here, surely forget that any "supervision" of this matter, which denies the freedom of personal choice, would ultimate in the exclusive imposition upon all, of some one of the many warring material methods, and, moreover, that if it interdicted a reliance upon spiritual healing through prayer, which is, and ever has been, a cardinal doctrine of the Christian faith, it would trench upon that religious freedom for which the fathers bled, and which must ever remain the most sacred guarantee of constitutional liberty.

The consideration of this subject by the prejudiced and and unjudicial is usually rendered wholly valueless by the habitual begging of important questions. It is assumed by them that the practice of medical therapeutics is an exact science, that Christian Science treatment does not heal anybody, or if it does that they were not sick; that Christian Scientists are actuated by religious fanaticism and not by convincing experience; that while maintaining their sole and entire dependence upon God, they are in fact self-

Digitized by Google

deceived, and that their children are placed at pitiful disadvantage and die in unnumbered instances, when reasonable medical attention would have saved their lives. Into these wholly gratuitous and erroneous assumptions, which are the outcome of bigoted prejudice, ignorant gossip, or garbled and sensational news-reports, many good people are quite unconsciously led, and it is in the soil of just such unwarranted judgment that injustice and unnumbered other evils are nurtured.

To be strictly fair, to insist on satisfactory proof of derogatory statements, to be actuated by a desire to know the truth, and by undeniable evidence, and to have judicial repose in all our judgment of those with whom we disagree, —this marks the truly cultured, Christian man, whose judgment is of real value; and to this standard the judiciary is no less amenable than is the private citizen.

Most Christian Scientists have reached their conviction through personal experience, and if the determination of the value of this method of healing is to be reached by other means, it should be upon the basis of the verified tabulation of a large number of cases of serious ailment, treated by the various means of cure, and with a statement of the attending results. This would give the comparative facts, and furnish that only safe and just ground of judgment which Jesus enunciated when he said, "By their fruits ye shall know them."

It is apparent that it would be very difficult, if not practically impossible, to secure such a ground of fair judgment from a study and summation of communal experience, but it *is* possible to secure such a basis of assured conviction through one's own experience, and it is here that Christian Scientists will be found well prepared to give a prompt, intelligent, and sufficient reason for the hope that is within them. After years of acquaintance with *materia medica* they have found that Christian Science treatment affords them and their children more prompt relief and more reliable protection from physical maladies, while at the same time conducing to that health and peace of mind which is of yet greater importance than health of body; and it is for this sufficient reason that they pursue the even tenor of their way with good-natured recognition of the conflicting opinions of those who have not had their experience, and who are therefore unable to understand or endorse the conclusions which they have reached. W.

Mind, not Matter.

AMONG the many helpful sayings of our Leader which are not found in our text-book, is this, "Not matter, but Mind satisfieth," and it touches the heights and depths of experience.

If, at the beginning of his career, a young man could but know what alone can satisfy, what is truly worth striving for, he would seek it more intelligently, and would be spared the disappointments which come to many, since the conscious pursuit of the highest, brings a satisfaction second only to its complete realization.

Many of the things which are sometimes considered commonplace cease to be so when their true import is gained, and especially when we discover that they represent Mind, not matter. Our first analysis of a dainty table set before us by a friend, reveals an intelligent provision for our human need and enjoyment, and we know that without this application of intelligence, the choicest materials would fail to satisfy. On a closer analysis, however, we discover something much finer than the skill needed in domestic science, if our food has been prepared with loving consideration for those who are to partake of it. When thoughtful affection is blended even with the simplest elements, we have the proof that it is "not matter, but Mind" which satisfies. This is no less true of all the beautiful things produced by art, for to find real satisfaction we must see, as did the builders of the Temple, something of the pattern shown "in the mount."

Pursuing this line of thought we find that matter cannot heal the sick, because it does not satisfy a single need of man's true nature, and great is the discovery which tells us of what really heals and satisfies; namely, Mind. The truth of these statements is so self-evident, that it seems strange how few there are who see its relation to the welfare of all.

It is very easy to charge Christian Scientists with being transcendentalists, but when our critics come to understand what we really believe, point after point is conceded. At the present time, as never before, the value of the mental factor is placed far above that of the material, but it is not enough merely to admit this, the reason for it should be recognized; viz., that Mind is, was, and ever will be, superior to materiality.

After this revelation comes to us in Christian Science, we shall find on every page of the Bible,—wonderful words of wisdom which confirm our faith and understanding. Isaiah warns us against laboring for "that which satisfieth not," and the Psalmist says of God, "Thou satisfiest the desire of every living thing;" and again, He "satisfied them with the bread of heaven." As we sit down at our table, be it in the lowliest or the loftiest abode, we may well remember Solomon's words: "Better is a dinner of herbs where love is, than a stalled ox and hatred therewith." Mind, not matter, should be the ruler at the board, in cottage, or in palace, and Mind cannot be expressed by indolence but by the industry which the "little busy bee" reflects in providing her sweet store.

When we realize that materiality has neither the power to help nor to hinder, that it can neither give love, nor respond to it, we shall do well to ponder these inspiring words of our text-book: "Mind is the grand creator, and there can be no power except that which is derived therefrom, . . . then give to Mind the glory, honor, dominion, and power everlastingly due unto its holy name" (Science and Health, p. 143). K.

Mrs. Eddy's Christmas Hymn.

WE have further reason for gratitude to our Leader, Rev. Mary Baker G. Eddy, for she has given us a new song, entitled "Christmas Morn," to be used in our church services, thus proving once more that she is ever watchful over the Cause she loves so well, and to which her time and labors are so freely given. This poem displays, in a marked degree, the originality of thought, beauty of expression, and keen spiritual insight which characterizes all Mrs. Eddy's writings, and it is a fitting companion to her other hymns, which have become so dear to Christian Scientists.

Beginning with December 1, 1903, the Christian Science Hymnal will contain this poem, set to two appropriate tunes for congregational singing.

Counterfeit Letters.

I LEARN that letters have been received by persons, purporting to bear my signature, making complaint against them; one of those declares I had consulted a lawyer for Mrs. Eddy on what I complained of. I never had consulted a lawyer relative to the subject named. I never wrote those letters nor knew anything about them until said parties sent one of those counterfeit letters for me to examine. CALVIN A. FRYE.

Pleasant View, Concord, N. H., Nov. 13, 1903.

Letters to our Leader.

487 Watertown Street, Newtonville, Mass.

Beloved Teacher, Friend, and Leader:—As we daily strive to attain to the holiness and perfection of the Son of God, which has been revealed to us in Christian Science as a present possibility, our thought becomes aglow with love for you, the heart overflows and tears of gratitude bathe your feet; for our own wrestlings with the claim of the persistence of matter discovers to us somewhat of your toil and self-sacrifice, and the burden of the world you have borne these many years in order that those who sit in darkness may see the great light.

We are learning that it is by Christian Science alone that we have "power to become the sons of God," here and now; that through its gates we now enter heaven, the spiritual state of existence; and that surely by it "the kingdom of heaven is at hand" to all mankind. Like John, we often feel like kneeling at thy feet, who hast been so faithful in the delivery of His message

We thank you for the Concordance which has been and will be of great help to us in our study; for the Manual which urges more complete self-abnegation and reminds all of the hour's great need, and we are endeavoring to reach the goal of your expectance of your students.

Dear Teacher, my heart blesses you for an understanding which I cannot recite here, but for which we love and honor you, and daily remember you in thanksgiving.

Your earnest, loving student,

November 18, 1903. ELLA LANCE WILLIS.

372 Boylston St., Boston, Mass.

Rev. Mary Baker G. Eddy.

Beloved Teacher:—On this anniversary day of your last class may I assure you of my gratitude for having sat under your teaching.

Five years have brought many experiences,—mistakes and corrections, defeats and victories; but my love for Christian Science is stronger to-day than ever and my prayer and searching is to heal the sick intelligently and quickly.

Surely one overcomes the world only as he masters himself. What one *really* understands may be helpfully told to another.

Believe me to be profoundly grateful.

Your student,

November 20, 1903. GEORGE WENDELL ADAMS.

Eau Claire, Wis., November 5, 1903.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—May I ask a moment of your time to tell you how glad and thankful I am that my eyes have been opened to behold the precious Truth,—Christian Science.

I was a clergyman in one of the older denominations for ten years, but the old theological theories and doctrines did not satisfy. While living in New York State a copy of our *Christian Science Journal* fell into my hands, and *into my heart,* for its pages seemed illumined, and the "aching void" began to fill. From that time (two years ago) to this, I have been a tireless student of Christian Science literature. Now the Bible is so much nearer and dearer. Religion means more, and "life is real."

A blessed privilege was accorded me last year in receiving class instruction at Troy, N. Y., under Mrs. Harriet L. Betts, C.S.D., one of your faithful students. My good wife is with me in the Truth, and our children are growing up under its sacred influence.

We are thankful that divine Love has revealed this gospel for the burdened through you, and that we are "laborers together" with you in its name and by its power.

With much gratitude and heartfelt love,

Sincerely yours,

(REV.) MARTIN SINDELL.

Testimonies of Healing.

Last winter when on a passage for a western coal port, I was in a small schooner, and we were off Cape Cod in a storm. The sea was running high, and in the capacity of steward I was preparing dinner, or at least doing my best to get one up, when, about ten o'clock in the forenoon, a seaman called out to get on deck, but to get some clothing on, as we were in the breakers. When I came on deck I saw the situation at a glance, our boat was nearing the shore all the time with no hope of escape. It was bitter cold and the breakers were before us. To mortal sense it was only a question of a few moments more, with no land in sight, and no hope or thought of being rescued. Then it seemed that folly and fear began their work, and I must confess that after twenty years' experience at sea my legs seemed to refuse to hold me up. We all gathered around the wheel, not a word was spoken except orders to the man who was steering. The situation seemed too serious for talk. As it was very cold I went to my room to get some more clothing, and when there I took my Bible and read the twenty-third Psalm, and again to mortal sense it seemed to be for the last time. The vessel was at that time laboring hard in the sea, and I was cast from side to side, but coming to the fourth verse I began to realize God's allness and care. "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me;" at that moment the vessel was lifted on a huge billow over the place of danger, going over with a crash that seemed to crack every timber, but nothing gave away. The men tried the pumps but found no water in the hold and no mishap whatever. I went back to work at my dinner, realizing that God is good and my religion is sound.

I was partially deaf and the great fear of being deaf altogether made me melancholy and sad, but our text-book has taught me that "man is spiritual and not material" (Science and Health, p. 468), and the result is that I hear better and fear is cast out.

Not having had class instruction in Science I appreciate the latest revision of Science and Health and the new Concordance which our Leader has provided. Words fail to express my thanks for her faithfulness and grand labor in so lovingly showing us the way.

CHRISTIAN JENSEN, Concord, N. H.

I have been benefited so much by Christian Science, that I feel it a privilege to give my testimony.

In the early part of last fall, a growth appeared on my right eyelid. It increased gradually in size till Christmas time, when my eye was half closed and intensely inflamed. There was a constant blur before the sight, so that I could not see to thread my needles. Two doctors told me that it was a cyst and it would have to be operated upon, as it would never go away itself.

My husband had just been healed by Christian Science of dyspepsia and accompanying ailments of years' standing, and I thought if he could be healed I could, so I began treatment. Two days after the first treatment, I found I could see a little clearer. I took five treatments in all and the growth gradually disappeared.

During the time I was taking treatment I read Science and Health every day and attended regularly the Wednesday evening meetings as well as the Sunday service. This helped me a great deal.

After this demonstration of the power of Truth, my daughter was healed of a disease of the eyes, which for five years had caused her great discomfort. Every spring when the first warm days appeared her eyes would become very much inflamed and irritated. As the summer advanced the trouble would become more aggravated. Oculists called it spring catarrh. It was distressing to be with her,

Digitized by Google

for at times it would seem as though she would dig her eyes to pieces. This last spring the trouble came on worse than ever. As I had employed the services of an eminent oculist without receiving any benefit, I concluded I would try Christian Science. In two treatments she was healed. The terrible irritation subsided at once, but the inflammation was more gradual in disappearing.

We are indeed thankful to God and deeply grateful to Mrs. Eddy and to the dear practitioners through whom this blessed truth was brought to us.

JENNIE ST. L. BROWN, Chicago, Ill.

When I was a child, a large copy of the Lord's Prayer hung over my bed, and every night for years I read it and re-read it; but it remained for the most part sealed from my understanding. The nights were long and full of strange fancies, for I was ill and weak, but that picture was always good company, though I more often cried over it than found any conscious joy in it.

Later, I went to live in a home where a brook ran through the grounds and the whole place was full of nature's beauty. I loved what others wrote about these beauties and I longed to have the same beautiful thoughts come to me; but do what I would to woo them, there remained a mist between.

But my childish prayer was answered; the constant struggle to see and understand was the unceasing prayer which availeth much.

After a time, about fifteen years ago, Christian Science came to our notice and it is accomplishing its healing work. The torpid liver and sluggish circulation are normal, the sensitive throat is whole; the sunken chest, strengthened, and the weak back, strong. The lame feet walk, the troublesome eyes see, and the deaf ear hears.

The Lord's Prayer is no longer a petition of pain but a declaration of joy. It speaks to me, and through me of the Fatherhood and Motherhood of good and its heavenly reign in man; it leads me to adore the Love divine and reflect it in my love. It brings heaven down to make earth glad for me, as I flee from the tempter and seek the everlasting Life, and Truth, and Love.

I sit by that same brook and its ripple is like the gentle voice of Truth; it speaks to me of the unending river of Life with its one pure source and love-filled channels. The trees by the brook tell me of the infinite intelligence which their strength and beauty and shelter can but typify.

I thank the giver of all good that He revealed to the waiting thought of His faithful daughter, our Leader, His message of Life. Science and Health has taught me that "the admission to one's self that man is God's own likeness, sets one free to master the infinite idea" (p. 90).

ELSIE F. EARLEY, Elgin, Ill.

For about twenty-five years I was almost continuously addicted to the habit of smoking cigars. By the exercise of will power I was often able to discontinue the habit for periods of time running upward to thirteen months.

I always came back to it, however, as a means of solace in solitude, or as a theoretical sedative for nervous complaints. The appetite was incessant and seemed to demand gratification. I often boasted of my self-control in frequently putting it aside, but I never succeeded in extinguishing the habit.

One afternoon over a year ago, while smoking a cigar and reading "Miscellaneous Writings" by our Leader, Mrs. Eddy, I was suddenly conscious of having no desire for tobacco. The habit and desire were completely destroyed by the truth and love expressed in that little volume. I have never since smoked a cigar nor have I ever desired to do so. I am very grateful for this release, and for the sense of freedom and dominion which the demonstration has brought into my experience.—ERNEST C. MOSES, Chicago, Ill.

When I look back a little more than six years ago, and note the change that has taken place in my life, I know there is no power, less than the divine power, that could possibly bring it about. I was addicted to nearly all the bad habits of the man of the world: using liquor daily, sometimes to excess; smoking ten to fifteen strong cigars daily; swearing at everything that did not please me, and they were many; selfish to a great degree, with a heavy load of fear; suffering with a bad case of stomach trouble and indigestion, which material remedies had failed to heal; unable to make ends meet although I had quite a large practice in dentistry.

How different all is now! I have no desire for liquor or cigars, the swearing habit is gone, I have no fear, am healthy, strong, and happy, surrounded with a healthy, happy family, with plenty and to spare. We have had many beautiful demonstrations in our home, one of which was to me the most beautiful I have ever seen, and it has helped me wonderfully. Three years ago last Fourth of July, I went home at noon-time, and found my little four and a half year old boy lying on a pallet on the floor with a very severe bilious attack. He was so sick that he paid no attention to his older brother and several of his playmates, celebrating with their fireworks, flags, and drums. When lunch was announced he came to the table, remaining but a few seconds; then he returned to his bed, where he lay until six o'clock, when he called for some one to read Science and Health to him. I asked his mother to read to him; she took a seat by his bedside and commenced reading aloud. She had not read more than fifteen minutes, when the little fellow rolled out of bed, saying, "Papa, will you buy me some sky-rockets?" I told him I would, and he immediately asked to be dressed so he could go to the store with me. I bought him a supply of fireworks, and when we returned to the house he joined in play with the other children. By seven o'clock he had eaten a hearty supper and did not seem ever to have been sick.

W. J. CORD, D.D.S., St. Louis, Mo.

I deem it a privilege to acknowledge the many blessings resulting from the application of Christian Science to the experiences of every-day life; to reiterate my appreciation of its ability to meet our every need. We have deeply appreciated the healing of our pointer dog from the effects of poison; as we lost a favorite dog in that way prior to our acceptance of Christian Science.

One day while in the kitchen I heard a sound which attracted my attention, and as I looked out I saw our dog try to put his forepaws on the step and instantly fall to the ground in a rigid position. I recognized the error at once as I had seen our other dog in the same condition. Instantly Truth was declared and with the declaration he made an effort to get up, but failed. This effort was made three times; each time he fell back, but in five minutes he was able to mount the steps. The sense of fear seemed very real, so I hastened into the house to be alone; but our little boy, not six years old, stood by his faithful playmate, saying over and over aloud, "God is Love,—God is Truth,—God is Life." After this truth seemed clearer to me, I went back and the dear dog stood trying to wag his tail, but he did not seem to be able to move very much nor to walk any, as his joints were so stiff. Love's presence and power was continually realized, and in an hour we fed him and he ate heartily.

Within three hours from the time we first saw him, every symptom disappeared.

Can one describe the gratitude, the peace, and the joy which follow these evidences of the presence and power to-day of the Christ-truth to destroy evil (error)? And the dog? Yes, he was happy and grateful, too, and made every effort to manifest it. I daily thank God for Christian Sci-

Digitized by Google

ence and for our beloved Leader, who was worthy to become God's messenger to this age.

N. B. S., Jacksonville, Ill.

I wish to express through the pages of our periodicals my gratitude for what Christian Science has done for me. My desire is daily to put off the "old man with his deeds" and to be governed by divine Love alone,

I will tell of a demonstration that was made in our family three years ago. My sister had an ailment called by *materia medica,* quinsy. She was allowed to choose for herself whether she would have a doctor or try Christian Science treatment. When she had been under the doctor's care in the past for the same trouble, she was often housed for three weeks or more, suffering greatly and taking powerful medicine; so she decided to give Christian Science a trial. A practitioner was notified, but it was not possible for her to come to us, as we were some miles out of town, so the treatments were all absent, nevertheless she was entirely free in one week's time, and what Mrs. Eddy says was also proven true: "Science can heal the sick who are absent from their healers, as well as those present, since space is no obstacle to Mind. Immortal Mind heals what eye hath not seen" (Science and Health, p. 179). She did not once glance at her throat, and was very grateful for the help.—G. N. L., Chicago, Ill.

Shortly after coming to Christian Science I had a beautiful demonstration. I had gone to New Haven, and while there I became ill. My friends called in a physician who pronounced it a case of typhoid fever, and added that if I had not improved by the following morning they would have to send me home. He also stated that there were fully two hundred cases in the city. He left some medicine for me, but I told my friends I could not take it, as I believed in Christian Science.

I immediately wrote to a Christian Science practitioner asking for help, but the following morning I was seemingly worse, and my friends telegraphed to my father, saying that I would be home in the afternoon. My friend then accompanied me to the depot. Meanwhile the Christian Science practitioner called at the house, and when my friend returned she explained to her the reason of her visit. My friend exclaimed in surprise, "Why, she is on her way home now, and I accompanied her to the train, how then can you be giving her treatment?" The practitioner told her that it was absent treatment she was giving. All the way home in the train I experienced no pain, and when my father saw me he exclaimed, "Why, you don't look a bit sick!" I received three days' treatment after I reached home, and was perfectly well. For some time after, my hair fell out continually, but this was also overcome by Truth. I am most grateful to those who have helped me to get the understanding of Christian Science, for through it I have been enabled to overcome evils in myself and others.

Miss Vally Falks, Brooklyn, N. Y.

I feel as if it would be wrong for me to withhold my testimony to what Christian Science has done for me.

I knew little or nothing about Christian Science until I tried it as the last resort in my case of sickness. For over two years I was a constant sufferer from stomach and liver trouble, trying some of the best doctors that could be found. I was in a sanitarium for four months, but all the time I was getting worse, and decreased in weight from one hundred and sixty-eight pounds to one hundred and fourteen, and could eat little or nothing without being in great distress. At this time I turned to Christian Science through the advice of a friend who had been healed. I stopped all material treatment, went to eating whatever I liked, which was just the opposite from what the doctor told me, and felt no bad effects whatever. I took treatments for three weeks, which were all absent except two, and at the end of three months I weighed one hundred and sixty pounds. This was certainly proof enough to me that Christian Science was what I had been searching for, the truth that makes man free.

I have been a constant reader of the Christian Science text-book, "Science and Health with Key to the Scriptures," since my healing, and am very grateful for the good I have received from it. I am also very thankful to Mrs. Eddy for making plain this great truth for us.

Whit G. Smith, Osage, Ia.

One night not many days ago my little girl, ten years old, had every appearance of having been poisoned by ivy. She said to me, "Mamma, coming from school to-night, Charlotte dared me to pick poison ivy. I said it would not poison me; she said it would; I said, No, it would not, and I picked some and rubbed on my cheeks, and eyelids, and put a leaf in my mouth. Now my face itches so I'm afraid it has." I talked to her a few minutes on the words, "Ye shalt not tempt the Lord your God," then gave her treatment; and in an hour repeated it. In the morning no trace of the error was to be seen.

Two days after this my boy of eight years awoke in the morning with eyes swollen so he could hardly see. His face and hands were red and burning and he felt too uncomfortable to eat his breakfast or go to school. I gave him treatment at once, told him he could go, not to be afraid, and that all thought of trouble would soon be gone. He went with many misgivings, but returned at noon whistling all the way, having forgotten all about the error. It had disappeared before he reached school. He had brought home a bunch of ivy leaves the day before and pressed them.

I send these demonstrations as a slight token of my sincere gratitude to our Leader, Mrs. Eddy, for showing us how to live as God's own children.

Mrs. Louise Jackson Keith, Newtonville, Mass.

My final struggle to gain health and happiness through material means was in the gymnasium. My physician said it was the only means through which I had any chance of getting physical relief and strength, and that I should lose no time in placing myself under its care. I decided upon the Young Men's Christian Association, being religiously inclined and knowing their organization to be the best of its kind in the city. Although scarcely able to walk, I persisted in attending regularly and doing what I could with all the apparatus in the place, bathing and rubbing, hoping to receive that which was so necessary to aid me in supporting my wife and family,—physical health and strength.

After a mighty struggle for a few months I found myself very much benefited, and felt sure that my weary hope was realized; but the summer time was approaching, and I was forced to give up my exercises in the gymnasium—first, on account of the heat, and secondly because the closing of that part of the institution for the summer months was announced.

My material props abandoned, not many days passed when a collapse came that was worse than any previous attack, and I was once more a physical wreck, unable to attend to my duties.

A lady living next door who had been healed by Christian Science of the morphine habit of twenty years' standing, brought the glad tidings of great joy to my threshold, and I accepted Christian Science treatment merely as an experiment at first, but received more lasting benefit in fifteen minutes than from the gymnasium or anything else that was given a fair trial.

The unselfish and loving Scientist who treated me, gradually but surely set me on the right path, and after a great

Digitized by Google

struggle with self and sin, in about three months I became more than conqueror, being permanently healed of dyspepsia, nervous prostration, heart and head troubles, and many other complaints, as well as spiritual darkness, the healing of which is the greatest of all blessings to a weary and hopeless mortal.

This was over five years ago, and after knowing the great benefits of Christian Science I have ever since been actively engaged in the work as well as following my own vocation; and if I have taken so-called physical exercise, it was not because I had to do so, but with the full assurance that my health and strength emanated from the divine Mind, the source of all action. I exercise to enjoy my new-found strength.

Working from and understanding Principle now in some degree, my thoughts of self are relinquished, and this equips me for helping others; hence I have been led into channels where many have been helped to partake of the sweet waters also. As a result of the leading and guiding of Truth, I have been permitted, through our church, to place in the library of the Association that I was forced to abandon, a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and thus some other weary ones may be led to the true source of health and happiness by its wonderful contents.—GEORGE H. WHEELER, Toronto, Can.

I have long felt it my duty to write and tell what Christian Science has done for me. Truth has been the only physician in our family for six years, and I could not tell all the blessings received. As I was the first to receive benefit, I will tell of some of the troubles out of which I have been lifted. I was never strong after the birth of my last child, and suffered in many ways. Ulcers of the mouth, throat, and all the mucus membranes, made life a torment for many weeks.

As medicine failed to help me, my friends wished me to try hygiene, so I went to a sanitarium where the beautiful surroundings, rest, and change seemed to do me much good, and I was discharged as cured, but in three months I was as miserable as ever. This time the trouble was called tuberculous ovaries. I went back to drugs, but steadily grew worse, and was finally advised by my physician to go to a hospital and have an operation.

I said good-by to husband and little ones, and went, with but one chance in ten of ever coming back alive, as the doctors declared. I will not picture the horrors of the operating table. I stayed alone among strangers nine weeks, then came home with an assurance from the surgeon that I would have to return for another operation in about three months. I had to wear a bandage that was very tight and uncomfortable, but the wound did not heal and the discharge soon became alarming. I dragged along in this condition for five months, when a great French doctor came to our town. I was examined by him, and he said there were wounds in the bowels through which there was a discharge, and I could not get well without having them sewed up. My condition at this time was most distressing in every way, and I was wavering between the dread of another operation and the fear of something giving way that would cause instant death, when Christian Science was recommended to me.

I did not know or care what it was, it promised relief without the knife, and I was ready for it. I began to improve from the time I met my practitioner. The sweet assurance that God is no respecter of persons, that He could heal me, and that I need never again face the operating table brought hope and peace, and I slept better that night than I had for many months. I improved rapidly in every way, the discharge stopped, and the wound healed. My hired girl left me the first week, and I was soon doing all my housework, besides milking cows, husking corn, or anything that it seemed my duty to do.

Since then, discord has seemed very real to me at times. I have had some old and some new troubles come to try me, and have had to ask for help. My progress has seemed slow, but I feel confident that harmony will soon reign. The consciousness of ever-present Love has enabled me to demonstrate over many discords for my family, as well as for a few others. Two years ago a young man who was working for us got his arm caught and badly crushed in the feed grinder. He at once expressed fear of blood poison, and asked to be taken to a doctor. My husband went for a horse and I bathed and tied up the arm, meanwhile striving to overcome the fear he manifested. I told him that our little boy had his foot caught and crushed in the same manner, two years before. He asked what we did for it, and I told him about Christian Science. He had the horse taken back to the barn, asked for help, and in half an hour was skipping over to the neighbor (who had heard his cries and had come to help get him out), to tell how free he was from pain. The swelling, numbness, fear of crushed bone, blood poison, proud flesh, etc., were all treated scientifically, and he was able to go to work in less than a week, and husked corn all the fall.

I often wonder how I ever lived without Christian Science. I am sometimes tempted to feel discouraged because none of my family seem to care for it except for the healing, but I can be thankful that they are not antagonistic. I know that they will some day be ready for it.

I hope I may soon be worthy to unite with the church. Isaiah, 49 : 10, and many other beautiful passages in the Bible and Science and Health are my daily helps when the clouds of error seem dark. Words cannot express my thanks for what this wonderful truth has done for me and mine.—MRS. LILLIAN CHANDLER, Central City, Neb.

It is with the deepest gratitude to all helpers in the Christian Science work, that this demonstration is given, although no healer was asked for help in this case.

Having suffered for many years with gall-stones, which were greatly aggravated by an operation for tumor, I could get no relief for constipation and other ills attending this trouble. Mrs. Eddy tells us in Science and Health that "man's extremity is God's opportunity." This proved to be true, for I was healed by simply reading Science and Health, and the *Quarterly* lesson daily. The relief was immediate, and the daily desire to be what Christian Science teaches us we can be, is a never-failing comfort.

LILLIE V. BOARDMAN, Parsons, Kan.

[Written for the *Sentinel*]

The Awakening.

MARGUERITE BOUVET.

WHAT matters where my body dwells
If but my thoughts are high?
Up in my tower I look across
Where mountains meet the sky;
I dream of an eternal day,
Of things achieved and done,
Of battles fought, woes banished, victories won!
The past—a valley darkened by the mist—
Sinks far below my rising sun.
Once more I live. Hope lights the way,
From its long lethargy my spirit wakes
To behold the breaking day.

Not what we give, but what we share,—
For the gift without the giver is bare;
Who gives himself with his alms feeds three,—
Himself, his hungering neighbor, and me.

LOWELL.

From our Exchanges.

A belief—or opinion—that the Bible is the Word of God, even though it take the extreme view of absolute verbal inspiration, may co-exist with utter moral infidelity. It is the doing of the Word, not a mere belief in its infallibility, that tells in a man's life. "Why call ye me Lord, Lord, and do not the things which I say?" asked our Saviour of those who were very orthodox as to the Law and the Prophets, but refused to believe in him who was fulfilling them before their very eyes. In God's mercy, no doubt, many will be saved who hold very erroneous views concerning the Bible, though that is no excuse for holding such views; but no one will be saved merely because he professes to regard the Bible as the very Word of God. Such a faith is only on the surface, it does not affect the life. It is "with the heart that man believes unto righteousness."

The Examiner.

The Rev. John Watson, D.D. (Ian Maclaren), says in *The Watchman* in an article on "The Next Revival," "We are between the tides, between the creed which is dead and the creed which is to be, between the life that was and the life that is going to be; we are in the gray mist between night and morning. When vitality is at its lowest, men's hearts are apt to sink. We do well, therefore, to pray for a revival; for the coming of a new age, with fresh faith and unimagined triumphs, cannot be brought by organization any more than you can hasten spring by lighting a fire on the frozen ground, or create day by turning on the electric light. Revivals of religion have been the most convincing evidence of God's Spirit, which bloweth where it listeth, so that we know not whence it cometh or whither it goeth."

There must be a revival of that religion which has dwelt as the spirit of love and of truth, of aspiration and of power in all the world's great faiths; of that religion which to the Hebrew prophet meant dealing justly, loving mercy, and walking humbly, which to the primitive Christian meant a new birth, a sincere spirit, and a love of all mankind, which to the great discoverers of scientific knowledge in modern times has meant an unfaltering trust in the excellence and in the supreme safety of truth, which to the self-sacrificing ones of every age, of every creed and of none at all, has meant joy in renouncing the things that self-seeking men call good, if so be that they might lead some into a larger freedom and a fairer light. We need to-day a revival of this religion.—*The Independent.*

There is no substitute for personal righteousness. Personal righteousness is primary to all social good. The minister who really saves into vigorous Christian character the dozen he may have in his congregation has done more, not simply for them, but for the world, than by taking a city with some scheme by which a few people may have some soup and a good many may shunt off their personal responsibility by giving a dollar to pay for it. Let the evangelical temper grow; let every Christian Church join in every great enterprise for making men really righteous.

The Universalist Leader.

In our moments of spleen there is no better exercise than to reckon up as against our losses the things that remain. When we have fairly understood the worth of our personal gifts, what it means to be able to swing along in careless freedom of limb, to open clear eyes upon the world's beauty, to eat with appetite, to reason, to remember, to imagine, instead of being reduced to the privation of these things, we find we are rich where we thought ourselves poor. The worst is where we lightly value our wealth in love.—*Christian Register.*

There are encouraging signs of a revival of popular interest in the study of the Bible. The conviction appears to be growing that the knowledge of its truths is essential to civic freedom no less than to holy living. More thorough acquaintance with the Bible as the treasure-house containing what men need in order to realize the true end of life, will lead to acceptance of its authority as the supreme literature which records the mind and will of God.

The Congregationalist and Christian World.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Price, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The long-expected report on the postal frauds have been made public, together with the President's comment upon it. The frauds surveyed occurred in the office of Assistant Attorney General, and in the office of the First Assistant Postmaster General, this latter including the supply division, the free delivery division, and the salaries and allowances division. Frauds were committed in the reckless purchase of supplies at exorbitant prices, out of which percentages were taken by the offenders. The department which was charged with legal action against fraudulent concerns using the mails took blackmail from bond, turf, and guessing swindlers. It is averred that political influence demoralized the service.

The chief hydrographer of the United States Navy, in his annual report, says the office has in progress the preparation of a series of charts intended to cover every navigable portion of the world except on the United States coast, so that American vessels may be supplied with charts of "their own production for every region that a vessel may be called on to visit," and not run any risk in time of war of being unable to obtain such an absolutely essential requirement for the safe navigation of their vessels.

Preliminary arrangements for the National Encampment of the Grand Army of the Republic in Boston, August 15–22, next year have just been completed by the National Council of Administration. It is estimated that between seventy-five and a hundred thousand men will march in the line, which will be about two miles in length.

The original draft of the Hay-Herran Panama Canal Treaty has been signed by the special commissioners of the Panama Government and has been forwarded to Colon for ratification.

Former Queen Liliuokalani of Hawaii has returned to Washington to press her claim for compensation for the crown lands of Hawaii.

Not one but three challenges are now probable for the America cup.

Foreign.

Revolutionary forces have captured the city of San Domingo in the Republic of San Domingo, and articles of capitulation have been signed by the President, Wos y Gil, and the ministers of the United States, Hayti, Belgium, and Spain. The conditions of capitulation guarantee full protection of life and property. The provisional government of the revolutionists will move shortly from Santiago de los Caballeros to the captured city, the capital of the Republic.

The two little islands, St. Pierre and Miquelon, in the Gulf of St. Lawrence are said to be for sale by France. Their sale to the United States, which has been intimated, would be "prejudicial to Canada and imperial interests," and Canada would probably protest to Great Britain against such a sale. They have been much used as a resort for smugglers who set at defiance Canadian laws. The logical purchaser would be Canada.

Spain has taken the first steps toward severing relations between her and Venezuela. This action is thought to be due to the ill-treatment accorded to the Spanish minister while acting as an arbitrator of the Mexican claims against Venezuela.

So great is the chagrin of Colombia at the loss of the Panama Canal, and so great her extremity, that it is even rumored that she might as a last resort ask admision into the new Republic.

Governor Dole of Hawaii, who has just been made United States District Judge, has been succeeded as Governor by the appointment to that position of former Secretary Carter.

Much unrest prevails in several of the provinces adjoining the new Republic of Panama which may lead them to make overtures to join their interests with the new Republic.

Industrial and Commercial.

The importance of Southern ports in American commerce is given in a recent issue of the *Manufacturers' Record* dealing with the imports and exports at those ports, together with the figures of their respective populations, in comparison with similar facts about other ports of the country. The South is now actually producing in the neighborhood of 40 per cent of the total exports of the country, although it embraces but about 30 per cent of the total area and contains less than one-third of the population. During the past fiscal year Southern ports handled more than 35 per cent of the total exports of the country, while of the $38,418,613 increase in the value of exports over the preceding year, $35,342,395 was at Southern ports.

Of the seventeen typical ports, Galveston has the heaviest commerce per capita of its inhabitants, $2,795, followed by Newport News, $1,518; Savannah, $1,017; Brunswick, 948; Pensacola, $832; Wilmington, $727, and New Orleans, $619. New York, with $327, is less than all of these, and also less than Mobile, $436, and Portland, Me., $378. San Francisco, with $204, is close to Norfolk's $200 and less than Tampa's $248 and Baltimore's $215. Of the selected ports, Charleston has the least weight in the South per inhabitant, $124, and Philadelphia the least in the rest of the country, $103, while Boston's $310 is less than the weight of eight Southern ports.

Bearing in mind that comparatively little of the commerce actually originates in the ports which handle it, this per capita idea is suggestive. Savannah, with 54,000 inhabitants, has a commerce annually of $55,000,000, while Portland, Me., with 50,000 inhabitants, has a commerce of $18,000,000; New Orleans, with 287,000 inhabitants, has a commerce of $177,000,000, while Boston, with 560,000 inhabitants, has $3,000,000 less; Charleston's weight per each inhabitant is greater than Philadelphia's, and Galveston, with 37,000 inhabitants, does a foreign business of $105,632,206, while New York with 3,437,000 inhabitants, ninety times the population of Galveston, does $1,124,556,802 of foreign trade,—less than eleven times as much as Galveston.

Between 1883 and 1903 the value of the exports and imports increased from $1,517,020,316 to $2,445,889,552, or $898,869,236, equal to fifty-eight per cent. This rate of increase was exceeded by Newport News, which had an advance of 1,850 per cent; Pensacola, 605 per cent; Brunswick, 452 per cent; Mobile, 422 per cent; Galveston, 239 per cent; Wilmington, 207 per cent; Savannah, 136 per cent, and New Orleans, 69 per cent.

Figures showing the production of coal in the five principal coal producing nations, in 1902, as compared with 1901, follow: United Kingdom, 227,095,000 tons, an increase of 8,048,000; United States, 268,688,000 tons, an increase of 6,814,000; Germany, 107,436,000 tons, a decrease of 1,103,000; France, 29,574,000 tons, a decrease of 2,060,000; Belgium, 22,750,000 tons, an increase of 556,000. The total known production of the world, it is stated, is now about 700,000,000 tons.

Figures showing the number of employees in the coal industries in the five principal coal producing countries are: United Kingdom, 787,700; United States, 453,554; Germany, 448,000; France, 159,957; Belgium, 134,092.

The average production per person in the United States is 539 tons, against 278 tons in the United Kingdom and 242 tons in Germany.

Statistics for the fiscal year ending June 30, 1903, show that the total Cuban imports, including coin, were valued at $62,620,279, against $66,062,856 for the preceding year. Of this amount 41 per cent came from the United States, 16 per cent from Spain, and 14½ per cent from Great Britain. The imports from the United States show a decrease of $3,000,000 compared with those of the preceding year, and deducting coin were valued at $23,640,000 against $28,000,000 in 1902.

A cut of about ten per cent in the wages of cotton-mill operatives in various cities of New England went into effect this and last week. Altogether about sixty-four thousand hands are affected. No strike is likely, as they recognize that the high cost of cotton and a slow market are determining factors.

The volume of trade between China and the United States in 1903 was $84,000,000. In 1872 it was $80,000,000; in 1874 the record was reached, $105,000,000. In 1893 it reached $103,000,000, but in 1898 fell to $24,000,000.

General.

The Workman expedition, composed of Mr. Workman and his wife, two guides, Mr. Hewett of London, and a number of coolies, has returned after reaching in the Himalayas an elevation of 23,394 feet. The expedition was highly successful and added much new informaton concerning the glacial phenomena and the topographical, geological, and scientific features of this extensive range of mountains.

W. N. McMillan of St. Louis, Mo., who recently failed in an attempt to explore the course of the Blue Nile, has completed arrangements for another expedition, which will embark at once in launches at Khartoum and proceed to the furthest navigable point, where it will land and continue the explorations in the direction of Lake Rudolf. The expedition will cover about seven months of time.

Professor Ramsay in a recent lecture in London announced that he had seen radium change into helium, and compared it to the old search of the alchemists to convert lead into gold. He announced that he did not understand the phenomenon.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Thanksgiving Services.

Thanksgiving Day in the Mother Church.

THE singing of the first hymn was followed by the reading of the Governor's Thanksgiving proclamation, that of the President having been read the Sunday previous. The reading of the one hundredth Psalm was followed by silent prayer and the Lord's Prayer with its spiritual interpretation, as given in our text-book, after which the congregation joined in singing the Communion hymn written by Mrs. Eddy. The Thanksgiving Lesson-Sermon was next read, and was followed by a solo.

Professor Hering, the First Reader, then said,—

It is especially fitting that our Thanksgiving Service should include the opportunity of giving verbal expressions of our gratitude for the many blessings that have come to us through Christian Science.

There is no body of people on earth to-day who have such good reasons for being grateful as have Christian Scientists; and not merely because they are the healthiest and happiest of peoples, as they undoubtedly are, but because the very God has come to them through a demonstrable scientific religion that leads them into the Holy of Holies, wherein they may become conscious of the Truth of their being, and thus acquaint now themselves with God and be at peace.

Therefore, friends, we certainly have especial reason for exalted veneration and deep gratitude to our very beloved Leader, Mrs. Eddy, whose spirituality, purity, fidelity, and self-sacrifice have made it possible for the Giver of All Good to send us this revelation of Truth and to direct its establishment on earth.

Our Leader has shown us in her own beautiful, consistent Christian life, the fruits of her teaching, and we shall do well to follow willingly and obey implicitly one who has given such unmistakable proof that she follows and obeys the Master.

All the love and gratitude we can express in word and in deed is not too much to give in exchange for the glorious liberty which lies within our reach as the result of her life-work.

We shall now be glad to hear from members of the Church who desire to give testimonies appropriate to this occasion.

Over twenty persons gave testimonies, all of whom expressed profound thankfulness for health restored, for freedom from care, anxiety, and financial and other troubles. Nearly all who spoke told of their joy in a higher understanding of God and of His word, and there were none who did not express the deepest reverence and affection for our Leader, Mrs .Eddy. Many who rose to speak could not find opportunity in the allotted time.

At the close of the testimonies the following despatch was read, and on motion it was unanimously voted that the same be forwarded to Mrs. Eddy.

Boston, November 26, 1903.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—The year which has passed has deepened our debt of gratitude to God for blessings recognized and blessings beyond the range of our present realization. In loyal obedience to the President's proclamation and to that of the Governor of the Commonwealth of Massachusetts, we meet in the Mother Church to lay upon God's altar our offering of heartfelt thanksgiving.

We remember that of old God said, "Them that honor me I will honor."

You, our beloved Leader, have indeed honored God in revealing Him to the world as All,—as Life, Truth, and Love,—and this has brought healing and happiness to thousands who to-day in the Mother Church, and in its branch churches, and reaching other denominations, tell of the redeeming power of the Christ-truth as made known to them in the ministry of Christian Science.

We thank you for another year of toil for the Cause of Christ, Truth, and for us. We thank you for the Concordance to Science and Health, which lightens our labors and multiplies the results thereof. We are striving to thank you for the Twentieth Century Church Manual by loving and intelligent obedience to its high requirements, and we can truly say that "Heaven is nearer, and Christ is dearer" to us than ever before.

We rejoice and thank God for all the good that has come to mankind in the past year,—for all that has lifted burdens, and made for progress. We are thankful that the torch of liberty which was lighted at the birth of this nation, still sheds its rays across the waters, but above all we thank God that a greater light has been rekindled which shows the way to freedom from sin, sickness, and every evil that enslaves those who do not know God as the only Life,—the only Mind.

Your mission and your example honor God and His Word, and ennoble and dignify the true idea of man. We reverently thank God to-day for Christian Science and for the progress of mankind. Our gratitude for Life, Truth, and Love bids us hold sacred this day in common with all other Christians. May this Thanksgiving echo round the globe and tell the world of advancing faith in God and in "the power of His Christ."

THE FIRST CHURCH OF CHRIST, SCIENTIST.
WILLIAM B. JOHNSON, *Clerk.*

After the singing of the 172nd hymn, the scientific statement of being and the correlative Scripture, 1 John, 3 : 1–3, were read, and the benediction pronounced.

Thanksgiving Service in Concord, N. H.

THE usual Thanksgiving service of First Church of Christ, Scientist, was held Thanksgiving morning at half past ten o'clock in the Unitarian Church. The attendance was good, and visitors were present from Boston, Buffalo, Denver, San Francisco, and elsewhere.

The services, which were listened to with deep interest, were as follows: Organ voluntary; hymn, "In Thee, O Spirit true and tender;" reading of the Governor's proclamation; Scripture reading, Psalm 147; silent prayer, followed by the audible repetition of the Lord's prayer with

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

its spiritual interpretation from the Christian Science text-book; responsive reading, 1 Chronicles, 16; hymn, "I Praise Thee, Lord, for blessings sent;" Thanksgiving Lesson-Sermon, which consisted of selections from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Following the sermon many thankful testimonies were given by those present of the spiritual healing wrought by the power of God through prayer, as revealed in Christian Science.

The services concluded with the beautiful hymn by Mrs. Eddy, "Shepherd, show me how to go;" the scientific statement of being and its correlative Scriptural passage, 1 John, 3 : 1–3, and the benediction.

The Scientists present from abroad took deep interest in the handsome new edifice which Mrs. Eddy has generously given to the local church. They were particularly gratified to observe that the building has progressed so rapidly that the work of enclosing the church is now going forward.

The Concord Patriot.

Inter-denominational Services at Vinalhaven, Me.

Dear Editors:—Extraordinary cause for thanksgiving came to the little Christian Science Church at Vinalhaven, a small town on an Island in Penobscot Bay off the coast of Maine, and I believe will prove of interest as a sign of the times to our dear *Sentinel's* multitude of readers. I will quote from a letter just received giving an account of it:—

"This Thanksgiving Day I am sure means a great deal to Christian Scientists all over the world, but to the few of us here in Vinalhaven it seems especially important, because it has brought us an unexpected privilege, one we could not possibly have planned ourselves,—for nothing would have seemed more unlikely (judging from appearances) than that a Christian Scientist would be invited to stand in the pulpit of Union Church here in Vinalhaven, and there have an opportunity to speak to a large congregation of the church members, and to read to them from the Christian Science text-book,—but that is just what occurred here to-day.

"Recently the pastor called on one of the Scientists and asked her if we would unite with his Church and the Advent Church in a union service on Thanksgiving Day. He said he was willing it should be held anywhere, but his church being the largest it seemed the most suitable place. As there are only three churches in the town, he felt that it would be a pleasant thing for those three to show a feeling of brotherly love by holding a union service that day. We considered the matter carefully and voted to accept his invitation, as it seemed an exceptional case, and we felt would be an opportunity for bringing Christian Science to the thought of the people, and in a way we had least expected. A—— (Scientist) explained to him that our Lesson-Sermon was prepared expressly for the occasion, and that while we wished to show our appreciation of his kind thought by doing as he suggested, yet we felt that we must hold our own service in the evening; so we met with his congregation at 10 A.M. to-day. After the meeting he announced that our service would be held in the Christian Science Hall that evening, and that all were *cordially invited.*

"I can assure you that in one way it was not an easy thing for A—— to do, to occupy the pulpit with those two ministers, both of whom made short addresses, but we all felt what a privilege it was to be allowed to speak there of Christian Science, and so the demonstration was made. Even those who have been most bitter must have been impressed with the beauty and truth of the passages she read. The little speech in which the pastor explained to his congregation the occasion of her presence there was so good I wish you might have heard it. He spoke of the Pilgrim Fathers, and religious liberty, and of our right to worship God according to the leading of our highest thought of right, etc. A—— said a few words expressing friendly kindness, and then read from the Bible, Isaiah, 40 : 3–5 and 28–31. She then said, 'I will now read from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.' The selections were all lovely passages on prayer and thanksgiving, also from pages 275, lines 9–19, and 276, lines 1–10. It was very impressive and the people felt it. The pastor expressed regret that he could not attend our service that evening, but a previous engagement prevented, otherwise he said he should be present with us. Truly this seems a great change since the days of former pastors, and I knew you would be glad to hear about it.

"One thing more: a lady who was my Sunday School teacher once, and who has been for years very deaf, stopped A—— and told her after the meeting how very much she enjoyed her reading, adding but 'wasn't it strange, I heard every word you said.' She has been going to church without expecting to hear, because it seemed better than staying at home, but to-day she heard all A—— said, and kept repeating 'Isn't it strange!' "—E. E. C.

The Library Committee in Philadelphia.

Philadelphia, November 9, 1903.

First and Second Churches of Christ, Scientist, of Philadelphia, Pa.

Dear Brethren:—Your Library Committee, appointed May 28, 1902, herewith submits the following report:—

Since its organization the committee has received $385.62 and expended $265.46. A systematic plan has been perfected, by means of which the leading libraries of this city are regularly visited and records made of the amount of demand for Christian Science literature. Complete sets of Mrs. Eddy's works have been placed in all the leading free libraries in this city and, in addition, in the University of Pennsylvania Library, Drexel Institute, and Swarthmore College Library. The *Christian Science Sentinel* and *Journal* are to be found on the tables of the reading rooms in these libraries, and are encased in handsome covers, thereby being given the same prominence as the popular magazines. Copies of Science and Health have been placed in the Editorial Library of the leading newspapers in Philadelphia. Copies of Science and Health have also been placed in the County Prison and in the House of Correction. These institutions also receive several copies of our periodicals regularly. Considerable literature has been placed in these institutions for free distribution.

Your Committee respectfully suggests that hereafter the churches shall contribute to the support of this work at the rate of fifty cents per annum for each enrolled member, instead of at the rate of $1.00 as heretofore; as the work of placing books in the libraries has progressed to such an extent that the immediate call for more volumes is insufficient to require greater outlay than the amount stated.

Your Committee feels very much encouraged by the work thus far accomplished, and can assure the members of our churches that Christian Science literature has its rightful place on the shelves of our public libraries, and that the demand for these books, as shown by our reports, is constantly increasing. Our members are requested to invite their friends to call for these books at the various libraries, and in this way the libraries will learn to appreciate the demand that really exists for Christian Science literature.

All of which is respectfully submitted,

The Library Committee of the Christian Science Churches in Philadelphia,

ALBERT E. MILLER, *Secretary.*

Love Reflected in Right Thinking.

C. W. CHADWICK.

How to love one's enemies has been one of humanity's most perplexing problems. Popular theology tells us that it is the proper and only thing to do, but fails to show us how it is to be done. Christian Science goes a step further and shows us how to love.

In "Miscellaneous Writings," p. 210, Mrs. Eddy says, "Love your enemies, or you will not lose them." While earnestly pondering these words the idea of Love reflected came to me as it never had before; and the longer I study and try to live Christian Science, the more I realize the great need of understanding how "infinite Love is reflected in love" (Science and Health, p. 17).

This idea of Love reflected solved for me the problem of how to love my enemies. It no longer meant that I was to love evil or an evil person, but to reflect the Love that destroys the sense of evil, and to abide in this Love wherein nothing that maketh or worketh a lie can enter. It meant that I was to let Love control and be expressed by me in thought, word, and deed,—the Love that "thinketh no evil."

It meant to me absolute insistence upon right thinking. It meant that Love could not be expressed in any other way. We are not truly and Christianly scientific in thought unless we reflect infinite Love, which Love is just as merciful to the sinner as to the saint, just as compassionate toward an enemy as toward a friend.

Was it not the conscious control of this divine Love that enabled the Master to say, "Father, forgive them; for they know not what they do"? He taught us by precept and example how to love our enemies. His whole earthly career was one harmoniou manifestation of Love. Though "tempted in all points," he insisted upon expressing the right thought, which was not then and is not now tainted with a single element of hatred. It was Love's pure expression.

Why does the Master's life seem to us mysterious and impracticable? Is it not because we have not yet learned to love, not yet discerned the rule for right thinking and reduced it to practice?

"If ye love me, keep my commandments," Jesus said. We partake of the Christ-life only as we learn to reflect Love. We begin to live when we begin to love, for Life is Love. Life is not a theory; Love is not a theory. Both are expressed in deed, not in profession.

"He that loveth not knoweth not God; for God is Love," and, "If a man say, I love God, and hateth his brother, he is a liar." This is proof positive that Love and hate cannot dwell together. The reflection of Love means the destruction of hatred and all kindred qualities.

No one can deny the validity of right thinking, and this constitutes the problem of loving our enemies. It should not seem unreasonable to insist upon thinking right when tempted to think wrong. Right thinking heals sickness and destroys sin because Love is its Principle. If we as Christian Scientists will but remember that the same manifestation of Love that heals the sick will also heal the sinner, we shall have no excuse for not obeying the Golden Rule, and thus loving and losing our enemies.

"What is it that harms you? Can 'height, or depth, or any other creature' separate you from the Love that is omnipresent good,—that blesses infinitely one and all? Simply count your enemy to be that which defiles, defaces, and dethrones the Christ-image that you should reflect" (Miscellaneous Writings, p. 8). May we all devote ourselves unreservedly to this right thinking which reflects divine Love.

The Wondrous Story.

EVA STROUD HAYES.

I FEEL compelled to give to the field some expression of the tender love and gratitude I bear our beloved Leader, Mrs. Eddy. How sweet are the lessons taught us of her life, and how blessed is the revealed truth as we find it in her writings through the understanding of which we are able to "speak the truth to every form of error" (Science and Health, p. 418).

I came into an understanding of this Science through my healing in the year 1895, and many times since I have wished I might give to the Field some expression of the joy and gladness gained, but words have always seemed inadequate to express the fulness thereof, so I have tried to content myself by reading the testimonies of others; but I can no longer remain silent, for my heart overflows with love, and I know I can express some measure of it.

When about eight years old I attended a Sabbath School where one of the hymns we sang was, "Christians, I am on my journey," one line of which was "I would tell the wondrous story what the Lord has done for me." I wondered at that time just what was meant by "the story," and why was it "wondrous," and would I ever tell it? Later on we changed song books, and in the new one I found the same song but with an addition. On each page was a small cut descriptive of the song thereon, and on this was a picture of the Christian on his journey. He was represented as old and bent, with a bundle on his back which was weighing him down. His was one of the saddest of faces, and I remember how discouraged it made me feel. I turned it all over in my child thought: Why, if his story was so "wondrous," did he not have a *radiant* face, and why was he so burdened? So I rather lost the desire to tell his story.

As we measure time, it has been a good many years since my childhood desire, but at last it is fulfilled, and now I know that God's children are not weighed down and the story is being told over and over again and the faces are radiant which tell it, for we are coming "into the land of Christian Science, where fetters fall, and the rights of man are fully known and acknowledged" (Science and Health, p. 226).

At the time of my healing I had heard but a very little of Christian Science, and much of that was really overheard. A very ardent little Scientist was visiting our home and was talking to our mother as I was passing in and out of an adjoining room, so I only caught snatches of what was said, but my heart leaped for joy as I realized that he was indeed telling a "wondrous" story. So interested did I become that I stopped my work and went into the room that I might see him, for I felt the love he expressed, and thought his face must be radiant, and so it was. I shall never forget that day. I made up my mind at once to try Christian Science, for I was at that time under a physician's care, being treated for a complication of troubles.

From what I overheard I thought one went for healing just as we would have gone to Jesus; that is, that the healing was instantaneous, and so it proved in my case. The thought that troubled me was, how could I reach the home of the practitioner, as it was quite a distance from my own, the weather was stormy, and I was quite poorly? I remember so well thinking, If I can only get to the door I know I shall be healed, for I am sure it is the truth, and Jesus said, "Ye shall know the truth, and the truth shall made you free."

It was a joy indeed to be free from the bondage of sickness, but how much greater was the spiritual gain; for I was filled with joyfulness when I found that I could "tell the wondrous story." And how gladly I tell it to-day and have told it for eight years, and yet, as the Queen of Sheba

Digitized by Google

said of King Solomon's wisdom, the half has never been told.

I feel that I have awakened from dreaming the dream of materiality and I am coming into a realization that we are now the sons of God," that God is our Life, and that we are rich indeed, not with the riches that take to themselves wings but rich with the abundant blessings of joy, peace, understanding, love. And it is this glad, wondrous story that is building and filling Christian Science churches all over our land and in other lands, and that is being told at the Wednesday evening meetings. It was told first by the meek and lowly Jesus, re-told by our beloved Leader, and echoed by every loyal Scientist. Should not every heart be filled with gratitude for what our faithful Leader has done,—she who has watched each step, cheering us on or rebuking as the need required.

With unnumbered voices repeating "the wondrous story" and unnumbered hearts overflowing with love, error—the king of terrors—is being destroyed and the time is hastening on foretold in Revelation: "Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Concerning the Lectures.

THE lectures were instituted for the purpose of making known to the public the truth regarding Christian Science; and as legitimate Christian Science is identified and known by the name of its Discoverer, by whom its laws have been formulated in the text-book, "Science and Health with Key to the Scriptures," the facts concerning Mrs. Eddy's life and work constitute an important part of the truth which all men would be the happier for knowing. A lecture is not an entertainment, but rather a part of church work,—one of the means whereby, as in service and testimony meetings, the members of a church can do good to their neighbors. To help them it is necessary to interest them. To win them to happier views of life it is important that they should know what these views are. For their own sakes it is well that they should be freed from pain-bringing misconceptions regarding Christian Science. The work of the lecturer, then, is to remove prejudices, displace misinformation, and establish fact; and so to interest the members of a community in the movement that they may become partakers of its benefits. This interest is expressed at the lecture by attention, afterwards by increased attendance of strangers at the services of the local church, where they find love and healing, and are blessed thereby. But the watchword of a branch church is not "advantage," but "opportunity." The lecture is not planned for gain, but for the good it will do. When a patient comes for help the healer finds opportunity for blessing a life with knowledge of the true God; and a lecture is the opportunity for changing lives in the community by the message of a healing Christianity. The Board of Lectureship, then, was instituted to promote good-will and good understanding among men through the united efforts of a local church and a public speaker. The lecturer presents such items of truth as may be given in an hour; the church not only provides a welcome to the public for the occasion, but continues its welcome by holding regular services, where, on Sunday, the Principle and rules of Christian Science re presented, and on Wednesday evening the practical results in healing are publicly related. The service to mankind accomplished by the lectures is so important that a by-law in the Manual requires the churches not to neglect their part in it. Under the heading "Annual Lectures," this direction is given: "The Mother Church and the branch churches shall call on the Board of Lectureship annually for one or more lectures." There are many churches which have from the first made full use of their privileges in this respect, and while it was not done to gain advantage or to enlarge membership, the result has been the increase which God gives, coming in such manifestations as fair dealing from the press, kindliness from the community at large, opportunity for healing, and following that, of course, accession of adherents and members. Wherever a church fails to be interested in this public work there must be some misconception or else personal view. The expense involved is usually met spontaneously where members are interested, and as an item coming once or twice in the days of a year should be accounted no burden.

There may exist a difference of opinion as to the length of time required to prepare for and advertise a lecture. A long-continued announcement is not necessary. There is a certain verve and satisfaction in quick work, which is possible where unity prevails. One largely attended lecture which was in all ways a success, was mainly arranged for in a couple of days. The lecturer telegraphed on Friday that he could lecture the following Tuesday. The hall was secured, advertising done, invitations sent out, and other preparations made in good order, and a splendid audience assembled. No doubt the unseen welcome of love was given in this case; but that may always be given, and visitors made to feel happy and peaceful, they know not why. Where advertisement is prolonged into weeks, it is often found that engagements have risen, been found, or made, for many whom their friends hoped to bring to the lecture and so to interest in Christian Science. The churches will naturally desire to co-operate with and help the lecturers in their work. Compliance with the request of the circular sent out by the Board of Lectureship is therefore important. This circular is sent to the church clerk, the officer through whom, as the Manual directs, the call of the church to a lecturer is to be transmitted. Should a clerk preserve this so carefully that lecture committees do not know about it, or fail to have access to its instructions, the purpose of the Board in preparing and sending it out is not realized. The following provisions are worthy of consideration by all the churches, since, while absolute spontaneity should prevail in the choice of a lecturer, it is necessary to have a business method for the work.

"In order to lessen the item of traveling expenses, it is often desirable for several churches in one part of the country to arrange to have lectures at about the same time, and thus obviate the necessity of making a special trip for each one. Two or more churches may, if it is desirable, give a joint lecture.

"After deciding to have a lecture, the church or society, through its clerk, should notify the lecturer chosen without delay, so that he may arrange his appointments, and as much as possible may conserve time and expense in going from one engagement to another. If such notification can be given the lecturer several months in advance, it will better enable him to arrange a tour according to the requirements of the field."

This method ought to be "twice blessed" in that for the churches it should lessen the amount paid for traveling expenses, and for the lecturer enable him to utilize his time so that days are not wasted in traveling back and forth, or weeks waiting in distant parts between appointments.

In vain does our own foresight strive. Danger comes from below, but deliverance only from on high. Temptations are without and within us. We should be lost, O Lord, without thee. To thee I raise my eyes, upon thee I rest my heart.—FENELON.

The Lectures.

At Milwaukee, Wis.

Mr. Bicknell Young of Chicago, lectured under the auspices of First Church of Christ, Scientist, of Milwaukee, on Sunday afternoon, November 1, at the Davidson Theatre. The house was full to overflowing, and many were turned away. It was a most helpful lecture, and the close attention given by the large audience was a delight to witness. We find with each lecture an increase of interest shown by the public, and feel that this means of reaching the general public is a most helpful one. Mr. C. F. Wieland, who introduced the lecturer, spoke in part as follows:—

You will all admit the pleasure you feel in making known to your friends anything which has brought you joy and comfort. It is therefore our happiness to share with you some of the knowledge which has come to and blessed us.

It is not claimed for Christian Science that it is some strange or new theory, but that it is the simple and comprehensive truth taught by Jesus, with a new light, in the effulgence of which we are able to follow and understand his teachings in a more demonstrable and practical way, overcoming sin and sickness.—*Correspondence.*

At Detroit, Mich.

An interesting lecture on the merits of Christian Science was listened to yesterday afternoon [November 1] at the Detroit Opera House by an audience which overtaxed the capacity of the building. The lecturer was Rev. Arthur R. Vosburgh of Rochester, N. Y., and he was introduced to his audience by Attorney Frank T. Lodge, who spoke in terms of eulogy concerning the believers in this religion with whom he had come in contact in his private and professional life.—*The Detroit Tribune.*

The introductory remarks of Attorney Lodge were as follows:—

Ladies and Gentlemen:—It has been frequently remarked, on occasions of this character, that public lecturers under the auspices of Christian Science Churches are nearly always introduced by members of other denominations. In our own city, a very eloquent Roman Catholic, Judge Murphy; a clear, cogent preacher of the Unitarian Church, Rev. Reed Stewart; and our own inimitable Mayor, who is a prominent officer in the Protestant Episcopal communion, have officiated upon former occasions of this kind. To-day, I consider it a high privilege to be invited to join this brilliant galaxy of oratorical stars, and, as a member of the Methodist Episcopal Church, to introduce to you th gifted speaker, who is to address you.

I am glad to see this interchange of courtesies among the different denominations. I hail with joy the growing spirit of tolerance and brotherly feeling which it indicates. Among the few things which I still remember of my study of the classics, is the remark of Cicero, that there is a certain bond of kinship among all the sciences. Were he living to-day, he would probably add that that tie has extended to the different creeds as well.

Every day sees a deeper and broader appreciation of the Scotch bard's strain, "The rank is but the guinea's stamp; the man's the gowd for a' that." Men feel more strongly, every day, that each one can best appreciate his own spiritual needs; that there is no single, select, and exclusive pathway to the great heart of God, but that the avenues to His mercy and love are as many and various as the differing hearts and souls of mankind; that the chief thing is not the rank, nor the road, nor the brand of his creed, but whether one loyally and lovingly lives up to his full spiritual measure and honestly works out his task in life as he understands it. For this reason, men are, in a sense, throwing down the spite-fences of denominational exclusion, and are welcoming one another as guests in their worship, believing that the one thing is to love God, and hoping that they will both receive and communicate some light upon the great problems of the Soul.

My first experience with Christian Science was purely professional. It was my privilege to draft the necessary papers for the incorporation of this church,—to officiate at its legal birth. Since that time, I have, as an attorney, represented the church and several of its members in the legal difficulties, which are inseparable from our imperfect human state. We lawyers witness the seamy side of life rather than the perfect pattern. When our clients come to us, their passions are generally hot and their judgments warped by prejudice. I am glad, however, to say that, even in the fierce light of persecution and unjust criticism, these Christian Science clients of mine have borne themselves in such a calm, serene, and dignified manner as to win my high respect, not only for them, but also for the principles by which they profess to be actuated. To-day, I respect their creed for the "fruits of the spirit," which I have seen it bear.

The good book says, "By their fruits ye shall know them." Certainly, the meek and lowly lives of the early Christians contributed largely to the astonishing spread of Christianity in the first Christian centuries. It may be that like qualities of heart and soul are, in a measure, responsible for the wonderful growth of this new sect. From the little handful of devout believers who erected and dedicated the Mother Church edifice in Boston in 1895, they have increased in eight years, until they now have between six and seven hundred churches, and the Mother Church in Boston alone has a membership of twenty-eight thousand.

A part of their plan of work for the dissemination of information as to their peculiar beliefs is to send out lecturers from the central organization, who, from their original breadth and depth of view and the later deep draughts which they have drunk at the fountain of Christian Science inspiration, are qualified and authorized to impart truth and correct error among those who are interested in its teachings.

A member of this Board of Lecturers is Rev. Arthur R. Vosburgh, who graduated from the Presbyterian Theological Seminary, at Auburn, N. Y.; and for a time preached very acceptably to Presbyterian congregations. Becoming convinced of the truth of Christian Science teachings, he had enough strength of character to withdraw from his former church, and he has since been one of the prominent teachers, healers, and lecturers of this church.

I congratulate you, ladies and gentlemen, upon the privilege which is yours of listening to Dr. Vosburgh. I congratulate you, Dr. Vosburgh, upon your large and intelligent audience.

I now introduce Rev. Arthur R. Vosburgh of Rochester, N. Y.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Take Notice.

I HEREBY notify the public that scurrilous letters purporting to bear my signature—letters of evil intent—that I never wrote, never caused to be written, and never saw until they were given to me by the individuals to whom they were superscribed, are constantl being circulated. But those who know me, know that I never wrote them.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., Nov. 13, 1903.

The Lectures.

THE large number of newspaper reports received at this office indicate that much more attention is being paid to the work of the Board of Lectureship, and that a greater number of lectures have been delivered during the present lecture year than ever before, but the article which we publish in this issue of the *Sentinel,* upon the request of the Board, shows that still greater care and forethought are required if the best results are to be obtained.

The number of persons who wish to know something about Christian Science, providing they can obtain authoritative information without much outlay of time or labor, is constantly on the increase, and to this class the lectures appeal with great force. That the lectures have removed much prejudice and misconception from popular thought is so apparent that there can be no question of their utility, and in no other department of our denominational work is there greater and more immediate return for the effort expended, unless it be in the healing of the sick.

Every social, political, and religious reform has been maligned and misrepresented, and it has been only through persistent and convincing elucidation of the truth that erroneous pre-judgment and self-satisfied indifference have been dispelled. Christian Science is no exception to this rule, and the need for a correct presentation of the subject appeals to all who are active in the work. This need has been well supplied by the Board of Lectureship to the extent that the branch churches have made use of this means of spreading the gospel of healing, but it cannot be said that the best has been accomplished until every church and society in the denomination has had its full quota of one or more lectures every year, as enjoined by the By-laws of the Mother Church.

The wisdom of our Leader in establishing this branch of our work has been proved time and again through the healing of some sick person who obtained his first understanding of Christian Science at one of these lectures, therefore no church of the denomination can afford to be remiss in availing itself of this means of bringing health and happiness to suffering humanity.

M.

Law Understood.

IT is very surprising that there are so few who fully recognize the power which attaches to a belief in law, whether this belief be based upon truth or upon error, and it is no less surprising that many things which have no foundation in the facts of existence are thoughtlessly taken for granted. Yet another fact is constantly overlooked; namely, that so long as error is believed, the truth, which is its opposite, is disbelieved or unknown, and whatever is generally believed comes in time to be regarded as law.

During the last half century much light has been thrown upon the subject of law, and thinkers are agreed that very erroneous opinions have been held,—that often an observed order, sequence, or customary happening in nature has had nothing to do with cause, rightly understood, and is no evidence of the operation of law in its true sense. At the same time, it has been admitted that law and order do exist, and what is more, that they must represent truth.

These admissions have doubtless been due in part to the wonderful discoveries along so many lines which could never have been made practical had not existing opinions about material law been discarded for more advanced theories; without these concessions we should have been indefinitely deprived of the wonderful inventions which mean so much to the present, and which promise even more for the future.

One of the clear-cut decisions of the last century was that which declared the universality and continuity of law; in other words, that law must be ever-operative. If, therefore, the moral and spiritual provisions of the law given by Moses had been obeyed, sin, disease, and death would no longer even seem to exist, and this would prove that they never had support or authority in law. Because of the prevalence and seeming reality of evil, Paul speaks of "the law of sin and death," and the beginner in Christian Science Mind-healing finds that in diseases, certain results usually but not invariably seem to follow certain conditions, and that these phenomena are supposed to be due to the existence of law. The practitioner is at no disadvantage, however, if he studies our text-book faithfully and intelligently, for he learns therefrom that neither sin nor disease is a manifestation of Principle, and that every expression of law is harmonious; hence the truth of Paul's grand statement: "The law of the spirit of life in Christ Jesus hath made me free from the law of sin and death."

In attempting to convince mortal mind of its errors, it may be pointed out by way of illustration that a number of years ago it was firmly believed that vaccination once submitted to was an effectual and permanent preventive of small-pox. This belief in a law which in reality was nonexistent satisfied the sense for a time, but it could not continue to do so, for it was merely one error taking the place of another, and the demand for repeated submissions to this taskmaster's scourge brought inevitable discontent and rebellion, even among its former votaries. The requirement of Truth with respect to every falsity is always, "Give place."

When divine law is understood it is found to be self-fulfilling, and it meets every need of man's wonderful and complex nature.

The divine law of justice is summarized in these words: "Whatsoever a man soweth, that shall he also reap," and our Leader says, "No possible injustice lurks in this mandate, and no human misjudgment can pervert it" (Miscellaneous Writings, p. 66). All human attempts at the making or enforcing of law are but feeble efforts toward the fulfilment of this divine proclamation.

Christian Science teaches us how to distinguish between mere human belief and law. The one is false and is a constant menace to freedom and growth, the other is true and is a perpetual support and inspiration. Well may we pray, "Give me understanding and I will keep thy law."

An Afterthought.

SITTING by the yet glowing embers of our Thanksgiving fire, we are led to muse upon the real significance of the day, and to wonder what lasting appeal it may have left with us.

It is a very simple thing to say, Thank you, and involuntary conformity to the expectations of good breeding may be easily acquired, but to be truly grateful to those who have brought us blessings means much,—it is to be dominated by an impelling sense, an attitude of mind, the presence of which is not always indicated by the expressions of conventional courtesy. Beneath all surface phenomena there must exist that recognition of indebtedness, that alert desire to please and honor which companions with the spirit of loyalty, and prompts us ever to be and to do for those who have become our benefactors.

No adequate Thanksgiving for life's best possessions can find expression within the limitations of a single occasion. It is too ample and consuming an experience, as every true man has come to know. And this is most true of the gratitude which fittingly recognizes human indebtedness to God, of which, as Christian Scientists, ours is chief.

When one's obligation is seen to be overwhelming, and his worthiness but meagre, self-respect alone would impel him to an expression of appreciation which must blossom out in every season and every experience of the year.

Blessed as are we in the possession of the demonstrable truths of Christian Science, it becomes us, above all others, to show our gratitude in lives of such unselfishness, purity, and sincerity as will present to the world the radiant outline of a truly consistent Christian character. And here we do well to recall the pertinent and suggestive words in which our Leader has reminded us that "we cannot conceal the ingratitude of barren lives. . . . To keep the commandments of our Master and follow his example is our proper debt to him, and the only worthy evidence of our gratitude for all he has done" (Science and Health, p. 4). This supplies us a test of the real value of our frequent declarations that we are "so thankful." If during the past year we have kept the commandments; if we have been humble, loving, chaste, and true; if we have been loyal to God, to our brother, and to our Cause,—then surely our lives have not proved barren and we have indeed evidenced a sincere gratitude for all the good which has come to us.

The law is inexorable which declares that a truly thankful life bringeth forth good fruit, but an ungrateful heart is a barren waste; and our Lord's condemnation of those who say "and do not," must fall on us if, having openly witnessed to the discovery and demonstrable presence of the Christ-truth which saves unto the uttermost, we fail to meet the legitimate expectations which our testimony has awakened; and to fulfil those expectations certainly demands of each of us a life whose constant gratitude is expressed in such love, humility, honesty, and good sense as will make us exemplary and helpful to all, and our communion an asylum for hungry, longing hearts the wide world over.

To assert the inferiority, the possible subjection, of the powers of evil certainly imposes upon Christian profession the obligation of an earnest and continuous endeavor to make that proposition good; but to assert the demonstrable nothingness of error as do we, leaves us without excuse if its disharmony appear in any form or degree in our churches, our homes, or our hearts.

Every Christian Scientist would delight to gladden the heart of our Leader, and we can no more surely achieve this end than by inscribing our Thanksgiving in a record of wholesome, consistent Christian living which shall exalt and sweeten every day of the coming year. W.

Counterfeit Letters.

I LEARN that letters have been received by persons, purporting to bear my signature, making complaint against them; one of those declares I had consulted a lawyer for Mrs. Eddy on what I complained of. I never had consulted a lawyer relative to the subject named. I never wrote those letters nor knew anything about them until said parties sent one of those counterfeit letters for me to examine. CALVIN A. FRYE.

Pleasant View, Concord, N. H., Nov. 13, 1903.

The report of the Library Committee of the Christian Science churches of Philadelphia, which appears on another page, is deeply interesting, and furnishes a useful hint as to the value of systematic work in placing our literature where it will accomplish large results with a modest outlay of time and money. The method employed will enable many needy ones to find the blessings of truth, and will leave sincere inquirers without the excuse of ignorance as to what Christian Science teaches.

A Letter to our Leader.

St. Louis, November 23, 1903.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—You will be pleased to know that our church edifice erected and dedicated in 1895,—under the title First Church of Christ, Scientist,—which provided seating capacity for about four hundred and fifty persons, has long since failed to meet the needs of our enlarged attendance.

We are now erecting a larger structure with seating capacity for twelve hundred persons, which we expect to have completed by the opening of the World's Fair, May 1, 1904. This new edifice will cost, when completed, between $130,000 and $140,000, including the lot. It is located on King's Highway Boulevard and Westminster Place, fronting two hundred feet on the latter and one hundred and seventy-five feet on the former, which is the leading Boulevard of our city. It will be a dignified, convenient structure, with Sunday School and other accommodations suitable to our needs.

The corner-stone of this building was laid on the morning of the 19th inst., at eight o'clock, in complete accord with the rule in the Manual governing such occasions.

This forward step in our movement furnishing evidence of increased interest in our Cause and also of the loving devotion of our people, will, we are sure, afford you comfort and encouragement.

It would rejoice our hearts to have you with us at the dedication services, giving you also an opportunity to visit our World's Fair, which would be an additional pleasing incident of your trip. With hearts full of love, we remain, very sincerely,

THE BOARD OF TRUSTEES.
LOUIS HELM, *Clerk.*

Semi-annual Lecture of the Mother Church.

THE semi-annual lecture on Christian Science, under the auspices of the Mother Church, will be delivered by Edward A. Kimball, C.S.D., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., in Symphony Hall, corner Massachusetts and Huntington Avenues, Tuesday evening, December 8, 1903, at eight o'clock. The lecture is free and the public will be cordially welcomed.

Regarding Individual Rights.

WHILE Christian Scientists cheerfully grant their neighbors the privilege which they claim for themselves,—their own choice of religion and medicine,—they would not be inclined to lend any special support to any practice which is not demonstrably efficacious.

They do not discard material remedies merely to be fanatically true to a religious belief, but because they have proved by actual experience that in so doing they are choosing the better way, not only for the adult but for the child. In this connection, however, it should be stated that they sometimes sacrifice personal liberties in deference to popular opinion and the fears and apprehensions of their neighbors.

While some might look upon the withholding of medicine from a child as neglect, a Christian Scientist would regard the administration of medicine as a detriment to the child, provided it had access to the treatment of a proficient Christian Scientist; and while the critic points to a child that has died under Christian Science treatment, the Scientist has in mind many children whose lives have been saved through the Science after medical practice had proved futile.

A mother, whose own life and the lives of two of whose children have been saved through Christian Science, while three of her little ones have died under medical treatment, has overwhelming testimony that Christian Science is the more reliable remedy, notwithstanding that one child has died under its administration.

It should be understood that when a Christian Scientist withholds medicine, he is giving something better in its place.

It should also be borne in mind that the Christian Scientist, having had experience first with medical practice and last with this Science, is better capable of judging as to the wisdom of his choice than those who have depended exclusively upon medicine and who have not had experience with Christian Science.

A parent is the natural guardian of his child, and a Christian Scientist parent is not excepted. To him belongs the privilege of choosing a remedy for the ills of his child. It would be quite as unjust for the state to force Christian Scientist parents to administer medicine to their children as it would be to force parents who believe in the use of medicine to administer Christian Science treatment to their children. In either case, the action should not be governed by popular opinion nor by prejudice, but should be decided on the actual merits of the proposed remedy.

Justice would demand that if a parent proposes treatment for his child which is not in harmony with his neighbor's sense of a proper remedy, and if the neighbor therefore proposes to interfere in behalf of the child, his first task should be to establish, by a thorough investigation, the merits or demerits of the remedy in question.

It seems to us that every system of healing should stand upon its own merits and not be at the mercy of mere opinion. If it can be shown that the peculiar condition of the patient, his environment, and the means at hand for the maintenance or restoration of health, are such that he is equally as well or better provided for without medicine, this should be regarded as a lawful excuse for the non-use of medicine. Evidently the law was not made in the interest of any specific therapeutical system, but solely to guard against neglect.

ALFRED FARLOW.
Boston Times.

It is of no avail to assert your own purity, even were true purity possible in isolation. Whensoever you see corruption by your side, and do not strive against it, you betray your duty. It is of no avail that you worship Truth; if you see your brother men ruled by error in some other portion of the earth, our common mother, and you do not both desire and endeavor, as far as lies in your power, to overcome that error, you betray you duty.—MAZZINI.

Testimonies of Healing.

In 1898, my eyes were healed of astigmatism and farsightedness in one treatment.

On account of general weakness it had been impossible for good oculists to do anything to help them, but in a few hours after the one treatment in Christian Science my eyes were perfectly normal and I was able to use them right along.

With this healing my thought was naturally turned to Christian Science, which I studied with eagerness, striving to understand the Principle of my healing. A year or two later I came to the city, and my one desire was to have class instruction and the privilege of the Christian Science services, which I had never had before. In order to do this, it was necessary for me to support myself while there.

Words cannot express the dread which I had of doing anything for strangers in my weak, inexperienced condition; for while my eyes were perfectly healed, from the start, my general health was more slowly gained, and at the time I commenced sewing by the day, I hadn't even been accustomed to sitting up all day, and had received very little special training in this work. I was not used to doing any sort of work, and this was the one kind the doctor had said I never could do.

I have not lost a day in four years on account of sickness. My wages have been increased four times, and in three years I have not been unemployed a single day, while my health is better now than when I commenced working. All that has been done has been accomplished by steady, daily work in Christian Science, by habitually realizing the presence of the one intelligence and denying every erroneous thought that presented itself.

Through many failures and triumphs I have proven the promise, "When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee: when thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee."

This demonstration of the power of Truth brings to mind the words of our Leader: "The true theory of the universe, including man is not in material history, but in spiritual development" (Science and Health, p. 547).

EVA VRADENBURG, Minneapolis, Minn.

Gladly and joyfully do I testify to the healing of sickness in our family through the efficacy of Christian Science. Two years ago my brother was taken ill for the fourth time with neurasthenia. He was so ill that there seemed to be no hope of his recovery. He suffered from great mental depression, seemed to have lost his memory, and could not work, because of his desperate mental condition. The thought that he would have to give up his profession on account of inability to perform the required work, distressed him terribly. All remedies and cures which had been applied in the former attacks, and which had then given him relief, had now no effect upon him. The physician who examined my brother, comforted him with the words: "Since you have lived through the first three attacks, you may live through the fourth."

He then sent him to a sanitarium in the Harz Mountains, and after having been there for four weeks, he returned home, but was no better. In this darkest hour of trouble I heard of Christian Science. I was very receptive of this wonderful teaching and tried to interest my brother in it. He would at first have nothing to do with it, and rejected it with the words: "It is impossible for me to believe in such humbug."

Later, with the help of the dear friends through whom I heard of Christian Science, we were able to induce him at least to listen to us. This first step was soon followed by the second. My brother took treatments and the result

Digitized by Google

. was wonderful. After three treatments he was a changed man, and after three weeks he was perfectly well and has remained so.

We feel very grateful for Christian Science and its Discoverer, and to our practitioner.

M. J., Berlin, Germany.

For over twenty years Christian Science has been the only physician in our family. We have brought up children from the age of four and six years to be men and women, without ever taking medicines or having a doctor. Although the claims of measles, mumps, diphtheria, and scarlet fever were manifested at times, the children were never in bed for a week on account of them, and now, if they are thrown in contact with people who fear disease, they realize that they are living in another atmosphere altogether.

Having proved Christian Science so many years and in all kinds of ways, I am more and more convinced of the truth of it. I know by experience how important is the knowledge of the true way to open the understanding of the hungry.

I greatly appreciate and am very thankful for the new Concordance.—M. E. W., Chicago, Ill.

I have been benefited spiritually, and sickness has been overcome for myself and children through Christian Science. We have "Science and Health with Key to the Scriptures," and take the *Sentinel* and *Journal*. We feel that we could not do without them. It is three years since the light came to me, and now I can trust in God alone, for He is all in all.

My husband and I are the only Scientists in this little town, but a brother and a sister who are Scientists living a few miles away, come to us in time of trouble.

May God's blessings be with our dear Leader.

TENNIE HODGES, Ledbetter, Tex.

It is seldom that we are willing to testify that we have been healed of sin. Physical ailments are of such a nature that we have not the same objection to speaking of them as belonging to our former selves, as we have to acknowledging that we have been steeped in sin.

As I recall the years that have passed from the time of early manhood until some eight years ago when I came to Christian Science, I cannot view any of these years without a sense of shame, and even of something stronger. I lived entirely for myself and do not think that at any time I ever gave another a real helping hand. My time was chiefly taken up in looking for what the world calls pleasure, but I can now see how little real pleasure was found. Until ten years ago I was a hard drinker, having grown up in a community where, as young men, we believed that the one who could drink the most without losing caste was the most manly. For a long time I kept in that condition and remained in that belief. Then came a time when I commenced to lose my self-respect, and gradually also that of others. Years went by and that self-respect was not regained, but many things transpired in my life which tended to lessen rather than to strengthen it. At this juncture it was found necessary to give up the liquor habit or entirely succumb to it. This was two years prior to my coming to Christian Science.

The habit was dropped but the desire for intoxicants was not destroyed, and it was not until I came into some slight understanding of Christian Science, gained through that wonderful book, "Science and Health with Key to the Scriptures" written by Mrs. Eddy, that I ceased to have this craving for strong drink, at which time the desire was completely destroyed.

With the understanding of God as revealed to us by Mrs. Eddy, I have been enabled to overcome many evils in my consciousness. I am learning to love my neighbor; I am ceasing to hate, ceasing to hold malicious thoughts against others, learning not to criticise or condemn.

It is possible that some may say they do not yet see the perfect man; but while deploring what shortcomings there may be, I may state that I have had so much of sin overcome that those who knew me prior to my gleaning some knowledge of Christian Science, will say that the present man they hardly know when viewed in the light of his past.

As before stated, it is not an easy task to bring the past in its worst light into open relief, and it would not serve the end desired, were it not for the thorough reformation realized. I see now in my mind's eye a happy mother who formerly lamented the many shortcomings of her son; I see friends who give respect where they formerly condemned, and I know with this slight overcoming as an actuality, that the high ideal of Christian Science, toward which we are all working, is not impossible; that the kingdom of God is within man if he will but realize it here and now.

Should it, then, be a matter of surprise or wonder that those of us who have felt this healing power are joyously grateful to her who has made such reformation possible? Rather, would we not be ingrates of the worst order if the acknowledgment were not made, and our grateful thanks tendered to her who has so faithfully striven to give to the world this wonderful revelation—this antidote for sin.

J. P. J., Chicago, Ill.

I feel that I can no longer delay sending my grateful testimony to the Field. I first heard of Christian Science four years ago, and became very much interested in seeing the work done for others, but did not at that time think it was what I needed, although I knew I was very far from being a happy woman. I did not then think that my prayer for light was to be answered by Christian Science. I seemed to be drifting on a wide ocean of human hopes and fears, subject often to seasons of discouragement and gloom, and this mental depression was thought to be due to physical ills.

Some three years prior to my first knowledge of Christian Science, an inner abnormal growth made its appearance. I was told by the physician whom I consulted that nothing but the knife would remove this growth, and I was advised to go to a hospital and submit to an operation. I realize now that I was being led by divine Mind, and instead of accepting the advice, I decided to go to a Christian Science practitioner and ask if I could be healed. The answer was: "Yes, there is nothing impossible to God." This inspired me with confidence, and I immediately asked for and received treatments.

In ten days I was not only healed of this growth, but other chronic troubles that had been with me for twelve years, also disappeared. A diseased condition of the right lung, caused by a severe attack of pleural-pneumonia fifteen years ago, has also yielded to the power of Truth as understood and demonstrated in Christian Science. I never expected to regain the use of the lung, as my right side was sunken and the right shoulder was an inch lower than the other. A month after taking treatment I discarded the pad I had been wearing on the shoulder, and I can now breathe freely and am nearly straight. Better than all, I know God is able to make me "every whit whole." "Be ye therefore perfect, even as your Father which is in Heaven is perfect."

Shortly after being healed I had the privilege of class instruction, and am now a member of the Mother Church and a branch Church.

My heart overflows with gratitude to our heavenly Father for the life-work of Mrs. Eddy, and for the efforts of all who are working so faithfully to lighten the burdens

Digitized by Google

of humanity, and to make it easier for all to know Him, whom to know aright is life eternal.

MRS. LILLIAN MCMORRIS, Portland, Ore.

I am young in Science but I should nevertheless like to give my impression of Science and Health gathered in a three years' study, in the hope that it may help some other student.

What a book! To human view a volume to be read, to be studied perhaps, and then like any other so-called scientific book to be laid aside. But what do we find on closer inspection? We read it once, twice, thrice, and each time it is found to be a fresh volume, instinct with intelligence; and sentences which we have read and re-read, wear ever a fresher aspect. God be praised for the gift of this healing book.

I suppose we all study it in a different way, and perhaps each way is the right way. In my experience, to get the utmost benefit we should not only read the passages in the Lesson-Sermon, but we should also read the book consecutively, page by page and day by day. Let us fill ourselves with the glad tidings till with "full quiver" we need not be ashamed when we speak with our enemy in the gate.

"I have yet many things to say unto you, but ye cannot bear them now." O doubters who halt and start at the clear evidence of Truth! were these things never to be said, were we never to be able to bear them, or can we bear them now, and are they being said now?

Our hearts go out in deepest gratitude to our beloved Leader, who has borne so many things for Truth's sake. Who shall say what her trials have been? We can only estimate them through our own little trials in working for the same Cause. One gentle, loving woman braving alone the opinions of the world; then, Love triumphant, and the arm of the Lord revealed.

W. E. FELLS (Major), South Dene, Eng.

I first heard of Christian Science while in Colorado seeking health. I was then a victim of nervous prostration. After having employed a physician for some weeks without receiving any benefit, I was induced to try Christian Science. I took treatments very reluctantly, for I had no faith in them, but I was healed with only one week's treatment. I was exceedingly happy, for I never expected to be sick again, nor did I understand that there would be anything for me to do but sail along on "flowery beds of ease." I purchased the book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it, but not understandingly.

Soon after returning home the old condition seemed to return with renewed force. I did not know of any Scientists in the city at that time, so, after struggling on alone, I became discouraged and again resorted to *materia medica*. After turning away from Truth I seemed like a wave of the sea,—tossed to and fro without peace or rest. I was sick, unhappy, discouraged, and felt as though I had no God. I laid Science and Health aside and tried to forget it. This was no easy task, for the still small voice of Truth followed and called me back. I did not heed it but wandered in the wilderness of doubt and fear for nearly six long, weary years, turning from one remedy to another. This mental condition produced a very severe heart trouble, which grew worse from day to day. I fully realized that unless relief came speedily my earthly sojourn would be of short duration. The passage of Scripture, "Choose you this day whom ye will serve," was constantly in my thought, until I finally decided to turn again to God for help. I fled to Truth as a tired child to its mother's arms. After receiving a very few treatments I was entirely healed of the ailment and a spiritual uplifting came with the healing which cast out all fear and doubt. Other ills did not yield so readily, and many times discouragement tried to creep into my thought. I scanned *The Christian Science Journal* for a case of slow healing and I finally found one, and it was a source of encouragement to me. I had often wondered why all error did not yield readily. I am thankful now that the healing was slow, for in the waiting I learned more of God. Shortly after my healing my husband was instantaneously healed of a stomach trouble which had baffled the skill of physicians.

Having received so many blessings, the desire came to know more of this wonderful Science. I received class instruction, and soon after joined the Church, and to-day am glad to help others in the "passage from sense to Soul" (Science and Health, p. 566).

Health and harmony reign in our home, and my gratitude to God and to Mrs. Eddy for revealing this truth which frees us from the bondage of sickness and sin, knows no bounds.—L. A. J., Sioux City, Ia.

My attention was called to Christian Science about five years ago at a time that was ripe for me to investigate, for I had tried all material remedies,—doctors, climate, electricity, and baths,—without any satisfaction.

For two years I had to quit active business on account of my illness. The doctors pronounced my difficulty to be inaction of the brain. I was also constantly troubled with stomach, bowel, and kidney trouble. I was unable to control my mental faculties, hence could not reason well or assume any sort of responsibility. This made me very sensitive, and I suffered from my own thought by thinking that my friends and relatives were noticing my condition. I feel a great appreciation for the kindness shown by the physicians who treated me, but it was not until I received Christian Science treatment that I was relieved.

My healing was not quick, but in four or five weeks I was so much helped that it was sufficient proof that the rest could be overcome.

To-day I am able to do whatever comes to me to do for God, and it is in this way I am endeavoring to show my gratitude to our Leader for this wonderful truth. I am striving to be more loving and to have that Mind which was in Christ Jesus.

I was of the Jewish faith before taking up Christian Science, in which I find great comfort and peace as a religion. It was not hard for me to accept the teachings of Christian Science, because they correct the wrong sense which the Jewish people have of Jesus and his teachings, and especially their sense of his personality.

I will not close without expressing my gratitude to my helper for her patient and loving work, and also to the many Scientists who interested themselves in my welfare.

SAMUEL KAUFMAN, Fort Smith, Ark.

I have long wished to express my gratitude for the help received from our periodicals, and recent blesings lead me to express my thankfulness. Many times their message has exactly supplied my need.

I am more than grateful to our Leader, who has demonstrated over the trials and struggles before us, and when I think of her, it gives me new courage for greater effort. I think sometimes we are apt to forget how great are our blessings.

Truth has worked slowly but surely in our sense; there have been seeming trials and failures, but we have triumphs if we are obedient. Recently, in thinking of our blessings, it came to me that our whole family has been freed from the belief of inherited consumption, healed from the fear of it, also from typhoid fever and pneumonia in their worst form; in fact, our benefits have been greater than we

Digitized by Google

have realized. Truth has given me all the happiness I have.—Miss Emily Harmon, Ellisgrove, Ill.

Some years ago, when I first knew of Christian Science, my little daughter, then about four years of age, after having been put to bed in the evening would say her prayers and I would sit down beside the bed and listen, then turn down the light and leave the room. One evening (we were then visiting at her grandmother's), just as she was about to say her prayer, she looked up at me, her little face full of fear and trouble and her voice tremulous with emotion, and said, "Papa, will I have to die when I get to be an old lady?" This came so suddenly upon me, for there had been no intimation of any mental disturbance till that moment, that I hardly knew what to say, so to gain time to think up an explanation that would quiet her fears, I said no, and then I said, "I will say your prayer for you to-night," so I repeated the little prayer:—

Now I lay me down to sleep,
I know that God His child will keep,
I know that He my Life is nigh,
I live in Him, I cannot die.

I repeated it absent-mindedly, not knowing that the little verse contained the explanation. As I said the last line her face became radiant with joy. She had caught the spiritual meaning and was satisfied,—all fear was gone.

When we first come into Christian Science it seems as though we have to give up a good deal, but later on it begins to dawn upon us that all we are called upon to give up are the things that stand in the way of our happiness. When we realize this we then say with all our heart, "Thy will be done." We then watch out for the hour of temptation, knowing that if we stand firm we shall have taken another step out of bondage into the promised land of freedom, and what beacon lights on the way are those exhibitions of yalty to Truth. It thrills us through and through as we realize the nothingness of what we gave up, and not until we give it up, can we see the nothingness of it, which shows that the so-called cross must be taken up before we can wear the crown. We have had many proofs of the power of Truth in the destruction of disease, and I am very grateful for the transformation from sin to holiness which is daily being accomplished by the study of our Christian Science literature.

C. G. Ladau, Brookline, Mass.

With a grateful heart I write of the following experiences which have come to me through Christian Science, hoping that this may cast a ray of light into some poor hopeless heart.

From childhood I had been rather frail, and was accustomed to be very careful in regard to my health. In my twentieth year irregularities of digestion appeared which resulted in serious stomach and bowel complaint. Several specialists were called; several times I went to a clinic which was supervised by a noted authority, remaining there for months at a time. I was only partially relieved of my suffering, and I seemed to be merely vegetating. The physicians agreed that I could never expect to be entirely healed, for the disease had assumed such control that it had become chronic. The pain was unbearable, the cramps in my stomach and bowels manifested themselves more and more, and several times I lost consciousness. This condition lasted for seven years. I tried all that medical aid could afford us, but in vain. My fear of increasing pain and trouble pursued me day and night.

At length I went to Switzerland for my health, and there I heard of the blessings which Christian Science brings, yet I had very little confidence, and with a degree of suspicion I listened to the Scientists' explanations. They gave me their literature to read and I soon saw that many sufferers had been blessed with healing. I approached the subject with less prejudice. I tested it, considered, studied, hoped, believed, until, after a few weeks, knowledge of Truth began to destroy the entangled roots of error. Hope began to dawn, different and even joyful thoughts came to my consciousness and revived me, and after three months' treatment and study, I was free from all my ills,—not a single trouble clouded my life.

I have learned that if we are at one with our Creator, are faithful and true, then no error can obstruct our path in life.

Several years have passed since my healing. I have never had any relapse, and hope to grow spiritually and ever keep the truth as a safeguard before the door to shut out error.

I wish to express my never-ending gratitude to God and to our noble Leader, who so patiently leads poor humanity out of darkness into light.

My family has received many blessings through Christian Science. My dear husband was healed of lung trouble and my little daughter, who had for a long time tried in vain to be cured of spinal disorder through practising many wearying physical exercises, was also in a short time healed through Christian Science.

H. L., Stuttgart, Wurttemberg, Germany.

Our youngest child was very feeble after his birth and many people doubted if he would live. One physician said that he suffered from rickets. When the child was a year old, he could sit up only a few moments at a time, if he was propped up on pillows. Some people prophesied that the child would not walk until he was three and a half years old, and others said he would remain mentally dull.

We heard of Christian Science six years ago, long before it was practised in Zurich, and I had gained such confidence in this new teaching that I was reluctant to employ material remedies for the healing of the child, although I was undoubtedly looked upon as one of the most indifferent of mothers. As soon as the opportunity was given us here I turned to Christian Science treatment for the child. He was then one year old. From the first week he became more lively and I noticed his awakening from week to week; his appetite came and the signs of the malady quickly disappeared. In five weeks he was healed. When he was two years old he walked alone and erect. At the present time, he is four and a half years old and stronger and taller than most children of his age. Mentally he is quite normal and daily I listen to the surprised remarks of people, when they notice the growth of the child.

We feel very grateful to God for His help.

Frau Anna Keller, Leemann, Zurich, Switzerland.

The American Constitution is really the oldest political document of its kind in the world. All the great races contributed to its adjustments of local and general power, its protection of individual rights, its breadth, its sanity. Greece, Rome, France, Holland, and England furnished the framers with rich capital of political wisdom. The Constitution is the capitalized experience of the world to the very date of its framing. We are the youngest of nations, but we are the oldest of peoples.

Hamilton W. Mabie.

It is not the vessel that is important, but the wine we pour into it: not the form, but the idea which animates and transcends that form.—D'Alviella.

From Our Exchanges.

Let preachers reflect upon the social problems that absorb the attention of the rich and the poor to-day,—upon the rights and duties everywhere under discussion. Then let them ask themselves whether they preach the gospel of Christ so that men realize its practical application to the present-day needs. Let them meditate upon the business and political methods and ideals of men who sit in the pews. Perhaps they will discover how complete is the divorcement between the ethics of Christ and the ethics of daily life. Perhaps they will discover how little respect the world has for Christianity that becomes worldly, commercial, selfish; that does not look upon the face of the crucified Christ nor preach a vigorous and vital doctrine of sacrifice and service. Let us ask ourselves, as ministers of Christ, whether we are ourselves ready to suffer for Christ's sake and to risk place and preferment for the sake of preaching an unwelcome gospel to a church threatened by commercialism, luxury, selfishness, and formalism. ALFRED W. WISHART.

The Standard.

Of course undue weight must not be attached to subjective impressions, but there is no fanaticism in seeing in the widespread realization of a spiritual need some evidence that God is intending to satisfy it.

Parallel with this desire on the part of good men we have a strong impression that seldom in recent years has there been among the masses of intelligent people a deeper and more pervasive unrest and dissatisfaction with the physical interpretation of life. . . . The modern world is utterly weary of formulæ, however venerable. It has no welcome for the type of man that stakes the character of Jesus upon one alternative of a disputed interpretation of an Old Testament incident. But a man of gifts who could preach the real Gospel, and appeal directly to the spiritual nature of the people of to-day, might easily kindle a flame that would envelope the whole land. In a general way, these indications seems to point to the coming of the long desired revival.—*The Watchman.*

That which hinders the progress of the church is not antagonism but apathy, not doubt but indifference born of the justifiable suspicion that a church that devotes nine tenths of its energies to keeping itself alive and one tenth to serving and saving the world, is not so important a factor in the work of world-redemption as it would have us believe. Oh brethren! that our churches might perform the supreme act of faith and seek first, not the penny contributions of its children, but the kingdom of God and his righteouness, and trust the Father to add "all these things." When the church ceases to be a mite society and becomes a might society, and gives itself in the spirit of Christ to the work of Christ, it will not languish, for God will see that it has friends. REV. CARL F. HENRY.

The Universalist Leader.

A hungry person is no more saved from starvation by accepting the scientific man's teachings about the chemistry of bread, and the working of the yeast in the unbaked loaf, than a man becomes a Christian by subscribing to a certain creed. No traveler gets across a bridge by accepting the architect's statements as to its strength and soundness and reliability; and yet the architect's creed is not to be depised. The point to be seized upon is, that it is not relation to a system that makes a man a Christian, but relation to the Saviour. REV. ROBERT F. COYLE.

The Homiletic Review.

A revival of evangelical religion is needed, urgently needed, in this country. Of that there can be no doubt. It is almost universally conceded that piety is at a low ebb. Religious declension is wide-spread. The churches are apathetic. Worldliness is prevalent, devotion to Christian ideals and Christian service feeble and inert. This is a dark picture; but is it not, broadly viewed, a true one?

The Examiner.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Price, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The estimated postal expenditure for both city and rural free delivery service in the United States during the fiscal year beginning July 1 next, will aggregate about $47,000,000. There were 15,069 appointments of postmasters during the year ending June 30, last, and the removals of postmasters for cause show a decrease. There were 4,462 post offices discontinued, of which 2,163 resulted from the extension of rural free delivery; the salaries of the postmasters of the latter offices aggregating $121,332. During the year postmasters were dropped from the rolls as follows: Resignations—Presidential, 67; fourth-class, 8,277. Removals—Presidential, 401; fourth-class, 1,386. Deaths—Presidential, 86; fourth-class, 713. On July 1, last, there were 74,169 post offices, of which 242 were first-class, 1,101 second-class, 3,690 third-class, and 69,130 fourth-class. City free delivery service was established during the year at ninety-nine post offices, making a total of 1,032 free delivery offices.

There are now in operation 19,398 rural free delivery routes. It is estimated that 3,260 additional routes can be established out of the appropriation now available by March 1, 1904. To maintain the service of these routes during the fiscal year from July 1, 1904, to June 30, 1905, will require $13,560,000.

The annual report of the director of the United States Mint Bureau shows that the coinage mints at Philadelphia, New Orleans, and San Francisco in operation during the year produced an output greater in the number of pieces than in any previous year, aggregating 205,872,482. The pressure for small domestic coins and for Philippine coins reduced the aggregate of gold coinage to $45,721,733, and the stock of gold bullion in the mints increased from $124,083,823 to $157,511,571. The net gain in the gold stock of the country during the year is estimated to have been $57,157,149. Of the silver bullion purchased for dollar coinage 33,218,712 fine ounces were on hand at the beginning of the year, and 17,502,938 at the close of the year. The total deposits of gold bullion at the various offices of the mint service during the year were of the value of $127,004,443.

The value of gold bars disposed of by the mint service during the year was $43,776,286, of which $22,559,854 was for export, and $21,216,432 for use in manufactures.

Professor Jeremiah W. Jenks of the Commisson of International Exchange, who is now in Tokio, reports that he has received the cordial support of the Japanese Government in the project for putting China on a gold standard. A recent communication to the State Department encloses an appeal from the Chambers of Commerce of Hong Kong, Shanghai, and Tien-Tsin for the favorable action of the Powers in aiding China to adopt a uniform currency as the first step towards a gold standard.

President Roosevelt has appointed a commission, which includes Commissioner William A. Richards of the general land office, Mr. F. H. Newell, chief engineer of the United States reclamation land service, and Professor Gifford Pinchot, to consider in detail all the land laws of the United States and determine what ground there is for the wide divergence of opinion concerning the repeal of the present laws and the need of prompt consideration by the Government of the questions involved.

The Panama Canal Treaty drawn and signed by Messrs. Hay and Bunau-Varilla, has been ratified by the Panama Junta at Panama and dispatched to the United States. The signing was made the occasion of a great jollification. The special gold pen used to sign the document was presented to Consul-General Gudger with appropriate ceremony.

Sir Henry Mortimer Durand, the successor of Sir Michael Henry Herbert as the ambassador of Great Britain to the United States, was received formally by President Roosevelt at the White House on the 2d inst. Ambassador Durand presented his credentials, and was received with great cordiality.

Conflicting reports concerning the Eastern question are being received. It is generally believed, however, that Japan and Russia are gradually reaching an understanding concerning matters connected with the Russian occupation of Manchuria and the opening of her ports in Korea.

The Commissioner of Internal Revenue in his annual report to the Secretary of the Treasury, shows that the receipts of his bureau for the fiscal year were $230,740,925 at a cost of 2.07 per cent for collection.

The United States has refused to recognize the provisional government of San Domingo, set up by the insurgents, until it guarantees to observe all engagements entered into previously by former governments.

Foreign.

The Cuban House of Representatives has passed the Senate bill for the creation of legations at Berlin and Rome. These legations will be under the charge of secretaries, who will receive their instructions from the ministers at London and Paris, respectively. The bill authorizes the establishment of a number of European consulates.

A despatch from Constantinople says that the Governments of Austria and Russia have not yet acknowledged the reply of the Porte to their joint note concerning the Macedonian reforms, and that unless the reform scheme is accepted unconditionally they will address an ultimatum to the Sultan.

The Philippine Commission has passed an act to maintain the equality of gold and silver pesos by creating a reserve fund from the receipts of the sales of certificates of deposit and seignorage on the coinage.

Americans who reside on the Isle of Pines or have money invested there are protesting against the cession of the island by treaty to Cuba in return for the guarantee of coaling stations there.

Industrial and Commercial.

The Census Bureau last week issued a report on the quantity of cotton ginned from the growth of 1903 up to and including November 14, showing total commercial bales of 7,070,437. Of these, 6,519,332 were square bales, 510,550 were round bales, and 40,555 Sea Island crop bales. There were 29,506 ginneries operated this season up to and including November 14. The cotton ginned in 1902, as reported by the Census Bureau was 5,925,872 commercial bales up to October 18, and 9,311,835 commercial bales up to December 13.

The total exports of manufactures in October, as shown by the reports of the Department of Commerce and Labor, through its Bureau of Statistics, amount to $37,558,675. This is a larger export than in any preceding October, except that of 1900, when the total was about $100,000 above that of October, 1903. The increase over October, 1902, is about $1,500,000; over October, 1901, $3,000,000, and is more than double the total for October, 1893. Imports show a slight decrease compared with October, 1902.

The last of the fifty-four vessels comprising the Alaskan salmon fleet, carrying an enormous cargo of 87,000 cases of salmon, the record shipload for the season, has just arrived at San Francisco from Loring, Alaska. This brings the receipts of the port for the season to 211,751 cases and 21,329 barrels of salmon. This only includes direct shipments by sea.

A cable to the New York *Sun* from Calcutta says that a rich copper mine has been discovered in the Garhwal district of the Himalayas. A company is being formed in Calcutta to develop the mine. Seventeen American mining engineers are prospecting in the Himalayas.

The production of beet-sugar in 1902 in Colorado was about 80,000,000 pounds, being exceeded only by California and Michigan. This amount is about twice the consumption of sugar in the State. The production this year is estimated at 110,000,000 pounds.

The annual report of the Boston Elevated Railroad to the Railroad Commissioners of Massachusetts shows an increase over the previous year of 11,000,000 in the number of passengers carried.

General.

"Science moves in circles, and it appears that we have arrived at one of the stages which was reached by the old alchemists in their search for the philosopher's stone which would transmute the baser metals into gold," says the *Boston Transcript*. "To be sure, we show a more scientific reason for the faith that is in us, but scientists today are inclining to the conviction that there is a primal form of matter which may be converted into the forms which we know as elements. The discovery of radium upset many preconceived theories: the discovery that radium is transformed into helium by some mysterious process without the addition of other elements, is likely to work a still greater change in the hypotheses of chemistry. The idea that the various elements are interchangeable to some degree is not new, or rather the revival of that ancient idea was set forth by men of science some years ago. The mathematical relation between the atomic weights of elements suggests the operation of a universal law not yet fully understood."

The great unfenced cattle ranges throughout the middle West and Northwest of the United States are everywhere passing, and smaller fenced and watered pastures are replacing them as being more profitable. Cattle men claim that the ranges are depleted and that they have been seriously affected by dry seasons. They also find that feed of better quality and greater quantity can be had on the small, well watered enclosures, and that the cattle fed here are better and heavier than the range-fed ani-

fice in Washington reached $20,961 last year.

Unique and Costly.

New First Church of Christ, Scientist, Dedicated in New York Sunday.

New York, November 29.—The new edifice belonging to First Church of Christ, Scientist, located at 96th Street and Central Park, west, was dedicated at three o'clock this afternoon.

The seating capacity of the church is twenty-five hundred, the membership twelve hundred, and the number of its students of Christian Science is fourteen hundred.

The order of the exercises was as follows: Dedicatory anthem, written especially for this occasion. This was rendered by Miss Mary Reno Pinney, the organist, assisted by a choir of one hundred voices. Next a hymn written by Mrs. Eddy, sung by the whole congregation. Third, selections from the Bible and Science and Health. Fourth, solo by Mrs. Charles Herbert Clark, soprano, entitled, "Saw ye my Saviour?" written by Mrs. Eddy. Fifth, offertory and repetition by the congregation of the Lord's Prayer. Sixth, dedicatory address by Mrs. Augusta E. Stetson. Seventh, anthem, "A New Heaven and a New Earth," by the choir, with Mr. George Ensworth as soloist. Eighth, solo by Mrs. Charles Henry Cottrell; and, last, the Hallelujah Chorus.

A letter was received by the church from Mrs. Eddy which was read. It was:—

LETTER FROM MRS. EDDY.

First Church of Christ, Scientist, New York City.

Beloved Brethren:—Carlyle writes, "Give a thing time; if it succeeds, it is a right thing." Here I aver that you have grasped time and labor—taking the first by the forelock, and the last by love. In this lofty temple, dedicated to God and humanity, may the prophecy of Isaiah be fulfilled: "Fear not, for I have called thee by thy name; thou art Mine." Within its sacred walls may song and sermon generate only such as Christianity writes in broad facts over great continents—sermons that fell forests and remove mountains—songs of joy and gladness.

The letter of your work dies, as do all things material, but the spirit thereof is immortal. Remember that a temple but foreshadows the idea of God—the "house not made with hands, eternal in the heavens," while a silent grand man or woman healing sickness and destroying sin builds a heaven-reacher. Only that group of men and women gain greatness who gain themselves, in a complete subordination of self.

The tender memorial engraven on your grand edifice stands for human self lost in divine light—melted into the radiance of His likeness: it stands for meekness and might, for Truth as attested by the Founder of your denomination, and emblazoned on the fair escutcheon of your church.

Lovingly yours in Christ,

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., November 28, 1903.

Independent Statesman,

Declined by Mrs. Eddy.

Cannot Accept Princely Gift of $1,185,000 Church in New York City.

Concord, N. H., December 5.—The new building erected at a cost of $1,185,000 for First Church of Christ, Scientist, in New York City, has been declined as a gift by Rev. Mary Baker G. Eddy, founder of Christian Science and head of the faith. The tender was made by members of the church on November 30.

The following correspondence has passed between the church and Mrs. Eddy:—

New York City, November 30, 1903.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.,

First Church of Christ, Scientist, New York City, rejoices in the accomplishment of its desire to honor the Cause of Christian Science and gain an acknowledgment of its merits from thousands of representative people and offers to our beloved Leader this church as a tribute of loving loyalty and gratitude.

EDWIN F. HATFIELD,
ADOLPH RUSH,
WILLIAM H. TAYLOR,
STEWART C. ROWBOTHAM,
JOHN D. HIGGINS, *Clerk.*

Pleasant View, Concord, N. H., December 3, 1903.

Mrs. Augusta E. Stetson, First Reader; Gentlemen, Edwin F. Hatfield, Adolph Rush, William H. Taylor, Stewart C. Rowbotham, John D. Higgins.

Beloved Students:—Your telegram in which you present to me the princely gift of your magnificent church edifice in New York City is an unexpected token of your gratitude and love. I deeply appreciate it, profoundly thank you for it, and gratefully accept the spirit of it; but I must decline to receive that for which you have sacrificed so much, and labored so long. May divine Love abundantly bless you, reward you according to your works, guide and guard you and your church through the depths; and may you—

"Who stood the storm when seas were rough,
Ne'er in a sunny hour fall off."

Lovingly yours in Christ,

MARY BAKER G. EDDY.

Boston Globe.

Semi-annual Lecture of the Mother Church.

THE semi-annual lecture under the auspices of the Mother Church was given before a splendid audience in Symphony Hall, Tuesday evening, the 8th inst., by Edward A. Kimball, C.S.D. Every part of the vast auditorium was crowded and a large number were unable to gain admittance. The speaker commanded the closest attention of his hearers from first to last, and the vital interest of his theme was abundantly manifest. The wisdom of our Leader in providing this effective means of sowing the seed of Truth grows more apparent day by day. A fuller report of the lecture will appear in our next issue.

Thanksgiving.

CLARA LOUISE BURNHAM.

THIS is Thanksgiving Day, and it reminds me that I have never testified in our periodicals my thanksgiving for a share of the blessings of Christian Science.

A couple of mornings since, I wakened with a slight nervous headache, but having an appointment in town I kept it, thinking I might be able to work through the cloud; but when I returned all the conditions were worse, and in a general nauseating misery I made my way to my practitioner with no other idea than to take a treatment and get home and to bed. I did get home, but instead of going to bed I fulfilled, in entire comfort, an engagement to attend the theatre. This may not sound wonderful, but such has been the tenacity of that particular ailment in my case that the experience makes this doubly Thanksgiving Day.

Recently I received a letter from a stranger who had read something I had published on the subject of Christian Science, inquiring with a shade of impatience why I should be "devoted" to that faith. I mused after reading the letter on the length of the reply I should have to make in order to cover the ground. I have seen an occasional happy mortal begin to imbibe the truth when it was first offered, as unhesitatingly and eagerly as a hungry baby takes his milk. I was hungry too; but I fought this food long and strenuously. Mortal mind is of one piece, and doubtless I have plenty of company among those who virtuously demand that the gods of human intellectuality and rationality shall be appeased by many concessions and departures from the uncompromising statements of Science and Health before the text-book can be acceptable. I forgot another uncompromising statement. This: "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."

To lay off the mature opinions for which we have such overweening self-respect, and gain the humility of little children is the hardest lesson for some of us; but when it is accomplished sufficiently to let in a gleam of light, and we follow that light with growing interest, it is not long before humiliation begins to be added to humility as we look back upon the spirit of patronage and discrimination with which we once approached that place where now we take the shoes from off our feet in meekness and reverence.

My healing of one physical difficulty has been a slow one. It has been a help to me to remember Paul's saying that man may plant and water but that God "giveth the increase." Better than to be too introspective in search for the baffling error, it is to plant continuously in the mind truths from the Bible and Science and Health, watering them faithfully with refreshing reminders of the eternal verities which annihilate discouragement. This is our part; not to dig up the plants for examination or to worry lest they do not grow fast enough. Their growth is no part of our business. God alone giveth the increase, and we are absolutely sure to see that increase when we are ready for the blessing. Blessings many have come to me already. Several physical troubles, some of which had been my companions from childhood, have left me entirely, and I am certain that if any new-comer into Science has been in the habit for some time of keeping a diary it will amuse as well as appal him to read the record of those years before all things began to be made new. Think what we have to be thankful for in mere generalities! Think of the old attitude of hoping for the best above a strong undercurrent of doubt and fear, and contrast it with our present knowledge that not only is nothing too good to be true, but nothing is true except the good.

What cause for thanksgiving are our periodicals! Surely they grow better all the time, and to realize how we value them we have only to picture weeks and months without their invaluable reminders.

Think of our practitioners,—that noble body of quiet, consecrated workers with whom loving helpfulness is the first thought every hour of the day and night; whose whole attitude toward the varied calls that would divide their attention revives the memory of our Saviour's answer: "Wist ye not that I must be about my Father's business?" To one of these I owe a lifetime's gratitude for unmeasured gifts, and the patience and wisdom born of God with which she has guided me to the light.

Our Leader warns our thought away from her personality to her message, and loyal hearts obey as far as is possible. It is right, however, that her very name should be dear to us, and when malice attacks it, each one of the vast and growing army of those who rise up daily and call her blessed has his portion of the cross to bear. The swan in the fable when mud was cast upon its snowy plumage sank for a moment beneath the wave and emerged more dazzling than before. So when calumny has been directed toward her whom we love and revere, she has but quietly immersed those accusations in the flood of truth, and risen in a purity more radiant than ever. She is our Leader, and leans only on her Father and ours; but she is glad for our own sakes that we should give her perennial love and gratitude, for anything less would shut us away from the benefits she has given her life to point out to us; and that omnipotent Love who has given us the priceless gift of her life and work will enfold her until her message is heard from pole to pole and the universe unites in one grand hymn of thanksgiving.

The Living Word.

MARIAN W. HERING.

THE Word of God accomplishes its purpose, it does not return void. Looking back to the days when I knew next to nothing of Christian Science, and had a most inadequate and erroneous conception of its teachings, I can now see that the occasional statements of truth made to me and in my hearing, took root in thought and were destined later to spring up in a conscious acceptance of their verity and authority.

In my time of need, when burdened with sorrow and uncertainty, the Word in Christian Science, which had been dropped incidentally into thought and supposedly lost, was vital enough to lead me to its further study to find there a Comforter that healed the sorrow, and a Principle that removed all uncertainty.

God's Word does not pass away, because it is of His own nature,—omnipotent and omnipresent. More faith in its power to heal will leave less room for the belief in unfruitful, barren soil. The Word is the seed within itself, which is growing on every side and is heard and seen of men, as the darkening, deadening material sense wears thin and transparent.

We know that Christian Science is the beginning of the end of all evil and mortality,—it is the answer to the prayer of Christendom: "Thy kingdom come. Thy will be done in earth, as it is in heaven."

We cannot be grateful enough that the Word in Christian Science has been protected and kept pure by our watchful Leader, and her followers cannot be too careful in their mental and audible use of the Word, that they sow no tares along with her pure wheat. Her reward is in our growth Godward, and in the bountiful harvest of good fruit gathered for a starving world.

"For as the rain cometh down, and the snow from heaven and returneth not thither, but watereth the earth, and maketh it bring forth and bud, that it may give seed to the

Digitized by Google

sower, and bread to the eater: so shall my word be that goeth forth out of my mouth: it shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it."

A Mother's Tribute.

MAY A. THIBAUDEAU.

FOR some years the desire has been with me to express my gratitude to our Leader for Christian Science; but with the desire came always the thought of limitation, "How can I find fitting words? I am not worthy to speak of one so noble." Thus time has passed and the sweet comfort has not been mine of having spoken a loving word in recognition of her priceless gift to me.

This morning while reading over "The Mother's Evening Prayer" (Miscellaneous Writings, p. 389), I was reminded of what a source of strength these words have been to me in many an hour of trial. How often the first line, "Oh! gentle presence, peace and joy and power," has brought with it the sweet sense of God's protection, the consciousness that "His arm encircles me, and mine, and all." Thus the human mother-love, so fearful of harm to her little one, has sought and found refuge in divine Love.

The beautiful order of this first line, is like the unfolding of an exquisite flower, disclosing its golden heart: first *peace*, the consciousness of His presence dispelling the darkness and its seeming terrors; then *joy* as His allness is recognized and we know that we have nothing to fear; then *power*, as the demonstration is made by abiding in His love. The fear and manifestation of croup have often been overcome by clinging to the statement of truth in that line.

The fear of the night after the little voice had been hoarse in the daytime was overcome with a dear friend's help suggesting the second line of the fifth verse, "No night drops down upon the troubled breast," for after that the terrors of the night vanished and the last verse, so precious to all Christian Science mothers, came like a sweet benediction, "And mother finds her home and far-off rest."

"Pray without Ceasing."

ERNEST C. MOSES.

SOME recent experiences and observations have aroused in my consciousness a series of introspective questionings concerning the import and application of the Pauline injunction: "Pray without ceasing," the benefit of which I would lovingly share with the readers of our periodicals.

It seems clear from signs and manifestations which come under our frequent notice, that the time is matured wherein we can with individual and collective profit introspectively examine our states of consciousness and inquire of ourselves if, as Christian Scientists, we are scientifically and unceasingly praying the prayer of Truth and Love. Are we with sincerity righteously employing this great revelation of Science vouchsafed unto us for sacred purposes of selfless good? Or are we too often diverting the glorious freedom and opportunities thus bestowed into a means of liberty unto the flesh? Are we considering the type and shadow of the things whereof we are given richly to enjoy in a mere unsatisfying sense of material pleasure? Are we too often prostituting the precious liberty so dearly bought for us by our Master and by our Leader to ignoble ends in seeking self-gratification and personal ease and indulgences? Are we gratefully seizing upon our opportunities for that continuous, silent mental work of declaring the truth, whereby we earnestly pray that the kingdom of our Father—the Father of all—may come, and thus attuning our own mentalities to the modes and methods of that inevitable coming?

Are we guarding against the enticements of "fashionable lunacy" and all the frivolous concomitants of thought in which those temptations involve us? If we are striving in our personal appearance to bring out aspects of dignity and harmony, our demonstrations in apparel will rightfully proclaim our status in such matters, and a capricious world will have little occasion to question the sincerity of Scientists who are denying the claims of materiality in all directions.

If we earnestly desire that the words of our mouths and the meditations of our hearts shall be acceptable in the sight of divine Love, "our strength and our redeemer," shall we not unceasingly pray; daily allotting more time to the mental work of Truth and less to the frivolous driftings of mortal thought and the consequent manifestation of error? Are not more of us to-day ready to extinguish that incessant desire for amusement, diversion, and conversation which profit nothing, and which savor so much of the influence of animal magnetism that when the results are weighed in the balance barely a modicum of good is discernible? A Christian Scientist should find little pleasure in affairs and functions designed to kill time. The glorious possibilities unfolded by Love in Christian Science should cause us all to rejoice in the modes of thought which are scientifically directed toward the pulling down of strongholds and casting down imaginations, bringing into captivity every thought to the obedience of Christ.

Work.

FLORENCE GRINNELL.

THERE is a beautiful allegory by Carmen Sylva (Queen of Roumania) which tells of a girl named Sorrow, who, roaming over the world, brought to every one who looked upon her face, some kind of disaster, and who in her travels met two other very different creatures,—a woman called Patience, and a joyous maiden by the name of Work.

It was the duty of Patience to comfort those burdened with the visitations of Sorrow, and Work carried sunshine into the homes of all who opened their doors to her. Hers was a labor of love, and it brought her beauty, strength, and contentment. Thus it is with all who work with Truth as guide, no matter what the task may be.

We sometimes hear girls and boys say this or that is "so hard," and rather than make the needed mental effort, they shirk what are really simple tasks; but I am sure that satisfaction with themselves is not the usual result of such doing.

Now if all were to look in the Manual, they would find much help from these words of our Leader: "Amusement, or idleness, is weariness. Truth and Love rest the weary and heavy laden" (p. 46). Our text-book also says, "God rests in action;" and, "No exhaustion follows the action of this Mind" etc. (Science and Health, p. 519). As we study these words, we see that as Mind (God) and its manifestation is all there is in reality, we cannot be governed by such errors as are expressed by "hard" and "tired," especially if we dismiss them the minute they try to tempt us, and if we work on patiently, with only loving thoughts, and never give up until we hear the sweet "Well done, good and faithful servant." Then our guardian angels, thoughts of Truth and Love, will make us happier and better servants of God day by day.

The gift of a set of chimes to the new Concord Church comes from the Association of the Jamestown Christian Science Institute, of which Mrs. Rose E. Kent is the Principal, and not from Mrs. Kent alone, as was stated in a previous issue of the *Sentinel*, upon the authority of a Concord paper.

Selected Articles.

Christ our Present Saviour.

WHILE it is true that Christ, working in and through all branches of his Church, brings to light rather than creates life, health, joy, and immortality, it is as misleading for our critic to say, if Christian Scientists "go to heaven," "they were saved before they became Christian Scientists," as it would be for a Christian Scientist to say, if members of other denominations ever "go to heaven," it is because they are such good Christians they are saved in spite of the fact that they are orthodox. And, while it is true that a large number of the best as well as some of the poorest members of the older churches have come to Christian Science because it promised and gave more than they could find elsewhere, our ranks are being largely built up by those who have found salvation as well as health through Christian Science. In fact, Christ, as brought to light in Christian Science, has lost none of his ancient and eternal healing, comforting, and saving power; many are finding him through Christian Science who never sought nor found him elsewhere; and many are also finding him in a larger, truer, and more helpful way than they could find him elsewhere.

The daughter of one of the leading lawyers of Southwest Georgia told me some time ago that for years she and her mother worked and prayed to bring her father to Christ, but that all their efforts seemed to have failed. A few years ago her father commenced the study of Christian Science, and was healed of his diseases, morally reformed, and spiritually transformed from one of the most irreligious to the most religious man of his community. And while the daughter at first opposed Christian Science, and is now a better member of her own church than before she knew of Christian Science, she has been forced to recognize that God has answered her prayer in a better way than she knew how to ask it. A friend of mine who studied for the orthodox ministry, but who became an agnostic through his study of the old theology, tells me that he was brought back to God, Christ, and the Bible through Christian Science. He also tells me that the present-day healing and saving works of Christian Science led him to see that the miracles in the Bible were not only true, but the natural and normal expressions of the law of divine Love. A lady of this city, who was a member of one of our leading churches, and who through Christian Science has been saved from agnosticism and healed of many of the "ills that flesh is heir to," writing of her debt to Christian Science, says among other things, "My physical healing has been a marvel to all who know me, and I appreciate it as only one can who has spent many years in bondage to disease; but my deliverance from sins over which I had wept as incurable is to me the most glorious deliverance." One of the editors of our Christian Science periodicals writes me, "My heart is daily stirred to its depths as I read the testimonies sent in to us telling of such depths of woe and such glorious deliverances." And the time would fail us to tell of the many signs of Christ's coming in Christian Science that we are eye-witnesses to, not to mention the testimony of thousands who are witnesses to the fact that they are being led, through the ministry of Christian Science, from sickness to health, from death to life, from despair to hope, from grief to joy, from a carnal to a spiritual life; in a word, from "the enemy" to Christ.

I have cited these few cases, not because they are exceptional, but because they are typical; and because the grateful and reliable testimony of thousands who have been healed and saved through Christian Science, more than confirms everything I have claimed for it. And, with grateful reverence, I wish to add that all sincere and faithful Christian Scientists have the inner testimony, as well as some of the outward signs, that God is with them in every effort they unselfishly and lovingly make to preach the Good News and to do the works of Christian Science.

J. R. MOSLEY.
Macon (Ga.) *News.*

Loyalty to Conviction.

DR. FRED D. JOHNS, for twenty-nine years an allopathic physician and for four years of that time superintendent of the Bertillon system at the Four Courts, has been converted to Christian Science and has commenced regular practice in that faith.

Dr. Johns took up Christian Science healing immediately after leaving his police department position in September.

After failing to cure himself of long-standing physical ailments by means of the "regular" practitioner's methods, and arriving at a point where orthodox religious views would not satisfy him, Dr. Johns turned to Christian Science.

For two years he has been a member of the Christian Science Church, but only in the past two months has he regularly practised its healing.

"I was in the old school for years," said Dr. Johns in his Odeon office, Friday morning. "I was in very bad health, and after much doctoring received no help. Then, too, I was dissatisfied with my religious faith. I could not see God in the light I desired, and wanted something more.

"I became interested in Christian Science and watched its effects on others. I saw that it cured the supposed incurables, those who had gone to many doctors. Then I tried its effects upon myself. It cured me, and it also gave me just the religion I was seeking.

"Do not for a moment believe that I decry the medical profession. I gave up the medical profession because I no longer had faith in it. I knew that cures could be made without it, and my conscience would not allow me to practise it again."—*St. Louis Chronicle.*

Christian Scientists know that the Son of God was manifested, as John declares, to destroy the works of the devil (or error), and that which he destroyed was sin, sickness, and death. Therefore follows the logical conclusion that rheumatism as well as all sin and sickness is not made by God, but is destroyed by Him. Hence Christian Scientists are not as eager to hold on to that which God did not make, or to the belief of its reality, as is the good preacher. Christian Scientists admit that there is as much reality to rheumatism or gout as there is to temper, envy, jealousy, hatred, sensuality. They know, too, that the former can be destroyed by the grace of God as well as the latter, and by the same scientific, Christlike, mental process.

NORMAN E. JOHN.
Wilmington (Del.) *News.*

As to individual rights, while Christian Scientists cheerfully grant their neighbors the privilege which they claim for themselves,—their own choice of religion and medicine,—they would not be inclined to lend any special support to any practice which is not demonstrably efficacious. They do not discard material medicines merely to be fanatically true to a religious belief, but because they have proven by actual experience that in so doing they are choosing the better way, not only for the adult, but for the child. In this connection, however, it should be stated that they sometimes sacrifice personal liberties in deference to popular opinion and the fears and apprehensions of their neighbors.

JOHN W. OPDENWEYER.

The Lectures.

At Chicago, Ill.

Fifth Church of Christ, Scientist, Chicago, gave its second lecture on Thursday evening, November 5. The lecture was delivered by Mr. Bicknell Young, who spoke earnestly and convincingly of the power of Christian Science to deliver from all that is unlike God. His audience of about fourteen hundred persons, including a large number of those who are not yet identified with the Christian Science movement, listened to the lecture with marked interest and were evidently much impressed by the clear and comprehensive statements made by the speaker. Mr. Young was introduced by Mr. George Shaw Cook, First Reader of Fifth Church.—*Correspondence.*

At Joplin, Mo.

Mr. Carol Norton of New York lectured last night [November 5] at the Club Theatre to a fine, intelligent audience. His presentation of the subject was especially able, eloquent, and sincere. The speaker was introduced by Senator Hugh McIndoe, as follows:—

You are present here to-night seeking truth, for we can only learn it by searching for it with diligence. Whence come we? What are we? Whither are we going? are questions which will ever perplex human reason. And when one has an opportunity to hear expounded a new faith it is a duty which devolves on us to hear what is said, open-mindedly, whether or not we agree with all that is said.

There has lately sprung into existence a new religion of which we shall hear to-night, which has met with intemperate, even violent, opposition, but true to the maxim, that the blood of the martyr is the seed of the church, this opposition has expanded the growth of this new organization. To-day it numbers among its followers thousands of our most cultured and intelligent citizens. If they are not entirely right, it is certain they are not entirely wrong.

Judging by its growth, there must be truth behind it as there has been truth behind other great religious movements. If a test of one's religion is one's sincerity of purpose, then Christian Science must stand high among the religions of the world. It is hardly fitting for me to say more. For the speaker of the evening, who is distinguished for his learning, I bespeak your fullest attention. I now take pleasure in presenting to you Mr. Carol Norton of New York.—*The Joplin Globe.*

At Stamford, Conn.

A large audience assembled in the Opera House, last evening [November 10], to hear a lecture on Christian Science by Edward A. Kimball, C.S.D. His address was smooth, fluent, intelligent, and illuminative, and was heard by the audience with every mark of interest and attention.

Dr. Charles E. Francis, in introducing the speaker, said substantially:—

In this present age and generation, the term Christian Science has become a somewhat familiar one, not only in this community, but throughout the length and breadth of our land. Within a few years, Christian Scientists, as a denomination, have increased largely in point of numbers and influence. They have erected magnificent and costly churches in the principal cities of our country, and I am informed that, although many of them are large and commodious, they are fairly crowded with people Sunday after Sunday, and I much regret that such is not the case with some of our long-established churches of the present day. Standing, as I do, outside their circle, I have often wondered what peculiar forces of attraction could bring into their fold such large numbers of individuals, so many of whom are highly cultured, remarkably intelligent and refined, and in many instances wealthy.

We have with us this evening a distinguished gentleman whom I have been asked to introduce to this audience, and I trust that he may be able to acquaint us with the underlying principles of Christian Science, that we may be able to judge of its merits without permitting our minds to be fettered with prejudice.

I have the honor of introducing Mr. Edward A. Kimball of Chicago.—*The Daily Advocate.*

At Kankakee, Ill.

A lecture was delivered here by Judge William G. Ewing, Tuesday evening, October 27. Judge Robert Hilscher presented the speaker to his audience in the following words:—

Ladies and Gentlemen:—When I was asked a few days ago to perform this office, I found myself hesitating for a moment with the inquiry addressed to myself, "Why should I, a Methodist, introduce a Christian Scientist?" That moment of hesitancy was to me a fortunate one, for by the answer to that question my life has become enriched with a more secure grasp and understanding of the thought expressed by a great scholar of our day, when he said in substance, "Wherever religion erects her altars, there flames a burning bush. He who would draw near to it in the proper spirit should be mindful of the caution given to the Hebrew shepherd, 'Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground.' He who has no religion may scoff at another man's religious belief; but he who cherishes as the best he has, his own religious principles, must enter the sanctuary where his brother worships with respect and reverence."

He who is to speak to you to-night needs no introduction. Suffice it to say, therefore, that after devoting nearly forty years to the practice of his profession, which, through all those years, he pursued with assiduity and distinction, he has consecrated the remainder of his life to the dissemination of religious teachings,—the most exalted mission that can claim the energies of man.

Judge Ewing will address you.—*Correspondence.*

Salem, Ore.

Last night [November 13] Judge Septimus J. Hanna, of Colorado Springs, delivered a public lecture on Christian Science, and was greeted by a large and representative audience of Salem's best people.

Circuit Judge Reuben P. Boise, who is a believer in the orthodox doctrine, introduced the speaker in an eloquent address, during which he said that if the doctrine was true, Christian Science was the greatest thing ever given to the world.—*Oregon Statesman.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Take Notice.

I HEREBY notify the public that scurrilous letters purporting to bear my signature—letters of evil intent—that I never wrote, never caused to be written, and never saw until they were given to me by the individuals to whom they were superscribed, are constantly being circulated. But those who know me, know that I never wrote them.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., Nov., 13, 1903.

No Claim to New Harlem.

MARY BAKER G. EDDY.

New York, December 6, 1903.—Regarding the rumor that Christian Scientists are planning to establish a "New Jerusalem" on the ground occupied by New Harlem, in New York City, Mrs. Mary Baker G. Eddy has sent the following dispatch to the *New York World*:—

"Over an article on the above subject published in the *World*, November 27, you said: 'The followers of Mrs. Eddy plan to establish a New Jerusalem there.' Allow me to state I knew nothing of the Harlem movement until recently when receiving a book written on the subject. Said book I have not read, and am not at all concerned in the history of New Harlem, or the building of a New Jerusalem, since, as I apprehend it, the New Jerusalem 'cometh down from heaven,' and is not an outcome of litigation. Christian Scientists are not, to my knowledge, interested in locating heaven, but in finding it within themselves."

Boston Herald.

Individual Affairs.

OUR attention has been called, from time to time, to certain business enterprises conducted by Christian Scientists which have been exploited in such a manner as to create the impression that our denomination is responsible for them, or that it is in some manner connected with them. This is entirely wrong, and we can say with authority that the Christian Science Church is in no wise interested in, or responsible for, any business other than the publication and sale of its official literature.

It is the privilege of every man voluntarily to take upon himself whatever responsibility is lawful and within his desire, but to force upon him responsibilities which are not his, and which he does not desire to assume, is to violate his right. This is equally true of an organization; and individual members should not assume to commit the organization, either by direct statement or by implication, to the promotion of any enterprise which is foreign to its purpose.

Christian Scientists, like other people, are engaged in almost every legitimate business and profession, but they are thus engaged as individuals only, and as individuals they must bear the entire responsibility for their business affairs. May we ask them so to conduct their affairs that neither their Leader nor the Cause of Christian Science will seem to be involved. M.

Superstition versus Understanding.

OUR text-book says, "Superstition and understanding can never combine" (Science and Health, p. 288). This statement is of vital importance to all Christian Scientists and at all stages of their mental and moral growth, for unconscious superstition clings very closely to mortals. Like many other beliefs it is a relic of the time when we were ignorant of the Truth of being, and the term stands for the many delusions concerning "the deep things of God," as well as for the most ordinary things of every-day life.

Christian Scientists all know that the understanding of God is indispensable to their welfare and happiness, and the statement above quoted shows clearly that superstition of every sort must give place to the Science of all that is real. We no doubt think ourselves superior to the common superstitions concerning days and numbers, the many delusions relative to disease and to material remedies, to belief in the warnings of impending evil, etc., which seek expression in well-nigh every experience between the cradle and the grave.

While we rejoice in divinely bestowed freedom from these errors, we need to see to it that we are not in any wise robbed of our largest liberty for growth by trivialities which are but new forms of the old enemy seeking recognition under the respectable guise of a religious duty.

It would seem ridiculous if it were not discouraging to attempt to answer such queries as this, How should the Bible and our text-book be marked for the services, or is it not wrong to mark them at all? Paul says, "Let all things be done decently and in order," and our beloved Leader rebukes the tendency to criticise trivialities in others, and says, "Christian Scientists preserve unity, and so shadow forth the substance of one sublime faith, and the evidences of its being built upon the Rock of Divine Oneness" (Miscellaneous Writings, p. 131). Whatever common-sense method best preserves unity and order in the matter referred to and in many other things where no rule is given, is surely best, and above all our efforts, there is ever the shining pathway of love,—the "more excellent way." We should never forget that superstition in any form tends to belittle thought, while love enlarges it. This extended vision and wider influence for good is surely well worth seeking, since it affords proof of the healing presence of the Christ at work in the church and its individual members.

That so many are finding Love's way, and walking in it, is cause for rejoicing. One who has passed the threescore years and ten, and who was bowed down with sorrow and sickness, writes, "I am in perfect health, and growing fast. Divine Love is all in all. This wonderful love of God through Christ fills every atom of my being, and no one could be more truly happy or healthy than I am. Oh, wonderful truth, health, and happiness that have come to me; it was a blessed day for me when I went to Christian Science. It is so beautiful,—the love so pure and true that Christian Scientists have for each other. All our beloved church members are so tender and loving to me and to each other, to every one; it is heaven on earth indeed. What a wonderful woman is Mrs. Eddy, following as she does in every step of the Master!"

Is it not this uplifted thought which is the need of all our churches? and come it will to church and to individual alike, when error is cast out by Truth and Love. Our text-book warns us against a religion consisting of rites and ceremonies, and in referring to the martyrdom of Jesus it says, "It rent the veil of the temple. It revealed the false foundations and superstructures of superficial religion, tore from bigotry and superstition their coverings, and opened the sepulchre with Divine Science,—immortality and Love" (Science and Health, p. 597). Why not Help rather than Hinder?

THE genius of mortal mind is wont to express itself unconsciously in self-contradiction and self-defeat, and this is well illustrated in the attitude of the press respecting experiences of persons occupying exalted positions.

All intelligent people know that a state of fear and foreboding upon the part of patient and surrounding friends is to the distinct disadvantage of a sick person, and most people would readily concede that the focusing of anxious thought upon an invalid could do him no good and would be likely to do harm, since it would certainly favor an increase of his own fear; and yet, despite the probable desire of all to help and not hinder the afflicted, about every possible thing is done in these cases to intensify public solicitude and beget the assurance that the trouble is of a type which is sure, sooner or later, to prove fatal. And this is true not only of the secular, but of the religious press as well.

There lies before us a Christian weekly which in successive issues enlarges upon the likelihood that the trouble in a certain case is malignant, despite the assurances of the operating surgeons to the contrary. The family history of the sufferer is dwelt upon, and the inevitableness of the transmission of the fatal malady is emphasized. Unfavorable tendencies, affiliations, and possibilities are all carefully enumerated and enlarged upon, and having thus done all he could to insure the death of the patient by affirming and supporting the condemnatory mortal law and exciting a morbid mentality in his readers, the editor says that, in spite of advances in medicine and surgery, we are quite as ignorant of abnormal conditions as we were years ago, and adds: "Patient observation for many months will be necessary to decide the momentous question, which we sincerely hope will be eventually favorable."

It is quite inexplicable and wholly inconsistent that those who "sincerely hope" that calamity may be avoided, should knowingly do anything to increase the likelihood of that event, and it is fair to assume that they would not; the above procedure but indicates a subserviency to habit and to current material belief in the supremacy of the powers of evil over good, which seems so pitiful, unfortunate, and out of keeping with worthy Christian thought.

There is an eloquent and well-remembered passage in Paul's letter to the Philippians, in which he says, "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things." Macaulay has written a startling paraphrase of this in the following brief description of the character of a certain French Revolutionist, "Whatsoever things are false, whatsoever things are dishonest, whatsoever things are unjust, whatsoever things are impure, whatsoever things are hateful, whatsoever things are of evil report, if there be any vice, and if there be any infamy, all these things . . . were blended," he says, in the object of his denunciation.

The thought which mortal sense would have us bestow upon abnormity and the expectation of evil, presents as great a contrast to the true Christian consciousness as does this paraphrase to the Scripture injunction, and yet we all know that the value of the apostle's counsel has in no degree depreciated. How much better to help than to hinder, and how unwise it is persistently to vote for that which we wish had neither place nor power! The needful recognition of a condition of error in no sense authorizes its exploitation, and all sensible physicians would be most glad and thankful if the mouthing of disease and disharmony, as the very tidbits of public and private gossip, were to cease.

Christian Science revoices Paul's wholesome appeal, and would give it dominion in every thought and word; and what an unalloyed blessing to all it will be, when its loving rebuke is accepted by those who are now so ready to declare for that which oppresses and offends, so ready to anticipate the undesirable, and to forget the omnipresence of that infinite good in which they would, no doubt, assert that they firmly believe. W.

A Letter to our Leader.

San Francisco, Cal., November 25, 1903.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Dear Leader:—I have instructed our New York office to send you, charges prepaid, two cases of our canned fruits of this season's packing. They will probably be sent to you very shortly from New York.

I have just returned from a trip to New York and met many Jewish people interested in Christian Science. As you are doubtless aware, one of the remarkable features of the rapid spread of Christian Science on this coast is the large number of Jewish people taking hold of this truth. In fact, this applies particularly to San Francisco and Los Angeles in this state, and Portland, Oregon.

With best regards and appreciation of your efforts in the direction of benefiting mankind, I am,

Yours sincerely,

ISIDOR JACOBS.

President California Canneries Co.

Union Thanksgiving Services.

In Brooklyn, N. Y.

First, Second, and Third Churches of Christ, Scientist, of Brooklyn, N. Y., held a Union Thanksgiving service in First Church on November 26. At the conclusion of the service a message of love and appreciation was forwarded to our Leader, Mrs. Eddy.—*Correspondence.*

In Kansas City, Mo.

Union services were held by First, Second, and Third Churches of Christ, Scientist, at the Auditorium Theatre in the morning.

At the close of the reading of a specially prepared Lesson-Sermon, a half hour was set apart for testimonials of healing in Christian Science, and many responded. At the close of the meeting a motion was unanimously adopted that the following despatch be sent to the Rev. Mary Baker G. Eddy of Concord, N. H., the Discoverer and Founder of Christian Science:—

"United in the bonds of love, First, Second, and Third Churches of Christ, Scientist, met together to-day to return thanks to God for blessings received, and join in sending their greeting, thanking you for opening the way."

Kansas City Journal.

O mortal, wavering in thy trust,
Lift thy pale forehead from the dust!
The mists that cloud thy darkened eyes
Fade ere they reach the o'er-arching skies!
When the blind heralds of despair
Would bid thee doubt a Father's care,
Look up from earth, and read above
On heaven's blue tablet, GOD IS LOVE!

OLIVER WENDELL HOLMES.

Testimonies of Healing.

I thank God for Christian Science and what it has done for me, physically, morally, and spiritually,—it has lifted me out of sickness into health. Three years before learning of this truth, I had doctored for eczema on my hands and feet. The third winter it came in its most aggravated form, and for three weeks I was almost helpless. A friend came to me and said that if I would try Christian Science I could be healed. I said I would be glad to take the treatment, but I did not believe it would do me any good.

She loaned me Science and Health to read, and after a few days' treatment I was so much helped that I knew I was on the highway to health. I continued to read, and so far as I could understand the application of its teaching, tried to act upon it.

In less than eight weeks I was entirely healed. It is a year and five months ago, and I have had no return or symptoms of it. In ten days after the first treatment I was healed of the tobacco habit. I had used tobacco for twenty-five years and had often thought I could not do without it, and it did seem so strange to me just then, as I did not intend to give up this habit, but I soon found that I had lost all taste for it.

As I have learned this blessed truth, many manifestations of error have been successfully met. No physician has been needed in our home and no druggist has filled a prescription for any member of our family in that time. I am learning daily to rely more on God as the great and only Physician,—the ever-present help in time of trouble, "Who forgiveth all thine iniquities, who healeth all thy diseases." As we drink in the glorious truths of the Bible and strive for the mind which Jesus manifested, we begin to grow in usefulness to our fellow-man, to have the understanding that brings health to the sick, peace to aching hearts, freedom to those imprisoned by their false belief,—thereby serving God as Jesus commanded us to do. My heart is full of joy and sincere thankfulness to our Leader, and to the dear friends who have led me to this blessed light, and I hope that some one who reads this may be led as I have been, and so be freed from sickness and sin.

P. M. Booker, Winchester, Ky.

[Translation.]

I gladly profit by this opportunity to speak of my improved health. For many years I suffered from serious stomach trouble to such an extent that I almost bled to death in the last attack and could hardly regain my strength because food caused me great pain and bleeding. My meals consisted for years of milk and bread. Then rheumatic pain and other ailments increased my troubles so that I led a sad life.

Homœopathic remedies brought me a little relief; allopathy I had given up some time ago. Fortunately for me I heard that many sufferers had been healed through Christian Science and that there were practitioners in Zürich. With confidence I turned to a Scientist in Zürich and received absent treatment from her. Slowly but surely my condition improved, and I am now much stronger, healthier, more joyful, and eat my food without suffering pain from it.

Several weeks ago I had an attack of erysipelas. I again turned to Christian Science and asked the Scientist for treatment. Relief came immediately, and after a short time all pain disappeared entirely. For this healing also I am grateful to Christian Science.

The teachings of Christian Science have brought me peace, sunshine, and joy of mind. Through this Science I have acquired a high and pure perception of Life, Love, and Truth, which I never before knew. Therefore it has become the aim of my life to continue in the study of Christian Science and live its precepts.

S. E., Koppigen, Canton Bern, Switzerland.

At the time I began to investigate Christian Science I had almost, if not entirely, abandoned the hope of ever being well. Stomach, liver, and kidney trouble gave me much discomfort and my back and head ached continually. Although wearing glasses fitted by one of Chicago's best oculists, for a pronounced case of astigmatism, the pain in my eyes was not destroyed. I was very nervous and always tired. From childhood my throat had been very troublesome, and for some winters I had been subject to attacks of tonsilitis and acute bronchitis, accompanied by chills and great fear that the attacks would be fatal, so that I had a morbid dread of their re-occurrence.

Physicians whom I consulted gave me no assurance that their treatment would result in more than temporary relief, while several changes of climate had resulted in no permanent improvement.

In November, 1897, I bought a copy of Science and Health, having previously heard of Christian Science in the South, but being unwilling to give it serious attention until climate and material remedies failed.

After reading the book a short time, the fear and the physical troubles began to disappear, the pain and soreness left my chest, a painful bunch in my side vanished, my throat, which for three years had been sore much of the time, summer and winter, ceased to be troublesome. I laid aside my glasses, and my head and eyes no longer ached. Gradually other troubles disappeared.

While I am deeply grateful for the physical healing, I am still more grateful for the peace, contentment, and hope which Christian Science has brought to me through a better understanding of God, and I am learning to appreciate more and more the unselfish work of our beloved Leader in the interest of suffering humanity.—E. K. C., Chicago, Ill.

At this season I offer heartfelt thanks to God. "I know that my Redeemer liveth," for I was paralyzed, and with impaired sight, utterly helpless, with a mental condition that bordered on imbecility, hopeless and approaching the "valley of the shadow of death,"—when God and His Christ were revealed to me, through Christian Science. There could be but one result, for "Truth is always the victor" (Science and Health, p. 380). My reason was re-enthroned, my sight restored, my strength renewed. I was healed. Thanksgiving and praise to God, are my bounden duty forever. To Mrs. Eddy I owe loving reverence, that she has been chosen of God to reveal His message of Life, Truth, and Love, as found in "Science and Health with Key to the Scriptures," that whosoever will may read, understand, be blessed, and healed.

Then cometh the crowning triumph, in the Master's own words, which are the light and hope of this and every age: "Ye shall know the Truth, and the Truth shall make you free."—W. W. W., Peoria, Ill.

From childhood I had suffered from yearly attacks of hay fever. When I first heard of Christian Science I did not think of it as a means of bringing me out of physical bondage, but by reading and studying our text-book I was completely healed of the distressing disease.

The following extract proved most helpful in overcoming the ailment: "What an abuse of natural beauty to say that a rose, the smile of God, can produce suffering! The joy of its presence, its beauty and fragrance should uplift the thought, and dissuade any sense of fear or fever. It is profane to fancy that the perfume of clover and the breath of new-mown hay may cause glandular inflammation, sneezing, and nasal pangs" (Science and Health, p. 175).

G. K. M. Miller, Poughkeepsie, N. Y.

At this Thanksgiving season my heart overflows with gratitude when I recall the many blessings that are and have been mine since Christian Science first unfolded its meaning to me, ten years ago. I have endured many hardships and persecutions "for his name's sake," but have been amply rewarded for remaining faithful to Principle, when the many phases of error have been overcome through the application of the truth as given in Science and Health, and I am sure the hardships enable me to appreciate more fully Mrs. Eddy's efforts in behalf of humanity.

I am thankful for the healing that is done through Christian Science, and will give a few experiences that have come to me which may be helpful to others.

I have a relative who by an accident lost the sight of one eye. In after years the other eye became affected through sympathy, and at times she was almost blind. Christian Science treatment was tried, and after six weeks the patient was delighted to find she could see the stars with her "bad eye;" something she had not done for twenty-six years. After this healing, her nephew, who is an oculist, desired to examine her eyes, she permitted him to do so, and he pronounced the sight "about normal."

One night I awakened from a troubled sleep and found myself quite miserable. I turned thought as much as possible away from bodily conditions to the Truth of being, and seemingly drifted from one statement to another in Science, when suddenly this passage of Scripture came to me: "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent," and I recalled the many places in the Bible where reference is made to works of healing done in the name of Jesus Christ. Then there burst upon my consciousness the importance of understanding the perfect man—the Christ idea; and I saw that this knowledge of the perfect reflection of God by man healed the sick. The promise of eternal life is two-fold,—that ye know both "the only true God" and the perfect man whom He has created.

Needless to say I was soon relieved of my pain and went to sleep. The next morning I was rejoicing in thought over my quick recovery and my new sense of Truth, and almost wondering why it so often happens when we are in the depths, the clearest glimpses of Truth come to us. Then this Scriptural passage answered my question: "For He shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone." How happy I am to have "Science and Health with Key to the Scriptures" to teach me that "'Angels are God's impartations to man,—not messengers, or persons, but *messages* of the true idea of divinity, flowing into humanity" (p. 299).

C. B. A., Dallas, Tex.

[Translation.]

I feel that it is time for me to give to the world my experiences in Christian Science. An evil had crept into our family which the physicians pronounced inherited consumption. My mother, brother, sister, and other relatives were taken away by it, and the physicians considered it incurable.

When a child, I was examined and sentenced to go the same way; but this was not God's will. He led me to the truth which makes man free, and that is Christian Science. In a few treatments and through growth in the understanding, I was freed from that disease. To-day I cannot thank God enough that He led me into this way, which gives me life and peace, instead of sickness and death.

At the birth of my first children I suffered greatly from the instruments. My last two children were given me with the help of Christian Science. No instruments were needed, and the third day I was free to do my own work. I knew that I was in God's protection. Our first child was in poor health until nine months old. The physicians said that nothing could be done for him. I tried all the different foods, but in vain. From a human standpoint there was no help for our child.

Then some one advised us to try Christian Science, saying that it was God's work. We were very willing to accept this. Our child had two treatments and was well. Our little daughter was healed of a broken arm by the power of God. The fourth day she could pick up a toy with that hand, and the ninth day she used her arm as usual.

I have received much benefit from *Der Herold*, and therefore think it my duty to acknowledge it. Words cannot express my gratitude that I have found my way to Truth. To know that divine Love governs, and that we, as God's children, cannot be distressed by poverty and sickness, I feel is the only way to find peace.

Because our Leader expresses her teachings in English and I understand German only, I had to begin like a little child, constantly making use of an English and German dictionary. Some one asked me, "Why do you go to church? You cannot understand one word of it?" But I had found out that God is neither English nor German, and from that time on I understood more and more. I certainly know that God reveals Himself to every heart that is earnestly seeking Him; and now I shall strive to show my gratitude in following the path that has been pointed out to us.—Frau Hedwig Voigt, Sheboygan, Wis.

Christian Science has done much for me. Four years ago I was unable to do any work for long periods, and could not walk any distance without suffering. I had also such pain at intervals that I had to go to bed, and was very nervous and weak. I also had stomach and bowel trouble, and would contract a cold very easily, and had a sore throat several times nearly every winter. My mother thought allopathic medicine too strong for me, and I had a dread of doctors, therefore I tried all home remedies, patent medicines, and a homœopathic doctor, but did not get well. I was unhappy and discouraged. I wanted to be entirely well and happy, but thought I never would be.

"Man's extremity is God's opportunity," and a friend who had been healed by Christian Science gave me the address of a practitioner to whom I wrote, and I was given absent treatment for several weeks. I began to feel so happy and free from weakness that I stopped the treatments. I did not know I had anything to do for myself in order to keep well, so I let error creep in, and have had to seek help several times since I was first treated. I was, however, benefited each time, and I can now work, walk any distance, and go out in all kinds of weather. I am indeed better physically and morally, thanks to Christian Science.

Last fall I had the privilege of class instruction, and I find that so far as we live this truth in our every-day lives we are well and happy.

I am very thankful to Mrs. Eddy, who has shown us the way, and to all the Christian Scientists, who have helped me.—Miss Beatrice Biggs, Canon City, Col.

Merely to name the name of Christian Science is sufficient to fill my heart with love and gratitude.

I was healed four years ago and immediately, together with my wife, took up the study of Christian Science. About one year after that we united with Fourth Church of Christ, Scientist, Chicago, and a few months later we enjoyed the privilege of class instruction. We then became members of the Mother Church, and we also joined the Central Christian Science Reading Room Association of Chicago. I am free to say that if there were anything else to join or any step to take that would more fully identify me with Christian Science, I would gladly and quickly take it, for I fully appreciate the many blessings and bene-

Digitized by Google

fits that have come to me through attending and taking part in the services and the business meetings of the church and Reading Room Association.

A few days ago, in conversing with a friend who expressed a desire to know something of what Christian Science is, I told him that if he really wanted to know what it is, there was nothing that could prevent him from knowing all about it. I told him of the reading rooms where all the Christian Science publications could be read or purchased, and I also told him that I had been healed of a severe nervous affection of the stomach, and chronic constipation and sick headaches; that I had been delivered from the bondage of tobacco, medicine, and stimulants, to which I had been a slave for twenty years. I further told him of the peace of mind, the happiness and contentment, that had come into my life through the action of this blessed truth. He asked me if we believed in God, and I replied that Christian Science is a study of God; the text-book of Christian Science, "Science and Health with Key to the Scriptures," contains a complete statement of this Science, and that the study of this book enables us to know the truth about God, and also the truth about man.

I gratefully acknowledge every good thing that comes to me to be from God, and I have to acknowledge and thank Christian Science for recent recognition, and advancement in my position, accompanied by a greater return for my services. All this goes to prove that our declarations that the law of right and justice is God's law and is the only law, are true.—W. T. MURPHY, Chicago, Ill.

[Translation.]

With a grateful heart I will try to express my gratitude for the innumerable blessings which Christian Science has brought, and is still bringing to me. About five years ago, I heard of this truth, and I had many struggles with self before I began to understand even a little of its meaning; yet I held steadfast to the thought: "I will not let Thee go, except Thou bless me," because I felt that Christian Science was the truth which I had so long desired.

Although I did not come to Christian Science for physical healing, yet I sought for and found deliverance from little ailments; but I needed the truth chiefly because I felt so unhappy and discordant. I find that the understanding of it brings us blessings in every direction; it teaches us the true perception of humility, honesty, purity, justice, and love; and it silences all passionate desires. Through the understanding of Truth, we are enabled to free ourselves and others from the errors which are manifested in some form of physical trouble, yet the proof of the allness of Truth and Love in overcoming moral errors is of far greater value. The false sense of self, which is expressed in uncharitableness, envy, resentment, dislike, suspicion, and temper have been destroyed for me and for others through divine Love, and this has brought inexpressible peace instead.

In financial affairs the power of infinite Mind has been revealed to me as the only source of supply. In fact, from every standpoint, in all our affairs, Christian Science is the universal remedy, it reveals inexhaustible treasures from which we may draw health, harmony, intelligence, and strength, if we strive for it with honest, willing hearts.

I will here relate a proof of the power of Truth which I have recently experienced. I expected to have a tooth extracted and mentally clung to the words which Jesus spoke to Thomas: "Blessed are they that have not seen, and yet have believed," and in adhering to the truth in spite of the testimony of the senses, I found wonderful help, for the tooth was pulled quickly and it caused me very little discomfort. Several days prior to this, the understanding of Christian Science freed me from a severe toothache.

How practically we may apply Christian Science in all the minutiæ of our affairs, I experienced some time ago, when the constant thought of infinite Love and intelligence, which governs and controls all, helped me to find a capable maidservant. Not a day passes without bringing me proof of the power of Truth, and my gratitude to God and our beloved Leader, Mrs. Eddy, is inexpressible. I feel that I can give the best proof of my gratitude by implicit obedience and constant endeavor for growth in love. I am also most grateful to the dear teacher who, with unselfish and untiring love, brought the word of Truth to me and to many others.—ALMA BIENE, Dresden, Germany.

In the year 1900, our little daughter, then three weeks old, began to cry one afternoon, and cried until nine in the evening. This was repeated for a week, nothing could stop her, it rather grew worse and the doctor could give her no relief. Then one of our relatives asked me if I had faith in Christian Science, to which I answered that I did not believe in it, but she might call a Scientist. After the child had received treatment for two days, she began to get better, and in two weeks was entirely well. The following year she had a pulmonary fever and Christian Science healed her. During the same year I was healed of some growth on my eye and several other ailments.

When Eleanora was three years old, she had the whooping-cough and pulmonary trouble again, besides brain fever. We sent for a physician, and after the child had been in bed for six weeks, she had a relapse, which was worse than the first attack, and with this came consumption of the stomach. The physician and our friends thought that she would never get well; she was so weak that she could not raise her hands or feet. It seemed as if I could not endure to look at her, she suffered so. No one gave any helpful advice, and then I again turned to Christian Science. I went to the practitioner and told her of the conditions, and that we would now place all our hope in God. After two weeks' treatment, one trouble after another disappeared, and now she is perfectly well. Every one expresses surprise at her healthy appearance.

After she was healed, our son, seven years of age, was taken down with typhoid fever. This time we did not try a doctor first but sent for a Scientist, for we now knew where to look for help in all trouble. Our boy is now well and strong and is in better health than he had enjoyed for several years previous to the attack. We cannot thank God enough for all He has done for us.

MRS. GEORGE KNAPP, Cincinnati, O.

[Translation.]

Three years and a half ago I was taken ill with ulcers in the stomach, connected with bleeding and other disorders. I tried different remedies to prevent the ever-recurring attacks, but these brought help for a short time only, and I became the slave of my stomach. Every thing I ate was accompanied by the thought, If only it does not do me any harm. This continual anxiety exasperated me, made me nervous, and consequently, at times, rather disagreeable to those surrounding me. What troubled me most was the thought that the activity of my bowels was and would always be paralyzed. For three years I used stimulants and felt that I was getting weaker and weaker. Only my usually high spirits helped me to bear my sufferings; but whenever they left me I felt almost in despair. I could not pray any more, as I thought God had quite forsaken me, and I inwardly accused Him of injustice.

Fortunately a dear friend of mine who was being treated by Christian Science came to see me last August, and after much persuasion on her part I resolved to accompany her to her practitioner. There were many doubts in my heart as yet, but they vanished gradually on hearing the Scientist's clear and convincing explanations; in short, I

Digitized by Google

believed that I would be helped. The same evening I had to keep an appointment with my doctor (I was being treated by the hygienic system); but to my great relief, having arrived rather late, I found him gone. Joyfully I hastened home and then I became fully aware that I was well, and that paralyzed bowels, etc., were a thing of the past. Fear had disappeared as well, and, to the great terror of my family, I ate whatever came on the table, salad and fruit, etc., which had hitherto been strictly forbidden. A few days later I called again on my practitioner, who kindly gave me further instruction. Now I am a well and happy being and feel most grateful to God for all He has done for us. With the deepest conviction I can say with the Psalmist, "The Lord is my shepherd; I shall not want."—M. STROH, Zurich, Switzerland.

Christian Science has been our salvation in so many ways that I feel I must lift up my voice in thanks to God for this great comforter, which brings peace to all who earnestly strive for it.

It is over four years since our eyes were opened to the truth, and during that time our two little girls have been brought through many diseases which educated mortal belief says are necessary, and in nearly every case, health has been manifested so quickly as almost to startle us, yet Paul says, "Why should it be thought a thing incredible with you, that God should raise the dead?" (or heal the sick).

If parents only knew the great blessing this glorious truth is to the little ones, I am sure, for this alone if for no other reason, they would wish to investigate it.

This summer, while in the country, our little six-year-old girl manifested a severe sore throat with white patches, and high fever bordering on delirium. Feeling that I needed help myself, as the case seemed so severe, I telegraphed to a practitioner at our home in Buffalo, and in less than an hour after the message was received the child was sleeping sweetly, and was perspiring freely and naturally.

On awakening, she asked me to read to her, and I sat down by her bed and read two or three short Psalms, when she said, "Mamma, do you remember when Jesus said to the sick man, 'Arise, take up thy bed, and walk'?" After a moment, she added, "Something tells me to 'Arise,' and I am not going to stay in bed any longer."

I carried her to the porch where we sat down and talked more about the great Healer, and that was absolutely the last of the error.

We returned in a few weeks to our home, thanking God that the truth had come to us, and also thanking the one who brought us so quickly out of this darkness into the light.—MARIANNA QUINBY, Buffalo, N. Y.

Through reading a testimony in the *Sentinel*, I have been awakened to a sense of duty. This is the third attempt I have made to send my testimony, and now, after three years of waiting, I wish to be with those who return to give God praise.

Since early childhood I suffered from a complication of diseases. About three years ago I was suffering from severe chronic troubles which seven doctors whom I consulted could not cure. I had, moreover, astigmatism, and had worn glasses from childhood, and many times I have cried because I could not use my eyes like others.

I am now entirely healed of all that I have mentioned, and would like to give more fully the healing of my eyes. I had been treated about a week in Science, and was then using glasses, but the friend who was treating me said, "The time will come, when you will find that you do not need glasses." I was trying to sew out on the front piazza, on a dark material, when all at once my vision blurred. Thinking the fault lay in the glasses, I cleaned them, but it was still the same. I cleaned them the second time, but I could see no better. I was still looking at my work, wondering what was the trouble, when I took hold of the glasses and lifted them up, and to my amazement my sight was perfect, and I knew I was healed. I can use my eyes now as long as I like, either by night or day.

I am very thankful for all I have received, and I never knew God before as I know him now,—as the Giver of every good and perfect gift. I wish to thank our dear Leader for her faithful work.

MARY L. S. WADDELL, Bethel, N. Y.

My heart is so full of gratitude for the many blessings that come to me through Christian Science, and also for our periodicals and all our literature, that I cannot keep silent.

What would I do without Christian Science which has brought me out of great darkness? Fear and worry over the trials of life had robbed me of health. When I was a child, I accepted Science in a way, and when my husband and I came West we brought Science and Health with us. I have surely gone through great trials since coming here, and but for my dear, patient practitioner it would have been much darker; but she has led me through into light and liberty. Health and strength are mine now, and instead of being the poor, sickly, weak woman that mortal mind would make me, I am well.

MRS. LUCY MACLEOD, Denver, Col.

I desire to express my gratitude for what Christian Science has done for me and mine. For four years I was an invalid, and during this time I was operated on seven times; then I was taken by my doctor to a convention of physicians, where I was examined by the dean of the university of Iowa, and his verdict was that nothing further could be done for me, except to submit to another most terrible operation with no assurance of being any better. It was then that a friend told me of Christian Science of which I had never heard before. I went to a practitioner and was healed in one week. This was six years ago, and these six years have been the best six years of my life. I am very thankful to Mrs. Eddy for her great work, and to the practitioner who brought about my healing.

MRS. GEORGE MASON, Reinbeck, Ia.

I was enabled the other day through my understanding of Christian Science, to overcome sea-sickness. It was the smell of the steamer rather than the rolling of the sea that seemed to cause it, but I realized that I live in Mind, not matter,—that "In him we live, and move, and have our being,"—and the sickness was destroyed by a realization of the truth expressed in the words: "Neither . . . things present, nor things to come, nor height, nor depth, . . . shall be able to separate us from the love of God." I trust this may help some other sufferer.—C. L. E., London, Eng.

Names and Addresses of Clerks.

Clerks of Churches and Societies were requested by a notice in the *Sentinel* to send their names and addresses (with address for telegrams if different from that for mail) to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass., in order that a complete list might be made. A number of Societies and some Churches have not been heard from, and we ask that clerks will carefully attend to this request at once, else their names must be omitted. Whenever changes occur notification should be sent, so that the exact address of every clerk, the church officer to whom correspondence is addressed, may always be on record with the Publishing Society.

From our Exchanges.

Life should be to us the great opportunity. We believe we shall go into the other state as we leave this, not blossoming immediately into an angel, but remaining essentially human. Is there progress there? We hope devoutly there is, but we do not know. Suppose there is not, that we are to remain as we arrive, neither better nor worse. The thought has an awful implication, that of a fixed and changeless state. Supremest bliss would not satisfy our restless souls on those conditions. No, we must advance, expand, grow. A bud that forever remains a bud suffers a peculiar kind of annihilation. The aspiration is for more life and richer. But are we worthy of it if we neglect the great, good chances of this life for the growth of a nobler?—*The Christian Register.*

The truth that we desire here to impress is, that the Christ who has so mightily affected the ages, dominating the thoughts and lives of men, is not so much the Christ of the creeds, the confessions, the great controversies, but the Christ of the Gospels. We plead for a better knowledge of him among us. We are saying nothing against confessions, creeds, theologies. But the great mass of our people are ignorant, amazingly ignorant, of the Christ of the Gospels. It is easy to read theologies, and to contend for the beliefs that some man has formulated; but it is not so easy to read, with faith and insight and joy, under the tuition of the Spirit of God, the Gospels that, with inimitable transparency, portray for us the inimitable and real and supreme Christ.—*The Examiner.*

Faith is not a creed, but it expresses itself in a creed. We voiced our childish faith mainly in words which were given us. But now it is a privilege to find our own forms of expression, old or new, embodying our belief in words of our own choice. It would clear up thought amazingly with many of us if we took time to put in words what we really do believe. Men reach heaven by faith expressed in holiness; but they would have an easier time on earth if they thought honestly and clearly as well as believed with childish simplicity. For doubt is of the dark—of the gray twilight of vague thought and not of the broad day of thoughtful sincerity.—*The Congregationalist.*

The Universalist Leader quotes the Rev. C. W. Tinsley, a Methodist minister, as saying, "The heart of this age hungers for truth. It wants to be sure of something. We can't put new wine in old bottles without breaking the bottles and spilling the wine. Language wears out. Terms and forms of expressions change, and fail to state the truth. Our present knowledge is compelling the writing of a new physics—a new biology—and also a new theology. We must translate the truth into our own terms if it is to be real to us."

In an address to students Dr. John Watson said: "No serious person, should he be religious or non-religious, can look upon society in our day without being depressed and alarmed. There is a general unsettlement, both of belief and of institutions. What one longs for is another of those great movements which suddenly break forth, one knows not whence, and which carry the race one knows not whither, which in literature is called a Renaissance, and in religion a revival, and which in any case is the restoring of the human soul."

Pilate was no weakling. Long experience had hardened him, and a single Jewish life would not have cost him a pang. Yet nothing is clearer than the impression which the personality of Jesus made upon him. There was a hunger at the bottom of his callous heart to which Jesus appealed. Even he felt the power of a kingdom not of this world and the influence of its king. ISAAC O. RANKIN.

The Congregationalist.

If there were less preaching about Christ, and more preaching Christ, possibly there would be larger results from preaching. Men are not won to Christ by speculations about him, but by the earnest, heart-to-heart presentation of him as the Saviour of sinners.—*The Examiner.*

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Ave., Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Ave., Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies o healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Price, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The plan for a body of American Congressmen to visit Paris, and for a number of French Parliamentarians to visit Washington is assuming a definite aspect, through the effort of Baron d'Estournelles de Constant. The latter says of the plan, "When I arranged for the exchange of visits between British and French Parliamentarians I had in mind a similar exchange of visits between American and French representatives. The idea of the visits is generally approved, and I hope to arrange the details during my approaching visit to the United States, when I will present an invitation in behalf of several hundred members of the French Chamber of Deputies."

The Secretary of the Treasury has transmitted to Congress the estimates of appropriations required by the United States Government for the fiscal year ending June 30, 1905. The appropriations asked for aggregate $624,502,146, as against $589,189,112 asked for the year 1904, and $605,286,990 the amount of the appropriations for that year. The total receipts for the fiscal year ending June 30 were $694,621,117.64; the total expenditures for the same period were $640,323,450.28, showing a surplus of over fifty-four million dollars.

Judge Gray has announced his acceptance of the appointment as an arbitrator in the dispute between the Government of San Domingo and an American company over a contract alleged to have been entered into between them. At a conference of the arbitrators held in Washington, it was agreed to begin work next February.

It is possible that M. Reyes, Colombian minister plenipotentiary, may try to have the question of equities in the Isthmian Canal situation brought before The Hague Tribunal. He finds his mission in appealing to American public sentiment to reverse or modify the action taken by the American Government at Panama a failure.

The American flag has been lowered over the consulate at Alexandretta, and Consul Davis has left for Beirut, putting the consulate in charge of the vice-consul. The trouble arose over the arrest of a naturalized Armenian.

Official information of the ratification by the junta of Panama of the Isthmian Canal treaty having been received by the administration, the President last week sent the treaty to the Senate for ratification by that body.

Foreign.

After five months of negotiation, in which the central Chinese Government, the Chinese provincial authorities, the diplomats at Pekin, the European officials at Shanghai, and the foreign ministers of the important Powers took part, the trial of the five reform advocates concerned in publishing the Supao has been concluded. These men were charged with publishing seditious articles in that paper. The Government had demanded their surrender, though at the time of their arrest it was understood between the Taotai and the consuls that they would be tried in the Mixed Court, and, if guilty, undergo punishment in the foreign settlement. The attitude of the foreign Powers was unanimous against granting China's demand, which would have resulted undoubtedly in their being executed barbarously without trial.

The Japanese Emperor opened the Diet on the 10th. In his speech he referred to the negotiations with Russia, and said his ministers were carrying on those important matters with great prudence and with wisdom in protecting the interests and rights of the Empire.

The House of Representatives promptly adopted without division a reply to the speech from the Throne accusing the Ministry of following a temporizing policy at home and neglecting its opportunities abroad. The Diet has been dissolved.

Negotiations have been begun by the Powers which may result in an international administration for the Macedonians similar to the present Government of the island of Crete. To prevent another Macedonian uprising in the spring, Russia and Austria have proposed to the other Powers that immediate steps be taken to put the plan in operation. The governor of Macedonia will be a Christian, but there is also a determination that equal protection shall be accorded the Mussulmans.

The growth of the population of Germany in 1902, regarding which statistics have just been tabulated, was the greatest known, amounting to 902,312, or 15.61 per 1000, compared with 15.09 in 1901, and 14.63 the average for the last ten years. The number of births during the decade increased only slightly, remaining just about two million yearly. The gain is due therefore exclusively to the death rate, which was 20.56 in 1902, compared with 22.68 for the previous decade.

Late reports from Colombia say that the Government has recognized the impracticability of reaching Panama with its troops, and has accordingly issued orders cancelling the decree closing the ports of Cartagena and Savanilla against Colon, and will resort to diplomacy in trying to attain its wishes concerning the Panama trouble.

It is reported in official circles that, Japan having modified her demands and Russia having made certain concessions, the reply of Russia is now on its way to Japan for ratification.

The Republic of Panama has been officially recognized by Russia, Denmark, and Austria-Hungary.

Industrial and Commercial.

Official figures issued by the Union Pacific Railroad show that thirty thousand cars will be necessary to move California oranges East on the three lines. This is six thousand more cars than was required last year. The shippers of oranges must pay to the railroads in freight charges more than $9,000,000. The cost of the crop to the consumers, taking present market values, will be $36,000,000.

The crop and live stock reports issued by the Union Pacific Railroad for Nebraska show that the State has produced more than 315,000,000 bushels of grain and 5,000,000 tons of hay and forage crops. The single crop which is disappointing is potatoes. The report shows also that Nebraska is coming to be one of the largest growers of alfalfa.

The town council of Moscow is discussing the proposal to ask the Government's permission to import American street-car rails, which are badly needed in consequence of the failure of Russian firms to supply the heavy rails required by the new lines. The failure is due to lack of proper machinery.

General.

A plan has been drawn in Chicago for the creation of a national arbitration tribunal, named by the President, to which shall be submitted all disputes between capital and labor. Copies of this have been sent to leading business men, manufacturers, and labor leaders, with a request for suggestions and amendments. The bill provides for a commission of six members at a salary of $8,000 a year, with the Secretary of Commerce and Labor as an ex-officio member and chairman. The headquarters of the tribunal are to be in Washington. The proposed bill provides that the tribunal determine all cases either in the affirmative or negative, on the claims of both parties. It also provides that there shall be no strike or lockout pending the investigation, and both parties to the controversy are to resume and continue their former relations.

No change will be made in the name of the Protestant Episcopal Church in the immediate future, and the next Triennial Council of that Church will take no action on the movement for a change in the name of the Church. The statistics in regard to the vote on change of name are as follows: The vote in favor of changing at once was: Bishops, 22; clergymen, 940; laity, 64,883. The vote against any change was: Bishops, 21; clergy, 384; laity, 92,055. The vote which favored an ultimate change, but did not desire it at this time, was 12 bishops, 596 clergy, and 92,342 laymen.

One hundred and two miles of track, composing what is known as the Ogden-Lucien cut-off, across Great Salt Lake, was formally declared completed on Thanksgiving Day. This track has cost the Southern Pacific Railroad Company several millions of dollars, but, it is estimated, will result in a saving of more than $500,000 yearly in operating expenses, as well as reducing the running time between Ogden and the Pacific coast by two hours. The train which passed over the new line on that day carried representatives of many important railroads throughout the country.

President Eliot of Harvard University has been invited to address the Boston Central Labor Union some Sunday afternoon, suitable to his own convenience. This invitation was extended by a unanimous vote with the understanding that it would be accepted. Much significance is attached to this, since President Eliot generally is regarded by labor organizations as antagonistic to their policy, and frequently comes in for criticism at their meetings because of his utterances on the "strike-breaker" or "scab" question.

The "ninety-seven-cent stamp book," with its ninety-six cents' worth of stamps, waxed paper, and covers, together with the books of all denominations, netted a profit in the year of $67,998. The Government sold nearly ten million books, an increase of forty per cent over the year before.

The money taken from dead letters for which no owners could be found and that realized from the auction sale of unclaimed articles accumulated in the Dead Letter Office in Washington reached $20,961 last year.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

The Semi-annual Lecture.

We give below a condensed statement of Mr. Kimball's lecture delivered before a splendid audience in Symphony Hall, Boston, December 8. The lecturer was introduced by Prof. Hermann S. Hering, First Reader of the Mother Church, who said,—

Friends:—The lecture you have been invited to hear this evening is the regular semi-annual public lecture given under the auspices of The First Church of Christ, Scientist, in Boston, the Mother Church of the denomination, for the purpose of presenting an authoritative statement of the fundamental teachings of Christian Science, its practice and results, and of correcting any existing misapprehensions thereof.

Christian Science in its essentials is extremely simple, its spirit being readily grasped even by children, but its teachings concerning all the various theological, medical, and educational questions, and its explanation of the innumerable problems of existence, are so exhaustive and comprehensive, when considered in their entirety, that in a single lecture it is quite impossible to do more than touch on the most important points; but the fundamentals will be presented, and if any of them appeal to you as reasonable, desirable, or even promising, you can readily obtain fuller information by further inquiry.

I can tell you from my own experience as a former physical scientist and lay student of *materia medica* and theology, that you can prove for yourselves, through honest investigation, study, and application, the truth of every declaration made here to-night, as well as the entire statement of Christian Science as contained in Mrs. Eddy's writings.

You will also be told something of the Discoverer and Founder of Christian Science, that noble New England woman for whom hundreds of thousands of beneficiaries feel such genuine gratitude, who has devoted her whole life and energy to disclosing to suffering humanity the knowledge and understanding of the true God and His Christ, which knowledge is life eternal, and brings to them health, happiness, and holiness.

The gentleman who will address you to-night is one who is eminently qualified to speak with conviction and authority. About seventeen years ago he was a very successful business man, but owing to ill health, being in fact on the very brink of the grave, he was obliged to retire. At this point Christian Science healed him and he has since devoted his entire time to Christian Science work. He is a personal student of Mrs. Eddy, has occupied successfully the various positions of practitioner, teacher, Reader, lecturer; and for the last five years has been the teacher of Christian Science in the Massachusetts Metaphysical College. You can therefore rest assured that what he tells you to-night will be spoken with authority and is the result of wide experience. I bespeak for him your calm, impartial, and intelligent attention.

It is with much pleasure that I introduce to you the lecturer of the evening, Mr. Edward A. Kimball, C.S.D., of Chicago.

Mr. Kimball said in part,—

In order that you may most readily appreciate the import of this address, you are asked to contemplate for a moment the scene upon which Christian Science has made its entrance.

The history of the human race may be classified as a tragedy. If it were to be epitomized, then one long monotone of protest against the misery, one pitiful appeal to God for relief, and one final moan of defeat would tell the story. There are a few flowers, a little sunshine perhaps, but beyond the foreground is the vista at the end of which is the grave—and mystery.

The people of earth, unreconciled to what seems to be an intolerable fate, have turned in every conceivable direction in their effort for deliverance from evil, and they have failed, thus far, to find the way. There are still the same tears, broken hearts, beds of pain,—the same havoc of outrageous fortune. Men continue to live, sicken, and die according to a philosophy of doom which declares there is no salvation this side of the grave, no way out of the hell on earth but to die out.

The Need of a Better Way.

To this same stricken people, and in this very age, comes Christian Science to declare that they can get out, naturally, lawfully, scientifically; it comes as a message of hope and promise to a race which is in supreme need.

We submit the proposition that humanity which prays for different results should also consistently pray for and expect a different way, and we contend that Christian Science, which promises and produces the prayed-for results, cannot logically be rejected simply because it also discloses a different way.

By means of literature, teachers, and lecturers, explanation has been made concerning the points of agreement between Christian Science and other forms of religious and scientific belief, but it is my purpose to-night to emphasize the fundamental differences also, and thus enable you to make comparisons for yourselves.

It is self-evident that certain things have existence. It is generally known that they have cause, origin, and basis, by reason of which they exist. Some people declare the cause to be a blind force; others that it is some sort of intelligence, and theology affirms that it is a conscious intelligence or entity which many designate God.

A concensus of enlightened belief concerning God, is that He is one supreme, infinite, self existent, all-inclusive, spiritual, individual, conscious Being,—the sole Creator of all that has actual existence. Also that God is good, Life, Truth, Love, omnipresent, omniscient, and omnipotent; that He is the only law-maker, and holds in His grasp the destiny of all men.

Christian Scientists subscribe to all these postulates without reserve, and yet our religion is in some respects quite different from that of others. Why? Why different if we agree on these essentials?

The difference is in the amplification and application. It is in this respect that most religious sects and systems diverge from each other. There are hundreds of these sects.

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

There are one hundred and forty Christian sects alone, many of which have been in the most violent antagonism towards each other. There is, therefore, no unity of religious belief with which we can compare Christian Science, but I shall explain wherein it is different from all others.

In her effort to enlarge the human concept of the infinite God, Mrs. Eddy has added somewhat to the technical definitions of Deity, and affirms, among other things, that God is divine Mind and that this Mind is good.

God is either Mind or mindless. The Mind that is God, and which includes all wisdom, intelligence, and science, is good. This Mind is the antipode of what the Bible calls the "carnal mind," or that which Mrs. Eddy designates "mortal mind," the mind of sin, which is enmity against God.

The Mind which was in Christ.

The Science of Mind declares that to the extent that man is governed by the divine Mind, he will manifest perfection, health, life, welfare, prosperity,—the ampleness and completeness of harmonious existence. It was this Mind which was also in Christ; which cancelled temptation and sin, healed the sick, raised the dead, raised Jesus from the dead, and overcame "the world, the flesh, and the devil." "To be carnally minded is death." Sin and disease are the offspring of this carnal mind; they are no part of the nature or of the procurement of the divine Mind.

God is good, in nature, design, power, action, substance, and operation. All that He has made and done is good. His laws are good, and He has already done everything that is essential to the supreme welfare of man.

Conversely we repudiate the effort to solve the mystery of evil by assuming that any part of it has been instituted by God, or that He needs to involve Himself in or with evil in any way or for any purpose, or that He does so involve Himself.

God is not only Life, but has ordained life and is the law of life and health for man. The theology of Christian Science is consistently parallel throughout with this declaration. It also declares that God has created man that he might have being, and not for the purpose of inflicting upon him inveterate agony and disease.

We repudiate all assumption that His law is the law of sin and death. Sickness is contrary to God, and God is contrary to it. God is the natural healer of the sick, and is able, willing, and ever ready to save mortals from the evils imposed upon them by an utterly perverted sense of existence.

The supposition that God has induced the pangs and horrors of disease and death engenders a fear of Him,—a fear and alarm concerning the author and the law and the destiny of human life; a fear concerning the very foundations of existence. We Christian Scientists are no longer afraid of God or of His heaven, which we are learning is within us to the extent that we are governed by the Mind which was in Christ.

God no Longer Unknown.

In Christian Science there is no longer an unknown God. No longer do the distorted graven images of human thought mask or hide from us the real God, who is altogether lovely, who is our dearest friend, whose help is ever available, whose grace is sufficient, and who created man that he might have life and peace. Christian Science promises to lead mankind to God through the highways of health and life instead of death. It promises to humanity, in the name of God, not the doubtful felicity of the grave, but a sensible, practical dispensation of good, now. It promises to incline men naturally nd willingly to a more spiritual life, which will satisfy them; and it promises that as they wend their way to a sure heaven this Christ-truth will be the Christ way-shower through all the mazes and besetments of an evil sense and an evil age, until, with undeviating trust and confidence, they abide under the shadow of the Almighty.

We disagree with others concerning the nature of evil. Mrs. Eddy knows full well that "Whatsoever a man soweth, that shall he also reap," and that sin inevitably imposes suffering on its victim; nevertheless, she declares that sin, sickness, and kindred evils are unreal, meaning thereby that they belong in the realm of the temporal, illegitimate, abnormal. They are the paraphernalia of mortal belief or the carnal mind,—unlawful, unrighteous, and unnecessary,—monstrosities of unnatural existence.

The world generally believes that evil is an enduring entity having a basis in truth; that it is as actual and substantial as good, or God, and that its indestructible immortality will be manifested in an eternal hell and devil. If this were true, and evil as an entity were consequently indestructible, then the entreaty of Jesus to resist and overcome it must needs have been a mockery. But, on the contrary, the career of Jesus is in demonstration of the power of *something* to abolish evil, its pretense and presence. Is it a thinkable proposition that our Master sought to equip a mortal man to destroy something that God has made, and is therefore a part of infinity? Do Christ and Christianity ask of you something that cannot be done?

Picture for a moment a family which includes a violently insane person. Ask the other members if they consider the insanity real, and the answer will be "Real! why of course it is real, it is the only thing in sight most of the time." Now suppose that this person is cured of insanity; what becomes of it? It is now a nonentity is it not? Was it at any time other than an abnormity, a deranged sense of that which is an entity and which is normal?

Christian Science explains that sickness is of a kindred unreal nature and is to be obliterated by the same process whereby everything that has no right to exist or continue is to become extinct through Christ and Christianity.

If insanity and sickness are real, then God, who includes all reality, must have made them. If He made them and bestows or sends them, then it is a sin to try to get well or to want to get well.

Complete Salvation through Christ.

Concerning the divine Christ there is among men much conflict of opinion. Most Christians believe he was the Son of God, and was divinely commissioned; that his mission was to preach the gospel of reform and regeneration, to set forth the way and promise of salvation after death, by reason of his mediatorial atonement. It is believed that, incidentally, he did many mighty works. It is also affirmed that he is the only Messiah or Saviour, and that his way is the only way of salvation.

Christian Scientists believe all this, and yet their sense of Christianity differs from that of all others. We know that Christ was and is divine; is our Saviour or Messiah; is the "Way," and we can prove it. We are confident that when this way is scientifically understood and becomes scientifically operative, it will manifest its saving efficacy by transforming the race.

We believe that Christ Jesus was the representative of God to humanity; that he was the voice of wisdom and intelligence, and that he knew more about God, man, and the universe than all other people combined. We believe he came to do the will of God and to fulfil law. What God, and what law? The God that is good and whose law is the law of life, health, harmony, and holiness. We believe he came "to seek and to save that which was lost," and that he found that "which was lost" when he found the sinner and the sick man. We believe that he came to "destroy the works of the devil," and that he was "about his Father's business" while he was doing it. Unless he was destroying the works of the devil when he healed the

Digitized by Google

sick, there must have been a time when he was not in the fulfilment of his mission, for he gave much attention to the cure of disease, and himself declared that such healing was a part of his "works." We believe this healing was natural and lawful: that all his works were done in exquisite accord with the eternal law of a changeless God. We believe that the teaching of Christian Science through Mrs. Eddy removes the ministry of Jesus from the realm of mystery and brings it within the range of law, order, and a scientific *modus operandi*. We believe that God and His Christ are too wise to be unlawful or to procure or induce or make use of that which is in contravention of law. We believe that the unlimited divine volition does not need to upset or undo any natural law in order to do good.

We believe that the Christ ministry is an object-lesson in demonstration of the immanent, ever-present, and ever-available power of Spirit, God, to destroy evil. We believe that Jesus manifested the supremacy of spiritual law which is the law of life, and its power over the fictitious law of sin and death.

An Un-mysterious Salvation.

Christian Science teaches that this proof,—the deeds, the achieved results, the mighty works,—is to illustrate the way of salvation to them that need salvation, and that Christian salvation is for the sick man as well as the sinner. All this is different from the belief that his work was miraculous, meaning that it was mysterious and in the way of intervention or violation of law and nature.

Jesus never intimated that his work was mysterious. On the contrary he indicated the universal nature of the divine animus by declaring: "These works shall ye do." The contrary beliefs of men which have filtered their way down through the dark ages lead to the most absurd conclusions and tax to the utmost the credulity of man. They presuppose that, after promising for one thousand years that a Messiah should come to save a suffering world, God arranged and carried out a plan of which all future generations should have a right to say, "It is an impenetrable mystery." They require people to believe that Jesus largely devoted himself to mighty works which were of no utility to subsequent generations of men, and which have exhausted their service when people are induced to believe that it was according to the divine nature for God to heal the sick man in one age and refuse or neglect to heal him in a subsequent age. They require men to believe that God and Christ, who were willing to save that which was lost, limited that salvation to the sinner and discriminated against the sick man. They require us to split the ministry of Christ Jesus in two; decide that the healing work was without scientific or universal avail; that it was nothing we can possibly understand; and lastly that Jesus did not mean what he said when he declared that Christians who understood his Christianity must preach the Gospel and heal the sick and that they *could do it*. They require us to repudiate the works of Jesus as the legitimate interpreters of his mission and his words. They require us to believe that in saying "heal the sick," he who shows the way asks us to heal with drugs, a way which is contrary to his way.

If instead of regarding evil as a mysterious entity, men had understood the Science which detects and correctly designates the phenomena of evil, such misconceptions of Christian salvation would long since have been dissipated.

Sin and disease are in immediate kinship. They are allied as cause and effect. The Scriptural statement that "through sin came death" is scientific. Every physician knows, or ought to know, that anger will arrest digestion, that grief, revenge, and envy will impair the integrity of the body.

If Jesus came to save from one, then he came to save from both. He could not possibly save from one without saving from the other. He clearly indicated this to those who heard though they could not understand.

When Jesus healed the sick did he destroy the work of God or devil? Was it the mission of Jesus to destroy the work of God? If sickness is the work of devil, then is God for or against it? If God is against and contrary to it, are His laws for or against it? If His laws are against it are they available to man? Has God created a man who is without possible recourse to His law and power? If He has, then why pray for an impossibility?

The Key to the Scriptures.

Mrs. Eddy answers all these questions and hundreds of others in her text-book, "Science and Health with Key to the Scriptures," and thereby reconciles reason to God, and dispels the mystery which has obscured the science of Life.

People throughout all the Christian centuries have differed concerning the meaning of the Bible, indeed, in behalf of the quarrel about the Bible and of the conflict of creeds, millions have gone down to violent death. Our tenets declare, "We take the inspired Word of the Bible as our sufficient guide to eternal life." Like many others, we believe that the Bible has not been dictated word for word by God. We believe with Paul that the things of God and the real substance of the Bible must be spiritually discerned.

Most people have commentaries, or helps to the study of the Bible. We have a commentary, or Key, in our text-book. With historic and characteristic instinct the people whose love is for their own alone do not like ours, and even say it is dangerous. I will not linger long to discuss the merits of this book now. Since studying the Bible in its light, we have no desire to kill any one or quarrel with any one about religion. We have learned to love the right of every man to strive for heaven according to his own inspiration. We are taught that it is abominable in the sight of God and a decent manhood to denounce, persecute, or molest a man who does not agree with our religious propaganda.

This book encourages us to live according to the Commandments and the Sermon on the Mount, and in obedience to the highest conceivable moral standard. It teaches us to be loving, charitable, merciful, meek, and pure, and as followers of Christ Jesus to obey every mandate of God and Christ, even to the extent of forsaking sin, preaching the gospel, and healing the sick. We are taught to love and to rely on one infinitely good God, who is Love; and that we may trust Him to the uttermost; indeed, we are led to believe we cannot trust God too much nor expect too much from infinite Love. We are taught to rely on the supremacy of Spirit and to know that no other reliance and no lack of reliance is acceptable to God or of avail to mortals. We are taught that the mission of Christ is in demonstration of an un-mysterious salvation, and that we may expect more and gain more through Christ than if we were to minimize the scope and efficacy of his mission.

If to be thus obedient, or to be too explicit in obedience, be dangerous, then we are indeed the most dangerous people that encumber the earth.

Read all the books on philosophy since time began and they will not equip you to cure one case of fibroid tumor. Read all the commentaries, sermons, and books on theology, and they will not enable you to heal one case of locomotor ataxia in its worst form. Read all the medical books and all other books and you cannot, as a result thereof, cure one instance of malignant cancer. This book Science and Health has taught people how to cure hundreds of such cases, and they have done it.

Man's Lawful Dominion.

We differ concerning the nature of man. The Bible declares that God made man in His own image and likeness and gave him dominion over all the earth. Do you know of any such man? No. Is there something wrong

Digitized by Google

with God or with the man? The trouble is with man, and he confesses it by declaring himself a fallen man (fallen from some high estate), and by his ceaseless prayer and effort to get back. Theology and philosophy in general declare that he cannot get back except through the door of death.

Jesus' theology was indeed divine. He was himself a consummate theologian. He ushered Christianity upon the scene of humanity by means of preaching and healing. His works were in demonstration of his theology. They were essentially incidental to his Christianity, and the same works are essential signs of Christianity now.

In comparing Christian Science with other systems of curative endeavor, I remind you first that there are many such systems and much disagreement concerning theory and practice. For example: one school of medical practice advocates the use on the average of one hundred million times as much medicine as is administered by the other school.

Conflicting Medical Systems.

I shall speak of several particulars in which Christian Science is fundamentally different from all other systems.

The matter physician holds to the theory that disease is natural and inevitable; that although he may in some instances prevent or cure, nevertheless disease, *per se*, is sure to master him and his patient ultimately. By way of admission of the inadequacy of the system to cope with disease, he exhibits a long list of fatal or incurable types thereof. He therefore advances to the conflict with sickness with more or less uncertainty as to his natural right or ability to succeed.

Christian Science declares that disease is unnatural and should be resisted, and repudiates the theory that, from a scientific standpoint, disease is incurable. Jesus, the only perfect healer, actually demolished the theory by healing the multitude of *all manner of diseases*.

The practice of Christian Science is in its infancy. No pretence is made that such proficiency and efficiency have been attained by practitioners as to preclude any failure, but already this practice has resulted in the cure of practically every disease that is included in the long list of incurables. In other words, Christian Science can heal all diseases that drugs have ever healed *and all that drugs have never healed;* hence the Christian Scientist contemplates sickness as something he has a right to cure and ought to be able to cure.

The medical profession have practically united in the admission that "concerning the essence or primary cause of disease little is known; indeed, nothing at all." It is generally assumed, however, that matter alone is causation. There is an exception to the rule in the case of homœopathy, which designates certain abnormal and unrighteous mental conditions—sin, etc.—as causative, and affirms that anger arrests digestion; that grief, sorrow, etc., impair or degrade the physical condition. According to Christian Science the enigma of the ages; namely, What is the primary cause of disease? can be solved only by entering the mental realm.

Did you ever see a person turn pale because of fear? Have you known a person to turn red because of anger? Have you ever heard that one has died because of fright? Do you not know that the thing which happens is this: that such mental activities operate as causation; affect the nervous and circulatory systems and induce congestion, —the evidence of physical impairment or degeneracy?

It must be, surely, that you know that mental conditions affect the body, and because you know this and should act accordingly, I ask if there is any scientific relationship between grief or jealousy as a cause and a mud bath as a cure. If you had a patient whose incorrigible hatred had finally caused liver trouble, and the medical books prescribed a mustard plaster, would you apply the plaster to the liver which is innocent of offence, or to the hatred which is the sole cause?

If the case is to be cured at all, ought not the remedy to reach the cause and cancel it? Do you think that a plaster will do it? If not, then consider the Mind which was in Christ and which *transforms* man by means of righteousness. Consider the curative system of Christ Jesus, which clearly recognized sin as a cause of sickness and administered the emollient of holiness which divine Love has prepared in the laboratory of eternal Life.

The Fictitious Nature of Fear.

In consequence of ignorance and superstition, the universal mortal man is afraid of the very foundation of his being. He is afraid of God and heaven, he is afraid of devil and hell; afraid of his own body, of everything he does and has, and of all that exists on earth. This universal fear constitutes a universal and primary cause of disease, and the conclusion cannot be resisted that the curative system which fails to recognize it, cannot intelligently abolish its effects.

There are two books in the world which entreat humanity to know that fear is illegitimate and can be "cast out." These books are the Bible and Science and Health. The latter, with much elaboration, explains the fabulous nature of fear and gives the reason and rule for its elimination.

Will not those of you who are Christians consider as to whether or not it would have been a mockery for the Saviour of the world compassionately to implore man to resist fear if it really has a scientific, inherent right to infest humanity, and therefore is irresistible?

The matter physician declares that the proper therapeutic or curative agency is to be found in matter or in the use of material means.

The drugging system did not originate in a civilized, enlightened, or Christian age. According to its own history of itself, it is the offspring of paganism. Since its birth, forty centuries ago, men have endeavored to reduce the system and practice to a science, and they not only admit they have failed, but declare that the practice is largely tentative, by way of expediency; is experimental, or accidental.

In behalf of the drugging theory mankind has literally swallowed everything on earth, hoping to placate or obstruct disease, and is still sicker and has more diseases than ever before. Concerning the theory and practice of four thousand years, it is to be said that nearly all of it is condemned by the practice and theory of to-day, and it is prophetically expected by the physician of this generation that his practice and methods will be repudiated by the next generation. The "History of Four Thousand years of Medicine" does not disclose one single element of pure science. Moreover, there is scarcely a postulate that has been allowed to remain unimpeached or undisturbed.

Now comes the utterance of Christian Science, which is the Science of Mind. It declares that everything you have or know; all that means religion, politics, art, music, sociology, education finance, business, government, the daily life and minutiæ of your existence; all is in consequence of thought. Thought ruptures empires, wages war, obliterates nations. Thought is the greatest potentiality that the mortal knows of or is moved by. The stage of human existence which Oliver Wendell Holmes calls a "disorder" has been desolated by evil mental conditions and must become normal and righteous through the "transformation of Mind." Mindless matter is not equal to the task. It has no intelligence of its own and an all-wise God needs not to filter Himself through non-intelligence in order to accomplish for a sick man all that he needs or to which he is entitled.

We think the Bible is to be credited, wherein it indicates that God is the natural healer of all our diseases, and we know that this God is Mind and not matter.

Digitized by Google

How did Jesus,—the only perfect healer whom history affords,—how did he heal the sick? Medicine had been in use for twenty centuries. Was it Mind, or matter? Christianity would collapse in the admission that it was not Mind.

It is urged that all this is transcendental because contrary to the senses. So is the hope of immortality, so is the belief in God and heaven. The senses testify to the extinction of man by death and the annihilation of his individuality, and they do not afford an atom of evidence of God as Spirit.

It is declared that Christian Science practice is intangible and is objectionable because there is no visible or palpable animus or *modus operandi*. Do you know why the earth revolves, why your heart beats, why you can wink your eyes, or do anything? No. Does any physical scientist understand the primary impulsion of your every act? No, none on earth ever knew. I might spend years in bringing to your attention the every-day things of your life, and in proving to you that you do not understand the *modus operandi* of one in a thousand.

Christian Science is Tangible.

Christian Scientists who have been the first to heal malignant cancers, know more about the *modus*, than you know about the circulation of the blood or your ability to walk.

Why did it not come sooner? It did come sooner. Jesus understood the healing Christianity; declared and demonstrated it. The people did not fully understand him and he told them they could not, but he prophetically declared the time will come when "ye shall know the truth, and the truth shall make you free." Since then men have prayed that it might be revealed, and now we believe it has been revealed.

Why did not everything come sooner? Why did not Adam have a telephone, a steamship, a piano, and the thousand other things of to-day? Simply because he didn't know enough. In consequence of law, substance, and possibility, all these were possible to him if he had only known enough to make the discovery. The Principle and rule of Christian Science Mind-healing were before Adam. They only needed to be discovered and applied.

After this brief and fragmentary allusion to these differences I ask what think you of the difference?

It really means the supremacy of God and the impotence of error. It means life and health instead of sickness and doom. It means joy instead of tears. It means a lawful Christ in demonstration of a palpable salvation for a man who ought to be like his Maker.

Mrs. Eddy's Plea for God.

For a third of a century Mrs. Eddy has been pleading with mankind for the recognition of its right to life, health, and holiness according to the will of God. She has insisted that God is the natural healer of the sick, and that disease is contrary to God and His will. She has discovered and made known the Science of Christian healing and has set forth the rule whereby humanity is to obtain mastery over disease.

On every one who has ever healed the sick through and by means of divine power in attestation of the supremacy of spiritual law, the world has bestowed the antagonism and hatred which materialism ever exhibits toward the spiritually minded; indeed, there has scarcely been a reformer since the day of Abel who has not been hated, reviled, stoned, or crucified; a martyr to his own ministry and mission.

In view of this inveterate propensity of the human mind to persecute the prophets and to resist that which makes for its own moral and spiritual welfare, it is not strange that with consistent industry it has given itself up to misrepresentation and defamation of Christian Science and its works, and of the Leader of this Cause.

It seems futile to repine or demur because of this ruthless habit, and it is useless for us to protest or contend against the baseless disposition to do injury to us and to our Leader. Mrs. Eddy has specifically denied all the inventions of evil and the perverted statements of fact, and there is but one sufficient, adequate course for her and for us to pursue. Her life, past and present—the actual facts and activities of her daily existence—constitute an imperishably righteous answer, and one that will stand as answer forever.

There is no other way, and there need be no other way, for this dignified woman to do, for one who is entrenched in the rectitude of her own pure living, but to depend on the present and ultimate recognition by the world of the great value of her work for her justification. The lofty character of her deeds and impulses, and the long-continued sacrifices which she has endured in order that her mission might live, these speak for her.

Every revelation of truth, every scientific discovery, has found its way to humanity through some man, woman, or child. It so happened that Christian Science was discovered, assimilated, and disclosed by a woman, and forthwith, and since then, there have been many objections, all of which can be congregated in one common belief that woman is not fit to know the truth. It is not strange that this barbaric belief that mental inferiority inheres naturally in woman should have penetrated so many centuries, but it is amazing that this generation needs yet to learn the scientific fact that there is no reason, mental, moral, or material; physical, metaphysical, or spiritual, why woman may not know anything that is true, and know it as soon as a man and as well as a man.

A Noble Womanhood.

I feel that I need not stand long before a New England audience to debate the question as to whether or no its grand women constitute fit ministers of God to them that sin and mourn and suffer. I know it is expected that a chivalrous man will speak in gracious terms of gracious womanhood, but I rejoice to know that the women I mean need not, nor do they thrive on unnutritious compliment. Because of the sublimity of inspiration, fidelity, courage, and character they stand on exalted heights which they have achieved for themselves.

It has been my good fortune to know a splendid womanhood of whom I am greatly enamored, but I never knew one who was so meek, loving, and humble as is the Leader of our Cause. I never knew one who seemed so intent on knowing the will of God or so glad and satisfied to do that will. I never knew one who was so honest, so charitable, just, or kind. Her many years of consecrated experience have ripened into Godly reverence for and devotion to the daily life that is in imitation of Christ. Her chief ambition seems to be to battle for humanity against sin and disease, and to continue without reproach before God and man.

Some day the world will know all this and render tardy justice, and meanwhile the tender, loving woman knoweth that a million people, many of them once dying, who have been rescued from unspeakable depths, and who know that for a generation she has stood as the lone rock stands far out against an angry sea, are thankful that in spite of every contention against her she has been faithful to her trust.

Notice.—Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20, 1904.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Amendment to By-law.

Article XVIII., Sect 6, has been amended to read as follows:—

A SINGLE FIELD OF LABOR. Sect. 6. A loyal teacher of Christian Science shall take entire charge of his pupils. He shall not teach a loyal teacher's pupil Christian Science, except he be a teacher in the Board of Education, nor have more than one field for his labor. His pupils shall not trouble Mrs. Eddy with their affairs. Students may visit each others' churches, and by invitation may attend each others' associations.

Courts Sustain Christian Science Practice.

THE utter futility of attempts to curtail individual liberty through legislative enactment is once more apparent in the field of medical legislation.

In 1901, the Indiana legislature passed a bill which was introduced and its passage urged by the physicians of the state, for the avowed purpose of putting a stop to the practice of Christian Science in that state. After the bill became a law, Christian Scientists continued to practise as usual and some considerable time elapsed before any attempt to interfere actively with them was made. Finally, however, Mrs. Emma J. Ehrit, a Christian Scientist residing in Martin County, was indicted by the Grand Jury of that county, for "practising medicine without a license." A few days ago she was tried before a jury, and found not guilty.

We are indebted to Hon. Clarence A. Buskirk of Princeton, Ind., for the following statement of facts in connection with the trial of Mrs. Ehrit.

"The evidence showed that she had silently prayed for the recovery of the sick, etc., according to Christian Science practice, had not professed any knowledge or skill in *materia medica,* etc., had not physically manipulated the patient in any way or used any material means or methods whatever; but had appealed with spiritual understanding to God as the Great Physician. She retained McCormick & Gilkison, of the Martin County Bar, and the undersigned, as her attorneys. Our contention was that the medical laws of Indiana, under the guarantees of our state constitution in favor of religious liberty, cannot be construed to mean that the clergyman, friend, or Christian Science practitioner who prays for the sick, religiously meditates in behalf of the sick, and offers religious advice and hope, in good faith, disclaiming any knowledge or skill in *materia medica,* and employing no material means or methods, trusting solely to God for the recovery of the sick, is within the term 'practising medicine' as used in the statute. We were able to show, by the examination requirements as to proficiency of applicants in *materia medica,* etc., adopted by the State Medical Board, that this is the view taken by that Board, inasmuch as the statute expressly provides that the Board shall not discriminate between different systems of healing the sick, so far as those systems constitute the practice of medicine."

Another case of interest to Christian Scientists is that of The State *v.* Bishop, in which the Supreme Court of Ohio recently decided that the practice of Christian Science is not in violation of any statute of that state. M.

"Peace on Earth."

As on the sea of Galilee,
The Christ is whispering "Peace."
WHITTIER.

IN the introduction to his work on "The Early Days of Christianity," Canon Farrar presents a picture of the seething tumult of the Roman world in the first century, which would furnish a fitting counterpart to Dante's Inferno.

The authority of the Cæsars had so far suppressed organized opposition as to have effected well-nigh undisputed dominion throughout the world, but upon this background of seeming tranquillity history has projected an unparalleled contention of personal passions and interests. The clash of philosophical and religious ideas was equally marked with that of worldly ambitions. The babel of Athens and Jerusalem was no less confusing than that of the City of the Seven Hills, and all these external dissensions were but the phenomena of a discord within, which made the age one of universal unrest. It was in the midst of this turmoil of sinful and distracted mortal sense that there was heard the angelic carol of "Peace on earth!"

How startling the incongruity! and yet these heaven-born words found fulfilment in the gentle heart of the virgin mother and the sweet face of her sleeping babe, and in all his after trials and vicissitudes, from the cradle to the cross, the angel song lingered with the Christ-child. In the "peace of God" he found refuge and strength, and when his work was "finished," he gave his loyal followers this benediction, "My peace I leave with you."

As one recalls the tragedy of the Master's earthly experience, and the continuous struggle with aggressive error which has attended the Christ-life in all the subsequent years, he is led to see that the peace which gave Jesus such repose, and which he bequeathed to all faithful hearts, does not mean escape from the necessity of a constant overcoming of evil. The "peace of God" is not a sweet sense of inactivity. With torpid indifference to its spiritual interests, weary humanity has ever coveted exemption from struggle, but Jesus undeceived his disciples regarding this matter and said to them frankly, "Think not that I am come to send peace on earth, I came not to send peace but a sword." "They shall deliver you up to councils, and in the synagogues you shall be beaten, . . . and ye shall be hated of all men for my name's sake. . . . These things I have spoken unto you that ye might have peace. In the world ye shall have tribulation: but be of good cheer; I have overcome the world." He thus taught very explicitly that there can be no peaceful "adjustment by compromise" between right and wrong in human consciousness. "Even Christ could not reconcile truth to error, for they are irreconcilable" (Science and Health, p. 19).

We are to realize spiritual ascent and thus find true peace only as we address ourselves to the serious task of breaking our peace with error. Christian Science gives distinct emphasis to this point, and its guidance and stimulus to intelligent human endeavor explains, in part, its practical helpfulness to mankind. Peace does not inhere in human belief or human conditions, but in spiritual understanding. It is the fragrant flame within the sanctuary of a heart that is in conscious unity with God,—a unity which is undisturbed because it cannot be reached by the antagonism of the world, and to this Jesus referred when he said, "Rejoice not that the spirits are subject unto you, but rather rejoice because your names are written in heaven." "The calm

Digitized by Google

and exalted thought is given understanding, and is at peace" (Science and Health, p. 506).

Belief in materiality has obscured this sense of oneness, because both in its declaration and its phenomena it embraces that which is unlike God. The absence of peace in the heart, the home, or the church can thus be readily explained. If the Master be not with us in life's tempests, the waves are not stilled.

In Christian Science we come to apprehend as never before that dis ease and unrest are the inseparable companions of falsity, while "Truth imparts its own true peace and permanence" (Science and Health, p. 516). When with the "Mind that was in Christ Jesus" we come to know our Father-God as omnipresent Love, we part with anxious thought, and are undisturbed, even though called to push our prow into the very maelstroms of mortal sense. In the understanding of Truth we know with Paul, that "all things" are ours, and can sing with the poet,—

> The stars come nightly to the sky;
> The tidal wave unto the sea;
> Nor time, nor space, nor deep, nor high,
> Can keep my own away from me.

W.

The Spiritual Remedy.

Some years ago a very frank admission was made by a prominent member of the medical profession, to the effect that too much time was devoted to the study of pathology and morbid conditions, and too little to the investigation of the "life-forces." In addition to this, he counselled his confrères to discover if possible the relation of food to the bodily economy, evidently with the belief that the "life-forces" were evolved from matter. About the same time another eminent physician, in a paper read before a medical congress, expressed his doubt that disease either possesses or manifests entity. He condemned severely the absence of really progressive methods in the profession, and said, "The only notable change from the old mythologies is a mere change of costume. The deities now invoked are represented not by brazen images and carvings in stone, but by chemic symbols and hypothetic equations. The modern fane is a laboratory, the later altar a dissecting table. . . . The contradictory and opposite qualities and alleged power of drugs used as remedies, are a constant stumbling-block to students of medicine. The properties ascribed to them to-day are the opposite of those with which the same substances stood accredited twenty years ago."

Long ago, one who was blind from his birth received sight through the spiritual ministry of Jesus of Nazareth. Many were the questions asked of this erstwhile blind man: "How were thine eyes opened?" "What did he to thee?" etc. He freely admitted his ignorance of the power which had wrought his deliverance, but he clung to the fact which must then have meant more to him than all else: "Whereas I was blind, now I see!"

At the present time there are many who are forced to admit the wonderful healing which is done through Christian Science; they question, however, the position taken; viz., that the results are gained through Divine power, and they attempt to show that what is called "suggestion" is mainly responsible for the undeniable benefits received. Now, "suggestion" is admittedly based upon statements which would fail to convince were they directly addressed to the understanding of the individual, while the statements of truth found in Science and Health so satisfy the reason, as to awaken the spiritual sense of many who read them, and who are thereby healed without receiving treatment from any one, while thousands are led by these truth-statements to an ever-deepening sense of health and holiness.

It is granted by physicians that surprising physical results are sometimes secured where an unmedicated substance is administered to a patient who believes that he is taking a powerful remedy. In such cases the desired results would not follow if the patient knew what was employed. These experiments are, one and all, but altars erected to "The unknown God," the worshipers bowing before an empty fane.

In contrast with all this, the beneficiaries of Christian Science healing are soon able to answer intelligently the question: "What did he to thee?" Their confidence in this system lies in the fact that they are encouraged to know,—to understand,—what it is that heals; and what is more their confidence increases in the ratio of their understanding of the remedy. Even the little child soon learns that his healing comes from the "God who made both heaven and earth," and who never made evil. Even physical science declares that life alone produces life, but it has never undertaken to say what life is. Christian Science teaches that we must come to Life for life, for healing, for all; and it tells us that God alone is Life.

It is sweet at this Christmas-time to remember the one who came to tell the world that God may be known of all, and who gave in his healing work the proof that God was known to him. We learn from Christian Science how we, too, may know God, and in knowing Him find "the life which is life indeed,"—the remedy for all human ills. If we suffer from the poison of hate or fear, the antidote is ever at hand; if we are faint or weary, the manna is near. The true Life-force and nourishment is referred to by our Leader when she says,—

> Fed by Thy love divine we live,
> For Love alone is Life.
> (Miscellaneous Writings, p. 388.)

K.

A Letter to our Leader.

Our Revered Leader:—It is only right that I should faintly express my gratitude for the story your eyes told me last June, when they looked into mine with such unutterable love, and said, "I know all about you." Possibly you remember the day. Four of us stood in the rain to catch a glimpse of you; then as you passed again, came this thought of divine Love, borne by your eyes, changing my whole life. It helps me everywhere, but most at home, and in our jail work. One woman, even you in your busy life will be glad to hear of. Everything that money could do had been faithfully done, to free her from the drink habit,—Keeley cure and various hospitals; she became worse; her husband procured a divorce, and then she fell to a common drunkard; she was serving her second sentence in our county jail, when God gave me the chance to breathe to her a little of the love you gave me; and from the first treatment she has been well; and she and her dear ones—husband, daughter, and son—are learning daily a little more of the beauty of Science.

A Harvard graduate has been released from the same suffering in the same way. Another, who is one of my best helpers in the jail, was addicted to the morphine habit. I could hardly believe my own eyes at the change three days wrought in him. Whenever I meet suffering, and am able to realize the story your eyes told, the suffering is lifted.

With deepest gratitude your faithful follower.

Mrs. I. Eloise Cooper, Denver, Col.

P. S.—It is unjust to my dear husband that I have said not a word of him, for his whole heart is consecrated to Christian Science and he is constantly giving and doing to help people to understand its truth. Of all you have written I believe I am most grateful for the prayer, "Father-Mother God."—I. E. C.

Reply to the Rev. Mr. Field.

Mr. Editor:—I have before me a recent issue of the *Journal-Gazette,* in the columns of which my much admired friend, Rev. J. N. Field, unlimbers his heavy artillery, and makes war on Christian Science. To the Christian Scientist, Mr. Field's sermon is best epitomized by this couplet from an old and popular Scotch bard:—

> Did ye ever hear tell o' Jame Jamison's bonnet?
> 'Twas nae itsel', but the ornaments on it.

So with Mr. Field's sermon, the best part of it is the "ornaments on it;" *i.e.,* the good things he said about Christian Scientists and Christian Science.

Several days before the delivery of his sermon, while visiting in Fort Wayne, I met Mr. Field in the down-town district and at that time he declared his intention of delivering a sermon against Christian Science, and honestly presented his attitude by indicating that his method of procedure would be in the nature of a friendly salute, followed by a full broadside. At that time he said he intended to take some of the most positive statements from "Science and Health with Key to the Scriptures" by Reverend Mary Baker Eddy, and show that many of its statements were in total disallignment with the Scriptures. In reply to his remarks, I told him that if he would allow me to compare his chosen statements from Science and Health with the teachings of the Scriptures, that I would be glad to proclaim myself a good Baptist, if I could not reconcile every statement with those of the sacred pages of the Bible. After reading Mr. Field's sermon in the *Journal-Gazette,* I am perfectly willing to hold to my offer. Mr. Field has a decided misunderstanding of the true spiritual import of many of his passages selected from Science and Health, and it would be impossible to harmonize his conception of their meaning, with the correlative passage in the Scriptures; yet when comprehended in their full spiritual meaning, every one of his quoted passages can be logically harmonized with the Ten Commandments and the Sermon on the Mount. Even the sacred Scriptures may be made to seem inharmonious, incongruous, and contradictory, by quoting citations detached from their explanatory surroundings, after the method followed by Mr. Field in analyzing Science and Health.

It is plainly apparent, then, that an individual desiring to investigate Christian Science, cannot take even the statements of a beloved pastor as a finality on so great a theme, but must investigate for himself by honest, earnest, and just study.

I shall not attempt to answer in detail the condemnatory statements of Mr. Field against Christian Science, for the world needs love more than logic, and health and harmony more than harangue; and if Christian Science brings love, health, and harmony into the lives of suffering ones, as millions testify, it will by its own works answer all misrepresentation. However, I feel obliged to enter some strenuous counter-charges against some of the statements of our friend. In the first place, Mr. Field is hopelessly inconsistent in some of his assertions. He admits that Christian Scientists are one of the happiest, healthiest, and most harmonious bodies of Christians; that they are devout students of the Bible; zealous in good works, peaceful and inoffensive; good examples for Christians of other denominations, and then proceeds to execute the tree that bears such choice fruit because its leaves and roots do not quite suit his ideas. Our Master admonished us, "Every good tree bringeth forth good fruit," and "By their fruit ye shall know them." At another time, when his disciples found some who were not his followers, casting out devils in his name, and his disciples came to him with a complaint about them, Jesus commanded the disciples to let them alone and to offer no hindrance to their good work. The same principle of charity holds good to this hour.

Right here I would like to enter a protest against the term "Eddyism." The very first tenet in Christian Science is this: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." This sentence alone makes it self-evident that Christian Scientists are not followers of person, creed, or "ism," or "ology," and that there isn't any such thing as an Eddyist or Eddyism.

Again, Mr. Field says, "Christian Scientists cure by thought-power, or by making the patient believe there is nothing the matter with him." This statement would indicate that the whole *modus operandi* of Christian Science healing consisted simply in the blind use of human will-power and the curative operation of human thought, whereas Christian Science shows that it is the human, mortal thought that makes sick and the divine God thought that makes well. Paul said, "Present your bodies a living sacrifice, holy, acceptable unto God, . . . and be not conformed to this world: but be ye transformed by the renewing of your mind." Christian Scientists understand that this transformation means not only mental, moral, and spiritual, but physical as well. It is plainly evident, therefore, that true Christian Science healing consists in the scientific substitution of God's health-giving thoughts, for sick, sinning, erring, inharmonious thoughts of the human mind, and the consequent bodily transformation therefrom. Its fruits prove its theory.

As to Mr. Field's reference to the statement of Pundita Ramabai, that Christian Science is identical with the Hindu philosophy, which has been taught among her people for thousands of years, nothing could be further from the truth, nothing more unjust or more indicative of almost hopeless blindness as to the real, spiritual import of Christian Science teaching. One honest reading of the chapter on "Prayer," and on "Atonement and Eucharist," in Science and Health, the text-book on Christian Science, will convince even the prejudiced investigator that Christian Science is Christianly scientific and has no relation to the dreamy, vague, illogical premises of Oriental philosophy.

Again he makes the statement: "One of the most prominent physicians of this town has been called again and again to treat Christian Scientists, and even Christian Science healers." I am glad to give the public at least my own experience in this line, and that is during ten years' study and practice of Christian Science in my home, I have found Christian Science, rightly applied, equal to every emergency, and during all that time not a material remedy even of the simplest kind, or physician of any school whatever, has even entered my house. And I do not say this in an antagonistic sense, as being in opposition to physicians, but with a devout sense of gratitude to that infinite Intelligence which has enabled us to win the victory over all the ills of the flesh by spiritual power. It may be that some who termed themselves Christian Scientists felt this faith and understanding wanting in the hour of need and resorted to material means for aid, but the general average would not be one in thousands, and it would be as manifestly unjust to condemn Christian Science for the weakness of its followers as to condemn Christ and his teachings because Peter denied him and Judas betrayed him.

Then, too, as a counter-charge, the writer can give Mr. Field a list of many devout Baptists who were healed by Christian Science after noted physicians and all material remedies had failed.

But probably the most serious, unjust, and un-Christian misrepresentations in the whole discourse is the introduction therein of the following quotation from a sermon by Dr. A. C. Dixon of Boston:—

"Mrs. Eddy's press agent asserts that she is modesty personified, and this, too, after he has seen in one of her books the picture of Mrs. Eddy and of Jesus Christ, with a halo around the head of each." In making this statement Dr. Dixon referred to the book "Christ and Christmas," but

Digitized by Google

the picture to which he directs attention is not a portrait of Mrs. Eddy, and is not intended to be a portrait of her nor to represent her. Dr. Dixon further says that "In her autobiography, page 96, she classes herself with the Virgin Mary and with Christ himself, saying that no one else can take her place."

To offset this really wicked aspersion and misrepresentation as to the life, character, and mission of Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, I shall quote her own words from a few of her standard works. In her preface to Science and Health, page 9, she says of herself: "To-day, though rejoicing in some progress, she finds herself still a willing disciple at the heavenly gate, waiting for the Mind of Christ."

In February, 1895, the report was circulated by the *New York Herald* that Mrs. Eddy's followers believed her to be the second Christ. In answer to this uncalled-for and wicked canard, Mrs. Eddy prepared a statement for the *New York Herald*, a portion of which I quote below:—

"A despatch is given me, calling for an interview to answer for myself, 'Am I the second Christ?'

"Even the question shocks me. What I am is for God to declare in His infinite mercy. As it is I claim nothing more than that I am the discoverer and founder of Christian Science, and the blessing it has been to mankind which eternity enfolds.

. . . . . .

"My books and teachings maintain but one conclusion and statement of the Christ and the deification of mortals.

. . . . . .

"There was, is and never can be but one God, one Christ, one Jesus of Nazareth."

"If Christian Scientists find in my writings, teachings, and example a greater degree of this spirit than in others, they can justly declare it. But to think or speak of me in any manner as a Christ, is sacrilegious. Such a statement would not only be false, but the absolute antipode of Christian Science, and would savor more of heathenism, than of my doctrines."

One can hardly imagine a popular divine, belonging to the enlightened nineteenth century, residing in the supposed center of American culture, making such statements as those accredited to the Rev. Mr. Dixon. While assailing the modesty of Christian Science, Mr. Dixon has exposed his own direful lack.

But Christian Scientists are calmly and lovingly awaiting the hour of the development of Christian civilization, when there will be a fulfilment of the Master's command, "Judge not," and in the mean time are endeavoring to fulfil this admonition of their beloved Leader, Reverend Mary Baker Eddy, taken from page 444 of her book, "Science and Health with Key to the Scriptures:"—

"Students are advised, by the author, to be charitable and kind, not only toward differing forms of religion and medicine, but to those who hold these opinions. Let us be faithful in pointing the way through Christ, as we understand it; but let us also be careful always to 'judge righteous judgment,' and never to condemn rashly. 'Whosoever shall smite thee on thy right cheek, turn to him the other also.' If ecclesiastical sects or medical schools turn a deaf ear to the teachings of Christian Science, then part from these opponents as did Abraham, when he parted from Lot, and say in thy heart: 'Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren.'"

Fraternally,

WILLIAM BRADFORD DICKSON.

Fort Wayne Morning Journal-Gazette.

Wrong ever builds on quicksands, but the Right
To the firm center lays its moveless base.

JAMES RUSSELL LOWELL.

Testimonies of Healing.

I first heard favorably of Christian Science in April, 1896. At the time, I was in the employ of the Erie railroad as a station agent. I had always been a firm believer in the law of heredity, and supposed myself to be suffering under this law, my mother having passed away with consumption. Besides this, I was suffering from two physical injuries which I thought would remain with me as long as I lived. My right arm had been terribly wrenched in getting on a moving train, seven years before, and had become paralyzed up into the biceps muscle. I had consulted the best physicians and endured a great deal of suffering from this injury. I had recovered a partial use of hand and arm, but could not lift or carry any weight without causing myself great suffering. It was shrunken and remained cold all the time.

I also had an injury to my left eye of several years' standing, caused by a hot cinder being thrown into it from a locomotive. At the time of the accident, it gave me a terrible shock, and when removed by the family physician, left a scar. Two years after the accident, the eye and nerve leading to it became much inflamed and I consulted the best eye specialist I could find. He said there was scarcely any sight left in the eye and that the suffering was caused by the continued strain upon it. A pair of glasses were prescribed to remove this trouble, and they were worn constantly up to the time I began treatment in Christian Science.

A lady called at my office one day on business, and on noticing my physical condition, advised me to try Christian Science. I had, however, a preconceived notion of what Christian Science was, besides which, the years of drugging and constant intercourse with physicians had made me very partial to their way, although they had failed in my own case. Later on, I decided to try Christian Science, but resolved not to let any one know about my doing so. I wrote to a Buffalo practitioner, requesting her to take my case, bought Science and Health and commenced taking absent treatments. With the help received I was able to lay off my glasses and continue my work without any sense of discomfort to the eye, soon realizing that I could see a little. Each day I improved until I was finally healed, the scar even being removed from the eye. I then wrote my helper of the bondage I was in from the injured arm. Treatment was given and I soon found myself using it vigorously. In a short time it was so well I began playing ball, and played all the season of 1896, rejoicing in my new-found freedom. My general health was much improved, and in a short period I gained thirty pounds in weight. Shadows of the past disappeared, many sins were destroyed, and I found myself a new man.

In August, 1896, I had the privilege of receiving class instruction, and am a member of a branch church and also of the Mother Church in Boston. Seven years have passed and the good work done for me has never needed a repair. Sin is being overcome and I am so thankful, each day, to God, and to our Leader, Mrs. Eddy, who has revealed the way out of bondage, for sin-sick and tried humanity, also to my teacher who has patiently pointed the way, and to the practitioner who first told me of this wonderful Truth.—GEORGE C. WAITE, Buffalo, N. Y.

I am indeed very happy to be able to give a testimony today after an accident which happened to me lately.

Returning home the other evening after visiting some relations who are Christian Scientists and with whom I had gone through the lesson, "Unreality," I took the tram, and on getting in, told the conductor where to let me off. On arriving there, I went to get out, but evidently too soon, for hardly had my foot touched the ground, before, in some unaccountable manner, I fell over, and slid at full length

Digitized by Google

some feet along the paved foot path, without knowing how it happened. I heard the cries of the passengers, but my consciousness at that moment was so filled with the good thoughts I had learned in the lesson just before I started, that no suggestion of being hurt was present, and I did not even drop my book, Science and Health, which I had in my hand. Before the tram went on, I got up alone, feeling all right, and thankful to God for His care, and went home and passed a good night.

The following morning on awaking the thought came to me: To get so lightly over such an accident is certainly not possible, and when I put my foot to the ground my ankle pained in such a degree that fear got the upper hand and declared that I could never go to the office that day. There was a severe contusion on the arm that was under me when I fell, and with each movement there was a nasty throbbing pain in my shoulder-joint. The doctor would have called it strained sinews, a sprain, or something of that sort, and ordered lotions, bandages, etc.,—things that were well known to me in the old thought, but now I saw the time had come when I would have to do my own work, and that meant giving an earnest trial to what I had learned during my two years' adherence to Christian Science. So I began to treat myself, and in order to master error and the claims of matter, I denied each pain, realizing that in matter there is neither life nor sensation, and it was only mortal mind that seemed to make me suffer. I worked earnestly to free my thoughts of this false consciousness, and as soon as I did so, perceptible relief came. I walked to the office and all went well the whole day, till the evening, when material laws again put in a claim. This returning of the error was a very evident proof to me that I had not held Truth conscientiously and steadfastly enough in my thoughts to be worthy of a perfect victory. It showed me, too, that the constant efforts and energy of the sick themselves are indispensable, and, as seen in this case, we come very short of the mark if we expect that the fruit of healing will be showered upon us for half done work, or even when we get others to do our work for us, if we do not work too. Christian Science shows the way to every earnest seeker.

The second day after the accident, it was a thing of the past, and even the bruise on my arm had almost disappeared.

U. F., Zurich, Switzerland.

In loving gratitude to God for Christian Science I send my Thanksgiving offering to the dear *Sentinel*.

When I began to read Science and Health four years ago I was told by a dear Scientist that I would find in it "nuggets of gold." This I have proved true. Soon after reading it, great spiritual joy and peace dawned upon my consciousness and thereby I was awakened to the fact that God is not the author of discord, sin, suffering, and death. I soon found endless opportunities to apply the truth I was striving to understand, and many times its healing efficacy was proved.

The Bible is more precious to me and the words of Jesus are studied as never before. Each day I realize more clearly that the acceptance of the teachings of Christian Science means a great warfare with self, and truly do I rejoice to see the errors of sense, which only tend to darken one's spiritual perception, uncovered and destroyed, and each time a higher sense of Truth is gained.

One experience most valuable to me, I gladly give, hoping it will encourage some one on the way.

Last winter during extreme cold weather I stepped on a sharp rusty nail which imbedded itself in the fleshy part of my foot. For three days the wound did not annoy me, when suddenly I suffered extreme pain. After endeavoring to treat myself I found it necessary to call for the aid of another practitioner. The struggle seemed a mighty one, all symptoms of blood-poisoning being manifest, and fear of death; but Truth was triumphant and perfect harmony was again restored. Such unspeakable joy and spiritual upliftment and enlightenment followed, that when called upon later to aid one suffering from a similar accident I gave a treatment and a few hours after, the patient arose and declared, "I feel like a new man and am well."

My gratitude is unbounded for every helpful thought given me during my journey "from sense to Soul" (Science and Health, p. 566), the privilege of class instruction and the association with experienced workers in the Field.

Inexpressible is my love and gratitude to our dear Leader through whom this great blessing is given to humanity.

Louise K. Rastert, Cincinnati, O.

About a year after I came into Science, I took my little son South to meet his father, who was traveling there. We met him in St. Augustine, Florida; he told me he was obliged to go to Cuba and desired that we should go with him. I hesitated, as it was so late in the season I feared our boy would take the fever, but we finally went. Two days after our arrival I woke up early in the morning to find the child burning up with fever. Filled with fear I called my husband and told him to go out at once and cable for help. He hurried out and came back excited and told me it was a Spanish feast day, the office was closed, we were shut off from the world, for the office would not be opened until six o'clock that night, and he wanted me to have a doctor; that he had been amongst yellow fever and he was afraid he had it. At that announcement I realized that God was with us, and we could not be shut out from divine Love. I said to my husband, "God is with us, and He evidently means for me to meet this case; so if you will leave us alone, I will work for him."

At various times my husband came into the room only to go out more discouraged. At three o'clock a friend, traveling with us came into the room, said he was perfectly disgusted that we would not have a doctor, and told my husband he was crazy to let the child suffer. At five o'clock in the evening came the first signs of improvement. A slight perspiration broke out; by six o'clock he was covered with it and every vestige of fever was gone. At eight o'clock he asked for crackers and milk, which he ate with a relish, slept soundly all night, and the next morning he surprised our friend by coming down to breakfast as well as ever. I praised God and my heart went out in gratitude to our dear Leader for giving us the knowledge of this glorious truth. Since that time I have been called on many times to declare the truth, and it has never failed me.

Anna O. Hegenan, Brooklyn, N. Y.

I would like to tell of a demonstration which followed class instruction in Christian Science.

For a year and a half or more, I had been struggling with a stiff and swollen ankle. I had ceased treating the ailment itself, and was simply resisting the inclination to allow it to interfere with active work, or to let pride keep me from using the ankle as much as usual, because I could not restrain a limp. At times both feet and ankles were affected, and the trouble had extended to one knee, but I had no fear, for I knew it could not harm me.

During the three weeks' instruction, the symptoms increased, making it difficult to walk, especially on the way to the class room. Imagine my satisfaction when, a few weeks later, I suddenly found that I was perfectly free. I knew not when or how, but the swelling had disappeared, the ankle was flexible, and the foot, which had been slightly turned, had resumed its natural position and the knee was strong again. Every symptom had vanished, and they have never returned since that day, nearly four years ago.

Digitized by Google

I think I appreciate it more now than I did then, because I realize how thoroughly the work was done, and courage is established to meet other obstinate ailments.

I am deeply grateful to God for giving our Leader, Mrs. Eddy, the inspiration to write Science and Health and the wisdom to protect its teaching, and I am deeply grateful for the privilege of having this true teaching.

MRS. HELEN L. CANNON, Minneapolis, Minn.

For many years I suffered great pain after eating, without knowing what it was that ailed me. My mother was a victim of the same complaint as long as I can remember, and I supposed that it was hereditary and quite natural for me to have it.

I went to doctor after doctor; now and again I got a little relief, but the trouble always returned. One named it dyspepsia, another called it indigestion, while a third was sure it was neuralgia of the stomach. After I had been trying to live for some time on the not very nourishing diet of bran and milk or water, my wife suggested that I take Christian Science treatment.

I had very little faith in it and said so, but she persuaded me, saying it wouldn't hurt even if it did no good. After dark one evening, I went to a practitioner who told me that food couldn't hurt me, and that it wasn't necessary to starve.

I was not healed instantly, but I promised to give the treatment the same chance that I had given the doctors, and I gradually came to see that although the fathers had eaten sour grapes, the children's teeth need not be set on edge, and I ate what was set before me, "giving God thanks," and found I did not suffer from the food. Shortly afterwards I took class instruction, and for over ten years have been able to help myself and others to know that "man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."—J. W. WALKER, Buffalo, N. Y.

When I came into Christian Science I had a great many ailments, some of them of years' standing.

My thought in writing is that perhaps I may say a word to encourage some who may think their progress is slow. I would urge such to hold fast to the truth. What I have gained of the knowledge of God through Christian Science, has come slowly, but I would not give this understanding for the world. "The world passeth away," but "the word of the Lord endureth forever," and I have found Him a present help in every time of need.

When I came into Science I had worn glasses nearly twenty years, but after getting a little understanding of the Truth I laid them away, knowing that the same power that heals the sick could restore lost sight. I could not see to read a word without glasses, only the large type, such as the headings, and it has been up-hill work some of the time; but I had the promise, that it was yea and amen to those who believe. Now I do all my reading and sewing without glasses. One by one my ailments have vanished into nothingness, and I expect ere long to realize what Paul says: "The law of the spirit of life in Christ Jesus hath made me free from the law of sin and death." I wish to thank every one who has in any way helped me to receive this truth, and The Christian Science Publishing Society, as well, for its faithful labors. The reading of our Leader's works is also a help in every walk of life. I hope to appreciate my blessings more truly.—L. L., Jamestown, N. Y.

I am very happy to inform you to-day that Christian Science has healed me of a tenacious eczema. Last summer the first signs of this malady appeared on my neck, and I immediately consulted one of the best specialists, who recommended a consultation of several physicians to examine the case, but this was not convenient for me at that time.

I went to another physician, who tried to remove the eczema through cauterization, but failed. Wherever he cauterized it, there remained a white spot. I was then obliged to turn to a third physician, for the malady spread more and more. I submitted to his treatment and hoped to be healed, but was disappointed. Although I was in his care for some time, there was very little improvement, and I lost my confidence in physicians. Then I turned to Christian Science, of which I had heard, and after three weeks' treatment I was entirely healed of this obstinate trouble. The first treatment convinced me that I would soon be healed, for the Scientist, to whom I feel very grateful, understood, and made clear to me the love of God, and showed me the way in which we must walk, according to the divine decree.

Christian Science has revealed the things of God, which formerly have been obscure to me.

CLARA HUBER, Zurich, Switzerland.

Christian Science first came to my notice about six years ago. At that time I was suffering from throat and lung trouble, and as medicine was not benefiting me, I was advised to try Christian Science. I purchased a copy of Science and Health and commenced reading, and I had only read about half the book when I was entirely healed of the complaint. Not being then associated with any Scientist, and not understanding the book clearly, I made but little progress until about two years later. I then had an attack of appendicitis, and sent for a physician, and after an examination he said there would have to be an operation before I could be any better. Fearing that an operation would not prove successful, I turned once more to Christian Science,—having moved into a locality where there were Scientists, a few months previous. I did not, however, know where the practitioner lived, but a neighbor went for her, and left word for her to come quickly, as she feared I would be dead before she could get there. She came soon, and in an hour from that time I was healed. The next day I was up and attending to my household duties. This occurred on Thursday, and the following Sunday I attended Christian Science services.

Four years have elapsed since I was healed, and I certainly feel very grateful for Christian Science, for it has brightened many a dark hour for myself and family.

E. B., Lancaster, O.

A short time after coming to Christian Science, I reached home from business one night in company with my old enemy, sick headache. I had been taught never to voice an error to any one unless it was to some one who knew the truth and could help me. I was only a beginner myself in this new way, and the rest of the family knew nothing of it. If they knew I was suffering they would ask me to try the old material remedies that had failed so many times, so I thought if I could get through dinner without any one knowing it, I could go to my own room and to bed, as I had always been obliged to do in the old way. After I was left alone the question presented itself, Why go to bed any earlier to-night than at other times? error cannot command me. As this thought came, I began to read in Science and Health, and studied it the entire evening. When ten o'clock came I was perfectly free from the ailment, and realized that I had spent a very enjoyable evening, and went to bed perfectly well, thanking God for one more demonstration of the healing power of Truth as taught in our text-book. One by one old difficulties have been met and overcome until to-day I am rejoicing in perfect health and strength, which physicians declared it was impossible for me to attain.—H. E. G., Buffalo, N. Y.

Some five years ago, I had never heard of Christian Science. I had undergone a severe operation on the neck for tubercular glands, having suffered constantly for about four years from abscesses in the mouth which had been subjected to the knife again and again.

In about a year and a half after the first operation, I was told by the surgeon that another operation was necessary, as the neck had again enlarged. I declared that there must be some other way out of this trouble, and in a week after I saw the surgeon, I heard of Christian Science.

At the end of the first church service, I decided that I had found a way out of my trouble. With two treatments, I was entirely healed, after suffering with all sorts of harsh treatment from the physicians for four years, with no lasting good results.

I am very grateful to our Leader, Mrs. Eddy, for what she has given to this world; for Christian Science indeed does heal the sick, and helps us in every walk of life. I cannot be grateful enough to all who have helped me along.

IDA S. ROBINSON, Brooklyn, N. Y.

I did not come to Christian Science for the healing, I was attracted by the beauty of the thought.

Science appealed to me as the highest thought in Christian life that I had discovered, and I determined to investigate. I did so, and for nearly three years have been realizing its strength and beauty. I have proved that "divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). I will tell of a demonstration I had last summer. It was just about a year ago in August, and the thought of asthma in the atmosphere, was very strong. One night I awakened with a great sense of suffocation, which to mortal sense, was almost unbearable. I made a light, took Science and Health, and read for about fifteen minutes, then put out the light and went to sleep and slept until morning. That was my first and last attack of anything of the kind.

I am very grateful for the knowledge of Christian Science, it enables me to put on the "whole armor of God" in deed and in truth.—ELEANOR S. SMITH, Chicago, Ill.

Some years ago I was taken with nervous prostration, and at first I did not know what was the matter with me. I could not go out alone nor walk across the floor without falling. My physician said that all my reserve force of nerve strength had given out, and there was nothing to build on. When I asked him how long it would be before I was well, he could not tell, but said it would be a long time.

One of my friends advised me to try Christian Science, which I did, and after the second treatment I was able to go home alone. From that time I continued to improve though I cannot say how long it was before the trouble left me entirely. I feel very thankful that I heard of Christian Science, for it has carried me over many rough places, and it has been a great help and comfort to me in every way. I feel very thankful to Mrs. Eddy and also to my loving teacher.—E. L., Brooklyn, N. Y.

I have found the testimonies of others so helpful that it has occurred to me that in justice to the Cause, I should add mine.

I came to Christian Science "through much tribulation," and am in like manner maintaining my right. Like Paul, I "glory in tribulations" if I may but demonstrate the truth of Christian Science. Thus far I seem to have proven the truth for myself only, though a few others are interested and willing to read our literature, which I am glad to furnish.

I have no words with which to express my joy for what this revelation has been to me. The physical healing is the very least, though my experiences in healing have been many and wonderful. In the words of the Psalmist I can rejoice and say, "Bless the Lord, O my soul, and forget not all His benefits."

G. F. WASHBURNE, Vineland, N. J.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members. Changes will appear in the list of names semi-annually only,—July and December.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By Laws of the Mother Church. Price, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The United States Legation at Constantinople has received an exhaustive report of the recent incident at Alexandretta, fully convicting the local authorities and police of making an unwarranted attack on Consul Davis and of arbitrary interference with him in pursuit of his duties in connection with Attarian, the naturalized American, who was about to embark for Egypt under the protection of the consul, but who was arrested by the Turkish authorities. The report was transmitted to Washington, and Acting Secretary of State Adee has cabled the United States Minister at Constantinople to present the facts to the Turkish Government and inform it that the case seems to call for some expression of regret and reparation. The attack upon Consul Davis is regarded as a serious matter in international law.

It is reported that Turkey accepts the United States version of the incident and promises proper amends. Consul Davis has returned to his post on a warship detailed from Admiral Cotton's fleet at Alexandria, Egypt.

The Supreme Court of the United States on the 14th began hearing arguments in the case of the Northern Securities Company, the Great Northern Railway Company, the Northern Pacific Company, James J. Hill, J. Pierpont Morgan, Daniel S. Lamont, and others *v.* the United States, coming to this court on appeal from the decision of the Circuit Court of Appeals of the Eighth Judicial Circuit. That decision was to the effect that the purchase of the greater part of the stock of the two railroad companies constituted a merger and was contrary to the Sherman anti-trust law. The case involved the community-of-interest principle.

An agreement has been reached between Governor Taft and the friars, by which the United States will acquire the friar lands for the sum of $7,250,000 gold. The Pope has given his approval of the terms of the settlement and the approval of the War Department is awaited. The settlement provides for the purchase of 405,000 acres, comprising all the agricultural lands and holdings of the friars, with the exception of 12,000 acres. The friars originally asked $15,000,000. Governor Taft offered them $6,000,000.

The United States State Department has been cabled by the consul at Puerto Plata that a revolution has broken out at Santiago and that the movement is extensive and serious, resulting, as is supposed, from the failure of the Provisional Government to secure recognition at the hands of United States Minister Powell, which fact operated to prevent that Government from obtaining through a foreign loan money necessary to maintain itself.

It is reported that United States Minister Allen has demanded a definite answer from the Korean Government in regard to the opening of the port of Wiju. Russian influence is still thought to operate strongly against speedy action by Korea on the matter of open ports desired by Japan, Great Britain, and the United States.

By the decisive vote of 57 to 18 the United States Senate last week passed the bill giving effect to the Cuban reciprocity treaty. The President has signed the bill and it will become operative at once.

The Rev. Edward Everett Hale, who had planned to spend the winter in Washington, has been tendered the appointment of Chaplain of the United States Senate, and has accepted the office.

Spain will not participate in the St. Louis Exposition. This decision was reached at a cabinet council, the reason given being that there would not be sufficient time to complete preparations.

The signed copy of the canal treaty with the new Republic of Panama arrived by steamship from Colon last week and was turned over to a representative of the United States Government.

The United States Senate in executive session on the 18th ratified without opposition the treaty "for the extension of the commercial relations" between the United States and China.

The House has passed without division the pension appropriation bill carrying $138,150,000.

Congress has adjourned for its holiday recess. It will meet again January 5.

Foreign.

Letters addressed by Lord Curzon, Viceroy of India, to the Dalai Lama, at Lhasa, asking for a conference, have been returned. The various units of the British expedition into Tibet are concentrating in the Chumbi Valley, where Colonels Younghusband and MacDonald are awaiting them. The ostensible purpose of this expedition is to impress the Tibetans with the necessity of respecting treaty obligations. Further objects may be to extend the facilities of trade intercourse and to demonstrate the British power.

Sir Thomas Lipton was last week the recipient of a magnificent silver service subscribed for by his friends and admirers in America. The guests at the banquet were principally Americans residing in London. H. Clay Evans, consul-general for the United States, presided. Toasts were proposed for the King and the President. In the course of his speech Sir Thomas took occasion to announce that he stood ready to challenge a fourth time for the America cup.

The British Foreign Office has forwarded to Ambassador Durand for unofficial transmission to President Roosevelt the position of foreign bondholders anent Panama and Colombia, asking the President to use his good offices in trying to induce Panama to assume a part of the Colombian debt.

With the exception of France, all the Powers interested in the Venezuelan arbitration have forwarded to The Hague Tribunal a notification of the verification of their claims by the Caracas Commission. Judgment will be delivered early in February.

The report is current that the Council of the French War Office has considered the details of Dreyfus's reinstatement in the army, and that the regiment he will command, with the rank of lieutenant-colonel, has been chosen.

Nicaragua has recognized the Republic of Panama by appointing a consul at Panama. This is the first recognition by the Central American States. Peru has also recognized the Republic.

The text of the reply of Russia to the demands of Japan is not given out, but it is understood that Japan is not satisfied and that further negotiation will follow.

Industrial and Commercial.

The directors of the New Orleans Board of Trade have indorsed the project of organizing a steamship company under the laws of the State of Louisiana, to ply between the Orient and New Orleans by way of the proposed Panama Canal. It is proposed that the company be named the Mississippi Valley & Orient Steamship Company, capitalized at five million dollars, and that the fleet shall consist of full power, up-to-date passenger and freight steamers, under the American flag. The coöperation of the Governors of the various States in the Mississippi Valley, the mayors of the cities in these States, and the presidents of the various commercial exchanges in these cities, is to be solicited through the Board of Trade, in this enterprise.

The bank money-order committee of the American Bankers Association, representing seven thousand banks, has agreed upon a plan for a money-order system whereby sums not to exceed one hundred dollars can be sent by mail and the orders cashed by any bank belonging to the association. The proposed system is to be operated as exchange is now sold, and the orders are to be guaranteed by a guarantee company. The committee's report will be submitted to the executive council of the national body at its regular meeting next April.

A reduction in wages averaging seventeen per cent and affecting thirty thousand men in the Connellsville coke regions has been announced. It is also announced that the United States Steel Corporation will on January 1 next put into effect a general system of economy, which will affect more than 160,000 of the 186,000 employees. All of the 186,000, however, will, within the year, suffer a reduction in their wages. The reduction in salaries will be about twenty per cent, while the cut in wages will not average more than ten per cent.

General.

There will start from Boston on January 2, an expedition of scientists who go abroad to search among the hidden cities in western Afghanistan and Crimea. The expedition is one which has long been under consideration. The expedition is provided with funds by the Carnegie Institute. The section has never before been searched by scientists, and the work of the party is awaited with widespread interest. The buried cities of the desert remain as they have for centuries past. What will be discovered is merely a matter of conjecture, although the party expects to find much ornament and possibly some gold of the early Aryans.

Christmas gifts of American coin reaching a total of $4,408,960, sent through the money-order department of the New York Post Office were carried to Europe on the liners St. Louis, Kaiser Wilhelm, and the Oceanic, all of which sailed last week. Of this sum England received $628,399.

Bids for raising the entire city of Galveston seven feet, to a level with the sea wall, so as to prevent flood by tidal waves, have been opened. The work will require 11,000,000 cubic yards of filling and will cost $2,000,000, for which the city will issue bonds.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Call of Duty.

M. S. B.

THE Bible says, "Awake, awake; put on thy strength, O Zion, . . . shake thyself from the dust; arise, and sit down, O Jerusalem: loose thyself from the bands of thy neck, O captive daughter of Zion."

In our text-book the same rousing thought is given: "Sleep is darkness; but God's creative mandate was, 'Let there be light.' In sleep, cause and effect are mere illusions. They seem to be, but are not. . . . Even so goes on the Adam-belief, of which mortal and material life is the dream" (Science and Health, p. 556).

When Christian Science first dawns upon our thought, we are like people awakened from a long sleep. Life suddenly takes on a new phase. We are made aware that the Biblical promises of salvation, healing, and peace are not the voicing of mere emotional ecstasy, but they are an earnest of results which ever attend the discernment of and obedience to, a true conception of God. Great thinkers, from Moses to Paul, realized, in greater and lesser degrees the spiritual law and its practical application to the needs of mortals.

We are also impressed with the conviction that God is the same yesterday, to-day, and forever; that what was true to Jesus, is true to us; and life and its opportunities appear to us in a new and radiant conception of good.

This discernment of the available truths of the Bible is a universal experience to Christian Scientists, but because our awakening is not yet complete, apathy sometimes steals upon us, and before long we may grow accustomed to this changed attitude towards life. Our work, which we formerly undertook with so much zeal, grows arduous, and we begin to wonder why our labor does not come to its fruition, and why there is so much of it to do.

But instead of yielding to such thoughts of "a little sleep, a little slumber, a little folding of the hands to sleep," we should see that this is the time for Christian Scientists to be awake to their opportunities. Solomon said, "Love not sleep, lest thou come to poverty; open thine eyes, and thou shalt be satisfied with bread."

However small our understanding seems to be, we have enough with which to begin our work, and if effort be faithfully made, knowledge will unfold itself to us, and with it, the necessary results of knowledge, power, and demonstration.

And of what is our labor to consist? First, daily, prayerful, intelligent study of the Bible with Science and Health. Second, prompt and efficient fulfilment of the duties that come to us as Christian Scientists.

Even when there is no definite, specific object in view we should not allow our work to grow slack. Indeed, such a time should be the very one for greater, more conscientious effort. "Take unto you the whole armor of God, that ye may be able to withstand in the evil day, and having done all, to stand."

We know that in military campaigns the most important work is the persistent drill in which soldiers learn the methods of warfare and obedience to those in command. History has often recorded the victory of a few well disciplined soldiers over a large body of raw recruits.

As working Christian Scientists, we should not be found sleeping at the post of duty, but awake and doing, and as soldiers in a common cause we should be loyal and obedient to our Leader. We should never allow curselves to fall into a state of apathy, indifference, or discouragement; since each of us has work to do that no other can do for us. We need to heed well the text on our *Sentinel* as it comes to us every week, "What I say unto you, I say unto all, Watch."

Truth and Truthfulness in Christian Science.

LOUISE DELISLE RADZINSKI.

A CHRISTIAN SCIENTIST having had an unexpected question suddenly put to her, paused an instant to reflect before answering. The questioner laughed mischievously and said, "I thought you would do that; all the Christian Scientists I have talked with do it—don't you ever answer questions *'pat'?"*

"If they are stock questions, such as people generally ask," responded the Christian Scientist, "the answer is usually ready, but one cannot be too careful in answering a question like yours that is ambiguous and might be answered in a variety of ways according to its context. Such questions have sometimes been answered rather too freely by Christian Scientists, and their replies have been used as weapons against them; that is why I am careful in my answers, that I may voice the truth as clearly as it may be given me to understand it."

"What do you mean by truth?"

"By truth I mean that which absolutely and positively is; not that which merely *seems* to be, which strikes the senses as real, and is retailed by the thoughtless as true."

"Do you mean that we are not to believe the evidence of our senses? What, then, is the good of sight, and hearing, and our other senses?"

"These senses are servants of man, and their operation and service, when they are controlled by right thought and purpose, are most valuable as servants and interpreters, but not as rulers and prophets."

"What do you suppose Pilate meant when he asked the famous question, 'What is truth?'"

"If Pilate had lived to no other purpose, the formulation of that thought, 'What is truth?' is important enough to mankind to distinguish for ages the man who voiced it, and the fact of his answering thus the declaration of Jesus, 'Every one that is of the truth heareth my voice,' shows that he recognized the spiritual power, the truth-power of the man who said not a word in his own defence, but who boldly proclaimed that Truth is divine."

"How do you prove that Truth is divine?"

"That which is divine is the peculiar property of Deity, and distinguishes Him from mankind. God is life,—the Life-source,—therefore Principle. God, we are taught by Jesus the Christ and in Christian Science, is being,—perfect, harmonious being. *Being* is that which *is*, absolutely,

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

positively, without the shadow of doubt, therefore Truth,—and nothing is truth that is less than absolute being.

"Pilate's question shows him to have been a thinker; the known world was then in a ferment, compared to which the mental turmoil of the present period is mild; the nations of the East were shaken to their very foundation, and whole populations, driven from their ancient homes, poured like floods into the western world. Barbarian hordes assailed the mountain passes that guarded the Roman world and its conquests, bringing with them strange beliefs of immortality, of transmigration and reincarnation. The mythology of Rome, elastic and convenient, gradually adopted those beliefs that were most precious to the nations which Rome wished to absorb; every legion of the Roman armies contained men representing every phase of thought and belief, from every land then known, and this mixture of faith and fable, poured into the cup of Hebrew monotheism, produced a mental commotion that has not yet subsided. But we do know this, that is Truth which *is*, and nothing that *is not*, is truth or true. Even a child when asked 'Why is not this true?' will tell you, 'Because it *isn't so!*'"

"Then you make truth God?"

"No, we do not make truth God—God is Truth, because God is being. God is Love, and God is Life, as well as Truth."

"And what is truthfulness?"

"Truthfulness is the quality of being full of the consciousness of truth,—of the reality of God, so that there is no room for any false sense of that which *truly is*."

"Is not this ideal of truth unattainable?"

"Not if we live in the constant desire to be truthful. We are told in Science and Health, 'The habitual struggle to be always good, is unceasing prayer' (p. 4). We may also understand that the habitual struggle to be true is unceasing prayer; and we know that what we ask for is given us, that every need, recognized and confessed, brings the promised blessing in answer to the heart's constant prayer. We need not fear to entertain a lofty ideal, to 'hitch our wagon to a star;' for the higher we rise in aspiration, in desire, the nearer we come to the fount of all blessings, and we know that fount is ever flowing, and we are to take all we need of its supply, without money and without price. The dangers of disobedience to Truth are too feebly recognized. A case in point is that of a woman who desired to shine in society, to amuse and to interest her friends; to do this she would not stop at the limit of truth, but strained it to the utmost, till she was satisfied that she had 'made a good story of it;' the result was that not a friend remained faithful to her, for none knew when he or she would become the subject of an amazing story—and her mentality has become so distorted, so darkened, through this pernicious practice, that her family are sadly watching the degradation and decay of a once fine intellect, brought to this condition by indifference to truth. The only hope now is that the light of Truth may, through Christian Science, be allowed to shine into her darkness and bring her out of the pit which she herself has digged."

One of the most encouraging features of a Christian Scientist's work is the remodelling of the sense of life through a quickened and ennobled sense of Truth and of truthfulness. One healed of deadly physical troubles said some time after her healing, "My new health seems to have given me new perceptions of what is good, and real, and true; speeches and acts that I formerly thought only silly or foolish, now show themselves positively wicked and sinful, and I have no pleasure in practices that I formerly thought amusing, but now see to be untruthful. Truth is so much more to me now that I know *God* as *Truth*."

Pilate's question, "What is truth?" should be ours to-day and continually; the kingly priest tells us "that God hath made man upright [true]; but they have sought out many inventions." These inventions of mortal mind have not been to the advantage of mankind, for they have multiplied sin, sickness, and death; they are "many," and the glitter of their falsity is apt to charm the senses; only the knowledge of the beauty and blessedness of truth can lead man safely away from the many-hued coils of the tempter, and bring him into the clear light of the kingdom of heaven, the reign of Truth.

The Ninety-first Psalm.

SEPTIMUS J. HANNA.

THERE is perhaps no part of the Bible more familiar to the Christian Scientist than the ninety-first Psalm. It may be said to be the Scientist's favorite Psalm, and indeed his favorite Scripture selection. He has read and re-read it most likely more than any other portion of the Bible. He draws from it much help, much consolation, much spiritual food. He reads in it the story of life, of health, of peace. Each reading is a refreshment, a solace, and a benediction. It is not a merely perfunctory reading, not a laborious task, but a recreation,—a re-creation in the true sense of that term. It creates within the earnest reader a new sense of God, of Life, of man, and of all that pertains to existence,—past, present, and future. But in reading it do we always grasp and hold to its very first declaration? Do we note that there is, at the very outset, a condition,—a peremptory and unyielding condition? Unless we do so, we read it in vain.

What is the condition? "He that *dwelleth*." To dwell is the primary requirement. This dwelling is the imperative condition precedent to the results to be obtained. If he so dwell the consequences follow as naturally, nay, as necessarily, as the growing of grass follows the warmth and nurture of rain and sunshine. "He that *dwelleth* in the secret place of the most High *shall abide* under the shadow of the Almighty." The dwelling is equally imperative with the abiding. Not more so, not less so. Both are indispensable in establishing such a relation with the most High that the blessings and benefits will certainly result. What are the blessings and benefits? Explicitly and beautifully are they set forth. Deliverance from the snare of the fowler, and from the noisome pestilence,—that is the first. And what is it to be delivered from the snare of the fowler and from the noisome pestilence? The fowler is sin, and all noisome pestilences are the result of sin, either in ourselves or the sins, so to speak, of the world. If one were delivered from the snare of sin,—the fowler,—he would indeed be in the secret place of the most High. He would be saved. He would be redeemed. He would be resurrected. He would have passed through every condition and requirement necessary to his full freedom as a child of God. Then what a mighty, what an infinite result has been accomplished through obedience to this precedent condition of our beloved Psalm.

This deliverance from the fowler's snare, of course, carries with it all the other blessings and benefits enumerated. When one dwells in the secret place he is, by virtue of such dwelling, covered with the "feathers" of divine protection; he is under (protected by) the wings of infinite Love and therein he trusts; and thus divine Truth becomes his shield and buckler. One thus protected and trustful, of course, will not be afraid "for the terror by night; nor for the arrow that flieth by day; nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday." A thousand may fall at the side of such an one and ten thousand at his right hand, but it shall not, because it cannot, come nigh unto him.

At this point in the Psalm the primary condition is reasserted: "Because thou hast made the Lord . . . thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling." Why? Again, because

Digitized by Google

thou hast brought thyself into such relationship with Truth, —the most High,—that Truth,—God,—shall "give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone. Thou shalt tread upon the lion and adder." Again is the condition repeated: "Because he hath set his love upon me, therefore will I deliver him: I will set him on high, because he hath known my name. He shall call upon me, and I will answer him: I will be with him in trouble; I will deliver him, and honor him. With long life will I satisfy him, and shew him my salvation."

Here, then, is enumerated every blessing and benefit that could possibly come to one throughout eternity.

Can we hope for or expect these infinite blessings and benefits without seeking them?

It is a rule of human logic that every affirmative proposition has its converse. We may then, according to this rule, fairly ask whether the following would not be a correct interpretation of our Psalm?

"He that dwelleth [not] in the secret place of the most High shall [not] abide under the shadow of the Almighty." And he that dwelleth not there shall *not* be entitled to the blessings and benefits which come to those who do so dwell. He has not earned them. By the very necessity of cause and effect, he cannot receive that which he has not earned. To confer upon one unearned and undeserved blessings and benefits would be contrary to the very nature of justice and love.

We may not enter the secret place at one bound; but we may instantly determine to begin an earnest striving to enter, and this very determination opens the way. Our business, then, is to follow the way thus opened, and to continue to follow. In proportion as we do this, the blessings and benefits come to us, and we can, measurably to our earnest striving, receive as we progress. To flatter ourselves that by a mere mental or intellectual declaration we have reached the secret place without even overcoming one single enslaving sin, were vain and foolish. One who thus believes is self-deceived, and must undeceive himself before he can know how to commence the entrance. Step by step, through daily overcoming, can he enter and proceed on his way. The goal can finally be reached, for God is neither a mocker nor a deceiver. His word is true and His promises will be fulfilled.

A comprehensive summing up of the way and means whereby to enter the secret place is found on page 448 of our text-book, Science and Health, "It is Christian Science to do right, and nothing short of right-doing has any claim to the name. To talk the right and live wrongly is foolish deceit, doing one's self the most harm. Fettered by sin yourself, it is difficult to free another from the fetters of disease. With your own wrists manacled, it is hard to break another's chains. A little leaven causes the whole mass to ferment. A grain of Christian Science does wonders for mortals, so omnipotent is Truth; but more of Christian Science must be gained, in order to continue in well-doing."

A Fair Minded Editor.

THE following editorial comment by the *Quincy* (Ill.) *Herald* upon Dr. Buckley's recent attack upon Christian Science, is indicative of the spirit of fairness which generally characterizes the secular press of the country.

"Dr. Buckley disgraces his intelligence by such a cheap method of assailing a religious organization that is at least commanding the attention if not the wonder of the world, and that is conceded by all reasonable people to be an honest belief, regardless of its real merits.

"Mrs. Eddy does not treat cases of any character. Even if she did, a challenge to exert her spiritual powers to gratify the sneers of an antagonistic spirit, would be belittling her high calling. It is very easy for those who have only the most superficial and erroneous impression of what Christian Science really is, to declare that it is all nonsense. Christian Science healers do not claim that they will positively heal every case. They say that the Bible shows the way and with a proper understanding and spiritual application and demonstration, disease may be healed. Because a doctor has lost fifteen cases does it follow that he can cure no one, and that all his knowledge of *materia medica* is valueless? Christian Science might consider it so, but certainly Dr. Buckley, the avowed enemy of Science, would not assert the uselessness of the physician.

"It is too late in the day for any one who does not care to stultify himself to deny that Christian Science has become a mighty power for good, and has certainly helped suffering humanity to a decided and gratifying degree. This is too liberal an age of the world for such intolerance as Dr. Buckley displays. Broad-minded men see good in every religion and commend it for the good it does instead of declaring it a failure, because it has not reached the acme of perfection."

Obedience.

LOUIS A. STREMPLE.

THE test of faith is obedience. God's son is always consistently sensible, always poised, always sane, always good and *pure*.

The first lesson for God's child is obedience. God cannot made a mistake when He calls one of His children into His work, and obedience is required,—*absolute* obedience. God's child never questions, but obeys with alacrity. The future call is prepared by obedience to the present. God decides our calling and our destiny. Questioning is always error, and is to be recognized as such.

All that God's child is belongs to God, and he must watch that he retain not a part for himself. God's will must be done, and he is a rebel if disobedient to the divine command.

To discern when suggestion comes and resist, is the duty of each one of God's children. Suggestion is our enemy, but it is nothing, and we must *know* it. Suggestion makes the thought of obedience unpleasant, but the testimony of spiritual sense denies the enemy, and puts the illusion to rout. Defeat comes only to illusion, never to God's children. Too many times we hear suggestion and too few God's voice.

Every son of God is independent, *free*, and must never believe the lie of bondage to sense. Nobody but a dreamer believes the lie of disobedience; nobody but a dreamer believes disobedience possible. My friends are they that obey God, and none other can be my friends. God's voice has been repeating, "Obey, obey," through all eternity.

The times are waiting for men who shall serve and not merely inquire, strive and not merely investigate, give to their age and their kind, not so much learning in bulk as wisdom in action; great doing is the only true fruitage of great thinking; the consecration to the uplifting of one's fellow-men of one's best rather than the conserving, by mere culture, of one's self.

BISHOP HENRY C. POTTER in "The Relationship of the Citizen to the Industrial Situation."

NOTICE.—Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20, 1904.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Among the Churches.

Church Dedication in Plymouth, Mich.

The dedication of the new First Church of Christ, Scientist, took place on Sunday afternoon, October 25. A large congregation was present; visitors coming from Detroit, Saline, Ypsilanti, Northville, and other places. Addresses were made by Charles K. Skinner of Detroit and Mrs. C. E. Baker. Mrs. Mary Kellogg read a history of the church, which was organized a few years ago.

Contrary to the general practice, no money was solicited to pay debts,—not even was there a collection taken up. The handsome property has cost the society, of which there are only thirty-three members, about $4,700, and it is all paid for. The church is to be congratulated.—*Exchange.*

From correspondence e learn that Mr. Skinner said in part,—

While Christian Scientists worship the same God and have the same Christ as other Christians, it is with a very different understanding. Christian Scientists believe in God as divine Principle, unchanging and unceasing Love; knowing that He is not a God of love to-day and of hate to-morrow, but the same, yesterday, to-day, and forever. We believe and try to realize that when God created the spiritual universe, He made man in His image and likeness, and said, "Let them have dominion over" all. His work was perfect. Believing this with all the intensity possible, the Christian Scientist knows that his heritage, "dominion over" all, cannot be changed or taken away except by his own volition. Turning from the one true God as the only power, to a belief in another power, he knows man loses his sense of his true self, the spiritual man, and becomes the slave of matter, even as the apostle has said, "Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness?"

Christian Scientists know, however, that as a better understanding of this new yet old religion is gained by the clergy, different conditions will spring up. Only a few days ago a gentle, broad-minded minister said, "There are some things that Mrs. Eddy says that I do not understand, hence I do not accept; but Christian Science is doing one most important thing that our churches have utterly failed to do, that is teaching and demonstrating that holiness means wholeness, and that one without the other is a dead letter. I have several believers in Christian Science among my people, and I wish there were more like them." Talking with another of our city ministers some time ago he said, "While I do not agree with some statements of Christian Science, it is possible that I have a misapprehension of their true meaning; but this I do know, Christian Science is, and will continue to be, a great factor in the redemption of the world. I know a great many Christian Scientists and I have watched their lives, and they compare favorably with any of our own church people. One thing I will say, I have no patience with the clergy or others who go about attacking other people and their religion."

Therefore, fellow-workers, let us, like Paul, thank God and take courage, knowing that He who doeth all things well will be with us and uphold us in all things that are right, and restrain us from all else, if we are faithful to Him. To-day we bring a tribute of love and gratitude to our Leader, Mrs. Eddy, who, under God, has been an instrument of untiring devotion to humanity in bringing to us this great truth of Christian Science as explained by her text-book, "Science and Health with Key to the Scriptures," and other writings, through which all may gain a clearer understanding of God and man's relation to Him.

Many Christian Scientists from other points contributed by their presence or otherwise to the interest of the occasion. A letter of greeting and good-will was read from Mrs. Annie M. Knott, in which she said,—

May your church speak to every passer-by of the healing, saving power of the Christ-truth, and may each member so live its teachings that those who are in need will come to you and ask for that which is more precious than silver or gold.

May to-day be a foretaste of final "union and communion," when no form of material belief or time or space can separate us from God or from each other. May your faithful officers, who have toiled for this day's achieval, hear from above and from your grateful hearts the "well done, thou good and faithful servant."

Plans for Building in Wilmington, Del.

During the impressive Thanksgiving service, held yesterday by the Christian Scientists,—First Church of Christ, Scientist,—it was announced to the congregation that the site selected for the building of the permanent church edifice, at the corner of Park Place and Van Buren Street, had been purchased, paid for, and the deed transferred to the church corporation.

The choice of location for this church is an ideal one, situated in a well-built residence portion of the city. It is the intention of the society in the near future to erect an edifice that will comport with its surroundings.

An epitome of this important step was then given. At a meeting of the members of the church last February, it was unanimously voted to take active measures toward a permanent church building. The first contribution was made by the Sunday School and was soon followed by the Easter offerings of gratitude amounting to $2,500. Without a single appeal the entire amount of $6,000 has been contributed.

The members are greatly pleased because of this voluntary expression from the many interested, which has in no way hindered the prosperity of the church; for the expenses of the church have been met, a considerable sum has been forwarded to aid in the building of the Mother Church in Boston, and a generous amount contributed for missionary endeavors.

The rapidly growing congregation is crowding the capacity of the present temporary quarters, and a larger place of worship will be needed. The new structure may be erected soon.—*Wilmington News.*

Church Dedication in Evanston, Ill.

The formal dedication of First Church of Christ, Scientist, of this city, took place last Sunday [November 15]. Services were held in the morning and evening, and at both services the church was well filled, showing an unmistakable interest in, and growth of, Christian Science in Evanston.

The services were simple but impressive. Besides the regular form of service, an address of welcome was given and a history of the church was read.

The history of the church shows its growth to have been very gratifying and consistent with the growth of Christian Science all over the country. With the completion of this church edifice and its dedication, a great sense of gratitude goes out from all its members to those who have in any way helped or contributed to make this church home a possibility for them.

In the address of welcome given at the dedicatory service a tribute of love was paid to Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science.

The Evanston Press.

The Lectures.

At St. Louis, Mo.

The Rev. William P. McKenzie, C.S.B., of Boston, delivered a lecture last night [November 3] in the Odeon, entitled "Christian Science and the Emancipation of Man."

The lecture was given under the auspices of First Church of Christ, Scientist, of this city. The audience was large and Mr. McKenzie's arguments were heard with interest.

St. Louis Republic.

At West Chester, Pa.

Edward A. Kimball, C.S.D., of Chicago, spoke on "The Beneficial Effects of Christian Science" before a fair-sized audience at the Assembly Building last evening [November 16]. The meeting was called to order by Miss Mae Darlington, of the local Christian Science Church. Mr. Kimball was introduced by Albert E. Miller of Philadelphia, of the Publication Committee for the Christian Science Churches of Pennsylvania.—*Morning Republican.*

At Philadelphia, Pa.

Mr. Edward A. Kimball lectured in Philadelphia Tuesday evening, November 17, before a large audience. The professions of law, medicine, and theology, were largely represented among those in attendance. Mr. Kimball spoke for about an hour and a half on "The Beneficial Results of Christian Science," and held the undivided attention of his audience throughout. The lecture was given under the joint auspices of First and Second Churches of Christ, Scientist, of Philadelphia, and the lecturer was introduced by Charles H. Fahnestock, First Reader of First Church.

Correspondence.

At St. Joseph, Mo.

Carol Norton, C.S.D., of New York City, spoke last night [November 2] at the Tootle Theatre to an audience of investigators of that faith and members of the local Christian Science churches, which filled the large auditorium.

The Hon. A. W. Brewster, presented by Charles M. Howe of First Church of Christ, Scientist, introduced the speaker of the evening by a reference to the presence of a splendid audience, searchers after the truth, and a commendation of the spirit which leads the modern searcher to follow truth wherever it may lead, even to the crumbling of old creeds and old traditions.

Mr. Norton retained the undivided attention of the large audience to the close of his address, which was a thorough exposition of the faith and tenets of Christian Science, which, the speaker said, is a religion founded on the Scriptures and throwing the light of spiritual interpretation upon the Bible from Genesis to Revelation.

St. Joseph News and Press.

At Jersey City, N. J.

Edward A. Kimball, C.S.D., of Chicago, lectured on Christian Science, Thursday, November 19, in Jersey City, at Hasbrouck Hall. The lecture was well attended, principally by citizens of Jersey City, although visitors were present from New York, Brooklyn, Orange, Englewood, Cranford, etc. This being the third lecture given by First Church of Christ, Scientist, Jersey City, seemed to mark the culmination of appreciation on the part of the public, those present expressing the greatest satisfaction and sense of indebtedness for the good received from the lecture.

Mr. J. D. Higgins of New York introduced Mr. Kimball, and said in part:—

Markedly within a few years, the thinking world is awakening to the fact that all ultimate truth lies outside and above the range of the physical, and must be sought in the metaphysical, in the realm of Christian Science. There is no exact science but the Science of Truth and the Science of Truth must be exact. Christian Scientists believe that they are developing and proving step by step the Science of Truth.—*Correspondence.*

At Topeka, Kan.

A large audience assembled at the Grand Opera House yesterday afternoon [November 15] to hear the lecture by Carol Norton, C.S.D., on the subject, "Christian Science, the Gospel of Righteousness and Health."

Rev. Abram Wyman presided over the meeting and introduced Mr. Norton in a few very graceful and courteous remarks, saying in part:—

Christian Science is young among its sister churches. I mean, of course, under its present name. I realize that some of the fundamental truths are as old as Christianity and older—as old as the human race. Let me be frank with you and say that personally I care least for the therapeutical side of Christian Science; here I have the most doubts. But let that pass. What I do value Christian Science for is that it has given a vital religious faith to multitudes whom no other form of the Christian faith was able to reach so well. It has made them happy; it has made their lives rich and full; it has made religion a living reality to them. I know many who by what they have gained from the Christian Science faith have been transformed; been made happy; their character has been built up in all ways; they have become new beings. This is why I esteem Christian Science and rejoice in the good work it has done and is doing. And, therefore, it gives me great pleasure to introduce to you the speaker of the afternoon, Carol Norton of New York City.—*The Topeka Herald.*

Lectures at Other Places.

Rock Island, Ill.—Mrs. Sue Harper Mims, November 7.
Janesville, Wis.—Bicknell Young, November 6.

As an instance of the wonderful growth of Christian Science congregations I will furnish a single example. Twelve years since in a certain family of eight adults, there were as many religious beliefs and varying opinions as to the cause and cure of bodily diseases and mental distress, as there were persons in the household. Only one of the number viewed these things from the vantage-ground of Christian Science as interpreted in Science and Health by Mary Baker G. Eddy. With patient, constant, loving example this one "leavened the lump," and to-day can rejoice in the following results: Six of the original eight are members of Christian Science Churches, the seventh and eighth accept treatment and attend Christian Science services, three of the original six married and their wives are members of Christian Science Churches, two of the original six are readers, and the wife of the seventh has been healed through Christian Science. All have come through Christian Science to have *one* concept of God, and to believe that God knows no evil, inharmony, discord, disease, or distress, and consequently varying opinions have passed and *oneness* of thought and action enables this united and harmonious family to register through this testimony a degree of the gratitude it feels for constantly increasing blessings which come through our Leader's constant and loving guidance.

JAMES D. COOK, Chicago, Ill.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Relief for the Macedonians.

LEGITIMATE appeals in behalf of destitute and suffering humanity have always proved ready passports to the hearts and purses of Christian Scientists, therefore it is to be expected that a generous and loving response will be made to the call for contributions in aid of the unfortunate people of Macedonia, issued by a committee of which Mayor Low of New York is the head.

The following circular issued by this committee presents in a few words a most deplorable situation which calls for immediate relief, and we feel sure that "Christian Europe and Christian America" will "come to the rescue." An appeal which sets forth the fact that innocent women and children are the victims of cold and starvation must find its way to the heart of every one, and to such appeals Christian Scientists are never indifferent. In this we have the example of our Leader's ready sympathy and practical help which have been manifested in this instance as in many others. "And God is able to make all grace abound toward you; that ye, always having all sufficiency in all things, may abound to every good work." M.

THE CRY FROM MACEDONIA.

What Paul saw in the spirit, the man of Macedonia, who called to him for help for his country, we have before us in the flesh. The suffering and destitution, resulting from insurrection in Macedonia, are extreme. Twenty-five thousand Macedonians have managed to cross the border into Bulgaria. Several times that number remain in Macedonia, homeless, their herds and crops destroyed, perishing of cold and starvation. Every one is familiar to some extent with the conditions which have prevailed in that unhappy country for the last two years and more,—the active agitation of the Macedonian revolutionists, the rising in rebellion of a portion of the Macedonian people, the attempt of the Turkish authorities to suppress the revolution with the utmost severity by overwhelming force. With the rights and wrongs of the Macedonians we are not now concerned, but we cannot help being concerned with the relief of fellow human beings and fellow Christians,—of innocent women and children, who are perishing by the hundred and will perish by the thousand, most cruelly, unless Christian Europe and Christian America come to the rescue.

At this Christmas season, with its thought of peace and good-will, of joy and merry-making, tens of thousands of villagers, stripped of everything but the clothes on their backs, are facing the winter cold without food. We appeal to you for contributions to aid the destitute and suffering Macedonians in Bulgaria and Macedonia. For some months, not less, certainly, than $1000 a day are required to relieve the most pressing wants,—clothing, food, fuel. Ten times that sum could be used to advantage. All contributions sent to the Trust Company of America as treasurer, 149 Broadway, New York, or Kidder, Peabody & Co., Boston, will be forwarded without expense. American missionaries in the field will superintend wisely and economically the distribution of all sums thus forwarded for purposes of relief to all sufferers without regard to race or religion.

A Protest from the Pew.

PHYSICIANS who have been inveighing against spiritual healing because of its faith element, and who have declared that this renders its claim to be scientific "wholly ridiculous," have been vigorously called to order by the editor of a leading news journal who ventures to remind them that this faith element enters very largely into all "orthodox doctoring." He says:—

"That medicine is often given rather for its effect upon the mind of the patient or those concerned about him, than for its effect upon the body, will probably pass without much of any question; and it is still true, as it always has been, that a robust physique in the physician, or a cheerful, hearty confidence, or faith-inspiring manner in the sick-room, are often of more importance than drugs and medicines, in so far as their effects upon the body are concerned. Here, then, we have a large element of faith-cure, as it were, entering into regular medical practice."

Such a recognition of the undoubtedly increasing use of a faith-factor by medical practitioners,—the steady encroachment of the mental prescription upon the whilom domain of the material,—is both pertinent and prophetic. The change in this respect among physicians generally during the last twenty-five years has been very great, and it is a very natural result of the marked lapse of public faith in the remedial power of drugs, and the greater familiarity of the people with the undeniable healings achieved through Christian Science. There is a great multitude of those who are now strong and well, and actively engaged in business or professional life, who were once sufferers from maladies which are pronounced incurable by physicians. Their testimony is being voiced in all lands, and its convincing force is constantly leading even the most prejudiced doubters to the point where it requires decidedly more credulity to deny the facts than to accept the proposition which they substantiate; namely, that the Christ-truth is still able to heal the sick, even as Christian believers generally declare that it did in the first century.

It is often claimed by the exponents of material therapeutics that great progress has been made of late years in the control of disease, and if this be true, and if it also be true that during this time the faith factor in medical treatment has been coming into more general use (with a corresponding decrease of reliance upon drug medications), would it not be a fair and logical conclusion that this explains the asserted progress in the mastery of bodily afflictions, and would not the medical profession be authorized thereby to make ready concession that the spiritual healing of Christian Science is effective. The conviction of Christian Scientists is altogether reasonable, because it is based on a practical experience which is entirely satisfactory to them.

Christian Scientists recognize a very marked and funda-

Digitized by Google

mental difference between that spiritual apprehension—the understanding of revealed Truth which distinguishes the Christ healing from all other so-called mental means of cure, and conceding to all others entire freedom of choice, they adhere to the method of healing which Jesus used and commended, not only because they would thus honor him and fulfil his command, but because it has been demonstrated to their entire satisfaction that they and their children are most surely preserved thereby from the encroachments of disease. In committing their dearest interests to the protection of Truth, they are therefore impelled, as all must see, not only by their religious sense, but also by that "common-sense" which is accredited with looking first of all to the human interest. W.

Some Christmas Lessons.

It is surely most fitting that between the ebbing and the flowing tides of each year, humanity should pause and think upon that great event which wrought such changes in the history of the race,—the birth of Jesus of Nazareth. In all history there is no story of such sublime simplicity as that which tells of the annunciation by the angel, of thoughts' outpouring from the pure virgin heart of Mary the blessed, and of the coming to earth's sense of the song of the heavenly host, with its message of peace and goodwill. So inspiring is this story, that we wonder the whole year is not illumined by its grace, and this will surely come to pass when the spiritual conception, the birth, the life and work of Jesus the Christ are not merely believed, but are understood in their scientific relation to all humanity.

In her wonderful, though perhaps but little understood poem, "Christ and Christmas," our Leader says,—

> Who can depict the glorious worth
> Of that high morn?

Whether generally recognized or no, it is true that no life has been lived, but has been touched by the light which radiated from the Christ character. When in the uttermost depths of sin and misery, the sons of men have felt, though some perchance but momentarily, the uplifting influence of him who said, "I came not to judge the world, but to save the world."

As we read Luke's account of the manifestation of the Divine idea known as Christ Jesus, we may gather some pearls of thought, to be placed with our rarest treasures. One of these is the angel's assurance to Mary: "With God nothing shall be impossible;" and her responsive prayer, "Be it unto me according to thy word;" not according to human opinion, nor according to mortal law, but "according to thy word." Then the words of her song, "My soul doth magnify the Lord." It is the office of spiritual sense to magnify good always, while material sense does just the opposite. It makes material conditions, including all evil, seem very large, and separates God so far from our experiences that many have come to regard Him as we do a great planet which appears like a speck in the heavens because of its distance from the beholder. Thus does God seem to many a weary mortal, and the refrain of much of the world's thought concerning God and the spiritual universe, is this, "*Far, far* away." When the true conception of God and man comes to us in Christian Science we too hear the sweet words: "Fear not," and when, like the sun in its strength, the Divine presence dispels the shadows of the long night of materiality,—its sin and its sickness,—then we say as did Mary, "My soul doth magnify the Lord,"—God is indeed all.

How many there are who would rejoice to know that angelic visitations have never ceased since the Psalmist said, "He shall give his angels charge over thee, to keep thee in all thy ways." Our debt of gratitude to our Leader seems great indeed when we think upon all that comes to us when we read the Bible in the great light of this truth. We see in it that the holy men and women of old communed with angels, a blessing commonly believed to be long denied. Christian Science comes with no uncertain sound to declare that angels are "God's thoughts passing to men; . . . the inspiration of goodness, purity, and immortality, counteracting all evil, sensuality, and mortality" (Science and Health, p. 581). If this were its only message, it would yet be a glorious hope for the race, but Science brings us more, it shows us how that "we being delivered out of the hand of our enemies might serve him without fear." It comes also "to give knowledge of salvation," a present salvation, and "To give light to them that sit in darkness and in the shadow of death."

In the ever-enlarging temple of true spiritual worship are many shrines where we may bend to pray, and many of these are lighted by the holy experiences of the past; but past and present are alike to Love divine.

> No blight, no broken wing, no moan,
> Truth's fane can dim:
> Eternal swells its music tone
> In Heaven's hymn.
> ("Christ and Christmas," by Rev. Mary Baker Eddy.)

K.

Mrs. Eddy's Contribution.

The building committee of the Y. M. C. A. to-day received from the Rev. Mary Baker G. Eddy a handsome contribution toward the building fund for the Association. Mrs. Eddy has been a constant and liberal supporter of Y. M. C. A. work in Concord, and her generous gift to the building fund is additional evidence of her co-operation in all good works in the city of her home.

Concord Evening Monitor, Decembe. 18, 1903.

Letters to our Leader.

Galt, Ontario, November 25, 1903.

Rev. Mary Baker G. Eddy,
Concord, N. H.

My Dear Leader:—You will be pleased to hear how four of your children, all our family, are getting along. My wife is coming on splendid, and the two children are the same.

Where at one time my wife and I did not love each other, to-day we do. Then the children would very seldom come near me on account of being afraid of me, but now we all have many a good laugh together and the children are no longer afraid.

I am sorry to say that laughing was seldom known in our house before we knew of Christian Science.

Now let me tell you of a thought that came to me, and what a blessing it has been to me already; what the end will be I cannot tell. I am so glad it has helped me to look further beyond the material senses than ever I have before. But first let me tell you of another blessing Christian Science has brought us.

At the beginning of the New Year I will own the house and half an acre of ground where we live to-day, all through a demonstration. I would not have got one cent only for the protecting power of divine Love. Love cleared the way, as it does in the spring for the tulips and other flowers when the snow is going off, and this is why I am writing to you now.

This is what I was going to tell about. I was so impressed with your words in the *Sentinel:* "Did you but know the sublimity of your hope, the infinite capacity of your being, the grandeur of your outlook, you would let error kill itself." By mistake the paper which had them in was burned, but you will know the rest. I saw that by carrying

Digitized by Google

it, an error always tried to appear a reality, but when I stopped doing so I found error began to diminish in power. Just those few words have been the means of helping me; for as soon as error—thoughts of sin—would come forth I could deny them as I never was able to do before, and instead of harboring them, now I can deny them right away and they do not hover around me.

I am so glad to be able to resist evil, and the time it took up is now taken up in seeking the way from the material senses to the spiritual. So you see that you have one child here who is desirous of learning the right way and is thankful for blessings, no longer thought of as just a chance, but as something sent from God. Error of every sort is less real to-day than ever before; and I am thankful to see the way the two children are in earnest to learn the Golden Texts for Sunday School.

These are some of the things I have to be thankful for, and one other is that beautiful hymn of yours: "Shepherd, show me how to go." How I long to know the way now. I have seen so much lately, I just want to learn how Love can reflect itself just as though it was alone; that I may become so pure in thought that every act and word will be so like God that all my brothers and sisters may see God's actions in mine, and I go on seeking to become purer and purer in thought, just desiring to let God glorify Himself while I am still asking the way.

I am so thankful for those few words that I wanted to let you know that they have found a consciousness where they are made use of, not abused. What a blessing they have been! Thank you, dear Leader, although they were not given me from you, yet Love took care of them.

I am thankful to God for a faithful Leader that can lead from bondage to liberty. The four of us are all following our Leader now in love.—ANDREW H. RUNDSTALLER.

The Red Rose, Villa Nova, Pa., November 23, 1903.

To Mrs. Mary Baker G. Eddy.

Reverend Leader:—Such a sweet experience came to me in the night a short time since that I feel that I may send it to you with a feeble expression of gratitude for the light of Christian Science.

I awoke, as I thought, about midnight, and saw what seemed pale moonlight shining across the room, but realizing that it was past the time of month for the old moon, I arose and went to the window to find in the sky no moon, but instead a huge blazing star so palpitating with light and life as to seem almost within reach.

Immediately I knew that "the night was far spent" and dawn at hand because of the brilliancy and power of the reflected light. And it seemed to be but the expression of your life,—the symbol of your loving, lifted thought, high above a sleeping world still wrapt in seeming midnight,—but to those awakened by the bright shining of your realization and sight of the Light of Good, "the Sun of Righteousness."

"And I will give him the morning star."

With loving gratitude and thanksgiving,

VIOLET OAKLEY.

The Manual.

I AM impressed with the inestimable value of the Manual to any one who will carefully read it. It fills a place no other work can supply. It is my opinion that if our Leader's recommendation contained in Article XXXII., Section 7, were faithfully put into practice (and surely it will be), the results will be of the greatest value to suffering humanity, and it will bring blessings to all who engage in the good work. In conclusion, I have no hesitation in saying that a careful study of this book will give light and understanding to all who read it and obey its Rules and By-laws.—GEORGE TOLMIE, Ogden, Utah.

Testimonies of Healing.

[Translation.]

In gratitude for the help and blessings which the study of Christian Science has brought to me, I will here gladly state my experiences; and the thought that others, who are longing for light and truth may be benefited by it, makes this task an easy one.

I believe that almost any one who has been healed through Christian Science of sickness or trouble, will in different ways and from different motives be led to enter into the narrow path that leads to salvation.

The words in the Holy Scriptures: "Seek, and ye shall find; knock, and it shall be opened unto you," have been my guiding star in life, but through the wonderful book, Science and Health, I have found the true key to the life and teachings of our Master, Christ Jesus, and the importance and meaning of his words.

I was not led to Christian Science with the desire for physical healing, but by the longing hope for an explanation of the great problems of life and religion, which I had sought for years in vain. As a patient who is in the different moods of hope and despair, and takes different remedies which promise to bring him help, so I tried to find peace and understanding and a reason for this existence in an almighty, loving God, by reading different books on philosophy and history, and attending religious lectures, and also in having intercourse with freethinkers, whom I considered advanced thinkers. Often I believed I was near my goal, yet I could never find an abiding satisfaction and assurance, and thus I wandered along for many years, trusting that God would help me to find the right way.

I was raised, baptized, and in due time confirmed in a Protestant church, and my dear parents taught me to be good, and although I honored and loved my parents and the ministers, I never dared to tell them of my inward struggles or ask for explanation of Bible passages, for this had been refused me with the remark that pondering over religious questions would lead to insanity with which God punishes us for the attempt to try to understand whatever is mysterious and miraculous in the Bible; but that the faithful performance of my duties here on earth and absolute faith in God would lead me to salvation after death. And yet how could I believe in the love and the omnipotence of a God who so often sends sickness and distress to the best Christians, and who seems to be powerless to hinder the selfish, cruel deeds of the wicked?

Ardent desires, and the best intentions to recognize the good in everything, and to do right, were always crippled by the feeling of human powerlessness to satisfy the need of the world. Financial losses and unfortunate circumstances brought me to the determination to renounce all worldly desires and turn to that which is spiritual.

Once in an ardent prayer to God for counsel I felt impelled to go to America. I followed this impulse with perfect confidence. I gave up my position in my native country and soon after embarked for Baltimore.

Seven years have passed, and when I look back, I recognize the guidance of divine wisdom and care in everything.

When I began to be afflicted with physical weakness, I was afraid to study the Bible too closely on account of that phantom of insanity, fearing it might result in softening of the brain, and yet I almost hoped that such a condition might make an end of my earthly existence. Bodily suffering has always seemed of little importance to me; I rather centered my hopes upon a life after death as our church taught us, that I might then learn to know God and man's real existence.

Just then I heard of the healing of a friend whom the physicians had considered to be incurable. This induced

Digitized by Google

me to inquire into the cause of that wonderful fact, and when I heard that the healing was the result of the true understanding of God as taught in Christian Science, I immediately bought the text-book and eagerly began my study. At first the statements of mortal erring man and the true eternal Being seemed incomprehensible, and some of the Scientific expressions abstruse, but when I read Science and Health, page 140, where it says, "The Christian Science God is universal, eternal, divine Love, which changeth not and sendeth no evil and no sin upon man;" and page 280: "God, the Soul of man and of all existence, being perpetual in His own individuality, harmony, and immortality, imparts and perpetuates these qualities in man,—through Mind, not matter,"—and when I read that life does not depend upon brain or matter, it brought me a peace that I had never before known. The words of John came to me: "In him [Christ Jesus] was life; and the life was the light of men. . . . That was the true Light, which lighteth every man that cometh into the world."

I felt as if I were born anew and placed in a world of love and bliss. No task seemed too great, no condition too difficult to be overcome in Mind, in the ever-presence of God. This state I later recognized as the first awakening to new life. My salvation had begun, but I soon experienced mentally and physically that it is easy to form an ideal, but not so easy to live up to it. The clear statements and practical instruction in Science and Health became my daily guide, and I have always found help and guidance therein, for they unfold for us the understanding of the life and works of Christ.

The reading of the other Christian Science literature, *Der Herold*, and the other periodicals, is also of great help to me as is the patient and loving assistance of all true laborers in God's vineyard. The fear of the first symptoms of typhoid fever that tried to be manifested,—headache and dizziness,—have been overcome. I have also been blessed in being able to advise and help others to gain their freedom, and it is my ardent desire to overcome selfishness, self-will, and pride.

It is but natural that I should love, revere, and be grateful to our faithful Leader, Mrs. Eddy, who has become the instrument of God to reveal to all people by a simple, clear method the contents of the Bible and the way to eternal life. Through her untiring, self-sacrificing labors, she has brought health, peace, and happiness to thousands.

E. F. L., Cincinnati, O.

At the close of another year it seems appropriate to give thanks to God and also to our Leader for Christian Science, and what it has done for us. In thinking over my experience since becoming interested in this blessed truth, I can say that I was indeed hungering and thirsting for something, I knew not what.

The first time I heard Christian Science spoken of was on my return from the World's Fair, and it seemed to me as words spoken in an unknown tongue. I remember this, however, that it made such an impression on me, that I wished I might build a tabernacle and there abide.

My experience in reading Science and Health for the first time was a strange one. Quite frequently I would lay down the book thinking I did not care to take it up again, for it seemed only so much Greek to me.

The next step was taken when I met for the first time a Christian Scientist,—the one who afterwards became my practitioner and teacher. Never shall I forget that happy experience, and the effect of the words spoken, and the answer to my first question, in which she explained to me the unreality of matter. I asked, "Where did it come from? this Adam dream seems very real to me." She referred me to Science and Health, and asked me to study and grasp the spiritual meaning of these words, "As human thought changes from one stage to another of conscious pain and painlessness, sorrow and joy—from fear to hope, and from faith to understanding—the visible manifestation will, at last, be man governed by Soul, not material sense" (Science and Health, p. 125). Many times since have I read and heard these words, and as they have become clearer and clearer to me, I have recalled my first hearing of them and been able, in a measure, to realize why it was that Mary did not heed Martha's call, but remained undisturbed at the Master's feet, why the Samaritan woman left her pitcher at the well, forgetting all about her material errand, and went back to the city to tell others of what had been revealed to her.

When I called on my practitioner the second time, it was for more than mere questioning. Soul-sick and heart-broken, I came this time for help. I had just come from one of the noblest physicians of the city; he had given me temporary relief from my trouble about two years before, but when I sought help again, I got no better but rather grew worse. Then I asked what Christian Science had to offer, and it is at a time like this that the words sink deep into the heart as they drop from the lips of one who knows whereof he speaks, for the knowing *is* the power, the power Jesus gave his disciples when he sent them out to do the healing work. It is at such a time that one longs to hear of life, not of death; of health, not of sickness; of Truth, and not of error.

And what shall I say in thankfulness and praise to God for my healing, and to our Leader who has given us Science and Health, wherein we can learn of this truth; or rather, what does she ask of us? Only this, that we obey Truth and keep the Commandments.

JACOB ROPP, Bloomington, Ill.

For eight years I have been learning, through the teachings of Christian Science, something of what Life is, and something of the meaning of Jesus' words, "I am come that they might have life, and that they might have it more abundantly."

Of the many blessings that have been mine, if I could tell of one more than another for which I am most grateful, I think it would be the healing of a very unhappy condition of thought I had lived in for more than fifteen years, which might be termed rebellion or resentment, because I felt that I had long suffered a great injustice. When I first heard of Christian Science I had also been a constant sufferer from many diseases for more than nine years; five of these years I was a helpless and almost hopeless invalid. Part of this time was spent in the hospitals and sanitariums where I had four serious surgical operations performed by some of the most noted surgeons in the South, but each operation seemed only to add new diseases and greater suffering, until I had despaired of ever being even relieved, much less well again, unless help could come through some other means than *materia medica*.

I had often told my father and friends that if I were ever cured it would be through divine power; so when I heard of Christian Science, and that it was curing sick people without medicine, I felt that possibly there was some hope for me, if I could only go to a Christian Scientist; but my father and all the family felt that this would result in failure as everything else had done, and they were very much opposed to my having anything to do with it. It was therefore through many trials and after several months of earnest prayer that God would provide some way or means through which I might learn something of this (to me) new religion, that the way was opened for me to go to a Christian Science practitioner, who was then in a neighboring town. It was she who first placed in my hands "Science and Health with Key to the Scriptures," and three days' reading of this book together with three

Digitized by Google

silent treatments from this practitioner, transformed me into a new woman.

For years I had been able to walk only a few steps at a time, but on the third day of my investigation of Christian Science I walked more than a mile and returned the same distance without any suffering whatever. To be sure this was cause for rejoicing, and truly I did rejoice in my freedom from this bondage, but the greatest cause for rejoicing was my freedom from the bitterness and resentment that went out of my heart and life when I caught the first gleam of God as Love.

As I have said, I felt that I had for many years suffered a great injustice at the hands of a certain person, and, although I tried constantly to suppress the resentment, I felt there was, deep down in my heart, a sense of bitterness and revenge that I was not willing the world should know, and it was this that caused me much mental suffering before I ever knew what it meant to have a sick body. But when my bodily ailments were healed I found that this mental burden was also lifted, and the sense of love and peace that took its place cannot be described in words. As I learned more of Christian Science I soon began to see that it was no wonder that my body became diseased, neither was it any wonder that the body was made well when the hate and rebellion and resentment were blotted out of my thought —not suppressed, but cast out—by the coming in of divine Love that seemed to fill my whole being; and for this blessing I would give ceaseless praise to God for the understanding and realization, even in a small degree, that Life is Love, and Love is Life, and that this understanding shows us so plainly the difference between suppressing an evil and overcoming it, and how to overcome evil with good, hate with love. Then we begin to understand something of what our Saviour meant when he gave us the two commandments of Love, and said, "On these two commandments hang all the law and the prophets."

While I am thankful indeed that I have been able to gain, and manifest in my daily life even a little of this Love, my constant prayer is for more of the love that "thinketh no evil," for I now know that only through love can we know God, for God is Love; and only through knowing or understanding God can we gain eternal life. Jesus said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

AVA H. GLISSON, West Point, Miss.

In March, 1894, our dear little boy, two years old, passed on with only a few hours' sickness. The doctor called it spinal meningitis. I had been poorly all winter, hardly able to get around, and the sorrow caused by our loss was more than I could bear and I became very sick. I went East in August to visit my sister, and there heard of Christian Science.

I went to see a practitioner and was so impressed with what she said that I went to church on Sunday with my husband. The lesson was on Jesus before the doctors at twelve years of age. It was most beautifully expressed, and although I knew the story it seemed as if it were new. I made an engagement with the lady who led the meeting for Tuesday following. I was given a treatment, and in three weeks was healed of a spinal trouble which I had had since a child twelve years old, when a chair had been pulled from under me and my spine hurt very badly. In after years the doctors wanted to amputate the end of the spine, but my father would not consent. I had also headache which was inherited from my mother and grandfather, both of whom died from congestion of the brain. When suffering one of those headaches I could not bear the light, or even a step in the room, the pain would be so great. The doctor usually gave me morphine at such times, and I would be in bed three days. The second Sunday while in Brooklyn I was unable to hold my head up any length of time, but with help I got ready and went to the Christian Science Church. During that service the pain left, and it was the last severe headache I have had. This was nine years ago. I was also healed of chronic constipation and liver complaint in its worst form. They have all gone down before the touch of Truth.

My husband was interested in Christian Science from the first, and three years ago we were privileged to receive class instruction from the practitioner who helped me. I am thankful to say we have been able to help others as well as ourselves over various ailments. We feel grateful to Mrs. Eddy for the discovery of this truth and to our teacher for her labor in presenting it to us. We realize that we can best show our gratitude by obeying Principle and bringing out in our every-day life the benefits resulting therefrom.—SARAH D. PIERPOINT, Pittsburg, Penn.

In the year 1902, I read in a church calendar a malicious squib about Christian Science and did not think much of it, because it seemed nothing new to me to read about conflicting opinions of different religious denominations. Later on a neighbor told me something of Christian Science and I read some of its literature. I also attended their services in order to judge righteously.

Last spring when my wife was dangerously ill, we turned to Christian Science and sent for a practitioner, and through the efficacy of the Scientist's prayer, she soon regained her health. Recently I had the following experience in our neighbor's home, where several young Russians live who are working in factories here. One of them, a strong, fine youth, who often plays with our children, was suddenly attacked with bowel complaint and suffered intensely. The physicians had him removed to a hospital and insisted upon an operation. A friend of this youth, who had had some bad experience with physicians in the case of a broken arm, prevented the operation and had the patient brought home.

He was in bed, suffering intensely, and in this condition I found him when I called there. I asked whether he took any medicine to relieve his suffering. They told me that the physician had called that same day, but had not prescribed any medicine because he believed that an operation alone could help him. I offered to call in a doctor, but they did not accept this, because they had lost confidence in them.

I then told them to turn to God and advised Christian Science, telling them that he might be healed through the efficacy of prayer. I could see the hopeful expression in the patient's face, and he asked me how much it would cost him. I told him that in case he were not able to pay, no money would be demanded, for Christian Scientists are not greedy after money. Yet I also said, "If you have a child baptized, you pay the minister; if you have a funeral in your family, you pay the expenses. And therefore, if you are able to pay, why should you not pay the Scientist for his time? He may be compelled to work for you all night."

The Scientist was sent for and he began his work quietly. The patient enjoyed a refreshing sleep that night, the second day was taking a walk in the garden, and in a few days was healed and went back to his work. Therefore we say, "Glory be to God."

Thus it is that I have found Christian Science to be the very opposite of what that church calendar claimed it was. I have found a people who trust in God, in the Bible, in prayer. It is just what mankind needs and is seeking after, and instead of condemning Christian Science from the pulpit and spreading false accusations, we should look into it and find that "Thy word is a lamp unto my feet, and a light unto my path."

Digitized by Google

If we all do that, we shall welcome our Christian friends and the future will bring the Master's words to pass: "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

I agree with him who said that the nation cannot be saved through strife and dogmatics, but by the gospel of Jesus Christ, which demands and advances works of love.

That God will bless the work of Christian Science is my conviction, and although I am not yet a member of the Christian Science Church, I write these lines truthfully, trusting in the love of God.

A. SCHOEPP, Sheboygan, Wis.

When I was about the age of twelve, my father, who was a devout Christian, desired me to unite with an orthodox church, of which he and my mother had been members for many years.

From early childhood I had been taught the Scriptures, and to love God, and at this time felt no change of heart. I was, however, admitted into the church, and shortly after overheard my father say that he was sorry not to see the joy and peace which should follow this step expressed in my countenance. I never forgot that remark, and often wondered why I did not feel differently.

As the years passed, with their varied experiences and trials, I felt a longing for something purer, higher, and holier. Everything seemed so temporary and changing that many times the desire came to me for some good that would be real and lasting!

Through all these years of deep yearning I remained with the church, and in the latter years I worked with those who had the interest of the church at heart, hoping in this good work to find that which would satisfy these longings, but it only gave me another disappointment.

I was considered delicate from childhood, and among other troubles was that of indigestion from which I suffered greatly, and I finally had a long, severe illness due to peritonitis, from which I never fully recovered before coming into Christian Science.

It is now sixteen years since I first heard of Christian Science and was healed through it. It was then "A stranger within our gates," as it was little known in this city at that time, and I did not know that it even claimed to be the religion of Christ Jesus.

I was led to go to a practitioner for physical healing, little realizing the spiritual light and uplifting that came through the treatment and the reading of Science and Health.

I shall never forget the joy and peace that I felt when the light of truth dawned in my consciousness.

I had been taught that there were two lives, a spiritual life and a material life; that through death and the grave I should lose the material and gain the spiritual life.

Through Christian Science I learned that God is the only life we ever had or ever can have, and that we reflect this life; and my healing quickly followed the coming of this revelation of Truth.

With a heart full of love and gratitude to God and to our Leader, Mrs. Eddy, and to all the dear ones who have let their light shine upon my pathway, to help me on my journey, I press toward the full understanding of "Thy will be done in earth, as it is in heaven."

MRS. CLARA P. SCHRECK, Buffalo, N. Y.

For a number of years I was afflicted with what the doctors called an incurable disease,—a species of fits, also internal ulcers. I tried many physicians, but they could not heal me. One physician said he might help me, if I had an operation, so thought I would. In the mean time a friend called. I told her what I expected to do, and that I was preparing to have the operation, when she said, "Why don't you try Christian Science?" She was then just beginning to learn what it was, and gave me some information, also told me where I could go for treatment.

That same evening I consulted my husband about it. He said, "Try anything to get well" for he had become as discouraged with *materia medica* and its failures in my case, as I was.

I went to a practitioner, and she commenced treatment, and also talked with me on the subject of Christian Science. I found it to be just what I was searching for. After several treatments I began to improve rapidly, but one condition seemed to hang on for some time. It was destroyed later, after I had gone through a class. I am very thankful to Mrs. Eddy for showing us the way out of Egyptian darkness into "the glorious liberty of the children of God." Christian Science is the Comforter that we have with us always, and that Jesus said would come after he left. Besides my own healing, I know where Christian Science has healed tumors, nervous prostration, pneumonia, and other diseases. The healing is a proof that our heavenly Father *is* a *present* help, and Christian Science also teaches us the way to get wisdom, to get understanding, as Solomon advises. It also teaches us to search the Scriptures where we shall find eternal Life.

F. L. BOYCE, Brooklyn, N. Y.

It is now four months since I first heard of Christian Science through a friend who is a member of that church. I attended the Wednesday evening meetings and heard many wonderful testimonies, but I declared to my friend that I could not believe in Christian Science unless it should heal my foot, which for two years had been inflamed with extreme pain, often making me quite lame. My friend gave me two treatments, and before the end of a week my foot was perfectly well. It has filled me with joy also to notice that without expecting such a result, through the daily study of Science and Health, I have been quite healed of troublesome ailments of years' standing, among which were continual dysentery and ulceration. I am very thankful to Christian Science, not only for the physical healing, but for the better understanding of the great love of God, which it brings.—HANNAH MAUDE EDWARDES, London, Eng.

For many years before learning of Christian Science I had suffered from indigestion in a severe form, which gradually became chronic, and for which I tried numberless remedies without result. Through a friend who was interested I began to attend the Christian Science services and purchased a copy of Science and Health by Mrs. Eddy. The interpretation of the Scriptures as given there appealed to me at once, and I sought to learn all I could along that line, not thinking at that time especially about the healing, although I discontinued taking medicine. Imperceptibly the disease left me, while I was reading Science and Health, and I awoke one day to the fact that I was perfectly well. That was over five years ago, and since then I have never had to take any thought for the body, what I should eat.

BESSIE HULL BIRKS, New York, N. Y.

One day last summer I was attacked with blood poison, which seemed to come from a mosquito bite. It was extremely hot and I was traveling all day. When I reached my destination my ankle was much swollen, discolored like a bruise, and so painful I could no longer step on that foot. With Christian Science treatment the pain yielded in about half an hour, and in two days the trouble had disappeared. A distressing gastric and nervous disorder with a severe cold, was entirely relieved after heart-searching self-examination, and "effectual, fervent prayer." As we work for God and man, evidences of discord are brought into subjection to the law of harmony and good, and Love is the effective worker.

ZELLE EMMONS, New York, N. Y.

From our Exchanges.

Spenser B. Meeser, D.D., says in *The Standard*:—

"The profound conviction of the deep need of a quickened spiritual life in the Christian churches is everywhere in evidence. . . . For several years past men have been saying that we were on the eve of a great revival. Many have been looking for it to come down from heaven as a mystery, or up from the earth as an organized effort. When it comes it will come without observation and be found in our hearts. . . . Many of the churches are in reality desiring it intensely, and are agitated concerning it. Everywhere men feel that the modern materialistic interpretations of life have been as stones in the mouth of a hungry soul. Many varieties of religion and philosophy that appealed to the sense of the spiritual have had a wide hearing. The emptiness of formulæ, however old in religion or new in science, is attested by thousands; and everywhere there seems to be an atmosphere of expectation of a Coming One.

"Of course the final issue of any religion, or religious movement, is the saving of men from sin unto God; but I mean that toward that end the best thing and the thing God intends may involve what most mightily touches the hearts and lives of the Christian people themselves in the Christian churches. This is not prophecy; it is simply thinking the alternatives that may be in the eternal purpose of God, and bidding all to be open-minded, ready and receptive to whatever God may send, and not predetermine what it must be to have our sympathy, or fail to appreciate the wider needs of the church which God may see.

"Some feel that it may be seen in what Dr. Cuyler has called 'The re-conversion of the church and the Christians.' By re-conversion he means a penitent return to God and the path of duty on the part of erring believers; as Peter, whose faith Jesus recognized before his fall in the denial of his Master, was bidden of Jesus, 'When thou art converted, strengthen thy brethren.' The church is backslidden and disobedient, denying her Lord. At times, it seems to me that for the good of the world this is the most needed thing."

In every Christian heart there should be a holy dissatisfaction with present attainments and, to recur to the Apostle's figure, a stretching forward, as the runner in a race stretches his tense and eager body, to the things that are before. The most advanced in the heavenly race have not attained, and will not attain, the goal in this life, and we believe there are reaches of attainment and heights of knowledge in the heavenly life toward which the disburdened soul will press through all eternity. Certainly to be satisfied with any utmost attainment in the spiritual life here is to be content with very little. Contentment with the ways of God toward us, dissatisfaction with our attainments in the heavenly way—this is the full-rounded philosophy of the Christian life.—*The Examiner.*

Perhaps no one thing has really done more damage to the Church of Christ in all ages than the sight of men who have called themselves Christian, and have borne the outward marks of discipleship in the church, the prayer meeting, and the home, and have not applied the teachings of Jesus to their money making, to their political life, to their recreation! The heart of Christianity itself is summed up in the verse, "Whatsoever ye do, whether ye eat or drink, do all to the glory of God." REV. CHARLES M. SHELDON.
The Congregationalist.

There is abundant and joyful evidence that the hearts of Christians are increasingly expectant of a revival of religion in the near future. This is a hopeful sign. An earnest expectation is indicative of a stirring of the inner life, like the waking of nature in the spring. It is a movement to be cherished and promoted by prayer and concerted action. God is waiting to be gracious; when His people are willing to receive it, the blessing will come.
The Examiner.

There are a hundred indications that the one truth for which the spiritually disposed men to-day all over the world are longing is a larger, worthier conception of Jesus Christ.
The Watchman.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk., 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members. Changes will appear in the list of names semi-annually, July and December.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Price, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

The Commission on International Exchange has received the conclusions of the Monetary Commission of Japan regarding the proposals of the American commission for a uniform coinage system for China. The resolutions declare that the present chaotic condition of the Chinese currency is disadvantageous both to China and to those countries that have commercial relations with her, and that a definite and uniform currency system should be put into operation throughout the empire. Inasmuch as the currency reform cannot be started on a perfect system, it is regarded as advisable to adopt the suggestions of the American commission as a matter of expediency.

The chess clubs of Harvard, Yale, Princeton, and Columbia Universities have sent a formal joint challenge to the chess clubs of Oxford and Cambridge, proposing an international cable match to defend the Rice trophy. This match will be held next spring, and will be the sixth in the series of contests for the possession of the silver shield, valued at twelve hundred dollars, given by I. L. Rice of New York. This shield will become the permanent property of the country winning it three years in succession. Of the previous international intercollegiate matches Great Britain has won three, America one, and one was drawn.

Escorted by several thousand Ethiopian soldiers, the American mission to Emperor Menelik, headed by Consul General Skinner of Marseilles, entered the Abyssinian capital last week. The reception of the Americans was brilliant and picturesque. Emperor Menelik personally received Mr. Skinner and delivered a cordial address of welcome, to which Mr. Skinner responded, presenting an invitation to his majesty to visit the exposition at St. Louis. A formal audience and a conference with the emperor to discuss the purposes of the mission will follow later.

According to the annual report of the Civil Service Commission for the fiscal year ended June 30, 1903, the total number of persons examined by educational tests and otherwise was 112,624, as compared with 60,588 for the preceding fiscal year. The commission gave 654 examinations at more than one thousand places throughout the country. The total number of persons appointed, promoted, transferred, or reinstated was 40,267.

Foreign.

The Porte has agreed to the demands of the United States Government and ordered the governor of Alexandretta to make ample apology to Consul Davis for the insults offered him and the assault committed upon him by the local police of Alexandretta. The Porte notified the United States legation of the instructions telegraphed to the Vali of Aleppo to order the Governor of Alexandretta to call on Consul Davis immediately upon his arrival at Alexandretta and offer to him a complete apology. This has been done. The Porte has also promised to punish the police officials who assaulted Consul Davis, and will allow Attarian to depart unhindered.

It is the general belief that the island of Cuba will produce almost if not quite 1,250,000 tons of sugar the coming season. The reciprocity treaty gives encouragement to the hundreds of American settlers scattered throughout Cuba, who have been planting tobacco, cocoanuts, cacao, oranges, pineapples, and early vegetables for the Northern markets. An impetus also will be given to the native and American planters of cotton on the island. The absence of the Texas boll weevil has encouraged the culture of Sea Island Cotton, and experiments have more than justified fondest expectations.

The agreement for the sale of friar lands in the Philippines has been signed, to take effect in six months, the time allowed for surveys and examination of titles. The bureau organized to administer the affairs of these lands will dispose of them when possible to the present tenants on long terms of payments. Three-fourths of this land is included within the populated districts. Governor Taft left Manila the 24th ult. He was given a very cordial farewell reception by the citizens and military. He will visit Tokyo by invitation of the Mikado and also call at Honolulu.

In the Land Judges' Court in Dublin Justice Ross has delivered judgment regarding the sale of certain estates, according to which the tenant for life is not entitled to appropriate the bonus under the new act for his own use, but must hold it subject to trusts of settlement. The judgment will probably have the effect of suspending all sales and negotiations to sell until Parliament has taken measures to remove the doubts and difficulties which have arisen in the interpretation of Irish Secretary Wyndham's Land Act.

The Dreyfus Commission has unanimously recommended a revision of the case by the criminal branch of the Court of Cassation. The court will assemble next month to hear the case. The commission report sets forth the reasons which caused it to make the recommendation. These include evidence not submitted to the court-martial at Rennes and changes of testimony on the part of some of the witnesses before the court-martial.

Trade in Newfoundland has virtually doubled during the past five years. This year it will approach twenty million dollars, while revenue will reach nearly $2,500,000, the largest on record. There is a cash reserve of $352,000 to the colony's credit, and the authorities hope to announce a substantial addition to this reserve at the end of the year.

Japan has handed to Russia her reply on the Manchurian and Korean question. It is not in any way in the nature of an ultimatum, but asks Russia to reconsider certain essential points of her reply to Japan. It is also reported that Great Britain and France have diplomatically conveyed to Russia their belief in the justness of Japan's contentions.

The representatives of several foreign Powers at Washington are reported to have advised General Reyes, minister plenipotentiary of Colombia, of the futility of Colombia's trying to retake Panama and of the desirability of avoiding a conflict with the United States.

Industrial and Commercial.

The year's commerce of the United States with Canada, as shown by the figures of the Department of Commerce and Labor, through its Bureau of Statistics, will aggregate nearly $200,000,000 against less than $100,000,000 in 1893. Our imports from Canada, which in 1893 amounted to only $34,000,000, will in the present year reach about $55,000,000. Our exports to Canada, which in 1893 were $57,000,000, will in 1903 aggregate about $130,000,000. The total commerce of the United States in the calendar year 1893 was $1,652,000,000, and in 1903 will aggregate about $2,460,000,000.

According to the *Railroad Age*, the total railway mileage of the United States, on January 1, 1904, will be 209,855 miles, the present year having added 5,723 miles. This mileage takes into account all the new track laid up to the last days of the year. Early in the year it was shown that there were eighty-five hundred miles of railroad under construction, but labor troubles and financial difficulties caused some of the work to be abandoned.

The cut of white pine lumber in the Duluth district, the largest in the United States, during the year closing December 1, amounted to 885,000,000 feet, representing a value of $17,500,000. Of this amount 500,000,000 feet was shipped East by water, the rest was distributed by rail to Chicago, the South, and West.

General.

Plans and specifications have been prepared for developing valuable water power properties on the Little Tennessee River in Swain County, N. C., to furnish forty thousand horse-power. It is proposed to transmit the power by electricity for operating cotton mills and other industries, and the first mill to be built will be a modern cotton factory. It is expected that the power will ultimately be brought to Atlanta, Ga. The enterprise as planned will cost about three million dollars.

The Southern Pacific has just completed at great expense the cut-off across Great Salt Lake. The next great engineering feat of the Southern Pacific, says E. H. Harriman, will be tunneling the Sierra Nevada mountains. Plans for this great undertaking are ready, he says, but the Southern Pacific is not yet ready to begin construction.

It is estimated that the people of the United States pay $150,000,000 a year for candy. In 1890 the output was $81,290,543, and in 1880 $25,637,033. In 1880 there were 1,450 establishments making candy, which had increased in 1900 to 4,297, while the capital invested increased from $8,486,874 in 1880 to $35,155,361 in 1900.

The second and greater bridge across the East River, connecting the boroughs of Manhattan and Brooklyn, was turned over to the city and formally opened on the 29th ult.

Russia has acquired new territory within the past fifty years which has an area larger than the United States, and there is a prospect of more in the near future.

Interested parties propose to construct in the delta section of the Mississippi Valley, near Tutwiler, Miss., an immense rose farm of three thousand acres.

Efforts are being made to secure for Yale by contributions from her alumni a stadium for her athletic events similar to the one at Harvard.

The $2,142,207 worth of platinum extracted in the Gorotiagodatski district of Russia last year is practically the world's supply of that metal.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Self-control.

ANNE DODGE.

WHAT is self-control? Speaking from personal experience and demonstration, I should say it was the discipline of self, the government of self,—one's thoughts, one's tongue, one's speech, one's acts, to be absolutely under the influence of the divine Mind, not the human, and to know no other Mind or power but good. We are counselled to resist the devil and he will flee from us, to resist the impulse to think evil, speak evil, or act evil, and the temptation, no matter how strong, will flee, and we shall record another victory for Truth, and rise a round in the ladder of self-control.

When taunted or bitterly opposed or ridiculed, how strong the temptation at times to meet like with like, to answer wrathfully or scornfully, cynically or skeptically. How easy to meet the quarrelsome nature with impatience, with another expression of the same impulse that actuates our antagonist, or to be led into controversy, heated discussions, which lead us on and on until we manifest as much error as our opponent.

How easy to mete out scorn to the scornful, contempt to the contemptuous, and to the intolerant and self-opinionated, hatred and aversion! But if, instead of yielding to the tempter in these things, we *first* take *self* in hand, what a victory will be ours in the end! If we resist the temptation to argue, to quarrel, to get angry, or to be led into "doubtful disputations" that benefit no one; if we are gentle and loving, if we answer the harsh word with a kind word, the scornful and contemptuous glance with an eye in which the light of Love is reflected, if we are tender and merciful toward those who are filled with hatred towards us, then will self be governed by the Christ-mind.

How patient and loving was our dear Master with the dull and stupid, how wisely chosen were his answers to his questioners, to the skeptical and unbelieving; how careful he was never to say an unnecessary word! Oh to learn that great lesson in self-control, to govern our lips and put a guard upon them, as we would guard a precious jewel, to answer wisely, and never to speak an idle word! How necessary, if we would manifest the Christ-life, first to know ourselves and have these selves under complete control.

Invisible but Infinite.

JESSE B. TWISS.

As I sat concealed near a large tree I saw a mother robin in billowy flight glide easily to her nest above me. Four hungry voices rose in clamoring appeal, and four hungry mouths were opened in wide expectation; but no plump morsel fell from the mother's mouth to theirs. In its place a lecture seemed to have been provided and precept upon precept was poured out to the fledglings. Soon, one by one, four young robins had climbed upon the edge of the nest and opened a quartet of questionings. Then one boldly spread his wings, let go his grasp, and floated, not too gracefully, to a nearby twig which was clutched desperately as he began to chirp his amazed but grateful pleasure in the enjoyment of a new-born liberty. Then another and another launched out upon the unseen air with uncertain, fluttering movement, and all landed triumphantly on the neighboring branches.

The fourth was not so easily persuaded; he waited long, questioning the mother's wisdom, and seeming to say, "You tell me of God and the wonderful air He has made, but where is God? and where is His air? I see no God, I see no air, I cannot trust myself to nothing. I love my life too well to be so rash. True, I saw my brothers in their flight, but it was only a happy chance that led them where they are, and perhaps next time they will just fall plump and hard on that terrible rock down there,—I can see no reason why they might not. Yes, you say God cares for all His creatures, but why should He take any care of a bird who is so foolish as to let go of all he has to sustain him and just drop down into nothing at all until he strikes the hard earth, and, maimed and helpless, becomes perchance a prey to cruel animals. For my part, I will just cling to my nest until I see something else to grasp." The little fellow became so excited during the delivery of this "common-sense" statement of his belief that the very nest on which he stood began to tremble and suddenly it slipped from its moorings and he was thrown into space. Then with instinctive haste he spread his wings, and the invisible air in which he had put no trust, became a wondrous support, in which divine Love conveyed to him a happy freedom from his false beliefs,—a glorious liberty to mount heavenward whenever he would.

The Science of Truth.

MARY B. HOWE.

I HAD been reading the article in the June *Journal* on "Right Thinking," and as I finished, turned my chair so that I could look out of the window at the setting sun and the heavy black clouds rolling up. As I turned, the light shone so directly in my face that it almost blinded me. As I continued to look, however, I soon could see without being dazzled by its brilliancy.

I thought, what a wonderful universe this is, even to mortal sense; what is the sun, what is it that causes the earth to turn on its axis, and what is it that drives the clouds hither and thither, sometimes floating gently, at other times driven furiously in storm, sometimes near the earth and sometimes far above it? I thought and thought, and question on question arose, but the answer to all was plain to me through the understanding of Christian Science.

The activity of any and every form of life has its source in Mind, and by reversal of the evidence before me I could realize as never before how the universe of material sense and its supposed laws is simply a counterfeit of the true universe, which is governed by divine Mind, and is perpetually harmonious. The sun is a grand idea, the symbol of Soul, giving light and life to all forms of existence. Our text-book says, "So Science reveals Soul as God, un-

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

touched by sin and death, as the central Life and intelligence, around which circle harmoniously all things in the systems of Mind." "The myriad forms of mortal thought, made manifest as matter, are not more distinct or real to the material senses than are the Soul-created forms to spiritual sense, wherein Life is permanent. Undisturbed amid the jarring testimony of the material senses, Science, still enthroned, is unfolding to mortals the immutable, harmonious, divine Principle, Life and the universe, ever-present and eternal" (Science and Health, pp. 310, 306).

Just then the angry looking clouds, which were but manifestations of fear and unenlightened thought, became gloriously transformed by the rays of the setting sun,—a gorgeous bank of color which owed its beauty to these rays. I saw that the color was not in the clouds, and this made clearer to me than ever before the wonderful possibilities that are ours when we reflect Soul and let its light give radiance and beauty to all that is touched by our thought, however dark it may be before the light of Truth falls upon it.

I had been restless before these thoughts came to me, but the lesson had been learned thereby, and now a sense of calm and peace seemed to come to me. It was the result of looking above sordid and selfish things, and I felt a confidence in Truth's dominion, and in the supremacy of Spirit that I had never known before. I could but think of our Leader, and her elevation above earth-sense,—how inspiring the view must be to her. It seems that at present we only have glimpses now and then, but with her the consciousness is more abiding. I feel more grateful for Christian Science than ever before.

Christian Science Work.

F. B. HOMANS.

In Christian Science we learn how to live, but it does little good to learn how, unless we practise what we learn. One may study art of the best masters in the world for years, but unless he takes the brush and practises what he has learned he will never be an artist. The study of law never makes a lawyer, it is the practice of law that produces our great jurists. It is not the theory of blacksmithing but the actual work at the anvil that develops the effective worker, and it is just the same in Christian Science. It is a religion of works rather than words, of doing rather than saying. Jesus said, "By their fruits ye shall know them." All his life, by both word and deed, he taught the necessity of work. It is not necessary to be a professional healer, teacher, or lecturer in order to do this work; for if we keep our thoughts so filled with the love of God that we can deny error at every point we are doing God's work. We can do this in the shop, in the office, and in the home. We should always be ready to give a cup of cold water (a loving thought or word) to one of God's children. Mrs. Eddy says, "Take away the spiritual signification of Scripture, and that compilation can do no more for mortals than can moonbeams to melt a river of ice" (Science and Health, p. 241). We must read, but we must understand what we read and prove that we understand by demonstration.

Error is ever busy trying to weaken our trust in God, ever striving to keep our thoughts on material things. One of error's most subtle means of attack is to induce us to talk about, or listen to the talk of others about the weakness or failings of some one else. To resist this temptation is to do a noble work in Christian Science. To yield to it is to commit a great error. By this yielding we bind upon others burdens we know are hard to bear. By yielding we break one of God's laws, and one that is not the least of them.

Another point on which error attacks us is that of lack of supply. God gives us all the good we have and gives us the ability to acquire more. Jesus said, Lay not up treasures on earth, but in heaven. Why did Jesus say this? Because the desire to hoard impels us to recognize and fear evil,—poverty,—and thereby we fail to trust God, who is the absolute source of all needed supply. Our Leader teaches us that giving rightly does not impoverish, and that withholding does not enrich. (Science and Health, p. 79.) If God can and does take care of us to-day, He certainly will to-morrow.

Another error appears when we treat a patient and then look anxiously for results. We put seed in the ground and then leave it to sunshine and rain to produce fruit or flower. If we would do our work in Christian Science with the same degree of trust, we would see better and quicker results. Let us learn, whatever our problem may be, to meet it with love, treat it with love, and leave it with Love, and the results will surely be satisfactory.

"Come unto Me."

WILLIS F. GROSS.

Sweeter words never fell from human lips than those of the Master, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." These were the words of one who knew whereof he spake; one who knew in whom he had believed; one who was able to show forth God's love and power to save. We read that he "was in all points tempted like as we are, yet without sin." He was called "a man of sorrows;" he carried burdens heavier than the world had ever known, yet he was lifted up and strengthened. He knew how to overcome temptation; how to fight the good fight of faith. His rebuke of error was effectual; the subtle suggestions of the evil one were silenced, and the angels of God came and ministered unto him. He knew "the divine remedy for every ill" (Science and Health, p. 326). He knew where to find rest, comfort, and consolation. It mattered not how heavy was the burden, how great the temptation, or how severe the trial of his faith, he was resigned to his Father's will. Although he was, to mortal sense, the man of sorrows, yet he was conscious of a deeper joy, a sweeter peace, a holier calm than was ever experienced by those who esteemed him "stricken, smitten of God, and afflicted."

Because he had received so bountifully of the blessings of God and realized so clearly the true harmony of life, he spake of himself as "the Son of man which is in heaven." He knew that divine Love would bless others as he had been blessed, and with a heart filled with compassion for his fellow-men, he said, Come, and you shall find rest.

Jesus did not speak of his human selfhood when he said, "Come unto me;" he spake of the Christ, "the divine manifestation of God, which comes to the flesh, to destroy incarnate error" (Science and Health, p. 583). "Jesus mapped out the path for others. He unveiled the Christ, the spiritual idea of divine Love" (Science and Health, p. 38). He made it possible for all men to hear the voice of Truth and answer with rejoicing.

The great Teacher told his disciples that after his departure the Father would give them another Comforter, even the Spirit of truth, which should abide with them forever. When sorrow had filled their hearts and it seemed that their loss would be greater than they could bear, he said unto them, "It is expedient for you that I go away: for if I go not away, the Comforter will not come unto you; but if I depart, I will send him unto you." He told them that the Comforter would bring to their remembrance the things he had said unto them, and also teach them all things, even the things he desired to say unto them but could not because they were not able to receive them. At all times they would hear Truth calling, "Come unto me . . . and I will give you rest." "Lo, I am with you alway."

"God is no respecter of persons." He is not more to one than to all. Christ is ever saying, "Come unto me."—how

Digitized by Google

general is the invitation! "all ye that labor and are heavy laden." The invitation is "Come," and the reward for coming is rest—labor ended, the struggle over, and the victory won.

Why is there not a more ready response to the call of Truth? Is it not because there are few who believe that the invitation is personal? Many read the words, but their ears are dull of hearing and they do not hear Christ calling them personally. They carry heavy burdens and they long for rest, but they know not where to find it. They continue the uneven struggle with sin, disease, and death. They stumble and fall, and oftentimes give up to hopeless despair, all because they do not hear the voice of the Comforter, or hearing, they know not how to "come."

It is hard for man to realize that he is even now a child of God and that all good is for him. It seems that a great gulf, almost, if not quite, impassable, separates him from the Source of all good. He reads the Bible as though the promises contained therein were intended for others but not for him. He is held by the conviction that God is a respecter of persons; that He did more for man in bygone centuries than He will do to-day; and that in the present He does more for some than for others. He believes himself to be among the less favored ones and it is useless to expect God to help him. He cannot grasp the fact that every word of God is for him to hear and heed.

There are few persons who have not at some time felt that it was not their privilege to avail themselves of the precious promises recorded in Holy Writ. Many persons are to-day filled with doubt and distrust. If they are not without faith they nevertheless find it impossible to believe that God will verify His word to them as He does to others. They may know how to trust God at some times and in some ways, but not at all times and in all ways. They do not know from experience that God is a present help in every time of need.

Christian Science has brought joy and gladness to the sick and sinful. It has enabled them to hear the voice of Truth calling them and they have found health and salvation. They are gaining the liberty of the sons of God, and they rejoice to know that with God's help they can overcome the myriad forms of sin that have held them in bondage. The Comforter has come into their lives. He is teaching them all things, making plain the deep things of God. They are learning how to turn a deaf ear to the suggestions of error that they may hear the word of God as spoken to them. And when they hear for themselves they know that divine Love is calling all men, even though some may know it not.

Christian Science says to every invalid, "God is able to heal all your infirmities." It says to the sinner, "Divine Love can save you from all your sins." To the discouraged and heavy laden it says, "There is hope and rest." It speaks to all men the words they long to hear, and when they hear, the sick are healed, the sinner forsakes his sinful ways, heavy burdens are laid down, and there is a new heaven and a new earth to all those who accept the invitation, "Come unto me."

Sacrifices.

A. T. M.

Doing Truth's work may seem hard, but it is no hardship, no sacrifice, and no meed of praise is due to those who attempt it, for they follow only what is for their own best interest. The idea of selfishness is, to get the most possible for yourself, but if one tried to be "scientifically selfish," that is, if he studied how to get the most for himself, he would be unselfish, for it is the unselfish one who gets the most—who has his measure pressed down full and running over. Let us be honest with ourselves and rationality will aid us to get rid of that hindering and blinding feeling of martyrdom which we carry around when we imagine that we have given up something for Truth, and contemplate how much we have done, how well we did it, how hard it was, or how hard it is going to be to finish it.

When we do our work right we do not have to give up anything worth the having, and what we get in return is many times more than what we once expected. There are no "sacrifices" for Truth, for nothing that is real can be lost.

He who thinks he has made or has yet to make a sacrifice, and grieves that he has to give up something for Truth, places a wrong value somewhere. To our material sense all values are relative only: a thing is big or small, usual or remarkable, desirable or undesirable only as it is compared with something else. Wonderful is merely a point of view. The material and spiritual are opposites; the smallest spiritual thing or demonstration is a wonderful miracle if compared with anything material. But we cannot look back into the material to seek grounds for comparisons; we must look forward into the spiritual and then there is nothing that is remarkable, for in the realm of the real there is only good, and good is what is natural and to be expected, whether manifested in the healing of sickness or in the raising of the dead. It is not remarkable to heal, for harmony is natural. Mrs. Eddy tells us that sickness and wrong are the unnatural and remarkable. Any one who says he has had a "remarkable" demonstration can use this expression only by way of contrast with his sense of limitation before he know that God is All.

It is never hard to do Truth's work if we do it right and recognize the right value of things. It was really easier for early Christians to "die" in the arena as martyrs than to live with the gnawing remorse of a guilty conscience for having denied what was known to be true. As life is mental and heaven a mental condition, not to have stood for their convictions would have been to have lost heaven, —their mental peace and sense of Love. It is only our sense of limitation that sometimes makes Truth's work seem hard; then let us deny the limitation and find our work easy, and there will be "painless progress, attended by life and peace" (Science and Health, p. 224).

[Written for the *Sentinel*.]

Christian Love.

FLORENCE RICHMOND.

True love of man and woman,
The God-inspired and human,
Athrob with wakened fiery beat
To smooth the paths of weary feet;
Like pulses of the mobile air
Thou art a life-fount everywhere.

Thou hast beheld the ruined things
In awful, wildest picturings;
But thy great love and gentleness,
Have rent the veil and dared to press
The joyous truth that knows no change,
Upon the earth, so sweetly strange.

For through the gates of solitude
The bitter pain hast thou subdued,
And loosed the bands of galling chain
In every land of Christ's domain;
And God, the omnipresent One
Breathes Christian love through works well done.

A Question Answered.

MAY I be permitted to answer, in part, your query as to why Mrs. Eddy secures so many followers? It is because the practice of Christian Science results in that which men want above everything else, healthy bodies and harmony of existence. She has not invented a new religion. Christian Science contains no new teaching. It is rather a restatement of Christianity, a reaffirmation of the fundamental propositions of Jesus' theology. He said, "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on." And Paul declared, "Henceforth know we no man after the flesh." Christian Science reiterates these teachings, it lays stress on the actuality of Spirit—God—and spiritual entities or things, and turns man's thought away from a contemplation of matter, which Jesus said "profiteth nothing." This single example illustrates the scope and mission of Christian Science, which propounds no new doctrines, but calls attention to eternal truths about God and man, truths which were first enunciated by Jesus.

When Jesus appeared upon the stage of mortal existence, he taught a theology widely different from the scholasticism of the age. It is conceivable that those not in harmony with him asked themselves why it was that he secured so many followers. The answer then was to be found in the sick who were healed, the sinful who were transformed by the renewing of their minds. The same answer suffices to-day to account for the number of believers in Christian Science. It is no mere theory or abstract system of philosophy. It is practical, definite, and provable, and therein lies its attractiveness. It offers to a suffering humanity, consolation, health, peace, all that man wishes for, and it is making good its promises by undeniable healing works. We do not need to search for, nor do we need to appeal to social economy, to find a reason for the popularity of Christian Science. It is because it gives results that are in every way satisfactory, to the beneficiary at least, if not to others.

WILLARD S. MATTOX.
Bridgeport (Conn.) *Farmer.*

True Healing.

THE error which causes sickness is always Truth's opposite, a lie; hence it is the understanding of the truth concerning God, and man in his relations to God, which heals.

Science and Health says, page 391, "Sin is the foundation of sickness, and you can master sin through divine Mind; hence it is through divine Mind that you overcome disease."

Since "sin is the foundation of sickness," true healing must result from the destruction of the sin, because when the foundations are destroyed the most gigantic error will disappear. The body will improve when the thoughts turn resolutely away from all error and we learn to love that which is pure and true. Truth is the beginning and end of true healing, for it enables you to "put off the old man," by being "renewed in the spirit of your mind." Righteousness is not sick or diseased. It is always a mistaken sense of what is good, or an ignorant, careless, material sense, which leads into suffering. This sense must be instructed out of its mistake, and led to seek good where alone it can be found, in the spiritual understanding of what man is, the image and likeness of God, absolutely free from all that is unlike good.

S. F. S
Hoopeston (Ill.) *Herald.*

A Helpful Influence.

MORE than by numbers and stately edifices the influence of Christian Science may be traced in the thought, habits, and ideals of all peoples. It is far less common now than of old "to enjoy ill health," and the perpetual talk of aches and pains, past and present misfortunes, and possible future trials is dropping rapidly into disuse.

Let the world rejoice that the time has come when in any organization the standard of good cheer and kindliness has been raised so high that its members are regarded by every one as inconsistent if they indulge indigo moods or criticise their fellow-men. *Denver* (Col.) *Times.*

It is absurd to suppose that a Christian Scientist would entrust his health and happiness to this religious belief if he did not find in it a larger degree of safety than in any other method of cure. The type of manhood and of womanhood found among Christian Scientists is not of the kind which would cling to any doctrine because of fanatical belief in its promises.

ALBERT E. MILLER.
Butler (Pa.) *Herald.*

Christian Science recognizes that humanity needs help, needs mental, moral, and spiritual stimulus and a larger faith, not only in themselves, but in God; and recognizing these truths, it endeavors to implant that understanding of God's presence, availability, and power which alone can heal and save.

Christian Science is educational in the truest sense of the word, because it inculcates the truest, best, most logical, most consistent understanding of God as infinite intelligence, ever-present and available, and man as his image. Learning of God and the things of God is true education.

JOHN L. RENDALL.
Iowa City (Ia.) *Republican.*

The reasonableness of its theory and the evident practical results of its application in healing the afflicted and reforming the depraved, makes Christian Science that which appeals to and satisfies those who turn to it in time of need.

Christian Science removes from man's experience nothing which is desirable, good, or true, but its mission is to affirm the fact that discord and distress of whatsoever nature belong not to the normal state of man, and that an understanding and application of the universal law of God frees man from them, and in their stead brings health, peace, and righteousness. An investigation of the subject with unbiased mind cannot fail to produce respect for Christian Science and its Leader, and force the conviction that the world is better for its teaching.

DAVID B. OGDEN.
Portland (Ore.) *Mercury.*

True religion and true Christianity include practice as well as theory. Indeed, one can understand but a limited amount of truth without practice, for Christian conduct is essential to lift one to that spiritual height which is necessary to understand deeper things. One could not fathom the depths of spiritual truth without progress. The advanced lessons of spiritual understanding can no more be understood by one who has not practised the first lessons than the advanced lessons of mathematics can be comprehended by a pupil who omits the examples for practice.

Every undertaking which involves practice necessitates knowledge or science. While Christian Science does not pretend to accord with that which deals only with the material, it is in harmony with the spiritual truth which Jesus taught and practised; and it is but just to the scientific world to say that many modern physicists approximate very nearly to the teaching of Christian Science in its definition of the substance of the universe.

The Lectures.

At Winchester, Mass.

Judge William G. Ewing of Chicago lectured on Christian Science at the Town Hall, last Sunday afternoon [November 29]. The hall was well filled with a most interested audience. The speaker was introduced by the Hon. Samuel J. Elder in the following words:—

The late Chief Justice of Massachusetts, now Mr. Justice Holmes of the Supreme Court of the United States, once said, in speaking of the devotion of the Southern troops and of their adherence to their cause, "It seems a part of the divine economy that every person should go somewhither with all his might on the pain of not having lived." And it is just as true in the affairs of the mental and spiritual life as in the affairs of nations and individuals, that the truth as the man sees it, the truth as bodies of people see it, should be presented, and that each person should live out his views of the truth as it is in his mind, because there has been no progress in the world except there has been a clash of feeling, of opinion, and of judgment. Uniformity has always meant stagnation. And it is in this knowledge and in this spirit that I believe our Winchester friends welcome the discussion to take place this afternoon.

We are most fortunate in having the views presented by one of the ablest men in the ranks of Christian Science, and I have great pleasure in introducing to you your friend and mine, Judge Ewing of Chicago.

The Winchester Star.

At Anderson, Ind.

The Grand Opera House was filled to overflowing last night [November 30] by an audience of representative citizens, who assembled to hear an address on Christian Science by Carol Norton of New York. Stephen Metcalf of this city introduced Judge Buskirk in a fitting manner, and he delivered a very forceful introduction, which was in part as follows:—

Now, Christian Science is a tree that has been bearing fruit for about a third of a century, although it is only within the last few years that it has become extensively planted throughout the world. Has it or has it not been bearing good fruit?

It has cured thousands of drunkards and restored them to sober, successful citizenship. Is not this a good fruit? It has emancipated thousands of the captives of the vilest appetites and passions and taught them that the Circe enthralling them and changing them into beasts is but a vile and unlovely enchantress after all, when rightly known, all of whose alluring gifts of pretended sensual pleasures are no better than wormwood and gall. Is not this teaching a good fruit, my friends? It has rescued tens of thousands from the cold and benumbing fogs of materialism and infidelity and has led them onward and upward into the vivifying, joy-giving sunlight of an assured faith in the divine Principle of the universe, a God of infinite loving-kindness. Is not this a good fruit? For one, rescued by Christian Science from those fogs of which I spoke, I can answer that indeed it is a good fruit.

Christian Science has entered thousands of homes where stricken loved ones have been left to die by their drug physicians after faithfully expending upon them the best skill and learning of their profession, and those fading loved ones have been taught by Christian Science of the one Great Physician and have once more blossomed into health. Is not this a good fruit?

From my experience as a father nine years ago, not to mention many later experiences, my friends, I can sincerely and most gratefully say to you that for me and for my family it is indeed a good fruit, and that beside it the golden apples of the fabled garden of the Hesperides are as nothing. That is why I am a Christian Scientist, my friends. It has done the work.—*The Bulletin.*

At Montevideo, Minn.

The introductory remarks of the Hon. Lyndon A. Smith, Ex-Lieutenant Governor of Minnesota, who introduced Miss Mary Brookins on the occasion of the Christian Science lecture, November 22, were in part as follows:—

We have assembled this afternoon to listen to a presentation of the prominent features of a comparatively new religious movement. Some of us know much less about it than we ought. We have now and then read a news item in the daily papers attributing to some Christian Scientist absurd ideas, and imprudent, if not improper, conduct. Occasionally we have heard clergymen of other denominations criticise Christian Science with marked severity and little charity. Others who are present here to-day have become familiar with the teachings of this new denomination and have accepted them as reasonable, and they are now consistent adherents to the new faith.

The starting of a new religious movement is not a matter of slight importance. Many such have been important factors in the world's civilization and progress. Many a great war has left less impress upon the world than has a religious movement.

Many of the denominations now existing have originated through bitter quarrels, but Christian Science had a peaceful origin. Its followers have not used their strength to tear down others but have been active in building up an institution of their own, and zealous in extending its influence. We have all recognized their sincerity and implicit faith in their church and have not found it to be any hindrance to their usefulness as citizens, or to the performance of their duties along social lines.—*The Commercial.*

Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Building Fund.

A FEW days ago we received a letter from a friend in another city saying that he had just been informed—and his informant claimed to have good authority for the statement—that the entire amount required to complete the Mother Church Building Fund had been paid in, consequently further payments or subscriptions were not desired. Our friend very promptly and emphatically pronounced the story a fabrication of the evil one, and he was entirely right in doing so. If the devil were really an entity, endowed with genius and inspiration, he could not have invented a more subtle lie with which to ensnare a generous and loyal people.

As a matter of fact, the Building Fund is not complete, but it is in such a healthy state that building operations have been commenced and they will be carried on without interruption until the church is finished. The rapidity with which the work will be pushed forward necessitates large payments of money, and it is desirable that the contributions to the Building Fund keep pace with the disbursements. So long as the notice, "A Word from Mr. Chase," continues to appear in the *Sentinel* and *Journal*, our friends will know that the opportunity to contribute to the Building Fund is still open to them.

We had not intended to do more than expose the means by which a state of indifference to the needs of the hour might be engendered, but now that we are on the subject, we cannot refrain from volunteering the suggestion that the most certain way to put this undertaking beyond the reach of that which would instinctively hinder and delay it, is to complete the fund at once. Why not do it to-day? M.

Revivals.

IN the book of Habakkuk, that old Hebrew classic which challenges the admiration of modern poets with its sublime imagery, we find the petition, "O Lord, revive thy work in the midst of the years." That even one was wont to pray thus, gives proof that the sacred light of Truth was burning, if but dimly, and that ever and anon the prophetic spirit breaks forth to awaken mortals from the long dream of materiality.

Paul reminds us that God has never left "Himself without witness," and as the ages roll on they are marked by revivals,—that quickening of human thought and spiritual interest which finds expression in art, in literature, in religion, and in the higher ideals of life. The word "revive" has the following definitions: to give new life; to recover from a state of oblivion, obscurity, or neglect; to bring into action after a suspension. In this broad sense the prophets were all revivalists, and to the extent that they were heeded, the people recognized the Divine presence in their deliverance from sin and sickness, and in their national prosperity and peace.

When Jesus came to revive the work of Truth he did so in a more effective way than had ever been known before. He never failed, however, to recognize what had been done by those who preceded him, and he began his public ministry by declaring in the synagogue, that the prophecy of Isaiah which he had read was fulfilled in his work. He frequently reminded them of the lofty hopes which had centered about the birth of their nation, and said that not a jot or tittle should pass from its law till all was fulfilled. Not only did he carry his revival of true religion into the hearts and the homes of the people, but he went into the very temple and there he rebuked and cast out that which symbolized the worship of mammon,—then he healed the sick therein by the power of the Word, and thus revived Truth's work in that age; and it is a sad thing that it should ever have been lessened, ever have ceased, since without the demonstration of the divine activity, humanity inevitably drifts into moral and social chaos.

In our time there has come a mighty revival of spiritual understanding which bids fair to gather up all the treasures of the kingdom of good, and bring them within the reach of those who love Truth's appearing. As the centuries have passed, many have longed for a revival of true spirituality, but for lack of the right knowledge it has not come. Says Lowell,—

> Many loved Truth, and lavished life's best oil
> Amid the dust of books to find Her,
> Content at last, for guerdon of their toil,
> With the cast mantle She hath left behind Her.

Not so the prophet who prayed that God's work would be revived, and who at the same time declared, "The Lord is in his holy temple, let all the earth keep silence before him." Not so those who understand and love the Christ Science which proclaims the eternal fact that spirit fills the universe, and that material sense must "keep silence" before God. "Do not I fill heaven and earth? saith the Lord."

It is interesting to note how all-embracing is our sense of brotherhood when we are revived by Spirit. In the light of Christian Science men awaken to a brotherhood which includes all the children of God, and this is significant. That Enoch "walked with God" is of vital importance for him who is learning how he too may walk with God, and find with the patriarch eternal Life.

In our individual experience the revival of Truth's work is greatly needed, for mortal sense would dull the hopes of youth, would check the heavenward aspirations, and quench the light of love in the disappointments of advancing years. When, however, we are revived by the understanding of Truth, our hopes reach infinitude, our aspirations lay hold upon nothing less than the realization of the Christ ideal for ourselves and others, and

> We find the joy of loving, as we never loved before,
> Loving on unchilled, unhindered, loving once forevermore.

"In the midst of the years" has come this glorious revival of truth, and its Leader has said, "One moment of divine consciousness, as the spiritual understanding of Life and Love, is a foretaste of eternity" (Science and Health, p. 599). K.

To Each his Portion.

THE hope of humanity resides in the fact that Truth brings conviction and content of mind through the highest sense which honest inquiry may have at command, though that sense may as yet be very imperfect. The fulness of its glory cannot be transmitted through human media, but Truth gives assuring evidence to sincere seekers upon the plane of present illumination and experience. To Thomas, a doubting commoner, as to Saul, the self-satisfied Pharisee, and John, the saintly seer, there came alike, though in varied form, the appealing word, "Come, let us reason together." There surely is a satisfying portion for every earnest seeker, regardless of his ignorance and prejudices, and the realization of this fact

Digitized by Google

will increase both our reliance on Truth and our care that we make no mistakes in our administration of it. Humanity's deep need explains its universal quest and disquiet, and how encouraging for us to know not only that there is a disclosure of wisdom suited to every stage and condition of the individual advance, but that it is our privilege to make it.

It would be no great task to find those whose spiritual apprehension is a long way in advance of their sense of the eternal fitness of things, who in the clumsiness and unwisdom of their handling of the word, temporarily rob it of its effectiveness. Their exhibit does not have the soul-satisfying quality, and the disappointed and grieved turn away to continue their search for that without which the heart is ever "an hungered."

The success of our ministry to humanity will be determined first of all by the surety and definiteness of our own embrace of truth. Then by our perception of the nature of another's need and our wisdom of address in meeting that need. To be effective the appeal to men must always be considerate of their present susceptibility. If our address be above the plane of their apprehension it may awaken only sarcasm and contempt, if below, it is likely to repel if not disgust, and herein lies that art of winning men of which Jesus revealed so great a mastery. The story of his conversation with the woman at the well is a study in tact as well as truthfulness. How easily a zealot or a blunderer might have frightened or offended this poor weakling, but in the choice and ordering of his words Jesus has shown us how unswerving loyalty to Truth may be conjoined with wise and compassionate regard for the educational bias and ignorance, as well as the heart-hunger of one who perchance was more sinned against than sinful.

As Christian Scientists, many of us are anticipating the most valued experiences of the new year in kindred opportunities to minister to the sin-sick and suffering, and we may indeed rejoice that the truth to which we point, as revealed and demonstrated in Christian Science, is able to silence criticism and convince prejudice, as well as comfort and satisfy "the hungry soul," but we do well to remember daily that its achievements for humanity are to be determined largely by the wisdom with which we rightly divide the word. If we are adequate to the situation, no honest inquirer will go from our door discouraged and unblest, though perchance to-day we can give only an illuminating suggestion,—throw an added light upon some human experience or upon some familiar saying of prophet or seer, so that it shall have ever after a higher, more spiritual meaning. Indeed, our ministry to many may involve the withholding of much of truth until the babe be grown: and this demands not compromise, but alert perception of individual need and the most thoughtful and discriminating adjustment of our expressions thereto. W.

Mrs. Eddy's Gift.

MRS. MARY BAKER EDDY has given one hundred dollars toward a bell to the Bog church, so-called, in Bow.

Concord (N. H.) *Monitor.*

Letters to our Leader.

Coldwater, Mich.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—I want to gladden my Christmas-tide by sending a few words of gratitude to you for the wise gift you brought, years ago, to Love's manger, over the desert-sands of human want and suffering,—the best gift for a sorrowing world,—"Science and Health with Key to the Scriptures."

Through reading Science and Health and praying the words line by line, I have been entirely healed of the severest form of organic heart disease, and Truth has led me lovingly and safely on "beside the still waters" of health and peace.

This book has taught me to love God, and it is, day by day, teaching me to judge no man. Believe me to be one who owes much, and is daily praying to love more.

Lovingly,

AGNES FLORIDA CHALMERS.

December 22, 1903.

Beloved Leader:—My little Virginia, aged five, and I send our love and Christmas greeting, and may we take up a few moments of your time to tell you how thankful we are for the many blessings received through Truth.

I had suffered physically every ill that flesh is heir to. Physicians failed to diagnose my case and gave no hope of my recovery.

Through a relative I purchased the Bible and Science and Health, and in less than three months was completely healed of two ailments that some of the most noted specialists in America had told me were on the books as incurable.

I employed no practitioner, but the loving Truth revealed through Science and Health and the knowledge that I have a God, was my healer.

My heart is filled with love for my dear Leader, and each day, when in silent communion with God, I thank Him for giving us one so true and loving, in following whom we cannot but reap a rich reward of blessings,—of spiritual light. I have been able to help others to see this light, and am striving faithfully to work in Truth and Love.

Little Virginia would like to send through you a little love offering for the room in the Concord Church. She loves Christian Science and quite often makes her own demonstration. When three years old she seemed to have a very severe attack of whooping-cough, which I met in two and a half weeks; also a little later she had the measles which was destroyed in two days through my understanding of Science and Health.

For this and many blessings my heart goes out in gratitude to our beloved Leader, and I am striving each day to be purer and better, reflecting the Christ-principle in thought, word, and deed.

With a heart full of love, I am most faithfully,

JESSIE S. WARDWELL, Boston, Mass.

Toledo, O., December 4, 1903.

Beloved Leader and Teacher:—This second Sunday after Thanksgiving Day is the nineteenth anniversary of my healing by the sermon you preached that day. I went to Hawthorn Hall an indifferent hearer and an almost hopeless invalid. When you had finished speaking I was a new creature. My heart leaped for joy, my song was, "I have found God, and He is my life now. I don't have to die to find Him, He is here and Life is here." The next morning I entered a class, and have been on the field of battle ever since.

These long years seem but moments, now that they are passed, and I thank God and you for leading me through all the experiences that have come.

When I came to you in October we were trying to divide the church, although we were striving to be brethren in the matter, including the financial part also. But your words to the Teachers Association Meeting opened the way for us to go on together, to start anew to work out church organization according to the definition of Church in our text-book, "Science and Health with Key to the Scriptures." To human sense it seems an awful sacrifice, but I believe it is the only thing to do. I expect the matter will be adjusted this week, and I am working that this is the way of deliverance for all of us.

Digitized by Google

I pray that when you call me again I shall be ready and waiting.

Your loving, obedient student,
SARAH J. CLARK.

Dallas, Texas, December 18, 1903.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—I can no longer withhold from you my deep gratitude for the great blessing received with the thousands at your home last June.

I was so clothed with peace, and an enlarged understanding, that I have been enabled to do quick healing. I will mention one case,—that of a nephew sixteen years of age. After he had suffered several hours with inherited congestion of the stomach and bowels, I was called at twelve o'clock to see him. The condition was so alarming that his mother, who was away from home, was telegraphed for, and it was believed she would never see him again. When the treatment was given he was relieved somewhat, and in an hour he was free from suffering. Our dear text-book, Science and Health, was read to him. At four o'clock he dressed himself and went to town well. He has since been in better health than ever before in his life, and is a better boy. A cousin of his, the same age, had said a few days before this that he never had seen anything that Christian Science had done. After this he said he could say that no more, and is now able to prove to some extent his own understanding by studying for himself. This confirms your statement, that "proofs are better than mere verbal argument" (Science and Health, p. 355).

I beg you accept this little expression from one who is striving to be found worthy of the name a Christian Scientist. With love and best wishes, I am sincerely yours,

SUE D. HINES.

The Christian Scientists proceed from the premise that all things are possible to God, and that not the least of these powers is ability, willingness, and desire to heal the maimed and the sick. They believe sickness to be a lie consequent upon sin, and that it can be avoided and cured by perfect faith in God, love of fellows, and the living of the Christian life every day.

Is there anything preposterous in this belief and in the claims that proceed from it? It taxes the material understanding to agree that prayer will set a fractured limb, or that it will remove a cancerous growth. Yet accepting the premise of the Scientists, that all things are possible to God, is their belief unreasonable? are we to judge of what is possible and what impossible to the Divinity? Whence comes authority to affirm that the great Healer can not set a fractured limb or heal the cancerous growth? and whence the authority to declare that He will not, if the sufferer lives the Christian life and puts his faith absolutely in God?

The Scientists should be free to practise their faith without restrictions of legal fetters. Nothing is thought of it when a physician's patient dies under treatment, but when a Science patient dies under treatment, the fact is heralded broadcast. That is because the one death is not news and the other is.

It is restriction of the spirit of religious freedom to legislate against the Christian Scientists. They are entitled to their opinions, and those who are not Scientists, to theirs. If their faith in God is such that they believe in His curative power, it is not within our province to judge them harshly.

Editorial in *Telegraph-Herald*, Dubuque, Ia.

Correction.

In the current *Quarterly*, page 27, Sect. III., the Science and Health reference, 539—7 to 12 should be omitted. Page 34, Sect. V., the first Bible reference should read Deuteronomy, 33 : 27.

Testimonies of Healing.

I enjoy reading the testimonies of healing, and feel that I can endorse every word. I would like to acknowledge my gratitude to God, to Mrs. Eddy, and to my practitioner, also to the kind friends who first told me of Christian Science.

At that time I was in bed, could not stand on one of my feet, and could not endure the pain it caused me to let it hang down while I used my crutch. I had suffered about six years from an ulcer on my ankle. When it first became sore, I did not pay much attention to it for some time, but it got so bad that I had to go to a doctor, and then medicine, bandages, and rest, were prescribed and carried out, without giving relief, until I heard of the Christian Science treatment, and that some Christian Scientists lived near by who were healing cases which the doctors had failed to cure.

No one except those who have been without any hope of ever getting well can have an idea of how I, an old, widowed mother, felt when I heard the sweet words which told of the promises of our heavenly Father, and found that they were just as valid now as they were when first promised us. I never did doubt God's goodness, mercy, and power; but, like so many others, thought that these promises would never be realized during our stay on earth. I am thankful to say, however, that I was healed and can walk all about my home without any trouble. I never have had to use the crutch again, neither have I taken any medicine or anything. I simply trust God who forgiveth all our iniquities, who healeth all our diseases.

I was well for about three years, bought Science and Health, and read and studied it, and it did me a great deal of good; then I came down to my bed again. This time the sore appeared in a different place. I cannot tell you how I suffered; it was erysipelas this time, and it spread from above where the first sore was, near to my body. I felt as if I could not live two hours, and it would take about that length of time to get word to the practitioner. One of my sons went as fast as he could travel, and though the man was not at his house, his wife, who was also a Scientist, gave some help, and she sent for her husband, and he and my son got here as soon as they could.

Several of my neighbors were here, and some of them said that if I were raised up, they would believe in Science. The pain was so severe that I thought the bone was broken, but it was an abscess that had formed very rapidly. My helper had been treating me before he got here, and I wish I could describe my condition, and how perfectly easy I was in a few minutes. The next day the abscess opened and a great deal of blood was discharged from it for a day or so, but in a few days I was well, and have never had any more trouble in that way. That was about three years ago.—E. S. B., Bonham, Tex.

It is the practical element in Christian Science which interests the practical people of to-day. The history of the religions of all people in all ages gives evidence of the bow of promise exhibited in some form by all, but in most of them fulfilment is contingent upon some future condition or event. The apostle says, "Faith is the substance of things hoped for, the evidence of things not seen."

For more than twenty years before accepting Christian Science, I was a member of an orthodox church and much of that time an active church member, a Sunday School officer and teacher, striving for "the substance of things hoped for," but it remained for Christian Science to furnish me with the real "evidence of things not seen."

Faith that is based upon one's own work is a more abiding faith, and we now have a keener appreciation of the Scripture statement, "Show me thy faith without thy works,

Digitized by Google

and I will show thee my faith by my works," through personal knowledge of instances of healing, and through some understanding of the teachings of our text-book, Science and Health.

Among the instances of Christian Science healing which first interested me is one which is particularly noteworthy for the number of persons who were more or less influenced by it to embrace the teachings of Christian Science. The case was that of a farmer, a personal friend, whom I have known for more than thirty years. He then lived on a farm five miles from the nearest railroad station and thirty miles from a city. He had for some weeks been a sufferer from a severe attack of rheumatism. The joints of his hands, feet, and limbs were so swollen that he was absolutely helpless. He tried every known remedy, and many were suggested by friends and neighbors. A number of different doctors were employed, and he had ample means to pay for relief from any who had the skill or remedies to offer. The doctors frankly told him they could do little for him. They directed that he should have careful nursing, and stated that the only immediate danger was that the disease might suddenly attack a vital organ and cause death without any warning.

Left in this helpless, hopeless condition, he became very despondent. Material means being powerless to help him, his thoughts reverted to God, and he was pondering upon this, when some neighbors called. They had a copy of Science and Health in their home which they were reading, also copies of *The Christian Science Journal*. In a friendly way they told what they had learned from the text-book, and of the testimonies of healing in the *Journals*. He was so impressed with the hope of God's help that he ordered his well-filled wallet brought out and turned over to his friends, who were to bring a practitioner from the city of Des Moines, Ia., on the first train. By telegraphing this was done, and in a few days he was healed. That was about ten years ago, and he became an earnest student of Christian Science. Through the understanding he gained, many were healed, and with those directly influenced by these persons and his own case much is traceable to the influence for good of the one copy of Science and Health in the hands of the friendly neighbors. These neighbors were the writer's parents, and this demonstration was to them such powerful "evidence of things not seen" that more than anything else it influenced them to accept Christian Science. The light of Truth has brought into these homes, into these lives, such a peace and harmony as marks the pearl of great price. We have occasion for daily thanksgiving that Mrs. Eddy has endured such trial and self-denials in order to show us the way in Christian Science.—A. L. McBride, Kansas City, Mo.

I should like to express the gratitude I feel for what Christian Science has done for me. I first heard of it about six years ago through a friend writing me and telling of her own and her husband's wonderful healing. She asked me to try it for myself, assuring me it would help or heal me, also giving me the name of a practitioner in our town.

At that time there were no services held here. I had only heard the name of Christian Science about three times and never gave it a second thought. I heard Scientists spoken of as a sect that thought they could get along without medicine or doctors. I of course thought it absurd and was taking medicine by the wholesale, with the hope of getting better and stronger. As far back as I can remember I was a sickly, delicate child, something always seeming to be wrong. I am truly thankful that Christian Science came to me at the time it did, for I surely needed the help. I had nearly every ill that flesh is heir to,—catarrh, chronic bronchitis, and lung trouble,—the doctor saying one lung was in a bad condition, and of course arousing great fear of the dreaded disease, consumption.

I could not take a long breath, and trying to do so was accompanied by a sharp pain. I could not sleep well because of a weak, aching back, and I was glad when morning came. I had stomach trouble and fear of eating certain things. If I ventured to eat things that my appetite craved, there were bad results. I had worn glasses for over six years for astigmatism, one eye being in such a condition that I could not read or sew for any length of time.

After several weeks' treatment I began to get stronger, and in a short time put aside the glasses. I have never needed them since. One ill after another disappeared. I am now well and strong, and happy to know that Truth has overcome all these ills, and has taught me how to "put off the old man with his deeds," and "put on the new man."

Christian Science has enabled me to rise above fear that never would have been met in the old thought. I have had the privilege of class instruction, and hope to grow daily in wisdom, knowledge, and understanding. I am deeply grateful to God for Christian Science and to our dea. Leader, Mrs. Eddy, also to my helper and teacher for her sweetness and patience.—M. S. Pearce, Lancaster, O.

In gratitude for my remarkable cure through Christian Science, and with the hope that this may help some one else to find the truth, I desire to give this testimony. For years I had been considered delicate. I was unable to walk any distance or lift any weight without suffering terribly afterwards. I did not dare to eat many things, was extremely nervous, and almost constantly suffering from rheumatism and neuralgia. These troubles finally culminated in lockjaw and a very badly diseased condition of the bone of one jaw, supposed to have been caused by my trying to have a tooth extracted.

For eight months I tried everything known to the medical world, besides osteopathy, magnetic healing, etc. I was in two hospitals and in the hands of the most efficient surgeons of the West, had four operations, and finally the head surgeon of the hospital where I had been for over two months, told me there was one chance of a little live bone remaining, and since I might as well be dead as to lose my jaw, I must wait perhaps months and hope for the best. For a week I steadily grew worse, and I made up my mind never to submit to another operation until I had tried Christian Science.

When I began treatment I could scarcely walk two blocks without resting, but in two weeks I walked four miles, and although I was thoroughly drenched by a sudden rain, I was not tired and never had an ache or pain follow the exposure. I ate anything I desired, and within a month was at home taking charge of my children and the work.

I was the first one here to step out of the medical path and to take a stand for Christian Science, and I see each day more plainly how much I owe to the patient practitioner who so faithfully prepared me for the stand necessary. Since my return, nine months ago, neither my children nor myself have taken one drop of medicine or sought any material aid. Within three months we were having regular Sunday and Wednesday services and a regular Sunday School, and had organized our society with ten members. We feel much encouraged, and shall continue to fight the good fight of faith.

Mrs. Grace J. Eckles, Cambridge, Idaho.

I wish to express my gratitude for the wonderful message of Truth, as put forth in "Science and Health with Key to the Scriptures."

It will be three years in February since I received this blessed truth. I had been a sufferer for a number of years from a complication of diseases, as well as many discords too numerous to mention. To mortal sense the crisis had apparently come after the birth of my baby. I was con-

Digitized by Google

fined to my bed for five months; my relief coming only from the use of opiates.

There finally came a time when my attending physician gave up all hope of my recovery, claiming that the resources of *materia medica* had been exhausted so far as his knowledge reached. He suggested that I try Christian Science. I then knew nothing about this teaching, except that I had a grandmother who had embraced it. I loved her dearly, but I was never permitted to see her after she had accepted Christian Science. I used, however, to hear my mother say that surely a great change had come over grandma, judging from the tone of her letters.

A practitioner was called, and to the astonishment of many, as well as myself, I was raised up in three days. The practitioner, like her Exemplar, boldly and courageously walked out on the sea of error, bidding its troubled waves be still. In a short time I could perceive to a limited degree the presence of Truth, and this cleared my clouded sense. From that time I had a desire to know and follow in the footsteps pointed out to us in truth, and I at once started out with a new sense of Life.

I find that the footsteps do not always lead through smooth places, and that obstacles seem to be in my pathway, yet, glory be to God, I know that the Christ-truth rolls away these material obstructions and they disappear as a mist before the morning sun. I mean to press on and finally reach the goal prepared for all God's children from the foundation of the world.

I am ever grateful to God and to Mrs. Eddy, also to my loving teacher and practitioner, and the friends who assisted me in my journey "from sense to Soul" (Science and Health, p. 566).—Mrs. J. C. Kelton, Maquoketa, Ia.

It is with a grateful heart that I shall attempt to testify to the healing efficacy of Christian Science. It is about a year since I was completely healed of catarrh in its very worst form, it having reached my lungs. I expectorated quite profusely and had a dry, hacking cough all the time. I had been a sufferer from troubles peculiar to my sex for many years, which, together with chronic constipation of over twenty years' standing and many other ills, gradually disappeared under the potency of divine Truth and Love.

My husband gave up a good position in our Southern Oregon home to enable us to come down here to try the climate cure, as medicines, doctors, and operations had failed to relieve me, and so in the fall of 1900 we commenced our mad chase after climate. After living in several different parts of Southern California for some time, I gradually got worse, entered a hospital in Los Angeles, and had an operation performed which the surgeon said would make a well woman of me, but the relief was only temporary, and that from which we expected so much was only another disappointment.

It was while my husband was teaching school out in the country that we first learned of Christian Science, and being ready to try almost anything, we were convinced, on reading Science and Health and other literature, that there was surely something in it, so last summer we came to Riverside with the firm determination to give Christian Science a fair and honest trial. I was under treatment three and one half months with results as above stated. I am to-day a well, strong, and hearty woman, and can now do my household duties with ease and pleasure, while only a short year ago I was able to do but a small part of my work, and that only with great effort. I am happy and contented, and our home is what it should be, one of joy and love. My husband and I have gone through a class and are striving earnestly to learn more and more of this blessed truth that makes free. Words are inadequate to express the thankfulness I feel for what Christian Science has done for me, and I shall strive to let my life and conduct show my gratitude and appreciation.

Emma S. Jacobs, Riverside, Cal.

I would like to express through the columns of our priceless literature, one of the blessings which the daily study of Christian Science has brought me.

The healing of a sprained tendon in the right arm, caused by excessive practice on the piano, first interested me in Christian Science. Many physicians, among them two celebrated specialists whom I had consulted during eighteen months, promised me no complete cure of the sprain. All agreed that there would always be a weakness in the wrist, and they recommended me to avoid over-fatigue when practising or letter writing; and two of the specialists said that rheumatism might possibly set in.

In deepest gratitude I can state that Christian Science has effected a complete cure. The daily study of "Science and Health with Key to the Scriptures" during a period of about three months, together with the help of occasional talks with dear Christian Scientists, enabled me to give a pianoforte recital within three months after taking up the study of Christian Science.

A point that struck me forcibly during my early days in Science, was the quiet confidence shown that a relapse was impossible if our God-given dominion over the senses were exercised. This meant much to me, because the doctor's warnings would try to assert themselves and arouse fear.

The only warning Christian Science has for those healed by it, is the same as that o our great Master; namely, "Sin no more, lest a worse thing come unto thee."

The conviction of security from physical disorders, and from all discordant conditions, results from the right understanding of God which the Bible reveals when studied in the light of Christian Science; namely, that God is Spirit, and His creation is *purely spiritual.*

The one through whom this great truth is to-day presented to the world, is the courageous, exalted, pure-minded woman, Mary Baker G. Eddy. Only time can reveal what her noble character has effected, and will effect in the working out of the salvation of the whole world.

L. H., London, Eng.

With a heart full of gratitude for the blessings received from Christian Science I send this testimony.

About six years ago I was awakened during the night with a sense of being wanted, and while I was thinking what it could be, I heard a low moan proceeding from the bath room. Hastening there I found my husband lying on the floor, white and cold, and with only the faintest sign of breathing. I had no time to be afraid, and knew I had work to do. I took his head on my arm and declared audibly that God is the only power, the only presence, the only Life, and that he could not be separated from Him. At first there was no sign, and I then again declared the truth and asked him to speak to me. He opened his eyes, looked at me, and said yes, and that was all. I again declared the truth and asked him to go back to his room. He arose to his feet and started to walk to the chamber. I put out my arms to steady him and the moment I touched him he fell again at my feet. I then saw that God needed no material help to complete the work. In a short time he was able to get into bed, and after the demonstration was complete he said, that his heart seemed to beat so fast that it smothered him, then stopped, and that was all he knew until I spoke to him. Thus was it again proved to me that man is God's own reflection. (Science and Health, p. 471.)

Alice F. Rowe, Gloucester, Mass.

Digitized by Google

About seven years ago my health was so poor that I could not walk alone. I had been treated by doctors for years, but no one seemed to know what the matter was with me. I had bad headaches during all the time, and one doctor said that I had hardening of the spinal cord. I got a little relief, but the next year I was as bad as ever, and was so discouraged that I did not know what to do. My husband said I must try some other doctor, but I told him that I was going to try Christian Science. I had heard of it but did not have any faith in it.

One morning with the help of my husband I went to see a practitioner a short distance away,—a young lady with whom I was somewhat acquainted. When I saw her I began to cry, and I asked her if she could heal me. She said, "No; but God can,—there is nothing impossible with God." I took a treatment and bought a copy of Science and Health, and commenced to read the next morning. As I read, I told my husband that I felt better. I continued to read the book and had three weeks' treatment, and was healed. I was never so well in my life, and I do all my work, which I never did before.

I am thankful to God for Christian Science and to our dear Leader, Mrs. Eddy, to my teacher, and to all who in every way helped me to understand the Truth.

MRS. VIOLA E. ANDREWS, Chelsea, Mass.

Like the woman in the Bible story, I had "suffered many things of many physicians" for about twelve years. I finally turned to Truth for healing. Hearing of Christian Science one day, I hunted up the Christian Scientist who was mentioned to me. The next day I placed myself under treatment and was healed in about two months. After about two months more I took class instruction, and after nearly seven years' growth and experience in the unfoldment of Truth, I to-day with sincere gratitude wish to consecrate myself anew to God and whatever work He has for me to do, whatever place He has for me to fill.

Just after leaving the class my first patient came to me for help. This lady had been sent home for a rest, as the physician put it, which was to prepare her for a second operation; a former operation which had been performed in a distant city having proved unsuccessful. She was healed, and took class instruction, and is to-day a faithful student. I am most grateful to our beloved Leader, to my own teacher, and to all who have given me any "crumbs" in my times of need.

I have simply given a faint suggestion of the blessings that have come to me, and the gratitude I feel to God for awaking me to the possibility, if I am faithful, of being satisfied when I awake in His likeness.

CAROLYN MARJORIE COCHRANE, Buffalo, N. Y.

Some time ago an epidemic known as mumps, seemed to be raging among the schoolchildren of our town. As I was a teacher in the public schools, this was brought to my notice many times, and finally seemed to fasten itself upon me. I knew a little of Christian Science and tried to overcome the error. I was soon relieved from all suffering, but the manifestation on the face seemed to gain ground.

After two days, I asked help of another Scientist and was healed, remaining out of school but two days. While out of school, I found work at home and was busy from morning until night each day, and never felt like lying down.

The result of this treatment was the most wonderful spiritual uplifting! I can never describe it. Then, too, although I was living in a family with eight children, not one of them was touched by the error nor did I hear of another case in town for two months. I soon received class instruction, and upon my return from the class, a little sister began to complain of mumps. With my new understanding, I was enabled to see the ailment vanish without the usual swelling on the face.

I cannot be too grateful to God and to our Leader for this glorious redemptive truth known as Christian Science.

A. J. E., Silver Creek, N. Y.

I have been interested in Christian Science about eighteen months, and during that time, I have been healed of nervous trouble, which would result in complete prostration, causing me to have sleepy spells, wherever I chanced to be. I have also been cured of muscular rheumatism after having suffered with it for ten years, and I have been enabled to lay off my glasses, which I had worn for twenty years.

I have also had the privilege and pleasure of class instruction, and through the power of this demonstrable truth, as taught in Science and Health, I have been able to help others.

I was reared in an orthodox church, but only through Christian Science has my understanding been opened to the meaning of the words which Jesus spake, when he said, "Ye shall know the truth, and the truth shall make you free."

I desire to express my gratitude, to Mrs. Eddy, to my teacher, and to my practitioner for helping to lead me out of darkness, into light.

My daily prayer is that I may walk worthily in this blessed truth.

MRS. ANNIE E. GAWTHROP, Baltimore, Md.

Words are too weak to express the comfort, joy, and hope that Christian Science has brought into my life. When I first heard the sweet strains of truth I was in a black night of fear, and my heart was filled with malice and revenge, not to mention a mountain of self-love and pride. I accepted at once every word the dear Scientist spoke, for I felt instinctively that I had found that for which my heart had longed since childhood.

Aside from the physical healing, I am learning to love those whom I once hated, and have lost an *awful* fear of the future that seemed to be engulfing me. I never take up a *Sentinel* or *Journal* that I do not find rich food for my peculiar need.

God grant that I may one day be as selfless and pure as our beloved Leader, who is so far ahead on the journey.

C. A. J., Lewinsville, Va.

I wish to testify of what Christian Science has done for me, hoping that it will lead others to investigate the subject. I was healed of dyspepsia, rheumatism, and many other ailments which the physicians could not cure. It was thirteen years ago that I heard of Christian Science, and I procured a copy of Science and Health and began to read it. In a short time I realized the healing, but the spiritual understanding of God and the Bible is far above the physical healing, for both of which I am very thankful.

MRS. KATE AVERY, Buffalo, N. Y.

From the greatest to the smallest, happiness and usefulness are largely found in the same soul, and the joy of life is won in its deepest and truest sense only by those who have not shirked life's burdens. The men whom we most delight to honor in all this land are those who did not choose the easy tasks, who did not shirk the difficult duty. Deliberately and of their own free will they strove for an ideal, upward and onward across the stony slopes of greatness. And because they did this they have won such proud joy as it has fallen to the lot of no other men to win, and have written their names forevermore on the golden honor roll of the nation.—PRESIDENT ROOSEVELT.

From our Exchanges.

We are not living on the past; eating up our spiritual patrimony, beggars existing on the crusts left us by nobler ancestors. The world is better than it was in John Calvin's day. It is not growing worse. Its moral momentum is furnished by its Maker. His breath can make as His breath has made. By Him we are swept forward toward the light. We do need a restatement of the eternal verities. We do need a theology which is grounded on the Golden Rule. And we will get this in due season, if we faint not. Unhasting and unresting, the God of all flesh and all spirit is preparing the world for that day, out of whose richer experience, wider horizon, nobler growth another and grand formula of faith will come. And when it comes it will be no less vital and potent than the old, but it will be more beautiful and more merciful and more prophetic. But let us get things in their true order and relationship. The new formula of faith will not create the mood that creates it. Let us follow things to their true source. It is the life of God in the souls of men, it is the religious instinct of humanity, which casts upward into life all formulas of faith, and furnishes the moral momentum of the world always, now, and evermore.

The Universalist Leader.

Of all the great matters before us to-day none compare in importance and interest to the fresh spiritual impulse coming to the Kingdom of God.

The imperative need of this is seen on every hand. . . . We long for a moral earthquake, a revival of religion, a new spiritual impulse to carry us on toward the realization of the kingdom.

This groping is toward a new social order, and the truth, long neglected, which fits into the condition, is that of the kingdom of God,—a kingdom in which love of God expresses itself in love to man; a kingdom in which truth, love, and righteousness prevail; a kingdom that insures the future through the redemption of the present.

As to this kingdom, repentance and faith is the door of entrance. Love is its informing principle, and service the form of its expression.

The signs of its coming are seen in the change from destructive criticism to reconstructive faith, from materialism to idealism, from individualism to altruism, from division to unity, from a future heaven to a present kingdom. It is this that should fill our hearts with gratitude in this wonderful time. REV. F. E. MARBLE, Ph.D.

The Watchman.

The Bible is a literature as well adapted to the child mind as are any of the great classics, ancient or modern, and it surpasses them all, though they are all works of the imagination. But to treat it as a text-book on history, geology, astronomy, and other sciences, miraculously prepared many centuries in advance of the time when it could be understood, is to do violence to it and to any tenable theory of inspiration. The Bible is a library revealing the mind of God through prophets who had divine insight and used all forms of literature to make known what they saw. It should be taught to children as prophets spoke and wrote it.

The Congregationalist.

There are indications that Solomon saw the necessity of an inward renewal, but if he discerned the need of it, he does not appear to have experienced it. Of him it might be said, as Jesus said of another: "One thing thou lackest," but that one thing was everything, for it was that central spring of desire which binds the will to the performance of righteousness. The great message of Christianity is the possibility of choosing and receiving the gift that transforms life from within and makes the soul "a new creation."—*The Watchman.*

We may be all the time growing in spiritual capacity and power, but the larger achievements of the future are to be absolutely dependent upon our faithfulness now; and hence the small things of life now are as important in their place as the larger things are to be when we reach them.

New-Church Messenger.

Unhappiness is never excusable, because it is so easily overcome by making others happy.—*The Examiner.*

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

NOTICE.—Members of the Mother Church who have changed their names by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members. Changes will appear in the list of names semi-annually,—July and December.

NOTICE.—Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20, 1904.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America.

It contains about thirty-eight pages of reading matter, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The chief of the Insular Bureau of the War Department, has made public circulars calling for subscriptions for $7,000,000 Philippine land purchase bonds, the proceeds of which are to be applied to the purchase of the friars' lands. The bonds will be registered in denominations from $1,000 to $10,000, dated February 1, 1904, bearing four per cent interest, payable at the United States treasury in United States gold coin. The bonds will run from ten to thirty years, and be free from all forms of taxation, either in the Philippines or in the United States. Subscriptions will be payable at the New York sub-treasury, where the bonds also will be delivered.

The United States expedition to Abyssinia under Consul General Skinner of Marseilles which arrived at Adis Abeba December 21, has successfully negotiated a treaty with the empire of Ethiopia, opening for the first time friendly commercial relations. Emperor Menelik has also given his formal acceptance of the invitation to participate in the St. Louis Exposition.

As a personal tribute from Emperor Menelik to President Roosevelt, Mr. Skinner has been charged to deliver to the President two lions and a pair of elephant tusks.

Although Secretary Hay has not yet replied to the note of General Reyes, who is representing Colombia in the Panama question, preparations are rapidly going on for the closing of the Colombian Legation at Washington and the departure of Colombia's representatives for home. They entertain very little hope of a satisfactory response by this Government. Already most of the legation files have been packed and arrangements completed for placing them in storage.

W. I. Buchanan, recently appointed as United States minister to the Republic of Panama, has presented his credentials to the Republic.

Foreign.

It is announced in London that the manuscript of Milton's "Paradise Lost" is in the market and will be sold at auction by Sotheby in March next unless previously disposed of at private sale. The *Daily Express* announces that a New Yorker residing in London has offered $250,000 for the manuscript. The authorities of the British Museum are trying to induce the Government to make a grant to purchase it, the museum not having the money to compete with millionaire collectors.

Milton sold "Paradise Lost" to Samuel Simmons, publisher. He received $25 down and a promise of two more payments of $25 each if two editions were sold.

Mr. Bunau-Varilla, minister of Panama to the United States, states that he has notified Sir H. Mortimer Durand, British ambassador to the United States, that Panama is willing to assume a part of the exterior debt of Colombia, in proportion to the population of Panama compared with that of Colombia, as soon as the independence of Panama is recognized by Colombia. The total amount of the exterior debt, with interest added, is about $15,000,000, and Panama has a population about one-fifteenth of that of Colombia, so that Panama will take upon itself the payment of a million dollars, if the conditions are carried out.

The Russian Government, it is stated, has placed a rush order with a South Omaha company for one million pounds of extra mess meat for its soldiery, and with a Kansas City firm for one and one-half million pounds. These and other supplies, said to be designed for the Russian War Department, are to be delivered in San Francisco by the 26th of January, there to be placed aboard two Russian vessels to sail from that port.

The Treasury Department has issued an account of revenue in the United Kingdom for the first nine months of the fiscal year of 1903-04. Of an estimated total for the year of $721,550,000, the returns thus far show $455,287,490 paid into the exchequer, showa total net decrease of $18,497,040, which was not unexpected.

No definite action has yet been taken to put into effect the Austro-Russian reform scheme for Macedonia by the Commission which was appointed five or six weeks ago to consider the details and enter into negotiations with the Porte. It is thought that obstructions are being systematically placed in the way by Turkish influences.

Cuba has recognized the new Republic of Panama. Recognition has also been given by England, Italy, and Costa Rica.

Industrial and Commercial.

The Baltic has just been added to the White Star Line. She is the largest vessel ever built, being 1,900 tons larger than her sister ship, the Cedric. She is 725 feet 9 inches over all, 75 feet beam, 49 feet deep. Her tonnage is 24,000 tons, cargo capacity 28,000 tons, displacement at load draft 39,800 tons. The first-class dining-saloon will seat 370 persons and there will be accommodations for nearly three thousand passengers besides a crew of 350. Her engines are quadruple expansion balanced type, having cylinders 33 in, 47½ in., 68½ in., and 98 in., in diameter with a stroke of 5 feet 3 inches. She has eight double ended boilers supplying steam at a pressure of 210 pounds. She will make between 16 and 17 knots. The White Star fleet consists now of about 350,000 tons, represented by 29 steamers. Of these 25 are fitted with twin screws, 21 are 10,000 tons or over. It is reported that a new steamer 755 feet long has been recently ordered at Belfast, Ireland. This will exceed the Baltic by 30 feet in length.

A news despatch from Guthrie, Okla., says that the Pan-American Railway Company, with headquarters at Guthrie and with $250,000,000 capital stock, has been chartered there. The Company proposes to build a line from Port Nelson, on Hudson Bay, British America, via Winnipeg in Manitoba through the States of North and South Dakota, Nebraska, Kansas, Oklahoma Territory, Indian Territory, and Texas, thence through Mexico, Central America, the republic of Panama, Colombia, Ecuador, and Peru, into the Argentine Republic, with a branch line from Peru through Chile to Valparaiso. The total length is ten thousand miles.

The Canadian Transit Company with a capital of $1,500,000, proposes to enter into the trade of the upper lakes. This company has just made contracts in England for the construction of twelve large steel ships for the grain trade. This will be the largest fleet yet put afloat on the Great Lakes under Canadian ownership. The cause is found in the increase of wheat production in the Canadian Northwest, and the great immigration into Manitoba and the Northwest Provinces.

Now that Canada has completed the improvement of the Welland and St Lawrence Canals so that vessels drawing fourteen feet of water can pass down, agitation is beginning for an eighteen-foot channel. The entering wedge is a proposition for "deepening of the Welland Canal to eighteen feet, so that lake ships of large size can discharge at Kingston and Prescott, from which points grain may be carried in barges and transshipped into ocean vessels at Montreal."

Details of eleven months' commerce of the year 1903, just made public by the United States Department of Commerce and Labor through its bureau of statistics, show an increase in practically all the great groups of exports and imports. Agricultural products, as a whole, show an increase of $74,000,000; products of the forests, $10,000,000; products of the mines, $8,000,000; manufactures, $5,000,000, and miscellaneous articles, $2,000,000. In the single group, fisheries, is shown a slight decrease of a little more than $1,000,000.

The United States consul general at Constantinople, advises the Department of Commerce that the Pennsylvania Steel Company has been awarded the contract for twenty thousand tons of steel rails, fish plates, and bolts for the Hedjaz Railway. This Company was the lowest bidder among Belgian, German, and other competitors. These rails will lay about six hundred miles of the new railway from Haifa to Mecca.

The official reports of the traffic through Sault Ste. Marie canals during the season of navigation just closed, show that a total of 21,654,898 tons of iron ore passed through the American and Canadian locks. The down-bound shipments of copper footed up 112,877 net tons. The record of the total traffic, both down and up-bound freight, is 34,674,437 tons. A total of 18,606 vessels used the canals this year.

The Westinghouse Electric Manufacturing Company has closed a contract to equip the Manila Street Railway involving an expenditure of $500,000.

It is understood that orders yet to be filled by the American Locomotive Company are sufficient to keep every plant busy for six months.

General.

A building planned to be erected in lower Broadway, New York City, with five stories below the street level, forty stories from the entrance to the top floor, and surmounted by a sixty-foot tower, will have a total height of 615 feet, making it the tallest building in the world. Its cost, including the site will reach $10,000,000. The land is said to have been secured, and the completion of the building within one year is promised.

The Metropolitan Art Museum of New York has just purchased an old chariot for $50,000. It was unearthed near Rome some time ago, and is 2,600 years old and splendidly preserved.

From our Contributors.

The Thanksgiving Service in Berlin.

E. P. R.

JUST a year ago Thanksgiving Day, we held our first service in the comfortable rooms which we now occupy, and only those who have had a similar experience can understand our satisfaction and happiness in the manifestation of harmony which has been brought out by loving hearts and willing hands. Practically the entire demonstration was made in about two weeks; and as we sat down to our first Thanksgiving feast, as contained in the beautiful lesson provided for the day, it was with hearts overflowing with gratitude and love. Nothing, it seemed, could be more beautiful, and yet this year, being able to receive more, we have had more. Instead of the one service in English, we have had two meetings, one in German on Wednesday evening, and our English one on Thursday morning. Never before has it been so fully revealed to us that with one Father,—One Mind,—there can be no division of thought, only one great brotherhood, one kingdom, one language,—the language of Spirit.

I am sure that the depth of gratitude expressed for the knowledge of Truth would have gladdened the heart of our beloved Leader, Mrs. Eddy, through whom all this joy and gladness has come to us.

The German meeting was the largest ever held in our present quarters. The time given for testimonies was opened with a brief explanation of the origin of Thanksgiving Day, and its present application to all those interested in Christian Science, without regard to land or speech. During the following sixteen minutes fourteen people gave testimonies. One told of gratitude for victory over fear and the depression and unhappiness which fear always brings. Another, who only heard of Christian Science a few weeks ago, but who is now a regular attendant at our meetings and a subscriber to *Der Christian Science Herold*, gave thanks for the blessing of having her Bible made plain to her, and questions answered which all her life have caused her disquietude and sorrow.
