But it is to the east of the entrance that the gardener has displayed his skill and ingenuity to the best advantage and the greatest delight of onlookers. There, by the beautiful and constantly playing fountain, with the pretty gold fish sporting in its basin, he had placed, in the late autumn, the hundreds of bulbs which are now bursting forth in flowering beauty to repay his foresight and care, not to speak of his artistic genius, which has been displayed with remarkably good taste. Among the beds now in bloom, the *Patriot's* representative noticed a perfectly formed five-pointed star planted with golden yellow tulips; a cross of geometric accuracy, easily six by ten feet, planted with white tulips just coming into full flower; a perfectly formed crown, ten or twelve feet by about three and a half, in two colors, and a number of other figures, in different hued tulips, bordered with the fragrant hyacinth.

All this wealth of color, set in the rich, velvety green of the gently sloping, and evenly trimmed lawn, makes a picture difficult to describe adequately, and that must be seen to be appreciated.

Board of Lectureship.

MR. BLISS KNAPP has been elected a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. Mr. Knapp's address is 4 Batavia Street, Boston, Mass.

Letters to our Leader.

Jamestown, N. Y., March 14, 1904.

Beloved Leader:—I send an endorsement by one of Mr. Parker's physicians, together with three other testimonies, as requested. Lovingly,

MARTIN F. JACKSON.

The following endorsement and testimonies are those mentioned in Mr. Jackson's letter and they relate to cases healed by him.

I wish to endorse a testimony appearing in the *Sentinel* of February 13,

I was called to attend Mr. David Parker of this place, who was affected with the most obstinate case of chronic rheumatic gout that I have ever seen.

What helped to make this case almost hopeless was the fact that he also suffered from what soon proved to be an incurable constipation, together with an alarming state of the kidneys, passing an almost imperceptible amount of urea, and all efforts, not only by myself, but by the very best counsel obtainable, did nothing to relieve him either of his constipation or kidney trouble. It was a common occurence for his bowels to remain inactive for ten or twelve days at a time, and when by the most powerful cathartics they were forced to act, the prostration and suffering was extreme.

After a few months of this hopeless condition he reluctantly accepted the care of a Christian Science healer, with the result that in about forty-eight hours his bowels acted perfectly normal and have so continued to the present time.

His kidneys also gradually resumed their normal functions and are in a healthy state.

I am not a Christian Scientist, but state the above facts as they occurred, because they are true.

C. M. WALRATH, M.D., Ellicottville, N. Y.

I was supposed to have an hereditary disease of the eyes and was fitted with glasses before I was nine years old. In the spring of 1902 my eyes were worse, and one of the best oculists in this country told me I could never read or sew again.

I always had severe sick headaches. I got worse instead of better under the oculist's treatment until May, 1903, when some friends urged me to try Christian Science. I went to Jamestown, had two months' treatment, and laid aside my glasses, entirely healed. That was six months ago and I have not worn my glasses or felt the need of them since.

I shall always bless the day I took up the study of Mrs. Eddy's inspired writings. If any one would like to know more particulars, I would be glad to furnish them.

LENA BETTIS, Buffalo, N. Y.

During the past three years I have had twenty-four physicians. All of them diagnosed my disease differently and pronounced it incurable.

I underwent two operations, the last time remaining in the hospital from early spring until late in the fall, and came out worse than before I entered. I even sent to Sweden to the best physicians there for help, but received none. The neighbors thought it was but a matter of a few days when the end would come, and came in to see me for the last time. I then had Christian Science treatment and was healed. I now do my own work and feel as strong and well as ever.

MRS. MARY SAMPSON, Jamestown, N. Y.

I was suffering with a cough and had night sweats of the most severe nature, having had trouble of this sort for years.

Digitized by Google

I sent for a practitioner who came one evening about seven o'clock and my sweats instantly disappeared. There has been no return, and I improved steadily, and so continue.—J. STONEHOUSE, Jamestown, N. Y.

Wellsboro, Ind., April 26, 1904.

Beloved Teacher and Leader:—Again has a message of the greatest beauty and bounty given me renewed strength and appreciation of your wonderful work of love for the world. Your letter to the Chicago churches has blessed me beyond words, and from a depth where I can but pray unceasingly for increasing life, light, and love, I wish to send you my most earnest love and thanks. Dearest Teacher and Leader, again I thank you.

Lovingly and earnestly yours,

ELLA W. CRAWFORD.

St. Paul, Minn., April 27, 1904.

Rev. Mary B. G. Eddy.

Dear Beloved Leader:—To-night in reading "Miscellaneous Writings," my heart is overflowing with thanks to divine Love for having given us this glorious truth through you. My heart goes out with thanks to you for being so faithful and obedient to His call; for all you have done for me and for all humanity; for the glorious book, Science and Health, and for all your writings. Christian Science has made me all that I am to-day. I have been brought through very dark hours, and very hard places.

I am in possession of the new Concordance for which I am very grateful. When studying our text-book with the Concordance, my thought goes back for about seven years when I first read Science and Health with a little dictionary translating the English into German. I was not a good German scholar, for I had been taught Danish, but it was all I had at hand. I wrote the words between the lines in Science and Health so as to remember them, for I could not understand any English words except "Yes" and "No." The revelation was so sweet, and the Concordance illumines the pages as I have never seen it before.

May divine Love always cover you so that not one evil thought can touch you, and may I meekly and humbly follow the divine guidance which comes through your teaching.

Lovingly yours,

(MRS.) ANNIE MORCK.

A Correction.

In the *Sentinel* of April 30, the first sentence in the third paragraph of the article on page 552, "An Oft-repeated Inquiry," should read, "It is true that some of the critics of Christian Science question its teaching on philosophical, not on religious grounds, but so far they have offered nothing in substitution for that which they assail, nor do they 'show us any good' by means of which deliverance from disease—the, to them, undeniable misery of mortal experience—may be found." K.

NOTICE.—Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20, 1904.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

Testimonies of Healing.

One morning about five years ago, my husband, a lady and her two young daughters, and myself, started in a carriage to visit another daughter. This daughter was just beginning to be interested in Christian Science. We also had in view another call where we had previously left a copy of Science and Health. About five or six miles from town the horses became frightened, gave a lunge forward with such force as to break the harness, letting the carriage pole drop, pulling the carriage by the tugs. At the next leap of the horses the pole was run into the ground, breaking it and upsetting the carriage with me underneath, while Mrs. B. was thrown against a post, my husband on the barbed wire fence, and the young girls escaped without injury.

The first thing I heard after the shock was Mrs. B. declaring, "God is all; nobody is hurt." I asked to have the buggy, which was resting upon me, taken up. In a few minutes there were neighbors gathered who had seen the accident, and one of them, with Mrs. B.'s help, extricated me. As I arose and started to walk, it seemed impossible, but by silently declaring the truth and seeking to realize it, I did take a few steps. Getting under the fence and turning around I saw my husband, apparently lifeless, lying on the wire with some of it wrapped around him, and I said to the girls, "Help us to declare the truth for Mr. Gates." In about three quarters of an hour, after the men had laid him on the grass as dead, he raised his head and looked around. In less than half an hour more he walked to the roadside to wait for a conveyance to take us back home.

As we were waiting, my own sense of pain, and my seemingly helpless condition caused such a feeling of loneliness and homesickness to come over me as I never had before, when all at once, as though some one were speaking to me, I realized clearly that our home is in divine Principle, the pain ceased, and a sense of peace and rest came to me that did not leave me in all the weeks that followed.

A neighbor brought a team and carriage, and with his and Mr. G.'s help I got into it. Mrs. B., with her arm in a sling, said, as she sat down, "I wish you would treat me for this awful pain." In a short time it was gone, and there was no return of it until, upon our arrival home, her husband, to satisfy himself whether the arm was broken or not, took hold of it, and said he could feel the bone out of place. He asked her if he should call a surgeon. She said, "No; not after the demonstration we have seen to-day [referring to my husband] should we dishonor God by calling any doctor." Then Mr. G. turned to me, and I said, No, that I only wanted to telegraph my teacher for help; and Mrs. B. said she would have the same practitioner.

The telegraphing and writing was done, and Mrs. B. stayed at our home about a week. We studied the Lesson-Sermon each day as well as other Christian Science literature. We slept and ate just as usual. In my case the ankle joint of the left foot was crushed, also the heel. The accident happened on Thursday, and on Sunday, by being drawn in a chair to the desk, I stood during the entire service as Second Reader. Saturday night I felt the joints go into place. In four weeks I walked, and in six weeks put on my shoe. I limped a little at first, but in less than six months there was not a trace of weakness, not a mark or scar to be seen, and I have been perfectly well ever since.

In reference to Mr. G.'s injuries, I will say that his neck and legs were cut by the barbed wire, and a rib was broken. That afternoon he went down town, greatly surprising those whom he met. Next day he went into the hayfield and worked every day while haying lasted.

Gratitude to God, to Mrs. Eddy, who has shown us the way of Life, and to our teacher, who so faithfully and

Digitized by Google

patiently labored with us that we might walk in the true path, can only be properly expressed by seeking to bring out in our daily lives this glorious Gospel.

MRS. JANE M. GATES, Exira, Ia.

[Translation.]

Whenever I read the testimonies in the Christian Science periodicals, the thought comes to me to do my duty also and relate how I came to Christian Science and what it has done for me.

Twelve years ago my youngest son was very ill. Although the physician had given him faithful attention, his condition grew worse from day to day. One day the doctor said that he believed we should never give any one up to die, but that man could afford my boy no more help, that we must leave him now in God's hand. With these words he left the house, and I was incensed at him for suggesting that God's hand should help my child, for I had never believed in God.

My wife held the half dead child in her lap. After a silence she said that she had heard that there were people in the city who called themselves Christian Scientists, who prayed for the sick and they recovered, and that I should call in one of them for our child. I answered her, "Don't bring any such humbugs into my home," and with that, I left the room. My wife burst into tears and I walked up and down in the garden. Then the thought came to me that it would be immaterial whether our child died under a doctor's treatment or that of a Christian Scientist. I further thought that it was better to call one then, so that my wife could not reproach me afterwards. I went back to the house and told her that I would go and get a Scientist, which I did, and to my surprise, my son was healed in five treatments.

I myself had always been ailing and therefore my wife advised me to take Christian Science treatment, but I declined, saying this might be all right for children, but not for grown people. Thus the days passed and my health grew daily poorer. One evening I met a Christian Scientist and we talked about Christian Science and I told him of my trouble. He pointed to the great blessing which God had bestowed upon my boy, and furthermore said that I could be healed in the same way. I asked if he were willing to treat me, and he answered in the affirmative. This was about nine o'clock in the evening, and the next afternoon about three o'clock I felt fine, all pain had left me.

I then felt that this was God's work and said to myself, I shall seek and find what this good really is, and soon was convinced that Christian Science is no humbug, but the revealed truth, which makes man free from sin, sickness, and death. I saw that, if I wished to be benefited by this truth, I must walk in the narrow path which leads to life eternal. Shortly after that I became acquainted with a teacher of Christian Science, and although I understood only very little English, I became a constant attendant at their meetings, and eight years ago I had class instruction.

Since I accepted Christian Science no medicine has come into our home, and much healing has been done in our family and outside of our family, for which I thank God, and I also thank Mrs. Eddy, the Discoverer of Christian Science, and express my gratitude to my teacher.

C. R. ELVERS, Sheboygan, Wis.

After my graduation I took up the household work. There are five in the family, some of whom were very ill during the time; which, besides making the work much harder, caused me a great deal of worry. After a time I grew exceedingly nervous, then followed fainting and crying spells which left me completely exhausted. In a little while I found I was not able to rise from the bed. This was the beginning of an all winter's sickness, nervous exhaustion, as it was pronounced later, which brought on other troubles.

I was quite opposed to doctors and to Science as well. My nervousness increasing, I was persuaded to try the latter which I did for seven weeks with both absent and present treatment. At the end of that time, there seemed to be no improvement whatever. My condition was even worse than before and I turned from Science with anything but love in my heart. Three or four weeks later, I was able to walk and ride a short distance, but the accompanying pain made it a great effort. My parents were unwilling I should remain in this condition, so a doctor was summoned, who assured us that an operation was necessary. I was then sent to Portland to consult a more learned physician. There was no operation but I was under his care for six months. I was greatly improved and could walk some little distance, though still with more or less pain.

Then I began to have serious trouble with my eyes. One attack followed another, leaving me prostrated for a week at a time and nearly helpless from sheer weakness. I went to a specialist who immediately told me that glasses would be of no assistance; that the muscles of my eyes must be cut, and unless this was done I would be unable to stand the torture, as the eyes were already in such a weakened state. This required a trip to New York, which could not be afforded, and I left his office completely discouraged.

Then it was that Christian Science was again urged on me. There was no other way to turn, no hope of health that I could see. I asked for help, and it was received almost immediately.

At the first treatment I was requested by my practitioner to take a walk. I had not been able to go out except in a carriage or car for some time, owing to the renewal of the old troubles brought on by the worry over my eyes, but I consented, and we walked a distance of not less than two miles without any discomfort whatever. I was practically healed of one trouble that afternoon.

The trouble with my eyes was overcome slowly, but Truth was at last acknowledged as the victor. Is it surprising that I, like so many others, should be grateful to this wonderful Science which has brought us out of our difficulties. It shows us plainly the way to live aright, and by incessant work to triumph over error, even though but slowly at first.

M. E. G., Skowhegan, Me.

Words fail me to express the half of the health, joy, and peace which have come into my life since the light of divine Science dawned upon my darkened sense over ten years ago. Ever since then this Science has been my "shield and hiding-place."

For quite a long time, however, I was content to remain upon the heights, looking only from a single point of view, and to this day the glorious vision and glad release from error's thraldom remain with me like a glowing star over my mental horizon. In constant daily companionship with the Bible and Science and Health, I have been enabled to meet and overcome error in many of its varied and deceptive phases. In the infancy of my changed thought, several beautiful demonstrations were made, which served to hold me steadily to the truth of divine Science.

One of my earliest experiences was that of filling a responsible position as cashier and bookkeeper, something I should have stood aghast at before, had I been called upon to fill the place when living in the old thought, and for the reason that I had had no training whatever in any kind of business. In looking back upon that demonstration it remains in my grateful thought as one of the strongest, tenderest proofs of God's loving care for one who seemed at that time very desolate and in great need. The gray and misty days, the trying problems which have come up to

Digitized by Google

be met since then have proven conclusively to my sense that Christian Science is indeed the all-saving, all-satisfying, all-powerful, ever-present truth, through which we are to "enter into the kingdom." By the regular daily reading of Science and Health, and of the *Sentinel, Journal,* and *Quarterly*, my thought has been so purified and renovated, I can now joyously say that the channel is becoming helpful to others, and of this each day gives added proof.

Knowing that the demands of revealed truth mean practice, not profession, I realize the importance of giving cheerfully, liberally, to our dearly loved Cause in all ways, hence this simple effort is offered, with heartfelt, loving gratitude for our Leader's unparalleled work, and for all the dear ones from whom so much help has been derived in the past decade. May this join with the rejoicing of others who have been mentally freed, is the prayer of one who gladly signs herself, a Christian Scientist.—J. S., Vicksburg, Miss.

[Translation.]

I desire to give my testimony for the blessings I have received through Christian Science.

Four years ago I was taken ill and used patent medicines, which brought temporary relief but no lasting help. When I could no longer leave my bed a physician was called. He examined me and said that I was in a state of internal decay, and could not live much longer. I was suffering great pain and could partake of no food. Medicine was administered, but I grew worse. Another physician was called in who gave me more medicine. I was reduced to a skeleton, my eyes and skin were yellow. The pain increased so that we called in a third physician. He said that after I had taken his medicine for a half a year, he might be able to tell what ailed me, but I said that I would take no more medicine; if it were God's will I would rather die.

This was in 1903. I really expected to die then, for I had no strength and my pulse was very low. I still had the one desire,—to see my daughter,—and I therefore asked my heavenly Father to grant me this wish. She was in St. Louis where she had found the way to Truth.

My daughter was called, and after she arrived she told me that I need not die, but that we would go to St. Louis together. I shall never forget those words, for they brought new hope to me. She told me that I was starved and should eat something. I answered that I could not, because it caused me such pain. Nevertheless she brought me something, and I found that I could eat it. On January 30, we went to St. Louis, where I was healed and found spiritual and physical food for which I am very grateful.

I wish to express my gratitude to our faithful Leader, Mrs. Eddy, who has shown us the way to Truth, and I am grateful to the dear practitioner and all the Scientists who have helped me. I can neither read nor write English, and therefore the German Bible and *Der Christian Science Herold* are my friends. Every day I feel grateful to God for Christian Science.

FRAU FRIEDERIKE SCHMIDT, St. Louis, Mo.

'I am seven times one to-day," as this date is the year's milestone of my new life in Science. "Seven years of plenty" after more than "seven years of famine," mental and spiritual. This is why deep gratitude fills my heart, and I would that I could find words to express it in a way that might reach some other "weary pilgrim, journeying 'up hill all the way' " (Science and Health, p. 574), and lead such an one to read and study the "little book," "Science and Health with Key to the Scriptures," which is indeed the chart of the way back to the "Father's house," where there is always "bread enough and to spare."

Words can never express my gratitude to Mrs. Eddy for what she has done and is doing; only loving obedience to all her wise counsel and heavenly-directed guidance can begin to satisfy my desire to recompense her for the true joy her words and work have brought to me. Truly, "her children arise up, and call her blessed."

Soon after the light of Truth shone upon my waking thought, I was enabled to lay aside glasses which I had used six years for reading or sewing, and I have never felt the need of them since, for which I am indeed very thankful. I have also been able to help others and have seen nearly every form of error yield to the power of Truth and Love during these seven years, for all of which I can never be grateful enough to God and to our beloved Leader.

I would also like to give a tribute of praise and thanksgiving for the beautiful hymns Mrs. Eddy has given us,—"Shepherd, show me how to go" and "O'er waiting harp-strings of the mind" (Miscellaneous Writings, pp. 396, 397), as they are so helpful in quieting thought in times of restlessness. These hymns have always been a great help to me since I have known them, and this is another reason for deep gratitude; so I sing with joy unmeasured, "I will follow and rejoice all the rugged way" (Miscellaneous Writings, p. 398).—VIOLETTA M. DOANE, Jonesville, Mich.

[Translation.]

The readers of *Der Christian Science Herold* may be interested to hear from some one who has used the Bible and Science and Health for eighteen years as the only remedy, not only in sickness but in all other conditions.

In 1884, a well-known lady from Denver, Col., was healed of blindness in the city of Chicago. She brought home this wonderful truth and I, her adopted daughter, was only too happy to learn what had healed her. In 1885, I had class instruction, and since then I have seen the Cause of Christian Science grow step by step, and have learned that we must daily make unconditional surrender to God. The nearer we live to God, the more we can accomplish.

After the third lesson in our class instruction, I awoke during the night with an attack of croup, which, as had been its habit, came upon me without warning, like a thief in the night. A member of our family came to me and inquired what she could do. My first thought was that I must have light, for darkness seemed to increase the fear of choking. Then came the thought that *now* was the time for me to prove the truth of Christian Science, and so I asked for its help. After a short struggle I fell asleep, and when I awoke in the morning, it was as though I had passed through a dream. I went to school as usual, and during the day passed an unusually difficult examination. The trouble never returned.

Since then I have had daily opportunity to prove the truth of the healing power of Christian Science in cases of sickness and sin. It is practical religion, applicable in all conditions,—in anxiety, fear, distress, and danger.

Words fail to express my gratitude to our Leader, Mrs. Eddy, for the love, faithfulness, and unselfishness with which she has devoted herself to suffering humanity. We can show our recognition of it only in a degree by obedience.

HERMANNA JANTZEN, Longmont, Col.

I would like to tell how the almighty power of God saved me on the night of September 25, 1903. I am working in the postoffice at this place. I had just closed the office for the night and started for home. I was on a wheel, and as I rode up the street I passed a dog which came after me, trying to catch my foot. My attention was turned to the dog so I did not see a carriage that was coming toward me, and the driver of the carriage was talking to a person in the rear seat, therefore neither knew the other was coming. Just as I looked around I saw the team not more than two or three feet ahead, and as we were both going at a good rate of speed it seemed impossible to stop.

I never once thought of danger, my first and only thought was that with God there are no accidents. We crashed into each other and I was thrown over on the ground, the team,

Digitized by Google

and front wheel of the carriage passing over me. A moment later I found myself holding to the carriage wheel, helping myself out, and in another moment a crowd had gathered and some one helped me out. I was, to mortal sense, out of breath and could not speak for a few seconds. When I regained my breath I told them that I was not hurt. I was not the least bit excited or nervous, either at the time or afterward. I got into the carriage by myself, rode home, got out of the carriage and walked into the house without any assistance. I was not at all injured, while the bicycle had spokes broken in both wheels and the handle-bars turned entirely around.

People unacquainted with Christian Science called it a miracle, but those who have studied Science and Health know it was the power of omnipresent God that helped me through. I am very thankful for the many blessings and comfort which Christian Science has brought to me.

EDWARD P. NORTON, Cottonwood Falls, Kan.

About this time last year I was very ill. I had been an invalid for about ten years,—a nervous wreck from indigestion and all that goes with it; only those who have it very bad know what it is. For about eight years I could not sleep without medicine; I took a great many kinds of medicine for all the diseases I had. I had catarrh all through my system, and my eyes were very sore at times. I used glasses a long time, and three years ago I got a second pair to wear all the time. Oh how my eyes did burn and ache!

As I write this I cannot help saying, Glory be to God and thanks to Mrs. Eddy, I am a new woman. I am sleeping well and eating every kind of food. It is so good to be able to eat of everything and feel well after it. Before I took treatment I couldn't take tea, coffee, or cocoa, only a cup of hot water, and could eat so little of anything I was starving. My heart also gave me a great deal of trouble, and to be free from all this is wonderful to me, and best of all is to know that I am at-one with God.

I asked for treatment the 9th of September, 1903 (I was then in Ireland), and since that I have not taken any medicine. I had a good deal of medicine with me, but I threw it all away. I had medicine for sea-sickness,—I would not go to sea without it,—and had some to take coming home, but it went with the rest. I came back with a healing knowledge of God, acquired through Christian Science. I am so thankful I wish I could tell it so all who may read this would be healed.—MRS. S. A. CATERSON, New York, N. Y.

There was once a time when I longed to be ill, to be quite disabled, so that I might begin again. My only peaceful moments were those following some service rendered another member of the household, and I learned how little comfort came from distractions, such as exciting novels, and how great was the need of seeking help from "the hills."

A change greater than I can describe followed a few treatments from a Christian Science practitioner, whose buoyancy and confidence in the power of Truth seemed to me marvelous, and for whose kindness I was deeply grateful.

Never before had I known such a joyous spring. Physical trouble which had continued for years was destroyed, and I was free to take forms of exercise from which I had firmly expected to be always debarred. Before knowing anything of Christian Science I used to look with utter incredulity upon those who declared themselves well and happy, though it was not often that any one made such statements in my hearing.

For the health and happiness that have come to me through this blessed truth I feel great gratitude, not only because of selfish considerations, but also because I am unlearning the doleful art of casting shadows upon my neighbors' pathways, and am, I hope, acquiring contagious cheerfulness.—S. C. H., Orange, N. J.

I would like to offer a tribute for my beautiful healing in Christian Science from rheumatism. I had been a sufferer for a number of years from it, in different forms, and *materia medica* was unable to relieve me. I had been reading for a short time Science and Health, which was loaned by a friend, when I was taken with an acute attack of rheumatism of the stomach. When the physician said he had done all he could for me, I turned to Christian Science, and found it was the true healing. This was in the year 1898, since which time I have had no recurrence of the trouble.

I have every reason to be most thankful that Christian Science has come into my life. I have used no other means in our family since, and have had demonstrations over paralysis, accidents, fever, colds, and many minor ills. Surely this is proof of the Truth which to know, makes free.

I am more thankful than words can express to our beloved Leader and to all who have so lovingly and kindly helped me and mine, and I try to live it in my life.

C. P. H., Utica, N. Y.

Just six years ago I began reading Christian Science, not for physical benefits, but because Science and Health was loaned me by a friend; and the first words I read were grand and beautiful. "To those leaning on the sustaining infinite, to-day is big with blessings" (Science and Health, Pref. p. vii).

I continued to read until I had read this "little book" through twice, though I had many interruptions, and I was healed of colds, sore throat, and coughs, all of which I was subject to in the winter and spring. Since then Science and Health has been my daily companion. My family have had many ailments overcome by Divine Science through the understanding of a good conscientious practitioner to whom I am more grateful than words can express. I am also most grateful to Mrs. Eddy for giving us "Science and Health with Key to the Scriptures," and to our heavenly Father who is always ready to give us more than we will receive.—E. W. C., Houston, Tex.

I would like very much to tell what Christian Science has done for me. Nearly all my life I have been considered delicate; my troubles were chronic dyspepsia and nervous prostration, also lung trouble and cancer on my nose. I had the best of medical attendance with only temporary relief.

I suffered from a troublesome cough which was destroyed while attending a Christian Science lecture, also many other ailments. I have overcome the sense of lack to a considerable degree, I know something of what the power of Truth can do, and my heart overflows with gratitude to our Leader for all she has done to reveal this great blessing to us. I am also thankful for our literature, which has been so helpful to me, and to my dear teacher who has been so faithful to us.—MRS. M. E. WILLIAMS, Charleston, S. C.

I wish to express gratitude for help received from reading the *Sentinel*. One forenoon while working in the kitchen I felt sharp pains through my chest, caused, according to mortal law, from exposure to cold. As soon as I found it convenient to stop work, I took up a copy of the *Sentinel* that was near at hand. While reading four of the testimonials of healing my thought was so uplifted that the pain entirely disappeared and did not return.

"Who is so great a God as our God," the one divine Mind, who is ever-present and all-powerful to meet all the false claims of life and sensation in matter? The great desire of every Christian Scientist is that all may know our God, and we have this promise, "For the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea.—M. FANNIE WHITNEY, Auburn, Me.

Digitized by Google

From Our Exchanges.

It has been pretty generally assumed that the modern industrial development, enormously increasing the temptations to crime, has greatly increased crime. And there has been much bemoaning the supposed fact that education was not doing what had been expected from it in the way of promoting morality. But now comes France with the first really thorough and accurate statistics on this subject; and at once it appears that though the newspapers with their telegraphic services and their corps of reporters have been giving the world more and more news of crime, crime has been steadily and rapidly decreasing.

How could it be otherwise? Never before was so large a part of the civilized world so healthy, so well fed, so well housed, so hopeful, so enlightened, above all, so regularly employed. It therefore follows as the night the day that never before was so large a part of it honest and, in the broad sense, moral. The day now dawning is the brightest humanity has ever seen, but by no means the brightest it shall see.—*Saturday Evening Post.*

Religion is a source of satisfaction superior to any other in human life, but, like all things of a high character, it requires time and experience to show its full value. . . . Much of the religion of man has been under the impulse of fear and has been spoiled by errors and superstitions, yet its original, deep, and essential satisfaction is not altogether lost. Men cling to its remnants as their dearest hope. When religion is found in its pure and uncontaminated form, or made known in its freshness and power, as in Christ's manifestation of religion as a revelation of grace and love from our heavenly Father, it becomes the supreme, the sweet and precious thing in life.—*The Watchman.*

No man, or company of men, of the past must be allowed to do our thinking and believing for us. If the men of the past thought truly and well, they grew by their thinking; but we can no more grow by their thinking, except as we assimilate their thoughts and make them our own, than we can by their eating. If they wrought the truth they knew into habits and character by their obedience to it, by the same process and no other can we become what we ought to be; namely, by our obedience to the truth which we know. It is the doers and not the hearers of the Word that are blessed by it.—*The Examiner.*

If men of integrity and good intentions in the world of business would manifest their real feeling towards their associates and employees by constant recognition of work well done, by the words spoken almost at random which show that a piece of work is valued and credit is rendered to the worker, a large percentage of the social unrest would disappear; for love is the only solvent of the social problems.
The Outlook.

Christian Scientists do not indulge in vicious tirades against any person, or class of persons, and while they honestly differ from a majority of the people on various points of theology and medicine, they are simply practising that which they have proved to their satisfaction to be the most efficacious methods, and willingly accord all others the same privilege.—Editorial *Des Moines* (Ia.) *Register.*

The God who made the world made it to be enjoyed. The wealth-discovering and appropriating instinct of man is as God-given as any other. Heaven is a state of soul and not a place The dualism implied by the old terms terrestrial and celestial has gone forever. What we are now we shall be; what we shall be we are now.
The Congregationalist and Christian World.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

THE TRUE LAW.
SERVICE AND STIPEND.
THE BROTHERHOOD OF MAN.
RESIGNED TO THE WILL OF GOD.
TO BUSINESS MEN.
THE TRUE ORTHODOXY.
LESSONS FROM A WORKSHOP.
THE LESSON SERMONS.
HEALING THE SICK.
HOW SHOULD THE SICK BE HEALED?
THE REAL AND THE UNREAL.
THERE IS REST AND PEACE ON EARTH.

Price. Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Pamphlets

LEGAL ASPECTS OF CHRISTIAN SCIENCE. A compilation of Court Decisions, Opinions of Lawyers, etc. 72 pages.

MR. KIMBALL'S LECTURE. 33 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonies given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 23 pages.

Price. One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

MISCELLANEOUS PUBLICATIONS

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

COMMUNION HYMN. "Saw ye my Saviour?" Words by Rev. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

A question which has come prominently to the fore in the proceedings of the Methodist-Episcopal General Conference at Los Angeles, is that involving a change in discipline to the extent of entirely removing the Church ban on dancing, card-playing, and theatre-going. A sub-committee has reported to the main body a recommendation in which it urges a radical change in the Church rule on the subject, making it simply an advisory restriction instead of a mandatory prohibition as at present.

The international convention of the Young Men's Christian Association of North America convened in Buffalo last week. The convention marks the fiftieth anniversary of the first international convention in America. The convention has brought about 1,400 delegates, representing 600 city associations, 700 student associations, 200 railroad associations and a large number of miscellaneous associations, representing the army and navy, the Negro and Indian races, and industrial concerns.

The President has issued a proclamation for the entry of the ceded lands of the Rosebud Indian Reservation in South Dakota, beginning on August 8, next. There are almost four hundred thousand acres of the ceded land and some of it is very fertile. The drawing will take place at Chamberlin July 28.

The President's formal instructions to the Canal Commission have been issued and are embodied in a letter to the Secretary of War. It recites the steps taken under legislative authority as a preliminary to the work of actual construction, and directs that the work vested in the Commission be carried on under the supervision and direction of the War Department.

R. A. Lane of Hingham, Mass., has been appointed Assistant Secretary of the Isthmian Canal Commission. Mr. Lane will discharge the duties of Secretary to the Commission until that office is filled. Mr. Lane has been in business in Alaska, Manila, and this country, Legation Secretary in Costa Rica, and an extensive traveler.

Secretary Shaw has issued a third call on the depositary banks, directing them to transfer to the Treasury on or before May 25, approximately ten million dollars. The call is for ten per cent of the authorized balances of the depositary banks as they stood before the two previous calls.

Judge George Gray has been chosen by the nominating committee of the National Civic Federation to succeed Senator Hanna as president of the Federation. The filling of the vacancy was left to Bishop Potter and President Mitchell of the Mine Workers.

King Peter of Servia was recognized last week by the United States when John B. Jackson, United States Minister, delivered his credentials to the King. The minister was escorted to and from the palace by a detachment of the King's Guards.

Foreign.

Foreign Minister Pardo of Peru acknowledges the receipt by cable of the reply of Baron Rio Branco, Brazilian Foreign Minister, to the Peruvian proposal for the neutralizing of the disputed zone and that Baron Rio Branco's reply was couched in friendly language. Minister Pardo appeared confident that an amicable settlement of the difficulty would be reached. Rubber is at the bottom of the dispute. The Government of Brazil recently demanded that Peruvian troops posted in the region of the upper Purus and Jurura Rivers be withdrawn; Peru has neglected to comply with this demand. The Montana rubber district is about exhausted, and Peru now asserts her claim to the rubber forests in the basins of the two rivers named. She long ago laid claim to the territory and ran boundary posts through it, but Brazil has never given any further recognition to this claim than to mark on her official maps "Peru's pretended boundary."

In view of the anticipated demand for native laborers for the Panama Canal works the Government of Jamaica has endeavored, through the British Ambassador at Washington, to ascertain what policy the Canal Commission is likely to adopt with regard to labor, in the hope that, if Jamaica is drawn upon, they may be able to arrange the form of contract and other details directly with the United States Government.

A new five per cent loan of one hundred and fifty million dollars, to be issued in France, was approved and signed at St. Petersburg last week by the Financial Department of the Council of the Empire.

Recent events in Tibet made it inevitable that the British mission must advance to Lhassa, the capital, unless the Tibetans consent to negotiate at Gyangtse within a given date.

President Palma has signed a final contract with a New York house relating to the loan of thirty-five million dollars for the payment of revolutionary veterans.

English and American bankers have arranged to loan Japan fifty million dollars for seven years at seven per cent interest.

Sir Henry M. Stanley, the African explorer, passed away in his London house last week.

Industrial and Commercial.

Although the construction of the great turbine-propelled liners for the Cunard Company overshadows in public interest every other marine turbine development just now, says the *Scientific American*, it is a fact that there will be some splendid specimens of turbine ocean liners in service on the high seas long before the Cunard vessels are in the water. Mention should be made incidentally of the Turbinia, which was launched not very long ago in Great Britain, and will soon cross the Atlantic for service on Lake Ontario. Before many weeks a large ocean steamer, the Tasmania, will be dispatched to Australia, and the Allan Line will place two turbine-driven liners in the Atlantic service of the company. Next year, moreover, a turbine-driven Cunard steamer of about half the tonnage of the 25-knot 40,000-ton turbine ships will be plying between Liverpool and the United States. Considering that the practical turbine is but a decade and a half old, this must be considered a remarkably rapid development of what is commercially considered an entirely new type of steam engine.

One of the latest and most useful results of scientific progress along the lines of synthetical chemistry is announced in the synthetical production of camphor on a commercial scale. The process, as described by the New York *Medical Journal*, is very simple. Oil of turpentine is heated with oxalic acid, forming an oxalate with pinene. A formate is also produced which, when heated with alkalies, yields camphor, carbon monoxide, and water. The camphor is separated by sublimation and condensed in white crystals, which are not only like camphor, but are its very self.

The Government's crop report for May shows a reduction of 4,932,000 acres in the area under winter wheat from the acreage reported seeded in the fall. The reduction in acreage this year is equivalent to 15.4 per cent of the area sown last fall, and the area now is 5,427,400 acres, or 16.7 per cent less than the area of winter wheat harvested last year.

The foreign trade of the Chinese Empire in 1903 surpassed all previous records; the total was $346,000,000. The annual report of the inspector-general of customs for the Chinese Empire shows that the imports in 1903 were valued at $209,113,000, and exports $137,185,000. As compared with former years the total trade is almost exactly double what it was a decade ago. Imports exceed those of the previous year by about four per cent, while the total value of exports is practically the same.

Dr. Bertram B. Holtwood of New Haven announces the result of an experiment by which he has determined that the source from which radium comes is uranium, produced by decomposition. He has also demonstrated that the per cent of radium in all uranium-bearing minerals is in direct proportion to the per cent of uranium present.

During the year ending with February the street railways of Greater New York carried, in round figures, 1,037,000,000 passengers. In the borough of Manhattan the traffic amounted to nearly 671,000,000 passengers, and of the increase of about 37,000,000 over the previous year the elevated lines took practically the whole.

General.

A national cathedral at Washington, D. C., was proposed at the recent conference of Episcopal Church clubs at St. Paul. The committee appointed in the general convention of 1901 to ascertain the mind of the Church on the subject of a change of the corporate name of the Episcopal Church expresses its unanimous judgment that "any change of the name of this Church at this time is inexpedient."

By a recent ruling of the Boston Board of Park Commissioners, automobiles now have free run of all the Park roads in Boston, excepting parts of Franklin Park, and the Arnold Arboretum. The Metropolitan Park Commission also this year allowed automobiling on all the State's through parkways.

The Kaiser's own band from Germany will fill an engagement at the World's Fair.

Three-fourths of the cotton in the world is produced by the United States.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Christian Science Legislation in Congress.

EDWARD EVERETT NORWOOD.

APRIL 19 and 20 of 1904 should be red letter days in the Christian Science calendar, for upon those dates our National Congress enacted legislation favorable to Christian Science. Our people have occasion to be thankful for this demonstration, for it is another milestone in the triumphant march of our Cause.

The nature and status of the bill was ascertained on Saturday afternoon, when it was found that House Bill No. 11693, Regulating the Practice of Medicine and Surgery in the Indian Territory, contained a section which might be interpreted to interfere with Christian Science practice. This bill passed the House of Representatives February 20, was favorably reported upon by the Senate Committee, was on the Senate Calendar, and was to come up the following Monday.

The friends in both churches in Washington were invited to co-operate in every legitimate way in protecting the interests of the Cause, and a friend in the Senate was willing to propose an amendment excepting Christian Science from the provisions of the bill, but he expressed doubt of its going through, owing to the lateness of the hour, and the fear that it would provoke debate, thus delaying adjournment, which both Houses hoped would occur the following week. His kind offer was accepted, and as the result of a careful canvas it was found that over thirty senators would support the amendment. Only two or three declined to commit themselves, and so far as the writer knows, not one positively refused.

A strong point made was that Christian Scientists were seeking no favors, no special class legislation, and asked only for the recognition of their simple rights and liberties as American citizens. One provision of the bill read,—

"SEC. 15. That any person who shall prescribe or administer medicine for, or who shall in any manner treat disease, wounds, fractures, or other bodily injury for pay shall be deemed physicians and surgeons under this Act."

It was explained to inquiring members that if a pastor who receives a salary in any Christian denomination were called to the bedside of a sick member, and were to pray for his recovery, he could be deemed guilty of an offence under the provisions of the bill, and be subjected to prosecution, since his relation to the sick man would be practically the same as that of the Christian Science practitioner.

Tuesday afternoon the bill came up, and Senator Clark of Wyoming offered the amendment, which was carried. Only one senator spoke against it.

So far, all was well; the next step was to follow it up in the House, since the amended bill must be passed by the House and be signed by the President, before it became a law. Here again great consideration was shown the Scientists, every Representative who was spoken to promised to support the measure, and the chairman of the House Committee, Mr. Stephens of Texas, who had introduced the bill, agreed to the amendment. Late Wednesday afternoon, after the House had been in session over half an hour longer than usual, and just five minutes before adjournment, Mr. Curtis of Kansas had the bill called up, the amendment was ordered read by the Speaker, and unanimously passed, being the last business of the day, the House adjourning immediately after.

While all Christian Scientists must realize the great importance of this action, and be very grateful to our heavenly Father for this and all other blessings, our thoughts turn with deep gratitude and loving reverence to our Leader, who has, by her toil, self-sacrifice, honesty, purity, humility, and impersonal love for all mankind, made this and every other Christianly Scientific demonstration possible.

Learning to Love Aright.

LEWIS C. STRANG.

ONE of the first things the student of Christian Science learns is the meaning of the first commandment, "Thou shalt have no other gods before me." He learns that "other gods" are not necessarily images of wood and stone representing man's various deific conceptions, that "other gods" are not primarily things at all, but thoughts—"loves" from which the human mind, self-deceived, believes that man will derive greater good than he does from the one God who is good.

If the student be wise and courageous, he forthwith offers proof of his worthiness to receive further revelations of Truth by putting into practice what he already has. He begins to search in his own consciousness for his "other gods," for those qualities of thought which, being unlike God, prevent him from being at one with God. He summons them from the recesses of mortal mind in various disguises, as love of money, love of power, love of body and of physical sensation, love of intellectuality, love of family, even love of "my church." Gradually, as his ability to analyze thought grows keener and his grasp on truth becomes firmer, the student sees that this seeming myriad of "other gods" can be classified under one head. He reaches the scientific conclusion that the one great "other god" is love of mortal self, a sense of being, apart from God.

Man can no more help living what he thinks than cause can help having its lawful effect. The inevitable result of love of self is a life of selfishness, and the effect of selfish living is seen on all sides in the mass of afflictions, summed up under the headings of sin, disease, and death, of which the human race is the unhappy victim.

Inasmuch as love of mortal self and its inseparable companion, hatred of God and man, have brought all these ills into the world, it is plain that denial of mortal self and love of God and man will thrust them out of consciousness, will destroy them by eliminating all witnesses to their existence. Therefore, in order to be obedient to the command, "Work out your own salvation," man's first and all-important labor is to learn how to love aright.

Mrs. Eddy accurately identifies Love as divine Principle

Digitized by Google

which is the standard of right living. Jesus defined right living when he said, "Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets." We thus find succinctly stated not only the absolute and perfect Principle, but the method by which its rule can be applied to the minutest details of life. Men have known this Golden Rule of conduct for nineteen hundred years. They have professed both to believe and to follow Jesus' teachings, and yet selfishness has not been eradicated. Evidently there has been a failure to carry profession into practice, and a consequent failure to reap the full blessing.

To what has this failure been due? Largely, if not entirely, to this, that while professing to believe in God, mankind has really believed in evil, and, fearing evil, as the result of this belief, it has not dared either to trust God or its fellow-man. It was not until Christian Science revealed the rule by which the omnipotence of good could be proved in daily life, that trust in God and in man as the image and likeness of good was seen to be practical.

Here, then, is our starting-point in learning to love aright, —the fact, demonstrated either by us or for us by the healing of sickness or the destruction of sin, that good is omnipotent and therefore to be trusted. This step may be called spiritual awakening. The second step immediately declares itself in a sense of need, a longing for spiritual things, termed by Jesus a "thirst after righteousness."

The next step is willingness to learn, the becoming as a little child, the acquisition of true humility, which throws down those hopeless bars to progress,—self-righteousness and self-satisfaction. Humility opens man's thought to new impressions and thereby prepares the way for the fourth step in learning how to love aright, the appreciation of love when it is expressed by others. This mental condition is called gratitude, which, truly felt, bestows a gentle benediction of melting tenderness.

The fifth step in this divinely natural development of character is the resolute purpose, expressed in systematic work, to prove by service that one is really grateful. Then for the first time the seeker for understanding how to love aright faces the necessity of demonstrating, not only to his own satisfaction but to the satisfaction of others, the trustworthiness of his theories regarding God and man. The student now realizes that learning to love aright is really learning to express God aright in every circumstance and condition of experience. He perceives that loving is synonymous with doing, and that a quick and accurate gauge of the quality of deeds is afforded by their consequences. The proof of his sincerity is his tenacity, and his growth in love and understanding is the fruit of his activity, through which sickness and sin are overcome and destroyed in himself and in those to whom he ministers.

Reasoning from cause to effect accustoms one to the searching analysis of motives, which in turn begets self-knowledge, an essential to the attainment of spiritual understanding. Through self-knowledge truth and error are gradually separated and classified in consciousness, the reality of truth and the unreality of error is apprehended, and healing follows as the irrefutable proof that so far, at least, one has learned to love aright.

Out of Dreamland.

CAROLINE E. LINNELL.

ONCE, long ago, in the Land of Dreams, there was a barren valley where the dense fog had spread its impenetrable blanket so thickly that the blue sky was never seen; the sun never shone into its gloomy depths; the fresh breeze never blew across its sunken wastes. Nothing grew in this valley except fungi and brambles, nothing lived there except a flock of little birds.

It was the strangest thing that these little birds should be living in this forbidding region, for they were song birds, and their native place was in the upper air, in the glory of the sunlight, and how they came to be there no one knew. Another strange thing was that although they had strong and beautiful wings, they never spread them to fly, they did not know what it was to fly, but went hopping about as best they could, and tearing their plumage on the brambles, and often quarrelling and fighting over the few berries they found to eat. They knew not that their heritage was freedom and their home the upper air. They were song birds, but no one of them had ever sung. They did not even know what it was to sing. They had never seen the sun, whose clear shining wakes the song, and although their feathers were beautiful, they were tarnished and dulled by the dust and damp of the fog land.

They had lived in this valley so long that many of them had no desire for anything different, no thought for aught but the brambles, the stones, and the mist; but others were stirred by an instinct for something better and they groped about blindly, some of them climbing a little way up the rocks. One day a little fellow who had climbed higher than the rest, in his desire to go still higher, began to spring up and lift his wings, and so he found that he could leave the earth and rise in the air. Instinctively he spread his wings and began to fly. Up and up he went into the glory of the morning, and as the sunlight bathed his plumage, turning it to gold and sapphire and ruby, a gush of melody burst forth.

Now when the little bird found that he could fly, he began to call to the others, "Come up, come up. This is the way. Come up and fly in the sunshine." But, strange as it may seem, many of the birds showed very little interest, some not even lifting their eyes from the bramble berries. Others ridiculed the idea. "Flying," said they, "How preposterous; none of our ancestors ever flew; the law of gravitation forbids such a thing." But others listened, and looked, and longed, and then began to flutter their wings and try to fly. It was not easy at first; their wings were weak from lack of use, and they had many a tumble, and some became discouraged and stopped trying, but those who persisted found that each day they could go a little farther, that each day their wings were a little stronger, until at last they found that they too were sailing away into the clear blue and gold of the upper air, singing ever for very joy of heart.

Truth Never Fails.

MARY E. WATKINS.

No doubt many of us have heard people say that they do not believe the healing can be done now which Jesus did. Others will say they have tried Christian Science and were not benefited by it. We may also hear Scientists say they do not receive the help they should from Christian Science. One day I had a very good explanation of this kind of failure given me. The woman for whom I was working had a very heavy bedspread on which a bottle of stain had been spilled. I asked her why she did not remove it. She said it could not be removed; she had tried everything she could find and the stain was as bright as ever. I asked her to let me try. When she found what I was going to use, she said, "I have tried it, but you can try it to convince yourself that it is of no value in this case." So she gave me the article.

I went to work and in a short time brought her the bedspread free from stains. She asked, "How did you do it?" I told her that I had to apply more of the chemical, as the goods were heavy and the stain was deep; and she said, "Now I see why I did not remove the stain, it was because I applied it lightly. It then appeared to me more plainly than ever that this was why the stain of sin, sickness, and death is not always quickly removed; it is because the truth has only been lightly applied, for we know there is no fault in perfection.

Among the Churches.

Dedication of First Church of Christ, Scientist, of Cleveland, O.

We are indebted to the *Cleveland Leader* and the *Cleveland Plain Dealer* for the following report of the dedication of the edifice of First Church of Christ, Scientist, Cleveland, May 8.

"Morning and evening services were held, and at both the church was crowded to the doors. At the evening service the members of Second and Third Churches of this city attended in a body, occupying about three hundred reserved seats.

"The edifice has been in use for some months, but owing to a rule of the church never to dedicate a church building until every cent of indebtedness has been obliterated, no dedicatory exercises had been held.

"The morning service was repeated in the evening, and addresses were delivered by Mr. C. E. Carpenter, First Reader, and Mrs. Lida S. Stone, Second Reader. A letter was read from Rev. Mary Baker G. Eddy, also a number of congratulatory telegrams and letters from friends and churches."

LETTER OF REV. MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., May, 1904.

First Church of Christ, Scientist, Cleveland, O.

Beloved Brethren:—You will pardon my delay to acknowledge your card of invitation to the dedicatory services of your church. Adverse circumstances, loss of help, new problems to be worked out for the Field, etc., have hitherto hindered it. However, it is never too late to repent, to love more, to work more, watch and pray—but those privileges I have not had time to express—and so have submitted to necessity, letting the deep love that I cherished for you be hidden under an appearance of indifference.

We must resign with good grace what we are denied, and press on with what we are, for we cannot do more than we are, nor understand what is not ripening in us. To do good to all because we love all, and to use the one talent that we all have, in God's service, is our only means of adding to this talent and the best way to silence a deep discontent with our shortcomings.

Christian Science is at length learned to be no miserable piece of ideal legerdemain that we poor mortals expect to live and die by, but a deep drawn breath fresh from God, whereby, and in whom man lives, moves, and has deathless being. The praiseworthy success of this church and its united efforts to build an edifice wherein to worship the Infinite, sprang from the temples erected first in the hearts of its members—the unselfed love that builds without hands, eternal in the heaven of Spirit. God grant that this unity remain and you continue to build, rebuild, adorn, and fill these spiritual temples with grace, Truth, Life, and Love.

Lovingly yours in Christ,

MARY B. G. EDDY.

The First Reader said in part,—

Good gave, Love builded, and man dedicates. As God's children we rejoice in this evidence of progress, and instinctively reach out to share our joy with others. To those who have prayerfully and earnestly striven step by step to this manifestation of the "Structure of Truth and Love," this beautiful temple is God's answer to a human need. It typifies his abiding presence of inspiration, realization, and fruition. To the dear co-workers in other fields it stands as an added beacon on the shores of time, flashing out to the weary mariner its message of Truth.

To our beloved Leader, Mary Baker G. Eddy, who has made this understanding of Truth possible to us, it will attest our faithful stewardship, and we trust it may add to her cup of rejoicing. To the many churches of our own city it stands a pledge of loving co-operation against our common foe, evil and all sense that knows not good.

The enlightened understanding which is gained through the study of Christian Science enables us to detect the counterfeits of mortal belief. Evil claims to be manifested and the true relation of things seems to be disturbed thereby. The innocent holder suffers injury and loss, the indifferent possessor becomes a criminal. If we would escape discord, and gain harmony, we must weigh and analyze every incoming or outgoing thought, accept the spiritual, the true, and the good, and refuse the material, the sensual, and the false.

Jesus so clearly distinguished between the true and the untrue, the spiritual and the material, that his every thought became a blessing, his every act the manifestation of infinite power, and in the degree that we are able to think aright, in that degree shall we be enabled to act aright and manifest harmony in ourselves and for others. Then will the promise be realized: "The works that I do shall ye do also." The constant desire to know God aright is a prayer that availeth much, and the pure in heart shall see God. The possibilities for effective work in God's vineyard were never greater than at present.

The blessed truths of Christian Science were given to the world centuries ago. Jesus planted the seed in seemingly rough and stony ground, but the unseen forces of infinite Life were silently and surely accomplishing their purpose.

Through the pure thought of a good woman, there shone the sunshine of God's love, and lo! the miracle to our age,—first the blade, then the ear, and then the full corn in the ear,—first the recognition of truth, then its manifestation through demonstration,—sin overcome and sickness healed.

No wonder the angels sang of the good the infant Jesus brought to mankind, the greater wonder is that all mankind does not catch the echo and join in the glad refrain. Jesus taught his sublime truth with signs following, to a seemingly deaf age, and sinful sense crucified him. Through the understanding given us in Christian Science, the same truth is again taught, and shall history repeat itself? No; God has been unstopping the ears of His children and has implanted in their hearts an hunger that shall be satisfied. Mrs. Eddy says, "The night of materiality is far spent, and with the dawn Truth will open the spiritual senses to hear and speak the 'new tongue'" (Science and Health, p. 354).

Our thought of dedication is not complete without its synonym, consecration; and as we apprehend this truth we recall that morning meal when our risen Saviour for the last time admonished his disciples. Thrice was the question repeated, "Simon, son of Jonas, lovest thou me?" and the repeated command came clear, "Feed my sheep," To us, to-day, this wistful question is borne and emphasized by repetition. And shall not our answer be, "Yea, Lord, thou knowest that I love Thee," and as we respond to the Master's earnest appeal, may God add His blessing to our work, and may it be our privilege to see with John the vision of the Apocalypse, "Behold the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God."

The Second Reader, Mrs. Lida S. Stone, said in part,—

First Church of Christ, Scientist, sprang into existence as a society about sixteen years ago, holding services in a small room in the Nottingham Block on Euclid Avenue, with an attendance of perhaps twenty-five, and a Sunday School with not more than fifteen scholars. The same room was used during the week for a dispensary, as it was then called, where those who desired healing came, and many evidences of "God with us" were shown forth in the healing of sickness and sin.

Later on, and as the result of a continuous growth, more commodious rooms were secured on Euclid Avenue, and in

Digitized by Google

1891 the church was incorporated with seven charter members, the attendance upon our Sunday services being about one hundred and fifty.

The growth of the work in Cleveland has at no time been phenomenal; but there has been a steady increase of interest in our Cause, and therefore an increase in the attendance at our services, until the hall which we occupied five years previous to coming into this building had become inadequate to our needs and thought began to turn toward a church building.

On May 7, 1900, the corner-stone of this present edifice was laid, and December 22, 1901, we held our first service here.

To-day, as we dedicate our church and ourselves anew to the service of the one omnipotent, omnipresent, omniscient Love, our hearts turn with tender gratitude to our beloved Leader, the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, who has, under God's guidance, taught us, by precept and example, the law and the gospel of Love, "whose form to-day is Christian healing," without which the Church is dull and apathetic. Our gratitude is a loving recognition of her selfless life, a life consecrated to God and His work, a life which, from its purity and high ideals, is blessing all mankind.

Christian Science in Utah.

I am sure the Field will rejoice to know that another evidence of our Leader's wisdom in establishing the impersonal pastor, has come to us.

Out on the great American Desert, twenty miles and more from Eureka, and near Death and Skull Valleys in western Utah where the ranchmen live from six to twenty miles apart, Christian Science meetings have been started. The Scientists meet alternately, every two weeks, at one another's homes, I am told, some being in attendance from a distance of about thirty miles. This necessitates the starting on Saturday, so that they may be in time for the Sunday morning service. That none of the Lesson-Sermons be omitted, two are delivered the same day.

How applicable seems this reading in Isaiah: "The wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as the rose. It shall blossom abundantly and rejoice, even with joy and singing; the glory of Lebanon shall be given unto it, the excellency of Carmel and Sharon; they shall see the glory of the Lord and the excellency of our God."—HARRY T. WILSON.

Loving Activity in Foxcroft, Me.

Our little church of nine members contributed up to July 1, 1903, about two hundred and twenty-five dollars to the Mother Church Building Fund, and a few weeks ago it was decided to add, as a love offering, our Easter collection to that fund. After reading the notice about Communion in a recent *Sentinel*, a few of our members who belonged to the dear Mother Church decided that they could well afford to pay what it would cost to attend the Communion, and this enabled us to send to Mr. Chase the sum of one hundred and twenty-five dollars, making a total of three hundred and fifty dollars sent in to date.—*Correspondence.*

Notice to Branch Churches.

The following notice has appeared in several issues of the *Sentinel*, but the Clerk has not received reports from all the Churches. Will the proper officers of the Branch Churches please give the matter immediate attention.

"Each Branch Church of Christ, Scientist, is requested to send, as soon as possible, a report of its total membership, as it stood April 1, to William B. Johnson, C.S.D., Clerk of the Mother Church, 239 Huntington Avenue, Boston, Mass."

Selected Articles.

Fair Play and Truth.

Whenever a case of sickness treated by Christian Scientists is lost, the fact is telegraphed all over the country as a matter of great news. Suppose every case lost by doctors were similarly treated? Would not the papers have to be enlarged? Tuesday a dispatch from Appleton tells of a man with many ulcers "given up by the Scientists." Then follows the statement that *he* would not give up medicine. Of course under the conditions the Scientists drop the case. They cannot treat cases in connection with medicine. Is there anything strange that they should give up the case if medicines are retained? Would a doctor retain a case if the patient insisted on also treating by some other radically different means? Even if you hired a man to build you a barn and then insisted on doing half the work yourself in opposition to the carpenter's plans, would he not abandon your job without delay? Clearly Christian Scientists cannot be blamed for insisting that they do their work in their own way; therefore this Appleton case cannot truthfully be headed "Given up by the Scientists." The *Journal* has always stood up for the Christian Scientists, that they have as good a right to treat diseases their own way as any other line of practitioners, and it is time that newspapers stopped misrepresenting them. With well authenticated cures, ranging from consumption to cancer, epilepsy, hay fever, asthma, nervous prostration, and other diseases quite generally deemed incurable by medicines, to the credit of Christian Science, it is, to say the least, unfair to give undue and false prominence to a case now and then that fails, and then not half the time a genuine failure, as is true of the Appleton case. Anything that cures disease and alleviates suffering ought to have an open field, fair play, and truthful reports about it. The misrepresentations in newspapers about Christian Science, we are charitable enough to think, generally come about through lack of knowledge of the truth, and certainly no one should condemn or misrepresent a thing he knows nothing about.—*Berlin* (Wis.) *Evening Journal.*

The Christian Science teaching that "matter" is phenomenal rather than real is very much misrepresented in order to excite ridicule on the part of those who have never been taught to discriminate between reality and appearance. Yet these appeals to ignorance made by the opponents of Christian Science are on the same low plane on which the propositions that the earth is spherical instead of flat was once ridiculed, because it was in opposition to our "sensations." Mr. Churchman ought to know, and in fairness he ought to have stated, that the Christian Science concept in respect to "sensations" and "matter" are being rapidly supported by the conclusions of the greatest among the modern natural scientists. CLARENCE A. BUSKIRK.

Terre Haute (Ind.) *Gazette.*

Christianity teaches that "whatsoever a man soweth, that shall he also reap." If this be true, then all discord, physical and moral, is the result of wrong, or poor sowing, and as it is the general conclusion that thought precedes action, if this premise is correct, the inevitable conclusion is that thought must be changed in order to bring out harmonious mental and physical conditions. Christian Science is the science of right thinking, and the thousands who have been redeemed from the bondage of sickness and sin through a change in thought, or consciousness, know it was through Mrs. Eddy's teachings that this condition was brought about. A. E. VAN OSTRAND.

Brooklyn (N. Y.) *Eagle.*

The Lectures.

Lincoln, Neb.

Bicknell Young of Chicago spoke last night [April 10] at the Oliver Theatre upon the subject of Christian Science. Rev. J. Lewis Marsh, pastor of All Souls' Church, Unitarian, introduced the speaker.—*Nebraska State Journal.*

Montclair, N. J.

Frank H. Leonard, C.S.B., lectured on Christian Science at the Montclair Club Hall, Tuesday evening, March 1, to a large and attentive audience. He was introduced by Mr. William D. Baldwin of New York City, a former resident of Montclair. The lecture was given under the auspices of First Church of Christ, Scientist.

Correspondence.

Worcester, Mass.

A representative audience filled Tuckerman Hall last evening [April 15] to listen to the lecture on Christian Science by Judge Septimus J. Hanna. The remarks of the speaker were listened to with the closest attention, and the audience manifested their approval in hearty applause at the close of the lecture. It was a scholarly and logical address, and will doubtless be instrumental in arousing a deeper interest in Christian Science among those who have hitherto given the subject but little thought. Judge Hanna was introduced by Harry J. Knight, First Reader of the Worcester Church.

Worcester Gazette.

Rockford, Ill.

Nearly every seat in the Opera House was occupied Sunday afternoon [April 10], when Judge Ewing began his address on Christian Science.

Robert Rew introduced Judge Ewing in part as follows:

Ladies and Gentlemen:—Nearly two thousand years have gone since the birth of Jesus ushered in the long-promised day that, in the words of the evangelist, was to give light to them that sit in darkness and in the shadow of death, to heal the broken-hearted, and to guide our feet in the way of peace.

While inculcating a charity sufficiently wide to reclaim the worst repentant sinner in the deepest hell, Christ Jesus also taught a faith that could move mountains, as it is said; a faith that makes the weak most strong, that neither airless dungeon, nor stony tower, nor walks of beaten brass, nor strong links of iron, nor flame, nor sword has ever vanquished; and which, through the long ages past, has bridged the "dreadful pass of death" for thousands upon thousands of sorrowing, aching hearts.

> Still the days of the nations bear little trace
> Of all the sunshine so far foretold;
> For the cannon still speaks in the Teacher's place,
> And the world is weary with work and gold.

I know little if anything about Christian Science. In these latter days, I am told, it was discovered by Mrs. Eddy, about thirty-six years ago, but that its tenets are coeval with the Christian religion.

Speaking in general terms, I understand, it tells of the plain, simple teachings of Christ, cleaned, and scraped, if you please, of barnacle creeds, the incrustations of nineteen centuries; and it includes the healing practised by Christ and his disciples in their times. While many of us are doubtless skeptical regarding the healing power of faith alone, still, in the words of Shakespeare, there are more things in heaven and earth, than are dreamed of in our philosophy.

In my humble judgment, it is the plain duty of every good citizen, if he has the opportunity, to give a respectful hearing, to all who seek to better our race, however much their views may differ from our own.

I have the honor, and I esteem it a great privilege, to introduce to you this afternoon Judge Ewing.

Rockford Register-Gazette.

Omaha, Neb.

Exceptional in point of numbers and thoroughly representative in its composition was the audience that assembled Thursday night, April 7, at the Boyd to hear the lecture on Christian Science by Bicknell Young of Chicago.

The speaker was introduced by M. A. Hall [former state senator], who said in part,—

A homely old apothegm has it that none is so blind as he who will not see. With such a one it is quite useless to waste time, for his is a deliberate purpose to remain in darkness. But the great majority of the human race are not only willing, but anxious to have pointed out to their benighted vision the beautiful coloring and the delicate tracery of life's picture; and the better the light in which such picture is exhibited the greater is the pleasure of the onlooker.

The most of us remain children all our lives, in the sense that we want to know; and it is well that it is so, for without the desire to acquire knowledge we would lack the necessary stimulus to activity, and hence stagnation would result and, following that, decay. So, having implanted in our being the ambition to progress, we welcome the thought which takes us away from the sordid and the grasping and the debasing, and which leads us onward and upward to a higher and better plane, where the air is purer and more invigorating, where the imagination is kindled to a more glowing heat, and where one's vision is enlarged and extended so that the horizon constantly recedes.

And this I feel is the inspiration which has brought us here to-night,—that we may learn somewhat, if we can, of the fundamental Principle which has brought peace and comfort and consolation and happiness to so many people, within such a brief span of years; and that we may grasp, in passing, the salient truths as they fall from the lips of the speaker and apply them each according to his or her own understanding of right and wrong. The true scholar and disciple of wisdom seeks for the reasons which influence others to pursue a different path from the one he has trodden, and if those reasons appeal to his instincts and to his rational understanding, he will abandon the old and will follow the new.

There is a little work on natural philosophy written by one Albert Sundell, and his prefatory inscription therein seems to me fittingly appropriate to us here to-night who have come to listen to an exposition of the underlying Principle governing Christian Science, so-called, and that inscription reads: "To those who change opinions and to those who do not approve or condemn without understanding."

What is Christian Science? In what does it differ from other Christian faiths? What has it done in the past and what is it now doing for the uplifting and betterment of mankind? This in general will be the theme of the discourse by our distinguished guest to-night; his narrative and elucidation and argument will, I know, be listened to with the greatest interest by us all.—*Omaha World Herald.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Flowers.

MARY B. G. EDDY.

Mirrors of morn
Whence the dewdrop is born,
Soft tints of the rainbow and skies—
Sisters of song,
What a shadowy throng
Around you in memory rise!

Far do ye flee,
From your green bowers free,
Fair floral apostles of love,
Sweetly to shed
Fragrance fresh round the dead,
And breath of the living above.

Flowers for the brave—
Monarch, or slave
Whose heart wore its grief, and is still;
Flowers for the kind,
Aye the Christians who bind
Wreaths for the triumphs o'er ill.

Pleasant View, 1904.

Copyright, 1904, by Mary Baker G. Eddy.

Take Notice.

MARY B. G. EDDY.

I BEG to inform my beloved members of the Mother Church that the By-law in Article XXVI. of its Manual does not require members of benevolent and progressive organizations, such as the Free Masons, Odd Fellows, temperance societies, and those of similar cult, to resign this membership. It specifies in plain English that after individuals become members of our Church they shall not *thereafter* "be made" members of clubs or other organizations not named in its Manual, and wherefore? Because our religious denomination demands the faithful attention and labor of its members in all philanthropic, therapeutic, and progressive Christian work for the human race, and relies upon the adequate, scientific Source and resource therefor.

The Question of Omnipotence.

THE statement recently made before the New York Ministers' Conference, that "It is a mistake to say God is omnipotent; He is not omnipotent; He is constantly thwarted and harassed; there are many things He cannot do," has awakened very little protest. And this may be explained by the statement in one denominational weekly that, "perhaps this is only putting into words the difficulty that many of us feel when we try to follow out to its logical results the doctrine of God's sovereignty." We venture to say that this difficulty is entirely due to the popular theological belief that evil is real, and so long as evil is believed to be real, the difficulty will remain, because to be consistent with it we must deny God's omnipotence or make Him responsible for the creation of evil.

Some have tried to evade the issue by taking the ground that although God is not the creator of evil, He, for some wise purpose, permits its existence. This does not solve the difficulty at all, but simply accentuates the inconsistency. In fact, the man who takes the ground that God is not omnipotent, is more consistent than the one who attempts to beg the question in this way. Who honors God most, the Christian Scientist who insists that God is omnipotent, and who declares that evil is unreal because inconsistent with all the attributes of Deity, or he who is compelled by the inconsistency of his logic to believe that God permits evil? The declaration of God's permission of evil, is of itself an utter denial of His omnipotence.

The following quotations from "Message to the Mother Church, June, 1901" by Rev. Mary Baker G. Eddy express the teachings of Christian Science which alone gives a logical explanation of evil without denying the omnipotence of God.

"Evil is neither quality nor quantity: it is not intelligence, a person or a principle, a man or a woman, a place or a thing, and God never made it. The outcome of evil, called sin, is another nonentity that belittles itself until it annihilates its own embodiment: this is the only annihilation. . . . Sin can have neither entity, verity, nor power thus regarded, and we verify Jesus' words, that evil, alias devil, sin, is a lie—therefore is nothing and the father of nothingness" (pp. 19, 20).

"Do Christian Scientists believe that evil exists? We answer, Yes and No! Yes, inasmuch as we do know that evil, as a false claim, false entity, and utter falsity, does exist in thought; and No, as something that enjoys, suffers, or is *real*. Our only departure from ecclesiasticism on this subject is, that our faith takes hold of the fact that evil cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness. We regard evil as a lie, an illusion, therefore as unreal as a mirage that misleads the traveler on his way home" (p. 21).

"The evil-doer receives no encouragement from my declaration that evil is unreal, when I declare that he must awake from his belief in this awful unreality, repent and forsake it, in order to understand and demonstrate its unreality. Error uncondemned is not nullified. We must condemn the claim of error in every phase in order to prove it false, therefore unreal" (p. 23). M.

A Cause for Joy.

AMONG the many interesting letters to our Leader which we are permitted to read in the *Sentinel*, a recent one from abroad tells of a custom unfamiliar to this country; viz., the wearing of mourning and the display of other manifestations of grief on Good Friday.

If a stranger to the Christian religion were to ask one of these sable clad mourners, what was the occasion of his apparent woe, the answer would doubtless be, that it was in commemoration of a God-like man who had suffered a cruel and ignominious death nearly two thousand years ago. The stranger might then ask why such an one had met with such a fate, and the answer would depend largely upon the religious bias of the respondent. If the questioner were told that Jesus had died to propitiate an offended Deity, he would recognize an almost world-wide belief in the necessity of human sacrifice. If, however, he were directed to the gospel story, he would learn from it that Christ Jesus had appeared in Palestine at a time when the people were looking for a long-expected Messiah; that his birth was lowly and obscure; that his teaching and practice were so entirely at variance with popular expectations as to arouse the bitterest opposition on the part of the religious teachers of the nation, and that he steadily refused to make any concessions to the prevailing opinions as to the place

Digitized by Google

and function of the Messiah, but pursued an undeviating course, declaring the truth and proving it to be the only healing and saving power. He would also find that the common people gladly heard and accepted this message at first, and then, sad to tell, they were influenced by the calumnies of his unrelenting foes, until only a few faithful friends stood by him at the closing scenes of that most cruel of all earth's tragedies.

Having learned that, in process of time, the name of Jesus of Nazareth came to be loved and honored above all others, the stranger might ask if the truth for which Jesus contended had replaced the material beliefs which pursued his steps with such malignity; if the kingdom which he sought to establish, with its "righteousness and peace and joy," was now to be found; if all his followers now knew that "the flesh profiteth nothing," that it is "the spirit that quickeneth," and if this teaching now resulted in the healing of "all manner of sickness" as in the Master's day.

The inquirer would doubtless be much astonished if he were told in answer to these queries that for long centuries this teaching with its resultant healing had disappeared from human experience but he would certainly rejoice to learn that it had been revived of late years, and that its divine Principle and rules were now so clearly stated as to be available for all human need. He would be surprised, however, when told that, even as in Jesus' time, the material belief about God and man had unavailingly risen up against the idea of the supremacy of Spirit, and had sought by the influence of pulpit and press, legislative enactment and social ostracism, to resist the advancing tide of spirituality which followed the study of Christian Science and the healing that accompanies it. Mrs. Eddy, the Leader of this movement, found, like the Master, that it was "slow work to ripen vigorous faith and adequate spirituality" in her students, yet she pressed on, urging them, as did he, to have faith in good, to return blessing for cursing at every step of the way, and above all to displace gloom and sadness with a sense of rejoicing in the affluence and healing power of divine Love which is again made known to the human race. With her they now pray, "May apostate praise return to its first love, above the symbol seize the spirit, speak the 'new tongue' and may thought soar, and Soul be" (Mrs. Eddy, *Christian Science Journal*, July, 1899, p. 230).

K.

A Universal Brotherhood.

THE growth of a larger and truer sense of brotherhood in all the world, is one of the many assurances of the spiritual advance of the race. Despite the fact of wars and rumors of war, of racial jealousies, political contentions, and economic strifes, the definiteness and intensity of the communal consciousness steadily increases, and the pooling of common interests keeps pace with that multiplication of the means of intercourse which has signalized this "Electric Age."

Very many of those who, under military requirement, are subject to the command to array themselves against one another in deadly combat, are realizing that they have no occasion to slay their brother men; that the dreadful sufferings entailed by wars, the lifetime burdens they impose, are not borne by those who precipitate them; that the adjustment of conflicting national interests ought to be effected, and might easily be effected, through mutual concession or arbitration, and that prosperity cannot exist apart from the recognition of fraternity, the maintenance of peace.

In times past, the soldiers of belligerent armies cherished for each other only enmity and hatred, and every victory was followed by a heartless slaughter of the wounded and defenceless. To-day no less tender care is shown the wounded enemy than the wounded comrade: while in the instance of the war now waging, a fraternal organization in one country has sent a message to the people of the other, which reads in part, "Dear Comrades, We are brothers and sisters and have no reason to fight each other. . . . Those who are fighting for humanity must remember that the end does not justify the means. . . . The most important question before us is, How can we bring this dreadful war to a close?" Such an expression of brotherliness and sympathy under the existing conditions, awakens a new hope for humanity, and indicates the approach of that day, promised of old, when "They shall beat their swords into ploughshares, and their spears into pruning hooks;" when "Nation shall not lift up sword against nation, neither shall they learn war any more."

The familiar teaching that all men are brothers because they have a common heavenly Father, has been far more generally accepted than it has been understood. When analyzed this human sense of brotherhood can but affirm that mortal man, as he appears,—a compound of spirit and matter, of soul and body, of good and evil,—is a divine product. This man is seen to have many of the instincts and impulses of the animal. Self-interest determines his action, and to him, therefore, as Hobbes has said, war is a perfectly natural thing. The struggle for the survival of the fittest is but an incident of racial advance, and however dreadful the phenomena may be, they have a perfectly rational explanation. Such a concept stands for a kind of brotherhood, but it is subject to inevitable contentions; to the discredit of God and the discomfort of man, its fraternity still retains the fighting element.

The importance of the contribution which Christian Science is making to a nobler sense of universal brotherhood, can be rightly estimated by those only who apprehend the significance of its basis of thought. In contrast with the teaching of the past, it asserts the unity and exclusively spiritual nature of man, as grounded in the unity of his source, the one creative and eternal Spirit, and the consequent harmony of his being under the divine government. It logically declares that only through escape from the false sense of man as material, can we be separated from the impulses of materiality, the strifes of which will then give place to the peace and harmony of heaven. "The real, ideal man appears in proportion as mortals, or the false and material, disappear." "The erroneous belief that life, substance, and intelligence can be material, ruptures the brotherhood of man at the very outset." "Immortals, or God's children in divine Science, are one harmonious family; but mortals, or 'the children of men' in sense, are a discordant race." "'Thou shalt have no other gods before me,' and 'Love thy neighbor as thyself.' When these divine commands are understood they unfold the foundation of brotherhood, wherein one mind is not at war with another, but all have one Spirit, Soul or God, one intelligent source" (Science and Health, pp. 69, 541, 444, and 276).

How apparent it is that this elevation of the human sense, this awakening to the truth of being, is the one thing which enables us to enter into the true brotherhood of man; and how blessed are they who see the dawning of that "Day of the Lord," in which each shall recognize and love his fellow-man, not for what he may seem, but for what he is,—a brother in Christ.

W.

Letters to our Leader.

New York, May 5, 1904.

Beloved Leader and Teacher:—I have just finished teaching a class, and during these lessons we generally have from one to three cases of impersonal healing. This time the claim healed was of such a peculiar nature that I thought you might be interested to hear about it. A young woman in the class had always been deaf in one ear, never having heard a single sound through that one ear. When she was

Digitized by Google

born, or soon after, the doctor announced that she had only one ear-drum, and said that for this reason she never could hear except with the one ear. As she grew older, specialists verified the family physician's opinion, and she became so accustomed to consider deafness in that one ear inevitable that she did not ever speak of it.

During the very first class lesson, it seemed to her as if a bubble started at the base of her neck, and revolved round and round on its way to the ear where it burst. At the second lesson these indications were repeated with increased vigor and frequency, still she did not speak of it; however, at the third lesson, the movement of the bubbles was so intensified, that they seemed to come in a perfect rush. She placed her hand over her ear for a moment or two as if to steady it, and when she removed her hand she found she could hear perfectly with both ears. "Thanks be to God for His unspeakable gift," to the children of men. Divine Love verifies, through such healing as this, the statement made by you, dear Teacher and friend, in Science and Health, p. 493, "Christ can improve on a lost [or missing] sense."

Thank you again and again for your discovery to this age of the wonderful Divine healing methods, made known to the world in the works and words of Jesus the Christ and practically interpreted by you.

Loyally and affectionately yours,

ROSALIND ROBERTS.

Asheville, N. C., May 8, 1904.

Beloved Leader:—By authority of a resolution passed this day at a meeting of the members of First Church of Christ, Scientist, of Asheville, North Carolina, we, the undersigned committee, desire to express to you the sincere appreciation and thanks of this Church for the new By-laws you have lately given to the Field,—especially Article 26, Section 14, entitled, "Church Organizations Ample."

We hail with joy each advancing step out of the old and into the new; and we joyfully accept your loving invitation to the members of the Mother Church to unite with you in a purified and consecrated spiritual love, and closer unity with God. We recognize with heart-felt gratitude and reverence, the wisdom and guidance of our heavenly Father, through you, our dear Leader, gently beckoning all His little ones nearer Himself.

May the richest blessings of our dear God be forever yours, is the earnest prayer of this Asheville Branch.

Lovingly and loyally yours,

MRS. RUTH V. BROWN, MRS. MARY A. LINDSEY,
MISS ELIZABETH EARL JONES, MRS. ALICE B. POWELL,
THOMAS M. HENRY, GEO. S. POWELL.

Dear Mrs. Eddy:—I have long felt a desire to tell you of the great and wonderful *good* you have given to me, and I cannot refrain any longer. I was healed in less than two months by the truth of your teachings (what doctors had failed to do in nine years of constant treatment); and I seemed to feel such a love for you immediately. I often think, if my love for you is so great, what must be the love that is extended to you, by Scientists all over this world. The good that you have given to us seems most marvelous to me.

Every blessing I now enjoy I owe to you,—health in place of suffering, happiness in place of woefulness, and a trust in God whom I never had known before "Science and Health with Key to the Scriptures" unlocked the barred door and let me in.

To thank you, Mrs. Eddy, seems so little. My love and gratitude for you is unbounded, my reverence deep and true.

CLARA A. ORRILL.

Manchester, N. H., Sunday, May 15, 1904.

Testimonies of Healing.

There appeared in a recent issue of the *Sentinel* a testimony of healing, signed Darius Perry, the statements of which are now denied. Mr. Perry has passed away, and his family say that the testimony purporting to have been written by him is not genuine, that its details are not true, that he was not healed by Christian Science. It is our intention and endeavor to give such testimonies only as are unquestionably true and fully verifiable by inquirers, but we find that in this case we may not have been as diligent as was needed.

In justice to Mr. Perry, his family and friends, as well as to ourselves, we make this statement and express our sincere regret.

In the *Sentinel* of January 2, 1904, on page 282, there was the following extract from a newspaper: "It taxes the material understanding to agree that prayer will set a fractured limb, or that it will remove a cancerous growth. . . . Whence comes authority to affirm that the great Healer cannot set a fractured limb or heal a cancerous growth? and whence the authority to declare that He will not, if the sufferer lives the Christian life and puts his faith absolutely in God?" Whence, indeed, in the face of many proofs to the contrary, in one of which I was the active participant?

One afternoon a little more than two and one half years ago, I started out for a bicycle ride. I was riding along a short distance behind a carriage which served as an admirable wind shield, and which enabled me to see whatever might be approaching from either side at any of the cross streets, but, in view of what followed, it unfortunately prevented me from seeing in time a vehicle coming in the opposite direction. At any rate, a carriage coming toward me suddenly turned in behind the one I was following, and before I was able to turn aside or pull up, there was a collision, and my wheel and I both went down and the rear wheel of the carriage passed over my left leg midway between the knee and ankle and squarely over the right foot. It was a large open barouche, containing four people and a driver, so that the weight was quite a heavy one. I did not attempt to rise at once but lay in the road, trying to realize the ever-presence and healing power of Truth and Love, and to be conscious of nothing but my relationship to God. Naturally the people gathered around me, but I paid no attention to their remarks and suggestions until I heard one man say, evidently in response to another, "Broken? of course his leg is broken,—do you suppose a team like that could go over his leg and not break it?" Upon hearing that, I got up and, mindful of Paul's injunction to "speak with boldness," declared to them that, "of course, it is *not* broken," and walked over to the side of the road, each step causing intense pain, and sat down on a stone wall. As different ones kept offering all kinds of advice and suggestions as to the application of material remedies, and as I was but an infant in the understanding and application of Christian Science, I quickly decided that the only thing for me to do was to get home as soon as possible and send for a practitioner, and, although it proved a tedious and painful journey, this I did.

Fortunately, when I finally reached my home I there found a member of the family who is a practitioner, and immediately asked her for help. I tried first of all to take off the shoe from the right foot, but because of the pain and the swelling found it impossible to do so. Then for the first time fear assailed me, and I voiced the thought as to whether I had not better send for a surgeon at least to see how bad the injury might be. The practitioner, however, with that wisdom which comes instinctively to one who is daily striving to live in the atmosphere of Truth and Love, suggested that I lie down for a short time and she would

Digitized by Google

work for me. This I did, and in a few minutes I fell asleep. When I awoke, over two hours later, all sense of pain had left me and with it was forgotten any thought of sending for a surgeon.

She told me afterward that when she saw that I had fallen asleep, she took up our text-book and found these words, "He [Christ] met and mastered, on the basis of Christian Science; namely, the power of Mind over matter, all the claims of medicine, surgery, and hygiene. . . . He required not the skill of a surgeon to heal the torn palms, and bind up the wounded side and lacerated feet, that he might use those hands to remove the napkin and winding sheet, and employ his feet as aforetime" (Science and Health, p. 44). Through the clear realization of the practitioner the cure was effected by the healing power of Truth. We then took off the shoe from the right foot and on examination found two of the bones broken, one on the outside and one on the inside of the foot, and on removing the clothing from the other leg, to which it had become attached on account of the coagulated blood, there was disclosed a deep gash about three inches in length. Both injuries were washed and the cut bandaged up, and I again lay down and the work was resumed with such good effect that when it was time for supper I went down, not without difficulty indeed and much to the surprise of the family.

The work was continued that evening with such good results that the next morning I decided to go to business. A carriage was suggested, but I declined, and putting on a pair of overshoes, I was able to hobble to the car with the aid of two canes, and proceed to my office in town. I returned home that night ever so much better than when I left. In three days I was able to leave off using the canes, and to put on a pair of extra large shoes, and within a week I was able to move along without any perceptible limp, although, of course, careful as to where I stepped. I had no further pain or inconvenience from the wound, although the scar is apparent to this day. Two hard lumps appeared on each side of the foot where the broken bones knitted together. These remained for several months, but gradually dissolved as the leaven of Truth performed its work. Neither during this time nor since have I suffered any serious inconvenience from the injury, and to-day the foot is practically as good as ever, although not altogether as straight as before.

To end where I began, I would repeat the worthy editor's question, "Whence comes authority to affirm that the great Healer cannot set a fractured limb, . . . and whence the authority to declare that He will not, if the sufferer lives the Christian life and puts his faith absolutely in God?"

WILLIAM C. PREE, Boston, Mass.

I have just returned from a visit with friends in my old home which I left four years ago. I did not realize what progress I had made, until I went back and looked over the years which had intervened. I came to Topeka with my husband and two children, the main purpose being to seek health. I was not, however, seeking Christian Science, for I knew nothing of it, but I found nothing else that would help me. I shrank from having an operation performed, and was praying constantly, to the best of my understanding, that I be delivered from the bondage of sickness. My prayers were answered and I was lifted up out of the depths of sickness and despair.

It makes me shudder to recall that dark picture again; I would not do it, but for the purpose of giving an encouraging word to those struggling for the light of Truth. The physical troubles I had were said to be incurable except with the knife, and that was uncertain. As I said, my prayers were answered and help was sent to me in Christian Science. I felt the soothing, healing power in the first treatment, but I battled hard against the thought of material aid, until I felt the complete disappearance of those dreadful conditions of many years' standing.

I cannot tell how happy I was when I first felt the comforting influence of Truth. I asked for something to read that I could understand, and as I read it seemed as if I had suddenly been uplifted to a mountain peak. I can never forget the encouraging words my practitioner gave me, and the way he helped me to understand my perfect relationship to good, God. Sometimes I would think it was all too good to be true, but I felt the sustaining power of God, and the more I studied the more I knew that Christian Science is all there is, because it teaches that God is the one and only power,—the one Mind.

What Christian Science has been in my family I can never tell. Many severe physical ailments have yielded beautifully to its treatment, but the physical help has been nothing compared to the mental uplifting which has come.

One Sunday after returning from church I was stricken with what seemed to be appendicitis, and the pain was simply terrible. I could neither sit nor lie down. It seemed that I would lose my reason. Word was sent to a practitioner, and he treated me absently. I was helped so much that I was able to get up and prepare our evening meal and get my children ready to retire.

The trouble seemed to return on Monday and kept getting worse until I had endured all that I could until Wednesday, when the crisis came. I had so much to stand against in the form of fear, anxiety, and doubt in my family, that I asked for a nurse who was a Christian Scientist. God provided me with every care I needed, and by Thursday morning the disease in all its tenacity was destroyed and there have been no signs of any return of it.

To say that I am thankful for my restoration, and that an operation was not performed (which my family insisted upon having), does not half express my gratitude to God for sending to us through our beloved Leader, Mrs. Eddy, this most wonderful and yet simple revelation of Truth,—Christian Science. The only way I can realize all its beauty is to watch and pray constantly, and to know that there is but one power, and that is divine Mind,—God.

MABEL P. HILL, Topeka, Kan.

Something over a year ago, an opportunity was given me by kind friends to look into Christian Science, but I thought I had not the time. I was already a very busy woman, and beside, there were, I thought, physical limitations, and Science was a thing that could be put off to a more convenient season.

Not many months later, I was urged by my physicians to submit to the surgeon's knife without delay. Urged on by their anxiety for my welfare, I entered the hospital and submitted to a severe operation. For seven weeks after the operation, my physical suffering was great, but it was as nothing to the mental agony, the like of which I had never conceived it possible to endure and live; the physical torture was a positive relief compared to it.

Just why this accumulation of disasters fell upon me, I am unable to explain. I prayed, in my benighted way, to a God who seemed no more responsive than a graven image, to deliver me, by death if need be, from this desolate valley of many shadows. Nothing in medicine could help me, and I left the hospital physically and mentally prostrated. Seemingly there were but two alternatives left me —suicide or insanity,—and yet, curiously enough, I could discern neither rest nor surcease from the treadmill of my diseased thoughts, even in these alternatives.

I had been "beaten with many stripes," and I was terribly bruised and broken; but my extremity was Truth's opportunity, for at this juncture a Christian Scientist came, and with gentle words of assurance, gave me a copy of Science and Health to read. I had not much confidence in the efficacy of the prescription; but with my hands folded helplessly

Digitized by Google

before me, I had all the time at my command that had seemed so lacking a few months previously, and I took the proffered tonic, and was even thankful for it. Before twenty-four hours were passed, I realized that I had in the Bible and Science and Health the remedy most needful for me, and I absorbed the truth revealed by them as a sponge absorbs water. This was followed with a few treatments by a dear practitioner, and no words can describe the strength of the spiritual uplifting. Each succeeding day adds to the depth of my gratitude to Mrs. Eddy and to the dear practitioner and gentle friends who, by their loving kindness and assistance have made this spiritual condition possible. Blessings have followed every step of the way.

In the days of my despair and hopelessness, I thought if I could find something that would make the Bible seem real to me, something that would show me more of the love of God and less of His vengeance, more of life and less of death, I would acknowledge it before men. I have found it in Science. I have found a living Christ; have found the Bible, through Christian Science, to be active and powerful; have found a God of Love and Truth in whose Divine image and likeness it is blessed to have been created. It is true that spiritual knowledge is power. Christ said, "Seek ye first the kingdom of God;" and Paul later explained how "The kingdom of God is not in word, but in power." Jesus said, "No man, having put his hand to the plough, and looking back, is fit for the kingdom of God." Therefore, for myself, I have chosen to look forward and upward.—HARRIETTE H. ROOTE, San Francisco, Cal.

It is with feelings of deepest gratitude to God and to our Leader that I give my testimony in regard to Christian Science. I had been a worker in the ministry for twenty years, having been ordained in an orthodox denomination, and God blessed my work both as a pastor and an evangelist. I was always ready to go at any call, and it was while I was very active in the work that my health failed. For three years I had been compelled almost to give up preaching. I felt at times that the harvest was indeed great, but the laborers few, and I hoped to be again able to work. Every effort I made, however, only left me more unfitted, and my physician told me I could not preach any more for a long time, if ever. I asked God to remove the great longing to help in the work of Christ if there was no more for me to do, and I then had a season of rest, but I grew steadily worse until my physician and friends gave up all hope of my ever being much better.

At this time a dear friend who had come to Christian Science came to see me. She had known me when I was engaged in church work. She told me of Christian Science, but I said I did not know anything about it and had regarded it as a sort of side issue leading away from the true Christian life. She explained it to me in such a plain, simple way that I began to heed what she said, and when she told me that it meant a better understanding of God's word and more of Christ in my life; that it was better than blind belief,—it was a certain knowledge,—how those words thrilled me. A new light came to my inmost consciousness, and I said if that is what Christian Science is, I want it, and I will have it.

My physical condition did not enter my mind, but anything that would give me more of Christ was what I wanted. I accepted it for spiritual help and was healed bodily at once, and while at that time I had been taking several remedies, among them the most powerful heart remedies known, I have never used any material remedy since. Truth has made me free, and as I think of that wonderful work it seems to me that the words of Thomas are fitting for me: "My Lord and my God."

I began reading Science and Health, and I find as I go on studying the Bible through the help of this book, that it is like the unfolding of a flower which grows more beautiful each day. It is surely leading me out into green pastures and beside still waters, for in Christian Science, as revealed to the world through Mrs. Eddy, there is a fulness of joy which is found only at the right hand of God. This star of great magnitude is sending out its effulgent rays into darkened lives and cheerless homes, giving joy to sorrowing hearts.

The constant language of my heart is, Praise God, for this truth has brought peace and harmony into my life and accord into my home. I know that old prejudices and preconceived ideas are all cast aside in the study of the truth, and all things become new.

REV. JULIA GOULD MOFFATT, Greenville, Mich.

At a time when death seemed to be confronting me, I finally mastered fear and faced it. I realized that death had no power over my spiritual individuality, it had no power over one iota of good, or any part of me which proceeded from God. All it could possibly kill was error or evil, and I was willing that should die, and the sooner the better. Then I thought, Let me see what death claims? It does not claim any life, it does not claim mind, it does not claim action, nor power. It is lifeless, mindless, powerless, it does not claim anything for itself, then why should I fear that which is not anything? This proved to me what a delusion it is, and with this all suggestions of death passed away.

About six months after this experience I was called to my mother's home where she lay unconscious from the effects of cholera. The muscles were set, and the manifestation of death was so pronounced that I had to go into another room to work. Fear was intense, and all I tried to do was to silence the material senses. It was through the realization of "stationary power, stillness, and strength" (Retrospection and Introspection, p. 117), and the truth found in 2 Chronicles, 20, that this demonstration was made. The following morning a great sense of weakness was manifested, so that she was unable to be about. The thought then came that it does not take time to gain strength, it is omnipresent, it is here and now, and has never been lost. The next day she took a trip of eight miles to the country.

Several months after this, I found my husband in an almost unconscious condition from heart failure. He seemed to be sinking fast; I tried to give him a drink but he could not swallow it. I stayed right in the room declaring the truth, and soon the color began coming into his face, and within a half hour he was well and able to walk upstairs. The next morning he felt as well as ever.

I might give many more demonstrations of the power of Truth over error. These that I have given mean much to me, as I was all my life in terrible bondage to fear of death. When a child, if the subject was mentioned I remember getting afraid of the people with me, and of my own self. No one could possibly imagine this suffering unless he had experienced it.

I have much to be grateful for to God, and to our beloved Leader through whom this truth which makes free has come. I also feel very grateful to all who have helped me in the understanding of Christian Science.

MRS. C. E. K., Cleveland, O.

For something like fifteen years I suffered from an ulcerated stomach caused by dyspepsia. I tried every remedy that physicians prescribed or friends suggested. Finally, one physician was frank enough to admit that I could not be cured by medical treatment. In 1895 I went West in search of health, as I had tried everything except mountain-air and baths in the Great Salt Lake. These afforded no relief. Then I found what I had been many years searching for—

Digitized by Google

true health; not the health which diseased persons seek through material remedies. Through a Christian Science practitioner I was healed in a few days; not weeks nor months, but within less than one week's time. The treatment also destroyed the taste for tobacco.

Previous to my healing I had repeatedly scoffed at Christian Science, and was with much difficulty induced to give it a trial. Since that time I have taken no material remedies, and have not even had an inclination to return to them, as I know that I have something more powerful than anything that ever can be invented by mortal man. In 1896 my wife and I took class instruction, and we have led many sufferers to the light.

We have a family of three children, and have found Christian Science to be the best remedy for all children's diseases, accidents, etc. One of our boys a number of years ago fell out of an automobile and broke his collar-bone, and was healed in a few days by Christian Science alone, the bone having knitted perfectly without the assistance of a surgeon.

It were useless for me to state that I am overjoyed and thankful that such a system of therapeutics was called to my attention. I give thanks to God for His goodness in favoring His children as He has favored them, and thanks to that grand woman of our epoch, Mary Baker G. Eddy, for having discovered and founded Christian Science as a religion and a system of therapeutics.

JOHN C. HIGDON, St. Louis, Mo.

When we get the true healing, the error is so completely erased from our consciousness that the remembrance of former disease and suffering is wholly obliterated, and it is well that it is so. I find this to be so in a great measure, in the healing of my husband, as related in the above testimony. There is so much connected with his case that I feel there should be more of the details given.

Just before taking Christian Science treatment, he seemed to grow worse each day. He gave up his law practice and spent the days seeking relief. He was barely able to walk about the house, and was so peevish and unreasonable in his requirements of food and medicine as to keep the entire household in confusion. In every room was medicine, and a new remedy would be added almost every day. He had medicine in bottles and in packages; he had it in his pockets, and it was at his plate on the dining-table, and by his bedside at night. He drank hot water, and then he drank cold water; he bathed in cold water, in hot water, and for a time in the ocean. He had an exercising machine in his room; a saddle-horse was brought to our door at six o'clock each morning, on which he would ride, when able, before eating his frugal morning meal. His meals had to be prepared according to his daily whims, and his many changes in the bill of fare caused many changes of cooks. There was a time he ate baked oyster-shells after they were powdered; again, the powdered shells would be mixed with wine, and this diet was supposed to restore the "lost" lining of the stomach. After eating anything, he would be in such pain that he would frequently remove the food from his stomach with a stomach-pump, and, as might be expected, he became greatly emaciated, impatient, and nervous. His weight was just half what it is now. At last the doctor said there was no hope, but to try traveling West. We packed up and went West on a little trip through the mountains. He tried bathing in the waters of Salt Lake, drank many kinds of mineral waters, but all to no purpose.

Discouraged, we were ready to return to our home in St. Louis, when my husband was induced to take Christian Science treatment. The result of that treatment is given above, and I must say that we have lived eight of the happiest years of our lives, in which no doctor has been called nor has any material remedy been used in our home.

Our three children hardly know what medicine is. We are always happy, healthy, and harmonious.

EUNICE E. HIGDON, St. Louis, Mo.

In the spring of 1880 I was taken down with a severe attack of stomach trouble, was bedfast for three months, and not able to drive out for nearly six months. During this time I had three good doctors treating me. I gained a little in strength, but had very little relief from the stomach trouble. I was recommended to try mineral springs and did so, but with the same disappointment. Next was a sanitarium, but yet the stomach trouble prevailed. I had some friends who recommended patent medicines, but no healing came.

I worried along in this way for several years. Finally I read medicine nearly two years with a good doctor friend, especially for my own benefit, and during this time I had a very severe attack of bladder trouble, and for fifteen years I suffered so severely at times that I thought life was not really worth living. In connection with these troubles I suffered every winter with rheumatism and the grip. I also had a growth coming on both eyes called cataract, which caused my eyes to be inflamed nearly all the time, and this growth had made such progress that it was causing my vision to be very dim when reading. Corns were not forgotten, as I was reminded of them very frequently, and for all these troubles I had tried every remedy I heard of that I was able to get, specialists included, without relief.

Thanks to a friend who took me in this hopeless, discouraged condition and led me to the light that never knows darkness, I got a copy of Science and Health by Mrs. Eddy and was healed in a short time by reading this work. It gave me an understanding of that great and infinite good, our loving "Father-Mother God, all-harmonious" (Science and Health, p. 16).

I thank God for all this. He is so loving, kind, and true. I know that His love is everywhere, and my prayer is that I may walk in the narrow path of Life, Truth, and Love, and I trust that all who may read these few lines will cling to Truth and deny all forms of error, and they will be free indeed.—D. W. LEATHERMAN, Anderson, Ind.

With Jesus—his faith and his conviction never allowed the question to arise as to the existence of finite things—in short, they had no existence for Him; only in union with God was there Reality.—FICHTE.

[Written for the *Sentinel*.]

You Cannot Hide from the Light.

FANNIE ROGERS WHITE.

THE world is full of sunshine,
  Is full and running over;
It shines in all the cities,
  It shines on fields of clover.
You may hide away in the darkest wood,
  Away from the blue of the sky;
But you may be sure a sunbeam
  Will find you by-and-by.

In life there are days of darkness,
  When the sun seems to hide its face;
But if you creep out of the shadows
  You will find the sun in its place.
Then why so much complaining?
  And why do we mourn and sigh?
There never was yet a teardrop
  The sunshine could not dry.

From our Exchanges.

The work of Jesus was to win men. . . . It was to make every man realize in his own way and in his own degree what Jesus so perfectly realized in himself. He tried to awaken in men his spirit, so that they should see the world as he saw it, should know God to be their Father as he did, should have his steady faith and calmness, no matter what should come to them. That is the fulfilling of his religion.

Remember how it was with Jesus. Every advance was preceded by a period of struggle. Between the quiet days of Nazareth and his public ministry came the wilderness. Between the year of popularity and his going up to Jerusalem lay the sojourn in the north country. And in Gethsemane the spell and wonder of the higher fellowship with the Father beckoned, but was not at first attained. Times like these come to every man,—times when the support of the old is gone and the comfortable satisfaction of the new has not yet come. But times like these come to society, and such a time is this present. The Church has outgrown much that in other days was thought most important; and the coming glory beckons, waits.—*The Christian Register.*

While the population of London has increased about 500,000 during the last seventeen years, the church attendance has in that time decreased about 150,000, and the loss has fallen almost entirely on the Church of England. The Nonconformists are now in the majority. The population of the city is 6,240,336, while the number of worshipers on a Sunday is given as 538,477 in Anglican and 545,317 in Free churches. As in American cities, where the wage-earning classes crowd the middle classes farther into the country, there church attendance is lowest.

The Congregationalist and Christian World.

Hold up your head, and look the world square in the face. It is that world over which you must exercise your power. Over and above it, where the imagination runs like an illuminating flame, is the realm where the greater meanings of the real live and have power. Every fact has its corona of exalted significance; every phenomenon of nature palpitates with meaning. Over and above it, the fancy of the poet broods, holding the fact subservient to that greater meaning which he formulates and expresses. And that which the poet declares remains longer, perhaps, than the fact which it crowns.—*The American Hebrew.*

The discovery of the germ of this disease [discontent] is not to be credited to modern science or philosophy. It was revealed to Isaiah more than twenty-six hundred years ago, who wrote, "There is no peace, saith my God, to the wicked." The germ of discontent is sin, and the most convincing proof of the universality of sin among men is that so few are free from some measure of dissatisfaction.

The Watchman.

It is a mistaken, though a very prevalent idea, that in some way God can be "taken in" and placated by an ostentatious display of religious devotion in His house on the Lord's day, and will not concern Himself too narrowly with the life between Sundays. What insane folly is this! Yet men hang their hope of eternal salvation on their Sunday hyprocrisy.—*The Examiner.*

It is not a weeping Christianity that Good Friday demands, but a militant Christianity. It is not the penitence of tears, but the penitence of action; it is not a world silenced and humiliated about a cross, but a world purified, uplifted, with its feet set in new paths and its hands committed to the highest tasks.—*The Outlook.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 709 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Postmaster-General Payne announces that the receipts of the Post Office Department for the fiscal year ending July 1st next, will be approximately $144,100,000. In 1896 the receipts of the Post Office Department were $82,499,208. In 1899 two hundred rural routes were in operation. At the close of the present fiscal year there will be over twenty-five thousand rural routes in operation, bringing a daily mail service to more than 12,500,000 people.

The Corporation of the Massachusetts Institute of Technology recently passed a resolution authorizing its executive committee to investigate the matter of closer relations with Harvard University.

There is an almost unanimous sentiment among the Tech Alumni against consolidation, if the distinctive name of the Institute should thereby be lost. This sentiment has been ascertained through the Secretaries' Association.

Governor Davis, accompanied by Rear Admiral Sigsbee, Captain Wainwright, Majors Black and LeJeune, Secretary Legard, Lieutenants Hetherington, MacAuley, and Brooks, and several aides have been received with great ceremony by President [illegible] and the state secretaries of Panama. Amo[illegible]

[illegible]io cor- The London Daily *Telegraph's* To[illegible]rious respondent cables that a great religious meeting promoted by influential men has been held to determine the question of founding in Japan a Church, Christian in character but on independent lines. Leading men consider that the time has arrived to adopt the elements approved by the majority of civilized nations. An edict establishing a national Church is not improbable.

The enormous budget demands for the army and navy of Austria (carrying a total of $51,791,200) have caused a sensation among all parties in the monarchy. The Government's sudden desire to hasten the completion of the military programme which had been planned to extend over several years, is supposed to be influenced by the experiences of the Russo-Japanese campaign.

Venezuela has requested France to appoint as umpire of the Franco-Venezuelan mixed tribunal, M. Magnaud Le Bon, a French judge. The choice causes surprise, as the claims, amounting to $8,400,000, will, if France accepts him, be judged by a Frenchman.

The official promulgation of the adoption of the new constitutional amendments, making the presidential term six years, and creating the office of Vice-President has been made throughout the federal district of Mexico.

An imperial edict, just issued voluntarily at Pekin, opens to the commerce of the world the ports of Chinanfu, Weishien, and Choutsun, on the Shan-Tung peninsula.

King Edward has announced his intention to visit Emperor William during the regatta week at Kiel, which begins June 22.

Industrial and Commercial.

A fleet of turbine-driven steamships is to be placed on the Great Lakes by British capital. Plans for vessels to be 250 feet long and of Welland Canal dimensions as to beam and depth, have been drawn by British shipbuilders. These plans are to be carried out as soon as possible. These vessels will make the round trip from Toronto to Port Arthur or Duluth in eight days and will make a specialty of passengers and flour and other quick passage freight. The ships will carry 250 passengers and 2,000 tons of freight, and will run at a sustained speed of sixteen miles an hour.

The United States is likely to head the list of nations as an exporter of domestic products in the fiscal year which ends with the coming month. Until a comparatively recent date the United Kingdom stood at the head of the list. The figures of domestic exports of the United Kingdom for the nine months ending with March, 1904, were $1,073,538,366, and of the United States $1,149,330,670.

Commerce of the United States with its non-contiguous territory now averages about $8,000,000 per month. The records show that the shipments from the United States to Alaska, Hawaii, Porto Rico, the Philippines, Guam, and Tutuila aggregated in the seven months ending with January, 1904, nearly $21,000,000, and the merchandise received from them in the same period nearly $31,000,000.

The contract for the construction of a complete waterworks and sewer system for the city of Monterey, Mexico, has been awarded to an American concern. The amount of the contract is said to be three million dollars gold. Monterey is a city of nearly one hundred thousand people and contains many important manufacturing and industrial concerns.

Fifty million bunches of bananas were brought to the United States last year, according to the statement of an importer. The development of this industry has been greatest in recent years in Central and South America. Two hundred and thirty steamers loaded with bananas cleared from Port Lemon, Costa Rica, last year.

It seems probable that the Cunard line will establish at once on its trans-Atlantic vessels the Marconi system of wireless telegraphy, by which a daily news service will be maintained.

The Cincinnati, New Orleans, and Texas Pacific Railroad Company has made arrangements for the purchase of 2,850 freight cars of different types. The cost of these cars is $1,544,389.75.

General.

The International Chess Masters' Tournament was won last week at Cambridge Springs, Pa., by Marshall, who thus secured the first prize of one thousand dollars and the Cambridge Springs championship. His final score was thirteen points won and two lost, comprising eleven victories and four drawn games. His feat of passing throughout the entire tournament without losing a game is almost without precedent in the annals of tournament play, although in 1893 Dr. Lasker won the New York tournament with a clean score of 13-0.

The committee on the state of the Church of the Methodist General Conference having in charge the consideration of the proposed change in the rules in regard to dancing, card-playing, and theatre-going, has decided by a vote of 55 to 43 against recommending any change. This result was reached only after a vigorous and prolonged contest in the committee meeting. A minority report presented by members of the committee who favor a more liberal construction of these rules, was offered before the Conference.

Two English castles are about to come under the hammer, each included in the sale of extensive estates,—Kingswear Castle, South Devon, dating from the reign of King John, and the Hanwell Castle, situated in Oxfordshire. This sale will include the whole of the village of Hanwell and part of the village of Drayton, near Banbury. This was the seat of the Cope family, and James I. was twice the guest of Sir Anthony Cope, the celebrated Puritan leader.

Dr. Richard Strauss, who has just returned to Berlin after a tour of the United States, is reported as saying:—

"Chicago and West America is a land of the greatest musical promise. I distinctly dissent from the charge commonly heard in Germany that Americans are unmusical. On the contrary they are highly appreciative of good music and the prompt rejection of trash is indicative of a keen discriminative faculty."

Radical action giving official sanction to the publication of the revised version of the Bible was taken by the managers of the American Bible Society at their annual meeting in the Bible House last week. This step is a decided departure for the Bible Society, for its constitution has limited it to the publication of the King James version.

Alexander McKenzie, a mendicant well known to patrons of the Elevated Road of New York, has invented a device for the protection of the "third rail" on the elevated tracks, which seems likely to win for him the prize of one hundred thousand dollars offered by the Interborough Company for that achievement.

Twenty-four tons of gold were recently melted at the Philadelphia mint in one week for coinage into eagles. Twelve million dollars will be coined. Most of the gold came from New York in bullion. The melting of twelve tons of gold in one day is said to break all records for mint melting.

A valuable portrait by Sir Joshua Reynolds has been brought to light at Elton Hall, Huntingdonshire, the seat of the Earl of Carysfort. It was found in the servants' hall.

At Christie's, London, at a recent auction sale, a Gainsborough portrait of Lady Mary Impey brought £2,950; a Romney portrait of Catherine, Lady Abercorn, sold for £2,100, and a Valasquez portrait of the infant Don Balthazar Carlos brought £1,575.

The American Federation of Musicians, in session last week in New York, adopted a resolution favoring "low pitch."

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors

The Use or Misuse of Time.

SAMUEL GREENWOOD.

THE Scriptural statement that man must work out his own salvation invests time with vital interest and value for him who would achieve that salvation, for his ultimate triumph over evil will be hastened or deferred according to the right or wrong use he makes of his time. A period is usually reached in mortal's experience, unless foreseen and forestalled, when the remembrance of unused opportunities, neglected privileges, and wasted hours, calls up the "unavailing tear" and keen remorse. To drift idly with the current of events, absorbed with the passing pleasures and vanities of a sensuous world and careless of the pleadings for recognition of man's spiritual being, is to enter the torture-chamber of memory when the flame of corporeal joys has burned itself out.

If mortals but heard the Christ patiently knocking at the door of consciousness; if they but realized the utter emptiness of the whole dreary dream of matter, they would have no time for that which but prolongs the illusion and the pain of mortality. If this material sense of life constituted man's real being, we might well yield our time and thought to it, but Christianity teaches that not materiality but spirituality represents the truth and permanence of being. Those who have truly discerned this fact, those who have learned well their first lessons in Christian Science and have awakened to the delusion of the so-called material senses, should have no time except in which to follow Christ. To be Christ-like in every moment and in every place is the only road by which we may reach Jesus' dominion over the flesh.

Do we sufficiently consider that we must give account of the use of our time as well as of our abilities, that we are simply stewards of the days and years? All things belong to God, and what man has of Him, whether of time or talent, is of good only. What moral right have we to use or misuse even a moment for wrong? To bring out in our experience God's true ideal, the real man, requires that each moment be lived truly; not wantonly nor idly, but in the constant recognition of and obedience to the rightful rule of good in man. To give our time for purposes of evil,—evil thinking, evil speaking, evil doing,—is suicidal to every hope of salvation.

Those who have perceived in advance of others the great spiritual meaning of Jesus' teachings and demonstrations and their comprehensive application to human need, should prove the sincerity of their faith by consecrating their every moment to God, good,—in good thinking, good speaking, good doing. To do otherwise is an attempt to work with both truth and error, now one and now the other, a zigzag course that makes little permanent progress.

Not to do the good we may now have the time and means of doing is a foolish disregard of what constitutes our salvation, and the inevitable necessity of our own accomplishment of it. The faithful use of present opportunities is the best preparation for the demands of the future. To-day bequeaths to the morrow the legacy of our living, whether it be good or bad. The tendency given to thought in the present moment continues its current to the next, bearing us earthward or heavenward.

The frequent excuse, "I haven't time," is a bald deception of error. We have all the time needed for present duties if used aright. If we are not doing our best in the time we have, we would not do better if we had more. If we are striving to become better acquainted with Love, with purity and goodness, as the days go by we shall find it growing easier to do right and harder to do wrong. A good thought demands no more of us in the thinking or the doing than an evil one; and to love or to hate is all the same from the point of time. The confession that we have no time in which to be God-like, to refrain from evil, or to love our neighbor, is the insanity of selfishness, the worship of sin.

The work of a Christian Scientist is not the demonstration of comfort in materiality; it is to learn the way *out* of the flesh even as Jesus taught, and to walk in that way. The sense of mere physical or bodily consciousness has no permanent joy or good to bestow; it is bounded by mortality, and includes the whole dark category of human woe and evil. Can we be profitably careless as to the amount of time we unnecessarily allow to this false sense? God demands of all men that they conform to their divine Principle in thought and deed, not intermittently but continuously. To do this and yet bestow our time on aught unworthy of our best thought of man, is not possible. To let each passing moment testify of thought and effort turned Godward, of good desires confirmed in action, of increasing diligence in minding our Father's business, is the only way to fill the measure of our time acceptably to God. Less than this would not fulfil the earnest injunction of our Leader, that "all our thoughts should be given to the absolute demonstration of Christian Science" (Miscellaneous Writings, p. 136).

All persons, no matter what may be the demands of their business or occupation, have time to be honest and kind and pure, to practise the Golden Rule, and to be happy and good. God provides time in which to do His will, and if used thus our sense of freedom in it will develop until we shall find that our good desires are not debarred from fulfilment for lack of time. Whatever Truth requires of us, that we surely have the opportunity to do according to the degree of our understanding. The demands of family, of society, of business, would all be met equitably and profitably if God's demands were first met because of their first importance. When the call comes to attend the feast of Soul, we should not be found making the excuses of the men in the parable, that the pressure of material pleasure, wealth, or ambition prevents our acceptance, else we shall later be left mourning in the barrenness of that false sense that would find joy and being apart from God.

It is surely wise to guard the spending of our time with at least as much care as the spending of our money, for the former more than the latter will decide our future loss or gain. "Good demands of man every hour, wherein to work

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

out the problem of being" (Science and Health, p. 261). Why should we seek to give less? This problem is not solved in a moment, even though it be the so-called moment of death, for man must learn through his own individual growth in spiritual understanding, and his reflection of goodness, of the infinite nature of good and its forever expression in man. In learning this divine lesson, how to live aright and to overcome evil with good, God must have not a part but the whole of our time. This does not demand that we leave the world, but it does mean our separation from its evil.

God speed the day when the divine opportunities and possibilities enfolded in each passing hour have become so apparent and attractive to us that we shall have no time to traffic in the things of error; no time in which to be dishonest, unkind, or unjust; no time to expend in frivolous gossip, unbrotherly differences, or selfish ambition; no time for the service of debasing passions and unmanly appetites; no time for anything that would blind our perception of the ever-presence of God, or postpone our recognition of His kingdom, on earth as in heaven.

Reflection.

ALICE HAMMOND.

"RECOLLECT that Science reveals Spirit, Soul, as not in the body, and God as not in man, but as reflected by man" (Science and Health, p. 467).

How this statement puzzled me at one time, and how diligently I searched for some symbol by which to comprehend it clearly. True, Mrs. Eddy had given us an illustration in the mirror, but it seemed to keep my thought on my own personality, and my comprehension of the subject was by no means clear.

This state of mind continued for several days, when one morning, as I was sitting in my room with Science and Health on my lap, endeavoring to realize the true meaning of reflection, I closed my eyes, and instantly the picture-gallery of memory was opened. Before my mental vision, spread in all its beauty, was a favorite spot at my childhood's home.

On the back part of the farm was a meadow enclosed on three sides by beautiful woods. To that place, in childhood and youth, I was wont to resort in the early morning before any one else was astir on the farm, to feast my senses with the freshness of those June mornings,—the perfume of larch and clover, the harmony of bird songs, and the soothing murmur of the little brook that wound its way across the meadows which lay in the bright sunshine,—one sparkling mass of dewdrops.

I had found my symbol of reflection! Laying down the book I stepped to the door, for it was early morning, and looked upon the dewdrops on the grass in the yard. I recalled our Leader's reference to the sun as a symbol of Soul, and as I saw it reflected in every dewdrop the thought of man as the reflection of Soul, to me was perfect.

Each tiny orb reflected only light, clear and unsullied. Their rays sallied forth as bravely as if they, too, had worlds to light, and must be about their "Father's business." As they were touched by the sun's rays, how they glowed in their display of hues divine! blue, purple, yellow, and orange, then white as if to betoken the purity of Life, Truth, Love, and all telling, in varied expression, of Mind's glorious ideas. Truly, as Jesus said of the lilies, "Solomon in all his glory was not arrayed like one of these."

I had my lesson, Jesus' words were explained. "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." Material selfhood was for the time being lost sight of, and the meaning of our dear Leader was made manifest to me.

A Floral Lesson.

JULIA WALKER STANYAN.

I HAVE a beautiful hydrangea which I call my Christian Science plant because it was raised from a little, crushed and wilted slip, and because it has reminded me so forcibly of the passage of Scripture which says that God made "every plant of the field before it was in the earth, and every herb of the field before it grew." It also made clear to me the statement that "God creates all through Mind, not through matter; that the plant grows, not because of seed or soil, but because growth is the eternal mandate of Mind" (Science and Health, p. 520).

The hydrangea slip was sent to me a year ago in the springtime, and I placed it in a glass of water with other slips and left them on the sill of an open window. A few days later as I was examining them to see what progress they were making, I discovered that the hydrangea slip was missing. I searched for it but it was nowhere to be found. I was sorry to lose it, as it was the second one my friend had given me and I wanted very much to raise it, but I finally gave up the search. One day, some time after, having occasion to open the window, which had been closed ever since, I found beneath it, all crushed and withered, the missing slip. I took it up gently and placed it again in water with the thought that it would revive, remembering the beautiful words of our text-book, "By its own volition, not a blade of grass springs up, not a spray buddeth within the vale, not a leaf unfolds its fair outlines, not a flower starts from its cloistered cell" (Science and Health, p. 191).

It did revive, and in due time sent out tiny white rootlets; and I then placed it carefully in a pot of earth where it thrived all summer. Later in the season, to my great delight, I discovered that my hydrangea was budding, and although it was repotted during this time, it went on growing just the same; and as the buds expanded and the flowers unfolded it became a thing of great beauty, and all who saw it said it was the largest and the loveliest they had ever seen. It remained in perfect bloom until after Christmas.

This beautiful plant which grew from the withered slip taught me a wonderful lesson, and often, as I gazed upon its purity and rare beauty, it seemed to say to me, "Truth crushed to earth shall rise again."

[Written for the *Sentinel*.]

The Thrush's Song.

MARGARET B. AYRES.

A WOOD-THRUSH sang to a child one day,
Sang from his hedge in the garden-way,
Atilt where blossoming branches sway.

Red grew the poppies 'neath the sun,
Kissed by the butterflies one by one,
That flutter on till the day is done.

The notes rang clear in the trembling leaves,
Through wild-rose bloom where a Dryad weaves
Her golden spell in soft mystic wreaths.

"Oh, little child, there is one Great Heart
Will keep thee still from all care apart;
For held in infinite Love thou art.

"O, tender life from the Life divine,
As buds unfold to a summer clime,
Grow thou each day in the warm earth-time."

Thus sang the thrush to a child one day,
Sang from his hedge in the garden-way,
Atilt where blossoming branches sway.

Regarding Evil.

A critic complains that Christian Science does not satisfy a philosophic inquiry by its statements as to the origin of evil and the nature of death. This is a big subject and theology has vainly attempted to explain it. Natural Science has offered no more satisfying explanation than speculative philosophy. It is the world-old question of the origin of evil; it is the futile attempt of a finite, limited mind to cognize the tremendous facts of limitless extension.

Christian Science, in attempting to frame an answer to this question, makes its reply as simple as possible, so that the metaphysical fact may be understood somewhat by the material consciousness to which it is addressed. Christian Science says, in effect, that there is an origin for all things, a great First Cause, a creator, whom men call God. The creator must be intelligent, and must be good, else the oneness, the integrity and continuity of all things could not be guaranteed for the hundredth part of a second. All things emanate from the creator and are, must be, like Him, good. This is reasonable, logical, natural, Scriptural, and scientific. It follows that evil, as entity, as intelligence or power, does not exist, and the term evil is intended to include all the phases of discord familiar to organic life. There seems to be an illusion, or, if you please, a dream existence, in which disease, sin, and death are actualities. How do you account for the dream? Where did the dream originate? It is not real from the standpoint of God and therefore never did exist, and wise men do not spend their time trying to account for the origin of nothing. That twice two is five is not true. It is a lie. Where did it originate? How did it begin? No one knows; but the man who knows the truth that twice two is four does not fret himself as to how and where and when the falsehood got its start. He is busy availing himself of the knowledge that twice two is four and getting out of it all the good he can. In Science and Health, p. 274, occurs this sentence, "The conventional firm, called matter and mind, God never formed. Science and understanding, governed by the unerring and eternal Mind, destroy this imaginary co-partnership, formed only to be destroyed in a manner and at a period as yet unknown," and on p. 553 we read, "You may say that mortals are formed before they think, or know aught of their origin; and you may also ask how belief can affect a result which precedes the development of that belief. It can only be replied, that Christian Science reveals what 'eye hath not seen,'—even the cause of all that exists,—for the universe, inclusive of man, is as eternal as God, who is its immortal Principle."

WILLARD S. MATTOX.
Meriden (Conn.) *Record.*

Some months ago an article entitled, "Shall Christian Scientists be Persecuted?" or a similar heading, appeared in the *Express*. As it was from the pen of a member of the Christian church, and may be regarded as somewhat prejudiced, I have thought it may not be out of place to have a few lines from an orthodox standpoint. I am a member of one of the leading orthodox churches, and have been for nearly forty years, but believe that any one who professes to be a true follower of Christ, under whatever name, should be tolerant, and so love his fellow-men, of whatever creed or sect, as to be able to tell the truth about them, and in the absence of the facts from which to make his statements, hold his peace.

No one could be more prejudiced against Christian Science than the writer until within the past few months. By mere accident a copy of Science and Health by Mrs. Eddy, the Founder of the Christian Science Church, fell into my hands. I decided to read it for the purpose of learning what the teachings of Christian Science really were. I read it carefully and prayerfully. I then attended their meetings at the different churches in the city. The result was that I came to the conclusion that my prejudices against that church were founded wholly upon misrepresentations and misquotations.

At the first Wednesday night meeting I attended at one of the churches, which corresponds to the prayer meeting of the other churches, I found between two and three hundred persons present, a larger number than I have seen present at a similar meeting in any other church in the city, except on some special occasion, and, moreover, the week-night meetings were much larger in proportion to the Sunday attendance than at any other church.

Instead of the congregation being made up of "cranks and dyspeptics, principally women," they were as naturally intelligent, well-educated, refined, and as healthy-appearing people as I have seen in any church in Los Angeles after a residence here of some ten years.

As to the doctrines, I came to the conclusion that it is nothing more or less than apostolic Christianity, and that it is all it claims to be. From a spiritual standpoint it is Science, and, contrary to what many suppose, it is purely, I may say intensely, Christian.

If the statements I have made are true (and upon investigation they will be found true), why should Christian Scientists be persecuted? To condemn Christian Science is to condemn Christianity. I would advise any one who has anything to say against this people to investigate before they speak, and if they are true Christians at heart, I am quite certain they never will say it.

My opinion is that Christian Science has come to stay. Not that it will supplant all other churches, as some predict, but its good features will be copied into their articles of faith, or at least their rising members will absorb so much of them that it will become the prevailing faith, and true goodness (godliness) will be the test of membership rather than the ability to perform certain ceremonies or the willingness to subscribe to some dogmatic creed. J. F. M'CAMANT.
Los Angeles (Cal.) *Express.*

Christian Scientists take the whole promise of immunity from disease, but not in the spirit of bravado that a critic suggests. It is related as one of Jesus' experiences that the devil came to him and taking him up on to a pinnacle of the temple said to him, "If thou be the Son of God, cast thyself down." Jesus' reply was not one that suggests encouragement to mortals to yield to the temptation.

Paul shook off the viper which had fastened upon him and felt no harm, so the Christian Scientist of to-day has been, and if living the full understanding of his teaching will be, protected in all times and places where duty calls him. To drink poison or to handle reptiles in bravado would be to mock God, and would deserve punishment.

CHARLES E. SKINNER.
Maple Rapids (Mich.) *Dispatch.*

Christian Science classifies the spiritual as the real and eternal, and matter as the temporal and phenomenal. If matter were "just as real as spirit," then, like spirit, it would be eternal and unchanging. That which is eternal is incapable of change. The modern physical scientists recognize that matter is not real but merely phenomenal; that all we know of matter is what it appears to our senses to be; that its so-called qualities are attributed and not inherent. For example, opacity is attributed according to the keenness or dulness of our sense of vision. Paul says, "The things which are seen are temporal, but the things which are not seen are eternal." Among the Churches.

Dedication of First Church of Christ, Scientist, of Milwaukee, Wis.

A representative gathering of people filled every portion of First Church of Christ, Scientist, at three different services, yesterday [April 24]. They came to attend the dedication of the church, which, by the recent consolidation of First and Second Churches, has been cleared of all debt, making a dedication possible, according to Christian Science usage.

Warm greetings were extended to all, and each seemed to take a personal interest in his neighbor. The address by Judge William G. Ewing was the principal feature, and his remarks were listened to with deep attention.

In speaking of the significance of the occasion, the First Reader said, "The union which has recently taken place between the members of First and Second Churches is designed to promote the growth of Christian Science through the practical manifestation of Love which heals physically and morally."—*Milwaukee Sentinel.*

A New Church Edifice in Manchester, England.

We are in receipt of Manchester, Eng., papers giving a full report of the opening service of the new edifice of First Church of Christ, Scientist, Wednesday evening, April 20. Services were first held in Manchester about three and a half years ago by Lady Victoria Murray, daughter of Lord Dunmore, and Miss Florence Coutts Fowlie, and the rapid growth of the work is indicated in a church organization of over sixty members, who with their sympathizing friends have made this splendid demonstration possible. Voluntary gifts to the amount of about ten thousand dollars have built this wing of a much larger structure to be erected later on.

The following references to the opening service are taken from the *Manchester Weekly Dispatch.*

"The building was opened this week for public service, and was crowded far beyond its seating capacity by an audience palpably in comfortable circumstances.

"There was nothing remarkably unorthodox about the service. It was refined, quiet, unostentatious.

"Instead of a sermon extracts were read from Mrs. Eddy's text-book, Science and Health; and in place of the Litany was an interval of silent devotion, ending with an audible recital of the Lord's Prayer. When the meeting was thrown open for personal testimony, the proceedings took a more distinctly characteristic and unusual turn.

"All the testimonies were remarkable for sincerity and earnestness. Lord Dunmore, the father of the First Reader, spoke quietly of the effect of Christian Science treatment in curing him of an obstinate hernia, the result of an accident in the East. Doctors had pronounced him incurable, but so complete was his recovery that he was passed for insurance by a medical man, who declared that there was not the slightest trace of the injury perceptible. He had since been cured of an affection of the heart by the same means.

"A gentleman from Liverpool said that his eldest daughter had ailed from childhood, and was so wasted with disease that she weighed less than seventy pounds, and looked like 'those dreadful pictures one sees of plague victims in India.' She was treated by a Manchester Christian Science practitioner, 'she had accepted the truth, and the truth had made her free.' She now sat in that church peaceful and happy, mentally and physically sound and well.

"Alderman Meakin of Salford, declared that he was on the brink of the grave when he met two practitioners at Colwyn Bay. He placed himself in their hands, and that very night slept soundly for the first time since his illness attacked him. Every day he gained strength, and now he was as well as he had ever been. No power on earth could have done what Christian Science had done for him.

"A Manchester doctor told an astounding story of the cure of his eight-year-old daughter by the same means. She was dying before his eyes of tubercular disease of the lungs and hip-joints. She was rigidly fixed in iron splints from the shoulders to the ankles, and weighed only twenty-eight pounds. He took her to the practitioners and they removed the splints, the pain disappeared, and the very next day she began walking. In a few months she took to cycling, and she was present at that meeting a 'perfect demonstration of the power of Christian Science.'

"Other testimonies were given, every whit as remarkable, and all in the most matter-of-fact fashion, relieved only from being absolute commonplace by the genuine note of gratitude pervading every utterance."

The Work in Lodi, Cal.

Three years ago Christian Science was a stranger within our gates. About that time there were two or three remarkable cases of healing of some who had gone away in search of health and found Christian Science, and these brought the truth home to others and we began to have home meetings for the study of the lessons.

Two years ago we met in a small hall, and since that time the growth has been wonderful; now we have a large hall and have organized a society with twenty members.

Our Sunday School averages about twenty, and Wednesday evening there is an attendance of about forty. Seventy-nine copies of Science and Health have been sold here in the last two years. We have had two lectures, and great good has resulted therefrom. All expenses are readily met and a building fund has been started, and a nice little sum was sent to the Mother Church Building Fund. Best of all, harmony reigns and Love is supreme.

The testimonies heard at the Wednesday evening meetings are many, and we feel very thankful to our Leader, who has brought the truth to us that we may be free.

Correspondence.

New Church Home in Rome, N. Y.

The dedication of First Church of Christ, Scientist, of Rome, occurred on Sunday afternoon [March 27], at two o'clock. The society's new home is located at 409 N. Washington Street, the former residence of Mr. and Mrs. M. M. Davis, and it is through their generosity that the occasion of Sunday was made possible. A large audience assembled to participate in and listen to the dedicatory exercises.

On the second floor of the structure is an auditorium which will seat over three hundred persons, and on the occasion of the dedication its capacity was well tested. Among those present were many Christian Scientists from Utica and Syracuse.

On the lower floor on either side of the spacious hallway are located a reception room, reading room, Sunday School room, and a room for meetings of officials.

The church was organized in 1895, and incorporated in April, 1900. At the close of the simple dedicatory service the tenets of The First Church of Christ, Scientist, of Boston, Mass., to which all subscribe when they become members of the society, were read. Letters of congratulation and encouragement were also read.

Rome (N. Y.) *Sentinel.*

As the teachings of Jesus are studied, the feeling grows that Jesus was and is the wisdom of God and if allowed to do his will in our lives, he manifests himself as the power of God.—*Exchange.*

The Lectures.

Buffalo, N. Y.

Mr. Edward A. Kimball delivered a lecture before a vast audience in Teck Theatre, Buffalo, New York, Sunday, May 15. The lecture was given under the auspices of Second Church of Christ, Scientist, and the great audience was an impressive evidence of the rapidly growing interest of the public in Christian Science.

The speaker was introduced by Mr. Arthur W. Hickman, a prominent lawyer of Buffalo, who gave a cordial greeting to the mission which is being proclaimed in the name of Christian Science. Mr. Kimball's lecture was a strong plea for the right understanding of God. It was clear, forceful, and convincing, and commanded the unbroken attention of the audience throughout. The Christian Scientists are much gratified over the evident benefit which resulted, and particularly because of the effective way in which the lecturer spoke of the character and life work of our Leader, Rev. Mary Baker G. Eddy.—*Correspondence.*

Brooklyn, N. Y.

W. D. McCrackan, C.S.B., delivered a lecture on "Christian Science and the Brotherhood of Man," at the Columbia Theatre yesterday afternoon [April 17], which was very well attended. Second Church of Christ, Scientist, arranged the lecture.

A. E. Van Ostrand, Vice-President of the church, introduced the lecturer, saying,—

Ladies and Gentlemen:—You have been invited here this afternoon to contemplate no new subject; indeed, the gospel of the brotherhood of man is as old as the Christian religion itself, but Christian Science has a new message and throws new light on this old subject. The human mind has ever been reaching out for more knowledge and understanding wherewith to solve the problem of life and bring into human experience a larger measure of health, happiness, and satisfaction. The lecturer for this afternoon will show to you something of what Christian Science has to offer to solve these problems, and I know that if you listen with an open and unprejudiced mind you will be able to say at the close of the lecture, "I have heard the truth." I have the pleasure of introducing to you W. D. McCrackan, C.S.B.

The Brooklyn Times.

Santa Ana, Cal.

A lecture on Christian Science was delivered by Edward A. Kimball of Chicago, at the Grand Opera House last evening [April 15]. A large audience of intelligent people listened with close attention to the exposition of Christian Science presented by the lecturer. Mr. Kimball was introduced by Mr. E. E. Keech, who spoke in part as follows:

Ladies and Gentlemen:—I was not requested to introduce the speaker of the evening because I believe everything that he may say. Neither was I requested to introduce him because I do not believe anything he says; but I was requested to introduce him rather because I am supposed to be in favor of a fair hearing for him and from you.

Now, there is a thought that I wish to present as being appropriate to the lecture that you are about to enjoy this evening. No person has a right to condemn any theory, and especially so important a theory as one of philosophy or religion, without first thoroughly understanding it; more, he has no right to condemn it unless he has understood its excellencies and found himself in sympathy with its reason. Although you may disagree with its teachings, you have no right to condemn any religion, philosophy, or theory without having felt the effects of its fundamental doctrines.

You have come to hear the gentleman who will address you on the subject of Christian Science; he is one who has deeply studied the subject, and is familiar with its teachings and their application. Therefore, you will gather from him a correct exposition of that religion. You will no doubt give him an impartial hearing, and will enjoy, as I shall, an exposition of that religion by one of its apostles. I therefore take pleasure, ladies and gentlemen, in introducing to you Mr. Kimball.—*Santa Ana Dispatch.*

Philadelphia, Pa.

Judge Septimus J. Hanna delivered a lecture on Christian Science in Witherspoon Hall, Tuesday evening, April 12. The lecture was given under the auspices of First and Second Churches of Christ, Scientist, of Philadelphia, Pa. The hall was crowded to its full capacity and several hundred were turned away for lack of even standing room. A unique feature was the introduction by Judge William B. Hanna, President Judge of the Orphans' Court of the County of Philadelphia, who spoke as follows:—

Has it ever occurred to you how much of our life is made up of pleasant memories and reminiscences? A few years ago I received some Christian Science literature from Boston in which I read my name, which aroused my curiosity. The following summer, while *en route* to Nova Scotia, I passed through Boston and stopped over to see the man who had the same cognomen as myself, and made a very pleasant acquaintance. When I heard he was to lecture here I rejoiced, and still more when I was asked to introduce him. He is a Pennsylvanian who studied law and went West, where he acquired fame as a jurist. But he has long since left the law and its profits, to take up the study of the higher law and the prophets. I bespeak for him at your hands a Philadelphia welcome.—*Correspondence.*

Hamilton, O.

The lecture delivered by Judge William G. Ewing of Chicago, in The Jefferson, Sunday afternoon, April 17, delighted a large and select audience. Allen Andrews introduced the speaker, in part as follows:—

When we think of ourselves presently, retrospectively, and prospectively, it naturally occurs to us that we know most about ourselves in the present, less in the past, and still less in the future. And I once heard a great preacher say that if we left it to the scientists to tell us exactly where we come from, and the theologians to tell us exactly where we are going to, we would still have for our own consideration the blessed fact that we are here anyway. And I submit that the task of taking care of ourselves in this present world is sufficiently difficult without worrying about either our origin or our destiny.

I am sure any effort to make our lot better and life happier is welcome to us. We have come together this afternoon to listen to one who would help us. The speaker has been a learned lawyer and a distinguished judge for many years, and brings to us the rich thoughts of a ripened experience. He belongs to that profession of noble, self-sacrificing men who devote their lives to making other people behave themselves, and is therefore worthy to speak the message he brings.

I can neither champion nor criticise Christian Science, for I do not understand it and know nothing about it. And yet this might be a good reason for criticism; for persons who understand least and know least often set themselves up as the boldest critics. But this great movement has made too much progress, and too many good men and women believe in it, to be met by ridicule or treated with disrespect. We can only say, let it be, for if it be of man it will come to naught, but if it be of God, who can stand in the way of it?

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Heal the Sick."

THE Bible is full of contrasts, but none more striking than that presented by the last verse of the sixth chapter of Mark's gospel and the first two verses of the seventh chapter. "And whithersoever he entered, into villages, or cities, or country, they laid the sick in the streets, and besought him that they might touch if it were but the border of his garment: and as many as touched him were made whole." "Then came together unto him the Pharisees, and certain of the scribes, which came from Jerusalem. And when they saw some of his disciples eat bread with defiled, that is to say, with unwashen, hands, they found fault."

Jesus was healing the sick by hundreds, and these petty-spirited theologians and sectarians could see nothing more than that "some of his disciples eat bread with . . . unwashen hands." Think of it! And yet this does not differ materially from what is going on at the present time. Thousands are testifying each week, at the Wednesday evening meetings that they have been healed through Christian Science of all manner of diseases and of sin. "But," says the critic, "they disregard the wisdom of the ages; they don't believe in a personal devil."

Jesus did not depend upon mere words to make known his gospel, he healed the sick, cast out demons, cleansed the lepers, and raised the dead; and it is only as we follow in his footsteps that we show forth the practical significance of his good tidings. Christian Science will be justified by the works of its followers, and captious criticism and prejudiced opposition will be overthrown by what Christian Scientists accomplish for humanity. The call of the hour is for greater spirituality, for more consecrated lives, and for absolute unity in our efforts to advance the cause of Christ among mortals.

The Readers, the lecturers, the teachers, and the Publication Committee, are doing a great work for humanity, but the proof that this work has been well done is seen only in the physical and moral regeneration of the people,—their spiritual awakening. In support of this we can do no better than quote our Leader's words on page 85 of the Church Manual:—

"Healing the sick and the sinner with truth, demonstrates what we affirm of Christian Science, and nothing can substitute this demonstration. . . . I recommend, that . . . each member shall strive to demonstrate by his or her practice, that Christian Science heals the sick quickly, and wholly; thus proving this Science to be all that we claim for it."

M.

Clergymen and Physicians.

A VERY striking but entirely explicable phase of the irrepressible conflict between the spiritual and the material has presented itself in a rather undignified interchange of condemnatory compliments between some of the prominent ministers and the equally prominent physicians of one of our cities. The charge made by a clergyman that the moral atmosphere and influence of a certain medical institution is unwholesome, is answered by the claim that "Christianity is not words or creeds, but a life," that physicians are devoting their energies to practical work in aid of humanity, while clergymen are doling out undemonstrated theories, etc.

In reply to this, a minister gives expression to a point of view which clearly differentiates the modern from the Apostolic church. He says, "The doctor is doing God's work, and deserves a high reward, but at a certain point his work ceases, and that point is where the physical wants of his patient end and the spiritual needs begin. Then comes our work, and we do a lot of it." This conviction that it is not the business of preachers to heal the sick, but that, while it is "God's work," it is properly committed to those who may or may not have the spiritual motive and unblemished life which has always been exacted of the ministry,—this as we think, fairly represents the attitude which has been, and is still maintained by the great majority of Christian clergymen. A technical knowledge of the human anatomy and its diseases, and of some system of therapeutics, has always been exacted of physicians, but while they include many earnest Christian men, we do not recall that a high order of spiritual attainment has ever been demanded of them; nevertheless if their work be "God's work," it certainly becomes godly men, and they only are fitted for its doing; and it is most astonishing that this has not been seen long since.

The Scriptures in no way intimate that the disciples required a knowledge of *materia medica* in order to fulfil their Master's command to preach the gospel and heal the sick, nor do they give the slightest ground for the assumption that while it is still incumbent upon the "ambassadors of Christ" to honor his instructions, they are not now called upon to honor the instrumentality of healing which he designated and used. On the other hand, if the physician is to-day called to do "God work," can it be true that he needs no spiritual equipment? Surely no one is better able to settle this question of the work we shall do and how it shall be done, than was the Master, who taught his disciples, not of matter and medicines, but of God, of Truth, of Life and of Love, and then sent them out, commissioning each and every one both to preach and to heal. Are the ministers to-day more competent than was he to decide this matter? The teaching and practice of Christian Science is leading the world to see how utterly incongruous and untenable has been the position of the Christian Church with regard to spiritual healing, during all the centuries; and while the facts to which we have referred indicate that there is yet sore need of enlightenment, there are many evidences of awakening thought among the clergy upon the subject.

The physician who is trying to help the afflicted by the means the church both utilizes and commends, certainly has the best of the argument when discussing the question of the relative value of their respective labors, with a minister of Christ whose preaching is academic and unremedial, and who must concede that he is making no effort whatever to fulfil one half of his Lord's specific injunctions.

When present-day theologians earnestly seek to attain to that apprehension of spiritual truth which enabled the ministers of the early Church to perform their wondrous works of healing, and can cite their own practical demonstrations, as did their Master, in proof of the authority and practical value of their teaching, they will have protected one of their most vulnerable points, and be signally advanced in the estimate of those who are honestly trying, by unspiritual means, to comfort and relieve the suffering.

W.

Knowledge is Power.

"ALL power is given unto me in heaven and in earth." So spake Jesus at the close of his earthly career, and well may we ponder his words. In the midst of varied and conflicting human conceptions of power, the desire for it

Digitized by Google

often leads men and nations to measure their strength against that of their fellows in deadly strife. Such a sense of power leaves only ruin and desolation in its track; the greatest warrior has never claimed or sought the ability to heal a single wound, or to restore to life one of his victims; he is an agent only of destruction. True, other concepts than this have had their place in the world, but they have all failed even to approximate the Christ ideal which begins and ends with the dominion of Spirit, Mind, whose mighty and beneficent influence extends to everything within the compass of thought.

This concept was fully realized in the ministry of Christ Jesus, who claimed no intelligence, no potency apart from God, and who reached by progressive steps the height from which he declared that *all* power was given unto him.

It is undeniable that knowledge is power; that no one can impart to others a knowledge which he does not himself possess, and that knowledge which cannot be imparted is of small value. It is further manifest that the absence of knowledge gives rise to confusion, to opposing beliefs, a fact which has been overlooked by the religious systems that have sprung up since Jesus' time. They have blindly ignored the relation of his wonderful demonstrations in the healing of the sick and suffering to his positive knowledge concerning God and man, and have overlooked the fact of his constant effort to impart this knowledge in order that the healing ministry might be perpetuated, and the kingdom of God established, as Paul said, "not in word, but in power."

That Christ Jesus could and did impart this knowledge is clearly stated by John, who accompanied him on his journeys and witnessed his mighty works. He says, "As many as received him, to them gave he power to become the sons of God." What a statement is this in the light of Christian Science! "As many as received him." In the prologue to John's gospel we are told that the divine Life and light was eternally present although unrecognized by the darkness of materiality. We are next told that when the Christ came to reveal Truth, "his own received him not." It was evident then, even as now, that we must know God before we can understand what it is to be His children. While men believe that God not only kills His enemies, but torments them throughout eternity, they feel perfectly justified when inflicting tortures upon their enemies. This, however, was not the teaching of Jesus. He never ceased to remind them that if they would be the children of God they must love as he loved and work as he worked for the world's redemption.

With Christian Science, so blindly and vainly combatted by mortal sense, there comes that awakening to the true meaning of Life which really constitutes the healing, and which is accompanied by the power to distinguish reality from mere appearances. With Christian Science comes also the power to heal both sin and sickness through the understanding of divine Love. This true sense of power destroys forever any fear of another supposed power, or any reliance upon it. We also learn what it means to "become" sons of God, for Christian Science reveals the necessity for orderly processes whereby we go from "strength unto strength" from power to overcome a lesser claim of evil up to that which overcomes all evil, for evil has no power, even when we fear it most. The tasks which seem so difficult to the child can be easily accomplished by the man who not only has added strength but added knowledge, and this is most fully realized in the mental and spiritual realm.

Our revered Leader makes all this very clear when she says, "In the great Forever, the verities of being exist, and must be acknowledged and demonstrated. Man must love his neighbor as himself, and the power of Truth must be seen and felt in health, happiness, and holiness" (Miscellaneous Writings, p. 182). K.

Letters to our Leader.

Cleveland, O., May 11, 1904.

Rev. Mary B. G. Eddy, Concord, N. H.

Beloved Leader:—We acknowledge with much joy and pleasure your message of gratification over the dedication of our church edifice, and appreciate your words of loving cheer and admonition. As the Christian Scientists and their friends gathered together "with one accord in the upper room"—our auditorium—which was filled to its capacity at two services on Sunday last, your letter was read to waiting hearts and received the response of deep thanksgiving. It was appreciated more than our poor acknowledgment can express, but the glow of satisfaction which pervaded each audience of about nine hundred told the story of their love for the Cause of Christian Science and for its beloved Leader.

We know that our dedication has been possible only because of your revelation of the teachings of the Christ, and your constant, unparalleled example of exalted purpose "leading up to divine heights."

We realize that our integrity and faithfulness will help to supply with love and watchfulness the need which you experience through the "loss of help." The Field is whitening for the harvest through your faithful ministry in encountering and overcoming both new and old problems. We will endeavor to be guided by your counsel that "it is never too late to repent." We appreciate your admonition "to love more, work more, watch and pray," and thank you for your love cherished for us.

Among many happy incidents attending our dedication services there was one which gladdened our hearts and came like the bow of promise, "a token of the covenant between me and the earth" (Genesis, 9 : 13). You perhaps recall that the entire dome of the church was a gift from the children of our Sunday School. As your message was begun, the sun's light, which before had been clouded, burst through the dome with splendor as if it would flood the whole church and reach beyond with its promise of the universal Love revealed through "babes."

May we learn how to consecrate our hearts to this glorious Cause! The benediction which you have given us will constantly guide us "to build, rebuild, adorn and fill these spiritual temples with grace, Truth, Life, and Love."

Gratefully and lovingly yours in Christ,

LIDA S. STONE, C.S.D.
EDWARD A. MERRITT, C.S.B.
MATILDA H. MERRITT, C.S.B.

Committee for First Church of Christ, Scientist.

Boston, Mass., May 2, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dearest Leader:—I have long wished to write you of my healing, and think I feel to-day somewhat as did the Psalmist when he wrote the 143d Psalm calling upon all creation to praise God. Three years ago last November I was healed instantaneously by a practitioner in Poughkeepsie, N. Y., of inherited consumption, which had assumed the form of lung, throat, and heart trouble; also of dreadful headaches from which I would at times cry out with the intense pain.

The first time I took up "Science and Health with Key to the Scriptures," I read it eighteen consecutive hours with such an intense longing to retain the truths contained in it, that when I closed it, I found that I had clasped my hands so tightly that the prints of my nails were left in the palms. A few months later I had the privilege of high spiritual class teaching by one of your faithful students, and was made happy to know that I could put off the "old man," and enter into my rightful inheritance. I felt like a person intoxicated with joy, and when I sat down to reason out this great happiness the still, small voice whis-

Digitized by Google

pered, "This is the new wine which cannot be put into old bottles; this is the new cloth which cannot be mended into the old garment, this is the wine of the kingdom." For weeks I was so happy that I seemed to walk on air and in a great light, and I exclaimed with the Psalmist, "Let all creation praise the Lord."

Dear Leader, through you has come to me the only *real* happiness and joy that I have ever known, and I study your books daily, that I may try to emulate the life contained therein. I was born in the South and am visiting Boston to try to learn more of this beautiful truth, that I may see more clearly how to help others.

My heart goes out to you and all who have helped me into this glorious liberty, with a great, yearning love which I have no words to express.

Your grateful and loving student,
(MRS.) AMELIA E. BATTELLE.

Rev. Mary Baker Eddy.

Blessed Leader:—It was such a joy to me to hear the men at the Wednesday evening meeting in the Mother Church speak of you as the "Woman of women." A lady told us of one of her students whose child had seemingly passed on, and she said the man took his child in his arms and prayed to God and the child was restored and has been a dear little Christian Scientist for years, and since that time has usually made her own demonstrations. You will be glad to know that the printers of the *Journal* and *Herald* attend our church now.

Please accept my gratitude for your wonderful letter to the Chicago Churches. I have studied it daily, trying to imbibe its spirit, for I do long to love and heal by the Spirit. I shall continue to study it, as it meets a great need, —my need to love more.

With love and gratitude I am striving to be worthy to be
Your humble child,
April 28, 1904. MARY E. EATON.

Newburyport, Mass., April 27, 1904.

Rev. Mary Baker Eddy.

Beloved Leader:—You will be glad to know that the conservatism of dear old Newburyport has been broken. First Church of Christ, Scientist, accepted an invitation to unite in celebrating a Sunday School Union gathering, to be held in the near future, and was represented at the informal meeting held Friday evening, and was called upon for an expression regarding the movement.

We are very glad to recognize such a manifestation of love from the churches of our city, and regard it as a step onward in our progress in Truth and Love.

Lovingly and sincerely, your student's student,
LIZZIE P. ORDWAY.

Newton, Mass., April 29, 1904.

Dear Mrs. Eddy:—I feel that I should at least express my feeble sense of gratitude for what your books have done for me within the last four years of my study of Christian Science. Your book, Science and Health, is teaching me how to be free, which means much to me. Having been brought up by slave parents I can appreciate what this truth means. For this and all other blessings, I give thanks. I am humbly your student,
JOHN W. HENDRICKS.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

Testimonies of Healing.

I should be very happy if the story of my healing by Christian Science treatment were to serve the purpose of helping some one else out of trouble as I was helped in my hour of great need; for my case certainly was man's extremity which is always God's opportunity.

I am a German, a farmer, eighty-seven years old, residing at Williston, and had the misfortune in the early autumn of 1897 to have the large toe on my left foot crushed. Our family physician was called in and attended me in the regular way for several weeks; but the injured member grew much worse. The foot, including the lower leg, becoming affected, a second physician was called in, and the two upon consulting decided to advise with a third as to whether it were best to operate surgically. By this time my entire leg was diseased. It was greatly swollen and badly discolored, the injured part having become very offensive, and my general health very much run down. I had no appetite, could not sleep, and suffered intensely all the time. The doctors were perplexed and divided in their opinion as to whether they should amputate the toe, the foot, or the lower half of my leg. It was finally decided that I was too weak to have a surgical operation, and I was put under a certain treatment for a week to prepare me for the ordeal. At the end of that time the several doctors came to our house ready and intending to operate; but finally decided that I could not live more than a week anyhow, and therefore they would not do so.

At this point one of my daughters, who believed in Christian Science, came to my rescue. Upon talking the matter over with her I decided to dismiss the doctors and leave off all their medicines and applications. We sent a telegram to a Christian Scientist in Buffalo, who began to give me absent treatment. Letters followed, and although I did not seem to improve quickly under the treatment, I did live through the week in which they said I must die, and then my family took fresh courage. Before very long a general improvement in my health was noticed, I had an appetite, could rest at night, and I did not have so much pain. After some weeks the discoloration of the leg began to disappear, then the swelling went down, and at the same time the first signs of healing began to show themselves in the injured toe. My treatment lasted through the winter, and in the spring my leg had assumed its usual size, shape, and color. That portion of the toe which had not already decayed when Science took hold of the case healed up and became entirely sound, and from that time to this I have had no difficulty whatever from that injury.

I believe that mine was a plain case of gangrene with blood poisoning well developed or certainly threatened. I believe that the daily reading of "Science and Health with Key to the Scriptures" had a great deal to do with my getting well, and I never let a day go by now without reading that dear book. It has indeed proved a great blessing to me and to my family, and I hope that all the world will soon learn the great good that Christian Science can and will do for everybody in destroying disease and sorrow of every kind.—GEORGE WEIMER, Williston, Pa.

As a mother of a family my heart goes out in love and gratitude to that good woman we are privileged to call our Leader, for all she has done through her book for me and mine.

Ten years ago I was healed of hereditary deafness and catarrh of the head, simply through reading the book, Science and Health. For years previous I had consulted and taken treatment from some of the best specialists for the ear and throat, both in England and America, but I grew worse all the time. I was then urged by a lady who had been healed through Christian Science, to buy this book and study it. I did so very reluctantly, but had not read fifty

Digitized by Google

pages before I felt I had indeed found the truth which makes free, and can truly say, from that time I have never had a return of the ailment.

That for which I am, however, most grateful, is the daily help it is to me in my household of young children. I am sure if mothers only knew what Christian Science truly meant they would give all they possess to know it. We have seen croup, measles, fever, and various other children's complaints, so-called, disappear like dew before the morning sun, through the application of Christian Science,—the understanding of God as ever-present and omnipotent. It has been proven to me without a doubt that God is a very present help in trouble, and what a blessed help this wonderful truth is in the training of our children, and how quickly the child grasps it.

Some time ago my little girl, then three years old, dislocated her shoulder. I was alone in the house at the time. The pain was so intense that she became faint. I treated her the best I knew how, but kept holding the thought that just as soon as some one came I would run for help. She seemed to grow worse and cried very much. I undressed her and tried to twist the arm into place, but it caused such suffering that I began to get afraid. Then like a flash came the thought, what would you do if you were out of the reach of a practitioner, now is your time to prove God's power and presence. With these thoughts came such a sense of calm and trustfulness that I lost all fear. I then asked the child if I should read to her; she said, "Yes, mamma, read the truth-book." I began reading aloud to her from Science and Health. In about half an hour I noticed she tried to lift the arm but screamed and became very pale. I continued to read aloud and again she made an effort to put some candy into her mouth. This time I noticed with joy that she almost reached her mouth before she felt the pain. I kept reading aloud to her until my sister and two boys came in, when she jumped off her bed, so delighted to see her brothers that she forgot her arm. She then began to tell her aunt that she had broken her arm and mamma treated it with the truth-book. When this happened it was about 10.30 A.M. and by 3 P.M. she was playing out doors as though nothing had ever happened.

For this and many other things I thank God and all who have been the means of making known to me divine Love who healeth all our diseases.

MRS. MARY GALLIE, Winnipeg, Man.

Green pastures are before me,
Which yet I have not seen;
Bright skies will soon be o'er me
Where darkest clouds have been.

Had I understood these beautiful words from our Christian Science Hymnal nearly six years ago I would not have left my old home and dear friends with a heart full of regret and despair.

After eight years of weary invalidism, classed among the incurables, according to my kind physician's orders I left my home in New York for South Dakota, to be near relatives, and with apparently no hope. There seemed to be nothing but "darkest clouds" about me.

Little did I realize when I consented to take Christian Science treatment a few days after coming here, that "bright skies" would soon be o'er me, and that "my path in life" would be free.

I had just recovered from a severe attack of typhoid fever, and the usual prospect of being obliged to have my hair cut manifested itself. In the first talk with my practitioner this was not mentioned, as other troubles seemed of so much more importance, but, to my surprise, that day my hair stopped coming out and in a short time had attained its normal condition. In ten days I laid aside my glasses, which I had worn for two years, and my eyes have been perfectly well ever since.

What seemed, however, my greatest joy, was to have my practitioner tell me to send for my music and books and resume my teaching if I cared to do so. The words seemed almost too good to be true, as, on account of serious mental trouble, my physician had said it would be very dangerous for me to attempt any mental work for at least a year, and probably longer. My music had always been a part of my life-work, and to have it restored to me was indeed a great blessing. I must say that it was with some sense of fear that I sent for the music and began teaching. Success immediately attended my work, however, and has continued, and with it, complete restoration to health: but even a greater blessing is the spiritual uplifting which has come through the study and application of this beautiful truth.

Mrs. Eddy says on page 50 in "No and Yes," "If a change in the religious views of the patient comes with the change to health, our Father has done this; for the human mind and body are made better only by divine influence." This change came beautifully, and I could no longer be satisfied in the orthodox church, of which I had been a devoted member.

I wish to express my deepest gratitude and appreciation for all the writings of Mrs. Eddy, the Founder of Christian Science, to the dear practitioner and teacher who has so patiently helped me at all times, for the wonderful benefit received in class teaching, and also for the *Quarterly*, *Journal*, and *Sentinel*, which ever remind us of "On earth peace, good will toward men."

MABEL SIMONDS MYERS, Watertown, S. D.

Wishing to add my testimony to many others, I would state that before hearing of Christian Science I was about as low as I could be and live, having locomotor ataxia, rheumatism, nervous spasms, and several other complaints. I had tried many doctors with the same result, they could do nothing but relieve the pain with morphine injections, so I gave them up, and was merely existing on morphine, whiskey, and tobacco, using the last two in large quantities, and the first when in great pain, which was often.

One of my neighbors who had been cured of a complication of diseases by Christian Science called and persuaded me to try it, on the ground that it could do me no harm, and she was sure it would make me a new man.

She returned the next day bringing a practitioner with her who lost no time in proceeding to help me. The advice and treatment she gave me seemed to have an instantaneous effect in taking me out of the morbid condition into which I had drifted. For a few hours after her departure I felt as if I were on the rapid road to recovery. A reaction then seemed to set in, and I had a hard nervous spasm; my attendant handed me a glass of whiskey,—the old remedy,—which I swallowed at once. It had no effect, and another was given me. I then remembered that I had promised to give up the use of all liquors and drugs. I returned it. With it there went all desire for its use, and it has never returned. After three or four treatments I thought I would stop using tobacco, which I had used for over forty years, and as I was afraid of failing I told no one until I was successful. It was a hard struggle, and many times I put my hand in my pocket after the much wanted chew of tobacco.

For two months my recovery was rapid; since then it has been very slow. While not entirely cured, I am able to go all over the city, getting in and out of the cars without any assistance, except my two canes. I cannot express the joy I felt when, after five years' confinement to the house, I was able to pay a visit to the neighbor who so kindly recommended me to Christian Science. I was indeed a new man in thoughts, words, and deeds. Going to my next neighbor's one day my cane broke and I sprained my foot. It was

Digitized by Google

soon swollen to double its regular size and the colors represented were many but not pleasant to look at. It yielded to two treatments and I went up and down stairs each day with no extra pain from using it.

I will cheerfully give any further information desired to any one who calls or writes to me.

WILLIAM WILLIS, Brooklyn, N. Y.

[Translation.]

On a stone over the entrance of my old home, is the Bible inscription, "Seek, and ye shall find." On one occasion my school teacher said, "Children, don't believe that our religion is the best there is." These words and this Scriptural passage have often come to my memory in later years.

In kindergarten, I was told that God is Love and all good. Then later on I was told in school that God sends us sickness and evil to bring us back to Him. These contradictions I could not believe, since they do not harmonize; therefore I finally laid my Bible aside as a book which I was not to understand.

Fifteen years ago, my youngest brother, then seven years old, was afflicted with carious bones. He heard of a man who healed the sick without medicine. I would not believe this, yet no medicine could help my brother, or even relieve his great pain. I myself had always been feeble and was constantly suffering. My mother had often said that she did not believe I would live to grow up.

Two years later my husband asked me to go to an English church. I went, against my wish, because I could understand very little English. This was the Christian Science Church in Rochester, and I believed it to be like all the others, nor did I then know of the healing power of Christian Science. After I was shown to a seat, a feeling came over me,—if God would only save me from my trouble, and save me soon. While listening to the Lesson-Sermon, I forgot my sickness; I was fed with the word of God. After the service I was told that God sends no sickness, and that He heals without medicine, also that God is Love and He can only give love and all good, if we obey Him.

That moment I was made well; I was a different person. Thus Truth has made me free from sickness and suffering.

How can words alone express my gratitude! My brother also was healed through Christian Science, yet not instantaneously as I was. Much has been given me through divine Love and wisdom, and our whole family has been helped.

Through "Science and Health with Key to the Scriptures," I have learned to read English. Every day I find that there is something for me to overcome, and only through good can I get the victory.

Mere words can never express my gratitude to God and to our Leader, Mrs. Eddy, but I shall try and let divine Love lead me daily.—A. S., Rochester, N. Y.

Having received so much help through Christian Science I wish to add my testimony to that of others, hoping it will help some one.

Eight years ago I was taken sick with typhoid fever which left me a helpless invalid for several years. It would fill a book were I to tell every detail of my illness, so I will only say that after every human aid had failed, I was left in despair.

I was unable to walk a step for three years before I commenced with Christian Science. My healing was very slow, but I never expected otherwise, and for two years I walked with a cane.

I was not able to overcome error entirely, until a year ago, the final demonstration came after the birth of our little girl. I am now able to do quite a lot of work.

I also wish to speak of an instantaneous healing which occurred lately in my family. Our oldest son was taken with a very severe spell of coughing, and I requested him to let me write to a practitioner, but he said, "No; I am almost well," so I left him alone, because he is of an age to decide for himself. I had retired for the night, when all at once I heard him cough and strangle, and before I had time to get out, my husband went to get a doctor; for they were terribly frightened. When the doctor came, he pronounced it bronchial asthma, and told him he ought to go to North Carolina. He took the medicine that night, only to have another attack in the morning, so I asked him if he was ready to try Christian Science, and he consented. It was not ten minutes after the practitioner telephoned he would treat him, that all at once the coughing and wheezing stopped and he was at rest. He slept all the forenoon, and went to his work right after. Previously he was confined at home for a whole week, having had the same attack last winter. Now he is trying to demonstrate the power of Truth for himself. One of the boys was severely scalded with boiling water and was healed in a short time. My husband also was severely burned on the gasoline furnace, and was also healed

The demonstrations are so many that we cannot help but feel grateful to God for all the blessings we have received. May He bless Mrs. Eddy, through whom this truth has been revealed to mankind.

MRS. HERMIA J. LOCKNER, Cedar Bluffs, Neb.

I would like to tell of an incident that happened to me at school two years ago last October. I was in a football game between the first and second teams. I was playing center on the second team, and as they were trying very hard to get through our center, it was up to me to stop it if I could, and I did so for the first down, but on the second down the full back on the first team stepped on my left hip, and to sense broke all the cords and ligaments in my hip.

After they got up I crawled out from the pile the best I could, and finally, with the help of another fellow, I got up. At first they wanted to stop playing, but I said, "No: go on: I am all right and can get along all right." So they did, and with the help of another fellow I got off the field and took off my football clothes and went to my room and then to bed.

In the mean time one fellow had gone and seen the principal, and he had sent for the doctor, whom I did not want, but he came and examined me, and he said that all the ligaments in my left hip were broken, and that it would be some time, perhaps months, before I could walk. I, however, denied that statement the best I knew how, and after he had gone I asked my roommate for writing materials, which he gave me, and I wrote to a Christian Science practitioner. This was on Wednesday afternoon.

In the mean time I worked the best I knew how, and on Sunday morning I felt entirely healed, so after the fellows had gone to church I got up and dressed myself and went over to the principal's office and knocked on his door. He told me to come in, and the first thing he said was, "What are you doing up here?" and I told him that I was all right. The doctor, who had told me that it would be some time before I could walk, examined me and could not find any trouble, and in about a week after I was hurt I was playing again.

And now to compare this with the experience of other fellows who were hurt in the same game and in the same place. One of them was obliged to go home on crutches at the Christmas vacation. I am very grateful for the help I received, and also for the understanding which Mrs. Eddy has given us through Christian Science.

E. A. ROTHWELL, Brookline, Mass.

For a number of years I was a slave to the demon of liquor, but Christian Science has made me a free man; "Love and Truth make free" (Science and Health, p. 227).

Digitized by Google

I have been a commercial traveler for the past twenty years, and when first I started on the road I thought business could not be done successfully without treating my customers and drinking with them, and the habit grew on me until I became a wreck. The firm I represented were so uniformly kind and considerate of me, although I often abused their confidence, that at last I asked them how they had been able to put up with my conduct.

I was told that they were trying to follow the teachings of Science and Health, and but for Christian Science I should have been dismissed long before this. They also advised me to seek help from a practitioner.

I followed this advice immediately, and in a short time I was healed of one of the worst diseases known to mortal man. I soon started to attend the morning service at the Christian Science Church, and my wife, who was an Episcopalian, wondering what could possibly draw me to a morning service, as I had never attended one since we were married, expressed a desire to go with me. Not long after this she left her church, and for several years we have both been members of the local Science church and also members of the Mother Church. It is now four years since I had my last glass of liquor, and what a change! Christian Science has made me a better man both physically and spiritually; my home is harmonious and my wife is a happy woman.

Words cannot express my gratitude to my practitioner and the faithful friends who stood by me when the days were dark and gloomy, and to our beloved Leader, Mary Baker Eddy, the Discoverer of the blessed truth which sets men free. I am more thankful than I can ever tell. I derive a constant benefit from the *Sentinel* and *Journal*, and trust that the story of my healing may be a help to others.

G. W. STEWART, Berlin, Ont.

In September, 1899, I first heard of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. I was told that it gave an explanation of the Bible, and that by reading this book people had been healed. This was "good tidings of great joy" to my hungry thought, consequently the book was ordered at once. Longingly I awaited its arrival, and with eagerness read it when it came.

I was in need of physical healing and was advised to have treatment, although told to do just as I pleased in the matter. My desire for a higher understanding of God and man's relation to Him was paramount, and it was with a degree of reluctance that I turned to a practitioner for help; however, I had treatment for a time and was healed permanently of chronic constipation.

I then began working out my own salvation. The light was dawning. I found that the "old man with his deeds" must be put off to reveal "the hidden man of the heart,"—God's image and likeness. I saw that Paul's saying, "Be ye transformed by the renewing of your mind," must be obeyed. This work begun, the conflicts were many, but through it I have been given the proof that "Truth is always the victor" (Science and Health, p. 380). As I progressed in this work, denying self and all that I understood to be error, neuralgia, indigestion, bronchitis, and many other ills disappeared into nothingness.

I am very grateful for the revelation of the way of salvation. Through it I find love, strength, peace, and it is my earnest desire that I may express my gratitude for what Christian Science has done and is doing for me by alert, active, and assiduous obedience to Principle. Thus only is true gratitude expressed.

EMMA MAXWELL PADGET, Palmyra, Ill.

It is nearly two years since I was healed by Christian Science. About three years before this time, I heard of Christian Science through my uncle who gave me Science and Health, but I did not then understand it. I showed it to my pastor, and he looked it over and said it was too much for him, so I gave it up. I had been under the care of several doctors, having been an invalid for a good many years. I was troubled with acute indigestion, heart trouble, and spinal trouble; had also been through an operation, and had received but very little help. When my uncle told me of Christian Science he then had a very severe ailment, and I told him that when he was healed I would believe in it. Two years ago Thanksgiving time, he came to spend the day, and told me he was well,—healed by Truth. I then said, "I believe it." A few days after this I was taken worse, and the doctors could not do any more for me. I then decided to try Christian Science. I went to my uncle and asked for treatment, if there was help I wanted it.

At the first treatment I felt God's presence, and something seemed to tell me that I was going to be healed; it was a glimpse of heaven. In two weeks' time I came home a well woman,—the truth had made me free. My husband accepted Christian Science at the same time and was healed of a tumor, also a rupture. Now when error creeps in we know that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

We are very grateful to God, and to our beloved Leader for this truth. I could fill pages with demonstrations of God's love to us.—MRS. D. W. NOYES, Gloversville, N. Y.

I would like to tell of one of the many benefits received during the past four years from the study of Christian Science. As a child I had suffered almost every winter from sore throat, and as I grew older the trouble became a more serious one, until I was seldom entirely free from it during the fall, winter, and spring. I doctored for this and tried various remedies with but little relief, usually having to suffer from an attack of ulcerated sore throat until, as it was said, "the disease wore itself out." I seemed very susceptible to the least change in the weather, and thus was kept in continual bondage to the fear of cold.

From the beginning of the study of Science and Health and the Bible Lessons, this disposition to take cold was almost entirely overcome, and when once or twice sore throat has seemed to manifest itself, it has been entirely overcome inside of twenty-four hours. I am trying to live my gratitude for all that Christian Science has brought and is bringing to me.—E. L. W., Colorado Springs, Col.

I have often wished to express my heartfelt gratitude to our beloved Leader for the perfect health I now enjoy through Christ and Christian Science, for I was given up by the doctors as incurable.

I had been deaf from childhood. I suffered intensely after eating, and dropsy was another of my complaints. This, with consumption, caused one doctor to say, "It puzzles me; I have never seen such a case before as yours."

I met a friend who had been cured in Christian Science, and she said, "Try Christian Science." I got a copy of Science and Health and in three weeks I was entirely cured. I felt uplifted. It seemed as if God's arms were around and about me. I felt as if heaven had come down to earth for me. After five years of suffering can any one wonder at my unspeakable gratitude.—ANNA BABB, Pittsburg, Pa.

The other day my little girl, aged six, was overheard talking to a little friend of hers who for many years has had to go about on crutches. She was telling her to throw away her crutches, and God would make her walk without them. It seems such conversations had been going on between the children for some weeks, and now the little invalid has been walking and even going upstairs without the crutches, and this by acting on the advice of this child follower of Christian Science.

SARAH DILWORTH, Belfast, Ireland.

From Our Exchanges.

The non-Christian has a right to expect that the Christian will be more than an average man in goodness. He has a right to expect that we who claim to be followers of Jesus Christ will exhibit the spirit of our Master in all the relations of life. This is not a demand for perfection, but for clear evidence that perfection is our aim. Sometimes we are "overtaken in a fault," stumble in the way where we are walking. It is not the occasional weakness of the Christian that causes others to stumble, it is our persistent refusal to apply our Christianity to every-day matters. It looks, to those who are watching us, as if our ideals for common duties were no higher than their own; as if our religion exhausted itself in credal consent and outward forms. Probably this is not the case with any great number of Christians, but it is unfortunate that we should convey such an impression. If Christianity does not make men more honest, more unselfish, more considerate than they would otherwise be, it is not the Christianity of Christ.

The Standard.

Rev. Artemas J. Haynes, pastor of the United Church, delivered the address at the Men's Club service last evening, the theme being "The Creed of a New Century." In connection with the address, Mr. Haynes said,—

"The mistake of the Church of the present time is that the furtherance of the spirit of God has been substituted for a great missionary zeal. The new century will see a religious creed on much broader lines than those of the present time. This creed will include the brotherhood of man and the life of Christ, and also larger humanitarianism. In five hundred years the people will then look back and see the awakening of a new religious zeal in the twentieth century. The creeds of the different churches will be broken down and merged into one broader creed, and men will pay more attention to their brother man. There will be ethical solution of social problems, but the solution will lie solely through a closer adherence to the teachings of the Lord."

New Haven Register.

Religion and morality are a life, the product of the heart and will, rather than an intellectual assent to a creed, however true and full, or obedience to a ritual, however beautiful and impressive. It is not regulated action in conformity to demands imposed upon us by authority, human or divine, but regulation of action in conformity to the divine law by an impulse within. Religion is really re-allegiance, the turning of a sinful heart and life back again to God. Membership in a church absolutely orthodox in its creed does not guarantee it, and want of membership does not exclude it. Undoubtedly membership in *the* church, not membership in *a* church, is essential to it; but the church in this deep sense is the body of Christ, an organism for the embodiment and expression of his life and the accomplishment of his will and work.—*The Examiner.*

Peter believed himself ready to die for Jesus before he had mastered the first principles of his plan of life. Christ recognized at once the promise of his pupil and named him for what he was to be. How much we owe to that prophetic confidence of Christ which also sees in us great possibilities and loves us for them while he teaches us to seek the way of their attainment!

The Congregationalist and Christian World.

For us every week should be, in a sense, a "passion week," a week of humiliation and prayer for our own and others' offences and need, and every Sunday a memorial of the resurrection. It may be well to observe this memorial season in a special way; but it would be very ill to make the observance serve for all the remainder of the year.

The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE. A complete Concordance to Science and Health with Key to the Scriptures. This has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

THE TRUE LAW.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Post Office Department, with the assistance of Government scientists, seeks to bar from the use of the mails the host of patent medicine concerns and exploiters of proprietary medicines and nostrums which chemical analyses show are incapable of performing the wonderful cures claimed for them. Although the work is still in the initiatory stage, sufficient evidence has already been discovered, it is said, to warrant the conclusion that many of the widely advertised patent remedies are frauds.

The United States cruiser Tacoma is about to start from Honolulu for San Francisco by a roundabout route, going first to a location between there and Panama in search of an unknown island, which has been reported many times. It is believed that the ship of war Levant, which disappeared after leaving Hilo in August, 1860, was wrecked on this island. It is thought possible that there may still be some of her survivors on the island.

The State Department has learned that an intimation has been conveyed to the United States chargé at Bogota, that the Colombian Government would rather not receive Mr. Russell as minister. This was not on account of any personal feeling against him, but was simply an illustration of the attitude of Colombia toward the United States.

The Oxford University Athletic Club, on behalf of Oxford and Cambridge Universities, has sent a challenge to Harvard and Yale to hold an athletic meet in London this summer. The challenge has been accepted.

President Roosevelt last week attended the graduating exercises at the Groton (Mass.) School, where two of his sons are in attendance, and addressed the scholars. On the 30th ult. he delivered an address on the Gettysburg battlefield.

Foreign.

The seventh international Congress on the Protection of Patents and Trade Marks was opened in the Reichstag Hall, Berlin, last week. Most of the European countries, the United States, and Argentina sent official delegates. The Congress passed a resolution calling attention to the desirability of amending the Paris Convention so that citizens of a signatory Power shall enjoy the benefits of legal protection in other signatory countries without being compelled to have establishments therein, and urging that the regulations concerning expositions be formulated in a treaty.

The British and European Christian Endeavor Convention was in session in London last week with an attendance of over twenty thousand delegates. It rivals in size and interest the great World's Christian Endeavor Convention held in London in 1900. Representatives from every European country were present.

In consequence of the petition put forward by a touring club of France, the Minister of Public Works has granted credit to the Chief Engineer of Bridges and Roads for improvement in the sharp turns in roads. Nearly all women chauffeurs in Paris are said to be Americans.

The Dominion Government has made arrangements to instal submarine signals in the River and Gulf of St. Lawrence. The recent grounding of the Dominion Line steamer Vancouver has brought the matter to a head.

The small proportion of the Cuban loan of thirty-five million dollars available for British subscription was oversubscribed two or three times. The same conditions were reported also from Germany and New York.

The British Tibetan expedition at Gyangtse is isolated, and no communication from it has been received for a number of days. Further reinforcements have been ordered to the front.

Industrial and Commercial.

William Marconi has recently crossed the Atlantic a number of times for the purpose of completing the experimental details connected with the establishment on the Cunard line of an ocean wireless newspaper.

"The paper will be published on the next trip of the Campania, and this will be followed by the publication of a paper on the Lucania," said Mr. Marconi. "We shall receive news from both sides of the Atlantic. When nearing or leaving the other side the news will be received from the station at Poldhu. As we get near this side the news will be received from the Cape Breton station. Of course with our improved instruments there will be a time in mid-ocean when we shall be able to receive news from both sides of the Atlantic."

Present indications are that not less than seventy-five thousand employees will be dropped from the railroad pay-rolls by June 10. The main cause of this sweeping wave of railroad economy is the rapid falling off in freight shipments within the last six weeks. During the past year the railroad employees in the United States numbered about 1,150,000. The present reduction in forces therefore amounts to about seven per cent of the whole number. Experienced railroad men say that under ordinary circumstances about two per cent of the employees are laid off during the summer months.

Cotton and its products will bring more than four hundred million dollars into the United States from other parts of the world in the fiscal year which ends this month. Last year the total exports of cotton and its products amounted to three hundred and seventy-six million dollars. The products of cotton other than the raw cotton fibre which go to form this total, are cotton-seed oil, cotton-seed meal, cotton waste, cotton seed in the natural state, and cotton manufactures. Cotton-seed oil and cotton-seed meal exports now amount to more than twenty-five million dollars annually.

Thirty-three Fall River corporations operating seventy cotton mills paid out in dividends during the past quarter $239,650 on a capitalization of $21,745,000, an average of 1.10 per cent. This is a reduction of .28, as compared with the corresponding quarter of a year ago. Most of the mills were operated in full during the quarter, but since March the curtailment has gone on until about thirty per cent of the product has been cut off.

What promises to be the largest coal mine in Fremont County, Colorado, is being developed by the Santa Fe Railroad, not far from Florence. The discovery of four veins of coal, one of which is three and one-half feet in thickness, extends the coal producing zone of the county about ten miles, and will necessitate the construction of five miles of railroad and the establishment of a new camp.

The burning of one thousand square pianos on the beach at Atlantic City was an event of the National Association of Piano Dealers' convention, which was in session there last week. The dealers burned the veteran instruments to signalize the passing into history of this make of piano, which the trade has been compelled to take in part exchange on new purchases

Owing to the amount of time required in assembling and installing the dynamos in the power house, the New York subway will not be in running order probably before September.

General.

The steamship Wildenfels, from Suez, has just landed at East Boston one hundred and forty cases consigned to the Boston Museum of Fine Arts. They contain a notable addition to the Egyptian department of the Museum and the most valuable collection of the kind ever brought to the United States. They contain two complete mastaba chapels of the fifth dynasty, from Sakkara. There are some of these same chambers in the National Museum in Cairo quite as good as those just received by the Museum, but nothing better has ever been discovered.

The Presbyterian General Assembly of the United States has declared in favor of union with the Cumberland Presbyterian Church by a nearly unanimous vote. This favorable vote means that the recommendation will be sent down to the Presbyteries for action. It must have a two-thirds vote of the Presbyteries to make it a law.

Alum is one of the latest mineral substances of value to be added to the list credited to Colorado. A blanket deposit, four feet thick and of great width, has been discovered a few miles east of Florence, and it is pronounced to be of high commercial quality. This is the first discovery of alum in Colorado.

The Park Avenue tunnel disaster New York City, has cost the New York Central & Hudson River Railroad Company $1,500,000 in damages paid to wreck victims, their relatives, and lawyers. The suits have all been disposed of, the last one resulting in the settlement for $17,000 of a claim for $100,000.

Church union between the Methodist Protestants, the Congregational, and the United Brethren Churches is the subject of greatest importance to be considered by the nineteenth quadrennial conference of the Methodist Protestant Conference at its session at Washington.

The convocation of York has recently recommended the elimination of the Athanasian Creed from the service of the Church of England on the days on which it was appointed to be read.

The Prussian State Railway system contains 21,104 miles of track, and its net earning last year was $140,000,000, being ten to twelve per cent on the investment.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Differing Conceptions of the Lord's Prayer.

JUDGE JOHN D. WORKS.

IN my limited knowledge of Christian Science and its teachings, nothing has impressed me more, or with greater favor, than its construction of the words and meaning of the Lord's Prayer. The ordinary conception of this prayer, now accepted and used in all Christian churches, deprives it of that spiritual meaning attributed to it by Christian Science, and which renders it so inspiring and helpful. "Our Father which art in heaven" is understood under the more material construction and understanding of the prayer, as a personal being living apart from us, in a place called heaven, that we may reach after death if we live proper lives here on earth and die in the faith. On the other hand, Christian Scientists understand this to refer, spiritually, to an all-harmonious Principle who is ever-present with us, the one Mind, Life, Truth, and Love of whom the real spiritual man is the image and likeness, the reflection. "Thy kingdom come" is generally construed and understood in a material and literal sense, as appealing to God to establish His kingdom, or rule, over us, in earth, as one personal being might rule over another. Christian Scientists believe that God's kingdom is within us, here and now, not as a part of or within the seeming material, mortal body, but spiritually, and as the one all-inclusive Mind. In other words, Christ, in this prayer, in calling for the establishment of God's kingdom on earth, was referring wholly to the spiritual and not a material man, to the real and eternal and not to the unreal and temporal.

But the prayer, "Thy will be done in earth, as it is in heaven," has given rise to the most marked and radical difference in construction. It is generally believed that this is an appeal to the heavenly Father to *enforce* His will in earth as He enforces it in heaven, and that His will shall be submitted to and obeyed here as there. The mother, grieving for her lost child, is counselled to be comforted by the thought that it is "God's will," and therefore must be for the best; but the yearning heart of the suffering rebels against God and is not comforted. It is a part of the prevailing religious belief that it is God's will that we shall be sick, suffer, and die, and that as we are taught to pray, "Thy will be done," we must, as a part of our religion, worship the Being who has afflicted us, because it is His will that we shall suffer, and it must be sinful to question His will or its justice. Christian Scientists have an altogether different understanding as to what "God's will" is, and therefore a different conception of this portion of the Lord's Prayer. They believe that in heaven all is love, peace, and harmony, the Mind that was in Christ Jesus dwelling in us, in accordance with God's will, and that when we pray, as directed by Christ Jesus, we are not asking that God's will that we or our loved ones suffer and die, shall be submitted to with pious devotion, but that peace and harmony, the reign of Spirit over matter, good over evil, and truth over error, shall be established within us, which *is* heaven here on earth. "'Thy kingdom come;' let the reign of divine Truth, Life, and Love be established in me, and rule out of me all sin" (Church Manual, p. 56).

This conception of the Lord's Prayer is based upon the accepted teachings of Christian Science that no evil or suffering shall afflict His children; that it is foreign to His very nature and essence to will or desire that any shall suffer or die, or that evil shall exist in any form, and that He is all Life, Truth, and Love, all good, and knows no evil. It proceeds upon the understanding that all evil and suffering are unreal, are destroyed by good, and are the result of mortal error and wrongdoing, the departure from the will of God and the establishment in mortal thought and belief of a material, sinful, unreal man, as distinguished from the real, spiritual man created in the image and likeness of God. It is God's will that His children shall cast off the trammels of mortal thought and become one with Him, all peace and harmony, knowing no evil and doing no evil. And when we pray, "Thy will be done," we are, in effect, declaring for harmony, for right thoughts here on earth, for this is to do the will of God.

In the very first chapter of Science and Health, our Leader says, "The prayer that reclaims the sinner and heals the sick, is an absolute faith that all things are possible to God,—a spiritual understanding of Him,—an unselfed love." And again, "What we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds. . . . Consistent prayer is the desire to do right. . . . Self-forgetfulness, purity, and affection, are constant prayers" (Science and Health, pp. 1, 4, 9, 15).

If we so pray and so live, we do the will of God in the highest sense. So far as in us lies, we are responding in a Christian way to the prayer of loving and expectant faith, "Thy will be done in earth, as it is in heaven." The purpose and object of prayer is to elevate man to a higher standard of perfection, to bring him into spiritual harmony with God, and thus secure him from sin, disease, and death. This conception and spiritual understanding of prayer and its objects leads, naturally, to the results realized by Christian Scientists. Whenever man rises to spiritual perfection, when he becomes, in the true sense, the likeness and image of God, whether here or hereafter, he must, of necessity, have reached a condition where he is free from evil in every form. "Ye shall know the truth, and the truth shall make you free." "Be ye therefore perfect, even as your Father which is in heaven is perfect." It was this knowledge of the truth, and spiritual perfection, that enabled Christ Jesus to rise above the trammels of material existence, to heal the sick, and to raise the dead. And we have an abiding conviction that this power was not possessed by him alone, but that it may be exercised by any of God's children worthy to exercise it in his name and in fulfilment of Jesus' assurance "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

The Nature of Substance.

MRS. THOMAS JEFFERSON.

WHEN the wonderful facts of Christian Science first became evident to me, and while trying to understand that the unseen things were the real and that substance was in the things hoped for, I happened to read one of the works of the great French astronomer, Camille Flammarion, and I found it most helpful in many ways. The following excerpts are of special interest:—

"What we see is only apparent; reality is quite different!" "The sun apparently turns from us, the earth seems to be motionless, but the contrary is the truth; we live on a whirling projectile thrown into space with a speed seventy-five times as great as that of a cannon ball!" "In reality there is nothing but motion." "The rainbow, the rose, the cornflower, the green meadow, diversify the plain with their bright colors." "There are no colors—there is no light—there is nothing but the ether waves, which cause a vibration of the optic nerves; appearances are deceitful."

"The sun warms, fire burns. There is no heat, only sensation; heat, like light, is but one form of motion."

"Take a strong iron beam—it is solid—upholding great buildings—yet this beam is composed of particles which do not touch each other, and which are in perpetual vibration. . . . Tell me, if you please, in what the solidity of this bar of iron consists? Is it material atoms? Assuredly not, since they do not touch. Solidity lies in an immaterial force!"

"Speaking absolutely, solidity does not exist; take a heavy iron cannon ball, . . . heat it, it will melt, heat it more, it will evaporate."

"What upholds the earth, the sun, and all the stars of the universe in the eternal void? . . . what keeps all bodies in shape? Force. The world, beings, and things, all that we see, is formed of invisible atoms. The universe is a dynamism. *God is the Universal Soul! 'in eo vivimus, movemus et sumus.'* "

This is the conclusion arrived at after years of study, and scientific research by the great French scientist.

A Spring Message.

GRACE H. WILMOT.

WHILE at work removing the winter's covering of leaves and straw from flower beds and vines, I found in my wild-flower corner this beautiful spring greeting: a single hepatica one of the earliest of the spring flowers, tired of its imprisonment among layers of leaves, had forced itself in its efforts for liberation, through six tough brown leaves. That such a slender, delicate flower could possibly push its way through an obstacle so great, seemed almost incredible, but there it was with its furry stem and delicate pink looking triumphantly upward. This was my message. The same Principle, law, and activity which enabled this little flower to make its way into the air and sunshine, enables us to remove every obstacle which impedes our progress into health and wholeness. With our faces ever turned upward, animated by patience, perseverance, and courage, like the little flower we may force a way through everything that hinders and retards our spiritual growth.

Though unable to remove the seeming obstruction, we may find a way through it unharmed. In Isaiah we are promised, "When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee: when thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee." Will not a recognition of the all-protective power of infinite Love enable us to meet every impediment with the assurance that if we cannot change circumstances, we at least can go through their "turbulent waters" victoriously? The dear little blossom could not remove the obstacle itself, but it forced an opening through it, and thus in accomplishing its mission it brought to one human heart fresh courage and hope.

The Dream of Mortal Life.

R. S. M.

EVERY Christian Scientist has learned that mortal existence is a dream. This was forcibly impressed upon me by a dream in which I seemed to be in a large building with many places for rest and sleep, but where there were such disturbing conditions that though I sought a quiet place I found none. From room to room I wandered, vainly seeking rest, but never for a moment being allowed to remain quiet long enough to fall asleep. The light of day finally seemed to break, and, still struggling to find a place of rest, I awoke, feeling the same desperate need of sleep that my dream evinced.

Almost at once I thought, This is mortal existence. I dream daily the disturbing conditions I seem to see around me, the pandemonium of sickness, sin, losses, failures, and every ill to which flesh is heir. In my dream, a long night of peaceful sleep had ended, yet the dream made it appear that I had not slept, that I had spent the whole night vainly searching for that which I could not find. Is it not thus always with the waking dream? Vainly we seek good but find it not because we look for it in the mortal, material things of this earth-dream.. In reality we now possess in all fulness the things for which we seem vainly and vaguely to grope.

A story is told of a wealthy man, whom I will call Ah Haveit. The story, very much abridged, runs something like this: The man was rich in flocks, in herds, in money, in family ties, in respect, and honor; in all things that seem to make for comfort and happiness in this mortal life. One day a priest came, telling of a wonderful find of diamonds in a certain place. The rich man went to bed poor, for he had found discontent. He too must find diamonds. He sold his flocks and herds, and took his departure. He would not seek near home, he would go afar, and he spent all in his vain search, and was finally swallowed up by a tidal wave, a poor, outcast vagabond.

Not long after Ah Haveit left home, the man who lived on his place found in a little pool back of the house a shining piece of stone. It was a poor, shallow pool, hollowed out for the water to fill, and covered with pebbles on the bottom. No doubt it was muddy,—one had to wait sometimes for the spring to re-fill it after the camels had been watered. The man, attracted by the stone shining in the pool, picked it up and, pleased with its glitter, took it into the house and placed it on a shelf where he could often see it. It lay there some time, but finally the priest who had visited Ah Haveit and who had told him about the diamond mine, chanced to visit the place again. He was at once attracted to the shining stone. "Where was it found?" "Out in the little pool." "Any more?" "Probably;" the owner had not noticed much, being given to other things. The priest, interested, began looking about and it was discovered that diamonds were there in plenty, for the shining stone was nothing else. The domain that Ah Haveit had left to search for diamonds in other lands was literally sown with the precious stones. It is said that this was the site of the Golconda mines.

"To point a moral and adorn a tale" so pertinent as this is hardly needful. We all overlook the things near us, and think that the desirable things are afar off. "The kingdom of God [good], is within you." Look within and find it. The pool may be shallow, perchance nearly empty, but there may be found the precious gems of truth, the truth

Digitized by Google

that makes free. "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee." The glory,—the character of the Lord, as some quaintly translate it,—is upon thee; not shall be when you have become sufficiently good, but it is here, now and forever. Why this struggle for the very things we now have? It is not place, power, rank, or display that makes life worth living. It is Life itself, and this we ever have, and that "abundantly."

"Open thou mine eyes, that I may behold wondrous things out of thy law."

To be at Peace.

O. F. FLEISCHER.

ONE of the foremost essentials of Christian Science is to be at peace. We should be at peace with God, our neighbor, and ourselves. "Peace be with you," was one of the greetings of our Saviour. He knew that where the Angel of Peace had entered, discord could not hold sway and harmony must abide. How much it means to be at peace! When mortal mind rebels within us and we are in a fault-finding mood and permit hate, malice, envy, pride, or selfishness to enter our hearts and get the upper hand, how it rejoices us to overcome the enemy, and hear again that sweet refrain, "Peace, be still!" causing the turbulent waters to subside, letting in the sunshine of Truth and dispelling the storm cloud of error, permitting us to reflect the radiance of Love.

How seldom we realize the import and meaning of this small but powerful word! It comes to the soldier on the battlefield bringing thoughts of "Home, Sweet Home," and a re-union with his loved ones; it comes to us in the hour of sorrow, bringing comfort to our bleeding hearts; it comes to us in the evening hour when the toils of the day are done; it comes to us when we have overcome our trials and tribulations,—it comes to us through Christian Science. Through this understanding of Truth we can secure peace and everlasting happiness. It is the only Comforter.

Let us therefore meet our friends with "Peace be with you," and error with "Peace, be still!" Christian Science has again opened the way for the demonstration of "On earth peace," and we feel most grateful to Christ Jesus, "The Prince of Peace," and to our beloved Leader, who has shown us the way anew. May the blessed influence of Christian Science be felt throughout the world, and may it bring about universal peace.

Oh! thou God of Peace, be near us,
Fix within our hearts Thy home;
With Thy bright appearing cheer us,
In Thy blessed freedom come.

[Written for the *Sentinel*.]

Patmos.

MARY T. DUNBAR.

ALONE on Patmos Isle, in desert drear,
Whence every human hope and trust had fled,
Came John's pure vision,
Heavenly clear.

So to our waiting, longing hearts, O Love!
As all things earthly fail, and fade, and flee,
Reveal thy presence
From above—

And as we journey onward, leaving all
For joys of Heaven, life "hid with Christ in God,"
Teaches John's great lesson,
Love for all.

Selected Articles.

Too Little, not too much Faith, a Sinful Risk.

There is much in the published report of Mr. Williams's sermon that Christian Scientists heartily endorse, and we are in full sympathy with every intelligent and righteous effort he is making to bring about a higher standard of economic, civic, and social righteousness. While we naturally regret that Mr. Williams does not seem to recognize that the prayer of faith and understanding that heals the sick and reforms the sinner is just as scientific as it is Christian, and that God's ways and means are all natural and spiritual rather than unnatural and physical, we are nevertheless pleased to note that he sees that "Science is as much of God as prayer," and that all God's remedies are natural rather than supernatural. When he sees that the only real and eternal knowledge of Science is Christian, spiritual, divine, and that God's remedy for every human ill is Christ, the divinely natural manifestation of God to the flesh and to the carnal mind, he will find himself in harmony with the fundamental insight of Christian Science.

But the implied contention in your synopsis of Mr. Williams's sermon, that it is a "sinful risk" to trust God wholly and absolutely for healing as well as salvation, is so out of harmony with the teachings of the Holy Scriptures, so much at variance with the practice and precepts of Jesus, so antagonistic to what we regard as fundamental in all forms of pure spiritual Christianity, and so contradictory to what we, as Christian Scientists, through personal experience and proof, know to be true, that we feel it should not remain unanswered. For, according to the teachings of the Old and New Testaments, the words and works of Jesus, and the experience and testimony of all who have trusted God for healing as well as salvation, there is no risk involved in the prayer of faith, and no one has ever sinned because he trusted God too completely and absolutely. The sin and risk arise when we forget God and His marvelous healing, His saving and loving care, and go off after false gods. To admit the possibility of either risk or sin as involved in too great faith in God, is to deny ourselves of that very faith and absolute reliance upon God which Jesus and his apostles not only preached and practised, but which they also taught was the one essential condition for the answer of all righteous prayer, and for the doing of the healing and saving works which they themselves did, and which they taught all who believed should do. "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." "And these signs" always have followed, and always will follow, them that "believe," who know, and wholly trust and rely upon God and His healing and saving Christ, Truth.

Thousands who have had the best opportunity to study and to test the claims of both *materia medica* and of Christian Science, bear testimony to the fact that Christian Science healing has every advantage that Mrs. Eddy, its Discoverer and Founder, claims for it, over all material ways and means:—

"First. It does away with all material medicines, and recognizes the fact that, as mortal mind is the cause of all 'the ills that flesh is heir to,' the antidote for sickness, as well as for sin, may and must be found in mortal mind's opposite,—the divine Mind.

"Second. It is more effectual than drugs; curing where these fail, and leaving none of the harmful 'after effects' of these in the system; thus proving that Metaphysics is above physics.

"Third. One who has been healed by Christian Science

Digitized by Google

is not only healed of the disease, but is improved morally. The body is governed by mind; and mortal mind must be improved, before the body is renewed and harmonious, —since the physique is simply thought made manifest" (Miscellaneous Writings, p. 33).

The fact that our all too faltering faith and feeble understanding of God are doing so much more for us than material knowledge, ways, and means ever did, or ever promised to do, gives us the reasonable hope that perfect faith, understanding, and love will give man dominion over all sin, disease, and death. "Have faith in God. For . . . whosoever shall say unto this mountain, Be thou removed, and be thou cast into the sea; and shall not doubt in his heart, but shall believe that those things which he saith shall come to pass; he shall have whatsoever he saith."

J. R. MOSLEY.
Savannah (Ga.) *News.*

The help obtained from a change of environment or of sensations is from its inherent nature temporary, and sooner or later the patient must meet the problem again, as the fundamental error has not been overcome, nor can such assistance permanently change a man's moral nature.

In contradistinction the healing done by Christian Science is permanent in its nature, as it reaches and removes the fundamental wrong that caused the suffering. Christian Science makes clear that suffering and sin are due to man's wrong conception of God and of man's relation to Him. When the sinful mortal thought is replaced by a purer, truer concept of God, the disease, the effect of the wrong conception, disappears. In this process the moral nature is improved and man becomes better, happier, purer. He begins to grasp the conception of God as infinite Principle and sees that man's life, instead of being an enigma, has a real significance, and is capable of infinite development as is befitting an individual made in the image and likeness of God.

EZRA W. PALMER.
Grand Junction (Col.) *Sun.*

It is the practice of all true Christian Scientists to be charitable and forgiving towards all men, even to those who misunderstand and misrepresent their religion, knowing that this misunderstanding can be better overcome by a kindly presentation of facts, than by taking up the sword of hostile argument.

What the world pre-eminently needs is Christian toleration, in the free, unbiased light of which we can understand one another's position. It is this broad-minded spirit of patient forbearance which will enable us to co-operate in waging war upon the evil which is our common enemy. It is not to our advantage to quarrel with each other, but we should direct our God-given energies against the foe in ambush, who has been deceiving the world since the beginning of time.

RICHARD P. VERRALL.
Poughkeepsie (N. Y.) *News-Press.*

Jesus said, "I and my Father are one," also, "my Father is greater than I," the greater cannot be limited to the lesser.

Christian Science teaches that man is at one with God, even as a ray from the sun is inseparable from the sun, though one could not logically state that the ray was the sun or that it ever would be. Divine Science includes all truth and denies supposition. God's universe reflects the infinite,—omnipresent Mind,—but the reflection of the Creator is not the Creator, any more than one's image in a looking-glass is himself.

Because man and the universe reflect Deity, Christian Scientists declare that the real universe and man are perfect, and they try to realize it.

H. COULSON FAIRCHILD.
Trenton (N. J.) *Gazette.*

Among the Churches.

Plans for Church Building in Joplin, Mo.

First Church of Christ, Scientist, has purchased two lots on the corner of Sixteenth and Wall Streets at a cost of seventeen hundred dollars, and the members are busily at work raising funds with which to erect a church which they are determined shall be a credit to their faith as well as to the city. The plans for the building are not completed, but it is understood that the church will be one of the largest in Joplin.—*Joplin News.*

Earnest Work in Sherman, Tex.

Four years ago two members of the Mother Church and several beneficiaries of Christian Science met together each Sunday to hear the lesson read. Soon an association was organized with thirteen members. Later we organized a church with twenty-seven members, and two months ago we bought a corner lot well located near the business center of the city. We now hold our services in a hall, but hope in the near future to be in a home of our own. We want the Field to know that we are earnestly at work in Sherman.

J. D. WORKS, *Clerk.*

Advance in Massillon, O.

The Christian Scientists of this city, who last February organized and incorporated what is known as First Church of Christ, Scientist, held their services for the first time on Sunday [April 17] in their new church room, corner of Wellman and Prospect Streets. In addition to the usual morning service, an extra service was held at three o'clock Sunday afternoon to accommodate those who were unable to be present in the morning. Christian Scientists from Canton, Akron, and Alliance, as well as many Massillon friends, attended this service.

At the Sunday morning service the offering wiped out the debt incurred for all improvements, and left a substantial surplus.—*Massillon Independent.*

Growth in Milwaukee, Wis.

Fourth Church of Christ, Scientist, Milwaukee, was organized, May 1, 1903, with twenty charter members. We have an average attendance of seventy people at our services, and our Sunday School has an enrolment of seventy children, of whom forty are regular attendants.

The bud that has blossomed was nurtured in a soil of love. The thought that gave birth to this branch of the Mother Church, was that of seeking good for others, an earnest desire to feed the hungry, to obey the Master's injunction, "Go ye into all the world and preach the gospel to every creature."

"By their fruits ye shall know them." The number which united with us at our first communion service, is evidence that a need is being supplied. While we rejoice in the success of our church thus far, we do not forget to give honor to whom honor is due. We do not forget the trials, heartaches, and toils of one who has borne our burdens, who has patiently led us out of Egypt and revealed to us the new-old Science of happiness, health, and peace on earth. As individuals and as a church we owe our Leader, Mrs. Eddy, our deepest appreciation, gratitude, and love for what she has done for us and for mankind, and we can express it in no better way than by living and demonstrating the Truth.—TINA WARD, *Clerk.*

I stand fast as a rock. My breast is steeled against annoyance on account of personal offences, and vexations or exultation in personal merit: for my whole personality has disappeared in the contemplation of the purpose of my being.—FICHTE.

The Lectures.

Washington, D. C.

"Read all the books on philosophy since time began, and they will not enable you to heal one case of locomotor ataxia in its worst form. Read all the medical books and all other books, aside from Science and Health, and you cannot, as a result thereof, cure one instance of malignant cancer. This book has taught people how to cure hundreds of such cases, and they have done it."

This was one of the remarkable statements made by Edward A. Kimball of Chicago, in his lecture on Christian Science last night before a large audience assembled at the National Theatre. Mr. Kimball showed himself to be thoroughly familiar with his subject and entirely in sympathy with its teachings.

The point of his argument in behalf of Christian Science was that both sin and disease are unnatural and contrary to the law of God, and may be removed by the application of Christianity scientifically applied.

Mr. Kimball was introduced by former Representative Henry M. Baker of New Hampshire, a cousin of Mrs. Eddy the Founder of Christian Science, who is the Leader of the sect.

In beginning, Mr. Kimball said the history of the world was one of tragedy, the only relief from tears, broken hearts, and beds of pain, according to other teachings, being the grave. Christian Science, he said, comes with a message of hope and promise, it comes with the declaration that there is a way out of trouble in life by natural, lawful, scientific methods.

"God is not only Life," said the speaker, "but has ordained life, and is the law of life and health for man. The theology of Christian Science is consistently parallel throughout with this declaration. It also declares that God has created man that he might have being, and not for the purpose of inflicting upon him inveterate agony and disease.

"We repudiate all assumption that His law is the law of sin and death. Sickness is contrary to God, and God is contrary to it. God is the natural healer of the sick, and is able, willing, and ever ready to save mortals from the evils imposed upon them by an utterly perverted sense of existence.

"In Christian Science there is no longer an unknown God. No longer do the distorted graven images of human thought mask or hide from us the real God, who is altogether lovely, who is our dearest friend, whose help is ever available, whose grace is sufficient, and who created man that he might have life and peace. Christian Science promises to lead mankind to God through the highways of health and life instead of death.

"If insanity and sickness are real, then God, who includes all reality, must have made them. If He made them and bestows or sends them, then it is a sin to try to get well or want to get well."

Mr. Kimball argued that Christ's healing was not mystery, but came within the range of law and scientific *modus operandi*. Jesus, he said, never intimated that his works were mysterious. Christian Science teaches, he said, that the salvation of Christ was not alone for the sinner, but for the sick man also. Sin and disease, he said, are in immediate kinship, they are allied as cause and effect.

Speaking of the results accomplished by Christian Science, Mr. Kimball said,—

"The practice of Christian Science is in its infancy. No pretence is made that such proficiency and efficiency have been attained by practitioners as to preclude any failure, but already this practice has resulted in the cure of practically every disease that is included in the long list of incurables. In other words, Christian Science can heal all diseases that drugs have ever healed, and all that drugs have never healed; hence the Christian Scientist contemplates sickness as something he has a right to cure and ought to be able to cure.

"The drugging system did not originate in a civilized, enlightened, or Christian age. According to its own history of itself, it is the offspring of paganism. In behalf of the drugging theory, mankind has literally swallowed everything on earth, hoping to placate or obstruct disease, and is still sicker and has more diseases than ever before.

Asking and then answering the question why it did not come sooner, Mr. Kimball said,—

"It did come sooner. Jesus understood the healing Christianity; declared and demonstrated it. The people did not fully understand him, and he told them they could not, but he prophetically declared the time would come when they should know the truth, and the truth should make them free. Since then men have prayed that it might be revealed, and now we believe it has been revealed.

"Why did not everything come sooner? Why did not Adam have a telephone, a steamship, a piano, and the thousand other things of to-day? Simply because he didn't know enough."

Mr. Kimball concluded with a tribute to Mrs. Eddy and her work, and praised the purity of her life. Her chief ambition, he said, seemed to be to battle for humanity against sin and disease, and to continue without reproach before God and man.—*The Washington Times,* May 23.

New York, N. Y.

W. D. McCrackan, C.S.B., delivered his first lecture in New York City on Thursday evening, April 28, at Fifth Church of Christ, Scientist. The church was crowded to the doors, two hundred extra chairs were provided, and many who were unable to obtain seats stood during the entire lecture. A large number were unable to gain admission.

Mr. McCrackan was introduced by the First Reader of the church, Mrs. Rosalind Roberts, who spoke in part as follows:—

Friends:—The world has had noble teachers from time to time, for God has never left Himself without a witness through all the centuries. But although faithful to their highest sense of right, Jesus the Christ, the central figure in religious history, stands pre-eminent not only as a teacher, but also as the Saviour of the world; not that he saved sinful souls from eternal damnation in a material lake of fire, but in that he saved the world by showing the way out of sin, sickness, and death. Man-made creeds, doctrines, and theories have added nothing to Christ's teachings, and it is only by clearing away the debris of the ages and appropriating these teachings in their purity and perfection that the best results can be obtained. This has been done by our faithful and beloved Leader and Teacher, Mary Baker G. Eddy, who has discovered to this age Jesus' methods of casting out sin and healing the sick. Echoing down the corridors of time we hear the imperative command of our Master and Way-shower to every child of earth, "Preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils," or evils, and supplementing this comes the promise, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Christian Science, planted on the rock Christ Jesus, making manifest the omniscience, the omnipresence, the omnipotence of the one God, the God who is All-in-all, is a factor for good and for good only, as our gifted brother is about to tell you in his lecture to us this evening on "Christian Science and the Brotherhood of man."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Welcome Letter.

WE give special prominence to the following letter received by Mrs. Eddy, because it shows keen discernment of the import and importance of the By-laws of the Mother Church, and especially the By-law, "Church Organizations Ample," recently published in the *Sentinel* and *Journal*, and in the forty-first edition of the Church Manual. This By-law has awakened wide-spread interest, and has been the subject of considerable favorable comment in the newspapers.

We are confident that Mr. Goodwin's words will help others to see the great spiritual significance of the code prepared by our beloved Leader for the guidance of her Church, and we may be sure that this letter has given her great satisfaction, because it proves that the seeds of Truth which she has sown, have not fallen in "stony places," but "into good ground, and brought forth some an hundredfold, some sixty fold, some thirty fold." M.

Atlanta, Ga., May 21, 1904.

Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader:—May I claim even a moment of your time to add my testimony to the many thousands you constantly receive from grateful hearts all over the world, telling of the joys and blessings that have come into their lives—of sickness healed, of sin and sorrow destroyed—through the study of your wonderful writings. My heart overflows with love and gratitude to God, that in this age one has been found worthy, through her purity, spirituality, and unselfish love for humanity, to apprehend and understand His truth and reduce it "to a system, in a form comprehensible by and adapted to the thought of the age in which we live" (Science and Health, p. 146).

Through the understanding of God's word, as made known to us by your writings, I have been healed of an umbilical hernia of five years' standing, an injury which was received while playing in a game of baseball; also of hemorrhoids, of catarrh of the throat and head, and of astigmatism.

When seventeen years of age I began to prepare myself for the ministry in one of the orthodox churches, but soon drifted into the unsatisfying realm of agnosticism, and only escaped therefrom by being driven to Christian Science for physical healing. While the healing, though slow, was wonderful, yet that for which I am most grateful is the destruction of a violent temper, an intense sense of hatred, and a revengeful spirit. In their place has come a love for God and man, a realization of the truth enunciated in "Miscellaneous Writings" under the title "Love your Enemies," and an appreciation of what it means to be always obedient.

During the six years that I have been a student of Science and Health, I have watched with interest the appearing of each new By-law given for the government of the members of the Mother Church as occasion arose, and I recognize and appreciate more and more that these people are indeed guided by the hand of Divine wisdom; that she who stands upon the watch-tower overlooking her flock is ever on the alert, and her sheep have no fear or hesitancy in following where she leads.

If one By-law could be considered more important than another, it seems to me that "Church Organizations Ample" is the most important and far-reaching given since the institution of the rule relating to rotation of Readers and other officers. It not only means more consecration and time to devote to our sacred Cause, but a putting into practice of the "equality of the sexes" that will mean equality. Fear, misgiving and jealousy will be destroyed, and confidence demonstrated. Men will no longer gather to converse on a low plane nor women to gossip, but both sexes will be "loving, pure, tender, and strong" (Science and Health, p. 57). It will tend to annul the belief of a difference in the sexes, which is the root of much evil, and the spiritual creation will be "discerned intact, apprehended, understood, and His kingdom" come. (Science and Health, p. 56.) Lovingly and gratefully yours,

WILLIAM M. GOODWIN.

Neglect of the Weightier Matter.

THE history of ethical movements is usually the chronicle of a body of earnest adherents to some vital idea who band themselves together for its advancement. Organization, formulas, and propaganda methods are instituted, and as attention is thus centered upon prescribed lines of activity, the many drift, all unconsciously, from the substance of their impelling thought to its symbol, from essentials to their imperfect expression, from faith to formalism.

None will question that man's salvation, his entire emancipation from sin, sickness, and death, has given character to all prophecy and purpose to all revelation. All Christian sacrifice and endeavor has been prompted by the hope and assurance of its realization, and every true follower of the Master has repeated the Psalmist's joyous proclamation: "All the ends of the earth shall see the salvation of our God." This fundamental idea regarding the end and aim of our religion has never been questioned as an ultimate attainment, but its compass and practical relation to present human experience has been very much forgotten. In the thought of the early church this salvation was to be comprehensive and immediate, the realization through Christ of individual supremacy over sin and all that sin has wrought, all that impedes in any way the consummation of an ideal life; but the assertion of the naturalness and possibility of a present spiritual dominion such as Jesus exercised and assured his disciples in the memorable words, "He that believeth on me, the works that I do he shall do also,"—this assertion awakens no less protest to-day than its denial would have incited in the apostolic age, and of this strange anomaly our Leader has said,—

"Anticipating this rejection of the true idea of God,—this salvation from all error, physical and mental,—Jesus asked 'When the Son of man cometh, shall he find faith on the earth?' . . . Denial of the possibility of Christian healing robs Christianity of the very element which gave it divine force, and its astonishing and unequalled success in the first century" (Science and Health, pp. 132, 134).

Most Christian believers agree that healing works were done by the Master and by his early followers; that they were in harmony with that divine law which changeth not, and that this healing is no less needed and would be no less conducive to the awakening and establishment of religious conviction to-day than it was when the apostles went about "curing all manner of diseases,"—and yet the astonishing fact is thrust upon us that very many of these believers are not only removed from all thought of attaining to this present salvation for themselves, but they unsparingly condemn others for endeavoring to realize it. A Christian minister recently said to the writer, "I am willing to grant

Digitized by Google

the truth of much of the teaching of Christian Science, but as for this spiritual healing, I have no use for it whatever." There lies before us an evangelical periodical which has devoted its first page to an offensive cartoon, and two other pages to bitterly hostile criticism of those who stand for this promised freedom of God's children, and who are not unsuccessfully seeking to demonstrate it in their lives; and these lamentable facts illustrate again how the errors of material sense are able to effect in human history an entire separation between religious profession and the religious ideal.

To find the doctrine and declaration of this spiritual overcoming not only ignored, but its representatives subjected to caricature and contempt by those who are zealous for some human expression of Christian faith; to discover that those who have been commanded to continue the Master's healing work are now denying the legitimacy of this divinely provided attestation of truth,—this is indeed saddening, and the larger meaning of the fact begins to dawn upon us as we realize that to refuse to look to God for healing is to question either the supremacy or the availability of infinite Love, both of which are surely the very basis of the requirements of the first commandment.

This antagonism becomes yet more saddening and significant when we remember that unnumbered Christian sufferers the world over, to whom *materia medica* has failed to bring health or the assurance of relief, are thereby remanded to the endurance of hopeless years of pain. The opponents of the healing work of Christian Science may be earnestly devoted to highly commendable religious activities, but in ignoring the demonstration of Christian truth through spiritual healing, they are neglecting a "weightier matter," and to these the words of Jesus are applicable when he said, "These ought ye to have done, and not to leave the other undone."

Mrs. Eddy has rendered the Christian world an incalculable service in again fixing its attention upon the great fundamental truths of Jesus' teaching and demonstration; viz., that the kingdom of heaven is at hand, and that it is the blessed privilege of the Christian believer to enter at once into that entire freedom from the bondage of materiality which is in keeping with the dignity and destiny of the true man, made in "the image and likeness of God." W.

The Power of the Press.

LONG ago King David caught a glimpse of the divine greatness and power, and said, "All that is in the heaven and in the earth is thine." Our Leader repeats this thought in terms of Christian Science, "Mind is the grand creator, and there can be no power except that which is derived therefrom. . . . Then give to Mind the glory, honor, dominion, and power everlastingly due unto its holy name" (Science and Health, p. 143). While few would question the Psalmist's declaration, there are many who have never thought upon its real meaning, and who, in the midst of worldly prosperity, think if they do not say, "My power and the might of mine hand hath gotten me this wealth;" and is not this sentiment far too prevalent the world over? Is it not forgotten that God perpetually demands a just reckoning of all who hold in their keeping the treasures that belong to Mind, whatever be their character?

It is surely the duty of every human being, whether his station be lowly or lofty, to see to it that the treasures of Mind be not misapplied through indolence, dishonesty, or selfishness. When we consider the power of the press, and remember that a little over a century ago this mighty agency was almost unknown, we may well ask, to whom, in the last analysis, does it belong? In some countries the press is controlled largely by the heads of the government, but in this country it is supposed to represent the will of the people. This being the case, how many are there among our millions who remember that not only "all that is in the heaven," but also "all that is in the earth" belongs to God, and that therefore the press rightfully belongs to God, to Mind, both primarily and ultimately, whether this be acknowledged or no, and it should never be used to express that which does not make for righteousness,—for justice, for social, political, and individual purity. The men who make and control our newspapers and magazines hold a trust which is most sacred, and the time draws nigh when they and all who work for the world's advancement must know whom they serve, and see in every workshop a church whose requirement is perpetual divine service, and whose sacrament is "daily industry."

Some years ago, our Leader was speaking to a class of students of the many channels by which the truth may go out into human thought, and by way of illustration she said that gold coinage might be taken to represent statements of absolute truth, whether stored up in consciousness, or given to others in silent treatment. The silver may represent the written or spoken statements of truth which are current among Christian Scientists; and then she added that newspaper articles written on this subject are like bills,—they have the largest circulation, are a ready and convenient medium of exchange, and always represent the gold which can be secured on demand. It was a lesson not soon forgotten, and especially the admonition which accompanied it, never to traffic in base coinage, but to possess and give out that which bears the image of the only ruling power,—Truth and Love.

The press of this country and of other lands will some day acknowledge its debt to Christian Science for the contributions made to it of pure, wholesome, temperate, and uplifting thought which bears the hall-mark of Truth, and carries to all mankind a message of health and happiness, of peace and good-will. K.

Letters to our Leader.

First Church of Christ, Scientist, Hartford, Conn.
Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Dear Leader:—We gladly notify you of a very quiet but important and impressive service, which took place this morning at eight o'clock, in Hartford, Connecticut. The early morning was dark and rainy but by the time we reached the lot the sun was shining brightly.

The Church Committee and the Building Committee turned the first sod on their property, thus starting the building of First Church of Christ, Scientist, in Hartford, the capital of Connecticut, a state like your own, full of interest because of its memories of patriotic deeds.

In the famous Watkinson reference library of this city there is a copy of the third edition of Science and Health presented by you years ago.

We are so happy and grateful and hasten to share our joy with you over these fruits of your teachings.

Lovingly and gratefully,
WILLARD S. MATTOX, C.S.B., *First Reader.*
MRS. GERTRUDE G. NEWTON, *Second Reader.*
For the Committee.

Portsmouth, N. H., April 27, 1904.

Beloved Leader:—I have felt for a long time that you would be interested to know something of the work we have been doing in the jail, and I shall now take this opportunity to write you about it, as two of the boys have carved frames which they wish to send you.

They are both in the neighborhood of nineteen or twenty, I should think, and have never been inclined to be studious, or to have any thought of religion. Since they have been in the jail they have read history, travel, poetry, besides the Bible and Christian Science literature. As the place

Digitized by Google

used to be flooded with flashy novels, and no Bible could be kept there, as it would be torn up to light pipes with, the improvement is very manifest, in a general way at least.

I have given quite a number of them a good start in carving, particularly the chip carving, and the good work they send you is a specimen of their efforts. We began our work over a year and a half ago, and in the mean time have presented the jail inmates with an organ, also a Bible, a copy of Science and Health, and considerable other literature. In this work I have been greatly assisted by a few in our Society who have been very faithful in their efforts.

It is very encouraging to note what an impersonal sense there is about us. When I go on Wednesday to study the lesson with them, and lift their thought to a love of spiritual things, the thought is especially impersonal. In our work there we have been greatly aided by the kindness and co-operation of the sheriff, who has been uniformly kind, courteous, and helpful. The inclosed is a copy of his reference in the county commissioners' report, to our work. As all of us who have been laboring there have been healed and strengthened by your love and labor, and your unselfish life as manifested in the priceless gift to the world of Science and Health, we gratefully send this report hoping it may encourage you as it has us.

There are from a half dozen to twenty-five or more prisoners thrown in together; and as some are resolved from the start to resist our efforts and discourage the others who take an interest, it is not hard to believe the boys when they tell us how difficult it is to be Christians under such circumstances. That many are helped is all the more proof of the power of Truth revealed in Christian Science.

During the past year and a half we have seen much good resulting from the work done, not only while the prisoners are there but after they leave, as our after-knowledge of them shows they obtain work more readily, and live more manly and moral lives.

We frequently receive very encouraging letters from them, and send them Christian Science literature when requested.

Just a few words regarding my healing, and I will close. I was healed after becoming a total wreck, and exhausting the skill of the best physicians in two hospitals and outside. But best of all is the knowledge that I have found God through Christian Science; and I try to show my gratitude by being meek, obedient, and loving, and by living as near as I can to the spirit of Jesus' words, "Whosoever will come after me, let him deny himself, and take up his cross, and follow me." I send the letters from the boys just as they wrote them, without any corrections. I neglected to state that the organ was contributed to largely by business and professional men here.

With unspeakable love and gratitude,

Yours affectionately,

ADA G. WHITE.

The report of the sheriff says in part:—

"Religious services have been held in the jail each Sunday, and religious instruction given to the prisoners every Wednesday during the year by Miss Ada G. White and her associates of the Christian Science faith. These people are very much interested in this work and have labored earnestly to arouse better thoughts and elevate the moral standard of all under their instruction, and we are under obligations to them for their efforts in this direction, and for the instructive and wholesome reading matter provided by them.

M. M. COLLES, *Sheriff*.

December 31, 1903.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

Testimonies of Healing.

On the night of September 16, 1896, while at work in the lead and zinc mines of this place, another man and myself were being hoisted out of the shaft at midnight. When within twenty feet of the surface, the hoister broke, letting us fall to the bottom, a distance of one hundred and twenty feet, killing my companion instantly. An hour later I was taken out with several ribs broken, jaw broken in two places, a hole clear through my chin into my mouth, and one foot burst open from the ankle bone around under the heel, the bones of which were all shattered. I was carried home, and a doctor called in who pronounced it nothing very serious, sewed up the wound, and left; but in the morning, my wife, the mine superintendent, and myself, not being satisfied with the physician first called, sent for our home physician, also for an eminent doctor in another town, who at once took out the stitches, and did the best they could to clean out the wound. Every day this process of washing out the wound was gone through with, but still it refused to heal beyond a certain point.

Meantime I was in almost constant agony, or in a stupor from opiates. This continued until near the middle of November, when a piece of bone made its appearance in the center of the wound, protruding about a quarter of an inch above the surface. After waiting several days for it to force its way out entirely, the attending physician sent for Doctor Brookes of Carthage, he being considered the very best surgeon in southwest Missouri, to come and remove the offending bone, which he did November 21. But still the wound refused to heal, and grew worse daily. This state of affairs continued until the middle of December, when we again called in Dr. Brookes. This time, with the assistance of our two home doctors, he cut the heel open and removed all the bones of the heel, taking out no less than one hundred pieces by the actual count of Dr. Brookes (my mother still has them), leaving a cavity which required twenty yards of medicated gauze, an inch and a half wide, to pack it and to keep it in something like the natural shape. This packing was taken out and new put in every other day for about fourteen months, the flesh very slowly filling up the cavity.

At all times a very offensive discharge oozed from the wound in spite of the careful washing with warm water and various antiseptics. After four and a half months in bed, I was able to get around the house with the aid of crutches. My heel remaining about the same until the following October, I went to Kansas City to the hospital to have the foot amputated. While there I first heard of Christian Science through a sister-in-law, who told me that I could be healed without undergoing the operation, and that even the bones would grow anew in the heel, by Christian Science treatment. However, I listened as one having ears and hearing not. I came home without having the foot amputated, and shortly after the wound ceased to discharge but failed to heal, leaving a cavity in which I could insert my thumb up to the ankle bone.

In April, 1898, I had a shoe built with a four and a half inch heel; I also used a thick cotton pad in the heel of the shoe, and had the inner sole of the shoe cut out, about the size of a dollar, so as to let my toes drop down, owing to their being drawn under to such an extent, that I walked on their ends, causing much pain. At no time could I walk more than a few steps at a time without the aid of a cane, my foot was always in more or less pain. This is the condition in which Christian Science found me in the fall of 1900. At that time I became acquainted with Science, through the healing of my wife's sister, which was so wonderful that my wife and I took up the study. At this time I met the practitioner who had treated my sister-in-law and had a talk with him. He said all things were possible with God. I then took three weeks' absent treatment and bought

Digitized by Google

Science and Health. After the first few treatments I laid aside my cane, not having any further use for it. During that time we had several proofs that Christian Science is all that is claimed for it. In a short time, however, I stopped the treatments, neglected reading Science and Health, and came short of living the truth, even as I understood it.

I had been a victim of the liquor habit since about the age of fourteen, and as I grew to manhood, the habit grew upon me. All the evils that generally go with such a habit were fastened upon me, and in spite of the fact that my wife, two of her sisters, and her father's family all accepted Christian Science, I drifted on in my evil ways for nearly two years longer, gradually sinking lower. One Saturday night in October, 1902, I drew my week's wages, and did not get home until Sunday evening, without a cent of money, having spent it all over the bar. At that time I resolved to take up the study of Science for all there was in it, and I immediately commenced attending services at First Church of Christ, Scientist, in Joplin, Mo., and in December became a member.

From that time I have never taken a drink of intoxicants, and can truthfully say that through the study of the Bible and Science and Health, I was completely healed of the appetite for liquor. At the same time my foot began to improve, until to-day, I wear a shoe like any other man, with only a slight alteration on the inside at the toe. I stand as proof to the world that God can make the bones to grow anew, for such is the fact in my case. Two of those removed from my heel have been replaced through divine Love, and my whole foot is recovering its natural shape and action to such an extent that I now perform the same labor I did before the injury.

I have also been healed of smoking and profane language, through the study of Science and Health. We have had many demonstrations in our home over other forms of error, such as sickness, cuts, bruises, etc., but infinitely greater than all is the spiritual blessing our home has received. We have scarcely begun in Christian Science as yet, but through the good works of our beloved Leader, Mrs. Eddy, and the patient and loving help given us by our practitioner, who is also my wife's teacher, we can repeat those sweet words, "Glory be to God, and peace to the struggling hearts! Christ hath rolled away the stone from the door of human hope and faith" (Science and Health, p. 45).

I give this testimony hoping it may be a benefit to some poor, afflicted searchers for light, that they may prove as I have that God is no respecter of persons or conditions.

W. S. JACKSON, Oronogo, Mo.

I would like to say how very grateful I am to God for my healing through Christian Science. In March, 1897, I was taken with great pain in my leg, and went into the London hospital and was operated upon. The surgeons said it was a cancerous growth of the fibula. I left in May a cripple, in surgical appliances, but ill and suffering worse pain. I returned to the hospital in October, the growth having come back worse than before, and had my leg amputated above the knee. Six weeks later it was taken off higher up, and I left at the end of December very weak and ill. Nothing could be done to relieve me; I was an object of pity to all the nurses and doctors who knew me, and they were all very kind, doing their best for me.

After the amputation I had to be operated upon several times, and in all underwent eleven what are called big operations. The dread of these was terrible to endure, and many times, when on the table I prayed that I might die. Up to October, 1902, the only sleep I got was through taking strong drugs. That month a lady came to see me and told me about Christian Science, and asked me if I would try it, saying she knew I could be healed. It was my last hope; I had been sent home in August by my surgeon, who said he could do nothing more for me, but told me to try to be happy.

I was treated in Christian Science, and through it I am healed, and I know that if I only trust in God, and have no fear, my former ills will never return. After a few weeks' treatment I went in March, 1903, to live in the house of a lady where I was surrounded only by Scientists, who did all they could to lift me out of the hopeless condition into which I had been brought by suffering and constant drugging. In July, 1903, the wound was quite healed and I was well enough to wear an artificial limb, which the surgeons said would never be possible. I then went to the hospital to be measured for it, and the surgeon who had previously operated was amazed; he could hardly believe it was the same person, and called another surgeon to see how wonderfully I had been healed. I must add that for one year I was in a hospital for incurables. The limb has now grown four inches and is perfectly healthy. I am thankful to say that I can now walk without assistance, and I can work, which I had not been able to do for six weary years.

I can never say how much I owe to Science and Health which has brought me out of the depths of despair into health, life, and happiness.

MRS. MARY ANNIE E. ETTINGER, London, Eng.

It is almost four years since I first heard of Christian Science. At that time I had been in a hospital a few weeks with a disease that did not give much hope of future well-being. I remember one day asking the doctor how soon I would be able to leave the hospital and go home, which was not in the city, and he simply answered me, "No one can tell when you will get well, you are liable to die." He also said that if they were not able to check the further development of the disease, I would have to undergo an operation. I did not say anything at the time, but the next day I told the nurse that I would not give my consent to an operation.

A day or two after this Christian Science was brought to my notice, but as I did not know what sort of treatment it was I sent my sister to the Scientist's house to learn more about it. When she came back she said the Scientist had told her that I could be well again, and that God would heal me as well as any one else. This of course gave me great hope, for I had not the least faith in material treatment. Knowing that my suffering was the result of sin, I felt that I could be healed only if I were reconciled to God.

I was taken from the hospital on Saturday morning and received treatment, and in two days I was able to get up, and after eight treatments I went to the Scientist's house, and to the meeting. I was well, and have been in good health ever since.

From that time to the present I have studied earnestly to know more of the truth which makes us free.

As I was raised in an orthodox church, it seemed hard at times to go ahead. I am as yet the only member of our family who attends the Christian Science Church.

I am happy to say that I am now a member of Third Church of Christ, Scientist, of Milwaukee, and also of the Mother Church in Boston. My gratitude to the all-wise God, and to our beloved Leader exceeds expression. I am also grateful to the practitioner who has lovingly led me out of the mists of error into paths of righteousness, where brotherly love and purity reign.

MINNIE C. BARTELT, Milwaukee, Wis.

The blessings and benefits I have received from Christian Science are so many and so beautiful, that I could never give full expression of my gratitude for its great truth. For many years I had been a sufferer with stomach and head trouble; my head and back ached incessantly. I could not walk a block without a sense of great weight, weariness,

Digitized by Google

and pain. When it was necessary for me to shop, I dreaded the effort, as it always resulted in a fever which would last all the next day. The time came when I found myself slipping away, the doctor having pronounced my trouble Bright's disease. This was a great shock to me, my father having died at an early age with this disease. The thought of leaving my two children stared me continually in the face, and, receiving no further benefit from my physician, I was ready and willing, through the advice of kind friends, to take treatments in Christian Science. In two weeks I was greatly relieved, could eat everything with freedom, and continued to gain, feeling the benefit of each treatment. Patiently I persevered until the fear and the disease were destroyed.

During my healing one victory which came to me through my own effort and understanding of Truth proved a great strength and inspiration to me. A distressing trouble of long standing was finally met by my clinging steadfastly to the one thought, I "acknowledge and adore one supreme and infinite God" (Science and Health, p. 497). For three days I suffered untold agony. The third night I fell into a peaceful sleep, such as I had never known before, and it lasted until morning. When I awoke I realized that I was healed. Through this experience I learned that there is no obstruction in Truth, and that "Immortal Mind, governing all, must be acknowledged as supreme in the physical realm, so-called, as well as in the spiritual" (Science and Health, p. 427). Then I understood the Scripture, "Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ: for the accuser of our brethren is cast down, which accused them before our God day and night."

The beauty of this demonstration was in the consciousness, and can never be expressed in words, and I realize since how much gratitude we owe our dear Leader, who has taught us to worship only omnipotent good.

EMMA T. SHULTZ, Minneapolis, Minn.

Two years ago we were occupying a house with another family, and while our rooms were separate we were much in one another's company. Our neighbors were not Christian Scientists, so that when one of them became sick they resorted to *materia medica*. The physician diagnosed the case as appendicitis, but owing to later developments called in a specialist who at once declared that the patient was suffering from smallpox in an advanced stage and reported it to the city authorities. Our family consisted of myself, wife, and one child, and the prospect of being quarantined was anything but agreeable.

The suggestions of mortal mind were met one after another, and when the city authorities arrived they did not think it necessary to quarantine the house, but adopted the plan of disinfecting the rooms and removing the patient to the hospital provided for contagious diseases. A few days went by and another member of the same family manifested symptoms of the disease, but in this case the complications were such that it was impossible to move the patient. There seemed to be no chance of escape from quarantine now, but, recognizing only divine Love as law, we were not surprised that it was found only necessary to placard the room in which the sick person lay, and nothing was said even about vaccination.

How often were we reminded during this trial, of that quotation from Science and Health, p. 392, "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you may control yourself harmoniously." The 91st Psalm had always been a very beautiful one to us, but it seemed to mean a great deal more after this experience. "There shall no evil befall thee, neither shall any plague come nigh thy dwelling. For He shall give his angels charge over thee, to keep thee in all thy ways."—ALLEN L. CLARK, Omaha, Neb.

[Translation.]

In gratitude to God for what Christian Science has done for me, I would like to give my testimony. A little over twelve years ago I was healed through Christian Science. I was afflicted with several diseases, from which no earthly power could free me, and for two years I had been unable to work. Since my healing through Christian Science I am well and have gained in weight.

For the last ten years, I have devoted my time to healing the sick, and God has blessed my work manifold. I realize what a welcome guest *Der Christian Science Herold* is with all Germans who do not understand the English language. My desire to understand Mrs. Eddy's books was so great that I learned enough English to read them. How happy I am to know that the Bible must be comprehended spiritually and its teachings must be lived in order to accomplish the healing as Jesus commanded.

When I became interested in this truth I took up the study of the German Bible, having always been a Bible student, but I thought, as did some others, that the Christian Scientists did not believe in the whole of the Bible. I was told that Christian Science teaches that God never made evil. This confused me at first. In Isaiah we read, "I form the light, and create darkness; I make peace, and create evil; I the Lord do all these things." I soon learned, however, to understand that passage aright. When I was awakened to the light through the teachings of Christian Science, I saw in what a dark condition I had been when God showed me this way of peace. I saw how evil had held me captive, and how the understanding of Truth gives us power to gain our freedom.

More and more do I realize what a blessing has been bestowed upon humanity through our Leader, Mrs. Eddy, whose writings bring to our consciousness a new and effective understanding of the work of human redemption.

INGWER NAHNSEN, Cedar Falls, Ia.

It is now over a year since I have been in Science, trusting Truth and Love to sustain me, and finding that I no longer need the medicine to which I was for years before a slave. Last year, all medicine failing, I decided to try a change of climate, and went to Denver, visited there a few days, and went on to Boulder, expecting to remain there, as I thought I surely would be well at that place; but being very homesick, I could scarcely get along.

One day when I was crying, the thought came to me, "Why don't you go back to Denver and try Christian Science?" Before going to Boulder I visited a friend, an old gentleman who had been healed of asthma of over forty years' standing. I had been told about Christian Science while there, and it caused me to think about it. The thought came again and again to try Science and go home, so I went back to Denver and took two months' treatment, gaining nearly twenty-eight pounds. I was at first unable to eat anything but baby foods, such as milk and lime water. The change in me is so great that words cannot express my thanks. Among other things, I was lifted from the bondage of wearing glasses. Before returning home, I had the opportunity of taking class instruction, which has been a wonderful help to me. My teacher being kind and full of love, did not send me home and forget me, but still seeks to point my footsteps to a higher plane through admonition to study the Bible and Science and Health.

Praise God for bestowing so many rich blessings on me, and I am grateful to Mrs. Eddy for all she has done for this age. I also thank all who have helped me along my journey.—BERTHA V. KARR, Maryville, Mo.

Some years ago, while laboring under a very dark cloud, with health wrecked, with a confused mentality, and with absolutely no hope left of ever realizing freedom from this bondage of sense, God sent His messenger of love, bearing

Digitized by Google

the glad tidings of Christian Science into our troubled home. The first vivid impression made upon my darkened sense by this wonderful light, was one of peace and rest. The great sense of fear, which for years had been a constant burden, gradually lost its hold upon me, and for the first time in my life I caught a faint glimpse of the God who is Love.

Slowly but surely the light came, revealing the unreality of all discord and suffering and the ever presence of Love. One by one the physical ailments were met, among them an injury received during an operation. This trouble was very painful, and our family physician, when asked what it was, said the intestines had been injured, and that nothing could be done for it. When asked if in time it would heal naturally, his reply was, "No; it will undoubtedly grow worse, and you will simply have to bear it."

Almost three years have passed since this trouble was healed, and there never has been the slightest return of a single symptom. More recently I was healed of the grip and of quinsy.

The spiritual light that has come to me as a result of the earnest study of our text-book, is of greater value than all the physical healing, and each day proves the truth of this passage of Scripture: "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you."

I wish to extend thanks to all who have given me a helping hand along this path,—to Mrs. Eddy for her priceless gift to me and to all the world, and above all to God, the giver of all good gifts.—EMMA M. BECK, Los Angeles, Cal.

Having received so many blessings through Christian Science, I feel it would be ungrateful to keep silent any longer. One of the many blessings for which I am thankful is the healing of nervous prostration. I was unable to do anything which required exertion, and was always tired. I am now able to work all day without bad results, and this came without treatment and by daily study of the Bible and "Science and Health with Key to the Scriptures." I have never failed to get relief by reading our text-book, and all the old troubles are dropping away, one by one.

My sense of health and strength increases as I strive to live up to my highest understanding of good. "We apprehend Life in divine Science, only as we live above corporeal sense, and correct it. Our proportionate admission of the claims of good or of evil determines the harmony of our existence,—our health, our longevity, and our Christianity" (Science and Health, p. 167).

It would take much space to tell of the many proofs I have had, and have seen in others, of the power of Truth to cast out error. I have had the blessed privilege of class instruction, and I am most grateful to Mrs. Eddy for her valuable work. I am also grateful for our periodicals, which help us to keep our thought in the right channel.

VIRGINIA L. WILLIAMS, Charleston, S. C.

More than ten years ago, Christian Science healed me of nervous prostration and other chronic and organic ills. The year previous I spent traveling in Europe in quest of health, but returned home a mental and physical wreck. One year more was devoted to *materia medica*, taking, however, the statelier step, using homœopathic remedies. After an operation was performed, still without hope, and without God in the world, I turned to Christian Science, knowing nothing of it, and having no faith in it.

God was good to me, and through His precious Word I was made whole; perhaps not every whit whole, for there was yet work to be done.

"A glorious day is dawning." The teaching of Christian Science gave to me the very first knowledge I had of God and gave the understanding of His word, as revealed in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Through this understanding of Truth, tears have been wiped from my eyes, comfort in deepest sorrow has been mine. Can any one wonder that we love God as never before, and our beloved Leader with hearts full of love and gratitude?

M. C. K., St. Joseph, Mo.

I should like to express my gratitude for what Christian Science has done for me. It is nearly three years since I first heard of it, and during that time I have seen many demonstrations of healing, one of which even, should convince any one of the truth of Mrs. Eddy's teachings. I was healed of astigmatism, from which I had suffered since my girlhood. I was quite a slave to my glasses, and my eyes were getting more and more troublesome at the time that I first heard of Christian Science.

It was through seeing a dear friend healed of consumption that I was led to begin the study of Christian Science myself, and it was with the help of this same friend that my eyes were healed. It took us three months to make the demonstration, but I have had no need of glasses since, and I can say with perfect truth that I have not had a headache once during the past two years.

No words can express my gratitude to Mrs. Eddy who has helped us so much to understand the allness of God, and how, by understanding His power, we may daily overcome sin and sickness in ourselves and others. I am also very grateful to my faithful and loving teachers.

L. D., London, England.

For ten years I suffered with muscular rheumatism and palpitation of the heart so that I had to stay in bed four weeks at a time, and could not turn over one way or the other without taking hold of the bed-post. I was under the care of many doctors and received only temporary relief. One doctor told me that I could never do another day's work on the farm. I heard of Christian Science and took treatment, and in four weeks I felt like a different man. I was also cured of the tobacco and liquor habit. I am very grateful for the help I have received through Christian Science.—S. EYER, Lyons, N. Y.

This testimony was accompanied by the following letter.

"This is the same man of whom I wrote as growing straight between Thursday and Saturday. When he gave this testimony he said the half could not be told of all that Christian Science had been to him, and he also wished me to add that at times he had to creep on his hands and knees. Since coming to Christian Science he has given up all material remedies."—M. P.

God is eternal light, having neither beginning nor end, and along with him there is the reflection, also without beginning, and everlasting. The Father, then, being eternal, the son also is eternal, being light of Light, and if God is the Light, Christ is the reflection.

DIONYSIUS, an early Christian Father, A.D., 240.

[Written for the *Sentinel*.]

Prayer.

M. P. H.

PRAYER is achievement, not appeal,
A firm, strong hold upon the real.
It is to know God's work is done,
And that thine own must be begun
By answering His call to thee:
"If thou art weary come to me
And I will give thee rest."
The rest of heavenly work,—divine behest!

From Our Exchanges.

The old idea of heaven as a place to be admitted to, and of hell as a place to shun, has largely given way in the minds of Christian believers to the better idea of heaven as signifying a heavenly condition and of hell as expressing the inner state of the sinner who persistently and flagrantly violates the laws of his being and disregards those divine precepts which are designed, through compliance with them, to make the life prosperous and happy. The Christian world is becoming more sane and more Christian as the centuries pass. This is evidenced in several ways and particularly by the changed views on the subject under consideration. The belief that this world is a miserable habitation for man, made so by the transgression of the first pair who entered upon this stage of existence, and that life here must be borne with as much patience and grace as human beings can muster while they anxiously look forward to another world where unending felicity shall be vouchsafed to them, is happily waning through the growing acceptance of the better and truer conviction that life in this world is a great and noble thing; that God made no mistake in ordaining the conditions of man's life here; that heaven and hell,—success and peace and happiness, or defeat, unrest, and suffering,—are the experiences of men and women here according as they seek to know the real meaning of life, seek the truth and obey it, or follow low and selfish instincts and give no heed to God's commands as written in the human constitution and promulgated in the Scriptures.

The Universalist Leader.

Where is Galilee in the geography of your spiritual life and mine?

Galilee is for us that land of simple, homely, and familiar experience out of which we may have supposed for a moment that the Lord had lifted us, away from which forever, as may be we fondly thought, he had led us. He had lifted us up to heaven and we feel the shock of being brought back to earth. Heaven, those years with the Master must have seemed to the disciples even while they were living in them, heaven, still more in the retrospect. And yet to the same old Galilee, yours and mine, it may be quite clear that Christ is now calling us back. It is thither that he bids us go. It is there that he will be found going before us, or else not found. It is there that we shall see him or else we shall not see.—*The Congregationalist and Christian World.*

It is doubtful, however, if all these causes taken together hinder the conversion of the world to Christ so much as do the imperfections of professing Christians. It is easy to declare that one man's failure does not make another's success, that the weakness of Christians furnishes no excuse for the disobedience of those who reject God, that every man must stand or fall by himself, and all these declarations are true. But the fact remains that the weakness and the strength of Christianity lie in the lives of Christians. There is no argument for Christianity like a worthy Christian life; there is no argument against Christianity like a life that claims to be Christian and is not.—*The Standard.*

One cannot conceive of a heaven without thinking of it as embracing righteous personalities, and only those. One cannot think of hell without thinking of it as made up of wicked personalities. With such facts before us we easily see that our first personal business is to build righteous personality within ourselves, and to seek to build it in society, in the home, in the church, all about us, till the world is filled with it.—*The Examiner.*

If the reverent temper does not run through the week it will be in vain to seek to be worshipful on Sunday.

The Watchman.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can he had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Avenue, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

ANNIE M. KNOTT, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The terms of ransom asked by Rasouli and his band of bandits who kidnapped the American citizen Perdicaris and his stepson Varley in Morocco are considered by the State Department as impossible of acceptance. The United States cruiser Olympia, flying the flag of Rear Admiral Jewel, in command of the European squadron, and the United States cruisers Baltimore and Cleveland are now at Tangier. The United States has requested the coöperation of France in securing the release of the captured men. This action is very favorably received in France as being the first distinct international recognition of the paramount influence of France in Morocco.

Porto Rican teachers to the number of six hundred may visit the United States during the summer. Of this number four hundred will go to Harvard and two hundred to Cornell. These teachers have appropriated one month of their salary toward meeting the expenses of the trip. The balance, it is hoped, will be raised by subscription in the United States. Army transports will convey them from the island.

The United States cruiser Tacoma, which sailed from Honolulu on May 20, has arrived at San Francisco. The ship made a detour toward Panama in order to locate if possible an unknown island on which the warship Levant is thought by some mariners to have been wrecked in 1860. No uncharted island was seen and the soundings made failed to indicate anything of importance to navigators.

By a vote of five to four, the Supreme Court of the United States has rendered a decision denying the residents of the Philippines the right of trial by jury. The opinion was rendered by Justice Day. Justice Harlan in a dissenting opinion declared that the decision of the Court was an amendment to the Constitution by judicial construction, which was a most dangerous step.

President Roosevelt has written a letter to Secretary Hitchcock declaring that appointments in the forestry service are not to be regarded as senatorial patronage. It is to be the policy hereafter to fill vacancies wherever possible by promoting head rangers to forest preserve supervisors. The order is an outgrowth of recent public land irregularities.

The tenth annual meeting of the Lake Mohonk (N.Y.) Conference on International Arbitration commenced its sessions there last week. The delegates numbered two hundred and fifty and came from all sections of the country. Judge George Gray of the United States Supreme Court was presiding officer.

The United States Supreme Court has ordered a new seal for the Court, for the first time since 1790. The old seal was the size of a silver dollar. The new order calls for a seal 2¼ inches in diameter, somewhat larger than the old seal.

The Merchant Marine Commission, appointed by the last Congress to investigate the causes of the decay in American shipping, and plan means for its rehabilitation, has held sessions in Boston, New York, Philadelphia, and Baltimore.

Foreign.

Frank Plumley of Vermont has forwarded to the British and Venezuelan Governments, through their respective ambassadors his decision as umpire in the dispute between these countries. Eleven different countries were involved, including Great Britain, Germany, Italy, Holland, Spain, Mexico, and the United States. Some of the questions were new in international jurisprudence. There were four awards, one involving a large sum of money, and the others dealing with questions of international law. In one case, regarding the payment of interest on awards, there was no precedent. Two questions were those covering the question of citizenship where the laws of the contending countries were not uniform and well settled. These awards are the last to be made, and, as by mutual agreement Mr. Plumley's decision is to be final and conclusive, they close the Venezuelan dispute.

The last section of the second cable connecting Germany and America has been completed.

The cable just completed was manufactured at Nordenham, Germany. Its total length is forty-two hundred nautical miles. The first German cable was laid in 1900. This makes sixteen cables across the Atlantic, distributed as follows: Nine landing in Ireland, two in England, three in France, two in Germany. There are also four abandoned cables across the Atlantic, the oldest of which was laid in 1858.

The steamer Siberia, which recently arrived at San Francisco, brought the portrait of the Empress Dowager of China, which is to be shown at the St. Louis Exposition. It was painted by Kate Auguste Carl, an American, and is being conveyed in royal state. The accompanying guard of honor numbers about one hundred persons, headed by Major Domo Shen Nigh Hu. He has seven secretaries, each with ten attendants. The picture, with the baggage of its custodians, was passed by the customs authorities without inspection, in accordance with instructions received from Washington.

A commission from the Government of Quebec has been given to effect the sale of the Magdalene Islands to an American syndicate. The islands are a part of the Province of Quebec. They are rich in mineral deposits, principally iron and manganese, and the herring fisheries on the coast are valuable. It is believed that the Dominion Government may take some action to prevent these islands passing into the hands of a foreign company.

Communication with Colonel Younghusband at Gyangste, Tibet, which was last week reported broken, has again been restored. The Tibetans who attempted to invest the British rear have been dispersed.

Recent despatches say that the last troops of the Moorish pretender have disbanded, and numerous tribes are seeking to make submission to the Sultan.

Industrial and Commercial.

The Department of Agriculture announces that an ant has been found in Guatemala that promises to be an effective check to the boll weevil. It will be introduced into the cotton States. The discovery was made by C. F. Cook, the botanist in charge of tropical agricultural investigation of the Bureau of Plant Industry. During a trip in Central America last year Mr. Cook discovered a cotton grown by Indians which gave evidence of being immune from the attacks of the boll weevil. The weevils are present there, but the investigations show that they are unquestionably kept in check by the presence of a large reddish brown ant.

The report of the superintendent in charge of the Sault Ste. Marie Canal for the year 1903 shows that the American canal was open for 249 days and the Canadian canal 256 days. Of the total traffic passing the Sault about eighty per cent went through the American canal, and the remainder through the Canadian locks. The total freight traffic was 34,074,437 net tons. The items showing an increase are coal, grain, and salt. There was a falling off in the movement of iron ore, which, however, formed 26.8 per cent of the total traffic in value; coal, 7.1 per cent; copper, 7.4 per cent.

Exports of manufactures in the fiscal year which ends with this month, seem likely to exceed those of any preceding year. Ten months' figures just presented by the Department of Commerce and Labor through its Bureau of Statistics exceed those for the corresponding period of any preceding year. The figures of ten months' exports of manufactures in the fiscal year 1904 exceed by $19,000,000 those for the corresponding months of the fiscal year 1900, which was the banner year.

It was discovered, when the fire engines from other cities responded to Baltimore's call for help at the time of her recent fire, that the hose couplings of other cities would not always fit those of the Baltimore plugs. An arrangement has now been entered into by the departments of all the cities within the radius of possible emergency relief, to bring all their couplings into conformity with one standard, so that the apparatus of any one can be used for the defence of any of the others.

The production of Vermont maple sugar this year will be about twenty million pounds.

General.

The combination of the biograph and the phonograph has been effected in England under the name of the biophotophone. At the exhibition the cinematograph was worked from the back of the pit, the phonograph being behind the screen on the stage; the uniting power was electricity. Among the pictures shown was the "Xylophone Trio," in which the movements of the players were in strict accordance with the time of the music. Other examples included a song from "Lohengrin," and the drilling of a squad of German soldiers.

The freshman class of Smith College last week presented a reproduction of the most important events in the three days' celebration by Augustus Cæsar commemorating the conclusion of the first decade of his reign at Rome. The performance centered about the "Carmen Sæculare" of Horace.

In the recent sale of the Princess Mathilde's jewels a pearl necklace, formerly the property of Queen Sophie of Holland, brought $171,000. It is said that the buyer represented the German Empress.

India grew 1,149,957,200 pounds of cotton last year.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Telling the Truth.

CHARLES I. OHRENSTEIN.

PERHAPS no question is more common in the experience of a Christian Science practitioner than that which opposes the denial of the reality of disease on the part of those suffering from it. "How can I deny being sick, when I am sick?" we are asked, and this is usually followed by the remark, "Why, I should feel that I was not telling the truth if I did so."

It must be evident that a denial of sickness under such circumstances,—a denial which is believed to be untrue, —can be of little or no value. Mrs. Eddy says, "The sick are not healed merely by declaring there is no sickness, but by knowing there is none" (Science and Health, p. 447). It is important, therefore, that sickness should be denied understandingly, with a conviction of the truth of the denial,—knowing that there is in reality none, as our textbook teaches. For, as a man "thinketh in his heart [in his innermost consciousness], so is he."

Those who are striving to apply Christian Science as a remedial agency for themselves and others, are believers in the teachings of the Bible, and should therefore be ready to claim their true birthright; *i.e.*, that they are the sons and daughters of God, made in the image and likeness of the infinite, perfect, and "altogether lovely" Being,—God,—hence, they *are*, not will be or ought to be, well.

Unconsciously, perhaps, the false belief in the duality of man's nature is so tenacious that somehow the notion seems to obtain that there are two of each of us: one that is perfect, spiritual, well; and one that is sick and dying. It is this belief, this wrong sense of self, therefore, that needs to be corrected. I have never yet seen any one, no matter what wrong belief he entertained about himself, who was ready to say in just so many words, so that he could hear himself do so, that there are two of him: one made in the image and likeness of God, and therefore well, and another one that is sick, as it is at once patent that one or the other of these statements is not true.

If man is made in the image and likeness of God, who is not and cannot be sick, then man is not and cannot be sick; and he is declaring the truth when he says so; contrariwise, he is not declaring the truth when he says, mentally or audibly, that he is sick.

Telling the truth in Christian Science means telling the absolute truth,—God's truth and man's truth,—as His likeness. It is as man knows the truth, and therefore knows his well-being,—not only declares that there is no sickness, but knows that there is none,—and acts in keeping with this knowledge, that he makes manifest the result thereof.

No fault can be found with one who says, "I don't agree with your premise and therefore I don't agree with your conclusion," such an one belongs to that class concerning whom, as our Leader cautions, we should not explain Christian Science too soon, "lest you array the sick against their own interests" (Science and Health, p. 414). It is those who have accepted Christian Science, but who yet believe that they are sick, who need correction. If man is the image of God he is well; and the manifestation agrees with the declaration when this is known to be the truth and acted, —lived up to. Thus, "ye shall know the truth [God and His reflection only, to be true], and the truth shall make you free."

Understanding.

HERBERT W. BECK.

THERE lies in the British Museum a clay tablet which gives the Assyrian account of creation. Briefly it is as follows: Chaos was filled with the powers of darkness and the attempt was made to destroy evil with evil, but the effect was always discouraging, for evil became intensified. The legend further reads that the desire for peace at last compelled the well-doers to turn away from evil or darkness as a reality and to find its opposite in the good powers of Light. The verse ends with the statement that there was rest and peace, and evil could not be found, for good filled creation.

While it matters little that attempts have been made to find a similarity between this and the story in the second and following chapters of Genesis; there does lie within this myth a lesson applicable to each one's experience. More often perhaps than we care to admit, we attempt to destroy evil with evil, and expect that by working in the dark we may destroy darkness. When injured wrongfully, do we always meet hate promptly with love, without a shadow of retaliation? Does kindly and helpful understanding instead of self-righteousness always meet another's misstep or lack of understanding? In short, do we in all things immediately antidote specific evil with Truth? If not, then the lesson on the Assyrian tablet applies to us, and we must renounce the weapons of darkness and utilize the "powers of Light." This we can only do as ignorance gives way to understanding. Ignorance —the seeming power of evil—is but a suppositional vacuum, while understanding is the consciousness and realization of omnipresent good. Herein are found no vacuums but the active, divine, working Principle—Life. Christian Science cannot cause any confusion of good, but it surely has come to confound the ignorance that will not know. This is found true only in understanding and not in blind faith or vain and foolish belief in phenomena.

Jesus refused to give signs for a spectacular purpose, but he was and is an example for all who wish to understand and repeat his life-work. He never worked contrary to the laws of God, but always understandingly in fulfilment of them. He knew why God always heard him, and when he raised Lazarus he understood that Life cannot be destroyed. It was only human ignorance of Life that suffered, and from this delusion Lazarus had to be awaked.

Understanding brings the light as to what constitutes God's work. He is light to the darkness, whether the dark-

Digitized by Google

ness recognizes it or not. The practical application of Christian Science has no foolisl exhibitions, but demands individuality in demonstration as well as in understanding. Jesus' understanding of the Divine power to heal will never cure our ills unless we also understand the healing Principle. Understanding shows the true and only sign of Christ's coming. Those who are worthy alone find understanding, and this is a law of justice. All will at the right stage of spiritual, mental, and moral development come into the understanding of good, but at present we find that "an evil and adulterous generation seeketh after a sign; and there shall no sign be given to it."

Christian Science is ready with the answer to Pilate's question, "What is truth?" Whether or not it teaches "the way of God in truth" can only be decided by each of us, as we understand what Christian Science is. This understanding is always subjected to the practical test; namely, in "signs following."

Ignorance is blind, but understanding is intelligent sight dwelling upon the good. "Surely in vain the net is spread in the sight of any bird." Our understanding destroys the snares of evil, whether in its direct attack or the more subtle allurings of temptation; deprives it of its sting, and the evil is seen to be powerless. Understanding, then, is the key to universal salvation from the flesh.

A false sense, or blind faith in "the way, the truth, and the life" will never aid us in doing good. Only by understanding the scientific reason for every act and word of Jesus can we follow after him and know the Christ.

Faith without works may induce a pleasant sense of possible salvation from evil, but it is understanding that enables us to enter in at the narrow gate. To have life eternal we must *know* God. True understanding is spiritual and never material, for it deals with Spirit, God and His creation, but never with matter. It is not necessary to know evil in order to be "broad" in thought, for evil always limits and tends to destroy, while the true way is without limit in all good things.

A realization of our God-given rights comes alone through understanding and never through death, human doctrines, or mortal mind intellectuality. Our Leader says, "Understanding is a quality of God, a quality which separates Christian Science from supposition,—which makes Truth final" (Science and Health, p. 506). Understanding is the pearl of great price. All depends upon it. We talk of humility, but can we be humble unless we understand how to be? The same holds good regarding honesty, purity, meekness, and moral strength, which is the strength of Spirit rather than of matter. We cannot have perpetual health unless we understand how to obtain and retain it; neither can we retain in realization the kingdom of heaven without the understanding of God's allness to protect our rights against the thief who would steal our crown. The Scriptures inform us that "The Lord by wisdom hath founded the earth; by understanding hath he established the heavens." In short, to live a strictly scientific life we must understand how to do so. Unless we have the understanding we have but the semblance which stands no practical test.

We may believe that Truth heals under favorable conditions, but it is understanding that sees the healing done under all conditions.

We often hear the remark, "Come to our meetings, for you will find them interesting and helpful, and then go to a practitioner." But should we not say, "Come to our meetings and be healed, for the word of God is read there, and Truth does heal"? Here we may express our understanding of law and the fact, instead of a promise of that fact.

What we need is more understanding to comprehend our Master's teachings, understanding to follow more closely and more unselfishly our Leader's loving steps, understanding to love our brother and thus to prove that we are the lawful sons and daughters of God.

Spiritual understanding is not the weapon of malice but the sword of Spirit to destroy materialism in this and every age. Then cometh peace after the well-won fight, for the Master's hand is seen in it all. The sword then is rightly put aside for the olive branch, but never before absolute understanding or realization of good is attained. "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding. Exalt her, and she shall promote thee: she shall bring thee to honor, when thou dost embrace her. She shall give to thine head an ornament of grace: a crown of glory shall she deliver to thee."

Gardening.

ELMA E. WILLIAMS.

In a small village in the middle west live two retired farmers. Each has his comfortable home, with ample grounds and large garden, and the contrast between their methods of gardening is suggestive.

As soon as the first indications of spring appear, one begins his preparations, selecting his seed, sharpening his tools, etc., and from the time the seed is sown until the vegetables are stored, he is always at work. He works both faithfully and systematically, and as a result reaps abundantly for his labor.

The other works, yes, works hard, but with odds against him, for too often he waits "a more convenient season" to plow and to hoe, to sow and to weed. He often grumbles at the smallness of his crop, and when he has gathered it he leaves the ground covered with the signs of "what has been," offering as an excuse for his slovenliness that "the birds need something for winter." The successful man, on the contrary, clears off his ground and burns up the refuse, thus saving himself extra work later on, and also making his place a more attractive spot, while out of his abundance he scatters from his barn door grain for the birds.

As Christian Scientists working in the garden of mentality, which man's methods are we following? The majority of us have come to Christian Science with a soil already filled with the weeds of malice, fear, self-will, poverty, and kindred errors; and when the seed of Truth is first sown in such a soil, it seems as though it could not possibly find room to grow. It requires patient and persistent labor on our part to remove the erroneous beliefs, which, left to themselves, would choke the tender ideas of Truth and Love, and hinder their development. It is our work to prepare the soil, and it must be thoroughly done.

In proportion as our fields become fit for the seed of Truth, the weeds disappear, for they find neither place nor nourishment in the soil of a renewed heart.

We have as our guides in this work the Bible, our textbook "Science and Health with Key to the Scriptures," and the other writings of our Leader, together with our periodicals, which constantly uncover to us some unseen weed, some latent error, so that we may uproot it before it gets a "start."

On page 457 of Science and Health we read, "Christian Science is not an exception to the general rule, that there is no excellence without labor in a direct line. One cannot scatter his fire, and at the same time defeat the enemy. To pursue other vocations, and advance rapidly in the demonstration of this Science, is not possible."

It is not pleasant to pull weeds under a burning sun, and the one way to avoid it is to rise and work in the cool of the morning, and thus keep the soil so stirred with alert endeavor, that the noxious things cannot spring up.

The gardener must also protect his garden by removing the pests which would destroy the harvests. Perhaps the most common of these are discouragement, disappointment,

Digitized by Google

and loquacity about error. These and many other things are to be destroyed by the declarations of Truth and Love.

"The discoverer of Christian Science finds the path less wearisome when she has the high goal always before her thoughts, than when she only counts her bleeding footsteps in reaching that goal" (Science and Health, p. 426).

Personal experience bears testimony that if one can become absorbed in planting and cultivating the seedlings of Truth, he will be much surprised some day to find that the weeds have all disappeared.

When the harvest is gathered, the demonstration made, we must be just as careful as is the gardener to go over the ground and destroy every remaining manifestation of error, so that there may be nothing left to impede the next season's growth, to retard our next demonstration.

We thus see that the thrifty farmer is thoughtful; he selects good seed, he prepares the soil, he nourishes the growing plants, and he destroys the weeds. These are the steps by which he wins his harvest, and our progress and success in Christian Science are to be attained by the same thoughtfulness, industry, and persistence. We cannot sow too abundantly the seeds of charity, humility, perseverance, and faith. Such seed, watered with love to God and to man, cannot fail to bring forth fruit unto life everlasting.

Vacation Thoughts.

S. F. S.

WHEN last I went away on a vacation there was a great sense of freedom, for I determined to leave every care or responsibility behind and have a complete change. On attending the church services the thought came, how beautiful it was to have nothing to do but enjoy the Lesson-Sermon, with no responsibility in regard to anything. Then the habit of examining my thought made me question this one, and I found just what each member of a Christian Science congregation can do to help the Cause at each service. I knew that the great truth which the Lesson-Sermon contains must be so spiritually understood and grasped by each, that he may aid in the united demonstration of that truth which would thus go forth with power to overcome sickness, sin, and death in all lands in which this Gospel is proclaimed. I saw that no one could be careless or inattentive without marring that demonstration, and without himself losing the help and healing which the lesson brings. I knew that no weariness accompanied this carefully guarded thought, because, as our text-book says, "The highest and sweetest rest, even from a human standpoint, is in holy work" (Science and Health, p. 520).

I found many ways in which to proclaim the glad tidings, and saw, more than ever before, that there is but one business for a Christian Scientist, even as Jesus said, "Wist ye not that I must be about my Father's business?" So we, to whom the understanding of Truth has been given in Christian Science, must be about our Father's business, no matter what we do or where we go. Thus, instead of having rest or recreation, my trip was turned into a sort of missionary tour, which gave an opportunity to reach and help some who seemed to be yet a great way off from heaven or harmony, besides giving me a more practical understanding of our Leader's words in the new Manual, p. 46: "A Christian Scientist is not fatigued by prayer, by reading the Scriptures or the Christian Science text-book. Amusement, or idleness, is weariness. Truth and Love rest the weary and heavy laden."

Love is a daily thought
Sweet in the holding;
God's child is lovely then
In its unfolding.

M. K.

Selected Articles.

Premise Precedes Conclusion.

As in every logical statement, premise must precede conclusion in the teaching of Christian Science.

Recently I have been much impressed with the peculiar manner in which critics undertake to state this Science, by emphasizing its conclusions, not even mentioning its Principle; thus indicating their mis-information on the subject. For example, one lately said, "The basic teaching of Christian Science is that there is no matter," when in fact this abstract statement is a rather remote conclusion which is neither understood nor acceptable to the individual unless he first has some knowledge of the premise upon which it is based. Moreover, such a conception is offensive to all thinking people, and, when presented as a first lesson in Science, it prejudices the student, and hinders his acceptance of the truth. Even a Christian Scientist would stumble over this lesson if he were not previously prepared for it.

The statement, "there is no matter," standing alone and independent of any qualification, seems to mean that everything that we see,—the entire creation,—is non-existent, while in truth Christian Science teaches that all things, from the least to the greatest, are real, though not what they seem to the peculiar sense of those who have not yet learned to perceive them as God made them and as they really are.

The premise of Christian Science is stated in the answer to the first question contained in the chapter "Recapitulation" in the Christian Science text-book; namely, "What is God?"

When we understand that God is Spirit, Truth, Love, and that man is made in His image and likeness, and, therefore, is spiritual, we can readily endorse the conclusion that He is not material. Also, when we understand that Spirit is the only First Cause, and creates all things after His kind, and that, therefore, the entire universe is spiritual, we can readily endorse the teaching that it is not matter; in other words, that there is no matter in the universe.

When we are correctly informed as to what God's creation is we can understand what it is not. We are unable to make the proper distinction between truth and error until we first understand truth.

When we understand that Spirit is really substance and "pervades all space" (Science and Health, p. 78), is infinite and everywhere present, we can admit that there is no other real substance. If a pupil fails to comprehend the teaching of this Science regarding matter, our proper course is to enlarge his understanding of Spirit, God.

We have no conscientious scruples in our strenuous denials of power and place to error when, through our understanding of true cause, we discover that we thus rightly honor God.

We all agree that sense testimony to a very large extent, if not altogether, is unreliable. Christian Science draws the line as emphatically between truth and error as does mathematics; and the question is not what seems to be, but what is.

ALFRED FARLOW.
Boston Times.

Great reforms will come about in God's own way, in a perfectly natural order. What is this order? With those who are now interested in Christian Science it came about in this manner: When sick, almost every material means known to the patient, or within his reach, had been tried and failed. As a last resort, Christian Science was given a trial, and as a general rule with less faith in its efficacy to heal than he had in drugs, and yet when this Science was demonstrated he was restored to health. It is perfectly natural when such results have been achieved, if the patient is a parent, he would want this same treatment for other

Digitized by Google

members of his family. Not only has this treatment resulted in bettering the condition physically, but in almost every instance it has resulted in awakening the patient to a spiritual life, awakening an interest in the Bible, and establishing greater trust in God, good.

So charitable are Christian Scientists that if they were in the majority and had it in their power to compel those who believe in *materia medica* to take Christian Science treatment they would not do so. They believe in letting God govern all people, for when they tire and become weary of the material, they will turn to God for help, even as the flower turns to the light. Living in this Christian attitude the Christian Scientist is not at war with *materia medica*, but is only patiently waiting for all mankind to come in possession of the Mind that was manifest in Christ.

LLOYD B. COATE.
Dayton (O.) *Herald.*

A religion that bears fruit in the lives of its adherents is one which the world pre-eminently needs. If it can be said of the Christian Scientist that he is a reliable business man, a good husband, and a public-spirited citizen, then the country owes to the tenets of his religion some thanks for the benefits he has conferred upon the community. In this twentieth century, the vast increase of population of the globe is emphasizing the urgent need of universal brotherhood and a better understanding of how to develop the latent resources of the earth through national and international co-operation. Commercial relations have probably done more to bring this into effect in recent years than has either religion or education. We believe, however, that if the lives of Christian Scientists embody the teachings and example of their Leader, the Rev. Mary Baker G. Eddy, this much desired consummation will be gradually approximated, and an impulse will be given to the cause of Christianity such as it has never before received since the commencement of the Christian era. RICHARD P. VERRALL.
New York Sun.

Luke wrote one of the Gospels and the Acts of the Apostles, the first history of Christianity, and yet he does not record one word from Jesus or the apostles favorable to medicine. It is well that Luke wrote so much of the New Testament; because a doctor would not have omitted any word or act of Jesus or the apostles that could be construed in favor of medical practice. When Eutychus fell out of the third story window it was Paul and not Luke who healed him. Luke also records the case of the "woman having an issue of blood twelve years, which had spent all her living upon physicians, neither could be healed of any, came behind him, and touched the border of his garment: and immediately her issue of blood stanched."

To-day in all our great cities may be found physicians who have given up the practice of medicine, and who are now practising Christian Science healing, so that we can readily understand how Luke left medicine and followed Christ's way of healing the sick and reforming sinners.

WILLIAM H. JENNINGS.
Omaha (Neb.) *World-Herald.*

Christian Science does not tell people to heal themselves. It heals them, and then equips them with an understanding which enables them thereafter to help themselves. Is not this what Jesus did when he healed the sick and sent them away with the warning, "Sin no more, lest a worse thing come unto thee"? The most efficient sympathy, I take it, is not the sentimental type, which does nobody any good, but the healthy, sensible sympathy which separates a man from the circumstances needing sympathy; in other words, the sympathy which heals. WILLARD S. MATTOX.
Waterbury (Conn.) *American.*

The Lectures.

Tiffin, O.

Bicknell Young of Chicago, delivered a lecture on Christian Science, Tuesday evening, April 26, in Boos' Hall in this city, before a large and representative audience. The speaker was introduced by Judge J. C. Royer in the following language:—

Ladies and Gentlemen:—I am not a Christian Scientist. I know nothing about its teachings or its doctrines; but I know its aims and purposes are high and lofty, and that it is Christian. Truth existed before we came. It is coeval with time. Truth will be when we go,—it will exist for all time to come. The search after truth is the noblest thing to which we can devote our minds, and I am glad indeed to see so many of the people of Tiffin here to-night in search after truth. From an investigation after truth no one needs to fly.—*Correspondence.*

Needham, Mass.

When the time arrived for opening the meeting at Town Hall last Monday evening [April 18], a great audience had assembled and all the seats on the floor were occupied. The speaker, Judge Septimus J. Hanna, was accompanied to the platform by George E. Mitchell, who introduced him to the audience and spoke in part as follows:—

I can remember when different sects or denominations were not as tolerant of each other as they are now, when people generally thought that in order to reach heaven one must go by their particular road. Now it is admitted by most people that there are different starting-points, and we read in the Revelation of St. John that there were twelve gates to the Holy City. Which one will swing open to the members of any particular society or branch of God's Church, we have no means of knowing. Certain it is, there are many varieties of belief, and probably no two members of any denomination believe exactly alike on all points. Some believe that heaven comes down to us if we are in the right spirit. It is not strange, then, that, with these various opinions, we should segregate into factions or denominations, with which most people are directly or indirectly connected.

The Needham Chronicle.

Riverside, Cal.

The announcement that Edward A. Kimball of Chicago was to lecture yesterday [April 17] at the Loring on the subject of Christian Science, drew a large and a very attentive audience to listen to him. Many came because they were *en rapport* with the speaker on the subject, and wished to learn further, while others came from general interest or from curiosity, but it was an audience that paid the strictest attention to what the speaker was saying from the first till the last word. Attorney W. A. Purington, on behalf of Second Church of Christ, Scientist, introduced the speaker.

The Riverside Enterprise.

Mr. Purington in his introduction spoke in part as follows:—

One of the most striking phenomena in the religious world during the last twenty years has been the rapid growth of Christian Science. From a small and insignificant church or society centered about its Founder, its followers are now found in nearly every part of the United States and in many parts of Europe. Hardly less remarkable than its rapid growth, is the character of its membership. Men and women who were Baptists, Congregationalists, Methodists, Presbyterians, Jews, Catholics, and of no faith at all have been attracted to this new gospel and become its zealous supporters. How is it that men and women of such diverse training, environment, and

Digitized by Google

traditions have been drawn to this new faith and become enthusiastic co-workers therein? How is it that men and women of more than average ability, and many of them persons of brilliant intellectual attainments have been willing to devote so large a part of their time and life in promoting its growth and culture? Perhaps the speaker of this afternoon will answer these questions.

A short time ago, my attention was attracted to a man here in Riverside who was born in Germany, was born and raised a Jew. He afterwards came to this country and became an agnostic, and had no faith in God or future existence. Somehow Christian Scientists here succeeded in interesting him in the subject of Christian Science. From disbelief in the Bible he became a believer therein and came to have faith in a future and higher existence. He now spends a portion of each evening with his wife in studying the New Testament and the life of Christ. For this man, with his early environment and the traditions and prejudices of a Jew to turn about and become a believer in, and a student of the New Testament, and a believer in Jesus Christ, and to regard with respect what he before regarded with contempt, and this at nearly the age of sixty, is a phenomenon to challenge the attention of all classes, believers and disbelievers.

You might well say, "A religion or faith that can do this deserves respect." What honest men and women want to know is the truth. I have seen persons who seemed to care more for their particular "ism" than for the truth. I have seen persons who would even appear willing to suppress the truth to support their particular dogma. I have no patience with such persons. What I want to know is the truth. If there is a truth in Christian Science that I do not now know, I want to know that truth. The truth is the great object of discovery in the religious as in the scientific world. If Christian Science has anything to offer me better than the church to which I now belong offers, I want it.

"He Calleth Thee."

LAURA DUNBAR HAGARTY.

In blindness dost thou sit beside the way?
And dost thou fear?
With love divine, e'en as of old,
Thy Lord draws near.

The Way, the Truth, the Life, dost thou
Desire to see?
"Be of good comfort; rise;
He calleth thee."

Thy garment cast aside; arise;
Come near the light,
The voice of Love divine *now* cries,
"Receive thy sight."

O vision blest, the Lord to see!
O Light Divine,
Shine out with Love's infinity,
Forever shine.

Among the Churches.

Growth in San Bernardino, Cal.

Being crowded from one hall to another our small congregation has finally purchased a church formerly owned by the Christian Church, and located in a desirable part of the city. The conditions of payment are so favorable that we are confident we shall be able to meet all demands.

Truth and harmony prevail, and much encouragement comes to us in view of the increasing attendance and the kindly aid we are receiving.

Our first public lecture delivered by Mr. Edward A. Kimball, was very successful, and we are sure it will disabuse the minds of many of prejudice and misjudgment concerning the Christ-truth. Mr. Kimball was fittingly introduced by Mr. Cramer B. Morris, one of our leading attorneys.—ANNA GYGER PIERCE, *Clerk.*

Prison Work in Portland, Me.

The following account has been received of the work done in the Portland, Me., jail. The helpful news is given in a letter to a friend, as follows:—

"You very kindly wrote to me—perhaps in November—in regard to work in jails. You were so good as to say that you would like to hear of our success. I am glad to tell you that we have been received most courteously and cordially, not only by the wardens, but by the prisoners. Twice we have been allowed to hold services on Sunday. We are hoping for future chances, but the Sundays seem to be claimed by various people. Some of the prisoners actually wrote and signed a petition to the authorities, asking that the Christian Scientists be allowed to hold services. I think that they were struck by the lack of condemnation in our thought toward them. The regular Lesson was given to them as to any one else, and they were cordially invited to come to our hall for services, and to our reading room after their discharge. There has been private conversation with many of them, and treatments have been given. The wardens open the doors freely to us,—urge us to come,—say that we do good. Indeed, one of the turnkeys has several times been to our Wednesday services. We are now thinking that some sort of Prison Association may be formed in our city. The great trouble is the total lack of work when the men come out of jail. This should be changed; in what way we cannot quite see, but we are working to find a remedy."

Wilmington, Del.

The following extract from the annual report of First Church of Christ, Scientist, Wilmington, Del., shows encouraging and healthy growth.

Foremost in our work we note that there have been many cases of healing through Christian Science in our midst, several of them being worthy of special record. Those who have been healed are enthusiastic attendants at our church services.

Of interest to all is the growth of the church, as manifested both by the enlarged and broader view of life which is noticeable among our members, as well as by the actual numerical growth made during the past year. Our membership has increased thirty-eight per cent during the year just closed, and the names on our roll now number more than double what they did when the church was incorporated two years ago.

Our membership having thus rapidly increased, we found it necessary to cast about for a new and larger church building in which to hold our meetings, and a desirable lot has been purchased with a view to building.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Mental Murderers.

THEIR published boast, in 1903, that Mary Baker G. Eddy would never again meet with her church is not fulfilled. She deems it wise for her church not to visit her home at each Communion season. Also, the less ceremony we include in our worship the better. Hence I hereby notify my beloved brethren that I shall not attend the church dedications, but, as usual, remain at home working and praying for the prosperity of Zion.

The mental assassins are in God's hands, and He will uncover their *crimes*, and punish them in His own good time and way. Let us obey Jesus' command, to bless our enemies, and do good to them that despitefully use us.

MARY B. G. EDDY.

Pleasant View, Concord, N. H., June 7, 1904.

A Generous Gift.

THE following letters relate to another splendid gift to our Leader for the branch church in her home city. The great interest of the Field in this church has found expression in many gifts, and Mrs. Eddy's letters of acknowledgment have shown warm appreciation of the loving regard manifested by the donors.

LETTER TO MRS. EDDY.

First Church of Christ, Scientist, New York City.
May 27, 1904.

To the Reverend Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—Through you, the windows of heaven have been opened to us, and blessings have been poured out so that there is not room enough to receive them. (Malachi, 3 : 10.)

We rejoice in the opportunity of expressing, in part, our gratitude, through the gift of the two stained-glass windows which this Church had the privilege of ordering in February last for First Church of Christ, Scientist, Concord, New Hampshire, and which are approaching completion. We now have the pleasure of handing you draft for their cost.

They typify your pure spiritual perception, through which "the sunshine of Truth" (Science and Health, p. 299) reveals the real Church, the expression of eternal Life and power, "the worship of God in spirit and in truth," the manifestation of the Christ idea.

It is an honor to be represented in the edifice so near to you, and so dear to your heart, and to let our offering speak of the love that unites us indissolubly to her who has filled our treasuries with priceless gems of immortal thought.

Lovingly and loyally yours,

E. F. HATFIELD, *Chairman of Trustees,*
First Church of Christ, Scientist, New York City.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., June 1, 1904.
First Church of Christ, Scientist, New York City.

Beloved Brethren:—I beg to thank the dear brethren of this church for the sum of $10.000 presented to me for First Church of Christ, Scientist, in Concord, N. H. Goodness never fails to receive its reward, for it makes life a blessing. As an active portion of one stupendous whole, goodness identifies man with universal good. Thus may each member of this church rise above the oft repeated inquiry, What am I? to the scientific response,—I am able to impart truth, health, and happiness, and this is my Rock of salvation and my reason for existing.

Human reason gets tired and calls for rest, it has a relapse into the common hope. Goodness and benevolence never tire, they maintain themselves and others and never stop from pure exhaustion. He who is afraid of being too generous has lost the power of being magnanimous. The best man or woman is the most unselfed. God grant that this church is rapidly nearing the maximum of might—the means that builds to the heavens, that has indeed found and felt the infinite Source wherein is *all,* and wherefrom to help its neighbor. Then efforts to be great will never end in anarchy but continue with divine approbation. It is insincerity and a half persuaded faith that fail to succeed, and fall to the earth.

Religions may waste away, but the fittest survives; and so long as we have the right ideal, life is worth living and God takes care of it.

Lovingly yours,

MARY B. G. EDDY.

Christian Science and Surgery.

WITHIN the past few months we have received many testimonies substantiating the healing of broken bones and speedy recovery from the results of various accidents, and while our limited space has not permitted the publication of all these cases, we have given enough to prove the truth of our Leader's words, "Christian Science is always the most skilful surgeon" (Science and Health, p. 402). The fact that one such testimony, recently published in the *Sentinel,* has called out a half column of editorial ridicule in a New York daily, fulfils the prophecy contained in the balance of the sentence just quoted; viz., "but surgery is the branch of its healing which will be last acknowledged," and without doubt this knowledge of the reluctance on the part of the public to acknowledge the healing power of infinite Mind was one of the reasons which caused Mrs. Eddy to write, "Until the advancing age admits the efficacy and supremacy of Mind, it is better to leave surgery, and the adjustment of broken bones and dislocations to the fingers of a surgeon, while you confine yourself chiefly to mental reconstruction and the prevention of inflammation" (Science and Health, p. 401).

The testimony referred to is that of Mr. William C. Preé, a well-known lawyer in Boston, which appeared in the *Sentinel* of May 21. It was written January 12 of this year, and tells of Mr. Preé's condition on that date.

The following letter, dated June 4, gives additional information about this interesting case, and shows that Mr. Preé is even more of a beneficiary of Christian Science treatment than was disclosed by his first letter. M.

633 Tremont Building, Boston, June 4, 1904.

Mr. Archibald McLellan, *Editor.*

My Dear Sir:—I have your request for a corroboration of my testimonial which appeared in the *Christian Science Sentinel* of May 21, together with any additional facts which I might desire to relate.

I note that the New York editor's criticism of my story is based upon the admission that I declined to employ a surgeon, and that the foot is not as yet entirely straight.

For the benefit of those readers who may not have seen my former article, let me state briefly that while out bicycle riding I was run over by a heavy carriage (barouche I think it is called), and my right foot crushed so that two

Digitized by Google

bones were broken. As I stated in my former story, I was very young in Christian Science and perhaps had rather more zeal than discretion, and therefore refused to have a surgeon to set the broken bones. This I have since learned was out of the usual practice of Christian Science, and disregards Mrs. Eddy's caution that a broken bone should be replaced by a surgeon and the case then placed in the care of a Scientist. My faith was strong and I was anxious to have a result which was entirely dependent upon the Divine power. I may have taken some risk, but my faith was not misplaced and the results are as I have related. Now that the whole experience has been so vividly recalled to my recollection, I distinctly remember that when I first raised the question as to whether I had better send for a surgeon, the practitioner replied, "Yes, certainly, if you wish it; but hadn't you better lie down and rest for half an hour or so, and in the mean time I will work for you." This I did, and it was then that I fell asleep and slept for over two hours, and when I awoke I settled for myself the question of having a surgeon by absolutely refusing to send for one.

It will doubtless interest you and your readers to know that since sending my testimonial to the *Sentinel* (which was in January, although not published until May), the foot which I then said was not altogether straight is now very much improved, and I feel sure will eventually be again entirely straight and normal.

Sincerely yours,
WILLIAM C. PREE.

"Wisdom is Justified of her Children."

IT is an aphorism of the business world that it pays to follow the line of least resistance, and the practical wisdom of the proposition strongly commends it. To achieve a desired end with the expenditure of the least possible time, effort, and trouble seems to be equally good philosophy and good common sense, whether in the field of ethics or economics; and if our discernment has become adequate to the guidance of our impulse, and if we have reached an effective understanding that "success in error is defeat in Truth" (Science and Health, p. 239), then this dictum may indeed run and be glorified, for it is applicable to the widest and noblest range of endeavor.

It is manifest, however, that we cannot safely commit ourselves to the government of a law, the significance of whose terms we do not clearly comprehend, and the issue in this instance, therefore, will be determined by our understanding of this word "resistance," our realization of what it is that opposes our every worthy undertaking. Herein lies the need of constant thoughtfulness and illumined perception; for from the day of Eve's downfall until now, humanity has been sadly fooled regarding the things which help or hinder spiritual progress.

We are tempted assiduously to determine the line of least resistance by considerations for personal ease and creature comfort. The love of laziness and the love of luxury are the twin sirens whose united charms have lured many a well-meaning voyager from his course, and their appeal is still very winsome and seductive to human sense, but he who heeds their call learns in due season and through painful experience that his chosen line of sense satisfaction in doing, makes a gigantic angle with the line of wisdom and of true advance.

The mathematician knows well that but one thing can save him from the possible mistakes which crowd the field of his involved calculations; namely, a constant adherence to the basic law and rule of numbers. A single forgetfulness of the mandate of the multiplication table insures his failure, and therefore his every step must be a knowing of demonstrable truth; and, following this highway, nothing can separate him from his goal. This is illustrative of the faithfulness to Principle which counts, in spiritual things, and which made it possible for our Leader to write, "I saw before me the awful conflict, the Red Sea, and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science" (Science and Health, p. 226).

Every follower of Christ Jesus must come to know that the line of least resistance is that in which our progress is opposed *only* by the sense of error; seeing this we shall also see that nothing but a constant discrimination between truth and error on the basis of practical demonstration will make it possible for us to hold our true course amid the surging currents and shifting winds of this life's tumultuous sea.

For him to whom error is uncovered, the *only* path is the line of least resistance, since he knows that error's mightiest and most threatening aggregations are dispelled by Truth, as are the shadows by light. W.

Man and Woman.

"From the beginning of the creation God made them male and female. . . . What therefore God hath joined together, let not man put asunder."—JESUS.

ONE of the first lessons learned in Christian Science is that the spiritual sense of being is, in every particular, the opposite of the material. Science reverses the false concept of man's relation to God and to his fellow-man. Respecting this relationship to God and to each other which truth brings to men, we may say, "it doth not yet appear," but of this we are sure, that whatever comes from God, will bring only help, happiness, strength, and, above all, freedom, —a condition indispensable to spiritual and intellectual growth. When shadows fall across our path, when human affection fails to sustain or inspire, or worse, when through ignorance or selfishness it even becomes a constant menace to happiness, we may think upon Jesus' words: "From the beginning it was not so," respecting the thought of which our Leader has said, "Sometime we shall learn how Spirit, the great architect, has created men and women in Science" (Science and Health, p. 68).

The recent By-law, "Church Organizations Ample," ought to set us all thinking as to how we can most effectively meet the demand of the hour. We have had glimpses, even in the midst of confessedly imperfect conditions, of the possibility of pure and uplifting intercourse between the sexes, and we have the example of Christ Jesus, who drew to him men and women alike by the all-compelling attraction of his spirituality. To every man there is always a sacred circle which holds for him his mother, sister, possibly a wife and daughter. He tolerates no invasion of this precinct by profane intruders, which is well; but does he himself always take off his shoes when he approaches the sacred domain? If so, it will become an ever-widening circle, which must at length include all women, of whom he will come to think as the daughters of his Father-Mother God, whatever be their rank, station, or experience.

A man once said that men are far kinder to women than are they to men, and for the reason that men demand of women goodness and purity, while women tolerate a lower standard. He was informed that in Christian Science there is but one standard,—that of the Christ,—and that obedience to its requirements can only be reached by the understanding of the one Mind, since "the carnal mind" is "not subject to the law of God, neither indeed can be." The time has now come when woman can go among her brother men with the Christ message of deliverance from the thraldom of the senses, from sin and suffering, and for this priceless gift she will receive that gratitude and reverence which to the true woman is more precious than all the jewels in earth's diadems.

An old-time clergyman once said to a young Christian Scientist, that he thought it dreadful for a woman to be at the head of this movement, and for so many women to

Digitized by Google

be ministers in it. The young lady replied that it did seem "dreadful" that after so many years of the ministry of men alone, women should have to take up the work of healing the sick and the sinful just where our Lord left it. He was so startled at the apparent audacity of the response, that he was led to look into our text-book, with the result that in a short time he was proud to be called a follower of our Leader.

In the light of Christian Science we see before us a glorious future wherein we shall know each other even as we are known of our Father, and in our united effort for good it were well to remember the vow of the knights of old:—

To break the heathen and uphold the Christ,
To ride abroad redressing human wrongs,
To speak no slander, no, nor listen to it,
To live sweet lives in purest chastity.

K.

Letters to our Leader.

Norfolk, Va., May 24, 1904.

Rev. Mary Baker Eddy, Concord, N. H.

Beloved Leader:—First Church of Christ, Scientist, recently assembled in Annual Meeting to hear reports of the past year's work, and to elect officers for the ensuing year.

The meeting was opened with the singing of your beloved hymn, "Shepherd, show me how to go," and proceeded in regular order.

The reports were most gratifying, and were received with joyous enthusiasm. Each report showed substantial progress.

We are glad to tell you, also, that the utmost harmony prevailed in our meeting, all being apparently of "one accord in one place."

Feeling that we have so much to be grateful for, we, therefore, in Annual Meeting assembled, earnestly desire to express, so far as language is adequate, our gratitude to you for all the good that has come to us and to the world through your labor and love, and especially for our text-book, Science and Health, the richest of all the rich gifts to this age. We are sensible of the immense sacrifice that you have made, and continue to make, and we appreciate that your work has never been for yourself, but always for the release of sin-sick and suffering humanity.

We are deeply grateful to God for the revelation of Christian Science, and for our blessed Leader, the Revelator; for we know that it is His Word, through His obedient servant, calling us "out of darkness into His marvelous light."

God grant that we may grow each day in grace; that our lives may be characterized by patience, meekness, and love, and that our works may prove our words.

Lovingly yours,
FIRST CHURCH OF CHRIST, SCIENTIST.
By Board of Directors,
J. C. BATTS, *Chairman.*
GEO. H. BARRETT, *First Reader.*
FANNIE H. BATTS, *Second Reader.*
R. E. PRINCE, *Church Clerk.*

Redford, Ockley, Surrey, England, May 16.

Beloved Leader:—Last week brought me a *Sentinel* and a newspaper with your compliments. It was a joy to read of the Wednesday evening service at the church in Denver. I fancied I saw all that took place on that peaceful occasion. The description of the service and the harmony pervading it brought a feeling of "rest in God" even at such a distance.

I feel I do want to tell you what Christian Science has been to my beloved son, now gone from me on earth, but nearer than ever in Truth. From the time my dear son visited you at Pleasant View, his chief thought was Christian Science. He knew, and said to me one day, that Christian Science is all there is in the world. I feel sure that the daily Christianization of thought in the study of your great work, Science and Health, and your other works, brought to him the only realization of happiness he felt. He left this vale of tears with an earnest longing for higher and better things, and with a love for you, dear Mrs. Eddy, for all you had done for him and for the world, which my words cannot express. For me, this blessed teaching has been my very life. I have been carried over the troubled sea of grief. I feel the daily help given to all who seek. I know infinite Love is all around and about my darlings, and that there is no separation in Love.

God bless and keep you, and lift from you all trouble, beloved Teacher and friend.

Affectionately yours,
(LADY) H. ABINGER.

Chicago, Ill., June 1, 1904.

Rev. Mary Baker Eddy, Pleasant View, Concord, N. H.

Beloved Leader:—Out of my gratitude for Christian Science and what it has taught me of the Life and Love divine, I am prompted to send you this letter.

From the dream in which everything appeared mortal and finite, Christian Science has awakened me to some understanding of the realities and possibilities of the immortal and infinite, and I desire to acknowledge gratefully the debt I owe you for this awakening.

The Bible, and our text-book which is enabling humanity to hear the message the Bible contains, have become my constant and my dearest companions, and they are leading me to lean upon and to trust my heavenly Father as I never before dreamed of doing.

The thought of what you have been able to accomplish by "trusting Truth," by an uncompromising insistence upon the supremacy of good, and by your unselfish and untiring labor of love for the benefit of others, has been, and is, a mighty inspiration to me. I rejoice to follow such a Leader, and I rejoice at every indication of the progress of our beloved Cause, and earnestly desire to be found faithful and obedient. Sincerely and lovingly,

OSCAR E. FLINT.

Chicago, May 31, 1904.

Dear Mrs. Eddy:—I am prompted to write you at this time to declare that I am one among the many thousands of Christian Scientists who have hailed, with obedience and with joy, the by-law entitled, "Church Organizations Ample." You foresee what is before us as a heavenward marching band, and the mobilization of God's children under a single banner at this time, is an indication pregnant with significance and expectation. "He that hath an ear to hear," has heard, and is ready, knowing what he is standing for and against, hence his eyes also see.

May the knowledge of His dear Son ever light your ascending path. With great love,

W. A. REED.

The World's Fair, St. Louis.

THE exhibit of The Christian Science Publishing Society at the World's Fair in St. Louis is in charge of a competent attendant who will take pleasure in answering inquiries about the official literature of the denomination.

The exhibit includes all the published writings of Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, as well as the publications of the Society. The official designation of the space occupied is Lot 20 A, Aisle 1, Liberal Arts Building.

Testimonies of Healing.

My heart is filled with gratitude for the help which Christian Science has been to me in every way, and I must express it. It is just two years since I first heard what Christian Science really is,—the religion of Jesus Christ. Before that, I had seen only the slighting remarks about Christian Scientists and our dear Leader in the daily papers, so I was as ready as any one to judge unrighteous judgment. The first testimony I ever heard of the healing work of Christian Science, was from a cousin, who had been healed in one treatment of life-long constipation, after having tried many doctors and medicines, for years. She was also healed of rupture later on.

I seemed to be very weary and heavy laden, and so determined to see a practitioner as soon as we returned to Boston. Our little traveling party consisted of my mother, my little two-year-old son, and myself. My mother was taken violently ill on the steamer going to Maine, and was under the doctor's care and in bed during our entire stay of about two weeks. That time seems like a nightmare. It was only by exerting all my will-power, that I was able to do what I had to do to wait on her and the baby, as I had felt myself, and been looked upon by others as a semi-invalid for several years,—a result of five months spent in bed with nervous prostration. I seemed to have no strength to speak of, and an almost constant pain, and I had suffered for years with constipation, which was supposed to be hereditary. I had also been a victim of chronic bronchitis and sore throat. I had suffered from many attacks of grip, and had worn glasses constantly, for over eight years, for inflammation of the optic nerve and partial destruction of sight. Even with the glasses on, I suffered greatly with my eyes, and traveling and sight-seeing gave me very little pleasure. Looking out of a car window or reading in a moving vehicle, had been prohibited; and disobedience, for only a few minutes, was followed by sharp pains.

When I was a small girl, my aim was to be a physician when I grew up, as there seemed to be so much trouble and suffering, and I thought there was but that one way of bringing even a little comfort or help to those who so much needed it. When this ambition was combated by members of the family, the profession of trained nurse was looked forward to. When about sixteen years of age, I tried to enter the New York Hospital on probation, so as to get the training for my life-work. Turned away because of my youth, I went to our family physician and begged him to help me get the training I wanted. He said that I was not strong enough and would never be able to do it. I cried bitterly, and felt that there was no chance for me to be of any use in the world. The suffering, care, anxiety, and want that were so apparent on all sides, and the frequent accidents and terrible disasters, made me often question, "Does the Bible really tell what God is? Jesus taught that He is Love, and the Scriptures declare that He made all and is all powerful. Either He is cruel and unmindful of the sufferings and struggles of His creatures, or He has started His creation going, like a big machine, and cannot interfere to save His children, for fear of spoiling the mechanism. He seems to be governed by the laws which He has made."

Any one can imagine my joy when I found that Jesus' teaching was for all time, for us as well as for those who heard his voice; and that there are people who *now* understand his instructions, in part at least, and who can do the work that he did and that he promised his followers should do.

When the Scientist told me this, and referred me to some of the many promises in the Bible, and the constant healing which Jesus did, I thought, "This is what I have been looking for since I was a small child. It seems reasonable to suppose that Jesus' life-work and supreme sacrifice should have had a more far-reaching influence than we have been taught to suppose. These people are proving their faith by their 'works.'" To be well and strong, and to be able to do the work which we all see our brothers so much need, is indeed worth the struggle we have to make to get out of our false sense of life. As many other testimonies have borne witness, we are all glad to receive the physical healing, but the spiritual uplifting, the understanding of the truth that makes free, is beyond words to express.

I neglected to say that three days after first taking treatment, I took off my glasses, which I had expected to wear always, and have not worn them since. One pair I took to the oculist to see if he would buy them from me. After being asked as to why I thought I never would need them again, the glasses were examined and I was told that any one who had that trouble never could be healed; but I am free, and I know it. My heart is now full of love for a God who is all-powerful good, and to Christ Jesus, who came to waken man from this dream of life and intelligence in matter, and to our revered Leader who was pure enough and humble enough to receive and give this Christian Science to a weary and suffering world. I also want to thank the practitioner who so lovingly led me out of darkness into the sunshine of divine Love.

MRS. H. H. S., Hastings-on-Hudson, N. Y.

It is the old story which I have to tell, and that is, how Christian Science has brought unnumbered blessings into my life; more than I can describe. One of the first benefits received was the complete healing of heart weakness, from which I had suffered all my life, having been encouraged in the belief that I had inherited it from my mother, who passed away in the night through heart failure on my birthday. The fear these attacks occasioned was very great, and this also has been removed.

Before hearing anything of Christian Science I had a very bad attack of gastritis, which lasted seven weeks. I was attended by a doctor, dieted, and sent to a hydropathic establishment to recover strength. I then looked so ill that friends who met me at the station thought I had gone there to die. Shortly after looking into Christian Science the same trouble attacked me sharply one Saturday. I declined the assistance of *materia medica*, proposed by my friends, and took ordinary food. I was a little alarmed on finding that the Scientist who had hitherto helped me was away from home, but I realized afterwards that this was the best thing that could have happened, as it made me work for myself to know the allness of God, good, and that there is no room for evil, since good fills all space and is all-powerful. On the strength of my implicit faith in this great truth I rose up and dressed myself, and, although complete recovery was not realized at once, the right thought soon resulted in health. Instead of seven weeks of suffering I was relieved in about forty-six hours, and had I worked rightly at first I need not have suffered at all; but the fear that my friends would execute their threat, and call in a doctor, roused me to activity.

The study of our text-book, Science and Health by Mrs. Eddy, is a constant source of comfort and inspiration, and as I read and work, much in it that formerly seemed to me to be contradictory becomes perfectly clear. I am not surprised when I hear people say they cannot understand Science and Health on the first reading, because it is a book that requires spiritual discernment. We must come to it with an open mind. Few of us are ready to give up our old beliefs. They seem part of ourselves, and we must be willing to be emptied even of these, however sacred we may hold them, that we may be filled with the right thoughts concerning God and ourselves. We must "taste and see that the Lord is good" before we can realize what perfect

Digitized by Google

peace Science brings into the lives of those who are willing to forsake all and follow in the light.

I have received much help from reading the *Sentinel* and *Journal*, which always encourage one to go on working fearlessly. I should therefore like to thank all our contributors for their kindly help through their beautiful articles and verses, knowing that good will be returned to them an hundredfold.—Miss J. Lax, London, England.

I wish to recount a few of the innumerable blessings that have come to me through Christian Science, and to thank the contributors to the *Sentinel* for the many helpful testimonies and articles they have given us through its columns.

In October, 1890, our family removed from Dubuque, Ia., to Colorado Springs, and at that time I had been afflicted for more than a year with a sense of confusion in the brain, which affected my memory and the nervous system so seriously that, so far as possible, I avoided visiting or receiving friends. The case baffled both our family physician and a specialist, and life became a burden to me. Our physician said I required a change, and that going to Colorado would probably cure me.

Soon after we arrived there, the complaint disappeared, and I supposed I was permanently cured; but the following spring (1891), it returned, and I consulted a doctor who treated me constantly during the summer. I did not improve, and having heard that glasses were sometimes beneficial in such cases, I finally asked the doctor if he did not think my eyes were affected. He replied that perhaps they were, and recommended an oculist, who told me that I had astigmatism, and supplied me with glasses, but no benefit resulted. The following winter I accompanied our family on a trip to the Pacific coast, hoping the change would benefit me, but I was no better when we returned.

In March, 1892, Christian Science treatment was suggested to me by a neighbor whom it had cured of a complaint similar to mine. Having suffered so much, I gladly tried it, and was healed. During the treatment, a chronic complaint for which I had used many remedies, disappeared, and I became convinced that Christian Science was what I needed, and had long been wanting. I willingly accepted its teaching, and with it came the glorious spiritual uplifting that comes to all who earnestly seek it.

Words cannot express my gratitude to God, to our dear and faithful Leader, and to the Scientist who so patiently unfolded this precious truth to me.

Josephine McMaster, Galveston, Tex.

I want to give my testimony and tell one of the many blessings I have received through Christian Science.

Last Fourth of July when I was playing with some of my companions, I picked up a large-sized bomb and placed it under my arm. The bomb had been lighted, but had failed to go off. This was caused by the powder falling away from the fuse. After putting it under my arm I held it like a book, and in such a way that the powder fell against the fuse, and so caused it to explode, tearing my coat and shirt to pieces and inflicting two gashes in my arm, and burning a place as large as one's hand on my side.

The bomb was held under my left arm, and the ribs were thrown in so as to cause a hemorrhage of the lungs.

I ran a block home with the blood running out of my mouth and nose at every step. When I got home, and my aunt found out what was the matter she at once telephoned for a practitioner because I wanted one and she did. All the while the blood was coming from my mouth, but not as badly as it was at first.

In twenty minutes after the practitioner came, the blood had stopped and so had the pain, and in a little while I was asleep. I slept an hour, and that night I slept as sound as I ever did. This happened on Saturday, and on Monday I was dressed and out of doors, playing with my friends. Wednesday evening I went to our service. I walked only a little stiff, and soon was well.

I am a boy twelve years old, and was healed of spinal trouble when I was five years old, by Christian Science, and I am grateful for all that it has done for me.

J. C. T., Portland, Ore.

I have been deeply impressed for some time to write of my healing, thinking that some reader of the *Sentinel* might be benefited thereby.

One Friday morning about nine o'clock a severe pain struck me in my right side. From the very first start it seemed to be almost beyond human endurance. I stepped to the telephone and asked my family to help me, as the suffering seemed so real to me that I could do nothing but declare God's allness and deny death.

I started for home, a distance of about three squares, and by great effort I reached it. Then a telegram was sent to a practitioner in another city to treat me, which was done, and the demonstration was soon made, or at least to such a degree that I got easy.

Soon after reaching home severe vomiting set in, which did not stop till the intense pain grew less and less. I rested fairly well that night and Saturday afternoon was able to return to my place of business, and also to go to church on Sunday. A great sense of weakness seemed to follow from the start. A little of the trouble seemed to linger for about two weeks, but finally all trace of it was destroyed, and with it many old ailments of several years' standing left me, and to-day I am a living testimony to the great blessings that I have received through Truth. With the Psalmist, I can declare that God healeth all our diseases. I am to-day a well man.—A. T. T., Connersville, Ind.

It is just three years since I first heard of Christian Science through the healing of a young lady in the church of which I was then an earnest member. I was deeply interested, for I was much dissatisfied with the general teaching about God and man, although I loved my church very dearly. I bought Science and Health and read it gladly. It opened up a new world to me. I wanted very much to help others, and it seemed to me that I gained the understanding very slowly. I began to wish for class instruction, but it seemed quite impossible at that time to get it, yet I knew that with God all things are possible, and trusted that He would open the way for me. A few months later the way was opened very unexpectedly.

Since then I have had many demonstrations of the power of Truth over error. About two years ago my mother wrote, saying she had indigestion very badly. She said she had had medical treatment but was getting worse, so she had given up the doctor and would like Christian Science treatment. She was entirely healed in two weeks. Some months later she had a severe attack of rheumatism. She wrote for help and in three days was well. Last summer we received an urgent message to go to my sister, about one hundred miles away. I did not know what the ailment was, but I held constantly to the thought that Life, Truth, and Love are omnipotent and omnipresent, consequently error had neither presence nor power. I did not reach the town until midnight, when I found that the doctor had sent her to the hospital, saying she had every symptom of typhoid fever. I saw her the next day, Sunday, and she was much better, and on Monday the doctor said her case was a fraud. She was out and quite well in three weeks from the time she was taken ill. When she had typhoid fever before, she was in bed sixteen weeks and had a long convalescence after that.

Last winter I was asked to help my brother who was out of work, and living at a distance. Through the understanding which comes in Christian Science, all his needs

Digitized by Google

were supplied, and in less than a fortnight he was at work and has not lost one day since. Two years ago, we, as a family, were all scattered; now we are all living within easy distance of one another, and are united in the study of this glorious truth. Words cannot express my gratitude to God and to our dear Leader.—M. A. S., London, England.

Four years ago a lady came to live with us and brought to us the knowledge of Truth as revealed in Christian Science. Since that time we have reason to be more than grateful. How we managed without this knowledge, I can only wonder now.

I wish to tell of a few demonstrations of the power of divine Love. A little niece, four years old, lives with me; one day she stood on a chair before the sewing machine holding a penknife in her hand. She was calling to a little girl at the opposite window, when she fell off the chair, the knife blade running into her chest. I was sewing in a room near by and heard a girl next door scream out, and then all was quiet. The mother carried the little niece to me. I immediately saw very clearly that in Truth the real child had not been touched with error, and instantly the flow of blood stopped. I told the mother to change the soiled dress for a clean one, and in a few minutes she was back in the chair calling to the girl next door. As the blood-stained dress was being taken off, I saw a cut on the chest, the width of the knife blade at its widest part. In about two days not even the scar was to be seen. What surprised us most was that the child never cried once, not even when falling.

I was healed of typhoid fever in about three weeks' treatment. After having trouble all my life with my throat,—having diphtheria and quinsy often,—I have not had any difficulty of that kind since I have known of Christian Science.

As a girl I was reserved, and did not care to mingle with people, so I had few friends. I was selfish, and much preferred my own society to that of any other. Now I see things differently and am beginning to know what it means to love my neighbor as myself, and how to do it. I have overcome so much selfishness that those around me, who are opposed to Science, remark about the change in that respect. I feel very thankful for this truth and get great peace and comfort from my Bible since reading Science and Health.—M. A., Philadelphia, Pa.

One of the references in the lesson on "Matter" in the *Christian Science Quarterly* for March 13, 1904, was the story of the "three young Hebrew captives" and their deliverance from the fiery furnace. As I studied this lesson it brought to my thought anew an instantaneous healing which I experienced not long ago at a Wednesday evening service at the Mother Church.

When I left home for Boston, early in the day, I was suffering from quite a severe sore throat. During the afternoon, as I found opportunity, I denied the error and tried to dispel the fear in my consciousness, for in times past similar attacks had resulted in much suffering and a loss of voice for at least a day or two. When the time came to attend the service in the evening the condition was worse, if anything, than during the day.

The Scripture selection read at this service was the story of Shadrach, Meshach, and Abednego, followed by correlative passages from our text-book, and it seemed to me that I had never before so fully realized the beauty and power contained therein, especially in the following sentence from page 243, "The divine Love which made harmless the poisonous viper, which delivered men from the boiling oil, from the fiery furnace, from the jaws of the lion, can heal the sick in every age, and triumph over sin and death." Truly was the Scripture fulfilled,—"He sent his word, and healed them,"—for when we arose to sing the second hymn I found that I was free from any sense of fear and was entirely healed.

For this experience, as well as for many others which have proven to me that Christian Science is the truth, I do indeed feel thankful, and especially am I grateful to our beloved Leader, whose consecrated life and obedience to Principle have made such blessings a present possibility.

A. F. C., Haverhill, Mass.

I was first led to investigate Christian Science by hearing a sermon preached against it. The physical healing did not appeal to me, but the beautiful spiritual truth was just what I needed, and of course the physical healing followed. Ever since I was eight years old I had been subject to severe neuralgic and sick headaches, and could never ride any distance on the train without becoming very miserable from car sickness. After studying Science and Health by Mary Baker Eddy for a few months, I awoke to the consciousness that I was entirely free from headaches and car sickness. Once in a great while a headache will come on, but it is very quickly overcome.

I find Christian Science invaluable to me in a business way, enabling me to detect errors in bookkeeping quickly and to do stenographic work in a noisy office and under the most trying circumstances, with accuracy. I can do a great amount of work without any nervous tension, and am entirely cured of morbidness, said to be hereditary. All this is due to the understanding of Christian Science which I have, and words are inadequate to express my gratitude to our dear Leader for all this. Surely the new birth in each individual consciousness is going on hourly as thought is changed from a material to a spiritual basis.

G. B. W., Cincinnati, O.

I became interested in Christian Science about three years ago. It was through the healing of others that my attention was first drawn to this teaching. Though not an invalid, I was not strong, and was almost constantly taking medicine, with no beneficial results, and when I saw the effect produced upon others by the Christ-Truth I was only too glad to investigate it.

During the past three years I have had abundant and convincing proof of the power of Christian Science, even when slightly understood, to overcome every manifestation of error. The Bible, studied in the light of Christian Science, is indeed a new book. The contentment and peace enjoyed through this understanding, is beyond my power to express in words, but we are taught in Science and Health that the most sincere expression of our gratitude is in thought and life.—LILLIAN A. ROUTZONG, Oronogo, Mo.

[Written for the *Sentinel*.]

"Peace, be Still!"

LOUIS F. CURTIS.

In stormiest sea there comes to me,
A message from above,
Mid the lightning's flash and the thunder's crash
I hear the voice of Love:
Peace, be still! is the whispered word,
Peace, be still! be still!
And the storm and strife of this dream-land life
Are calmed by the Master's will.

Oh wand'rer from God, still dwelling in Nod,
Dreading a gale to-day,
Find refuge secure in the One who is pure,
Whom even the winds obey.
Peace, be still! omnipotent word!
Peace, be still! be still!
And clamor and din, the tempests of sin,
Are hushed by our Father's will.

From Our Exchanges.

How often does Christ sit with us on the well-curb, whither some blazing noontide we are gone to draw water. He offers us water of life, and we know him not. We are all absorbed in some trivial question, whether in Gerizim or on Mount Zion men ought to worship. We forget that in a moral life in Sychar there might be abundant opportunity for worship in spirit and in truth. We say with dull devoutness, When Messiah shall come. We think of him coming at some other time than now and in almost any place save here. But he answers, I that speak unto you am he.

And then we must gratefully acknowledge how often in our experience it has happened that we have toiled all night and taken nothing. We were on the point to leave the boat and perhaps to sell the gear and abandon the business forever. Only something Christly in the voice which bids us be faithful once again to duty prevails. And now we are unable to draw the net for the multitude of fishes. In the gray dawn we see the figure on the shore to which our hearts cry out as cried the heart of that man whom Jesus loved, "It is the Lord." We have seen him again—in Galilee.

The Congregationalist and Christian World.

True spirituality is true rationality, and the spiritual man in the only normal and perfect man. God alone is all Spirit, and He is also all reason and all wisdom and all holiness, and man approximates these infinite divine perfections as he comes under the domination of God's Spirit. Man is designed to have companionship with God, and to be transformed into His likeness. This is his growth in spirituality; and it will show itself in his business, and in all his daily intercourse with society, and even in his recreations, not less than in his public and private worship. Whether he eats, or drinks, or whatever he does, he will do all to the glory of God.

"To be spiritually minded is life and peace." "God gives us not a spirit of cowardice, but a spirit of power, of love, and of a sound mind."—*The Examiner.*

To remove the conditions which make hell in this world, and to secure those conditions which make life here heavenly—thus eventually establishing the kingdom of heaven on earth—was the primal object of Jesus. The supremacy of the principles of the Gospel in the hearts of men and women throughout the earth would set right everything pertaining to human life. In every instance of departure from that divine standard of life the consequences of transgression are felt. There is no postponement of the effects of disobedience to the righteous and eternal requirement. Neither are the effects of willing compliance therewith long deferred. The heavenly enjoyment is the constant experience of him who worketh good, as the tribulation and anguish cometh at once to him that doeth wrong and continues with him as long as the wrong-doing goes on.

The Universalist Leader.

A careful study of religious history will show nowhere evidence of religious decay. The spread of Christianity over the globe is not the most remarkable feature of progress; but that which most amazes the sympathetic observer is the downfall of bigotry and intolerance, of dogmatic assumption, of sect selfishness, and the rise of a Christ-like humanity. To those who are troubled about the changes that are occurring our only reply is, "We must grow or perish."—*The Christian Register.*

I believe in Man as capable of complete salvation from sin (which is want of love), thereby becoming perfect in love as God is perfect.

PROF. C. P. FOGNANI, D.D., Union Theological Seminary.

The Independent.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Items of Interest.

National.

United States Consul-General Gummere at Tangier has been cabled instructions from Secretary Hay for dealing with the brigand, Raisuli, the point of which is a positive injunction to refrain from committing the United States Government to any guarantee of immunity for the brigands or in any way to take any action that would amount to the recognition of the right of brigandage and blackmail in Morocco. This attitude will be adhered to regardless of consequences. The reports that the Sultan is ready to concede the brigand's terms are confirmed.

The necessity for the better policing of Tangier is recognized, and officials say one of the results of the incident will be the establishment of a police administration under foreign authority with foreign officers. It is the expectation that France's influence will probably lead her, with the coöperation of the Powers, to undertake the organization of a permanent police system at Tangier.

During the recent trials near Newport, R. I., the submarine torpedo boat Fulton was submerged and remained under water for twelve hours. There were nine men in the vessel during the time of submergence. Among the trials was a run under water for a distance of ten miles, covered in an hour and twenty minutes; and on the supposition that her periscope had been injured she was submerged and kept her bearings by rising and using her conning tower. The trials were under the supervision of Naval Constructor Woodward, and were pronounced in every way satisfactory.

The population of the Philippine Islands, according to the census just completed, is 7,635,426, of which 647,740 are classified as wild and uncivilized, although possessing some knowledge of the domestic arts. This is the first accurate and complete enumeration of the Filipinos ever made. It was taken by the Philippine Census Bureau, which was organized by General Sanger. The enumerators employed were mostly natives. The schedules were translated, transcribed, and tabulated by the United States Census Office in Washington.

Foreign.

A question of interest came before the British House of Commons last week when the administration of the Congo Free State was raised for consideration by Sir Charles Dilke, who advocated an appeal to the United States to act with Great Britain in investigating reports of alleged cruelty and atrocities, inasmuch as the United States was instrumental in the creation of the State. By the acquiescence of the Powers, Leopold II. of Belgium was recognized as sovereign and sole administrator of the new State, which contains a territory four times as great as France. The enterprise found favor because it was supposed to represent a generous philanthropy and freedom of commerce for all the world.

The letter of Colonel Younghusband, in command of the British expedition to Lhassa, demanding that Amban come to Gyangtse with accredited Tibetan representatives to settle outstanding differences before June 25, has been returned from Jong unopened and without comment. The Tibetans have therefore deliberately refused to negotiate. They are now concentrating in Jong monastery and the town of Gyangtse. Two regiments of Punjabis, a mountain battery, and a detachment of engineers have been ordered to re-enforce the expedition.

The *Frankfurter Zeitung* of Berlin announces that a syndicate of German and Dutch capitalists has been organized for the financing of a cable from the Dutch Island of Menadotua (off the coast of Celebes) to the Island of Guam and thence to Shanghai.

The Government of Brazil is reported to have annulled the exequatur of the Peruvian consul at Para and has denounced the treaty of 1891 with Peru. This is the result of friction concerning the contested zone between Brazil and Peru at Acre.

Industrial and Commercial.

Imports of india-rubber into the United States in the fiscal year about to end will exceed by far those of any earlier year, and will amount to over forty million dollars in value. The demand for this article has increased rapidly in recent years, and the imports in the present fiscal year will amount to about sixty million pounds. In 1880 the quantity of rubber imported into the United States amounted to seventeen million pounds, valued at $9,500,000.

Importations of "gutta-joolatong," a product of India, which is used in certain industries as a substitute for india-rubber, now average more than a million pounds a month, while importations of old and scrap india-rubber, to be manufactured, amounted to over fifteen million pounds in the ten months of the present fiscal year.

More than one half of the india-rubber imported into the United States comes direct from Brazil, the total from that country alone being, for the ten months, 30,000,000 pounds, valued at $20,300,000. The United Kingdom supplied in the same period over seven million pounds, valued at $5,400,000; Germany, two million pounds, valued at $1,250,000, and other countries of Europe, nearly ten million pounds, valued at over $7,500,000. These supplies of india-rubber which come from the European countries are in practically all cases the product of their various colonies.

The imports of steel and iron in the fiscal year 1903 were the largest since 1891. In the fiscal year 1904 they will be but about one half those of 1903. During the ten months ended with April last the total imports amounted to but $23,075,084, as compared with $43,332,714 in the same period of last year. In practically all articles of iron and steel imported there has been a marked reduction both in quantity and value as compared with 1903, but this is most strongly marked in pig iron, which alone shows a reduction of more than ten million dollars, while steel ingots, blooms, and bars show a reduction of five million dollars.

Exports of iron and steel, however, show a material decrease. In the ten months ended with April, 1904, the total exports of iron and steel amounted to $89,094,415 against $79,839,462 in the corresponding months of the preceding year. The principal increases in iron and steel exports occur in billets, ingots, and blooms, steel rails, locomotives, typewriters, and firearms.

Mexico City advices state that arrangements are being completed by a number of capitalists and grain dealers for the formation of a company with a capital of $2,500,000, with which to establish a large grain elevator there, with a system of line elevators along the various railways in the wheat raising districts of Mexico. It is expected that the Mexico City storage elevator will have a capacity of about 750,000 bushels per day, and the line elevators about 35,000 bushels. It is the intention to have the elevators completed before next year's grain crop is ready for the market. Americans will be in charge. At the present time Mexico is without any modern grain elevators.

Since the introduction of American methods for the promotion of agriculture in the Philippines seven experiment stations and farms have been established for special branches of agriculture or in typical sections of the Islands. These include a rice farm, a live stock farm, a sugar station, a farm for cocoanut and hemp culture, a testing station near Manila, and two other stations for general work in typical localities. A coffee plantation has been started with imported hybrids, and it is hoped to revive that former important industry.

The total area planted in cotton in the United States this season is estimated at 31,730,371 acres, an increase of 2,823,046 acres, or 9.8 per cent, upon the acreage planted last year.

The yield of peaches from the Georgia field this year is expected to be four thousand carloads, or fifteen hundred more than during the season of 1898. This will establish a new record.

There are between fifty and sixty petroleum wells in the northeast part of the island of Borneo, with a total daily production of six hundred tons of oil.

General.

To avoid the possibility of any repetition of the great catastrophe of 1900, when the sea swept over the low island on which the city of Galveston, Texas, is built, a great wall of solid concrete three and one-half miles long and seventeen feet high is being constructed all along the water front. The plans of protection include—besides the construction of the concrete sea-wall proper—the filling or raising of the grade of the city to a level with the top of the wall. In this way it will be necessary, if the wall is to be destroyed and the water to reach the city, to wash away the entire island, thirty miles long and three miles wide.

In Germany the use of potato alcohol to furnish light, heat, and motive power has been rapidly spreading, says an exchange. At present there is converted into alcohol twenty million tons of the fifty-five million tons of potatoes raised in Germany. It is burned like gas in chandeliers and in street lamps, and for cooking, heat, and lighting, and is used for both land and water motors as a power generator.

Acting in accordance with the authority of the Legislature the Law School of the Boston Y. M. C. A. conferred the degree of Bachelor of Law upon forty-nine young men last week. It is said that this is the first time that an institution of this character has enjoyed such a privilege from a State.

Colorado produced 1,800,000 pounds of honey last year.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

The Annual Communion Service.

THE Communion Service of the Mother Church, which was held Sunday, June 12, will be remembered by all who participated in it as impressively harmonious and helpful. The day was a perfect one, and although no general invitation had been issued and it was understood that a large gathering was not expected this year, nevertheless every part of the auditorium was crowded with eager and expectant worshipers at each of the three services.

Our Leader's Hymn, "Blest Christmas Morn," No. 186, and "Here, O my Lord," No. 166, were used, and the Scripture reading was John, 21 : 1–6, 10–17. Early in the service the following brief message from the Pastor Emeritus, Rev. Mary Baker G. Eddy, was read:—

Pleasant View, Concord, N. H., June 8, 1904.
The First Church of Christ, Scientist, Boston, Mass.

My Beloved Brethren:—As you are not expecting an invitation to visit Concord at each successive Communion season, I shall not disappoint any hope of your receiving it.

My heart goes out to you as ever in daily desire that the Giver of all good transform you into His own image and likeness. Already I have said to you all that you are able to bear now, and thanking you for your gracious reception of it, I close with Kate Hankey's excellent hymn,—

I love to tell the story
Of unseen things above,
Of Jesus and his glory,
Of Jesus and his love!
I love to tell the story!
Because I know it's true;
It satisfies my longings
As nothing else would do.

I love to tell the story!
For those who know it best
Seem hungering and thirsting
To hear it, like the rest.
And when, in scenes of glory,
I sing the NEW, NEW SONG,
'Twill be—the OLD, OLD STORY
That I have loved so long.

Lovingly Yours,
MARY BAKER G. EDDY.

The beautiful Communion hymn, "Saw ye my Saviour?" written by our Leader, was then sung as a solo by Miss Elsa Marshall.

The following expression of love and loyalty was submitted, and, by the unanimous approval of the Church, was dispatched to Mrs. Eddy.

Boston, Mass., June 12, 1904.
Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—It is always a joy for us, the members of your Church, to avail ourselves of the privilege of sending you a word of loving greeting at our Communion season, and of giving expression to our continued loyalty to the Christly mission which you have so definitely and carefully outlined for us. In doing this we are deeply conscious of the fact that we do not speak for ourselves alone, but also for the many thousands over the entire world whose grateful hearts turn to you at this glad season with thankfulness too deep to find adequate expression in words. Like those of us who are assembled in the Mother Church, they have all felt the healing touch of the Christ, Truth, and been awakened to an understanding of the divine Life which destroys sin, sorrow, and pain.

Whether present or absent, we unite in spiritual Communion, in the joyful recognition of the ever-present Christ, revealed to us in Christian Science. We are not unmindful of your love, present with us at our annual Communion service, and we fully appreciate the wisdom of remaining at your post in order to carry forward your pioneer work for us, and pray that a very large measure of the blessings of this hour may be your portion.

We trust that we may be as faithful in keeping to the well-defined path of truth and righteousness as you have been in seeking and finding it; in clearing away the heavy growth of erroneous belief, and in hewing out the adamantine barriers of human opposition which would obstruct the highway of our God.

As Christian Science is becoming better understood it is rapidly growing in public favor, multitudes are being healed of sin and sickness, Christ's promises are being fulfilled, the truth of the Bible is being vindicated and made available for human need, and God's name is exalted and praised. We rejoice that many who once looked upon Christian Science with misgiving, because to them it was new and untried, are learning that there is nothing to fear, but much to desire, in a religion whose entire teaching is consistent with the Scriptural doctrine, "God is Love."

As students of Christian Science we have thoroughly tested your interpretation of God's word, as well as the wisdom, meekness, and Christ-likeness which in an ever-enlarging degree it has unfolded in you; therefore, our affection for you, our confidence in you, and our gratitude to God, who gave Christian Science and its Discoverer to the world, increases as the years go by. We pray that more than ever we may be found worthy of our Cause and Leader, and that with united hearts and hands we may prove our faithfulness, and thus be able to see the walls of our temple go up as a visible token of our allegiance to God and His Christ.

The First Church of Christ, Scientist, in Boston.
BOARD OF DIRECTORS.

The Communion Lesson Sermon on "Obedience" was listened to with the deepest interest, and at its close the First Reader, Prof. Hermann S. Hering, said, "I now invite all present, whether members of this Church or not, to unite with us in spiritual, silent Communion with our Father-Mother God, the one Life, the one Truth, the one Love. In the words of the Psalmist, "O come, let us worship and bow down: let us kneel before the Lord our maker."

A ready and reverent response to this invitation followed, and after a few minutes of silent Communion, all present joined in the audible repetition of the Lord's Prayer.

During the progress of the first service, a letter was received from Mrs. Eddy, which brought increased gladness to all. It read,—

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

Pleasant View, Concord, N. H., June 11, 1904.

Beloved Students:—The new Concord church is so nearly completed that I think you would enjoy seeing it. Therefore I hereby invite all my Church Communicants, who attend this Communion, to come to Concord, and view this beautiful structure, at two o'clock in the afternoon, Monday, June 13, 1904. Lovingly yours,

MARY B. G. EDDY.

The Visit to Concord.

A PLEASURE is often enhanced by the unexpectedness of its coming, and this was surely true with regard to the opportunity to visit Concord and see the well-nigh completed church. Our Leader's gracious invitation was read at the close of each of the Communion services, and at half past eight Monday morning special trains began to deport the very large number who responded.

The day was most comfortable, and in the afternoon it was flooded with sunshine. Nothing happened to mar in any way the pleasure of the trip, and love and joy held sway in all hearts. The church was a delight to the eyes of all.

While on her regular afternoon drive Mrs. Eddy responded graciously to the silent greetings of the people who were assembled on the lawn of the Unitarian Church and of the High School. Her carriage came to a standstill on North State Street and she was greeted in behalf of the Church by the President, Mr. E. P. Bates, to whom she presented as a love token for the Church a handsome rosewood casket beautifully bound with burnished brass. It contained a gavel for the use of the president of the Mother Church. Its further contents were to be disclosed at the annual meeting of the Mother Church on Tuesday afternoon. The wood of the head of the gavel was taken from the old Yale College Athenæum, the first chapel of the college. It was built in 1761, and razed in 1893 to make room for Vanderbilt Hall. The wood in the handle was grown on the farm of Mark Baker, father of the Rev. Mary Baker G. Eddy, at Bow, N. H.

In presenting this gavel to President Bates, Mrs. Eddy spoke as follows to the members of her Church, The First Church of Christ, Scientist, Boston, Mass.:—

"*My Beloved Brethren:*—Permit me to present to you a little gift that hath no intrinsic value save that which it represents; namely, a material symbol of my spiritual call to this my beloved Church of over thirty thousand members; and this is that call. In the words of our great Master, 'Go ye into all the world,' 'heal the sick,' 'cast out evil, disease, and death;' 'Freely ye have received, freely give.' You will please accept my thanks for your kind, expert call on me."

In reply Mr. Bates said,—

"I accept this gift in behalf of the Church, and for myself, and my successors in office."

Having learned that Judge Hanna had just arrived from a lecturing tour in Great Britain and was on the ground, Mrs. Eddy at this point called for him, and greeted him most cordially. For many years previous to his appointment to the Christian Science Board of Lectureship, Judge Hanna was editor-in-chief of the Christian Science periodicals, as well as First Reader in The First Church of Christ, Scientist, in Boston.

The Christian Scientists were very grateful to the citizens of Concord for the excellent hospitality accorded them, and especially to the mayor of the city for the use of the public park; to the members of the Unitarian Society, who so kindly opened their church edifice and permitted the use of their lawn, and to the Wonolancet Club for its courtesy in tendering the use of its clubhouse.

It is needless to say that Mrs. Eddy was much pleased to be greeted by so large a gathering of her followers on such short notice.

The Annual Meeting.

A LARGE audience was assembled in Symphony Hall when the annual meeting was called to order at 2 P.M. by the President, Mr. Edward P. Bates. After the singing of our Leader's hymn, "Shepherd, show me how to go," the 91st Psalm was read, also a selection from Science and Health on page 275, lines 9 to 23, which was followed by silent prayer and the Lord's Prayer. The following telegram to our Leader was unanimously adopted and ordered sent to her.

Boston, Mass., June 14, 1904.

Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader:—With grateful hearts we acknowledge the pleasure and profit resulting from our joyous visit to Concord yesterday.

WILLIAM B. JOHNSON, *Clerk.*

There followed the reading by Judge Ewing of a formal expression of the deep sense of gratitude entertained by the Church for our Leader's loving and untiring service for humanity, and by a unanimous vote it was despatched to her. It was as follows:—

Boston, Mass., June 14, 1904.

Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Dear Leader:—The members of the Mother Church assembled in annual business meeting, avail themselves of the privilege of expressing to you their appreciation of your long and consecrated ministry to the children of men, and their quickened sense of the stupendous worth to the world, of your revelation of the health and life-giving potency of the religion Jesus Christ brought to it. Day by day it becomes more apparent that it is your "Key to the Scriptures," which has wider opened to us the storehouse of God's word and love, and enabled us successfully to invoke His healing and redemptive power as it was done nineteen hundred years ago. You have taught us also to emphasize by precept and example the scientific value of works over words, and thereby the better to comprehend the eternal oneness of Christianity and Christian Science.

Devoutly we thank God for your beautiful life, and the good you have brought to humanity. Our sense of obligation to you cannot be measured by words. Thousands of your fellow-men rejoice in health and happiness to-day, only because you pointed the way from the clutch of disease and the jaws of death; mere expression of thanks cannot compensate you for this marvelous ministry. "Love begets love," and Love's obligation can only be met by love; we love you,—love you in that sweet and abiding sense of the divine injunction, that "Ye love one another, even as I have loved you," and in the full appreciation of the fact that love for our fellow-man is the only human expression of our love for God; and as you have so sweetly taught us the way, our love, at this holy hour, goes out to our neighbors, mantled in that charity that hopeth all good; believeth all good; doeth all good; suffereth long and is kind.

WILLIAM B. JOHNSON, *Clerk.*

The President then opened the rosewood box which was handed to him by Mrs. Eddy in the presence of the members during Monday's visit at Concord, and took from it the gavel, which he then presented to the Church in accordance with her wishes.

The following letter which accompanied the gavel, together with the words spoken by Mrs. Eddy on the occasion of the presentation of the box and its contents was then read.

Pleasant View, Concord, N. H., June 13, 1904.

The Mother Church, Boston, Mass.

My Beloved Brethren:—You will please accept from me the accompanying gift as a simple token of love.

Ever yours in Christ.

MARY BAKER G. EDDY.

Digitized by Google

Judge Hanna then read and submitted the following despatch in acknowledgment of Mrs. Eddy's gift; it was adopted by unanimous vote and telegraphed to her.

Boston, Mass., June 14, 1904.

To the Rev. Mary Baker G. Eddy, Pastor Emeritus of The First Church of Christ, Scientist, in Boston, Mass.

Beloved Teacher and Leader:—We, your students and members of the above-named Church, in annual meeting assembled, hereby acknowledge with deep gratitude your gift of a gavel for the permanent use of said Church, made from the wood of old historic trees, with one of which your childhood history was so intimately associated; and on our own behalf as well as on behalf of adherents and friends of our beloved Cause everywhere, we thank you for the beautiful gift, but more for the love which prompted the giving and also the significant words accompanying it, whose grand sentiments we most heartily endorse, recognizing as we do that your call and that of the Mother Church with her nearly one thousand branches, is to heal the sick and the sinning and cast out evil. We rejoice with you, that this call has already become an accomplished fact in many parts of the world, and is destined to continue until the last great commandment given by Jesus to his apostles shall have become a verity in all the world, "Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost: teaching them to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world." Lovingly yours,

WILLIAM B. JOHNSON, *Clerk.*

After the announcement of the officers of the Church for the ensuing year, Mr. Bates introduced his successor, Alfred Farlow, and paid a loving tribute to his faithful and efficient service to our Cause during many years. The new president accepted the office in a few well-chosen remarks.

The very interesting reports of the Treasurer and Clerk then followed. On motion the Clerk was instructed to send the following letters expressing the appreciation entertained by the members of the Church for the courtesies received by them.

Boston, Mass., June 14, 1904.

Hon. Charles Corning, Mayor,
Concord, N. H.

Dear Sir:—The members of The First Church of Christ, Scientist, in Boston, Mass., desire to express their deep appreciation of the courtesy and hospitality extended to all their members who were yesterday privileged to visit your beautiful city for the purpose of paying their respects to their beloved Leader, Mrs. Eddy, and also of seeing the new church of their denomination, which is nearing completion.

They beg that you will accept for yourself and convey to the citizens and officers of Concord, their thanks for the kindness which contributed so largely to the pleasure of the occasion. Sincerely yours,

WILLIAM B. JOHNSON, *Clerk.*

Boston, Mass., June 14, 1904.

The Prudential Committee of the Unitarian Church,
Concord, N. H.

Brethren:—The members of The First Church of Christ, Scientist, in Boston, Mass., desire to express their appreciation of the Christian courtesy and kindness shown them by your Church on the occasion of their visit to Concord upon the invitation of their revered Leader, Mrs. Eddy, and they hereby return to you their heartfelt thanks for the same. Sincerely yours,

WILLIAM B. JOHNSON, *Clerk.*

Boston, Mass., June 14, 1904.

The Wonolancet Club, Concord, N. H.

Gentlemen:—The members of The First Church of Christ, Scientist, in Boston, Mass., gratefully appreciate the kindness and courtesy which has again been extended to them by your club on the occasion of their visit to your city on the invitation of their beloved Leader, Mrs. Eddy, and they sincerely thank you for your generous hospitality.

WILLIAM B. JOHNSON, *Clerk.*

Boston, Mass., June 14, 1904.

To D. J. Flanders, Gen. Pass. & Ticket Agent, and D. W. Sanborn, Gen. Supt. of the Boston and Maine Railroad.

Gentlemen:—We desire to express to you our thanks and appreciation for your very satisfactory, prompt, and efficient service in conveying the Christian Scientists to and from Concord, N. H., yesterday. The accommodations were all that could be desired.

The attention and courtesy displayed by the employees of the Railroad Company added much to the comfort of our people. Sincerely yours,

WILLIAM B. JOHNSON, *Clerk.*

Many interesting reports from the Field were listened to, including one from Manila, P. I., as well as a number from England and Canada, and many parts of the United States. A report from the newly organized Association at Harvard University was also given. Judge Hanna spoke impressively of his recent lecture tour in Great Britain and Ireland.

The annual meeting was marked by a deep sense of harmony, which characterized also the Communion service and the trip to Concord. Many were the loving wishes expressed for the completion of the new edifice for the Mother Church, which would enable a large representation from the entire Field to be present at future meetings of this kind.

The annual meeting closed with the singing of the 163rd hymn, "O'er waiting harpstrings of the mind," written by Mary Baker G. Eddy.

Letter from the Executive Members.

At the annual meeting of the Executive Members held in the Mother Church, Saturday, June 11, the following letter to Mrs. Eddy was unanimously approved and was forwarded to her by special messenger.

Boston, Mass., June 11, 1904.

To the Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader, Teacher, and Guide:—We, the Executive Members of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., at our annual meeting assembled, send you loving greeting, with ever-deepening gratitude for your tender guidance and care.

We comprehend more clearly the magnitude of the Cause wherein you are our Leader; and understanding better what your mission is accomplishing for the whole world in the way of redemption and blessing, we are more than ever grateful that we have your counsel and admonition.

We welcome the By-laws which appear as needed for our spiritual welfare, and appreciate them as the expression of divine wisdom, which is revealed to you because your only aim is to know and do the will of God, and to establish in Christian Science a demonstrable and spiritual Christianity.

Your continued insistence that healing should be exhibited as the proof of Christian Science, is awakening us, and we now see the wisdom of withdrawing ourselves from relationships which would hamper us in this work.

You have spoken of "UNITY, the bond of perfectness, the thousandfold expansion that will engirdle the world," and have designated the exhibition of this among Christian Scientists as "a great sanity." During this year past we have appreciated the arrangements made by your wisdom, so that greater progress into unity is being achieved by us,—

Digitized by Google

so that there again appears "a peculiar people, zealous of good works," to the greater end that the whole world is being leavened by demonstrated Christianity, and its expected millennium is found to be at hand.

By reason of your loving labor, the religion of Christ Jesus is being universally accepted, the sick are healed, love is triumphant, and our hope is that we may learn better how to help you in your heaven-blessed labors for humanity.

WILLIAM P. MCKENZIE,
ARCHIBALD MCLELLAN,
HERMANN S. HERING,
FRANK H. LEONARD,
JULIA S. BARTLETT,
Committee.

The Lectures.

London, England.

WE are indebted to Mr. Frederick Dixon for the following report of Judge Hanna's lecture at Queen's Hall, London, May 12.—EDS.

For some reason or other the lecture is a form of instruction which seems never to have appealed to the people of England. This is probably especially true of London; and of every description of lecture, it seems to be most true of the religious. Regarded from this point of view the success of the lectures delivered at various times on Christian Science has been phenomenal, and of none more so than that recently delivered by Judge Hanna in Queen's Hall. Two years ago the representative of a great London paper, watching the audience slowly filing out at the close of Judge Ewing's address, declared his inability to find words to express his astonishment. "It might," he declared, "have been a political meeting instead of a religious lecture, and when it was remembered," he added, "that this audience was brought together practically without advertisement, it was simply incomprehensible." This year the same reporter saw a greater audience filling the same building.

With the exception of the Albert Hall, which for the purpose of a lecture is quite unsuited, the Queen's Hall is the largest in London; and when at half past eight o'clock on the twelfth of May the great organ suddenly ceased to peal, and Judge Hanna, closely followed by Mr. Haworth-Booth, walked across the platform, the audience broke into applause.

In a few simple but admirable sentences Mr. Haworth-Booth presented the speaker.

"It is my privilege to-night," he said, "at the invitation of First and Second Churches of Christ, Scientist, London, to introduce to you Judge Septimus J. Hanna, of the Christian Science Board of Lectureship, Boston.

"In these last days there are many earnest thinkers among the various denominations of Christians who are eagerly and anxiously expecting and praying that we may know more about God.

"It was foretold in the Old Testament, and repeated again in the New Testament, that 'in the last days, saith God, I will pour out of my Spirit upon all flesh: and your sons and your daughters shall prophesy, and your young men shall see visions, and your old men shall dream dreams: and on my servants and on my handmaidens I will pour out in those days of my Spirit: and they shall prophesy.'

"We have therefore the authority of Scripture for expecting that in these last days we may be able to know more about God. It was the teaching of Christ Jesus which lit the lamp of modern civilization nineteen centuries ago, in the midst of the darkness of this world, though the darkness comprehended it not: and it is of the teaching of Jesus Christ that our lecturer is going to speak to-night; of the Science of Christ's teaching or Christian Science, as it is now called.

"He comes to us from our brothers on the other side of the Atlantic, and I ask you to give him a hearty welcome, for he brings us a message of peace. His strenuous life has been spent in the law courts of the United States, in the sifting of evidence and in balancing between the false and the true. He is thus eminently fitted to hold his present high position."

Judge Hanna rose, amidst a renewed burst of applause. He stood for a moment behind the low bank of flowers skirting the platform, the tiers of the orchestra crowded with Christian Scientists rising in a semi-circle behind him; then facing towards the vast audience which had come from every part of London to learn something of what Christian Science is, he spoke.

For an hour and twenty minutes, in a hush broken only by the rising and falling of his own voice, he worked out his argument. Once when in speaking of sickness he declared that if God sent sickness to draw us nearer to Him, the sicker we were the better, the hush was broken by a sudden wave of laughter. Except for this the audience followed with intensely silent and eager attention as he explained the church tenets, as he spoke lovingly and reverently of Mrs. Eddy, the Leader of this movement, and as, quoting copiously from the Bible, he showed how Jesus had made healing the test of the understanding of his Gospel, "And, lo, I am with you alway, even unto the end of the world."

Looking out over the sea of faces at this moment, the effect was almost startling; it seemed as if every one had bent forward in fear lest some word might escape.

Then in quick succession came the analysis of sickness as the result of human error, the explanation of its cause and of the method by which it could be healed.

The end came rapidly after this. With his hand resting on the desk beside him, the lecturer thanked the audience for their attention. A great and prolonged burst of applause stopped him at this moment, and then, when silence was restored, there came a peroration drawn entirely from the pages of Science and Health, and concluding with the closing paragraph of the preface, "In the spirit of Christ's charity,—as one who 'hopeth all things, endureth all things,' and is joyful to bear consolation to the sorrowing, and healing to the sick,—she commits these pages to honest seekers for Truth."

In another minute the people were pouring out into the night, carrying with them through the streets of the great city the words which in sickness and sorrow will ever have a new meaning, "And, lo, I am with you alway, even unto the end of the world."

Is a Christian Scientist Liable to Sickness?

Sickness is the result of sin. In Christian Science, however, the term sin is not restricted in its application to wilful wrongs, but refers to any deviation from the right, including even our ignorant mistakes. Sickness is possible because one's thought and conduct do not afford a sufficient defence against it. It is not what one knows, but fails to practise, which renders him immune from sickness; but the condition in which one actually lives.

As in mathematics, it is not one's belief in the rule which produces results, but the correct application thereof. Christian Science is advantageous only to those who deport themselves according to what they know. As in mathematics, while Science points out the way, the pupil must do the work. A Christian Scientist may have an advantage over his neighbor in having ascertained what he ought to do, but he reaps his reward only in proportion as he puts this knowledge into practice. John did not say, Blessed are they who know the commandments, for the mere purpose of being posted, but "Blessed are they that do his commandments." The blessing comes to the doer, not to the mere hearer, of the Word. To attain to such an understanding and realization of the truth as to become entirely and permanently immune from sickness and suffering, requires a life-work and continued watchfulness.

Our brief answer to the question, "Will a Christian Scientist ever be sick?" might be given in the following words: If he can always think aright and live aright, he cannot possibly be sick. If he deviates from the right course, retribution may come to him even more quickly than to those who have a less clear comprehension of the right way.

Even when one is conscientiously seeking to do right, he is confronted with the proposition which the Scriptures name in the following words: "The spirit indeed is willing, but the flesh is weak." But he can and must conquer through divine help. Good intentions are not sufficient guarantee against trouble. Furthermore, one must serve his apprenticeship in learning to think and act from a spiritual standpoint; and, like a child learning to walk, the beginner may stumble to some extent until he becomes master of the situation. It is noticeable that some children stumble a great deal while learning to walk, while others, though advancing slowly, never stumble. One's ills may not be directly traceable to misconduct, but may be occasioned because one is mentally giving place to unlawful powers, not having, through a sufficient realization of the divine Power, become impregnable to these intrusions.

After having developed fears and apprehensions because of the peculiar beliefs in which Christian Science finds us, we sometimes require time to rise effectually above such fears. It is important to say, however, that Christian Scientists find themselves far less liable to trouble, even with a limited understanding of this Science, than before it was brought to their attention; and the general gain in ability to avoid as well as eliminate sickness on the part of students of Christian Science is truly gratifying, and cause for deep thankfulness.

ALFRED FARLOW.
Boston Times.

The word "philosophy," as defined by Webster, is "literally the love of or search after wisdom." If the lexicographer had aimed to describe Christian Science, he could hardly have chosen more appropriate language.

Our critic says that "There is not a philosopher of any standing in its ranks, though it may include here and there a man somewhat able as a lawyer or successful as a business man."

Upon this subject St. Paul, the scholar, theologian, and metaphysician, has the following to say, "For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called: but God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty."

It is a remarkable fact that, according to history, the progress of truth has been more opposed and misunderstood by scholastics and theologians than by people of more modest attainments. Referring to the great Teacher of Christianity, the Gospels tell us that "the common people heard him gladly." We are reminded further of the words of Jesus, who said, "I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes: even so, Father; for so it seemed good in thy sight."

In all the attacks upon Christian Science it is invariably the case that those who attempt to disprove its teachings signally fail to understand Mrs. Eddy's meaning, and we recall the advice of Coleridge, who said in substance, Before you condemn another's misunderstanding, be sure you understand his misunderstanding. Would it not be well, therefore, in view of the great need of spirituality in the world, to welcome all that makes for health, happiness, and brotherly love? If Christian Science does not do this, then it will be sure to fail, and our critics will win a victory without expending their intellectual ammunition.

Let us remember that it is never wise to tear down what one cannot build up, and those who are trying to disprove the truth of Christian Science would be more likely to succeed if they would offer in its place something that is better calculated to meet our human needs. Until this can be done, would it not be well to allow time and experience to test its efficiency, and let it stand or fall according to its own merits and its inherent vitality?

RICHARD P. VERRALL.
New York Post.

"The basis of Christian Science is the Scriptural teaching that God is All in all, that God and His creation constitute the only reality, that God is Spirit, and His creation spiritual, hence in reality there is no matter." The whole question resolves itself into a difference of opinion as to what constitutes "reality." The materialist says, all is matter; the Christian Scientist says, all is Mind, and Mind's (God's) idea.

This does not deny reality, but affirms it on a substantial, positive, enduring, and scientific basis. Instead of taking away "reality," it establishes reality, and recognizes all things in God's creation as substantially real, eternally real and spiritual.

JOHN L. RENDALL.
Montgomery (Ia.) *Republican.*

Christian Science is purely primitive Christianity regained and put into practice. It is not occult, but simple. It is not esoteric, but universal in its adaptation. It is demonstrable by any one who will meekly and honestly investigate its teachings and practice.

When the Ten Commandments and the Sermon on the Mount are lived and practised, it will be seen and understood that purity of thought spontaneously expands into health and harmony of body, as well as mind. Christian Science teaches that sickness is the result of sin; hence healing the sick and reforming the sinner are accomplished by one and the same process.

JAMES D. SHERWOOD.
Forth Worth (Tex.) *Record.*

For I hold what God wills above what I will. I cleave to Him as His servant and follower: my impulses are one with His, my pursuit is one with His; in a word my will is one with His.—EPICTETUS.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Card of Thanks.

[THE following letter from our Leader appeared in the Concord papers of Wednesday last, and we know that all who experienced the hospitality of the citizens of Concord will thank her for having expressed the sentiments which all felt so deeply.]

Dear Mr. Editor:—Allow me through your paper to thank the citizens of Concord for the generous hospitality extended yesterday to the members of my church, The Mother Church of Boston.

After the Christian Science periodicals had given notice that no preparations would be made for a large gathering at this annual meeting of the Mother Church, I scarcely supposed that a note, sent at the last moment, would bring thousands here yesterday. As many gifts had come from Christian Scientists everywhere, to help furnish and beautify our new church building in Concord, it came to me, why not invite those who attend the Communion in Boston to take a peep at this church edifice, on the day when there are no formal exercises at the denominational headquarters? The number of visitors, about four thousand, exceeded my expectation and my heart welcomed each and all. It was a glad day for me—sweet to observe with what unanimity my fellow-citizens vied with each other to make the Christian Scientists' short stay so pleasant.

Special thanks are due and are hereby tendered to his Honor the Mayor, for arranging the details and allowing the visitors to assemble on the green surrounding the High School; also to Mr. Geo. D. Waldron, Chairman of the Prudential Committee of the Unitarian Church and to his co-laborers on said committee, and to the Church itself,—for their kindly foresight in granting permission, not only to use the beautiful lawn surrounding their church building, but also for throwing open their doors for the comfort and convenience of the Christian Scientists during the day. The wide spreading elms, and soft green-sward proved an ideal meeting place. I greatly appreciate the courtesy extended to my friends, by the Wonolancet Club, in again opening their spacious club house to them on this occasion; and that of the efficient City Marshall and his staff of police extended to me throughout. And last but not least I thank the distinguished Editors in my home city for their reports of the happy occasion.

MARY B. G. EDDY.

Pleasant View, Concord, N. H., June 14, 1904.

The Events of the Week.

THERE are times when we wish the *Sentinel* might be greatly enlarged, and this is one of those times.

We appreciate the keen interest of the Field in the Communion and Annual Meeting of the Mother Church, and because of this great interest, we have endeavored to give in the present issue of the *Sentinel* a condensed report of these events, and we sincerely hope that, notwithstanding the brevity to which our limited space forces us, we have not altogether failed to convey to our readers some measure of the loving Christian fellowship which has so largely characterized these assemblages. The deeply religious and devotional aspect of these meetings has given rise to much favorable comment, and it has been freely recognized that these people came together with the love of God in their hearts.

A very pleasant incident of the week was our Leader's invitation to those assembled in Boston to visit and inspect the new church in Concord. The invitation was joyfully accepted and much pleasure was added to the occasion by the presence of Mrs. Eddy, who greeted her visitors from her carriage and presented to the Mother Church through its president, Mr. Edward P. Bates, a token of her love.

The annual report of the Clerk contained much to encourage our members to still greater loyalty in the establishment of Christ's kingdom on earth, and the statistics, showing the remarkable growth of the Mother Church during the past ten years, will be of great interest. We shall publish this document in full in our next issue. M.

The Light of Love.

THE world's noblest leadership has ever effected a chief good in that ministry to which Emerson refers when he says, "That is always best which gives me to myself." In the disclosure to humanity of the ideal selfhood, its origin, nature, capabilities, freedom, destiny, there is communicated the inspiration and the impulse which make more possible the unselfishness, the faith, the transformation, and the sovereignty of our highest moments.

He who, in Truth's name, wrests thought from the bonds of material pettiness, and attaches it to life's larger significance,—he becomes a liberator, humanity's lasting benefactor and friend, and in the years his recognition cannot fail.

True leadership fulfils yet another effective ministry in the manifestation and allurement of love. In the fires of a great heart's devotion to a redemptive idea the selfish and the commonplace are consumed, and that true affection which always conveys strength, speeds, upon every occasion, to embrace human need. This explains full well to the many, a phenomenon which is quite inexplicable to some; namely, the loving and joyous enthusiasm with which Christian Scientists respond to every opportunity to visit their Leader, or do her honor.

Though pitifully late in its discovery ofttimes, the world ultimately realizes that the truly great are very dear. The touch of a Lincoln or a Gladstone becomes a benediction, and the remembrance of them prompts to the better doing of life's humblest deeds. We bring them our hearts' best offering, therefore, because they have brought us a larger life, a nobler sense of man and his work. This is love's guerdon.

To all Christian Scientists Mrs. Eddy's pure, truth-telling face speaks of the overcomings which have crowned the years of self-effacing effort to follow the footsteps of the Master,—an effort which, after the experience of St. Paul, ever brings trials, reproaches, necessities, and persecutions "for Christ's sake." It tells the story of a heroic, and withal, joyous struggle, whose benison has meant for us life's unmeasured enrichment, and our thankfulness for priceless blessings is tenderly mindful of her by whose faithful and loving hands they were borne us.

For all those who understand even in modest degree the motive and meaning of her ministry, the face of this honored woman is illumined with that light of Love's sweet reflection which ever comes with healing on its wings. W.

The Communion.

"Each successive stage of experience unfolds new views of divine goodness and love" (Science and Health, p. 66).

WITH the swift flight of time, another Communion season has come, bringing a great spiritual uplifting which will go on with us, and make the year more fruitful than any we have known. The dear assurance of divine Love, given by Christ Jesus, "Lo, I am with you alway," speaks to us in every hour of need and is the reason for our deepest joy; and although we have learned in Christian Science that the Christ, Truth, is a perpetual presence, it by no means follows that we have outgrown the need of special communion.

It is an hour for gratitude as well as for joy, when we remember that through the ministry of Christian Science divine Love came to us in our deepest woe, healed us, and revealed to us the living, ever-present Christ; that it is feeding us daily with the bread which "giveth life unto the world." It is meet, too, that we renewedly consecrate ourselves to our great Cause, and to all its activities, so that the world may the better understand with each succeeding year the Christ-teaching and its healing, uplifting influence. The Saviour's words, "This do in remembrance of me," take on a higher meaning when we devoutly recall that, at such awful cost, he proved, for all time, the truth which he revealed to mankind, the truth which is the foundation of Christian Science. Although the full import of his teaching was early lost to a needy world, not a single idea is missing to-day, and as we individually understand and obey, we shall attain to the blessedness and peace of true, spiritual communion. As we do this, we shall better understand and appreciate the work of our revered Leader, and be better prepared to carry it onward to its all-embracing end,—the salvation of all mankind from sin, disease, and death.

It has seemed that never before, at any Communion season was there such a deep, calm sense of joy, such tender affection for our beloved Cause and its Leader. May the spirit of the hour abide with all our members, whether present or absent, and fulfil the promise of the old hymn,—

Awhile beside the fount we'll stay
And eat this bread of thine;
Then go rejoicing on our way,
Renewed with strength divine.

K.

Letters to our Leader.

The following letter from the Marchioness of Bath, which we are privileged to read, will awaken a deep interest in many. Its tender appreciation of our Leader shows that not alone in her native country, but everywhere that Christian Science is known, Mrs. Eddy is revered and loved.

London, May 26, 1904.

My Dearest Mrs. Eddy:—I feel that even if this letter never reaches your own hands, I must write and thank you for the two *Sentinels* which have been so very kindly sent me with your "compliments." They brought with them such an example of "thoughtfulness for others," an example you are so often showing us.

It is two or three years since I wrote to you from Longleat, and I wish I could tell you all that Christian Science has done for me and mine since then, and how grateful I am. I only hope I may go on growing in understanding, and manifesting more and more of that unselfish love and thoughtfulness for others, the example of which came, if I may say it, as a loving rebuke and gentle reminder along with those *Sentinels*. Mrs. Eddy, "thank you" is such a small word, but I *do* thank you from the bottom of my heart, and my one desire is to grow in grace, and to be able truly to sign myself your grateful and obedient follower,

VIOLET C. BATH.

Sioux City, Ia., May 8, 1904.

Beloved Leader:—I wish to express my gratitude for the wise guidance in the late Manual and for the new by-law entitled, "Easter Observances." I remember to have received an Easter box several years ago, and when I asked, "Why particularly at this time?" I was told it was now the custom. I thought then, It were better not so, and when I read in the *Sentinel* the new by-law referring to this point, I felt so uplifted and rejoiced that I, as a Christian Scientist, can perceive the spiritual meaning, and in the degree that I am overcoming all error in my thought, can, as you say, in the "sacred words of our beloved Master, 'let the dead bury their dead.'" My prayer is that I may reflect more of the risen Christ each day, thus doing my part to help all humanity.

Lovingly,

MRS. MINNIE K. STODDARD.

Progress in Edinburgh, Scotland.

ON Sunday, May 8, First Church of Christ, Scientist, Edinburgh, held its first service in the new hall at 14 Queen Street. The occasion was one of much rejoicing, as it was the first move into larger quarters since the Church was organized four and a half years ago.

The new hall is conveniently situated in the central part of the city at a very short distance from the reading rooms. There were about ninety people present at the opening service. The First Reader gave a short address.

"Many of us," she said, "have been brought out of great tribulation, out of great trouble of body and worse trouble of heart and mind, into a condition of health and happiness to which we never expected to attain on this plane of existence. It was natural, therefore, that we should earnestly desire to share our happiness with others and rejoice at every sign of the advancement of our Cause."

She spoke of the unique position held in the estimation of the world by Jesus of Nazareth, and pointed out that in spite of the agnostic tendencies of the day, more attention was at this time being directed towards his life and acts than ever before. The secret of his greatness had been lost, the understanding of how his works of healing had been wrought and his life lived; and it was, comparatively speaking, only quite recently that this secret had been rediscovered, and once more given to the world. "On this happy occasion, the opening service in our new hall," she said, "our thoughts naturally turn with the deepest gratitude to Mrs. Eddy, through whose purity this truth was revealed to the world, and by whose unceasing energy and perseverance the Cause of Christian Science has been established. She saw that since God is Spirit,—Mind,—man, made in His image, must be a spiritual being; and every form of illness is now proved to be, not a thing over which man has no control, but an evil suggestion which he can cast out through the recognition of his true nature as a child of God.

"From all times men have been endeavoring to reform the world from without: Christian Science shows us that it can only be reformed from within, through the regeneration of the individual. It shows us that illness is cured by casting out the sick thoughts which caused it, rather than by eating and drinking, and external applications. To accomplish this task, it first shows us what are sick thoughts, and then shows us how to get rid of them. The man who thinks that his sufferings are caused by external circumstances or by other people's thoughts has not yet grasped the elements of Christian Science. Man suffers entirely through ignorance and through belief in evil.

"Times and seasons," she said, "are still helps to our progress. Let the opening of this new hall mark the open-

Digitized by Google

ing of a new and better era for each one of us; leaving behind the old man and his deeds. Let us enter joyfully upon our new-found liberty, bearing in mind that only by individual improvement can we help the Cause and the human race, show our gratitude to God, and win our own salvation."—*Correspondence.*

From a Mining Camp in Colorado.

"Go ye into all the world, and preach the gospel to every creature."

This becomes easy through the use of our text-book, Science and Health, and the periodicals. I have been at this mine only seven weeks, and have five earnestly studying and trying to put into practice the teaching of Christian Science. Four have acknowledged benefits therefrom. One, the master machinist, has ordered a copy of Science and Health; another, a foreman, wrote a very beautiful letter to his sister in Canada, asking her to look into Christian Science and not take the word of prejudiced people.

The time-keeper, who is also a doctor, and who dresses the wounds of the men hurt in the mine, fell and sprained his wrist, and instead of going to his own medicine chest, he asked me for help, and acknowledged the help received.

This has been accomplished by placing a shelf in our sitting-room with the literature on it, and a notice which reads: "Christian Science Literature. Read and return. Free." My little stock is in almost constant use.

I have the promise of some *Journals* and *Sentinels*, which I intend to place in the large sitting-room, where from one hundred to two hundred men pass their idle hours, so that they may also have a chance to know the truth. Our Leader's hymn (Miscellaneous Writings, p. 397),—

> My prayer some daily good to do
> To thine, for Thee;
> An offering pure of Love, whereto
> God leadeth me.

is ever being answered.

A. E. SOUTHWORTH, Telluride, Col.

From Blackburn, Okla.

THE Field will be interested to learn that the leaven of truth is working among the people of Blackburn. When we came to Blackburn three years ago there was but one Science and Health here. The lady who owned it said she could not understand it. However, she told me she had only read to page thirty. I asked her if she wished to sell the book. She said she did. I paid her full price for it and have loaned it to those wishing to read it, so that it has done a great amount of good. All those who read it found that they wanted a little book of their own, and now there are six copies in and around the little town. Some of us meet each Sunday to go over the lessons. We know there is no opposition and so it does not appear to us. There are many here that say they believe but are still wearing the vail. (2 Corinthians, 3 : 15.) There are three orthodox churches under construction in this place; we have given of our substance to help build them and there is a kind, brotherly feeling with us, proving that charity is the best of all. No evil can stand before it. I am thankful for every loving friend who has helped me to know the truth, and as a reward for their labors I am striving and daily praying to know only that which is true. I owe Mrs. Eddy a debt which only love can repay. Four years ago I first read that wonderful book, Science and Health, and I was healed through the renewing of my mind. I know that words can never pay her, but loving and living the Christ-truth can. We are thankful for the *Sentinel* and *Journal*, they are such a help no one can afford to be without them.

MRS. KATE ROACH, Blackburn, Okla.

Testimonies of Healing.

I was much impressed in reading a recent testimonial of the practical benefits the managing editor of a daily paper had received in applying his understanding of Christian Science to his work. It had become so illumined that it attracted commendation when no suspicion was entertained of the real power behind his pen. I wish to add that I am making an earnest effort to utilize the same line of thought in the mechanical department of two newspapers where I am employed as foreman of the printers. We print both a morning and an evening paper that are separate and distinct, and I have charge of the working force of both. This being a thoroughly modern Western city, our newspapers are wide-awake and progressive, and the mechanical details require the most careful watching, and painstaking work to secure the required result. All these details must be figured nicely, as mails have to be made promptly and extra editions furnished on the shortest possible notice, as competition is very keen, and it rests with the foreman to see that his men are prepared at any moment for almost any emergency. With the little understanding I have acquired of Christian Science I have been enabled to improve the mechanical system and adjust its capacity to a nicety so that there is very little unnecessary hurry or bustle, and every man handles his work without friction. I am daily learning more how to carry this understanding into every detail of my work, and as it grows clearer the work becomes easier. I find the Golden Rule of great practical benefit in dealing with the men, not only in my own department but in every other part of the office, and in my home life as well. Where a prejudice formerly existed through careless indifference toward Christian Science, I find the editors now exhibit a kindly interest in the printing of any articles that may be furnished, and the interest is increasing slowly but surely, both on the part of the men and of the management.

I was led to accept Christian Science by a friend who came to the office to work. For nearly forty years I was a semi-invalid, the thought of a torpid liver and its chronic accompaniments holding me in a vise-like grip. This grew into catarrh of the stomach in its most violent form, with chronic constipation. As a last material resort I had swallowed a stomach tube almost daily for months, with some slight benefits of a temporary nature, but there was nothing permanent looked for, and the constipation was considered hopeless by physicians. My work worried me and I was almost a nervous wreck, and as I then viewed it I seemed to exist solely by my will-power.

My friend suggested that I read Science and Health. In a few days I asked him to help me with treatments, which he did, and I was entirely healed. The light came to me most beautifully and it is growing, and growing daily. I was brought up in the orthodox faith, but when sickness and troubles came, and I was plunged into the very depths of despair and turned to my God, there seemed little or no response. Although I could not comprehend this, I never lost faith, and felt that somehow and in some way God would make it all right. The answer to those prayers of anguish is now being demonstrated daily, not only in the physical well-being of myself and family, but in the conduct of my business affairs, where I am enabled to do justice both to employer and employe, and know that divine Love governs and is All and in all. With this understanding the most difficult problems are quickly solved, and my work is no longer a burden but a pleasure, and my capacity for it has greatly increased. But more wonderful still is the joy that is found in helping others, knowing that the more we give the more we receive, that there is absolutely no limit to this fountain of love.

E. S. S., Denver, Col.

Digitized by Google

It is now nearly five years since I first heard of Christian Science, and I have always had a desire to express my gratitude through the Christian Science publications for what it has done and is doing for me. I was an invalid for eleven years because of an internal rupture, and unable to attend to my household duties or care for my children. The last two years of my illness I was confined entirely to my bed. It is impossible for any to know what a terrible trial it is to be perfectly helpless, with small children to care for, unless they have had a similar experience. I also had kidney trouble and was in a very dejected condition. We employed the services of the very best physicians, and the only hope they gave me was a surgical operation which I seriously objected to, preferring to suffer rather than submit to such an uncertain remedy, and fearing that I would be no better, as we know this is often the case with those who have been operated upon. I was in this helpless, hopeless condition when Christian Science was first presented to me by a friend of my husband.

I had lost all faith in God or man as able to help me out of my suffering. For years I had prayed earnestly, and my prayers were not answered. Then I became skeptical and decided that God did not know anything about me or my troubles. We tried Christian Science as a last resort, not that either myself or my husband had any faith at all that it would heal.

We were told by the gentleman who first presented the subject to us that it did not require large faith on our part, but only obedience. We decided to try it, as we thought it could do no harm, but how little we knew what happiness and satisfaction were in store for us. In six short weeks I was able to go to any place I wished, and was so changed in appearance that some of my friends did not recognize me when I met them. To my friends and myself, my healing was wonderful, but the truth about God and man that Christian Science enabled me to obtain is a constant source of joy and satisfaction, and what a relief it is to *know* that God does not know sickness, and that we, as His children, do not have to suffer.

I feel very grateful to God, to our Leader, and to all those who have helped me to gain my present understanding.

MRS. MARIE E. MAITLAND, Joplin, Mo.

I wish to make public acknowledgment of the benefits received through Christian Science. I was a trained nurse and followed my profession for ten years before coming into Christian Science, but after deep study I have been convinced, both in theory and practice, that the only curative agent is divine Mind. Although I gave up my profession and sought new work, looking only to divine Love, my wants have always been supplied.

When a child my ear became diseased from constant diving, and troubled me for years, as abscesses formed constantly, and I was seldom free from pain. I was advised by one physician to leave Galveston for a dryer climate, thinking that I would be benefited by the change. I suffered severely from the treatment given me by great specialists. About eight years ago the condition was considered so serious that an operation was performed by which the drum and several small bones of the ear were removed. Even after the operation, the abscesses continued to form. The last abscess was destroyed under Christian Science treatment. That was three years ago, and I have been free from them ever since. Two years ago I had the blessed privilege of class instruction, and I am happy to state that during the teaching my hearing in that ear was restored after it had been lost to me for twenty-eight years.

Six years ago my wrist was broken while caring for a patient who was in wild delirium. Being unable to leave the patient and thinking that the wrist was only sprained, I bound it up tightly and paid no further attention to it. After removing the bandage I found that the bone had been broken and had united crooked. The joint was twice the natural size and always gave me pain and was not strong enough to lift a heavy weight. I was advised by several to have it broken and reset, which I refused to do. Three summers ago, while under absent treatment for the ear trouble, one day, to my utter astonishment, I found the wrist straight and reduced to its normal size. I had occasion to return some medical books to a physician who was anxious to show me his powerful electric light and X-rays, and I asked him if he could see that anything had been the matter with my wrist, and he said that he could see where it had been broken, by the thickening of the bone as it had healed. I have also been healed of pneumonia, acute indigestion, and sick headache.

Each day brings new proofs of the power of divine Love to meet every human need. Ten years of *materia medica* and three years of this glorious Science have proven to me beyond doubt which is the truth. I feel grateful for the kindness shown me by the physicians who did all their science suggested to benefit me, though without result. I turned to the one and only Physician and was healed. Although I still have work to do, I know that under the guidance of Christian Science, faithful, earnest effort will bring reward, and at some time the promise will be fulfilled: I shall awake in His likeness.

LEE WASHINGTON, Washington, D. C.

About five years ago I had three teeth filled by the dentist, two on the left side of my mouth and one on the right side. On the left side the teeth were very close together and the decay was between the teeth and up in the roots under the gum, so that the dentist had to cut away much of the teeth in order to get at the roots, which made a very large cavity. The one on the right side was very much decayed and so loose in the gum that the dentist refused to fill it; and touching it with his instrument, said, "It is waste of time and money to fill such a tooth as that, let me take it out," but I insisted on having it filled and keeping it as long as it would stay. The enamel on two of my front teeth had also decayed about a sixteenth of an inch below the gum, so that the dentist advised me to have them filled too, but it was not convenient at that time.

In about a year, may be not so long, the filling came out of the teeth on the left side of the gum, and they ulcerated and were at times very painful. I was able to overcome the pain somewhat, so that I did not lose much sleep. I think this lasted about a week, and the swelling seemed to increase so that I was not able to close my mouth; that is, I could not bring my teeth together. It had become so painful that I stopped my work and went to my room to try to realize the truth so as to destroy the sense of suffering. In my effort to become conscious of the truth that heals, I received a wonderful sense of the non-existence of error, the nothingness of everything but God and His idea (I wish I could express that sense, but I have no words), and instantly the swelling went down like a blister pricked with a pin, the pain left, and I went about my work free from the pain and swelling.

It also came to me that the cavity was a false sense which Truth would cast out and give me the true sense, which is perfection. I did not go to the dentist. I don't know why. I did not then think my teeth would be filled as they have been. In about two or three weeks, when my tongue touched the cavity on the left side it seemed to be smaller, and as the days passed it continued to get smaller. The thought came to me, Is it possible I am having my teeth filled by the realization of the power of Truth over error? Shortly, I had occasion to go to the dentist's office, which reminded me of the fact that the cavity was getting less, and I called his attention to it. He examined it and said, "I see the new bone that has formed. Your tooth is being filled." The enamel also began to grow on my front teeth. The

Digitized by Google

tooth on the right side of my mouth tightened in the gum. It was cut away so that the space between it and the tooth next to it was almost large enough to hold another tooth. This tooth was filled up in the root under the gum, also below the gum. I do not know what became of that which was below the gum, but the filling that was under the gum came out and stuck between the gum and the tooth. I paid very little attention to it. One day I was eating something, and found a hard substance in my mouth. I put it aside without noticing it. Some days after, I missed the filling that was between the gum and the tooth, and found no cavity. I took a small mirror and examined my tooth and found it whole, filled with new bone, and the space between it and the tooth next to it much less. It is now almost filled in with a whole solid tooth. The new growth actually pushed the filling out. I have had no trouble with my teeth since.—S. J. K., Philadelphia, Pa.

As an expression of my deep gratitude I should like to say what Christian Science has done for me. I first heard of it six months ago, from a friend, who, like myself, was very much in need of repairs. Seeing the effect it had on him convinced me that it was true. Selfishness was my first reason for seeking its aid. I wanted to be rid of my many ailments. Now I understand that the mental and moral effects of Christian Science are of far more consequence.

After a life spent in a disappointing struggle with what to me seemed adverse circumstances, I have now found a contented and happy state of mind, such as never came my way before. My gratitude is due to the practitioner who took me in hand, for his patience and forbearance. Many things were told me which at first were very hard to believe; but I am bound to confess that everything has been satisfactorily proved since.

During the last six months I have been completely healed of a rather serious case of hernia. Palpitation of the heart, which had troubled me for more than twenty years, is quite gone. Acute rheumatism in the shoulder has disappeared. Catarrh of the throat and nostrils, which sometimes lasted all the winter, has not troubled me this year. My sight was very indifferent; for the last sixteen years I have had to use glasses, gradually increasing their strength. Now I can read newspaper type with ease, and I have not used my glasses at all for more than two months. Some other troubles, chronic gout among the number, are disappearing so rapidly that I no longer fear them or believe in their reality. I do not know of any power save my gratitude to God and to Christian Science which could make me give a testimony in public, for my nervousness was so great that I had never been able to speak at a public meeting.

To express adequately my gratitude to Mrs. Eddy is impossible. I can only wonder at her extraordinary courage in giving to the world this beautiful revelation of Truth, and without making the least concession to materialism.

W. Davidson, Richmond, England.

I wish to express my gratitude for the blessings of Christian Science. Six months ago it was introduced to me by a friend. I was then called a "perfect wreck." I was a victim to almost all the ills that flesh is heir to,—lung and throat trouble, nasal catarrh of about twenty-four years' standing, kidney trouble, and dyspepsia. There were many things I could not eat, and coffee I dared not drink; it always brought on a bilious spell. According to mortal sense, I had lost my voice, I could not speak above a whisper for seven months. I was very kindly cared for by my physician, who was a specialist, but he had no hope of a complete cure. When we had talks on the subject, he said he was doing for me what he would wish any one to do for him,—giving me a chance for my life. I took several kinds of medicine all the time; it was as natural for me to take medicine after each meal as it was to eat the meal, but after this friend had spoken to me of Christian Science, I stopped taking medicine, gave up treatment for my throat, and gave my full attention to the investigation of Christian Science.

I was in Science about two months before taking a treatment, but made some very good demonstrations for myself from reading the *Sentinels* and *Journals*. The first demonstration was over weakness. I had been able to walk but a short distance at a time, but I started out to attend the meeting on the second Sunday after having heard where the services were held. I declared the truth,—that God is my strength,—and on arriving at the house I was surprised to note that I was not tired. My strength began to increase from that time on. My next demonstration was over heart trouble, and that was met so quickly I have had no trouble since from climbing stairs, or walking fast. A few weeks ago I ran nearly half a square to catch a car, but felt no bad effect from it. In my case the cure has been slow, but one ailment has disappeared after another through the understanding of divine Truth which makes free indeed. I can work or walk as much as I like, and do not feel weary.

I am reading the Bible and Science and Health every day, and they are my best friends. I thank God, and also Mrs. Eddy, for the light of Truth that has been revealed to us through Christian Science; and not only for the healing but for the spiritual uplifting. I am not entirely cured, according to mortal sense, but I know that as I grow in grace, I shall reflect perfect health.

Annie E. Cornelius, Norristown, Pa.

I wish to express my gratitude to our beloved Leader, Mrs. Eddy, for this wondrous truth, called Christian Science. It is nearly ten years since I was healed by it of what the doctors called chronic indigestion, inactive liver, heart trouble, and several other diseases which made life a burden.

Three of the best doctors in this city attended me and could do no more for me. The minister of my church and his wife were among my best friends, and they called on me very often. When he learned that the doctors said I could not live much longer, he told me what he had heard of Christian Science. He did not know much about it, but he knew of a case of insanity that had been cured without any medicine, and said if I would try it he would bring the lady to my house, as I was too weak to step out of doors. For two weeks I had been confined to the room, and had been a sufferer for six years. I accepted his kind offer, and next day he brought a practitioner. I was helped almost instantly, but I was treated for some time, and all my ailments were overcome.

It seems useless to try to explain what Christian Science has done for me and mine, but my heart overflows with gratitude for the many blessings that have come to us through this truth. Of course the healing of my body seemed the greatest to those around me, but the unspeakable joy and peace, the *knowing*,—not only believing,—the realization that God is All, that Love is Life, and God is Love, filled me to the brim, and is the greatest to me. Only in such a condition was I enabled to stand the many trials that I had to go through, but all the different trials have proven Christian Science to be an ever-present help in time of need. During this year, diphtheria, measles, scarlet fever, are the diseases that have been healed by Christian Science in my family. I cannot enumerate the many times we have been helped, and I do not see how anybody can do without this truth.—Mrs. O. Anderson, Austin, Tex.

It has occurred to me that I have had ample time to meditate on the many blessings which I have received through Christian Science, as it is now more than six years since I was entirely healed of a most malignant case of

Digitized by Google

dyspepsia as well as constipation in its worst form by the reading of "Science and Health with Key to the Scriptures." So aggravated were the conditions that for three years or more I was unable to drink a glass of cold water. Everything that I drank had to be hot, and my only means of relief from the bowel trouble was hot water injections, for a period of more than three years.

I can truthfully say that I was permanently, and I might say instantly, healed of those two ailments by reading Science and Health as before stated, and in fact I do not think I had read more than thirty pages of this book when I ignored entirely the most rigid kind of diet. I ate and drank everything I wished without a single harmful effect from that time to this date, and there has not been a drop of medicine in our home for more than six years, in a family of five.

I have also seen the power of Truth manifested in our home by having our youngest child relieved of the most excruciating pain, and changed to his most playful mood, immediately upon notifying one of the faithful practitioners of this city. For all this I am endeavoring to be thankful to God and to our faithful Leader, Mrs. Eddy, whose pure and undefiled life enabled her to discover this precious truth for the benefit of all mankind.

With loving gratitude to all the faithful workers in our Cause, I send this forth as a feeble expression of what Truth has done for me and mine.

M. C. McKENZIE, Denver, Col.

My little brother, ten years of age, was bitten on the nose by a rat. The sore seemed to heal all right for about a week, after which the doctor said that blood-poisoning had set in, and for three weeks thereafter he was constantly under the doctor's care. He grew worse until finally he was given up by the doctor, and father was advised to take him to Chicago. He lay in bed, unable to move, his face swollen out of shape, his nose drawn to one side, eyes shut, the cords of his neck fearfully swollen, and his face covered with ugly sores.

Father was on the point of having him removed to Chicago to a specialist for such diseases, when it was suggested to him that he first try Christian Science. After much persuasion, he finally consented to give it a trial for three days, although he said he hadn't a particle of faith in it. A Christian Science practitioner was called in that evening and, wonderful to relate, Joe was out the next morning and played six games of croquet.

The following morning all the sores on his face had disappeared except one, and that week he went to a neighboring city alone and visited his grandmother.

We are truly grateful for this wonderful recovery and for what Christian Science has done for us.

HAZEL LARIMER, Chillicothe, Ill.

I am glad of the privilege of giving my testimony of healing through the ministry of Christian Science. I was healed of nervous prostration brought on by grief and trouble. I had suffered from a torpid liver and constantly used liver-pills. A neighbor called to see me, and from her I had the first treatment. When I was healed the first thing I did after getting out of bed was to empty my medicine chest and burn all my prescriptions. I am a graduate of the Orthopædic Hospital of Philadelphia, and for four years previous to this I had practised massage, but about every three months I had to give up work and take medical treatment and rest, or try a change of climate.

The physical disability is but part of the burden which has been removed from my life. In fact, life to me had been a complete disappointment. Every aspiration seemed to be made impossible of achievement, until it seemed that failure was the only result. Now this is gradually changing, as I am proving that Life is God, and I, as God's child, must reflect wisdom, strength, and endurance, and that it is a joy to live. I have learned that God's law involves progression and that success is the sure result of worthy endeavor.

I am deeply grateful to those who have helped me in Christian Science: first to Mrs. Eddy, through whose purity and self-sacrifice this wonderful religion is given to the world, to my neighbor and first helper, to the teacher from whom I had class instruction, and for the *Sentinel* and *Journal* which bring us their cheering messages.

L. W. D., Lanark, Ont.

I have been putting off the writing of my testimony for a long time, but I have so much to be thankful for that I cannot tell all. Enough to say that I have been cured of blood poison, kidney trouble, heart disease, headache, and rheumatism; in fact, I was a physical wreck. It would be impossible for me to tell of all. I seemed to suffer all that a human being could suffer and live. The doctors told me there was no help, and once I was given up for dead.

There was not only physical suffering, but trouble, sorrow, and poverty. I had no hope of anything and had arrived where I did not care, but *now, oh now*, thanks be to God and to our dear Leader, the light has come, with health, happiness, and love for all mankind. I have three children who have been saved from death through Christian Science, and I can truly say, Praise be to God for Science and Health, which has shown us the way of life; also how to read the Bible and love it.

I know now that God is my Life,—it has been proved to me beyond a doubt, and I am very grateful for all these blessings. I have had the great privilege of class instruction.—MRS. BEULAH SNODGRASS, Golden, Col.

Christian Science was presented to me when I needed it most. I suffered from what was called appendicitis, for a number of years, and grew worse until the doctors could help me no more. The only thing left was an operation, to which I would not consent. Then came the time that I turned to Christian Science and I was healed in two treatments. This was four years ago and I have not had a return of the trouble since.

My heart overflows with gratitude to my practitioner, and to our dear Leader, Mrs. Eddy, for this blessed truth.

ED. HALLIFDIEDE, Manitowoc, Wis.

[Written for the *Sentinel*.]

Faith.

HARRY T. FEE.

THERE is no woe
  But what we make,
There is no gloom
  But as we take
Gloom's vagrant view;
God's all-wise love will not forsake
  His truth in you.

Disease is but
  A glimmering wraith,
No matter what
  Grim error saith
In blatant tone;
And thou shalt know the power of faith
  And Love alone.

From Our Exchanges.

What is needed to-day is such a demonstration of the living God that men will know His direct relation to them. It is the work of the Spirit of God to convict the world of sin, of righteousness, and of judgment to come, and it is found in personal experience that the effect of Spirit's presence in the soul is to make very real the Biblical revelation as to God and to bring Him into such manifestation that His being is the profound truth of the soul. Multitudes of Christian people are living in a sense of accountability as fully as that of any period, because they have known through experience of the power of God that He is the Alpha and Omega of life. It is the business of the church at the present time to bring men to the conviction of the truth of the word of God and to secure Divine power in such effectiveness in human experience that they shall gain a renewed sense of accountability to Him.—*The Watchman.*

For every stage of progress, up the vast spiral of ascending life, we need to summon all the real and vital things within us, all hope and courage, all patience and sympathy and love. We need to stifle and silence the unworthy things, the brutish impulses, the low-born passions that bark at our heels. We need, in one word, to be alive. And if any tract of life has become torpid, if any faculties for better things have sunk into disuse, if the palsy of indifference has invaded any vital center of life, the word which needs to be spoken to these wandering powers is the word spoken of the prodigal son: "He was lost but is found; he was dead but is alive again."

The Congregationalist and Christian World.

To him who correctly apprehends its meaning, the term religion stands for the most important things. It signifies right thinking toward God and man. It is that which binds the spirit to God in faith and love and moves the heart to kindly deeds for His children. Religion in its most essential aspect is not a thing of special days and forms and ceremonies and creeds, but a prevailing posture of spirit and temper of mind which lives in an abiding consciousness of the Divine presence and under the influence of a sweetly irresistible impulse to good works.

The Universalist Leader.

Busy minds are diligently seeking a reason or reasons for the spiritual lethargy that has so long enthralled the churches of this country. Doubtless many causes have contributed to this result; but may it not be that the root of the difficulty is that there has been so much of pulpit dabbling with theories of evolution, psychology, sociology, and so on, and less of forthright preaching of the verities of the Gospel? Men need to be reminded often and forcibly that "he that commits sin is the slave of sin," and that the only escape from that fatal bondage is by the way of the Cross.

The Examiner.

Fear may be overcome in such a way as to leave the soul quite as desolate as it was before. One may overcome the pain of fear without touching the cause of fear. Why are we so fearful? Is it not because we have given to God such a mean and narrow place in our hearts? Perfect love casteth out fear, and God is love. Lift up your heads, O ye gates, and let the King of glory come in, and fear shall fly away.—*The Christian Advocate.*

Men show gratitude to their fellow-men by words and acts. Words without corresponding acts or contradicted by conduct are simply evidences of hypocrisy.

The Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The Constellation, the oldest ship of the old navy, has been brought from Newport to the New York Navy Yard to await there her further disposition by the Navy Department. For the past ten years she has been in service at Newport as a receiving ship for navy apprentices. She was built in Baltimore in 1797 and, aside from the Constitution, is one of the most notable of the old oak-ribbed vessels set afloat in the early years of the nation. She was fast in every point of sailing and early became known as the "water witch." She had the reputation early in the last century of being the fastest frigate afloat.

Princeton University has just announced changes in her curriculum that are quite radical. The leading feature, which will not come into full operation until 1905-06, is to take away from the two lower classes the hitherto carefully guarded system of electives. The course of study in the academic department will be narrowed down to three general lines, each leading to a degree. At the end of the second year a large measure of freedom will be allowed in the matter of electives. This action is a deliberate return toward the curriculum of earlier days, which has been regarded as too unyielding and narrow.

Foreign.

There are nine thousand burning lights and signals stretched along the American coasts, forming a perfect link, so that the navigator never need be beyond sight of one of the beacons. One thousand of these are located on the Atlantic coast, fifteen hundred are scattered along the rivers and inland waterways, five hundred on the Great Lakes and two hundred on the Pacific coast. Of the grand total, including lighthouses of different classes, buoys, beacons, and danger signals, three thousand are lighted, giving forth their warnings at night time. Of these a score or more throw a beam of one hundred thousand candle-power. To maintain the lighthouse service a corps of over four thousand men is constantly employed and a fleet of more than fifty vessels. A modern American lighthouse of the first class costs between one and two hundred thousand dollars, and of this about one-third is spent for the electric light and apparatus alone.

The Government decree accepting the bids for constructing the trans-Andine railway has been signed by Chile. The contract for building the road was divided between New York and London firms. The aggregate of the contract is $6,750,000, but ultimately the Government designs, it is understood, to expend two or three times that much on the railway.

It is announced that Earl Grey, Lord Lieutenant of Northumberland, has been appointed to succeed the Earl of Minto as Governor General of Canada.

The house at Chiswick in which William Hogarth lived is about to be opened to the public as a Hogarth Museum.

King Victor Emmanuel has decided in favor of Great Britain, the dispute with Brazil over the Guiana boundary.

Industrial and Commercial.

The progress that has been made within recent months in the adaptation of wireless telegraphy, says an exchange, may be inferred from the fact that *The Bulletin*, published on the steamer Campania, which arrived from Liverpool on the 11th, every day contained two hundred words of news received from either the American or the English side of the ocean, or from both, by the wireless system. M. Marconi was a passenger on the Campania and had guaranteed that his company would keep in daily, if not hourly, contact with the shore, and that the news of the world would be supplied. Every morning at breakfast the passengers on the Campania read *The Bulletin* and were kept informed as to the progress of events. The daily sea paper, therefore, has arrived, and is now a permanent institution in our rapidly developing civilization.

The third and last section of the rapid transit tunnel under the Harlem River was sunk last week, and it is expected that the tunnel will be completed inside of six weeks. The work, as an engineering feat, has attracted much attention. The total length of the tunnel is about fifteen hundred feet. It consists of two cast-iron partial cylinders, with a cast-iron diaphragm between them, each cylinder carrying a single track of railway. They were laid by first dredging a channel across the river to a depth of nine or ten feet below the elevation of the roof of the finished tunnel and a little wider than that of the finished tunnel structure. Four lines of piles were then driven throughout the length of the channel. The upper halves of the two cast-iron cylinders were then put together upon a pontoon and sunk in place on the tops of the timber side-walls.

Cotton has developed another and hitherto unsuspected value; for if the result of an analysis recently made is reliable, the cotton stalk, which has previously been regarded as useful only as a fertilizer, will yield between two and four dollars' worth of sugar to the ton. And, furthermore, the waste resultant from the sugar refining process can be manipulated to produce a grade of paper said to be superior to that obtained from wood pulp. The stalks are also found to contain a material resembling celluloid, the base for a smokeless powder composition, and a fair grade of alcohol. It is stated that a conservative estimate of the average annual yield of stalks in the South may be placed at seventy million tons.

The Turbinia, the first turbine passenger and cargo steamer to cross the Atlantic, passed into the St. Lawrence last week on her maiden voyage, bound from England to Hamilton, Ont. She will be employed in Canadian waters in the service of the Turbine Steamship Company of Hamilton. The vessel is 260 feet long, 53 feet wide, and 20 feet nine inches deep. She is of one thousand tons burden and has accommodations for about fifteen hundred passengers. Her propelling machinery consists of three Parsons compound steam turbines,—one high pressure in the center of the ship and one low pressure on either side.

After a tie-up of six weeks on the Great Lakes that has directly involved only a couple of thousand men, but indirectly more than a hundred thousand, a cessation was brought to the strike last week by the surrender of the masters who, with the pilots, have been holding out for a more uniform scale of wages this season than was offered by the Lake Carriers' Association. It was understood that the Lake Carriers' Association would soon come to an agreement with the mates, and that the full fleet of the Lake Carriers' Association would be gotten under way within a few days.

Negotiations have been in progress for some time in San Francisco, it is said, looking to the organization of an international banking corporation by local capitalists and a Japanese syndicate. According to the plans outlined, the institution is to have a capital of ten million dollars and to be the dominating influence in the financial relations between the United States and the Orient. The movement to start the organization came from Japan.

General.

A writer in the current issue of *Public Opinion* makes mention of some curious musical features possessed by certain fish. It cites one instance where a traveller in Borneo, while passing along the Pontinaic River, heard a distinct collection of musical sounds, sometimes high and sometimes low. The sounds came from the water and varied from the resonance of an organ to the soft and harmonious notes of an Æolian harp. If one dived into the water the music became more audible, and it was definitely concluded that the sounds were produced by fish. The pogonias or tambours, which inhabit the Atlantic coast water, are known to make similar sounds, which may be heard at a great distance.

Signor Giacomo Boni, the archæologist who is directing the excavations of the Roman Forum, has found a heavy capstan with eight fixed levers of wood. The wood is perfectly preserved, while the iron fixtures have become oxidized. This mechanical contrivance dates back two thousand years. The capstan, which was found almost intact, has a diameter of over two yards.

Persons travelling on railroads cannot secure damages in case of accident when they ride on passes. This decision has been reached by the United States Supreme Court. The decision went to the extent of applying the principle to such passengers as are not familiar with the contract usually printed on the back of passes.

The American chess champion, H. N Pillsbury, played sixteen games simultaneously without sight of men and boards in New York recently. After three and a half hours' play the referee declared Pillsbury had played to win ten games and to draw six. None of the games were finished. On none of the boards was the position against him.

Concerning the small watercolor portrait by Holbein, recently sold in London for $13,750, and believed to be a likeness of Frances Howard, Duchess of Norfolk, at the age of twenty-three, a statistician has come forward to prove that the lady could not be Frances, or else that Holbein could not be the artist.

A number of antiquarian discoveries are reported from Switzerland. The director of the museum at Avenches (Aventicum) has unearthed more than one hundred and fifty objects belonging to the Roman period. Among these are several bronzes, pieces of pottery, brickwork, and mosaic, and a small table-top in colored marble.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Report of the Clerk of the Mother Church.

THE following valuable report was made by William B. Johnson, C.S.D., Clerk of the Mother Church, The First Church of Christ, Scientist, to the Annual Meeting, Tuesday, June 14, and it was listened to with great attention by the large number of members in attendance.

Ten years ago the twenty-first day of last month the corner-stone of the Mother Church edifice was laid. The conditions that environed the building of the church are of intense interest to students of Christian Science history, and the success of the undertaking is evidence of faith in divine Love to guide, guard, and help those who love and obey God.

The erection of the Mother Church ten years ago was the demonstration which gave incalculable impetus to the Cause of Christian Science, not only here in Boston but in every place in which Christian Science was known. Those who are familiar with Mr. Armstrong's graphic account of the building of the church, in his book, "The Mother Church," and those who were in the front ranks at the time, know something of the struggles that beset the erection of the building which was to be an enduring testimonial to the Discoverer and Founder of Christian Science, and which should stand before the world as a visible sign of faith in the promise of Jesus, that those who believe on him are to heal as he healed.

Words are inadequate to narrate the struggle that accompanied the building of the present edifice, and only those who were immediately connected with the work apprehend it, and rightly estimate the value of the counsel, caution, instruction, and encouragement which our beloved Leader then gave her workers. There was something more in this undertaking than the mere construction of a building of granite and steel. The erection of the Mother Church symbolized the fulfilment of promise, a promise of spiritual purpose, the extent of which we yet realize but little.

The meaning of this demonstration, what it represented at that time and what it represents now, and the great benefits that have come to our Cause through it, should be learned by every student of Christian Science. First, the edifice brought Christian Science as taught by Mrs. Eddy vividly before the religious world; secondly, it awakened a new interest in the thoughtful and the inquiring as to the Principle and the doctrine it represented; thirdly, the erection of the edifice was an example of perseverance for students of Christian Science, and opened the way for the building of many beautiful structures by its branches; fourthly, after the dedication of the building, there was a surprising increase in the membership of both the Mother Church and its branch churches.

On January 20, 1895, a marked departure took place in the order of services in the Mother Church. Prior to that date the sermons in this church and in many of the branch churches had been supplied by pastors, but Mrs. Eddy realized the need of uniformity in presenting the doctrine of Christian Science, unhampered by diverse personal views, and to that end ordained the Bible and "Science and Health with Key to the Scriptures" as "Pastor over the Mother Church." Through the columns of *The Christian Science Journal* of April, 1895, Mrs. Eddy ordained the Bible and our text-book as the "only pastor of the Church of Christ, Scientist, throughout our land, and in other lands."

Before 1898 talks and lectures on Christian Science had been given indiscriminately, and much confusion in the conception of the teachings of Christian Science had been caused by persons calling themselves Christian Scientists and whose statements were accepted as authoritative. In January, 1898, Mrs. Eddy saw the necessity of a Board of Lectureship which should be the authorized body to correctly present Christian Science to the public; therefore in this year the Board of Lectureship was established.

In order to correct misrepresentations and mistakes appearing in newspapers, books, and periodicals in regard to Christian Science, the By-law creating the Publication Committees was adopted, and those day and night watchers and workers for equity and right, sprang into useful existence. At this same time another By-law authorized the Board of Education, having for its sacred labors the duty of equipping students to practise and to teach Christian Science.

On September 1, 1898, the *Christian Science Weekly* began its issue and ran under that title until January 26, 1899, when it was changed to the *Christian Science Sentinel*, a name more suggestive of its mission. Owing to the growth of Christian Science in Germany, the necessity of a German publication was felt, and *Der Christian Science Herold* became a bond of religious friendship between the English and the German speaking adherents of our Cause. The first number of this periodical was published April, 1903.

This Church was organized September 23, 1892, with twelve members. In 1895 the By-laws of the Church were published under the title of "Church Manual of The First Church of Christ, Scientist, in Boston, Mass." When Mrs. Eddy conceived the thought of providing a Manual for the furtherance of this Cause, and for our daily guidance, Divine wisdom impelled her efforts. With a vision widened by the broad experiences of her position, her knowledge of material thought, and by her spiritual understanding, she has given us a book so simple, yet so far-reaching in its spiritual intent that when living in harmony with it we cease to stray into deceitful ways, and are guided in paths leading heavenward. Let us, then, realize to-day as we have never before what the Church Manual means, and how it guides and guards us, and be deeply and humbly grateful to our revered Leader who has given us this book, and manifest our gratitude by obedience to its requirements.

It should be distinctly understood that the ordination of the Bible and "Science and Health with Key to the Scriptures," as Pastor, the compilation of the Church Manual, the establishment of the Board of Lectureship, the Publication Committee, and the Board of Education, the publication of the *Christian Science Sentinel* and *Der Christian Science Herold*,—all emanated from Mrs. Eddy's forethought, love, and prayerful consideration, and all have been given to us since she urged her students, in the face of seemingly overwhelming difficulties, to build the Mother Church of Christian Science.

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

The progress of this Cause is evidenced by the increase in the number of branch churches and the gain in their membership and the constant growth of the membership of the Mother Church. Ten years ago there had been admitted into this Church 2,536 members. The membership is now 30,534, of which 3,102 united during the past year. The number of branch churches advertised in *The Christian Science Journal* of June, 1894, was 96, the number now is 619. Reports from 581 of these show a membership of 34,599. The number of places in which Christian Science services were held June, 1894, but which were not known as branch churches, was 118; the number to-day is 231. The total number of places in which Christian Science services were held ten years ago was 214; the total at this date is 850.

The increase in our local membership, and the rapid growth in the attendance at our services have long since exceeded the capacity of the present church edifice and have forced the Church to enlarge its borders, and at the Annual Meeting, June, 1901, by unanimous vote, the Church pledged any part of two million dollars for the purpose of erecting a structure of sufficient capacity to meet the needs. Steps were immediately taken to secure the remaining property which occupied the triangle bounded by Falmouth, Norway, and St. Paul Streets. Since October 29, 1903, the buildings have been removed, 4,048 piles have been driven, and the work upon the foundations is being rapidly pushed forward. The structure to be erected will be in keeping with the grandeur of the Cause, and in its beauty, strength, and majesty, it will prove a splendid and fitting testimonial to the Founder of Christian Science, our revered Pastor Emeritus.

Mr. Chase, the Treasurer, in his report has given us the amount contributed for the Church building fund. It is our duty to keep this splendid project in our daily thought so that no obstacles may hamper the advance of the undertaking.

That "history repeats itself," is a familiar axiom. With this in mind allow me to take a few more moments of your time to read a quotation from the *Boston Transcript* which appeared shortly after the dedication of the present church edifice. It says, "Wonders will never cease. Here is a church whose treasurer has sent out word that no sums except those already subscribed can be received. The Christian Scientists have a faith of the mustard-seed variety. What a pity some of our practical Christian folk have not a faith approximate to that of these impractical Christian Scientists."

The happy condition which forced the Treasurer in January, 1895, to send out notice that ample funds were in his hands for the completion of our first church building is worth repetition, and will surely come to us again.

In talking on the subject of Christian Science with those who have not accepted it, we frequently refer to Jesus as the great Wayshower for all mankind, and cite the fact that he did not resort to material means in healing the sick. This statement is almost invariably met by a reference to the application of clay to the eyes of the blind man whom Jesus healed, as related in the ninth chapter of John's gospel. In the sixteenth verse of this chapter referred to we find this: "Therefore said some of the Pharisees, This man is not of God, because he keepeth not the sabbath day. Others said, How can a man that is a sinner do such miracles?" If those who were present and witnessed the healing had regarded the clay as a factor, this, to them, would have removed it from the realm of the miraculous, while the fact that they looked upon it as a miracle shows conclusively that they attached absolutely no significance to the application of clay to the man's eyes.

R. M. Strother.

From our Contributors.

The Sophistry of Discouragement.

WILLARD S. MATTOX.

We, who are beginning the vast study of the Science of existence, who are just learning how to lay hold on the simple truths of being, need every encouragement, for unfortunately it would seem that our every endeavor is met by an argument intended to dissuade us. The situation, apparently, is this: We have been submerged so long in the mesmerism of matter, its every incident and detail appear so real to our view, accustomed as we are to a distorted perspective, that it seems very difficult to turn the gaze in the opposite direction. A ship set adrift will sweep helplessly in the direction of tide, current, and wind. Now start the machinery. Begin to get the huge bulk under control, and you will see that it does not readily and at once, answer to the new propulsion. The natural forces seem reluctant to release their grasp. Slowly, with much straining and a mighty effort, the drifting is reduced, until finally the vessel begins to move under intelligent guidance. Inch by inch it fights its way up stream to its moorings.

The similitude may not be entirely satisfactory, but it gives a fairly accurate picture of what takes place when a mortal wakes up to find himself helpless, and drifting under the control of the tide of general belief. Such an one is entitled to every bit of encouragement and assistance he can find. Above all, he requires to have himself so well in hand at all times, that he will not be tricked by the little artifices by means of which a subtle claim to intelligence seeks to impede his progress. The Christian Scientist should be an expert logician, possessed of a capacity for sound reasoning which will enable him to lay bare every false claim. Possibly this is the characteristic which men are most deficient in. The world generally is satisfied with a very inferior quality of logic, and it suffers because of its unwillingness to go deeper into a question than the scratching of the surface. If it be true, as Bacon says, that writing makes an exact man, then it were well if we all turned writers. But there is something back of the writing which makes an exact man. Our thought processes must become more precise, if we desire to be thoroughly well fitted for an investigation of truth. It is recorded that "Mary kept all these things and pondered them in her heart." She gave herself up to the contemplation of the heavenly truths revealed to her pure consciousness. So must we all ponder, and this communion with the Most High, this seeking to know more of the changeless creator and His unchanging laws, will develop in each a clear vision; it will necessarily shape thought into the likeness of Him who is forever the very selfhood of all truth, accuracy, and integrity of being. The image and likeness of God cannot be a careless thinker. This is apropos of the statement in Science and Health, page 128, "The addition of two sums in mathematics must always bring the same result. So is it with logic. If both the major and the minor proposition of a syllogism be correct, the conclusion cannot be false if properly drawn. So in Christian Science, there are no discords or contradictions, because its logic is as harmonious as the reasoning of an accurately stated syllogism, or of a properly computed sum in arithmetic." A proper appreciation of the mental methods necessary to the practice of Christian Science justifies its title and exposes the shallow criticism which does not penetrate beyond the frontier of the domain of right thinking.

The practical advantage to the Christian Scientist of such a cultivated faculty for close reasoning, is just this,—it enables him to analyze situations, to dissect phenomena, and it insures him against the little deceptions of mortal mind which are always so much more dangerous than the

Digitized by Google

glaring evils. Who, for example, has not found himself depressed momentarily by the sudden unveiling of error in another? I dare say it is the common experience of all Christian Scientists to find themselves listening to a very enervating argument about some other man's faults, as if that were the end of all good, and the finish of our own race. There is nothing more disheartening than to witness the breaking of an idol, when that idol is something we have built up for ourselves. But to be disappointed in persons is a happy augury of that scientific sense which finds complete satisfaction only in things as God made them, and which wastes no time lamenting things that are not. And yet it is so easy to be tricked into looking long at person, investing fallibility with divine characteristics, and then falling with the inevitable fall of the idol. It is just another way of breaking the first commandment, and one of the ways we do not recognize at once. The talent for precise thinking enables us to detect the weakness of such procedure. Manifestly, if we could be persuaded to keep our gaze fixed on some other mortal, or several other mortals, themselves struggling out of the same mesmerism which is besetting us, we would make little or no progress. The effect of such misdirected scrutiny is an exaggeration of all the error of the human, a heightened sense of the frailty and fallibility of mortal man, and a consequent discouragement which will do much to paralyze effort and depress energy.

To illustrate, let us suppose two students, side by side, each working out a problem in mathematics. One is making his initial trial and is struggling with the foundational truth that twice two is four. The other has already proved that simple statement, has progressed somewhat, and is now engaged on a more advanced problem. In the course of time, the second student fails. His failure is promptly noted by the younger student at his side. Why? Because he has had his eye on the older student all the time, watching to see how he would come out. Instead of giving all his attention to the working of the problem before him, he has been more or less in a conjectural state of mind, wondering, possibly, if his companion would or would not succeed. Noting the failure, he throws down his pencil, and exclaims dejectedly, "That finishes me with mathematics! There is no use to try any longer. There is my friend, who is so much farther along than I am, and see! He has failed! If he can't do his problem, I can't hope to succeed with mine. I might as well quit, for what guarantee have I that I will ever be able to solve my little problem!" Have you ever heard that plaintive cry? Have you ever pitied the weakness that is all eyes for the failures and cannot see the Principle and the rule by which it can be worked? Have you ever wondered at the deplorable lack of logic which measures one man's capacities by another's failures, and gets small comfort from the process? What if the advanced student at your side does not reach a solution at one trial? Is that any argument for discouragement? We have a perfect model, who never failed in anything he attempted, and we shall never be discouraged so long as we keep before us his splendid example. If we want to know how a thing can be done, we should seek out the man who has done it. We lose time watching the man who is trying to do it.

It may be that Paul had in mind some such condition among the early Christians, when he wrote, "Not as though I had already attained, either were already perfect: but I follow after, if that I may apprehend that for which also I am apprehended of Christ Jesus. Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

If our gaze rest on nothing better, nothing higher than a false image, a counterfeit man, we ought not to be surprised nor complain if we do not derive from such a contemplation sufficient courage to enable us to go on our way. Jesus never failed in any demonstration over evil, and he said of himself that he was the way. Mortals are unconscious imitators. The instinct is strongly developed in children and is more noticeable in them than in adults. We unconsciously pattern ourselves after that which we take to ourselves as a model. How much better, then, to look always toward the perfect demonstrator, toward the wayshower who succeeded, and take heart, rather than to stumble and fall and fail, because our models are counterparts of ourselves, and have little stimulus to offer us by way of accomplishment. We are not dismayed, then, when here and there we see fellow students who are not, at the moment, equal to the immediate problem in hand. We know they will be equal to it, sometime. We know that beneath us all, firm as the Rock of Ages, is the great governing Principle of the universe, even God, expressing His infinite will by means of ever-present law; that this law is available, is operative for us, and annuls the supposed laws which result in discord. We know that Jesus the Christ expounded this law, proved it, lived by it, and taught others to live by it. And so it is Principle and Principle's law we are to work up to. We must not take a man of dust nor his uncertain ways, as our prototype, for such was not the "pattern showed to thee in the mount."

Milk for the Babes in Christian Science.

ISABELLA TENNANT.

ST. PETER bids those who are young in the faith to "desire the sincere milk of the word, that ye may grow thereby." As "new born babes" we need constant nourishment, and at first this is all we do need. We are not expected to do the work of men. In our joy in the new sense of life we are apt to speak about it indiscriminately and beyond our understanding, when it would be better to keep quiet and drink in all we can of the truth revealed in the literature of Christian Science. When we more thoroughly understand, we are in a better position to set the truth before others. How often young Christian Scientists rush into argument to their own discomfiture. It is surely clear that "such as have need of milk" are not expected to go out to battle. Our beloved Leader says, "I enjoin it upon my students to hold no controversy or enmity over doctrines and traditions, or over the misconceptions of Christian Science, but to work, watch, and pray for the amelioration of sin, sickness, and death" (No and Yes, p. 17).

We shall not long remain babes if we assimilate the food so freely provided for us, and the time will shortly come when we shall be able to "run, and not be weary," and partake of the "strong meat" which is "for the perfecting of the saints, . . . till we all come . . . unto a perfect man, unto the measure of the stature of the fulness of Christ."

[Written for the *Sentinel*.]

The Sculptor's Prayer.

WILLIS VERNON COLE.

LET every thought that guides this hand to-day,
Be song of praise, O God, unto Thy name,
And every chastened chisel-touch a lay
Of selfless love that seeks a selfless fame.

Thou Holy Source of inspiration pure,
Thou fountain-head of genius, Thou alone
Canst cleanse this heart and make Thy son endure
With joy his seeming burden to Thy throne.

And what is the essence of God? Mind, Intelligence, right Reason? Even so. Hence then, once for all, seek the essence of the good.—EPICTETUS.

Why Men do not go to Church.

NEWSPAPERS and clergymen have busied themselves with the question at the top of this column, "Why do men not attend church?" Special commissions have been appointed to discuss the question with workingmen. Others have investigated the indifference to church attendance of business men.

It appears to be generally conceded that, in Protestant churches at least, the attendance of men is falling off steadily. We suggest to those interested that it might be worth while to consider the question of church attendance at a new kind of church,—the Christian Science Church.

In attendance at least, both of men and women, the Christian Scientists have none of the trouble that seems to be puzzling other denominations.

One great Christian Science Church of New York City, built at an expense of over a million dollars, is packed regularly with enormous audiences. Weather makes no difference, good or bad. Recently newspaper reporters were attracted to this church for news reasons. They reported an absolutely full attendance always, an absolute loyalty to the Founder of Christian Science. It might be worth the while of those investigating the church question to look into the attendance at Christian Science churches.

Why are they crowded and growing? What causes the enthusiasm at their gatherings, an enthusiasm shown in the proselytizing work of every member as well as in marvelously liberal contributions to church purposes.

The following letter received from a man very well known throughout this country, suggests these observations to-day:

To the Editor of the *Boston American*.

I suggest that you investigate the strength and growth of the Christian Science movement. What are its causes. I do not care to be quoted. Christian Scientists do not run into print indiscriminately. But you can easily verify my statements.

While attendance at other churches is falling off, our Christian Science churches grow in membership and attendance every day. There are no congregations whose members attend as regularly as ours, none in which the old and the young, even the little children, find so much happiness in the expression of religious faith.

I read recently a very honest review of a book which I subsequently bought. It is called "Some Truths and Wisdom of Christian Science," published by the Pulpit Press at No. 36 East Twenty-first Street, New York City.

The writer of the book is Margaret Beecher, a granddaughter of the great preacher. Beecher had no difficulty in keeping his church full. People found it hard to get in.

His granddaughter tells of her conversion to Christian Science and her belief that her grandfather if living would be a Christian Scientist.

I believe that she is right. For Beecher taught a cheerful and hopeful view of life and religion. I think those who are puzzling over non-attendance at the old school churches might find some enlightenment in this book, which presents a thesaurus of the best Christian Science thought.

Very truly,
ONE WHO DOES ATTEND CHURCH.

If the name of the writer of that letter could be printed, it would interest the public considerably to learn that he had been converted to Christian Science.

There is no question that the Christian Scientists are a very closely united and enthusiastic body. There is no doubt whatever that their congregations grow and have great vitality. It might be worth while, as our correspondent—a man universally known in national politics—suggests, for those interested in religious questions to find out why it is that Mrs. Eddy's followers retain the enthusiasm that those of other denominations seem to lack.

Editorial in *Boston American*.

The Lectures.

Manchester, England.

The Scriptural basis of Christian Science was the theme expounded in the Free Trade Hall, Manchester, last evening [May 10] by Judge Hanna of Colorado Springs, Col., U.S.A.

The announcement of the meeting had attracted several thousand people whose interest had been stimulated no doubt by the stories of healing which have been told recently in Manchester in connection with the new sect. Those visitors who went in the expectation of hearing more marvelous "testimonies" were disappointed. Judge Hanna gave an earnest but quite unsensational lecture. He was sympathetically listened to throughout.

Chief interest naturally attached to what he had to say about the healing of the sick. He pointed out that, coupled with Christ's command to his disciples to go into all the world and preach the gospel, was the injunction to heal the sick. The latter function, Christian Scientists maintained, was an essential part of the gospel of Jesus.

Christ Jesus himself overcame sin, cured disease, even raised the dead, stilled the tempest, and walked on the surface of the waters. He said, "Verily, verily I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do because I go unto my Father." These words could only mean one thing, said Judge Hanna, if they meant anything at all.

Christian Scientists believed that Jesus meant what he said, and that if people understood the divine law and fulfilled his commands they would be able to do all the things that he and his disciples did. Then, indeed, would be established on earth the kingdom of God. Sickness and death were the result of sin, and could only be removed by following in the footsteps of Christ.

Lord Dunmore presided over the meeting, and he also declared that Christian Science was in perfect harmony with the lessons taught nineteen hundred years ago on the shores of Galilee.—*Manchester Dispatch.*

We are pleased to give the following very interesting extract from the letter of the friend who sent us the above newspaper account.—EDS.

"This is one of many excellent notices of Judge Hanna's lecture. In fact, all the newspapers were unanimous in their praise of the lecture and surprise at the enormous audience. The Free Trade Hall is one of the finest auditoriums in the North of England, and the public were much surprised at our taking the hall, for it was thought ridiculous for such a small body to attempt such an undertaking; but we felt it was the only thing to do, as all smaller halls had *refused* to allow a Christian Science lecture, so we were forced to take it; the result was indeed gratifying. Four thousand people were there, and the majority men."

Chicago, Ill.

Tuesday evening, May 3, Mrs. Sue Harper Mims of Atlanta, Georgia, delivered a lecture for Fourth Church of Christ, Scientist, in Chicago, on "The Spiritual Dominion of Man."

The introductory remarks of Mr. O. E. Flint were in part as follows:—

If humanity were not in need of some means of escape from conditions which, in many cases, seem to take away all the joy and sweetness and satisfaction of existence; and, in nearly all cases, from conditions which are recognized as far from ideal, we would not be here to-night. It is because of this great and universal need, and because Christian Science offers a practical means of overcoming these conditions, that Fourth Church of Christ, Scientist, of Chicago, has invited you to this lecture.

Digitized by Google

It need not be considered at all strange that Christian Science should be misunderstood; every new truth that has been revealed to humanity has been misunderstood. Nothing could have been more misunderstood than the teachings of the Master when they were first proclaimed by him; but the healing and regenerating power of the truth taught and demonstrated by Jesus proved that it was able to meet the needs of humanity; that it did offer a means of escape, not alone from disease and physical suffering, but from sin, and from every form of evil and error to which mankind was in bondage.

To-day, this same truth is again being proclaimed and demonstrated, healing the sick and the sinful, and lifting the burdens and bondage and limitations from the oppressed. The actual present demonstration in our midst of this healing and saving truth is doing much to eliminate the misunderstanding of and consequent prejudice against Christian Science; and it is awakening a lively and widespread interest in this subject. Christian Science is not an abstract philosophy, but it is such a recognition, and understanding, and consciousness of God's infinite love, and power, and wisdom, and goodness, as brings to man health, and purity, and peace; and enables its students to manifest to the world something of the divine character.

Correspondence.

Dallas, Tex.

At the Opera House yesterday afternoon [April 24], Edward A. Kimball delivered a lecture on Christian Science. The lecturer was introduced by Dr. William H. Greenburg, rabbi of Temple Emanu-El of Dallas, who said in part,—

Ladies and Gentlemen:—I feel the kindliest, I may almost say an affectionate, interest in all spiritual and godly people, and all those Christian Scientists who have made a study of the fundamental truths upon which the religion is based seem to be God-fearing people, men and women who are gentle and kind and loving and imbued with a deep sense of what the Psalmist has so exquisitely termed "the beauty of holiness."

I understand and believe it to be a fact that Christian Science has been grossly and sometimes maliciously misrepresented, and for this reason all lovers of justice, all those who reverently and sincerely wish to see truth triumphant and enthroned in all its majesty, must heartily welcome men with our lecturer's earnestness and erudition to enlighten us, to give us the right conception of Christian Science. I say, if it is based upon truth in all its purity and simplicity, if it is the harbinger of light and love and happiness, if it will infuse a spirituality into the hearts of those who are devoid of it, if it will make the noblest ideas of a loving God co-extensive with human action,—I say if it teaches something that will deepen and broaden human life, if it will make it sweet and precious and beautiful we should, if we are honest, bow in reverence before it. Mr. Kimball has created a splendid reputation by his devotion to this Cause which is so dear to his heart, and I among hundreds of others will listen with more than passing interest, with an open heart, to the message he brings us to-day, and which Christian Science claims to bring to the modern world.

The Dallas News.

Plymouth, Mass.

There was a large attendance at the Church of the Pilgrimage, last Sunday afternoon [May 1] to hear the lecture by William D. McCrackan, of New York. Superintendent of Schools, F. J. Heavens, introduced the speaker, and the lecture was listened to with marked attention.

The Old Colony Memorial.

Following are the introductory remarks of Superintendent Heavens:—

It is our privilege as well as our duty to know the truth. It is only to be had for the seeking, and the pleasure of the seeking as well as the joy of the finding is most worth our while. The truth is a continual revelation. We may not know it all at once; we discover a little of it to-day, and shall find more to-morrow. There is an ever-widening and broadening view of mental and spiritual truth possible for those who are looking for it. God has always more light and truth to flash forth from His world of life and love. But we cannot hope to understand it all at once, any more than could the disciples of Jesus understand or bear at once the revelation of the purpose, character, and mission in the world, of their divine Master. They found, as we find, that the joy of an ever-increasing spiritual vision and power comes only to the earnest seeker; that knowledge is ever incomplete, to-day a little, and more to-morrow, and that our knowledge of the truth can be perfect only when we shall know as we are known.

To the fact that truth is a continual revelation should be added the related fact that truth to be effective in the world must be lived. Truth is a seed, the most precious of all seeds; for in it is bound up the revelation of God to the world. It should therefore grow and blossom and bear fruit in every season and among all people. But that it may do so it must first find lodgment in the fertile soil of the human heart, in hearts that are willing to receive it, honest enough to consider its worth and to recognize its claims, and then loyal enough to follow wherever the light of the truth may lead.

Therefore, ladies and gentlemen, in the belief that you are here in search of the truth, and that you are willing to receive and to consider honestly what the speaker has to offer, it is with great pleasure that I introduce to you Mr. William D. McCrackan of New York City, who will speak on the subject of Christian Science.—*Correspondence.*

Waukegan, Ill.

There was a large audience at Perrin's Thursday evening, May 19, to listen to the lecture on Christian Science by Bicknell Young of Chicago.

Charles W. King, in introducing the speaker, said in part:

I am not a Christian Scientist, but from the little I know of the doctrines of this church, of the personnel of its membership and particularly of the life and character of its noted Founder, I consider it an especial honor to preside at this meeting.

I believe that the church under whose auspices we have met has contributed much to our religious thought. In this denomination more than in any other with which I am familiar there is a general and accurate familiarity with the Bible. It has insisted that a pure life presupposes a pure mind, and hence thought should be clarified and the mental powers refined. It has done much to change our point of view from the pagan conception of the death of the Christ to the supreme importance of his life as an example for men, and it has done much to bring the kingdom of God to earth by emphasizing the importance of the mental and spiritual life of the race,—"The kingdom of God is within you."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Use of the Title "Leader."

THE Century Dictionary defines a leader as one who is first, or most prominent in any relation; one who takes precedence by virtue of superior qualification, and in this sense the title, Leader, which has been bestowed upon Mrs. Eddy by Christian Scientists, is singularly appropriate; and although it has sometimes happened that newspapers in reporting matters pertaining to the branch churches of our denomination have erroneously referred to some person of local prominence as "a leader," the peculiar fitness of this title as applied to Mrs. Eddy, and its unfitness as applied to any other Christian Scientist, is becoming more and more apparent, and the necessity for a prompt correction will appeal to all who may thus be improperly designated.

As the Discoverer and Founder of Christian Science, and the author of its text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy's position is unique, and as the one through whom all the institutional organizations and processes of this great religious movement have been planned and set in motion, she stands pre-eminent as the only person to whom the title can be given. Mrs. Eddy has earned this distinction by her unceasing work for humanity, and by the success which has attended her ministry for the race. She is still far in advance of any of her students, and the most experienced among them are the quickest to see and the readiest to acknowledge this fact.

Christian Scientists gratefully avail themselves of Mrs. Eddy's wise leadership, because she has successfully pointed the way from the misery and turmoil of mortal existence to the joy and peace of man's spiritual and eternal birthright: from sickness and pain to health and usefulness; from agnosticism to faith in God and the understanding of His loving care for all His children.

The following quotation from the lecture recently delivered by Mr. Edward A. Kimball in Carnegie Hall, New York, shows that Mrs. Eddy's leadership has long been recognized by students of religious history.

Mr. Kimball said, "Ten years ago the president of the World's Parliament of Religions said to me, 'Mrs. Eddy is already one of the world's illustrious religious leaders.' Inch by inch this conviction is forcing itself into the consciousness of humanity, but the present and future acknowledgment of her character and life-work does not rest on the uncertain contingencies of human opinion." M.

"A Book of Remembrance."

"Then they that feared the Lord spake often one to another: and the Lord hearkened, and heard it, and a book of remembrance was written before him for them that feared the Lord, and that thought upon his name."

AT the time of our annual gathering the main topic of conversation is the experience which brought us into Christian Science. In most cases, "Faith had fall'n asleep" when the truth came; and the tempter was whispering, "Believe no more," but at each repetition of the story of deliverance, it seems more wonderful and beautiful to the one who can now say, "Christ has come to me." It is noteworthy that all these accounts of healing convey the same thought; namely, that the divine power is available for all, and that all may know *how* Truth heals the sick even as in Jesus' time, and it would seem that the method of healing which recognizes man as a spiritual, moral, and intellectual being, and which treats him accordingly, must take precedence over all others, and in time supersede them.

If to some it may seem that Christian Scientists are very decided in their views and unwilling to yield a single point, it should be remembered that for this they have the warrant of the Master's teaching and example, by which they must stand or fall. There was no element of uncertainty in the teaching of Christ Jesus; he not only claimed to know the truth but he insisted that his followers also should know it and be made free thereby; and we could hardly claim that our Leader was following in the footsteps of the Master did she not also insist that we know the truth, and prove it to be truth by the healing of the sick.

We do indeed rejoice that we have in Christian Science no array of creeds and dogmas to impede our steps. The beginner who had hitherto failed to find any agreement between faith and fate, starts with the assurance of God's allness, and may say with Whittier,—

> Yet in the maddening maze of things,
> When tossed by storm and flood,
> To one fixed trust my spirit clings;
> I know that God is good.

How enlarged the meaning of this statement grows with each succeeding year may be best understood in listening to the many expressions of joy and gratitude which are uttered by Christian Scientists when they come together to read the pages in their "book of remembrance" written by divine Love. As they do this they can but see that without their Leader's faithfulness to the trust bestowed upon her, they would, one and all, still be doubting and fearing, or perchance blindly hoping that in some way deliverance would come, either here or beyond the grave; but now they *know*, and because of this knowing they go forward with steady assurance and an ever-deepening love for God, for mankind, for their Cause, and for its Leader. K.

Man in Relation to God.

A MINISTER of national reputation has recently said, "Suppose I can get into right relations with God, what does it mean? So far as this physical being is concerned, it means perfect health. So far as the mind is concerned, it means the perception and acceptance of truth. So far as the heart or the affectional nature is concerned, it means the love of all that is good and beautiful and true. So far as the moral nature is concerned, it means perfectly right relations between me and every other being that can think and feel. So far as the spiritual nature is concerned, it means the loving, tender, comforting, helpful recognition of the fact that I am a child of God and that He is my Father."

This splendid statement distinctly emphasizes and commends the teaching of Christian Science, and though it is fair to presume that such was not the purpose of its author, Christian Scientists may rejoice as did St. Paul that, whether "intentionally" or otherwise, "Christ is preached."

A Yale divinity lecturer once counselled his hearers that the best way to combat a religious movement which they did not approve was to lay increased emphasis in their own preaching upon whatever of truth they could perceive in it, and there are indications that an increasing number of clergymen are acting upon this advice in their consideration of Christian Science. The organization of a society of Anglican clergymen and others, which aims to advance a practical interest in spiritual healing as it was known and utilized in apostolic times, is another of these evidences of a growing recognition that holiness does indeed mean health, and that the good which Christian Science is accomplishing is to be frankly admitted.

Digitized by Google

It would be well, however, if all who thus recognize the larger and richer meaning to mankind of the attainment of right relations with God, were to understand and accept the further teaching of Christian Science, that a right sense of God and man is essential to this attainment. "The human capacities are enlarged and perfected, in proportion as humanity gains the true conception of man and God." "In Christian Science we discover man in the image and likeness of God. We see that man has never lost his spiritual estate and his eternal harmony" (Science and Health, pp. 258, 548). There can be no relation (*i.e.*, touch, affiliation) established between things which are mutually contradictory or exclusive, since the presence of the one always means the absence of the other.

Light can have no relation with darkness, it cannot associate with it in any way, cannot find it, though its shafts peer into every cranny of the universe. In the same way, Truth can have no relations with falsity. They are opposites, there is no possible classification or ground upon which to establish relationship, and it is equally manifest that no contact can exist between God and the man of material sense. With this man, God has no causal relation, nor has this man any redeemable relation to God.

Christian Science takes definite issue with much traditional theology, in teaching that there is no partnership between the spiritual and the material, no combination of a real that is good and a real that is evil; but rather that the true man abides ever in the Divine consciousness, his Father, is sustained by Him, and is therefore wholly separate from sin. Hence Saint John's declaration that "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God."

The new birth, our awakening to Truth, means that the human sense of good and evil, shall give place to spiritual consciousness alone, and mortal mind disappear as the nothingness it is. Paul used this figure of separation in writing to the Romans when he cried (7 : 24), "O wretched man that I am! who shall deliver me from the body of this death?"

The carnal mind cannot be saved; on the contrary, it is and ought to be perennially and eternally lost. Humanity is being saved through Christ, Truth, as, prodigal-like, it comes to itself; *i.e.*, when it recognizes God as Spirit; and the true individuality, His son, as wholly spiritual, and thus loses the false sense and estimate of man. Then that which ever was; viz., God and His idea, is seen to be, and this is life eternal.

The right concept of God as Spirit, and of man as spiritual, carries with it the right concept of their relation, and the maintenance of this relation in thought brings it into demonstration.

It is encouraging to remember that the whole tenor and import of Jesus' teaching was in harmony with the proposition that such a knowing of God and of our "right relation" to Him is attainable in this life as will enable us to experience and to repeat his work of healing from sickness and sin. "Behold, now is the accepted time; behold, now is the day of salvation." W.

The image of God is His word, the genuine Son of Mind, the Divine Word, the archetypal light of Light: . . . the mind which is in man, who is therefore said to have been made in the image and likeness of God, assimilated to the Divine Word.—CLEMENT OF ALEXANDRIA.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

Letters to our Leader.

Des Moines, Ia., June 16.

My Dear Mrs. Eddy:—As I read the enclosed clipping I decided I would send it to you. Following so soon after our own By-law on the same subject, I knew it would give you a moment's pleasure. Indeed, Church organizations are ample.

With tender love for you, I am,

VICTORIA MCCORD.

The following is the newspaper clipping referred to. It is from *The Pathfinder*, published in Washington, D. C.

In the baccalaureate sermon at Bryn Mawr College, the young women graduates were appealed to, to avoid joining clubs and the like, as these distractions lead to "spiritual bankruptcy."

Los Angeles, Cal., May 30, 1904.

Dear Mrs. Eddy:—For many weeks I have been thinking of you, our beloved Leader, and wishing there was some real service that I might perform for you. Since the healing of my mother (now a successful practitioner) through the reading of Science and Health, fifteen years ago, we have had no other remedy.

I am a member of the Mother Church and also of Second Church of Los Angeles, where I teach a class of boys the ten commandments. My mother taught the commandments, Sermon on the Mount, and Lord's Prayer continuously for seven years. We can never thank you sufficiently for the love and wisdom which prompted the selection of the ten commandments for Sunday School instruction. This method is so practical, systematic, and searching. "Miscellaneous Writings" and the Concordance to Science and Health are invaluable aids in this work. I wish you could see the effect of the mention of your dear name on a class of children. Every sign of mischief and restlessness vanishes like mist before the sun, and the most respectful and earnest attention prevails. In all my experience with children, I have never seen anything equal to it.

Strive as we may, we have given only our mite of testimony for this gracious gift of Love, Science and Health, for throughout all eternity "her works shall praise her."

Yours in obedience and love,

VIOLA BACKUS.

Chicago, May 31, 1904.

Rev. Mary B. G. Eddy, Concord, N. H.

Beloved Leader:—Would that words could half express what I want to say to you! Just now, however, I pray for more love,—spiritual love,—whereby to understand your words!

The reading of Science and Health, about eight years ago, suddenly healed me of long-standing chronic diseases, and great scales, as it were, fell from my eyes.

Dear Leader, I want to tell you of my heart's fidelity to you, and to say my supreme desire—my daily, hourly prayer—is to follow where you point the way,—not to falter, question, doubt, argue, or secretly try to cling to my baggage, but joyfully, quickly to leave *all* as you have left all, and laid down your "life for the sheep."

The By-law regarding organizations has rejoiced my heart more than any former step. Just before this By-law appeared several men in our church told me they had been led to sever their connection with various lodges. This to me is further confirmation that God Himself directs you. I believe it would gladden your heart to hear the expressions of gratitude from hundreds here in Chicago, because of this By-law.

With deepest, tenderest love,

SAPPHO E. PRENTISS.

Digitized by Google

Chicago, May 30, 1904.

Beloved Leader:—Although you are a very busy woman, untiring in your devotion to the uplifting and saving of humanity, I am sure you will be glad to hear of the love and gratitude of those who owe so much to you, and I wish especially to thank you for the new By-law in regard to clubs. I have been an active member of two literary clubs, and while in Boston at the Communion last year, I felt the desire to give up everything that would take my time from Christian Science work. As I had just been re-elected to the highest office in one of these, I was advised to wait until my year was out, which I reluctantly did. When the *Sentinel* came with the new By-law, my problem was solved. Within a week I had resigned from both clubs, so happy that I could show my love for one who has made life so bright for me, by perfect obedience, knowing that it is for our advancement to better work and higher understanding, and you will be glad to know that many others have lovingly and gladly done the same thing.

Words are inadequate to express my love and gratitude for all that has come to me, but I hope to prove these by my loyalty and obedience. Lovingly yours,

CELLETTA V. FLINT.

Buffalo, N. Y., May 25, 1904.

Dear Mrs. Eddy:—I thank you for the letter written to the Cleveland Church. It stirred to the depths, and tears came unbidden to my eyes. Surely you are worthy of all the love and affection which is given you. When I read it these words from Science and Health immediately came to me, "The divinity of the Christ was made manifest in the humanity of Jesus" (p. 25). Surely no one can read that letter without the desire to be more loving, humble, and meek.

It is to you as God's messenger of truth that I owe the little I understand of myself as God's child. What you have lost of self I can never know until I too overcome as you have overcome. I can see the fruits of it, but the realization is yours. Please accept another small contribution for the church in Concord.

From one who is striving to live the true life,

(MRS.) MARY I. AUSTIN.

New York, N. Y., May 26, 1904.

Dear Leader:—I desire to express to you my loving thanks for the benefit received from the study and application of the truth as revealed and interpreted by you, and for your faithful leadership in the great Cause which is, and is to be, such a great blessing to humanity. It has been my privilege during the past year to have been helpful in establishing the Central Reading Room,—being secretary of the Association which attends to its work, and the demonstration of unity of the children of Truth is beneficial to the Cause in this section as well as elsewhere. God's blessing will surely enrich you as you have enriched humanity. With love,

Yours sincerely,

R. E. CAREY.

New London, N. H., May 30, 1904.

Rev. Mary Baker G. Eddy.

Beloved Leader:—This Memorial Day has such a sweet new meaning to me, for it marks the seventh year of my study of Science and Health. I was searching for God and peace, and when I first heard of Christian Science was anxious to know what it was. A friend loaned me Science and Health for a few hours, and from that moment I have loved the book and its author, for it enabled me to find my God, and I sing every day your hymn, "I will follow and rejoice all the rugged way." With gratitude and love.

Your student's student,

(MRS.) EVA H. SWENSON.

Testimonies of Healing.

We are indebted to the *Canton* (Ill.) *Register* for the following testimony given by Judge Robert H. Lovett of Peoria, Ill., upon the occasion of his introduction of Bicknell Young, of the Christian Science Board of Lectureship, at Canton, Ill., May 17.—EDS.

The cause of my being a Christian Scientist is that same cause which prompts nearly every good deed performed by man, to wit, a woman; in this instance, my wife. For some time prior to our marriage a dread disease had been fastening itself upon her, and for about three years we doctored with first one physician and then another, but she grew worse and worse.

I would not be understood as saying one word derogatory to any doctor, for they have come into our home with their kind words of sympathy and cheer when their coming has been like a visit of a messenger of love and hope; but their best prescriptions and their kind words did not bring that health for which we so earnestly longed, and for which we patiently waited, and when finally our last physician said that he had exhausted all known remedies, and I asked him if he thought my wife would recover, and he paused and thought and said, "I think so," I then felt that I might expect the worst, and my home was sad and desolate. Then, in the darkest hour of my life, my wife turned to Christian Science, and her healing was miraculous. Immediately the dark clouds of disease, misery, and despair were scattered and destroyed by the sunlight of health and consequent happiness and prosperity. The most beautiful roses that ever bloomed in or out of the Garden of Eden came back to the cheeks of my wife, and her weakened condition gave place to the strength and vigor of youth, to which she was entitled.

I, too, had been suffering with a disease for which I had been doctored for many years; I, too, turned to Christian Science and felt the healing power. This led us to seek the cause of those wonderful effects. Lo, and behold! we learned what we had always known, yet never realized,—that there is but one God, one Creator, our God; and the spiritual awakening was infinitely greater than the physical healing. It clothed the Bible with an entirely different costume. We no longer waited for Sunday to commune with God. It brought Him into our home, into our daily life; it made Him an ever-present help, and for the first time we learned the real meaning of these words, "Lo, I am with you alway." It made the Christian religion more practical, more in accord with common sense and common desire.

I believe that most men are honest, and I believe that every honest man is a seeker after truth. I am also of the opinion that when the average man condemns anything, he does so because he believes it is not true, and we as Christian Scientists believe that when any man thinks that he is denouncing Christian Science, he is mistaken, and that he is simply raising his voice against his own foolish ideas of what Christian Science is.

[Translation.]

It is hardly a year since I first heard of Christian Science. At that time it seemed as if I had received some fatal blows. My twelve-year-old boy, who was subject to certain ailments every year, was then returning home for vacation with his legs swollen. Since he did not want a physician, we applied home remedies and he slowly improved a little, but the improvement did not last. A few months later the disease appeared again in a more alarming form,—his arms, fingers, and legs were swollen, he suffered severely, and had no appetite. I then decided to have him treated in Christian Science. After two days' treatment he had a good appetite,

Digitized by Google

and in eight days all signs of the disease had disappeared. He was very happy and often said, "Well, mother, is it not true that God can do everything?" Since then he has not been ailing, but denies for himself any error which may appear.

During the winter, the other children suffered from colds at different times, and each time they were healed through my slight understanding of Truth. Once my youngest child was attacked by what appeared to be diphtheria, and the fever was so intense that she became unconscious. She seemed to be gasping for breath and I must confess that fear crept in; nevertheless, I continued declaring the truth all the more earnestly, and, thanks to God, after midnight all danger was over. The next morning the child took her milk as usual and played and ran around during the day.

The same little girl, who is now five years old, had formerly suffered from lameness in her foot, so that she dragged that foot and often complained of weariness. The physician ordered her to wear a brace, which made the condition worse. Another physician, whom we consulted, put the foot in plaster-of-paris, which improved it a little, but he said that the trouble would reappear, and it did, and in a short time it was as bad as it had been before.

Just then I came to Christian Science. I took up treatment for this trouble. I removed the bandage and the expensive shoes which had been prescribed, and in a very short time the ailing foot was healed and the little girl now feels no more weariness in it.

I myself had suffered for a long time with a rupture which at the birth of my third child became so much worse that I could not get up and had to call in a physician. Having just then been afflicted with a severe articular disease, I could not submit to an operation and was therefore treated by a specialist for ruptures. Every week for four years he made injections which were very painful and which caused weakness of the nerves, but instead of getting better a second rupture appeared, and the physician said that in his twenty years' practice, he had only had three similar cases.

When I saw that my whole body was being affected by this, and that there seemed to be no help, I turned in full confidence to God. I took off the truss to prove that I trusted in the all power of God. I read diligently in the Christian Science German periodical, which strengthened me, and I received the blessing of my healing and realize that all the promises of divine Love are true, and that God does not send evil to man as I was taught in my childhood. I can now do the hardest work in my household, and feel as strong as if I had never undergone any of these troubles. I cannot thank God enough for all the good that He has done for our family.

FRAU BARBARA RUEGG, Zurich, Switzerland.

While I have testified to those around me and in many localities, of my healing in Christian Science, I feel that it is high time I put the candle in the candlestick where all who will may see. My earliest recollection was a day of suffering,—a physical inheritance from my mother, which gave simple interest for a time until years advanced and compound interest was added. My father was a physician, and material remedies were used for my mother without avail, consequently his confidence in them for me was shaken, —in fact he often told me it was better to suffer without medicine than become a chronic doser, without pain.

I began teaching in early life and continued for more than twenty years, and during that time not a day passed without pain, or fear of pain, and only for my innate love of life it would have become an intolerable burden. For five years oatmeal was my chief food and I became almost as attached to it as Kaspar Hauser to his crust. I was early taught to have faith in God, and many times was relieved of pain only to have it appear again in an aggravated form.

At last my heart cried out for the living God, and the answer came by one of His messengers, who told me of Christian Science. I replied that I believed God could heal, but that I had no faith in the healing of Christian Science, but would like to investigate its theology, as it might aid in giving me some clue to the meaning of life. For three years I had searched the works of the most scientific writers to find the origin of life; many times I would think I had traced it to the beginning, but it would elude my grasp every time. One day in talking with my friend, she said she would like to loan me the text-book, Science and Health, which I very willingly accepted. Not long afterward I felt the usual attack of suffering. I opened the book for the first time and found a paragraph near the middle which attracted my attention. I read the same paragraph over and over for nearly two hours. When the tea bell rang I closed the book and I shall never forget my perception of the new heaven and the new earth,—everything in nature that I could see seemed to have been washed and made clean. The flowers that I have always loved so much, and that from childhood had told me such sweet stories, now spoke to me of the All in all, the hearts of my friends seemed kinder,—I had touched the hem of the garment of healing.

I ate my supper that evening forgetful of the preparations I had made for suffering, and when the next day began I was more zealous of good work than ever before. Since closing Science and Health at my first reading I have never been able to find the paragraph which I had read so many times over, the words seemed to have slipped away from me, but my joy knew no bounds at having found the pearl of great price. By the continued reading of the book I was entirely healed, and for fourteen years I have not seen a day of physical suffering.

My daily prayer is to be more obedient to our Leader who by precept and example is expressing the rule of divine Love which teaches us to "Trust in Truth, and have no other trusts" (*Sentinel*, July 4, 1903).

MISS LIZZIE MOORE, Rome, N. Y.

At the close of the last century, while in a northern state, I laid aside all material remedies and asked for an understanding of Christian Science, hoping it might meet my case, which seemed very urgent. Dyspepsia, with two chronic and painful internal troubles, were cured at once, defective eyesight yielded soon, and in time nervous troubles of various types, neuralgia, malaria, and other physical discords vanished, while with the slower demonstrations, which were attended by many a struggle, came an understanding which I have been able to apply to all the so-called material affairs of life.

Always counted frail, my enjoyment of life had been limited in many ways. Dyspepsia, more or less acute, had afflicted me much of the time, and at two different periods I had barely existed for months on a starvation diet, while two years before coming into Science my physician had declared that I would never be able to eat a hearty meal.

Nervous prostration at one time had kept me a year and a half in bed and unable to sleep save by the use of drugs, while at other times I had endured the tortures of insomnia rather than risk forming a drug habit.

In 1892, after a long siege with the grip, it was decided that the winters of the north were too severe for me, and for eight years, different climates, altitudes, hot springs, and other mortal mind prescriptions lured me on across the continent. Then with a growing sense that in all this there was no permanent relief, no science; that in the opinion of the most skilled specialist or the most conscientious, kind-hearted physician there was no health for me, I returned

Digitized by Google

to the north. There the hospital was prescribed, and it was then, in a state bordering on the helpless and hopeless, that I found the Great Physician and my birthright as a perfect child of God.

For more than twenty years I had worn eyeglasses for close work. All efforts to do without them had been followed by severe suffering in my head, and as this condition seemed to be growing worse, I had in prospect the fitting of a pair for constant use. After four or five months in Christian Science, while engaged in continuous close work with my eyes, my glasses were forgotten and they have never been used since.

Orthodoxy, in which I had spent half an ordinary lifetime, tried to hold me, but with a thankfulness for all the good I had gained in its fold, I took the inherent faith and hope which had ever been my stay, to the Christian Science service and found there what had been wanting in the other. I began to know God aright, to understand Christ's mission on earth, to claim the Bible promises, and to *live*.

Continued proofs of the power of omnipresent Love to care for all God's children at all times and in all places, have convinced me that in just the measure the student of Christian Science learns to apply its rules will he realize his God-given dominion over the world, the flesh, and the devil."

Lest a long "silence might seem denial" of the ministrations of this wonderful Science to me, I offer this inadequate expression of my gratitude to God for having given us "Science and Health with Key to the Scriptures," for the devoted and self-sacrificing life of its author, who is leading the way for us, and for all the Christian Science literature, the churches, the demonstrators, and the friends of the Cause everywhere.—H. A. L., Tombstone, Ariz.

It is a little over one year since I came to Christian Science for healing. I was wearing glasses at the time, but laid them away after my second treatment. Many other troubles have been met through my understanding of God as revealed to us in Science and Health by Rev. Mary Baker G. Eddy. I am very grateful to her and to my practitioner for leading me into the light which is in Christian Science.

I am not only thankful for the physical benefit I have received but for the spiritual uplift,—to know that God is All in all. I have been led to help others who are thankful that I could point them to Truth. My husband and I are trying to get a better understanding of Christian Science. We became members of the Mother Church last June, and desire to "strive, watch, and pray for that Mind to be in us which was also in Christ Jesus" (Science and Health, p. 497).—Mrs. Ella Taggart, Normal, Ill.

I feel it my duty to tell the Field a few of the many helpful experiences we have had since we have tried to live up to the teachings of Christian Science. About five years ago, a friend who was visiting at our home, an invalid for many years, had just begun to take treatments, and was receiving much benefit. It led my husband to look into Science and Health, and he became interested at once. I could not understand it for a time, until I saw some healing done in our own family, then I could not help but be interested when I saw such wonderful work. My husband had very severe pain in his head and eyes so he could not see for a number of days. He was instantaneously healed by absent treatment. He was also healed of a broken rib in the same way.

We have had many beautiful demonstrations in our family since coming to Christian Science. It would take more space than I can ask for to tell it all. One I would like to mention which we had when our last baby girl was born. I formerly had great fear at such times, for I had usually suffered much weakness for weeks afterwards. This time all seemed harmonious and natural. I suffered no inconvenience at all and sat up the next day and took care of my baby without any bad effects. I got up the third day and did my own work. Where can such freedom come from but from God?

Our four children have been rescued from the jaws of death by the truth, and words fail to express my gratitude to Mrs. Eddy, who has worked so patiently for us. We have a nice little church here. We started services in January, 1903, and now there are about twenty-one in regular attendance, including the children. May God bless all the workers in His vineyard is my daily prayer.

Mrs. A. M. Firman, W. Grand Rapids, Wis.

I wish to tell with gratitude what Christian Science has done for me. It may help others, who are afflicted as I was. I began to look into this Science three years ago, and commenced to take treatments of a practitioner in Los Angeles. In less than three weeks I was healed of a rupture that had been a burden to me for fifty-four years. My gratitude and thankfulness are beyond expression for my relief from the pain caused by a rupture. No one can tell the suffering from this cause save those who have had the same experience. This testimony is for them,—to let them know that they can be healed as I was.

I had concluded to have an operation, as I had been told, I could thus be cured. I went to see a prominent physician. He advised me not to have an operation but be fitted to a truss, and abide by it the rest of my life, as he had asked my age. I did as he advised, but suffered a great deal, and was tired of life. My husband came home from a distance, and told me what he had heard of Christian Science, and advised me to read Science and Health, which I did. It changed my whole life,—made a new woman of me. Through simply reading this book, I was healed of inflammatory rheumatism, constipation, and other ills. I was indeed thankful when they were all gone, not only for the healing I obtained, but more than all for the spiritual uplifting, the desire to be a better woman and to have something to live for. I wish to say how thankful I am to our dear Leader for Science and Health. I am also thankful for the *Sentinel* and *Journal;* they help me very much.

Mrs. S. C. Pettis, So. Santa Monica, Cal.

I have great cause for thankfulness for the many blessings that have come to me through Christian Science. It was in May, 1902, that I went in great trouble to see a lady who was a Christian Scientist. My husband was a terrible drunkard and was daily growing worse, ruining our home and his health through this evil. This lady talked to me about God, and showed me how to help my husband by holding in my thought God's perfect image and likeness. At the same time, she promised to take the case and give treatment. With deep thankfulness to God, I can say that after two or three treatments an improvement began and he was quickly healed. From that time to this he has not lost a day's work through any fault of his own, and instead of blows and cruel words, I am constantly receiving such kindness from him that I could not formerly have believed possible.

My little boy was healed of whooping-cough, to the astonishment of my neighbors, who knew I used no material remedies. Last winter, when I had a very hard week's work to do, I had a poisoned finger. I began to treat it myself at once, and although it looked very swollen and inflamed, there was not the slightest pain and I was able to do my own work and the washing for two families with ease. Each day proves to me more and more that God is *All* to those who rely on Him and claim the blessings He is ready to bestow. My changed home, so happy and peace-

Digitized by Google

ful, is a standing proof of God's goodness. Instead of dreading the coming winter, I know that all will be well and that God can never forget His children.

I value my copy of Science and Health more than I can say, and also the helpful articles in the *Sentinel* and *Journal* lent me by the friend who first showed me the way to understand God's unchanging love.

E. ROSSITER, London, England.

Six years ago I came into Christian Science, through the healing of my sister, who was given up by the best of physicians. Through the reading of Science and Health I was cured of a severe ailment, for which I could get no relief from *materia medica*. My first demonstration was over a case of croup. I had nothing at the time to read but a tract, "Healing the Sick," and when I had read to the third page, the child was asleep. It never entered my mind to call a physician, although there was one in the same building; the demonstration was perfect, and since that time we have been firm, no matter what has presented itself.

Understanding that God is All, I daily pray for that Mind to be in me "which was also in Christ Jesus."

I am thankful for every trial over which I am the victor; it makes me press forward to the high goal our dear Leader has reached long before us. My class instruction has been very helpful,—a blessing in our home; it has taught us to work out of all selfishness.

Our boy, seven years old, has a good understanding of Science, and it is very helpful in his school work, for it teaches him that man is God's idea and reflects all knowledge and intelligence. A few evenings ago I was attacked by a severe ailment and was alone with him, and he met it by reading from Science and Health. In business, Science has been a great help, for we know as we ought that Principle governs. My fear in storms has been very great, but it was overcome one night by the still, small voice, "Fear not, I am with thee," and in the same moment I realized such peace that it brought tears to my eyes to feel the ever-presence of divine Love.

Various diseases, such as measles, small-pox, whooping cough, dropsy, carbuncles, pleurisy, have been met successfully and overcome in a few treatments, for which I am very grateful.—MARIA LAURA HANSEN, Oshkosh, Wis.

When the truth was presented to me over three years ago, by a sister who was a Scientist, it found me in a very pitiable condition indeed, with a little girl afflicted with bronchial and heart trouble. I had physical troubles of my own, and other members of my family were in poor financial circumstances. I was in such a discouraged state of mind that life did not seem worth the living. It would be a long story to tell every step of the way I have been led, but little by little I have gained an understanding with the good help I have received from practitioners and others, and I can say that my heart trouble has been destroyed, and other ailments are slowly but surely yielding to the power of Truth.

The physical benefits are, however, but a small part of the blessing received. The spiritual uplift and changed financial circumstances which have come as I have been able to realize that God is the source of all my supply, and that there is no lack to that supply, all testify to the power of Truth as revealed in Christian Science. With the aid of my sister and a friend I early began demonstrating the way for myself, for which I have often been thankful, as I have never lived near other Scientists and have oftentimes been placed where immediate help was necessary; but I have noticed that when I did ask for help, it came as soon as the decision was made, which proved the work to be of God. The children also have their little demonstrations in helping themselves and each other.

I wish to express a great sense of gratitude for this blessed truth, and that there was one good and pure enough to bring us the light. I have a deep sense of thankfulness for the patient, faithful practitioners, and all others who have helped me on my way.

MRS. JENNIE S. CUMMINGS, Cumberland, R. I.

My attention was first called to Christian Science while visiting a friend in the West who had a son eight years old who had been healed of bad eyesight. A specialist had said he would never be able to see to study, and if he ever had an education he would necessarily require a tutor. He was, however, perfectly healed through Christian Science.

I had wondered many times why the healing was not done as in Jesus' time; and when a little child, my favorite chapter was the ninth of John, which tells of the healing of the blind man. At the time I heard of Christian Science I was suffering from dyspepsia, nervous sick headaches, nasal catarrh, liver and spinal trouble, and was so nervous that I could not read nor sit at any kind of work but a short time without getting up and moving around. But, thanks to this wonderful truth, I am delivered from them all, and I wish to express to our dear Leader, as well as to my own teacher, my loving gratitude.—A. B. L., Utica, N. Y.

I am glad to express our appreciation of Christian Science, and to acknowledge the blessings brought into our home through it. My father, who is eighty-four years of age, was healed of an attack of pneumonia, my mother of a severe attack of grip and a stubborn case of neuralgia, while other ailments are gradually disappearing. We have not employed a physician for several years. Words cannot express the gratitude we feel to God, to Mrs. Eddy, and to our faithful practitioner for the help given "in time of trouble," and for the sweet peace and harmony that are in our home. I wish that this beautiful truth might be brought into the lives of all.—MRS. JENNIE FOX, Chicago, Ill.

I acknowledge with a thankful heart that the truth as taught in Christian Science has healed me, and has opened my eyes to see and know my birthright. My prayer is, that I may be able to follow on, and show my gratitude to God and to Mrs. Eddy for pointing the way, also to those loving friends who have helped me in my time of need.—MARGARET FYFE, Winnipeg, Can.

[Written for the *Sentinel*.]

The Smile of God.

WILLARD MUDGETT GRIMES.

[The Indians named a very beautiful lake "the Smile of the Great Spirit."—*Science and Health*, p. 477.]

ALL was lonely, dark, around us,
Shadows black, and woodland deep,
Shady dimness, dismal quiet;
And the path was rough and steep.
Oft we slipped, and oft we stumbled,
As that lonely path we trod;
Till, at last, we reached the summit;
Lo! we said, "The Smile of God."

Through the woods of mortal life,
Weary oft we grope our way.
Climbing slowly out of darkness,
Up to reach the immortal day.
Though the path be steep and slippery,
We the worst of it have trod;
And above us, in the sunlight
Shining, lies "The Smile of God."

Digitized by Google

From Our Exchanges.

In much of this discussion it seems taken for granted that the Church has a right to be heeded and given reverence, just because it is the Church. To those who are outside of the Church, this is not an axiom; they must first be persuaded that the Church has something worth their heeding before they will heed it. They, at least, make a practical distinction between the institution and its religion, between churchism and Christianity. In this respect it is well to turn from the injunctions of the Church to the example of the one whose name the Church bears. Jesus of Nazareth, himself a young man, gathered young men about him. He did not insist on their going to the Jewish church; he himself went both to the Temple and the synagogue, but, except as he complied with those laws which made the priest an inspector of health, we have no record that he urged any one else to go. What Jesus Christ was concerned in doing was not in building up an organization, but in creating character—individual character, social character; not in bringing people into right relation with the Church, but into right relation with themselves and with their God. While, therefore, the question, Why do not young men go to church? is an important one, the vital question is, Why does not the spirit and character of Christ more prevail?

The Outlook.

The test of revelation does not lie in itself, but in its correspondence with facts, its disclosure of things. It has been a constant and disastrous mistake in theology to suppose that a certain verbal advantage was given us by revelation; that words, as footprints of thought, might be scented and pursued till the grandest truths were overtaken and pulled down. If we had looked upon the phenomena of life as interpreters of revelation, as we have made revelation the expounder of these phenomena, we should have fallen into no such absolute rendering of depravity, redemption, salvation, the justice of God and His dealings with men, as has characterized our theology.

DR. JOHN BASCOM.

Ordinarily the mind imagines that eternal life is synonymous with endless perpetuity. But eternity is in no sense time long drawn out, and eternal life does not take into account the lapse of periods. Only God is eternal, and only he has eternal life who lives in and from God. "This is eternal life, to know thee, the only true God, and Jesus Christ, whom thou hast sent." Eternal life is to enter voluntarily and delightedly into the Divine way of living. Its everlastingness lies in its quality—in its essential divinity and infiniteness. The immortality or deathlessness of its recipient is only an incident or corollary of the main truth that man is created to know and love God.

New Church Messenger.

The fact that certain great men among the heathen have arrived at a high degree of knowledge of moral and spiritual truth has seemed surprising to some. But it should not appear strange when we remember that the Spirit of the living God is pouring His light into every mind that is open to receive it. Many who have never heard of the Bible and who are ignorant of the existence of the Holy Spirit are illuminated by His rays.—*The Christian Advocate.*

A religion that does not take in the whole of life is unworthy of the name. The religion of Christ—Christianity—is a re-linking of the estranged life to God, and means that the whole man—body, soul, and spirit—is transformed into likeness to Christ, so that every act and purpose of life is in harmony with his mind and will.—*The Examiner.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonies given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 23 pages.

Price. One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

MISCELLANEOUS PUBLICATIONS

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

COMMUNION HYMN. "Saw ye my Saviour?" Words by Rev. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The volume on appropriations, new offices, etc., required by law, has been prepared by the clerks, respectively, of the Senate and House Committees on Appropriations. A summary of the appropriations shows a grand total of $781,172,375. Those for the army were $77,070,300; for the navy, $97,505,140; for pensions, $138,360,700, and for the post office $172,545,908; authorized contracts for certain public works, requiring future appropriations by Congress, aggregated $22,891,300, mainly on account of the navy.

The new offices and employees specifically authorized show a net increase of 8,415 in number and $5,481,865 in the pay-roll, the increase including 214 for the Department of Commerce and Labor; 475 for the military establishment, including 402 for the Signal Corps; 3,068 for the naval establishment, including 3,000 seamen, and 4,258 for the postal service, including postmasters, post-office clerks, and railway postal clerks.

Arrangements have been completed for the visit of the Porto Rican teachers to the United States. The army transports Kilpatrick and Sumner, which are to bring the teachers to this country for the purpose of attending summer schools, were to leave San Juan on June 26 for Boston and New York. The teachers are to attend school for about six weeks, after which those brought to New York will reëmbark on the Sumner for Boston to see the sights of that city. All the teachers are then to reëmbark on the two transports for New York, and thence will go to Philadelphia. One day will be spent in Washington. The teachers will return to Porto Rico from Philadelphia.

The Republican Convention in session in Chicago last week nominated Theodore Roosevelt of New York for President. He was placed in nomination by former Governor Frank S. Black of New York. He received every vote on the roll-call. For Vice-President, Charles W. Fairbanks of Indiana, placed in nomination by Senator Dolliver of Iowa, seconded by Governor Pennypacker of Pennsylvania, was nominated by acclamation.

President Roosevelt last week made the following announcement regarding changes in the Cabinet:—

William H. Moody of Massachusetts, to be Attorney General; Paul Morton of Illinois, to be Secretary of the Navy; Victor H. Metcalf of California, to be Secretary of Commerce and Labor. The resignations of Secretary Cortelyou and Attorney-General Knox were received and accepted, to take effect July 1.

The monthly statement of the collections of internal revenue shows that for the month of May the total collections were $18,750,431, an increase, as compared with June, 1903, of $55,306. For the 11 months of the present fiscal year, the receipts were $212,668,458, an increase over last year of $2,685,314.

Ion Perdicaris and Cromwell Varley, who were captured by the bandit Raisuli, were ransomed last week and have arrived at Tangier. Perdicaris suffered many hardships while in the hands of Raisuli, although he says he thinks that these were not the fault of the bandit chief, and that he had every comfort possible under the circumstances.

The United States sub-marine boat Adder was given successful tests at Hampton Roads recently in surface running, running partly submerged, sinking, and rising to the surface. The boat was sent to the bottom of the deep portion of the Roads, and remained submerged three hours.

A party of members of the British Institution of Mechanical Engineers, headed by President J. H. Wicksteed of the British Institution, since attending a joint convention of the American and British engineers at Chicago, have toured a great part of the continent.

As a result of tests the Naval Board of Inspection and Survey will recommend the expenditure of the $850,000 recently appropriated by Congress for sub-marine boats of the Fulton type.

A body of prominent Filipinos are touring the country as guests of the United States Government.

Foreign.

One of the consequences of the Russo-Japanese war is the serious crippling of trade in Siberia, European Russia, the Caucasus, and Poland, owing to the withdrawal of the skilled laboring element. The traffic between Russian inland railway centres and the Russian ports of export has decreased, it is said, practically twenty-five per cent. The aggregate quantity of goods railed from various parts of the Empire to the western land frontiers of Russia is less for last May than for May, 1903, by nearly forty per cent. On the railway lines of European Russia and Poland alone it is computed that sixty thousand men have been discharged during the last four months. The number of laborers and artisans throughout the Empire thrown into idleness during the same period is estimated at from three to four hundred thousand.

The first through train for Victoria Falls over the Cape to Cairo Railroad left Cape Town on the 22d ult. amid enthusiastic demonstrations. Victoria Falls is on the Zambesi River, 1,633 miles from Cape Town. The Cape to Cairo road was one of the ambitions of the late Cecil Rhodes. The Zambesi is nearly sixteen hundred miles in length and is navigable to Victoria Falls. It drains a half million miles of territory and for two-thirds of its length flows through British territory.

A combination of Montreal and Toronto capitalists has formed a company with a capitalization of fifty million dollars for the purpose of securing control of the different street railway systems of Rio Janeiro, Brazil, as well as of the lighting facilities of that city. The company has already secured control of the only water power within a convenient radius of the city.

The Icelandic Parliament at its last session voted a yearly subsidy—to be continued for twenty years—for the purpose of establishing a wireless telegraph connection with the Shetland Islands. At present there is no method of communication with other countries except by slow mail.

Industrial and Commercial.

The new White Star liner Baltic, the largest steamship in the world, sailed on her maiden trip from Liverpool to New York, June 29. The Celtic and Cedric of the same line each register 21,000 tons gross. The Baltic registers 24,000 tons, has a cargo-carrying capacity of 28,000 tons, and a displacement at her load draft of 40,000 tons. She is 726 feet in length, is fitted with engines of the quadruple expansion type, arranged on the balanced principle, and will steam about seventeen knots. She is intended to afford the largest modicum of comfort coupled with moderate speed. She can carry 3,000 passengers, besides a crew of about 350.

The new 1905 models of American built automobiles are now well in hand and will depart but little from the models of the present year and the prices now holding will obtain another year. These are the most interesting points brought out at the recent general meeting in Buffalo of the Association of Licensed Automobile manufacturers. During the meeting it was brought out that the combined output of American automobile manufacturers for 1904 will be between 17,000 and 20,000 machines, and that preparations are being made for an output of 30,000 or more in 1905.

The Pennsylvania Railroad conducted a trial trip last week of its De Glehn locomotive, recently brought to this country from France, where it was built. The test was made on the Atlantic City division of the road and proved highly satisfactory. The De Glehn locomotive differs from the other motive power of the Pennsylvania Road in that it is of the compound type, with two sets of cylinders and two sets of throttles. It is the intention of the company to give the locomotive a speed test at the St. Louis Exposition, and if it meets expectations its type will be generally adopted and a large number of similar locomotives ordered.

At the beginning of the last half of the last century there were only two States south of the Ohio River and Mason and Dixon's line in which coal was being mined to any extent. These two States were Maryland and Virginia, together producing a little more than 325,000 tons in 1851, when the total output in the country was 8,141,525 tons. In 1903 the total output in the South, by tons, was 62,662,662 tons.

The cut in eastbound steerage rates to $15 to England and $17 to Continental ports which the Cunard line announced last week has been met by a corresponding reduction by the American, White Star, the Dominion, the Allan, and the Anchor lines. No change has been made by the Hamburg-American, the North German Lloyd, or the Red Star.

A certificate has been filed at Albany incorporating the firm of D. Pearson & Co., who are to build for the Pennsylvania Road the East River tunnel. This firm is affiliated with the English firm of Pearson & Son, Limited, of London, the largest firm of contractors in the world.

The average speed of the North German Lloyd line steamer Kaiser Wilhelm II. on her recent record trip for the 3,112 miles from Sandy Hook lightship to Eddystone lighthouse was 23.58 knots per hour, as compared with the 23.51 knots of the Deutschland of the Hamburg-American line.

According to reports the Russian oil combinations have capitulated to the Standard Oil Company, and the Rothschilds and Nobel interests have come to terms with the American concern.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Lessons of Obedience.

BLANCHE H. HOGUE.

THERE are so many reasons why obedience blesses the obedient one, that it becomes really desirable to seek obedience for its own sake. The child who obeys a parent, is thereby learning the meaning of self-surrender. The obedience itself is the educational force. It has a far-reaching result which the child may not clearly see at the time when the obedience is demanded. The act of yielding the stubborn will or the selfish desire, has a lasting effect upon the nature of the individual, whether or not the circumstances attending the surrender are immediately beneficial.

It is a difficult matter always to foresee the results springing from a present obedience, but this we know, that the self-surrender is purifying in its action and effect. Learning to yield to the wishes of others, striving to consider the interests of others and to obey that which, even in small matters, confers the greatest good upon the greatest number, certainly does prepare the way for the great sacrifices which at some time must come into every human life.

A character which is pliable, bending readily to the family, community, or national interests because it has learned how to surrender its personal desires, has become thus manageable because of continued obedience to something other than its own will. And this growing graciousness, taking into consideration the authority, rights, or privileges of others, leads naturally to ready obedience to the will of God, whensoever and wheresoever it may be discerned. The human will which, in the affairs of childhood and youth, obeys only with reluctance another decision or desire than its own, obeys the law of God no more readily in the later and larger problems of life. The lesson of obedience to something above and beyond self, must sometime be learned, and if begun in early experience, much will be pleasantly learned which otherwise may be wrought out in bitterness. Reluctant obedience to the highest good is, without doubt, the reason for much of the slow healing and many of the discouragements which still mar the practice of the Christian Scientists.

A little story printed in the *Religious Intelligencer* to illustrate the value of the effort to cherish good thoughts, teaches also this lesson of obedience. The story was quoted recently, by a Christian Scientist, at a Wednesday evening meeting, and was so helpful that it is, with permission, repeated here. "My son," said the Arab chief, "bring me a basket of clear water from the spring." The boy tried and tried to fill the basket, and before he could get back to his father's tent the water had leaked out. At last he returned, and said, "Father, I have tried to fill the basket, but the water will not stay in." "My son," said the old chief, "what you say is true. The water did not stay in, but see how clean the basket is; so will it be with your heart. You may not be able to remember all the good words you hear; but keep trying to treasure them, and they will make your heart clean and pure."

This little lesson encourages the student of Christian Science in every effort toward right-thinking, for each good thought cleanses the consciousness, even though not retained; even though "the water will not stay in." But back of this lesson lies the deeper one of obedience, for had the boy not filled the basket in unquestioning trust, no water would have passed through, and no cleansing would have occurred. He may have been bewildered in the effort to accomplish this thing; he doubtless was discouraged because of what he supposed to be his failure. Yet really no failure was his, nor was there any reason for discouragement. He was not accomplishing the one thing for which he was consciously striving, yet a happy result, of which he was wholly unconscious, was shaping itself because of his obedient toil, and teaching him to discover, at the moment of confessed failure, the hitherto unseen purpose of it all.

The test of obedience lies always in this: Is one willing to obey what one knows to be a higher good, even if the ultimate purpose is not disclosed at the outset? May not the voice of divine Love often be saying, " 'The water did not stay in, but see how clean the basket is! The plan you cherished, the purpose you outlined, has not matured, but behold! a cleansed nature, a transformed character, is yours, because you have striven obediently for that which you thought to be the highest and best. A better thing than your eyes had beheld or your heart conceived, is yours. Above and beyond your vision in the dark hours of toil, Love was doing its holy work with you, and now you understand."

We say, blind faith, blind obedience! Yet really, there can be no blind obedience, for the knowledge that there is something, apart from one's own will, to obey, is in itself discernment. It is a small measure of understanding, the beginning of that unfolding which leads to knowing "why." That man who plants the seed and awaits his crop, thus "doing the will" of the law of growth, is brought by this simple obedience into such relationship with the harvest that its rich results are his own, in proportion to his fidelity. The seed-sower always obeys a law which he does not fully understand, but he has become so assured of its action that he does without question that which is required of him.

In the moral and spiritual realm, however, he is inclined to think that obedience to Divine law is "blind" because he is not given the whole of the harvest in immediate conjunction with the seed-sowing. The harvest of moral and spiritual growth springs just as directly from that first confidence in a law not yet completely fulfilled, as does any external effect. Though this growth involves a sense of time, and the first steps must sometimes be taken in trust rather than in full knowledge, the effect is none the less sure. He would be a foolish as well as a disobedient man, who would refuse to begin the solution of a problem because the conclusion is not at the same moment presented to him. The conclusion can be reached only by beginning and continuing to apply as much of the Principle as is un-

Digitized by Google

derstood. This is the only true obedience. It is never blind, but always enlightened and enlightening.

It is significant, that every time the student of Christian Science sings or repeats the first stanza of Mrs. Eddy's hymn, "Shepherd, show me how to go" (Miscellaneous Writings, p. 397), he promises to his Shepherd a far-reaching obedience. First, he asks for guidance. Then he promises to "listen for Thy voice," to "follow" and to "rejoice." Three solemn pledges, which, fulfilled daily and hourly, will cleanse the secret springs of living and purify the motive and method of every action. Unquestionably it requires obedience to listen, in every problem, for the voice of the highest good; to follow, without reluctance, its unerring guidance; to rejoice, without complaint, even when the way seems dark and hard to the material and ease-loving thought.

The words of this hymn grew in our Leader's thoughts during her early church work in Boston, because the spirit of these promises was abiding in her heart. She was keeping the promises, in quiet obedience, as she established and guarded the revelation of Truth she had discerned. And she has continued to keep them in "growing brightness," as the fruits of obedience have multiplied. Every Christian Scientist promises, again and again, to listen, to follow, and to rejoice. And in the degree of his fidelity to these promises, will he find the first four lines of the second stanza defining his individual experience, until he shall grow to the full stature found in the conclusion,—

White as wool, ere they depart,
Shepherd, wash them clean.

Giving Account.

W. S. MORRIS, JR.

IN Romans, 14 : 12, we read, "So then every one of us shall give account of himself to God." To know that we are governed by divine Love, is to know that we are governed by God, for "God is Love." This knowledge can only be gained by the daily practice of truth, as taught in Christian Science, and shows us what it means for man to "give account of himself to God."

The account must be perfect; it must measure up to the divine standard in every detail, and must be free from every material or false belief. We must give an account of health, because God will not accept an account of sickness, for He is the source of health, harmony, and has made man in His own image, after His likeness, and pronounced His work "very good." Now it is impossible to conceive of sickness as being good. Therefore, it is unreal, and is proved to be a false account, which is wiped out and destroyed by Christ, Truth.

We must give an account of strength, because God is Almighty: "The Lord is clothed with strength, wherewith he hath girded himself," and as man "possesses not a single original, or underived, power" (Science and Health, p. 475), it is impossible for him to give account of weakness by yielding to temptation, either morally or physically, for God's government is the government of strength.

We must give an account of good, not evil, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee." Therefore man is incapable of giving a false account while God is good, and man is His image and likeness. Neither can man give an account of error, by believing in minds many and a false sense of existence in matter, because God is Truth, and Truth destroys error. Therefore the account must be true.

It should also be a joy to us to know that man cannot give an account of hate, for "God is Love" and the account must be of love, and only love, to show forth our understanding of the true man—God's man. "Love must triumph over hate" (Science and Health, p. 43). Jesus made this plain, and Peter says, "Whereby are given unto us exceeding great and precious promises: that by these ye might be partakers of the divine nature, having escaped the corruption that is in the world through lust."

"According as we Love."

A. H. M.

THERE are thousands whose hearts are grateful for Christian Science. I wonder if any are more filled with gratitude than are we, for much has been forgiven, much made clear. About five years ago when walking one day with a sister Scientist whose seeming burdens were heavy, she made the statement, "According as we love, are we liberated."

To sense, our own burdens were heavy,—a life-work confiscated and a heavy debt laid upon us by the perfidy of a business associate, and much bitterness was to be met, not only from the thought of being wronged, but, because unable to meet our own obligations, we were called dishonest.

The friend's clouds seemed even heavier than ours, and because of this her statement impressed me, and daily has it helped to uplift us. Science was then new to us, we were just beginning to understand. We had been crushed into it by sorrow and trouble, yet, thanks to God, through faithfulness to Christian Science and its wonderful teaching, we are free, every dollar is paid, health is established on God's sure law, and we have fearlessness to go forth to the battle, that neither youth nor untried courage could know.

The dear sister is also liberated, has advanced from gloom and loneliness into light and love,—the reflection of good deeds daily done in love to others. In healing others, she herself was healed. Is it worth while to cherish any ill will when liberty and light come by loving, by forgetting all discord? With many others, we add our thanksgiving to our loving Leader, who has shown us how to apply the teachings of our Master. Please God, may we never cease to use them, but daily prove by a life reflecting the "liberty of the children of God," that "according as we love, are we liberated."

"The Mantle of Charity."

GRACE WHITE.

"AND now abideth faith, hope, charity, these three: but the greatest of these is charity."

These gracious words of Paul have touched human hearts for many years and still are full of glad promise for those who long for true Christian living among men. Faith, hope, charity, these three graces or gifts of God, abide, endure, continue throughout all time, stable and sure as "the everlasting hills." They are the Father's benediction on work well done; and the greatest of these states of consciousness is charity, which is the active aftermath of universal benevolence or love.

Could we but have gentle charity as our daily, hourly guest, the crushing weight of unfeeling criticism would be lifted; the fear of ourselves and of others be overcome: and in its clear light, in the "holy of holies" of each struggling, striving heart, we should see eye to eye, for we would then know that the temptations of one are the temptations of all, and we should truly rejoice in the good our neighbor would do and finally will do, in the man he would be and finally will be. What a light would be shed on our path heavenward by the entertainment of this one gentle guest.

Each has some loved one, or loved ones, whom he would shield with his life if need be, whose faults he would quickly cover from the gaze of unfriendly eyes, and may he not be privileged to cover with the same quick, protective charity

Digitized by Google

the faults his discerning eyes may see in the loved ones of his neighbor, or may it not be his supreme and holy privilege to cover with this wondrous mantle these same faults and failings from his own all too careless scrutiny, shield from his own gaze, with more than the chivalry of a stainless knight of old, all that he knows his neighbor would not have him see.

Let us then weave our mantles of charity with strands of trustful appreciation of all well-meant efforts for good, of gentleness, of encouraging hope, of peaceful faith in God's protecting care for all, and let us cover with its encompassing folds our brother and shut out all that we see to be unlike God's dear son.

The Touch of Truth.

H. K. M.

"AND when Jesus was come into Peter's house, he saw his wife's mother laid, and sick of a fever. And he touched her hand, and the fever left her: and she arose, and ministered unto them."

What was it that healed Peter's wife's mother,—made her strong and well, so that "she arose, and ministered unto them"? Surely no one can think there was magic in the touch of the Saviour's hand. The fact that his disciples did similar works of healing would refute such a supposition. What, then, was it which caused this sudden change from weakness and suffering to health and freedom? It was the touch of the Christ-truth upon her life,—the coming into close contact with divine Mind,—which caused the fever to leave this woman and made it possible for her to arise and go about her usual duties.

Mrs. Eddy says, "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints. If suffering from a belief in sickness, you will find yourself suddenly well" (Science and Health, p. 14).

Christ is ever-present with us, and to-day we may have this touch of Truth which will free us from the belief of material life and the discordant testimony of the physical senses, and bring us into the glorious understanding that we are the children of God, and that, by reason of our sonship, we have dominion over all the earth. Then, in loving gratitude, we shall arise and serve Him, doing with our might what He gives us to do. Our first work will ever be to keep our own thought pure and free from every stain, and of equal importance is the work of helping others,—the giving of a cup of cold water to the thirsty one. It may be only a little thing,—a word spoken or a little kindness shown,—but we cannot see the end. It is for us to use every opportunity wisely, and trust the result to God, who doeth all things well.

Report of the Building Fund.

THE report of Mr. Stephen A. Chase, Treasurer of the Building Fund of the Mother Church, made to the Annual Meeting, showed that a total of $425,893.66 had been received up to and including May 31, 1904, and that there was a balance of $226,285.73 on hand on that date after paying out the sum $199,607.93 which includes the purchase price of the land for the site of the new building.

Mr. Farlow's Article in the June Journal.

MR. ALFRED FARLOW'S article, "A Critic Answered," which appeared in the June number of *The Christian Science Journal*, is in such demand that it has been decided to issue it in the form of a reprint, and in order that the article may be widely circulated the following low prices are made: Less than one hundred copies 3 cents each; one hundred copies or more, $2.50 per hundred, prepaid. Send orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Selected Articles.

The two articles which follow were published in the *Sentinel* of June 18, but through a printer's mistake the types became mixed in part of the edition, hence this republication in correct form.

Is a Christian Scientist Liable to Sickness?

Sickness is the result of sin. In Christian Science, however, the term sin is not restricted in its application to wilful wrongs, but refers to any deviation from the right, including even our ignorant mistakes. Sickness is possible because one's thought and conduct do not afford a sufficient defence against it. It is not what one knows but fails to practise, which renders him immune from sickness; but the condition in which one actually lives.

As in mathematics, it is not one's belief in the rule which produces results, but the correct application thereof. Christian Science is advantageous only to those who deport themselves according to what they know. As in mathematics, while Science points out the way, the pupil must do the work. A Christian Scientist may have an advantage over his neighbor in having ascertained what he ought to do, but he reaps his reward only in proportion as he puts this knowledge into practice. John did not say, Blessed are they who know the commandments, for the mere purpose of being posted, but "Blessed are they that do his commandments." The blessing comes to the doer, not to the mere hearer, of the Word. To attain to such an understanding and realization of the truth as to become entirely and permanently immune from sickness and suffering, requires a life-work and continued watchfulness.

Our brief answer to the question, "Will a Christian Scientist ever be sick?" might be given in the following words: If he can always think aright and live aright, he cannot possibly be sick. If he deviates from the right course, retribution may come to him even more quickly than to those who have a less clear comprehension of the right way.

Even when one is conscientiously seeking to do right, he is confronted with the proposition which the Scriptures name in the following words: "The spirit indeed is willing, but the flesh is weak." But he can and must conquer through divine help. Good intentions are not sufficient guarantee against trouble. Furthermore, one must serve his apprenticeship in learning to think and act from a spiritual standpoint; and, like a child learning to walk, the beginner may stumble to some extent until he becomes master of the situation. It is noticeable that some children stumble a great deal while learning to walk, while others, though advancing slowly, never stumble. One's ills may not be directly traceable to misconduct, but may be occasioned because one is mentally giving place to unlawful powers, not having through a sufficient realization of the divine Power, become impregnable to these intrusions.

After having developed fears and apprehensions because of the peculiar beliefs in which Christian Science finds us, we sometimes require time to rise effectually above such fears. It is important to say, however, that Christian Scientists find themselves far less liable to trouble, even with a limited understanding of this Science, than before it was brought to their attention; and the general gain in ability to avoid as well as eliminate sickness on the part of students of Christian Science is truly gratifying, and cause for deep thankfulness.

ALFRED FARLOW.

Boston Times.

The word "philosophy," as defined by Webster, is "literally the love of or search after wisdom." If the lexicographer had aimed to describe Christian Science, he could hardly have chosen more appropriate language.

Our critic says that "There is not a philosopher of any

Digitized by Google

standing in its ranks, though it may include here and there a man somewhat able as a lawyer or successful as a business man."

Upon this subject St. Paul, the scholar, theologian, and metaphysician, has the following to say, "For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called: but God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty."

It is a remarkable fact that, according to history, the progress of truth has been more opposed and misunderstood by scholastics and theologians than by people of more modest attainments. Referring to the great Teacher of Christianity, the Gospels tell us that "the common people heard him gladly." We are reminded further of the words of Jesus, who said, "I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes: even so, Father; for so it seemed good in thy sight."

In all the attacks upon Christian Science it is invariably the case that those who attempt to disprove its teachings signally fail to understand Mrs. Eddy's meaning, and we recall the advice of Coleridge, who said in substance, Before you condemn another's misunderstanding, be sure you understand his misunderstanding. Would it not be well, therefore, in view of the great need of spirituality in the world, to welcome all that makes for health, happiness, and brotherly love? If Christian Science does not do this, then it will be sure to fail, and our critics will win a victory without expending their intellectual ammunition.

Let us remember that it is never wise to tear down what one cannot build up, and those who are trying to disprove the truth of Christian Science would be more likely to succeed if they would offer in its place something that is better calculated to meet our human needs. Until this can be done, would it not be well to allow time and experience to test its efficiency, and let it stand or fall according to its own merits and its inherent vitality?

RICHARD P. VERRALL.
New York Post.

The question as to what is Mind and what is matter, and their relation to each other has been the problem of the ages. Until this question could be settled on some satisfactory and provable basis, the mystery of human existence and man's individual continuity beyond the grave, would inevitably remain in the domain of speculation and doubt. In the present time the world is battling over this problem of matter more earnestly than ever before, and human learning was never more thoroughly divided on the subject. Recent statements by eminent material scientists, show that a mighty revolution in thought is rapidly going on. Space forbids the analysis of this change, but any careful reader of the times can easily perceive that the trend is away from former conceptions. "It is the spirit that quickeneth; the flesh [matter] profiteth nothing." "The flesh lusteth against the Spirit, and the Spirit against the flesh, and these are contrary the one to the other." These statements of Jesus and Paul, together with the works that flowed from the knowledge they evinced, have in the rounds of time led to the final solution of the problem, by reason of which the sick are spiritually healed as aforetime.

JOHN CARVETH.
Maple Rapids (Mich.) *Dispatch.*

Christian Science and Christian Scientists never attack any one. Christian Scientists love all mankind and are working to lift themselves above whatever is unlike God that they may help those who are sick and needy in any way, and to follow in the way of overcoming the world, the flesh, and the devil, which Jesus taught.

We do not say that there is no stone, and no stumble, but we do know that as a man thinketh in his heart, so is he, and his thoughts govern him at all times. If he has the Mind which is in Christ Jesus he has his remedy at hand, and if there seems to be an accident one neither curses the stone nor God, nor cuts off the toe. He does not say he has no pain, but he knows God is All, and so holds his thought at one with God, and thus proves God to be an ever-present help in time of trouble. Christian Science has the "signs following," which proves it is the knowledge of God taught and practised by Christ Jesus, and now manifested by the great numbers of pure-minded men and women, healed through its influence, who are building up its churches.

F. VAN GORDER.
Sioux City (Ia.) *Journal.*

To the Christian Scientist, prayer means more than a formulated statement of words. It is nothing short of living an exemplary Christian life. It is honesty (including the payment of all just debts), truthfulness, and uprightness, and he who lives such a life cannot help making progress into things better, more spiritual. Hence it is but perfectly natural to expect to progress with such a practical sense of prayer. There can be nothing inconsistent in this.

Prayer, as understood by the Christian Scientist, is entirely free from mysticism and occultism, neither do they believe that the healing work accomplished is supernatural, but instead divinely natural.

As we more clearly understand God, infinite good, and the relation we hold to Him, we will see that it is perfectly natural for health to be restored through the application of truth which corrects the cause of the trouble in the mental realm.

LLOYD B. COATE.
Dayton (O.) *Herald.*

Christian Scientists gladly recognize that a large majority of the medical profession are good and intelligent men; but they look upon *materia medica* as based on materialism, knowing nothing of God in its doctrine and practice; that it deals with man as an animal rather than an immortal spiritual being; that it doctors effects and secondary causes; that it is empirical and not scientific, frequently changing its practices and theories; that it is on a false basis, since it ignores God and man's spiritual and immortal being.

CLARENCE A. BUSKIRK.
Fort Wayne (Ind.) *Journal.*

We shall find that the love of nature, wherever it has existed, has been a faithful and sacred element of human feeling; that is to say, supposing all the circumstances otherwise the same with respect to two individuals, the one who loves nature most will always be found to have more capacity for faith in God than the other.—RUSKIN.

Resolved.

AGNES FLORIDA CHALMERS.

To know a little more of good each day;
To hourly cast some cherished sin away;
To give each thought to Love, and keep no part
Of any will of mine within my heart;
To do, without complaining, every task
Life gives to me, while pausing not to ask
The *why* or *wherefore;* just Thy will to know,
Trusting in Thee to guide me as I go,
Father,—these heights my heart would climb to Thee
By holding fast to thine infinity.

The Lectures.

Toronto, Can.

A luminous and interesting lecture on "Christian Science and the Brotherhood of Man" was delivered in First Church of Christ, Scientist, last night [May 9] by W. D. McCrackan of New York, before a large audience.

The lecturer was introduced by Mrs. Isabella M. Stewart, a former First Reader of the church, who, with Mr. Stewart, was the pioneer of the Christian Science movement in Canada, some seventeen years ago. Since then the membership of the church in the Dominion has increased very rapidly, until now its adherents in this country are numbered by the thousands.—*Mail and Empire.*

Moline, Ill.

Before a large audience representative of the best people of this city and Rock Island, Bicknell Young of Chicago, delivered an eloquent address at the First Congregational Church, Tuesday evening, April 19, explaining the Christian Science faith.

Rev. M. V. Crumbaker, pastor of the First Methodist Church, introduced the speaker, saying, "It is the custom of the organization under whose auspices we are here to invite some one outside of their organization to introduce the speaker on such occasions as this. Hence I am here. It is also their custom to secure as lecturer one who is eminently qualified to set forth clearly their teachings. Hence Mr. Young is here. I have the pleasure to introduce to you Mr. Young.—*The Moline Mail.*

Kansas City, Mo.

Edward A. Kimball of Chicago lectured last night [April 26] before a large audience at the Christian Science Church at Ninth Street and Forest Avenue. Mr. Kimball was introduced by Mr. John H. Wheeler, C.S.B., who said in part:

This new-old explanation of God and man's relation to Him is the pearl of great price and reveals the demonstrable fact that God is our helper and is the ever-presence whose law is the Divine law of life and health for every one.

We are told that love is the fulfilment of the law. Christian Science, which heals the sick and reforms the sinner, accomplishes its largest work in teaching men the holy art of loving according to the Divine pattern. "A new commandment I give unto you, That ye love one another." "By this shall all men know that ye are my disciples if ye have love one to another."—*The Kansas City Times.*

Roxbury, Mass.

The semi-annual lecture on Christian Science under the auspices of First Church of Christ, Scientist, in Roxbury, was delivered in Fauntleroy Hall on Tuesday evening, April 19, by Judge Septimus J. Hanna, C.S.D., formerly of Boston. A large and intelligent audience taxed the seating capacity of the hall and most of the standing-room was occupied. Judge Hanna was introduced by the First Reader of the church, Willis F. Gross, who spoke in part as follows:

The power for good in this new religious movement is due to its conception of God and man. A man's religious belief and practice is the natural result, the logical sequence, of his conception of the Supreme Being. If a mortal thinks of God as being in any sense like unto himself he rises no higher than a man-like God, and he comes to the conclusion that this God has even less to do with the affairs of every-day life than have his relatives and friends, or even the stranger with whom he comes in contact. Christian Science teaches that the seeker for truth must start with God. The mortal, material selfhood must be left out of the consideration. If God, Spirit, is the starting-point and the reasoning is along scientific lines, no other conclusion can be reached than that of a spiritually perfect universe and a God-like man.

If one's ideal is a man-like God, there is little hope of heaven on earth, and there is honest doubt as to what the future has in store, but if his ideal is a God-like man, there is assurance of progress. A man-like God seems on most occasions beyond human reach, but a God-like man is inseparable from his Creator. Of himself he can do nothing, but with God's help he can do all good.

The mission of Christian Science is to teach and demonstrate the true idea of God and the spiritual man. That this teaching is practical and is bringing forth fruit abundantly is proven by the sick who are healed, the sinful who are reformed, and the sorrowing who are comforted.

The Dorchester Beacon.

Rice Lake, Wis.

The Opera House was filled Tuesday evening [May 10] with a very intelligent and appreciative audience to listen to a lecture on Christian Science delivered by Frank H. Leonard of New York City. The lecturer was introduced by Leslie S. Everts, assistant cashier of the First National Bank, who said in part,—

Ladies and Gentlemen:—I esteem it a privilege and an honor, to have been invited to introduce the lecturer of the evening to this audience. Whether or not we may agree with the arguments he presents, the subject is one of vital interest to all of us.

We live in an age of progress, an age fairly resplendent with the deeds of men, and I am glad to say that foremost among the advancements of to-day can be seen and felt the certain, if gradual, development of the moral side of human nature. Under the leadership of the pure and strong, of whatever creed or faith, sex or nation, mankind is daily struggling toward the goal of perfection. No matter how bad a man may be, he might be worse; no matter how good, he might be better. But good or bad, there is a constant struggle for something better; something more noble, more elevating. The good book says, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." It is this constant seeking after the light, the truth, which dominates the restless actions of mankind.

Probably no subject has been so little understood, and so ignorantly and wilfully misrepresented as Christian Science. People with absolutely no understanding of the subject presume to establish logical arguments against its teachings. If you honestly feel that Christian Science has no message for you, well and good. The time may come when you will change your mind. But above all things, let us hope that the true American spirit of liberty and justice for all will make your investigations thorough, your criticisms fair.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Another Expression of Gratitude.

THE following letters disclose another happy incident in connection with the building of the Concord church, and they give further evidence of the loving regard for our Leader, and appreciation of her work, which animate the Field. The donors are blessed in the giving, as well as in the spiritual food which they have found in Mrs. Eddy's acknowledgment of their gift.

LETTER TO MRS. EDDY.

Boston, Mass., June 23, 1904.

Reverend Mary Baker Eddy, Pleasant View,
Concord, N. H.

Beloved Teacher and Leader:—The enclosed draft for $10,000 is sent you on behalf of the local members of the Mother Church in Boston and of the members of the nearby branch churches who frequently attend the services in the Mother Church. It is their gift to you to pay for the organ for First Church of Christ, Scientist, in Concord, N. H.

This is a token of love and gratitude from those who have been healed and spiritually blessed through your ministry.

The beautiful edifice in Concord erected by your munificent gift of $120,000 stands as a perpetual testimonial to the teachings of Christ Jesus, and to the fact that the sick are healed and sinners are reformed through the right understanding of his gospel. This right understanding you have given to the world through your work, and it has richly blessed the race.

Lovingly yours, for the donors,
WILLIAM B. JOHNSON, *Clerk.*

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., June 25, 1904.

The Mother Church.

My Beloved Brethren:—Your munificent gift of ten thousand dollars wherewith to furnish First Church of Christ, Scientist, of Concord, N. H., with an organ is positive proof of your remembrance and love. Days of shade and shine, may come and go, but we will live on and never drift apart. Life's ills are its chief recompense; they develop hidden strength. Had I never suffered for the Mother Church, neither she nor I would be practising the virtues that lie concealed in the smooth seasons and calms of human existence. When we are willing to help and to be helped, Divine aid is near, and if all our years were holidays, sport would be more irksome than work. So, my dear ones, let us together sing the old-new song of salvation and our measure of time and joy be spiritual not material.

Lovingly yours,
MARY B. G. EDDY.

The Mother Church Building Fund.

IN another column of this issue we give a statement of the receipts and expenditures of the Building Fund as reported by the Treasurer at the Annual Meeting of the Mother Church. While this report shows that the amount paid in is quite large, it also shows that much more must be contributed before the amount pledged at the Annual Meeting in 1902 is made up. The immense amount of work required in laying the foundations for a building capable of seating five thousand persons can scarcely be appreciated by those who are not constantly on the ground; but fortunately this seemingly slow part of the construction is nearing completion, and we shall soon see the walls arise with all the rapidity consistent with first-class work.

This means that the time is at hand when the disbursements will rapidly increase because of the more expensive character of the labor and materials required, and in order to maintain an adequate balance in the hands of the Treasurer at all times, it will be necessary to increase the size and number of our contributions. The figures announced by the Treasurer are useful only as they are regarded by each individual to indicate the further amount which he will need to contribute in order to complete the sum pledged two years ago. May we not, then, ask each one to make such computation and thus take the steps necessary to cancel his part of the obligation.

The fact that four hundred thousand dollars is a very conservative estimate of the amount expended in railroad fares, hotel bills, etc., by those who attended the Communion of the Mother Church in 1903, gives proof that the entire amount which has been paid to the Treasurer of the Building Fund could be easily doubled in a day.

As practitioners of Christian Science, we always endeavor to heal our patients in one treatment, and we should have the same thought about the Building Fund. We know that if we were to treat our patients from the standpoint that it is not necessary for them to be healed until next week, or next month, or next year, we should make a sorry failure of our practice. This Building Fund is but a patient, and as we realize what the erection of an addition to the Mother Church means, and the necessity therefor, we shall gladly ascertain what can be done by each of us, and do it promptly.

M.

The Hope of the Nations.

WITH the return of this country's natal day we are led to think of the nations which have come upon the world's stage with what seemed a promise of perpetual greatness, and are reminded of the lines,—

Assyria, Greece, Rome, Carthage—where are they?
. . . Their shores obey the stranger, slave, or savage,

and that many of the world's best modern thinkers have given warning that the foremost nations of this time would go the way of those of the past, unless they avert a like fate by the exercise of the truest wisdom.

Few would deny that "righteousness exalteth a nation;" the difficulty lies in reaching an agreement as to what is right, or even best, so far as a practical solution of the problems of the hour is concerned. There is no lack of plausible theories, economic, political, and religious, but most of them spring from personal motives, and assume that harmony can be reached apart from obedience to spiritual law. Let any man honestly ask himself whether the world's condition could be perceptibly and permanently improved so long as sin is indulged, and the appetites and passions are allowed to govern man as at present, and his answer will be forthcoming. No one need argue that improved material conditions would uplift the world's moral standard, for history tells a far different story. It is very manifest that neither to the individual nor the race, does worldly prosperity give content, much less happiness. It is equally clear that human theories cannot do it, they have failed too often. Instead, they tend to strife,—man against man, class against class, nation against nation.

In so far as a nation upholds the authority of Divine

Digitized by Google

law, to that extent is it in the line of progress and true prosperity. Like individuals, nations must be willing to learn by experience, and while they should be grateful for the wisdom of their progenitors, which served their day, they should know that Truth speaks to the present age in words which best meet the present need. When the Jews contended for the wise men who were gone, Jesus said, "A greater than Solomon is here."

That Christian Science had its birth in this cosmopolitan country is indicative of the Divine purpose to bestow upon all mankind that fuller sense of freedom which is first among Deity's favors, though Christian Science aims to make all good better understood and more available. As the Bible, that great gift of God, was first given to the world at large, in fair England, so to this country belongs for all time, the glory of having given to humanity, Science and Health which, as a "Key," unlocks the priceless and inexhaustible treasures of the Bible. Together they are establishing that "righteousness" which, by the grace of God, will exalt all the nations of the earth till He shall call them good, even as at the dawn of creation He beheld and named His own reflections.

With the passing of the centuries many that were great have come and gone, but the world can only render thanks for those who gave to it a larger sense of righteousness, a sense which lifts the individual from the sod. Says Mrs. Browning,—

> Rise up teacher!
> Here's a crowd to make a nation!—
> Best begin by making each a man.

It is cause for thankfulness that a great teacher has arisen in this land of freedom. That this teacher should be a woman may excite wonder when it is seen what superhuman courage and endurance were essential to the success of her mission; but Mrs. Eddy has proved by her unwavering devotion to the lofty ideals of Christian Science that a God-inspired woman is adequate to a heaven-imposed task, and grows stronger in faith and understanding at each step of her advance.

It were indeed well if our children could all be taught to love their native land so nobly that, serve where they may, consideration for her honor would ever invite them to yet untrod heights of greatness, so that in the days to come it should again be said, "This and that man was born in her."

K.

A Donation Acknowledged.

Pleasant View, Concord, N. H., June 21, 1904.

Mr. Fred N. Ladd, Treasurer Building Fund, First Church of Christ, Scientist, Concord, N. H.

Dear Mr. Ladd:—Our dear Leader has received the enclosed envelope containing forty dollars (two twenty dollar notes) wrapped in the piece of plain brown paper, just as you see it, and no word of explanation. Not knowing what else to do with it, she directs me to hand it to you for the Concord Church, supposing it may have been intended for that purpose, by the modest donor. When you have entered the item in your account, will you please place upon this letter your official receipt of the amount, and return it to us? We will then pass it along to the Editor of the *Christian Science Sentinel* to be published, so that whoever sent it, if he be a reader of that paper, will know of its receipt and the disposition made of it.

In Mrs. Eddy's behalf, I remain,

Sincerely yours,

GEO. H. KINTER.

Dedication of the Church in Concord.

THE new church edifice of First Church of Christ, Scientist, in Concord, New Hampshire, the gift of our beloved Leader, the Reverend Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, will be completed on July 16, the anniversary of the laying of the corner-stone. It will be dedicated Sunday, July 17, with simple but appropriate services. A cordial welcome will be extended to all those who come.

Church Dedicated at Grand Island, Neb.

THE dedication of a new church edifice is a matter for congratulation and is of interest to the entire Field, but the event at Grand Island, Neb., was made doubly interesting by the exchange of the following telegrams. Our Leader has the happy faculty of saying much in few words and her telegram to this Church is an inspiration and benediction to all Christian Scientists.

Grand Island, Neb., June 19, 1904.

To the Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

First Church of Christ, Scientist, Grand Island, Nebraska, sends greetings and love for your devoted consecration to divine Principle, which has enabled us to-day to dedicate our church free from debt and to prove that the Church is the structure of Truth and Love [Science and Health, p. 583] demonstrated practically. We are to have a lecture to-morrow evening by Mr. Bicknell Young at the Opera House.

MRS. L. A. GLADE, *Clerk.*

MRS. EDDY'S TELEGRAM.

First Church of Christ, Scientist, Grand Island, Neb.

Beloved Brethren:—I return greeting and congratulation. You have won on God's command to Moses, "Be still and know that I am God." May His presence and power that guided your passage continue and your harps never be hung upon the willows. Lovingly,

M. B. G. EDDY.

Letters to our Leader.

Foxcroft, Maine, June 24, 1904.

Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Dear Leader:—On the 17th inst., there occurred a most interesting event at Fryeburg, Maine. At that time and place a memorial stone and tablet, to mark the battlefield of Pequawket, or Lovewell's Fight, was dedicated. The tablet was placed there by the Society of Colonial Wars. Inasmuch as Captain John Lovewell, the hero of this fight, was your great-great-grandfather, you may be interested in the account of the dedication ceremonies. It gives me much pleasure to send you a program of same herewith, also newspapers (under separate cover) containing detailed account of the exercises. Sincerely yours,

CALEB H. CUSHING.

The program referred to in Mr. Cushing's letter is as follows:—

SOCIETY OF COLONIAL WARS.

Fryeburg, Me., June 17, 1904.

Exercises in the Congregational Church at 3 P.M.

All are Invited.

Addresses will be made by A. J. C. Sowdon, Governer, Massachusetts Society of Colonial Wars; Dr. Orin Warren, President, Lovewell's Fight Memorial Association; Hon. James Phinney Baxter, Mayor of Portland; President, Maine Historical Society; President, New England Histor-

Digitized by Google

ical and Genealogical Society; Judge Job Barnard, Washington; Dr. S. C. Gordon, Portland; Emerson Leland Adams, Principal, Fryeburg Academy; Hon. William Warren Towle; Mr. Walter A. Robinson, Mr. John Stuart Barrows.

Sacramento, Cal., June 17, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

My Dear Leader:—In the *Sentinel* of August 7, 1902, there appears a letter from Mr. Robert Bishop, then an inmate of one of our state penitentiaries. In this letter he speaks of his healing from several ailments, but lays particular emphasis upon the joy and peace that your message to us all had brought to him.

He has since been released from that prison upon parole and is now a member of Second Church of Christ, Scientist, Oakland, Cal. It was the jail committee from this church that brought his attention to Christian Science, and as soon as he was at liberty he affiliated with that body. My wife and I were at their Wednesday evening meeting a few weeks ago and heard Mr. Bishop give an incident of his prison experience which I know will please you, and that is my apology for taking some of your valuable time.

As you know, the discipline in such places is very strict, and the courage expressed by Mr. Bishop spoke of a love for you and a forgetfulness of self. One Sunday morning the chaplain of the prison had you as the subject of his discourse, and so belittled your character and told so many self-evident falsehoods as to your life that Mr. Bishop could not stand the continuance of the falsifying, and rose to his feet amid the prisoners and told the chaplain very plainly that he was not telling the truth about you, and that he knew the remarks were false because he himself was a Christian Scientist. Mr. Bishop was ordered taken into custody by the guards, and he wisely sat down. Divine Love so met his human need that he was not found. In case he had been found he would have been put in the straightjacket for his breach of discipline in his defence of the one he was grateful to. Nothing more was said at that time nor afterwards about you. For this action he was styled "The Christian Science man."

Some time later an unknown person kindly sent Mr. Bishop several of your books, and he was sent for by the warden. One of the rules of the prison is that the covers of all books shall be removed before they are given to the inmates on account of the smuggling in of drugs. Consent to the marring of your books was very reluctantly given by Mr. Bishop, and only the urgent need of the contents by the prisoners gained his approval. He then took the coverless books to the chaplain to have them bound. He was recognized by the latter, who apologized for his unseemly remarks about you on the Sunday just referred to, saying that he had found out that he was wrong regarding you. Upon seeing that the books were written by you, he gave orders that the best binding be put on them. When the binding was completed and the books placed in the prison library, the chaplain was the first one to take them out to read.

When Mr. Bishop told this and of his gratitude to you a holy light seemed to shine on his beautiful white hair and face. I trust that the length of this has not burdened you, but it seemed such a full harvest for our planting that I must needs tell it to you.

My wife joins in grateful love to you.

Yours in sincerity,

HERBERT W. BECK.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

Testimonies of Healing.

Christian Science came to me in my darkest hour,—all material means having failed me. I had nothing to look forward to,—helpless, hopeless, I knew not which way to turn. A dear young Scientist came in one evening and, finding me on my couch, remarked how often she had thought of me lying there and wished I had that beautiful truth which had done so much for her. I immediately asked what that truth was. She tried to explain by telling what it had done for her, and I asked if it would do as much for me. She replied that she thought it would, and kindly offered to send me some reading matter. I had no idea what it could be, but as she had made it clear to me that it was as free for me as for any one, I waited anxiously to learn more. She remained talking until late and I retired that night with a faint hope of something better, nor was I disappointed; for the next morning she lovingly sent me her copy of Science and Health and an armful of *Journals* and *Sentinels*.

My husband took a *Journal* and I took Science and Health. I read all that day and far into the night. Next morning I drew the book from under my pillow, and again I read all day and evening. Before noon, however, the young friend called, bringing "Miscellaneous Writings," and saying she could not spare her Science and Health any longer, but lovingly offered to borrow one for me from a friend who had two copies. I answered that one book was the same to me as another, and that I had the *Journals* and *Sentinels* before me yet.

It was so new and wonderful, and it seemed very strange to have a book one could not spare longer than a day. I opened "Miscellaneous Writings" at "The New Birth." It was a revelation; I read it over and over. I could not grasp the meaning seemingly, but it was beautiful and satisfying, so I read the third day. My only sense was of light overflowing into the dark places of my consciousness, illuminating, radiating, and uplifting, until I could but close my eyes and say, My God, I thank Thee. The next morning I arose, dressed myself, and attended to my household duties, and have never had to remain in bed one single day since for that trouble.

I had suffered constantly for twenty-six years, or from the birth of my first child. I had never held my child in my arms, only as he was placed there by loving attendants. My life had been spared, but I was left with many ailments,—a physical wreck. We had employed many physicians, my husband sparing nothing in the way of expense, but trying every new remedy and every noted doctor that he could hear of or reach. I was in the hospital, underwent two operations, and my physician, who was kind and patient, tried conscientiously to help me, worked almost two years to build me up sufficiently to undergo a third operation, but all to no purpose. I only grew weaker until, in despair, my husband said, "We will quit doctoring."

I really seemed to gain for a time, then, through business changes, it became necessary for me to leave my old home and make a new one in another state. We went to Watertown, S. D., in July, and until I heard of Christian Science, the last week of November, 1901, I grew constantly weaker, until I would have as many as four and five sinking spells in one day. We thought it was the alkali water and the climate, but we have learned that neither water nor climate can affect us. "Every law of matter or the body, supposed to govern man, is rendered null and void by the law of God" (Science and Health, p. 380).

I can never be thankful enough to the loyal Scientist who first brought the knowledge of Truth to me. She was so kind and patient in coming to read the weekly lesson with me, and finally one day asked me if I would like to meet a practitioner, who could make many things much more clear to me. I was so eager for more I gladly said

Digitized by Google

"Yes," and very soon she and another Scientist called. Their bright, loving faces, their patient, kindly answers (for I had many questions to ask), did much for me. Freely they had received, and freely they gave. I owe so much to them that I can only repay by trying to live the truth they so earnestly taught.

I must speak of my first realization of my freedom for twenty-six years. I had sinking spells at intervals of a few weeks, the slightest exertion bringing them on. During the attack I could not stand on my feet. My physician told me I must keep off my feet, for it meant another operation, so for weary days I was confined to my couch, and only able sometimes to creep about from room to room by holding to chairs or the wall. The attacks were more severe after any little exertion, so I was in constant bondage to fear. I had children and was dependent on hired help, which made it impossible to keep off my feet at all times. When the next attack came, I did not then realize my freedom, and fear suggested that I give up to it, but this dear practitioner called and I asked her if I could go against all medical advice. It was Christmas, and I so desired to have my son and family come home, but the same faintness and weakness was there when I stood on my feet. She lovingly told me I must live one moment at a time, also that this might be my test time, and if I wanted my family, why not have them. Joy filled my heart at her words. I might trust God fearlessly. I prepared the dinner for a family of ten. Once fear crept in, everything seemed sinking away from me, when the thought came clear and strong, God is my "strength, a very present help in trouble."

I finished my dinner, and when at eleven o'clock that night I retired to my room, I wept tears of joy. I had been freed from the bondage of a lifetime, and with a heart overflowing with gratitude and love I thanked God for the truth which makes free.

We are learning day by day how good God is, and to those who have brought this truth into our lives we feel the deepest sense of thankfulness. We can only think of Mrs. Eddy with reverence for her great work for humanity, and may our lives prove our gratitude.

MRS. LUCY E. MATHER, Faulkton, S. D.

It was fear and despondency that caused me to cry out for God and, after years of wandering, to find Him in Christian Science. I was not very well bodily, but such ailments as I had were more bearable than the mental depression. This was so from my earliest remembrance, though from no visible reason. I had home, kind parents, brothers, sisters, friends; but I was restless, unsatisfied, and longed for something I could not find. The words of the Psalm were often in my thought, "As the hart panteth after the water brooks, so panteth my soul after thee, O God."

I was brought up an orthodox minister's daughter, and tried very hard to find God as others felt they had, but could not, and at times I feared that the doctrine of predestination explained my inability to reach Him. As I grew older I became skeptical. I could see evil, sorrow, sin, hardship, but could not see God, could not find Him. I wondered, and questioned, Where is He?

I was miserable, but after a while I grew more prayerful, more softened, and then "Science and Health with Key to the Scriptures" came to my notice, and surely in answer to my earnest longing.

When I began to read this book I knew I had found the way to God. I had no doubt of this, and although I felt a great distance from Him, I knew I had found the path leading to God, and the book was very sweet. Early in my study of Christian Science I was healed of chronic constipation, from which three physicians had been unable to give me any permanent relief.

My struggle with fear, pride, heartache, and other evil besetments, has been long and kept me at work, and often mortal mind has whispered, "It is no use." I could see nothing behind me and a seemingly inaccessible height in front, but I have caught a glimpse of Truth, and in moments of darkness I have declared Truth's eternal presence until I could rise higher, and know that His presence is everywhere and the absence of God is only a wrong belief.

To-day, yea always now, I feel the presence of Love encamping round about me, for error's voice is ceasing to be real to me; fears are being overcome, and I am seeing and knowing Him, God, good, in whom I have believed.

My little girl, aged nine and a half years, knows nothing of material remedies. She reads and applies the teachings of Science and Health earnestly. She is latterly getting at the handling of sin,—is struggling with the temptation to return evil for evil. She sees that thoughts of hate cause physical and other ills, and she is working well, and winning. I feel very grateful for this, for with the aid of Christian Science the problem of bringing up a child in the way it should go is solving itself, as the rules are obeyed.

Class teaching, which I have been blessed in taking this year, has lifted some heavy stones for me, as I have worked to bring out what I was taught. I am very thankful for this teaching.

I know that I cannot be too earnest in learning what our beloved Leader is working to give us, and I pray that I may see how to follow her guidance in the most direct way.

I am very thankful for the Concordance to "Science and Health with Key to the Scriptures." It is a great help, and our Church Manual is teaching me to know and apply better the meaning of the Golden Rule, hence better obedience. For these things and much more I thank Christian Science with all my heart.

MRS. ADELIA GILLIAM MORGAN, Los Angeles, Cal.

I became interested in Christian Science through the experience of my husband. The first visit the Scientist made we told her to send Science and Health by return mail, which she did, and I have made it my companion ever since, and can truly and thankfully say it is the "Key" which has unlocked many passages of Scripture for me.

My husband was healed in eight weeks of asthma which had troubled him for twenty years. Now he has no symptoms of such a disease, and with it disappeared a bad case of fistula. Since he took his first week's treatment, which was absent, we have never used one drop of medicine or other material remedies of any kind for ourselves or our children.

The following are a few of the many diseases from which we have been healed through Christian Science,—pneumonia, scarlet fever, croup, mumps, cholera infantum, eruptions, sore throat, sore eyes, and burns. The grip and earache which recently attacked my youngest boy were met in a very short time. My oldest boy, now seven, on two different occasions had a rusty nail run into that part of the foot, an injury to which is thought most dangerous. The first time it was healed instantly. The other time, being away from home and two days having passed before he had treatment, he did not wear his shoe for a week. He was where all kinds of material remedies were offered, but he accepted none of them and had a member of the family where he was visiting write home for treatment. For these and many other overcomings of error through truth I am indeed thankful to God, and especially for the spiritual uplift I have received.

I wish to express my thanks to Mrs. Eddy for this grand revelation. I am also very thankful to all others who have helped me to know the truth which makes us free.

PATTIE C. JETT, Winchester, Ky.

I feel it my privilege to say a few words in acknowledgment of the good I have received from Christian Science treatment. I consider my experience most encouraging, as I have been wonderfully benefited, physically, mentally, and morally. All my life I was unable and afraid to pray, because I found that the reverse of my prayers came into my experience. It was impossible to read my Bible without great discouragement, feeling, as I did, that nothing in it was for me.

At last I found myself such an invalid that I required a nurse day and night, and a visit daily from the doctor. I was taking habitually three or four drugs daily, and had not had one good night's rest for over two years. In order to get rid of the restlessness I often walked in the garden half an hour at a time, in the middle of the night. I never was without a headache, backache, and a general soreness in my whole body. Ever since my nineteenth year I had been growing gradually worse and worse, although my husband spent a fortune in taking me from one specialist to another in many capitals of Europe, and never allowed me to do anything that could harm me; but no doctor or change of air helped me to recover health, and no two doctors thought alike concerning my complaints. They only agreed in one point, saying, "You must make up your mind to put up with it for the rest of your life."

I had dyspepsia with all its attendant miseries, hopeless despondency, a very troublesome and persistent nettle-rash, and internal disorders, owing to which I was in constant pain, and which made my life unbearable.

When first I heard of Christian Science, all I heard was that it cured insomnia, for which I took treatment. At the end of one week I began to enjoy everything around me, which I had not done for twenty years, and in three months' time I was in perfect health. This was nearly three years ago, and I have not required one single day's rest or any drug during this time. I am able to enjoy long, rough walks, without fatigue, although I am nearly sixty years old, and I never have a bad night's rest. I now know that I cannot be separated from God, that I am leaning on Him, and loving Him daily more and more, and am trying to become worthy of the beautiful, practical religion that our dear Leader has given us.

MRS. PHYLLIS VON HOLTHOIR, London, Eng.

With a grateful heart, I gladly add my mite of testimony to the many that are constantly appearing in the *Sentinel*, bringing hope, health, and happiness to so many despairing ones.

When I was an infant, Egyptian ophthalmia made its appearance. Caustic was used to burn the ulcers off my eyes, which caused the most agonizing suffering, and other drugs administered made even the light unendurable. The fear of blindness was constantly held over me, but after a year of the best care, I slowly regained the use of my eyes, although I was left with very poor sight.

My last years in school brought the seemingly inevitable glasses, which proved of little avail, for soon after, my sight began to fail steadily. Another oculist then examined my eyes most carefully, and said I had an absolutely incurable complication of diseases, among which he mentioned hypermetropia (far sight), etc., prostration of the nerves, and a large scar over the center of vision of one eye. He gave me peculiarly ground glasses, which he thought might relieve the constant pain, but said there was no cure for me. With the thought of blindness constantly before me, with rapidly failing sight, and in utter despair, I turned to Christian Science, though with no faith, only a hope that I could be helped. I was healed instantaneously, although I continued treatment for ten days. This was almost five years ago, and I have had no trouble with my eyes since the happy day I turned to God, the "ever-present help," as revealed in Christian Science. I am most grateful to my helper and teacher for her loving guidance of my early steps.

Christian Science has taught me there is something of more importance than material sight, and this is spiritual discernment; it is making "all things new," and our wonderful text-book is indeed a "Key to the Scriptures," unlocking its hidden treasures, and proving the Bible my best friend, instead of an incomprehensible book full of seeming contradictions.

Words fail to express my gratitude to our beloved Leader. In Science and Health, p. 3, we read, "Gratitude is much more than a verbal expression of thanks. Action expresses more gratitude than speech," and I know the only acceptable expression of thanks is to strive to follow in the footsteps of our Master.—MABEL WRIGHT, Utica, N. Y.

Christian Science came to my aid at the time in my life when I most needed it,—when I was wickedly unhappy because, as I then believed, God had taken my mother from me. I never wanted to hear His name again; the old motto that hung on the wall, "God is Love," was only a mockery to me. To please a friend, a Christian Scientist, who, I dimly realized, had in some mysterious way made my mother's last hours happier and more free from pain, a fact which even the physicians admitted, I consented to read Science and Health.

In the long, lonely winter among strangers that followed, I slowly learned the lesson that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). Only by turning to the little book, could I conquer the paroxysms of grief and loneliness, and so I was impelled to keep up its study, and with it to open my Bible for the first time with real interest and pleasure. At the end of that winter, I could again say, "God is Love," for I had learned that He had not taken away my mother, and that only to this mortal, finite sense was I separated from her.

During my study, I had often wondered if my faith in Christian Science would be equal to a test in a physical emergency, for I had always been a great coward about pain. One morning, through a fall, I was badly burned by hot grease, and I also strained my back severely. The fear and pain were so great that I hurried to the nearest telephone and asked for help from a Scientist. In fifteen minutes I was absolutely free from pain, kept an engagement that afternoon, and the burn, which extended the length of my forearm, healed quickly and left no scar. It was about this time, too, that an inquiry from a friend made me realize that a cough of five years' duration, which had more than once reduced me to unconsciousness through exhaustion, and for which I had in vain tried all remedies, had entirely disappeared. I have never had a return of it since.

From that time on, I have had endless proofs of the power of Jesus' teachings as revealed through Science and Health, both mentally and physically. Among them are my baby's birth, her healing from convulsions and whooping-cough, and other baby ills; her perfect reliance on the Love that is the only power, and her unquestioning acceptance of the truth that casts out every discord. I have passed through the deep waters of mental trouble, but through it all I have been able to say, by the help of Christian Science, "Thy rod and thy staff they comfort me." I have seen friends healed of so-called incurable diseases, and had the great privilege of helping some to see that Christian Science is indeed the "Comforter" that was promised by Christ.

I rejoice that I have found a practical religion that I can take into the minutiæ of my daily life, and my heart goes out in gratitude to God and to His messenger, Mrs. Eddy, for the great peace and happiness that has come to me through Christian Science.

BESSE PHELPS STONE, Chicago, Ill.

Digitized by Google

We never heard of Christian Science till last August one year ago, and never have had the opportunity of going to church except twice, but we have tried to study Science and Health, and we two have been so wonderfully helped and blessed that we cannot half express our thanks to that God-inspired woman, its author. I am sixty-six and my daughter thirty-six. We were both of us nothing but wrecks,—given up by the doctors, who told me I was old enough to die, that my daughter could not live longer than three months, and that nothing could help her. But we heard of Christian Science and we employed a practitioner, and we are both on the road to health, have not had to keep our beds one half day this year, and have done the most of our work ourselves.

We love the truth so much, and want to know all we can. Thanks to our Leader, Mrs. Eddy, for the light of Truth. As Christ taught, we are getting free, for we know that God is Life, Love, Truth, and we will strive to enter in by the straight gate.—Mrs. Cherokee A. Smith, Bond, Miss.

[Translation.]

With all my heart do I wish to express my sincere gratitude for Christian Science.

In December, 1902, I had to submit to medical treatment, because I was severely afflicted with an abdominal disease. My condition grew constantly worse, and one day hemorrhage set in. The physician ordered me to remain in bed, which I did for about three months without noticing any improvement or change for the better. The physician then advised me to go to a clinical institution at the end of February, where they intended to perform some operation. This caused us a great deal of anxiety; yet it was again proved true that "man's extremity is God's opportunity."

Through my sister, who resides in another country, I was advised to try Christian Science. My dear ones immediately turned to a practitioner here, who visited me and gave me treatment. After the second treatment I began to feel better, and my condition constantly improved. After a short time I was able to be up, and during the third week was using my sewing machine. Our baby was born in July, and to my greatest joy and against all expectation, the birth was natural, without any medical assistance. Since then I feel quite well, and have no reason to complain, while formerly I had suffered constantly from abdominal pain.

Through this beautiful proof of healing we have become faithful adherents of Christian Science, and I feel that I cannot be too grateful to Mrs. Eddy and also to the dear practitioner for her self-sacrifice and loving ways.

L. M., Dresden, Germany.

It is now five years since I began to investigate Christian Science, and I have found that even a limited understanding of it, if rightly applied, can help us under all circumstances. I have found in God, Truth, a friend who never forsakes me. It is a religion to be lived every day, and in proportion as we live it, do we derive benefits therefrom.

I would like to relate a case of healing by Christian Science. My little boy, a child of five years, was taken with what the doctor called cystitis. There was great inflammation, the parts were discolored, and the child's suffering was very great. Salves and ointments were used for three days, but all to no good. The doctor said the only relief he could give was to perform an operation, and this we positively refused to have done.

Having a slight knowledge of Christian Science my husband advised giving the case to one of our pioneer practitioners, and to our delight the child was greatly relieved in two treatments. We had the treatment continued for two weeks, at the end of which time we gave up the practitioner and the child has never had a trace of the symptoms since, and that was two years ago.

The doctor's orders were, To keep him very quiet, as moving about would make it worse, but with the Christian Science treatment we learned that matter could not swell or be inflamed (Science and Health, p. 393), and the child was allowed to ride the velocipede or do anything else he wished, and he was not affected in the least from so doing.

I cannot express my gratitude for the truth, and what it has done for me in the healing of my son and for the destruction of many other ailments. I am deeply grateful to Mrs. Eddy for bringing this healing truth to our understanding for the relief of human suffering.

Mrs. Oscar D. Sires, Charleston, S. C.

Let me say, first of all, that I thank God and also Mrs. Eddy for again showing us the way to Christ. My feet had well-nigh slipped in the old paths, from "the faith which was once delivered unto the saints," and I needed the uplifting reminder of Christian Science to establish my goings, and turn me from the mazes of material remedies to God for healing.

For eight years I had suffered with chronic dysentery. I had tried all sorts of physicians, and had been through operations with no lasting results. The last money paid for medical treatment was one thousand dollars. I received six treatments in Christian Science and was healed. Since then I have bought Science and Health by Mrs. Eddy, and have been healed of numerous other troubles. We rely upon the truth every day, every hour, and find it always the same. My recovery seems hardly possible to my friends; but it is true.—Mrs. Fannie Chambers, Thomaston, Conn.

In contributing to our periodicals, I feel I can only repeat what has already been told over and over again: that Christian Science is the old truth revealed anew, a revelation that is bringing to humanity the true understanding of God, of Life, Truth, and Love. Christian Science has transformed me from a doubtful, unhappy, discontented, miserable woman, into one who is at least learning to know God aright, and who can now see the way clear to follow the teachings of Christ Jesus.

It is now more than four years since I first heard of Christian Science. I had, from childhood, been brought up in an orthodox church, had only a material sense of God, and considered my unhappy condition a just punishment. I was endeavoring to bow to His will, though I must confess I did this with a rebellious heart. The first words of this wonderful truth spoken to me planted in my soul a joyous hope, and now I am daily realizing, more and more, that it is the true understanding of God which is the Saviour; and I know that this Christ-truth is saving me hourly.

In all things I have trusted to the understanding gained from the teachings of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, in physical as well as mental troubles, and in every instance I had proven the truth of its teachings. Among the many physical diseases that I had to torment me, I will mention a few that have been overcome by a knowledge of this truth. From infancy I was held in bondage to weakness, and I was spoken of as a "poor weak vessel" not able to accomplish, in a physical way, anything that required strength. I had a weak back, liver complaint, bladder trouble, dysentery, malaria, injuries, accidents, toothache, and other troubles of like nature, which disappeared, and while I am grateful for the physical healing, I rejoice to know that I am governed by an ever-present divine Principle that is with me constantly, overcoming fear, doubt, and sin, as well as disease; but I especially glory in the spiritual understanding that is mine to-day, and I humbly express my gratitude to infinite Love, and to our beloved Leader, Mrs. Eddy, that staunch, true, loyal disciple of Christ, and to my devoted teacher for pointing the way to the greatest revelation of Truth the world has ever received.—I. C. L., Houston, Tex.

From our Exchanges

The new evangelism which shall . . . again exert the full power of the Gospel cannot be made to order nor devised by a single man. It will have to retain all that was true and good in the old synthesis, but advance the human conception of salvation one stage closer to the divine conception. It will have to present a conception of God, of life, of duty, of destiny, to which the best religious life of our age will bow. It will have to give an adequate definition of how a Christian man should live under modern conditions, and then summon men to live so.

A compelling evangel for the working class will be wrought out only by men who love that class, share its life, understand the ideals for which it is groping, penetrate those ideals with the religious spirit of Christianity, and then proclaim a message in which the working people will find their highest self. They will never be reached by a middle class gospel preached down at them with the consciousness of superiority. WALTER RAUSCHENBUSCH.

The Independent.

We have our dreams of enjoyment and attainment, our spiritual ambitions and desires. But Christ has a higher vision of what we may do and be. He will not leave us to the lower thought and aim. At whatever cost of possessions, pleasures, or present content, he will call us up to higher ground. He may any day make his saying,—For whosoever would save his life shall lose it; and whosoever shall lose his life for my sake and the good news shall save it,—as searching and imperative to us as to the rich young man. Woe to us, then, if it shall prove that we care more for our possessions than for the call of Christ.

The Congregationalist and Christian World.

The Christian is likened to a light. It is the function of light to dispel darkness. If one who professes to be a Christian sheds no light in his family, in the community, in the church, what reason is there to suppose that he is a Christian at all? He may have all the external marks of discipleship; but if he does not shine, all the rest is at least problematical. Dark-lantern Christians are a mere caricature of the genuine believer. They are of no value to the church, the community, or the cause of Christ. And is it not possible that he will say to them in the Great Day, "Depart from me; I never knew you"?—*The Examiner.*

He who is born good, or has achieved goodness, or has had goodness thrust upon him, is apt to think that he is in no danger. He is in the greatest of all dangers,—the danger of pride, of self-conceit, of ingratitude,—in a word, of Pharisaism. He who is saved from temptation has not less to thank God for than he who in temptation is saved from sin. The story of the prodigal son is also the story of the elder brother,—and that is a fact we are prone to forget. L. A.

The Outlook.

The tendency of the age in religious circles is to expand the doctrine of the everlastingness of the divine Love more and more toward a universal truth. This widely acknowledged truth sheds its gracious and inspiring influence over all denominations, modifying at least the doctrines of the past and giving a larger hope for the future, not only of souls on this earth but through all eternity.

The Universalist Leader.

The sublime dignity of divine work creates a reverent humility, and throws a man absolutely back upon God for strength. One of the hardest lessons to learn, and yet one of the most necessary, is that of our own insufficiency.

G. CAMPBELL MORGAN, D.D.

The Standard.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

THE TRUE LAW.
SERVICE AND STIPEND.
THE BROTHERHOOD OF MAN.
RESIGNED TO THE WILL OF GOD.
TO BUSINESS MEN.
THE TRUE ORTHODOXY.
LESSONS FROM A WORKSHOP.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Director of the Mint says that the last silver dollar that will ever be issued by the Government of the United States has been coined. The coinage statement for June shows the coinage of about $400,000 in standard dollars. These coins are now all completed in the Philadelphia mint. There is still on hand about seven million ounces of the silver bullion purchased under the act of 1890. This has been set aside for subsidiary coinage. There is enough of it to coin over $7,000,000. This, with the subsidiary coins now in the Treasury amounts to nearly $12,000,000.

The Navy Department proposes to send out from one of its wireless telegraph stations, most likely Key West, at noon each day, ball time as given by the Weather Bureau to points throughout the United States. Thus captains of ships who are within the projecting radius of the wireless station at Key West, as well as those ashore, will be able to regulate their chronometers.

Postmaster-General Payne and Mr. Takahira, the Japanese Minister, have signed a parcels post agreement between the United States and Japan, to take effect August 1. The treaty allows a maximum limit of weight of four pounds six ounces in the mails between the two countries. The rate fixed is twelve cents a pound or fraction thereof.

The final detail in the payment of the $40,000,000 to the Panama Canal Company by this Government was completed last week. J. P. Morgan & Co. received from the subtreasury the $25,000,000 of bonds which they deposited with the treasury officials while payment for the canal properties was pending.

The total number of Porto Rican teachers who are to attend the Harvard Summer School is as follows: Two hundred and twenty-four men teachers, 157 women teachers, 14 men administrative staff, eight women. Total, 403.

Judge Beekman Winthrop, the new Governor of Porto Rico, accompanied by his wife, arrived there last week. Large crowds gathered at the dock and palace to meet him. The inauguration occurred July 4.

Miss Helen Adams Keller last week received from Radcliffe College her diploma with the degree of A. B., and with the honor *cum laude*.

Foreign.

According to reports, an arrangement has been reached between the French legation and the Sultan relative to the introduction of Algerian police into Tangier. The French Government is considering details regarding the number of the force and other matters. Chiefs of the Anghera tribe, it is reported, have written to the Sultan demanding the release of their tribesmen who are imprisoned at Tangier. They say that unless their demand is granted they will capture an Englishman and hold him as a hostage for the release of the prisoners.

President Amador has signed the bill for a monetary law passed by the Panama Legislature. The law practically establishes the gold standard and provides for a coin to be called the "Balboa," equal to the American dollar or two silver pesos. It is to be .900 fine and will weigh twenty-five grammes. The law authorizes the executive to guarantee the rate of exchange by depositing a sufficient amount in the United States and also to make with the Panama Canal Commission whatever arrangements may be necessary.

The representatives of American houses in Cuba, especially the representatives of machinery houses, are said to be growing more and more dissatisfied with the workings of the reciprocity treaty recently negotiated between the United States and Cuba. They claim that the reduction made on United States machinery does not enable them to compete with the large manufacturers of Germany and England, and there is a movement on foot to secure further concessions in the treaty.

Late reports from Tibet show that representatives have been despatched from Lhassa and that armistices were granted for conferences with the British expedition under Colonel Younghusband. This action, however, was taken only after the Tibetans had suffered severe repulses in various conflicts.

It is stated that Emperor William announced to King Edward his intention of returning the latter's visit early in August, on which occasion a large fleet will accompany him.

King Edward was in attendance at the regatta races at Kiel last week and was enthusiastically received by the German Emperor and people.

The latest official reports estimate the population of Cuba at 1,655,677, an increase of 183,880 since the census of 1900.

Industrial and Commercial.

Secretary Wilson and the Director of the Bureau of Plant Industry have received advices from the department's traveling agent, who has started from Guatemala with the newly discovered ants intended to check the boll weevils in the cotton fields, that he would arrive at New Orleans on July 4 with eighty-nine colonies of these ants, and will proceed at once with them to Texas cotton districts.

Baron Masanao Matsudaira, a member of the Japanese nobility, who has been visiting the Japanese colony in Texas, is very enthusiastic in his expression of the possibilities of rice culture in Texas. "On the whole, I concur in the belief of Mr. Ichikawa, our agricultural and horticultural expert at the St. Louis fair, that Texas is the coming rice country," he says.

It is reported that 60,000 tons of steel rails have been contracted for by the Harriman lines for this year's delivery. Of the 60,000 tons bought, it is reported that 10,000 will be used on the Union Pacific, 10,000 on the Oregon Short Line, 20,000 on the Southern Pacific, and 20,000 on the Houston & Texas Central.

Present conditions indicate that the wheat yield this year will be a "bumper" crop. Some estimates are as high as two hundred and eighty million bushels, of which Canada supplies eighty million.

The Red Star line has joined the steerage cut rate competition. The Allan-State line has also met the reduction by a rate of $13 from New York to Glasgow.

The cranberry growers in the Plymouth County belt estimate the loss by a recent hail storm at 100,000 barrels, or $500,000.

A train on the Great Western Railway, running between Plymouth and London, covered 118 miles in 99 minutes.

General.

Owing to the complete success that has attended the irrigation of the land by the erection of the barrage at Assuan on the Nile, a scheme is being formulated for increasing the height of the dam by 19 feet 6 inches, says the *Scientific American*. The realization of such a project will enable the Irrigation Department to retain behind the barrage an additional thousand million cubic meters of water, which will suffice for an increase to the perennially irrigated area of half a million acres, and add $75,000,000 to the wealth of Egypt. According to the recently published report of the Assuan reservoir, the whole of the water kept back by the dam has been devoted to special tracts, and the Egyptian Government cannot entertain any applications for water. The cost of raising the barrage will involve an expenditure approximating $2,500,000, which sum will be defrayed out of the public debt surplus.

An English naturalist has discovered a new and interesting species of spider in Australia, says an exchange. It lives in the crevices of the rocks along the seashore between high-water and low-water marks, selecting this peculiar situation, it is believed, because it finds there the food that it likes best. Of course its home is submerged when the tide is in, but it prevents the water from coming in by weaving a sheet of silk across the entrance. The web is air-tight, as well as water-tight, but enough air is enclosed when the web is stretched to last the spider until the tide recedes.

Charles A. Gardiner of New York City, one of the State regents, in a recent address before the University Convocation, made a plea for higher salaries for high school teachers. He declared that in 1902 the wages of an ordinary hod carrier in New York City averaged $767, which was $38 more than the average high school teacher received.

Of the 1,099 degrees conferred at the last Harvard Commencement, no less than 470 were for bachelors of arts in the academic department alone. At Yale a total of 620 degrees were conferred, of which 280 were for bachelors of arts.

The recently completed census returns show that the population of Belgium at the end of 1903 was 6,985,214, of which slightly more than one-half were women.

English is in the future to be an optional subject in all public schools in Saxony, on the ground that it is "the most widely used civilized language in the world."

All the cars and engines in the United States run together on a single track would, it is said, make a train nine thousand miles long.

The railroad traffic of the United States makes use of 37,000 passenger cars and 1,600,000 for freight.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Right Reasoning and Right Conclusions.

C. D. REED.

WHEN we hope to learn something without seriously disturbing our present beliefs, or when we refuse to investigate carefully because we think our meagre research has shown us the fallacy of the subject under consideration, then we are apt to stagnate, and there can be no progress.

Many people think they have unique objections to Christian Science, and even pity well-informed Christian Scientists, and wonder how they can believe such stuff. These critics really think that if said Christian Scientists could become informed, as are they, and could see the valid objections which they know exist, then they would drop Christian Science and return to the sensible views held by themselves. They seem actually to think that few, if any, of the Christian Scientists have had to meet and battle with these same objections which seem so real and unanswerable to them.

The fact is, that our paths to higher understanding are very similar, and all these apparent difficulties have seemed as real to many others, and have been met and mastered by them before they could enter into the right understanding of Christian Science. For years imaginary objections of this kind robbed me of the joys of this great truth, which, as I now know by actual demonstration, was far above my thought and conception. Reading, or hearing a few passages read, I would denounce them as errors, and, received in the old material conception of their meaning, they could well be so-called, but when spiritually understood, these very passages were found to be demonstrable truth. Reviewing my former honest objections that now seem but absurd, and which I hurled against some of the teachings of the Christian Science text-book, I am convinced that it is only a question of time until every honest seeker after truth will be lovingly guided into this higher understanding.

When I look back over the rugged way by which I have advanced even so far, I rejoice with exceeding joy that I met and conquered the seeming difficulties by investigation and demonstration, instead of assuming that the premises were false and absurd because they differed from my preconceived opinions. Short-sighted humanity seeks to explain away all of Christian Science that does not agree with its views, and many persons may even believe for a time that they have succeeded in so doing; but, like Banquo's ghost, it will not down. They at length find that their explanations of the cause of the phenomena attending the practical, every-day workings of Christian Science are far from satisfactory, and that grievous failures invariably attend every attempt to put into practice their supposed methods in lieu of genuine Christian Science. In some way all are finally driven to Truth. "Mortal belief must, through Science or suffering, lose all satisfaction in error and sin, in order to part with them" (Science and Health, p. 296).

It is difficult for some who have spent years, and who have studied hard while investigating this subject, to be able to divest themselves of their old beliefs in order to be ready for the reception of the truth. Surely vessels that are already full must be emptied before they can receive more.

How strongly we are tempted to think that our conclusions have been reached by a true process of reasoning and demonstration, hence are infallible, and therefore any conflicting conclusions are, and must remain, false, and not even worthy of our investigation. This condition of thought is to-day binding thousands of mortals to darkness, distress, and death, and how plainly this illustrates the necessity of our becoming as little children.

"Unselfed love" is the way to advancement. So long as we are satisfied with self-centered, mortal-mind conclusions, we are dead, and only as we awake to the understanding that all true thought and life proceed from God, are we truly alive.

"Verily, verily, I say unto you, The Son can do nothing of himself, but what he seeth the Father do." We must learn to recognize the Father's activity, and do His work.

Speaking the Truth.

EDWARD EVERETT NORWOOD.

THE Psalmist says, "Let the words of my mouth, and the meditation of my heart, be acceptable in thy sight, O Lord, my strength, and my redeemer." If the meditation of our hearts—our thoughts—are correct, the words of our mouth will be correct also, for they will be the expression of right thinking. When our thoughts are based upon the recognition of impersonal good as supreme over all, and we deny matter's validity and power in every way, not only our words, but also our deeds, will be found on the side of divine Love, and thus heaven, harmony, will be attained on earth.

Then will be found Immanuel,—God with us,—good with us,—love, life, health, every good thing, with us,—and error nowhere.

Is not this what the world needs to know and do? As Christians, have we not been looking too much to the personal Saviour, and overlooking the real meaning of Immanuel, who was to save the people "from their sins"? If God is with us, how can error also be present, when God and error are antipodal? If God be an ever-present help in trouble,—and He is, and is with us,—how can error or sin any longer have dominion over us? In other words, if good be with us, then error—consumption, rheumatism, or any other evil belief (belief in evil)—cannot be with us, for it is the opposite of good.

If sin, sickness, and death do not exist in the divine Mind, and no one would admit such a belief, they must have their sense of existence only in the carnal mind at enmity with God. Then by reversing the beliefs of this so-called mind, by no longer believing in it, hearing its testimony, or talking it, in other words, by having our conversation in heaven, as the apostle enjoined, we may rise above the illusions of sense and find rest and peace in good; and Christian Science teaches us how to do this. It is a religion of power that brings its proofs with it by healing the sick and reforming the sinner; and these shadows of sense that seem so real to

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

the outsider, melt away in the celestial sunlight of Love, as we rise to the summit of Divine Science and learn to do the will of God.

Bringing in the Tithes.

A. C. Z.

SCIENCE AND HEALTH (p. 595) defines the term "Tithe" as "Contribution; tenth part; homage; gratitude." And the Prophet Malachi says, "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

Now these tithes mean not only the amount we put in the contribution basket, but our presence and our part in God's services; viz., the singing of hymns, testimonies of healing, the repetition of the Lord's Prayer, the responsive readings, etc. Note that we are to *bring* in the tithes, and not send them. Are we truly and faithfully bringing in the tithes? If so, the reward will be greater than we can ask or even think, for "no good thing will he withhold from them that walk uprightly."

"But this I say, He which soweth sparingly shall reap also sparingly; and he which soweth bountifully shall reap also bountifully. Every man according as he purposeth in his heart, so let him give; not grudgingly, or of necessity: for God loveth a cheerful giver."

"Honor the Lord with thy substance, and with the first-fruits of all thine increase: so shall thy barns be filled with plenty, and thy presses shall burst out with new wine."

"There is that scattereth, and yet increaseth; and there is that withholdeth more than is meet; but it tendeth to poverty. The liberal soul shall be made fat: and he that watereth shall be watered also himself."

"Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over."

Do we really believe these words of Scripture?

Science and Health, p. 79, says, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us." And again it says, page 135, "There is to-day danger of repeating the offence of the Jews, by limiting the Holy One of Israel, and asking: 'Can God furnish a table in the wilderness?' What cannot God do?"

Now do we truly believe God will fulfil his promises? Read the following from Numbers, 23 : 19: "God is not a man, that he should lie; neither the son of man, that he should repent: hath he said, and shall he not do it? or hath he spoken, and shall he not make it good?"

God requires of us only what we are able to perform. If we do our part, He will surely bring satisfactory results. Paul says, "I have planted, Apollos watered; but God gave the increase."

In 1 Kings, 17, we read that on a certain occasion, Elijah met a starving widow who was gathering sticks with which to bake her last mouthful of meal and oil for herself and son, and he asked her to make him a cake first. Now we would call this downright selfishness, the evidence of a total lack of brotherly love and consideration; but in reality it was simply a trial of the widow's faith in God's promises that the meal should not waste, nor the cruse of oil fail. Her mortal senses declared the oil and meal to be about exhausted, and there was no evidence of further supply except the promise of God through His servant Elijah.

Had we been in the widow's place, would we have made a cake for Elijah first, and then trusted in God for the supply of further needs? Do we really believe God's promises are to be depended upon to-day? Are we willing to put mortal beliefs aside, and trust in the giver "of every good gift and every perfect gift" for our future wants? If we don't believe Him willing and capable of providing, why do we pray to Him for our daily bread? Are we proving our faith by our works as did the starving widow?

Searching and Finding.

MARY ALICE DAYTON.

WHEN our class was sent out to do service for Truth, it was with the thought, "You will need, in future, *practice* more than theory" (Miscellaneous Writings, p. 281). These words were uttered by one who knew whereof she spake, and they certainly turned thought to God as the source of wisdom and the supply needed for our work. Mrs. Eddy's humble and entire reliance on God deeply impressed me, and gave a new and practical view of the relation of Christian Science to the all-knowing Mind.

In order to establish faith, and experience the joy of Divine guidance, this point must be individually tested, and not found wanting.

Shortly after, came the first opportunity to demonstrate the truth which had been taught, and to learn that one may ask for wisdom and receive according to the need. The case was a simple one, that of quinsy. The patient was subject to such attacks, which were accompanied by fever and suffering. The conditions were met as they appeared, but without the expected results. On my way to the patient the next day this determination came, "This is nothing but error, and I will work till it is destroyed." For an hour I prayed earnestly, casting out every possible opposing suggestion, still no change for the better. Then the thought that hate was holding the consciousness came to me. I could not find it in my own motive, and asked the patient if she were harboring hard feelings towards any one. No: it was not there. Turning to God with all my heart, I became firmly convinced that the world's hatred of Christian Science was being directed toward the practitioner to prevent the demonstration of truth. Unaided I should not have reached this solution of the problem, but I bear joyful testimony that immediately the presence and peace of God manifested itself to me and to my patient, who at once expressed relief, and rapidly emerged from a sense of illness into a normal condition.

Surely divine Love had uncovered and destroyed "lurking error" (Science and Health, p. 419). "Ye shall seek me, and find me, when ye shall search for me with all your heart." "I have chosen you out of the world, therefore the world hateth you." "Be of good cheer; I have overcome the world."

Truth Unchanging.

S. W. M.

WHILE I was working in the glorious sunlight one morning, the following questions and answers came to me with convincing power. Could you, for one instant, be made to believe that the erring human mind, with all its suppositional forces combined, could change the course of the sun, or stop its beneficent influence in any direction? *No.* Would you believe for an instant that erring mortal mind could cause the plant, instead of springing upward into the sun's light, to go backward into the cold, dark earth? *No.* Well, then, is it not a greater impossibility for this erring human mind to reverse God's law, or to stay the beneficent and healing power of Truth? Mortal mind *cannot* reverse or undo the work of God or retard our growth Spiritward. Therefore when tempests rage, if we "put to silence this lie of material sense, with the truth of spiritual sense" (Science and Health, p. 318), we can still hear Jesus say, "Be not afraid," and we have this most comforting assurance, "Undisturbed amid the jarring testimony of the material senses, Science, still enthroned, is unfolding to mortals the immutable, harmonious, divine Principle, Life and the universe, ever-present and eternal" (Science and Health, p. 306).

The Truth Stated.

The appended letter was recently published in the *Los Angeles* (Cal.) *Herald*, and in introducing it the editor of the *Herald* made the following explanation:—

"A few weeks ago Dr. Buckley, the most prominent figure in the Methodist Conference, delivered a lecture in this city in which he vehemently assailed Christian Science and its followers. Dr. Buckley's lecture was reported fully at the time. The following apology for the faith that is in him, is from the pen of a well-known Los Angeles lawyer and successful man of business, who prefers to conceal his identity under the pseudonym of "Bagdad." It is said that there are now over three thousand adherents of Christian Science in Los Angeles, and among its members are many men and women whose sincerity and sanity cannot be questioned. Therefore Bagdad's defence of his creed commands the respectful attention both of a liberal newspaper and of all thoughtful people."

I am not a Christian Scientist; nor yet a Methodist, though from nine to forty-five years of age, I was considered a "consistent member" of that church. For some time I have studied Christian Science, and the Rev. Dr. Buckley's late lecture in this city convinced me that in the future possibilities, if not certainties, of this Christian Science departure from old lines of religious thought and experience, there must be that which may sap the foundations of Methodism. Otherwise one of the doctor's learning, wide influence, and high religious authority could not, even for the moment, lay off the Christly garments of fairness, gentleness, and love, to wield the cruel weapons of ridicule and invective against a religious belief which is the mainstay of many of our best people.

I do not hold, with others, that in his selection of a three-headed title for his lecture he sought to allay suspicion that Christian Science was his real object of attack, or that his seeming fairness to one system included in his title was intended later on to impress his hearers that there must be a reasonable foundation for his bitterness against this Science and its Founder; nor will I criticise the speaker's taste, in pouring out his tirade of abuse and ridicule, before three thousand people, many of whom differed widely from him in religious matters, especially in a city where hundreds of homes had been gladly thrown open to him and "the visiting brethren," where his local friends had obtained $25,000 from "saint and sinner" for conference entertainment purposes, and where his audience was composed largely of the donors to this fund, some of the latter being Christian Scientists.

If asked if he is "divinely shod" for his great work, I am sure the reverend doctor's honest answer would be, "Yes! by His holy spirit, God called me to work in His vineyard," and as to "the fruit of the spirit," he would tell us that it is "love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance," and I realized that in allowing his "tree" to bring forth other fruit on this occasion, he must have labored under a stress born only of what seemed to him a well-grounded fear of the objects of his attack.

No one need fear that man can be snatched from the hollow of the Almighty's hand. Creeds will continue to flourish and die; nations may come and go, and denominational religions may wax, wane, and be forgotten, but God will still love His creation, including man. The Christ-spirit will ever abide with us, and the Bible remain our guide, though we have long hoped that some new commentator may arise, who, like Mrs. Eddy, would give the book a more spiritual interpretation than that given by the old writers, who may have had a less clear "light from above."

In "The Bishop's Address" to the conference, the missionaries in Latin countries were assured that they will be supported "in their demand for absolute religious liberty," and the doctor should concede this liberty at least to Americans, striving in America for a higher plane of thought and action. Should it not proclaim freedom from the shafts of public ridicule at home, as well as from fagot, rack, or legislative encroachment of any religious sect abroad?

Referring to Mrs. Eddy and Christian Scientists, Dr. Buckley said, "She is prospering and her people are prospering, and they will continue to prosper until the next plausible fad becomes a society craze."

If I read Christian Science aright, its demands on man are no less than those made by Christ Jesus, and such a religion should not in fairness be styled "a society craze," even by those who many years ago prophesied its early death. The *Boston Transcript* of December 31, 1894, said of it, "Every truth is in a state of agitation. . . . It is too early to predict where this movement will go, and how greatly it will affect established methods. That it has created a sensation in religious circles and called forth the implements of theological warfare, is very well known."

Are the symptoms of the "passing" of this "society craze" evident to an unbiased physician who makes an intelligent diagnosis of the case? The demand for the Christian Science text-book was hardly perceptible in the earlier years it was obtainable, though in the fall of 1901, in about twenty-five years, the sales had aggregated 218,000 volumes; while 301,000 are now in circulation in this and other lands, making 83,000, or three thousand a month, sold in the last thirty months. Hundreds of churches have been organized and are growing rapidly, and millions have been put into church edifices, free from debt before dedication, while this latest declaration from "religious circles" indicates that the "sensation" is still on.

Dr. Buckley also remarked, "From the time of Moses until now the same sort of delusions and proof of the supernatural have, in each generation, caught a greater or less number of the half educated and the highly educated who are cranks; these are their prey."

This surprised me, though I had read an editorial in the *Northern Christian Advocate* of February 11, 1904, referring to Mrs. Eddy as a "successful pretender," and to her followers as "fanatical," "novelty loving," and people "who cannot be induced to put their faith into sound Christian doctrine." Even Dr. Buckley's co-religionists who know anything of the make-up of Christian Science congregations, will wonder what "possessed" him to make such a charge as this. A dozen or more of our best citizens who were sworn witnesses in the late case against the Reeds (involving Christian Science men and methods), could be seen by the speaker in less than a half day, if he really desired facts on this point; among them he would find no "cranks" or illiterates, but some of our best and most successful men and women, who are doing much of the active business of the country: an able commercial broker, two successful dealers in real estate, the local head of our largest express company, an "A 1" county official, a leading lawyer in most active practice after serving terms as judge in two of our highest courts, one of our largest manufacturers, and some of the brainiest and most womanly of women.

Another of Dr. Buckley's epigrams was, "When you see a Christian Scientist with false teeth, you see a contradiction." In the absence of natural teeth, did he find a fact which legitimately contradicts the Principle of this science? If a practitioner treated a case for growing a new molar, should it be assumed that his failure disproved the Principle on which he depends for effecting cures?

If the primary arithmetician fails to solve a problem in higher mathematics, does that failure contradict the principle of mathematics?

When Christ Jesus' disciples failed to cure the dumb epileptic, whom he healed immediately afterward, was the Christ-Principle of healing contradicted by their failure?

Digitized by Google

Failures simply prove that neither immature mathematicians, nor yet immature disciples have attained a sufficient comprehension of the basic laws involved, to enable them to do the work. The fundamental truth and law in each case, however, remains perfect and demonstrable.

"Mrs. Eddy's work of fiction," was the expression used by Dr. Buckley to designate the text-book of Christian Science [Science and Health with Key to the Scriptures] which has turned more people to the loving and thoughtful study of the Bible than all the books heretofore printed, to say nothing of its reclamations from untruthfulness, bad temper, bad morals, bad habits, and bad health.

The book begins with, "To those leaning on the sustaining infinite, to-day is big with blessings" (Preface, p. vii.), and ends with the last sentence of a letter from one who was treated in this Science after being given up as "a hopeless case" by leading physicians and surgeons in a large eastern city: "From a condition of extreme suffering and emaciation, I have come to a realization of perfect health, strength, and happiness, through the teachings of the Christian Science text-book;" and in the intervening seven hundred pages, no sincere seeker for the truth can find anything not conducive to the highest morality, the best citizenship, and the grandest Christianity. Read a few quotations from it,—

"The habitual struggle to be always good, is unceasing prayer" (p. 4).

"Infidelity to the marriage covenant is the social scourge of all races" (p. 56).

"Clergymen, standing on the watchtowers of the world, should uplift the standard of truth" (p. 235).

"As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (p. 497).

"Marriage should be the school of virtue" (p. 65).

"Chastity is the cement of civilization and progress" (p. 57).

"The teachers of our private and public schools should be selected with as direct reference to their morals as to their learning" (p. 235).

"What we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds" (p. 4).

"Practice, not profession,—understanding, not belief,—gain the ear and right hand of omnipotence; and they assuredly call down infinite blessings" (p. 15).

"Sorrow for wrong-doing is but one step towards reform, and the very easiest step. The next and great step required by wisdom is the test of our sincerity,—namely, reformation" (p. 5).

These excerpts were written by this "pretender," for this "work of fiction" to be used by the "cranks" and "half educated," who comprise the "prey" of this religious body.

Dr. Buckley said further, "They are dying all over the country," and "they can't restore an eye or a lost limb; Christ did; even Paul could do more than these people can." I find him an exception to the well-known rule that those who most bitterly denounce Christian Science, know little or nothing even of its letter, for he declared, "I have taken the course; I know the whole thing from beginning to end."

The learned doctor must know that none of "these people" claim they can out-miracle Paul, and no work on this Science states that it is yet so well understood that the operation of the Principle involved restores lost eyes or limbs, or forever wards off death. Dr. Buckley should remember his reading in this text-book, that "During the sensual ages, absolute Christian Science may not be achieved prior to the change called death" (p. 254), and "All of truth is not understood; hence its healing power is not fully demonstrated" (p. 495); also, "I have never supposed the world would immediately witness the full fruitage of Christian Science, or that sin, disease, and death would not appear for an indefinite time" (p. 348).

In conclusion, the speaker said, "I wanted to read to you a prayer that I had by one of Mrs. Eddy's scholars, but I am unable to find it; I will hand it to the *Advocate* in the morning." It appeared in the *Advocate,* head-lined, "Dr. Buckley's Discovery—A Prayer of a Christian Scientist," and with it appeared his note to the editor, as follows: "The 'Prayer,' a copy of which you ask, was found by me in a work issued by 'Dr.' Hazzard, president of the 'New York School of Primitive and Practical Christian Science.' While he was not at the time one of Mrs. Eddy's devotees, the spirit of the 'Prayer' greatly resembles her productions."

His saying "a copy of which you ask," instead of "a copy of which I promised my audience," was unfortunate; for the uncharitable might think he wanted the printed church record to show that his responsibility for thus labelling and giving publicity to such a vulgarly foolish production was limited to furnishing a copy on request; though I counted it an effort to correct the error he fell into, in his previous statement that the "Prayer" was that of a student of Mrs. Eddy, for in his note he claims only that it "greatly resembles" her productions. Why not have so stated in his lecture? I am credibly informed that this Dr. Hazzard never was a pupil of Mrs. Eddy's, and Dr. Buckley knows that neither the book, its author, or his "school" were ever connected with the Christian Science movement; he knows that the "Prayer" and the expressions, "Harmatia of Thought," "Heavenly Holy Reality," "Splendid Fact," and "Shining and Glorious Verity," which are found in it, condemn both book and author as most inimical to Christian Science. He has read in Science and Health that "In divine Science, wherein prayers are mental, *all* may avail themselves of God" (p. 12), that "Long prayers, superstition, and creeds, may clip the strong pinions of love, and clothe religion in human robes" (p. 4), and he should know that, aside from the Lord's Prayer, written or printed petitions are not used.

I have learned that this denomination seeks no quarrel with other churches, or with the medical profession; as was said in the *Advertiser-Gazette* (N. Y.),—

"The literary productions of Mrs. Eddy and the Christian Science Publication Committee are written in a kindly spirit, free from mud-slinging and all abuse. Those who contend with them should do so in the same kindly spirit, answering argument with argument, advancing theory and facts against their theories and facts."

On this point Mrs. Eddy writes,—

"Let no enmity, no untempered controversy, spring up between Christian Science students and Christians who wholly or partially differ from them" (Unity of Good, p. 6).

"Students are advised . . . to be charitable and kind, not only toward differing forms of religion and medicine, but to those who hold these opinions" (Science and Health, p. 444).

"To perpetuate a cold distance between our denomination and other sects, and close the door on church or individuals —however much this is done to us—is not Christian Science" (Pulpit and Press, p. 30).

"At all times respect the character and philanthropy of the better class of M.D's—and if you are stoned from the pulpit, say in your heart as the devout St. Stephen said" (Message to the Mother Church, June, 1900, p. 22).

"I enjoin it upon my students to hold no controversy or enmity over doctrines and traditions, or over the misconceptions of Christian Science, but to work, watch, and pray for the amelioration of sin, sickness, and death" (No and Yes, p. 17).

In the light of the sacred book which Dr. Buckley must love, are not the teachings and practice of this Science at least excusable? Peter, John, and the other apostles; Paul and the early Christian fathers for three hundred years, healed simultaneously both sin and disease, and should we not rather rejoice if the world seems emerging from the night of materialism in which this spiritual power of dual healing

Digitized by Google

was lost? All Christians admit Christ Jesus' healing works, and all may read his commands making it as obligatory on his followers to heal the body of disease as to cleanse the soul from sin; he said, "Go ye . . . and as ye go, preach . . . heal the sick;" and following his precept and example, his disciples made both sickness and sin the subjects of their tender ministrations. His promises were, "The works that I do shall he do also," and "These signs shall follow them that believe; in my name shall they cast out devils [evils], . . . they shall lay hands on the sick and they shall recover," and when Peter was asked by what power he healed the man "lame from his birth," he said, "By the name of Jesus Christ of Nazareth; . . . even by him doth this man stand here before you whole." At no time did Christ intimate that this power would at any time be withdrawn, and though theology has not rationally explained its loss, in time it will admit that our materialistic tendencies so clouded our spiritual natures that we were unable to utilize this power to do the works his immediate followers did.

Let wits, religious and profane, laugh out of existence, if they can, the myriads of "incurable cases" brought to health in this Science, and, as I view it, they will not have robbed it of its power to heal the sins of humanity on a most practical basis. Its main object still lies before it, for its mission "now, as in the time of its earlier demonstration, is not primarily one of physical healing. . . . But these signs [healing] are only to demonstrate its divine origin,—to attest the reality of its higher mission, or Christ-power to take away the sins of the world" (Science and Health, p. 150). If under its workings disease only were cured, the learned Dr. Buckley might with some show of fairness relegate it, as he did, to the realm of hypnotism, in which also he professed to be an adept, but I think the honest student will come to regard its other good works as the best proof of the divinity of its mission, and will agree with a writer in the *New York Medical Journal*, who says:—

"The strength of Christian Science lies in its practical results. It is a positive force. It arrests attention by its dynamics. On every hand people speak of the happy changes wrought in their friends or families. They know of former drunkards who through it have lost all desire for stimulants, morphine fiends who are freed from the drug, dishonest men and women made honest and pure, boorish and selfish persons becoming refined and loving, life-long invalids rendered hale and hearty, chronic grumblers turned into cheery, good fellows, consumptives healed, and the insane restored to their right minds."

"At evening time there shall be light."
Let this sweet promise, my dear Lord,
Like Bethlehem's Star, my sure guide be,
Till at the evening's bursting light,
The far-off gates of pearl I see.

In days gone by this sentiment has given man a degree of patience and Christian resignation in times of trouble, but if Christian Science revamps it on a basis of faith advanced to the understanding of God, and sings to us that there are no "far-off gates of pearl;" that this "evening time," promised by ancient seer, came with the close of the old dispensation, and that its "bursting light" brightened into the Resurrection morn; if it teaches absolute reliance on Christ's promises, and proves that here and now we may be within the "gates of pearl," demonstrates that we may be free from sickness and sin, let us not risk injury to ourselves or hurt to others by seeking to hinder its rapid progress as a factor in Christ's salvage corps.

Dr. Buckley doubtless has read the immortal Whittier's words, written years ago, without invoking the persecutor's wrath:—

That healing gift he lends to them
Who use it in his name;
The power that filled his garment's hem
Is evermore the same.

And if this faith, be it new or be it a revivification of the old, sing with healing effect.—

O'er waiting harpstrings of the mind
There sweeps a strain,
Low, sad, and sweet, whose measures bind
The power of pain
(Miscellaneous Writings, by Mary B. G. Eddy, p. 396),

in humanity's name let it sing on, at least until we have some evidence that its fruits are not those of the Spirit.

"BAGDAD."

Among the Churches.

Canyon City, Tex.

The Christian Scientists of Canyon City, Texas, have purchased a plot of ground one block from the public square, and built thereon a reading room where they now hold regular services.

In making this demonstration we have realized that "Except the Lord build the house, they labor in vain that build it." And our hearts turn with gratitude to our beloved Leader, Mrs. Eddy, who by example and precept has taught us what God is and the possibilities of a "life hid with Christ" in Him.—MRS. V. EDNA HENSON.

Laying of Corner-stone in Green Bay, Wis.

The corner-stone of First Church of Christ, Scientist, has been laid with quiet but impressive ceremonies. There was a silent prayer followed by the audible repetition of the Lord's Prayer by all those present.

A copper box containing the Bible and the writings of Mrs. Eddy, the Discoverer and Founder of Christian Science, the history of the church, and the city papers were placed in the corner-stone.

The work virtually began during the early spring, although the excavating was done last fall. The members of the local church expect to get into the new building by fall.—*Correspondence.*

Fourth Church, Chicago, Ill.

Fourth Church of Christ, Scientist, of Chicago, has begun the construction of a church edifice, to seat about one thousand persons. This building will be located at the corner of Harvard Avenue and 67th Street.

The spiritual growth of this church is marked, and while this step will rejoice us all, we are not unmindful that we need to strengthen one another for greater overcoming,—even to the work of the building up of the body of Christ, Truth, until we all attain unto the unity of the knowledge of God.

Each victory in this work brings to us greater love for her who hath opened our ears to hear the healing Christ, and heightens our desire to unite with her in her "life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science" (Miscellaneous Writings, p. 207).—GENEVIEVE N. LAYTON, *Clerk.*

A Loving Thought.

A SURPLUS of one hundred and twenty-five dollars having accumulated in the general fund of our Sunday School, the thought occurred that it be transferred to our local church building fund; but upon remembering that the Mother Church Building Fund was still incomplete, we knew our first love and duty were due the latter, and we have accordingly sent a draft for the above amount to Mr. Chase.

GEO. W. MILLER, *Secretary of Sunday School.*
Omaha, Neb.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A New By-law.

ARTICLE XXVI.

THOU SHALT NOT STEAL.—SECTION 15. Neither a Christian Scientist, his student or his patient, nor a member of the Mother Church, shall daily and continuously haunt Mrs. Eddy's drive by meeting her once or more every day when she goes out—on penalty of being disciplined and dealt with justly by her church. Mrs. Eddy objects to said intrusion, inasmuch as she desires one hour for herself. And she who for forty years has "borne the burden and heat of the day," should be allowed this. The only exception to this By-Law is on public occasions, when she has the privilege of seeing others and of being seen.

A Question of Education.

IN recent years quite a number of educational institutions have been established which have been referred to or advertised as "Christian Science schools," and because of this designation the impression has gone out that they are in some manner a part of our denominational institutions. This is a mistake, and to call these institutions "Christian Science schools" is no more in keeping with the facts than it would be to call a certain store a "Christian Science dry goods store" because the proprietor is a Christian Scientist.

If such institutions were authorized to teach Christian Science, they might properly be called "Christian Science schools," but not being so authorized, the designation is a misnomer. The By-laws of the Mother Church are very explicit as to who may and who may not teach Christian Science, the number of pupils that may be taught by an authorized teacher of Christian Science, etc., and it can readily be seen that such institutions as those to which we refer are not within the scope of the By-laws, and are not contemplated by them.

Such schools are nothing more nor less than private enterprises, and their usefulness must depend entirely upon the ability and capacity of those in charge of them to impart information in such branches as are necessary to the sound and thorough education of the young. Christian Science is not taught through mathematics, music, chemistry, nor any other of the studies comprising the curriculum of the schools; and attempts to teach it by any method other than the orderly and authorized one should be avoided.

Christian Scientists believe in education, in the very best that can be obtained; but they also know that each educational institution must stand upon its own merits as a school, rather than as a direct or *quasi* adjunct of the Christian Science movement. M.

The True Working Basis.

IT is not unusual for those coming to Christian Science to make very large demands upon it in the way of insistence that their every problem, physical and metaphysical, shall be promptly solved. This is especially true, perhaps, of those who are somewhat habituated to theological and philosophical thought, and sometimes such persons have named the speedy settlement of all their difficulties as the one ground on which they are willing to honor the subject of Christian Science with their serious consideration.

For these as for all others it is needful to understand that while the working basis of the novice in Christian Science is very comprehensive in its inductions, it is necessarily of modest area in its demonstrable knowledge. We cannot enter upon "the narrow way" until the inflations of self-confidence and intellectual pride have collapsed, and we have become "as a little child" in our teachableness and simplicity. In the course of this schooling in humility, we learn to say, "I don't know," regarding many things concerning which we were once not only opinionated but dogmatic. We also learn that our ability to solve the larger problems to-morrow is invariably heralded by our willingness to recognize the beginnings of spiritual perception, and patiently work at the lesser problems to-day. We thus come to apprehend that though the kingdom of Truth is higher than the heavens, and compasses all knowledge and all reality, its disclosure in the awakening consciousness is fittingly likened to the grain of mustard-seed "which indeed is the least of all seeds, but when it is grown, it . . . becometh a tree, so that the birds of the air come and lodge in the branches thereof."

Respecting the apprehension of the profoundest truths, Mrs. Eddy has said that it is to be reached "by following upward individual convictions undisturbed by the frightened sense of any need of attempting to solve every Life-problem in a day." "Until the heavenly law of health, according to Christian Science, is firmly grounded, even the thinkers are not prepared to answer intelligently leading questions about God and sin" (Unity of Good, pp. 6, 7).

The well knowing of a simple proposition is the preliminary, the little beginning, of the largest achievement, and there can be neither poise nor contentment for the student until this fact is accepted. It is ours to apprehend and to declare that Christian Science embraces all knowledge, and that it is adequate to the solution of all questions, when utilized by one having the Mind that was in Christ Jesus; but let us not be tripped by the subtle temptation to concede that since we cannot answer all questions, have not proved equal to all the problems presented, and are often led to frankly say, "I don't know," we are therefore astray and do not "hold the Truth in righteousness." One may have a perfectly clear and correct understanding of a law of mathematics long before he is able to utilize it in all the fields of its legitimate application, and for the reason that to work out a given problem he needs not only a command of the rule, but of all essential data as well, and it is this fact that gives such significance to the subject of mental diagnosis. A case in point is illustrative. A very intelligent man who had been treated in Christian Science for some weeks without satisfying results, made serious complaint, and was ready to pass condemnatory judgment upon Christian Science. Just then, and most unexpectedly it was learned by the practitioner that the patient was owing a friend a large sum of borrowed money, the return of which he was persistently evading by most unfair and unjust means! Though a practitioner's apprehension of Truth were clear and competent, such a condition of thought upon the part of the patient, would abundantly explain a failure of demonstration. Jesus not only knew the truth, he also perceived the masked subtleties of error, and to this clearness of perception his followers need to attain before they can intelligently hope to duplicate all his wondrous deeds.

The working out of the individual salvation in Christian Science calls for a solid foundation rather than a broad one in the sense of a present ability to raise the dead, or answer all of mortal mind's caviling questions in its own phrasing and vocabulary. The blind man whom Jesus healed knew very little about the dialectics of philosophy, nevertheless he was more than a match for all the philoso-

Digitized by Google

phers, and for the reason that he knew one thing thoroughly and had the grace to rest his assurance upon what he knew, and to stick to it, while freely admitting that there were many other things of which he had no definite knowledge whatever. W.

"On Earth Peace."

So long as war continues no one can claim that the moral and intellectual faculties of the race are greatly in the ascendancy, or that the animal does not dominate mortal man. A very interesting article which appeared recently in a Russian newspaper says, "A people cannot pass suddenly from a state of cruel barbarism to one of civilization by means of purely technical skill, without passing through the incomparable school of nineteen hundred years of Christianity, which, perhaps, is the most valuable possession in Europe."

It is no less interesting than encouraging to note that in the great crises of life, nations and individuals alike, turn instinctively to the teachings of Christ Jesus and admit that they are the true standard of living. The pity is that all do not better understand them, and find in Truth a ready and satisfactory solution for every problem of human existence. While strife goes on between man and man, it is likely to extend to classes and to nations, through the belief in conflicting interests. The Apostle James says that "wars and fightings" come from "the lusts that war in your members." All strife undoubtedly comes from our failure to realize that we cannot afford to sacrifice our peace of mind for any material consideration whatever. When through scientific understanding it is seen that every struggle should tend to overcome evil with good, it will also become clear that the undertaking must begin with the individual, and continue until the victory for right is gained. Then the efforts will be directed to ever-extending conquests, and new regions in human consciousness will be won for God and His Christ.

For the coming of God's kingdom millions pray daily, and yet the Psalmist said, "Thy dominion endureth throughout all generations." It therefore remains for mankind to recognize this "dominion" and obey its laws. To mortal sense, the strife is great and the entrenchments of error seem very formidable. For long ages, the indulgence of sin, and submission to sickness and death have seemed to constitute a large part of human experience, but when we are awakened by Christian Science we perceive that evil has no claim upon us because it is not of God. No one who understands and follows Christ's teachings, in the light of Christian Science, need fear for the future of mankind. In spite of all the strife which may arise, nay, even because of it, humanity will be impelled to turn to Truth to find rest from its ceaseless woes.

Through type and symbol the Bible reveals the world's great struggle to attain true peace. The Word of God appears as a mighty warrior of whom it is said, "In righteousness he doth judge and make war," and it is significant that all the armies which follow him are clothed in linen "clean and white," and this betokens the character of the warfare. Says Christ, "In the world . . . tribulation; . . . in me, . . . peace." Truly "He maketh wars to cease." Our Leader says, "To infinite, ever-present Love, all is Love, and there is no error, no sin, sickness, or death. . . . Truth and Love prevail against the dragon because the dragon cannot safely war with them. Thus endeth the warfare between the flesh and Spirit" (Science and Health, p. 567). K.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, 239 Huntington Avenue, Room 8, Boston, Mass.

Letters to our Leader.

Chicago, Ill., May 30, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—I wish to tell you how gladly I received the recent By-law, "Church Organizations Ample."

Though I have never affiliated with any secret order, I have been benented by this By-law, because it has shown so many who are ready, how to lay down all "earth-weights" and has again shown us all that God is indeed speaking to us through you,—His messenger to this age.

In grateful love, CHARLES J. PRENTISS.

Western Springs, Ill., May 25, 1904.

My Dearly Beloved Leader, Mrs. Eddy:—I wish to express to you my heartfelt gratitude for the By-law of the Mother Church concerning clubs and organizations.

The way had not seemed clear to take the step before, but now I gladly do so,—only too happy to obey. That I may be worthy the name of Christian Scientist, is my prayer.

With abiding love. NELLIE L. HOFFMAN.

West Somerville, Mass.

Rev. Mary Baker G. Eddy.

Beloved Leader:—Please accept this little gift as a token of love and gratitude from one who has been healed by Christian Science of a severe eye trouble which the oculists could not even relieve. About eight or nine years ago I lived in Concord, and at that time was the most miserable of women. I had to sit with a shade over my eyes most of the time and always with my back to the light, because of the pain in the eyes. I was unable to sew or read, and my friends, when they made me a visit, always did what mending I had on hand. Since my healing in Christian Science I have done quite a lot of embroidery and want to do something for you in this line, since I have been liberated through your consecration to God in giving us Christian Science. It was suggested to me that I embroider trailing arbutus on a cloth for your breakfast tray, as you were very fond of these flowers, and I was glad to do so.

Yours lovingly and gratefully,

MRS. F. L. SAVORY.

Boston, Mass., June 18, 1904.

My Dear Leader:—I write you to-night to assure you of my gratitude and love for all you have done. I think I have never before felt more alive to the great work you have accomplished and to what it has cost you! I am grateful for every By-law and realize that if every Christian Scientist in the Field would rally round our Leader, intent only in carrying out her commands, the gospel would quickly be preached "to all nations."

I am very grateful to you for all the privileges we have enjoyed this week. We have had very helpful meetings and I trust we shall all grow thereby. The overflow meeting on Wednesday evening filled the vestry. One testimony given there particularly interested me. A man whose leg was injured in the war, so that he was obliged to wear a plaster-of-Paris cast ever since, and who was very lame, attended a Sunday service at the Mother Church and was healed. When he went out of the church he *ran* for a car, and when he reached home took off the cast, and has been free ever since. Was not this a glorious proof that Christian Science is indeed the Word of God? That these proofs may attend every service and be multiplied continually, and that we may follow our blessed Leader more closely, is the earnest prayer of your ever-loving student.

ELLA E. WILLIAMS.

Boston, Mass., June 26, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—You, dearly beloved Revelator, have bestowed such a blessing upon me that I desire to let you know of it.

Digitized by Google

Last Sunday morning, I remained at home working and praying for discernment, and in the afternoon went to church. During the service, the "windows of heaven" suddenly opened to me and I was lifted into holy communion with our God,—never before have I been so clear away from self. In looking up I saw a little bird flying just underneath the star of the sunburst. Two little birds had found their way into our Mother Church during the service; they made no noise and seemed happy in its atmosphere.

Then, when your loving letter came on Monday, I knew that your pure, ever-blessing thought, which has opened the windows of heaven for all humanity, had uplifted me and bestowed a blessing upon me which I shall never forget, nor cease to be grateful for.

Your beautiful words mean so much to me and will be a great help to me. Your ever grateful

LOUISE F. KOLLMORGEN.

Sharpsville, Pa., June 27, 1904.

Rev. Mary Baker G. Eddy.

Dear Leader:—As one [seemingly] creeping slowly along the path you have marked out, fearing and trembling at every step but never looking back, I wish to add my testimony of love, and gratitude, and faithfulness to the pioneer in that movement which is bound to remove all obstacles in the way of a pure and enlightened Christianity. All men will eventually honor that Love which casteth out fear, the Spirit that quickeneth in Christian Science. We who know the depth of your teachings, love you with pure hearts, fervently; and we love God and His son the more because of it. Freely ye have given, freely receive. One thought more to express my appreciation of your teaching, that "envy, rivalry, hate, need no temporary indulgence that they be destroyed through suffering;" also, that "the energy which heals the sick is divine." Yours in Christ,

THOS. J. HOLDERNESS.

Boston, Mass., June 27, 1904.

Rev. Mary Baker G. Eddy.

Beloved Leader:—I know it always gives you joy to learn of the good work that is going on in New Hampshire, as elsewhere, and as this is my native state, I am doubly interested to tell you of the change of sentiment in the past few years in the northern section of our dear old "Granite State."

When I was teaching school in the town of Lisbon, eighteen years ago, Christian Science was spoken of only in the most derisive manner, and all sorts of insults were heaped upon it. Last Wednesday evening the principal of this same school, with one of his assistant teachers and his graduating class (who were in Boston visiting the various historical points) visited the Mother Church and listened to our regular testimony meeting, and all seemed very kind and much interested. They were given the privilege of visiting the room of the Pastor Emeritus after the service. The principal has been teaching in this school for the past fifteen years, and although he is not a Christian Scientist, he very kindly and courteously introduced Carol Norton at his last lecture in Lisbon.

It is very gratifying to me to compare *then* with *now*, for it was while I was teaching in this school that Christian Science was first presented to me by my sister, after she had been, to me, miraculously healed in Christian Science, and I regret that I did not accept its teachings until some years later when, after everything else had failed, I was glad to accept it, and can now say that Christian Science is All in all. It rejoices my heart to see these small towns in our state coming now and then to pick up the crumbs that have fallen from our Master's table. The Christian Scientists in this town now have a regular service, and they are doing good work. With a heart full of love, I am,

Yours obediently,

MRS. HATTIE S. GALE.

Testimonies of Healing.

It is a great pleasure to give expression to the gratitude I feel for the renewed strength and hope which have come into my life through the light of Truth as revealed by the teaching of Christian Science. Looking back, I see how my prayers for light and guidance have been answered, ever since my childhood. My constant petition for years was, "Lead me in thy truth, and teach me," but all seemed so vague and indefinite.

At the age of sixteen, with great timidity and shrinking, I presented myself for membership with an orthodox Church of which my father was a deacon. I was full of youthful enthusiasm to follow in the footsteps of Christ Jesus, and my ideals of what Christianity should represent and embody were of the very highest, but on every hand there appeared nothing but limitation. Filled with a loving sympathy, I looked at the sorrow and suffering I saw around me, and which I longed to relieve, but all appeared to be wrapped in mystery. The fading of the flowers I loved, showed me that there *must* be a condition beyond that which I could see with my mortal vision; that which though beautiful was yet so transient could not be any part of the eternal and real. The non-fulfilment of hopes, the inconstancy of human affection, drove me to seek for what the world could neither give nor take away. Once there came to me in a flash a beautiful sense of the unseen, and I realized in a measure the truth of the words "the things which are seen are temporal; but the things which are not seen are eternal." I was thankful for this brief glimpse which came to me after a long illness and a letting go of materiality.

Later on, my life became weighted with care, anxiety, and struggling. My beloved father had passed away after much suffering which it broke my heart not to be able to assuage, and I felt strangely stranded, tossed about without rudder on a storm-swept sea, everything so joyless. For more than twenty years I toiled, much of the time in great weariness, to keep the home for my widowed mother, and all the time I was hungering for a fuller light, for more realization of God as Love, a fact I never doubted. The sorrows and suffering which seemed to meet me at every turn almost overcame me, and I would willingly have given my life if, by so doing, I could have relieved one twentieth part of the sin and wretchedness I saw around me. How I yearned for some light to dawn, for something to penetrate through the gloom of sense!

Now I can look back upon this time as the "long watch in the night" which led to a brighter dawn. The hand of Love was all the time leading me, although it sometimes seemed verily through "the shadow of death." I frequently broke down in health and had to give up work; then followed a long period of insomnia and weariness, and entire cessation from every form of work was ordered. At the expressed desire of my kind doctor, whom I can but remember with gratitude, for he was so anxious to help me, I entered one of our large London hospitals where I lay in bed for five weeks, just getting up each day to go through some special exercises. Later I was ordered to go away to the sea for some weeks, and I went to one of our small watering places on the east coast of England. How well I remember while there reading a text which was upon the wall of my room, "The Lord is my helper," and how I cried, "If only he would help *me*." My prayer was being answered as I had not expected. My doctor had just said I must go back to London to consult a specialist, for after my long rest, I was worse rather than better.

At this juncture, a kind friend wrote telling me that there were some Christian Scientists in Chelsea, and that she had spoken of me to one of them, and she asked if I would have help from them. I knew but very little of what Christian Science is, but I had long given up the idea that doc-

Digitized by Google

tors could help me. I shall never forget the effect of the first letter I received from the good, patient practitioner. In this letter she had said, "Your life does not depend upon sleep, God is Life." The night following the receipt of this I was lying awake as usual and the words came to me, "Your life does not depend upon sleep, God is Life," and I was able to realize the truth,—the light had begun to dawn upon my consciousness.

It was so beautiful as I realized from time to time the truth as shown in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, that I experienced the healing power as it illuminated my darkened consciousness, and I felt how truly indeed "the Sun of righteousness" had arisen "with healing in His wings." My healing has been slow and many have been the struggles to conquer the belief of mind being in the brain, and life in the nerves of the body, but I am filled with gratitude, and rejoice that I now know God to be "nigh at hand."

I know that we can grasp the hand of infinite Love and find that Love sufficient to meet "every human need" (Science and Health, p. 494). I *know* that that same Love is guiding me all the way, and I acknowledge it with gratitude. Among the many blessings which have come to me is the privilege of being in Boston for a season, and being able to attend services in the Mother Church. My only desire is to make progress in the understanding of divine Truth, and anew I consecrate all I have and am to God, praying that I may be used in the service of humanity in helping others out of the bondage of material belief into the "glorious liberty of the children of God." My gratitude and love flow out to our beloved Leader, who has given this message to the world in such a manner that all may prove for themselves the teachings of the Master who said, "I am come that they might have life, and that they might have it more abundantly."—M. LEE BAKER, London, England.

I was a great sufferer for many years from internal cancer and consumption. I was treated by the best of physicians in New York, Minneapolis, and Duluth, and was finally given up as incurable, when I heard of Christian Science. A neighbor who had been healed of consumption, kindly loaned me Science and Health by Mrs. Eddy, which I read and became interested in. In three months' time, I was healed, the truth conveyed to me by this book being the healer, and not only of these diseases, but I was made whole mentally as well. I have not been in bed one day since, or rather in eleven years. I have had many good demonstrations during this time, have passed through many a "fiery trial," but this blessed truth has caused me to stand, at times seemingly alone, and God was with me.

I will mention a demonstration of painless childbirth which I have had since coming to Idaho. Perhaps it may help some sister who is looking through the *Journal* for a demonstration of this kind as I was, before my baby came. Good help being scarce here I did my housework up to the time I was confined, and was in perfect health. I awoke my husband one morning at five o'clock, and at half past five baby was born, no one being present but my husband and myself. It was quite a surprise to the rest of the family to see me sitting by the fire with a new baby on my lap. My son got the breakfast, of which I ate heartily; at noon I joined the family in the dining-room. I was out on the porch the second day, around the yard the third day, and have been perfectly well ever since, which has been now over three years. To one who had previously passed through agony untold, with a physician in attendance, this seemed wonderful. I hope this will interest some one who is seeking the truth, and I wish to express my sincere love for our beloved Leader, who has given us the "Key to the Scriptures."—ELIZABETH CASE CULVER, Lewiston, Idaho.

Christian Science was brought to my notice more than a dozen years ago, by its slipping in nearly unawares and doing some good healing work in my family. My mental status at that time was that of an avowed infidel.

None of the religious doctrines that had been presented to my thought were acceptable. I simply could not believe them. The Bible was a conundrum that I had ceased to try to unravel. I was interested in the writings of agnostics, and I wanted truth and fact, not fable or fiction.

On many points my thought was very bitter towards Christian theology as I understood it, and I looked into Christian Science expecting to find a lot of superstition, but instead my infidel theories got such a jolt as they never had before. The fallacy of intelligence springing from matter was clearly shown, and I said on reading Science and Health, that if its teachings were true, it would revolutionize the world. My thought was completely changed, and it was rather a bitter dose to have to admit that I had been in error until more than fifty years old, but Truth conquered the error of pride of opinion, and now I am gladly learning life's problems from the standpoint that "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), instead of, all is matter and force.

The teaching of Science and Health is the most profound philosophy the world has known. In its light, life has become a joy, and to meet its battles an effort worthy our best ability. It has been my privilege to stand by the bed of the afflicted when medical science so-called, with all its world-wide experience was helpless as a child; and I have then seen Christian Science step in and easily restore the suffering to health, happiness, and usefulness. I bowed my head and said, It is enough; now let Thy servant live that he may be of some good to the world.

J. C. PERCY, Parnell City, Mo.

Two and a half years ago, I searched the magazines and papers for anything which might throw light on the problem of existence, and I found an article in the *North American Review* on Christian Science and eagerly read it. When I left it, it was with the strong hope that now I had found something that would lead me to the light. The following Sunday I attended service, and shortly afterwards purchased a text-book. The next two months I spent all my spare time in its study, often reading late into the night.

Just at this time I visited some friends whom I had not seen since learning of this truth. They met me with the exclamation, "How changed you look!" and then commented on my improved physical appearance. This was the first intimation I had that the reading of Science and Health was improving my health. I was conscious of such a sense of freedom and joy because of having found the truth (I knew it was the truth from the first reading) that I never gave a thought to the physical healing. Since then, however, I have had many occasions to test its efficacy in healing, and always with success. I wish to speak of one occasion in particular, but before doing so, I want to give my impression of Christian Science literature.

After reading Science and Health, I immediately began to read our Leader's other publications, and finally the Mother Church Manual. The more I read the more I found myself thinking after this fashion, "These Christian Scientists ought to be wonderful people, they surely have no excuse if they go astray, safeguarded as they are." The wisdom shown in directing Christian Scientists to pray this prayer, "Thy kingdom come. Let the reign of divine Truth, Life, and Love be established in me, and rule out of me all sin; and may Thy Word enrich the affections of all mankind, and govern them!" (Manual, p. 57), impressed me very much and has been a great help to me.

About eight months from the time that I first heard of Christian Science, I was for a period of some weeks in seem-

Digitized by Google

ingly great mental darkness, and at last in great physical distress, and I could not get free. While working, the thought came very forcibly to me, "If Truth and Love reigned in you, you would not be in this condition," and I at once saw the way out of it. Holding mortal sense in abeyance, I threw the entire weight of my thought, all my energy, into the wish to have "the reign of divine Truth, Life, and Love" established in me; and immediately the discordant condition yielded and harmony was established. This proof seemed wonderful to me because it came about so suddenly, and after so many days of fruitless work which did not go to the root of the difficulty. The lesson I learned has been of great value to me since.

To sum up,—my experience has taught me this: when I obey good unhesitatingly and unreservedly, the way is easy and harmony real; but when I do the opposite, the way seems hard, and discord, real.

Although I did not realize it at first, I have every reason to believe that, if I had not had Christian Science during the last two years, I would now be a physical wreck. I am very grateful to our Leader and to others for the help it has brought me.—GEORGE BOLDT, Schenectady, N. Y.

In Science and Health we read, "Until the advancing age admits the efficacy and supremacy of Mind, it is better to leave surgery, and the adjustment of broken bones and dislocations to the fingers of a surgeon, while you confine yourself chiefly to mental reconstruction and the prevention of inflammation" (p. 401). In the following case, however, the adjustment came so quickly there was not time to call a surgeon.

Two years ago, while out coasting with a party of young people, my son became the subject of a painful accident. He came home limping and said he had broken his toe. While he was undressing his foot, I was realizing as best I could the perfect, indestructible idea of Truth. On examination he said, "It was broken, but it is set." In passing him I glanced at the foot which was so swollen that it seemed nearly round. I continued treating him at intervals during the evening, and he said he suffered little or no pain. The next morning he found that an overshoe fitted that foot better than the regular shoe, so went to the office wearing one. In the evening when he came home he had on a close fitting felt slipper, and the next morning he wore his shoe, although limping very perceptibly. At the end of three days it was healed.

But that is not all. The work was done so quickly, and I did not "stand porter at the door of thought" (Science and Health, p. 392), so error whispered, "It may be that the bone was not broken." I did not silence the tempter, and after a while the suggestion was, "I don't believe that bone was broken," and because of this I had my work to do over again. It seemed that mortal mind had to be satisfied on this point.

The following July our family went to the lake for the usual outing, and while there that foot got hurt. It seemed a small matter at first, but it was enough to give error a chance. I was absent from the camp at the time, and when I returned after two days, I was confronted by such a picture that my heart quailed for an instant as suggestions of blood poisoning, surgical operations, and every other dreadful thing crowded upon me, for there in plain sight, just under the thin skin, was the end of the bone. I did not say a word, but took my books and went to my own tent to be alone and to work. All day and most of the night I wrestled with that monster,—fear,—but toward morning, I fell asleep with a sense of victory. During the following day the inflammation subsided and the bone went into place. At the end of three days, the healing was again completed perfectly, and he was wearing heavy hunting boots, and was climbing the mountain sides before the week was finished.

I don't know how to express my gratitude for what I understand of Christian Science, and what it is doing for mankind; to the workers at headquarters, to our Leader, and to God. Surely it is only through our daily lives that we can prove our gratitude.—M. C., Spokane, Wash.

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 372, we read, "A just acknowledgment of Truth, and what it has done for us, is an effectual help."

Being a business man with an active family of growing children, I have had many opportunities to see what an "effectual help" Christian Science is to one in any situation in life. In my business Christian Science has been a great help because it has enlarged my business capacity, has made me keener and clearer in thought and more ready to see opportunities which were formerly missed. It has shown me that honesty is the only policy in business as in everything else, and that a man's business will prosper in proportion to his reflection of justice, true activity, courage and benevolence, all of which are qualities of the divine Mind. In my home, Christian Science has been an "effectual help" in many ways. It healed a son of severe complications after measles; it healed me of a severe attack of stomach trouble, and ailments of less severity.

The grandest benefits to the family circle, however, are seen in the increased harmony which prevails, and the greater freedom in thought and action. These may not appear at first but "a just acknowledgment of Truth" each day will surely bring them about and prove to any one who will try it what an "effectual help" Christian Science is.

"A just acknowledgment of Truth" is not only a help to the one who makes it, but also to the one who hears it, for it tells of help received through Christian Science from the infinite Father who "is no respecter of persons," but is ready and willing to help equally each and every one of His children; and it proves both the brotherhood of man and the fatherhood of God.

DAVENPORT BROMFIELD, San Mateo, Cal.

As I am deprived, at present, of an opportunity to attend meetings or church, I wish to express through the *Sentinel* my sincere gratitude for the great blessing Christian Science has been to me. In the year 1892, I was almost instantaneously healed of a stomach trouble from which I had suffered for years, and which several prominent physicians had pronounced an ailment that they could not relieve. I was finally told there was no help for me,—that it was merely a matter of time how long I could stand the pain I suffered, as it would eventually wear me out.

Just at that time I came in contact with a Christian Scientist. I was living in Chicago, and across the hall from me was a representative of this faith. I did not care for her acquaintance, however, simply because I did not care for a "new religion."

This lady proved herself a "neighbor" in several ways, and simply through a sense of duty I called upon her. I apologized for my wrapper, as I could not wear a dress in comfort, and her reply caused me to put myself under treatment at once.

I had lived upon liquids, except occasionally, when excessive hunger forced me to eat a hearty meal. From the first treatment I ate and drank whatever my appetite called for. I am sure I was healed in the first treatment, but I did not realize it for several days. I enjoyed the instruction that I gained each day by talking with my practitioner, and the Scriptures became so much more to me with the better understanding of God.

I have not been as faithful in the Science as I should have been. I have had much to contend with according to mortal sense, being the only Christian Scientist in my family.

"Whom the Lord loveth he chasteneth," and through

Digitized by Google

suffering I have been awakened to a sense of my duty. Lately I have been healed of a serious ailment, and several minor troubles.

I am sincerely thankful to God, and to dear Mrs. Eddy, that I am blessed with a knowledge of this glorious truth; and the most earnest desire of my heart is to be useful in helping others to see its blessed light. What can exceed the pleasure of realizing that good is all.

MRS. J. V. WINN, Marion, Ala.

In the fall of 1900, my need for something more satisfying and effective for health, for the government of my children, and for my own thought, became so great that I decided to try the last resort; namely, Christian Science. This decision reached, the next important step was to secure a copy of the text-book, Science and Health, and also the help of a practitioner. In a very short time a radical change was noticeable. I was born and reared in a very weak and dependent condition, but Truth has given me health and strength. Before coming to Christian Science I had nearly all my work done by some one, now I do my own work, and care for three little ones under six years of age.

I rejoice in the freedom I enjoyed at the birth of my last babe, and also for the good which she reflects. I cannot help giving Christian Science unlimited credit for all this. My attitude of thought toward the Bible is revolutionized, and I want to thank the publication committees for their successful efforts in the Field at large. I am grateful to my teacher, who has shown such love and patience in her efforts for me; and above all to Mrs. Eddy, our Leader, who by her daily walk with God points out each advanced step for the followers of Science.

MRS. ADNA T. HOLCOMB, Jamestown, N. Y.

[Translation.]

The fifteenth number of *Der Christian Science Herold* has arrived, and is a welcome guest. I know that I should have expressed my gratitude long ago for the innumerable blessings we have received.

June is called the month of roses, and I have always loved it because it brings my favorite flower, and June, 1895, brought me the rose from paradise; its stem, flower, and leaves tell of Truth, Life, and Love; they never fade, but unfold more beautifully as time passes on. This flower is Christian Science.

When I heard of it for the first time, the prophecy of Amos was fulfilled in me: "Behold, the days come, saith the Lord God, that I will send a famine in the land, not a famine of bread, nor a thirst for water, but of hearing the words of the Lord." Through an understanding of the word of God, a neighbor was able to heal me of heart disease with which I had been afflicted for ten years. At the same time, I was freed from the discouraging belief that God had sent me my suffering to draw me to Him. I now feel drawn to God with all my heart, yet not through disease but through the daily study of the Bible, and Science and Health which elucidates the Scriptures. I have always had a great longing for something better, and this, Christian Science has brought to me. There is no question about Life which is not finally answered through the faithful study of the Bible and Science and Health.

I shall try to show my gratitude to God, and to our beloved Leader, Mrs. Eddy, by loving my neighbor as myself. May our dear *Herold* go across the oceans and find its way over the mountains and into the valleys, to carry the blessed message that God is here and everywhere to heal and to save.—FRAU AUGUSTA J. LILIE, Chenoa, Ill.

In grateful acknowledgment of the many benefits received through the power of Christian Science, I send this word to others who may be seeking for the truth of being.

From a child I was always ailing, many times suffering intensely from organic troubles. I had been treated by many different methods in *materia medica,* and by hygiene, osteopathy, etc., but without any permanent benefit. The thought would often come, Why is not an invariable method found which can explain and solve all these problems of life and deliver us from physical and mental suffering? Why must we grope blindly? Why do not the dear, honest men and women who are striving, studying, and praying to be able to answer our questions, find this rule and satisfy us as to God, man, and the universe? How I pondered these things! How I searched earnestly and honestly to find something tangible! How I yearned to know how to pray to some sort of a real, living, satisfying God!

Inasmuch as "Desire is prayer" (Science and Health, p. 1), my prayer was answered. I found my dear, loving Father-Mother God to be good, and my life "hid with Christ in God," through the study of the Christian Science text-book, Science and Health. Through its teachings, I see errors of temperament and disposition, such as sensitiveness or self-pity, gradually diminishing,—becoming displaced by more unselfed love, more reliance upon God, good, infinite intelligence. I have found the great Physician who healeth all my diseases and satisfieth my longing heart.

Through the application of Christian Science I have seen all manner of so-called chronic and organic diseases healed; and false appetites, such as drink and tobacco habits, overcome. Misery has been turned into joy and praise to God, for deliverance from the "fire that consumeth to destruction." I have seen empty and hopeless lives made to blossom and bear much fruit of the Spirit, love begetting love, in the ideal brotherhood of man "seeking his own in another's good" (Science and Health, p. 518). I feel most grateful for the conscious presence of peace which I know is "God with us."

For my own healing and for the knowledge that Christian Science is preventive as well as curative, I express heartfelt gratitude to the dear friends who guided my first infant steps toward the "light, that shineth more and more unto the perfect day;" to my teacher, for his wise counsel, and, above all, to our patient and wise Leader.

NERELLA R. OGDEN, Chicago, Ill.

When I think of what I once was, and compare it with my present condition, words fail to express my gratitude for what Christian Science has done for me. I have been helped in many ways physically, but that is nothing compared to the help received spiritually. The Bible is a new book to me, and I now know that the promises of God are sure, if we but claim them for ourselves. Many times have I proven that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). I find Christian Science very helpful with my children, where many fears and doubts have been destroyed. I feel very grateful to our Leader who has labored so long and earnestly to give us this great truth, and also to all who have helped me in any way. My greatest desire is that I may so live as to be worthy to be called a true Christian Scientist.

MRS. ETTA C. BOCK, Chicago, Ill.

Had Christian Science not gone to the beginning and established its foundation upon God and His spiritual creation, it could not have stood a brief time even, much less grown to its present proportions in the short space of thirty years.—CHARLES K. SKINNER.

From Our Exchanges.

It may be said at the outset that too many churches are born religiously tired. Their members believe nothing can be done to keep the young men from saloons and to stimulate the good morals of the town, and they do not even try. They ring their church bell, they warm the meeting-house, they open the doors, they "hire a minister," they announce the services—and "let it go at that." In these days of abundant reading matter, much of it interesting although by no means elevating, in these days when the business "hustler" is idealized, the churches cannot depend upon the mere fact that they exist and go through the motions of worship and of proclaiming the truth, in order to exert wide-reaching spiritual power. They must do something as well as be something and believe something.—*The Standard.*

A great deal of our modern life is full of the illusion—I will not characterize it by a stronger or more contemptuous term—the illusion that we can make humanity great and pure and honest and loving by a vision of great ideals. No; the place for the vision of great ideals comes when the mental and spiritual eye has been opened by nurture and discipline, to recognize the great spiritual ideals and to distinguish them from ideals that are false, the *ignis fatuus* of false teachers and false promises. Believe me, that is one of the sublimest offices of the elder Testament to which the apostle bids us turn back.

BISHOP HENRY C. POTTER.
The Homiletic Review.

The Gospel of Christ is one and immutable; the comprehension and expression of it in history has been of infinite variety. No individual, no Church, no age of history has ever comprehended the full scope of God's saving purposes in Jesus Christ. Neither has any proclaimed it without foreign admixtures that clogged and thwarted it. A fuller and purer expression of the evangel has therefore always been possible and desirable. It is on the face of it unlikely that the Gospel as commonly understood by us is the whole Gospel or a completely pure Gospel. It is a lack of Christian humility to assume that our Gospel and *the Gospel* are identical. WALTER RAUSCHENBUSCH.
The Independent.

After all, there is nothing that really goes to the heart of another like recognition of his personal worth. Carlyle was right when he said that appreciation, affection, even from a dog, is infinitely precious. Most of us can recall days when we walked with a lighter step because there had come to us the cordial recognition of another human soul. We do not always think what resources of encouragement and helpfulness lie in an honest word of recognition of another's work or purpose.—*The Watchman.*

We are turning back to review Christianity and ask if, after all, the Golden Rule is not workable and the life of Jesus Christ an every-day possibility. The Church is doing its work in the field of imagination. Its great, eternal truths must be anchored more surely to every-day life, yet the preacher will more and more fill the imagination with that central thought of religion, the assertion that we are the children of God. This was the distinctive doctrine of Christianity.—*The Christian Register.*

There are conflicts and battles and hard work in the Christian life, and we must have a piety that is vigorous and militant, and capable of bearing burdens. And such piety must have the inspiration and strength and joy that come from the consciousness of God's nearness, from seeing Him face to face, as He reveals Himself in the face of Jesus Christ, whom to see is to have seen the Father.

The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eight thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

THE TRUE LAW.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

A reception in honor of Independence Day was given in London by American Ambassador Choate, which was attended by about fifteen hundred guests, including many distinguished Englishmen. The American Society of London also celebrated the day with the usual banquet in the evening. The day was observed at Paris by a banquet by the American Chamber of Commerce. Many notable French officials were among the guests. The American College at Rome honored the day at a banquet at which there was a liberal display of American flags. At Genoa, on board the Brooklyn, the flagship of the South Atlantic squadron, mirth and good-will marked the day, and in the evening the local authorities entertained the American naval officers. At Berlin the usual excursion to the suburb of Grunau took place, and at St. Petersburg a dinner was given by the American Charge d'Affaires, Mr. Eddy.

Secretary Hay, through Ambassador Choate, has been inquiring into the object of the Tibetan expedition. It is said that the British Government has indicated its willingness to withdraw the expedition as soon as it can obtain from the Tibetans promises of yielding the points which were at issue between India and Tibet before the expedition crossed the border. These are pledges of freedom of trade between the two countries and official recognition of the right of the British Government representative to exercise his functions in Tibet. It is said that the British Government has received the American inquiries on this subject in a kindly spirit, as tending to emphasize the determination of the American Government to do everything possible to protect the integrity of China.

The members of the Yale-Harvard team who will compete with the athletes from Oxford and Cambridge on track and field, sailed last week on the steamer Teutonic for Liverpool. The meet will take place on July 23, at the Queen's Club, London.

Mr. Beekman Winthrop was inaugurated Governor of Porto Rico on the 4th. The ceremonies were opened by the firing of a national salute and this was followed by an imposing patriotic demonstration. The city was profusely decorated.

The transport Kilpatrick, with about four hundred Porto Rican teachers for the Summer School at Harvard, and the Sumner with two hundred for Cornell, reached port last week.

The Democratic Convention at St. Louis nominated as candidates for President and Vice-President, Judge Alton B. Parker of New York and Henry G. Davis of West Virginia.

Foreign.

On the 2d, Dover was elaborately decorated and great crowds were out to witness the customary picturesque ceremonial which installed Lord Curzon, Viceroy of India, as Lord Warden of the Cinque Ports,—Hastings, Romney, Hythe, Dover, Sandwich, Winchelza, and Rye. The Cinque Ports were created by William the Conqueror. The Lord Wardenship is now only an honorary dignity. The late Lord Salisbury was predecessor of Lord Curzon as Lord Warden.

Lord Curzon first made a triumphal tour of the town, and then proceeded to Dover Castle, at the entrance of which he was welcomed by the barons of the Cinque Ports in gorgeous robes. A procession was formed, headed by the mace bearers and bands, with all the local notables, which proceeded along a troop-lined route through the town to the college grounds, where the installation ceremony, which dates from the year 1265, was carried out. The castle batteries saluted as the Barons of the Cinque Ports promised allegiance to their new Lord Warden and Admiral of the Cinque Ports.

The Italian Government has introduced a measure sanctioning the construction of the Apulian aqueduct. This project consists of an irrigation system for the arid table-land of Apulia. The aqueduct is to cross the Apennines by means of a tunnel seven and one-half miles long, and will have several subsidiary canals, so that twenty-one communes, containing a population of about two millions, will receive an adequate supply of water. It is estimated that the scheme will cost twenty-one million dollars, and will not be completed before the year 1920.

General Rafael Reyes was declared elected President of Colombia on July 4, according to a cable message received at the State Department. The United States received from Colombia some time ago an intimation that no American minister was desired. W. W. Russell had been appointed minister, but his orders to proceed to Bogota were revoked. It is believed that General Reyes will be glad to receive Mr. Russell at an early day.

British troops of the Tibetan expedition last week captured the Gyangste jong, a strongly fortified position. This was defended by three thousand Tibetans. A messenger has been sent to the Tibetan peace delegates to inform them that Colonel Younghusband is still willing to treat with them, provided they arrive at the place appointed within a reasonable time.

French officials at Tangier are reported as saying that affairs there are critical. Raisuli, the bandit, is only a few miles from the city and is collecting men. An outbreak is feared.

Industrial and Commercial.

It is reported that a contract has been signed with a New York Wireless telegrapn company, providing for five of the longest wireless circuits in the world, says the *Scientific American*. The Government has been given the full use of the system, and incurs the expense of installing it. The contract is the first step toward the realization of a plan for placing New England and Panama in wireless communication. After the establishment of the service, its extension to the Orient is a matter of no difficulty. The circuits are as follows: Key West to Panama, 1,000 miles; Porto Rico to Key West, 1,000 miles; south Cuban coast to Panama, 720 miles; Pensacola to Key West, 450 miles; South Cuba to Porto Rico, 600 miles. Stations have already been erected by the company on the Atlantic coast from New England to Florida, and by means of the naval wireless station to be erected at Panama connections will be made with the De Forest stations now in course of construction on the Pacific, and thence to the Aleutian Islands, which station will be the key to the Alaskan business.

Work on the most difficult irrigation project that the United States Reclamation Service has undertaken has been begun near Montrose, Col., says the New York *Sun*. The Gunnison River, which now runs through a precipitous cañon between walls of rock three thousand feet high, is to be diverted, through a tunnel five and three-quarters miles long, into the Uncompahgre Valley, where one hundred and fifty thousand acres of arid lands will be rendered fertile by its waters. The difficulty of the project lies in the boring of the tunnel through the Vernal Mesa. There is nothing to equal it in the history of irrigation in America, and in American railroading only the Hoosac Tunnel approaches it in length.

The steamship Baltic of the White Star line, the largest steamship afloat, reached New York from Liverpool last week on her maiden trip. She was about seven and one-half days in making the passage. Her tonnage is 24,000 tons; cargo capacity, 28,000 tons; displacement at load draft, 40,000 tons, and she can accommodate three thousand passengers.

With the addition of the Baltic the White Star line's fleet now consists of 31 steamers—besides tenders—the aggregate tonnage of which amounts to the total of 360,000 tons. Of these 31 steamers, no fewer than 27 are fitted with twin screws, whilst 21 are each over 10,000 tons. It possesses in the Baltic, Cedric, and Celtic, the three largest vessels afloat.

Domestic trade movements covering the first five months of the current year as reported in the Monthly Summary of Internal Commerce for May by the Department of Commerce and Labor, through its Bureau of Statistics, indicate that there has been a decrease in the consuming demands of the country. On the other hand, some leading commercial activities continue to maintain an increase in the volume of business, in comparison with the corresponding periods of 1903. This is the case with live stock receipts, for which reports were received from leading distributing centres of the West.

The President of the Brooklyn Rapid Transit Company is reported as saying: "It is true that our agent is in Montreal looking for men. We have been greatly pleased with the service rendered by undergraduates of the colleges during the summer months. The young men we get from colleges are not only intelligent and faithful, but they are polite, diplomatic, and honest. They are the best men we get for such service, and they give such general satisfaction, both to the company and its patrons, that we are anxious to have as many of them as we can." The Boston Elevated and the Boston and Lynn Railroad also employ during the summer months many college students.

For the purpose of securing land for the location of a vast colony of Japanese, two head officials of the Toyo Kesen Steamship Company's line have recently arrived at Houston, Texas. The plans are to bring the Orientals over by the steamship line for colonization in Texas and Louisiana. The plan seems to be the largest colonization scheme yet devised for Texas. It is said the plans contemplate a colony of ten thousand families.

According to the *National Geographic Magazine*, the total catch of food fishes in the United States and Alaska, as shown by the last canvas, was 1,733,314,324 pounds, valued at $45,531,165. The number of men employed was 214,056, and the capital invested was $72,261,646.

From Belief to Understanding.

C. W. CHADWICK.

I ONCE thought that simply to believe in God and to try to live a moral life, was all that could be expected of me in this world. Need I say that Christian Science has shown me where I signally failed to do even this?

My former religious teaching was that of an orthodox church, of which my father was a member. It is needless to say that such worship on my part did not reach higher than blind faith, for how could I be expected to think intelligently about Spirit, of whom I had no knowledge. I was more or less proud of my belief in a God of Spirit, but I can now see that I never really knew the meaning of the words. I certainly had no mental grasp of the presence and power of Spirit to overcome the claims of sickness and sin that constantly assailed me. I can now see where my belief in God was no better than that of other professing Christians. And right here I want to say that Christian Science has made me more charitable. No longer am I inclined to boast, "You haven't the truth, but I have," for the Master has said, "By their fruits ye shall know them." Life to me now means obedience to divine Principle, mental activity, consecration, demonstration, overcoming.

I can truthfully say that I had never learned how to appeal intelligently to God for help in time of trouble, but I did resort continually to all manner of material means, not knowing that this was separating me from God. Matter was my god, and I served it faithfully until the light of Christian Science entered our household. Since my first reading of that wonderful book, "Science and Health with Key to the Scriptures," over twelve years ago, not a drop of medicine has entered our home, and every trouble has been overcome through entire reliance upon God, as taught in Christian Science.

Among my church friends were some of the most lovable, kind, and unselfish people I ever knew, and I had often wondered why such as these should be bound by the fetters of disease, as many of them seemed to be. The reading of this book solved the mystery for me, for I saw that their faith in God had not yet attained to the spiritual understanding which reveals the supremacy of divine Mind, the God "who healeth all thy diseases."

My own health was restored, after I had failed to receive it through faithful adherence to *materia medica*, after my invalid mother, who for twenty years "had suffered many things of many physicians," and was seemingly the worse for it all, was also healed when every available means except Christian Science had been tried, and when my wife was made whole after six years of pronounced suffering and helplessness. In view of all these things can I be blamed for saying that there is a vast difference between believing in God and understanding God, between profession and demonstration? Can I be blamed for desiring to be an exponent of a religion that can be made practical in the every-day life; a religion that can and does heal both sickness and sin when all else has failed; a religion that raises the standard of morality above matter and the flesh, and that enables us actually to overcome evil in all its forms; a religion that acquaints us with the Truth and the Science of our being?

In all my past experience I had never dreamed of what it meant to work out my own salvation with fear and trembling. I have learned, however, that there is a work to be done, here and now, before the harmony of being can be realized. Where was I? Simply drifting with the current of mortal thought, ignorantly believing but not understanding, consequently "without God in the world." I believed that God was ever-present,—and yet He seemed far away. I had seldom expressed a prayer in words, and was wont to criticise long prayers by the clergy. Christian Science has taught me to pray daily, and I have been doing it for over twelve years, perhaps not so faithfully as I might, but with these results: better health and morals; more peace and happiness than I had ever hoped to have on earth; more charity for my neighbor; more love and reverence for the Bible; more faith in God, omnipotent good; more of a desire to do His will, to be pure in thought, the thought of Life and Love becoming nearer and dearer to me every day; my every need supplied through the understanding of God as the only source of supply; a growing sense of appreciation of what our beloved Leader, Mrs. Eddy, has done and is doing for the whole world; and last, but not least, the sweet satisfaction and joy unspeakable of daily seeing others led out of the bondage of blind belief into the peace and harmony of spiritual enlightenment.

In my search for knowledge, I sought something practical, in civil and mechanical engineering, but these failed to satisfy me. Two years after graduating from a polytechnic institute, I found my health failing me, and it was then that my attention was called to Christian Science. In this I found what I was looking for, in Mind, not in matter.

Some of my classmates and friends marvelled that I should so soon become imbued with the teachings of what they thought to be a mere theory or fad; some even took occasion to tell me that I was losing my mind. Little did they realize that I was just beginning to find my Mind, for Christian Science has taught me all I ever knew of Mind. I once believed that it was an inhabitant of the brain; I now know that Mind never entered the confines of matter, and that if we will but let spiritual sense have control of the human mechanism, there will appear a far more honest, more wise, and more noble man than physiology and anatomy ever dreamed of; yea, there will be revealed to human consciousness the ideal man, who is forever spiritual, the likeness of God. Even as students of Christian Science we might simply believe this great truth until the end of time, and it would avail us nothing; but when we understand that man is spiritual, and can demonstrate it "with signs following," we are then working out our salvation, in obedience to the injunction, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

The slight understanding of Christian Science I have al-

ready gained encourages me to press forward "toward the mark for the prize of the high calling of God in Christ Jesus."

My heart is filled with loving gratitude to our revered Leader, who, through Divine revelation, has received this Christ teaching "in the understanding," and formulated it into a system which has made it possible for us all to attain that spiritual consciousness whereby God's word may be imparted to our fellow-man, healing him of sickness and of sin.

Making our Demonstration.

MORRIS WEBER.

AT the end of a fruitful year of study in geometry, our teacher drew an unusual diagram on the blackboard and wrote down certain propositions connected therewith, and told us to prove them. None of us was equal to the task, so he gave us two weeks' time to work out the problem, and said, "Now I know those propositions are true, that they can be proven, and that you understand the principle of mathematics sufficiently to convince yourselves of their truth."

The first night we were all very eager to work. Forgetting all other lessons, we studied on that problem till midnight, looking up references and rules that we had forgotten, but all to no avail. The solution began to look impossible, and some ventured to affirm that our teacher had only played a huge joke on us, and was trying to make us study up our old lessons; that the conclusions he had drawn were false, hence could not be proven. For some days a few of us kept on trying, but finally only three remained who were convinced of the correctness of our teacher's assertions and that it was possible for us to work out the proof.

That day we three came together again and spent the better part of the night in trying to solve the problem by a united effort, but we failed again, this time because each of us thought that the methods of the others were erroneous, misleading, and fruitless, so each one of the three took up the task individually, and we finally did find the propositions to be true. Then the teacher asked us to prove them to the rest of the class. It was interesting to discover that, starting from the simplest propositions in geometry, we had reached one correct conclusion after another, and depending ever on the one basic law we had brought out the proof of the original proposition. It was a long and circuitous way, but the teacher let us alone till we had made the demonstration after our own method. Then stepping to the blackboard, he solved the problem and made the diagram clear with a few well-defined lines.

In our effort to apprehend Christian Science we seem to go through a kindred experience. To a vainly investigating, but eager world, one who was pure enough to perceive the absolute demands of Spirit, has reaffirmed in her own language, the Master's proposition, "It is the spirit that quickeneth; the flesh profiteth nothing." She says, "All is infinite Mind and its infinite manifestation, for God is All in all" (Science and Health, p. 468). The truth of these words she has demonstrated to this age by healing the sick as well as reforming sinners, and she has asked us to follow her example.

Many may start by a long, roundabout way and, when wearied of the prolonged struggle, may become discouraged or else, seeing others advance more quickly, may fall into the temptation to leave the work to them; but when they begin to understand, even in some degree, that "The minutiæ and grandeur of lesser individualities reflect the one divine individuality" (Science and Health, p. 303), they will then take up their individual work gladly and fulfil the Scriptural injunction, "Work out your own salvation with fear and trembling."

The bias of education and custom, differing circumstances and experiences in individual life as well as that of nations, may seem to confuse us in our common work, by establishing the rule of minds many. Mrs. Eddy says, "I enjoin it upon my students to hold no controversy or enmity over doctrines and traditions, or over the misconceptions of Christian Science, but to work, watch, and pray for the amelioration of sin, sickness, and death" (No and Yes, p. 17). When we have learned to heed this loving counsel of our Leader we shall be more tolerant towards one another, look away from personality to Principle, and work in unity for the same glorious end; namely, the attainment of a consciousness, where, "There shall in no wise enter into it any thing that defileth, neither whatsoever worketh abomination, or maketh a lie."

Discharging our Indebtedness.

ELLA R. HALL.

IN Christian Science we understand that God's children are free born, heirs to His kingdom, "joint-heirs with Christ," therefore not indebted to any one, inasmuch as the kingdom of heaven is theirs by Divine right.

This statement admitted, we are called upon to prove our claim, by learning to obey the first commandment, "Thou shalt have no other gods before me." To material sense, however, we are mortgaged, "body and soul," to mortal mind, and are subject to all its laws of limitation; but as this mortal mind is only a counterfeit of immortal Mind, the debt must be seen as invalid. This recognition is the first step toward the discharging of our indebtedness, and the very easiest one. Our active work is to destroy in consciousness the false claims of material sense; namely, envy, pride, hatred, malice, dishonesty, self-will, self-righteousness, uncharitableness; in a word, all the delusions and illusions of mortal mind that would becloud our title to our spiritual estate,—our true heritage,—for to the extent that we do entertain in consciousness this false array of thought, are we in bondage to material sense, with its fruits,—sin, sickness, and death.

Our Leader clearly defines our indebtedness as follows: "To keep the commandments of our Master and follow his example, is our proper debt to him" (Science and Health, p. 4).

As students of Christian Science, we are *now* making strong demands for our spiritual estate,—trying daily to prove by right thinking and consequent right acting our perfect title to God's kingdom, which is within us, is at hand, right here, and everywhere.

To hinder us in this grand demonstration, error, "the so-called intelligence of mortal mind" (Science and Health, p. 282), sets up a denial of our claim, and if we are unable to prove our title our claim is worthless. This seeming opposition, however, need not discourage us, for, to the extent that we are learning Truth, "the intelligence of immortal Mind" (Science and Health, p. 282), are we eliminating from consciousness all sense of sin, all sense of substance in matter with its resultant lack or limitation,—in short, all sense of a power opposed to God as All in all. So working, we are gradually realizing that now are we spiritual beings, inseparable from Spirit,—the source of all supply, wisdom, and strength. The realization of this truth, though in a limited degree, is a source of comfort to the student.

Our Leader further tells us that "God's thoughts are perfect and eternal, are substance and Life" (Science and Health, p. 286). Think of it, thoughts being "substance and Life!" Then it is not only our privilege but our duty so to learn the quality of God's thoughts that we shall be able to think them and reflect them. And this we *can* do since, as she tells us in "Miscellaneous Writings" (p. 183), "Man is God's image and likeness; whatever is possible to God, is possible to man *as God's reflection.*"

To manifest right thinking, human consciousness must first be spiritualized by "bringing into captivity every thought to the obedience of Christ." Also, "Divine Mind

Digitized by Google

rightly demands man's entire obedience, affection, and strength" (Science and Health, p. 183). In the degree that we are doing this are we thinking into manifestation God's substance, which is the only wealth worth having, in that it is spiritual, therefore imperishable. And this leads to the right thought of our Temple, now building in Boston.

In order to build a Temple worthy of our Cause, we should daily realize that "now are we the sons of God," therefore we can give without any sense of exhausting our supply, because its source is omnipresent Mind. The only enrichment obtainable is by letting go our material sense of substance,—emptying consciousness of all that would hinder the perfect inflow of divine Love. "The substance of things hoped for, the evidence of things not seen." In the degree that our thoughts are pure are they unobstructed channels for God's supply, since it is through our thoughts that good has its expression or unfoldment. "Truly, man is the channel, Thou the flowing stream."

The absence of material riches should not deter us from giving. Neither should we fear to pledge the unseen. It requires faith to do this, but it is the faith that leads to understanding, which is the recognition of man's ability to reflect even now the omnipresence of Spirit.

To sum it up, the whole proposition resolves itself into a question of desire. Therefore, in order to hasten the realization of the Church universal which rises finally into the Church triumphant, we should daily pray that our desires become purer, and stronger, and more active. Then, all working together for God, good, we shall soon behold the "Temple Beautiful," standing as a loving expression of right thinking, and of loving gratitude to God for His revelation of Christian Science to suffering humanity, and bearing witness to the spiritual Temple "not made with hands, eternal in the heavens."

Love's Fraternity.

D.

As an instance where Love is breaking down the barriers of conservatism, I wish to tell through the *Sentinel* of a memorable meeting held in the town of Braintree, Mass., on the Sunday before Memorial Day. The commander of the Grand Army Post arranged for a memorial service in the Town Hall. The audience was made up of the members of the Post and their friends, and several hundred of the townspeople. There was singing by the public school children, Scripture reading, prayer, and an address. On the platform sat the clergy of Braintree, representing all phases of the Protestant faith, the Catholic priest of the parish, and a representative of the branch Christian Science church. The Post commander was so desirous that the Scientists should not be overlooked, that he made a personal call upon them to extend the invitation. The example of Christian fellowship here shown recalls our Leader's words in the 1902 Message: "When the churches and I round the gospel of grace, in the circle of love, we shall meet again never to part."

Our Work.

CORNELIA E. BAILEY.

Our text-book says of error, "It is *no thing*" (Science and Health, p. 554). This small sentence bears a message of Truth to mortals, and gives the earnest student food for thought, for it means much in its application to the phenomena of false thinking, as expressed through the material senses.

One definition of the word error is "a mistake." This leads to the contemplation of something that may be corrected, and when correction is made, does not a mistake return to nothingness? In fact, it was nothing at the first, and never belonged to a true condition.

If, when the light of truth first dawns upon our thought, we take our stand therein firmly, and allow nothing to divert us, each day of earnest effort will add to our understanding sufficient for our growth, and as we thus progress, error's nothingness becomes more and more apparent. To *know* it as nothing means the destruction of all fear, and with the passing of this frightened sense, the reality—the true consciousness—stands revealed, just where God has placed it, and just where it has always been. All along, the only power or presence that error has had, has been its entertainment by so-called mortal mind, and it is indeed a joyous time for us, when we begin to realize our freedom from its bondage, and to know it as "*no thing*."

And so our work is plain to us. Our growth demands integrity and wholeness of purpose, manifested "in patient obedience to a patient God" (Science and Health, p. 242). Our constant desire is our prayer, and bespeaks our sincerity. Such prayer never fails of reward, for God works with us.

Spiritual Bounty.

ADA J. MILLER.

"Thou preparest a table before me in the presence of mine enemies."
Psalm 23.

In Christian Science we learn that our enemies are any thoughts that would try to displace harmony in our consciousness. Whatever would assert itself as a power apart from God is an enemy; whatever would try to convince us that we have cause for fear or anxiety or sorrow is an enemy. When we realize that man reflects the Divine energy and intelligence, that in reality all that comes to man or goes from him is an emanation from divine Mind, this is a table spread before us in the wilderness of human doubts, fears, and perplexities.

Jesus said, "I have meat to eat that ye know not of." This "meat" which sustained him was his constant realization of the omnipotence of Spirit, God, and this is the meat that divine Love places before us in the wilderness, in the very presence of our enemies. This gives us real nourishment and strength, and with its sustaining power we can "fight the good fight of faith;" we can conquer every enemy, and our faces will shine with the light of life and love. At a time when fear, anxiety, doubt, were besieging on every hand; when perplexity would have prevented clear thought, when worry would have destroyed all sense of peace,—then came these words, "Thou preparest a table before me in the presence of mine enemies," and they proved the "Peace, be still!" that brought the calm.

[Written for the *Sentinel*.]

Omnipresence.

ELOISE CAMERON MC GREGOR.

I know in all Thy world there is no place
Or cause for pain;
Within Infinity there is no space
Evil could gain.

I know that near Thy boundless Divine love
Hate cannot come.
All sheltered, safe from fear and high above,
Is man's true home.

Higher than Truth can no one think or know—
Error's a lie.
Deeper than Life can no one long to go—
Man cannot die!

Selected Articles.

Not Revolutionary but Evolutionary.

Christian Science does not nullify any theory or practice which it cannot replace with something better and more desirable. The difficulty with some critics is that they do not note what it gives in return for that which it disavows. It would not "snatch the mariner's compass from his ship," but would improve it; it would not "tear up the railroad tracks," but would make them better and safer; it would not "pluck down the telegraph and telephone," but would give the inventors and operators a higher degree of intelligence by which to improve them. Christian Science would not "take clothes from the naked," nor "homes from the little ones," but would give to its adherents an increased degree of sobriety, industry, and good sense, so that they might yet improve their conditions.

Our critic is entirely wrong in his premises as to the meaning of Christian Science; hence he is equally erroneous in his conclusions. If he will examine the condition of his friends who have espoused Christian Science, he will find that this truth has made them better business men; better railroad men; better telephone operators or inventors; that it has made parents more dutiful and tender. And this will be convincing that the logical outcome of Christian Science influence is the exact reverse of that which he, in his ignorance of the subject, has suggested. ALFRED FARLOW.

Boston Courier.

"Where shall wisdom be found? and where is the place of understanding?" This deep human yearning for something better, higher, and holier than the systems of the times marked the appearing of our Lord and Saviour nineteen centuries ago, and that Christ Jesus gave to the world the Science of right thinking no Christian man or woman will deny. Christian Science is the re-discovery of the modes and methods of primitive Christianity, showing us how to apply practically Christ's teachings in our daily lives in the overcoming of sickness, sin, and mortal discords. Now a very natural question arises, "Does Christian Science show by its fruits (results) that it is authorized in this assumption?" This query can be answered positively in the affirmative. That within a quarter of a century Christian Science has healed hundreds of thousands of cases, many of them pronounced incurable by physicians, that it has awakened the sinner and reclaimed the infidel and brought happiness and prosperity to thousands of homes which formerly contained gloom, wretchedness, and poverty, are facts that can be abundantly verified by an honest investigator. If these are the present fruits, what may not the harvest be when Christian Science is more generally known and accepted, and its adherents have grown in grace and understanding! Judged from a basis of results, and there is no other consistent and just basis of judgment, Christian Science will be found pre-eminently logical and the acme of common sense. CALEB H. CUSHING.

Portland (Me.) *Argus.*

It is one thing to believe that the gospel is of God, and quite another to prove that the gospel is the power of God over sin and disease. And yet such proofs were given by the Master and his students. A New York lawyer testified at our Wednesday service, that he and his wife had been healed by Christian Science, and he said that in the Christian Science Church he attended there are some thirteen hundred members and a congregation of two thousand. In this membership there are people who have been healed of almost every conceivable type of disease. He said that he knew personally of more cases that have been healed in Christian Science than are recorded in all the New Testament. He added that orthodox belief in the gospel rests on the evidence of four men, Matthew, Mark, Luke, and John, all of whom died nearly two thousand years ago, and no writing of theirs remains.

The witnesses to the efficacy of Christian Science to heal and to save men to-day, in every way that divine Truth ever healed or saved, are unnumbered and fast increasing. These witnesses are our countrymen, and can be examined and cross-examined, and some of them have undergone such examinations in the courts of law, and by uncontradicted and unimpeached evidence the facts of Christian Science healing have been proved. So that Christian Science not only rests on the Bible but on a divine and working Principle, the Mind of Christ, whose mighty works are to-day established in our land by a host of witnesses and by proofs positive and convincing to all who without bias have examined the evidence. WM. H. JENNINGS.

Nebraska State Journal.

The world has had many religions, philosophies, and systems of therapeutics, both physical and metaphysical, all of which when weighed in the balance have been found wanting in some respects, and we ask, Is there any fairer standard by which to judge their relative values than the injunction of the Holy Scriptures "by their fruits ye shall know them"?

The writer's first impressions of Christian Science were gathered from reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures," in the early part of 1892. At that time he was suffering from a disordered liver and chronic dyspepsia which had defied medical treatment. About three weeks after the commencement of this study a distinct physical improvement was noticeable, and although there was no help received outside of the reading of Mrs. Eddy's book, this healing influence continued until every symptom of the old diseases had completely vanished. This wholly unexpected recovery created a desire for a better understanding of the law governing this physical phenomenon, and a close study of this great metaphysical Principle during the past twelve years has conclusively proved its efficacy under all conditions where circumstances make its demonstration possible.

Any intellectual effort to contradict Christian Science by theoretical argument, no matter how able and scholarly the attempt may be, will tend to emphasize the vast difference between the wisdom of man and the Divine intelligence, and the gulf existing between them can only be bridged over by yielding the former in favor of the latter.

RICHARD P. VERRALL.

The Psychological Review.

Individual sin healing was as instantaneous with Jesus as was his healing of disease. Does not the law of God work through the prayers and sermons of Christian ministers, thereby destroying sin in some degree for their members and congregations? If these prayers and sermons do not cleanse the listening sinner in any degree, then why give them? Because this work is not instantaneous and complete, and because sin doth yet much abound both within and without church congregations, shall the splendid efforts of our great and good ministers be said to be anti-Christian and worthless? The golden rule is the sword of the Spirit. It cuts wide and deep. In its divine operation it measures back to us as we measure to others. It is not what is called the law of nature, but the law of God, which is spiritual law, that is transforming men and uplifting humanity and moving the world onward toward health and holiness. JOHN CARVETH.

Maple Rapids (Mich.) *Dispatch.*

The shortest and surest way to live with honor in the world, is to be in reality what we would appear to be.

The Lectures.

Dublin, Ireland.

Notwithstanding the fact that all Dublin seemed to be in Kingstown on last Tuesday night [May 3], giving their Majesties a royal send-off, Judge Hanna's lecture in the Antient Concert Rooms attracted about seven hundred people of all ranks and sects. If he could return and give another lecture next week, I believe he would draw double that number at least, so profound was the impression he seemed to create. I can answer for myself, at all events. I went there in a keenly critical spirit, but I came away feeling that it was good for me to have been there. I have in my time sampled every form of religion, and have studied, more or less, every ism of man's creation, but I never before attended a lecture on Christian Science. The result is that all the isms are forgotten.

This seems to me to be the only form of religion which suits the needs of all, where all God's creatures can meet on common ground. It is as sublime and infinitely potential as the Creator himself,—the religion which should eventually "cover the earth as waters cover the sea." Put in a nutshell, it is *practical* Christianity, the simple teaching of the Bible, which, after all, is supposed to be comprehensible to babes. For an hour and a quarter Judge Hanna spoke, testifying to the faith that was in him by quoting text after text from the Sacred Word, and proving incontrovertibly that Christian Science is simply a knowledge of Christ, and that its followers merely claim to see Christ as he was, and is, and ever shall be. When he had finished, his hearers, who listened with breathless interest, experienced a disappointment at the brevity of his lecture.

In common with all Christian Scientists Judge Hanna possesses a countenance which seems to be illumined by God's eternal sunshine. The doctrine he preaches is that of infinite Love, in which fear has no place, strength knows no weakness, and the peace of which passes the understanding of mortal mind.

SYDNEY BROOKS.

The Figaro and Irish Gentlewoman.

Manchester, N. H.

The body of the Manchester Opera House was well filled last evening [May 31] when Edward A. Kimball of Chicago, Ill., gave a talk on Christian Science. Mr. Kimball spoke in part as follows:—

Ten years ago the president of the World's Parliament of Religions said to me,—

"Mrs. Eddy is already one of the world's illustrious religious leaders."

Inch by inch this conviction is forcing its way into the consciousness of humanity, but the present and future acknowledgment of her character and life-work will not rest on the uncertain contingencies of human opinion. By means of self-evident facts, by reason of achieved results which are in response to the deepest human needs, by reason of her manifest struggle in behalf of mankind and her manifest success against outrageous odds, by means of these facts and even more, all that will ever mean character, fame, or reputation has been established and will be determined.

The threadbare declaration that no woman ever founded a successful religious movement has an answer in the fact that a woman has done it. The barbaric assumption that a woman is a mental or spiritual inferior, without capacity for initiative, without constructive or administrative ability, is answered by the fact that Mrs. Eddy has brought to pass a denominational organization which is so adequate and competent as to compel the admission on the part of those who are inimical to Christian Science that it has no superior.

The shallow gibe that Christian Science is but a "fad," and that Mrs. Eddy's teaching is a fanciful vagary of the passing hour, without substance or utility, is met by the fact that a million people have been healed through these means, of diseases largely considered fatal, or have been reclaimed from desperate conditions of sin and vice. The history of one thousand years presents no spectacle that is parallel or equivalent.—*The Union.*

Indianapolis, Ind.

Clarence A. Buskirk, former Attorney-General of Indiana, delivered a lecture on "Christian Science: the Provable and Practical Gospel of Love," at the Propylæum yesterday afternoon [June 12]. The Propylæum was crowded. In the audience were people from all parts of the state. The lecture was under the auspices of First Church of Christ, Scientist, of this city. Mr. Buskirk was introduced by Judge Stuart T. McConnell of Logansport.

The Indianapolis News.

Fort Dodge, Ia.

A large and attentive audience greeted Mrs. Sue Harper Mims who spoke on Christian Science at the Congregational Church last evening [May 26]. She was introduced by Judge Smith of Mason City, who spoke in part as follows:—

The last time I addressed a Fort Dodge audience was on our national Independence Day, when, of course, I had a great deal to say about liberty. To-night it is my privilege to introduce a speaker who is one of the authorized voices of a church which asserts the need and the possibility on earth, of a greater liberty, a more essential freedom, than mere civil, political, and social liberty; that is to say, the liberty of the children of God; the perfect liberty which the Master referred to when he said, "Ye shall know the truth, and the truth shall make you free." The context of that statement, and the whole record of his ministry shows what he meant.

Jesus taught and practised a religion which liberated men from the bondage of sickness and sin. Christian Science claims to be the same religion, and surely, if it is taking the first steps toward overcoming the ills, as well as the sins of mortal flesh, it ought to be received with joy.

Christian Science asks all truth-seekers to investigate and learn what it teaches and what it does for mankind; to compare its teaching with what Jesus taught; to weigh its results in the scales furnished by the Master.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Dedication of the Concord Church.

To-day is the first anniversary of the laying of the corner-stone of the edifice presented to our Concord brethren by Mrs. Eddy; to-morrow will occur the dedication of this beautiful structure,—a splendid testimonial to the present efficacy of Jesus' gospel in behalf of humanity.

The simple services marking this event will be attended by thousands of Christian Scientists from all parts of the United States and other lands, and their hearts will rejoice with Mrs. Eddy in the fruition of her desire for a church building in her home city, in keeping with the dignity and high purpose of the Cause of which she is the Leader; but the thought of many will turn to the early days of her work, the trials that have beset her path, the self-denials through which they were overcome, the bitter opposition, the waiting, the watching, the patient and enduring heroism which have attended her every step in this great work, and they will thank God anew that they are of this generation, and that through Mrs. Eddy's labor in the Master's vineyard, they are seeing the fulfilment of Isaiah's prophecy, "No weapon that is formed against thee shall prosper; and every tongue that shall rise against thee in judgment thou shalt condemn. This is the heritage of the servants of the Lord, and their righteousness is of me, saith the Lord."

The growth of the Church in Concord has been along the same lines as in other cities; first, some one healed, then, "two or three gathered together" in Christ's name, then a gradual increase of their members through the healing of this one and that one, until finally a strong and vigorous church organization stands forth to proclaim the gospel of peace, righteousness, and health to all.

Jesus said to his disciples, "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover," but the import of these words, and the ability to put them into practice, was early lost to his followers because they knew not the absolutely scientific basis of his teachings, the Principle of his works. This Principle was re-discovered and revealed to the world by Mrs. Eddy less than forty years ago, and for some time she stood alone as the only practitioner of her system, the only apostle of the healing gospel of Christ, but to-day her followers are to be found in every quarter of the globe, the fruits of her ministry are seen in every land, and thousands upon thousands join in grateful recognition of her inspired ministry.

Notwithstanding the great growth of the Christian Science movement, we are ever reminded of our Master's words, "The harvest truly is plenteous, but the laborers are few; pray ye therefore the Lord of the harvest, that he will send forth laborers into his harvest." The needs of humanity are great, and as followers of Christ Jesus we pray that every human experience will inspire us to more earnest work for our fellow-men, all to the praise of His holy name.

Our Leader has presented this building to First Church of Christ, Scientist, in Concord, but the thanks of its beloved members can be no more sincere than are the thanks of Christian Scientists throughout the entire Field. M.

The Real Issue.

Most people firmly believe not a few propositions, the necessary outcome of which, were it seen, would be instantly rejected. Their growth is registered, therefore, in the successive disclosures of the illogic of their thought, and if they are honest truth-lovers, they are grateful for these discoveries, whether they are effected through the kindness of a gentle friend or the severity of an unsparing critic.

This is especially true of suffering Christian people whose earnestness and sincerity have been robbed of their legitimate return by the ignorance or prejudice into which they were born, and which has been retained as the result of an educated but unintelligent reverence for creeds.

This condition of things makes it possible for critics of Christian Science unwittingly to render general religious aspiration a distinct service by precipitating a more careful consideration of the nature and sequence of the issue between the teaching of Christian Science and all the many varieties of materialistic belief. Such an unintended good will be conveyed to its thoughtful Christian readers by a late book whose author admits the facts of Christian Science healing, soundly belabors the doctors and ministers who minify or ignore them, and then undertakes to explain them as the outcome of "neuro-psychopathic tendencies." Granting, he says, Mrs. Eddy's premises, that God, Spirit, and Spirit's manifestation include all reality, and hence that matter, Spirit's opposite, is unreal, her reasoning is logical and her conclusions necessary. Having made this frank confession that the statements of Christian Science are consistent with its premises, and that Christian Scientists "have healed the sick by hundreds of thousands," he proceeds to inveigh against the "notion" that God is all, and that there is no material *thing*, as a "monumental absurdity," and to ridicule the idea that the fact of healing should be adduced, "to prove the theory that there is nothing to heal!" The entirely satisfying evidence that Christian Scientists are "mentally degenerate," he finds in their obliviousness to the facts of human experience; namely, sin, sickness, and death.

This writer has been quoted very frequently by clerical critics of Christian Science, and yet it is manifest that his position is subversive of all Christian faith, and no less condemnatory of Christ Jesus than of Christian Science.

That God is Spirit, the only Cause and Creator, the omnipresent Being "in whom all things consist," and that there is no truth in evil, was surely taught by Jesus, and these statements have always been theoretically accepted by his followers; and if a true understanding of God as Spirit, and of His manifestations as spiritual and perfect, has no significance or relation to the healing of sickness to-day, it certainly cannot have had such relation in apostolic times, and the conclusion that healing is the result of psychic states and influences is precisely as valid for Jesus and his disciples as it is for Christian Scientists.

That the materialist's contention leads directly and inevitably to this stricture upon the nature of the ministry of Christ Jesus, is further illustrated by another work just published, on the mentality of Jesus, in which, on the basis of material science, the Christian explanation of his saving works is made to appear ridiculous, and the hypnotic means of healing, which it is claimed he used, is fully discussed. Christian believers who deny the possibility of spiritual healing to-day, and who quote from these and kindred writers in a vain endeavor to refute the teaching of Christian Science, must surely awaken to the fact that they are accepting an incongruous affiliation, and practically consenting to a point of view which involves the denial of the fundamental postulates of the Christian faith for which they stand.

Digitized by Google

The recognition of this fact is making it clear to many, as it will eventually to all, that Christian believers must either accept and begin to demonstrate spiritual healing as the natural and perennial phenomena of a divine law which is operative and available to-day, or else the healing work of the early church must be explained by some other means than that which has been accepted by the Christian church.

This is the issue between Christian Science and all forms of materialistic philosophy and faith, and in so far as worldly-wise critics of Christian Science are making it more apparent, in so far they are hastening the day when all the followers of Christ Jesus will truly honor him by seeking to attain to that knowledge of spiritual truth which he demonstrated to be the liberator from every human ill.

In its positive and practical stand for the healing of sickness through spiritual means alone, Christian Science is adhering to the only tenable ground for the explanation of the so-called miracles of Jesus, and is fighting "the good fight of faith" which Paul so earnestly commends as incumbent upon every Christian believer, and which alone can effect the overthrow of that materialism that binds humanity to-day with the shackles of suffering and despair.

W.

Entering the Fold.

ON last Sunday all the branch churches of our denomination were observing the Communion, at which service new members are received after having promised fealty to the tenets of the Mother Church. Some of these applicants have come from other churches; some are the children of Christian Scientists, and have so learned to remember their Creator in the days of their youth as to rely upon Him alone if sickness or trouble come to them; while others have come from the dreary wastes of agnosticism, to which they had been driven by their failures to find God in creed or dogma; and they have proved, each and all, in some degree that the spiritually scientific understanding of God heals both the sick and the sinful, even as in Jesus' day. To all of them the Christ has spoken, saying, "Are ye able to drink of the cup that I shall drink of?" and most of them have pondered long the step now taken in becoming members of the Church of Christ, Scientist. There are many who respond to the call of Truth with hearts made light and joyous by their healing, and all know that in the ratio of their faithfulness they will partake of Christ's cup and grow strong thereby, for they have learned that in no other way can they escape from the thraldom of materiality and gain the glorious freedom of spiritual being.

It is such a joy to know that in Christian Science we do not follow "a stranger" but are led by the familiar voice of the "good shepherd" who calls us to the fold where we "go in and out, and find pasture." While it is true that unforeseen difficulties may come to us, there will also come blessings beyond the range of our present vision, and each day, if we are true to our pledge, will bring a new and holier sense of "union and communion" with God which will lift us above every difficulty.

At this time it were well for the older members to recall the paths by which they have been led, and as they do so they will feel a deep and tender interest in the younger members, and never by any thoughtless word or deed cause them to wander from the strait and narrow path of Christ-like living.

A number of years ago, our beloved Leader, in a public address to her students, urged upon them the necessity for daily communion with God, and said that in this new realm of thought the Christian Scientist might be likened to a man who went into a new country and made a little clearing on which he built a rude shelter for himself, and perchance his family. In process of time, a larger clearing was made in the forest, and a better home provided. After many years had passed, a splendid mansion would perhaps mark the site of that first humble abode, while all around it would be found other beautiful homes,—possibly a great city. Her words can never be forgotten and are ofttimes an inspiration to those who were privileged to hear them, for they gained thereby an enlarged and purified sense of their own future and that of the Cause so dear to them.

Bonar says.—

> But see, the Pillar-cloud is rising now
> And moving onward through the desert night
> It beckons, and I follow, for I know
> It leads me to the heritage of light.
>
> Feast after feast thus comes and passes by;
> Yet passing points to the glad feast above—
> Giving sweet foretaste of the festal joy,
> The Lamb's great bridal feast of bliss and love.

K.

Letters to our Leader.

[When this letter was received at the office of the *Sentinel*, it bore the following endorsement in the handwriting of our Leader: "Received from the darling children of the Sunday School $20.00.—M. B. G. EDDY."]

Rutland, Vt., July 5, 1904.

Beloved Leader:—My heart yearns for words with which to express its love and gratitude to you as I send this gift from our little Sunday School of six children. The sum is small, but the largest gift to you has not carried with it more genuine and loyal love and gratitude. It is the desire of these little ones that you expend the enclosed sum upon some article to be used in the room set apart for you in the new church in Concord, and may it ever remind you that the seed of your noble effort has taken root in Rutland. I am sure that it will gladden your faithful heart to know that since I wrote you last year, the work of Truth has steadily advanced here, much good fruit being in evidence to prove the healing power of Truth. And now, to you, dear Leader and friend,—the one who has made all this possible for us,—to you there go loving greetings to-day, from the little church in Rutland, Vt.

Obediently yours,
HELEN S. B. ROSS.

Richmond, Va., June 29, 1904.

Rev. Mary B. G. Eddy.

Beloved:—Among the many blessings which have come to me through the Christ-truth, the destruction of my great fear of death is certainly not the least. A week or so after my precious mother passed away, I dreamed one night of standing by her dead body and weeping uncontrollably, just as I had done after she passed away. While I was standing there, wretched beyond description, I suddenly felt the pressure of an arm around my waist. Looking up, I beheld my dear mother; she was smiling at me and looked radiantly happy, young, and beautiful. I gazed at her, lost in wonder, then looked at the form I had thought was my mother, my real mother meanwhile leading me away gently from the inanimate form. As I was being led away, I looked back repeatedly at the dead body, then would look up into the beautiful face of my mother and find her smiling at me. Finally she led me where I could no longer see the dead figure, and then I awoke. I was comforted somewhat by my dream, and thought of it constantly, but never until I came into Christian Science did I understand its meaning. Now I know full well that it is just as you teach,—there is no death.

I thank God that the dreadful fear of death which I had has passed away, and in its stead I now think of Life eternal. God bless you for what you are doing for all mankind.

Enclosed please find check for one hundred dollars for your dear church in Concord.

Reverently and lovingly yours,
HELEN L. YOUNGER.

Chicago, Ill., June 22, 1904.

Mrs. Mary B. G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—I want you to know that many were ready and waiting for the By-law, "Church Organizations Ample." Less than a week prior to the time that it was published, a number of men, members of the Christian Science Church here, were speaking together of a well-known order of which they had all been members. Each one of those men said in substance that he had found in Christian Science all that he required, and that he no longer attended the meetings of the order referred to, nor those of any other order or society. They expressed themselves as having found in Christian Science that which they had all their lives been looking and searching for,—the truth; that they were perfectly satisfied, and had no time or inclination for any other societies.

We welcome these by-laws and know that they lead to a better understanding of the truth that makes us free indeed.

Very truly,

E. C. Wood.

San Francisco, Cal., June 23, 1904.

Rev. Mary Baker Eddy, Concord, N. H.

My Dear Leader:—In line with your request for thorough and quick healing (Art. XXXII., Sect. 7, Church Manual), I am happy to be able to say, that in the past month I have had twenty-two cases of healing in from one to six treatments; six of them instantaneous. One case of spinal meningitis was healed in two days. (It was so diagnosed by the physician who had been in attendance.) I beg of you to feel that I write this not for my praise, but for your gladness and your praise, for without the knowledge that I have learned through you, I had still been in the gall of bitterness. I can feel nothing but thanksgiving to God that He has so endowed you that you are able to break this bread and give it to us, that we may give it again to others. Jesus said, "Rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven."

Gratefully yours,

W. T. Kilgrove.

Chicago, June 5, 1904.

Beloved Leader:—As the import of the new By-law, "Church Organizations Ample," unfolds, I am impelled to write and thank you for all the good which has come to me through you.

I am endeavoring to deserve the name of a Christian Scientist, and I know that not by the ways and methods of the world can we reach "the land of Christian Science, where fetters fall, and the rights of man are fully known and acknowledged" (Science and Health, p. 226). It is my daily prayer not to depart one iota from the path marked out for us by you, whose purity of purpose and steadfast allegiance to God, divine Principle, make you a wise guide and Leader.

Lovingly and obediently,

Mabel L. Sinclair.

A Little Boy's Gift to the Concord Church.

While attending a meeting at our church the First Reader mentioned that it would be nice if we gave something to the Concord Church. The thought came to me that I had better *earn* mine, so the next day, being Friday, I printed some cards, on my little hand press, and right away I had orders so bountiful that some were a week ahead, and within two weeks I had three dollars from seven different avenues I realized that every one of those avenues will get a blessing for putting their substance of Love into the Concord Church. I am deeply grateful for all that Christian Science has done for me; it helps me in school and in my daily life.

J. E. O., New York, N. Y.

Testimonies of Healing.

It is with a deep sense of gratitude that I send the particulars of my healing through Christian Science. While visiting friends in the southwestern part of Ontario, about three years ago, my attention was called to Christian Science and the wonderful healing it was doing. I had lived in New York for twenty-five years, but had never heard of Christian Science before, to my recollection.

Up to that time, for seventeen years, I had suffered with indigestion and gastritis in the worst form, often being overcome from a seeming pressure against the heart. I had asthma for four years, also had worn glasses for four years. It seemed to me that I had swallowed every known medicine to relieve my indigestion, but they only gave me temporary benefit. I purchased a copy of Science and Health, and simply from the reading of that grand book I was completely healed of all my physical ailments in two weeks' time. I have used no medicine from that day to this, and with God's help, and the wonderful light revealed to me through the reading of Mrs. Eddy's book, I never expect to again. I used to smoke eight or ten cigars a day, and also took an occasional drink, but the desire for these has gone,—I feel forever. I travel on the road, and am constantly being invited to indulge, but it is no effort to abstain, and in many instances I find that my refusal helps others.

While I fully appreciate the release from my physical troubles, this pales into insignificance in comparison with the spiritual uplifting Christian Science has brought me. I had not been inside a church for more than ten years, to attend regular services, until I entered a Christian Science Church. What I saw and realized there, seemed so genuine that I loved Christian Science from the very start. I have never taken a treatment,—every inch of the way has been through study and practical demonstration, and I know that all can do the same thing if they will only try. About a year ago I had the benefit of class instruction, which answered much that I wanted to know, and it was of the greatest help in keeping me firm in the position that I had taken in Christian Science. It has helped me in a business way, and has taught me the value of a brother's and sister's love. Our family was reunited last Christmas for the first time in fifteen years, and I give the praise to God who has shown us through our dear Leader, Mrs. Eddy, the Discoverer of Christian Science, how to make love manifest, and to bring us all together again after all these years. I hope that if this reaches the eyes of any who are struggling, that they may know it is for us to hold firmly to the truth. No matter how dark, at times, the way may seem, the light will break through at the very time it looks the darkest.

Since I have been in Science I have overcome a case of ulcerated tooth in one night through the reading of Science and Health; also a severe attack of grip in thirty-six hours by obeying the Scripture saying, "Physician, heal thyself."

B. H. Norton, New York, N. Y.

I am deeply grateful for all the good that has come into my life through Christian Science. I read the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, for three hours, and was healed of a trouble in my head from which I had suffered for twelve years, and which prevented me from reading, except at short intervals. If I read for half an hour at a time, especially in the evening, it meant a sleepless night and a very tired head the next day.

I shall never forget the great spiritual uplifting and sweet sense of peace which accompanied the reading of that book. I had then never seen a Christian Scientist, and all that I knew of it was what I had read in some *Journals* sent me from America by a dear young friend. While reading them I saw that there was another book called "Science and Health with Key to the Scriptures," and as what I had read in

Digitized by Google

the *Journals,* seemed very beautiful and appealed to me as the teachings of Jesus, having the "signs," which he said should follow them that believe, I thought I must get it, so finding the address of some Christian Scientists at the end of the *Journal,* I wrote to one and procured a copy, with the result mentioned.

Some time afterwards I took Christian Science treatment, as I suffered from many different ailments, having been all my life in bondage to *materia medica,* nearly always having to take medicine, or wear plasters. I have sometimes worn as many as six at a time. I have also worn electric belts, and an abdominal support for an internal trouble, for which I had doctored with many physicians, without any permanent relief. I was under Christian Science treatment five weeks, and was healed of the internal trouble from which I had suffered for more than twenty years, constipation of many years' standing, liver and stomach trouble, neuralgia, and sick headaches. It is now four years and a half since I had treatments, and I have never used any material remedies since. Some time after, I had the privilege of class instruction, for which I am very grateful, as it has been a great help to me.

I have had many beautiful demonstrations of the power of Truth to overcome error; it would take up too much space to tell them, even if I could remember them, but there is one I would like to write of, as at the time it seemed very wonderful to me.

For more than thirty-five years I had had an enlarged stiff toe-joint caused by wearing, when a girl, a shoe that was too short. At first it was very painful, but after a few years it was only occasionally that it hurt me. A little more than three years ago, when out walking, it commenced to pain. I at once denied the error, and silently declared the omnipotence and omnipresence of God. At the same time the thought came, what if my toe-joint should get all right? The pain quickly stopped, and I forgot all about it until one day shortly after, I discovered I could bend my toe-joint. I could scarcely believe it, and I immediately took off my shoe and stocking, and to my great joy my toe-joint was healed, and looked just like the one on my other foot. I am a member of the Mother Church in Boston, also of Second Church of Christ, Scientist, London.

I am very thankful to our heavenly Father for the revelation of this glorious truth which makes us free; and I should like to express my grateful thanks to The Christian Science Publishing Society, and to all who so kindly contribute to our periodicals; they are a constant source of help and comfort. To our dear Leader through whose pure consciousness this blessed truth has been revealed, my heart goes out in tender love and gratitude deeper than words can express. My earnest desire is that by my daily life I may prove myself worthy the name of Christian Scientist.—MRS. SARAH HAMBRIDGE, Southampton, England.

[Translation.]

I desire to testify to all the good that has been received by me through God's loving guidance, and to express my thanks that He has sent us such a faithful messenger in our Leader, Mrs. Eddy, who has brought to us an understanding of the teachings of Jesus. Truly "The people which sat in darkness saw great light; and to them which sat in the region and shadow of death light is sprung up."

Twelve years ago I was in the shadow of death; broken down physically and mentally. I was almost in despair, when the first ray of light came to me through Christian Science which gives "light to them that sit in darkness and in the shadow of death, to guide our feet into the way of peace." From childhood I had been a member of a church and had tried to find happiness and contentment therein, but the more I tried to be a Christian the more I seemed to experience anxiety and despair. Then I began to be ailing, and for sixteen years was ill and in pain. I tried everything that I was advised to try and had several physicians, yet all human help was of no avail. I am, however, grateful to all those dear ones who sought to help me, especially my husband, who tried every available means to restore me.

When all hope seemed gone, the messenger of peace, Christian Science, came to me. It was truly my redeemer, although my healing was very slow. For the last twelve years my husband and I have walked in this path of peace and have learned to overcome all evil through the power of God, and He has blessed our work.

We have all of Mrs. Eddy's books, and they are our great treasure, for they interpret the Bible to us. More and more do we recognize what our Leader has done for all humanity; God bless her and all the laborers in this great work of love.

MRS. LENA C. NAHNSEN, Cedar Falls, Ia.

About three years ago, a niece living with us, who worked at dressmaking, became so much afflicted with astigmatism that she was wearing two pairs of glasses, with a green shade over both. She was troubled with indigestion, constipation, biliousness, nausea, and headaches; in fact, it seemed as if the ills that tormented her were legion. She had lately consulted one of the best oculists in our city, who simply repeated what had been told her before by leading oculists in other parts of the country: that there was no cure for astigmatism, and the only relief which they would be able to afford her must result alone from changing her glasses now and then, making them stronger and stronger. She had not experienced any relief from the change lately made, and was almost ready to yield to despair when a lady friend said to her, "Why, Miss M., your eyes can be cured!" This seemed almost a cruel mockery; yet, with no longer any hope in *materia medica,* she hastened to see a Christian Science practitioner as she was directed, and now, thank God, whereas she was blind, now she can see. For about three years she has been able to read and sew without glasses, and she can now eat anything she wants to eat without any dread of consequences, whereas before she dared not eat many things she liked.

When I was told she had consulted a Christian Scientist, and had accepted treatment, to say that I was angry is to put it mildly. I had come to look on religion as a farce,—a ridiculous sham. Where was the dividing line between the church and the world? What did the professing Christian possess or what could he do more than the non-professor? God is no respecter of persons, He sends the rain and sunshine on the just and the unjust alike. If miracles had ever been wrought by the church, the days of miracles were past. But what I said or what I did made no difference in the rising and the setting of the sun. Time moved on just the same, and soon brought marked improvement in my niece; the green shade first, and then the glasses were laid aside, and I was forced to admit that the demonstration was wonderful. My wife and daughter had embraced Christian Science and were rejoicing in the truth. I was offering no opposition.

Now for many years I had been subject to indigestion and constipation, and had turned to man for relief through drugs. I had tried homœopathy, allopathy, patent medicines, hot water, diet, everything, and everything failed me. If apparent relief was afforded for a while by any particular nostrum, the effect was not lasting. One morning I said to my daughter, what shall I do? everything seems to fail me and I do not know which way to turn for relief. She answered me, "Papa, if you will give up *materia medica,* I will treat you." And I immediately responded, saying, "My daughter, from this day on I will not take any more medicine, and I will submit to your treatment." From that day to this, about two years and a half, having put my hand to the plow, I have not turned back.

The Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures," are our daily com-

Digitized by Google

panions; and from these and in our daily experience we have learned that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494), and we shall continue in the things which we have learned and been assured of, knowing of whom we have learned them.

From the demonstrations made in our family, others have been brought to a knowledge of Truth, and have found the grace of God sufficient for them, for His strength is made perfect in weakness.

J. R. McCONNELL, New Orleans, La.

From a child I had suffered with constipation and scarcely knew what it was to be natural until it led to a more serious trouble. I had been treated by many physicians, with electricity, and the use of drugs of all kinds for years, and growing worse constantly, I submitted to an operation. As this, however, was of no permanent benefit, and the physician said there was nothing more he could do, through the advice of a friend, I turned to Christian Science as a last resort.

My healing was very slow, and I was many times tempted to give it up. Fear had such a strong hold on me, that I was constantly expecting trouble. I had about ten weeks' treatment, and a great deal of what seemed uphill work, and I think I can truthfully say that had it not been for Christian Science, I should not be here now, enjoying the best health I have ever known. I cannot begin to tell what a great help this truth is in my every-day life. I am very grateful to the dear Scientist who has helped me along the way, and for the benefits derived from the Christian Science literature. Through the study of our Leader's books alone, I have been able to make many demonstrations for myself and others.—F. H. P., Dorchester, Mass.

It is with a sense of the deepest gratitude to the Founder of Christian Science and the dear practitioners who have so patiently helped me that I acknowledge what has been done for me. Particularly do I recall a very severe spell of vomiting and pain caused by chronic liver trouble. In answer to a call, the practitioner kindly came and in one hour the vomiting had ceased. Heretofore those attacks would not yield for hours, and I had been obliged to take strong medicines, which left me prostrate for days. Under Christian Science treatment, I was able to sit up the next day, and on the second day went to the house of the practitioner.

Two attacks, some months later, were conquered by absent treatment, and I seldom have even a slight return of the trouble. In addition to the physical help, I have been wonderfully led in business affairs. When every avenue seemed closed to me, and I could not see one ray of light, the dear practitioner would always say, "Your Father is leading you," and as I look back, how plainly I now see that my Father *was* leading me.

I am most thankful for what has been done for my husband, who had an ailment of over two years' standing, part of that time being entirely helpless. He is now able to assist in the business (the means for which was so beautifully provided), notwithstanding the physician's verdict that he was incurable.

It has been my privilege to listen to a most helpful lecture delivered by Judge Hanna, and how grateful I am for these messengers who bring us such tidings of Love, of health, and of good-will to all men.

MRS. M. BENNETT, Portland, Ore.

I wish to express my gratitude for what Christian Science has done for me. Nearly two years ago I left school, and with my dear mother went to California in search of health. I was suffering from stomach trouble and was held in constant bondage by the fear of food with its imaginary power. I had tried dieting until, at the time of meeting with Christian Science, I was living on two meals a day, which usually consisted of the white of an egg beaten up, and a little rice for breakfast, and in the evening some broth and a little more rice. These meals were interspersed with hot water. I tell the above simply to show the contrast with the meals I began to eat when I learned somewhat of man's dominion, and the practical truth of the Master's saying, "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?" Pancakes, an indigestable food, according to *materia medica,* were eaten without pain. Right now this does not seem so wonderful, but when I think of the effects of the white of an egg, in the old way, compared with the effects of a pancake, in the new way, I then begin to realize that it was not stomach, but mortal mind, which suffered so, and that Christ, Truth, did come to my consciousness, and cast out this whimsical belief.

Since my acceptance of Christian Science I have seen many illustrations of the power of Truth, especially among my own folks. My mother has been wonderfully helped, and we both had the pleasure of uniting with the church here at the last communion. With humility and gratitude I thank God for His loving kindness in leading me from the darkness of mortal error into the light of divine Love as revealed to us in Mrs. Eddy's book, Science and Health.—CLYDE HENDRIE, Denver, Col.

For months I have endeavored to make an acknowledgment of what Christian Science has done for me, but have been held back by the thought that I could not tell it properly. I can, however, say this much,—the half can never be told.

Until four years ago my life was a dreary waste of fear and worry "having no hope, and without God in the world." I was a partial invalid, and my husband had been doomed by *materia medica* as a sufferer with a fatal disease. In our distress we turned to Christian Science and placed ourselves under treatment.

In a very short time I regained my health, and soon saw my husband literally transformed from a physical wreck, who used both liquor and profanity, into a man of sound health, with every trace of the fatal disease eradicated, the appetite for liquor absolutely destroyed, and with no inclination to use profane language. The application of our understanding of Truth has brought harmony to our home, success to our business, and the peace "which passeth all understanding" to our hearts.

I owe an endless debt of gratitude to Mrs. Eddy for this great revelation of Truth which she has given to the world in "Science and Health with Key to the Scriptures," and to the practitioner and teacher who worked so faithfully, patiently, and wisely to lead me into the light of Truth.—E.

I have demonstrated the power of Truth again and again over so-called physical ills. Troubles of weak eyes, neuralgic headaches and weak constitution generally have been or are being overcome. It is, however, more for the lifting of the veil and the shifting of the scene into light, that I am grateful to Christian Science.

When I look back to a year ago I see I was an unhappy young person, though I had no reason to be so, except for a distressingly large sense of self. Morbidly conscious and sensitive, I was vaguely aware of the desire for something, I knew not exactly what, and would shed tears frequently because details made up so great a part of life, because people weren't so good as they should have been, and because God seemed so far away and so awful. I then thought that I desired an impossible world if I wanted these things different, but I see now that I wanted the only

Digitized by Google

real world, divine Love's world, and that it was I, not things, which needed changing.

A Christian Scientist talked to me one day, and then sent me several numbers of the *Christian Science Sentinel* and the *Journal*. I went to one service, and almost immediately left off my glasses. Now, it seems impossible that ever I should have felt the way I did fifteen months ago. Imagine thinking life made up of details; man more evil than good; God, infinite Love, far away and awful. Things are indeed different. People, to-day, speak to me of my "good spirits," where they used to ask me, "What is the trouble?" and encourage me to "cheer up." Although my way in the truth has not been one of roses by any means, for I have had opposition and loneliness to struggle against, Christian Science has brought happiness to me as it must to all who wish to serve the only true God in "perfect love." I want to thank those who have helped me "fight the good fight," and set my feet firmly in the "way of Truth." Those who, like myself, have walked the narrow path almost alone to the place where Love need be the only Shepherd, realize what help a single hand can give, and what encouragement is found in a few words.

I hope to prove my gratitude to our Leader in other ways than words, and to be worthy the honored name of Christian Scientist.—CAROLINE FISKE, New York, N. Y.

Through Christian Science, I have been healed of the grip, acute bronchitis, chronic constipation, and sick headaches. Twice I have had a tooth extracted without so much as feeling the instrument used, experiencing no fear; while previous to receiving Christian Science treatment, the thought of having any dentistry done made me sick for days.

I will also cite one of several occasions when financial aid has been received. While without a home, in debt, and very unhappy over the estrangement of friends, and not knowing how to meet the expenses of a long vacation, I came to Christian Science for help. Within a few weeks, a relative of whom I was extremely fond, wrote promising transportation if I would spend the summer in her beautiful home. There were seeming obstacles, all of which were overcome through a realization of God as the only source of supply. While very thankful for the physical healing, that is little compared to the spiritual uplifting, resulting from a study of the Bible in connection with Science and Health by Mrs. Eddy.

I cannot close without expressing gratitude to God, to the Discoverer of Christian Science, to my practitioner, and to all others who have aided me to a knowledge of the truth which makes free.—E. A. W., Milwaukee, Wis.

I would like to tell the readers of the *Sentinel* my first experience in Christian Science, and my healing by Truth which, to me, was wonderful. From a world of sickness and disappointment, I was raised to a world of health, happiness, peace, and love. I was healed of heart trouble, constipation, diabetes, and nervous headaches. I was hard of hearing, had sore eyes, was a constant user of tobacco, and did not know for months what a night's rest was. I was healed of all these ailments in one treatment. I well remember that when the truth dawned upon me the darkness disappeared like frost before the sun. God's perfect light flowed in, like the sunlight flooding a dark room when the curtain is suddenly lifted. My spiritual uplifting was wonderful,—the things I once hated I now loved, and my enemies were my best friends. I loved every one, and everything was joy and peace around me.

My wife was also healed of troubles that the doctor said would require a surgical operation to remove, but Truth did the work for her. Since then I have taken class instruction from one of Mrs. Eddy's students. We both remember with gratitude our faithful practitioner who led us so lovingly to Truth, and we thank God every day for this revelation of divine Love through Mrs. Eddy in Christian Science.—FRANK KISER, Hiawatha, Kan.

I came into the understanding of Christian Science about five years ago, for the physical healing, being at that time almost an invalid from a complication of diseases. I was under the doctor's care for two years for uterine trouble, but got no better, or only for a little while, and I had grown so weak and nervous that I was unable to attend to my household duties or my children. I also suffered from gastritis which my little daughter, then ten years old, healed in one treatment. These are a few of the many things which Christian Science has lifted me out of. Some of my healing has been slow and sometimes I have had to work pretty hard, but with the end would come that rest and sweet "peace of God which passeth all understanding."

Previous to my coming to Science I had attended an orthodox church all my life, but I never felt the spiritual uplifting that comes to the true Christian until I found Christian Science.

I cannot find words to express my thankfulness to our Leader, Mrs. Eddy, for this great truth. It has not only helped me, but my four children have all been greatly benefited. It enables me to solve the many problems that arise daily, and my heart goes out with gratitude and love to God for His many blessings, and to those who have so kindly helped me.

MRS. ELLA ROBERTSON NOBLE, Kansas City, Mo.

I wish to add my testimony to those of the many who have been healed through the truth as taught by our Leader, Mrs. Eddy.

I became interested in Christian Science about six years ago through the healing of my sister, and since then it has been our only physician. I will relate two instances which proved to me that God is the only power. About three years ago I was overcome with an attack of gravel. I seemed to suffer terribly, and not being able to overcome it myself I called in a practitioner, who, since then, has become my teacher, and in about two weeks the trouble was entirely destroyed.

A few months ago I was healed of a severe case of typhoid fever through the earnest efforts of the same dear Scientist, and in less than five weeks I was back in the shop at work as usual. Now I am the picture of health, weighing more than ever before.

For the healing and many other proofs of God's care, my wife joins with me in thanking God, also Mrs. Eddy, and our teacher.—GEORGE M. DIEHL, Sheboygan, Wis.

A sense of Deity as the infinite Person or omniscience leads to the worship of an impersonal God, and this is understood and demonstrated through the medium of Christian Science. The organization which sets forth this scientific worship must of necessity be impersonally and liberally conducted to harmonize with the primary assumption of all law, and that which represents in outward form or association an invisible Principle must partake of the character and mode of that Principle; therefore Principle must be placed above person, and impersonality and democracy be seen as of kindred nature,—the true ways and means of the democracy of Spirit, in human affairs.

CAROL NORTON.

Man was made for love, he lives by love; and the measure of his life is the largeness and liberty of his love.

CHANNING.

Digitized by Google

From our Exchanges.

How Long Should the Long Prayer Be. Surely not twenty minutes! A good church deacon said, not long ago, that on a particular Sunday, just an ordinary day, his minister prayed twenty-two minutes and preached twenty-five, and that the prayer, as a regular thing, reached the 'teens. The record for three Sundays consecutively was fourteen, sixteen, and seventeen and one half minutes. A business man in the congregation said he always took that time to figure out some difficult problems in his business affairs. It was further asserted that the prayers were always the same, that they lacked the element of petition and confession and seemed oratorical and were given entirely too much to instructing the Lord. There seemed to be no vital connection between the minister and his people—no bearing up of their needs to God. It is questionable whether he was conscious of the impression thus made upon them, for he was earnest and sincere, but the congregation, even including the young people and the children, talked of it and grew weary; some even stayed away from the services on account of it or came in after the prayer was over.

. . . . . .

If some preachers wonder why men in the strenuous, hurrying life of business are not more interested in the preaching services, is it possible a radical change in "the long prayer" would in a majority of cases help matters tremendously? . . . The petition ought to be free from any sentence or word which can seem like telling the Lord anything about people, conditions, or things, and without so much as a hint of preaching "thrown into the form of a prayer"—just asking in three to five minutes at most for the helps and the blessings the people and their minister may safely be known to need. *Our Readers' Forum.*
The Congregationalist and Christian World.

Some instructive conclusions are drawn by Eugene M. Camp in an interpretation in *The Congregationalist* of the recent census of attendance in New York churches. It is a curious comment on the passion for furnishing an attractive and enriched service to find, as the census seems to show, that "churches which offer expensive music, provide an æsthetic ritual, and maintain high-salaried preachers are no better attended in proportion to their membership and seating capacity than those which depend on their congregations to sing service and hymns, provide nothing that can be called a ritual, and afford preachers at mere living stipends. . . . The count seems to prove that if people attend public worship at all they attend to worship God, and not to be entertained."—*The Christian Advocate.*

Our advantages and blessings are not in things, so much as they are in states of mind and heart, whether things are many or few, excellent or otherwise. The Saviour's lowly pathway, without possessions and with multiplied burdens such as no other ever carried, while there was left to him communion with his Father, and the certainty that he was opening, even through the gates of his broken heart, the door of paradise to men, was the way richest of all, in spite of the cross which overshadowed it. It is easy for discontent to dig the grave of happiness in the same soil where a pure and loving heart would plant flowers of paradise.
The Examiner.

Most people know enough, and are convinced of enough spiritual truth to make them far better men and women than they are. The fact that condemns them is that their action is so utterly out of harmony with their convictions. What they need above all is not more knowledge. To use a figure from the factory, their moral convictions are not belted to their ways of daily thinking and feeling and acting.—*The Watchman.*

The Christian Science Text-Book.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

The New Concordance.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of Science and Health, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 595 pages 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

Church Manual.—Containing the By-laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington, Avenue, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Building Fund of the Mother Church.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Church Treasurer.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Reprints from the Journal and Sentinel

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Bureau of Insular Affairs of the War Department has received a copy of an enactment of the Philippine Commission providing for the administration and temporary leasing and sale of the land commonly known as the Friar Lands, for the purchase of which the government of the Philippine Islands recently has contracted. It provides for surveys, and permits the present occupants of any such lands either to buy or to lease them, any leases to be for not more than three years and at a reasonable rental. Those wishing to purchase may do so at the actual cost to the Government, and will be allowed ten years in which to pay for the same in equal annual instalments, with interest on deferred payments at the rate of four per cent. The act further provides that all irrigation, common to all properties, shall remain under the control of the government of the islands. All money derived from the leasing and sale of these lands is to constitute a trust fund for the payment of principal and interest of the bonds issued by the Philippines for the purpose of raising money to pay the purchase price of these Friar Lands.

The Navy Department has been informed that a contract has been made with the Cuban Government to raise the wreck of the battleship Maine, which has lain in the mud of the harbor of Havana since the explosion on the night of February 15, 1898. The communication, which asks what ownership, if any, the United States claims, has been referred to the Judge Advocate General of the Navy for consideration. The Cuban Government, it is understood, makes no claim of ownership in the wreck, and is governed in its action simply by a desire to improve the navigation of the harbor.

The Panama Canal Commission has established custom houses in the Canal Zone at Ancon and Christobal. This action is considered by the Panamans as contrary to treaty implications. They claim that under the treaty all ports in Panama are under the jurisdiction of the Panama authorities. It is believed that this slight misunderstanding will be readily adjusted.

Information has come to the State Department of the settlement of the Acre boundary dispute between Brazil and Peru, involving the ownership of a large tract of country rich in rubber production.

W. H. Ellis, bound for Abyssinia, has arrived at Jibutil with the commercial treaty between the United States and Abyssinia.

Foreign.

The advance of the British mission on Lhassa, the capital of Tibet, has commenced. Colonel Younghusband has proclaimed the intention of the British Government to secure reparation from the Tibetans for the "overt acts of war," and the decision that any interference with the progress of the mission "will meet with condign punishment and only result in making the terms demanded more exacting, and the measures to enforce them more severe."

The Supreme Court of Germany has rendered an opinion that the title of doctor, conferred by American dental colleges, is not to be recognized in Germany, constituting a violation of the German law against unfair competition, and its use is therefore prohibited. Three hundred and twenty dentists in Germany, who heretofore held the title of doctor from American colleges, are affected by this decision.

Sir Chen-Tung Liang-Chen, the first Chinese Minister to Mexico and also Minister to the United States, has been officially received by President Diaz at Mexico City. The reception was a brilliant spectacle. Speeches expressing the friendly relations existing between the two countries were exchanged.

Paul Kruger, former President of the Transvaal Republic, passed away at Clarens, Switzerland, on the 14th.

Industrial and Commercial.

No better evidence of the remarkable growth and present magnitude of the petroleum industry in southeast Texas could be asked than is afforded by the figures showing the amount of steel and earthen tankage which has been built in this section in the past three and one-half years to provide oil storage facilities, says the *Manufacturers' Record*. A summary of the tankage completed to July 1, 1904, is as follows: Total capacity of steel tankage in Texas fields, 11,006,000 barrels; total capacity of covered earthen reservoirs, 7,845,000 barrels; total capacity of open earthen reservoirs, 10,940,000 barrels; total, all classes, 29,791,000 barrels, representing an investment of $2,751,500 for steel tanks, of $1,333,750 for earthen reservoirs, lined and covered, and of $1,422,200 for ground reservoirs, neither covered nor lined, a total investment in this line, not including wooden tanks, of $5,507,450.

Exports of fruit from the United States in the fiscal year 1904 will exceed $20,000,000, against less than $3,000,000 in 1894 and less than $2,000,000 in 1884. Apples, oranges, apricots, prunes, and raisins form the principal items in the exports of fruits. The value of the apple exportations in 1904 will amount to about $8,500,000, $5,500,000 worth in the natural state and $3,000,000 worth as dried fruit.

The exportation of prunes from the United States has grown from 16,000,000 pounds in 1898 to an estimated volume in 1904 of 74,000,000, valued at about $3,500,000. Raisins are also becoming an important feature of the export trade in fruits, the total number of pounds of raisins exported in 1903 being 4,250,000.

The increase in the size of ocean vessels is illustrated by those transacting the business of the port of New York, says an exchange. In 1883 the total sailings from New York numbered 1,222, while in 1903 they numbered 1,025, a decrease of 197 in twenty years, during which the city grew immensely in size and wealth. But the net tonnage in 1883 was 2,586,224, while in 1903 it reached 4,858,842 tons. This is the result of the great increase in size and carrying capacity, an increase that is going on now more rapidly than ever before.

Thomas Andrews, Naval Architect and Superintending Engineer for Harland & Wolff, who had absolute authority as to the building of the Oceanic, Celtic, Cedric, and Baltic, says it has been decided to call the new White Star boat, which is now being constructed at Belfast, the Adriatic. The Adriatic will differ from the Baltic in that she will have one-half knot an hour additional speed, and 15,550 indicated horsepower, as against 14,000 of the Baltic.

R. Peacock, an Egyptian railroad man from Assiout, is visiting this country. He is Locomotive Superintendent of the Egyptian State Railways, and has come here at the request of his Government, to inspect the American railways, with a view to introducing some of the modern American methods of transportation into his country.

The first message over the Seattle-Sitka cable line has reached Seattle. It was sent while the cable ship Burnside was at sea, and was ticked over the free end of the wire to Sitka; thence, via Skaguay, it came over the Canadian telegraph lines.

Earthenware shipments to this country are increasing. The number of crates shipped from Liverpool to all American ports from January 1, last, to June 25, was 29,039, as against 27,367 in the same period last year.

The record for climbing the eight-mile carriage road up Mount Washington by an automobile was lowered last week from the previous record of one hour and 48 minutes to 24 minutes 37.6 seconds.

John B McDonald, the contractor, has announced that the subway construction work is practically completed, and that the new transit line in New York will be turned over to the Interborough Company on August 1.

General.

The discovery by the University of Chicago's Oriental expedition of the ruins of a Babylonian temple containing vases, statues, and inscriptions dating back to 4500 B.C. has just been announced. The ruined walls and foundations of four temples, built one above the other, have been uncovered.

Among the articles found are marble statues, an engraved marble lamp, fragments of white marble, onyx, and sandstone vases, and various oronze objects, among them a large spike terminating in a finely shaped lion.

The registration of the Harvard Summer School is now something over 760. As the greater part of the students are teachers, their geographical distribution is very widespread. Practically every State in the Union is represented, besides Canada, Alaska, Japan, Porto Rico, England, and other countries.

According to *The Tribune* the only country without a railroad is Iceland, but one is about to be built there seventeen miles long, for the purpose of working some sulphur mines which are at that distance from the nearest harbor.

A crusade is being carried on by the police in Germany against proprietary medicines. Out of over one hundred samples analyzed, eighty per cent were said to have no medicinal value.

Last week the Gainsboro portrait of Maria Walpole, Countess of Waldegrave and Duchess of Gloucester, brought at auction $63,525. This broke the record auction price of $55,000.

Nearly eight hundred miles of telephone wire have already been put up in Abyssinia, and one thousand more are in process of construction.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Dedication of the Church in Concord.

[Copyright, 1904, by Mary Baker G. Eddy. All rights reserved.]

ADDRESS BY OUR LEADER, MARY BAKER G. EDDY, THE DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE.

First Church of Christ, Scientist, Concord, N. H.

Beloved Brethren:—Never more sweet than to-day, seem to me, and must seem to thee, those words of our loved Lord, "Lo, I am with you alway, even unto the end." Thus may it ever be that Christ rejoiceth and comforteth us. Sitting at his feet, I send to you the throbbing of every pulse of my desire for the ripening and rich fruit of this branch of His vine; and thank God who hath sent forth His word to heal and to save.

At this period, the greatest man or woman on earth stands at the vestibule of Christian Science, struggling to enter into the perfect love of God and man. The infinite will not be buried in the finite; the true thought escapes from the inward to the outward, and this is the only right activity and that whereby we reach our higher nature. Material theorems tend to check spiritual attraction—a tendency towards God the infinite and eternal—by an opposite attraction towards the temporary and finite. Truth, life, and love are the only legitimate and eternal demands upon man; they are spiritual laws enforcing obedience thereto and punishing disobedience thereof.

Even Epictetus, a heathen philosopher who held that Zeus, the Master of the gods, could not control human will, writes, "What is the essence of God? Mind." The general thought most regards material things, and keeps Mind much out of sight. The Christian, however, strives for the spiritual,—he abides in a right purpose, as in laws which it were impious to transgress, and follows fearlessly Truth. The heart that beats mostly for self is seldom alight with Love. To live so as to keep human consciousness in constant relation with the divine, the spiritual and eternal, is to individualize infinite power,—and this is Christian Science.

It is of less importance that we receive from mankind justice, than that we deserve it. Most of us willingly accept dead truisms that can be buried at will; but a live Truth, even though it be a sapling within rich soil and with blossoms on its branches, scares folks. The trenchant Truth that cuts its way through iron and sod, most men avoid until compelled to glance at it, then open their hearts to it for actual being, health, holiness, and immortality.

I am asked, "Is there a hell?" Yes, there is a hell for all who persist in breaking the Golden Rule, or in disobeying the commandments of God. Physical science shows that the internal fires of our earth will eventually consume this planet. Christian Science shows that hidden unpunished sin is this internal fire,—even the fire of a guilty conscience waking to a true sense of itself, and burning in torture until the sinner is consumed, his sins destroyed, which may take millions of cycles; but of the time no man knoweth. The advanced psychist knows that this situation is mental, not material, and that the Christian has no part in it. Only the makers of hell burn in their fire.

Concealed crimes, the wrongs done to others, are millstones hung around the necks of the wicked. Christ Jesus "paid our debt and set us free," by enabling us to pay it,—for which we are still his debtors, washing the Wayshower's feet with tears of joy.

The intentional destroyer of others, would destroy himself eternally, were it not that his suffering reforms him; thus balancing his account with divine Love that never remits the sentence necessary to reclaim the sinner. Hence these words of Christ Jesus: "Depart from me, all ye workers of iniquity. There shall be weeping and gnashing of teeth, when ye shall see Abraham, and Isaac, and Jacob, and all the prophets, in the kingdom of God, and you yourselves thrust out" (Luke, 13 : 27, 28). He is saved through Christ, Truth, who gains self-knowledge, self-control, and the kingdom of heaven within himself—within his own consciousness. Mortals must drink of the cup of their Lord and Master sufficiently to unself mortality, and destroy its erroneous claims—therefore, said Jesus: "Ye shall drink indeed of my cup, and be baptized with the baptism that I am baptized with."

We cannot boast ourselves of to-morrow; sufficient unto each day is the duty thereof. Lest human reason becloud spiritual understanding, say not in thy heart, Sickness is possible because one's thought and conduct do not afford a sufficient defence against it. Trust in God and "He will direct thy path." The God-like man said, "My burden is light,"—when evil was avenging itself on its destroyer; his pre-eminent goodness. Only he who learns through meekness and love the falsity of supposititious life and intelligence in matter,—can triumph over their ultimatum,—sin, suffering, and death.

God's mercy for mortal ignorance and need, is assured; then who shall question our want of more faith in His ever-present help in times of trouble? Jesus said: "Suffer it to be so now: for thus it becometh us to fulfil all righteousness."

Strength is in man, not in muscles; unity and power are not in atom or dust. A small group of wise thinkers is better than a wilderness of dullards, and stronger than the might of empires. Unity is spiritual co-operation, heart to heart, the bond of blessedness such as my beloved Christian Scientists all over the field, and the dear Sunday School children, have demonstrated in gifts to me of about $80,000 to be applied to building, embellishing, and furnishing our church edifice in Concord, N. H.

We read in Holy Writ, "This man began to build, and was not able to finish." This was spoken derisively; but the love that rebukes, praises also; and methinks the same wisdom which spake thus, in olden time, would say to the builder of the Christian Scientists' church edifice in Concord, N. H., "Well done, good and faithful." Our proper reason for church edifices is, that Christians may therein worship God; not that Christians may worship church edifices!

May the loving Shepherd of this feeble flock lead it gently into "green pastures beside still waters;" may He increase its members, and their faith never falter—their faith in, and understanding of divine Love,—this

church born in my nativity, may it build upon the Rock of ages against which the waves and winds beat in vain; may the towering top of its goodly temple, burdened with beauty, pointing to the heavens, bursting into the rapture of song, long call the worshipper to seek the haven of hope, the heaven of Soul, the sweet sense of angelic song chiming chaste challenge to praise him who won the way, and taught mankind to win through meekness to might, goodness to grandeur—from cross to crown, from sense to Soul, from gleam to glory, from matter to Spirit.

MARY BAKER G. EDDY.

THE DEDICATORY SERVICES.

The new edifice, the gift of the Rev. Mary Baker G. Eddy to First Church of Christ, Scientist, of Concord, N. H., was dedicated with simple but impressive exercises Sunday, July 17. Four services were held to accommodate the crowds of visiting Scientists who went to Concord on Friday and Saturday, and by regular and special trains on Sunday. It was undoubtedly one of the most notable events that has occurred in our denomination, and it attracted a larger gathering of Christian Scientists than any that ever assembled outside of Boston.

The first service was held at 9 A.M., the second at 10.30 A.M., the third at 3 P.M., and the fourth at 7.30 P.M. These services were identical, and the number in attendance upon each was about the same, except that in the evening the attendance was larger than during the day.

The Scientists began gathering at the church long before the hour announced for the opening. By nine o'clock a congregation had gathered which filled the church to its full seating capacity, and many availed themselves of standing-room in the rear.

The floral decoration was confined to the space about the pulpit, the organ loft, and the southwest wall. Against the latter rested a magnificent cross, the gift of Christian Scientists in North and South Carolina. Masses of red roses rested upon the choir rail, while extending around in front of the pulpit was a profusion of ferns and white flowers.

The following was the order of exercises:—

Organ Prelude.

Hymn, "O'er waiting harpstrings" written by Mary Baker G. Eddy.

Selections from the Scriptures and from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Silent prayer, followed by the audible repetition of the Lord's Prayer with its spiritual interpretation.

Announcing necessary notices.

Church History, Second Reader. Miss Mary E. Tomlinson.

Words of Gratitude, First Reader. Rev. Irving C. Tomlinson, C.S.B.

Hymn, "Saw ye my Saviour?" written by Mary Baker G. Eddy.

Dedicatory Address, written by Mary Baker G. Eddy.

Hymn, "Shepherd, show me how to go" written by Mary Baker G. Eddy.

Reading of "the scientific statement of being" and the correlative Scripture according to 1 John, 3 : 1–3.

Benediction.

Following the opening hymn and selected readings, the First Reader of the church, stated that a very large number of congratulatory letters and telegrams had been received from all parts of the world. Miss Mary E. Tomlinson, the Second Reader, then gave the following interesting summary of the history of the church.

CHURCH HISTORY.

The memorable event which to-day gladdens our hearts had its beginning in the year 1889, at which time our beloved Leader, the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, came to reside in the capital city of her native state. As she has told us, in accordance with a long-cherished intention, she withdrew from active labors as Teacher of the Massachusetts Metaphysical College to fulfil duties which demanded both her attention and retirement.

This beautiful structure, which to-day we dedicate to the service of God, is proof that her intensely absorbing labors for mankind have in no way diminished her ardent love for her native state. The communicants of First Church of Christ, Scientist, in Concord, N. H., have been, and must ever be, deeply grateful for their membership in the home church of their beloved Leader. Our growth, like that of other branch churches of our denomination, has been in consequence of the healing of sin and sickness as practised by the Master and made known in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

It is but a few years since a small handful of Concord people met in private parlors for the study of the Christian Science Bible Lessons. Their numbers increased, and meetings were held in one of the smaller halls of our city. When more commodious quarters became a necessity, our Leader and friend took measures to supply the need. In a letter dated October 2, 1897, in answer to a question addressed to her by the editor of a local paper, Mrs. Eddy wrote, "When the good effects of Christian Science are seen and sufficiently understood in Concord to be appreciated, then, *Deo volente,* a beautiful stone church will be erected on one of the finest locations in this city."

Preparatory to this step, our Leader purchased in October of 1897 the property where this church now stands. At an expense of $20,000, including the land, the spacious dwelling house which then occupied this site was remodelled into a beautiful auditorium and reading room. This was accomplished under her direction in the short space of twenty-two working days. In her first letter, written to the society and read on Sunday, the 12th of December, Mrs. Eddy said, "I have provided for you a modest hall wherein to assemble as a Christian Science kindergarten for teaching the New Tongue of the Gospel, with signs following, and whereof St. Mark prophesies. From the interior of Africa to the utmost parts of the earth the sick and the heavenly homesick or hungry hearts are calling on me for help, and I am helping them. You have less need of me than they, and you must not expect me to further do your pioneer work in this city."

Sweet and sacred are the memories which linger around the little hall set apart for God's holy work. It was here that, on March 4, 1898, Mrs. Eddy addressed this society, together with the First Members of the Mother Church. The company, which filled to overflowing the upper chamber, will never forget the illumination which fell upon the 91st Psalm as she unfolded its spiritual meaning. Later in the year, in November, 1898, she taught a class of sixty-seven pupils in Christian Science Hall. These students came from all parts of this country, and from Canada, England, and Scotland.

On January 31, 1898, Mrs. Eddy conveyed to three trustees the sum of $100,000 to be appropriated to building a granite church edifice in Concord. Early in the year of 1899, First Church of Christ, Scientist, was formally incorporated under the laws of New Hampshire, and on the 22d of February was organized with seventy-three charter members. In a letter from Mrs. Eddy, which was read the following Sunday, occurred these significant words: "In the annals of our denomination this church becomes historic, having completed its organization February 22, Washington's birthday—memorable date, all unthought of until the day had passed! Then we beheld the omen—Religious

Digitized by Google

Liberty—the Father of the universe and the father of our nation in concurrence."

For five years the members of this church were privileged to call Christian Science Hall their home. During that period thousands of visitors from all parts of the world came to the home city of her whose teachings have redeemed them from lives of misery and despair. These friends, at our Wednesday evening meetings, have given glad testimony of healing through Christian Science. From time to time this church has been the recipient of loving words of counsel and encouragement from the pen of our revered Leader. In a letter read at the first annual meeting on January 11, 1900, Mrs. Eddy tenderly wrote,—

"May this dear little Church, nestled so near my heart and native hills, be steadfast in Christ,—always abounding in love and good works. Having unfaltering faith in the prophecies, promises, and proofs of Holy Writ; having one God, one Christ, and that one the God and Saviour whereof the Scriptures declare, catch the early trumpet calls,—take step with the twentieth century,—leave behind those things that are behind, lay down the low laurels of vainglory, and, pressing forward in the onward march of Truth, run the race set before them in joy, health, holiness, till—home at last—they finish the full fruition of their faith, hope, and prayer. Faithfully, and more than ever persistently, you are now, through the providence of God, called to do your part wisely and to let your faith be known by your works. This is all we ask of any people; namely, to judge of our doctrines by its fruits. May the good folks of Concord have this opportunity, and may the God of all grace, truth, and love be and abide with you henceforth."

The public announcement that through Mrs. Eddy's generosity there was soon to be erected a beautiful church edifice of Concord granite was made at the Wednesday evening meeting on May 6, 1903. With this notice came the necessity of looking about for temporary quarters during the period of building. To meet the exigency our Unitarian neighbors graciously opened to us the doors of their church, and for thirteen months it was our privilege to gather within its hospitable walls.

On June 17, the date of the anniversary of the battle of Bunker Hill, the first foundation stone was put in place. On July 16, 1903, the anniversary of the birth of our beloved Leader, there was laid the corner-stone, with simple but impressive ceremony. Within the corner-stone was deposited the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, together with all her other writings and all the periodicals of The Christian Science Publishing Society.

The progress on the church from the beginning has been continuous. The workmen have labored with fraternal good-will and have manifested joy in their labors. We rejoice in the demonstration of completing this stately granite church on the anniversary of the laying of the corner-stone.

First Church of Christ, Scientist, Concord, N. H., today has a membership of two hundred and five. As love cannot be measured materially, neither can a brief historical sketch portray the spiritual growth of this church during the seven years of its history. The prayers of its loyal members, the spiritual aspirations, the victories are known to our heavenly Parent, and the Father which heareth in secret hath indeed rewarded us openly.

The fact that Concord is the home of the Discoverer of Christian Science has made this church the recipient of rich and beautiful gifts, which are but natural expressions of gratitude to God and love to our Leader for the great good received through her ministry. Well may we ponder the words of admonition from the donor of this church at the laying of the corner-stone one year ago,—

"The burden of proof that Christian Science is Science rests on Christian Scientists. The letter without the spirit is dead; it is the Spirit that heals the sick and the sinner, —that makes the heart tender, faithful, true. God has blessed and will bless this dear band of brethren; He has laid the chief corner-stone of the temple which to-day you commemorate, to-morrow complete, and thereafter dedicate to Truth and Love. O, may your temple and all who worship therein stand through all time for God and humanity."

Words of Gratitude.

The Rev. Irving C. Tomlinson, C.S.B., First Reader, in his address said,—

Dearly Beloved Brethren and Friends:—We welcome you to share our joy in dedicating to God this sacred sanctuary, a gift from our beloved Leader and Teacher, the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, to First Church of Christ, Scientist, in Concord, New Hampshire. Our hearts, on this glad day, are vocal with psalms of gratitude to the heavenly Father for His manifold benefits.

This momentous hour recalls those significant words uttered by the wise king as he was about to build the great temple in Jerusalem, "Behold, I build an house to the name of the Lord my God, to dedicate it to him." This massive pile of granite, towering heavenward, and built to the name of the Lord our God, begets a question asked concerning a sacred sanctuary of long ago, "What mean ye by these stones?" May we not truly answer as did the ancient scribe, "These stones shall be for a memorial unto the children of Israel forever"?

This granite tabernacle is a memorial that this Christian denomination hath kinship with all that is true in sacred history. We have not outgrown what has been held most dear by the historic church. Our religion is grounded in the sacred Scriptures. Our most precious book is the Holy Bible. Our God is the one living and true God of Moses, of David, and of Christ Jesus. Our Saviour is the appointed one foretold by the prophets, the very Christ who walked the waves of Galilee, who fed the multitude, who came forth victor over death, and who now "sitteth on the right hand of God." The Holy Spirit, which is our guide, is "the Spirit of truth; whom the world cannot receive." It is the Comforter whom the Master promised should abide with us forever.

These stones shall also be a memorial that the dear faith of our fathers has been transfused by the living Christ, so that our religion is able, day by day, to sustain and strengthen, to help and heal us. These enduring stones bear witness that in our extremity we have found our God a very present help in time of need. Our Christ is not confined in his healing ministries to three short years of work in the narrow boundaries of Palestine, but in full accord with his explicit promise, here, now and forever, he heals the sick as well as the sinful. The Holy Spirit was the Comforter of the Early Church. Likewise it comforts us with the comfort for which our hearts have so much longed.

The Bible is our daily companion, a manual on right living in our homes, on the street, and in our business. Prayer, to us, is the divinely appointed means whereby the power of Almighty God is utilized to meet man's pressing needs, in accord with the Master's promise, "Whatsoever ye shall ask in prayer, believing, ye shall receive."

This fair structure, the symbol of Truth and Love, is to us a tender memorial that one of God's servants, by right thinking and true living, was pure enough to discover the Science of the Christ; that she was brave enough to withstand every machination which evil could devise, and to establish her discovery upon a rock-ribbed foundation, against which the gates of hell cannot prevail; that she was so wise and so loving, so long-suffering and so forgiving, that she became, through no will of her own, the Teacher and Leader of a church triumphant.

We do not forget from whence we have journeyed. We have been led out of the cruel bondage of Egypt into the

Digitized by Google

"glorious liberty of the children of God." We have been guided through the wilderness of human doubts and fears, and have won a home in the land of peace promised to our fathers. And now we turn in joy and gratitude to her whose steadfast loyalty to God has made her our beloved Leader all the toilsome way. All this, and far more, is to us the meaning of these stones. They shall be "a memorial unto the children of Israel forever."

We all know that the visible edifice is but the symbol of the invisible idea which it enshrines. This house has been built to the name of the Lord our God, because one of His faithful servants hath these many years been erecting to the Most High "a house not made with hands, eternal in the heavens." The foundation on which she has reared an enduring structure is the rock of Christ, "for other foundation can no man lay than that is laid, which is Jesus Christ." The structure of her spiritual temple is Truth and Love; and this divine Science, which she has discovered, founded, and wisely named Christian Science, affords innumerable and indisputable proofs of its value to mankind.

She has projected into human consciousness a clearer thought of the Divine power as available for present needs. She has awakened a sleeping race into a quickened sense of its inherent possibilities, and filled and thrilled mankind with an unquestionable longing for nobler thinking and holier living. This is the spiritual house our Leader hath builded for herself and is building in the hearts of humanity. Therefore hath this visible temple been built to the name of the Lord our God.

This house, which hath been builded in Mind and made manifest in enduring granite, we this day dedicate to the service of our God. Within and without, this sacred sanctuary is set apart to the worship of God and the service of man. Even the stately outlines of this churchly edifice argue that this is a Church of Christ, and its worshipers a Christian people.

These enduring walls and this lofty tower are eternal witnesses that the vital, healing ministry of the Founder of Christianity is again preached and practised on earth. "God is in the midst of her; she shall not be moved; God shall help her, and that right early." Its gates are open wide to all who come to worship God "in spirit and in truth." The utterance which is voiced within these walls is the gospel of glad tidings, as proclaimed by the great Master in declaring the purpose of his mission, "He hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord."

Those who gather here are judged by the Master's test, "By their fruits ye shall know them." They fervently pray that they may more fully heed the Saviour's specific command, "Heal the sick, cleanse the lepers, raise the dead, cast out demons."

The church we now dedicate to God is likewise the symbol of a life devoted to His service. A revered clergyman who often shared the hospitality of the parental home, and knew intimately the thought and character of Mary Baker, feelingly said of her, "She was sanctified before she had birth." To-day there are multitudes to bear glad testimony to the fact that her life has been one of perpetual dedication to Truth and Love.

As a resident of Concord for nearly five years, and for several months a member of her household, I know full well of this life of dedication. I know that with her, every waking hour of every day of every year is given to the worship of God and the service of man. In her calendar there are no days of respite from active duty. The dials of the timepieces at Pleasant View have no hours for leisure. There are days of unremitting toil, whose only rest is in the sustaining presence of divine Love. There are hours of holy prayer, but in the years that I have known our Leader there has not been given one single moment to idleness. The welfare of mankind and their highest good have been her constant care.

The temple at Jerusalem was David's gift to his followers. Said he, "Because I have set my affection to the house of my God, I have . . . of gold and silver . . . given the house of my God." It was also the privilege of the people to unite with their great Leader in embellishing this house of the Lord. How beautifully do the words of the sacred historian describe our own gladness in giving into this house, for we read, "Then the people rejoiced, for that they offered willingly, because with perfect heart they offered willingly to the Lord."

The members of this church are indeed grateful for those love tokens that have been so gladly given to our beloved Leader. It has also been their joy to unite with you in making to her liberal and willing offerings.

We can but be grateful also that our architect has builded in enduring granite so fitting a tabernacle to enshrine that pattern which has been shown us in the mount. We are also thankful that our Leader has had a builder whose fidelity and unceasing zeal has conducted this great enterprise to a successful conclusion. Nor are we forgetful at this eventful moment of the skilled workmen who wrought so well. It is said of the ancient temple that in its erection "there was neither hammer nor axe nor any tool of iron heard in the house, while it was in building." The harmony therein symbolized has been realized in this fair structure. The expert workmen who have builded here have labored as if they indeed loved their tasks. From the first foundation stone to the topmost finial they have given honest workmanship, and we render them the meed of praise which honest and skilful toil deserves.

Beloved brethren of First Church of Christ, Scientist, Concord, N. H., what a holy trust is confided to our keeping,—the stewardship of this precious gift, love's holy offering. As the word of the Lord came to Solomon, so comes it to us, "If thou wilt . . . keep all my commandments to walk in them, . . . I will dwell among the children of Israel, and will not forsake my people Israel."

It is written, "Ye are the temple of the living God," and again, "God . . . dwelleth not in temples made with hands." This, then, is God's temple, as Truth and Love abide in the hearts of the people. With God's help we accept the precious privilege and humbly turn to Him for strength and guidance. Divine Love has been with us in the past; we doubt not He will go with us and abide with us forever.

After the singing by the congregation of "Saw ye my Saviour?" came the principal event of the day, the Dedicatory Address of the Rev. Mary Baker G. Eddy. This was finely read by Bicknell Young of Chicago, a member of the Christian Science Board of Lectureship. It appears on page 739.

The following announcement from Mrs. Eddy was read at each service:—

"Not having the time to receive all the beloved ones who have so kindly come to the dedication of this church, I must not allow myself the pleasure of receiving any of them. I always try to be just, if not generous, and I cannot show my love for them in social ways without neglecting the sacred demands on my time and attention for labors which I think do them more good.

"Lovingly,

"M. B. G. Eddy."

At the close of the service the congregation was invited to make its exit from the church by the rear door, passing through the reading room and the room of our Leader.

The latter room had been fitted up expressly for Mrs.

Digitized by Google

Eddy when she should visit the church, and it was desired that she should be the first to occupy it. She was questioned about opening it to the public, however, whereupon she answered, "By all means let our helpers see my room and feel that my love for them is already in it." The scenes in and about the church were practically the same at all the four services. Eager crowds waited for admission to each, and the overflow at the day services waited patiently about the front entrance.

Mrs. Eddy had officially announced that she should not appear in the church during the dedicatory exercises, but it became known early in the day that she would pass the church at about half past two on her daily drive, and at that hour crowds of people gathered in front of the church, lined the sidewalks on State Street, and awaited her coming with eager expectancy. Mrs. Eddy passed up the street in her carriage, amid the ringing of a welcome by the church chimes and the silent greeting of the Scientists.

Mrs. Eddy was in plain view as she rode slowly up the street, the windows of the coupe in which she rode being uncurtained. She was attired mostly in white, and recognized the people by continued salutes and repeated and animated bows. After passing the church, she continued her usual ride about the streets of the city, and then went directly to Pleasant View without reappearing near the church.

The following letter was prepared by a committee appointed by First Church of Christ, Scientist, of Concord, N. H., and sent to Mrs. Eddy, and was read at the evening service:—

The Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Teacher and Leader:—We, the members of First Church of Christ, Scientist, in Concord, N. H., deeply grateful for your munificent gift, send to you our heartfelt thanks for all that has come to us through your life of devotion and sacrifice. Your wonderful dedicatory message, to which four large congregations have listened so attentively, was a fitting consummation of your generous bestowal and has renewedly inspired us to consecrate ourselves, and all we have, to God and to the Cause of Christian Science, of which you are the revered Leader and Teacher. Faithfully and lovingly yours,

REV. IRVING C. TOMLINSON,
MRS. JOSIAH E. DWIGHT,
MISS MABEL C. GAGE.
Committee.

During the day the splendid chimes of the church were played, the following hymns being rendered: "Old Hundred;" Communion hymn, "Saw ye my Saviour?" "Abide with Me;" "Just as I am, without one plea;" "Shepherd, show me how to go;" "I love to tell the story;" "O'er waiting harpstrings of the Mind;" "Oh, the clanging bells of time;" "Blest Christmas morn;" "In the sweet bye and bye;" "I'm a pilgrim and I'm a stranger."

The number of visitors who had previously arrived in the city was augmented during the day by hundreds who came on regular and special trains from Boston. Cordial invitations were extended to visiting Scientists, and generally accepted, to make use during the day of the Unitarian Church, the Memorial Parish Hall of the Episcopal Church, the Concord City Building, the Capital Fire Insurance Company's offices, the First National Bank, and the store of William A. Thompson. The University Club welcomed all university men and women.

From the early morning hours till late in the evening, the streets near the church were thronged with visitors who had come to participate in the blessings of the occasion, as well as to show their love and loyalty to their Cause and its Leader. Many commented upon the courtesy and hospitality shown on every hand by the townspeople.

The Corner-stone Laid.

THE Corner-stone of the new auditorium for the Mother Church in Boston was laid Saturday, July 16, at eight o'clock in the forenoon, and those who participated in this "simple, prayerful, devout" service, were much gratified that, in the orderly progress of the work, this ceremony became possible upon the birthday of Mrs. Eddy. In addition to the members of the Christian Science Board of Directors, who have the work directly in charge, there were present on this occasion, Mr. Alfred Farlow, President of the Mother Church; Prof. Hermann S. Hering, First Reader; Mrs. Ella E. Williams, Second Reader, and Mr. Charles Brigham and Mr. E. Noyes Whitcomb, respectively the architect and the builder of the new edifice.

The order of the services, which were conducted by the First Reader, was as follows:—

Scripture reading, Isaiah, 28 : 16, 17,—

"Therefore thus saith the Lord God, Behold, I lay in Zion for a foundation a stone, a tried stone, a precious corner-stone, a sure foundation: he that believeth shall not make haste.

"Judgment also will I lay to the line, and righteousness to the plummet: and the hail shall sweep away the refuge of lies, and the waters shall overflow the hiding place."

And also, 1 Peter, 2 : 1–6,—

"Wherefore laying aside all malice, and all guile, and hypocrisies, and envies, and all evil speakings,

"As newborn babes, desire the sincere milk of the word, that ye may grow thereby:

"If so be ye have tasted that the Lord is gracious.

"To whom coming, as unto a living stone, disallowed indeed of men, but chosen of God, and precious,

"Ye also, as lively stones, are built up a spiritual house, an holy priesthood, to offer up spiritual sacrifices, acceptable to God by Jesus Christ.

"Wherefore also it is contained in the Scriptures, Behold, I lay in Sion a chief corner-stone, elect, precious: and he that believeth on him shall not be confounded."

The reading of selections from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy,—

Page 241, lines 13 to 30;
136, " 1 to 5, 9 to 14;
137, " 16 to 5 next page;
583, " 12 to 19;
35, " 20 to 25.

This was followed by a few moments of silent prayer and the audible repetition of the Lord's Prayer with its spiritual interpretation, as given in the Christian Science text-book, after which the following extracts from Mrs. Eddy's writings were read:—

"Hitherto, I have observed that in proportion as this church has smiled on His 'little ones,' He has blessed her. Throughout my entire connection with the Mother Church, I have seen, that in the ratio of her love for others, hath His love been bestowed upon her; watering her waste places, and enlarging her borders.

"One thing I have greatly desired, and again earnestly request, namely: that Christian Scientists here, and elsewhere, pray daily for themselves; not verbally, nor on bended knee, but mentally, meekly, and importunately. When a hungry heart petitions the divine Father-Mother God for bread, it is not given a stone,—but more grace, obedience, and love. If this heart, humble and trustful, faithfully asks divine Love to feed it with the Bread of Heaven, health, holiness, it will be conformed to a fitness to receive the answer to its desire; then will flow into it the 'river of His pleasure,' the tributary of divine Love, and great growth in Christian Science will follow,—even that joy which finds one's own in another's good" (Miscellaneous Writings, p. 127, lines 15 to 2 next page.

"Beloved brethren, the love of our loving Lord was never

Digitized by Google

more manifest than in its stern condemnation of all error, wherever found. I counsel thee, rebuke and exhort one another. Love all Christian churches for the Gospel's sake; and be exceedingly glad that the churches are united in purpose, if not in method, to close the war between flesh and Spirit, and to fight the good fight till God's will be witnessed and done on earth as in heaven" (Christian Science *versus* Pantheism, p. 19, lines 6–15).

The corner-stone was then laid by the members of the Christian Science Board of Directors. It contained the following articles: The Holy Bible, "Science and Health with Key to the Scriptures," and all other published writings of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science; The Christian Science Hymnal; The Mother Church; the current numbers of *The Christian Science Journal, Christian Science Sentinel, Der Christian Science Herold,* and the *Christian Science Quarterly.*

The ceremony concluded with the repetition of "the scientific statement of being," from Science and Health, and the benediction, 2 Corinthians, 13 : 14: "The grace of the Lord Jesus Christ, and the love of God, and the communion of the Holy Ghost, be with you all. Amen."

What the Editors Say.

A Kindly Greeting.

The following note from Mrs. Eddy is proof of the spirit in which her splendid gift to the cause of religion is made. In the beautiful temple just completed and to be dedicated to-morrow, stand revealed her loving regard for Concord as well as her abiding faith in the endurance of the religion she has founded. The *Patriot* feels that in saying her gift and her words of kindly greeting are received by the good people of Concord in the spirit in which they are sent, it is but expressing what is in the mind of all.

Dear Editor:—When I removed from Boston in 1889 and came to Concord, N. H., it was that I might find retirement from many years of incessant labor for the Cause of Christian Science; and the opportunity in Concord's quiet to revise our text-book, Science and Health. Here let me add that, together with the retirement I so much coveted, I have also received from the leading people in this pleasant city all, and more than I anticipated. I love its people—love their scholarship, friendship, and granite character. I respect their religious beliefs; and thank their ancestors for helping to form mine. The movement of establishing in this city a church of our faith was then far from my purpose,—knowing that such an effort would involve a lessening of the retirement I so much desired. But the demand increased, and I consented, hoping thereby to give to many in this city a church home.

Mary B. G. Eddy.

Pleasant View, Concord, N. H., July 16, 1904.

Concord (N. H.) *Daily Patriot,* July 16.

Dedication.

From time immemorial the spot or the building upon which or wherein the public worship of the people has been conducted, has been held sacred. The feeling of reverence for such a place is as old as humanity, being one of its primal instincts.

The ancient heathen, the solemn Druids, the countless thousands who have worshiped in nature a God superior to nature, have seen and felt in the glorious forests and in the oak groves, a vision of uplifting strength and majestic beauty, and in a later age and more enlightened dispensation men have loved to copy in lofty temple of delicately carved stone the wondrous life of the trees, and fashion therefrom shrines more enduring, if not more beautiful, in which to meet each the other for a common end,—to worship and praise the Deity.

Just in so far as men have kept before them the truth, have their ideas been incorporated in their religious buildings. The height or depth or breadth of the religion of the people can be pretty accurately gauged by the works of their hands in the cause of that religion.

In olden times, when by slow processes the people reared and beautified their houses of worship, nave and transept, clerestory and dome, pillar and capital, down to the minutest detail was an object-lesson in itself, and revealed the spirit of the worker.

To-morrow will be dedicated to God in this city, through that form of ceremony observed by Christian Scientists, the beautiful temple which Mrs. Eddy has so generously given to Concord and to her people.

In order properly to memorialize the occasion and pay becoming tribute and respect to their revered Leader, thousands of Christian Scientists from all over the country will be with us.

Concord is pleased to see them come, and rejoices with them in the cause of their coming. Christian Scientists are ever welcome, but on this occasion they are doubly so.

Concord (N. H.) *Daily Patriot,* July 16.

A Splendid Gift.

There is completed to-day a splendid addition to the long list of fine public buildings for which the city of Concord, the Capital City of New Hampshire, is widely noted.

The edifice to be occupied by First Church of Christ, Scientist, of Concord, is without doubt the most beautiful structure of the kind in this state.

Perfectly planned, in reference to the prominent location it occupies and the reverent purpose it is to serve, its outward fitness was made complete when our own good Concord granite was chosen as the material for its embodiment.

The great task of its construction has been successfully accomplished in the comparatively brief time of a single year, and to-day the edifice stands ready for the simple yet impressive services of its dedication on the morrow.

The spiritual side of the occasion may then be considered. To-day we look upon the building as a building and love it for its grand beauty, its majestic simplicity.

We read above the central doorway of the church the inscription, "A Gift from Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, to First Church of Christ, Scientist, Concord, New Hampshire;" and as we read we return mental thanks to that wonderful woman for all she has done in the past for this, her city of Concord, and for this present gift, the culmination of her generosities.—*Concord* (N. H.) *Monitor,* July 16.

Mrs. Eddy and her Great Work.

The formal dedication of the new Christian Science temple at Concord, N. H., the gift of Mrs. Eddy, calls attention in a pointed way to this wonderful woman. No matter what one may believe about Christian Science, no person of intelligence can fail to realize that this woman is one of the most remarkable personages of the twentieth century.

Any personality which can command such a following as Mrs. Eddy has gathered under the banner of Christian Science, is certainly in a marked degree extraordinary. How has this wonderful woman succeeded in establishing so vigorous and so splendidly enthusiastic a body of religious workers? What is it that causes the Christian Scientists to devote themselves and their resources so unreservedly to the Cause? What new element has been injected into the religious life that produces such remarkable results? The skeptic may scoff at the idea that Mrs. Eddy has any supernatural powers, yet it cannot but be admitted that in the work she has accomplished and the power she exerts, she is easily the foremost woman of her generation. Where is there another woman who

Digitized by Google

can number among her devoted adherents so many earnest followers? It would be preposterous to believe that these hundreds of thousands of intelligent, and many of them educated, people were simply dupes.

Rather is it reasonable to believe that Mrs. Eddy has succeeded in presenting the eternal truths in a way that has attracted men and women to her. She is now the head of a great and growing church, whose members believe her to be inspired. Were she anything but what is claimed for her, her position would be appalling. Her responsibility must be tremendous, and the demands upon her so great, that life would be burdensome indeed, were she hypocritically attempting to play a part. Measured by its success, Christian Science must embody the living truth, and Mrs. Eddy, through her remarkable personality, as the head of this growing sect, has shown qualities of leadership which stamp her as one of the greatest characters of her age.—*Lawrence* (Mass.) *Telegram.*

THE NEW CHRISTIAN SCIENCE CHURCH.

The dedication of this noble addition to Concord's public buildings was made a notable occasion by Christian Scientists, who came here Sunday in large numbers to testify to their adherence to the faith of which the new edifice is a sanctuary, and to express their gratitude to the noble woman who has made this magnificent gift to her local co-religionists. The people of Concord, too, have shared in the felicitations of the occasion, finding in it another evidence of Mrs. Eddy's efforts for this, the city of her home, so touchingly expressed in her communication to the editor of this paper on Saturday. Dedicated with the benediction of her message of love, Mrs. Eddy's gift is now added to the enrichment of the spiritual equipment of our city, to be an alluring center of faith to many far beyond our borders for decades yet to come.

Concord (N. H.) *Monitor,* July 18.

VISITORS AND THE CITY.

Certainly our visitors saw the dear old town in one of its best moods, and under most favorable conditions.

The sun fairly beamed, and if at times he waxed over fervent, he found that he had to deal with people whose fervor was not less than his own.

And everything passed off happily, thanks to the patience of those who, coming from larger cities where there is every accommodation for great crowds, bore with our somewhat limited and cramped means.

To-day the city goes back to the ordinary routine, but it is safe to say that every such day as yesterday marks a step forward in our city's life and growth. If it does not, then there is somewhere among our tradespeople and citizens a strange lack of the spirit of enterprise and appreciation of opportunity.

Concord (N. H.) *Daily Patriot,* July 18.

The late convention of Christian Scientists must bring home to every candid mind the truth that the Christian Science movement is one of the most remarkable phenomena of the age. It is due largely to the decline of systematic theology, and it resembles some of the movements in the early Church, anterior to the age of scientific theology.

The Church Federation, Gardiner, Me.

The more frequently Concord receives thousands of Christian Science visitors, the more cordial and sincere is her welcome. They are the right kind of people.

Concord (N. H.) *Daily Patriot,* July 16.

Among the Churches.

Advance in Albert Lea, Minn.

For the past year and a half we have held our services in churches of other denominations, and as we felt the need of a home of our own we have rented a very pleasant room in Syndicate Block on Broadway, which has been tastefully fitted up, and with our new chapel organ we feel happy and grateful that this demonstration has been made. Our first Sunday service in our new room was held June 5. We have a reading room in connection which is kept open every afternoon except Sunday. Our strength lies not in numbers but in the desire to do right and to love one another and work together in harmony. As a church we owe to our Leader, Mrs. Eddy, our deepest gratitude and love for what she has done for us and for mankind.

HELEN MITCHELL, *Clerk.*

A New Church Edifice in Denison Ia.

On Friday afternoon, June 10, 1904, the members of First Church of Christ, Scientist, Denison, Ia., quietly assembled to lay the corner-stone for their new church building, which is being erected on the lot recently purchased on East Tremont Street. The exercises were simple but impressive, and consisted of the reading of a selection from the Bible by the First Reader of the church, followed by silent prayer and the oral repetition of the Lord's Prayer, after which the corner-stone was put in place. It is manifest that divine Love leads the way and that in Mind every human need is supplied. But a few months ago it seemed that there were no suitable quarters for our services to be had in the city, and there was no other way open than to erect a church building for our own, and surely Mind did lead the way, for to-day our forty-one members have raised enough money to purchase a lot and erect a frame building, the contract for which has been let, and it is to be completed by August 15, 1904. We feel the ever-presence of divine Love leading us to make this demonstration.

J. W. MILLER, JR., *Clerk.*

The Christian Science Lectures Appreciated.

WE have had several lectures delivered in this city by members of the Board of Lectureship, and all have been greatly enjoyed, not only by Christian Scientists but by the masses of the people. It is very apparent to the careful observer that every lecture delivered by the members of this Board has assisted in preparing the people to understand and appreciate Christian Science, and this is proven by the steadily increasing numbers that attend these lectures, together with the favorable comments we hear afterwards.

A day or two after our last lecture one of our citizens, not a Christian Scientist, assured the writer he enjoyed the lecture very much, and said he could listen to such a talk every day for a week and not get tired. Another gentleman, who, like the first, was not a Christian Scientist, stated in substance, it was his conviction that within a few years, perhaps ten, Christian Science would heal a thousand cases of sickness where it heals one case now, and added that Christian Scientists are daily learning how to apply Christian Science more perfectly. Several times since, others have remarked how much they enjoyed our last lecture. These favorable comments, together with the increasing interest manifested, give ground for satisfaction and encouragement.

Words fail to express the gratitude of Christian Scientists for the work our lectures are doing, and it is very apparent much good is thereby accomplished for our Cause.

GEORGE TOLMIE, Ogden, Utah.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Our Leader's Dedicatory Address.

THE dedication of the Church in Concord, our Leader's splendid gift to the Christian Scientists of her home city, is an accomplished fact, and this building will stand as an enduring testimonial to the re-establishment of spiritual healing as a practical, demonstrable, and necessary feature of our Master's complete and saving gospel; but more substantial, more enduring even than this granite pile is the Dedicatory Address which Mrs. Eddy prepared for the occasion. It is one of the greatest of our Leader's writings, and it cannot help but produce a marked effect upon the religious thought of the day, even as her book, Science and Health, has leavened the world's theology and changed its views about medicine. Its tendency is to turn the thought of those who heard it away from the sordid selfishness of materiality to the infinite possibilities of the Christ-life. Its profound Christianity, its appeal for justice, righteousness, and God-like living, commend it to all.

Christian Scientists see all this in Mrs. Eddy's words, and because they have tested the efficacy of her teachings, and because they know of her consecrated life, they are followers in that Cause of which she is the Leader. They appreciate the fact that this address has cost her labor, at a very busy time, that this labor has been freely given that they might receive the blessing in store for all those who have caught even a glimpse of Christ's kingdom. They have learned that she does not spare herself, but lovingly and unselfishly takes up any additional burden, no matter what the sacrifice.

Simply to say that we appreciate this address is not sufficient return to our beloved Leader for what she has given us. The only adequate return we can make for this great gift is to be Christian Scientists in fact as well as in name. Her standard is expressed in the following words which we quote from the address,—

"To live so as to keep human consciousness in constant relation with the divine, the spiritual and eternal, is to individualize infinite power,—and this is Christian Science."

M.

Regarding a Recent By-law.

THE following editorial comment in the *Troy* (N. Y.) *Press* is a timely and proper rebuke, not only to those newspapers which have commented upon the recently published By-law, in the manner indicated, but also to those persons whose conduct in the past has made such a By-law necessary. The editorial is to the point, and the writer of it has our thanks.

"A great many of our contemporaries have discussed Mrs. Eddy's very reasonable request, and almost invariably in a would-be humorous and derisive vein. The matter of gallantry, decency, and courtesy involved seems to have been entirely overlooked in a silly attempt to heap ridicule upon this venerable woman.

"Mrs. Eddy is in the eighties, and has for years been accustomed to take a ride every afternoon. To have her route habitually lined with curiosity-seekers, trying to get 'a good look' at her, and making rude remarks which are often overheard, is an exhibition of vulgarity which must be trying to any well-ordered mind. Whether her religion is founded upon folly or wisdom, she has a right to it in this free country, and no one has the right to persecute her upon this account. The fame of Mrs. Eddy is so great that countless thousands are anxious to see her, no less among her opponents than her own followers, and the effort to do so has degenerated into a daily nuisance. It would appear as though about everybody who visited Concord has made it a business to try to get a glimpse of the author of Science and Health before leaving that beautiful town.

"Mrs. Eddy, therefore, makes a mandate for her followers to abstain from this impertinence. She has no authority over others, and can only appeal to their manliness and womanliness—to the respect due her sex. While there may be those who are insensible to all claims of gallantry and politeness, we feel sure that ladies and gentlemen of every sect, and of no sect, will be conspicuous only by their absence from the ignorant and vulgar people who may still persist in haunting the route of Mrs. Eddy's carriage in the effort to see its owner."

M.

Symbol and Substance.

IN its dignity, its chasteness, and the uniqueness of its form as well as of the end it subserves, a beautiful church is the highest symbol of the temple "not made with hands,"—a consciousness which is the place of the Divine indwelling.

Everywhere to-day the gifts of devoted hearts, framed and fashioned together into noble structures, are being dedicated with thanksgiving to the service of God. These are worthy deeds, and it is ours to rejoice that Christian Science churches are thus multiplying. The real gain of all our giving, however, lies in the growth of the temple within, whose fair towers rise only as we awaken to Truth and Love.

The root meaning of the word dedicate, is to affirm, or knowingly declare, and it is interesting to find that in a moment of exalted realization the Psalmist has clearly expressed this nobler thought. "What," inquires he, "shall I render unto the Lord for all his benefits toward me?" and then, from the heights of spiritual apprehension, there comes this wondrous answer: "I will take the cup of salvation, and call upon the name of the Lord." He is moved to give to God, and immediately his consciousness is pervaded with a sense of enrichment and of rejoicing. This is the reward of understanding, the harvesting of spiritual aspiration, that the impulses of gratitude and consecration open for us the storehouse of heaven; the Divine fulness is manifest until Paul's earnest hope and expectation is realized, and we are "enriched in everything to all bountifulness."

Our gold and our silver, our goodly stones and hewn timbers, our "Sabbaths and solemn meetings,"—of all these God hath no need, and vain indeed are such oblations if they are accounted more than human symbols of a Divine manifestation in us. The only thing we can give to God is our unreserved and abiding consent that He do for us "exceeding abundantly above all that we ask or think," that He may be glorified in us, as in His Son, our Lord.

Slowly but surely we are learning this in Christian Science, that every Christian aspiration and activity, every virtue and every grace, finds its substance and consummation in the reflection of divine Love. We can give to God, only as the flowers give to the sun.

W.

True Appreciation.

IN the intervals between the recent dedication services, there were many joyous meetings of old friends who had come from all over the land to share with our dear brethren in Concord the blessings of the occasion, and how gladly did they express their appreciation of the words of truth to which they had listened. But this was not all; as they looked upon the stately and beautiful new edifice, the hearts of many turned instinctively to their own home churches, for they could but know that by the building and dedication of this church they will be enriched and uplifted to the extent of their mental participation in it, and yet more, by the wonderful address of our Leader, which sounds the depths of human consciousness and urges forward all lagging footsteps.

In the calm atmosphere of that holy place and hour, it was not difficult to feel the reality of the spiritual, and the transitory nature of the material. Some one has sagely said, however, that feelings are not scientific instruments by which to measure our progress, and Christian Science also shows us very clearly that only by actual attainments in the overcoming of sin and sickness can we know how far we have climbed out of the "horrible pit" and the "miry clay."

It is nevertheless true that the experience of last Sunday should have a permanent place in memory. A profound thinker says, "The virtue of a mood depends by no means upon its continuance; and its absence, which leaves the mind free to contemplate it, may work even more good than its immediate presence." Thus surely will the remembrance of this dedication accompany all who heard it, as they go out into the paths of their daily duty. Should material sense ever seem to cloud our sky, we will recall that uplifting hour and the quickening words which revealed to us anew "the things that be of God."

In our gratitude for this experience, and for our Leader's words, we will strive to understand more fully the steps by which she has climbed, and her assurance of the perfect safety of those who are willing to "lay aside every weight," and, like her, press forward to the heights of Spirit. K.

Letters and Telegrams to Our Leader.

WE are pleased that our Leader has given us permission to publish the following letters and telegrams which are but a few of the many she received upon the occasion of the dedication of the church edifice, her gift to the Church in Concord.

Precious Leader:—I have just read your dedicatory message to the Concord church. The richness of its blessed truth shines like rarest jewels. The inspiration of its burden of tender love stirred my heart to deeper consecration and holier aspiration. It seems to compass the Science and theology of Christianity. My heart thanks you, precious one, and my life must prove the heart's gratitude. Especially do I thank you for your most satisfactory answer to the question on "hell." It brought to my thought a clearer sense of the importance and necessity of obedience to God's commands. May divine Love crown you with the royal diadem of victory, and may the quickening of this word in us to higher, spiritual issues bring to your loving heart the reward of joy and comfort so justly merited.

As ever your loving student,

LAURA E. SARGENT.

July 18, 1904.

Baltimore, Md., July 11, 1904.

Dear Leader:—I now expect to attend the dedicatory service of the Christian Science Church in Concord next Sunday. Can I serve you in any way?

It may perhaps interest you to know that at the recent intercollegiate boat race between Yale and Harvard, at New London, my nephew, Walter S. Cross, was captain. Three years ago his eyes were in such a terrible condition that it seemed he must give up his college course, but I persuaded him to try Christian Science treatment, as the best oculists in Boston had pronounced his case incurable, and he was perfectly healed.

With dearest love,

ELLEN.

[Telegram.]

Kansas City, Mo., July 16, 1904.

To Rev. Mary Baker Eddy.

Beloved Leader and Teacher:—"Alleluia: for the Lord God omnipotent reigneth." Let us be glad and rejoice and give honor to Him. We are grateful to you for your By-laws, which have hedged about the Church of Christ, Scientist, that it may be presented to the Father-Mother God, holy and without blemish, a glorious church. Your obedience to God and your loving labor in our behalf are appreciated more and more as time goes on. Second Church of Christ, Scientist, Kansas City, joins me in loving greeting to you and grateful acknowledgment for benefits received through your teachings. We trust that the electrolier sent by our dear members for your room in the new church will always bespeak our loving gratitude.

Your loving and grateful student,

AMANDA J. BAIRD.

[Telegram.]

Warsaw, Ind., July 16, 1904.

To Rev. Mary Baker G. Eddy, Concord, N. H.

The undersigned, one family of Christian Scientists, all from the Jewish faith, unite in sending their love and congratulations to you and the Scientists in Concord, upon this, the dedication day of the Concord Church. Through Christian Science you have revealed the heavenly manna, the pearl of great price, the truth which makes men free, the possibility of a universal brotherhood. Your spiritual interpretation of the Scripture reconciles Jew and Gentile to religious amalgamation, maintaining one God, one Life, one Truth, one Love. For your patient, loving efforts in our behalf, we owe you immeasurable gratitude. May God send His choicest blessings upon you.

[Telegram.]

New Orleans, La., July 10, 1904.

To Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Beloved Leader:—The congregation assembled at this church to-day send you greetings and love for the revelation of the communion with God which heals the sick and is doing so much for mankind, and they pray that they may ever be found obedient to your spiritual call symbolized by your late gift to the Mother Church.

SECOND CHURCH OF CHRIST, SCIENTIST, New Orleans, La.

Toronto, July 15, 1904.

Rev. Mary B. G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—For many years I have looked forward with pleasant anticipation to the time when a church would be ready for dedication in Concord, N. H., and to-day I hail with gladness the announcement. I look upon this church as a most valuable symbol, and I deeply regret that it will not be my privilege to participate in the dedicatory service. Circumstances seem to require me at home at present, and I am endeavoring to know that

Digitized by Google

I cannot suffer loss, inasmuch as I am doing my duty here for those who seem to need my help. But I assure you, dear Leader, I shall be present with you in the spirit of rejoicing for this added proof of the triumph of Spirit. We can have but a faint conception of what it means to you, who have stood a faithful sentinel all these years, working for what we to-day are seeing accomplished.

With much love, I am, yours in Christ,

ISABELLA M. STEWART.

Rock Island, Ill., July 10, 1904.

To our beloved Leader.

As a token of love for you, and an acknowledgment of the blessing you have brought to us through the discovery of Christian Science, and your ceaseless vigils and labors to preserve it to the world, we, the children of the Sunday School of First Church of Christ, Scientist, Rock Island, enclose herewith a draft for fifty dollars which we would be glad to have used to supply flowers for the dedicatory service in your dear church in Concord, Sunday, July 17.

With loving greeting,

LOUIS KOHN, *Superintendent of Sunday School.*

New Paynesville, Minn., July 12, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—The power of divine Principle, Life, set forth in "Science and Health with Key to the Scriptures" by you, was demonstrated for us by Mrs. Mary Gibson, and this saved Carl's life.

On July 5, 1900, while playing with fire crackers, his clothing caught fire, and two thirds of his body from his waist up to his nostrils, was burned beyond medical aid. This we did not seek, however, but by striving to know the truth, he is to-day well, sound in mind and body, and able to understand the promise, "He shall cover thee with His feathers, and under His wings shalt thou trust." The whole surface has been completely covered with new skin, without suffering, and by entire dependence on the Truth of being.

In May he received the dollar given for standing highest in his grade in school, and at once decided to send it to Mrs. Eddy's church. Said he, "She helped me to build my new structure."

This is a case where I can only say of God's wonderful love and care and of my dear practitioner's patience and love, the half can never be told.

Sincerely,

M. C. VAN VORST.

Denver, Col., July 15, 1904.

Reverend Mary Baker Eddy,

Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—To-day we are the guests of our sisters, Mrs. Perry and Miss Hall, and our desire is unanimous to send you a few words of greeting. We are seeking to be of one Mind, uniting in brotherly love at the foot of the cross to aid in enlarging the Mother Church edifice, doing whatever work for the Cause of Christian Science that you, under divine leading, shall direct.

We note Psalm 61 : 6, 7, 8. We, your students, can bear testimony to your self-sacrificing life and patient teaching, which for nineteen years has led each of us in the path of Christ. We thank you for calling one of our number to your home, knowing that a blessing to one of us is a blessing to us all as we are one in Truth.

We shall not be present at the dedication of First Church of Christ, Scientist, of Concord, N. H., on July 17, but our tender love is with you, rejoicing in this beautiful demonstration in stone, "The structure of Truth and Love" (Science and Health, p. 583). "From the least unto the greatest" these church homes are dear to our hearts. This is especially true of the Concord home which your eyes and thought can rest upon in thanksgiving and pleasant remembrance. We have recently moved into our beautiful new church edifice, under the roof of which we expect fully to realize the unity and peace of brotherly kindness promised us as co-workers in His vineyard, through obedience to our Church Manual.

From the small meetings held at Mrs. Hall's home in 1885, which were conducted in obedience to your directions, our church has advanced to the largest and most beautiful church building in our city. We were told by the trustees that twenty-five hundred persons attended our first service, one thousand being turned away.

Each one of us is busy laboring from early to late for this beautiful Cause. We are yours to command whenever and wherever you need us.

In loving gratitude, your faithful and loyal students,

JOHN C. RYAN, C.S.B.
MRS. J. C. RYAN, C.S.B.
MRS. AMANDA L. WILLOUGHBY, C.S.D.
W. H. H. BENFORD. C.S.B.
MRS. SARAH E. BENFORD, C.S.B.
MRS. MARY H. COLLINS, C.S.D.
MRS. MARY P. NICHOLS, C.S.D.
M. NETTIE HALL, C.S.D.
MINNIE B. HALL PERRY, C.S.D.
MRS. ELNORA B. TROSTLER, C.S.B.
GEO. B. WICKERSHAM, C.S.D.

Orange, N. J., July 9, 1904.

Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader:—First Church of Christ, Scientist, in Orange, N. J., lovingly begs permission to tender you the accompanying remittance, one hundred and fifty dollars, through the hands of your loyal student, Miss Nemi Robertson, C.S.D., who was our first First Reader. We hope it may give you pleasure to accept this love-offering and to devote it to some service for First Church of Christ, Scientist, in Concord, N. H., now about to enter its new edifice erected through your generosity.

Our church and congregation joyfully seize the opportunity to offer this slight token of our love and gratitude to you for the priceless gift bestowed upon us in your God-inspired volume, "Science and Health with Key to the Scriptures," and your other writings, and in your Christian labors.

Obeying the great Teacher, who meekly "endured such contradiction of sinners against himself," you have patiently and bravely borne for the welfare of men the burdens of "the world's hatred of Truth and Love" (Science and Health, p. 50). In a sublime consecration to your Divine mission, alone and by mortals unfriended, you have voiced the message of divine Love, declaring to mankind "the unknown God," who forgiveth all our iniquities; who healeth all our diseases. For this, your self-immolative love toward the human race, our thankful hearts rise up and call you blessed.

Our first outburst of gratitude for physical healing was like the joy of sunshine after the deluge, and with the "bow in the cloud," as a perpetual token that God-given health shall never be destroyed by any flood of error. When this was succeeded by a precious sense of "God's forgiveness of sin in the destruction of sin" (Science and Health, p. 497), and the full glory of the saving truth you have revealed, with its infinite possibilities, began to dawn in our hearts they were stirred to larger gratitude and a higher appreciation of your incalculable service to men in discovering this truth and bringing us this gospel.

We acknowledge a special debt of love because after discovering for mankind, and pointing out to us the footsteps of our Master, the great Wayshower, you have with heaven-taught wisdom provided the rules required for the safe guidance of your church, taking us by the hand

Digitized by Google

and leading us on our way past many dangers not foreseen by us, but clear to your illumined vision.

If our obedience has sometimes seemed to the human sense to involve temporary sacrifice, the results of that obedience have shown us the need of your gentle counsels, and have taught us to trust and revere the love and wisdom that ever inspire them.

As you have thus "held uncomplaining guard" (Science and Health, p. 48) over your dear Mother Church and its branches, from your solitary watch-tower, your demonstrations of love are daily reminders to us that "he that keepeth Israel shall neither slumber nor sleep."

With assurances of tender love and glad loyalty.

By order of the Trustees,

THEO. D. WARREN, *President.*

[We are privileged to read this loving letter to our dear Leader, and rejoice with her in the good it expresses.—EDS.]

Atlanta, Ga., July 11, 1904.

Rev. Mary B. G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader:—With a heart overflowing with love and gratitude to God and to you, dear Leader, for the manifold blessings I have received through the study of "Science and Health with Key to the Scriptures," I wish to make grateful acknowledgment. Thirteen years ago your work, Science and Health, was put into my hands by our family physician, who said, "Well, here is a *new* remedy. I've brought you this book to read." Eagerly did I take the book, read it, and was healed of many ailments,—chronic constipation, insomnia, dyspepsia, neuralgia headaches,—and not only was I healed, but my three-months-old baby, who had not seen a well day since her birth, was healed. Words can never express the love and gratitude I have for you for this revelation of Immanuel, or God with us. Each day I try to follow, in loving obedience, the way mapped out by you for us; and so to live that deeds, not words, may attest my discipleship and thus prove, dear Leader, these words, found on page 85 of our Church Manual: "Healing the sick and sinner with truth, demonstrates what we affirm of Christian Science, and nothing can substitute this demonstration."

How glad I am to tell you that after several years of stubborn resistance to Truth, the physician who gave me Science and Health became a devoted student of the book, and both he and his wife took class instructions of our dear teacher.

Under the supremacy of Spirit, sickness is healed, and sin and sorrow destroyed. In place of doubt and fear, is calm trustfulness. For all these blessings, my heart overflows with deepest love and gratitude to God, and to you our dear Leader; and may I ever be found worthy to be called a Christian Scientist, your faithful follower. With deepest love and reverence.

Your student's student,

ANNETTE DOWNS.

[The letter from abroad which follows will appeal to all loyal Christian Scientists, as it echoes the thoughts which so many feel for our revered Leader, and which the writer has so opportunely expressed.—EDS.]

Mrs. Mary Baker G. Eddy.

Dearest Leader:—Will you give me the great pleasure of writing to you, not to tell you that I exist, but to thank you for your watchfulness, and steadfastness, and that you were "ready" when the Son of Man came to you. It is so easy for us, your followers, to walk where you point the way, even though the stones bruise our feet, for we are like Thomas, we have your proofs, but you are blessed indeed, because when you had not yet seen, you believed.

I am writing this for the same reason that I pray, "Not to enlighten the Infinite," but to help me understand God.

This letter helps me to understand "our Leader," for as I appreciate her watchfulness I will watch with her, as I comprehend her steadfastness I shall be obedient to the law that governs her, and as I discern her love for her fellow-man, I shall be able to reflect the Christ love in my daily life. While this renewing of my mind is going on, I am trying to come into a closer communion with God, and to depend upon His guidance, but lest I mistake the voice, I shall verify my understanding, by the advice you give to your students and followers.

Yours in sincerest love and obedience,

MRS. LISABETH E. A. PARKER.

Paris, France, July 2, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader, Teacher, and Friend:—We, the members of First Church of Christ, Scientist, Providence, Rhode Island, in annual meeting assembled, desire, from overflowing hearts, to send you a message expressing, if possible, the love, loyalty, and appreciation we feel toward you, for all the manifold blessings and rich experiences that have been ours.

We can truthfully say that we owe to you our health, our hope of heaven, and our very lives. How shall we undertake to pay this our debt of gratitude? Can any service or sacrifice be too great? If we, as Christian Scientists, know but feebly what it has cost you to bring to humanity this heaven-born gift, how ignorant must be the world; but universal recognition, though tardy, will surely come, and the Discoverer and Founder of Christian Science will take her rightful place in human hearts.

We can only say, that for the coming year we will strive harder, work more faithfully, and love more unselfishly and wisely, and in this way try to show our genuine appreciation of your unselfish and heaven-blest labor in our behalf.

May God tenderly guard you, His faithful sentinel.

KITTIE B. WALSH, *Clerk.*

[Written for the *Sentinel.*]

Love's Ministry.

MARY J. ELMENDORF.

THE hand of Love supernal rolls the heavy stone away
That marked my sepulchre and, leading forth into the day,
Bares to the sabres of His sun my shadowy bonds of clay.

Love's blessing is as sweet as meadow-fragrance after rain;
Love's voice is harmony; golden His touch, surcease to pain,
His Presence o'er me streams as moonlight o'er the quiet plain.

Calm as the Morning Star, above the seething mists of sin,
Love's high watch-tower stands; through toil, its mighty view I win.
And lo! my burdens fade, and exaltation mounts within.

Love makes my swift feet chamois-firm to tread His paths along;
Love gives mine eyes the eagle's vision, unafraid and strong;
Love takes the tears from out my heart, and breathes therein a song.

Love bids me glance not downward toward the wastes of slavery,
But upward where refreshing waters promise ecstasy,—
The heights whence lie unrolled green vistas of Eternity.

Love onward—homeward!—calls, where I shall earn my rightful place
Amid the lilies white of everlasting peace and grace,
And find the Saviour waiting with the sunrise in his face;

The sunrise of that Resurrection Morning when, before
The might of Truth, death's potency was lost forevermore,
And Love resplendent stood revealed,—Immortal Conqueror!

The Lectures.

Belfast, Ireland.

The Christian Scientists of Belfast, Ireland, have been very greatly encouraged by the success of the lecture delivered by Judge Septimus J. Hanna on May 5. They had taken for the purpose one of the largest halls in the city. There were about one thousand persons present, and the audience, which was a very attentive one, was largely drawn from the more intellectual and refined class. The lecturer was introduced by Mr. Mann Harbison, a venerable elder of the Presbyterian Church, who performed his task in the kindliest spirit, and though he had been specially requested not to give a vote of thanks, he was so carried away by the lecture, that he rose at the close and said that he simply must thank Judge Hanna for coming so many hundreds of miles to give such a beautiful discourse.

The lecture has done much good and brought many interested enquirers to the rooms and service, and we are truly grateful for the great blessing these lectures always bring.

Correspondence.

Lewiston, Me.

That interest in Christian Science is growing more and more general may be judged from the increasing attendance at lectures upon this subject given from year to year.

This season W. D. McCrackan of New York was secured to speak at the Empire, Sunday afternoon [May 22]. The response on the part of the public was unexpectedly large.

Mr. R. F. Gordon of the Auburn Church made a brief introductory speech. He announced this as the sixth annual lecture in these cities. He alluded to the vital interest to-day in the discovery of Christian Science, and continued:—

That the authority and jurisdiction of the truth and its adaptability to every human need is not confined to the future, the far-off, but embraces the present, here and now, was made manifest in the life and work of the Galilean prophet, who taught this truth by precept and by demonstration, saving the sinner from his love of sin, cleansing the leper from his leprosy, and raising the dead; thus proving that his religion healed the sick man as well as the sinner.

Through her abiding faith in God, her ceaseless labor of love, and her self-sacrifice, Mary Baker G. Eddy has discovered this same Divine law and its rules of application that reclaims the infidel and heals the sick, that makes a man a more loving neighbor and a better citizen.

Lewiston Journal.

Edinburgh, Scotland.

On Saturday, May 21, a lecture on Christian Science was delivered by Judge Septimus J. Hanna, in the Music Hall, Edinburgh. There was a large audience. The lecturer was introduced by Mr. C. W. I. Tennant, Second Reader of First Church of Christ, Scientist, Edinburgh. Mr. Tennant said in part,—

The question, "What is Christian Science?" is being asked to-day on all sides. It is to answer, in part, this question that the lecturer has accepted the invitation of First Church of Christ, Scientist, Edinburgh, to come and deliver a lecture to you this afternoon on the subject.

As to the beneficial effects of a slight understanding of Christian Science, I can say that I owe my presence on this platform to-day, to its healing efficacy. A little over four years ago I was pronounced by the medical faculty to be suffering from an incurable disease; I then heard of Christian Science, and through the fuller knowledge I gained of God and man from the study of the Christian Science textbook, together with the Bible, perfect health has been restored to me, as well as great happiness and peace of mind These conditions are being eagerly sought after by the world, and are being found by many thousands of weary sufferers all over the globe, in Christian Science.

I have much pleasure in introducing to you Judge Septimus J. Hanna, and I trust you will give him an attentive and patient hearing.

The lecture which followed can best be summed up by the word "Satisfying." Nothing could have been more lucid, logical, and convincing than the presentation of the subject by Judge Hanna. The audience followed every word with the deepest attention, and when, from time to time, the lecturer laid some momentous question before his hearers, the silence was profound. The impression given by the attitude of the audience was that they felt his arguments to be unanswerable, and many remained seated in deep thought after the conclusion of the lecture. A criticism which was freely expressed amongst those present was indeed the highest of compliments. Although the Judge spoke for nearly one hour and twenty minutes, many were heard to exclaim, "Why was it so short?" A number of clergymen were noticed among the audience. One of these, when appealed to for his opinion at the close of the lecture, replied, "Well, it certainly is Scriptural." Another, an Episcopal clergyman, preached a sermon in favor of Christian Science on the following day.

Time alone can reveal all that has been accomplished by Judge Hanna's lecture tour in the British Isles; but there is already abundant evidence that it marks an era in the history of the Cause.—*Correspondence.*

Florence, Col.

The Christian Scientists of Florence, Col., feel deeply grateful for the lecture by Judge William G. Ewing on the evening of May 9. The Opera House was well filled with a splendid audience representing our most intelligent and earnest citizens. Judge Ewing was introduced by Hon. Lee Champion, a lawyer of our city, who said in part:—

The ultimate of all religious teaching, religious thought, and religious endeavor must be the attainment or approximation of some high ideal. A correct moral life is, and always has been, the ultimate of all the creeds. That this is true we fancy will not be questioned; for we are taught to-day, and history records, that mankind has for ages past been taught that man must approximate some perfect ideal, or he will be punished; when he succeeds in so doing the reward of eternal life—eternal happiness and eternal joy—follows.

We do not feel that it makes any difference whether a belief is born in the glow of nineteenth-century intelligence, or whether you may trace its lineage in direct descent to the immediate followers of the Nazarene; whether a belief is covered with the dust of ages or whether it shines new, polished with the thought of modern times; whatever may be the case, the correct criterion is the results obtained; and if in their daily life the members of any religious creed shall follow faithfully the things which they believe; shall color their life with the merits of their creed; shall by their acts and doings influence neighborhoods and communities for good; then I say that belief is answering the purposes of its creation and existence, and certainly merits the approval of all persons.

I have observed that Christian Scientists are constant in their endeavor to respond to the duties of their belief, and that they strive to enunciate that great doctrine of the Nazarene, "All things whatsoever ye would that men should do to you, do ye even so to them."—*Correspondence.*

When man lives with God, his voice should be as sweet as the murmur of the brook and the rustle of the corn.

Testimonies of Healing.

I would like to give my testimony to the Field, telling briefly what Christian Science has done for me. A dear relative, a young Scientist, had often told me that I could be helped in Christian Science, and as I was in great need of help, she did for me what she could in the way of sending me the literature, and when visiting me would read to me out of Science and Health, but it did not seem that I was ready. The reading matter was stored away without being looked at, and the teachings of Science and Health, I could not then understand; in fact, I was not interested, and would rather not be bothered, but I constantly felt miserable, and had been looked upon as an invalid since a little girl. Our home life was discordant, and I, the mother, sick in bed most of the time. Friends and neighbors would come in to sympathize, telling me that this was God's way to draw me to Him, but I could not believe this possible, for I was so unhappy. How I longed for help and light to be given me, yet I would not look in the right direction for it; but the time came when I was compelled to lay down all stubbornness and self-righteousness, and become as a little child.—willing to listen and obey.

It was three years ago that I accepted Christian Science. For three weeks I had lain in bed suffering from what the doctor called inflammation of the stomach. I had not slept or eaten any food for several days, and was delirious part of the time. My arms were sore from the injections of morphine, for the pains were so severe at times that I could not stand them. I certainly was a very sick woman. All about me was fear and confusion, and I felt I was sinking into unconsciousness. My sister has since told me that when the doctor said, "I can do no more for her," and the rumor was spreading in the neighborhood that I was dead, this young lady relative came, saying that she had felt all the evening she should come to me. She came from the South Side of Chicago, and as we lived on the West Side, it was a long way, but something kept telling her we were in need of help, and so she came. When she saw how things were she asked, "Do you want Christian Science help now?" The family answered, "Yes;" and she then started for Oak Park to see a practitioner who was willing to take the case. They talked it over and thought it best to give the first treatment right there at the practitioner's home, as there was so much confusion here with people coming and going; she would then come and see me in the morning. Meanwhile my friend came back and sat by my bedside all night.

When I opened my eyes and saw her sitting there it was morning and everything was still. Her copy of Science and Health lay in her lap; she smiled and said to me, "You are better;" then she told me all that had happened in the evening, and that the lady she had seen would soon be with us. She came at six o'clock. I shall never forget the happy, peaceful look in her face, and when I asked her, "Can you make me well?" she answered, "No; but God can." I told her I was very hungry, that they had not dared to give me anything to eat. The doctor had ordered that I must not eat solid food. She said, "You can have anything you want," and I did have it. While she fed me, I was drinking in the spiritual. I asked for the Bible. I wanted the *Christian Science Journals* that I had put away. I loved to listen to the reading of Science and Health, as the healing power of Truth was poured in on dreams of sense. It was like the sun breaking through the clouds; and what a wonderful change was taking place! The whole family felt it. In a few days I was up and out doors for a long walk, perfectly well and happy. I cannot be grateful enough for this wonderful healing and for many other beautiful demonstrations we have had since coming into the understanding of the power of Truth over error.

I am thankful to God and to our dear Leader who has braved so much for us, and to my helper who was so patient and kind. Since that time many of my family have come into Christian Science, and Science and Health can be found in all their homes. We are indeed happy and grateful for all these blessings.—Mrs. Anna E. Hanson, Chicago, Ill.

I give the following testimony with a heart full of gratitude to God, to our beloved Leader, and to the one who, thirteen years ago, came to me in an hour of great suffering and despair, and said these words to me, "I want to tell you that Christian Science can heal you. Four years ago it healed me of consumption in its last stages."

From childhood I had been regarded as a very delicate child. Four eminent physicians had pronounced my case incurable. The lady who first told me of Christian Science loaned me Science and Health, and after I had read a few pages, an indescribable peace came to me, and I felt very happy in the thought that there was one on earth who could tell me all I had longed to know about God, ever since I was a tiny child. My friend asked for the book before I had read it half through; but while reading Science and Health I was much improved physically, and to the amazement of myself and family, ate without suffering, articles of food which one physician had said would cause spasms. About nine months after I heard of Christian Science, I said to our family physician, "If you cannot cure me, I am going to have Christian Science treatment." He looked very much shocked, and said, "Well, if you do, in six months' time you will be in your grave; for the Christian Scientist will tell you to eat anything you want, and you cannot properly digest even liquid food."

A few weeks after this conversation, I asked for Christian Science treatment from the lady who first told me I could be healed. She gave me one absent treatment, and when she called to see me in the evening, I met her with these words, "I feel well and strong; and it is the first time that I can remember being free from pain." In a short time I bought a copy of Science and Health, and made a close study of the chapter on "Christian Science Practice." My heart was filled with a great longing to understand the teaching sufficiently to help others. I applied the truth as taught in that chapter, without a doubt of its healing power, and saw in the cases of others, consumption, pneumonia, erysipelas, and many other diseases, disappear like dew before the sun. I made a daily study of the Bible and Science and Health, and after working up to my highest understanding, I then applied to one of our Leader's students for class instruction. This equipped me to work with more understanding. By clinging to Truth in moments of temptation, I overcome a little more each day of that which is unlike divine Love.

E. M. V. T., Washington, D. C.

[Translation.]

In grateful acknowledgment of the benefit which I have received through Christian Science, I give my testimony. It is now five years since I first heard its name mentioned. I was at that time in a hopeless condition. I suffered with recurring epileptic attacks which were followed by mental derangement, lasting from eight to ten days. It made my life a burden, and I was constantly harboring thoughts of suicide. Medical prescriptions as well as the application of a so-called radical or secret remedy proved unavailing. Consequently I was exempt from my military duties. According to the opinion of experts, the cause of my illness could be attributed to my childhood growth, and it was said that it would in time disappear.

That was the only comfort given in answer to my gloomy inquiries. Christian Science soon discovered the real cause of the disease; namely, immoral habits, and it immediately began to destroy the cause. The error resisted with all its force,—prejudice, doubt, unbelief, contempt, and pride; con-

Digitized by Google

sequently the attacks grew worse, so that it seemed for a time as if I was without hope and without God in the world. However, error gradually had to yield, the attacks grew less, and after two months disappeared, without ever returning.

I then considered the physical healing the principal blessing of Christian Science, and believed that now all was done, but this was a mistake. The all-important thing; namely, the spiritual regeneration, demanded all my ability to destroy the false consciousness of being; a task which gave me and those nearest me many a battle to fight, yet Truth was always the conqueror and I sincerely hope will ever be until the last fault has disappeared from my consciousness.

As I now look back upon the past and see with what unfavorable conditions my practitioner had to deal, how many false, deep-seated, old customs and hereditary defects had to be destroyed, I am filled with sincere gratitude, and I believe that by faithful, constant overcoming and obedience, I can best express my gratitude.

It is my daily prayer to imbibe more of the Mind "which was also in Christ Jesus," and which at the present time is interpreted through Christian Science as taught by our inspired Leader, Mrs. Eddy; and I pray that this truth may spread wherever humanity is in need of it.

REINHARD BOMA, Fuetzen, Baden, Germany.

When Christian Science was presented to me I was a liberal or skeptic; and my first impression of its teachings was that it was nothing more than mental suggestion or transferrence of thought; but an honest desire to know the truth for truth's sake, soon dispelled this illusion, and as I continue to study the Bible in connection with Science and Health, it imparts a knowledge of divine Principle which illumines the Bible and makes practicable and demonstrable to-day the teaching of Jesus Christ. Of this we have had many wonderful proofs in our city, but I will write only of a few in my family.

Our daughter had been in poor health for years, and our physicians had told us they could do nothing more for her. She was completely healed in Christian Science. Our oldest boy while playing in a barn-loft fell to the ground floor. He struck on his head, and was picked up unconscious, with blood flowing from his mouth, nose, and ears, and with signs of internal bleeding. Afterwards a large amount of clotted blood passed through him; and kind neighbors insisted on calling a physician, but the true Physician,—divine Mind,—healed him.

Again while he was playing with some gunpowder, it exploded close to his face, completely filling his eyes and nostrils with powder. The concussion and burn was so severe that it cracked open his chin and lips, and the balls of his eyes were burned so that he could not see. His blackened and distorted features were a distressing sight; but in three days the skin began to peel off. In about a week all marks had disappeared, and thanks to Christian Science, his eyesight is now perfect.

Our baby when eighteen months old was crossing the street alone, and was knocked down by a team hitched to a heavily loaded surrey which was being driven rapidly along the street. Both the front and hind feet of one of the horses struck the child, and the wheels of the surrey passed over his body, crushing it out of shape. Life seemed extinct, and as quickly as possible I threw my coat over his face and ran with him in my arms into the house, followed by a large crowd to the door. We declared the truth and telephoned for a Christian Science practitioner. In about five minutes the child began to gasp and struggle with the return of breath and circulation; his respiration was so loud the crowd could hear him in the street. By ten o'clock, two hours later, he was sleeping, and he rested quietly all night waking only once to call for something to drink. The next morning he awakened and arose without a sign of soreness or pain, and there were no marks except where the iron tires passed over his body. While we were at breakfast our practitioner telephoned us that it was reported over the city that the little one was dead. To deny this report I took the child and he walked around the block, laughing and playing the entire way.

The many wonderful demonstrations of healing sin and sickness in our city, have caused many people here to investigate and accept this Christ Science which heals.

I am most sincerely grateful to our Leader, Mrs. Eddy, for her unselfish life-work in giving the world the key which is freeing our thoughts from the darkness of mythology and which opens the way to the true knowledge.

I wish also to express my grateful appreciation of the privilege of having been taught by one who has proven her obedience to Truth by her many demonstrations.

SILAS E. WIGHTMAN, Watertown, S. D.

[Translation.]

How gladly I testify to what Christian Science has done for me. I had been ill for twelve years when I heard of it. Weakness in general, nervous complaint, which expressed itself in insomnia and palpitation of the heart, forced me to a bed of pain. My heart-throbs increased to about two hundred beats a minute, and these attacks lasted sometimes from twenty to twenty-four hours. I was in torture, and the exhaustion of the heart which followed increased my fears to such a degree that I could hardly feel it at all, and it threatened to cease beating. I suffered so that I once said to my physician, a relative, that no sacrifice would be too great for me, if I could be freed from this painful condition. From the treatment of prominent physicians I had found temporary, but no lasting relief, and therefore I gave up all medical attendance and lived in solitude where I found good, pure air, and I hoped that God in His mercy would show me a way out of this suffering. Since childhood I had meditated over religious questions. These thoughts would be as fleeting as my heart-beats. I was seeking the truth, but could not grasp it.

In June, 1902, the representatives of Christian Science in our city had a trial in court. The *Allgemeine Schweizer Zeitung* of Basle gave a detailed account of the trial. My mother sent me the papers which contained that report, because she thought it would interest me. Although I did not read at that time on account of trouble with my eyes, yet I read this account attentively through, and here I heard for the first time of Mrs. Eddy's book, Science and Health. The representative of Christian Science said in his defence, that it had often occurred that people were healed from reading this book, and a desire arose in me to have it. I therefore urgently requested my oldest son to attend a Wednesday evening meeting and afterwards buy me a copy of Science and Health. I stayed awake until he returned, in order to receive this book, which has since become so dear to me. I began to read it quietly; but oh, I found it so hard to understand that I laid it aside discouraged, yet I could not let it alone, but took it up again to read a few lines. I had resolved to test this new "teaching from America" by the standard of which I once heard a man of God speak. He said, "Every religious movement must be tested by its standard of God and man; if its God be small and its man great, it is worthless and will soon disappear; but if its man be small and its God great, it is the truth."

Thus was Mrs. Eddy's book proved true to me: but it demanded much struggle and earnest thinking to understand it. As I do not like to argue, and this question was so important for me, I told no one of my study. In August I had a severe attack of neuralgic pain. The accustomed remedies were at hand, but I did not take them, because I

Digitized by Google

had found that God is proved to be our helper when all material remedies are given up. The more I read the more the new understanding worked within me, so that I found I was not able to digest it all beside the demands of my daily life, and therefore I suspended the study of the book for two months.

In November I felt a strong inward impulse again to take up the study; I had then in a measure digested what I had read before. From that time on my health improved; strength came so gradually, so naturally, that the different phases of the ailments disappeared. Every spare moment I read, and gradually understood it better. In my own experience Mrs. Eddy's words were proved true; that the book is an inexhaustible treasure to the truth-seeker. It especially satisfies me, because it rests upon a foundation which is radically different from what we have hitherto known, and therefore we reach different results. The physical perception handed down to us is denied throughout. What I do not now understand, I leave for the present and do not brood over it as I used to do. I am in better health than ever before; those nights of torment belong to the past. Even if I am awake at night for hours, I have so much to think about that those hours become fruitful and pass quickly. "No faculty of Mind is lost" (Science and Health, p. 407). I have proven this because I now play the piano as well as before, after an interruption of twelve years.

The demonstrations of Divine help in our daily life are the "manna" on our way to Life,—they are a corroboration and an encouragement. How thankful we are that through Mrs. Eddy's spiritual discernment, God could find a connecting link whence has come relief to a poor suffering humanity, and there will come much more.

L. USTERI, *nee* PESTALOZZI, Zurich, Switzerland.

Christian Science has been the means of bringing into my experience so much joy, harmony, and peace, and has so enlarged and brightened my mental outlook, that I have reason to be very grateful for its many blessings. I grew up under the *materia medica* thought,—my father being a physician, and I was considered not very strong. I was seldom free from a sense of debility and languor, very susceptible to taking colds, which would usually develop into severe coughs, and having a nervous, unhappy temperament, I never enjoyed thoroughly good health.

Since accepting Christian Science and depending on it as the remedy for all ills, my health has greatly improved, and I have found the true happiness, which the world can neither give nor take away. Many fears have taken flight, and doubt has been dispelled through an understanding of God's unchanging goodness and ever-presence as revealed in Christian Science. Gradually the colds became less frequent and severe, and they have not troubled me for a long time. Unhappiness, discontent, irritability, anxiety have given place to joy, harmony, and spiritual understanding. Now I seldom feel tired; I can take long walks and enjoy outdoor exercise without fatigue. Above all, I have found a satisfying, joy-giving religion which is a practical help in every way, and gives a "priceless sense of the dear Father's loving-kindness" (Science and Health, p. 366). I have been able to prove that Christian Science relieves physical suffering and overcomes fear; and through its beautiful teachings I have gained a deeper love for the Bible. In the light of Christian Science its promises are found to bear a new and vital import so that they become of immediate and practical value.

I wish to express heartfelt gratitude to our beloved Leader; it is through her selflessness, purity, and untiring devotion that the sunlight of Truth and Love has come to bless humanity.—MILDRED KNERR, Philadelphia, Pa.

For many years I was troubled with attacks of lumbago and sciatica, and was for nine months almost an invalid. About a year ago I had a violent attack that kept me bedfast for three weeks. My physician claimed it was due to the breaking down of my nervous system, which was about to collapse from the strain of thirty-two years of hard work over the dental chair. He insisted that a sea voyage was the only thing that would give me relief. I had previously tried every remedy suggested, including medicine, blisters, foot pad absorption, and all kinds of baths, without any lasting benefit. I was only able to get around with the greatest difficulty, and was in agony sitting or standing.

In sheer desperation, I was induced by my wife, who had just received wonderful help from Christian Science treatment, to try the same. To my intense satisfaction I soon got relief and was entirely healed, incredible as it may seem, in three weeks.

I am now enjoying excellent health, working harder, if possible, than ever, and never was so contented and happy in my life. I know Christian Science heals!

J. E. ROBINSON, D.D.S., Columbus, O.

I was a skeptic,—athirst in a desert land, when the "waiting harpstrings" of my "mind" (Miscellaneous Writings, p. 396), were touched by the gentle influence of the faithful and loyal Scientists of this place, and following the echo of the harmonious strain I came to the fountain of Life and there I am drinking. Through these instruments of divine Love a wandering child has been guided to the Father's house, and the prayers of honest Christian parents and many Christian friends have been answered.

I realize that my life must be the expression of the love and gratitude I feel for our Leader, for the Cause, and the faithful one who so wisely and lovingly presented to me the true import of Christian Science, and rebuked every form of subtle error.

Physical ills disappeared when I began the study of Science and Health, and although I am very young in understanding, error has been handled with beautiful results in our household. The dear friend who has patiently helped me all the way was called once when pneumonia presented itself, and I was conscious of the healing with her first treatment.

It is now my great privilege to be a member of the Mother Church, and I can truly testify that "the ransomed of the Lord shall return, and come to Zion with songs and everlasting joy upon their heads."

LOUISA M. C. TAYLOR, Skowhegan, Me.

[Written for the *Sentinel*.]

Answered Prayer.

CAROL NORTON.

I AM nestling, Father, nestling,
Safe within Thy loving care.
As a little child I'm clinging,
And Thy love heals my despair.

I am singing, Father, singing,
For Thou my prayer hast heard.
And my joyous song is ringing
Like the free notes of a bird.

I am thankful, Father, thankful,
For Thy Mother-love divine,
And my heart is ever grateful
For its harmony sublime.

From Our Exchanges.

The present paralysis of the churches affects all Western Christendom, and only a cause co-terminous with modern civilization will explain it. Communities are affected in just the degree in which they are affected by the progress of civilization,—the backward countries and rural communities least, the industrial cities most. State churches and free churches alike feel the drag. It is not because the religious spirit has failed. It runs surprisingly strong, but it runs largely outside the churches. Neither is the trouble due to lack of piety in the ministry, for, on the whole, we are as good as our fathers. We are told that the Gospel has always met with indifference and hostility. But is this to-day a persecution for righteousness' sake, so that Jesus would call us blessed for enduring it, or is it a case where the salt is trodden under foot of men, because it has lost its saltness. The worst explanation is that which shrugs its shoulders and regards the present alienation of the people from the Church as a mysterious dispensation of Providence against which we are helpless. Effects do not happen without causes, and God's reign is a reign of law. In short, no small or local or passing cause will explain so large a fact as the present condition of the Church.

WALTER RAUSCHENBUSCH.
The Independent.

The day of doom has dawned for the merely formal and heartless in devotion. Very slowly has the notion died that there is merit in act apart from motive, but from the ashes of this expiring superstition has sprung for some fortunate ones a new sense of the power and joy of a healthful, sincere, simple-hearted, religious devotion. The person who has once caught, for however brief an instant, the thrill of individual communion with God, or has felt the uplift, as of unseen wings, that bears a truly worshipful congregation into the freedom of the eternal, can never lose the conviction that in this experience he has found the native and inexhaustible meadow land of the soul. He may reach this altitude but seldom, but he knows that it is there and that prayer and praise are no puerile and passionless formalities, but real as life and love.

The Congregationalist and Christian World.

Life must be all of a piece wherever it is. There can be no change or interruption of the consciousness; there can be no such violent transformation at any stage as will leave one doubtful about his own identity. We may well believe that under infinitely better and more hopeful, because more enlightened, conditions we shall see better, know better, and be better than we are now. But the substance of the matter, so far as the life of the world to come is concerned, is that the prophecy is to be found in the distress of the soul at its own present. It is in this dissatisfaction with itself that it becomes convinced that its career is not complete.

S. D. MCCONNELL, D.D., LL.D.
Homiletic Review.

Happiness, goodness, hope, confidence, and courage, are as contagious as disease. One good-hearted, vital man, full of faith, his face shining with the light of the future upon it, will glorify a whole community. One good, brave life has saved many a city; one noble, faithful soul has saved and often made many a church. After all, it is Sunshine that rules the world. Be of good cheer, is the message of the Master.—*The Universalist Leader.*

The Beatitudes reveal the true sources of happiness. It is and can be realized only when we are at one with God in His purposes of love and grace. It is sin that makes unhappiness; it is obedience to the law of Christ that makes true and lasting happiness.—*The Examiner.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy, $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Acting Secretary of the Navy, has by letter informed the contractor who had made arrangements with the Cuban Government to remove the wreck of the Maine, that the Navy Department has no authority either to abandon the vessel or to permit its removal. He declares that Congress only can dispose of the public property of the United States, and that the Navy Department does not plan any work upon the wreck. This is an approval by the department of the position heretofore taken by the Judge Advocate General. It is considered likely, in view of the many attempts made to obtain the wreck of the Maine and to remove it, that Congress will take some action at its next session and finally dispose of the question.

Professor Dailey Willis, R. H. Sargent, and Eliot Blackwelder, of the Carnegie Institute of Washington, have returned to America after a year's absence on a scientific expedition in the Orient. Their most important work was a geological survey of the mountains of China. The scientists penetrated far into the interior of China, going as far as the headwaters of the Yangtse River.

The Government of Panama has given official notification of the ratification of the monetary system of the new Government in accordance with the agreement reached by the joint Monetary Commission. Panama is now a gold standard country.

Foreign.

"The loss of her colonies, far from being a disaster to Spain, has proved a blessing," Captain Carlos L. Lanela, a Spanish officer of Seville, who is visiting Washington, is quoted as saying. "Better conditions are prevailing throughout the kingdom than in the days of our colonial possessions. The war has aroused our people to the necessity of developing the resources of the mother country, and the factories of Barcelona and Bilboa are going forward rapidly. The Spaniards are not a lazy people, as Americans think, but industrious and high spirited. We have been involved in many wars, but now everything points to a long period of peace. It means prosperity. A picture from the brush of one of our great painters took the first prize at the Paris Exposition. Few names in contemporary literature are brighter than those of our poets. We look forward to a happy future."

The freedom of the city of London in a gold casket was presented to Lord Curzon of Kedleston, viceroy of India, at the Guildhall last week, with all the customary ceremonial. In the course of a speech, Lord Curzon referred to Tibet. He hoped that as a result of the expedition to Tibet, the political unrest and intrigue in that country would cease, and that harmonious relations between India and Tibet would gradually be built up. In the course of his remarks he clearly intimated his intention to return to India.

Panama has recently begun a consular service at San Francisco, Honolulu, and Corinto. She has also granted to a representative of an American transportation company a concession to establish a wireless system of telegraphy between Bocas del Toro and Colon, and between Colon and Panama. Authorization is also given to connect with wireless systems in other countries of Central and South America.

Emperor William has ordered Crown Prince Frederick William to start in October for a tour of investigation around the world. He will travel on the training ship Charlotte, which is being refitted for the purpose at Kiel. The tour of the crown prince will include a trip to America. He will travel incognito.

The British mission to Tibet under command of Colonel Younghusband, has forced the highest pass on the road to Lhasa, and is now ninety-two miles from Lhasa.

Industrial and Commercial.

A company has been formed at Cologne, with a capital of $1,750,000, subsidized by the German and Dutch governments, to lay a cable to connect with the Dutch settlement on the island of Celebes, through the island of Yap, in the Pelews group, and from Shanghai to Guam, where it will connect with the Commercial Cable Company's Pacific cable.

The Pittsburg Steel Car Company, a new concern that will enter the market in competition with the Pressed Steel Car Company, is being formed at Pittsburg, and will finally have a capital of $10,000,000. A series of improved patents have been obtained by one of the incorporators.

In a power plant installed in the Mysore country in Southern India, the timber came from Australia, insulations from Italy, the hydraulic plant from Switzerland, the penstock pipes from Scotland, and the entire electric plant, with a capacity of four thousand horse power, from America.

The last link in the coast to coast telephone line has been finished, and now Maine can get connection with Oregon via Kansas City, Denver, Cheyenne, Ogden, and thence northwest through Butte.

Unless unforeseen and unlikely contingencies arise between now and September 1, on that date the New York subway will be opened to the public.

General.

The monster electrical watch that is to furnish the correct time for London, and which will be suspended from the American Waltham Watch Company's building in that city, has been shipped. The timepiece is the largest of its kind in the world. The case of the watch is aluminum finished in gold, and is five feet in diameter. The two dials, one on either side of the watch, are each four feet in diameter. The numerals on one of the dials are Roman and on the other Arabic.

The watch has no movement of any kind except a mechanical device for carrying the hands on the dials which are governed by electricity from one of the company's best timepieces in the building, which was designed expressly for the work.

The President has directed the Bureau of Labor of the Department of Commerce to make an investigation into the conditions surrounding the miners' strike in Colorado. This investigation may be made with a view of bringing about an arbitration of the strike difficulties under Federal auspices, as was done in the case of the anthracite coal strike in Pennsylvania two years ago. One special agent of the Department has been on the scene for two weeks conducting a secret investigation, and it is probable that other special agents will be sent to Colorado within a short time. Owing to the long continuance of the strike troubles and the other features of the case, it is believed the inquiry will be a long one.

Udnunki, the ancient Adab, perhaps the oldest city in the world, has been discovered by the University of Chicago's excavating expedition in Babylonia. This city is mentioned in the code of Hammurabi, an early king of Babylonia, which document was translated recently by Professor Robert F. Harper, director of the expedition. The uncovering of ancient Adab is one of the most important archæological achievements of recent years. Bricks have been found bearing the syllables Ud-nun-ki at the lowest level of the ruins, which seem to identify the city as Adab.

A species of acacia which grows very abundantly in Nubia and the Soudan is called the "whistling tree" by the natives, says an exchange. Its shoots are frequently distorted in shape by the agency of larvæ of insects and swollen into a globular bladder from one to two inches in diameter. After the insect has emerged from a circular hole in the side of this swelling, the opening, played upon by the wind, becomes a musical instrument suggestive of a sweet-toned flute. The whistling tree is also found in the West Indies.

Governor-General Davis of the Panama Canal zone has advised the Panama Canal Commission that he wants 100,000 yards of wire gauze to prevent mosquito invasion of the zone. For the hospitals 20,000 yards will be needed, while for screening the houses along the canal 75,000 yards will be required. Two thousand yards are to be used to protect the De Lesseps houses at Cristobol.

Word has been sent out from one of the mining camps in British Columbia that two prospectors have made a strike of scheelite in the Willow Creek region, near Caribou. Scheelite is said to be more valuable than gold, and is the mineral from which tungstic acid is made. Heretofore it has been found in northern Australia alone.

As a result of the researches being carried on by Miss Leavitt upon the photographs of two Magellanic clouds, the Harvard Observatory announces the discovery of more than one hundred variable stars in the so-called Large Cloud. The total number of new variables found in nebulous regions by Miss Leavitt is at least 277.

Dogs have been trained in Belgium for centuries to be beasts of burden. Throughout the country thousands of dogs constantly work, singly or in teams, before small carts, giving perfect satisfaction. Hundreds of small wagons, as well as other light vehicles, are drawn by dogs throughout the country.

Madame Melba has been given the decoration for science, art, and music by King Edward. It is said that Madame Melba is the first woman to be thus honored.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

First Wednesday Evening Meeting.

WE are indebted to the *Concord Evening Monitor* and the *Concord Daily Patriot* for the following account of the very interesting and helpful meeting held in the new church edifice, Wednesday, July 20.

Nearly eight hundred people attended the first mid-week testimonial meeting held in the new church edifice, the gift of the Rev. Mary Baker G. Eddy to First Church of Christ, Scientist, of this city. This was a memorable occasion to the Christian Scientists present, and it was of more than passing interest to the goodly number of Concord people who attended a Christian Science service for the first time.

The services throughout were impressive. The meeting opened with an organ prelude, followed by the singing of one of Mrs. Eddy's hymns, "Shepherd, show me how to go." The Scripture reading was from 4th chapter of 1st John with correlative passages from the Christian Science text-book, Science and Health, beginning with second paragraph on page 366. This was followed by a few moments of silent prayer and the audible repetition of the Lord's Prayer.

The First Reader, Rev. Irving C. Tomlinson, thanked the citizens of Concord for their kind hospitality shown the visiting Scientists during their stay in the city. He then announced that the meeting was open for the giving of testimonies, and the time was fully occupied by those eager to tell of benefits received by them in Christian Science. Many times two or three persons were on their feet at once.

The first speaker of the evening, a gentleman from Boston, spoke of the evidence of love in the beautiful gift to the church, the new edifice, and followed with the query, "How did it come?" He proceeded to show that the revelation of Truth in the Christian Science text-book, which teaches the healing of sickness and sin through regeneration, the elevation of thought to an understanding of God and His government of man, resulted in this generous gift. He then spoke of his wife, who, twenty years ago, was a great sufferer, and after having been treated by many physicians, her father among the number, turned to Christian Science and was healed by reading Science and Health, and learning for herself that God is the healer of the sick.

The next speaker told of two cases, one of ulcers of the eyeballs, and the other hip disease, both healed by Christian Science treatment. Then a gentleman from New York state gave a concise account of how a young man, by the reading of Science and Health, was healed of the drink habit, which had been his companion from boyhood; also of a man who was stooped over, decrepit, with very poor sight and hearing, and dependent upon relatives, and his healing was accomplished through Christian Science, so that he now stands erect, his hearing and sight much improved, and he is employed in traveling for a business house.

The next speaker declared he owed all he was and all he had to Christian Science. He said he had been given up to die when he turned to Christian Science and was healed, and is now well and strong, and he looked it.

A lady arose to say that Christian Science had healed her of seven ailments, for which she was deeply grateful.

A lady spoke of her mother's life having been spared to her after physicians had told her she could not live three weeks. Science and Health was put into her hands and she was healed and was present in the church. She said she was grateful to God for the noble life and self-sacrificing love of the dear woman who had by her life-work enabled her followers to come up out of death into the realm of Soul. Another lady told of the healing of asthma of many years' standing.

Another said that nineteen years ago there were very few Christian Scientists in Boston and she was on the verge of the grave, a physical bankrupt as the physicians told her, with nothing to build upon. Two weeks' treatment with ten hours faithful reading on her part, gave her strength in place of weakness, perfect health in place of sickness, and that no words could express her gratitude for this truth as given to the world by the Leader of Christian Science.

Another told of her frequent visits during the past nineteen years from Chicago to Boston and Concord, and of the many new helps that had come to her along the way during all these years. She said that her coming was always a blessing to her in many ways, and she could thankfully say that Christian Science is the truth, and will do all that is claimed for it, all that our Leader says it will do. She spoke of the deep gratitude and joy that she has had in participating in these exercises, and in listening to the good words of Mrs. Eddy last Sunday. She spoke of her healing by reading the book, Science and Health. She said that after going back to Chicago from class instruction she was immediately appealed to for help from her own family and from others, and without expecting to become a regular practitioner she was soon in the work, being only too glad to aid her fellow-beings in overcoming disease. She said if for no other reason but the healing of disease, Christian people should accept this teaching, but it heals all manner of evils as well, and for this she is most grateful.

Mr. Buswell, who is well known as the former First Reader of the Christian Science Church in Concord, but now a resident of Beatrice, Nebraska, spoke very earnestly of the work in Concord, its wonderful growth, and all because one dear woman has kept her face, day and night, turned toward God, while the most of mankind were seeking pleasure. Mr. Buswell told how Christian Science came to the rescue and healed him twenty years ago, after the sentence of death had been passed upon him. He concluded with a beautiful tribute to Mrs. Eddy for the Dedicatory Address, which so clearly showed the way to health, joy, and peace.

The meeting lasted forty-five minutes beyond the regular time, and the giving of testimony was brought to a close by a business man from Chicago who told of the great benefit in the management of his business he had derived from his understanding of Christian Science. Many other testimonies of wonderful healing were given, but space will not permit the recounting of them all.

The meeting closed by singing, "In Thee, O Spirit true and tender."

What Christian Science is Doing.

SAMUEL GREENWOOD.

THE actual results of a theory when reduced to practice are all that sustain or destroy its claims. Opposition, persecution, ridicule, invective, weigh not the smallest degree against the righteousness of any cause. In the scales of Truth the balance is not adjusted to opinions or prejudices, however ancient or universally revered, otherwise the tide of human progress had ebbed ages ago. No religion, philosophy, or science, can evade the final judgment of works, by which alone its merit can be decided. Christian Science is no exception, and stands before the world to be judged, not only by what it teaches but by what it does.

The human need of help is piteous beyond language to express. The sufferings superimposed upon mortals because of their servitude to the flesh and their submission to error, exceed the utmost ingenuity of torture ever ascribed to a satanic mind. This burden of misery lies sore and heavy upon the world, robbing humanity of that brightness and freedom which should rightfully belong to it. And this has gone on for a thousand generations, until mortals exist in a state of constant terror lest they stumble upon some pitfall of misfortune or disease. Is there no end in sight to all this? Are the agony and the heartache of the world never to cease? Through long ages, men have struggled for freedom and deliverance from pain and weakness and disease, while the highest wisdom and genius of the race have been spent upon the search; and yet failure has been the finis of their efforts. Is there to be no redemption from this hell of earthly torment, no brightening hope of escape from the wretchedness of sin? Must the future ever repeat the history of the past, and succeeding generations, through unnumbered centuries, tread the same pathway of suffering?

Religions of every shade of belief, and curative methods of every conceivable form, have been offered to the world; but the latter have neither diminished nor destroyed disease, nor has the former delivered men from the love of sin. Theories about heaven and hell, or the chances of a future pardon, have no power over the sinful appetites and passions of men; and material modes, fettered by fear and fostered by spiritual ignorance, are helpless to waken mortals from the nightmare of disease. The redemptive and healing religion of Jesus Christ is the one radiant exception among past failures to cope with the seeming power of evil; but alas for the peace of the world! poor suffering mortals, believing misery and death to be the unavoidable heritage of the race, have turned from the practice of his teachings as being too good to be true.

The religion of our Master was pre-eminently one of works. He is remembered and loved to-day for what he did more than for what he said. His deeds were the foundation of his beautiful and impressive teachings, without which they would not have been believed. No other religion can heal the world of its sickness and sin, but it must ever have the same simplicity, completeness, and power as taught and practised by him who founded it and understood it best. There is no other Christianity; there needs to be no other, for Jesus demonstrated its power to save from all evil, and for all time.

Such a religion is Christian Science. It stands on no other foundation and prospers by no other rule than what Christ Jesus said and did; else it could not meet mortals' need as it is doing, nor fulfil its mission as the Comforter. The mere statements of Christian Science might not impress the world beyond other theories that have had their day, were it not that something more than talking is being done in evidence of its truth and helpfulness. The reformation of a sinner, wherein he loses his love of sin and gains a growing desire for good, is more to the point than the most exquisitely worded sermon on the evils of immorality. And the healing of an invalid who has run the gauntlet of all the material modes and methods of mortal man and been turned over as a prey to death, is more Christ-like in its purport and influence, and a more reasonable emulation of our Lord's example, than the injunction of resignation to evil as being in some inscrutable way the will of God.

The Discoverer of Christian Science, through her own healing of the sick, demonstrated its value and practicability before giving her text-book, "Science and Health with Key to the Scriptures," to the world. It was thus, at the outset, more than an untried theory or an impossible ideal. Her followers, who are loyal to the behests of this Christ-Science, are endeavoring to emulate her example by making their good deeds the explanation of their good words. That they have succeeded to some extent is now a matter of history, and is daily evidenced in the growth of this movement, a growth that could never have resulted from words alone, though spoken with the tongues of angels, nor from mere theories, however plausible or finely woven. The spiritually hungry among men would have turned away empty and unrefreshed from Christian Science if they had not partaken of at least some crumbs of truth from its table. And if the army of sufferers who have sought its help had received from it no bodily comfort and healing, it would now be but one of the forgotten failures of the past.

The misinformed or the ignorant may speak disparagingly of the teaching of Christian Science, but what will they do with its good works? Should they succeed in the overthrow of this Science, from what other tree could they gather such desirable fruit? Is the good of any community endangered by reason of its Christian Scientists? Rather do we hear from those who have observed them that Christian Science makes of its disciples better citizens, better neighbors, better parents, and better Christians, and it should not be an argument against it that it makes them better physically as well. The good cheer of any community is enhanced because of its Christian Scientists, for they are optimists of the noblest type, and if they have troubles they hide them as much as possible from the world and conquer them in secret with God. Is not all this commendable if only for the sunshine it sheds upon others? But if this tree is bad, as some would have us believe, why does not that fact appear in its fruit?

The columns of the *Sentinel* and of *The Christian Science Journal* tell, in every issue, of wonderful transformations for good, wrought in the lives of those who have faithfully sought God's help in Christian Science. Victims of the most debasing forms of vice have told of their loathsome appetites destroyed, and their ascension into sweeter and brighter conditions; mothers have told of the help received in maintaining the health of their children and the harmony of the home; business men have told of the invaluable aid derived from Christian Science in overcoming the various and complex financial problems and worries, and of their consequent prosperity; and those who had suffered untold miseries from disease, poverty, and misfortune, have gratefully told of the help and healing received in Christian Science when all other hopes had fled. These testimonies have covered the range of nearly every form of suffering and wretchedness known to mortal man, and they are given by intelligent and responsible people. The writer believes that they are true, from what he has himself seen, and they are open to verification by any earnest enquirer.

In seeking to obey the Master's command to heal the sick, Christian Science is doing a greater work for humanity than the mere removal of pain and misery, for it is lifting human thought above the plane where these discords originate and exist. To him who obeys from the heart the divine rules of this Science, life takes on a brighter and happier outlook, and the errors that disturb the peace and harmony of mortals, become less terrifying and less real:

Digitized by Google

he thinks less of sin and less of sickness as he discerns more of the actual supremacy of good, and the ever-presence of infinite Love. That these effects are Christian, and beneficial in their influence upon society, needs no argument or proof.

If the critics and opponents of Christian Science will be influenced less by its antagonism to their material theories, and look with unprejudiced eye upon what it is doing to alleviate and remove the sufferings of mankind and to emancipate mortals from their materiality and sin, they will discover somewhat of its far-reaching influence for good in all that concerns the well-being of the race. The full extent of its beneficent work the future must reveal, when eyes are more ready to see and ears to hear. Perhaps no more fitting words could express the divine endorsement of the success of Christian Science than those of Mrs. Eddy, when speaking of this Science, that "its only power to heal, is its power to do good not evil" (Miscellaneous Writings, p. 4).

Rejoicing.

FLORENCE M. SMYTH.

Let everything that hath breath praise the Lord. Praise ye the Lord. *Psalm* 150.

THE glorious conviction came to me lately while repeating the scientific statement of being, given in Science and Health (p. 468), that we are not half grateful, or thankful, or joyous enough while endeavoring to reflect the truth this statement conveys. Why should we ever repeat this comprehensive and wondrous statement of truth, with perhaps a sense of sadness, or doubt, or coldness, or perchance with a sense of the letter rather than the spirit? Such a sense of warmth and love seemed to pervade my consciousness as I realized the duty of rejoicing while uttering the truth, that I have been enabled to rejoice in a greater degree ever since, and in realizing the strength of joy, to make several demonstrations over errors to which I had hitherto been blind.

How subtle is the error of discouragement! The uncovering of this has been truly wonderful since I began to rejoice in Truth. Discouragement plays almost as large a part in the lives of mortals as does fear; it is difficult to detect, and very demoralizing in its effect. This error sometimes suggests that we are not progressing as rapidly or worthily as we should, that we are incompetent to help our brother while we cannot demonstrate over our home problems, etc.

"Rejoice always" is the Scriptural demand. Instead of being discouraged by these suggestions, we should rejoice to know there is no truth in them; rejoice at our progress however small, rejoice in the endeavor to help our brother, rejoice that the errors of physical and moral beliefs are uncovered no matter whether they are all destroyed at the present moment or not, rejoice to know that all error is temporal, and that Love is eternal.

Above all we should rejoice to know that one was found waiting who was pure enough, unselfish enough, and joyous enough to give us the glad tidings,—we who believed ourselves to be sick, discouraged, weak mortals, but who are now joyful disciples of Christ, Truth.

It is pleasant to note that the head and Founder of the Christian Science Church has regard for the æstheticism of architectural beauty. The new church built by Mrs. Eddy at Concord, N. H., is certainly a handsome edifice.

In the erection of such church buildings Mrs. Eddy has certainly added to the services she has done her followers. Satisfying architecture in church buildings is most desirable, and the example set by the Christian Science edifices is excellent.—*Boston Traveler.*

Selected Articles.

A Practical Advantage.

THE Scriptural text, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent," made very little impression upon me until through Christian Science, I began to have a definite understanding of God and to apply it to the every-day affairs of life. I can now understand that existence becomes secure and substantial in exact proportion as we understand God and His likeness, and in our conduct conform thereto.

The saying, "I get along all right so long as I am myself," is quite common. This remark is more comprehensive than one may think. To be one's self in the full sense is to be what God intended,—His own image and likeness. To be Godlike means to be free, intelligent, and clear; to be calm, peaceful, considerate, wise, and strong. We learn in Christian Science that it is possible to improve in all these virtues. With a knowledge of this Science it is possible to dispel the clouds, to overcome grief, sorrow, sadness, disappointment, discouragement, dissatisfaction, despair, and to be buoyant, hopeful, and mentally clear. In such a state of mind we are well prepared to enter upon the duties and cares of the day; our steps are likely to be careful and firm. We are less apt to be taken unawares by a sharp word; and we go through the day successfully and triumphantly, thus verifying the Scriptural teaching, "Thou wilt keep him in perfect peace, whose mind is stayed on Thee."

He who is steadied by the understanding of the sustenance and protection of the Divine power has less fear and is less liable to the intrusion of sickness; and surely the best time to cure one's ills is before they come.

Christian Science is not a preventive which looks forward expectantly to troubles and then doctors therefor, but it teaches how to be so conscious of God's presence as to be impregnable to disease.

One asks, "Do you mean to say that Christian Science is a benefit to a man in financial distress?" We answer, yes. It will enable such an one to see more clearly and so find his way out. One's understanding of Science may not immediately exert any special influence over his environment, but it will so sustain the individual and clarify his thought as to enable him to deal wisely and effectually with his circumstances. The tendency of Christian Science is to improve the judgment and render the perception more keen.

As a rule, one's troubles are never so large as they seem, and one does not fear so much the trouble that is upon him as the seeming calamity which confronts him. Science tends to minimize prospective troubles and to induce the Scientist to dwell more upon the bountifulness of the unseen supplies, knowing that God has unnumbered ways for our relief which we have never so much as dreamed of; and instead of dwelling constantly upon the narrow opportunity which seems to be our only way (and that scarcely available) to look directly to divine Providence and "wait on God," knowing that the relief will come in His way, if we quietly and steadfastly look away from matter to Spirit.

The term success does not belong exclusively to the accretion of wealth. There are some who need more of this world's goods; there are others who need less in the sight of supreme intelligence, and few mortals are wise enough to know whether they need more or less; therefore but few know whether to pray for riches or poverty; but one is safe in asking for Divine guidance and that the will of God may prevail; a thing, however, which cannot transpire unless we are willing to let go of mere human desires and to trust our affairs to the wisdom of divine Providence.

The Fair Test.

WHILE forty years is but a short time in which to introduce a new system of healing, yet its adherents are quite willing that the present results of Christian Science should be compared, patient for patient, with the results of *materia medica*, after two thousand five hundred years of experimental practice. And this comparison may be made with cases resulting from dissipation and debauchery, or with cases attended with either acute or chronic symptoms. That the results of Christian Science have been proved to be of practical worth is evidenced by the fact that three states of the Union, after critical examination of the practice and results of its work, have sanctioned Christian Science healing by legal decree.

Has it ever occurred to our critic, that if, in the twenty-five centuries since Hippocrates first systematized *materia medica*, the science and art of its healing had been brought anywhere near a normal state of perfection, "the medical fraternity" would not now be in a most "crucial position" as he states, and there could not possibly be the enormous demand for some other system of healing? The writer champions Christian Science fearlessly to-day, because he has witnessed cures in his own family and among relatives and friends where the best specialists in their kind and humanitarian efforts, not only failed to effect a cure but were convinced that these cases were absolutely incurable.

With nearly two thousand five hundred years the start, *materia medica* still racing after the uncaught microbe that will not yield to allopathic pill or homœopathic pellet, and, moreover, with the question still unsolved whether this same microbe is an invader or a welcome scavenger; with no definite cause or cure for cancer; with the ravages of tuberculosis still unchecked,—is it strange that there are some doctors, lawyers, judges, thinkers, and scholars who are turning in search of an exact science of healing, which, like all truth, must be the same yesterday, to-day, and forever? And is it strange that, after witnessing the same proofs of the same Christ that met the needs of humanity two thousand years ago,—is it strange that these investigators, like Luke, the beloved and learned physician, are willing to leave the medicine-case behind and adopt the more excellent and spiritual way? NORMAN E. JOHN.

Wilmington (Del.) *News.*

Jesus said, "They shall take up serpents." Christian Science teaches how to handle discord intelligently, scientifically, and with certainty, but this handling of evil is not a self-satisfied declaration that there is no pain, no sorrow, no sin, no want. It is much more than that. Christian Science is practical enough in its dealings to satisfy the most exacting demands of the followers of Bacon, because it shows results. It is indeed "a philosophy of works."

It is common sense to apply a remedy for physical, moral, and financial disease. It is uncommon sense to know how, even in a degree, to prevent these evils. Christian Science not only teaches the very best remedy, but it shows how it is possible, in a measure, to avoid that which we know to be discordant and unwelcome. WILLARD S. MATTOX.

Hartford (Conn.) *Times.*

If a thing is good would it not be wise to encourage it in its progress? If, on the other hand, it is not good, the best possible way to get rid of it is to offer something better, and public opinion will invariably decide in favor of that which is best. Instead of expending our useful and God-given ability in profitless discussion, which will do nobody any good, let us remember the Scriptural quotation, "The kingdom of God cometh not with observation."

RICHARD P. VERRALL.

Fredericton (N. B.) *Herald.*

Among the Churches.

A Working Sunday School.

The children of First Church of Christ, Scientist, Sunday School, Appleton, Wis., have donated to the city public library, a copy of Science and Health, and one year's subscription to the *Sentinel*, and received from the librarian a kindly letter of thanks, accepting the same.

True Fraternity in Humboldt, Ia.

We are pleased to learn that at the dedication of the new Congregational church last month, the Christian Science Society was invited to join with the other churches in a union service, with these words from the minister, "I want the whole body of Christ."

Church Union in Philadelphia, Pa.

In the spirit of love and unity, Second Church of Christ, Scientist, West Philadelphia, has disorganized, and its members have united with First Church.

This step has been joyfully taken, knowing that we shall continue to see good fruits from the seed which has been sown in the past. We gratefully give thanks to God for the many blessings which have come to us, and earnestly pray that we may so follow the guidance of our beloved Leader that we may more fully realize that Mind "which was also in Christ Jesus."

SUSAN R. WRIGHT, *Clerk pro tem.*

A Letter from Paris, France.

Dear Editor:—About three years ago I was informed that those who were attending to the spiritual wants of the members of the American Girl's Club of Paris, did not allow Christian Science literature on the tables of their reading room. Wishing that at least the *Sentinel* might be found in the reading room of our American Art Association (Men's Club), I wrote the following letter to the chairman of our library committee, who is the Rector of St. Luke's Chapel, and was formerly at the head of the library committee of the aforesaid American Girl's Club, and his kind reply is submitted here as evidence of the growth of, and kindly feeling for, the Cause of Christian Science in Paris.

To the Rev. Isaac Van Winkle, Chairman Library Committee American Art (Artists) Association of Paris.

Dear Sir:—If the Library Committee will furnish a cover, like those on other periodicals in our reading room, with title of periodical thereon, I will be glad to donate to the Club for an indefinite period, the *Christian Science Sentinel*, the official weekly paper of the Church of Christ, Scientist, of Boston, Mass. Fraternally yours,

THOMAS R. CONGDON.

I am in receipt of the following reply.

125 B'd Mont Parnasse, June 16, 1904.

Dear Mr. Congdon:—Your very kind offer to present to the Club the *Christian Science Sentinel* has been received, and in reply I beg to say that the Committee accept your offer with thanks for the gift itself and also for the interest in the Club that it evidences.

The cover will be ordered and will soon be ready.

Believe me, yours very faithfully,

I. VAN WINKLE.

A copy of Science and Health is in the library of the Men's Club (American Art Association), and several of the artists attend our Sunday services. By the way, our new rooms are crowded, many are obliged to stand in the hallway. In Truth I am sincerely,

T. R. C.

The Lectures.

London, England.

It is with deep gratitude that we write concerning the two lectures delivered by Judge Septimus J. Hanna, both of which were given under the joint auspices of First and Second Churches of Christ, Scientist, London.

At the first lecture, given on May 12, the audience was a large one and listened with great interest to the conclusive arguments of the lecturer, which must have dispelled most of the false conceptions previously entertained about Christian Science.

On May 30, even larger numbers came to hear Judge Hanna's second lecture. On this occasion the lecturer was ably introduced by the Earl of Dunmore, and again the audience listened with marked attention.

Throughout the United Kingdom the series of lectures has been deeply appreciated by thoughtful and religious people, and in London several cases of instantaneous healing are reported to have taken place. Our hearts go out in thankfulness to our revered Leader through whose love for God and man, and through whose wisdom and foresight we are enabled to unite in the one understanding, and to participate in the work and joy of imparting it to others.

WILLIAM ROWLEY, *President Lecture Committee.*
DANIEL MAYER, *Secretary Lecture Committee.*

Quincy, Mass.

"Christian Science a Religion of Works" was the subject of a lecture by Judge William G. Ewing of Chicago, given in Quincy Music Hall, Sunday afternoon [June 12], under the direction of First Church of Christ, Scientist of Braintree, Mass.

It was the first time that the general public of Quincy has had an opportunity to have the belief of the Christian Scientists made clear and many availed themselves of the opportunity. The meeting was attended by upwards of eight hundred.

The speaker was introduced by Rev. Ellery C. Butler of the Unitarian Church. He said, "We are here with but one purpose. Not as it was once, to save ourselves from impending doom in the future, for I take it we are here simply to make this a better world to live in, to help those in trouble, to make a happier outlook and stronger minds. Not because I agree or disagree with the speaker, but I hold it the right of every person to think his own thought to its conclusion, and because I believe in freedom of thought."

Quincy Daily Ledger.

Seneca, Kan.

Bicknell Young of Chicago delivered his lecture on Christian Science at the Opera House last Monday evening [May 23], to a cultured and attentive audience. He was introduced by Judge Emery, who spoke in part as follows:—

Great truths are alone discovered by investigating minds, and he or she who, through prejudice, bigotry, or other mental infirmity cannot or will not present a receptive or perceptive mind to one claiming to represent a truth is to be pitied more than blamed. While not pretending to know much about Christian Scientists, I have to some extent investigated their beliefs, read their literature, heard their testimonies, and absorbed some general knowledge of the progress and purposes of Christian Science; and from this it may be stated that, although young as an organization, it is founded on the words and acts of the great Teacher that have stood the test of nineteen centuries; that in membership, church organization, and edifices it has made the most marvelous growth in history; that by the character and standing of its members we have the evidence that it attracts the intellectual, the philanthropical, and the pure in heart; that it engenders in its adherents a loyalty, zeal, and self-sacrificing faith that beautifies, strengthens, and ennobles the character; that from the testimony of thousands whose integrity we may not question, its light has the tendency to dispel the dark gloom of physical and spiritual sickness, to let in the light of health and contentment, and to place the individual in harmony with himself, his fellow-man, and the divine Mind.—*Courier-Democrat.*

Chicago, Ill.

Two immense throngs of people crowded into First Church of Christ, Scientist, of Chicago, on Thursday and Friday evenings, May 12 and 13, to hear Mr. Kimball's lecture. Two evenings were provided in order that all who might wish to attend one lecture could be accommodated, it having been given out that those who attended Thursday night were not expected to come the following evening. Notwithstanding the large seating capacity of the auditorium of the church, with its fifteen hundred seats and its broad foyers where hundreds stood throughout the lectures, the doors had to be closed at eight o'clock each evening, in order that the building ordinances of the city relating to persons blocking up aisles and stairways, might not be violated. When the doors were closed, hundreds were left standing, eager to gain admission.

While it seems a hardship not to be able to accommodate all who come long distances to hear a Christian Science lecture, still that fact alone impresses people, and they learn that it is necessary to be prompt in attending these lectures if they would share in the feast. The probable number in attendance was thirty-five hundred. When we witness such outpourings where five lectures have been given in this city within the past two months, does it not prove that the world is looking for something better than is to be found outside of Christian Science? and should we not strive by example and precept to emulate in a slight degree that patient and loving woman, our revered Leader, who has given to us this practical religion?

A noticeable feature of both evenings was the large number of non-Scientists in attendance, although there was no special effort in the way of advertising. Several were brought to the lectures unable to walk alone; and others, almost wholly disabled by some malady, whose countenances depicted great mental suffering and despair, came with the expectation that some ray of hope might be held out to them.

Mr. Kimball was introduced the first evening by Mrs. Ruth B. Ewing, a member of the Board of Directors of First Church; and the second evening by George C. Ball, of the Board of Trustees.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Unauthorized Literature.

We have recently received several papers which are clearly within the class of unauthorized literature referred to in the *Sentinel* of August 15 and September 19, 1903, and as these papers seem to be in constant circulation, we feel justified in republishing the editorial of the latter date.

Of the three papers now before us one is an alphabet composed of quotations from Science and Health, another is a printed copy of an article by our Leader which appeared in the *Sentinel* and *Journal* some years ago. The persons responsible for the circulation of these articles are, we assume, ignorant of the fact that they are law-breakers, inasmuch as they have violated the copyright law, and have appropriated to their own use something that does not belong to them. The third paper is a typewritten formula of prayer, the circulation of which is misleading and harmful.

"Since the publication of the article 'The Integrity of Christian Science Literature,' in our issue of August 15, we have been given an opportunity to inspect three papers of the kind referred to. One purports to be notes taken in a class, another is said to be a copy of a letter to a student, and the third is a formula. The alleged notes are utterly repudiated by the teacher, the letter was found to be equally spurious, and the formula is, of course, in direct violation of the By-laws of the Mother Church. All three of the papers are faulty and misleading, and, if considered as attempts to elucidate Christian Science, must prove harmful to young students and inquirers who give heed to them, and yet we regret to say that inquiries which have been received since the publication of the article referred to indicate that in some instances there is a desire to cling to these papers which are 'doubtful as to authorship or clearness of statement.'

"We feel under the necessity of again warning our readers against this class of unauthorized and faulty literature and against the subtle and specious manner in which it is circulated, for it is usually put forth as the production of some well-known Christian Scientist, and in some instances the papers even purport to be copies of letters written by Mrs. Eddy.

"That these papers are passed from hand to hand without sufficient inquiry as to whether their reputed authors stand sponsor for them is an evidence of carelessness, but an even greater danger would seem to be that more or less change is inevitably made every time the papers are copied, and what may have been a correct presentation of Christian Science in the original is likely to become a doubtful or absolutely incorrect statement in the copy.

"When it is clearly understood that Christian Science is an exact Science, and that any diviation from the true line of its expression must necessarily obscure its teaching, it will be seen why these efforts to adulterate our denominational literature should be frustrated. It is of the utmost importance that no literature should be circulated as Christian Science which has not passed the scrutiny of those capable of pronouncing upon its correctness and authenticity, and it is for this reason that great care is taken to preserve the purity of the authorized publications. M."

The Waning of False Specifics.

A ministerial friend once said to the writer that in his judgment "it is criminal to ignore the deductions of medical Science!" This good brother is a representative of many who seem to be quite ignorant of the very rapid and very general awakening of physicians, as well as their long-suffering patients, to the fallacy, the utterly unscientific nature of the whole drug system.

With all due respect for its many conscientious exponents, and quite regardless of any question as to the scientifically demonstrated value of other means of cure, it may be said that it is becoming more and more manifest, that the drug system is unsound in its fundamental assumptions, unscientific in its practice, and unsatisfactory in its results.

The credulity of the many, and the unsatisfactoriness of more conventional methods of drug treatment are evidenced by fulsomely advertised patent specifics which are constantly appearing, and which are pressed upon the attention in ways and degrees which must beget a sense of utter confusion in all those who have not yet learned of the better way to health and happiness. An outburst of enthusiasm over some new system of treatment is speedily chilled by the contemptuous condemnation of a yet more advanced thinker, and thus the world of material thought limps on (and must needs perhaps) from one hurtful experience to another, till the self-destroying cycle of error shall have completed its painful tutorage, and men shall have come to an understanding which is acquired by many only through untold suffering,—that knowledge of the great freedom-bringing truth that there is neither life nor law in matter, that mortal ills are the outcome and fruitage of false beliefs, and that the one and only sufficient remedy for all the disease of humanity, is that knowing of God, the omnipresent good, which is life eternal.

The Post Office Department has recently entered upon a vigorous crusade with the purpose, as we are told, "of eliminating from among American advertised industries one of the most extensive frauds ever practised. With the assistance of government scientists, the department seeks to bar from the use of the mails the host of patent medicine concerns, and exploiters of proprietary medicines and nostrums which chemical analysis shows are incapable of performing the wonderful cures claimed for them."

The percentage of alcohol in a large number of the leading "specifics" has been found to range from seven to forty, and when the vast consumption of these highly alcoholic preparations is remembered, men can but realize what it means for unnumbered "home papers, and religious periodicals" to commend unqualifiedly these concoctions in comparison with which beer and light wines are mild and inoffensive as breeders of that curse to humanity,—the appetite for stimulants.

Christian Science has wonderfully accelerated the pace at which the thought of the world is escaping from the trammels of medical and theological tradition, and mortal sense is disturbed, as never before, perhaps, by that uncovering and denial of error which is coincident with the coming of Truth, and which is the forerunner of the glad recognition of God's healing presence, which for each individual ushers in "the Day of the Lord." W.

Prayer and Understanding.

The petition of the disciples, "Lord, teach us to pray," is full of pathos. Surely they could not have been as ignorant as their request would indicate, but it suggests their willingness to admit that they had not the understanding possessed by the Master. None had ever called down such answers to prayer as had he. The light of Truth was, however, dawning for them, and by its illumina-

Digitized by Google

tion they were able to see that the old sense of prayer was inadequate to meet their need.

Jesus had pointed out to them the dangers of audible and public prayers, but he had not treated this all-important subject in a merely negative or prohibitive way; on the contrary, he had given them definite and positive instructions as to how they should approach their heavenly Father, and as to what they should ask of Him. The Lord's Prayer "covers all human needs" (Science and Health, p. 16). We thus see that while a little child at his mother's knee may ask for daily bread, and think of bread alone, with added years and experience he will ask in the same words for the infinite blessings which God is ever ready to bestow upon all His children.

In Christian Science we no longer think of begging God to do something which material sense assumes that He has overlooked, and this may give some a temporary sense of loss, a feeling that they no longer know how to pray. It is evident that Paul realized this when he said, "We know not what we should pray for as we ought." James refers to an "effectual, fervent prayer," and this is assuredly the kind that Christian Scientists are seeking to understand and to utilize. Our Leader's thought respecting this vital matter is disclosed in all her writings, and the chapter on "Prayer," in Science and Health is especially worthy of the daily study of every sincere Christian. In it she separates the chaff of mere form from the grain of true aspiration, and prepares the student for "union and communion" "in spirit and in truth."

It would seem that no Christian Scientist could ever be so short-sighted and inconsistent as to depend upon a formula in his ministrations, since he ever has access to divine Principle and to the treasures of truth found in the Bible and Science and Health. Even passages from the Bible and from our text-book would be misapplied if their use fostered the belief that any statements, however clear, can do our work for us. Their office is to instruct and inspire, and thus to fit us to "pray aright," and, what is more, to live aright. It should be enough for the loyal Christian Scientist that the use of formulas is forbidden in the Manual of our church, and this for the best of reasons; namely, that all thought may be directed to divine Principle and to the individual demonstration of the truth which is thus realized.

There is, perhaps, no greater hindrance to the true understanding of prayer than is the desire for material things. Our Leader says, "If we desire holiness above all else, we shall sacrifice everything for it" (Science and Health, p. 11). Poverty is the concomitant of materiality, and no amount of formula can heal one of this error; true spirituality alone can do this. Human standards need to be changed, and spiritual attainments should alone be regarded as evidence of prosperity. The Master said, "A man's life consisteth not in the abundance of the [material] things that he possesseth." "Seek ye first the kingdom of God, . . . and all these things shall be added unto you." If our prayers are not answered, is it not a logical conclusion that material things have been given priority in the affections, and that it is there the redemptive work must be done? When this is accomplished we shall be able to say, as did the Master, I *know* "that thou hearest me always." If tempted to indulge in "vain repetitions," we do well to ponder more deeply these words: "Practice, not profession,—understanding, not belief,—gain the ear and right hand of omnipotence; and they assuredly call down infinite blessings" (Science and Health, p. 15).

K.

It is the universal custom among Christian Science churches to place the Holy Bible in the corner-stone. This was done at the laying of the corner-stone of First Church of Christ, Scientist, in Concord, N. H. The Holy Scriptures, therefore, should have appeared among the list of books given in the Historical Sketch read at the dedication of this church as reported in the *Sentinel* of July 23.

The *Sentinel* receives but few anonymous communications, yet it seems best to remind those who are tempted to write in this way that our rule is the same as that of all other reputable periodicals. We do not publish such communications.

Letters to our Leader.

Concord, N. H., July 16, 1904.

Rev. Mary Baker G. Eddy.

My Dear Mrs. Eddy:—It is with a great deal of pleasure in behalf of the Prudential Committee of the Unitarian Church that I tender the use of the church and annexes as a resting place for the many who may come to Concord tomorrow for the dedication of your beautiful church (my nearest neighbor) and who may not desire to leave the city immediately. I have also communicated this personally to Mr. Tomlinson.

Very respectfully,

GEO. D. WALDRON.

Concord, July 20, 1904.

To the Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

My Dear Teacher:—You may like to learn what one of your students received at the dedication service of First Church of Christ, Scientist, in Concord, N. H., last Sunday. The entire service was grand and harmonious. The central feature was your Dedicatory Address. This is a notable address. To me it has no equal in modern literature. As a statement of Christian Science, it is terse, comprehensive, and definite. As a spiritual exegesis it has no parallel, save in the inspired Word of God. Such a paper can be produced only by a mind active, clear, and in full possession and control of all its faculties. It indicates that the writer is in a vigorous mental and physical condition. I rejoice with you in the manifestation of God's promise to you in the early days, which might have been days of discouragement, had you been less sure in your reliance on His promise. The early faith held to, has brought out rich results which are of great benefit to humanity to-day. The richness of your faith radiates to the whole world. The building and dedicating of this church means more than appears superficially; God is in this great work for the good of humanity, and He blesses it. I realize that all peoples are blest in your demonstration, yet the residents of your city are especially benefited. They have a beautiful building to which they may resort to hear the gospel of Christ preached, and to see the sick and sinning healed. I thank God that I have seen this day.

Affectionately your student,

EDWARD P. BATES.

Pleasant View, Concord, N. H., July 18, 1904.

Beloved Leader:—This morning I had the opportunity of reading your address in print, and find it to be filled with deepest meaning—every thought expressed is a rule in Christian Science whereby we may learn escape from the thraldom of sin believed and lived.

Your followers, as well as the world, owe you a debt of gratitude for the unsealing of the theological teaching regarding hell, and for its true definition. To those studying your words it need no longer be enshrouded in mystery, neither need the way out be longer uncertain or unknown. The address has been a great inspiration to me, and yesterday, when it was read, I seemed to be carried away beyond environments, and my heart was filled with deepest love and gratitude for you who have labored so lovingly

Digitized by Google

and patiently for the whole world. God's richest reward is yours. Lovingly your student,

ELLA LANCE WILLIS.

Concord, N. H., July 19, 1904.

Rev. Mary Baker G. Eddy.

Dear Leader and Teacher: —Trusting that it will not be trespassing upon your time, I am writing to express my grateful acknowledgments for the inestimable privilege it has been to me to be in Concord during the past three days. The dedicatory services commemorating the completion of the beautiful home which you have given to First Church of Christ, Scientist, of your city, have been to me, as I am sure they have been to all listeners and eye witnesses, most instructive and impressive.

For more light, for glorious refreshment and renewed propulsion onward and upward, and for more uncovering of that which the apostle says, "letteth and will let, until he be taken out of the way," I return deep, heartfelt thanks to God, the Giver of every perfect gift, and to you, His chosen messenger, for your noble address, and for the services of all the dear ones who gave us "history" and "words of gratitude" and the excellent rendering of your address.

The rich, deep, mellow-toned organ and the masterful hand that played upon it, added also their full complement to the satisfaction of the whole.

My poor words are very inadequate to express even a tithe of what I have felt of admiration, joy, and gratitude for the things true and lovely brought to light in this event. Nevertheless, "such as I have give I thee," beloved Teacher and friend, and beg to remain affectionately,

Your student,

RUTH B. EWING.

Words of Appreciation.

Pleasant View, Concord, N. H., July 20, 1904.

Mr. Archibald McLellan, Editor of the *Christian Science Sentinel*, Boston, Mass.

Dear Brother McLellan: — Our dear Leader directs me to write you in her behalf, enclosing you, for insertion in the *Sentinel*, the accompanying copy of a letter from the Carolinas. She has been deeply touched by the tender remembrances from the South land, her former home, and was especially pleased with the beautiful cross of fresh-cut gladiolus, which the Christian Scientists sent from there for the dedication of the Concord church, on last Sunday, and which was so generally admired by all who attended.

The chivalric kindness of the noble Southrons, during her short sojourn in their country in the forties, has not been forgotten by her in the intervening sixty years; and it is particularly dear to her now to see that her religious teachings are accepted by the good people of the present generation.

Sincerely yours,

GEO. H. KINTER.

First Church of Christ, Scientist,
Concord, N. H.

Beloved Brother — The Christian Scientists of North and South Carolina, through the First Readers of their churches, ask that you will accept the small amount enclosed, in truest gratitude and most loving unity, at this happy hour for our revered Leader and for you. Deeply sensible of your privilege in receiving the beautiful gift from the Discoverer and Founder of Christian Science, we would join you in thankfulness that her precious life which in its fulness has meant so much to you, once touched these two states in its wonderful promise, and that our fullest salvation has come through her teachings. Yea, she has given to all the world a love so wondrous, that, as was recently said by one saved from the grave, it will heal the whole race of men if they will but accept its healing.

Grateful for your service and for your faithfulness to her whose mission is the establishment of a Church that heals the sick as well as the sinner, we are thankful to God and rejoice with our Leader in the prosperity and triumph of the Cause of Christian Science.

Lovingly yours,

MRS. ELIZABETH TAVEL BELL, Charleston, S. C
MISS MARY BRIDGERS, Wilmington, N. C.
MISS ELIZABETH EARL JONES, Asheville, N. C.
MRS. HENNIE PEEBLES, Kinston, N. C.
MISS MARY HATCH HARRISON, C.S.B., New Bern, N. C.

New Bern, N. C., July 10, 1904.

This letter bears the following self-explanatory endorsement in behalf of the Concord church.

7—13—1904
Trustees Building Fund
First Church of Christ, Scientist,
Concord, N. H.
$1000
LADD.

Pleasant View, Concord, N. H., July 16, 1904.

To the Editor of the *Sentinel*.

No doubt the *Sentinel* will receive many expressions of gratitude for the pleasure, profit, and help received at the dedication of the Concord church, and I should like to tell of some impressions, other than those herein mentioned, but regard for your valuable space prompts me to conciseness. The dedication of this church was truly a happy event in every way, and the mere fact of being privileged to attend the service, so simple yet so impressive, was a benediction in itself. I wish, however, to speak more particularly of the reading of our dear Leader's matchless address.

Since Mrs. Eddy thought best not to be present and deliver the address herself, which would have been a boon second only to the address, I am happy to have heard it read in a manner at once dignified, intelligent, reverent, and effective. The *Concord Monitor* says of Mr. Young's reading of the address,—

"The crowning feature of the programme, naturally, was Mrs. Eddy's Dedicatory Address. The address was read by Mr. Bicknell Young, C.S.B., of Chicago. Mr. Young is a man of striking personal appearance, with keen, intellectual features and possessing a rich, musical voice. His delivery of Mrs. Eddy's words was superb, and his splendidly accurate articulation served finely to demonstrate the perfect acoustics of the auditorium. Mrs. Eddy's illuminating and suggestive sentences sank deeply into the mind of the vast congregation, who listened with rapt attention as her thought was developed in chaste and striking phrase. Many were moved to tears by her language and all received a strong spiritual uplift from her words of mighty, yet tender, import."

This is a just tribute to the manner in which Mr. Young, with his rich, musical voice so perfectly modulated and his faultless enunciation, read the words of life, health, and holiness which Mrs. Eddy had prepared for her followers and for the whole world. Mr. Young's lectures, and his delivery of them, have been the subject of much favorable comment, but in these he was rendering his own composition, here he was speaking for another,—a task not usually so easy. It was a happy service that he rendered our Cause in thus presenting our Leader's words in this perfect manner; but the joy of the occasion is in this, that again our Leader's prophetic utterance has been fulfilled.—Divine Love has met the need, a masterly reader for a literary production that is destined to become historic.

GEORGE H. KINTER.

Testimonies of Healing.

I first heard of Christian Science about ten years ago, when visiting relatives who were Scientists. I cannot say, however, that I was enough interested in it to ask much about it, but the remembrance of the happy, harmonious home lingered long with me. I often thought of it, and a few years after, I became a little more interested and asked questions which were very kindly answered. It seemed a very beautiful life to me. A little later I was healed through it, but when I told my friends they ridiculed it, and told me I would have been well anyway if I had waited a little longer. I then went back to *materia medica*. Again I visited my uncle and aunt, and so longed for that perfect peace which was theirs; but I had not the courage to start again. "He that wavereth is like a wave of the sea driven with the wind and tossed. For let not that man think that he shall receive anything of the Lord."

During the last four and a half years I had such bad health that if I had not had two little children to live for, I would not be here to-day. I had had two operations and was preparing for a third. I could not sit up longer than three hours at a time. I was so weak and miserable that I prayed to die. I was of no use here, seemingly, and why did God let me live? I knew I had not the strength to undergo another operation, and where should I turn for relief? I again thought of Christian Science, but had never heard that it shortened ligaments, and thought this impossible. My only hope was to visit my aunt and have a talk with her, but it was a day's journey to get there. I accordingly received my husband's consent, took a sleeper, and stayed in it until I reached my destination.

I told my story with just the slightest glimmer of hope that I might be helped, and then asked my aunt if she could heal me. She was very quiet and thoughtful for a moment, and I thought, "Oh, she can do nothing, and does not want to tell me;" but by-and-by she answered me, "No; *I cannot*, but with God all things are possible." Those words I shall never forget. In my weakened condition I felt as if my heart had leaped to my throat, and I seemed to be blinded by an intense light which the eyelids could not shut out; so great was my joy and hope. I visited with them and received treatment for two weeks, and came home (not in a sleeper this time) so much improved that my family and friends marveled at my appearance. I must say, however, that I had not gained the understanding for which I now longed. I wrote my aunt that I missed her talks very much, and she answered that I should not miss her, and referred me to James, 1, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him." This seemed so beautiful and so appealed to me that I felt a hungering for such wisdom. Then came, to comfort me, those beautiful verses from the Sermon on the Mount, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled," and "Blessed are the pure in heart: for they shall see God." That was the first dawning of my understanding. I both hungered and thirsted for knowledge.

My growth in Science has been gradual, but so beautiful that I could approach God only in tears, not of sorrow but of joy, and with lips unmoved. Words cannot express my happiness. In the morning, when I first awaken, I wonder if it is a dream,—then comes the answer, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." I am now perfectly well, and am able to accomplish more than I ever did before. Surely "man's extremity is God's opportunity."

I have been helped so much by reading the testimonies of others in the *Sentinel* and *Journal*, that I thought perhaps my own might help or encourage some one.

GERTRUDE R. SPEESE, Germantown, Pa.

I feel an ever-increasing sense of gratitude for the little understanding I have of Christian Science. This truth came to me about one year ago. I had been ill for eighteen months and had five different physicians, but every one of them gave me up. One would pronounce my ills dropsy, another would call it diabetes, and the last two said it was tuberculosis, and told my husband that I could not live longer than one or two months. At the same time I had a very bad sore in my mouth, said to be caused by disease of the nasal bone. The physicians told me that nothing could save the bone, and that an operation was necessary to cut out the diseased bone and replace it with a silver plate. Besides this, I had what the physicians pronounced epilepsy, which came on me without warning, so that it was unsafe for me to go any place by myself. The last two physicians told me that they did not like to take my case, because they could do me no good.

This was my condition when a neighbor asked me to try Christian Science. She said, "I have been healed of eczema of fifteen years' standing, and there is help for you too." Well, I had given up all hope of ever getting well again, but when my husband came home I told him about our neighbor getting healed by Christian Science, and asked him to take me to a Christian Science practitioner, which he did. I felt better from the first treatment and could do all my own work after the sixth treatment.

I have had no more attacks of the epilepsy since my last treatment, and the nasal bone is all healed up and not even a scar left. The physician said if Christian Science would heal the sore in my mouth, he would give up his practice and become a Scientist himself. I was also healed of paralysis by Christian Science, and of all my other ailments, and to-day I am strong and healthy.

My husband was healed of a very bad sprain in the arm, and also of the tobacco habit,—both chewing and smoking of twenty-five years' standing. Since then we have taken up the study of Christian Science, and we are gaining very rapidly in the understanding. We also had the grand opportunity of class instruction by one of Mrs. Eddy's faithful students.

I cannot begin to tell of all that Christian Science has done for me and mine, but I consider it the greatest blessing that ever came into my life. We have become members of First Church of Christ, Scientist, of this place. To say that I am grateful to God, grateful to Mrs. Eddy, and grateful to my teacher, but faintly expresses my feelings, for verily I owe all that I have of health, of happiness, and of prosperity to Christian Science.

SALLIE ROHLOFF, St. Joseph, Mo.

I wish to tell how I came into the light of Christian Science. I had a stroke of paralysis in May, 1903, and could not walk one step, or help myself at all. I had to be cared for just like a baby. We tried doctors here, and others that did not live here, and my husband carried me to Dallas to be treated, but all the doctors failed. One Sunday, a friend said to me, "Why don't you try Christian Science?" I said to her, "I haven't any faith in it." She said, "Do try it for my sake, for I have a great deal of faith in it; I was treated by a Christian Scientist." She also said, "I'll tell her about you, and ask her if she thinks that she can do you any good." The next week I got so I could work my toes, something I had not done for quite a while. Then my mother was anxious for me to go and see the practitioner. When I first went to her, she had to come out to the buggy to treat me.

I had given up all hopes of ever getting well again, but now I am well and strong, and I can do my housework and care for my baby as a mother should. Just think! I had not walked in twelve months. May God bless my helper.

LULA E. MARTIN, Ardmore, I. T.

Digitized by Google

The following testimony was embodied in the introductory remarks upon the occasion of the lecture in Oskaloosa, Ia., by Bicknell Young June 17.—Eds.

When the lame man lying at the gate of the temple called Beautiful, asking alms of the people, was told by Peter, in the presence of John, in the name of Jesus Christ, to rise up and walk, his feet and ankle bones received strength, and he stood up, and leaped, and walked, and praised God. Peter, explaining to the amazed multitude that it was not by their own powers, this man was made to walk, said, "The God of Abraham,' and of Isaac, and of Jacob, the God of our fathers, hath glorified his Son Jesus; . . . and his name through faith in his name hath made this man strong, whom ye see and know: yea, the faith which is by him hath given him this perfect soundness in the presence of you all."

Eighteen years ago I was an incurable cripple, unable to walk, and partially blind, carried about, seeking help from every material source, but in vain, without hope, and abandoned to despair. In this dire distress, my cry was that of the prophet, "Is there no balm in Gilead; is there no physician there? why then is not the health of the daughter of my people recovered?"

The teachings of Christian Science dispelled this gloom, and revealed the healing balm, the healing Christ, for God gave me "perfect soundness," and I walked, and saw, and continue to praise God. The words of the Psalmist were again fulfilled, "He sent his word, and healed them, and delivered them from their destructions."

Our heavenly Father was found to be the Great Physician, who is as able, and as willing to save His people from sickness in this present time, as nineteen centuries ago, verifying Jesus' words, "Ye shall know the truth, and the truth shall make you free."

God's arm, indeed, is not shortened. His words have not passed away, but remain for this, and every time. "I have no pleasure in the death of him that dieth, saith the Lord God: wherefore turn yourselves, and live ye." And Jesus said, "I am come that they might have life, and that they might have it more abundantly."

Scientific Christianity shows man to have recourse to the Divine, from all the woes which beset mortal existence; that he can enter into spiritual Canaan, here and now, on this very earth, and find health, happiness, peace, and rest beside the still waters, as indicated in our Lord's Prayer, "Thy kingdom come, . . . in earth, as it is in heaven."

CARRIE BAUGHMAN, Oskaloosa, Ia.

I wish to express my gratitude for what Christian Science has done for my family. About two months ago my little boy had what seemed to be a very bad attack of stomach and bowel trouble. This was on Saturday night, and on Sunday morning I sent for a friend, who was a practitioner.

I did all I could, which seemed to be very little, as I was young in Science, until my friend came and commenced work for him. He did not seem to respond very quickly, if anything he seemed worse. He was very feverish and delirious, and complained of severe pain in the head. She worked for him all day, until about six o'clock, when he seemed to be quiet and not suffering. I told her she had better go home, and if anything happened I would let her know. Soon after, however, he went into convulsions,—his face, hands, and feet were all drawn out of shape and he was cold and rigid. My husband and I turned away, realizing that we were not helping her or him by our fear. The practitioner then declared the truth aloud very forcibly. The third time she called him by name he raised his head, opened his eyes, and said, "What is it, aunty?" The error was met and destroyed right then. She helped him up and he soon went to bed, and rested very well through the night, although she stayed with him all night. The next day he came down stairs, on Tuesday he was out in the yard, and Wednesday he went to school and to church in the evening. He has been entirely well ever since.

We feel that we owe his life to Christian Science, and we cannot express the love and gratitude we feel toward Mrs. Eddy and the dear sister who worked so faithfully for our little boy. I trust this will help some one who is still in the dark.—MRS. F. C. WEST, Concord, N. H.

I became interested in Christian Science about nine years ago. At that time I was suffering much, both mentally, and physically. The prominent symptoms were sleeplessness, dyspepsia, nervousness, and melancholia. These were my tormentors both day and night, and they also furnished me with terrible forebodings for the future. I had tried material remedies faithfully without receiving any permanent relief from my suffering. The period during which I had the above experience lasted about thirty-five years of my life.

About this time I became interested in Christian Science, and soon began to take treatments from a faithful practitioner. I had not taken treatments long before I began to improve slowly. As my understanding increased, and I became thoroughly interested in the study of Christian Science literature and tried faithfully to put its teachings into practice, I found that the false claims of the material senses, which seemed so real, began to yield slowly but surely, until I can now say that I enjoy freedom from these discordant influences.

Since I came into Science my wife was healed of chronic bronchitis, by reading "Science and Health with Key to the Scriptures." She was also healed of a severe attack of erysipelas, which made itself manifest by a terribly swollen face and ears. She was completely healed in a few days. We have had many other demonstrations in our family, and have been enabled to help others also, through the understanding of the blessed truth.

The spiritual insight which reveals to mortals man's oneness with the infinite Father has brought such blessings to our family that we cannot give adequate expression to their value in helping us onward in the path Godward and heavenward.

I am thankful to God because I live in this age when it pleased Him to send this blessed truth to wayward humanity; and because there were some ready to accept it. I am also grateful to our beloved Leader for her steadfast faith in God, her persistent efforts and toil to make the message as plain as possible to the understanding of weary and suffering humanity. That it has reached the minds of men, and lifted them out of their darkness and misery, there are thousands who can give ample testimony.

J. S. EAGAN, Cambridge, Mass.

I would like to give my testimony in the hope that it may help others. I have been a student of Christian Science eighteen months. I came to it for physical healing, or rather it found me, as I didn't know anything about it, but a dear friend told me about it when I went home to my father's in Gothenburg, Neb.

I had had neuralgia and stomach trouble for a year, and that caused nervous prostration and hysterics, and I was the most miserable woman that ever walked; but I thank God that Christian Science found me and cured me of all those troubles, and also of constipation and heart trouble, and it was mostly done through my own study of Science and Health. I had only three treatments from the practitioner. I have often been discouraged because the healing seemed so slow to me, but I felt that I could not give up the truth, because there was nothing to go back to, and I knew it was the truth. Jesus says, "Ye shall know the truth, and the truth shall make you free."

There is no organized society here and but one family

Digitized by Google

besides myself now. My husband is not a believer in any church, but I have helped him by the denial of error so much, that he does not think of taking medicine as he used to. What I have the most reason to be thankful for, is the spiritual uplifting. When Christian Science found me I was "having no hope, and without God in the world," but now I have found the "living and true God," "Who forgiveth all thine iniquities; who healeth all thy diseases."

My heart goes out in gratitude to our Leader and to the faithful friends here and in Gothenburg who have given me encouragement, perhaps more than they knew, for I was sadly in need of it, and I pray that I may let the light "so shine" that others will see the good works and glorify our Father in heaven.

MRS. MARY A. DENHAM, Minden, Neb.

I desire to express my earnest and heartfelt gratitude for all the blessings this wonderful and glorious truth has brought into my life. I never knew life in the true, full sense of the word until I found Christian Science a little more than two years ago, when it transformed me from a sufferer from headaches, to which I had been a slave always, as well as to many other nervous affections, into a strong, well woman with unlimited energy. All my life I had been fighting for strength, but only the light of Christian Science brought it to me. Since then, the Bible has been a glorified book, and though I had been taught to believe in a God of love, of mercy, and infinite goodness, there were shadows of doubt lurking in the corners of my faith, which now is absolute. The real part of me has come into its own.

WERDNA KELLAR, Hot Springs, S. D.

I am grateful for a healing, that was practically instantaneous, of an abnormal appetite, which I had since childhood. When a child I was always hungry and as I was permitted to do so, I was nearly always eating, particularly sweets,—apples, etc. Plenty of exercise, and lack of fear kept me from actual sickness, but my health was never good, and this appetite was not overcome.

After I came into the Christian Science Church and began to attend the meetings, to read Science and Health, and to work mentally as instructed, the appetite increased apparently, though I had approved and tried to realize the motto given by our Leader, "Mind, not matter, satisfieth." At last the healing has come, and I rejoice to know that I have a perfect stomach. I rejoice in realizing the dominion, given by God to man, as applied to my own body, love working out the law of Love, Principle manifesting itself in perfection. I am grateful for this, and for all that I have received from Christian Science.

OLGA W. CAMPBELL, Kansas City, Mo.

Though young in Science we have had several demonstrations in our family that assure us of the benefits derived from even a little understanding of Christian Science. A little over three years ago our eldest boy was afflicted, to mortal sense, with eczema. We had treatment by our family physician; and as he grew worse, we called on a specialist who gave medicine internally and by external application, but the boy grew no better. A physician informed one of the family that we might expect the child to have eczema, more or less, for seven years, and then he might not be entirely cured of it. The city physician ordered the child from the schools, and advised that we give him nourishing food, and let him play out of doors in the dirt. Just prior to this we asked a practitioner to take the case in hand. At first it was difficult to overcome, but inside of seven months the child was healed.

We are thankful for the understanding and we are experiencing more or less of the influences of Science. We have three children in the Sunday School of the Mother Church, and my wife and I attend each Sunday morning service. It was most certainly a wonderful cure in the case of our child, as a number have said.

WALTER G. CROWTHER, Boston, Mass.

Before studying Christian Science I was tormented with two questions: one was, What is God? The other, Where is God? Although a member of an orthodox church I felt dissatisfied with my understanding of God and of the Bible, for I had not realized its promises. Because of this unrest and a constant desire for a better understanding of God, I was led to the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. This book made a deep impression on me at once, and I thought, This is indeed what I have been seeking; this is a revelation of Truth.

I had not been studying the book more than two weeks when I was suddenly taken ill with a very severe cold in the head and sore throat. Although my understanding of Christian Science was slight, I began trying to apply what I had learned, and the discord was destroyed almost immediately. This was my first demonstration of the power of Truth, and it meant a great deal to me, because it proved the power of Mind over the belief in matter.

From that time on many other demonstrations were made through the study of Science and Health and the endeavor to apply its teachings, but best of all I have in a measure become acquainted with God and have learned that He is infinite good, divine intelligence, Love, Principle, and that He governs the universe harmoniously. Many times have I seen evil conditions—sin, sickness, and discord—overcome through the power of God, good, and it has been proven to me that God is a "very present help in trouble," that the all-loving Father-Mother God is ever ready to care for His own.

Every day I am more grateful for Christian Science, and more grateful to our Leader, Mrs. Eddy, through whom God has spoken to this age.

CAROLINE E. FAIRBANKS, Kansas City, Mo.

It is three years since I became interested in the study of Christian Science, and the many blessings I have received within that time would take up too much space to tell.

I have been cured of heart trouble from which I had suffered for some years, and other ailments for which I used to take medicine more or less, and which I left off from the first day of my interest in Christian Science. I have not taken any material remedy since, and the great benefit I have received I cannot express. I look and feel so much better that the people who formerly knew me now hardly recognize me. I have a copy of Science and Health which I procured at first. The Bible becomes plainer for me to understand; it seems like a new book. I have been enabled to overcome much and I know that in time, as I progress in the understanding of Truth, I shall overcome more. I desire to express my love and gratitude to God, to Mrs. Eddy, and to all who have aided me in Science.

MARY R. RICHARDS, Hartwick, N. Y.

A Smile.

THEY might not need me—
Yet they might—
I'll let my heart be
Just in sight—

A smile so small
As mine might be
Precisely their
Necessity.

EMILY DICKENSON.

From our Exchanges.

There is a dramatic tendency in all life. Things pile up. Power is accumulated. Behind the mask of things is a world of which we know but little. The stars seem going one way, but the world is going the other. Despots, societies, individuals, dam up the waters of the great deep, and hold back the flood. But it will not last. "I saw the wicked in great power, spreading himself like a tree. But, lo, I sought him, but he could not be found." The winds descend. The flood comes. The fountains of the great deep are broken up. They undo, they overwhelm, they sweep away the refuge of lies, even sleep. For a day or week or year, or ten years, a man may halt the processes of life in himself. He may even seem to turn them back. Prosperity may stifle the inner voice. The lethargy of animalism may benumb his noble faculties. But the Lord cometh like a thief in the night. And in an hour when he thinks not the trumpet of judgment shall sound in his ears, and he shall awaken to torment, to repentance, and to righteousness. And though it be that his awakening is to pain and agony of soul, yet it is as one dead who is made alive.

The Universalist Leader.

The idea is far too general, especially among young men, that to be good is to live the life of the frog in his pool,—blinking, sluggish, solemn, and withal croaking, and that the real flavor of life consists in doing something a little off-color morally, dashing across the line of rectitude into that dangerous but delicious land of the immoral, where all zest and adventure hide. Of course, thinks the boy coming to a sense of freedom from outside restraint, one need not go so far across the line but that he can get back in time for the last trump; but in order to have a real good time one must not be "too good."

The Congregationalist and Christian World.

Nowhere does the Bible speak of itself as "the word of God." That phrase designates the truth, of which the Bible is the record. Modern investigation is teaching us that there is a human element in that record; it has grown up in ways analogous to those in which other literatures have originated; and it is to be interpreted in the light of its history. And yet, in spite of imperfections, its authorship is divine as well as human; it brings us a divine revelation; its many biblia constitute one Bible. It is not intended to teach physical science or secular history; but it is able to lead us to Christ and the truth. When taken together, and interpreted by the same Spirit who inspired it, it is able to make us wise unto salvation.

PRES. A. H. STRONG, Rochester Theological Seminary.

The Standard.

The revival which the present conditions demand is one that will make this nation terribly conscious of God, and not one that will waste itself in a sort of emotional revelry and a brief delectation, but one that will take enduring hold upon all the motive powers of the spirit, rule every affection, and bring all conduct under direction of the laws of God. The next great revival of religion will be along the lines of a real and serious application of Christian truth to every phase of life.

REV. JOHN C. KILGO, D.D.,

The Christian Advocate.

To "pray without ceasing" is not to be always uttering prayer, but to be always in the spirit of prayer. One can have that spirit in the midst of the rush and pressure of business as well as in the seclusion of the closet. It is a frame of mind to be cultivated. It is a mighty safeguard against temptation.—*The Examiner.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington, Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN · SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

The frigate Constellation, the oldest ship in the United States Navy, has been ordered out of commission. She was launched in 1797. Two years after her launching, she was victor in her first great fight, which was with the French frigate Insurgeant in February of 1800. She fought the French frigate Vengeance in a desperate battle, which cost her all her standing rigging, but brought her victory. The Constellation subsequently took part in the war with Tripoli and was conspicuous in the War of 1812. The exhibit of France to the World's Fair in Chicago was brought by her. During the last ten years she had been in service as a receiving and training ship for navy apprentices at Newport.

For the first time in the history of the country the trust funds in the United States Treasury now amount to more than $1,000,000,000. The total amount was $1,002,169,969, as against $902,700,869 on June 30, 1903. The items include silver dollars, 469,873,000, against which an equal amount of silver certificates has been issued; silver dollars of 1890, 7,770,785 and silver bullion of 1890, $4,956,215. Against the last two there are outstanding Treasury notes to the same amount that is, $12,727,000. Besides the gold in active circulation the Treasury vaults now hold gold coin and bullion to the amount of $696,655,068, exclusive of the legal reserve of $150,000,000.

A conference has been held between the Panamanian Minister of Foreign Relations, Tomas Arias, and the American Minister, Mr. Barrett, as a result of which it has been agreed that steamers can go into Ancon, the newly established port of entry in the Canal Zone, the Panama Government simply filing protests, but not imposing any fine on the steamship agents, pending the final settlement of the questions at issue.

The Bureau of Equipment of the Navy Department is engaged on the plans for five large coaling stations, each to have the capacity of about 100,000 tons of fuel.

The Harvard-Yale athletic team sent to England to compete with the English University teams won six of the nine events. The English teams won only the long distance runs.

Foreign.

The capture and sinking by Russian war vessels of the Knight Commander, an English vessel under charter to an American firm and loaded with merchandise for business firms in China is likely to precipitate some important international questions. It is claimed she had no contraband of war on board. The action of the Russian commander in sinking her has caused no little feeling in England. A volunteer fleet has also passed out of the Black Sea through the Dardanelles ostensibly as merchantmen. Later they became war vessels and have been holding up vessels in the Red Sea. These two incidents have now been adjusted in a manner by the promise of Russia to pay for the sunken vessel, if proved to have been wrongfully sunk, and to withdraw the volunteer fleet. It is possible that these events will lead to some international agreement as to what is contraband of war; to the acceptance of the American contention that mails shall be exempt from seizure; and, perhaps, eventually to some agreement by which the questions arising out of the search of neutral vessels on the high seas may be determined by or under the Hague Tribunal, instead of by the prize court of the nation making the capture.

The revival of the imperial policy which sent boys of promise to this country thirty years ago for education indicates a progressive thought in China. Those boys are now in leading positions, one of them now the Chinese Minister at Washington, as was his predecessor. The examination of the boy-candidates to be sent abroad again this year was lately held in Canton. There were 560 applications, and over 500 actually appeared for examination. They were examined in translating from Chinese into English, French, German, or Japanese, and then from the language chosen back into Chinese. One group of them was examined in arithmetic, algebra, geometry, and trigonometry, and all in Chinese composition. From the whole number 26 were chosen, and others will raise the number sent from Canton to 40, half of whom will come to the United States, and the rest go to Europe. Not less than 30,000 Chinese students are now being taught by foreigners, most of them in missionary institutions, while a thousand Chinese youth are in schools in Japan, and a multitude of Japanese teachers are in the Chinese civil and military colleges and the normal and agricultural schools that have been established in every province in China.

Misappropriation of contributions to the Russian National Red Cross fund has resulted, it is reported, in the loss of $4,120,000 from the Central Treasury. The loss came to light in consequence of the demand of the province of Cherson for an acknowledgment of its contribution of 100,000 rubles ($51,500). An investigation of the books in St. Petersburg and Moscow revealed the discrepancy, which seems to be part of a system of thievery practised since the beginning of the war. The Czar is said to be greatly disturbed at the existence of such corruption among those intrusted with the Red Cross arrangements, and he insists that the culprits must be punished.

The Cuban Cabinet has authorized the beginning of the construction of the Santiago water works. The Government is willing to assume the appropriation for cleaning the streets of Santiago, Puerto Principe, and other eastern cities which are in a wretched condition, due partly to the inability of the municipalities to defray the expense, and partly to the alleged determination of the local authorities to force the Government to pay the expense of the street cleaning in accordance with the stipulations of the Platt Amendment.

It is officially announced that the coinage of Finland, which has hitherto been distinct from that of Russia, will be reduced to the basis of the rouble. The markka, the standard of Finnish Coinage, is equal to 19½ cents in the currency of the United States, and the rouble to 49 cents.

Industrial and Commercial.

The new Cunard line steamer Caronia, recently launched at Clydebank, is the largest ever built in Great Britain. Its dimensions are: Length over all, 676 feet; breadth, 72 feet 6 inches; depth to shelter deck, 52 feet; depth to boat deck 80 feet; gross tonnage, 21,000 tons; displacement, 30,000 tons. She has been built in accordance with the requirements of the British admiralty for an armed cruiser, and will be fitted for mounting twelve rapid-firing guns; there are eight continuous decks; bulkheads divide the ship into thirteen water-tight compartments; her full complement of passengers of all classes will be 2,650, making with a crew of 450 the total number of persons on board 3,100.

A delicious citrus fruit, a cross between the tangerine orange and the so-called "grape-fruit," has been produced by the United States Department of Agriculture. The cross was made in 1897, but it was not until this year that the seedlings came to bearing age, and it was discovered that the combination had resulted in a new and delicious fruit, combining the most desirable characteristics of both parents, size, juiciness, and refreshing flavor from the pomelo, while from the tangerine it acquires a thin rind, which is easily removed, a tender pulp, and an almost seedless interior.

Two of the big eight thousand horse power generators at the new power house of the Interborough Rapid Transit Company, New York, were tested last week, the power being fed to the "L" system. The "turning over" test was satisfactory and the great generators were found to be fully equal to their promised capacity. There are to be twelve of these 8,000 horse power generators when the power station is completed. When all is finished power enough will be generated, it is stated, to run not only the subway and elevated systems, but other contemplated subways.

A new record in railroad traveling has been established by the Great Western Railroad, of Great Britain. On July 1 a regular non-stop daily train service was established between the London terminus at Paddington and Plymouth. The distance is 246 miles, and the "Cornishman Limited Express" is scheduled to cover the journey in each direction in 265 minutes without a single stop. This supplies an average speed of 55.69 miles for the journey. This, therefore, constitutes the longest non-stop railroad run in the world.

A strike in seventy-one out of seventy-three cotton mills in Fall River began on the 25th ult. The number of hands employed by the affected mills was 25,630. Statistics show that Fall River makes over three-quarters of all the country's print cloths and has one-seventh of all the American spindles. The estimated daily output of cloth, when the mills are running anything like full time, is fifteen hundred miles.

The incorporation in the South of fourteen new railroads was reported during June, making a total of 107 new companies reported during the first six months of the year. The total mileage of these lines for the month is 898, making a total of 10,003 miles projected during the first six months of the current year.

The preliminary report to the Agricultural Department regarding the Gautemalon ant experiment in checking the ravages of the boll weevil says the results so far achieved are satisfactory.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Conclusion Reached by Eminent Philosophers.

EDWARD P. BATES.

In March, 1891, it was my good fortune to spend a few days in Athens, Greece; and, while there, I visited the National Academy, the highest educational institution in the kingdom. Its buildings are situated on the high ground of the new city, are modern, and are constructed of pure white marble.

The Hall of Philosophy, which had recently been completed, was most interesting to me. It is a one story structure in the Corinthian style of architecture, its interior walls and the seats being of pure white marble, while it is lighted wholly from the ceiling. On the walls are several paintings of heroic size, vividly portraying the legend of Prometheus. Though the hall is not large, seating only perhaps a hundred persons, its effect is strikingly noble and impressive.

After giving the pictures some study, I proceeded to the adjoining building, which is called the Musée, where I found the director at liberty and willing to give me attention. He very kindly showed me the most interesting relics, among which were gold coins of the time of Alexander the Great, and also others which are the oldest known in the world. I naturally asked many questions, especially as to the use of the Hall of Philosophy, and the information, graciously furnished by the director, was novel to me. I had supposed that this Hall was used as a lecture room for classes of young men who were students in the Academy, but my thought was far too limited. The director stated that the philosophers are, as a rule, men of mature years; in fact, many would be considered quite aged, and that they are persons who have always studied philosophy and made it a profession.

In many cases, their fathers and grandfathers have been philosophers, so that the members of the present class have been born and educated in the atmosphere of philosophy. They spend their entire time in its study, meeting periodically to discuss questions of vital import.

To my question as to what topics had employed their time so constantly, the director replied that they frequently discussed a single question for one, two, or possibly three years, before it was laid aside for a new theme. He said that no discussions were being held at the present time, for the reason that a vital question had been under consideration for something over a year, and that, several months before my visit, the philosophers had separated, going to all parts of the world where they could come in contact with learned men and search great libraries. They were not to return until the succeeding autumn, when they would bring together the results of their research. Some of the philosophers had gone to the United States, others to London, Paris, Vienna, Berlin, Rome, northern Africa, India, China, Japan, and other points where it might be possible to obtain information.

I was then impelled to ask, "What is the great question that can hold the attention of these eminent men for so long a time, and that leads them to travel the world over in order to find a possible solution?" The director answered me very readily, "The question before this body is, What is Life?"

I then told him that I had in my hand a book which would answer that question, adding that if he would put it in the library I should be pleased to present it to the Academy, also requesting that he call the attention of the philosophers to it upon their return. The director readily assented and asked me to inscribe the book, which I did. The book I gave him was "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

A few months after, I received an official certificate of the receipt and acceptance of this book by the library authorities. The document bore the seal of the Academy, with the signature of its presiding officer, and it is a souvenir much valued by me.

Late in the fall of that same year, one of our large Metropolitan dailies contained a short article which read somewhat as follows:—

"The philosophers have returned to Athens after an absence of nearly two years. They have been searching for a solution to the question, 'What is Life?'

"Reassembling at the Hall of Philosophy in Athens immediately upon their return, they stated that they had not found in their travels and researches any satisfactory answer to the question; but they passed a unanimous resolution that there never was, and never would be, an atom of matter."

The Harvesting.

MATTIE J. DE LANO.

Last summer was one of great joy and manifold blessings increased by the pleasure derived from the opportunity of visiting a number of Christian Science congregations, outside of the large cities and sometimes in country districts. The membership of individual churches was not large, but the quality of thought was Christly, and this is all that is real in individual or church. Work for the advancement of the Cause goes on in village, town, and hamlet, and seed is everywhere being sown for a coming harvest, the bringing in of golden sheaves to lay at the Master's feet.

At the Sunday and Wednesday evening services one is struck with the heartiness of the singing, especially the hymns of our Leader. How sweetly they sound as love gives coloring to the words which appeal to every heart.

I have listened to many testimonies of healing from dear ones who live far away from any practitioner's aid, who have taken their books and overcome fear in themselves, realizing that Love, their refuge and help, was near, and who thus met and mastered the seeming foe. Knowing Love's control over all discord (Science and Health, p. 514), they rested in the outstretched arms of our Father-Mother God, where they found health and sweet peace.

On every hand is heard thanksgiving and praise for the example given by our Leader in so pure a life; for her untiring watchfulness over the Cause of Christian Science, to

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

keep it pure and free from everything that "worketh abomination, or maketh a lie." In the Message of 1901, most touchingly she says, "I have passed through deep waters to preserve Christ's vesture unrent" (p. 39).

The Harvest Home is celebrated in many orthodox churches, by the members bringing in the best of their fruits and other products of the farm, as a free-will thank-offering and praise-offering to God for blessings received. This gives food for reflection; for now are we bringing our tithes into the storehouse, for the expansion of the Mother Church, where we may meet and greet our brethren in the blessed tie that binds our hearts in true Christian unity and love, for "no estrangement, no emulation, no deceit, enters into the heart that loves as Jesus loved" (Message, 1902). Through daily watching and overcoming, the true man and the one body are brought nearer together, the true Church is seen and recognized. Every opportunity must be improved, every thought made perfect to reveal the spiritual fact of one Shepherd, one Fold, one Church now and evermore.

It is God's vineyard in which we are working. The cutting and pruning of the vines must go on until all the dead branches are removed, to reach a full realization of the perfect Church, "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (Science and Health, p. 583).

The Cross.

P. M.

It was long after midnight and the room was silent save for the regular breathing of a sleeping child, whose mother was walking restlessly up and down the room.

The woman's whole heart had gone out in a prayer for peace, and she had heard a voice, "Take up the cross, and follow me." "Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest."

There was no mistaking the call. A great light stole over her face, and there came the peace "which passeth all [human] understanding." She had said in her heart, "I will leave my nets and follow Him. Whatever God wants me to do, I will do."

Who can measure the height and breadth and depth of the reflection of love which filled the room as she lay down beside her sleeping child. Little did she know how soon she would be put to the test, or how quickly that which had been given her would be required of her.

It was at the time of the new By-law limiting the term of the Reader's service in the churches to three years. The Readers then in office, in the church of which she was a member, had been faithful and true, and they were among the first to see the wisdom of the dear Leader that Christian Science might ever rest upon Principle, not person.

The annual business meeting was over and the woman was on her way home. There was a strange sense of bewilderment, and endless suggestions came pouring into her thought. Could she do it? Wasn't it a mistake on the part of the church? Could "God furnish a table in the wilderness"? She had been elected First Reader and her duties would begin in two days.

She went into the dimly lighted room and glanced at the same dear little face on the pillow. Where was the peace with which the room was filled that other night?

When she came from the Wednesday evening meetings each week she was accustomed to find a little note pinned to her pillow; sometimes only a little scrawl, which said, "Dear mother, I'm too sleepy to write anything only, I love you, Good-night."

This was not Wednesday, and why should she expect a message, but it surely was there, and no scrawl this time, but a carefully written letter with an even white margin on the left of the pages, and, stranger still, it was written with red ink and tied at the top with red ribbon. What did it all mean?

In all the history of her little love-letters to her mother, she had never used red ink before.

It read,—

"*Dear Mother:*—I am going to write a little verse to you about 'The Cross.'"

Then followed in careful copy, Whittier's beautiful poem,

"The cross, if rightly borne, shall be
No burden, but support to thee:"
So, moved of old time for our sake,
The holy monk of Kempen spake.

Thou brave and true one! upon whom
Was laid the cross of martyrdom,
How didst thou, in thy generous youth,
Bear witness to this blessed truth!

Thy cross of suffering and of shame
A staff within thy hands became,
In paths where faith alone could see
The Master's steps supporting thee.

Thine was the seed-time: God alone
Beholds the end of what is sown;
Beyond our vision, weak and dim,
The harvest-time is hid with Him.

Yet, unforgotten where it lies,
That seed of generous sacrifice,
Though seeming on the desert cast,
Shall rise with bloom and fruit at last.

"Good-night. Kisses. Good-night."

As the mother read, each word seemed to glow, and the questions came, Who told the child what had happened? How did she know her mother's need? Then the woman remembered that God is the ever-present divine Mind, and that the Master said, "Except ye . . . become as little children."

It was enough, the mother had received her benediction. Again the light shone in her face, again the peace, and yet again the reflection of Love filled the room, and seemed to rest upon the sweet face of the sleeping child with infinite tenderness, and the mother thought, as she lay down beside her, Father-Mother God make me worthy the trust.

The next day the child said, "Did you like my letter, mamma? I just kept looking through the verses till I found the right one for you?"

Her mother has the verses framed and hung in her study. She reads and re-reads them, and ever gives thanks to God and to the child for them,—His child, not hers,—for she has given her to Him.

Thanks.

J. EDWARD SMITH.

In the *Sentinel* of June 18, there is a report of Judge Hanna's lecture in Queen's Hall, London, England. As I read this report a tearful joy crept over my thought, and at the finish a burst of thanksgiving that, after a moment, sought sober and more practical expression; and not having the writer's address, I beg to thank him through the *Sentinel*.

What must be her joy whose life and labor has made possible this and every like demonstration? Let him who knows somewhat of the history of the Christian Science movement and of the life of its Founder; of her suffering, and unrequited toil amid persecution,—standing alone, working alone, praying alone, uncomplaining, in ceaseless vigilance upon the watch-tower of a world rebellious of the God-message she had to deliver to it. Let him take a retrospective view of thirty years, or even ten, count the woes, the sins, the deaths, that Christian Science has wiped out; let him imagine what the world would be without this religion of Christ, and what it will be in another thirty years with this religion scientifically applied, then let him read the report referred to and, if he can, let him restrain a tear of joy!

Digitized by Google

If there was joy in heaven at the birth of Jesus, and an angelic proclamation of "on earth peace, good will toward men," what of the joy when this prophecy is fulfilled? If the first night of the Christian era was filled with joy, what of the many nights in this and other lands, which follow the Christian Science lecturers as they go from city to city producing the effect described in the report referred to, of which I here quote the last paragraph: "In another minute the people were pouring out into the night, carrying with them through the streets of the great city the words which in sickness and sorrow will ever have a new meaning, 'And lo, I am with you alway, even unto the end of the world.'"

I am sure every heart that has beat a moment faster at these benign words of our great Master would leap for joy to behold the picture presented to mental vision while reading that report, for it signifies the fulfilment, at our very doors, of that which the Prophets foretold; that for which Jesus lived and suffered; yea, all that is hoped for in the signs of the coming of the kingdom of heaven as signified in his prayer, "Thy kingdom come. Thy will be done in earth, as it is in heaven."

As one who has loved the Christian religion and prayed the Lord's Prayer from childhood, I want to thank all who help to swell the anthem of Christian freedom; and, above all, I want to thank Mrs. Eddy who, by her discovery and selfless life and labor, has made possible this grand anthem which is now filling the earth, even as the birth of Jesus made possible the first grand song-burst of Soul which filled the first Christian night with joy. I have a right to voice these thanks, for Christian Science found me with blighted hopes and blighted health, and has made me sound in body and in Christian faith and understanding, whereas doubt and darkness had well-nigh shut out all the light. Now I can exclaim with the man of old, "Whereas I was blind, now I see."

And what do I see? Why this: That Christ never for a moment left the earth; that his promise, "Lo, I am with you alway," is inviolate; that the signs of his second appearing to human consciousness are the same as were the first; namely, both mentally and physically "the blind see, the lame walk."

The Relation of Science and Health to the Bible.

GERTRUDE SMITH.

THE study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, ever leads its students to the "book of books." One who becomes a student of Science and Health very soon becomes a diligent student of the Bible.

Few educators deny to the Bible a leading place in the realm of literature, and the great significance of the study of the Bible with Science and Health, lies in the fact that it heals mortal mind and body and spiritualizes motive, thought, and action.

When we consider the importance which the world places upon systematic study of a high order, we may rightly estimate the place and work of one who has inspired, and who is inspiring, thousands to an eager, earnest, and systematic study of the Bible; and can rejoice that the world has gained a great educator,—Science and Health,—which, abiding in our homes, is an insistent, loving teacher, leading always to the best. No one who becomes a daily student of the Bible is ever satisfied with less than the best in literature, and he who reads and loves only good books will choose the best in every direction.

The first year that I began the study of Science and Health, I became a systematic reader of the Bible, and for five years I have been a Bible student. I owe a deep debt of gratitude to our text-book for aiding me in gaining a practical education. My great fear, when I began this study, was that it might not honor Jesus as I felt he should be honored; but before I had studied the book through the first time, I was satisfied that Jesus was honored far more than I had ever realized that honor was due him. I was healed of nervous dyspepsia of ten years' duration, and through this healing I was awakened to see the immeasurable love of our Master in giving so large a portion of his time to the ministry of healing the sick.

The Christ-nature of Jesus was revealed to me as the idea of divine Love, ever-present with man. I began to long for this nature, and I longed to heal the sick, to bless and comfort others as Jesus did. Surely my reverence and love can never be too great for Mrs. Eddy, and for the gift of Science and Health.

Jesus' Appeal.

J. E. FELLERS.

"JESUS was a mediator between humanity and Spirit. He voiced truth. He spoke to the human sense through the divine" (Science and Health, p. 332).

As the son of Mary, Jesus was human, and formed the link between weak, cringing, fallen, mortal man and Spirit. He sought not to show himself to men. He wanted them to see the Christ. His mission was to lift humanity up.

A vine torn down from the tree which once supported it, had no strength of its own and so lay prone on the ground among the weeds around which it entwined its tendrils. In this condition it bore poor fruit, and unless it were lifted up it would ere long wither and die. With one hand a woodman drew downward a branch of the tree, and with the other he raised up the helpless vine. The vine knew the branch and clung steadfastly to it, reaching out farther and farther until at last the tendrils again took firm hold upon the strong body of the tree. The vine was lifted up from its fallen estate into the bright sunshine and the pure atmosphere. It had been redeemed. The mediator,—the woodman,—had shown it the way back to fruitfulness and life.

Jesus found mortals helpless and hopeless, blind, sensual, and sick. Though God, Truth, Love, was a living presence, mankind was sinking deeper each day into oblivion and doom. Jesus came with a new doctrine. He announced it to the world in a brief discourse which has been called, "The Sermon on the Mount." It has also been called, "The Song of Redeeming Love." There were some who heard the sermon but they did not hear the song. They understood the letter, but did not catch the spirit of his teaching. There were others who arose, shook off old beliefs, and laid hold upon the Christ. They heard the truth Jesus voiced. It was so wonderful and sweet that the human sense was lost in the divine, and as they listened they heard him say, "This is my commandment, That ye love one another, as I have loved you." By this he meant that just as he had shown them the way back to God, and had given them strength in hours of trial, they should comfort and sustain each other as they went forth to show others the way.

As Christian Scientists read and study more and more the writings of our Leader, they will hear her sweet and tender pleadings, "Love one another" expressed in some way on almost every page.

[Written for the *Sentinel*.]

Safe Keeping.

CLARA L. DOANE.

IN night time deep,
When I'm asleep,
I am God's child,
And God doth keep.

In daytime bright,
When all is light,
I am God's child
To do the right.

What the People Say.

No one but a Christian Scientist can possibly offer a "scientific explanation of the cures made by Christian Scientists," and the reason for this is at once apparent to any one who will give the matter a moment's thought and attention. Christian Science is all that its name implies,—the Science of Christianity; therefore to understand it one must be able to demonstrate it. How absurd, then, to claim to understand this subject better than those who are daily demonstrating its Principle, to say nothing of the attempted rejection on the part of our critics of the explanation of Christian Science as given by its Discoverer and Founder, the Rev. Mary Baker Eddy.

The great trouble with the attempted explanations of Christian Science as given by its opponents, is that they do not explain. Christian Science not only aims to cure, but does it; and the largeness of its following is the most convincing argument in proof of its accomplishing what it has set out to do.

To classify Christian Scientists with "faith healers," "witch doctors," etc., proves that this teaching is not understood by its critics. To assume that all cures resulting from practices which exclude drugs or other material administrations, are due either to Christian Science or to something necessarily allied to it, shows a rather limited knowledge of the general subject of therapeutics. Would our critic have us believe that the works of Jesus and his disciples were due to mesmeric suggestion or to hypnotism? Is prayer, for instance, to be considered as of no avail excepting as a process through which one can mesmerize himself into believing that he has no ills?

To know God aright is surely of some value to one who is suffering either from sin or disease. The term God, properly understood, embraces all good, all power, all knowing, and even partially understood it gives a faint idea of the possibilities which right understanding will bring to man.

The carnal mind was ever at enmity against God, and in the days when Jesus and the apostles brought forth signs and wonders through their right understanding of God, the carnal mind was constantly at work to counterfeit these miracles and to produce, if possible, similar phenomena. So it is to-day. Thousands have been raised up through earnest, enlightened prayer to God, and side by side with this we find believers in hypnotism and personal magnetism, seeking to do the same works, hoping to prove thereby that the human will is sufficient to meet all those demands for the fulfilment of which man usually looks to a higher power, but in this they are not successful. ALBERT E. MILLER.

Easton (Pa.) *Sentinel.*

In spite of the contemporary theory relative to microscopic life, *materia medica* is as far as ever from explaining the final origin and ultimate source of disease, and from having found a scientific cure. There are not less diseases to-day than there were before this theory was promulgated. Nor is it "absurd to say that any mental state on the part of the patient can have any influence over the life of these destructive agents," for Christian Science treatment, which alters the mental attitude of the patient, has healed every one of the diseases enumerated as due to microscopic life. It is a matter of record in the annals of Christian Science, during the more than thirty years of its work before the public, that hundreds of cancers have been cured by its ministrations. In fact, it is principally the so-called incurable cases which come to Christian Science as a last resort, having first tried everything else available, in vain. It may be granted that seventy-five per cent, or even eighty per cent, of all cases would cure themselves if left alone, and that "in acute ephemeral diseases, like colds, chicken-pox, measles, scarlet fever, etc., the universal law is that they are self-limiting, and when they run a natural course in a healthy person, the tendency is to a spontaneous cure." But experience shows that the cures of Christian Science are performed principally among the twenty-five per cent or twenty per cent which are not supposed to be self-curing or to come under "the universal law" of self-limitation, but, on the contrary, are reckoned as leading to death, if left to themselves.

Christian Scientists do not desire to urge their views upon others or to infringe in any way upon the medical practice of devoted and honored physicians. It goes without saying that they refer all those who may desire material medicine to those qualified and licensed to administer it. But they believe, and the fruits of their work prove their contention, that they have a better, safer, and surer way of meeting the ills to which flesh is heir than the material means more commonly used. W. D. MCCRACKAN.

Utica (N. Y.) *Press.*

Christian Scientists do not promise specific results to their patients, as they know from experience that great differences exist in individual cases, and whereas many are healed instantaneously, other cases are slow, and some do not respond at all. A practitioner can truly say that Christian Science as a system is capable of healing all manner of disease, meaning thereby that every conceivable human ill has been known to yield to its influence.

The fact that Christian Science does produce remarkable healing when rightly applied is acknowledged by thousands, and goes to prove that its practitioners have already gained a sufficient comprehension of its teachings to do some very successful work.

To have uniform and invariable success, we must wait patiently for spiritual growth, and allow time for development, which is so essential to perfection in all walks of life.

The majority of cases healed in Christian Science have come from the large class who had previously "suffered many things of many physicians," and were "nothing bettered, but rather grew worse." The writer has now before him a letter from a lady who testifies that she was restored to health in Christian Science after an invalidism of more than ten years, resulting from an accident which had injured the spine. This case had been under the treatment of well-known specialists in New York City, and had been pronounced beyond the scope of material aid. This patient was under Christian Science treatment for some months prior to her recovery, which shows that patience and perseverance are necessary in dealing with tenacious cases.

RICHARD P. VERRALL.

The Globe, New York.

That which is found in Christian Science and that which seems to be lacking in the other churches is the complete gospel of Christ. When Jesus sent his disciples on their mission, "He sent them to preach the kingdom of God, and to heal the sick. . . . And they departed, and went through the towns, preaching the gospel, and healing everywhere." He did not instruct them in *materia medica*, nor equip them with a stock of drugs, but said, "Have faith in God," and, "ye shall know the truth, and the truth shall make you free." When Jesus healed one that the disciples failed to heal, and they asked him why they had failed, he replied, "Because of your unbelief: for verily I say unto you, If ye have faith as a grain of mustard seed, . . . nothing shall be impossible unto you." Christian Science proves this teaching to be as true and practical to-day as when it was first uttered, and this is why it is being so generally accepted. FRANK W. GALE.

The Lectures.

Cleveland, O.

Chamber of Commerce Hall was completely filled yesterday afternoon [May 15] by an audience which had gathered to hear Frank H. Leonard of New York, deliver a lecture on the nature and workings of Christian Science. He was introduced by Rev. Minot O. Simons, pastor of the Unitarian Church, who said in part,—

"As an old church father expressed it, 'The soul divines what is divine.' I believe that is true. And I believe that the divine resources are so truly inexhaustible that some aspect of the truth is presented to every soul that seeks. To every human spirit comes the promise, 'But if from thence that shalt seek the Lord thy God, thou shalt find him, if thou seek him with all thy heart and with all thy soul.'"

"Now are we not all seeking? Are we not all searching for the way, the truth, the life divine? Indeed, that is always my assumption when I find myself in the presence of earnest truth-seekers who fear not heresy. I assume it now. In so far as you are seeking for the way, you have my heartiest 'God speed.' In so far as you have found it, you have my sincere congratulations."

Cleveland, Plain Dealer.

Brighton, England.

It is with great pleasure that I report the impressive and exceedingly interesting lecture given here at the Royal Pavilion on Tuesday, May 24, by Judge Septimus J. Hanna before a large and appreciative audience, which, to this little band of local Christian Scientists, was a very gratifying indication of the great interest awakening in the thought upon this vast subject,—Christian Science,—and from this, our first lecture, we hope, and are looking for, grand results.

The *Brighton Herald* noticed the lecture in part as follows:—

"However one may disagree with its teaching, it is impossible to deny that Christian Science has produced some fine types of men and women, and if only for the sake of its power of moral growth, it ought to be welcomed among the various forms of Christianity as another means towards that end which all are seeking. Judge Hanna was briefly introduced by Mr. W. N. Miller, K.C."

It may be of some interest to the Field to know something of our growth, which commenced in the summer of 1901, two of us meeting during each week to read through the Lesson. A few more seekers of Truth joined us in the spring of 1902, and we used to meet every Sunday, in a small private room to hold the service in proper order. The following November we organized as a Society.

A larger room was then acquired in which to open a reading room and to hold regular services on Sundays and Wednesdays. It is a very nice room of a seating capacity of one hundred, and can be divided by curtains to form a more inviting and comfortable reading room. Our first service was held on Sunday, February 22, 1903, when our attendance numbered fourteen. Since then we have been gradually but surely growing, so that our attendance now averages fifty. By this steady increase we have been greatly encouraged and led to see the immeasurable good that would surely result to the Cause by having a lecture given on Christian Science, and we were not mistaken; it has helped to remove many prejudices and misconceptions, for which we are full of joy. It has been a perfect and a beautiful demonstration of the allness of divine Love that has more than provided for all things, and our hearts overflow with love and gratitude to God, and to our beloved Leader, Mrs. Eddy, who has brought to light and given to humanity this glorious truth which enables us to rise to a higher understanding of Life, Truth, and Love. Another thing for which we are deeply grateful has been the attitude of the press which reported the lecture in a most favorable manner.—HARRY WAKELYN.

New York, N. Y.

Edward A. Kimball lectured on Christian Science before an audience of over two thousand at Carnegie Hall, Sunday, May 29. The lecture was given under the auspices of seven of the nine Christian Science churches in Greater New York. Herman A. Heydt, Esq., attorney at law, introduced the lecturer, saying in part:—

In most cases we are what we are because we have insufficient light to be what we should be. There are many who have what I term a negative belief; that is to say, a belief without the force of a firm conviction. To *believe* is one thing, to *know*, another. The man who believes he can, is second to him who knows he can. We are what we believe ourselves to be.

There is no danger of my obtruding upon the speaker's subject; for I know nought thereof. Nor am I a Scientist, but Mr. Kimball's integrity, earnestness, intelligence, and experience command our fullest attention, and assure us of a profitable afternoon. He is a man of a practical turn of mind, and so the words of Hosea Ballou will be of striking significance to him when he says, "There is one inevitable criterion of judgment respecting faith in doctrinal matters: viz., can you reduce it to practice? If not, have none of it."

Mr. Kimball will speak to us with the force of conviction born of experience, and in introducing him to you I associate the immortal words of Bailey, "He lives most who thinks most, feels the noblest, and acts the best."

Correspondence.

The *New York Tribune* quotes the following from Mr. Kimball's lecture:—

The inveterate disposition of mankind to attribute to God or to its gods the cause and impulsion of many of the ills which afflict humanity constitutes one of the tragic mistakes of the race. Christian Science declares that God is good by nature, design, and intention; that Life, Truth, Love, and the wisdom and omniscience which are divine include no evil, have instituted no laws or modes whereby to induce evil or co-operate with it. God has not procured the sickness of the world. Disease is the antithesis, the polar opposite, of that which is God, and He in every way is contrary to it.

The world has made another fatal mistake in supposing that "the ills of the flesh"—the tears and broken hearts, pain, poverty, and sin, the decadence, insanity, and fear—are inevitable, and have a right to exist and continue, as an entity exists by reason of its substance and immortality. A false philosophy of doom has enveloped mortals in the universal belief that their ills are, *per se*, irresistible—that the only way out of trouble is to die out.

The Science of Mind, which is solving the baffling mystery of evil, declares that all these ills have at most a fabulous existence in the realm of the illegitimate and monstrous. It declares that sickness and kindred evils are abnormal, lawless disorders, which have no right to exist, and that all these can be abolished in fulfilment of the prophecy, "And there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

A Critic Answered.

MR. ALFRED FARLOW'S article, "A Critic Answered," which appeared in the June *Journal*, is now issued in pamphlet form in order to give it a wider circulation. It will have a very beneficial effect in removing prevalent misapprehensions of Christian Science. Price, 3 cents each. $2.50 per hundred. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Loving Gift.

WE are pleased to have permission to publish the following correspondence, which tells of an interesting episode of the recent dedicatory services in Concord. The letter which follows indicates the deep sense of gratitude for our Leader's work entertained in the South, where she made her home for a short time in her early days,—days which hold for her the most sacred and tender memories. We are sure that this correspondence will interest our readers and reveal another bond of sympathy between the North and South.

Eagle Hotel, Concord, July 26, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—In asking you to please accept this little photograph of the cross, I am sending you the card accompanying it, also the letter written to the Scientists when the thought came to me of sending some united tribute of love from the two Carolinas.

It was beautiful,—the prompt, loving, generous response,—the letter from Charleston was especially loving. I wish you might see each letter expressing love for you and the joy of giving at this hour.

As I wandered among those brilliant flowers to make a choice, my heart, which always longs to express deeper consecration and truer selflessness, turned with greater gratitude than ever before to you; and the wish that the time were at hand when all shall reap of your teachings their fullest joy, was my prayer.

On seeing our simple flowers placed at the door of your room in the church, it seemed a holy bidding to come hither to the feast, though, e'en as must be, through the cross, up to the bridal with the Lamb.

The dedication, your precious message, your gift, all mean so much. I ponder, and trust that I may be able to learn more and more of God's knowing,—of Life and Truth and Love.

Gratefully, lovingly, ever your student,

MARY HATCH HARRISON, C.S.B., New Bern, N. C.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., July 27, 1904.

Miss Mary Hatch Harrison, C.S.B.

Beloved Student:—The cross of beautiful Gladioli, and the contribution from the long-loved people of the North and South Carolinas, filled my heart and eyes to overflowing. How appropriate the place given to that cross of flowers in our church; namely, the entrance to the room set apart for one whose way is marked with the cross and crown by the Wayshower who hath said, "Lo, I am with you alway, even unto the end of the world." And how illustrative the freshness of those flowers after days of departure from their native soil! Beautiful indeed is this symbol of love, and my heart responds to it with fervor.

Lovingly thine and theirs,

MARY B. G. EDDY.

The Building Fund.

WE have been advised of the circulation of a rumor that the total amount necessary for the completion of the new edifice of the Mother Church in Boston is "promised or pledged," and that the Field is therefore released from the necessity of sending further contributions to the Treasurer. If those who are responsible for the circulation of this rumor intend that the phrase "promised or pledged" shall be understood as meaning that the resolution adopted at the Annual Meeting in 1902 has received the ratification of the membership at large, no fault will be found with this statement; but the assertion that there is no need of further contributions cannot be reconciled with this view. The resolution adopted in 1902 reads as follows: "Recognizing the necessity for providing an auditorium for the Mother Church that will seat four or five thousand, and acting in behalf of ourselves and the Christian Scientists of the world, we agree to contribute any portion of two million dollars that may be necessary for this purpose." This resolution is a promise or pledge and has been so recognized by Christian Scientists throughout the world, and they are loyally fulfilling the obligation which they so cheerfully and voluntarily assumed; it is therefore a matter of considerable surprise that rumors such as the one referred to can pass current among Christian Scientists who are readers of the *Sentinel*, and have been informed through its columns of the true status of the Building Fund. Why these rumors arise and are passed from one to another should be obvious to every Christian Scientist.

The substance of the Treasurer's report to the Annual Meeting was published in the *Sentinel* of July 2, and the figures therein given, show that there is still need for further contributions. As soon as the need ceases, official notification to that effect will be given to our readers; and in the mean time, there should be no cessation of our efforts. Other interests should not be allowed to interfere with this endeavor. The building operations are progressing rapidly and satisfactorily, and the Treasurer's report shows that he has a large sum of money on hand, but this is necessary in order that the work may continue with the same dispatch as heretofore.

The statement has often been made that if there were no Mother Church, there could be no branch churches; just as there could be no branches to a tree without a trunk to support them. This statement will bear repeating many times, because it so truly indicates the relation of the Mother Church to its branches, and because the seeming importance of local conditions may at times blind our people to the unity and universality of the Cause.

The article "Now and Then" written by our Leader and published in the *Sentinel* of May 30, 1903, thoroughly covers the situation and its needs, and we recommend its study to every Christian Scientist. M.

The Adjustment of a Difference.

A VERY learned theologian, whose fame is abroad in all the world, has recently declared with emphasis that an imperative need of the present religious situation is a more highly educated ministry, a distinct advance in its scholastic equipment. A less widely known but more pungent metropolitan preacher has recently said that so far as religion is concerned, our greatest trouble, these troublesome times, is that we have "altogether too much intellect in the ministry." "Had it not been," says he, "for a plethora of intellect in the pulpit, the world would long ago have become religious. . . . It was Greek thought, permeating the Roman Empire, working itself into the midst of the chapter houses and council halls of Christendom, which finally changed the simple Gospel of the Son of Man into the ornate creedology we know to-day. Christianity has won

Digitized by Google

no great victories since the basis was changed. Had the plain Gospel of Jesus been permitted to remain as he left it, it would long ago have conquered the world."

This vigorous and definite contradiction of our erudite brother's opinion reveals the utter confusion of thought which still dominates religious convictions, even as it has for centuries past, and which leaves no doubt of the absence to human sense of the one Mind.

Without question these witnesses would agree that the Christian minister could not be over-supplied with the Mind that was in Christ Jesus; that he could have no surfeit of right ideas, but, on the contrary, that the more comprehensive and specific his knowledge of the truth of things, the actualities of being in all their diversities of manifestation and inter-relation, the more assured his fitness for his sacred calling and his success in it. They would also agree, we think, that if the plain gospel of Jesus were still preached in its uncreedal, unritualistic simplicity, it would be to the world's highest advantage. Surely no man can have too much of the wisdom that is from above, and equally true is it that the richest possible accretions of human learning are, in themselves, wholly inadequate.

Manifestly there is need that the jumble of contradictory thought in which our good brothers are immersed, be escaped from, and to Christian Scientists it is clear that this can be done only by a return to the Christ method of discriminating between truth and error.

When we understand that all right ideas are divine, and are capable of verification through the practical demonstration of their sovereignty, even as Moses proved them before Pharaoh and his magicians, as Elisha proved them before Ahab and the prophets of Baal, and as Jesus and his early disciples proved them before caviling priests and doubting people in the healing of the sick and sinful,—then we reach determination and exactitude as to what is of God and what of mortal man,—what is available in redemptive work for humanity, and what is a disability and hindrance thereto.

The inevitable outcome of the combination of good God and good devil, presents a conspicuous failure in the annals of a vast amount of earnest humanitarian and religious endeavor, and the conflicting ideas of the endeavorers will never reach at-one-ment until the eternal distinction between the knowledge which is of God, and the belief of intelligence which is of mortal man, is recognized and demonstrably maintained by those "signs following" which Jesus declared should ever attend upon spiritual understanding. W.

The Kingdom Within.

He that ruleth his spirit [is better] than he that taketh a city.
Proverbs.

The grand necessity of existence is to gain the true idea of what constitutes the kingdom of heaven in man.
Science and Health, p 356.

A GLANCE over the world at this time reveals a stormy sea with many threatened shipwrecks. Everywhere men are so continuously striving for material possessions and power that, as they readily admit, they are unable to find time for the only conquest of any real value,—that of self, and the finding of the kingdom within. It is surely self-evident that were it not for those who keep the sacred light of Truth burning, the conflicts between nations, classes, and individuals would soon lead to utter darkness and the annihilation of the human race.

It is well-nigh universally admitted by thinkers that the teachings of Jesus contain the essential truth which would end all strife, were it not for the unwillingness of mankind to be guided by his precepts. More and more does the world acknowledge the beauty of his character and teaching, but almost always with the reservation that under present conditions the one is as impossible of imitation as is the other of demonstration. The majority wholly overlook the fact that he clearly pointed out the only means by which these conditions may be reversed, and good, not evil, seen to be the reality of existence.

In the midst of political and religious strife, Jesus announced the absoluteness of God's kingdom, and made the statement which will hold good to the latest hour, that it is neither "here" nor "there," but within us. To those still in bondage to material sense and self, the kingdom within,—the reign of Divine harmony, does not exist, and a well-known writer ironically says that without actual obedience to Christ's teachings, "none of all who pray for it (the kingdom of God), need be the least afraid of its coming."

Christian Science teaches that the laws of God's kingdom are eternal in their duration as well as universal in their application. That these laws were known to the Master was proved by his healing of disease and sin and by the raising of the dead, and those who were delivered by him were also taught to look for the kingdom of God and the operation of its laws "within," and in spite of all the denials of the applicability of this teaching to present conditions, "the law of the Spirit of life" is found to be a power mighty enough to annul the action and supposed authority of "the law of sin and death."

No right thinker would deny that all ought to control their feelings and actions, but the multitudes of sick, sinful and unhappy mortals everywhere to be found, is proof that they do not know how to do this. The Bible says that the Christ must "put down all rule and all authority and power," and deliver up "the kingdom to God, even the Father," and this is what Christ, Truth, is doing for thousands to-day through the scientific understanding that divine Principle controls alike thought and its embodiment, and thus is established the kingdom within where the discords of earth never enter. K.

Letters to our Leader.

Steuben, Me.

Mrs. M. B. Eddy.

Dear Madam:—I am sorry not to be able to be present at the dedication of your beautiful church on coming Sabbath. I know it is a great addition to the beauty of Concord, and will be a help in the spiritual life of our city. I am away on my vacation for the summer. Thanking you for your kind invitation, I am, with best wishes,

Sincerely,
LOUIS H. BUCKSHORN,
Pastor of the Unitarian (Cong.) Church of Concord.

Los Angeles, Cal., July 8, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—Second Church of Christ, Scientist, in Semi-Annual Meeting assembled, sends you greetings:—

As the Founder and Leader of Christian Science,—a religion of love, benevolence, and healing,—as an example of pure, unselfish, exalted womanhood and of Christian charity and tolerance, the whole world is your debtor, and should hold you in grateful and appreciative remembrance; but it is from your students and followers that the deepest feelings of love and gratitude are due and are freely given. They know, as no one else can know, the extent of your self-sacrificing devotion to the cause of true religion, the elevation of man to an understanding of his true relation to God and to his fellow-man.

Science and Health, the revised Church Manual, the Concordance, your many other writings, and the wise counsel and loving admonition that you are ever sending to the Field,—these have meant for you years of incessant toil and self-immolation, and they have brought to us the richest blessings, the inspiration to better lives, and we are striving to be lovingly obedient, for we recognize that you are pointing the way to the Church triumphant.

Digitized by Google

At this, our communion season, we desire to express gratitude for the gracious privilege of contributing to the chancel of First Church of Christ, Scientist, of Concord, New Hampshire, which stands as a monument at your own home, to the success of your years of unselfish endeavor to establish the religion you love, and to the growth and prosperity of the Church.

Our branch church has grown and prospered beyond our expectations, and we have recently been compelled to secure one of the largest church auditoriums in the city to accommodate our services. We cannot express to you in words how profoundly we appreciate the great and beneficent work you have done for us and for our community. We can but say, with an affection and gratitude unspeakable: May God's greatest blessing rest upon you, comfort you, and keep you.

Lovingly,
MRS. ELMA P. JONES, *Secretary.*

London W., Eng., July 13, 1904.

Beloved Leader:—We are as always grateful to you—this time for your cablegram and letter which were read at the semi-annual meeting of our church members last Monday evening (11th inst.).

All present were unanimous in recognizing "rotation" as part of your wise guidance. There was a difference of thought as to whether the time for applying it to this branch church had yet arrived. Some felt that if they exercised the freedom of action accorded by you they would be disobedient to your leading—others that what was so plainly stated in your cablegram and letter gave perfect liberty of both thought and action in applying the method to the circumstances of this church. When the vote was taken there were one hundred and sixty-one for "rotation" *now*, and one hundred and ten against its present application. In the face of so large a minority, it would have been better that the amendment to adjourn the question over for further consideration to the annual meeting in January next had passed. Many of those present had heard for the first time the correspondence read at this meeting.

In deference to the vote I at once resigned the Readership. In doing so I do not feel that I am cut off from abundance of work,—there is a large field here for healing the sick and reforming the sinner. In this crowded center humanity is crying out for Christian Science and we can give it, for you have shown us Immanuel, God with us.

Ever your faithful and loving student,
W. N. MILLER.

London, Eng., July 13, 1904.

Beloved Leader:—My thoughts often turn to you with joy and gratitude for the blessings that your rule regarding rotation in office for the Readers, has brought to us in our work here.

In December, 1902, when our church was formed, we adopted it, knowing that every By-law recommended by you is the result of wisdom, love, and foresight, and is a sure protection to those who lovingly obey. It is one of our rules, also, that the Readers shall not hold office on either of our boards as trustees or directors.

The deeper trust in God for our church's welfare that these rules involve has lifted me out of seemingly ineradicable errors, resultant from early religious training and national prejudices. The unity existing between our Readers and the other members of our church is more spiritual and is one of the results of your wisdom, reminding us of your saying, "Every trial of our faith in God makes us stronger." We desire that the same Love and wisdom, so clearly manifested in you should guide us also, for truly it alone is Leader.

Yours with loving thanks,
E. BLANCHE WARD.

Testimonies of Healing.

It is four years in January since we became interested in Christian Science, when we turned to it for healing. This was not an easy thing to do. Being a physician's daughter I had been taught to believe that nothing but medicine could heal sickness. Then I was devoted to an orthodox church. I joined the church at the age of twelve and became a teacher in the Sunday School at seventeen. I thought I was satisfied with the religion I professed, but what was I to do? I seemed to be facing death. For six years I had suffered terrible pain from an enlargement on the back of my neck, and for three years with appendicitis. After having been treated for years by the best physicians in the cities where we lived, we had consulted eminent specialists. We were told by two of them it was a tumor; another said he did not know and advised us to see the leading spinal specialist of this country. We did so and he called it tuberculosis of the spine, and said I would have to be in bed for about three months, strapped to the bed to let the spine heal. All agreed that the operation for appendicitis should not be delayed any longer. I had become very much discouraged, the pain was so intense that I was willing for anything, even an operation, if I could only get a little relief from suffering.

Three weeks before the time set for the operation a Scientist asked my husband if he would not have me try Christian Science those intervening weeks. My husband knew I feared I would die in the operation and he was glad for anything that might postpone it. I was prejudiced against what I thought was Christian Science, and only tried it to please him. When I told the practitioner that I had no thought of giving up my church and was prejudiced against Christian Science, she kindly replied that people who were prejudiced had been healed, that Christian Scientists did no proselyting, and if I would remain she would be glad to treat me. I had never seen the book Science and Health, and I spent the half hour I was there reading the first page of the Preface.

The first treatment relieved the intense pain in the neck and spine. At the end of the first week I was surprised to find I could not use my glasses, which I had worn for reading and sewing for four years. At the end of the second week the soreness in my side and appendix had disappeared, also the pain in my left limb which I supposed was incurable as it was a weakness caused by childbirth. The result of these two weeks' treatment, together with my interest in Science and Health (for I was reading from six to eight hours a day), encouraged me so much that I asked my husband if I were entirely healed if we would become Christian Scientists. He said, "That remark makes me heart-sick." That evening he said he wished to see my practitioner, and went to take a treatment for dyspepsia, that he might see for himself what had changed me so, for he thought it was hypnotism. He was so uplifted and benefited in that treatment that for the next two weeks he went every evening and I went every morning. We were both entirely healed, but what were we to do now? We were healed, we were happy, but we had lost orthodoxy and did not have Christian Science. We early sought class instruction, and here learned that we had found the truth we had been working for all these years, and knew we were satisfied.

There was one thing which at this stage greatly concerned us. We had a large circle of friends—what of them? With only a few exceptions the friends relieved us of further consideration of them. At first this loss seemed hard to bear, but later we realized the blessed opportunity it gave us for study and for preparing ourselves so that we might have something to give them when they would return to us, and this pleasure has been ours a number of times.

I thank God for our dear Leader and I wish to express gratitude and thankfulness for the understanding of Life,

Digitized by Google

Truth, and Love that has come to us through the study of "Science and Health with Key to the Scriptures." I also wish to express my gratitude to my teacher for her patience and loving kindness.—M. L. B., Chicago, Ill.

For a good many years of my life I was a member of an orthodox church, an officer and worker in it, until I could no longer possibly affiliate with it because of the doctrines which it taught.

My first disappointment with its teachings was when I came to see that what it, as well as most of the other theological creeds, taught of God, was much below my own human conception of what God ought to be, and what I really thought He was. I believed that God must be away above any possible conceptions which I could have of Him, in my material way of thinking. My own father was a minister and a very good man, yet he believed more or less in these doctrines.

As I differed so radically from the churches I very seldom went into them, and when I did so I usually met with the same sad disappointment. As many probably know from their own experiences, my conceptions of God were very hazy. He was to me some very indefinite power, located in some very indefinite place, consequently of no possible help to me in any practical way, and if any individual on earth needed such a help, I certainly was that one. I believed in His unlimited power, but did not believe He had anything to do with the human family. I thought that He had simply whirled them off into space to sink or rise as their own individual efforts might dictate.

While in this condition, some two years ago, my dear wife asked me to attend one of the Wednesday evening meetings with her. I went merely in compliance with her request. This was the first time I ever went into a Christian Science church, and when I had taken my seat and looked up, and saw staring me in the face, "God is Love," I simply could not take my eyes from it and I did not seem to hear one word that was said during the whole service. Of course it was no new statement to me, but there it was the most of all to be observed, and I was at once filled with wonderment and questionings. Was it possible that here was a people following God, with this as their motto, and if so, could it be otherwise than a pure and undefiled religion? It might be supposed that one would have been rapidly led from this point to a full investigation of the claims of Christian Science, but such does not always seem to be the way of the human mind after so long a control of error.

I have never asked my wife what her motives were at this time, when she used to ask me on Sunday afternoons if I would not help her to read over the lessons, and she almost invariably did so. I was very much struck with the unusualness of the book, Science and Health, probably because I could not seem to understand it at all, notwithstanding the fact that my wife tried to make it plain to me. This went on for a year or more, and I am afraid I manifested not a little impatience as the time for the lessons came around. Finally, however, I began to get a new light upon the whole matter, and I think somewhat surprised my wife by taking up the study of the book all by myself. What it has been to me since many know from their own experiences. How any one can understand it and not love it is beyond my conception. If there are other books that upon every page and almost upon every line, so continually and persistently point us up and on to the Divine, I would surely like to know of them, by whomever they may be written.

To be healed of a long standing and painful malady is a grand thing, but to be healed by a realizing sense of the Divine presence, is most wonderful and certainly convincing, and above all to be liberated by this understanding from a mental thraldom blacker than night is more wonderful still. Such is my case, and when I look back upon it now, which I seldom allow myself to do except for the purpose of estimating my growth, it seems the most wonderful of all miracles. Error sometimes tries to ask me the question if it can possibly all be true. My needs are still many, but I have no doubt that divine Love has in store for me blessings as yet undreamed of, and so I can only be intensely thankful for what God has revealed to me, and implicitly trust divine Love for the future.

FRANK M. SCOFIELD, Atlanta, Ga.

[Translation.]

I knew nothing of Christian Science until four years ago. I was raised by Christian parents, and the Bible had always impressed me as a wonderful book, especially the earthly life of Christ Jesus, and yet his words of love and confidence, mercy and encouragement, wisdom and strength seemed the opposite of what I had been taught.

After I was married, a strange, disturbed condition of mind took possession of me. The physicians traced the cause to physical suffering which began with the birth of my first child. All medicines, operations, steam baths, and electricity were of no avail. I did not then know that the disturbed mental condition caused the physical illness; no one knew this, else the physicians would not have doctored the body and neglected the mental state.

Thus all their knowledge was of no avail in my case. I remained a sufferer, and what was still harder for me, was the evidence that my children suffered so terribly. The third child died, and I had to look on and see this innocent little one suffering torments. When they told me that I must be content, for God had done this, despair came over me, and I said, "God, the Father, cannot torment innocent children thus!" After I had said it, I became frightened, and I meditated over the question, Who sends evil? The Bible says there is but one creator.

I dare not think what would have become of me and my family if Science and Health had not come soon after. It was our saving angel, and words cannot express my gratitude for the revelation it brought to me. As a result, my daughter was suddenly freed from a troublesome ailment. This was sufficient proof that the book contained the eternal truth, and that I had been held captive by error (an illusion). I searched for a Christian Science gathering and immediately brought my children to Sunday School. It was not at all difficult for us to break off connection with the old thought, nor was the blessing withheld from us. Our Master's words were fulfilled, "By their fruits ye shall know them."

Words can never express my gratitude to our noble Leader, Mrs. Eddy, and I also wish to express my sincere gratitude to my teacher who so unselfishly and lovingly has showed me how to stay in the right path.

MRS. MARY FUENFSINN, Seattle, Wash.

It is nearly eight years since I was healed in Christian Science. A friend came to me while I was suffering from acute neuralgia in my face. The doctor told me he had given me the strongest remedies he dare give me, and he therefore knew of no further help to relieve my intense agony. I had had no sleep for nights, and my face was swollen and almost black in parts with the strong remedies I had applied to it. The most trying part of it was, that these attacks were becoming very frequent, either cold, or heat, or fatigue, or what the doctor called "run down," or "nervous debility," would bring them on in all parts of my body and head, and I was getting weary of my life. I also had traveled abroad for change of climate to see if that would strengthen me. Since childhood I had been delicate and subject to many ailments, and had spent weeks in bed.

When my friend spoke to me of Christian Science, though it conveyed nothing to me, never having heard of it before, I was ready to try any remedy that would free me from my sufferings, and so I gladly consented to go at once

Digitized by Google

with her to a practitioner. The treatment healed me in a few minutes, of that which the doctor had said he could not.

After this I got Science and Health, studied Christian Science, and later in the same year was again healed of an internal ailment. In the second year that I was in Science, I was able, with the help of another Scientist, to overcome inflammation of the bowels, after spending but one day in bed. Since then I have never had a return of it, nor have I had a day's illness. When sick headaches or colds have attacked me I have overcome them in a few hours; and now I do so almost at once.

I still have much to overcome, but the struggle gets lighter every day. I now realize God's omnipresence, His love, instead of thinking that He is far away and can only be appealed to by long, tedious, set prayers. The knowledge that one can speak oft with Him, the consciousness of the surrounding power of the divine Mind, frees me from loneliness, doubts, and fears. The angel He has placed in my path to bring me to the Promised Land is Christian Science, and the light for each step is in Science and Health. I join with all those who have been brought out of darkness, in warm gratitude to the Discoverer of this pure thought, and say with heartfelt sincerity, God bless her.

JECILIA M. PEARSE, Hitcham Land, Eng.

I came into Christian Science seven years ago. I had been a great sufferer from neuralgic rheumatism since childhood, had been tortured with it for over thirty years, in consequence of which, I became lame and deaf. I tried the different schools of medicine, but none afforded me any relief. After exhausting every resource, I was persuaded to try Christian Science. I went to one of Mrs. Eddy's students for help, and was relieved in five days. I was so elated and joyous over the result, and felt so well and free from pain, that I wanted everybody to try it. I sent for Science and Health, for I believed it to be the truth, and I wanted to know it. It was indeed an ever-present help, for the old ailment returned many times, and made vigorous efforts to stay, but an application of Christian Science would in a short time rout the enemy. Another old chronic trouble of many years' standing passed away at that time and has never returned, and never will. I am not afraid of rain or snow, and go out in all kinds of weather, when formerly I feared the least draught. Although all my ailments have not yet been overcome, I trust that they will be in time.

Through this great power I have been able to overcome other ailments for myself, my family, and others. A case of insanity yielded easily, one of consumption in a few months, drunkenness of many years' standing was healed instantaneously, stolen goods returned to their owner; all through the demonstration of the power of Truth. My heart is full of love and gratitude to the Giver of all good, and to Mrs. Eddy, whose labor and self-sacrifice the world can never know.—LIDA C. ROGERS, Maysville, Ky.

Christian Science came to me at a time when in physical distress from nervous dyspepsia, accompanied with insomnia and extreme physical weakness and mental depression, a depression so great at times that a desire for death was difficult to overcome. My diet had become so limited through medical advice and fear, that I ate very sparingly of the simplest foods for a period of two years or more, the tyranny of which was harder for me to endure than the mere abstinence from usual foods. My healing was slow, and only came through a process of mastering each separate article of food I had discarded.

Besides dyspepsia, I was healed of chronic catarrh and an ingrowing nail from which I had suffered for twenty years, and on one occasion, but without avail, had the entire nail taken out. During some years of suffering I had the best practitioners of two schools of medicine, to several of whom I shall always feel indebted for their patient kindness and active solicitude.

If freedom from physical ills were all I owed to Christian Science I doubt if this testimonial would ever have been written, as I would have regarded it only as one does a system of physical healing, and while I would not withhold a formal acknowledgment of such relief, my heart swells with deepest gratitude since darkness and despair have been taken out of my life, and in their stead have come such joy, freedom, and peace, as I had come to consider only an illusion of boyhood. The measure of increased courage, the liberal estimate of my brother, patience under neglect and unfairness, and the mastery of appetites, of malice, envy, and jealousy already realized, has been such as to prove the possibility of ultimately obeying the Master's command, "Be ye therefore perfect."

Christian Science is indeed to me the second appearing of the Christ, and my consciousness is filled with gratitude and veneration for the sublime and steadfast courage of the one through whom it was revealed to this age.

JOHN FORBES, Omaha, Neb.

It is about two years since I first heard of Christian Science, and I desire to express my gratitude for what it has done for me. Before coming into Science I thought that I could not live without medicine, as I suffered very much from indigestion. About two months ago, while at work, I turned very ill and had to go home, and for three days I scarcely knew what was going on around me. I was very sick, and could take nothing, not even a drink of water. I was also seized with inflammation of the lungs, a trouble which I have had twice before; it seemed as if every part of my body was out of order, I felt so bad. I tried to realize truth to the best of my understanding for the first four days, but thought I would require help, so I asked my wife to write to Edinburgh, which is about eighteen miles from my home, for a practitioner. After my first treatment all sense of fear left me, and by the eighth day I was able to go out into the garden for a short time, and in three weeks I was back at my work, looking healthier and feeling better than ever I did, much to the astonishment of all my friends. With gratitude to our dear Leader, Mrs. Eddy, and to my faithful practitioner, I send this, trusting that my experience may help others to believe and realize that "divine Love alone governs man" (Manual of Mother Church, p. 56).

J. S. CALLAM, Dunfermline, Fifeshire, Scotland.

From childhood I never knew what perfect health was, and I was very irritable and nervous. I dearly loved the church and was a faithful worker in all its societies. I loved my Bible, and prayed fervently to overcome evil in every form; however, my prayers seemed, most of the time, to remain unanswered, and I would often blame God when I fell into sin, as I had prayed for His help, and He apparently failed me.

Twelve years ago, after the birth of my little girl, I was left with serious internal troubles, and was in such a nervous state from treatments given by several physicians that I would cry several times a day. In October, 1899, a dear friend advised me to try Christian Science, but I ridiculed it at first. I loved my own church and faith so much that I was afraid to try anything which might lead me from it; however, I consented to talk to a practitioner. I was so impressed with the truth of what she said to me, that I asked her for treatment. The second day I threw away a surgical appliance which the doctor said I would always have to wear, and I have never needed it since. I was also cured of dyspepsia and severe bronchial trouble.

Needless to say, my husband and myself immediately took

Digitized by Google

up the study of Science and Health, with the kind help of my patient practitioner, and afterward we took class instruction. Oh, the joy of knowing how to pray! Oh, the peace of knowing God as omnipotent, omnipresent good! A few errors seem yet to cling, but Mrs. Eddy says in "Miscellaneous Writings," p. 118, "Be of good cheer; the warfare with one's self is grand." We know that we shall overcome all error, and we hope to prove our gratitude to our Leader, and to all who have helped us on our way, by lives of unselfishness and good deeds.

NINA B. SPAIN, Philadelphia, Pa.

It has been a question with me why many of us have been so slow to accept Christian Science, when we see again the unmistakable signs of Christ's power to heal and save by the application of its teachings. Notwithstanding the fact that I had heard, twelve years ago, of the healing of a friend through Christian Science, whose case was identical with mine, I remained incredulous and skeptical.

For twenty-five years I had been afflicted with chronic constipation, and during that time had consulted nearly every prominent physician in our city, with the same discouraging results and no permanent relief. As a result of so much doctoring my stomach became involved and I was compelled to diet half the time. Finally, after I had given up hope of obtaining relief from any source I had hitherto tried, I turned to Christian Science. I began taking treatment of a practitioner in our city twelve months ago, and received benefit from the first. While my healing was slow, and I have had some days of discouragement, Christian Science has been such a wonderful help to me physically and spiritually that, out of gratitude to God for my restoration to almost perfect health, I give this testimony, that it may possibly help some one who is as blind to Christian Science, as I was in past years. I am also grateful to Mrs. Eddy for pointing out the way to understand the healing power of Truth, and teaching us how to interpret the Scriptures spiritually.—MRS. J. E. R., Columbus, O.

I came to Christian Science through great suffering. I had what the doctor called an attack of sciatica, which he said was the most severe case that had come to him; and he was recommended as one of the best doctors for rheumatism. I took medicine for about a year as regularly as I took my food, and thought I was helped. At that time I believed he would cure me, if I could do just what he said. He told me not to do any work, or lift anything heavy, as I was in dread of those severe attacks.

I then went to my home in New Brunswick, thinking the change would help me, but I had another attack so severe that I could not lie in bed, but on a comforter on the floor. I could not bear to be moved, the pain was so intense, and everything seemed to annoy me and cause me to suffer. At this time I was treated by our family doctor, and he told my brother that he could help but could not cure me, He said if he could cure rheumatism he would be a millionaire. When I was able I returned to Boston, went back to my doctor, and was treated for some time.

I then heard of Christian Science through a lady who had been healed, and she advised me to try Christian Science. I must say that I was very reluctant, as I didn't know anything about it. One morning while in her house I found myself talking with the practitioner who had healed her. I asked her if I could be healed, and she said I could. I left her home feeling very happy and very much encouraged. It was the brightest, happiest day I had ever seen. I was like the lame man who leaped for joy. I took three weeks' treatment, and was healed. I have not taken one drop of medicine, and have been well, have had no return of that ailment, and have taken care of myself most of the time.

My heart goes out with love and gratitude to our dear Leader, Mrs. Eddy, for our text-book, Science and Health.

G. W. MILLS, Miramichi, N. B.

I feel that it is time for me to make some acknowledgment of the many blessings I have received through Christian Science, although it would be impossible for me to mention the hundredth part of what has been done for myself and family. I had never known what it was to be free from disease and suffering in all my life, until about six years ago, when I gave up material remedies and commenced Christian Science treatment. To-day I am a sound, healthy woman, although I had almost every ailment that it is possible for any one to have, among them several that were never understood by myself or the doctors.

When I left Eureka Springs I had a number of *Journals*, but as there is no one here who knows anything about Christian Science, I loaned all my literature and was unable to get it back. As my subscription had expired, I could not send on until I got the address of the *Journal*, so I looked over Science and Health, and decided to write the publisher and ask for the address. Before I expected an answer a copy of the *Sentinel* and a number of the *Journal* came, and at the same time I received a load of mail, and every letter contained joyful news. It seemed that everything was blessed on that day, it was the happiest day I had known for years. My heart is filled with gratitude and love to God, to dear Mrs. Eddy, and the kind friends who led me to the true life.

MRS. ELIZABETH LINSCOTT, Leslie, Ark.

When I took up the study of Christian Science nearly three years ago, I was suffering from a very bad rupture of thirty-two years' standing. Sometimes the pain was so severe that it seemed as if I could not endure it. These spells would last four or five hours, and while everything was done for me that could be done, no permanent relief came to me until I commenced reading "Science and Health with Key to the Scriptures." After I had once looked into it I wanted to read all the time. I was so absorbed in the study of the "little book" that I hardly realized when the healing came, but I was healed, not only of the rupture, but also of other troubles,—inflammatory rheumatism, catarrh, corns, and bunions.

I would never part with the book if I could not get another. I am seventy-seven years old, and am enjoying very good health. My heartfelt gratitude goes out to God and to Mrs. Eddy, who has given this blessed truth to all who desire it.

MRS. MARTHA E. PORTER, St. Johnsbury, Vt.

A number of years since I was healed by Christian Science, in three days, of a painful disease, that had caused months of intense suffering. Later, I was healed of typhoid fever and other troubles. My practitioner being absent, our communication was by letter, and it seemed wonderful that the symptoms disappeared one after another as they were brought to her notice. But far beyond the physical healing do I value the spiritual uplifting, the peace and light of Truth, that comes to the hungering heart through Christian Science, filling it with intense gratitude to our Father from whom "all blessings flow," and to our dear Leader, through whom this wondrous light has come.—M. L. C., San Diego, Cal.

He who receives a good turn should never forget it; he who does one should never remember it.—CHARRON.

From our Exchanges.

The Holy Scriptures are able to make us "wise unto salvation" only as we receive the truths they make known into good and honest hearts. Knowledge of the Scriptures as literature may be never so perfect, if it do not make them a lamp to the feet and a light to the path, they are of no more spiritual value to us than the code of Hammurabi or the Hindu Vedas.—*The Examiner.*

Jesus' spiritual interpretation of life actually translated into a present-day program becomes a change of emphasis. It may read: "Let your thoughts be not so much on acquisition as on stewardship; not so much on your rights as on your duties; not so much on compulsion as on kindness." It is a new standard of values, says the *Sunday School Times.*

The best test of truth, we may briefly say, and the surest guaranty that our light is light and not darkness, lies in the satisfaction of the inward and spiritual life of the soul of man. There is no surer refuge from all that is false than that which comes from culture and growth, from the satisfaction of the demands of the Spirit and the growth into a pure and holy life. Become nobler and your darkness will be less dark; your light more surely a celestial radiance, for evermore is the perfect vision the reward of the perfect life.
The Universalist Leader.

In a sermon printed in *The Leader*, entitled, "A Plea for the Simple Life," Rev. Frank O. Hall, D.D., says with the directness of clear conviction, "In undertaking to solve a host of religious problems men have forgotten to be personally religious. But what is the essence of religion after all? Just to be kind to those who need kindness, and to keep one's heart free from hate and his soul unstained with sin. That is it. How simple it all is! It is not necessary that you should settle, even in your own mind, the doctrine of the Trinity. It is not necessary that you should determine the degree of the inspiration and authority of this book, or whether Moses wrote the Pentateuch. It is not necessary that you should determine whether this or some other is 'the true Church.' Your simple religious duty is to love God, to be kind to God's children everywhere, and to keep your soul clean."—*The Universalist Leader.*

The *Boston Transcript* quotes the following from the Baccalaureate address of President Hadley at Yale:—

"Show in your lives that the honor of a gentleman is not for sale, the faith of a Christian something more than an empty form of speech. Do not be disturbed if your scientific investigation has rendered it impossible for you to subscribe to some of the old creeds. Jesus of Nazareth himself rejected many of the formulas which the churches of his day deemed essential to salvation. Two religions are to-day struggling for the mastery. There is the religion of Mammon, whose dominant purpose is selfishness and whose creed is indifference to moral considerations, except so far as they may be regarded as instruments of individual advancement. There is the religion of God, whose purpose is service and whose creed is loyalty to something larger than yourselves. The religion of Mammon appeals to those who value the external evidences of success—the pomp and the luxury, the title and the show. The religion of God appeals to those who value life for the work that it brings and measure success by the honest effort that a man has made to do his work. It appeals to those for whom wealth and power and professional eminence are not ultimate ends, but means to larger service and sacrifice. It appeals to men who will not sell their honor, no matter how high the price, nor betray their friends, no matter how great the advantage. These were the ideals of Christ, which he held through temptation and suffering."

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Republic of Panama has made a loan of $900,000 at four and one-half per cent on a large Broadway building in New York City. This sum is part of the $10,000,000 which the Panama Republic received from the United States for the Isthmian Canal concessions, and its representatives already have loaned out on mortgage nearly $1,500,000 on real estate in the same city. The republic's representatives have on hand $4,500,000 to invest in mortgages, and as soon as this sum is disposed of they will procure the balance of the concession money to dispose of in the same manner.

The city engineer of Manila has laid before the Secretary of War and the chief of the Bureau of Insular Affairs, plans for the proposed water supply and sewerage system for Manila. The plans have received the approval of the Municipal Board of Manila, and have been favorably reported upon to the Secretary of War by an eminent consulting engineer sent to the Philippines. The new water supply will be brought to the city of Manila by gravity, a distance of sixteen miles, at a cost of two million dollars. An issue of bonds to meet the cost to be incurred has been authorized.

Successful experiments in the manufacture of copper blanks from which cents are stamped have been made at the United States mint in Philadelphia. With this innovation the mint will have sufficient work to employ nearly all its six hundred workers throughout the year. Heretofore the Government has bought its supply of blanks from private concerns. The mint there is the only one in the United States which makes cents and nickels.

Mr. Barrett, the American Minister, has submitted a memorandum to the Panama Government regarding a *modus vivendi* pending the final settlement by diplomatic means of the disputed jurisdiction over Ancon, which has been created a port of entry by the authorities of the Canal Zone.

Foreign.

Colonel Younghusband, the leader of the British expedition, has received a letter under a white flag from the Tsondu, or National Assembly, of Tibet, praying him to refrain from proceeding to Lhasa. This is the first letter ever received by the British from the Tsondu, which is supreme in secular matters. Colonel Younghusband replied that his force must now proceed to Lhasa, but it would leave as soon as a convention was signed.

Colonel Younghusband has since had two interviews with the peace delegates, who pleaded with him not to shock the religious feelings of the Dalai Lama by entering the holy city. He replied that the treaty must be signed at Lhasa, but promised that the troops would not enter the monasteries unless fired upon therefrom.

President Castro of Venezuela some weeks ago demanded $9,650,000 of the New York & Bermudez Asphalt Company in Trinidad, alleging that the company had given material aid to the late revolutionary movement, causing the Venezuelan Government to expend that amount. The Government, by a motion before the Federal Court, on July 22, placed an attachment on all the properties of the company, especially on the asphalt lake at Guanaco. At that time a receiver was appointed. Last week the property was seized by Venezuelan officials. The action is regarded as an arbitrary procedure.

The Sultan of Morocco, in accord with the French Government, has appointed Captain Fournier of the French Army to command the Moorish police in the Tangier district. This action is the outcome of the kidnapping recently of Perdicaris, an American, by Rasuli.

Wu Ting Fang, for some years the Chinese Minister at Washington, has retired from the Vice-Presidency of the Foreign Board at Pekin, which office he held from the time of being recalled. He is said to have permanently retired from politics.

Industrial and Commercial.

Returns made to the United States Geological Survey show that the United States has again exceeded all previous records in the production of coal. The total output of the coal mines of this country in 1903 amounted to 359,421,311 short tons, an increase of 57,830,872 short tons, or nineteen per cent, over the production of 1902. The production of 1903 was nearly double that of 1893, and more than three times the output of 1883. The increase of production of 1903 over 1902 was equal to the total production of all kinds of coal in 1878, only twenty-five years ago. The value of the coal product at the mines in 1903 amounted to $506,190,733; in 1902, $367,032,069. The percentage of increase in value was almost exactly double that of the increase in production.

J. Wesley Hoffmann, D. Sc., has been sent to the United States by the British Government to study the Southern cotton fields. He will make a collection of seeds to be used in experimental cultivation of the cotton plant on what is termed "the model farm" in Western Africa. Dr. Hoffmann has been for fourteen months in Western Africa representing the British Cotton Growers' Association, which was organized by the Lancashire manufacturers for the purpose of developing the cotton industry in Africa.

Details of the largest transaction in Bessemer pig iron that has been made in the Pittsburg market for some months has leaked out. The Pittsburg Steel Company has bought from various concerns 110,000 tons of standard Bessemer pig iron, shipments to commence September 1 and to run up to June of next year.

The sea wall to protect Galveston from overflow by the Gulf has been completed. The wall is 17,539 feet long and 16 wide at the base, five feet wide at the top, with a granite rip-rap apron extending 27 feet gulfward. It cost $1,198,318.80, and took one year, four months, and fourteen days to build.

The attendance at the St. Louis Exposition has been as follows: April, one day, 187,793; May, twenty-six days, 1,001,391; June, twenty-six days, 2,124,836; July, twenty-one days, 1,791,715; total, 5,105,735.

The increase in the value of all American exports between 1902 and 1904 has been $79,110,138 or 5.7 per cent, and in the value of cotton exports $79,838,764, or 27.4 per cent.

The shutdown at the colleries in the Schuylkill region last week by reason of the lack of cars, affects about sixty thousand men.

General.

An interesting report has been received from United States Consul Ravndal, at Beirut, Syria, Concerning the recent archæological discoveries at the Tell-el-Mutesellim, the supposed site of Megiddo of the Israelite kings, a city fortified by Solomon and held by the early Pharaohs of Egypt between 2000 and 3000 B. C. "The site of Megiddo is on the southern border of the plain of Esdrælon in the country of Samaria. The Tel-el-Mutesellim reaches an altitude of 626 feet above the Mediterranean, and is the most commanding point overlooking the great plain of Esdrælon and Jezreel. Its superficial area is sixteen acres. The excavations were commenced in April, 1903, and have been continued, with but short interruptions, up to the present time. They will be completed, it is expected, within the next five years. Up to date the deepest trench, carried down 69 feet, has not reached natural ground, although it has pierced through seven cities, the layers of each being distinctly visible. There may, therefore, yet be discoveries of great scientific importance on the site of Megiddo."

Twelve hundred wires are now enclosed in a telephone cable two and one-half inches in diameter. Through one of the new cables words spoken into 600 telephones may flash simultaneously to be heard by the persons at 600 other telephones, each message undisturbed by the hundreds of others with which the wires are alive. Each of the 1,200 wires in the cable is wrapped in paper to secure insulation, but the paper is not the insulating medium. Dry air in the folds of the wrappings and in the paper itself prevents the wandering of words from one wire to another. In the manufacture of the cable it is thoroughly baked in great ovens that every vestige of moisture may be driven from among the wires. When the lead sheath has been closed it is absolutely air-tight, and, in suspending the cable from poles or drawing it into conduits under the streets, great care must be taken to prevent injury, for a hole no larger than that made by a pin in a piece of paper will admit moisture and make a section of cable worthless.

One of the wonders of the Bank of England is a weighing machine, which is so delicately adjusted that it can give the accurate weight of a speck of dust, and can also weigh any amount of metal up to four hundred pounds. A postage stamp on the scale will swing an indicator on a semicircle a space of six inches.

Pliny says that the saw was first invented by Dædalus, but, according to Apollodorus, it was the invention of Talus, who used the jawbone of a crocodile to cut through a piece of wood, and then made an iron instrument in imitation of it. The saw is represented on the monuments of Egypt from 2500 to 3000 B. C.

It is estimated that on the day of the great parade of the Grand Army of the Republic in Boston, August 16, there will be 25,000 to 30,000 men in line.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Resolutions Presented to Mrs. Eddy by the Concord Church.

WE have had the pleasure of examining the beautifully engrossed copy of the resolutions adopted by the Trustees of the Concord church, and presented by them to Rev. Mary Baker Eddy in appreciation of her gift of the new church edifice recently dedicated, as well as of her labors for the Cause of Truth. The engrossed copy is finely executed and is a fitting medium for conveying this expression of the gratitude of our Concord brethren who have been so richly blessed by our Leader's work as well as by her generous gift. The resolutions are handsomely bound in book form and the white cover bears a most excellent photograph of the spire of the church. The presentation of these resolutions has given much pleasure to Mrs. Eddy, and they will be read with great interest throughout the Field.

The following is the full text of the resolutions:—

Concord, N. H., August 1, 1904.

To the Reverend Mary Baker G. Eddy.

Beloved Leader and Teacher:

It is the unanimous wish of the Trustees of First Church of Christ, Scientist, in Concord, N. H., that their first recorded act, on coming into possession of your magnificent gift of this church, shall be the expression of their profound gratitude to God, and to you, their beloved benefactor, the Discoverer and Founder of Christian Science.

In this first business meeting held in the beautiful Reading Room of our dear church edifice our hearts go forth in loving thankfulness to God, for all the rich blessings which you have been instrumental in freely showering upon us.

You have tenderly led this little flock into green pastures and beside still waters. Your unstinted love has folded us in a church home where "strength and beauty are in his sanctuary," and our hearts say with David, "Bless the Lord, O my Soul, and forget not all his benefits."

We have been studying anew your grand and inspiring dedicatory message to this church. We are made strong by its strength, and are being awakened by its clarion call to love's labors. We are uplifted by its divinely inspired statements and its magnificent appeal to Christ-like living. We know that all this has come to us by your unmeasured sacrifice and your unwearied labors, and words seem inadequate to express the heart's gratitude.

We would at this time anew confess the imperative claims upon us for steadfast loyalty to you and to our holy Cause. We are citizens of the grand commonwealth of your nativity, in which your honored family has long held high positions of trust in church and state. We have our homes with you in the Capital City of the Granite State, whose worthy people, without regard to class or creed, delight to honor your spotless integrity and your Christian character. We thank God for our rare privileges and we pray to Him that we may prove worthy of our trust. We humbly accept the holy charge committed to our keeping, and pledge to you our unswerving loyalty and abiding love.

JOSEPH A. MOORE, *President.*
MABEL C. GAGE, *Clerk.*

From our Contributors.

Nehemiah's Way.

ABBIE H. SKINNER.

WITH the illumination given by Christian Science I find the book of Nehemiah both profitable and interesting. It presents a series of vivid pictures not to be forgotten. We find Nehemiah in Shushan the palace, and there come to him certain men of Judah. He questions them and finds that the Jews that are left of the captivity are in great affliction and reproach; the walls of Jerusalem are broken down and the gates burned. At once he is impelled to leave the luxurious Persian court and his honored position as cupbearer to King Artaxerxes, that he may work for the Jewish cause.

He humbly confesses before God the sins of his people, his family, and himself. Though they had failed in their duty toward God he claims the promises given to God's people who turn unto Him, and keep His commandments. Manifestly he was a favorite at court, but with a prayer on his lips he sets himself to gain the king's consent to his departure. This obtained, he goes to Jerusalem. Absorbed in his love for the cause which brought him thither, he apparently cares not for the indifference of the Jews, who pay him no honor; in fact, seem to take no notice of him. Quietly he goes out by night and sees for himself the exact conditions. There were the walls of Jerusalem dismantled, broken down; his countrymen indifferent and inactive. The work of repair seemed so stupendous that no one had lifted a finger to rebuild until Nehemiah came. Though no notice was taken of him, nothing escaped his notice. Having rebuilt the wall in mind, he began to talk to the rulers and people. He was unostentatious, careful to impress upon them that it was work which God required of them, and then he unfolded his plan to them. "Come, therefore, and let us build up the wall," and to this they cheerfully consented. Nehemiah's way was to set every man to work right where he was. He aroused enthusiasm in the individual.

The work began with the high priest, and the priests rebuilt the gate through which the sheep were brought to the temple for sacrifice. No doubt this was the gate nearest the temple. The work went on with the other gates, and a long list of the workers who severally repaired the walls over against their own houses, is given. Priests, rulers, apothecaries, goldsmiths, merchants, tradesmen, and last, but not least, Shallum, "the ruler of the half part of Jerusalem, and his daughters" and Meshullam, son of Berechiah, he repaired "over against his chamber." It would seem that the latter was a lodger, not a householder, but he too did the work nearest his hand. It is recorded that Baruch, son of Zabbai, "earnestly repaired" that which fell to his share. While all worked with energy he must have been inspired to do even more than others, or he would not have received special mention.

There was unity of thought, oneness of mind, alertness to duty, enthusiasm and persistence. Each worker was convinced that something definite was required of him. He was

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

necessary to the work, and he made it his business to do that which was before him.

"The people had a mind to work." While Nehemiah was the great mover in the work, the head that set the many hands to work, from beginning to end, he put himself out of sight. In the first chapter he begins with the statement that he was in Shushan the palace, but does not mention the position he held. Later, when there is a necessity for it, he says in few words that he was cupbearer to the king. He voiced no claims to leadership, he worked as did the others, and shared their hardships. "So neither I, nor my brethren, nor my servants, nor the men of the guard which followed me, none of us put off our clothes, saving that every one put them off for washing." All his work was done "because of the fear of God." Not once did he refer to the Persian court and remind the people of what he had given up for this work in Jerusalem. Not once did he say, See what I have accomplished, but this he said, "So we labored in the work." No wonder the wall was built in an incredibly short time, in the face of great danger and opposition.

The more I study this story of the Scriptures, the more I admire Nehemiah's consecrated life and his Christ-like humility; the more I feel that Nehemiah's way was the truly scientific way. I am grateful for what I have learned from him. Each Scientist needs to repair the walls over against his own house, and then we will have unity of thought and action, which will build a wall of defence round about the Cause of Christian Science. If we are very busy ourselves we shall have no time to criticise and condemn the work of others.

The Spiritual Idea and Human Need.

LUMAN A. FIELD.

OUR Master said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." To this divine, and therefore eternal and universal, promise and assurance, there is attached one condition,—"come unto me,"—and were it not that the spiritual idea guides "all right desires in their passage from . . . a material sense of existence to the spiritual" (Science and Health, p. 566), we would at the very threshold of the opening prison be defrauded of our rights by "carnal beliefs" (Science and Health, p. 263). Some erroneous belief concerning Truth or the proper channel through which the knowledge of Truth should come, some prejudice, some false pride, some form of self-love or fear may darken the understanding and hinder us in our effort to "arise and go" to the Father.

The story of the healing of the blind man as told by Luke, illustrates some of the difficulties experienced in coming to the spiritual idea. Hearing the noise of a multitude passing by, the blind man asked the meaning of it, and was told, "Jesus of Nazareth passeth by." Note the identifying quality,—*of Nazareth*. Error often begins its work with a contemptuous expression calculated to arouse prejudice and unbelief, and thus bar the advance to a higher plane of thought and experience.

Had the bystander with physical vision but recognized the spiritual idea Jesus presented, the human sense would have been wonderfully illuminated, for, instead of the reply, "Jesus of Nazareth passeth by," the blind man might have heard a hope-inspiring statement in line with the thought given in our text-book, "The highest human corporeal concept of the divine idea, rebuking and destroying error, and bringing to light man's immortality" (Science and Health, p. 589). That the blind man had to some degree this clearer spiritual sight, and had caught somewhat of this divine concept of Jesus, is evidenced by his putting aside the thought of "Nazareth," and crying out, "Jesus, thou son of David [son of man, after God's own heart], have mercy on me." The subtle effort to obstruct progress by contempt and prejudice having failed, mortal beliefs assume a bolder and more aggressive attitude, and now the blind man is rebuked for crying out, and is commanded to "hold his peace." The human need is forbidden to voice its cry for help, but we rejoice to know that "human hate has no legitimate mandate" (Science and Health, p. 454).

David said, "In my distress I called upon the Lord, and cried unto my God: and he did hear my voice out of his temple, and my cry did enter into his ears." It was most natural, therefore, that the "son of David" should hear the cry of need: and in response, he commanded that the blind man be brought unto him. When he was come near, Jesus asked him, "What wilt thou that I shall do unto thee?" He answered, "Lord, that I may receive my sight." Then Jesus said to him, "Receive thy sight: thy faith hath saved thee." The recognition of the spiritual idea and the persistent thrusting aside of every thought of unbelief which would dim the spiritual sight, saves all who come to Christ, Truth.

"Come unto me, all ye that labor and are heavy laden." Since "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13), every human need may voice its great desire,—"Lord, that I may receive my sight,"—my spiritual sense, my purity, my joy, my freedom, my peace, all that belongs to me as a child of God; and we may be sure that now as in the time of Jesus the spiritual idea will meet the demand according to our faith in Truth, and our obedience to Truth. To Moses, God said, "Certainly I will be with thee," and to Joshua, "As I was with Moses, so I will be with thee: I will not fail thee, nor forsake thee." Paul declared that "Charity (love) never faileth," and thus are we taught that the spiritual idea is always present, ever willing and abundantly able to meet every need. David wrote, "I will fear no evil: for thou art with me;" Jesus said, "Lo, I am with you alway, even unto the end of the world," and now in our own day the same truth is repeated to us in the words of our text-book, "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

In order, however, to avail ourselves of the divine help so freely offered, we must, like the blind man, carefully and energetically cast aside every prejudice and every erroneous belief that would dim our vision of the true idea when it is presented to us, even as our Leader has counselled, "Divest your thought, then, of the mortal and material view which contradicts the ever-presence and all-power of good" (Miscellaneous Writings, p. 14).

"That they may bring forth more Fruit."

J. U. HIGINBOTHAM.

THERE are educational institutions in this country which teach the laws of agriculture and horticulture, and after learning these, the pupils are required to put them into practice. In such colleges they teach, among other things, the proper way to prune grape-vines. When trimming his first vine, according to instructions, the novice has a feeling of sympathy for the plant, for there does not seem to be much left in the way of foliage when he gets through: it is now only a cluster of brown sticks, and as an ornament, it is quite ruined. He had acted under orders from a superior who knows a great deal about grape-vines, but to the uninformed eye nothing appears but devastation and wreck, after the removal of much that was beautiful and impressive to the eye. Will the result ever vindicate the seeming vandalism?

The purpose was to concentrate the vine's energies on its true mission: viz., fruit-bearing, and a season's sunshine and rain will fill it with purple clusters, while its untrimmed neighbor will bear nothing but leaves. Had it been allowed

Digitized by Google

to waste its energies, it would have been a failure both as a fruit bearer and as an ornament.

In Christian Science we are blessed with a Leader whose range of vision commences at a point beyond where ours terminates. She has often taken steps whose purpose we could not see, and yet prompt obedience has been rewarded in each case by *fruitage*. In a new By-law, the wisdom of concentrating our energies on one life-purpose is indicated,—a purpose, big enough, broad enough, and grand enough for the true life. This By-law does not go so far as does the vineyard requirement. It does not demand the removal of existing branches from growing vines. It only seeks to apply the law of prevention to those who have not yet put forth their shoots. Are any disturbed by it? Certainly not those who are well grounded in Science, and who have no cravings which their religion cannot satisfy.

Our Part in Ushering in the Millennium.

L. EMOGENE MOORE.

MRS. EDDY says, "A right apprehension of the wonderful utterances of him who 'spake as never man spake,' would despoil error of its borrowed plumes, and transform the universe into a home of marvelous light" (Unity of Good, p. 20).

From the time of the Revelation of St. John until now, man has been looking forward to a better condition among human beings while still inhabitants of this earth. If this is to be brought about by a clearer understanding of the Word of God, how important it is that we should be diligent students of the Bible. Many of us know how seemingly vain was our search for Truth until we became students also of our text-book, "Science and Health with Key to the Scriptures" written by our Leader, Mrs. Eddy.

It is safe to state that there is not a single individual among the civilized nations of the world, but wishes that there might never be a broken family circle; never a case of sickness or sin, never a destructive storm, nor a ship to go down at sea; never a railroad wreck; never a failure of crops, nor a strike; never a disaster of any kind; in fact, that nothing but good health, prosperity, happiness, should ever find place in the experience of men.

In view of this desire is it not clear that every healing of sin or sickness, whether in ourselves or in others, every life made better and brighter, helps to bring this condition a little nearer? Then why murmur if at times our work seems obscure and unappreciated? The little things must be done, the details must be worked out, and in no other line of work do we expect to work at the completed whole, but at its parts. In the building of a house the laborers see mentally its completion, but their work consists in setting a window or door frame, in laying floors or shingles, or perhaps in carrying a hod of bricks or plaster. The architect has no doubt a better concept of the finished building than the workmen, and it is their duty to do their work as instructed by one who understands alike the desired end and the steps leading to it. Thus it is in Christian Science. Our Leader sees what may be accomplished by selfless, conscientious obedience to the teachings of the Bible and Science and Health, and it is our privilege to be obedient and to work according to the rules of Christian Science.

If we think that that which comes within our sphere of daily work has but little to do with the fulfilment of our daily prayer, "Thy kingdom come. Thy will be done in earth, as it is in heaven," we may be tempted to ask ourselves such questions as these: Is my home expressing a better condition each day? Am I a better wife and a better mother, a better housekeeper than before I knew the truth? Am I a better husband and father, a better provider? Am I a better workman or business man? Do I use my influence at all times on the side of justice and right dealing? If an employee, do I try to give an honest return for wages received? If an employer, do I try to give a fair wage in return for the work accomplished? When with others do I talk less of discordant conditions, less of sickness and sin and more of the good and true? If these questions can be answered in the affirmative, we may be sure that Christian Science is making better human beings of us and is thus bettering all mankind, for every life nobly lived helps all the world. We have a far-reaching example of this in the life of our beloved Leader. Any one who has felt the healing touch of divine Truth must have in his heart constant and unbounded gratitude, and this inspires to the noble deeds which assure the coming of God's kingdom on earth.

An Echo of Thanks.

H. R.

A CONSCIOUSNESS of the great wisdom of our divinely instructed Leader, Mrs. Eddy, compels me to give my humble testimony to the wonderful plan of the general teaching in our Christian Science weekly Lesson Sermons at the present time. When the Sunday sermons were suspended for this new arrangement, questions about the expediency thereof troubled me. Now I see the fulness of foreknowledge which led to the change.

I am at the present time isolated from all our church services, but find by this arrangement a church in the wilderness, a perennial fountain not dependent on edifice or numbers. This teaching from our *Quarterly* ever at hand holds us like the magnetic needle to the pole. If our thoughts would wander to earthly things, here is our guide, the blessed inspiration which leads us on, by centering our attention upon the spiritual, and showing us "the way," making us feel that, like Enoch, we are indeed walking "with God." The beliefs of sickness and discomfort are thereby controlled, as I have found in my daily experience. Again and again I thank God for the fore-knowledge of the wants of the world which He imparted to our humble, waiting, receptive Teacher and Leader.

[Written for the *Sentinel*.]

Clothed Upon.

ROSE SEELYE-MILLER.

THE earth was bare and dun and sere.
The saddest time of all the year.
A sodden snow patch here and there
Begrimed and soil-stained, once so fair.
There is no hope, all earth is dead;
The grass, the flowers, the birdlings fled;
The clouds are lowering dark and drear,
Shadowed the naked hillslope near;
A symbol of this Earth-life's dream
Where all things seeming, do but seem
Naked and bare, and swept by fear,
This is the mortal atmosphere.

A soft rain falling in the night,
The rosy tints of dawning light;
A gentle verdure creeping slow,
O'er hillside slope, where flowers blow.
All earth is changed. The erstwhile bare
Is covered with a garment rare;
Flowers, and grains, and creeping grass,
Seem chanting pæans as I pass.
"Clothed upon" thus too, my heart now sings,
Clothed with the robe His Spirit brings.
No more can Life or earth seem bare,
Encompassed with Love's garment fair.

From the South.

THE interest of our readers in the following article, copied from *The Wilmington* (N. C.) *Messenger,* will be enhanced by the knowledge that our Leader, during a portion of her early womanhood, was a resident of North and South Carolina, and it was in Wilmington that she received great kindness at the hands of the Masonic brethren of her husband, Major George W. Glover, upon the occasion of his death.

Written for *The Messenger.*

Your wideawake paper is always ready for items concerning the citizens of our Republic, though they may not sit immediately under our own vine and fig-tree. In this instance, however, some of our own people were present, and many interested in the event reported; that is, the dedication of First Church of Christ, Scientist, in Concord, N. H., on Sunday, July 17th. Four services were held, and the capacity of the church taxed in each instance. It is estimated that between four and five thousand people were in attendance, many coming on special trains from New York, Chicago, Boston, and points to the north. A New Hampshire paper says of the occasion, "Perhaps no church in New England was ever dedicated under auspices more resultant in manifestations of loving loyalty," and surely no happier, healthier, or more enthusiastic set of people ever gathered at the call of church chimes than on this occasion, when the beautiful granite structure given by Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, to the Christian Scientists of her home city, was dedicated to the service of God, the healing of the sick and the sinful.

When Mrs. Eddy's generous gift of one hundred and twenty thousand dollars became known, other donations to the amount of at least eighty thousand dollars came pouring in from Christian Science churches and individuals. Of this amount, the Christian Science churches of North and South Carolina, the two Southern States where the joy and the sorrow of Mrs. Eddy's youth were so closely mingled, gave one thousand dollars. As an added token of loving interest in their Leader's home church, they also sent a large cross of gladioli from the flower gardens of Mr. H. E. Newbury at Magnolia, N. C. The remarkable tints and beauty of the flowers were commented upon by visitors from all parts of the country, and this product of the soil of our state was greatly complimented. The cross seemed deeply appreciated by our northern friends, who have many times gladdened our hearts by actions betokening the absence of all sectional feeling, and sincere interest in the people of the South.

Visitors to the city are always impressed by the manifestations of the high regard in which Mrs. Eddy is held in the community. On this occasion the people of Concord vied with each other in showing hospitality. Besides many private houses, the doors of two clubs, the Concord City Building, the Capital Fire Insurance office, stores, the Unitarian church, the Episcopal Parish House, and other places were thrown open for the use of the visitors. A Concord paper says, "The visitors of Concord generally have taken great interest in the new building, and are justly proud of the handsome additional adornment of their city."

The beautiful granite structure is 72 feet wide by 115 long, and its completion in one year to the day from the laying of its corner-stone has called general attention to the practical activity of Christian Scientists in the daily walks of life. I am assured that the courtesy, enthusiasm, and Christian spirit shown during the many gatherings of Christian Scientists here, have won for them the cordial good will of the people of Concord, and those of the South, whose watchword is "hospitality," realize that their northern friends are perfect masters of the art.

Among the Churches.

Church Opening in Denver, Col.

The opening services in the new church edifice of First Church of Christ, Scientist, Denver, took place May 29. Services were held in the morning and evening. At the morning service the full seating capacity of the great auditorium was taxed to its utmost, and many were unable to gain entrance to the building. A large number of visiting Christian Scientists were present from different parts of the state. The services consisted of the regular Sunday Lesson Sermon; subject, "God the only Cause and Creator."

Congratulatory telegrams were received from a number of sister churches in distant cities. The First Reader, Mrs. Emily L. Cameron, extended a welcome to all those attending our first service, and expressed the hope that it would be one of many they might share with this church.

The history of our church shows a most gratifying growth, and with the completion of this new home, its usefulness is broadened, its energies quickened, and it feels more sacredly than ever before that "To those leaning on the sustaining infinite, to-day is big with blessings" (Science and Health, Pref. p. vii).

The large numbers attending the regular services and the increasing interest manifested in Christian Science in this city, is a fruitful source of gratitude and joy; gratitude to the Giver of all good for the rich fruition crowning the efforts of those who have been "instant in prayer" in season and out of season,—joy unspeakable that the Christ-truth has come to this age bringing healing on its wings, and that the weary and heavy laden may come to the fountain and, "without money and without price," find health and Life.

JULIA L. HALE, *Clerk.*

Speaking of the opening services, the *Denver Post* said,—

"More than two thousand persons were within hearing of the speaker's voice when the services began, and more than one thousand were turned away. In addition to these, hundreds stood about the beautiful foyer downstairs, content to listen to the strains of the new organ, which might be heard several blocks away.

"In marked contrast to the magnificent church were the services, which were of an exceedingly simple character.

"A service similar to the one in the morning was held last night and the church was again crowded to its utmost."

A Word from Mexico.

Without the bread and wine that symbolizes the holy sacrament in orthodox churches, the congregation of First Church of Christ, Scientist, of this city, celebrated yesterday noon their semi-annual Communion. The Scientists now hold their services in the Jardin Hotel, to which they moved a few days since after worshiping for five years in the Lara House. In the same hotel, about Christmas time of the year 1898, in the rooms of Mr. and Mrs. Adam H. Dickey, were held the first Christian Science services ever held in the City of Mexico. They have been held continuously since that time, and the members of the congregation seemed happy in the handsome suite of rooms now occupied.

The Mexican Herald.

Love Triumphs in Marshall, Mich.

A gratifying proof of the work of Truth and Love in our midst has recently been given us. Less than five years ago the Presbyterian pulpit was used by an Episcopal rector from which to deliver a series of lectures against Christian Science. July Fourth of this year patriotic exercises were held in the same church, under the auspices of the Daughters of the American Revolution. At the suggestion of the Presbyterian pastor, the Christian Scientists were invited to take part in the exercises with other denominations, and the

Digitized by Google

Scripture reading was assigned to us. As First Reader of the Christian Science Church, I read from the pulpit from which we were so recently denounced, Psalm 144 : 1, 2, 9–15 and Matthew, 5 : 2–16. Surely ignorance of our Cause and prejudice against it have been in some measure overcome here. We owe much to the work of our State Publication Committee and to our lecturers for this result, as well as to our individual efforts. For all good manifested we are devoutly thankful.—MARY W. MILLER.

Another Loving Thought.

With an increased appreciation of their indebtedness to Christian Science, all its faithful adherents feel a correspondingly increased interest in the Mother Church and in the completion of the splendid enterprise to which it is their privilege to contribute. The members of the branch church in Needham, Mass., have been impelled by loving thought to apply the receipts of the first Sunday of each month to the Mother Church building fund, so long as there is a need, and harmonious action to that effect was taken at a special meeting July 13.—*Correspondence.*

The Lectures.

Adrian, Mich.

Everiss Hall was filled to its utmost capacity Thursday night [June 9], to listen to the lecture on Christian Science given by Edward A. Kimball of Chicago. Judge H. L. Larwill introduced the lecturer, saying in part:—

Ladies and Gentlemen:—Whatever may be our individual views upon any subject, we should always accord to the advocates of different theories a respectful hearing. There is nothing that so surely marks a person provincial as the dogmatic adherence to his own beliefs and the flippant rejection of the views of others. It is much easier to scoff at a theory that we do not understand than it is to study its principles and science. I believe in the broadest catholicity of thought; I believe it is the inherent right of every one to advocate and adhere to that system of theology that appeals to him most strongly and of whose truths he is convinced. The line between theological truth and error is so constantly shifting that it is difficult for one to be sure that he is upon the right side. This of itself should engender in us all a spirit of toleration.—*Adrian Telegram.*

Buffalo, N. Y.

Judge Septimus J. Hanna of Colorado Springs, lectured yesterday afternoon [June 26] at the Teck Theatre on the subject of Christian Science.

Charles D. Holcombe, First Reader of First Church of Christ, Scientist, in introducing Judge Hanna, said,—

Christian Science is a subject of ever-increasing interest because it is meeting a universal need; it has stood the test of time and to-day desires only to be judged by its fruits.

Having established itself by its works as a mighty power for good, it is entitled to and is receiving most profound attention. We do not need, neither do we wish, to force this subject upon you, but out of the abundance of our hearts we have simply called you together to listen to a message which has brought peace and joy to thousands, and which is waiting and ready now and throughout all time to fulfil the Saviour's promise, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Buffalo Courier.

Joplin, Mo.

The lecture by Miss Mary Brookins, at the Club Theatre last night [June 2], was attended by a large audience.

Judge Byron H. Coon made the introductory remarks which were in part as follows:—

Ladies and Gentlemen:—Science has its nights and dawns, as also does religion; and that particular form of religion known as Christian Science is now merely at its dawn. In little more than a quarter of a century, by earnestly striving to inspire men to nobler ideals, to better living, and by bringing the gospel of encouragement, hope, and love to cheer and brighten the lives of thousands, Christian Science is dethroning distrust and prejudice and has won recognition as an important moral factor in our civilization. To-night we are to be told of the precepts of this religion that has had a marvelous growth and made such a profound impression on inquiring minds.—*Joplin News-Herald.*

Newark, N. J.

An interesting lecture was given for First Church of Christ, Scientist, in the new auditorium, June 3, by Edward A. Kimball. The lecturer was introduced by Rev. Henry A. Rose, a Universalist minister of this place, who spoke in part as follows:—

Fear has been the bane of the human race. From the dawn of history mankind has bowed in terror before its gods. Some have sought to sink this terror deeper into the hearts of men by means of priestcraft, superstition, and threats. Some, on the other hand, have sought to deliver man from this bondage by an appeal to reason, faith, and trust. The liberators are winning, although the victory comes slowly.

Another bane of the human race has been delusion, especially delusion in reference to disease. All sorts of theories have been accepted to explain the origin, and all sorts of remedies have been used to effect the cure, of disease. Demoniacal possession long held sway as the one cause of every malady. The Esquimaux this day puts to death his favorite dog to save the life of his sick child. Some think Christian Science a delusion also; and that is something Mr. Kimball will undoubtedly attend to to-night.

Before introducing him I want to pay a tribute of gratitude to Christian Science for teaching and emphasizing the unity and goodness of God, and for standing for optimism in a world too much inclined to be pessimistic.

Correspondence.

Raleigh, N. C.

It was a cultured and refined audience, representative of the best life of Raleigh, that assembled last night [June 10] in Raney Library Hall, to hear a lecture on Christian Science by Mr. Bicknell Young of Chicago.

The lecture was under the auspices of the Christian Scientists of the state. Miss Mary Hatch Harrison of New Bern presented the speaker of the evening. In introducing Mr. Young, Miss Harrison said in part,—

The Christian Scientists in giving this lecture in Raleigh, the much loved capital of our great state, felt it a pleasure to bring our joy to you, recalling such gracious courtesy at your hands when their rights were questioned. They wished to pay a tribute to your citizens, and to your legislative and executive departments for their patriotism, justice, and protection.

We love Christian Science. It is the dearest of all things to us, and we wish you to love it. Still, if not yet so dear to you, we rejoice to know the whole world is seeking to understand why it is so dear to us. Your presence here to-night indicates a growing interest, and our efforts are fully rewarded by the choice audience greeting us.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Heal the Sick.

JESUS' success in healing the sick and his exhortation to his followers to do the works that he did, point to the true test of Christianity, and it is only as Christian Scientists are able to measure up to his standard that they know that they are his present-day followers.

"Science and Health with Key to the Scriptures," the text-book of Christian Science, is insistent in its endeavor to awaken the world to this healing gospel of our Master, and the By-laws of the Mother Church make urgent appeal to Christian Scientists in the following words: "Healing the sick and the sinner with truth, demonstrates what we affirm of Christian Science" (Church Manual, p. 85).

Other work for the Cause may engross the attention of Christian Scientists, but the paramount importance of this healing ministry cannot be lost sight of by them if the world is to receive the full benefit, and the Cause of Truth is to be advanced. That this healing work is being done is proved by the testimonies which appear in our periodicals.

The following extracts from a testimony recently published in *The Christian Science Journal* should appeal to every seeker for Truth, and should stimulate every Christian Scientist to more earnest consecration to our Master's service.

"For many years, in fact ever since I was a schoolgirl, I had been a semi-invalid,—up and around, but always obliged to be careful and to consider my health first. As the years went by, I became gradually worse, until the doctors pronounced my illness a very serious organic trouble. Everything was tried that loving friends could think of,— I spent months at a time in prominent sanitariums and water-cures in different parts of the East. I even resorted to patent medicines, and one entire winter I was away from home and friends, enduring a lonely hotel life in an eastern city, that I might have daily electric treatments. For many years I was under the care of specialists in New York and Chicago, but nothing gave permanent relief, and, as a last resort, an operation was decided upon.

"This was performed by one of Chicago's expert surgeons, and I barely lived through it, being in bed ten weeks. I had endured these horrors patiently, sustained by the hope of being well at last. Perhaps my dismay may be imagined when, at the end of six months, I found myself much worse than I had ever been, and going steadily down. All the old troubles had returned, bringing others which I had never before experienced. The physicians said there was not an organ in my body working right. . . . I was told there was nothing before me but more operations, though there was no certainty of a cure even then, and anyway I was not able to endure them until I could gain some strength. I felt myself sinking into the depths of despair, with nothing in the future but an open grave or, worse still, hopeless invalidism.

"It was in this dark hour that Christian Science came to my rescue. . . . My progress was very rapid, and at the end of two weeks, my friends said they would hardly have known me. I accepted my healing as a gift direct from God, because of the spiritual uplifting,—the wonderful peace and joy which came with it." M.

The Right Thought of God.

THE significance of the relation of our concept of Deity to our spiritual life was forcibly expressed by Emerson in his famous "divinity address" when he said, "The doctrine of the divine nature being forgotten, a sickness infests and dwarfs the constitution."

To entertain the least error is to court disability, but to cherish a false sense of God is to yield our thought to the influence of an all-pervasive blight, and hazard the shipwreck of all faith. The realization of this fact gives special interest to the comments of the religious press respecting the late Slocum and Norge disasters, for they go to show that while many have entirely given up the traditional thought of the divine relation to these dreadful events, others still cling to a view which would do credit to the vigorous old-time declarations of God's responsibility for evil, and His utilization thereof.

Long ago John Wesley said, "Calvin's God is my devil." Nevertheless a religious periodical which stands for his views, in referring to the first meeting of the tearful remnant of St. Mark's congregation, speaks of the fitness of their use of a hymn which attributes our afflictive experiences to God's "unerring decrees." "God hath done it and He only can explain." This seems to be the final word respecting these things, with unnumbered earnest Christian preachers as well as laymen, and the larger influence of such a thought may explain the fact that, in this twentieth century, books and periodicals are being issued, whose avowed object is to "emancipate men" from what is termed "the degrading belief in a God" who can institute an order of things that results in the unspeakable torture of innocent infancy and helpless age, and who, as instanced in these late horrors remains indifferent to their piteous and agonizing cry. One such anti-Christian journal before us dwells upon the teaching of some religionists regarding these events, and speaks with undisguised contempt of the worship of a God of the type disclosed.

The retention of an unworthy concept of Deity by a rapidly advancing race, may be explained, in part, by the peculiar hesitation of Christian people to indulge any spirit of inquiry regarding the subject; a far more significant reason, however, is found in the fact that a degraded and degrading sense of God inevitably attaches to the belief in the reality of evil. The moral sense of the world protests that the life-destroying holocaust is an abnormity and a wrong, and so long as a Christian faith stands for the substance and eternality of the so-called laws which eventuate in these tragedies, and declares them to be the expression of divine purpose, so long will the worship of inconsistency, with all its attendant ills, continue.

Over against all this sense of God, Christian Science teaches that He "is universal, eternal, divine Love, which changeth not and sendeth no evil and no sin upon man," and that He cannot "punish man for doing what He created him capable of doing, and knew from the outset that he would do" (Science and Health, pp. 140, 357). This does not encourage the presumption that would venture beyond what has been demonstrated, but it does counsel a glad acceptance of the larger apprehension of the meaning of Jesus' assurance that *we may know* God and find in this knowing "eternal life,"—"expand to the full circle of the universe." Christian Science dares to question the consistency and practical value of traditional ideas of God, and to discard those which are out of keeping with the teaching of the Master, however venerated they may have come to be, and this daring is both its offence and its glory. Either the belief in the reality of evil or in the Christ ideal of the divine perfection and lovableness must be given up, and in the presence of this issue Christian Science takes its stand unequivocably for the perfectness of our God.

The Protection of Spiritual Law.

WHAT a blessing it would be for mankind if all could see that the reversal of sense evidence and of human opinion is the way to that understanding of Truth which makes free. To the popular thought, law is usually associated with restriction, but Christian Science teaches that the opposite is true,—that law makes for freedom and provides for the permanence of good. That many false concepts of law exist is easily shown, and thinkers readily admit their ignorance on this subject. A simple test may therefore be helpful to the beginner in Christian Science,—one which will aid him in reaching that sense of certainty which differentiates understanding from mere belief.

When a certain order is set aside, in the treatment of disease, by the application of the truth, we may be sure that this unhappy condition did not represent law, even if the whole world believed that it did; and that God's law cannot be broken, even if the whole world believes this possible. The law remains, in spite of any attempt at its infringement, and eternally demands our recognition and obedience.

In this fact lies our only security, though we may need the measuring line of Science which was held in the hand of the angel to make this plain to us. If we accept material sense testimony, we may fail to see the punishment of wrong and the victory of right, but when we come to know God as eternal, divine Principle, we have positive evidence that He forever vindicates His law and His own.

The Bible declares, "Whatsoever a man soweth, that shall he also reap," and in an article which is remarkable for its keen, spiritual analysis, our Leader says, "This sacred, solid precept is verified in all directions in Mind-healing" (Miscellaneous Writings, p. 66). A backward glance through the vista of years reveals Pilate, the Roman governor, sternly questioning the Galilean Teacher, but failing to question his own motives,—false to eternal justice. Today, posterity is his judge, before which he stands condemned as a traitor to right, while the seeming victim of that hour—"the faithful witness" for Truth—is now the acknowledged ruler of the kings of the earth. Thus do we see the operation of the law of Divine justice which neither slumbers nor sleeps.

It is our joy to be able to prove that the reward of knowing and obeying Truth comes here and now. Our health and our heaven come together in Christian Science, and death does not hasten their possession. As the operation of spiritual law is understood, we see that it renders null and void the supposed laws of mortality, its false pleasures and false pains, and like the Psalmist we are then moved to say, "I delight in thy law."

As we hasten to express our thankfulness to God for the joy thus gained, we cannot do other than thank our Leader who has unearthed for us the long-buried treasures of apostolic Christianity.

K.

Unworthy.

OUR people are again warned against a man who for several years has made a business of imposing upon Christian Scientists, and who has obtained more or less money from them by falsely representing himself to be a Christian Scientist temporarily in need of funds until he can reach a relative in a distant city and obtain employment.

The story heretofore used by him is that he is a member of a Jewish family, but disowned and persecuted because of his espousal of Christian Science; that he is on his way to the home of the relative who will give him employment, but is completely out of money and desires the loan of a sum sufficient to enable him to buy a railroad ticket. He is quite fluent in the letter of our text-book, and is familiar with the names of Christian Scientists throughout the country. Since he keeps himself well posted on our periodicals, we assume that he will now adopt a different story.

The latest description we have of this man, is as follows: "He is a Hebrew in appearance, short, slender, has dark eyes and curly hair; uses good language, but with a slight German accent."

Letters to our Leader.

Colorado Springs, Col., July 11, 1904.

Rev. Mary B. G. Eddy, Concord, N. H.

Beloved Leader and Teacher:—On the occasion of the opening of a newly erected hall to Christian Science services, a few years since, in Scranton, Pennsylvania, a message was received from you wherein you said,—

"Space is no separator of hearts. Spiritually, I am with all who are with Truth, and whose hearts to-day are repeating their joy that God dwelleth in the congregation of the faithful, and loveth the gates of Zion."

As I thought of the dedication of the church in Concord these words of yours came to mind with such force that I felt impelled to quote them as expressing my own feelings in connection with the forthcoming event.

Circumstances are such that we cannot be present in person, but in the spiritual sense we are participants with you and all who are there.

The occasion is a momentous one. The church edifice seems to me to be architecturally superb and harmonious, and in keeping with that for which such an edifice should stand. It is expressive of spaciousness and light, and symbolizes throughout "the resurrection, and the life."

It adds another brilliant gem to the already bright church-cluster adorning the beautiful capital city of the grand old Granite State. It reflects great credit upon all associated with its construction and who, in thought and purpose, contributed to its building; but "tribute to whom tribute is due; . . . honor to whom honor." Honor to her whose spiritual conception brought forth the true Church idea; whose long years of selfless toil in God's vineyard and whose superabundant generosity made such an edifice possible. Much more might well be said; but the mere suggestion contains volumes. An appreciative people will say a glad Amen.

In this Church the cross and crown meet and mingle in happy coincidence. Here the "true worshipers shall worship the Father in spirit and in truth." Here they who worship in deed and in truth are daily proving that the "Sun of righteousness" hath arisen "with healing in his wings." Here, to the faithful, the healing Christ is a present, living fact. Here those who truly enter in have deeply pondered the spiritual import of Christ's immortal message:—

"I am he that liveth, and was dead; and, behold, I am alive forevermore." In sincerity and truth, I remain,

Your loving student,

SEPTIMUS J. HANNA.

Chicago, Ill., June 14, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Through your teachings and guidance there come times when we rise to a feeling of spiritual gladness wherein nothing seems to suffice save as we commune with you, and undertake to express in words our great love and gratitude to you. My wife and I have just returned from a trip to Colorado, which we were obliged to leave twenty years ago on account of my health, my doctor having made a law that I could not live at that altitude. A lower altitude was beneficial for a time, and then the old trouble returned. When Christian Science was presented to me I fought it strenuously, but I was obliged to accept it, and in one treatment was healed of disease of years' standing.

With me the physical healing came too quickly, for I accepted its benefits without looking for spiritual help, so

Digitized by Google

that it was not long before I strayed away until overtaken by heart-sickness,—sorrow,—which no *materia medica* could heal. This compelled me to turn to God for help. I then took up the study of the Bible under your teachings as given in our text-book, "Science and Health with Key to the Scriptures," and the spiritual uplifting that has come to me, with health and happiness in the last five years, "passeth all understanding." To return to Denver and there renew my old acquaintances and make new ones, to find many of my old friends loyal students of Christian Science, and to visit their new church, beautiful in design and grand in construction, filled with loving hearts, has been a privilege indeed. Our visit would not have been complete had we not given expression to our gratitude, that out of our many trials, tribulations, and sorrows, through God's love and your gracious teachings, we have come to the realization of man's dominion over "sin, sickness, and death."

I am pleased to say that both my wife and myself are students of one of your students, and many of our blessings are centered in the fact that we are able to help others.

God will continue to bless you.

Faithfully yours,

W. N. BABCOCK.

Skowhegan, Me., July 16, 1904.

Rev. Mary Baker Eddy, Concord, N. H.

Dear Mrs. Eddy:—I should be ungrateful indeed if I did not express to you my thankfulness for what Christian Science has done for me; my benefits, both physical and spiritual, are more than I can number. It was my privilege to unite with the Mother Church during my eightieth year, and I was one of the thousands who saw you and heard you speak from your balcony at Pleasant View in June, 1903. I think you will be glad to know of a case of healing that came under my notice within the last year. A woman whom I had known from her birth, and who had been in a chronic state of invalidism in both body and mind for nearly twenty years, finally came to believe that her days upon earth were very few. She "had suffered many things of many physicians, . . . and was nothing bettered, but rather grew worse." I told her of the beauties of Christian Science, sent her a copy of your book, Science and Health, and within one month from that time she came to me and said she was perfectly well,—healed by reading Science and Health. I have been a Free and Accepted Mason for thirty-seven years, and I thank you for the new By-law.

Sincerely yours,

HARRISON BAKER.

The Eagle Hotel, July 19, 1904.

Beloved One, Dear Leader and Teacher:—Before leaving this afternoon I must express to you my great gratitude for your magnificent Message; it must awaken the slumbering world to the Christ, Truth, that "holiness is health and Love is Life." I came from my far away home to bring my own greetings and congratulations with those of our dear home church, First Church of Christ, Scientist, in Atlanta, Ga., and richly have the beautiful services in this exquisite church, rewarded me. Never, dear one, has there been a leader whose followers are so loyal, loving, and devoted as are yours. Whatever differences may come up between them, all are a unit in love, devotion, and loyalty to you. It is the miracle of history, and nothing can rob you of the great joy and comfort this fact must be to you. It assures you of the progress and sublime success of this great movement in its onward march towards the world's redemption.

May we all so grow in the unity of faith and love that your loving heart may rejoice in the victory which follows that sublime attainment. With gratitude and love beyond words,

Your loving and faithful student,

SUE MIMS.

Testimonies of Healing.

From childhood these questions constantly recurred to my thought: "What is God? why does He let people sin and suffer? and is there no escape from these dark conditions?

My thought was always, Why can I not be free from these things, and who is there that has not longed to be free from the doubts and fears of an unknown future and the struggles and strife of daily existence? Growing older, the doubts and fears increased and there came a time when the very existence of God was doubted by me.

Having a thirst for the truth, I began to study my Bible in the hope that it might give me what I sought. I saw that it was full of beautiful promises, but why did not Christians receive them? If the promises of the Bible were true, how should I obtain them? The truths expressed in Scripture seemed always to evade my search; sometimes that which I wanted seemed just within my grasp, only to vanish again. Failing in my own efforts to find God, and being possessed by a continual hunger for a knowledge of Him, I became a member of an orthodox church, in the hope that it might make plain the way. Again there was disappointment, for I found it impossible to accept all the doctrines to which the church subscribed, still I held on to it, as it seemed the best resort to me.

About this time Christian Science was presented to me by a friend who had recently been healed by it. I felt at once that here was the truth, but having absorbed so much theology I found myself fighting against it. For almost a year there was the mental argument that Christian Science could not be true. However, I kept on reading Science and Health. The truth it contained began to reveal itself to me. Then, too, I saw in the daily lives of those who practised Christian Science a quietness and assurance I had never known. One by one, I began to put aside my old prejudices and to study more earnestly. I soon found answer to my old questions and began to see my way out of bondage. Since turning to Christian Science I have seen many a Red Sea of difficulty and many a dark and uninviting way before me, but the difficulties have melted and the dark, stony way has blossomed into beauty under the sunlight of Christian Science which reveals the presence of God here and now.

I traveled a long, weary way before I came to Science, and now, having only touched the hem of the garment of Truth, I have found it a wellspring of life in the desert of human beliefs. It has taught me to "know whom I have believed." I have experienced physical relief through this healing truth, for which I am grateful, but its greatest gift to me is in its priceless revelation of God as the divine Principle who governs man with law and order, thus making it possible for us, here and now, to overcome every evil condition. I have recently had the privilege of class instruction and am learning to rely more upon God, and there is within me a great sense of gratitude to Mrs. Eddy for the light that comes through "Science and Health with Key to the Scriptures" to the weary searcher after Truth.

ALICE M. SWARTHOUT, Wasco, Ill.

With a heart full of gratitude to God and to our beloved Leader, Rev. Mary B. G. Eddy, I send my testimony. It is over eight years since I first heard of this wonderful Science from a friend. She handed me Science and Health and I read it and said, "I will give it a trial." I was looking for the healing just then, but little did I know what was to be revealed to my consciousness.

I was then a physical wreck, discouraged and dissatisfied with myself. I had been a member of the church from my girlhood, and had tried to be a Christian. I had studied my Bible, but could not understand it satisfactorily, and when I would ask others,—ministers and Christian friends,—they would say that we must not be as wise as God; or that

Digitized by Google

we should know more when we got to heaven. I have realized, however, since studying the Bible in connection with Science and Health, that I can truly say, it has revealed to me perfect harmony, both mentally and physically. I was healed of many troubles that women suffer from, and that without any medicine but the study of "Science and Health with Key to the Scriptures." For this I am very thankful, and whenever I have anything to trouble me, I take my Bible and Science and Health and the *Quarterly*, and go over the Lesson-Sermon, and it always meets the trouble. What a grand help it is, and always at hand. It teaches me that God is ever-present to help us.

I was blessed with the privilege of attending the Communion at Boston, in 1903, and shall never forget the kindness and love which were shown us while there from all the dear ones in truth. I had the very great pleasure of visiting our Leader's home, and hearing her speak those words of love and welcome to Pleasant View.

That I may show my thanks for the many blessings I have received by living the Truth is my earnest desire.

MRS. ESTHER L. MCNAUGHTON, Port Hope, Ont.

In 1889, while living in Glidden, Ia., the first message of this new-old truth came to me through a lady from Nebraska who was visiting our town, and who had only a short time before been healed of serious ailments through Christian Science. I at once became interested enough to purchase a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and although I felt from the first that it revealed Truth, I seemed slow to grasp the spiritual meaning.

In 1894 we moved to the South and located in Mississippi, where it seemed that Christian Science had never been heard of. Four years afterward I was attacked by a serious ailment which I seemed unable to meet with the little understanding I had of Christian Science, and as there was no Scientist near, a physician was called who pronounced the trouble organic heart disease, and told my family that I must not be allowed at any time to lift a heavy weight, or exert myself in any way. I was then taking *The Christian Science Journal*, and I selected from the directory the name of a practitioner in St. Louis, and wrote to her, asking for help. One week of absent treatment cured me of the heart disease, and I have ever since been able to do all my housework, including cooking, milking, churning, etc.

About three years ago I was rejoiced to find that a family of Christian Scientists had moved to West Point, and I began with them the study of the Bible Lessons. Up to this time I had never seen a copy of *The Christian Science Quarterly*. I then began to see more clearly what Christian Science really is. I find it a constant source of comfort and help in my home, where I am the only Christian Scientist.

I would like to mention here another demonstration of the healing power of Truth. A finger of my left hand had been sprained, causing the joint to become so enlarged that it was impossible to remove the plain gold ring I was wearing on that finger. It had been in this condition for several months, when it became inflamed and swollen, and at times very painful, the edges of the ring being embedded in the flesh. My husband, fearing blood poison, insisted that I have the ring cut from the finger. I said, "No, this must be the work of Truth." Some of my skeptical friends and neighbors, who saw the finger, thought me very foolish not to have the ring cut off, and mortal mind made many laws as to what the result would be if I did not have this done. One lady, seeing my determination to have no other than Christian Science treatment, said, "Well, if your Christian Science makes that ring come off without cutting it, I will be a believer in your doctrine." This occurred shortly after I found my new Christian Scientist friend in West Point, and as I seemed unable to overcome the fear in myself and others, I called on this friend for help, asking her if she thought the finger could be cured without first removing the ring. She lovingly assured me that it could, and bade me have no fear. The pain and inflammation soon subsided, and for several days I simply forgot all about the finger, until one day I happened to notice that it was its normal size, and my next thought was to remove the ring, which I did with very little effort.

My greatest desire is to show my gratitude to God, and to our beloved Leader, by living a life of love and self-abnegation, and causing those around me to feel and know that Christian Science is the truth.

MRS. ESTHER MCCREATH, West Point, Miss.

My coming into Christian Science was through great suffering. From a child I was never strong, and as I grew older I became what the doctors pronounced a hopeless invalid. I lived under this law of *materia medica* many years, sometimes able to be dressed and about the house, and often months would pass that I could not be on my feet at all. My case was in the hands of the best physicians in the state. I consulted specialists as well, and the verdict was invariably the same,—I would perhaps live many years but could never be well.

During one of the seasons of prostration to which I have referred, a friend who is a strong Christian Scientist, called to see me. She told me something of the truth, said I need not suffer, that I could be well in a short time, all I need do was to give up my physician and accept Christian Science treatment. Her words fell on deaf ears. Give up my physician! Perish the thought! I see now how I rejected the "cup of cold water" given in Christ's name, and clung to personality and material remedies.

This state of affairs existed for four months with no change for the better. At last the doctor went to my husband and told him there was nothing more to be done; he had exhausted all his resources, and it seemed useless for him to continue his visits.

Then it was that the seed which had been sown four months before took root. I said to my sister one day, "I always thought when the doctors gave me up I would try Christian Science." "Very well," she remarked. She went directly to the kind friend, told her I was ready for Christian Science, and wished to know the steps to take. The friend came to me at once, and brought the book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. I began taking treatment at once, and in six days I was healed.

That was many years ago, and through many seeming trials God has been a sure and never-failing help. Shortly after being healed I received class instruction from a teacher, whose patient wisdom and love have faithfully guided me and made plain many seemingly rough places by her strict adherence to the truth as taught by our Leader. Many errors of belief have yielded to the declarations of truth through the understanding of God's love, proving more and more the truth of this priceless gift to mankind,—Science and Health.

Many times temptations have assailed me, but Truth has ever been the victor. I call to mind a time when I thought myself in deep waters. I was groping for light, and the dear Leader gave us "Miscellaneous Writings." The first article I read in it was just what I needed. It is with a heart full of gratitude that I write this testimony. Words cannot express my thankfulness to our dear Leader, who has given us all so many blessings,—Science and Health, "Miscellaneous Writings," the *Journal*, the *Sentinel*, and the Manual. What could we do without their welcome presence?—S. E. V. W., Jamestown, N. Y.

Digitized by Google

Having seen so many blessings result from the practice of Christian Science, my mother and I would like to express through the columns of the *Sentinel* our gratitude for even our slight knowledge of this wonderful truth. We feel that we would like to add our testimony of the many, many blessings we have had lately.

The loss of a dear husband and father, together with the loss of our home, was a cross hard to bear; but even through this error, we saw that the hand of divine Love was leading us through the Red Sea of trouble.

During the past year, my mother has been troubled with her head being cold, and also a slight deafness. Her healing has been very slow, but there is a marked improvement as the weeks go by.

An article in the November, 1903, *Journal* was a great help, as it pointed out the fact that in keeping the thought right, health is manifested on the body. In the endeavor to keep her thought pure, my mother has been enabled to bear more cold air without a thought of exposure, and no bad feeling has resulted. We know that as we come into the full realization of Truth and Love, all the errors of mortal sense pass from our lives.

We desire to express our tender, heartfelt gratitude to Mrs. Eddy for the blessing she has brought to mankind through the revelation of Christian Science.

L. M. M., Evanston, Ill.

In gratitude for the blessings which Christian Science has brought to me, the time has come when I should acknowledge it. In the year 1890 my wife spoke to me about being treated in Christian Science. This was the first I had ever heard of it. I thought favorably of her doing so, as she was then suffering from what had been called by the best doctors, heart trouble. To my surprise, in a very short time after the first treatment, she was restored to perfect health, and still continues without a symptom of the old trouble.

On April 22, 1895, I was taken with paralysis of my lower limbs,—from my hips down to my feet. I managed to perform my office duties during the first day, and finally arrived home at night in a very bad condition. The next morning, thinking I would get along all right, I started to take the train for Boston. I had not gone far when I had to give up, and get a carriage to take me back home. Upon arriving, the driver was obliged to carry me to my apartment, as I could not stand alone, and was in great pain. My wife asked if she should call a doctor, or if I would like to be treated by Christian Science. I chose the latter. Being in great distress I gave no thought as to which I wanted.

She went to see the same practitioner who had helped her, and I was given an absent treatment, and before her return, which was not more than a half hour, the pain had all left me, and I fell asleep. In a short time the one who treated me came, and after talking with me, explained what Christian Science teaches; namely, that divine Mind is the healer, and that this Mind governed the body, and that man is God's child. I was told to look to the spiritual, and not at the material body. This gave me food for thought. I was also asked to read Science and Health in connection with the Bible.

I first opened the book, Science and Health by Mrs. Eddy, when I was sure I was alone, as I knew not then what the book contained. I would read a little, and the more I read the more I wanted to, for it gave me such a clear knowledge of the Bible,—it gave me new light constantly, showing the truth as it is. In about three weeks I was able to go to my office in Boston, with the help of my son who went with me about one week, and from that time to the present I have attended to business, never having a symptom of the trouble of which I was healed. It is now more than eight years since my first treatment. During my treatment I was cured of bleeding piles of thirty-six years' standing, having used every kind of medicine that it was claimed would heal them, but without any relief. I was cured of smoking, although I did not believe this habit could be cured; but it went with the rest, and I have never wanted tobacco since. My eyes were troubling me and before I was first treated my oculist requested me to come to him in about four or five weeks, and if they were no better then I would need to have them operated upon. When I went to see him, he gave my eyes a strong test, and was surprised to find them healed. He wanted to know what I had been doing, and I informed him that my treatment in Christian Science had done it. The last named troubles were unknown to my practitioner at the time of treatment.

I desire to express my gratitude to the one who, through her spiritual understanding, has been the means of healing me of many ailments, and has helped me to gain a clearer understanding of my relation to God. I am also grateful to Mrs. Eddy, who has given us the book, Science and Health, for our guide.—A., Chelsea, Mass.

In the year 1901, Christian Science found me a hopeless invalid. I had suffered for seven years previous with a very painful back, the result of an operation. I could get no rest or sleep at night, as I could not lie down, but had to sit propped in a chair with pillows around me. Only those who have suffered as I did can know the full misery of it. I had come to the end of material means and never hoped to get well. One day, however, while out walking, it was my good fortune to come to a Christian Scientist's house, and there the teaching was explained to me. I decided to try it at once, and was advised to buy "Science and Health with Key to the Scriptures," which I did, and the study of this book has healed my back entirely. Christian Science has also cured me of long-standing catarrh of the throat, and neuralgia with which I had been afflicted from childhood. Before coming into Science I had doctored with three of the best physicians in Seattle, but none could give me relief.

I am no longer a sufferer, but rejoice exceedingly in Christian Science. God's promise has been fulfilled to me, "But unto you that fear my name shall the Sun of righteousness arise with healing in his wings." Words cannot express the love and gratitude I feel towards our faithful and beloved Leader for her labor of love.

ESTHER OBRADOVIC, Georgetown, Wash.

It is my earnest desire to express, though inadequately, my gratitude for the teachings of Christian Science, and to those who have aided me in my search for Truth. First, and above all, to our dear Leader, who is pointing out the way and devoting her life to my benefit and that of mankind, and then to those who have guided my wandering steps in the right direction.

I had sought Truth through many false channels, and when my opportunity came to hear of Christian Science I was in bad health, and was told that Christian Scientists healed the sick, and while I used my physical condition as a subterfuge, my sole motive was to investigate Christian Science. I had heard Christian Scientists spoken of only in a derisive manner, as persons who believed they could "heal the sick as did the disciples of old," but instead of calling out any unjust criticism on my part, I resolved, the first opportunity which presented, that I would try to discover what Christian Scientists really believed. Healing through prayer appealed to me. I hoped that I, too, might ultimately learn a prayer which could accomplish so much. I felt that I never had received tangible proof of mine being answered. I had since childhood suffered more or less from acute indigestion, and within a few days after my

Digitized by Google

first treatment I ate with impunity certain articles of food I had not tasted for three years. My physical condition was greatly improved in a short time, and my awakening was truly an answer to an oft-repeated prayer for a knowledge of Truth.

The first lines I read in Science and Health as I mechanically opened the book, were these: "In order to pray aright, we must enter into the closet and shut the door. We must close the lips and silence the material senses. In the quiet sanctuary of earnest longings, we must deny sin and plead God's allness" (Science and Health, p. 15). I found what I needed, the correct way to pray.

When I took the first copy of Science and Health into my hands, I thought, "I can easily read this book in three or four hours, and I believe I can memorize every word of it in a month." I was nearly two months reading our "Key to the Scriptures." I read slowly, deliberately, and many times after reading and re-reading a paragraph I could not grasp its meaning, or could not, as I many times wished, make it coincide with my old thoughts. Now, I am happy to say, I am eager to accept the teachings of Christian Science without a question, without a doubt, trusting and knowing that I am being led aright. My little book is my constant companion, and to-day it serves me as faithfully as when my eyes first fell upon the much-needed, though not fully comprehended, lines. Not a page responds to my touch that does not unfold to me the knowledge I seek, and I am daily learning more of the strength of divine Love and the powerlessness of error. Who has more cause for gratitude than I? Surely no one.

E. B. LANE, Kansas City, Mo.

[Translation.]

As soon as I began walking, my parents saw that I was lame, but took no notice of it. When I was about five years of age, as I was still lame, my parents saw several physicians who were considered the best for that kind of trouble, and they all answered that as it was from birth, it was incurable, that my mother must have had a bad fall before my birth which had prevented the jointing of the hip in its natural place. My mother had in fact been thrown out of a carriage before my birth and had been laid up for several days. I had then to resign myself to the prospect of being lame for life, a very painful condition, which made me inferior to others in my work.

About a year and a half ago, some one spoke to me of Christian Science. I accepted it with enthusiasm, not because I thought of deriving benefit for my physical ills, but because it gave me such peace and joy. Very soon, however, I began treating myself for my ailment, and about three months ago, I heard some one say, "You are walking like everybody else now!" I have heard the same exclamation from all those who knew me before my healing.

This demonstration has made me very happy, but my greatest happiness is that I have made a step in the understanding of God.—HENRIETTE MENJAUD, Paris, France.

It is generally believed that members of my trade drink heavily. I was no exception, yet I had a desire to overcome the taste for liquor, but did not know how. I also had the habit of chewing and smoking tobacco. These habits brought on gout, disease of the kidneys, and general debility, and I was pronounced incurable by several physicians. For four years I was not able to work at my trade.

A relative recommended Christian Science, and having tried it for a sprained ankle and found it reliable, I consented to take treatment for the above-named diseases. At first I was not steadfast because I loved intoxicants too much; but growing worse, and all other aids having failed, I returned to the practitioner, and she led me kindly but firmly to mental and physical health.

For three years I have been working at my trade. I find pleasure in my work and do better since I have the light of Christian Science. I have not had any desire to drink, smoke, or chew for six years. All the difficulties which have come up since have been overcome with the understanding I have received by the study of Science and Health and the other Christian Science publications.

Right here I wish to say that I had but two years of schooling, and that I felt the lack of more, but by patiently spelling out the words in Science and Health I learned to read and write much better.

I have found that God is a very present help in time of trouble. I thank Him that He has given us Mrs. Eddy to show us the way to this wonderful truth.

MATHIAS F. QUEST, St. Louis, Mo.

The reading of an article in the September *Journal* entitled "A Protecting Religion," demonstrated to me at least how necessary it is to be fortified with that preventive. I am running a locomotive on a fast run, but have no fear, knowing that God is All in all, in whom we live, move, and have our being. The accidents on the most of our roads of late years have been fearful. From my own experience, I am safe in saying that if all engineers were Christian Scientists the casualties would be reduced to a minimum if not done away with entirely, and besides in place of men growing old they would become consciously younger.

I have been running an engine nearly thirty-four years. Six years ago when I took up Christian Science, I was a physical wreck. I feel at least ten years younger to-day, and can stand more fatigue than men not half my age. It is strange that there are not more men in the transportation department of our roads who have an understanding of Truth as revealed in Christian Science. I am the only engineer running into this place who adheres to this teaching, but one with God is a majority.

W. M. CAMP, Clinton, Ill.

I desire to express my gratitude for Christian Science, for the many blessings, including healing. From being a delicate woman, with a great dread of death, I am now strong and well. I suffered much at times with the hives. The itching seemed intolerable, and it was stubborn and slow of healing, but as the dear Master taught, it was overcome by prayer and fasting. I received treatment for some months and the truth was victorious, as it ever will be.

Words are inadequate to express the many blessings that have come to me and my family, and I want to say that my heart goes out in thanks and love to our dear Leader, and to all the dear workers at headquarters.

MRS. A. E., Salem, Ore.

"The loss of earthly hopes and pleasures brightens the ascending path of many a heart" (Science and Health, p. 265). All earthly hopes and pleasures had fled when Christian Science found me, and I had only one desire left, and that was to know God's will. I soon saw that it was not God's will that I must suffer, but that God is Love, "with whom is no variableenss, neither shadow of turning," and the peace that the world cannot give or take away came to me then. Words cannot express my gratitude to our beloved Leader, Mrs. Eddy.—A. M. L., Erie, Mich.

I would like to give my demonstration. I was jumping down the steps and ran a rusty tack in my hand. I pulled it out and my hand swelled up. I kept declaring that "Truth casts out error and heals the sick," and the swelling went down, and mamma treated it for me. The next morning it was well. I am eight years old.

GERTRUDE IRWIN, Meadville, Pa.

From our Exchanges.

Every true life in the disciplehood of Jesus presenting the argument of character, is the herald of the incoming kingdom of our Lord. The most humble men and women, actuated by the Christian graces, are servants of the living God. They occupy no mean place among the forces of the world. They help mould and make its best life. They determine its happiest destiny. They give forth power that lives to bless humanity for an indefinite time. They thus leave their impress upon the heart of the world. Thus also we can understand the Scripture that says, "the least shall be greatest" and the "weak, strong." Humble souls, unnoticed by the world, need to lay this consolation to heart. They have their place and mission, and nothing can serve to take it from them. They are individual helpers in the great work of the kingdom of God.—*The Universalist Leader.*

Most effective of the tonics which enable us to make the best and wisest use of bodily powers is Christ's peace in the heart. He who goes with faith goes far. This is the secret of Christ's presence which removes the biting, wearing influence of worry and replaces it with the uplifting quietness and strength of joy. The cure of the body and the efficiency of the body are often in the mind and spirit. We can often overcome or circumvent our ailments by a wise resting of our hearts upon the promises and power of Christ. To gain health—powers of endurance, well-braced muscles, good digestion, steady nerves—is great delight, and such approximation to this perfect health as comes within our capacity is best attained in quietness of heart through faith in him.—*The Congregationalist and Christian World.*

A man can never be at his best until he is at one with God. Made in the image of God, and hence capable of perfection, he has become distorted and marred by sin until the divine likeness is but feebly displayed. Reconciliation to God through Jesus Christ restores the image to its pristine beauty, with a glory more than primeval; as the second Adam, to whose likeness the saved man is conformed, is more glorious than the first. In him we are complete, and though the bodily scars remain, the spirit is transformed from the earthly to the heavenly image.—*The Examiner.*

The *Boston Herald* reported the following from Rev. Charles Edward Stowe's Baccalaureate sermon at the State Normal School, Bridgewater, Mass.

"To do good one must be good. All goodness must rest on knowledge. Even well-meaning, pious ignorance is sure to do harm rather than good. The most terrible evils that have fallen on man have come from misguided and mistaken efforts to do good. There can be no possible conflict between science or knowledge and religion or aspiration toward goodness. Religion needs science as much as science needs religion."

There are times in history when the Spirit of God broods upon the waters and starts waves that are vaster and mightier than any human power can start or stop. We cannot help but believe that such a wave is this movement for union with the Cumberland Presbyterian Church. Man did not propose it, but God has disposed it.

The Presbyterian Banner.

Promotion is often dangerous. Many a man who while living in an obscure and humble position lived unselfishly and walked with God, has become proud, vain, and selfish through promotion. His rise was a grievous fall. The honors of the world robbed him of the honor which cometh from God.—*The Christian Advocate.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health, with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

ANNIE M. KNOTT, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Three important recommendations will be embodied in the forthcoming report of the Commissioner General of Immigration, as follows: That a law be enacted requiring medical inspection of emigrants at points of embarkation in Europe; that the Chinese Exclusion Act be strengthened by the assignment of American officials to duty at American consulates in China, empowered to examine the certificates of all persons who desire to visit the United States; that appropriations be made for the erection of additional buildings and providing better facilities for the reception of immigrants at Ellis Island, New York.

General Greeley, chief signal officer of the United States Army, has received the first telegraphic message ever sent direct from Nome, Alaska. It marks the inauguration of the Government wireless line from Nome, 107 miles, to St. Michaels. He reports that the line works perfectly. From St. Michaels the message came by the wire line up the Yukon to Dawson and thence to Seattle, traveling 3,500 miles.

The United States transports Kilpatrick and Sumner sailed last week from the Charlestown Navy Yard for Porto Rico *via* Philadelphia, bearing the party of nearly five hundred Porto Rican teachers who came five weeks ago for a course of study at Harvard and Cornell.

Foreign.

The United States, through Minister Leishman at Constantinople, has demanded the same favored treatment in Turkey that is accorded other most favored nations in the matter of schools, hospitals, and charitable institutions. The Porte recognizes the demand in principle, but has postponed its reply from day to day. The American legation has now sent a communication pointedly demanding a speedy and final settlement, the issuance of the necessary orders, and the official acknowledgment of the demands. The European squadron has been ordered to Smyrna. It is reported that there are signs that the signatory Powers to the Treaty of Paris are beginning to take active interest in the policy of the American Government in the matter at issue and are willing to bring influence to bear upon the Sultan to induce him to acquiesce in the American demands. The officials at Washington are hopeful that the Sultan, learning the real purposes of the Government, will be willing to make the concessions and thus make unnecessary any prolonged stay of the European squadron in Turkish waters. The latest advices are that the negotiations have taken a favorable turn and there is expectation of a speedy and satisfactory adjustment of the matter.

The official attitude of the Venezuela Government in the asphalt controversy, in which American interests are said to be endangered, is set forth in a cablegram received at Washington by the Venezuelan chargé d'affaires, from the Minister of Foreign Affairs at Caracas, which says,—

"The Government of Venezuela requested a competent court to declare forfeited Hamilton's concessions because of non-fulfilment of obligations. The property was seized as a precautionary measure, in conformity with law."

It appears that the company was required to construct certain public works in connection with the concession, and the failure to meet its alleged obligation in these respects was the reason for the course taken by the Venezuelan Government designed entirely to protect its own interests.

It was announced in the House of Commons recently that Germany, Austria, and Italy, as well as Russia, had given their assent to the Egyptian clauses of the Anglo-French agreement. Great Britain had given assurance that they would receive the "most favored nation" treatment for their commerce for thirty years; had promised to respect their treaty rights in Egypt, and to give their schools the same liberties as heretofore, and to allow the officials of those nationalities in the Egyptian service the same advantages as are enjoyed by the British subjects.

An unconfirmed report says that Prince Henry of Prussia, his wife, and eldest son will leave Germany in two weeks for a tour of the United States and will go, after his arrival in New York, direct to St. Louis. The Prince is coming in state, and will be entertained during his stay here by the German Imperial Commissioner to the World's Fair.

A son and heir to the Russian throne was born last week. The child will be christened Alexis Nikolaevitch, and if he reigns he will probably assume the title of Alexis II. The last Alexis was emperor of Muscovy in 1645.

The approval by King Edward of the reappointment of Lord Curzon of Kedleston as Viceroy of India is announced.

Rafael Reyes assumed office last week as President of Colombia, succeeding Señor Marroquin.

Industrial and Commercial.

An interesting "Blue Book" has been issued by the British Foreign Office containing the report of Sir William Garstin, under secretary for public works in Egypt, upon the basins of the Upper Nile, and a despatch from the British Minister and Consul General in Egypt, which says the irrigation and railroad schemes suggested by Sir William Garstin represent an estimated expenditure of about $107,000,000, of which about $65,000,000 will be used in the development of the Soudan, and about $40,000,000 in the development of Egypt. The whole irrigation plan is based broadly on utilizing the White Nile for the benefit of Egypt and the Blue Nile for the benefit of the Soudan. Lord Cromer says the carrying out of the greater portion of the programme may be postponed for the present, but about $27,000,000 should be utilized at an early date in canals for Egypt, in raising the Assouan dam, in the completion of the Suakim-Berber Railroad and other developments of the country which will largely increase the revenue from taxes.

According to the Government report on the grain crop of 1904, the corn crop will break all records, the hay crop will be second only in value, and unusually satisfactory crops of oats, barley, and rye will be harvested. The figures given for the crop of corn are 2,564,847,000 bushels, as against 2,523,648,312 bushels in 1892, which is the largest previous crop. Reports on wheat are not very satisfactory. The total crop is estimated at 605,939,000 bushels. The total crop of wheat has not fallen below 637,000,000 since 1900.

The London Board of Trade returns for the month of July show a decrease in imports of $23,483,500 and a decrease in exports of $5,460,000. The decrease in imports was principally in foodstuffs, $18,284,445, and wool, $3,345,265. The decrease in exports was mainly in iron, steel, and manufactures thereof, amounting to $2,436,215.

Lebaudy's steerable balloon made a quarter of an hour's flight recently at Paris, covering a considerable distance at a height of eighty metres and returning to its shed without any hitch. M. Lebaudy and the engineer, who steered, say the balloon covered about twelve miles and a half during its flight of fifteen minutes.

The Director of Mineral Survey for the State of Texas reports the discovery of quicksilver ore in Christmas Mountain. This extends the limits of the district twenty miles. The find was made by Mexicans.

General.

The United States Government is becoming quite a banker for the American soldiers, says an exchange. For the year ending June 30, 1903, there was deposited by soldiers $1,888,014, and it is understood that the amount for the fiscal year, which will end the last of this month, will be much larger. The enlisted men of the United States are allowed to leave their money in the hands of the paymaster, taking a certificate for it, and the Government pays the men interest at the rate of four per cent a year.

The restoration of the famous stadium of Athens, begun in 1895 with funds given by a Greek merchant, has progressed until the last of the fifty-two thousand marble seats which the great ampitheatre contains are now being placed. The seats, railings, etc., are all of the creamy white Pentelikon marble. It is the intention of the committee having the restoration in charge to build a marble propylæa, or entrance, resembling the ancient one.

An interesting discovery has been made in the Etruscan Necropolis of Tarquinia. It consists of a cornet of modern shape three thousand years old. Two hundred tombs, containing helmets and breastplates of gold, amulets, vases, etc., have been opened showing that the Etruscan civilization was far superior to that of the Romans. The collection will be offered for sale after the Government has appropriated one-fourth of it under the law.

In the chalk pits of Kent, England, eleven miles from London, there have been found cave dwellings of ancient Britons. The caves are connected by galleries, which extend for miles, and near the center is a Druid temple.

Last year the supplies of fish at Billingsgate Market, London, amounted to 163,897 tons as against 156,357 tons in 1902 and 148,366 tons in 1901.

Forty-eight thousand bushels of seedling oysters have been shipped from the Atlantic coast to replenish the beds of the Pacific.

The Ceylon pearl fishery season just ended produced £92,700 for the Government.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Knowing the Truth.

BLANCHE H. HOGUE.

THE greater part of the discoveries concerning any of the sciences known to man, has resulted from the effort to acquire a knowledge of the actual truth about existing things. The study of scientific questions reveals facts concerning the universe which are wholly unknown to the mind which has not penetrated beneath the surface of things, and in many instances, the discovered truth contradicts and upsets all pre-conceived evidence and theory. Education is in no sense real education, unless it leads thought out from the tangle of misconceptions concerning everything in the universe, to a knowledge of the truth about everything. Such research, if it be truly educational, means not the destruction of existing things, but the discovery of the truth about all things. If in this growth of knowledge, wrong beliefs are destroyed and false concepts pass away, this in no way touches the thing itself; it but brings the fact to light in its true aspect.

This is as true of the mighty and all-inclusive Science of Christianity, revealed in the Christian Science text-book, as it is of the various forms of science with which men are already more or less familiar. The popular conception of the word science associates it with so-called material laws and facts only; yet if we turn to the dictionaries, we find it to be a term which can be applied with propriety to mental and spiritual conditions. The Standard Dictionary defines science as, "Knowledge gained and verified by exact observation and correct thinking: . . . also, the sum of universal knowledge. . . . An exact and systematic statement of knowledge concerning some subject or group of subjects." The same authority also states that "Knowledge of a single fact, not known as related to any other, or of many facts not known . . . as comprehended under any general law, does not reach the meaning of science: science is knowledge reduced to law and embodied in system." "Art always relates to something to be done, science to something to be known."

Assuredly, there is "something to be known" about the things of God, and the statement that Jesus of Nazareth possessed *knowledge* of the laws of God, a "Knowledge gained and verified by exact observation and correct thinking," should attract both the theologian and the materialist. For all religionists will admit that Jesus observed exactly and thought correctly about the things of the Spirit; and all physical scientists recognize that "the sum of universal knowledge" must include those spiritual facts which, as causation, lie beyond the range of the physical senses. The discovery of the Science of Christianity really unites these two great bodies of thinkers. The Christianity which the religious world has always loved, loses none of its sacredness and dignity by being scientifically discerned and applied: and the science which demands that reason be satisfied, gains the whole of the kingdom of heaven when it enlarges its borders, and grasps that Christianity which extends beyond the realm of faith into exact knowledge and correct thinking.

The science concerning anything, is the "sum of universal knowledge" about it, and Christian Science is no less than the "sum of universal knowledge" about Christianity, in its application to all the affairs of mankind. Such knowledge does not demolish man nor the universe, but rejoices in the discovery of all that is true about everything which God created. Exact knowledge and correct thinking, must of necessity dissipate mistaken conclusions resulting from incorrect thinking, even though these beliefs be the hoary accumulations of centuries.

It may seem that the adherents of Christian Science make stupendous claims in saying that Christian Science is teaching them how to think rightly about everything in existence. However, when one considers the fact that the science of mathematics teaches its student how to think rightly about numbers, that the laws discovered by the sculptor, the painter, the architect, and the builder operate to produce true construction, it becomes only reasonable to assume that the Science which deals with man in his relationship to God and to his fellow-man, must teach man to think rightly about the whole question of human existence.

This matter of thinking correctly about everything, covers a wide field. Perhaps the question of health occupies general thought as largely as any other subject, because the lack of it obstructs so heavily the necessary activities of mankind. The invalid turns to Christian Science because he needs health, and because Christian Science offers him health. As he investigates its teaching, he finds that the *science* of health includes vastly more than is evident merely in physical conditions. He finds that his ignorance as to the truth or falsity of the conditions imposed upon him by the ordinary methods of thought and life, has fostered disease, and that an increasing knowledge of the truth about the nature and purpose of his existence will unbind him, and establish health.

When man, through the growing understanding of all which Christianity includes, will allow the law of God to operate scientifically in all which interests mind and heart, a glad transformation, covering every detail of daily life, will begin, and endure. To learn the truth about health, man must learn the truth about his right relationship to God, to his fellow-man, to the universe, and to every condition and situation which exists. To maintain right relationship to God means such knowledge of His law, such love for His presence, and such obedience to His will, that every selfish instinct is quenched in the abundant satisfaction growing from such understanding. The right relationship of man to man brings that love which "worketh no ill to his neighbor" into all the economic and social questions engrossing the nation and the individual. Right relationship to the universe keeps man, not at the mercy of wind and wave and climatic conditions, but finding strength and joy in all his surroundings; and right relationship to condition and situation means dominion over, not subjection to, the discords of a material sense of time, place, and occupation.

The individual who is growing to know the truth about this question of relationship, knows his place in divine Love as surely as the stars know their paths through the heavens,

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

and this knowledge enters into all his daily thoughts and deeds, sweetening and purifying every experience. Each man stands in many differing relationships toward his fellow-men. The one individual is to his country, a citizen; to his family, a son, brother, husband, or father; in his occupation, an employer or employee, director or subordinate; to his friends, a friend, and to his neighbors, a neighbor. These different capacities impose upon him differing obligations, and to fulfil them in the enlightenment which erases friction, bitterness, confusion, and misunderstanding, leads indeed into a way of salvation and a way of peace. The selfishness of oppression on the one hand and the selfishness of resistance upon the other, are the errors, not the truth, concerning relationship. And as the truth about it all lifts man higher in the scale of right thinking, these yokes are broken: the action of righteousness which builds for health is less and less restricted, and the power of Christ, in growing brightness, lives in every hour of the obedient life which is turning to exact knowledge and correct thinking about the things of God.

Obedience and Disobedience.

FLORENCE M. EARECKSON.

OUR environments are varied, and we have to meet some phase of material sense daily. Mrs. Eddy says, "Obeying the divine Principle which you profess to understand and love, demonstrates Truth. Never absent from your post, never off guard, never ill-humored, never unready to work for God,—is obedience" (Miscellaneous Writings, p. 117).

To be obedient to this demand, requires absolute consecration to Christ's command, "Watch and pray." We are tempted every moment if we are "off guard" to step aside from the path of duty which divine Love outlines for us, and though our deviation be ever so slight, we must go back and take our steps over again as the result of disobedience. However, with such a Principle to guide, and such a sure foundation as Christian Science, we should never be discouraged, but rather be more courageous and vigilant in our efforts to obey the loving will of the Father who blesses all our efforts.

Often, in not understanding the demands of Love, we find ourselves questioning the Divine guidance, not knowing that because we are rebellious we need these very conditions to purify us. We all must learn to say with Paul, that we glory in tribulation, and to know that it unfolds in our own natures, patience. Then through the realization of the statements of truth comes the experience which brings the love that melts away the shadows of sense, then we rise in thought above and beyond the things called material, and behold the real and true about us.

To be "never unready to work for God" is to be ever mindful of Love's demand to be watchful of thought, remembering that every thought we entertain bears fruit after its kind. Channing says, "Others are affected by what I am, and say, and do; and those others have also their sphere of influence; so that a single thought of mine may spread in widening circles through a nation of humanity."

We should strive to keep the light of Love aglow in our consciousness to warm and to guide the hungry ones who, although they do not know it, are restless and yearning for Love. We can mentally supply this need, give a cup of cold water,—a pure, refreshing draught of meekness, gentleness, peace, and strength, in the name of Truth. Thus in trying to forget self and self-interests, we find that Love will lift the burdens and show us the next step in obedience.

We do not have to take one needless step in our heavenward journey; if, according to our highest understanding we perform each duty as it is presented, then we know that we are obedient to Truth.

"Love worketh no ill to his neighbor: therefore love is the fulfilling of the Law."

Brotherhood.

W. W. ROOKS.

THROUGH long centuries of possible development, mortals have been awakening to the larger meaning of brotherhood. The devastation of war and of strife between families and nations has called forth those influences which make for peace and amity. To-day it is the wish of all peoples to have peace. Roads of steel and ocean greyhounds make distant peoples our near neighbors and reveal a community of interests not realized centuries ago. The idea of man's brotherhood must ever expand until all peoples live together in unity and all carnal warfare has ceased.

In Christian Science we discover the fuller significance of brotherhood. Mortal man, conceived in sin and governed by erroneous mortal belief, is not man, but only the counterfeit of the real or spiritual man. The thought of this mortal man is evil and corrupt. He hates and he cheats; he lies and is unjust; he suffers and he dies. His senses testify to evil, accident, and misfortune through his short span of life, which ends in oblivion. Can such a man have a common brotherhood? Brotherhood means unity. Evil, hate, and jealousy separate and destroy. The spiritual man alone can express brotherhood, and he is the only man. Is not brotherhood the expression, through man, of all good? Man as the image and likeness of infinite Life, Truth, and Love is the expression of all. The brotherhood of man points to the unity and expression of all Life, Truth, and Love. When a kind act is done to another, or a generous thought entertained, these are but the expressions of ever-present Love.

The belief in many minds or personalities destroys the true sense of brotherhood. This belief is the prolific source of all selfishness and separation. Brotherhood suggests common parentage and common interest. As the real man is never born, but is forever the divine idea, expressing the allness of Mind, so the countless ideas of Mind are the perfect children of infinite Principle, God. As we gain a truer conception of God and man, we rise higher in demonstration of our brotherhood in Truth. Brothers live together in harmony. He who does the will of God is our brother. He who does not the will of God is not our brother, for only as we bring health and harmony into our experience do we realize true brotherhood.

Fear is a False Belief.

L. M. S.

"FOR God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." It is very noticeable in infants that they have at first no fear. You may do anything you wish with them and they are quite unconcerned, but when the babe has grown to be three or four months old, we begin to say "He is afraid of strangers," or "He is afraid of a man with a beard," etc. Now when or where did he get that fear? Was it from God who tells us never to be afraid? No; it is only one of the phases of error which has to be denied and overcome by the truth. We can also see that it is the result of false education, for the older the child grows, and the more things he learns the more fear he has. By the time he has grown to manhood he still fears; he may have outgrown some of his early fears, only to have others, and so, unless taught better by Christian Science, he remains in bondage to one form or another of false belief.

It is said that Adam and Eve were afraid when they heard the voice of God calling to them. They really had nothing to fear, it was only their false sense that made them afraid, their fear could never have come from the call of Truth and Love. This teaches us a lesson of obedience, and shows that when we obey Truth we never have any thought of fear.

A lesson may be found in the experience of Queen Esther

Digitized by Google

who saved her people by approaching the king when no one was ever allowed to come unbidden into his presence. She, however, made herself ready, and went fearlessly before the king, though unbidden, and he extended the golden scepter as a token of good-will. Then she made her supplication which he honored, because he saw that fear had not kept her from asking what was to her very dear,—the lives of her own people.

Job says, "The thing which I greatly feared is come upon me, and that which I was afraid of is come unto me;" while David says, "I will fear no evil: for thou art with me; thy rod and thy staff they comfort me." He recognized God as all, and saw that there was nothing to be afraid of, so he says, "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?"

Daniel was not afraid to pray to his God after the king issued a decree that any one who asked a petition of any god or man for thirty days, other than the king, should be cast into the lions' den, and though this was done, the beasts could not injure him.

All through the Bible, and especially in Jesus' work and teaching, we find that fear has to give place to faith in good. John says, "Perfect love casteth out fear: . . . He that feareth is not made perfect in love." This is surely a rebuke to fear, since perfect Love hath no room for anything but good. "Darkness induces fear" (Science and Health, p. 371), so when we have the light of understanding it drives away ignorance and darkness. In Revelation we read, "But the fearful, and unbelieving, . . . shall have their part in the lake which burneth with fire and brimstone." Thus we learn that fear is anything but good, and that it hath "torment," while it lasts. When we have a sense of fear we are not in a state of harmony and must dispel the false to give place to the true. God says, "Fear thou not; for I am with thee: be not dismayed; for I am thy God."

As Little Children.

GEORGE S. HOLLOWAY.

"EXCEPT ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." Advanced thinkers have ever recognized the truth thus simply and forcefully stated by Jesus, and they have expressed their concepts of it in accordance with their different view-points of life. How the loving, beautiful, pure, childlike thought appealed to Jesus, and indeed how it appeals to all.

Love is reflected in proportion to purity of thought. We should not love people, but rather the good they manifest or reflect. In the loving humility of little children is the answer of the prayer, "Forgive us our debts, as we forgive our debtors." The only practical way it can be answered is in accordance with the spiritual sense, "And infinite Love is reflected in love" (Science and Health, p. 17). Great is the wisdom of our Leader's statement, that "we can hardly afford to be miserable for the faults of others," and that "he who can wilfully attempt to injure another, is an object of pity rather than of resentment" (Miscellaneous Writings, p. 224).

Much indeed do we need and desire the child's beautiful concept of the fatherhood and motherhood of God which destroys all fear. "Perfect love casteth out fear." The child, reflecting much Love, manifests little fear. An incident with which the writer is familiar illustrates this: A mother and her three little children were staying alone in a house that was quite isolated from neighbors. During the night a terrific thunder-storm came on. The wind moaning through the trees, together with the almost continuous roar of thunder and the sharp flashes of lightning, brought consternation to the heart of the mother, who aroused the children and gathered them about her. At the height of the storm the eldest child, about seven years of age, looked up to her and said, "Mamma, we needn't be afraid, don't you remember that little verse,—

> Why should I fear?
> For God is near
> In the dark night
> As in the light.

The mother's thought was changed, and while the storm without still raged, that within her consciousness was quieted. Surely, "A little child shall lead them."

The loving naturalness, the fearless honesty of purpose, and the receptivity of mind of the little ones make the good soil, wherein the seed of truth takes root and bears much fruit.

How true, "Except ye be converted,"—except our thought be changed, and we take on the simple child concept of life,—we cannot come into a realization of harmony here and now, "For of such [only] is the kingdom of God." "Willingness to become as a little child, and to leave the old for the new, renders thought receptive of the advanced idea" (Science and Health, p. 324).

A Way to Begin.

EDNA L. EARNEST.

WHEN I was healed in Christian Science, the truth of it, the blessings that it brings, and the reformation it produces, appealed to me so strongly that I desired more than anything else to become a good Scientist and an earnest worker, and how to begin aright was the question that confronted me. The immensity of the work undertaken, the consecration of thought demanded, and the difficulties to be overcome, overpowered me so that I could see no definite line of procedure.

When I caught the first glimpse of my ability to reflect the divine Mind, an outline of my work came to me. I saw that I must subdue the erratic and untrained human mind, and by right thinking, bring "into captivity every thought to the obedience of Christ."

Should a thought of criticism of another's words or acts suggest itself to me, I must replace it by one of commendation for the good which is manifested in some way by every one of God's children, and destroy the thought of pride or hypocrisy by one of humility, knowing that I, of myself, can do nothing. I must overcome the thought of egotism or self-assertion by realizing that there is but one Mind; and that every good thought is a messenger from God.

Again the word came to me, "Fear God, and keep his commandments: for this is the whole duty of man." How should I love God of whom I had so little right knowledge? Were gratitude and affection enough? No, there must also be obedience. Of what did this obedience consist? In Science and Health we find that "The demands of God appeal to thought only" (p. 182). This brought me to the conclusion that right thinking produces right acting and right conditions about me. What is the result of this right thinking upon others? If instead of an evil thought, I hold one of truth and love, I find peace, for truth insures peace instead of resentment or envy. If instead of a thought of lack or poverty I hold one of gratitude for what has already come to me, I find prosperity and progress around me. I find that I can best help others by thinking rightly concerning them. To hold the right thought seems no easy task when we consider the unreliable nature of mortal mind, but every effort in this direction is met with bountiful returns.

God said, "I will sprinkle clean water upon you, and ye shall be clean: from all filthiness, and from all your idols, will I cleanse you." There is no sediment in a perfectly clean vessel.—*Anon.*

An Explanation.

Since so much has been said in the public press with reference to a recent By-law of the Christian Science Church, restraining its members from interfering with Mrs. Eddy's daily drives on the streets of Concord, it seems but just to her to publish the whole truth regarding its prompting.

The Church was forced to make the By-law in order to deal with members for breaking the Golden Rule. A certain member of the Church went to the extent of meeting Mrs. Eddy every quarter of an hour during her drive, even after she, and also the Rev. Irving C. Tomlinson, First Reader of the Concord church, had kindly requested said member not so to treat their pastor emeritus.

The By-law does not apply to any reasonable conduct, but to the practice of following her and "daily and continuously haunting" her. Evidently Mrs. Eddy's purpose is to have the hour of her drive alone, and the members of her church believe that she is entitled to this privilege, and they gladly grant her the protection which the By-law affords.

ALFRED FARLOW.
Boston Herald.

While the canker of sin and the anguish of disease seem to afflict the human race so severely, there is ample room for every minister, physician, nurse, Christian Scientist, and lover of men to work, each with the light he has, in harmonious unity and loving kindness, for the elevation of mankind and their liberation from the hoary bondage of unholiness and ignorance.

JOHN CARVETH.
Maple Rapids (Mich.) *Dispatch.*

Christian Science is the amplification and exemplification of the natural law which controls the universe and man. This law, which is the emanation of eternal wisdom, was established in the beginning and will exist forever as the governing energy of all things.

A spiritual sense of man, the universe, the law and the Lawgiver is requisite for the accomplishment of mental and physical healing.

A. V. STEWART.
Quincy (Ill.) *Herald.*

We do not deny that healing the sick in Christian Science is a metaphysical process, for surely it is not a material practice. The same may be said of Jesus' healings: the work was mental, not physical, but it was spiritually so and was not dependent upon human will.

Christian Scientists, in accord with Jesus, rely upon the divine Mind, and with him they pray, "Not as I will, but as Thou wilt." Healing is scientifically and permanently accomplished in exact proportion as the divine Mind takes control and human will is silenced in the effort of the practitioner.

ALFRED FARLOW.
Granite State News.

One of the unanswerable arguments in favor of Christian Science lies in the fact that it is capable of proof, and is applicable as a practical religion. The difference between a theoretical theology and a demonstrable Principle should be apparent to all thinking persons, and the reason that "so many intelligent people" have embraced the teachings of Christian Science is because it meets not only their spiritual needs, but aids them in the solution of all the problems of daily life. It is not surprising that Christian Science is considered irrational by those who do not understand it, for it departs from the currents of established human belief.

RICHARD P. VERRALL.
Geneva (N. Y.) *Times.*

If a tree is to be judged by its fruit, then Christian Science is entitled to a most worthy place as a means of alleviating the suffering of mankind, inasmuch as it has established its right to be so honored by healing thousands of cases of what is ordinarily termed incurable disease, in addition to its many other wonderful works.

It is but just to Christian Scientists to state that they have not, as a rule, entered upon their present religious belief and practice without having first given medicine every reasonable opportunity to prove its efficacy. It is the inefficacy of medicine to cure human ills that has led many people to investigate and adopt this Science, and not a mere desire to be found advocating some new thing.

The Lectures.

Pittsburg, Pa.

Sunday afternoon, June 5, Mr. Edward A. Kimball of Chicago, delivered a lecture for First Church of Christ, Scientist, Pittsburg, in Nixon Theatre. About two thousand people were present. The speaker was introduced by Mr. B. F. Meredith, First Reader of the church, who said, in part,—

Ladies and Gentlemen:—On behalf of First Church of Christ, Scientist, of Pittsburg, we greet you with most hearty welcome, and thank you for your presence here in manifestation of at least an inquiring interest in Christian Science, the new-old religion of Jesus Christ, as taught, practised, lived, and established by him, the religion which was required of his followers in the command, "Preach the gospel" and *"heal the sick;"* and which was implied in the declaration "By their fruits ye shall know them."

Christian Science is not a mere theory, but a practical working Science, tested and proved as truly as the familiar phenomena of electricity. If some one should write a book condemning and denouncing electricity, your faith in electricity would not be shaken in the least, for you know by your own practical experience that its utility as a mechanical agent is all that it is claimed to be, and more is added to its field of usefulness daily. In like manner, if some one should write such a volume or a whole library in opposition to and condemnation of, Christian Science, such effort would be a only falsity and nothingness to Christian Scientists, for they know by their own practical, personal experience that Christian Science is all it is claimed to be.

We come to tell you, according to the Scripture, "what we do see and know," "that which was from the beginning, which we have heard, which we have seen with our eyes, which we have looked upon, and our hands have handled, of the Word of life." But this divine Science, will operate and produce proper results only in accordance with its own divine law: hence the necessity of understanding this law. This may be gained through the study of Christian Science. Students of Christian Science possess an ever-increasing measure of spiritual understanding and discernment. It is that to which Jesus referred when he said to his disciples, "Blessed are your eyes, for they see: and your ears, for they hear. For verily I say unto you, that many prophets, and righteous men have desired to see those things which ye see, and have not seen them: and to hear those things which ye hear, and have not heard them." This blessed condition may be reached by every one. It does not depend on mortal-mind intellectuality or worldly wisdom, for as we remember Jesus said, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes," that is, to those who can accept Truth as a little child.

Among the Churches.

The Christian Science adherents in San Francisco, Cal., have bought and paid for a site for a religious edifice, and determined to erect one of the few stone church buildings on this coast. Its location will be on the southwest corner of Sacramento and Scott Streets.

The congregation was organized in October, 1895, has a membership of nearly three hundred persons, and an average Sunday attendance of seven hundred.

San Francisco (Cal.) *Chronicle.*

First Church of Christ, Scientist, of Creston, Ia., kept open a Christian Science headquarters on the grounds of the Creston Chautauqua Association, which assembled for ten days this summer.

Christian Science literature was provided for free distribution and for sale. Some of the leading members of the association visited our tent and expressed a kindly feeling for our Cause. We are certain of many good results from this, which was the first work of the kind ever done here.

CORDA HURST, *Clerk.*

At the annual meeting of First Church of Christ, Scientist, Providence, R. I., an interesting report from the library committee was read.

Upon inquiry it was found that of the fifty public libraries of the state, quite a number were already supplied with from one to three copies of Science and Health, also with the serial publications.

The offer to place the literature in such libraries as were not already supplied was received with uniform courtesy, and in all but one instance accepted.

KITTIE B. WALSH, *Clerk.*

First Church of Christ, Scientist, of Cambridge, Mass., has recently presented the public library with a complete set of the published works of Mrs. Eddy, including two late copies of "Science and Health with Key to the Scriptures;" also a copy of "The Mother Church" by Joseph Armstrong.

The librarian received this gift very kindly and gratefully, and the trustees responded with the customary acknowledgment of gifts.

It was learned from the librarian that the demand for this literature had been greater than the supply, especially during the last few weeks. We are sure that Judge Hanna's recent lecture aroused much interest in the subject of Christian Science in this city, and that the results are already being seen.—MARY A. DAGGETT, *Clerk.*

First Church of Christ, Scientist, in Bethlehem, Pa., was organized June 22, 1904, with sixteen members. The work was commenced in April, 1901, when two Christian Scientists began the regular reading of the Lesson-Sermon each Sunday. Since April, 1903, the home of one of these Scientists has been opened to the public and the regular order of service was followed.

June, 1903, a gift of two dozen Hymnals was received from a branch church, and in July two desks were secured for the use of the Readers. From that date the work has grown in strength and unity of thought. The first collection was taken June 19, 1903, and it was our privilege to send twenty-five dollars to the Building Fund of the Mother Church as a thanksgiving offering.

The Sunday School, which began with two pupils in February, 1903, was increased to ten by August, 1903, at which time the public Sunday School was announced.

On Sunday, July 10, 1904, the service was held in Market Hall, Bethlehem. We were indeed rejoiced and thankful on this Communion Sunday to be able to hold our first public service as an organized church in the hall which has been secured and furnished for our use.

The longed-for step in our work has been taken and we recognize the need of constant prayer and loving obedience to God and to His law, as revealed to us in the Scriptures, and interpreted by our dear Leader, in the Christian Science text-book and her other writings. We know too that it means mental alertness and activity that we may be governed by the one Mind.—E. E. ELWOOD, *Clerk.*

More than one hundred persons formed the congregation in attendance Sunday morning [July 24] at the opening services in the new place of worship of First Church of Christ, Scientist, of Youngstown, O., corner of Chapel Place and Wood Street. In addition to the members of the local congregation and friends, there were Scientists present from Cincinnati, Pittsburg, Cleveland, Detroit, Warren, Sharon, Sharpsville, and some smaller towns near here.

The new church home of the local congregation was beautifully decorated for the occasion; a profusion of beautiful flowers lending color and fragrance to the scene.

A special feature of the opening service was the address of welcome which was delivered by Judge J. R. Johnston, whose wife is the First Reader of the organization. Another feature was the reading of a great number of greetings from organizations in other cities.

Youngstown (O.) *Vindicator.*

As a reliable evidence of the steady growth of the interest in Christian Science, we give the following report of the sale of literature received from Second Church of Christ, Scientist, London, England.

The sale of literature for the half year ending June 30, 1904, amounted to £365; that for last previous half year was £332, showing an increase of £33 for the six months.

Owing to the increased demand for *Quarterlies* and *Sentinels*, we have been obliged greatly to increase our subscriptions for these periodicals. Of the April *Quarterly* three hundred and thirty-five copies were sold, forty more than the previous quarter, and the demand is steadily increasing. Of Science and Health one hundred and ninety-two copies were sold during the past six months, or an average of seven per week for the half year, and an average of eight per week for the last three months. In January twenty-seven copies were sold, and in June forty-one. During the six months about two hundred and twenty copies of Mrs. Eddy's other works were sold. There is a corresponding increase in the number of visitors and inquirers at our reading and book room.

MARY ALEXANDER, *Librarian.*

Merely as an observer, mind you, and not as a propagandist, I rise to remark that Christian Science has obtained a foundation and a superstructure in Peoria so massive as to be almost incredible to those who have not interested themselves in noting its dimensions.

One of the most surprising features of this movement is its popularity among the traveling men. No lackadaisical sentimentalists are those knights of the grip, mark you. Keen, practical, hustling men of the world are they, many of them so deeply tinctured with the old faiths that they have not departed from them, as witness the organization known as the Gideons which attaches to the Christian church. But many of the traveling men identified with Christian Science have not come from the professed religious class, and yet they are among the most enthusiastic supporters of the movement.

I have been informed that there are enough Christian Science traveling men running out of Chicago to fill a church all by themselves. These extraneous researches are interesting and I am still investigating.

Peoria (Ill.) *Herald-Transcript.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Consistent Christian.

THE following rather pointed arraignment of "the great majority of nominal Christians" copied from a recent issue of *The Universalist Leader*, should have the effect of stimulating every Christian, "nominal" or otherwise, to a searching self-examination which will disclose his true status as a follower of Christ Jesus.

The Leader says editorially:—

"Is there that in the average of Christian discipleship today that persuades the world to assume its ethical superiority? Do we infer or assume instantly when we hear that Mr. Blank is a Christian that therefore he is all right, and is to be trusted, above other men? Is the business of the Christian doctor, lawyer, merchant, or mechanic conducted on a higher plane than that of his non-Christian neighbor? If we read two advertisements in the morning paper about two 'sales,' in two big stores, do we assume at once that the one printed by Mr. Blank, of Dr. Simeon's church, is more accurate and nearer the exact fact than the one printed by his competitor, who never goes to church? If we are dealing with men does the fact that one is a Christian or is not a Christian settle the matter of whether he is more or less reliable?

"When the Master came and men gathered about him, and went forth in his name, something had so wrought in them that the world knew them to be of superior stuff. In disinterestedness of motive and act, in unselfishness of aim, in all that marks men truer, nobler, more lovable and gracious than the mass, these first followers of Christ loomed above the level of the common life of the world, else the Gospel story is misleading. The Church, as signifying the members of the groups of disciples of Christ, was apart from and was above the world: above the age and its spirit. It is just this superiority that in a large way we miss in the great majority of nominal Christians to-day."

The value of all such criticism is not in its generalization, but in its appeal to the individual to so order his "daily walk and conversation" as to exemplify the life of our Master; to live Christianity rather than talk about it. Jesus expressed this in his saying, "By their fruits ye shall know them," and it is by this standard that the world judges all who profess to be his disciples. As Christian Scientists we do make this profession; and unless our lives are patterned after his, and our conduct is in keeping with the way which he has marked out for us by precept and example we can expect to be classed as nothing more than "nominal Christians." Because Christian Scientists have accepted the whole gospel, something more is demanded of them than the mere exemplification of a code of morals which will satisfy the letter of the law; there must be proof that our claims for Christian Science are true, that it is indeed the healing gospel of Jesus as taught and practised by him, and by his immediate followers.

Jesus said, "He that believeth on me, the works that I do shall he do also;" and thus he established a test of true Christianity for all time. Not only is the blameless, sinless life which our Master led required of us, but also the healing of the sick must prove our understanding of his teachings. Can we consistently call ourselves anything more than "nominal" Christian Scientists unless we are doing these works?

M.

"Honor to whom Honor."

THE marvelous changes which are taking place in religious thought to-day are scarcely more astonishing than is the apparent incapacity or indisposition of some to recognize their true explanation. This is well illustrated by an article upon the subject of "The New Hell" which has recently appeared in a leading magazine, and been republished in part, in the columns of *The Literary Digest*.

The author dwells upon the very great transformation in thought which has already been chronicled, the revolt from the gruesome teaching of Edwards that the knowledge of the eternal misery of the damned "would double the ardor of the love and gratitude of the saints in Heaven." His recognition of the incongruity between the Miltonic materialism of old theology and any worthy concept of the divine nature and purposes is prompt, and the general acceptance of that interpretation which regards Scripture realism as figurative, is declared. He fails, however, to note, possibly fails to see, the very significant fact that this phenomenal movement away from traditional views which have dominated religious belief for centuries, has been coincident with the rise and growth of Christian Science, and that every vital and impelling idea of the nobler view which now obtains, has been a part of the emphatic teaching of Christian Science since the first publication of its text-book, Science and Health, in 1875. The escape of thoughtful people from the enslavement of the frightening material beliefs of the past, cannot be thus disassociated, however, from the dissemination of the great truths of Christian Science, and it seems remarkable that any intelligent, fair-minded writer on the subject could overlook or ignore this correlation. It would also seem a very legitimate expectation that in calling attention to the article and publishing generous excerpts from it *The Digest* would have made some honest reference to a movement which is so determinatively related to it.

When, through his healing works, Jesus made manifest his apprehension of Truth, the standards of adverse teaching were humbled, the most venerated human conviction had to yield to his conclusive demonstrations, and this alone makes explicable the speedy transformation of the world's thought. In all subsequent times, likewise, the domain of false belief has been successfully invaded only by the heralds of a higher spiritual sense, and the true interpreter of modern religious history will find the key to its revolutionary changes in the revelation of Truth a generation ago, through Mrs. Eddy, a revelation the beneficent and corrective influence of which is by no means limited to the Christian Science movement.

To establish the fact of a healing realization of Truth in a family, a community, a nation, is to inaugurate the fulfilment of the promise that old things shall pass away and all things become new. How this is brought about is seen when we realize that every opposing doctrine and belief receives the full stroke of all the convincing "works" which have been wrought through Christian Science. However well buttressed my convictions may seem to be, the discovery that an annulling faith is doing the Christian work which I have not even dared to attempt, leads inevitably to the dethronement of those convictions.

More than this, the teachings of the past regarding hell have found their support in that belief in the reality of evil, which cannot be maintained in the presence of Jesus' demonstrations of the nothingness of evil's manifestations; namely, sin, sickness, and death. These demonstrations are being repeated in Christian Science in fulfilment of Jesus' promise and command, and the disappearance of beliefs which have

Digitized by Google

sprung from the acceptance of the reality of evil is therefore directly traceable to the influence of Christian Science upon public thought.

It must be understood, however, that while the teaching and healing works of Christian Science have served to free the people from the bonds and limitation of traditional views upon this and other subjects, it is not responsible for the vagrant ideas into which some have fallen who have not utilized their liberty in harmony with its teaching. In the article referred to, the author calls attention to the danger of a reaction which robs the divine government of vigor in the administration of justice, which will make "the new hell" so comfortable that, like some modern prisons, it fails entirely of its reformatory purpose, and which eventuates in an indefiniteness and vapidity of thought that neither terrifies nor inspires.

Mrs. Eddy's recent words in her message to the Concord Church give positive and incisive expression to that teaching of Christian Science which anticipates and meets this tendency. She says, "There is a hell for all who persist in breaking the Golden Rule, or in disobeying the commandments of God." It is "the fire of a guilty conscience waking to a true sense of itself, and burning in torture until the sinner is consumed, his sins destroyed, which may take millions of cycles: but of the time no man knoweth. The advanced psychist knows that this situation is mental, not material, and that the Christian has no part in it. Only the makers of hell burn in their fire.

"Concealed crimes, the wrongs done to others, are millstones hung around the necks of the wicked. Christ Jesus 'paid our debt and set us free,' by enabling us to pay it,—for which we are still his debtors, washing the Wayshower's feet with tears of joy.

"The intentional destroyer of others, would destroy himself eternally, were it not that his suffering reforms him; thus balancing his account with divine Love that never remits the sentence necessary to reclaim the sinner. Hence these words of Christ Jesus: 'Depart from me, all ye workers of iniquity. There shall be weeping and gnashing of teeth, when ye shall see Abraham, and Isaac, and Jacob, and all the prophets, in the kingdom of God, and you yourselves thrust out' (Luke, 13 : 27, 28). He is saved through Christ, Truth, who gains self-knowledge, self-control, and the kingdom of heaven within himself—within his own consciousness. Mortals must drink of the cup of their Lord and Master sufficiently to unself mortality, and destroy its erroneous claims—therefore, said Jesus: 'Ye shall drink indeed of my cup, and be baptized with the baptism that I am baptized with.' "

The emotional, and enervating satisfaction which finds content in singing, "Jesus paid it all," while doing nothing to "overcome" the beliefs and evil impulses of materiality, or to attain to that spiritual understanding which successfully resists the claims of sin, sickness, and death, finds no indulgence in this vigorous assertion that the sinner must work out his own salvation, must suffer the penalty of wrongdoing until he has "paid the last farthing" and sin's dominion has been supplanted by the reign of righteousness and truth. Every right sense is stimulating in the right direction, and the teaching of Christian Science stands for a vital truth when it emphasizes the fundamental difference in purpose and outcome between a belief which leads to a self-centered endeavor to reach a place of personal safety, and the understanding which prompts to the present attainment of that character and freedom which pertains to the "Mind that was in Christ Jesus."

No misapprehension of Christian Science is more complete than that which thinks of it as a sentimental and persistent declaration of the nothingness of evil and the ever-presence of good in a way which renders one altogether forgetful of Divine justice and Divine law. On the contrary, the unequivocal sovereignty of Truth, its absolute intolerance of error is constantly impressed upon every student of Christian Science. "Sin shall receive its full penalty, both for what it is and what it does. Justice marks the sinner, and teaches mortals not to remove the waymarks of God. To enmity's own hell of hatred, justice consigns the lie which would murder, in order to advance itself." "Justice requires reformation of the sinner. Mercy cancels the debt only when justice approves" (Science and Health, pp. 542, 22). In these and very many kindred passages Mrs. Eddy has smitten every show of craven presumption upon unmerited mercy and called Christian men to the maintenance of a strenuous and uncompromising war against every falsity of evil until harmony, heaven, is attained in fulfilment of the promise "to him that overcometh;" and those who know her best witness that in her personal bearing and attitude, gentle tenderness and loving compassion are associated with a merciless, and inflexible condemnation of every error wherever and in whomsoever it may appear.

He who is alert to the Divine voice entertains no doubt respecting the unvarying attitude of God toward his sin, of Truth toward his error, and the doctrine of hell as revealed in Christian Science is but this attitude writ large.

That Truth is essentially and necessarily intolerant of all error, that the punishment which material sense,— the belief in sensual gratification and its indulgence,—entails, cannot cease until the purification of the human consciousness, through the elimination of the belief and the believer, and that the true individuality is preserved intact in the embrace of the divine life,—this is the teaching of Christian Science, and its truth is established by the word and works of the Master, and by the results which are attending its realization to-day. Being divine Science, it will continue in the future, as in the past, a shaping and salutary influence quite regardless as to whether it be justly recognized or not. W.

Letters to our Leader.

Concord, N. H., July 17, 1904.

Beloved Leader:—I wish to express to you my deep gratitude for your address of Sunday, July 17, 1904, which is full of truths not given us before.

I have gained a spiritual uplift from the sacred dedicatory service, and a higher understanding of God from your wonderful message. Some thoughts stand out prominently like guide-posts; viz., to be so much awake that I do not accept anything but "live truth;" that I must continually arouse myself to the fact that "all is Mind." It teaches the lesson of humility which subdues ambition and strife; that we need not enter or remain in the hell which another has planned for us, and that we need have none of our own making; that we need God's mercy all the time; that your marvelous demonstration should help us to wash one another's feet, or in other words, enable us to express in our own lives the meekness and love illustrated in the life of our Master, which you so faithfully emulate.

May God keep thee and preserve thee from all evil.

Faithfully and lovingly yours,

ELIZABETH L. KINTER.

Boston, Mass., July 22, 1904.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Revered Leader:—Before returning to my home in Chicago I wish to express my deep gratitude to you for the many blessed occasions which have been ours for profit and enjoyment because of your loving kindness, your wisdom, your consecration to the great Cause of Christian Science, so near and dear to all who are striving to reach that understanding which blesses, purifies, elevates.

Of the many "tables" which have been spread for us, none has impressed me more deeply than the one recently provided,—the dedication of the beautiful church edifice,

Digitized by Google

your generous gift to First Church of Christ, Scientist, Concord, N. H. I rejoice that it was my privilege to be present on this occasion and I am sure the lessons learned will continue to unfold new beauties and bounties.

I am glad to express my appreciation of the kind manner in which the good people of Concord cared for the visitors "within her gates."

Gratefully yours,
ALLISON V. STEWART.

Atlanta, Ga., July 28, 1904.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We unite in rejoicing with our beloved Leader upon the consummation of a stately temple dedicated, not "to the unknown God," but to the worship of God "in spirit and in truth."

May this expression of God's love, a type of the real Church, speedily bring into its fold of Christian brotherhood many who are struggling in the dark depths of materialism, and ever stand as a monument of loving gratitude to you, dear Leader, who have so bountifully blessed mankind with the true teachings of Jesus our Lord.

With hearts full of appreciation, we offer this testimony of our deepest affection,

Lovingly and loyally yours,
Directors of First Church of Christ, Scientist, Atlanta, Ga.
MRS. HARRIET K. SCOTT.
MRS. ANNETTE DOWNS.
MRS. ADALIN WHEELER.
MRS. FANNY BELLAMY.
MRS. MAY DAVIS.

New York City, July 31, 1904.

To Rev. Mary Baker Eddy.

Dear Leader:—One day last week while spending an hour in the Central Christian Science Reading Room at No. 23 West 23rd Street, New York City, among the fifteen or more people that came in, three asked the question, "How can I learn something of Christian Science?" One said, "I see it mentioned so much in the daily papers, and I feel its influence must be for good." We know that the Founder of Christian Science has heard this cry coming from this great city, and we are thankful to God and to her that we have this additional place, where the desire to learn what Christian Science is can be satisfied. Dear Leader, this room is doing a great and glorious work for our Cause. I feel that I am in a position to know, for I have been deeply interested in it since its opening, and am now serving on its board of directors.

Faithfully yours,
HARRY VANCE SWOPE.

New Orleans, July 31, 1904.

Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Beloved Leader:—In *true* gratitude and sincere humility, we would tell you of the great spiritual uplifting and call to deeper consecration which has come to us through your address to the Concord Church,—your home church,—and we realize that the home is truly "the centre, though not the boundary, of the affections" (Science and Health, p. 58). That tender love which, in this message, is clothed with the might of spiritual power, rebuking, counseling, guiding, and directing our steps "from sense to Soul" (Science and Health, p. 566), is indeed the reflection of the Love which is God,—our Father-Mother,—and may its blessing more and more be poured upon you, His chosen one, and heavenly harmony be your habitation.

Humbly and gratefully yours,
First Church of Christ, Scientist.
MARY L. TWICHELL, *Clerk,*

Testimonies of Healing.

One of the most comfort-bearing of the many comforting messages to be found in Science and Health is, that "Divine Love always has met, and always will meet, every human need" (p. 494). I would like to tell how divine Love met the need of a tiny babe, nine weeks old.

The parents knew something of Christian Science, as they had, only a year before, flown to it in direst extremity when their little son was dying in a hospital. Now, when this little babe was taken with violent sickness and diarrhœa that all the doctor's skill had failed to check, and when the child was so reduced that the only verdict was "no hope," "she must die," they again came to Christian Science for help.

A friend of mine and her daughter took the case, and there was some immediate improvement, but as they had to leave England, they begged me to take charge of the child, so we went together on an introductory visit to the house. There we found that the child had relapsed and was apparently alarmingly ill. Before the fire sat a poor, despairing mother, the tears running down her face, with a baby almost in the last stage of emaciation lying in her lap. The eyeballs were turned, and the little jaw had fallen so that the mouth was wide open, and it had ceased to be able to swallow even a few drops of liquid.

It was my first critical case, and for a few moments I was numb with fear, but the thought that God was a present help flashed to me, and that this was the time to prove the reality of that help. Then and there I sat down and declared the allness of Life for that babe, and my friend and I stayed with it for about two hours and a half, when it began to be able to swallow a few drops of liquid at a time. Speaking all the words of hope and comfort we could to the poor mother we left, promising to work for the babe all night. Early in the morning there was a hopeful message brought by the father, who said baby was better, and from then she continued to improve. It was marvelous to me to see the different phases of error quietly uncovered, subdued, and destroyed,—first the sickness, then the diarrhœa, then a cough that seemed to shake the wee frame to pieces. The ability to take nourishment returned and gradually the love of Love was unfolded, she was built up and restored, and is now the roundest, laughingest, little infant one could wish to see.

The whole family have been very much helped in many ways. The wife was subject to varicose veins and was under a doctor's care two or three times, and in a hospital for clots in the veins of her legs. She suffered constant pain at such times, and was not able to put her foot to the ground or attend in any way to her home work. These appearances of clots in the veins were very much feared by her, as they not only caused suffering and weeks in the hospital, but this cost more money than they could well pay.

After the baby was restored the mother worked most earnestly in scientific thought, when one day, while standing at her cooking, she said to herself, "What a good way Christian Science is, I never feel my legs now." That very afternoon she was tested,—the clot appeared in her leg and quite suddenly she found herself helpless and unable to leave her chair. When her husband came in he was greatly distressed and said, "Whatever shall we do, and baby to look after too?" "We'll try Science," said the wife; "it made baby well." So they worked quietly and went to bed. She overslept herself a little next morning, and was rather hurried in getting her husband's breakfast. She jumped out of bed, ran down to the kitchen, got him what was wanted, both of them quite forgetful of the clot until he had gone and she was going upstairs again; then the thought came, "Why my leg is quite well," and on putting her finger over where the clot in the vein had been the night before, she found it was no longer there.

Digitized by Google

She told me this with surprise and deep gratitude that the error was so quickly met and destroyed.

The father and mother and baby are now regular attendants at the church services, and the sister has joined the Sunday School.—E. D. A., London, England.

The following letter was written by the father of the baby referred to in the above testimony.—EDS.

It is impossible for any man to feel more grateful than I do for benefits received through Christian Science. I came up to our church with the intention of giving a testimony about the help received by our baby, and the removal of the big substance in Ady's throat, called adenoid by the medical profession; also concerning my wife's veins being so much better. Upon hearing the testimony given by a lady, I never before felt so grateful as I did then, for my precious sight, in which I can see God's beautiful light; also for my strength through which I can perform my earthly duties so well. If ever I was in the presence of God it was then. I could not give a testimony, however, my heart was so full, but I came home and prayed unceasingly to God to blot out all my sins committed during many years of my infidel life. I have found in Christian Science what I could not find anywhere else. I am now working in Christian Science beautifully. My disposition, which was one of the most miserable, is now one of the happiest on earth, and from now I will take God for my guide, and show my light to others in darkness and in need. God speed our work.—**J. W., London, England.**

It is now two years since Christian Science came to our home to feed our hungry hearts and lead us gently into the understanding of Truth. It has also been a help to us since in ruling out error in the form of sickness.

After we had been in Science about nine months, my little daughter's hand was run over by a cart in which were children coasting down a hill. As the cart ran over her hand, she pulled it from under the wheel, and to all appearances, three fingers were dislocated and the pain was intense. A dear Christian Science friend was visiting me at the time, and she immediately denied the suggestion of dislocation. I telegraphed to our practitioner and did as much as my understanding of the truth allowed. With my friend's help, my fear and my little daughter's sense of pain disappeared. The night was spent very comfortably, and although the hand seemed useless the next day, I could notice, towards evening, that the swelling was disappearing. At the end of one week she could use her hand as well as ever, and did use it perfectly well in school. After the first few hours of treatment there was no suggestion of pain. We did not call a surgeon, for I knew that it is possible for God to do *all* things. Words cannot begin to express my gratitude, nor the joy which came with this demonstration. It was truly a realization of God as "a very present help in trouble."

Last winter a case of diphtheritic sore throat was met in a few hours. Much more help have we had, and we are constantly learning that it is ours. It is through these demonstrations that Life, Truth, and Love are revealed to us. Our lives are full of gratitude and love to our dear Leader for her unselfish help and constant watchfulness for our welfare.—AGNES H. GRIFFIN, Ridgewood, N. J.

About a year ago I had what was to me a very decisive demonstration, and for the second time my life was saved by the truth as taught in Christian Science. The first instance I wrote of some years ago. This time the belief of consumption had gradually developed. The well-known specialist in Philadelphia, Dr. Koch, pronounced it a very well-developed case, and marked on one of his diagrams just where he found that my lungs were affected. According to his diagnosis there were two very distinct spots on one lung, and one highly inflamed and rapidly developing spot on the other.

He declared that I must undergo his treatment or remove to some higher altitude or live for a year in the pines.

For a little while I was in doubt, as this particular disease had always seemed the most dreadful of all diseases to me. However, I was not long deciding, for I reasoned that Christian Science had saved my life once and I was sure it could do so again. In a short time after applying to the practitioner my cough began to cease, the pains in my chest grew less, and I realized that once more, Truth had been victorious. It was a very remarkable healing, for in two months there was scarcely a trace left of what had seemed a very well-developed case of consumption.

I might add that I had been an inveterate smoker, and during the course of this treatment, I lost the taste for cigars so naturally that I scarcely realized it until it was gone. In the year that has elapsed I have not smoked nor have I had any desire to smoke.

J. OSCAR MIDLAM, Wilmington, Del.

As I review the blessings that have been mine with even a partial understanding of this truth as given to us through the revelation of her who has been taught of God, I find their number is legion. I have come slowly indeed on the way, but I find I have lost the old fear of sick headache, and of many articles of food, by declaring often that there is nothing but good, that God is all. Many minor ills have departed, but my healing both mentally and physically has been slow, for to mortal sense I have had much to overcome.

My husband was cured of chronic intestinal trouble in one treatment although he was at the time confined to his bed. This was over four years ago, and he has never had the slightest return of the trouble, which was of an unusually serious nature from a material standpoint.

I have received so much kindness and patience from all whom I have met in this grand work that I should not have kept silent so long, and I gratefully remember the class instruction received in Kansas City three years ago. My only child, a daughter, is interested and also has been benefited, for which I rejoice, knowing that God will lead her on. I have come through much doubting and questioning on the way, but at last I can see that Christian Science is all true and blesses whomsoever will accept it.

F. W. GUITTARD, Beattie, Kan.

A year ago last March, Christian Science came to me and I supposed that in common with that of other churches this was a beautiful religion, but the healing by the prayer of understanding I could not then grasp or believe. One day I was taken ill, and after much distress, said to my husband, "Isn't it too bad after all I've gone through and suffered by the physicians' advice, and the number that I've had (twenty-one in all), I still am not well, and not one day ahead can I ever feel safe to make a plan, my health is so uncertain. I shall have no more operations, but will do the best I can and try to endure the suffering with patience when it comes, but I believe I'll try Christian Science first. It cannot do me any harm if it's of God, and then I shall feel that I have done all in my power to be well and of some use in the world."

The next day I said to the Christian Science practitioner, "If you think you can help me, I wish you'd try." She did, and I was cured immediately. I have never had a return of the trouble, and have been able to walk miles. It was an ovarian trouble, and the physician's advice was that if one operation failed to cure, there must be a second; but I never had the second operation. It had taken me several years to get over the nervous shock of the first one, and the

Digitized by Google

opinion was that I would in time be "comparatively well" only.

Last fall another old trouble which used to keep me down appeared in a severe attack. It was a serious rectal ailment of long standing. Eight years ago I had ten tumors removed, a few at a time. My husband finally said nothing more should be done. The last operation kept me in bed a month, suffering so intensely that it took months to recover strength.

Christian Science again came to my rescue with an immediate cure. The dear practitioner came on the noon train, and left me free from pain at six, to return home. It took a little time for the swelling to subside so I could stand or sit or even lie on my back, but in three days I was busy doing a little housework, and in ten days, besides doing housework, I walked two miles, not simply to see what could be done, but I felt like walking, and knew that street cars were available in case of need. There has been no return of that trouble nor of constipation.

I have studied my Bible as never before, in the new light which Science and Health has shed upon it, and have had many demonstrations for myself and others, and also on a sick animal, to prove that God's promises are safe and sure as in the time of Jesus. I am very thankful and grateful to those two kind practitioners who helped me to this new and beautiful understanding, and to Mrs. Eddy, through whom it has become possible, by her untiring devotion and loyalty. God indeed has been very good to me.

A. B. H., St. Albans, Vt.

About four years ago, the light of Christian Science was shed upon my consciousness. From my present standpoint, —in its glorious light,—I look back and marvel how I lived through all the heartaches, sorrow, and sickness, which I had endured for years. For sixteen years I was a great sufferer from so-called female weaknesses. I was almost never free from backache and other pains. For weeks and months at a time, I did not leave the house, and most of the time I spent upon my couch. Everything tired me. I can hardly conceive of one as having less strength than I appeared to have. Physicians had done all in their power for me, and still I was no better; I only turned to Christian Science because there seemed nothing else to do. I knew nothing of it, and had no faith in it, but in my case, as in thousands of others, man's extremity was God's opportunity.

The practitioner to whom I applied was a sweet woman, and to my question whether I could be helped, she replied, "Yes, God heals all things." I asked for treatment, and on that same day all pain ceased. I took four more treatments, not understanding how I was healed, and fearing to let go of my practitioner before I could realize the blessed truth that I was well. Then I started out to *prove* it and walked a mile, besides doing some shopping, and returned home as fresh as when I started out.

The Bible had been a closed book to me all my life, but I purchased one that day, and the next four months my time was given entirely to its study in connection with our dear text-book, "Science and Health with Key to the Scriptures." Through the understanding derived from this study, I have overcome many things for which I have never been treated. I have been enabled to leave off glasses, which I had worn for fifteen years, and to use my eyes continually for all kinds of work. The physical healing was to me a blessed thing, but the most precious lesson which I have learned in Christian Science, is how to love my enemies. In that line I think I have made my most wonderful demonstrations. I have been able to help others in the destruction of many forms of error, among which are tuberculosis, gastritis, cancer-tumor, nervous prostration, bronchitis, and many simple forms of disease.

My daily prayer is for more understanding and a higher, purer sense of the Love which heals, that I may be better fitted to obey the command of the dear Master, "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

Words fail me to express my gratitude to God for all these blessings, and to our noble Leader, Mary Baker G. Eddy, who has through years striven to bring to the world, the light of this blessed Christ-truth.

L. T. C. H., New York, N. Y.

A few years ago, before I heard of Christian Science, I had a serious illness resulting from a cold, a form of indisposition to which I was very subject. When I got about again the doctor told me I would have to be very careful to avoid draughts, or I would have the complaint in a more serious form. The profession for which I was studying necessitated my being frequently in places which, according to the doctor, I should have kept out of, and as a result I was constantly taking medicine which never did me any permanent good, and I was constantly dreading that I would have to give up and take to some other occupation, which might not be so much to my taste.

About a year ago I had Christian Science treatment, and since then I have never had a cold nor the slightest fear of any ill effects resulting from exposure, because I realize God's omnipotence, and that He will meet man's every need. I have also received great spiritual benefit from reading Science and Health which so clearly explains the teachings of the Bible. I feel very grateful for the many blessings I have received through Christian Science, and also to Mrs. Eddy for the wonderful enlightenment she has given us.

JOHN J. MARSHALL, Durham, England.

I have received so much benefit from reading the testimonies in the *Sentinel* and *Journal* that I am prompted to give mine in the hope that it may help some one who is striving to believe that God is Love, that He made man perfect, and that there is no power to make him sick or sinful.

I was brought into Christian Science under the lash. Fifteen years of my life I spent as a traveling man. Away from home influences, I rarely ever went to church or gave God a thought, but instead, indulged myself to the fullest extent in worldly pleasures. During recent years, however, through pride and self-respect, I had exercised enough will power to subdue most of my desire for dissipation. In the winter of 1901, having seen some healing in Christian Science, I was given one treatment by a practitioner, for a cold, and the ailment was met. Soon, however, all my former desires came back and I returned to my old life of dissipation. In a few weeks I had symptoms of what is considered by physicians an incurable disease. In great fear I went from one physician to another, until I had visited three in the hope that I might find one who would say I was unduly alarmed, but they all gave the same opinion. Then I started on a trip with medicine in my valise, and Science and Health by Mrs. Eddy in my pocket. For two weeks there was a desperate struggle between the human and the divine. I would pray and read Science and Health all night, and take medicine all day, but at the end of two weeks I gave up medicine, and threw myself on God's mercy, and went back to my practitioner. Through her clear knowledge of God and her consecration to His cause, her prayers in my behalf were answered, and I was healed. Then one by one the devils were cast out, and I could no longer enjoy whiskey or tobacco. I have not had any desire for either since.

I have now been striving for twenty-two months to follow in Jesus' footsteps and have succeeded to the extent that I have proven to my satisfaction that all his teachings and demonstrations were for the guidance of all mankind in all ages, that there is no condition of consciousness which

Digitized by Google

cannot be made harmonious by a realization of the Truth of being. I can truly say with the Psalmist, "It is good for me that I have been afflicted that I might learn thy statutes."

My hourly prayer now is, to walk close enough to God to be guided by Him to where some yearning heart is looking for that which it knows not,—that I may give "a cup of cold water" in His name.

W. C. CROSIER, New Rochelle, N. Y.

With deepest gratitude to God and to our dear Leader I submit this testimony. It is now almost six years since we took up the study of Christian Science, and in that time many changes for the better have taken place in our home and family. My husband was healed of a severe attack of nervous prostration, and since then of many other troubles that have occasionally appeared. I have had many beautiful demonstrations in Science for my two children and myself. We try to use Christian Science in every way possible, and find it an ever-present help in time of need.

MRS. FRED GREINER, Chaska, Minn.

About fifteen years ago I was healed through Christian Science of stomach and liver trouble which I had had from childhood. I had never known what it was to be free from pain. About three years ago I moved to Oak Park and joined the Christian Science Church. The pure thought of Truth unfolding to me cured the catarrh,—a disease I had all my life. I also had a number of corns, and had to cut places in my shoes so that I could go about the house. I can now wear new shoes with comfort.

In Christian Science God seems nearer and more loving. I am so grateful to Him for revealing this wonderful truth to our Leader, Mrs. Eddy.—M. L. T., Oak Park, Ill.

I would like to tell of my healing through Christian Science. I had had asthma for twenty-two years, ever since I was a year and a half old, and when I was older and going to school the doctors said I had consumption and that one of my lungs was entirely gone. But thanks be to God, who is Truth and Love, I am now learning what Life is. I realize what an illusion I was held in.

I have been interested in Christian Science three years last June, and can say that I am not only thankful for the physical healing but for the spiritual also. Truth has lifted me out of the darkness into the sunshine. Whereas our home was always filled with sickness, now there is health. My husband was healed of the tobacco habit by our little girl. I am thankful to Mrs. Eddy for this blessed truth.

MRS. EFFA L. MURPHY, Marietta, O.

Up to four years ago I suffered from a complication of diseases, such as stomach trouble of long standing, frequent severe headaches, kidney trouble, which the physicians pronounced Bright's disease, and finally inflammation of the bladder set in. I employed some of our best physicians, took all sorts of patent medicines, but nothing would give me more than temporary relief, when Christian Science was brought to my notice. I decided to give it a trial. My healing was slow, but one ailment after another disappeared, until I was fully restored to health. Seeming errors have arisen from time to time, but with what understanding I have gained I have been able to keep in good health ever since.

I wish to express my gratitude to God for all the blessings received, to Mrs. Eddy for bringing this truth to us, and to the practitioner who worked so lovingly for me.

F. W. MILBRATH, Milwaukee, Wis.

I wish to express my gratitude for what Christian Science has done for me. About five years ago I had been an invalid for two years. At the age of sixteen I had an operation performed and the doctors gave me morphine to quiet the sense of pain. This became a habit, and I took the narcotic for one year, four to six times a day. The doctor said that I was dying by inches and could live but a short time. Neither my brother, who was a nurse, nor the doctors, could get me rid of the habit of morphine, on account of my weak condition.

I then heard of Christian Science, had treatment and was healed, and I am to-day a healthy woman. My heart is full of gratitude to Mrs. Eddy for the beautiful unfolding of truth, which is teaching me to love my neighbor, and to overcome evil with good.—B. M. O., Gloversville, N. Y.

I have been very much helped by reading many of the testimonies in the *Sentinel* and *Journal*, and should like in return to help others by telling a little of what Christian Science has done for me. When first I heard of Christian Science I was very weak and could hardly go about my work. For more than three years I had worn glasses, the doctors saying I would never be able to do without them. If I left them off for half an hour, I suffered great pain, and was unable to see anything. Since coming into Science, I have ceased wearing glasses, and am able to do my work, also to sew and read, except very small print, without them. This was nine months since, and I suffer no pain from my eyes.

Ever since I can remember I have been troubled with sore throat, and always had to wear flannel or a silk handkerchief, and frequently rubbed it with camphorated oil. It is now eighteen months since I stopped wearing anything round my throat or used any material means for it. Some time ago I cut my thumb severely, and through Christian Science treatment the wound healed very quickly. I was able to do all my work, including the washing, which in the old thought would have been impossible.

Two years ago my friends thought I could not live; they say I was a walking shadow and they consider my healing a miracle. I am deeply grateful to God and to Mrs. Eddy for giving us Science and Health.

ADA DOBSON, Low Fell, England.

[Written for the *Sentinel*.]

Jubilate.

MRS. R. H. KERR.

O, HARP of Israel! mute so long,
I sweep thy rapturous strings:
Thy cadences of praise are mine!
My soul in gladness sings:

For Israel's gracious, loving God
Is mine to-day, indeed!
In Truth, my soul's triumphant song
Is praise—for I am freed!

I'm freed from error, sense, and dross;
'Tis faith's benignant dower:
I'm purified to view the cross,
To see anew its power.

O, Heart of God! So dear, so near!
So vibrant to our needs!
Help us to praise Thee as we should,
In Truth's transcendent deeds!

Digitized by Google

From our Exchanges.

One finely says that the Gospels are only a page from the eternal diary of Christ. Open the Gospels and see. If he is ever the same, then there is no leper seeking cleansing but Christ says, "I will;" there is no hungering multitude but Christ uses the small store of his disciples to satisfy the many; there is no mourning at death but Christ says to the mourner, "Why weepest thou?" there is no group of playing children but Christ blesses them; there is no Simon bearing the cross but Christ bears the heavier part—and, lo, it is his own cross, not Simon's! We need not go back to other days to find him; we need not cross the seas to Palestine to be conscious of his presence; we need not ascend into heaven to bring him down from the place of his beatitude, or descend into the abyss to loose him from the bonds of death. This Word of God is nigh us, and abides faithful. We wake or sleep, we weep or rejoice, we are filled with the Spirit or are tempted and fall—but Jesus Christ does not change.—*The Pacific Baptist.*

The *Boston Transcript* quotes the following excerpt from the Baccalaureate address of President Raymond of Wesleyan University:—

"God has often been found in unexpected places. Moses found God in the desert while he guarded the sheep, and Jacob found God on his way to Padanaram to work and win his wife. The Scriptures warrant the belief that God speaks and reveals Himself in divers ways. The scientist who gives us a shorthand sketch of the orderliness of the universe, puts us in communication with God's thoughts and makes us co-workers with Him. The poet who lifts us to the plane of elevated emotions enables us to feel the presence that we can neither escape nor express. All declare that God works in us 'to will and to do.' The important thing is to be aware of this moral and spiritual relationship which we always sustain to God, but which in the highest results we have also to maintain."

It is empty talk to call Christ our Lord and Master if while doing this we refuse to submit our hearts and lives to him, and only externally and formally yield obedience to his commands. Christ becomes our true Lord only when his Spirit has gained the mastery over our hearts and minds and souls. To free us not only from the punishment of sin, but from sin itself, from our fleshly lusts,—this, and all that belongs to this, constitutes the work of redemption.

PROF. J. GOTTSCHIK, D.D.
Homiletic Review.

No person ever deepened his spiritual life by deciding to deepen it. But let a man earnestly and bravely set himself the task of doing the will of God and enriching the spiritual lives of other persons, and he will find that he is himself blessed as he becomes a blessing. Life is learned by living. We deepen our spiritual lives as we learn to live the spiritual life. We grow in grace as we learn to be gracious.

The Standard.

The indifference of the world to the church is largely matched by the church's indifference to the world. When the church wakes up to her duty and her responsibility, the world may resist, but will no longer be indifferent to her claims upon its attention.—*The Examiner.*

We have not reached the heights of humility until we are thoroughly assured that the will of God is the highest good, and that to do His will is not only right but the most advantageous thing to be done in all circumstances and conditions.—*The Watchman.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5; twelve copies to one address, $9.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Porte has addressed a formal note to the American legation at Constantinople confirming its undertaking to accord equal treatment to American schools and kindred institutions as granted to the most favored nation, "subject to the accomplishment of the usual departmental formalities." In spite of the seeming reservation it is not believed that the Porte will raise further difficulties in executing the agreement, or run the risk of creating a fresh crisis. The verbal assurances given by the Porte that the list of American schools would be immediately recognized are understood to have been disapproved at the palace, hence the above reservation. It is anticipated that objections will be raised to some of the schools. Minister Leishman has replied to the Porte's note expressing the hope that the Porte will not raise difficulties over executing the promises, but ignores the reservation relative to departmental formalities.

Secretary Shaw has received from the Supreme Court of the District of Columbia the awards made in the litigation over the prize money derived from the capture of the Spanish fleet by Admiral Dewey in Manila Bay on May, 1898. One of the two checks delivered was for $370,365.25, representing the share which will revert to the captors. The other check was for $370,336.24, the share which will accrue to the naval pension fund. Other checks included one for $82,876.86 in fees for the attorneys who handled the case in the courts, and $3,000 for special counsel. The checks were signed by Judge Clabaugh. Admiral Dewey received $18,560. The further distribution amounts to about five months' pay for each man. This closes the bounty and prize money chapters.

It is proposed to construct at Panama a dry dock large enough to accommodate the largest vessels afloat. Unless occupied by war vessels of the United States, this dock will be available to any vessel passing through the canal which needs dry docking, and at a reasonable cost. Four islands in the Bay of Panama form, it is said, an excellent location for such a dry dock and repair shops. One of the islands, noted for its springs of fresh water and large timber growths, already contains a large marine railway and repair station, which have become the property of the United States under the terms of the treaty.

The National Encampment of the Grand Army of the Republic, which met in Boston last week, elected for its new Commander-in-Chief to succeed General Black, General Wilmon W. Blackmar, past Departmental Commander of Massachusetts. Denver was appointed as the place for encampment in 1905. Mrs. Fanny E. Minor of Concord, N. H., was chosen President of the Woman's Relief Corps.

A new training ship, the Cumberland, was launched from the Boston Navy Yard last week.

Foreign.

Last week the commander of the Japanese forces investing Port Arthur called upon the Russian commander to surrender. The demand was refused. It is expected, however, that very soon a report will be received saying the place has been captured. The capture by the Japanese of a Russian war vessel in the neutral Chinese port of Cheefoo, following the naval engagement at Port Arthur, has for the moment caused a little anxiety in diplomatic circles. Reports seem to confirm the news that both the Port Arthur fleet and the Vladivostok fleet have been rendered practically useless in two recent engagements. The Russian land forces are also reported as stubbornly but surely retreating before the Japanese.

The total number of matriculated students during the present summer at the German universities, according to the Consul General at Frankfort, Germany, is 39,581 against 37,881 last winter and 37,813 during the summer of 1903. Ten years ago the attendance was about 11,000 less than to-day. Eleven thousand seven hundred and seventy-five the present students study law, 8,111 philology and history; 5,945 medicine; 5,945 mathematics or natural sciences; 2,235 evangelical theology, and 1,770 Catholic theology.

The Archbishop of Canterbury, Dr. Davidson, accompanied by his wife and two chaplains, sailed for New York last week. The special permission of King Edward had to be obtained before the Archbishop could accept the invitation to visit the United States.

Industrial and Commercial.

Analysis by the *Manufacturers' Record* of official figures of the country's export trade during the past two fiscal years brings out several striking facts about the steady growth of trade at Southern ports and the increasing weight of the South in the country's commerce. It says,—

"In the first place, of the several groups of customs districts of the country, the Gulf ports alone showed an increase in the value of exports in the fiscal year 1904 over those of 1903; in the second place, the increase in the value of exports of cotton and its products was $47,600,000, or $7,000,000 greater than the increase in the value of all exports; in the third place, the value of exports originating in the South, directly or indirectly, about $590,000,000 constituted forty per cent of the value of all exports, and its increase was nearly equal the total increase over 1903. The value of all exports increased between 1903 and 1904 from $1,420,141,679 to $1,460,868,185.

The United States Consul at Bahia, Brazil, in a report to the State Department, tells of the discovery in Brazil of vast forests of Manicoba rubber trees, from which can be produced the high grade of rubber known to the trade as "Manicoba." The area is said to be very large. The best rubber which has come from this tree has been prepared by an American and has been classed in New York and Liverpool as equal to first quality Para rubber. The Consul, from his investigation, is convinced that the culture of the Manicoba could be most advantageously introduced into the south of the United States, and particularly into Puerto Rico and the Philippines.

The United States Geological Survey has issued reports on the production of petroleum, asphaltum, and bituminous rock and copper in the United States during the year 1903. The petroleum production was 100,461,337 barrels, valued at $94,694,050, against 88,766,916 barrels, valued at $71,178,910 in 1902. Production in California increased over 10,000,000 barrels, while the Texas production decreased over 1,000,000 barrels. The production of copper was 730,044,517 pounds, against 699,508,641 pounds in 1902. The production of asphaltum and bituminous rock was 101,255 tons, valued at $1,005,466. This was a smaller amount by over one thousand tons in quantity than the year previous, but its value was thirty-one per cent greater.

A new phase was given to the trans-Atlantic steamship rate war last week by the Cunard Company, which has made a cut in the east-bound cabin rates. By the cut the minimum first-cabin rates east on steamships Campania and Lucania are reduced to $60, from $100, and the second-cabin rates to $40. The minimum first-cabin rates on all other passenger steamers of the line from New York and Boston are placed at $50, and the second-cabin rates at $30. This cut was met at once by the White Star Line. The American, the Anchor, and the Leyland, have also met the reduction.

According to figures compiled by the Atlantic Coast Line for the entire movement of Georgia melons over all lines, there was a total of 2,641 cars handled in car lots, as compared with 1,733 for the season of 1903. The grand total for the three States of Georgia, Florida, and Alabama for the present season was 4,199 cars, while last year the total was 3,394 cars. It is figured that an average of $65 per car would be a fair valuation for this season, counting over one thousand good-sized melons to the car.

It is now estimated that ice shipments from the Kennebec River this season will amount to about 200,000 tons, and from the Penobscot 45,000 tons. From other places enough has been shipped to bring Maine's total this year up to about 400,000 tons.

A gold medal has been presented to Charles Algernon Parsons by the British Association for the Advancement of Science in recognition of his merits as an inventor. He is the developer of the steam turbine.

At a recent convention of the International Typographical Union at St. Louis, a motion that no member should enlist in the militia under penalty of expulsion, was voted down.

General.

A new German anti-friction metal, also recommended for dynamo brushes, consists of copper intersected with particles of graphite. The material is produced by sprinkling a plate with graphite and dipping into an electrolytic bath until a deposit of copper covers the graphite, then withdrawing, sprinkling again with graphite, and re-introducing into the bath, the operations being continued until the required diameter is reached. Friction on the alloy produced in this way slowly releases the particles of graphite, which then act as a lubricant.

An old style sword bearing the date 1711, and which is believed to have belonged to Admiral Walker who left England in 1711 with eleven thousand men and a large fleet to capture Quebec and Montreal, and whose fleet was wrecked in the lower St. Lawrence, has been found buried in the sand on Egg Island.

The Grenadier Guard Band from London, one of the most famous of the royal bands, will begin an engagement at the World's Fair, August 29. Special permission was obtained from King Edward to allow this band to leave England.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Business Man's Experience.

WITH the permission of both the writer and the friend addressed, we are pleased to publish the following letter.—EDS.

Minneapolis, Minn., June 3, 1904.

John M. Miller, Esq., Los Angeles, Cal.

Dear Mr. Miller:—A gentleman from Superior, Wisconsin, called on me recently and related an experience which reminded me of your affliction of the eyes. While here he called on a very dear friend who, as he had been informed, had become entirely blind after resorting to the most expert medical treatment obtainable, and was greatly surprised to be greeted by him, and to notice that he was much improved. His friend told him that, as a final proposition and what seemed to him a hopeless one, he acquiesced in the suggestion of friends, and permitted a Christian Science practitioner to undertake his healing. While the progress was slow at first, at this time his friend was satisfied that soon he would be as well as ever, and stated that he had been greatly benefited in other respects; that a heavy load had been lifted from him, and he was happy and prospering in business.

My caller had learned of my experience in Christian Science, and after seeing the work accomplished for his blind friend, he became deeply interested, and called on me to learn something of that which he had previously considered the merest humbug. To make a long story short, as a result of this interview, he took the address of my practitioner, saying he believed he would try Christian Science for his troubles.

You know something of what I have been through. For nearly twelve years I fought a combination of troubles, principally of the stomach and liver. During that time I had some of the best medical advice in this city, as well as in San Francisco; for nearly three years I depended on osteopathic treatment; under the direction of my physicians I traveled much, both by land and sea, yet the disease kept gaining on me. Three times they gave me to understand that my case was hopeless, and I was given various times to live, ranging from three weeks to three months. Some of my friends again and again persuaded my wife that I could live but a short time, and I assure you that many times the pain was so severe, my greatest fear was that I should continue to live. Several years ago a friend advised me to try Christian Science, as some friends of his had apparently been miraculously cured; but it seemed such absolute folly that I could not take up the matter seriously, though, having promised to do so, I did call to see a practitioner, but I did not find her in, and went to a doctor instead. As a result, I got into a condition where I was unable to eat a meal with any confidence that I could digest it without a siege of pain; I lost all interest in business and in pleasures of all sorts. In this condition I was finally persuaded to try Christian Science again, but finding no good resulting from a few treatments, I discontinued them. Later I heard Judge Ewing lecture, and this, with the reading of various Christian Science publications, so interested me that I went again for treatment, and within a short time I felt a sense of relief and a degree of assurance as to my digestion, and believed at any rate that I was on the mend.

At this stage, my wife was attacked with a complication of two dangerous diseases, either of which any intelligent surgeon would insist required an immediate operation. While she had no faith in Christian Science, she did believe she would die if she went upon the operating table, and in that frame of mind, she allowed me to call a Christian Science practitioner. Within a few hours after her first treatment her temperature, which had been very high, became nearly normal, and within a few days her natural appetite was about restored and she was practically well. The obstructions were removed and health restored in much less time than would have been the case had she survived the proposed surgical operation, most skilfully performed; and then, too, there remained no mental picture of a most painful and awful operation. This naturally gave me encouragement, and taken in connection with the almost instantaneous healing of a friend who was afflicted with a fibrous tumor which had developed to a point where her physician decided that only an immediate surgical operation could save her life, it convinced me that the best thing I could do was to hew as closely as possible to the line I was then pursuing in Christian Science.

About this time I received a letter from my old-time friend, Mr. ——, whom you will remember as the general traffic manager of the "Soo Line," and later of the "Great Northern." His wife had a constitutional trouble for which she had doctored almost all her life, having the best obtainable medical advice and treatment. She is an extremely practical woman, and Christian Science did not appeal to her, but finally, under the persuasion of a neighbor, she attended a Wednesday night experience meeting in Chicago. Mr. —— accompanied her, and in his letter to me stated that he found an audience ranging usually from fifteen hundred to two thousand people, many of whom he knew to be among the most prominent business and professional men of the city, including some of the leading bankers and railroad officials; and that while he did not know much about Christian Science, yet, when he heard the statements of these men,—that after spending large sums of money and much time in the fruitless search for help, they had at last been healed in Christian Science, he could not believe that they were all liars. He therefore advised Christian Science treatment for his wife, with the result that in a comparatively short time she was cured.

You would be surprised to know how many of your old friends among the most prominent people here are willing to testify that their lives have been saved wholly by Christian Science. I know quite a number who were afflicted as I understand you are, and they have been entirely healed; I presume there are failures in Christian Science; it would be strange if there were not, for it should be remembered that practically all who come to it, do so only after they

Copyright, 1904, by Mary Baker G. Eddy.

Digitized by Google

have resorted to all other known means for help; but I will venture the assertion that the percentage of failures is vastly less than can be found elsewhere.

At first it was very humiliating to me to call on a practitioner; I felt ashamed, and invariably looked around before entering the house, to see if any one was coming. But I am pleased to say that I have entirely overcome this feeling, also to inform you that for many months I have been in a much better condition, physically, mentally, and I hope morally, than for a long time previous. I firmly believe you can be helped, and indeed cured, and this at a minimum expenditure of time and money; and it would do me a world of good to hear that you have given the matter your earnest consideration.

Cordially yours,
FRANK L. THRESHER.

Eternal Life.

WILLIS F. GROSS.

THE unceasing cry of the ages has been, "What shall I do to inherit eternal life?" The earnest longing of the human heart is revealed in the question, and we see therein expressed the conviction that there is eternal life, a desire to possess it, and the recognition that the present sense of life is not eternal.

Human theories, based upon the mortal and material conception of life and being, have no answer to the question. That death is inevitable is the dictum of physical science and of philosophy. All material knowledge—that which is the result of present-day investigation, reason, and experiment, as well as that which bears the stamp of time—points to the dissolution of man and the end of all things. The accumulated wisdom of this world is no nearer the solution of the problem, no better prepared to answer the all-absorbing question to-day than it was thousands of years ago. In this respect, at least, it has made no progress whatever.

Limitation and death appear on every hand. Human knowledge points out no way of escape, and mortals are taught to be reconciled to that which is believed to be inevitable. But man is not reconciled; he desires to live. There is that within him which rebels against the thought that he was created to die; that his mission is fulfilled when he finds a resting-place in the grave. Something seems to say to him that in this world he scarcely begins to live, and there comes the conviction that some day, some where, he will live the life that knows no death.

Since material knowledge cannot answer his question, he must search elsewhere. Theology, through faith in God, looks beyond the present life, looks higher than science and philosophy, and says in the language of Scripture, "Believe on the Lord Jesus Christ, and thou shalt be saved." Theology agrees with material theories that death is inevitable, but it argues that death becomes, for some persons at least, the stepping-stone to higher things. It teaches that after death those who are found worthy will receive eternal life, but that there must be before death a preparation for spiritual existence, and only those who keep the commandments and put into practice the precepts of the Master, so far as it is possible for them to do so, will be accounted worthy of the kingdom of heaven.

There are comparatively few persons who believe that eternal life is the divinely natural result of right living; that it *is* a living in perfect obedience to the law of God. The generally accepted belief is that if man obeys this law as he understands or interprets it, he becomes the object of divine favor and receives a blessing which could have been bestowed upon him, regardless of what he had done or had not done, if God were disposed to exercise the divine prerogative. In other words, it is not understood that there is any direct and vital relation between right doing and eternal life, other than that eternal life is the reward bestowed upon those who do good and accept Christ as the Saviour of the world. This theory as to how and when eternal life is gained gives no definite idea of just how much is required. The question as to how little a man may do and gain eternal life, or how much he may do and still fail to receive his heart's desire, is not answered. There is oftentimes on the part of those who are honestly striving to serve God a feeling of uncertainty as to whether they have done all that is required of them. This occasions no little anxiety, and the thought of possible failure after a life of toil and sacrifice, brings them fear and trembling.

He who declared himself to be "the way, the truth, and the life," knew what eternal life *is*, and how it is gained. The proof of this fact is found in the many mighty works which he did,—the hopeless sick were healed; those struggling with the illusions of sin were made free; even the dead were called back to life and lived to proclaim the presence and power of God.

The Master's definition of eternal life is given in these words: "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

Jesus does more than tell how eternal life can be gained, he tells what it is. The understanding of God and man created in the divine image and likeness is eternal life. From this it follows that eternal life is here, and that man may gain it now. "He that believeth on the Son [understands what constitutes the Son of God], hath everlasting life." "If a man keep my saying, he shall never see death."

Jesus' words and works, and especially his life, which was the exemplification of his teachings, show how it is possible to gain the sense of life which is eternal. It is evident that if a man were to accept the teachings of Jesus, live the life that he lived, and do the works that he did, he would reach a higher and nobler plane of existence. Jesus declared that no man could be saved but by the way he pointed out. His was not the way of theory but of demonstration. To walk in his footsteps means infinitely more than to become deserving of heaven, it means to enter heaven. The kingdom of heaven comes as the divinely natural result of obedience to the law of God. It is just as impossible for man to understand and obey the Truth of being and remain without the kingdom of harmony, as it is for him to enter a lighted room and still be shrouded in darkness.

Christian Science teaches that death is not the gateway to heaven, neither is it the experience which brings the consciousness of eternal life. To enter heaven is to gain eternal life, and *vice versa*. Life which is less than eternal has no place in heaven, otherwise heaven would not be heaven. There is no sin in heaven, and from this it follows that sin in thought, word, or deed is no part, condition, or quality of the consciousness of Life which is eternal.

There are few who accept the theory of annihilation,—that death is the end of man. There are many, however, who believe that sinners are punished throughout eternity, but even that condition or consciousness would not be eternal life. Thus it becomes apparent that eternal life means more than consciousness of continued existence. It means the quality of life as well as the duration of life. If it were possible for the present sense of existence to be prolonged throughout eternity, it could never become eternal life. At most it would be nothing more than an eternally false sense of life.

Science and Health declares that "Truth, demonstrated, is eternal life" (p. 289). Here, then, is the explanation as to when, where, and how eternal life is gained. This declaration eliminates the thought of time. "Eternity, not time, expresses the thought of Life, and time is no part of eternity" (Science and Health, p. 468).

Digitized by Google

Jesus said, "I am come that they might have life, and that they might have it more abundantly." His mission was to reveal the Truth of being and thereby impart a higher, truer, and purer sense of life. A false or imperfect sense of anything is mortal, it endures for a while only to give place to that which is more nearly right. The changing and shifting goes on until the true concept is gained. Nothing less than the perfect consciousness of being is, or can be, eternal, hence that saying of the Master, "Be ye therefore perfect, even as your Father which is in heaven is perfect." In the degree that man's concept of existence is false or imperfect, in that degree is it mortal. It must give place to that which partakes more of the real and less of the unreal until perfection is reached.

Each advancing step brings perfection nearer just as soon as it is taken. Each victory over error assures us that we are on the right road, and we are thus inspired by the thought that we are only to persevere in well-doing, and our reward is sure.

The starting-point of Christian Science demonstration is the teaching that God is the only Life. He is the Life of all that is real. That which is not real has no life, even though it does seem to live, move, and have being. God knows and sees all things as they are, not as they seem to be. Being infinite in knowledge and wisdom, His consciousness of man cannot change; it is eternal. This consciousness of being, expressed in man, is eternal life. It embodies no evil sense and no sense of evil, for it includes only that which God creates and knows.

When we cease to think of eternal life merely as duration of life, and regard it more as the condition or quality of life, we shall better comprehend how it is that neither death nor any other manifestation of error can be a gateway to that life which is here and now in all its reality and power. We thus learn that Life, not death, makes man worthy of eternal, harmonious existence, a fit subject for the kingdom of heaven. All that is worthy of eternal life possesses it now. That which is not worthy can never gain it.

Spiritual growth is the natural result of giving up that which is mortal and thereby gaining that which is eternal. This growth means for man better health and morals now; it means a broader, more useful, and more harmonious state of existence now, and one which will ever increase its borders, reach greater heights of usefulness, and attain more lasting harmonies until man's finite sense of life and its joys gives place to the eternal consciousness of being which has its origin and ultimate in the divine Mind. "This is the true God, and eternal life."

A Turning-Point.

H. W. HEBBARD.

I HAVE been told that at the crest of the great Continental Divide which separates the waters of the Atlantic from those of the Pacific, there is a point where the slightest influence, even the breath of a summer zephyr, will determine whether a drop of water shall mingle with the broad Pacific, or become a part of the great ocean on the opposite side of the world. The direction having been determined, however, the drop of water starts on its long course, over boulder and precipice, and every hour separates it farther and farther from its old environment, and makes it more impossible for it to turn back and follow another course.

It often happens that a needy sufferer is found in the position of the raindrop at the summit of the mountain. It may be only a thought or a word spoken at the right time that is needed to give direction to his course. The start once having been made, however, each advance step makes it the more difficult for him to turn back.

The Wednesday evening meeting is often this turning-point. Here we constantly find those who are hungering for Truth, who are ready to grasp anything that offers relief to sick and suffering humanity, and all Christian Scientists can aid in determining the right course for such honest hearts, by telling publicly in these meetings what God has done for them and theirs through Christian Science.

One Law.

GERTRUDE MC CASLIN.

IN Science and Health we find the statement, "Spiritual law is our only code; Life, Truth, and Love our Government" (p. 442).

How the students of Christian Science, who in times past have seemed to come under the so-called laws of mortal belief, should rejoice at the above,—one law, one Lawgiver, one supreme ruling Judge, whose judgment is always just, —One who "discerns the thoughts and intents of the heart," and who rewards accordingly. It matters not what the verdict of the world (mortal minds many) may be, we can rest secure under the guidance and government of the great, all-wise Ruler, who is revealed as "the same yesterday, to-day, and forever."

As witnesses for Truth and Love, we can bear testimony only to the things of Spirit. As we recognize and obey only the law of God, good, all false testimony will be ruled out, and God's kingdom will be revealed as supreme and omnipotent here and now. To do this, we must reverse every erroneous thought, see the true instead of the false, and God's law will thus be made manifest. Sickness will give place to health, sorrow to joy, sin to perfection, hate to love, and so on through all that error claims unjustly.

David said in the 119th Psalm, "It is time for thee, Lord, to work: for they have made void thy law." Were we to believe the evidences of the senses, God's law would seem to be forever void, but in turning from sense to Soul, we can see but one all-governing law, unchangeable and perfect.

[Written for the *Sentinel*.]

A Discovery.

REUBEN POGSON.

I STRUGGLED oft with an unseen foe.
I fought as one that beateth the air.
As I gripped it hard and held it so,
It oozed through my hands, and left me there
With a foolish stare on my face of woe.

Pain of body or pain of mind,
Though formless it opposed me still.
The why and the where seemed hard to find
Of this nameless foe, that tried to kill
My hope to follow the behest of Mind.

Reveal, O God! in my pain I cried,
The seeming foe, that I may progress.
What part of self have I deified,
That now thy justice, demands redress
In the painful stress of a peace denied?

When next I strove in the dark of night,
I prayed the Light of the world to come.
And through the shutters a gleam of light
Rèvealed my foe, and guiltily dumb
In the shadow's gloom I saw, in its flight,
My Adamic self in hopeless plight.

Christian Science in Business.

Christian Science does not admit of any sort of practice outside the range of loving one's neighbor as one's self. True prosperity must have respect for the welfare of one's neighbor as well as for one's own. Moreover, only those possessions which contribute to one's spirituality or are conducive thereto are of any real benefit to us. The Scriptures declare, "Except the Lord build the house, they labor in vain that build it."

Without doubt there are some business institutions in the world that are not on the right basis, and, therefore, are not permanent; the sooner such are wisely and legitimately overthrown the better, since only that which is rightly established can stand.

There are numberless legitimate ways of developing and producing, and it is therefore not necessary that one should rob his neighbor in order to enrich himself. What we really need is wisdom, and herein lies the great benefit of Christian Science for the business man. It clarifies the mind, lifts the cloud of fear, anxiety, and indecision, and improves the judgment of its beneficiary, thus rendering his perception more keen.

We think it will be generally acknowledged that if one's vision is clear, and if one understands the right course to pursue, he is assured of prosperity in every way. Solomon, then, was right when he prayed for "an understanding heart;" also when he said, "And with all thy getting get understanding."

A Christian Scientist trains himself to seek the Divine guidance and yield thereto. And why not look to God as the only source of wisdom, since all that we have, are, or can hope to be, is of Him; for man in his normal fully provisioned state is the image and likeness of God,—the manifestation of infinite intelligence.

One of the principal dangers in praying for material things is that of erring in judgment. We are likely to ask for that which we really ought not to have, for that which would in reality be an injury to us. Therefore, we can do no better than to heed Jesus' admonition, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." If we enter the divine kingdom by placing ourselves under the control of infinite good, we can safely leave to His wisdom the question of our material supply.

An ardent Christian Scientist carries with him an atmosphere of hope and trust which benefits all who come in contact with him and which must necessarily wield a most powerful influence over his employees and associates, not because he personally affects them, but because his consciousness of Truth purifies his environment.

ALFRED FARLOW.
Boston Times.

A certain writer characterizes Christian Science as having its "authority centralized in one person." He does not know Christian Science, or he would not have made this assertion. It is totally incorrect. The coherence of Christian Science rests, not upon personal autocracy but upon loyalty to an underlying Principle, and that Principle is infinite God. Its creed is as broad and comprehensive as the needs of a suffering human race, and all who are willing to love God and His children supremely, may subscribe to its doctrines. The present state of human society makes necessary a form of organization. The attempt is made in this article to compare organized religious movements with something "without central authority, creed, or general organization," to the detriment of the former. If there be any virtue in this criticism, it must not only include in its condemnation all religious bodies or churches, but also all organized attempts for the betterment of mankind. Our schools are systematized efforts to help humanity by way of education. Our philanthropic and charitable institutions and hospitals, are organized attempts to uplift the race. Crime is dealt with by centralized organizations. Christian Science is not required to offer an excuse for its externalized activities, nor can it suffer by comparison, on this point.

WILLARD S. MATTOX.
Norwich (Conn.) *Record.*

The objection that in the treatment of children Christian Scientists "throw away what is certain for what is at least uncertain," cannot be substantiated, for there is no evidence that any material remedy is "certain" to cure in every case, and much testimony to the contrary; while skepticism and denial cannot change the fact that Christian Science does heal. Christian Scientists generally have had experience with material methods before trying Christian Science, and as they find the latter to be more efficacious than the former, they continue to trust it, and expect to be judged according to the general results, rather than according to a misconception of their doctrine, or an occasional failure. If parents refuse to provide any treatment for their children in time of sickness, they would be guilty of neglect, but if they employ a method which they have proved to be effective they are fulfilling their duty.

Christian Scientists grant to all the same right which they claim for themselves, to worship God according to the dictates of their own conscience, and if their prayer of understanding heals the sick, then the primitive gospel of Christ is again being demonstrated. FRANK W. GALE.
Fresno (Cal.) *Republican.*

Our reverend critic puts Christian Science into a category of beliefs which differ radically from each other. Suppose that some opponent of his own religious sect should try to add a prejudicial emphasis to a disparaging remark regarding it by classifying it with some obnoxious belief wholly foreign to it, like Mormonism or Mohammedism. Would he not justly feel that scant courtesy had been shown him? Would he not feel that the Golden Rule had not been obeyed? Would he not feel, if some religionist were guilty of such a gratuitous discourtesy as were his words, that such conduct was inconsistent with Christian charity and meekness? Would he not feel like saying, "Judge not, that ye be not judged"? And if such uncharitable and unloving language were too common among religionists, would he not be justified in classing it "among the causes of the world's apparent deflection from religion"?

CLARENCE A. BUSKIRK.
Muncie (Ind.) *Morning Star.*

Christian Scientists plead guilty to the fact that they have not established any hospitals, asylums, etc. Their activity has been along the lines of keeping people out of these places, and getting them out after they get in, and they know that their present efforts on behalf of suffering humanity are being appreciated. A. E. VAN OSTRAND.
Brooklyn Eagle.

The influence of Christian Science is decidedly for good to the outsider its works are for the elevation of mankind, and—who among us is sure of salvation? Who leads an absolutely pure, self-sacrificing, Christ-like life? It is for him to criticise, if he will; but for the rest of us to realize that a man's opinion is his own.

Mexico City *Saturday Night.*

The Lectures.

White Mountain House, Fabyan's, N. H.

A memorable occasion for the Christian Scientists of Northern New Hampshire, as well as for the followers of the faith among summer visitors, was the lecture at the pretty church near the White Mountain House, Sunday afternoon [August 7] by Bliss Knapp of Boston, a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston. The lecture was devoted to an exposition of the essential teachings of Christian Science, which was set forth in a clear and able manner. The church was well filled, the congregation including people from Boston, Littleton, Lisbon, Lancaster, St. Johnsbury, and the numerous White Mountain hotels.

Miss Emma C. Shipman of Boston introduced the lecturer with interesting and appropriate remarks.

The following reference to the lecture appeared in the editorial column of *Among the Clouds* August 8: "For the pleasure of the many Christian Scientists now in the White Mountains we give an extended abstract of the lecture delivered yesterday in the Scientist church at Fabyan's by Bliss Knapp. It is worthy of careful reading. And just at this point it is interesting to make retrospection and mark what the influence of the Christian Science religion has been upon the world at large. The tenets of its faith, while subscribed to but by only an inconsiderable number of the church-going masses, nevertheless contain that in their essence which is steadily entering into the essentials of the best religious beliefs. Long, long ago it was proclaimed that a man's thinking determines his relationship with the world. Nowhere is that truth more clearly demonstrated than on the summit of Mount Washington. The isolation of the place often makes it necessary that each person find companionship simply in the depth of his own thoughts. The surrounding conditions are the same for all, yet one man may be cheerful and happy, though storms rage and dark clouds threaten, while his friend beside him sees only solitude and dismal prospects. It is Christian Science to know that we possess a mastery over ourselves which is ours in so far as we recognize the perfectness of our creation. It is Christian Science to accept with faith every situation, thinking only of the good that is in it, denying the possibility of the endurance of evil, and with faith believing, to seek to develop day by day the true spirit which shall later mark us as perfect men."

The introductory remarks of Miss Shipman were in part as follows:—

A few items concerning the history of Christian Science in these mountains may be of interest at this time. The first and only lecture on the subject previously delivered in this region was given by Rev. Mary Baker G. Eddy in 1888, sixteen years ago, and it was thus announced in the paper called *Among the Clouds* which is so familiar to you all:—

"Rev. Mary Baker G. Eddy, who is announced to speak in the Fabyan House parlor, Sunday, August 19, at 11 A.M., is a native of Concord, N. H. She is the daughter of the late Mark Baker, and sister of one of the ablest lawyers and statesmen in the history of New Hampshire, the late Albert Baker. Mrs. Eddy is the Discoverer and Founder of Christian Science, and the author of Science and Health (now in its 37th edition), the first and only standard textbook on the subject of healing disease by a purely mental process. She is President of the Massachusetts Metaphysical College, and pastor of the Church of Christ, Scientist, both of which are located in Boston. Her residence is at 385 Commonwealth Avenue" (*Among the Clouds*, Saturday, August 18, 1888).

Mrs. Eddy spoke to a small but attentive audience. Some of those who heard her, tell me they have never forgotten the impression of the 91st Psalm as she read it on that occasion, and that it has made their lives holier and less fearful.

At that time she foresaw this little church, and closed her remarks with the words of Mrs. Hemans:—

For the strength of the hills we bless Thee,
Our God, our fathers' God.

On August 22, 1897, a few Christian Scientists, assembled at the White Mountain House, started a church building fund as a love-offering from grateful hearts to their Leader, Mrs. Eddy, for the gift of Christian Science, which had brought them healing and a foretaste of heaven in "that peace of God, which passeth all understanding." Other Christian Scientists joined in this expression of gratitude, and August 7, 1898, just six years ago to-day, the first church edifice of this denomination erected in New Hampshire, the edifice in which we now are, was dedicated. In the message sent by Mrs. Eddy she speaks of the mission of this church in these beautiful words: "Though neither dome nor turret tells the tale of your little church, its song and sermon will touch the heart, point the path above the valley, up the mountain, and on to the celestial hills, echoing the Word welling up from the Infinite, and swelling the loud anthem of one Father-Mother, God—o'er all victorious!" (*Christian Science Journal*, September, 1898).

Since God is infinite and Christian Science is the Science of God, you will readily see that in the limited time assigned him the lecturer can only outline a part of this vast subject, and in order to derive the greatest benefit from the lecture, let us listen as jurors, taking the evidence, weighing it carefully, and giving the verdict free from prejudice or partiality. The reading of Science and Health in this attitude of mind has healed thousands of whom I am one.

May the lecture bring to each one of us healing and uplifting, so that all can say with Isaiah, "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!"—*Correspondence.*

Milwaukee, Wis.

Edward A. Kimball of Chicago delivered a lecture on Christian Science, Sunday afternoon, June 19, at the Pabst Theatre, under the auspices of Third Church of Christ, Scientist, of Milwaukee. The theatre was filled to its capacity by an intelligent and appreciative audience.

The Rev. Thos. E. Barr of the Peoples' Pulpit, introduced Mr. Kimball, saying in part:—

Enlightenment rests on two principles: free speech and an unprejudiced hearing. No man, who presents a new idea, can ask less than that he be listened to with a candid mind. No such man can say more than "Weigh my words, see if they be true and wise, and if they commend themselves to you, accept them." The body of people who stand behind the presentations that are to be made to us to-day,—men and women of intelligence, men and women of character,—found their public work upon these propositions.

They do not ask us to bind ourselves beforehand to accept their teachings. They ask us to hear them, to weigh their words, to see if their testimonies are true; and if their teachings commend themselves to our independent judgment, they invite us to share the benefits they have enjoyed.

Paul says, "But the fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance: against such there is no law." It is not a question where or how we have developed these fruits,—the question is whether they adorn our hearts and ornament our lives.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Little Gem.

I RECOMMEND to Christian Scientists, and to all lovers of truth, to read the little book—"On The Way There"—by Katherine M. Yates. It is scientific, simple. It is an object lesson for each one of us to learn the meaning of this saying of our Master: "Be ye therefore wise as serpents and harmless as doves."

MARY B. G. EDDY.

Pleasant View, Concord, N. H., August 18, 1904.

Sold by K. M. Yates & Co., 45 East Fifty-third Street, Chicago. Postpaid, 50 cents.

Amendment to By-law.

ARTICLE XVIII.

NUMBER OF PUPILS.—SECTION 4. Apart from the Board of Education, the teachers of Christian Science shall teach but one class yearly, which class shall consist of not more than thirty pupils. The Board of Education has two classes annually, a Primary and a Normal class, each not exceeding thirty pupils. But no Normal classes are to be taught before December 8, 1906. (See page 85 of Manual.)

"Seek ye first the kingdom of God."

CHRISTIAN SCIENTISTS whose names appear in the Directory of Practitioners in *The Christian Science Journal*, also Readers in the branch churches, frequently receive circulars offering them an opportunity to make a fortune by investing any sum between five dollars and five thousand in some undeveloped but promising enterprise, which they are assured will pay phenomenal dividends at some time in a more or less remote future. To most of those who receive such circulars, if we may judge from the complaints that have reached us, this form of advertising has become an unmitigated nuisance.

One of the latest of these circulars is specially addressed to Christian Scientists who are supposed to possess a large circle of acquaintances and considerable influence. It offers a commission upon all shares of stock sold by the persons to whom the circulars are addressed; and in order to prove that the peddling of this stock is a laudable undertaking in which teachers of Christian Science may engage, a quotation alleged to be from an early edition of Science and Health is made a part of the circular. This latter feature is somewhat new in this style of advertising, but we doubt if it will be any more successful than the representation so frequently relied upon in the past, that "All officers of the company are Christian Scientists, and stock will be sold to Christian Scientists only."

We have on several occasions called the attention of our readers to the fact that it would be well for those persons who have money to invest, to part with it only after careful investigation of the enterprise in which they are solicited to take stock, and after they have satisfied themselves that the business is well established and profitable. The mere fact that some one who represents himself to be a Christian Scientist is connected with the company, is not sufficient guarantee that the investment is a good one.

As a general rule, it may be set down as a fact that those persons who exploit their business upon their religious affiliations rather than upon the intrinsic merit of the business itself, have departed from sound commercial ethics, and we doubt whether good business men or good Christian Scientists will fall into this error.

Christian Scientists, and all other Christians, who properly and unselfishly seek first the kingdom of God, good, will prosper in all their affairs, and in this fulfilment of the Master's promise they should, and do, become better business men, but this gives no warrant for any one to drag his business into his religion or to traffic upon supposed denominational fellowship. M.

"Awake, thou that sleepest."

IN Mr. Abbey's pictorial setting of the legend of Sir Galahad and the Holy Grail, he has very successfully portrayed in the knight's pose and expression, his utter discomfiture at the moment when he finds that he has forgotten the magical word by which he was to have broken the spell of spiritual death that bound King Amfortas, with all the inmates of the Castle of the Grail. At that moment his call, his consecration, his high purpose, his years of devoted preparation for the demands of knighthood,—all counted for naught, because he had not retained right consciousness. Until this awakening was realized, his holy quest must fail, and there was left him only the remembrance of a lost opportunity, the companionship of self-reproach.

The story reminds us of the frequent Scriptural references to this mortal life as, "a sleep and a forgetting;" and of the teaching of Christian Science that whatever of weakness and inadequacy may characterize our present Christian endeavor, it is explained by our fearsome forgetfulness, the feebleness of our grasp upon fundamental truths of Being,—the allness of God and His manifestation, the dignity and authority of man, the nothingness of evil, and the powerlessness of mesmeric belief in the presence of spiritual understanding.

The more common thought, perhaps, of spiritual development is patterned after the growth of a seedling. A center of life assimilates nourishment, enlarges its bounds, its strength, its fruitage, and ultimately reaches the completion of its kind. This figure serves our convenience, but it very imperfectly expresses the nature of our growth into the realization of the divine likeness. This is not a process, it is an awakening, a perception, a discovery of what *is*, and the significant gain of this true concept is in its sensible elimination of the time element. The generally accepted necessity of this factor means weakness of faith, and according to our faith so is our demonstration.

The tempter would have us content ourselves with slow progress, with modest demonstrations over evil, by reminding us of the naturalness and consequent legitimacy of this order. But we know that God's thoughts do not come to their perfectness by accretion. "The rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously" (Science and Health, p. 504). We know, therefore, that this human sense of limitation may pass away at once and forever, as the figment of a dream. Says the Psalmist, "I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness."

It is clear that in the ideal, to escape from the delusions of materiality is to be aroused from our Adamic torpor at the noonday of that spiritual manifestation whose glorious effulgence awaits *now*, our vision. "If sickness and sin are illusions, the awakening from this mortal dream, or illusion, will bring us into health, holiness, and immortality. This awakening is the forever coming of Christ,

Digitized by Google

. . . This is the salvation which cometh through God, the divine Principle, Love, as demonstrated by Jesus" (Science and Health, p. 230).

The immediateness of the possibilities of faith is not realized as yet in human experience, but the perception and maintenance of the ideal very significantly conduces thereto. The day has its dawn because of the visual obstruction of the earth, and, similarly, spiritual realizations are retarded, not because of any reserve in Truth's radiation, but solely because of the disabling earthiness of human sense, and our repose in its seeming.

It is the mission of Christian Science to awaken sinners (Science and Health, p. 342), among whom all are numbered; and its loving appeal has so far broken the material slumber of many that they are opening their eyes to the day. They now see that the listless face and the idle hands of inefficiency are the signs of our forgetfulness of God and of the Christ-man. They are quickened and impelled by a higher sense of love, of purity, of unselfishness, of duty, and of freedom than they have known before, and they love and honor her who, in faithfulness to the divine impulse and command, has awakened them from a condition of thought and life which is "as a sleep." W.

The Supreme Test.

"I will bring the third part through the fire, . . . and will try them as gold is tried."—ZECHARIAH.

EVERYTHING that goes to make up the sum-total of human experience must be subjected to the severest tests, and its worth or worthlessness decided by the results. That a great deal which may have been accounted very precious is found to have no real value, is proved daily by the sorrows and disappointments of mortal existence, but if bitter experiences lead to a search after spiritual realities, which never fail to satisfy, they have served a good purpose and cannot be regretted. That which is to be lamented is the sense of cold indifference or of bitter cynicism which comes to many whose affections and hopes have been chilled by adverse fate, and who are therefore in the condition described by Tennyson in his "In Memoriam,"—

when faith had fall'n asleep,
I heard a voice "believe no more,"
And heard an ever-breaking shore
That tumbled in the godless deep.

How many are there who, through some hard experience, have reached this melancholy state,—ceased to believe in the reality of life, and truth, and love; and yet, to thousands of such unfortunates a fairer day has dawned through the teaching of Christian Science. They have come to know that God is Life, that living is not a stern necessity but a supreme privilege; that Truth is never less than sublime and beautiful, however manifest, and that its requirements are a constant inspiration to noble endeavor.

When divine Love is made known in the healing ministry of Christian Science, a bow of promise appears on the cloud and its radiance tells the awakening thought, that in spite of the seeming reality of sickness, pain, or loss, Love is yet the centre and circumference of being, and good is triumphant over evil. After this revelation there comes the refining process of which our text-book says, "The purification of sense and self is a proof of progress" (Science and Health, p. 324).

Divine Love is ever trying us by the surest tests, and from them we should never shrink, for otherwise, Love's far-seeing and all-loving purpose would be undiscovered, and to our great loss. We know that if we love spiritually, hate can find no place in our thought, nor can our affections ever bring pain to ourselves or to others. The love which is the reflection of Love will always heal, purify, and uplift, and we shall be fitted for the supreme test expressed in our Leader's words, "If divine Love is becoming nearer, dearer, and more real to us, matter is then submitting to Spirit" (Science and Health, p. 239). Thus are we enabled to discern our true progress. K.

A Tribute.

TO-MORROW Thomas Impett, accompanied by his wife and daughter, will start on his pilgrimage to the seashore in Maine. On Sunday next he expects to attend service at the elegant Christian Science church at Concord, N. H., which was dedicated in the presence of visiting thousands a few weeks ago. Mr. Impett also anticipates the pleasure of meeting Mary Baker G. Eddy, who at 83 is sound in body and bright in mind, and daily devotes nearly double the conventional eight-hour limitation to literary and administrative work connected with the great and growing spiritual movement of which she is the acknowledged Founder and head. Mrs. Eddy's activities and achievements since she passed her eightieth milestone form a patent proof of the fallacy of popular "age limits," beyond which people are expected to sink into senility and superfluousness. We presume Mr. Impett will leave her presence convinced that he is hardly half-way through his fruitful and brilliant career as an instructor and demonstrator of the vocal art. Verily, a virile and beautiful old age is an inspirer to middle life, causing despondency to disappear and filling the heart with gladness and aspiration.—*The Troy* (N. Y.) *Daily Press.*

Letters to our Leader.

The following letter from Lady Ramsay shows her deep appreciation of our Leader's work, and will be read with much pleasure by all who are interested in the advance of our Cause in Great Britain.

Bamff, Alyth, Scotland, August 7, 1904.

Beloved Leader:—A few days ago I received a copy of the Concord *Patriot* and one of "A Critic Answered" by Alfred Farlow, with your compliments. Please accept my very best thanks for having sent them to me. I had not previously seen Mr. Farlow's most excellent article in its pamphlet form, though I had much enjoyed reading it in the *Journal*. The accounts of the opening of the Concord church have indeed interested me deeply, and the appreciation of our beloved Leader and her work by the press at large, as given in the newspaper cuttings printed in our *Sentinel*, is indeed good to read and think upon,—full of impressive meaning as a sign of the times. But best of all, and that which gladdens and strengthens, is your address at the dedication of the Concord church, for every word of which I sincerely thank you, as I know thousands of Christian Scientists are thanking you to-day, and for which we can never be too grateful. Thoughts that are given out in it are so loving and wise, and show such forethought and such absolute spiritual perception of the need of the hour, that it makes one marvel, then rejoice to know that God has placed the Cause of Christian Science in your hands. May I follow closely, humbly, lovingly, however rugged the pathway to the wonderful light which is shining to-day for all, thanks to the purity of your thought and the Christian devotion of your life.

Yours lovingly,
CHARLOTTE RAMSAY.

New York, July 26, 1904.

Dearest Teacher:—It is not enough that John has written you, I, too, your old student, must tell you how wonderful your message to the Concord church seemed to me. Surely never before have you expressed so much of the life-giving Truth and Love in so few words. It is the heavenly manna which to-day is feeding the starving human consciousness. To read it is to be bathed with fire, to feel our old aspirations rising higher, our spiritual desires growing

Digitized by Google

more intense. It is to *know* that our old sense of Mind is being destroyed, and in its place is coming a widening, broadening sense which will keep enlarging through all eternity. How you do make manifest your at-one-ment with God!

Your life is a constant stimulus to me. When I think of you and of what you have done, are doing, and will continue to do, I take fresh courage and turn my face more squarely towards the Light. God, the infinite Love, sustains you, upholds you, comforts you.

Your loving LAURA.

Philadelphia, Pa., July 25, 1904.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Beloved Leader:—The loving thoughts of two truly grateful followers have been yours for the last five years. What Science and Health was to us from the very beginning is depicted in the testimony which was sent humbly and gratefully for publication and which found a place in the revised edition of your book, "Science and Health with Key to the Scriptures" (pages 654 and 655). This has meant so much to us, that never a day passes but we realize and know the good you have brought into our lives. We ask God for help and guidance to be obedient and faithful followers of you who, through self-sacrifice and love for mankind, have given to this age the understanding which enables us to realize so much peace and contentment, and which reveals to us the spiritual meaning of the scriptural text, "The kingdom of God is within you."

Obediently and lovingly,
HERMAN L. TOURNY.
MRS. E. MABEL TOURNY.

New York, N. Y., July 24, 1904.

Dear Leader:—I want to thank you for the joy which came to me during my sojourn in Concord at the dedication of the church which your love for God and man has brought forth. As I came to the church at the earlier morning service my heart was filled with joy when I heard the sweet chimes peal out, "Be thou, O God, exalted high" from our Doxology, and realized more than ever the spiritual sense of Truth and Love which you have so valiantly endeavored to inculcate in human consciousness, through your life and works. Your message was so full of light that it will benefit all of us who are making a sincere effort to maintain the standard you have raised with that unselfish love which the world is beginning to understand and appreciate.

May the riches of God's goodness be ever yours, and may the Cause of Truth grow stronger and stronger, is the earnest prayer of

Yours lovingly,
R. E. CAREY.

Chicago, Ill., June 7, 1904.

Beloved Leader:—I want to express my gratitude to you for the new By-law, "Church Organizations Ample."

In it we are reminded of the words of Jesus, "My sheep hear my voice, . . . and they follow me: and I give unto them eternal life," and "If ye love me, keep my commandments." I feel that any attempt to express my love and gratitude for all you have done, and for the watchful, tender way we are being led, would be feeble, and I can but say that it is my great desire to understand more of the divine Mind which heals and redeems, and to live in unity of thought and purpose with you who have given to the world this wonderful message of love, which wipes away all tears, destroys the power of pain, the love of sin, and brings peace and happiness to those who are partakers thereof.

Lovingly,
ROBT. D. SINCLAIR.

Testimonies of Healing.

It is due the public that I make known a few facts relative to my wife's affliction and her instantaneous healing, which are briefly summed up as follows:—

For several years she had been very severely afflicted, in which time she spent five weeks in a hospital at Buffalo, N. Y., and underwent an operation.

During the past winter her case became more obstinate than ever, and at night her heart would skip about every third beat much of the time, and during the day would beat about one hundred and forty a minute. She weighed not more than ninety pounds, and for several days she had not been able to stand up. For several months she had not been able to dress herself. Her physician, for whom we have all respect, and who, we believe, was doing all that could be done for her from a medical standpoint, said that his medicine was only giving temporary relief, and that it was not in the power of medicine to cure her. For several nights I thought she would not live till morning. All the neighbors who saw her thought there was no question but that in a few days she would be gone.

In this, my great perplexity and sorrow, I heard of a Christian Scientist practitioner in Jamestown, N. Y., to whom I wrote at once. She responded by coming to our house, only to find my wife unable to sit up and scarcely able to talk. This lady talked for not more than three quarters of an hour on the subject of Science and Health, directing most of her conversation to myself, and then left. Within an hour from that time my wife got up and walked to the dinner table and ate more than she had done in any one day for a week. She then consigned every particle of her medicine to the fire. At supper she ate an ordinary meal and spoke of what she would like for dinner the next day. In the evening she went out and told some of the neighbors how she had been restored. In a few days her physician called to see her, and upon taking her pulse said, "Why, woman, you are better." She has taken no medicine since, and in less than three weeks she walked half a mile to the depot and rode comfortably on the train to Jamestown, where her practitioner met her at the depot. The practitioner did not know her, and when she returned from Jamestown, which was in less than four weeks from the time she was first treated, she weighed one hundred and sixteen and a half pounds, and since then has reached her normal weight.

The interest which this Christian Scientist has taken in my wife and the great blessings she has bestowed upon her and on our home, God alone can reward. In spite of the prejudice against Christian Science, we challenge the world and all succeeding generations to say that this healing is not in harmony with the teaching of him who went about doing good.

J. STONEHOUSE, Cattaraugus, N. Y.

Christian Science found me a physical wreck, but through its teachings I am enjoying better health than I have ever known before. I had been a sufferer all my life and was almost constantly under the care of different physicians, but did not find even temporary relief. At last through the many requests of one of my sisters, who was visiting me from Iowa, I was persuaded to try Christian Science and was thus saved from the operating table. I was troubled with ovarian tumors, nervous prostration, indigestion, and sick headaches. At the time of which I speak, I was suffering from the first-named trouble to such an extent that the attending physician was calling from one to three times per day. All that he did was to advise us to use chloroform to relieve my intense suffering, as all other drugs failed to ease me. He also told my father

Digitized by Google

and my husband, that no drug would reach the disease, and that my only hope was in submitting to an operation, but that in his opinion I was too weak to undergo one.

No one need wonder at my willingness to at least give Christian Science a trial, for I had been told it would not kill, if it did not cure. Accordingly, my two sisters called upon a practitioner at Joplin, and he advised them to return home and lay aside all material remedies at once, and he would give me an absent treatment that evening, and would come to see me the following day. We followed his instructions, and for the first time in many years, I slept nearly all night without suffering. The next day the practitioner came as promised, gave me a treatment, and returned on Friday (I received my first treatment on Tuesday), and on the following Sunday I was able to be up and dressed,—the first time in about two months. The next Thursday I went to Joplin to see my practitioner, a distance of several miles, and when I returned home I walked a distance of about ten blocks. In two weeks I was able to do my own housework for a family of five. I immediately begun attending services at First Church of Christ, Scientist, of Joplin, Mo., and became a member in April, after my healing in October. I was healed in four weeks' treatment, and it was no sacrifice for me to forsake my old teachings and cling to Truth.

It has been three years since I found the true way, as revealed in "Science and Health with Key to the Scriptures." I have had many demonstrations in my home,—among them the overcoming of pneumonia, rheumatism, and various other ailments.

Thanks to my practitioner from whom I have since taken class instruction, also to our beloved Leader, Mrs. Eddy, for showing us how to live as God's own children.

MRS. EDNA IRWIN, Webb City, Mo.

Two years ago last June, on my return from a trip in far Northwestern Colorado, I was surprised to find my wife, who had always appeared very healthy, quite sick with dropsy. I was alarmed and called in our family physician, who was at a loss to understand the cause. There is a material theory that dropsy is caused by interference with the circulation, and as there are several things that cause it, a search was made at once to find which one of them it was. It was not easy at first to detect the cause, but, after a most rigid examination, he announced that it was organic (valvular) disease of the heart, and that there was no known cure. I then called in another medical practitioner, one standing among the highest in the esteem of this community and in his profession, and, after a rigid examination, he agreed with the first; and then, to make sure that there could be no mistake, I called in another,—one of the highest known in the profession,—one who made a specialty of heart disease,—with the same result. I then had the first two make examination a number of times, in consultation, always with the same result. They finally told me that nothing whatever could be done for my wife, and recommended that she be kept on her back and made as comfortable as possible so long as she lived, but that there was positively no hope for her, and no known remedy indicated in a case of the kind.

It is needless to say that I was greatly worried, and very likely showed it in my face. One day while at lunch with a friend, he noticed that I was anxious, and said, "Why don't you try Christian Science?" I replied that it could do no good where any vital organ was diseased; that if the trouble was with the stomach, liver, or any other organ influenced by the mind, I would think of trying Christian Science, but certainly Christian Science could do nothing in a case like that of my wife. He replied that he was not a Christian Scientist, and while he did not know that they could cure the disease, he did know that Science could give rest and ease to my wife. "Well," I replied, "if they can do that, I will gladly pay for it."

I will say that up to this time my wife and I were totally ignorant of Science and its teachings. We had been severely skeptical and hard on Science and any one who resorted to it for healing. We had both been brought up in an orthodox church, and were members of it, and we had imbibed the spirit which would abuse Science even from the pulpit. I realized, however, that the medical profession could do nothing to save my wife, so I concluded to accept my friend's advice and try Science if I could get my wife to consent; not that I had any faith in it, but as a drowning man grasps at a straw. In my own reasoning I concluded that a Christian Scientist should be pure minded, and I therefore started out to investigate and find one whom I thought would fill the bill. I first obtained the names of a half dozen practitioners, and after making close inquiries, made my selection, which, I am happy to say, proved very satisfactory. I then called on the practitioner I had selected, had a talk with her, and told her frankly what my friend had said. She smiled and said, "Yes, your wife can not only receive rest and ease, but she can be cured." I was surprised, and cannot say that I then had much faith in the claim to effect a cure. I went home and said to my wife, "What do you think of trying Christian Science?" As she lay on her bed, very weak, she turned her head over on the pillow, and looking at me with a smile, asked, "What is going to happen? To think of any who have ridiculed Science as much as we have, now trying it ourselves." I replied that we would not stop to argue that question, but I asked her to think it over a day or two, and then let me know her conclusion. The next night she said that if I knew of a satisfactory practitioner she believed she would try it.

I lost no time in arranging with the practitioner to take up the case at once. This was in October, 1901. Her recovery was slow, for which she now says that she is very thankful, because it not only gave her an opportunity to read and study Science as she recovered by degrees, but she feels more certain that her recovery is due to the effects of Christian Science treatment than she would have been had her recovery been rapid. About the middle of January she gained strength enough to walk across her room. On the evening of January 28 our home was destroyed by fire. Our family physician in reading the paper the next morning at the breakfast table noticed in the head lines an account of the fire at our home. He remarked to his wife that he feared that would be the end of my wife, and immediately after breakfast came directly to our neighborhood to hunt her up. He found her in a room with several ladies, chatting happily, and was surprised, as the last time he had seen her she was prostrated. He asked the privilege of examining her heart, and she said she had no objections, but that her heart was all right. He examined it and remarked there were four or five hundred people walking the streets of Kansas City that day with worse hearts than hers, and asked her what she had been doing. The recovery continued steadily and uninterruptedly, and a year ago last October she took a trip to California, crossed the mountains at high altitudes, spent two months on the coast, making the journey and returning alone without inconvenience or bad effects. She is now, and has been for more than a year, in perfect health; is strong, and states that she never felt better in her life.

This testimonial to Science may not seem strange to those who have heard of many such cases and recoveries, but possibly it may be seen and read by some person suffering from a like disease who feels his case to be hopeless, and to such this should be an encouragement not to give up because the medical man says there is no hope. It should be remembered that at the time my wife consented to try Christian Science she had very little, if any, faith whatever

Digitized by Google

in it or in the ability of the practitioners to do her any good. She had merely that least shadow of faith which made her consent to be treated by them.

"And these signs shall follow them that believe." Dear reader, if you, or those dear to you, are suffering, and your doctor tells you there is no hope in medicine, don't give up, but lay hold upon the promises of that greatest of all physicians, read and claim his promises as recorded by St. Mark, last chapter and last six verses. These are a part of Jesus' conversation with his disciples after he arose from the dead.

I will gladly furnish the names of the doctors at any time, also that of the Christian Science practitioner above referred to, to any sufferer who desires to investigate for himself.

J. D. DAVISON, Kansas City, Mo.

I first heard of Christian Science in 1893 through the healing of an aunt. My sister and mother took up the study of Science and Health the following year and my mother was healed of many chronic troubles, among them violent sick headaches, through the treatment of a very young Scientist. I admitted that Christian Science was the truth, but studied very little until the fall of 1897. We have had many cases of healing in our family, most of them in from one to two weeks through absent treatment, slow fever, hernia, severe internal injuries produced by a fall from a trapeze, and black jaundice, being among the cases healed.

I have had many blessings through Christian Science, physically and mentally; but the case I wish to tell of was my experience in childbirth, it being my first. My practitioner had, however, had experience in handling such cases and I had perfect confidence in her ability to prove the truth for me through Christian Science treatment. During the early period I was very ill, and this condition lasted until even water could not be retained on the stomach. At this point I was completely healed, and during the remainder of the time I was remarkably well.

At the end of a week I had entire care of the baby. I walked about the room each day, and soon resumed my home duties, feeling strong and well. In about nine months after this, prolapsus appeared, and while I was talking to my practitioner about it, the trouble was overcome, and in a day or two all sense of irritation had disappeared and has never returned.

I am daily having added proofs of the utility of Christian Science. I cannot close without offering my gratitude for our most helpful and ably edited periodicals and Quarterly Lesson-Sermons, the faithful, wise, and tender guidance of our Leader, to my devoted teacher and his assistant, and to every honest, sincere student of Christian Science who is helping to spread this gospel—glad-tidings—of "on earth peace, good will toward men."

MRS. JESSIE REESE SMITH, Houston, Tex.

For the past eight years myself, husband, and five children have depended entirely upon Christian Science when there has been any sickness in our family, and never in a single instance has there been failure or any cause for wishing that we had used any means other than Christian Science. Among our first blessings received was the healing of my husband of bronchitis and consumption. His restoration to health has been so complete that at present he is employed in underground work in the mines here, where provision for good air is often a perplexing problem.

I had been afflicted for fifteen years with female trouble and was under the care of the doctors more or less during the entire time. A few months before my last baby was born, —some three years ago,—my suffering was intense and I became very fearful, as two of my sisters had passed on at the time of childbirth. I asked for treatment at this time, and one week after the child was born I was healed of something of the nature of tumor, and from that time on I have never been troubled with any disease and enjoy perfect health. I had heard Christian Scientists tell how well they were,—that they hardly knew what it was to feel tired; and I wondered if it could be true. I know now that they were living what we all have a right to live,—a life of good health and happiness.

I have lately had the privilege of class instruction, and all our physical benefits are not more satisfying than the conviction that has come to us that Christian Science does teach the true nature of God and in what way we shall expect and receive good. For all this we are truly grateful.

MRS. SADIE E. WILKINS, Joplin, Mo.

As a member of another Christian denomination I had prayed to God sincerely and fervently to heal me, but the healing never came until I turned to Christian Science. Just one week from the time I visited the reading room for treatment, sick physically and mentally, I was conscious of feeling absolutely well. Medicine could not relieve the conditions brought about by worrying. When I approached Christian Science whole-heartedly I learned that God's child has no cause to worry.

Divine Love has met each error which has come up from that time to this, and I am indeed thankful to be able to meet and put down error for my two children. One evening my little girl awoke after having slept only a short time, and seemed to have a raging fever. She appeared to be delirious and insisted that some one was pulling her foot and another was pulling her arm in the opposite direction. With shrieks she insisted she "just could not stand it." I declared the truth audibly and realized that God's child is always of right mind. Then those words of our dear Leader came to me, "Speak to disease as one having authority" (Science and Health, p. 395). After having done so about two minutes the little arms which had clasped me so frantically were unloosed. She lay back upon the pillow and began to speak in a rational manner. I continued to work mentally and in the morning she arose perfectly well.

I sincerely hope these few thoughts may help some one who is just starting. Christian Science brings unspeakable comfort and peace. I am indeed grateful to God for our Leader, who has worked so faithfully to show us the way.—O. B., Brooklyn, N. Y.

Some months ago, while in the United States I suddenly found myself out of work. I began to declare the truth almost immediately and realized that I should be guided by Truth. I had had a desire to go to Mexico, but knew nothing whatever of this country or people. The way, however, seemed to open for me and I came here. I also desired a position near a city, so that I could attend church each Sunday, as my work prior to this had taken me out sometimes many miles from the nearest town, and I was continually shifting. I kept on declaring the truth and trying to know that if it were right for me I should have the place I so longed for. It seemed a very hard thing to demonstrate, as business was at a standstill when I arrived and there was no work here in the civil engineering line.

One day some one suggested that I open an office to do that kind of work, and also mining engineering. There seemed to be a light shining ahead as I went farther into the matter. A few days later I found some work, and I am now in partnership with two expert mining men, doing a business which nets me a liberal income each month, and it is increasing every week.

I give this hoping that it will reach some one who may

Digitized by Google

be situated as I was among strangers, and I would say to him, falter not and your reward will surely come, for "we live, and move, and have our being" in God.

L. H. SKEELS, Chihuahua, Mex.

A few weeks ago my little girl, three years of age, fell from a child's tea chair to the floor, striking her head in such a way as to injure her neck. I was away from the house at the time, but my mother and daughter told me that when they picked her up the head hung perfectly limp, so that it had to be supported with the hand, the child not crying out, but moaning pitifully. There was of course much fear to overcome, but my daughter, who, though less than sixteen, has a clear understanding of Science, went bravely to work and succeeded, in a little while, in putting down the worst fears, so that when I reached the house an hour and a half after the occurrence, the little one was sleeping. I saw at a glance what the conditions were, and I felt that she must be awakened at once. I took her up and could only succeed in getting her to open her eyes partially. I then took her off in a room alone and declared the truth aloud, and read from Science and Health for a few minutes, when she was aroused and wanted me to read more. I suppose I had read a half or three quarters of an hour when the dinner bell rang, and I carried her down stairs. She sat at the table a little while, then wanted to go to the lounge, where she lay until we had finished dinner. I read to her a little longer, when she showed a sense of nausea, and after throwing up a little she slid down from my lap and went out doors for play with her father and brother, and when a little while later I undressed her for bed, she had a romp and frolic with her kitten. With laughing and playing, her face bright, rosy, and happy she was a perfect picture of health and freedom.

What can express a mother's gratitude for this revelation of the Christ, Truth, which, even with a little understanding, will enable her to overcome such trials so speedily and perfectly. My heart is so full of gratitude to God and to our Leader that often when thinking of this blessed truth my eyes fill with tears of joy and thankfulness.

A. H., Seattle, Wash.

It is nearly five years since I first heard of Christian Science, and during that time I have been perfectly healed of catarrh and several other diseases through the reading of Science and Health. I would like to speak of an accident which I met with while working in a laundry. My right hand was caught in a mangle, which was heated by gas and run by electricity. I think my hand was in the mangle about one minute before they could let me out, and was both burned and crushed. The middle finger was nearly taken off at the end. I declared the truth, and felt that God was an ever-present help in trouble. My daughter and I were the only ones there that knew anything about Christian Science, so they naturally suggested having a doctor come in and take care of my hand. I refused and asked them to telephone to a Christian Science practitioner to give me treatment, which they did immediately. To mortal sense the pain and burning was terrible for a half hour, when all sense of suffering left me. I was under absent treatment the most of that time. While the healing seemed slow, I never lost one night's rest, and to-day I can thank God and our dear Leader that I have the use of my hand as well as ever.—MRS. MARY E. BURNS, Scranton, Pa.

I want to add my testimony and gratitude to the hundreds that have been given through our *Sentinel* and *Journal*. My physical healing sixteen years ago, was wonderful in itself, and since that time Christian Science has been a continual help, blessing me in thousands of ways, destroying fears, and giving me increasing trust in God. Its educational influence has proved of wonderful significance to me. My heart goes out to God in gratitude for the mental culture and discipline I find in the pure writings of our dear Leader, Mrs. Eddy; and for the clean literature which is blessing mankind through Christian Science.

Many times a day do I resort to that loving counsel in Science and Health, p. 496, "Hold perpetually this thought, —that it is the spiritual idea, the Holy Ghost or Christ, which enables you to demonstrate, with scientific certainty, the rule of healing, based upon its divine Principle, Love, underlying, overlying, and encompassing all true being." I also desire to express my gratitude for the helpful Bible Lesson-Sermons, for I appreciate the labors of the committee in their selection of the references which have always met a present need.—MRS. KATE J. GRAY, St. Louis, Mo.

I herewith add my testimony to the many already given, respecting the efficacy of the healing and transforming power of omnipotent Mind, as taught us in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I was a communicant of an orthodox church for sixteen years. Four physicians had pronounced my husband an incurable sufferer from Bright's disease, but in seven treatments by a Christian Science practitioner he was completely healed. In the year 1898 it was my privilege to become a member of the Christian Science church in our city. Words are insufficient to express the unbounded blessings which have been brought to our household, physically and financially, through adherence to Principle as revealed through our Leader.—MRS. SARAH CROW, Denver, Col.

I was a sufferer for several years with female weakness, heart trouble, neuralgia, and catarrh; and was treated by the leading doctors of this city without any permanent relief. This combination of troubles soon brought on that dreaded disease which has always baffled medical skill and slain its victims by thousands,—consumption,—which seemed to be hurrying me to the grave. In this condition I went to a Christian Science practitioner in this city and I was very much surprised when she said there was help for me.

Never before had I met so kind a person. I was healed of all my ailments at my first call upon her, which was in April, 1902. Since then I have studied "Science and Health with Key to the Scriptures," and I am thankful to say that I am understanding it, and growing in the knowledge of God as taught by our Leader.

My first demonstration over fear was with my little boy, two years old. While playing in the room he fell and dislocated his wrist. I picked him up and, through the realization of God, as all power, I adjusted the bone in its proper place, realizing that "there is no fear in love."

Thanks be to God and to Mrs. Eddy for the good that Christian Science has done for me and is doing for others.

MRS. CLARA FIELDER, Charleston, W. Va.

[Translation.]

I desire to tell the readers of our periodicals what Christian Science has done for me. For many years I was afflicted with dyspepsia which affected me physically and mentally, and neither physician nor medicine could help me. Through Christian Science I have been healed of it and also of scirrhus and rheumatism. I could not go out in the sun unless I held an umbrella over me, which is very troublesome for a farmer who spends most of his time outside.

I am very grateful to God and to my practitioner for all the benefits I have received through Christian Science, and I desire to express my sincere gratitude to Mrs. Eddy, who has done so much for humanity.—J. F., Bloomington, Ill.

From our Exchanges.

This is a doctrine that needs to be emphasized again and again with increasing energy in these days when many things that are purely material and worldly in their sources and tendencies are absorbing the attention of young men and women to the exclusion of the more important and vital things that make for high and worthy character and for helpful and beneficent life. Not only college students, laying aside their books and taking up the activities of more mature life, but men and women everywhere need to be reminded, as President Wilson said to the Princeton men last Sunday, that "God is abroad, not shut up behind conventicle walls, and the college man ought to be the best man among men of God, because of his training and enlightenment. It is no doubt ordained that the world shall be saved not only by the 'foolishness of preaching,' but also by the courage of action and the satisfying nobility of unimpeachable conduct, and colleges cannot make serviceable men unless they make men of brains and also men of principle. This can best be done where the little commonwealth of their life breeds honorable character and gives influence to men who purpose the good of those whom they lead; for there are made manifest the foundations of knowledge."

The Christian Advocate.

There never was a time when religion was more needed in our schools than it is to-day, but it must be the religion of to-day, not the religion of a century or ten centuries ago,—the religion of social service, not the religion of scholasticism,—a religion that can gaze undisturbed upon scientific research, even when applied to the Bible, and not a religion that has been so long in the cloisters that it blinks at the sunlight—a religion that concerns itself more with life than with death, with inspiration more than with consolation. Such a religion will keep our colleges and universities from becoming mere training-schools whose aim is to teach how to amass wealth. It will help them to train students to make a living indeed, but to make a life as well, to use wealth as well as to amass it. Not knowledge for the sake of knowledge, nor knowledge for the sake of wealth, but knowledge and wealth for the sake of service,—that is an ideal that will yet bring the Bible, the book of logarithms, and the commercial directory into all co-ordination, and make it no longer necessary for men to build their lives as they build ocean steamships,—in bulk-head compartments.

Homiletic Review.

A Christian is not one who merely abstains from every form of outward evil. The true Christian does that, of course, but he is more than an abstainer, he is an active force for good, and that because the life of God is implanted within him. The genuine disciple of Christ can no more refrain from Christian activity than a plant with the flowing sap in its cells can refrain from growing. A workless Christian is like a plant dead at the roots.—*The Examiner.*

Enthusiasm for righteousness is what is needed in all our churches and in the hearts of all our ministers. It is righteousness alone that can solve the problems of the world, whether they be personal or political; we all know it and spend some time in hoping and praying, and a little in working to bring in righteousness, but there is such a lack of enthusiasm for it.—*The Universalist Leader.*

We cannot well have too much preaching and teaching and illustration of the need of personal righteousness, and of the constant insistence at all times and places upon the sovereignty of its august commands.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.
